Guyana's constitutional guarantee of free speech and the press has translated into a relatively free and active media environment. However, in 2008, government withdrawal of advertising contracts from its own newspaper operation (thought largely to be retribution for negative coverage), along with violence against journalists, has lowered the status of press freedom in the country. As of 2007, Guyana has six newspapers, including one owned by the government, which also operates the country's only two radio stations. There are 23 television stations. Unrestricted access to the Internet totaled 20 percent in 2007.

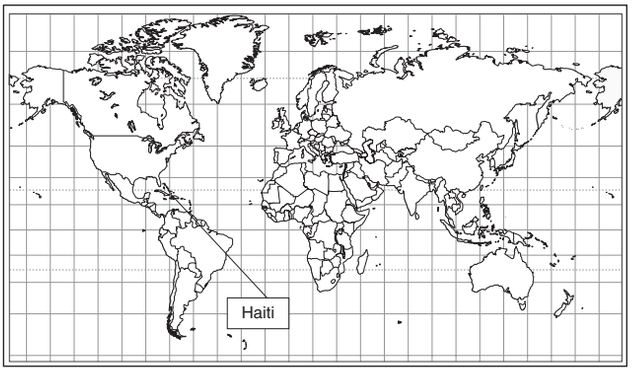
Haiti

Population (2010, proj.): 10,188,000

Gross National Income per Capita (current, 2007): $520

Date of Independence: January 1, 1804 (from France)

Date of Last Constitution: May 2006 (return to constitutional rule established in March 1987)



In 2007, Haiti continued an expansion of press freedom, begun following the 2006 establishment of a coalition government and the ongoing political stabilization of the country. The new government, indeed, has exhibited recent tendencies to prosecute crimes involving violence against journalists. Radio is by far the most popular media outlet, a fact understandable in a country with a relatively high illiteracy rate. Likewise, Internet use is still relatively low, at a rate of about 7 percent.

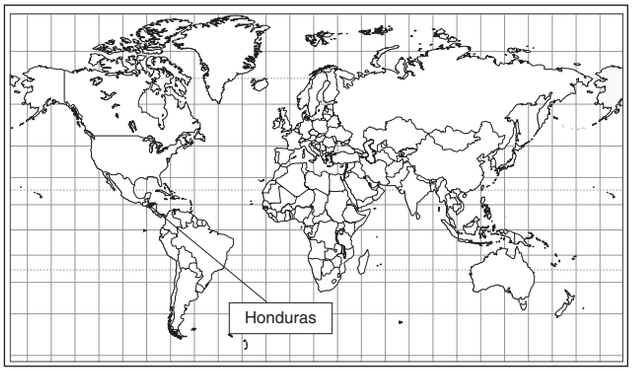
HONDURAS

Population (2010, proj.): 7,616,000

Gross National Income per Capita (current, 2007): $1,590

Date of Independence: September 15, 1821 (from Spain)

Date of Last Constitution: January 20, 1982



While Honduras enjoys constitutional protections of free speech and free press, journalists regularly face intimidation from the government. Assassinations of journalists and threats of violence—many from organized crime—also affect the press environment in the country. Ownership of media outlets is concentrated, for the most part, in the hands of wealthy business elites. Internet use, which is not restricted by the government, was at 4 percent in 2007.

Legal guarantees for free speech exist in Hong Kong, which enjoys an active press environment. However, its existence as a special administrative region of China brings journalists under Chinese rule, which often—due to its regulatory oversight and surveillance of the media—dampens journalistic activity. Violence against journalists in 2006 did not recur in 2007, but many media personnel, concerned about their safety, practice self-censorship. Internet access—usually through broadband—is at highest rate in Asia: 74 percent in 2007.

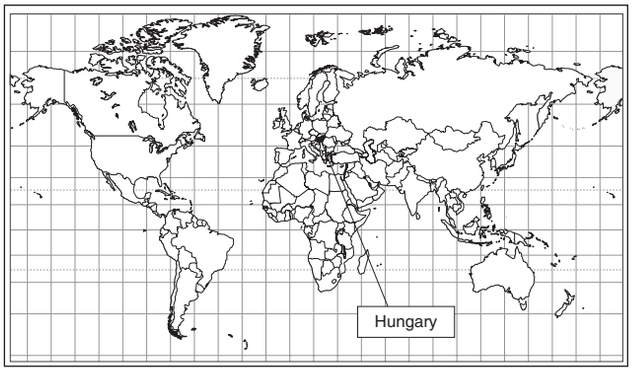
HUNGARY

Population (2010, proj.): 9,973,000

Gross National Income per Capita (current, 2007): $11,680

Date of Independence: April 1849 (from Austria)

Date of Last Constitution: August 20, 1949 (last revised October 18, 1989)



A vibrant and varied media scene—dominated by many privately run outlets—exists in Hungary, bolstered by constitutional/legal guarantees of free speech and press. Coverage by state-owned outlets is biased in the government's favor. In 2007, 35 percent of the population accessed the Internet.

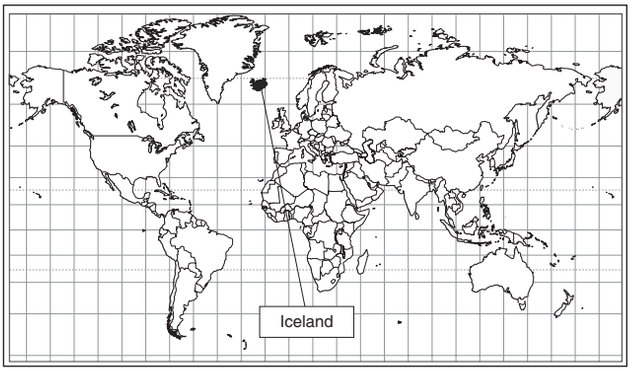
ICELAND

Population (2010, proj.): 329,000

Gross National Income per Capita (current, 2007): $57,750

Date of Independence: June 17, 1944 (from Denmark)

Date of Last Constitution: June 17, 1944



News outlets in Iceland function with a high level of independence and are supported by constitutionally guaranteed freedoms of speech and the press. The country's relatively numerous newspapers are both independent and partisan-affiliated. Ownership of broadcast media is concentrated in the hands of the media company 365. Internet use is high, at a level of 85 percent in 2007.

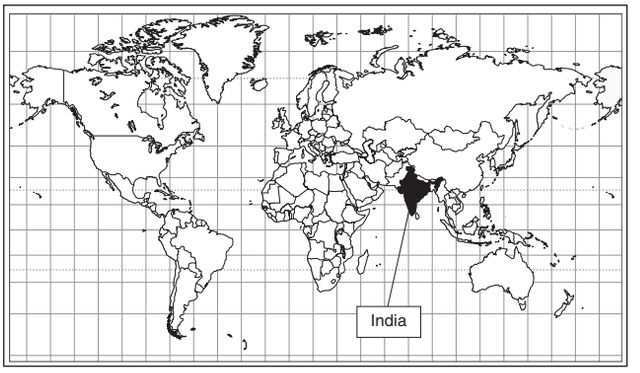
INDIA

Population (2010, proj.): 1,214,464,000

Gross National Income per Capita (current, 2007): $950

Date of Independence: August 15, 1947 (from the UK)

Date of Last Constitution: January 26, 1950



India enjoys the freest media environment in south Asia. Print media—mostly independently owned—are diverse and often scrutinize government activity. That said, some government regulation and restrictions of the media do exist, including attempts to censor and prosecute journalists under the Official Secrets Act. Most media outlets are in private hands. While the well-educated and upper echelons of Indian society have high levels of access to the Internet, the country as a whole has a relatively low access rate, at only 3.5 percent in 2007.

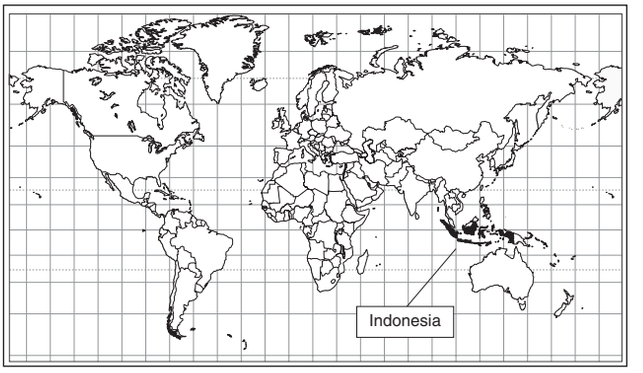
INDONESIA

Population (2010, proj.): 232,517,000

Gross National Income per Capita (current, 2007): $1,650

Date of Independence: August 17, 1945 (from the Netherlands)

Date of Last Constitution: August 1945



Indonesia has a vibrant and active media scene, even though some government interference and control limits the full exercise of the country's constitutionally guaranteed free speech and press. Violence against and intimidation of journalists—though at a low to moderate level—continues to be a problem. Private media outlets abound, though concentration of ownership has increased in recent years. In 2007, over 8 percent of the population accessed the Internet.

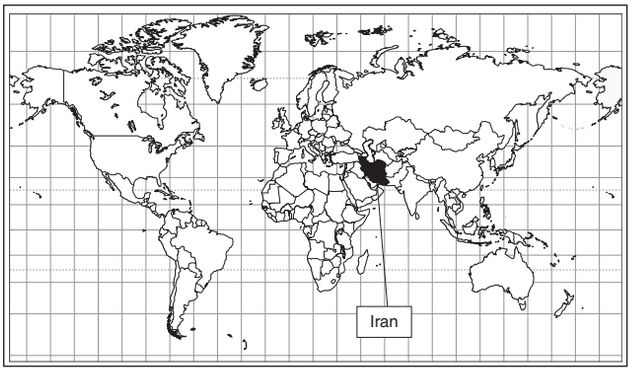
IRAN

Population (2010, proj.): 75,078,000

Gross National Income per Capita (current, 2007): $3,540

Date of Independence: April 1, 1979 (Islamic Republic of Iran proclaimed)

Date of Last Constitution: December 2–3, 1979; revised 1989



Freedom of the press continues to be limited by government policy and action in 2007, a trend developing since the early to mid-1980s. While free press is protected to some degree in the constitution, the government regularly cracks down on a range of coverage, such as that of women's rights and anti-government demonstrations. Even though public use of the Internet was banned in 2006, actual usage continues to rise, and websites and blogs, many antigovernment, continue to multiply.

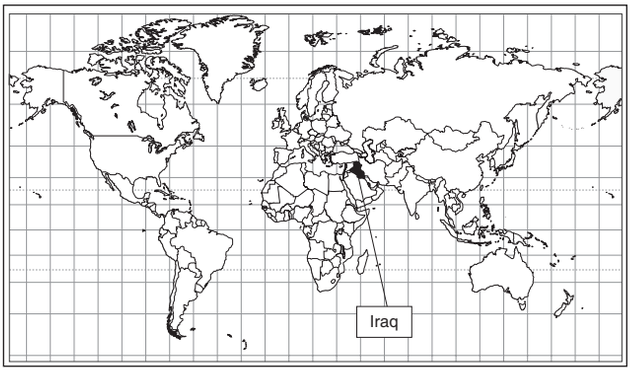
IRAQ

Population (2010, proj.): 31,467,000

Gross National Income per Capita: N/A

Date of Independence: October 3, 1932 (from League of Nations mandate under British administration); June 28, 2004 (from the Coalition Provisional Authority)

Date of Last Constitution: October 15, 2005



Since the Iraq war began in 2003 when the United States invaded the country, Iraq has been the most dangerous place for journalists to live and work. While the new constitution, enacted in 2005, grants limited freedom to the press, laws against criticizing the government are on the books. The number of media outlets has risen dramatically since the fall of Saddam Hussein, and Internet use, while dependent upon a fractured infrastructure, is on the rise, largely through Internet cafes.

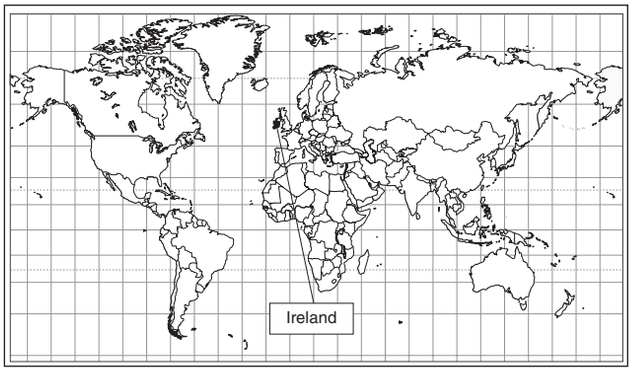
IRELAND

Population (2010, proj.): 4,589,000

Gross National Income per Capita (current, 2007): $47,610

Date of Independence: December 6, 1921 (from the UK)

Date of Last Constitution: December 29, 1937



The Irish constitution guarantees freedom of the press, a right respected in practice by the authorities. Though public radio and television dominate broadcast media, the number of private media outlets is increasing. Print outlets are many and varied. About one-half of Ireland's population accessed the Internet in 2007.

Israel enjoys a wide and varied media scene, and despite the fact that reporting on security issues is subject to military censorship, the press enjoys relatively wide freedoms. However, in recent years, Arab journalists have been known, on occasion, to be detained by authorities, especially journalists working for media outlets considered to be hostile to Israel. The media landscape is fairly decentralized, which encourages a range of opinions and perspectives. In 2007, Internet use was broad-based and extensive, at around 55 percent.

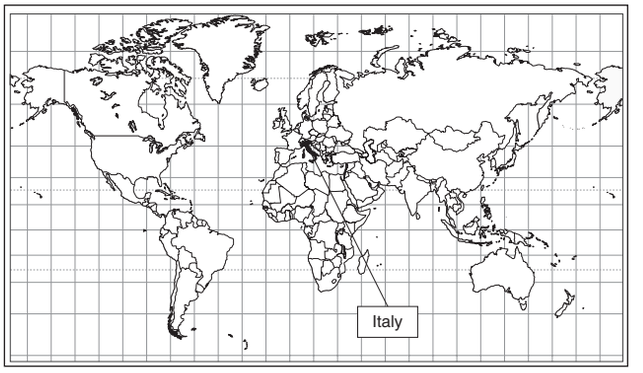
ITALY

Population (2010, proj.): 60,098,000

Gross National Income per Capita (current, 2007): $33,490

Date of Independence: March 17, 1861

Date of Last Constitution: January 1, 1948



The state of news media in Italy is considered to be generally healthy. Freedom of speech and the press is guaranteed in the constitution, while an antiracism law, enacted in 2007, criminalizes speech that incites hatred. Concentration of media ownership is a problem, particularly in respect to Prime Minister Silvio Berlusconi's media interests. Around 57 percent of the Italian population accessed the Internet in 2007.

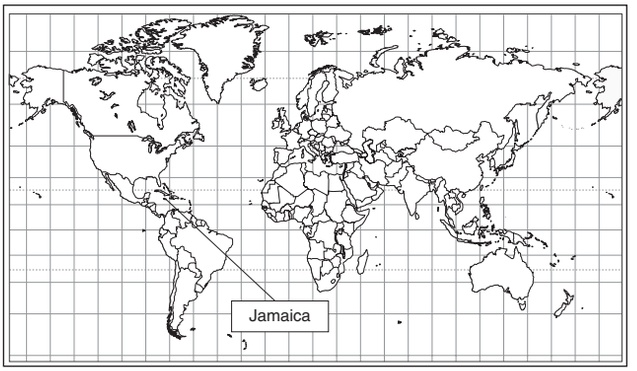
JAMAICA

Population (2010, proj.): 2,730,000

Gross National Income per Capita (current, 2007): $3,330

Date of Independence: August 6, 1962 (from the UK)

Date of Last Constitution: August 6, 1962



Jamaica enjoys a high degree of news media freedom, though lingering use of defamation laws is a worrisome factor. There are two national newspapers. Broadcasting, once controlled by the government, was privatized in 2007. The Internet is widely used and is not regulated.

Japan enjoys some of the highest levels of newspaper use in the world (several dailies enjoy circulations greater than a million). However, "press clubs" (*kisha kurabu*) in most communities strongly control who works in print and broadcast journalism, who has access to decision-makers, and often what is said, leading to considerable political self-censorship. Broadcast outlets are divided among private owners and the government-operated network called NHK. The majority of the population has access to and uses the Internet.

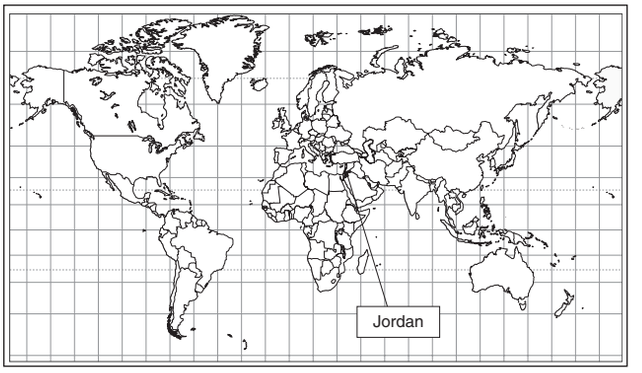
JORDAN

Population (2010, proj.): 6,472,000

Gross National Income per Capita (current, 2007): $2,840

Date of Independence: May 25, 1946 (from League of Nations mandate under British administration)

Date of Last Constitution: January 1, 1952



Jordanian news media suffer a variety of controls—formal press laws, some pressure from intelligence services, and cautious printers and advertisers—-which combine to make the press fairly compliant with government wishes through extensive self-censorship. Libeling Islam or the government is especially dangerous and potentially expensive. Publications are licensed. Private radio (and soon at least one television) outlets began to appear in 2004. Internet use is encouraged, though it appears to be monitored as well.

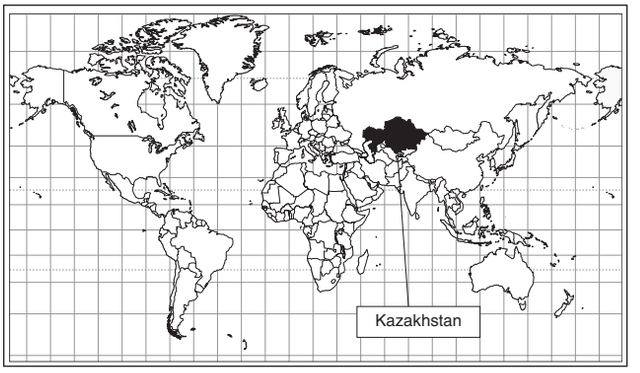
KAZAKHSTAN

Population (2010, proj.): 15,753,000

Gross National Income per Capita (current, 2007): $5,020

Date of Independence: December 16, 1991 (from the Soviet Union)

Date of Last Constitution: August 30, 1995



Political intimidation is widespread in Kazakhstan, and legal restrictions (especially the threat of libel actions) and self-censorship characterize the nation's news media. All news media must register with the government in order to operate. Most broadcast media are government owned or run by members of the President's family. The political opposition has occasionally been banned from use of the Internet though few people yet make regular use of the service.

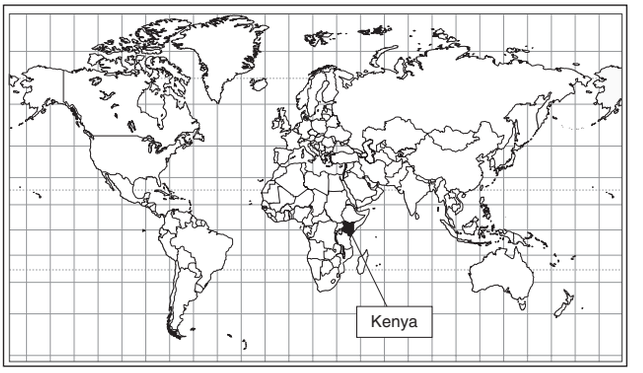
KENYA

Population (2010, proj.): 40,863,000

Gross National Income per Capita (current, 2007): $640

Date of Independence: December 12, 1963 (from the UK)

Date of Last Constitution: December 12, 1963; amended many times



A onetime reputation for aggressive reporting was threatened by the 2007 formation of a statutory media council with still-to-be-defined powers over media outlets. Reporters must register with the council and must have formal training in journalism. After a contested election late in 2007, live broadcasts were banned indefinitely in an attempt to limit dissemination of news. Internet use is limited but growing and will be aided by new broadband connections.

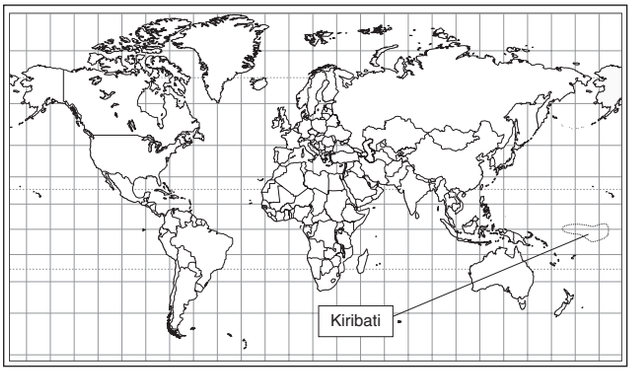
KIRIBATI

Population (2010, proj.): 100,000

Gross National Income per Capita (current, 2007): $1,120

Date of Independence: July 12, 1979 (from the UK)

Date of Last Constitution: July 12, 1979



This tiny Micronesian island nation enjoys a free press, though all newspapers have to register with the government. There is some self-censorship by journalists. There are two weekly newspapers, one government and one private, and two government radio stations. Internet is unrestricted but is the world's most expensive (though change appears to be coming) and thus plays almost no role.

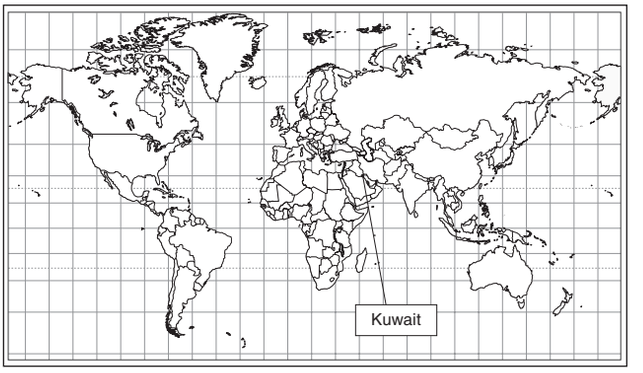
KUWAIT

Population (2010, proj.): 3,051,000

Gross National Income per Capita (current, 2006): $38,420

Date of Independence: June 19, 1961 (from the UK)

Date of Last Constitution: Approved and promulgated November 11, 1962



Kuwait's media are only partially free due to continued government censorship of and punishment for reporting on prohibited religious and political topics—including criticism of Islam or the emir (king). The Ministry of Information can censor books, periodicals and films deemed "morally offensive." Despite this, Kuwaiti media are generally freer than in other Arab nations. Newspapers are privately owned and private broadcast stations are beginning to appear. Internet use is widespread, despite government blocking of services thought critical of Islam or the government.

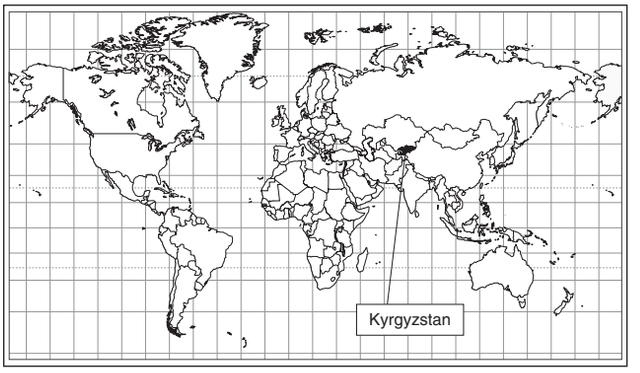
KYRGYZSTAN

Population (2010, proj.): 5,550,000

Gross National Income per Capita (current, 2007): $610

Date of Independence: August 31, 1991 (from the Soviet Union)

Date of Last Constitution: October 21, 2007



Media are closely monitored and regulated; reforms are stalled by the political tension between parties. Assaults on journalists are common, as are police raids on publishers and confiscation of newspaper print runs. There are about 50 newspapers and magazines regularly published. Internet access is limited to a small portion of people, though it provides a lively political arena for those who do use it.

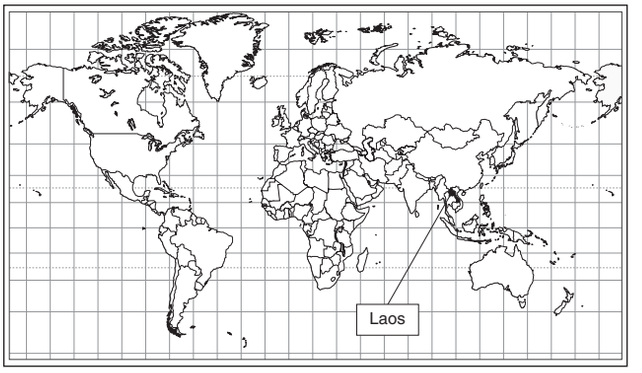
Laos

Population (2010, proj.): 6,436,000

Gross National Income per Capita (current, 2006): $630

Date of Independence: July 19, 1949 (from France)

Date of Last Constitution: Promulgated August 14, 1991



An authoritarian, one-party state, Laos retains tight control over all media. Indeed, all print and broadcast media are owned and journalists are paid by the government. There are no legal safeguards for voicing or printing dissent, resulting in self-censorship among reporters. Foreign journalists must register for special visas and are always accompanied by government escorts; Thai media are especially followed. Internet use is rare due to very high connection costs—ten times typical monthly salaries. Many overseas websites are blocked.

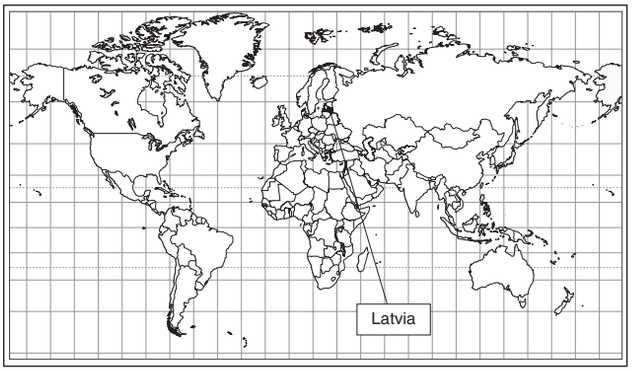
LATVIA

Population (2010, proj.): 2,240,000

Gross National Income per Capita (current, 2007): $9,920

Date of Independence: August 21, 1991 (from the Soviet Union)

Date of Last Constitution: February 15, 1922



This Baltic nation enjoys the press freedom common across most of Europe. Print and broadcast media are private, diversely held, and competitive. There are four national television channels, two government and two private. There are numerous regional private radio and television outlets. Half the population has Internet access and makes use of it.

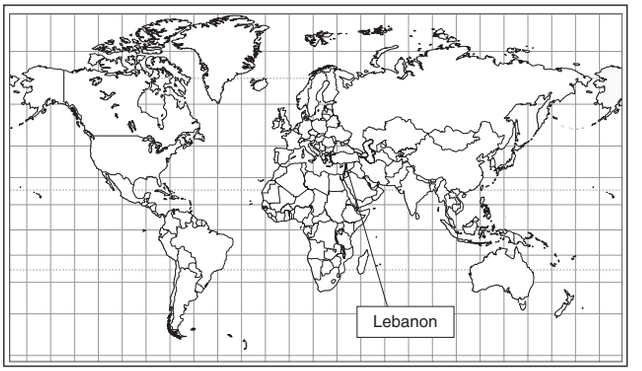
LEBANON

Population (2010, proj.): 4,255,000

Gross National Income per Capita (current, 2007): $5,800

Date of Independence: November 22, 1943 (from the League of Nations mandate under French administration)

Date of Last Constitution: May 23, 1926



Religious and political divisions in Lebanon are reflected in widespread self-censorship by journalists. Criticism of the head of state (or foreign leaders) is banned. Security services can and do censor foreign media. But the media scene is highly competitive—there are a dozen daily papers and hundreds of other publications. Like the press, radio and television outlets are privately owned, though many have ties to political or religious groups and their content reflects those links. Internet usage is widespread and growing, and many enjoy broadband connectivity.

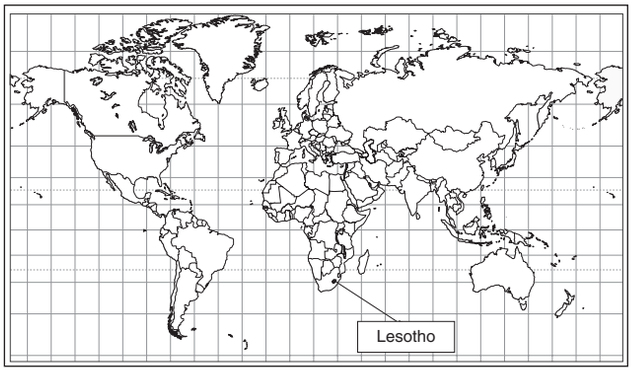
LESOTHO

Population (2010, proj.): 2,084,000

Gross National Income per Capita (current, 2007): $1,030

Date of Independence: October 4, 1966 (from the UK)

Date of Last Constitution: April 2, 1993



While the government respects press freedom in general terms, high fines for criticism of government officials or policies are often invoked. Occasional attacks on or harassment of journalists occurs. State-operated print and broadcast media reflect the party in power, while private outlets are somewhat more outspoken. Many listen to or watch services from South Africa. Internet use is very low, though not regulated.

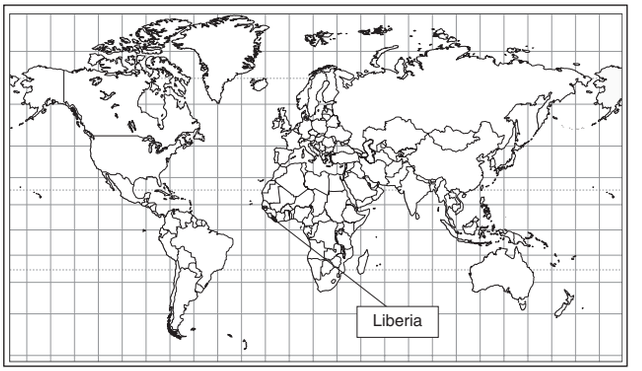
LIBERIA

Population (2010, proj.): 4,102,000

Gross National Income per Capita (current, 2007): $140

Date of Independence: July 26, 1847

Date of Last Constitution: January 6, 1986



In Liberia, which was created in the mid-nineteenth century by former American slaves, news media freedom is largely absent. Laws protecting the press or guaranteeing access to government information are vague and poorly enforced. Libel laws serve to protect government officials and agencies. Harassment of journalists and media outlets is widespread, as is the perception that poorly paid journalists readily accept bribes for good coverage. There are numerous newspapers and radio stations in the capital city of Monrovia, but Internet access, while not regulated, is too expensive for most people.

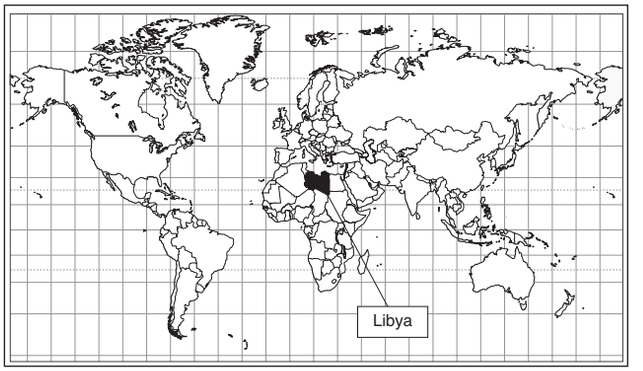
LIBYA

Population (2010, proj.): 6,546,000

Gross National Income per Capita (current, 2007): $9,010

Date of Independence: December 24, 1951 (from UN trusteeship)

Date of Last Constitution: None; adopted the Declaration of the Establishment of the People's Authority in March 1977



Libyan media are among the most tightly controlled in the world. Media outlet and individual journalist rights are almost nonexistent. Content critical of the government or Islam is quickly eliminated. Thus the government-controlled press and broadcast outlets praise the government regularly. Foreign publications or services are rarely available. Satellite television service is common. Internet is provided through one government service and is not widely used. Many foreign sites are blocked.

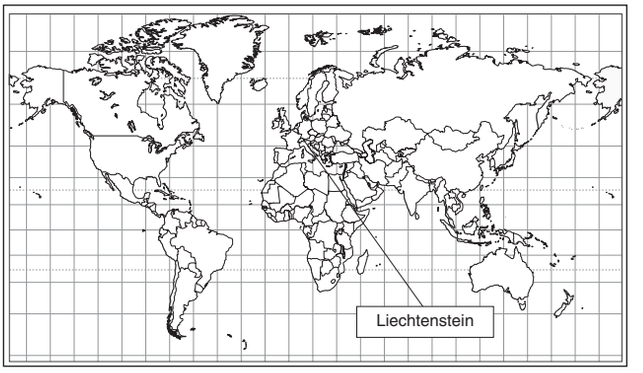
LIECHTENSTEIN

Population (2010, proj.): 36,000

Gross National Income per Capita: N/A

Date of Independence: July 12, 1806 (from the Holy Roman Empire)

Date of Last Constitution: October 5, 1921; amended September 15, 2003



This tiny European principality enjoys some of the world's freest news media. Served by several newspapers and broadcast stations, many in the country also tune to services from neighboring Austria, Germany, and Switzerland. Internet service is unrestricted and used by the majority of people.

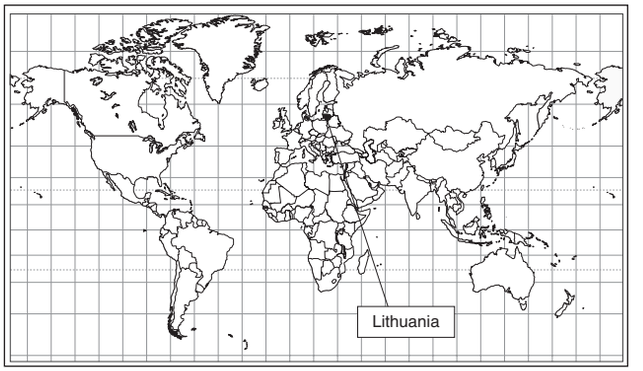
LITHUANIA

Population (2010, proj.): 3,255,000

Gross National Income per Capita (current, 2007): $9,770

Date of Independence: Declared March 11, 1990; Recognized by Soviet Union September 6, 1991

Date of Last Constitution: Adopted October 25, 1992; last amended July 13, 2004



This Baltic nation enjoys a free press. Media are often critical of the government and express a variety of viewpoints. There are some 300 newspapers and many broadcast outlets, though ownership is increasingly concentrated. While not restricted, Internet use is the lowest among the three Baltic countries.

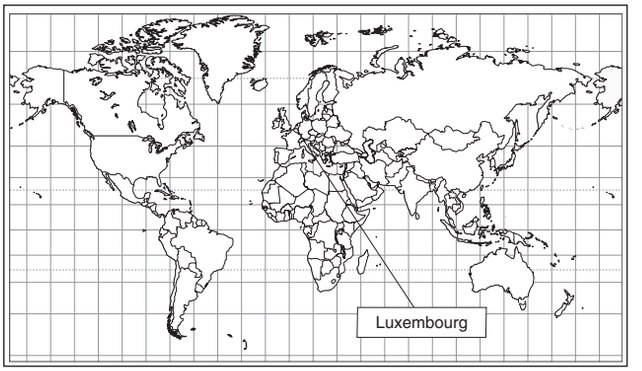
LUXEMBOURG

Population (2010, proj.): 492,000

Gross National Income per Capita (current, 2006): $72,430

Date of Independence: 1839 (from the Netherlands)

Date of Last Constitution: October 17, 1868



A wealthy though tiny nation between Belgium, Germany and France, Luxembourg has a long tradition of free media that serve many outside of the country (Radio Luxembourg was one of the early international commercial services, starting in the 1930s). Privately owned daily papers publish in several languages. Electronic media ownership is highly concentrated. Internet use is widespread.

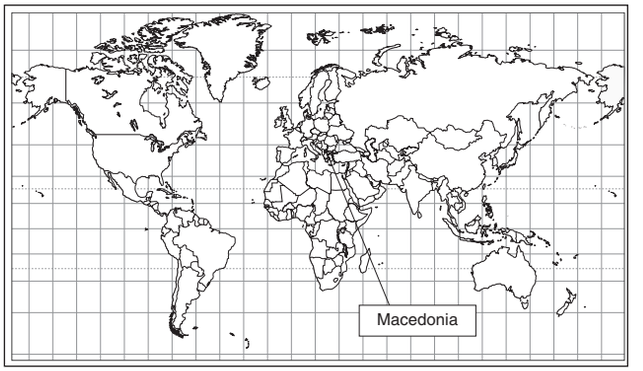
MACEDONIA

Population (2010, proj.): N/A

Gross National Income per Capita (current, 2007): $3,470

Date of Independence: September 8, 1991 (from Yugoslavia)

Date of Last Constitution: November 20, 1991 (amended November 2001)



Once part of Yugoslavia, this Balkan nation is served by partly free news media. The many private print and broadcast outlets are generally tied to some political or economic interest, which is reflected in their content. Media ownership also divides on ethnic lines. Attacks on and harassment of journalists is common. Newspaper ownership is concentrated. There are five national television services and many local radio and television outlets, but advertising revenue is limited and journalist pay is low. Internet is not restricted but cost limits use to about a fifth of the population.

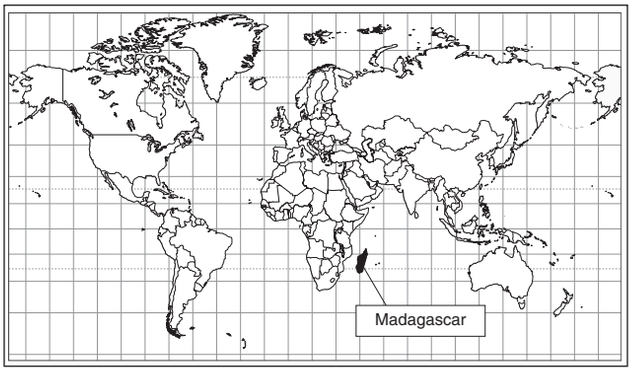
MADAGASCAR

Population (2010, proj.): 20,146,000

Gross National Income per Capita (current, 2007): $320

Date of Independence: June 26, 1960 (from France)

Date of Last Constitution: August 19, 1992



The island nation of Madagascar, off the southeast African coast, has news media partially muzzled by strict libel laws limiting criticism of government officials or policies. Journalists are poorly paid and thus often said to be open to bribes for positive coverage. About a dozen newspapers (which serve a mainly French-speaking elite), 37 television outlets, and nearly 250 radio stations serve the nation, though the country's President owns the private system that runs some of the broadcast stations. Internet is unrestricted but used by only a tiny fraction of the population.

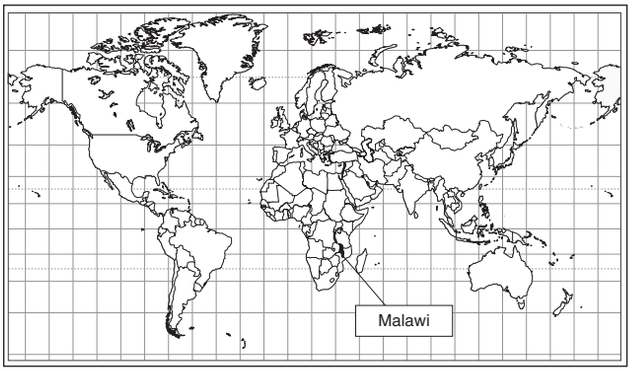
Malawi

Population (2010, proj.): 15,692,000

Gross National Income per Capita (current, 2007): $250

Date of Independence: July 6, 1964 (from the UK)

Date of Last Constitution: May 18, 1994



Freedom of expression is guaranteed in this sub-Saharan nation, though subtle government activity sometimes leads to considerable self-censorship by news media. Six of the eight major newspapers are privately owned and express diverse views. The government operates the two largest radio stations, but there are more than a dozen competing outlets mainly in urban areas. Television is operated only by the government and takes a pro-government line as might be expected. Internet usage levels are negligible.

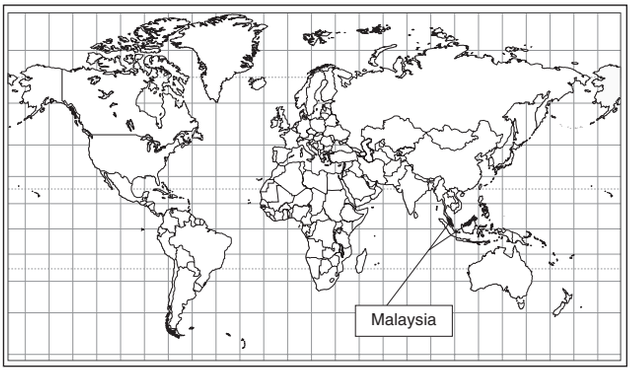
Malaysia

Population (2010, proj.): 27,914,000

Gross National Income per Capita (current, 2007): $6,420

Date of Independence: August 31, 1957 (from the UK)

Date of Last Constitution: August 31, 1957 (amended many times, most recently in 2007)



Malaysian news media have traditionally been constrained by legal restrictions and government intimidation, and this has recently been extended to online services as well. Publishers (newspapers and otherwise) must get an annual permit but the prime minister can revoke these at any time and seemingly without providing a reason. Opposition newspapers are thus often targeted. Broadcast licenses are similarly limited and in 2007 action was taken against a number of bloggers who expressed oppositional views. There is little investigative journalism given the menu of legal actions government can take in response. Censorship of books, film, and foreign media to protect Islam and government views is widespread. Despite some legal limitations, Internet use is intensive and helps counter government's information monopoly.

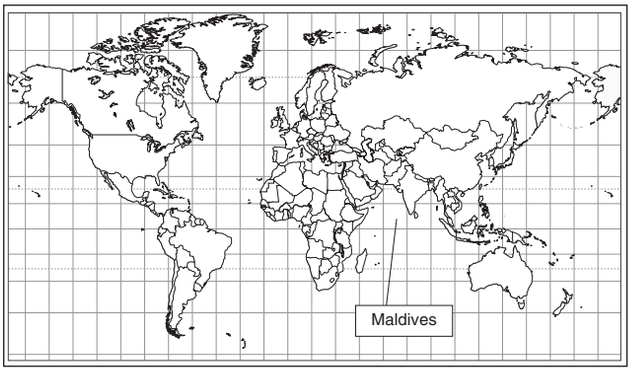
MALDIVES

Population (2010, proj.): 314,000

Gross National Income per Capita (current, 2007): $3,190

Date of Independence: July 26, 1965 (from the UK)

Date of Last Constitution: August 7, 2008



This island nation in the Indian Ocean enjoys only limited press freedom as media protections are not found in the constitution nor most laws.

A variety of content types are restricted or banned and the government can close down media outlets for transgressions. Harassment of journalists is common. Most broadcast stations are government owned and provide a progovernment line. Internet access is available, but few use it. Some oppositional websites are blocked.

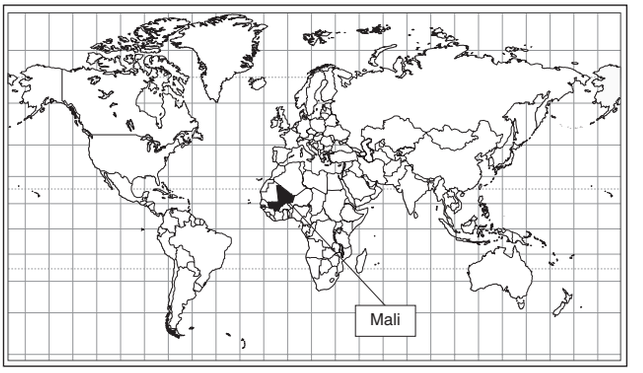
Mali

Population (2010, proj.): 13,323,000

Gross National Income per Capita (current, 2007): $500

Date of Independence: September 22, 1960 (from France)

Date of Last Constitution: January 12, 1992



Print media here are among the freest in all of Africa, although libel laws remain a matter of concern, especially as they are not consistently employed. Some 50 private newspapers and about 100 radio stations do criticize the government. Television service is provided by a government channel that is even-handed in its political coverage. Foreign media may circulate freely and the Internet is not restricted, though it is used by only a handful of people.

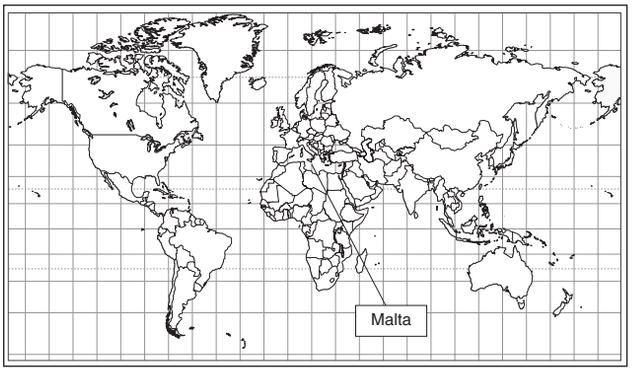
Malta

Population (2010, proj.): 410,000

Gross National Income per Capita (current, 2007): $16,680

Date of Independence: September 21, 1964 (from the UK)

Date of Last Constitution: 1964 (amended many times)



Maltese print and broadcast media are quite free, following the European model, though it is one of only three European Union countries lacking freedom of information legislation. There has been some harassment of journalists, especially those covering protests. There are a half dozen daily newspapers, one television system (though Italian television is widely watched as well), and a number of radio stations. Internet use is not regulated and most people and nearly all the islands' schools have connections.

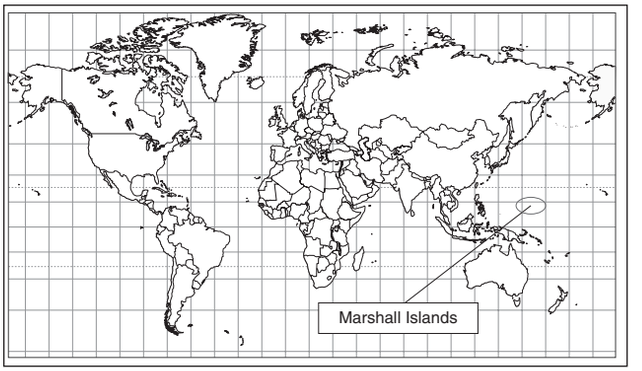
Marshall Islands

Population (2010, proj.): 63,000

Gross National Income per Capita (current, 2007): $3,240

Date of Independence: October 21, 1986 (from the U.S.-administered UN trusteeship)

Date of Last Constitution: May 1, 1979



These Pacific islands enjoy substantial media freedom. A weekly newspaper and government radio and television stations provide news to most people. American broadcasts are available by satellite. The Internet is used by a tiny fraction of the people, though the government is encouraging such use and has a government website.

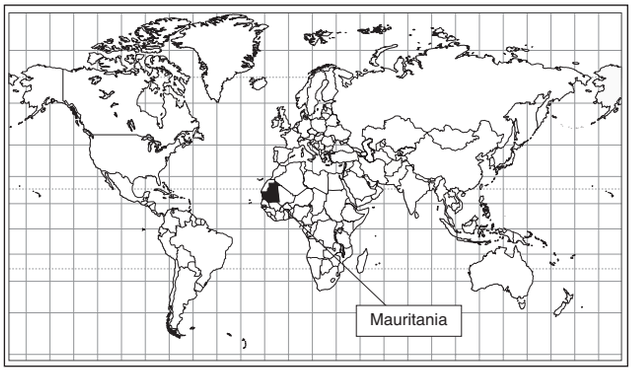
MAURITANIA

Population (2010, proj.): 3,366,000

Gross National Income per Capita (current, 2007): $840

Date of Independence: November 28, 1960 (from France)

Date of Last Constitution: July 12, 1991



Media freedom has increased since a 2005 coup overthrew the former authoritarian regime. A number of laws have helped this process along, though libel remains a potential danger and papers can be closed for publishing things thought critical of Islam or the government. Harassment of journalists is fairly common. Newspapers are both government and privately owned, but this is the only West African nation lacking a private radio or television station. Internet is not controlled but is used by only a handful of people.

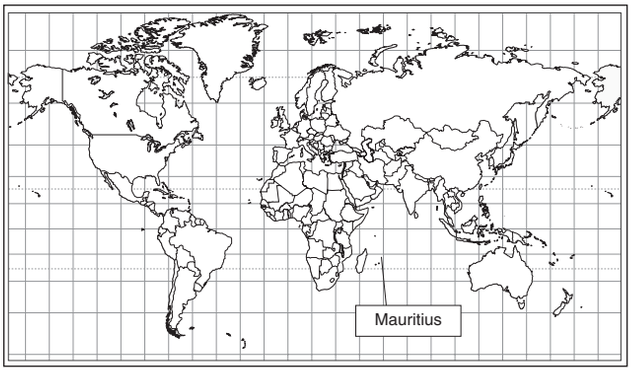
Mauritius

Population (2010, proj.): 1,297,000

Gross National Income per Capita (current, 2007): $5,580

Date of Independence: March 12, 1968 (from the UK)

Date of Last Constitution: March 12, 1968 (amended March 12, 1992)



The country has a traditionally liberal media environment, though it lacks a law requiring public access to government information. There are nine dailies and nearly three dozen weekly newspapers, with ownership concentrated in two groups. Television is the primary news medium, and is controlled by the government as are most, but not all, radio stations. Internet usage exceeds most African nations as a quarter of the population has access.

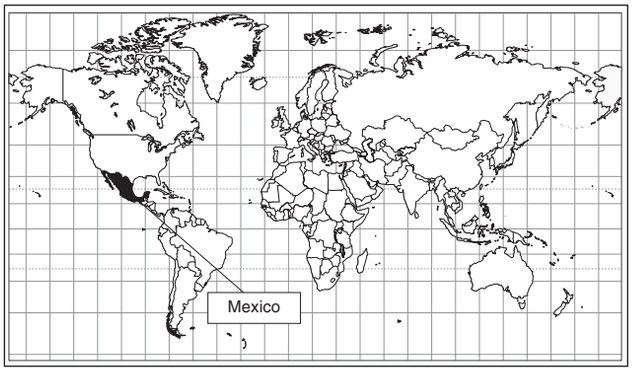
Mexico

Population (2010, proj.): 110,645,000

Gross National Income per Capita (current, 2007): $9,400

Date of Independence: September 27, 1821 (from Spain)

Date of Last Constitution: February 5, 1917



Mexico's ongoing battle with drug cartels has limited news media freedoms, increased harassment of (and substantial violence against) journalists (with little government action in response), and led to more self-censorship in reporting. On the other hand, federal criminal libel laws have been eliminated, though they continue on the books in many states. Major cities are well served by competing media—there are some 300 newspapers in the country—but small towns and rural areas less so. Television is dominated by a long-lasting duopoly ownership. Internet is used by about a quarter of the population.

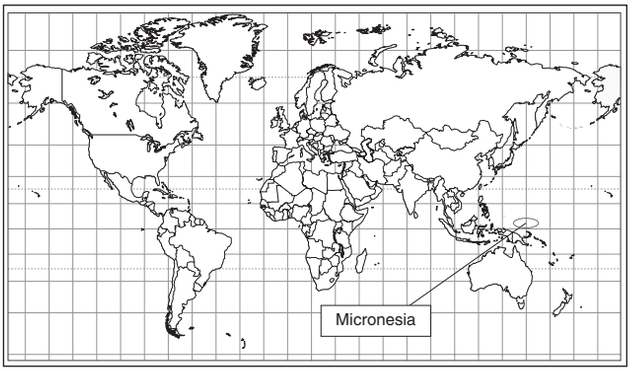
Micronesia

Population (2010, proj.): 111,000

Gross National Income per Capita (current, 2007): $2,280

Date of Independence: November 3, 1986 (from the U.S.-administered UN trusteeship)

Date of Last Constitution: May 10, 1979



Micronesia is made up of many groups of islands, so population is widely scattered making print media distribution difficult. There are five weekly or biweekly papers, and one online daily. Each of the four states has a radio station, and some have television as well. Foreign television is available by satellite. Relatively few people (13 percent in 2007) make use of the Internet.

MOLDOVA

Population (2010, proj.): 3,576,000

Gross National Income per Capita (current, 2007): $1,210

Date of Independence: August 27, 1991 (from the Soviet Union)

Date of Last Constitution: August 27, 1994

After a short period of partial freedom, Moldova has returned to its Soviet roots and little news media freedom. The government often infringes on legally "guaranteed" press freedom, and harassment of journalists is fairly common. Some newspapers provide a voice for opposition political views, but broadcast news is weaker. The government radio–television service offers a progovernment line. Internet use is not common, though it is not restricted.

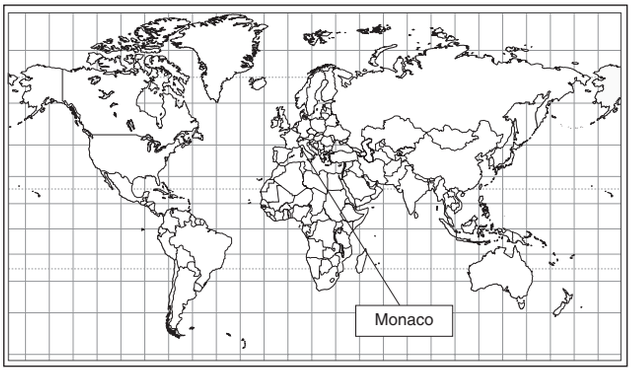
Monaco

Population (2010, proj.): 33,000

Gross National Income per Capita: N/A

Date of Independence: 1419 (beginning of rule by House of Grimaldi)

Date of Last Constitution: December 17, 1962 (modified April 2, 2002)



This tiny principality on the French-Italian border is one of the world's wealthiest enclaves and enjoys a nearly free press (the royal family may not be criticized). There are no daily papers, though French print and broadcast media circulate widely. There are government radio and television stations, and one private (English-language) radio station. Internet use is widespread.

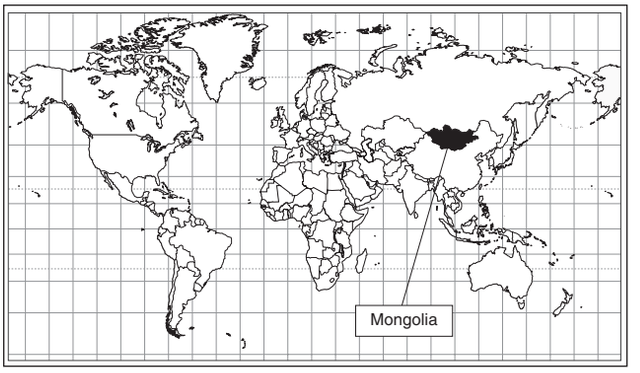
MONGOLIA

Population (2010, proj.): 2,701,000

Gross National Income per Capita (current, 2007): $1,290

Date of Independence: July 12, 1921 (from China)

Date of Last Constitution: January 13, 1992



Mongolia is located between Russia and China, and its media are partially free, though protected by law. Libel law (limiting criticism of government officials) remains a problem, and there is some legal harassment of journalists. Newspapers compete in several cities, but Radio Mongolia is the prime news source, now in transition to private from state control. Provincial media are generally controlled by state authorities. There are a number of private television stations, and foreign programming is received via satellite and cable links. Only about 10 percent of the population makes use of the Internet.

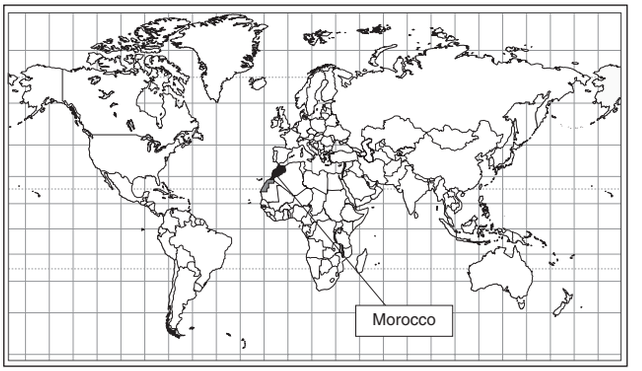
Morocco

Population (2010, proj.): 32,381,000

Gross National Income per Capita (current, 2007): $2,290

Date of Independence: March 2, 1956 (from France)

Date of Last Constitution: March 10, 1972 (last revised September 1996)



Moroccan media are restricted from reporting anything critical of the royal family or Islam—or anything against the government position concerning the Western Sahara. Fines and prison terms can face journalists who transgress these limitations. Seventeen daily and about 90 weekly papers (plus six online news sites) circulate, and most receive subsidies from the government. Broadcast outlets are still dominated by state control. About a fifth of the country makes use of the Internet (some websites are blocked).

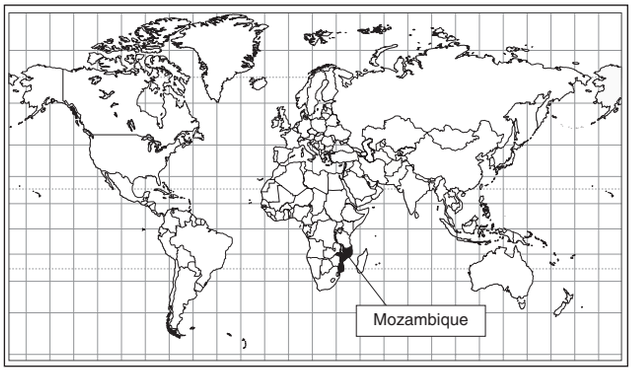
MOZAMBIQUE

Population (2010, proj.): 23,406,000

Gross National Income per Capita (current, 2007): $330

Date of Independence: June 25, 1975 (from Portugal)

Date of Last Constitution: November 30, 1990



This south African nation provides for press freedom in its constitution and a 1991 press law. But there is still some harassment of journalists and use of libel law to limit negative reports on government officials. Newspapers are largely limited to the capital city and have little impact on the illiterate interior. Radio is more important—-there are government broadcast stations and a number of private competitors as well. The level of Internet use is negligible.

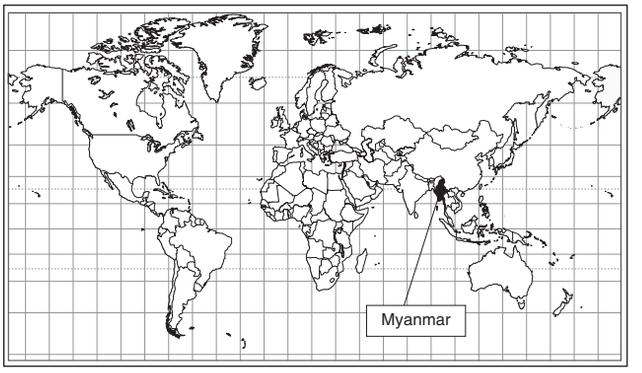
Myanmar (Burma)

Population (2010, proj.): 50,496,000

Gross National Income per Capita: N/A

Date of Independence: January 4, 1948 (from the UK)

Date of Last Constitution: May 10, 2008 (approved)



The repressive and reclusive military regime exerts close control on the nation's media—it owns all broadcast stations and daily newspapers. Prison terms are common and can be protracted for dissident journalists. Prepublication censorship is standard. The ability of domestic and foreign journalists to do basic reporting is restricted. Internet access is expensive, regulated, and censored, and few make use of it.

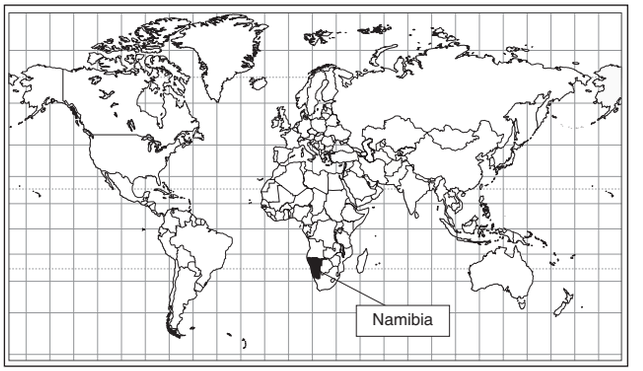
NAMIBIA

Population (2010, proj.): 2,212,000

Gross National Income per Capita (current, 2007): $3,450

Date of Independence: March 21, 1990 (from South African mandate)

Date of Last Constitution: March 12, 1990



The country enjoys some of the freest media on the African continent. Six of the eight newspapers are privately owned. The government-owned radio and television service is dominant, though there are a dozen private radio stations and two television outlets. Satellite television brings in foreign services. Internet use is limited to a handful of users by high cost and limited access, though there is no content regulation.

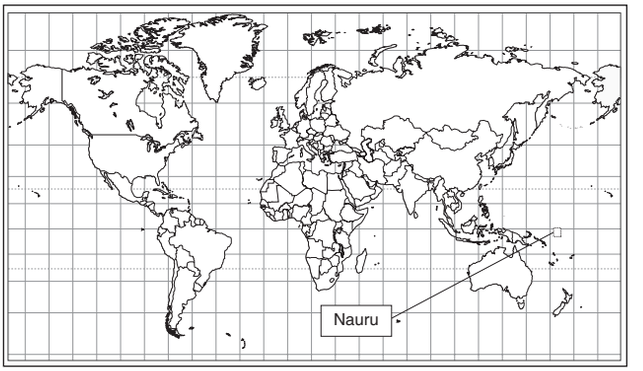
Nauru

Population (2010, proj.): 10,000

Gross National Income per Capita: N/A

Date of Independence: January 31, 1968 (from the Australia-, New Zealand-, and UK-administered UN trusteeship)

Date of Last Constitution: January 29, 1968 (amended May 17, 1968)



There are no daily papers and the government operates radio and television services. A poor economy hurts media ability to improve its reporting role. There are no limits on Internet use but few use it.

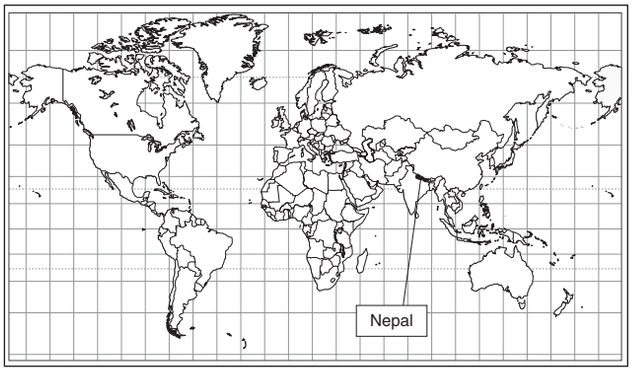
NEPAL

Population (2010, proj.): 29,853,000

Gross National Income per Capita (current, 2007): $350

Date of Independence: 1768 (unified by Prithvi Narayan Shah)

Date of Last Constitution: January 15, 2007



This Himalayan nation between India and China suffered a long civil war and in 2008 an election resulted in a Maoist government. To that point, media had been partially free under the ruling king, since deposed. Violence against journalists was common. The government owned the chief newspaper as well as radio and television service, though private companies competed in all media as well. Internet usage is negligible.

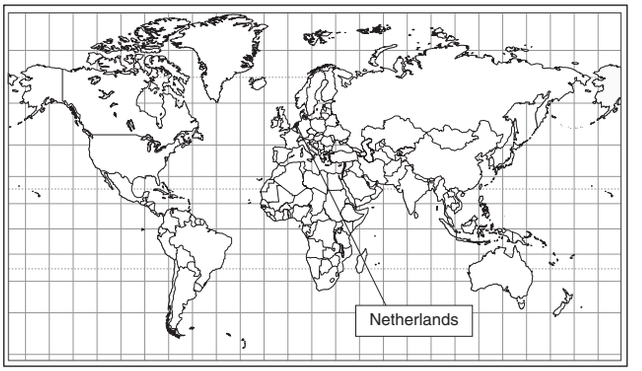
NETHERLANDS

Population (2010, proj.): 16,653,000

Gross National Income per Capita (current, 2007): $45,650

Date of Independence: Formally declared July 26, 1581; recognized by Spain January 30, 1648

Date of Last Constitution: Adopted 1815; amended most recently in 2002



As with other Western European nations, Dutch media are remarkably free. Rules against criticism of the royal family are seldom enforced. Newspaper ownership is concentrated. Public service broadcasting has faced commercial competition since 1988. Internet usage is nearly universal.

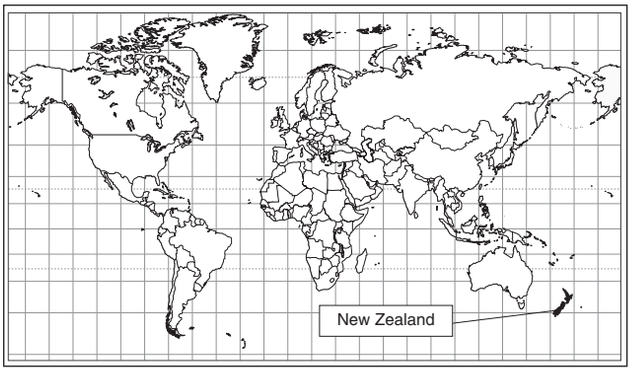
New Zealand

Population (2010, proj.): 4,303,000

Gross National Income per Capita (current, 2007): $27,080

Date of Independence: September 26, 1907 (from the UK)

Date of Last Constitution: Adopted January 1, 1987



New Zealand media are free more by tradition than constitutional provision. Four foreign firms (largely Australian) dominate the newspaper market and private broadcasters compete with the government radio–television system. Internet use is widespread.

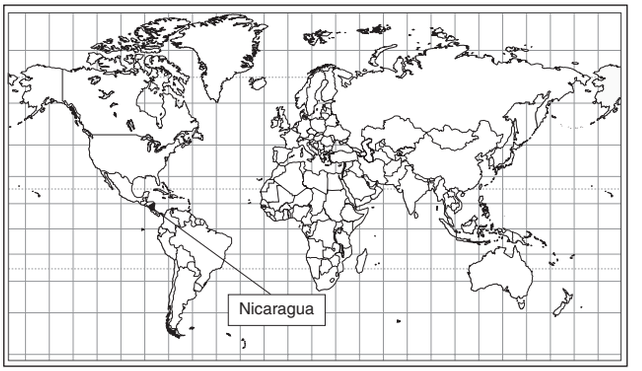
NICARAGUA

Population (2010, proj.): 5,822,000

Gross National Income per Capita (current, 2007): $990

Date of Independence: September 15, 1821 (from Spain)

Date of Last Constitution: January 9, 1987 (last revised in 2005)



Tensions between government and the news media are traditional here, and intimidation of (though, less commonly, violence against) reporters is widespread. Self-censorship is common. All media rely on government advertising given the weak economy—and it is often limited only to outlets backing the government. The capital city of Managua is served by ten television and about 100 radio stations, the latter providing the chief source of news for most people in the country. Internet usage is negligible.

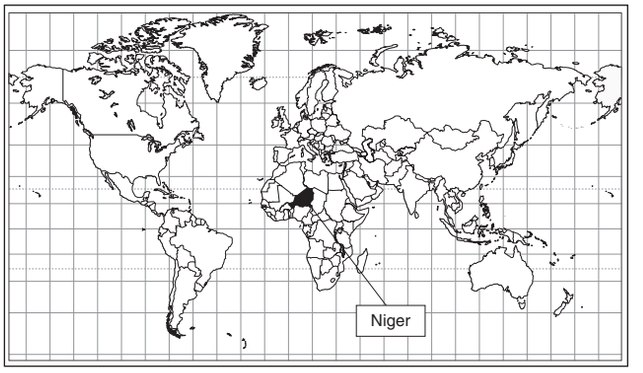
NIGER

Population (2010, proj.): 15,891,000

Gross National Income per Capita (current, 2007): $280

Date of Independence: August 3, 1960 (from France)

Date of Last Constitution: Adopted July 18, 1999



As in many developing countries, press freedom is guaranteed, but rarely observed. Civil conflict in the northern part of Niger has worsened the situation as government clamps down on formerly independent media to limit coverage of events. Radio is the most important news medium, and some private stations compete with the government service. Internet usage is negligible.

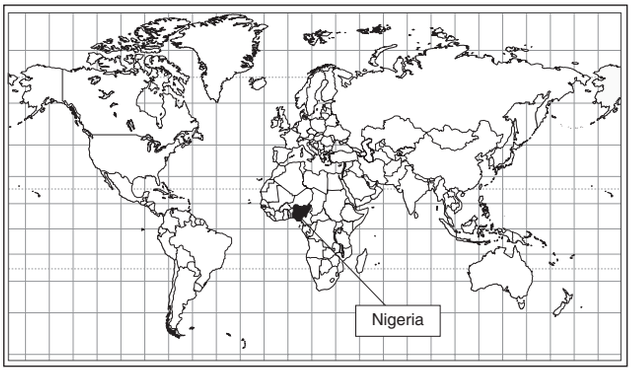
NIGERIA

Population (2010, proj.): 158,259,000

Gross National Income per Capita (current, 2007): $920

Date of Independence: October 1, 1960 (from the UK)

Date of Last Constitution: Adopted May 5, 1999; effective May 29, 1999



In Nigeria, one of Africa's most important countries, government harassment of the news media is fairly common, especially around elections. Access to government information is marginal at best. Violence against journalists is also common. There are more than 100 national and local publications, and 300 radio stations (the most important news medium), while television is limited to urban areas. Foreign broadcasts are an important source of news. Internet use is very low.

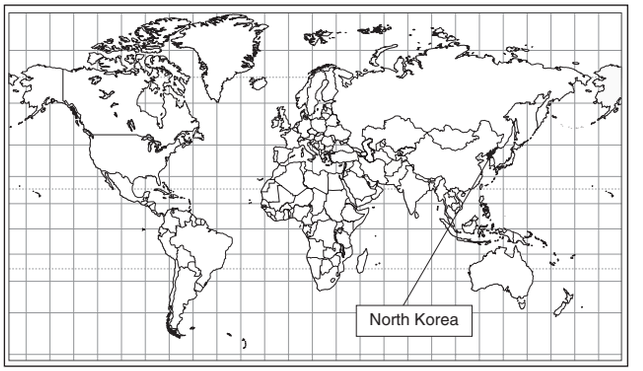
North Korea

Population (2010, proj.): 23,991,000

Gross National Income per Capita: N/A

Date of Independence: August 15, 1945 (from Japan)

Date of Last Constitution: Adopted 1948; revised most recently in September 1998



There is virtually no press freedom in this dictatorship. Print and broadcast media, all owned by the state, parrot government propaganda. Radio receivers must be registered and are limited to government radio frequencies. Access to any external media, including the Internet, is closely controlled.

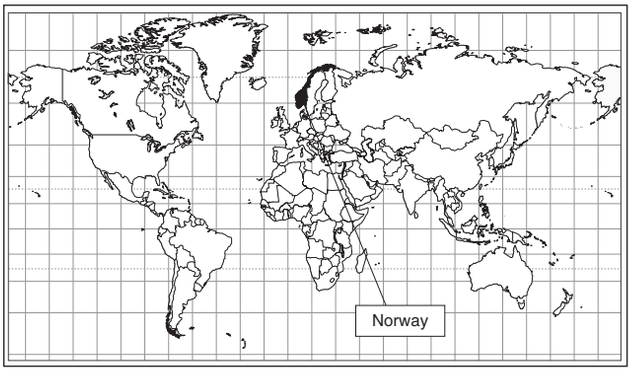
Norway

Population (2010, proj.): 4,855,000

Gross National Income per Capita (current, 2007): $77,370

Date of Independence: Declared union with Sweden dissolved June 7, 1905; Sweden agrees to repeal of the union October 26, 1905

Date of Last Constitution: May 17, 1814; amended many times



Norway enjoys the European tradition of a free news media, including more than 200 newspapers. Three companies dominate the print media sector. Broadcasting is both state-owned and private, and Internet usage is nearly universal.

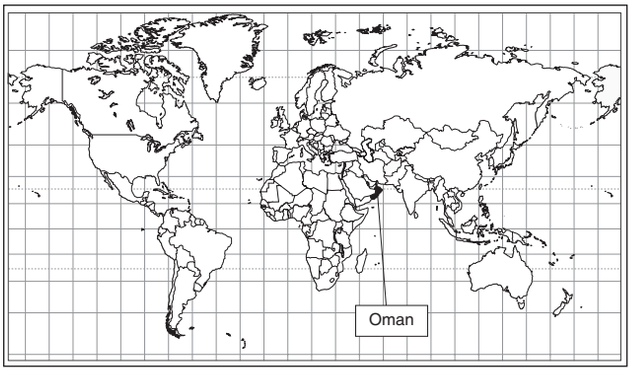
OMAN

Population (2010, proj.): 2,905,000

Gross National Income per Capita (current, 2006): $12,860

Date of Independence: 1650 (expulsion of the Portuguese)

Date of Last Constitution: no official constitution



Oman's media are among the most regulated and restricted in the Arab world—which is saying something. Yet some news (though rarely local) is available from domestic and (by satellite) international services. Journalists must be licensed and can lose their rights for a wide variety of transgressions. There are seven daily newspapers, five of them privately owned. There are several government radio and television stations, and a slowly growing number of privately owned competing outlets. Internet service is both expensive and broadly censored—and is used by perhaps 10 percent of the population, low for the region.

PAKISTAN

Population (2010, proj.): 184,753,000

Gross National Income per Capita (current, 2007): $860

Date of Independence: August 14, 1947 (from the UK)

Date of Last Constitution: April 12, 1973 (suspended and restored multiple times, most recently restored on December 15, 2007)

Political unrest and some strong content regulation (against criticism of the government, religion, the armed forces, and the constitution) limit the freedom of Pakistani news media. Government advertising is an important source of media revenue—and its withdrawal a means of press control. Libel law is widely used to control media reporting as well. Intimidation and attacks on journalists are commonplace. There are 21 national daily newspapers and 13 regional papers. Only government radio and television stations can provide news—which generally supports the government position. The government bans some websites, and Internet use is very limited.

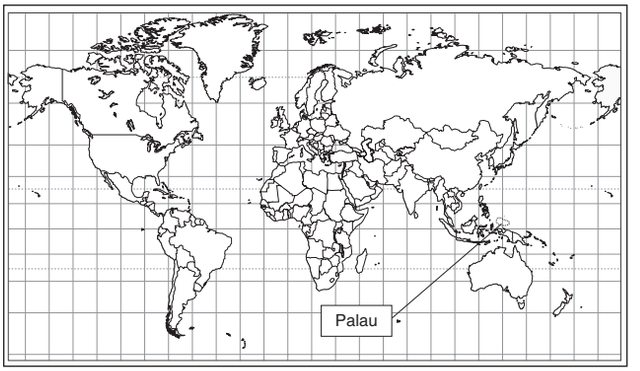
PALAU

Population (2010, proj.): 21,000

Gross National Income per Capita (current, 2007): $8,270

Date of Independence: October 1, 1994 (from the U.S.-administered UN trusteeship)

Date of Last Constitution: January 1, 1981



This Pacific island nation is one of the world's smallest in terms of population—about the size of a small American town. Press censorship is rare. There are just a handful of weekly papers and radio stations. Internet use is nearly nonexistent.

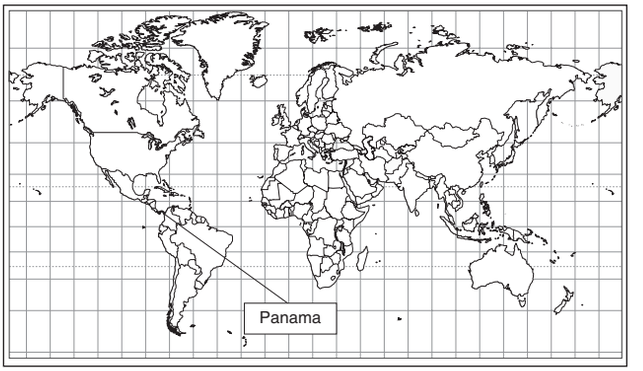
PANAMA

Population (2010, proj.): 3,508,000

Gross National Income per Capita (current, 2007): $5,500

Date of Independence: November 3, 1903 (from Colombia; became independent from Spain November 28, 1821)

Date of Last Constitution: October 11, 1972 (last revised in 2004)



This Central American nation provides a difficult environment for journalists, one heavy with intimidation. Low pay leads to widespread corruption (bribes are common). Access to government information is limited. Media tend to parallel political party views. Less than 10 percent of the population accesses the Internet.

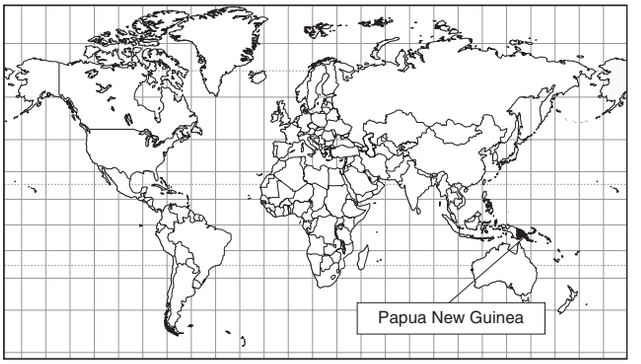
Papua New Guinea

Population (2010, proj.): 6,888,000

Gross National Income per Capita (current, 2007): $850

Date of Independence: September 16, 1975 (from the Australian-administered UN trusteeship)

Date of Last Constitution: September 16, 1975



News media freedom is guaranteed in the constitution and is generally observed. The country's two daily papers are both foreign owned (one by Rupert Murdoch). Fiji controls the other and the only television station. There is both a government and private radio network. Internet usage is very low.

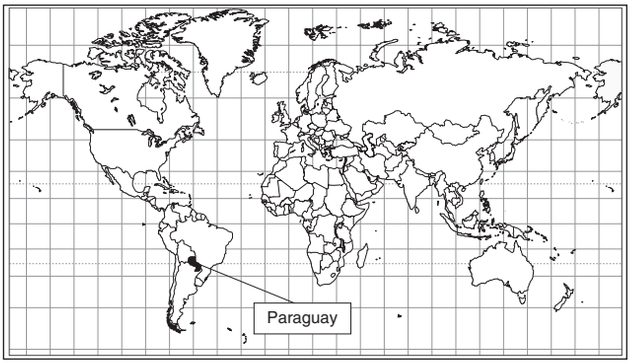
PARAGUAY

Population (2010, proj.): 6,460,000

Gross National Income per Capita (current, 2007): $1,710

Date of Independence: May 14, 1811 (from Spain)

Date of Last Constitution: June 20, 1992



This South American nation has a constitution guaranteeing press freedom though numerous loopholes provide a means for government intimidation of news media. Attacks on journalists are common and so is self-censorship. A number of independent newspapers and broadcast stations are overshadowed by the Colorado party's six decades in power—it controls perhaps 80 percent of the country's radio stations, for example. Internet use is minimal.

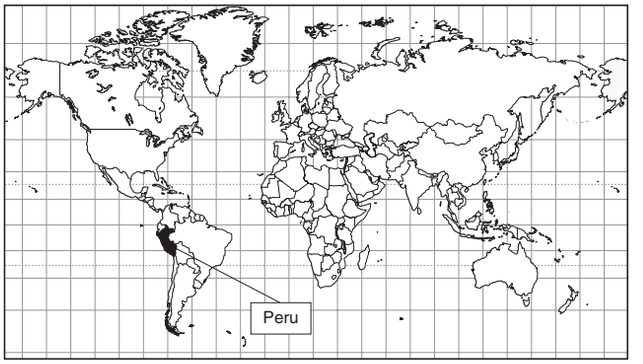
PERU

Population (2010, proj.): 29,496,000

Gross National Income per Capita (current, 2007): $3,410

Date of Independence: July 28, 1821 (from Spain)

Date of Last Constitution: December 29, 1993



This Andean nation guarantees press freedom in the constitution, but the reality is something considerably short of that. Libel laws ("disrespect") are widely applied. Attacks on journalists are all too common. Private newspapers and broadcast stations enjoy larger audiences than state-operated media. About a fifth of the country's people access the Internet.

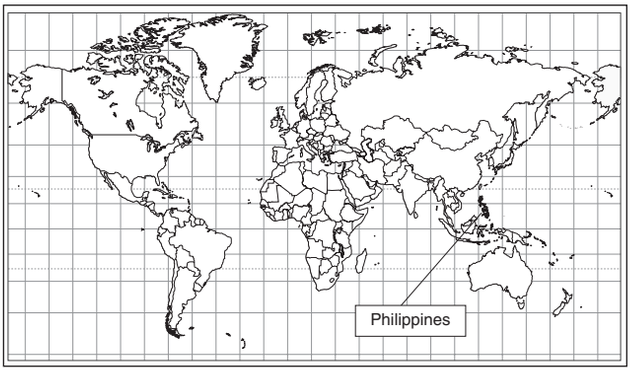
PHILIPPINES

Population (2010, proj.): 93,617,000

Gross National Income per Capita (current, 2007): $1,620

Date of Independence: June 12, 1898 (from Spain); July 4, 1946 (from the U.S.)

Date of Last Constitution: February 11, 1987



Made up of hundreds of islands large and small, the nation enjoys a partially free news media, weakened by widespread attacks on journalists in recent years. There are no licensing requirements to publish newspapers or to be a journalist. But libel law is widely used to intimidate journalists. A censorship board operates for film and television, though it rarely focuses on political concerns. Most media are privately owned, though ownership concentration has increased in recent decades. Perhaps 15 percent of the people used the Internet in 2007.

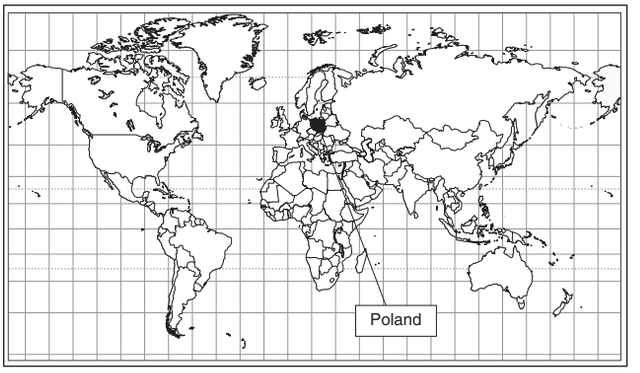
POLAND

Population (2010, proj.): 38,038,000

Gross National Income per Capita (current, 2007): $9,850

Date of Independence: November 11, 1918 (republic proclaimed)

Date of Last Constitution: October 17, 1997



After years as a Soviet satellite country, Poland and its media emerged into freedom in the early 1990s. Censorship is forbidden, and the constitution enshrines freedom of the press. Media ownership is largely private and diversified, though government television is the primary news source. The Internet is accessed by about 40 percent of the population.

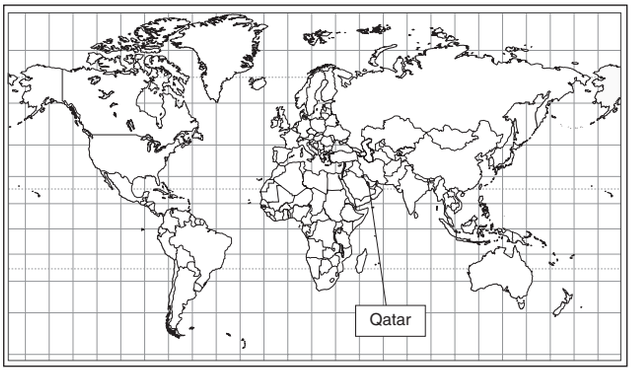
QATAR

Population (2010, proj.): 1,508,000

Gross National Income per Capita: N/A

Date of Independence: September 3, 1971 (from the UK)

Date of Last Constitution: June 9, 2005



The home of the international Al Jazeera network, the Persian Gulf kingdom is otherwise one that strongly controls domestic media. Few specific laws protect media freedom. There are seven newspapers, four Arabic and two English, whose owners are close to the royal family. The government controls electronic media. A third of the population uses the Internet, which is closely monitored, and some websites deemed negative to the country's interests are banned.

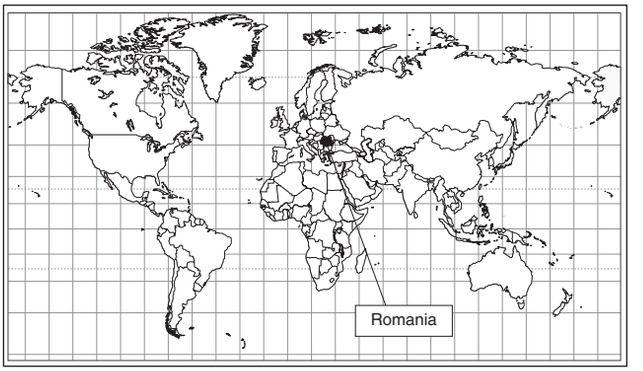
ROMANIA

Population (2010, proj.): 21,190,000

Gross National Income per Capita (current, 2007): $6,390

Date of Independence: 1877 (from Ottoman Empire)

Date of Last Constitution: December 8, 1991; revision effective October 29, 2003



Romania's constitution protects press freedom and the government increasingly acts accordingly. While criminal defamation remains a problem for journalists trying to report on government officials, government information is increasingly accessible. Public and private broadcasters compete, though ownership concentration is evident as there are more outlets than the economy can afford. About a third of the population used the Internet by 2007.

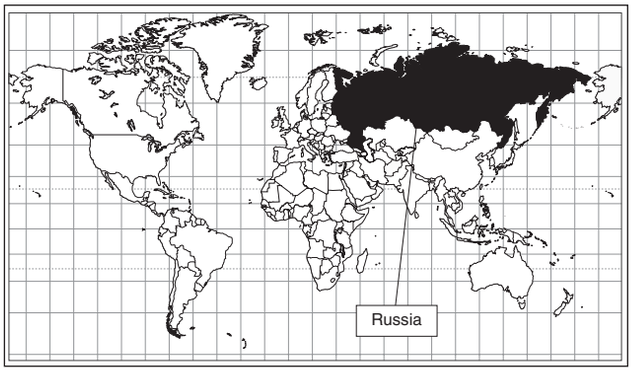
Russian Federation

Population (2010, proj.): 140,367,000

Gross National Income per Capita (current, 2007): $7,530

Date of Independence: August 24, 1991 (from the Soviet Union)

Date of Last Constitution: December 12, 1993



Operating in the core of the former Soviet Union, Russian news media have descended in recent years from a brief period of partially free operation back to an authoritarian pattern. Criminal defamation is now a widespread issue, and there is little independent reporting in the country. Self-censorship is rife—as are attacks on journalists and media institutions. State-owned print and broadcast media promote government views. About a quarter of the population used the Internet in 2007 but were subject to growing monitoring.

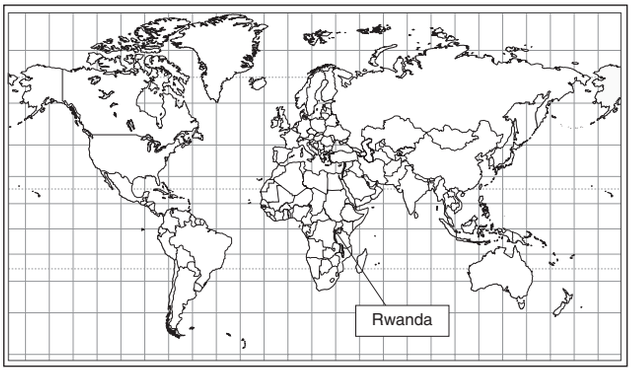
RWANDA

Population (2010, proj.): 10,277,000

Gross National Income per Capita (current, 2007): $320

Date of Independence: July 1, 1962 (from Belgian-administered UN trusteeship)

Date of Last Constitution: May 26, 2003



There is little media freedom here. Censorship is common (despite laws to the contrary) as is use of criminal libel laws to limit critiques of the government. Journalists are commonly attacked and jailed for a wide variety of offenses. Only the state-owned newspaper publishes regularly due to harassment of competing papers. Internet access is monitored and hardly used by anyone.

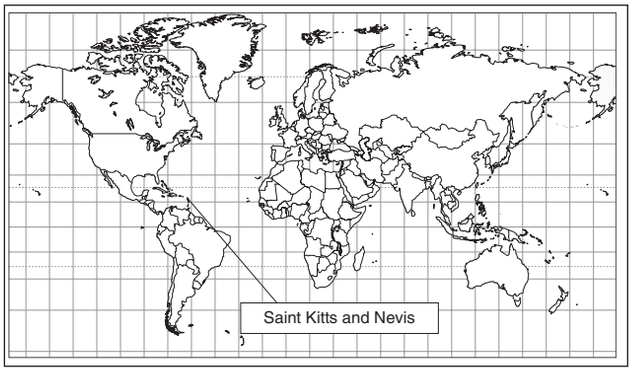
Saint Kitts and Nevis

Population (2010, proj.): 52,000

Gross National Income per Capita (current, 2007): $9,990

Date of Independence: September 19, 1983 (from the UK)

Date of Last Constitution: September 19, 1983



These Caribbean islands enjoy press freedom as enshrined in the constitution. Many independent media operate, and a wide diversity of views is regularly expressed. There are both government and private weekly papers, and government and private broadcast stations. About a quarter of the population accessed the Internet in 2007.

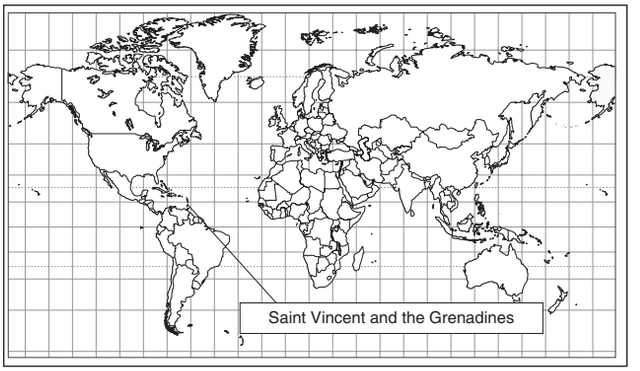
Saint Vincent and the Grenadines

Population (2010, proj.): 109,000

Gross National Income per Capita (current, 2007): $4,210

Date of Independence: October 27, 1979 (from the UK)

Date of Last Constitution: October 27, 1979



This former British Caribbean possession enjoys a constitutional right of free press that is widely observed. The main newspapers are privately held; broadcasting outlets are run by the government and many private owners. But only about 10 percent of the population uses the Internet as of 2007.

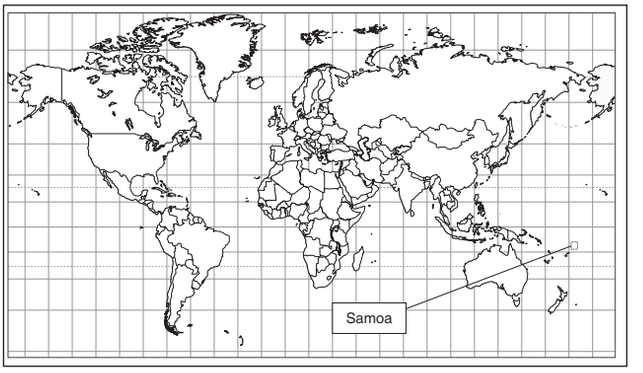
Samoa

Population (2010, proj.): 179,000

Gross National Income per Capita (current, 2007): $2,700

Date of Independence: January 1, 1962 (from New Zealand–administered UN trusteeship)

Date of Last Constitution: January 1, 1962



The Pacific island nation enjoys a constitutional right to a free press, though libel laws remain an issue of concern. Both print and broadcast media outlets are operated by the government and private owners and compete vigorously. Satellite service brings in further channels from overseas. Internet use was very minor as of 2007.

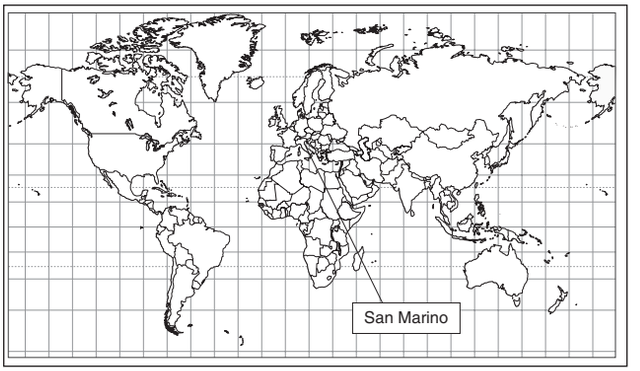
San Marino

Population (2010, proj.): 32,000

Gross National Income per Capita (current, 2007): $46,770

Date of Independence: September 3, 301

Date of Last Constitution: October 8, 1600 (electoral law of 1926 serves some of the functions of a constitution)



This tiny European principality enjoys freedom of its news media. There are three daily private newspapers but radio and television are government monopolies. Many people also use Italian media. The Internet is accessed by more than half the population as of 2007.

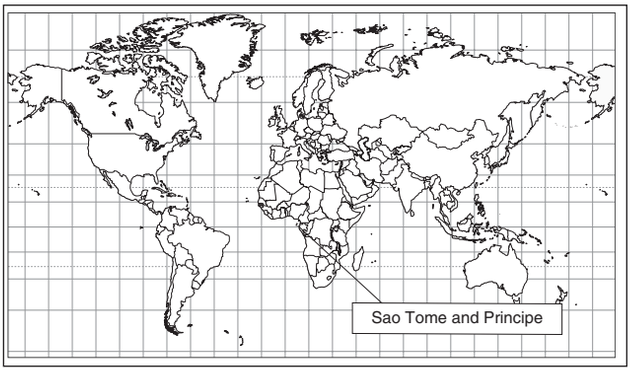
Sao Tome and Principe

Population (2010, proj.): 165,000

Gross National Income per Capita (current, 2007): $870

Date of Independence: July 12, 1975 (from Portugal)

Date of Last Constitution: September 10, 1990



This sub-Saharan African nation enjoys a constitutional protection of press freedom that is widely observed. Though there is little government interference with news reporting, self-censorship is widely practiced by the country's journalists. Nine newspapers (seven of them private), and government radio and television stations (private radio began only in 2006) provide service. In 2007, about 14 percent of the people made use of the Internet.

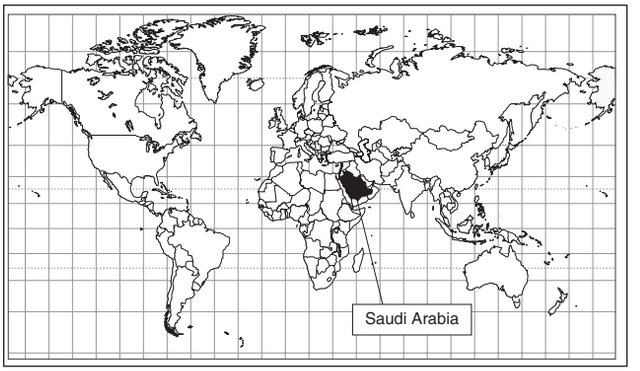
Saudi Arabia

Population (2010, proj.): 26,246,000

Gross National Income per Capita (current, 2007): $15,470

Date of Independence: September 23, 1932 (unification of the kingdom)

Date of Last Constitution: governed according to Islamic law (Basic Law promulgated by royal decree in 1992)



The desert kingdom maintains tight control over its media—journalism is more oppressed here than in most Arab nations. Media are seen as a means of promoting government views, education, and national unity. Criticism of the royal family or religion is banned. The Ministry of Culture and Information administers all media including ten dailies (some owned by the royal family), and radio and television outlets. Satellite reception is illegal—but widely used. Internet websites are often blocked and about a fifth of the country's people have access.

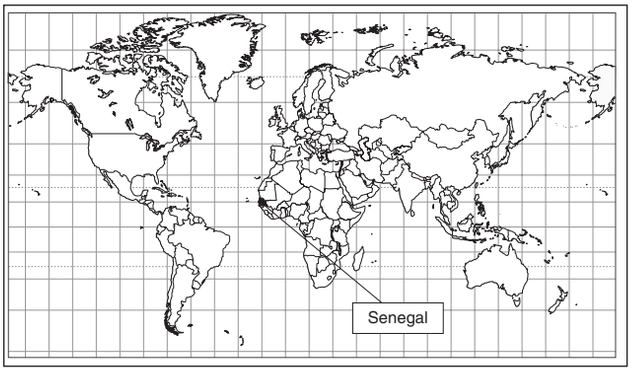
SENEGAL

Population (2010, proj.): 12,861,000

Gross National Income per Capita (current, 2007): $830

Date of Independence: April 4, 1960 (from France)

Date of Last Constitution: January 7, 2001



Persecution of journalists is widespread in this African nation and appears to be getting worse, despite government pledges to the contrary. Criminal libel is a primary tool of government to keep the press in line. Still, many private print publications and more than 80 private radio stations operate, though many are in the hands of those backing the regime. The only television station is run by the government. Reception of foreign services by satellite is available, as is Internet though only about 5 percent used the latter in 2007.

Serbia and Montenegro

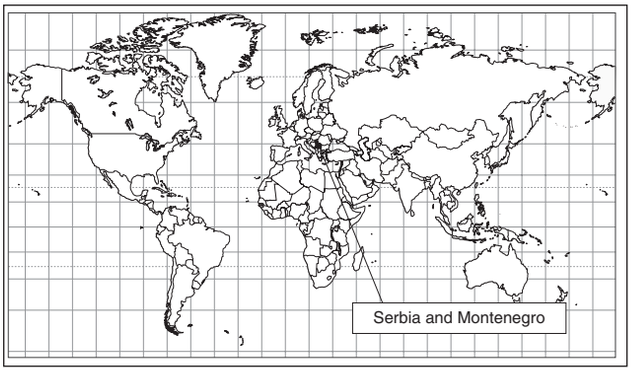
As of 2006, Serbia and Montenegro were recognized as two independent countries.

Population (2010, proj.): 9,856,000 / 626,000

Gross National Income per Capita (current, 2007): $4,540 / $5,270

Date of Independence: June 5, 2006 / June 3, 2006

Date of Last Constitution: November 10, 2006 / October 19, 2007



These Balkan countries, once part of Yugoslavia, suffer from the ethnic tensions rife in the area, as well as past conflicts. Attacks on journalists are fairly common. Self-censorship is common in both print and broadcast media, most of which are privately owned. Only a small minority of people access the Internet.

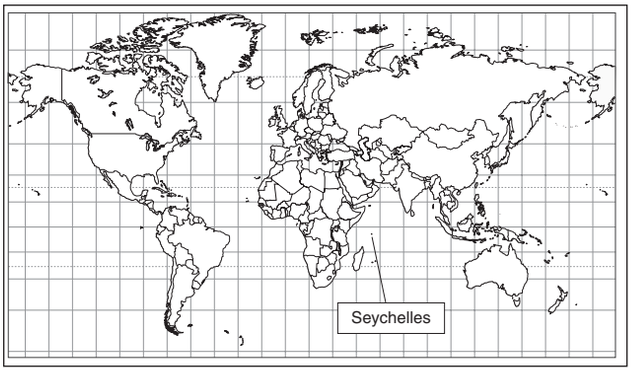
SEYCHELLES

Population (2010, proj.): 85,000

Gross National Income per Capita (current, 2007): $8,960

Date of Independence: June 29, 1976 (from the UK)

Date of Last Constitution: June 18, 1993



This island nation protects freedom of speech in its constitution but has many exceptions that weaken that protection. Material held to be "against the national interest" can be banned. The only daily newspaper is government operated. Government dominates broadcasting as well due to high annual license costs for private outlets. About a quarter of the people could access the Internet in 2007.

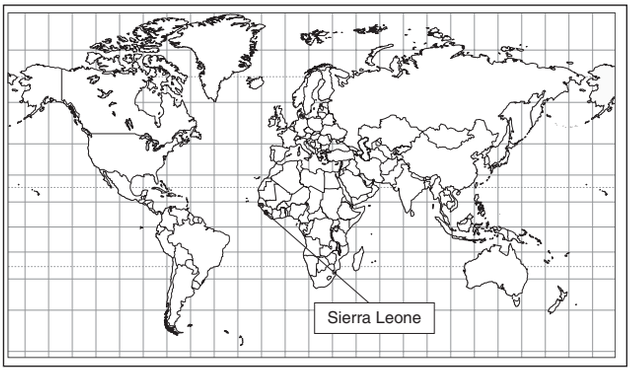
Sierra Leone

Population (2010, proj.): 5,836,000

Gross National Income per Capita (current, 2007): $260

Date of Independence: April 27, 1961 (from the UK)

Date of Last Constitution: October 1, 1991



Sierra Leone is recovering from a long civil war and resulting instability. The country's constitution protects freedom of expression but with notable exceptions. Criminal libel is a common weapon against journalists and even distributors of newspapers. Journalists are often threatened with violence or prison. More than 35 newspapers publish, some of them critical of government. Hardly anyone used the Internet in 2007.

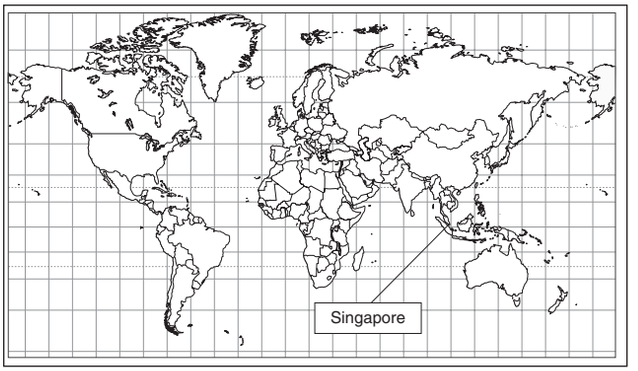
SINGAPORE

Population (2010, proj.): 4,837,000

Gross National Income per Capita (current, 2007): $32,340

Date of Independence: August 9, 1965 (from Malaysian Federation)

Date of Last Constitution: June 3, 1959 (amended 1965)



This Southeast Asian city-state has an authoritarian government that encourages journalists' self-censorship, which is widespread. Various laws constrain press freedom, and there is, for example, no right to protect news sources from being identified. Foreign periodicals must post a substantial bond in order to publish on the island. The government, or those close to it, control most print and electronic media outlets. Internet sites are monitored, many are banned, yet two-thirds of the population uses the web as of 2007.

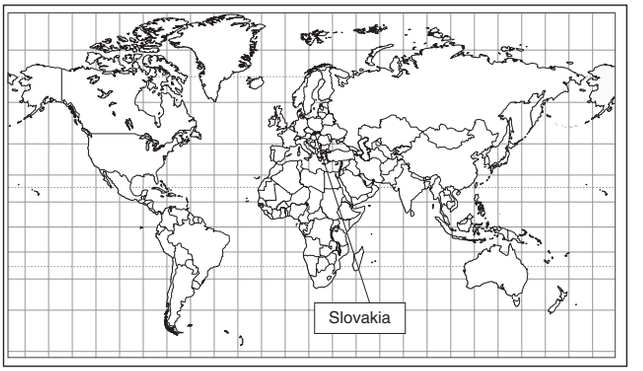
SLOVAKIA

Population (2010, proj.): 5,412,000

Gross National Income per Capita (current, 2007): $11,720

Date of Independence: January 1, 1993 (Czechoslovakia split into the Czech Republic and Slovakia)

Date of Last Constitution: January 1, 1993



Slovakian news media freedom is protected in the constitution and in practice. Government run television has been accused of promoting a pro-government line, but most print and electronic media are privately owned, and many use media from neighboring nations as well. Fully half the nation uses the Internet—and more than 90 percent of younger people.

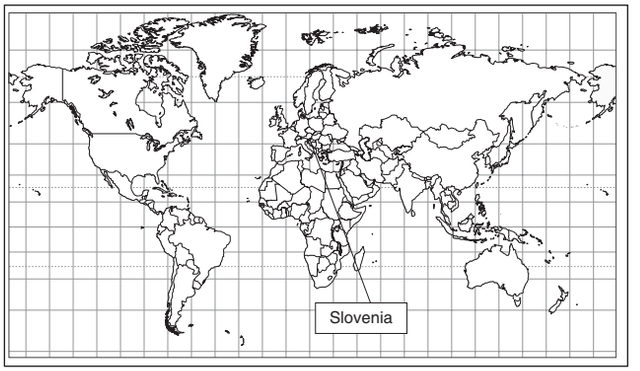
SLOVENIA

Population (2010, proj.): 2,025,000

Gross National Income per Capita (current, 2007): $21,510

Date of Independence: June 25, 1991 (from Yugoslavia)

Date of Last Constitution: December 23, 1991



Part of the former Yugoslavia, Slovenia has avoided much of the ethnic strife afflicting the region. While media freedom is protected in the constitution, there has been slowly growing tension between journalists and the government, the former accusing the latter of exerting political and economic pressure to achieve favorable coverage. This is especially evident in government-operated electronic media, as most newspapers are privately owned. Two-thirds of the people accessed the Internet in 2007.

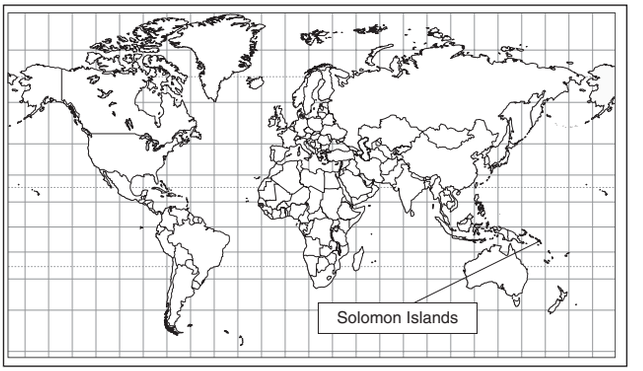
Solomon Islands

Population (2010, proj.): 536,000

Gross National Income per Capita (current, 2007): $750

Date of Independence: July 7, 1978 (from the UK)

Date of Last Constitution: July 7, 1978



This Pacific islands nation has a constitutional guarantee of freedom of the press. There are one daily and three weekly papers, all privately owned. Radio is the most important news medium and outlets are operated by the government and private parties. There is no domestic television, though satellite reception of TV in other countries is common. Internet use is a negligible factor.

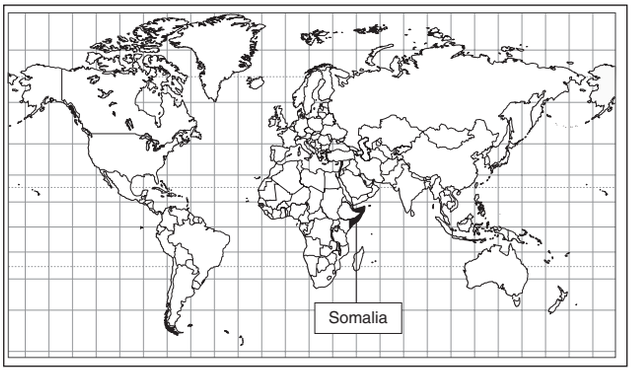
SOMALIA

Population (2010, proj.): 9,359,000

Gross National Income per Capita: N/A

Date of Independence: July 1, 1960 (from UN trusteeship administered by Italy)

Date of Last Constitution: September 23, 1979



Dysfunctional government (which controls but a third of the country) means that practicing journalism in this lawless state is highly dangerous, subject to ethnic and political pressure at all times. Attacks on journalists are common. Small daily papers and radio stations have proliferated, usually allied with one side or tribe or another. Internet use is negligible.

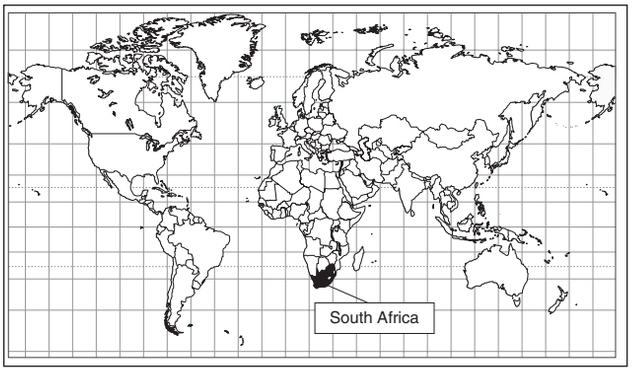
South Africa

Population (2010, proj.): 50,492,000

Gross National Income per Capita (current, 2007): $5,720

Date of Independence: May 31, 1910; May 31, 1961 (republic declared); April 27, 1994 (majority rule)

Date of Last Constitution: December 10, 1996



Post-apartheid South Africa is the most important sub-Saharan nation, a comparative economic powerhouse, and something of a model for other countries. Freedom of expression and the press is protected in the constitution and is generally observed. Most media are privately held. The government South African Broadcasting Corporation has been accused of progovernment bias and self-censorship. Private stations are beginning to appear. Internet access is growing but many cannot afford the service fees involved.

Press freedom is guaranteed in the constitution and is widely observed, making the country one of Asia's freest media markets. Expressing support for North Korea is banned. Access to government information is limited. There are more than 100 daily papers and both public and private radio and television stations, all competing vigorously. Online media are widespread and active as some 70 percent of the country uses the Internet.

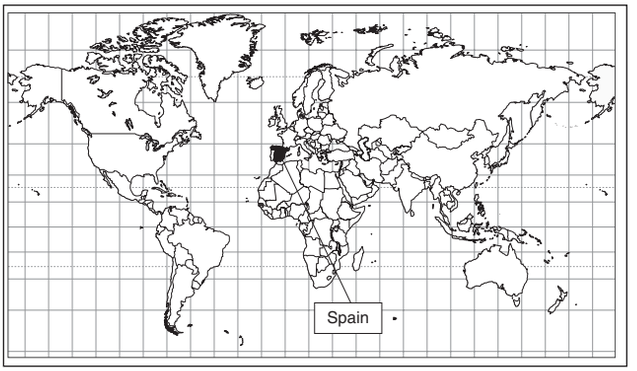
Spain

Population (2010, proj.): 45,317,000

Gross National Income per Capita (current, 2007): $29,290

Date of Independence: 1492

Date of Last Constitution: December 29, 1978



Spanish media are free in the European model, with vigorous competition. Press freedom is guaranteed in the constitution and widely observed. Antiterrorism rules and criminal libel laws are limits to press freedom, however. Criticism of the royal family is a touchy subject. Newspaper ownership is largely concentrated in two groups. Internet access is not restricted and is widely used.

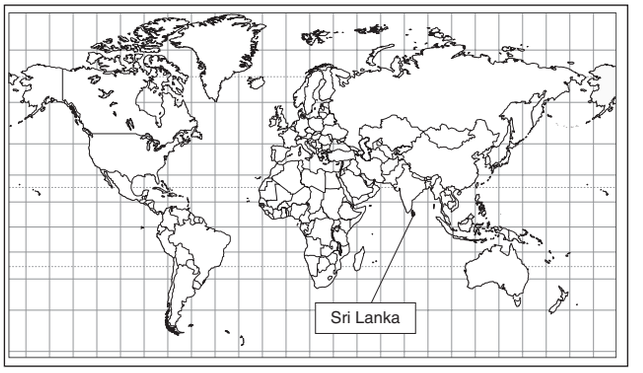
Sri Lanka

Population (2010, proj.): 20,410,000

Gross National Income per Capita (current, 2007): $1,540

Date of Independence: February 4, 1948 (from the UK)

Date of Last Constitution: August 16, 1978 (amended December 20, 2000)



The former island of Ceylon has been the site of fierce fighting with a Tamil separatist group and that tension has limited press freedom, especially in the north. While press freedom is guaranteed, many laws restrict it in practice. Prepublication censorship was introduced in 2006. Distribution and suspension of broadcast licenses appears somewhat arbitrary. Intimidation of journalists is widespread. Privately owned print and electronic media have become more politically polarized. Few use the Internet (under 2 percent) because of the high costs of doing so.

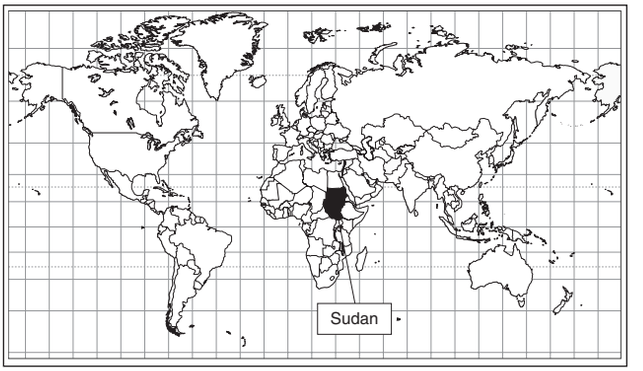
SUDAN

Population (2010, proj.): 43,192,000

Gross National Income per Capita (current, 2007): $950

Date of Independence: January 1, 1956 (from Egypt and the UK)

Date of Last Constitution: Interim National Constitution ratified July 5, 2005; Constitution of Southern Sudan signed December 2005



Sudan is a country seemingly at war with itself and with its Darfur western region. Media freedom is almost nonexistent, though more stable in the southern part of the country. Official censorship has been lifted, but the National Press Council licenses journalists and can suspend newspapers. Attacks on journalists are common. Newspapers are privately owned, though closely monitored by the government. Radio and television are dominated by the government and present a progovernment point of view. About 10 percent of the public, largely in urban areas, use the Internet.

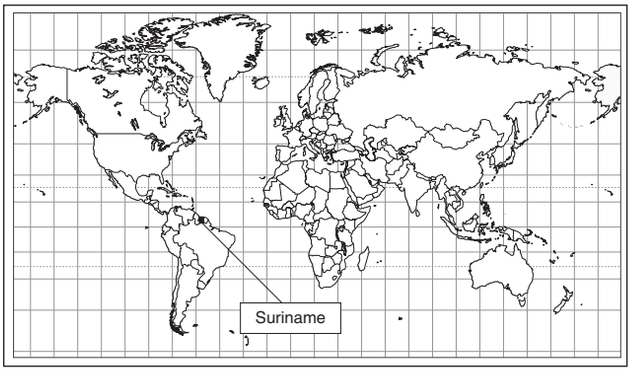
SURINAME

Population (2010, proj.): 524,000

Gross National Income per Capita (current, 2007): $4,730

Date of Independence: November 25, 1975 (from the Netherlands)

Date of Last Constitution: October 30, 1987



While press freedom is enshrined in the constitution and is widely observed, self-censorship by journalists is also common. There are two daily Dutch-language newspapers and seven radio stations, but television is government owned. Few (about 6 percent in 2007) use the Internet.

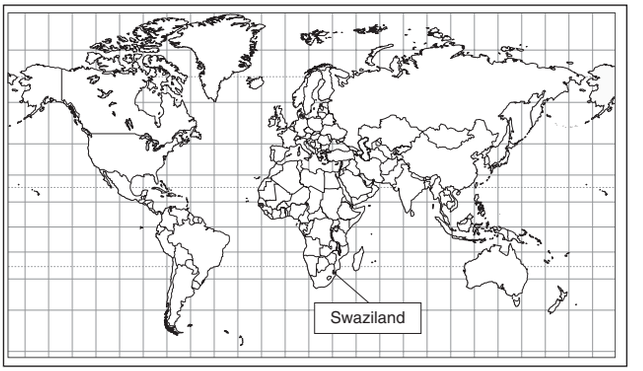
SWAZILAND

Population (2010, proj.): 1,202,000

Gross National Income per Capita (current, 2007): $2,560

Date of Independence: September 6, 1968 (from the UK)

Date of Last Constitution: February 8, 2006



Freedom of the press is limited here, especially concerning political issues or the royal family. Nor are there many protections for journalists. Access to information is limited, and libel laws are often used to limit reporters. There are two newspapers, one of them relatively free, the other controlled by the royal family. Government controls television, though there is one private religious radio station. South African media are received as well. Internet use is negligible.

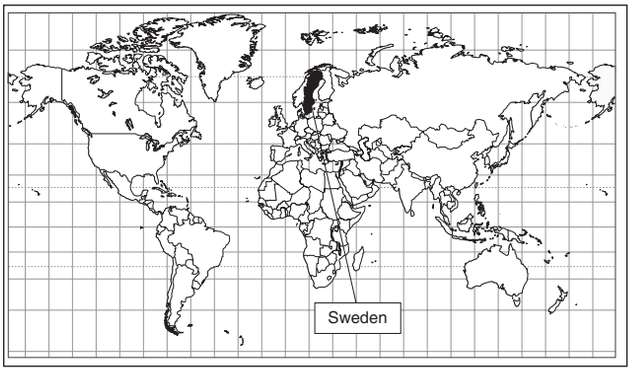
SWEDEN

Population (2010, proj.): 9,293,000

Gross National Income per Capita (current, 2007): $47,870

Date of Independence: June 6, 1523 (Gustav Vasa elected king)

Date of Last Constitution: January 1, 1975



Sweden enjoys some of the world's freest media. Public radio and television is widely used, and private station ownership is concentrated. The government subsidizes newspapers to retain competition of views. Internet use in 2007 approached 80 percent, one of the highest proportions in the world.

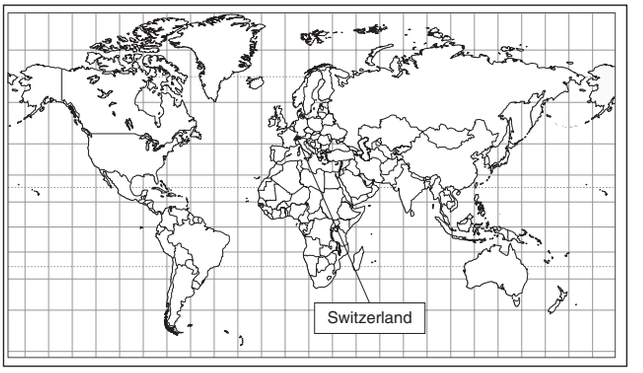
SWITZERLAND

Population (2010, proj.): 7,595,000

Gross National Income per Capita (current, 2007): $60,820

Date of Independence: August 1, 1291 (founding of the Swiss Confederation)

Date of Last Constitution: January 1, 2000



Media freedom is guaranteed and widely observed. The Swiss Broadcasting Corporation operates seven television and 18 radio stations. Cable television service is widespread as is Internet use (about 70 percent of the public in 2007).

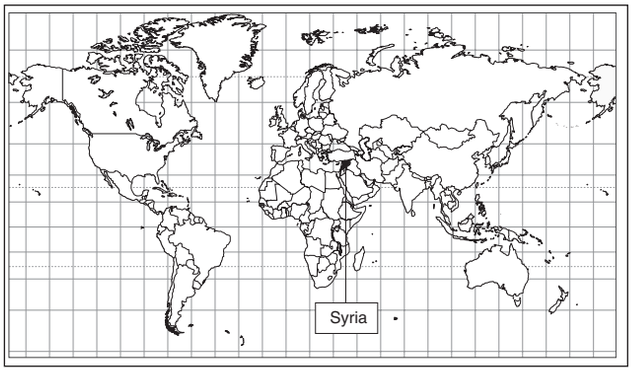
Syrian Arab Republic

Population (2010, proj.): 22,505,000

Gross National Income per Capita (current, 2007): $1,780

Date of Independence: April 17, 1946 (from League of Nations mandate under French administration)

Date of Last Constitution: March 13, 1973



As with most Arab nations, there is little media freedom here. Repressive laws are the reality though the constitution guarantees press freedom. An "emergency" law in place since 1962 enables widespread censorship and other government control across all media platforms. Journalists are widely intimidated, and prison terms are common for a variety of supposed offenses. Radio and television are state owned (a few private stations provide no news). Satellite television is widely available. Internet use is regulated, and less than a tenth of the population used the service in 2007.

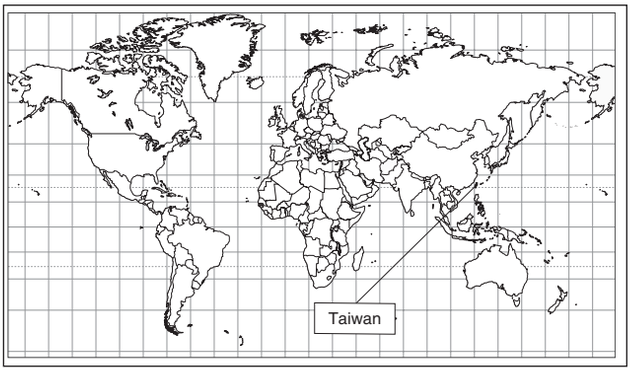
Taiwan

Population (2010, proj.): N/A

Gross National Income per Capita: N/A

Date of Independence: 1949 (from mainland China)

Date of Last Constitution: December 25, 1947 (last revised in 2005)



The Taiwan media market is perhaps the freest in all of East Asia. Free press protections are in the constitution and are widely followed. Criticism of government is often published or broadcast. Print media from mainland China are also available. There are more than 360 private newspapers and radio stations. Satellite television offers well over 140 channels. Internet is used by 70 percent of the people as of 2007.

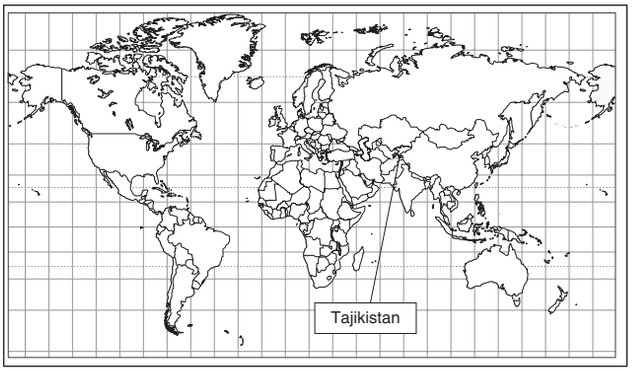
TAJIKISTAN

Population (2010, proj.): 7,075,000

Gross National Income per Capita (current, 2007): $460

Date of Independence: September 9, 1991 (from the Soviet Union)

Date of Last Constitution: November 6, 1994



Though press freedom is guaranteed in the constitution, legal realities are quite different with many repressive laws on the books. Intimidation of (though not usually violence against) journalists is common. Licensing and registration requirements are used to limit (or close down) media. State-run broadcast media are dominant. Internet usage is negligible, yet the government closely regulates it—including the use of libel laws.

Constitutional rights to free speech are, in practice, limited by a number of laws. Newspapers must be registered with the government (yet there are more than 500 of them). Libel laws are used to repress unfriendly reporters. Access to government information is limited. Zanzibar journalists must be licensed, and private broadcasting is not allowed—restrictions that do not apply elsewhere in the country. There are a dozen television and nearly 50 radio stations operating, though only four of the latter have a national reach. The government monitors Internet sites and use—of which there is hardly any.

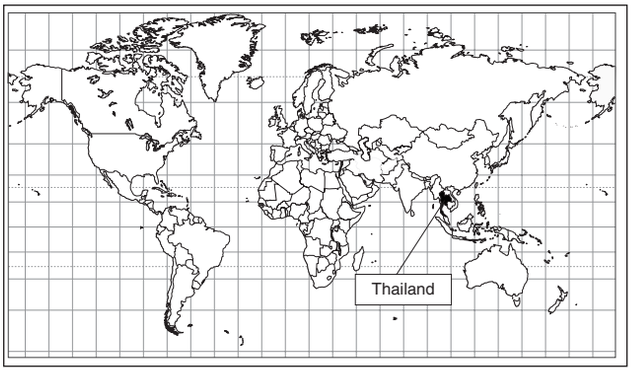
THAILAND

Population (2010, proj.): 68,139,000

Gross National Income per Capita (current, 2007): $3,400

Date of Independence: Never colonized

Date of Last Constitution: August 24, 2007



Despite constitutional protections, the military government restricts media freedom—including some of the world's harshest Internet laws. Libel laws are widely used to limit journalistic reporting. But newspapers continue to operate more freely—the restrictions (including censorship) apply largely to broadcast outlets (nearly all government controlled anyway) and the Internet. In 2007, only about 13 percent of the public used the Internet, which has been censored since 2003.

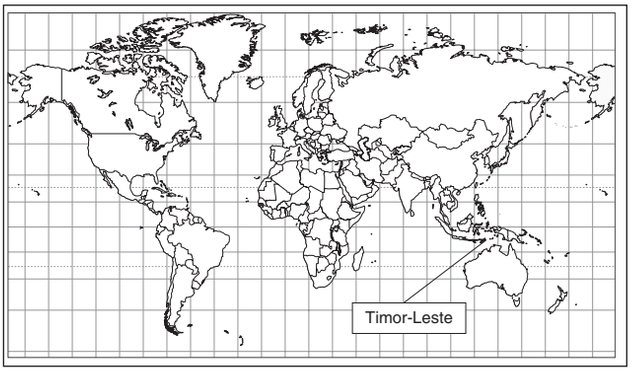
Timor-Leste

Population (2010, proj.): 1,171,000

Gross National Income per Capita (current, 2007): $1,510

Date of Independence: November 28, 1975 (from Portugal); 2002 (from Indonesia)

Date of Last Constitution: March 22, 2002



Formerly East Timor and part of Indonesia, this tiny country is filled with ethnic tensions that are reflected in the constitution that protects press freedom—-and the many laws that limit it. Libel laws are but one tool to control unruly journalists. There are three daily newspapers and both radio and television service. Community radio outlets have been largely dysfunctional. The Internet is not controlled, but it is also not used by the vast majority of people.

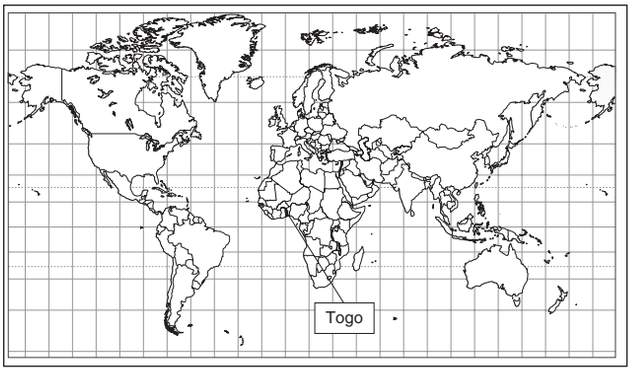
Togo

Population (2010, proj.): 6,780,000

Gross National Income per Capita (current, 2007): $360

Date of Independence: April 27, 1960 (from French-administered UN trusteeship)

Date of Last Constitution: September 27, 1992



There is no legal protection for freedom of the press or of speech. Censorship is widespread and attacks on journalists go unpunished. The many private print and broadcast outlets actively compete, though most are highly politicized. The only daily paper and television outlets are government run, though four private television channels have very limited coverage in the national capital. Internet use is small—about 5 percent in 2007.

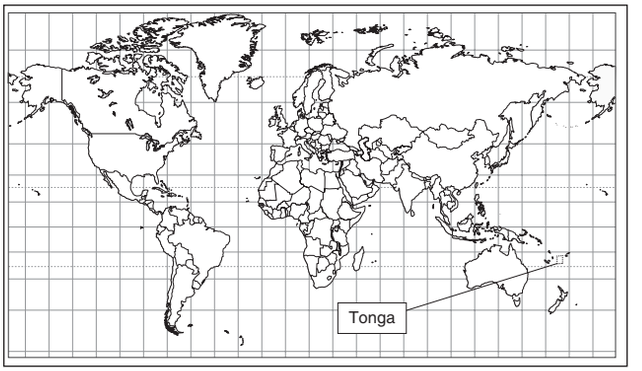
Tonga

Population (2010, proj.): 104,000

Gross National Income per Capita (current, 2007): $2,480

Date of Independence: June 4, 1970 (from UK protectorate)

Date of Last Constitution: November 4, 1875; revised January 1, 1967



Freedom of the press is guaranteed here and generally observed as well. There are a number of newspapers (one is printed in New Zealand) and broadcast outlets on the island, and there are private broadcasters as well. Internet users in 2008 comprised about 7 percent of the population.

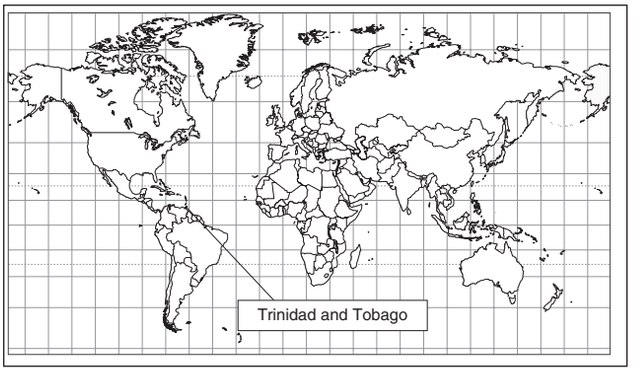
Trinidad and Tobago

Population (2010, proj.): 1,344,000

Gross National Income per Capita (current, 2007): $14,480

Date of Independence: August 31, 1962 (from the UK)

Date of Last Constitution: August 1, 1976



These Caribbean islands enjoy freedom of the press, though access to government information is limited. Tension between African and East Indian populations is reflected in the media and in some government actions as well. There are three dailies and another three weekly papers, four television stations, and some 35 radio outlets. The Internet is not regulated, and about 12 percent (in 2007) made use of it.

Press freedom is guaranteed in the constitution except for "conditions laid down by law," which leaves many loopholes for government action against the news media. Libel laws are one problem for journalists, intimidation (and sometimes attacks) is another, and newspaper censorship is fairly common. Self-censorship is widespread and government often interferes with newspaper distribution. The largest newspapers are government controlled or owned by those close to the regime. Satellite reception brings in many foreign television channels—though some are blocked if they broadcast material not desired by the government. Internet usage is rising, with about 10 percent of the population accessing the Internet in 2007.

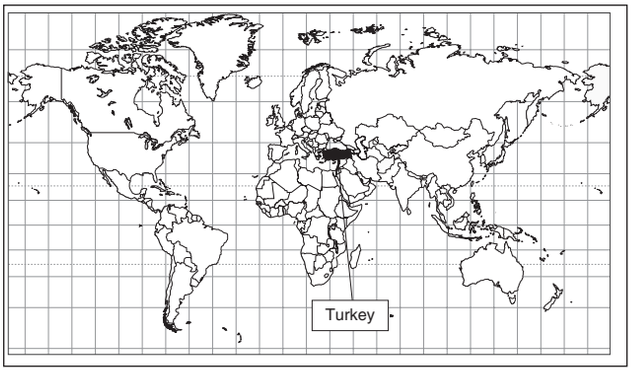
TURKEY

Population (2010, proj.): 75,705,000

Gross National Income per Capita (current, 2007): $8,030

Date of Independence: October 29, 1923 (successor state to the Ottoman Empire)

Date of Last Constitution: November 7, 1982



Press operations and freedom have been limited by tensions over secularization, nationalism, and separatism in the country. Turkey's desire to enter the European Union is providing another set of pressures, resisted by many in the religious communities. Libel laws (such as those concerning the "denigration of Turkishness") are widely applied, and attacks on journalists are fairly common. Self-censorship is widely evident. Four conglomerates control most media, including hundreds of private radio (a handful serving Kurdish areas) and television outlets. About a fifth of the population made use of the Internet in 2007.

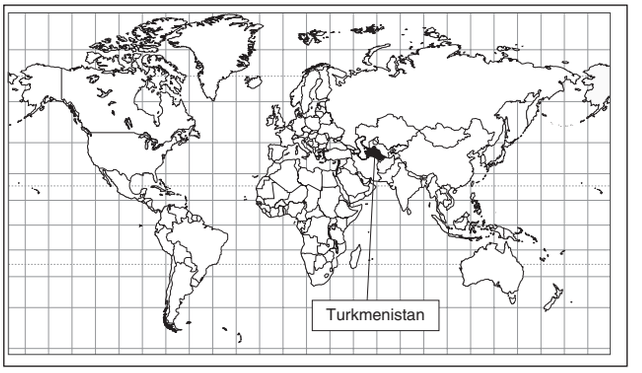
TURKMENISTAN

Population (2010, proj.): 5,177,000

Gross National Income per Capita (current, 2000): $650

Date of Independence: October 27, 1991 (from the Soviet Union)

Date of Last Constitution: May 18, 1992



Press repression here resembles that of the former Soviet Union. The government retains a monopoly over all media services, and foreign publications are banned as well. Attacks on journalists are fairly common and are often not investigated. Internet access is expensive and regulated, and use is negligible.

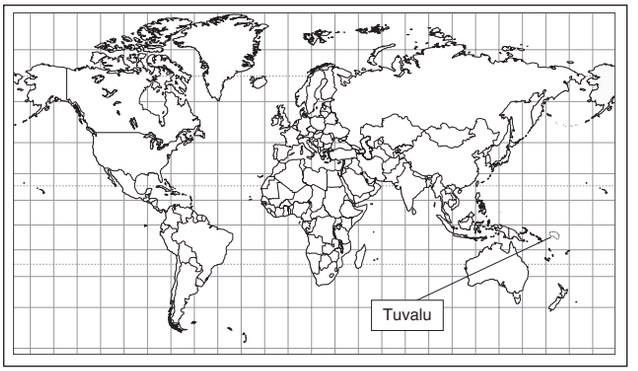
TUVALU

Population (2010, proj.): 10,000

Gross National Income per Capita: N/A

Date of Independence: October 1, 1978 (from the UK)

Date of Last Constitution: October 1, 1978



Press freedom is guaranteed by the constitution, though the only radio station and newspaper on this island are controlled by the government. There is no television. Infrastructure limitations made Internet use difficult, and only 16 percent used it in 2007.

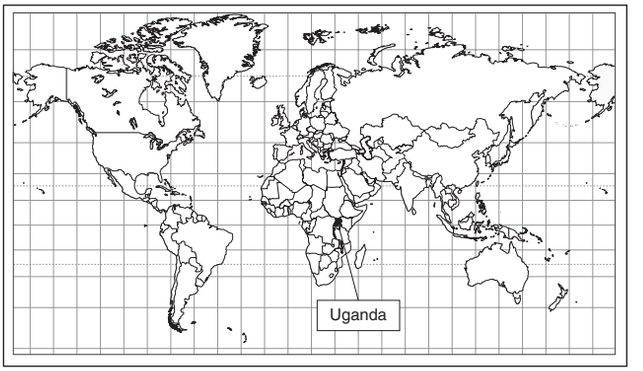
Uganda

Population (2010, proj.): 33,796,000

Gross National Income per Capita (current, 2007): $370

Date of Independence: October 9, 1962 (from the UK)

Date of Last Constitution: October 8, 1995 (amended 2005)



While the constitution promises press freedom, "national security" laws limit that in practice. Journalists are often intimidated or attacked. After the government loosened controls in 1993, media outlets greatly increased—there are two dozen daily and weekly papers and some 100 private radio and television stations. The state radio service is progovernment in tone. Internet use is very low—less than 3 percent in 2007.

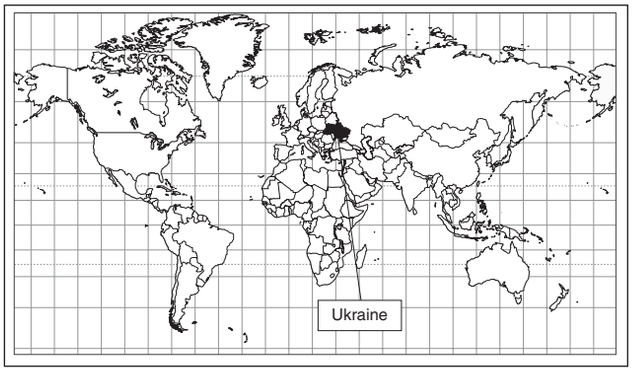
UKRAINE

Population (2010, proj.): 45,433,000

Gross National Income per Capita (current, 2007): $2,560

Date of Independence: August 24, 1991 (from the Soviet Union)

Date of Last Constitution: June 28, 1996



This former part of the old Soviet Union has been torn by political tensions that are evident in its news media. Press freedom is provided for in the constitution and is generally adhered to. Secrecy and corruption remain an issue in government agencies. Threats against and harassment of the media are fairly common. There are hundreds of print and broadcast media outlets, some owned by those close to the government. About 12 percent of the people made use of the Internet in 2007.

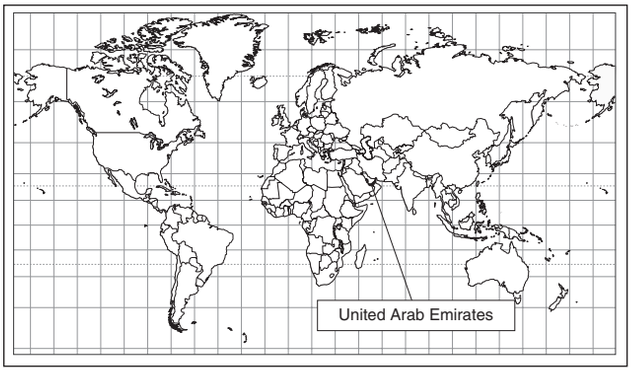
United Arab Emirates

Population (2010, proj.): 4,707,000

Gross National Income per Capita (current, 2000): $19,270

Date of Independence: December 2, 1971 (from the UK)

Date of Last Constitution: December 2, 1971; made permanent in 1996



This Gulf kingdom centered on Dubai has very limited news media freedom. Laws give the central government a whole variety of ways to control media content—more than most Arab nations. All media are owned by the government or closely allied to it. Newspapers must be licensed, are subsidized, and are subject to censorship. Journalists suffer various kinds of intimidation. Nearly 40 percent use the Internet, but it is closely monitored by the government, which blocks many websites.

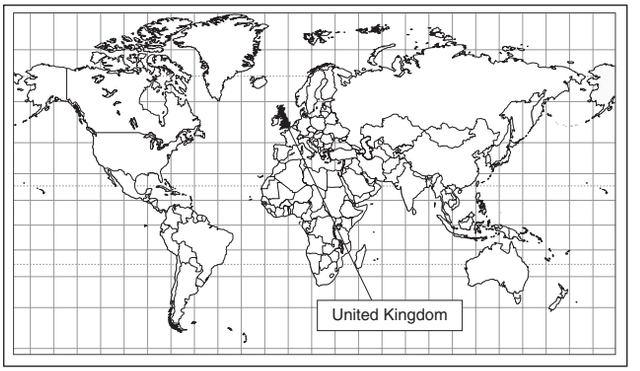
United Kingdom

Population (2010, proj.): 61,899,000

Gross National Income per Capita (current, 2006): $40,660

Date of Independence: January 1, 1801 (completion of the legislative union of Great Britain and Ireland under the name of the United Kingdom)

Date of Last Constitution: Unwritten; partly statutes and partly common law and practice



British media are free and very competitive. Many newspapers are distributed across the country—nearly a dozen compete in the London market, divided between upmarket and tabloid approaches. The BBC provides a world model for public service radio and television. Private television was introduced in 1955; radio in 1974, though the latter is very limited. Satellite television service is widely available. Roughly two-thirds of the country's population used the Internet in 2007.

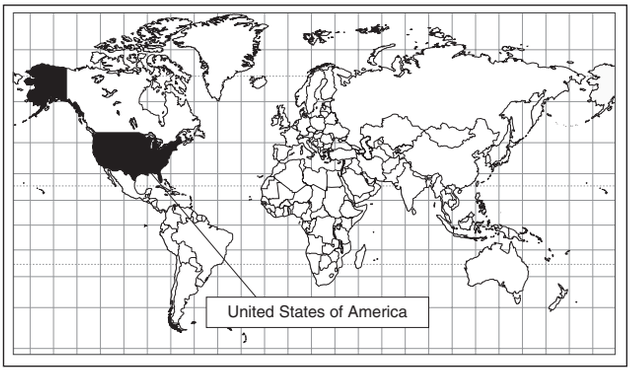
United States of America

Population (2010, proj.): 317,641,000

Gross National Income per Capita (current, 2007): $46,040

Date of Independence: July 4, 1776 (from Great Britain)

Date of Last Constitution: September 17, 1787 (last amended in 1992)



American media are protected by the Constitution's First Amendment, which is deeply respected and broadly upheld. Many states have shield laws protecting journalists from revealing sources, and attempts to develop a similar national law are underway. Government secrecy and unwillingness to release documents have been a problem. Coverage of government and business is aggressive. Media ownership is private and concentrated. There are some 1,400 daily papers, many in economic trouble as circulation and advertising drops. Public radio is widely listened to, and public television plays an important news and documentary role. Perhaps three-quarters of the population made use of the Internet in 2007.

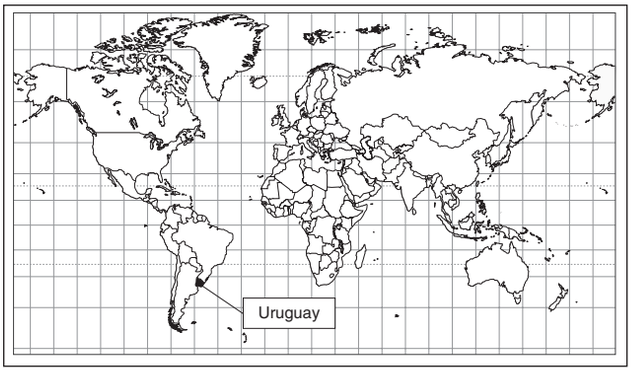
URUGUAY

Population (2010, proj.): 3,372,000

Gross National Income per Capita (current, 2007): $6,390

Date of Independence: August 25, 1825 (from Brazil)

Date of Last Constitution: November 27, 1966



News media are freer here than in many Latin American nations. Community radio stations were allowed in 2007—there will be some 200 of them eventually. Use of libel laws against journalists remains an issue as does access to government information. There are about 100 privately owned newspapers, though ownership is concentrated. There are about as many radio stations and some 20 television outlets. About a fifth of the population made use of the Internet in 2007.

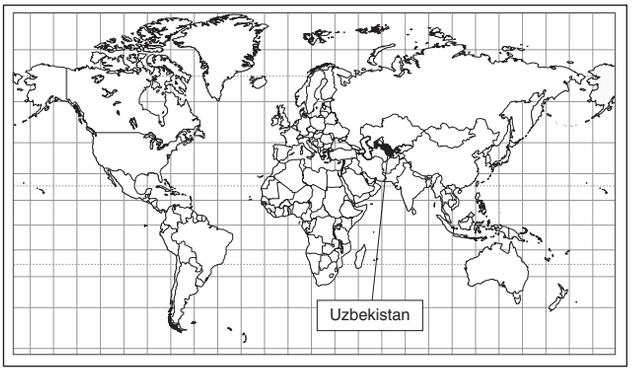
UZBEKISTAN

Population (2010, proj.): 27,794,000

Gross National Income per Capita (current, 2007): $730

Date of Independence: September 1, 1991 (from the Soviet Union)

Date of Last Constitution: December 8, 1992



Uzbekistan is another part of the former Soviet Union, and the nation's government ignores constitutional guarantees of press freedom. Uzbek laws use libel broadly, especially for any criticism of the President. Foreign media are harassed as are domestic reporters. Nearly all media are either owned by the government or closely allied to it. Internet sites are routinely blocked and only 6 percent of the population used the web in 2007.

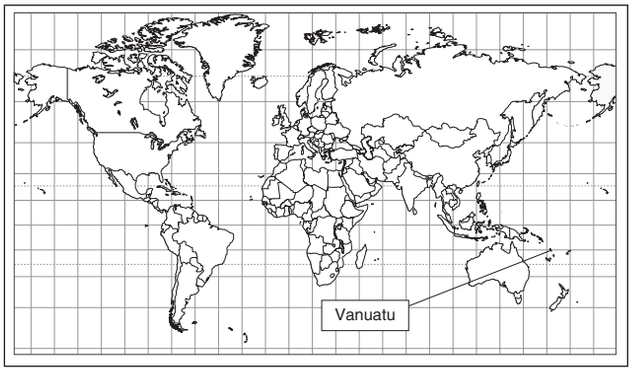
VANUATU

Population (2010, proj.): 246,000

Gross National Income per Capita (current, 2007): $1,840

Date of Independence: July 30, 1980 (from France and the UK)

Date of Last Constitution: July 30, 1980



A Pacific island nation, Vanuatu enjoys a free press, though some journalists have been censored or even intimidated at times. The only radio and television stations are government owned. There are private print media. Internet use is negligible.

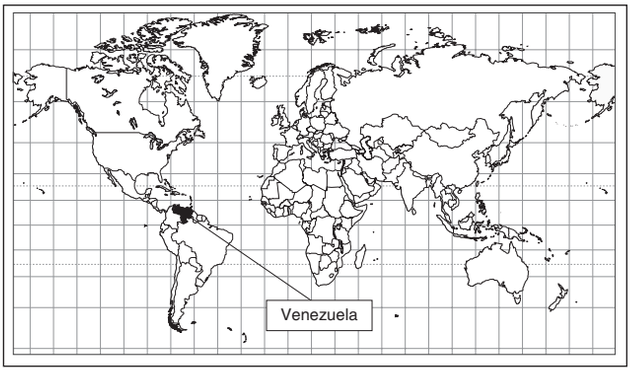
VENEZUELA

Population (2010, proj.): 29,044,000

Gross National Income per Capita (current, 2007): $7,550

Date of Independence: July 5, 1811 (from Spain)

Date of Last Constitution: December 30, 1999



The regime of Hugo Chavez has progressively clamped down on media, shifting this country from a free press to one that is not free, and all in the space of a few years. Private media have been restricted if not actually closed down. Attacks on journalists are now common as is intimidation of media outlets not seen as supporting the government. The government controls many broadcast outlets, and its advertising supports many media. The Internet is not regulated, however, though less than 15 percent of the people used it in 2007.

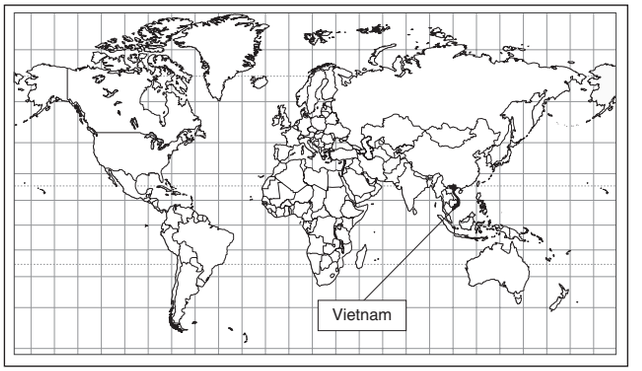
VIETNAM

Population (2010, proj.): 89,029,000

Gross National Income per Capita (current, 2007): $770

Date of Independence: September 2, 1945 (from France)

Date of Last Constitution: April 15, 1992



All media are controlled by the government or ruling Communist party, and press freedom—despite statements in the constitution and laws—is nonexistent. Harassment and imprisonment of journalists is common. Satellite television is widespread in urban areas, and about a fifth of the nation's population uses the Internet (as of 2007).

The media situation in the Israeli-occupied territories of the West Bank and Gaza Strip is tenuous, to say the least. Israeli occupation officials, the Palestinian Authority (which is the ruling entity in the West Bank), and the Islamist party Hamas (which is the ruling entity in Gaza) severely restrict press freedom. In addition, journalists encounter physical threats and violence from all three official ruling entities, as well as from radical militant factions, which have been accused of kidnapping journalists. That said, press activity is active and diverse, with many local and foreign media representatives engaged in reporting on the conflict and events on the ground.

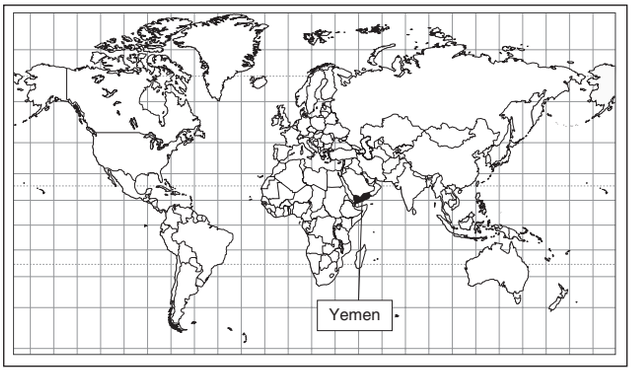
YEMEN

Population (2010, proj.): 24,256,000

Gross National Income per Capita (current, 2007): $870

Date of Independence: May 22, 1990 (by merger of Yemen and Aden)

Date of Last Constitution: May 16, 1991 (last revised February 2001)



Despite constitutional provisions to the contrary, news media are restricted under a 1990 law. Libel is widely construed and used to limit reporting, as is intimidation and violence, resulting in widespread self-censorship. There are five daily papers (three are official) with another 80 independent or party papers that appear less often. Newspapers are licensed annually and the license may be revoked at any time. The state runs radio (the most important news medium) and television. Satellite television is expensive but available. Few use the Internet because of cost.

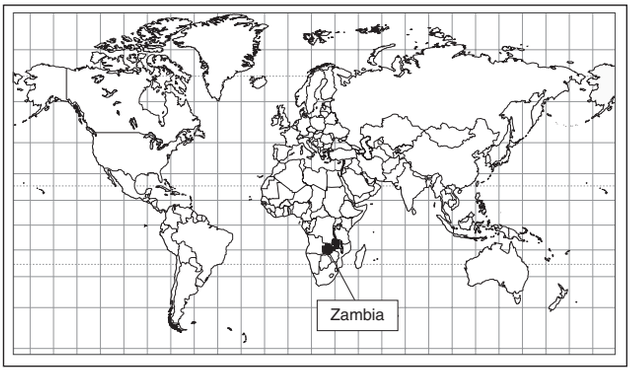
Zambia

Population (2010, proj.): 13,257,000

Gross National Income per Capita (current, 2007): $770

Date of Independence: October 24, 1964 (from the UK)

Date of Last Constitution: August 24, 1991; amended in 1996



While protected in the constitution, press freedom is curbed in practice. Government harassment of journalists is common. Government-owned press and broadcast outlets dominate the media scene. There are a few independent newspapers and one radio station. Internet use is very low—less than 5 percent as of 2007.

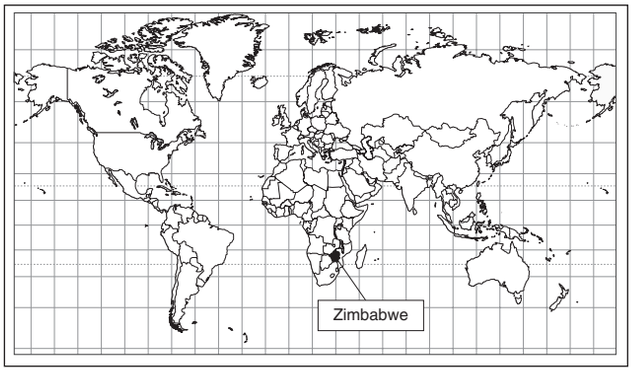
ZIMBABWE

Population (2010, proj.): 12,644,000

Gross National Income per Capita (current, 2005): $340

Date of Independence: April 18, 1980 (from the UK)

Date of Last Constitution: December 21, 1979



The repressive Mugabe regime tightly constricts the country's media. Draconian laws and repression are the rule of the land. Intimidation of journalists is widespread, and foreign journalists are severely limited in what they can do—which does not even include living in the country. Government-run broadcasting is subject to censorship. About 10 percent of the people use the Internet despite regulation and high cost.

Section 12. A Library User's Guide for Journalism amd Mass Communication Subjects 2339

Notes to the User

Introduction

That journalism performs a central function within modern society is evident in the huge amount of book and online material that has been produced about the field and its practitioners. There is hardly a newspaper, magazine, or television program that (or a major journalist who) is not recorded in at least one book—and probably a webpage as well. This portion of the volume consists of a bibliography that comprehensively surveys English-language research and professional literature (defined as monographs and websites) on all aspects of journalism published since 1990. Many important earlier books are cited as well.

This bibliography is designed to organize and briefly describe the substantial number of scholarly and professional books and relevant websites about most aspects of journalism, past and present. As will be evident when perusing the preceding table of contents, it is arranged by subject, as that is how most of us seek out information. It is also designed to be a free-standing reference source that can be used either in conjunction with the rest of this encyclopedia or on its own.

Using This Bibliography

A number of editorial decisions have guided the assembly, ordering, annotating, and editing of these bibliographic entries. The best means of finding information on a given subject is to use the detailed table of contents, which is designed to help you hone in on topic(s) of interest quickly. The topical arrangement is "free standing" in that it does not directly parallel the material in other volumes in the encyclopedia.

The bibliography becomes more inclusive the more recent its entries are. Put another way, the emphasis here is on the most recent books and web materials. Selectivity increases the older the material is, especially prior to 1990. For older material, the emphasis is on works still considered of value, either as history (regardless of the book's original intent) or because they contribute something else to modern research needs. There isn't much point, for example, in listing a two-decade-old book on a topic of rapid change (say, libel law), unless that book offers a valuable snapshot or record of an earlier time.

Each book and website is listed only once, with some internal cross-referencing. This means a decision has to be made for each title as to where it fits best—and naturally my decision might be different than yours. As a rule, I've tried to place titles in the most obvious or relevant place. But not all histories are found in Section 2. For example, a book on press coverage of the immigration issue over a century could appear there or under news categories (Sections 5 and 6). In fact, because it is about a single type of news, it appears under the latter, with a number of similar books in a subcategory on ethnicity and minorities. So spending some time with the table of contents and getting the drift of its approach and organization will likely pay off in finding the material you seek.

All sections (and subsections) are arranged by author (or title if no author is cited), in alphabetical order by last name. Books by the same author are listed chronologically. Works with more than two authors or editors are listed under the first author or editor, followed by "et al."

A conscious effort has been made to place reference works in the most appropriate sections. The

most general and broad ranging are found in Section 1, which is devoted to the broadest reference sources. More specialized titles appear as would regular publications—under the closest topical heading (most often at the beginning of the different topical sections).

The substantial focus here—as with the encyclopedia it supports—is on American journalism: For a selection of books and websites about other parts of the world, see Section 10 on global and comparative journalism. Most material on other countries, regardless of medium or format, is found there. Some very topic-specific entries (or those with substantial U.S. content) will be under the relevant topic in the other sections. But the "foreign" material is more selective than that concerning the United States, simply for reasons of space. Another project the size of this one would be needed for comprehensive coverage of even the English-language material about other countries.

Overall arrangement in most sections proceeds chronologically, more or less as the various media actually appeared historically, beginning with print (newspapers, then magazines, followed by editorial cartoons), followed by photography, and documentary film, and then broadcasting (radio, television, and cable), and finally online services. This is particularly true for Sections 2, 3, 7, and 9.

The latest known edition of each book is indicated (but please understand that books used as texts are now aggressively revised and reissued on from one- to three-year schedules—whether they need it or not—in an attempt to control computer networks of used copies). Information is current as of going to press—mid-2009.

A Few Exclusions

Despite its length and detail, several exclusions delimit the bibliographic material included. Among those things that will *not* be found in the pages that follow are these items. While an annotated listing of the more important trade and scholarly periodicals appears in Section 11, for example, the bibliography does not cite individual articles, which are nearly numberless. Modern search engines make this mass of material far easier to search online than used to be the case before their arrival.

Most histories of individual newspapers, magazines, or broadcasting stations are excluded, with a few exceptions for nationally important outlets. News agencies, broadcast networks, and cable news services *are* all included. Some important media controversies—such as children and media, violence, or obscenity issues—are not included (despite the vast amount of material about them), as they have only a marginal relationship with journalism.

The bibliography does not include the large number of "how to" or books of instruction on journalism methods. This includes most books designed as texts unless they have lasting value to a more general readership (and many do). But most "hands on" guides are generally missing here. Likewise, foreign language books or sites (defined as anything in a language other than English) are not included. Nor are URLs for individual blogs. The fields of public relations and most titles on advertising are also generally excluded, save for a few reference sources.

—Christopher H. Sterling
Volume Editor

Acknowledgments

This volume builds on the strong shoulders of many predecessors. A number of earlier published journalism bibliographies—many of them included in Section 1 here—provided valuable leads and a quality check for important subjects and individual citations. Credit must be given to the pioneers in bibliographic efforts like this—such people as Ralph Nafziger, Eleanor Blum, Warren Price, and Ralph McCoy spring to mind as earlier bibliographic toilers (each produced a book-length bibliographic guide—Blum and McCoy did more than one) whose efforts have helped shape the book in your hands. Jo Cates has produced three editions of her invaluable modern guide to journalism reference sources. All of these people were preceded—Carl Cannon produced what appears to have been the first comprehensive bibliography in this field, for the New York Public Library, way back in 1924, though only some of it was annotated.

Among other resources used in the development of this bibliography, the first was a careful page-by-page review of my own *Communication Booknotes Quarterly* and its bimonthly predecessor, *Communication Booknotes*. Begun as a mere mimeographed newsletter in late 1969, editing and writing this publication over four decades has helped to hone my understanding of and appreciation for the huge literature of journalism and related fields.

Several individuals were very helpful in this effort. They are thanked here in alphabetical order. Bruce Austin of Rochester (New York) Institute of Technology, once one of my graduate students, has been a colleague and fellow book reviewer for years—his knowledge of books on motion pictures has been hugely helpful. James K. Bracken of Ohio State University's Memorial Library has been a bibliographic partner in numerous projects over the years. His knowledge of publication in the communications field is immense and he shares it readily. The 1998 bibliography we co-authored with Susan Hill was very useful in shaping the present project. Rick Mastroianni, the head of the Newseum's World Center Library (in Laurel, Maryland, outside of Washington, D.C.) was very helpful and made his wonderful collection available to me. Many additional citations resulted, as did corrections and updates of others. The University of Illinois communication librarian, Lisa Romero, produces quarterly listings of her collection's accessions that were very helpful for inclusion of recent publications. David Sheddon, the Poynter Institute's library director, has made a hugely useful series of current subject bibliographies available online and was most generous to let me use them. His lists include vast numbers of online sites which change so easily.

These days, producing, checking, and correcting bibliographic work is made far easier by the gremlins (in the positive sense of that term) who work for the Library of Congress and so many other library websites, Jeff Bezos's Amazon.com, and the thousands of second-hand book dealers who list material on the pages of abebooks.com. These last two are among the most used sites on my computer. All these online sources are invaluable ways of double-checking things like a publisher, edition, or date—and sometimes even nailing down a firm title when sources disagree (and if the book itself is not readily available). They make it possible to conduct much of this bibliographic work on a desktop computer equipped with a broadband web connection.

—Christopher H. Sterling
Washington, D.C.

Section 1

General Reference

While reference resources can be found throughout this bibliography, here the focus is on those books and websites that are useful across multiple subjects.

A. Directories and Yearbooks

Material of this nature is increasingly migrating (though nearly always on a subscription basis) to the Internet, which allows ready updating while eliminating printing and distribution costs.

Bacon's Directories. Chicago: Bacon's Information Inc., annual. Multiple annual volumes as follows include concise directory information on media outlets as indicated:

1. *Newspaper Directory*. 1952–present. Some 15,000 daily and weekly (and community) papers, news services, syndicates and Sunday supplements in U.S. and Canada.
2. *Magazine Directory*. 1952–present. information for more than 10,000 business, trade, professional, and consumer publications, including circulation, advertising rates, news executives and editors names, types of unsolicited materials accepted, descriptions and profiles of content and targeted audience.
3. *Radio Directory*. 1987–present. Covers virtually all American and Canadian radio stations and program services.
4. *TV/Cable Directory*. 1987–present. Includes stations, cable systems, networks for both and other related services.
5. *International Media Directory*. 1974–present. Covers European media including newspapers and business and trade periodicals.

Broadcasting & Cable Yearbook. New Providence, NJ: Bowker, 1935–present, annual, two volumes in recent years (title has varied). Standard reference work featuring directories of radio and television stations in the United States and Canada showing their frequency, channel, power, date station began broadcasting, licensee, ownership, and date of acquisition. Includes format and programming information and market data. Cable section features directory of multiple systems operators, independent owners, and cable systems. Yearbook includes directories of programming, satellite, advertising and marketing, technical, and professional services; equipment manufacturers; and government agencies. (For the parent trade weekly, see Section 11.)

Broderick, James F., and Darren W. Miller. *Consider the Source; A Critical Guide to the 100 Most Prominent News and Information Sites on the Web*. Medford, NJ: CyberAge Books, 2007. Really a directory of some 100 in-depth (three to five pages each), critical reviews listed alphabetically (many are news media websites) using a four-star rating system. Reviews motives behind the sites. There is also a related website discussed in the book.

Burrelle's Media Directory. Livingston, NJ: Burrelle's Information Services, 1981–present. Directory of media outlets in the United States and Canada as follows (this is also available by subscription online):

1. *Daily Newspapers*.
2. *Magazines and Newsletters*. (2 vols.).
3. *Radio*. Lists some 11,000 stations.
4. *TV and Cable*. Lists some 1,600 stations and 650 cable systems.

Cable & TV Station Coverage Atlas. Washington, DC: Warren Publishing, 1966–present, annual (issued in recent years as a CD-ROM). State-arranged individual market maps showing TV station coverage patterns (especially their "Grade B contour"), their digital coverage as of the scheduled 2009 digital transmission changeover, and local cable system service areas.

Editor & Publisher International Year Book. New York: Editor & Publisher, 1924–present, annual. Standard directory for newspaper industry. Directories provide address, circulation, personnel, advertising rates, special editions, broadcast affiliates, political leanings for some newspapers, groups, and mergers. By 2008 it was appearing in three vols:

1. *Dailies*.
2. *Weeklies* (about 10,000 of them).
3. *Contacts Directory* (some 46,000 people).

Separately, the trade monthly (see Section 11) issues a *Syndicate Directory* in August, providing information on some 2,500 syndicated features under more than 70 subject headings.

Gale Directory of Publications and Broadcast Media: An Annual Guide to Publications and Broadcasting Stations Including Newspapers, Magazines, Journals, Radio Stations, Television Stations, and Cable Systems. Detroit, MI: Gale, 1869–present, annual (5 vols., also available online). Formerly *Ayer Directory of Publications,* this is a comprehensive and authoritative directory of media in the United States, Canada, and Puerto Rico. Broadcast stations and cable systems were added in 1990. First four volumes cover the U.S. and Canada.

1–2. *Stations* (listed by state).
3. *Networks and Syndicates, Indexes Tables*.
4. *Regional Market Index*.
5. *International, Indexes*.

See Media Post Directories, Section 7-A.

News Media Directory. New Providence, NJ: ProQuest, 2007–present, annual. Formerly issued as *Working Press of the Nation* (Bowker, 1950–2006, annual). Now published in three volumes (data are as of the 58th edition, 2008):

1. *Newspaper Directory*. Includes some 8,600 papers and 150 news services.
2. *Magazine and Newsletter Directory*. More than 10,000 magazines and 1,600 newsletters, arranged under 225 subject categories.
3. *Television & Radio Directory*. Some 17,000 broadcast stations and 250 networks.

See News Media Yellow Book, Section 7-A.

Standard Periodical Directory. New York: Oxbridge, 1964–present, annual. Includes more than 12,000 U.S. and Canadian magazines and journals, 12,000 newsletters, 10,000 newspapers, 3,500 directories, and 1,000 yearbooks.

Stankus, Tony, ed. *Journals of the Century*. New York: Haworth Information Press, 2002. Twenty-one chapters arrange hundreds of research or academic journals by subject with a paragraph of description for each.

Television & Cable Factbook. Washington, DC: Warren Publishing, Inc., 1947–present, annual, 3 vols. by 1990; now 5 vols. As follows:

1–2. *Stations*. Includes directory, contour maps, and historical information.
3–4. *Cable*. Cable television systems arranged by state and then city.
5. *Services*. Alphabetical and classified listings of services such as associations, brokers, attorneys, program sources, and publications.

Theodric Technologies. *Radio-Locator*. http://www.radio-locator.com. Portal allowing searches for American and overseas stations with a web presence, including some 10,000 stations and another 2,500 audio streams. Can be searched by call letters, format, state, city, ZIP code, etc. Canadian and other international stations can be separately searched. Formerly issued as the "MIT List of Radio Stations on the Internet."

Tribune Media Services, *Television Stations and Services*. http://tv.zap2it.com. Directory of cable and TV networks and TV stations, searchable by state, city, and other means, and including international networks.

Ulrich's Periodicals Directory. New Providence, NJ: Bowker, annual. A long-standard reference work to serials and periodicals of all kinds, and readily found in libraries. Includes volumes on:

1. Classified List and Titles, Titles Beginning A to Edu.
2. Titles Beginning Ele to Med.
3. Titles Beginning Mee to Z.
4. Indexes.
5. U.S. Newspapers.

Willings Press Guide. Chesham, England: Romeike Research, annual. Covers print and broadcast media, especially in Britain. Volumes provide a detailed director of newspapers, magazines, broadcast stations, advertising representatives, and more.

1. United Kingdom.
2. Western Europe.
3. World (excluding U.K. and Western Europe).

B. Dictionaries and Glossaries

For historical dictionaries, see Section 2-A.

Abercrombie, Nicholas, and Brian Longhurst. *Dictionary of Media Studies*. London: Penguin Books, 2007. Provides an alphabetical listing of terms central to all media and studying about them. Authors, both British sociologists, have assembled several hundred terms and mini-biographies of key figures, with a strong stress on British practice and companies. Still, many terms included cut across national borders, or are nearly universal. Entries vary in length from three or four lines to upwards of a page or more (and a few, such as that on "radio," extend for three pages). *See also* Watson, below, and Downing under encyclopedias.

Bognár, Desi K. *International Dictionary of Broadcasting and Film*. Newton, MA: Focal Press, 2000 (2nd ed.). Several thousand terms are clearly and concisely defined in this edition, which adds about 40 pages of material to original edition.

Crystal, David. *A Glossary of Netspeak and Textspeak*. Edinburgh, Scotland: Edinburgh University Press, 2004. Hundreds of terms are explained with some sense of how they have been used and how those uses are changing. Even includes a listing of emoticons, widely used in e-mail.

Diamant, Lincoln. *Dictionary of Broadcast Communications*. Westport, CT: Greenwood, 1989 (3rd ed.). About 6,000 terms are briefly defined and some are illustrated.

Ellmore, R. Terry. *NTC's Mass Media Dictionary*. Lincolnwood, IL: National Textbook, 1991. Includes some 20,000 terms across all media.

Hansen, Douglas E. *Educational Technology Telecommunications Dictionary with Acronyms*. Englewood Cliffs, NJ: Educational Technology Publications, 1991. Nontechnical definitions of about 750 common terms and acronyms.

Harnett, Richard M. *Wirespeak: Codes and Jargon of the News Business*. San Mateo, CA: Shorebird Press, 1997. Collection of glossary-like guides to wire service terms, cable terms, commercial telegraphic codes, and newspaper terms.

Jones, Glenn R. *Jones Cable Television and Information Infrastructure Dictionary*. Englewood, CO: Jones Interactive, Inc., 1994 (4th ed.). Defines 350 acronyms and 2,900 terms and provides 750 cross-references.

Kent, Ruth Kimball. *The Language of Journalism: A Glossary of Print-Communications Terms*. Kent, OH: Kent State University Press, 1970. Includes a separate listing of abbreviations.

Mazda, Xerxes, and Fradoon Mazda. *The Focal Illustrated Dictionary of Telecommunications*. Oxford, England: Focal Press, 1999. Some 6,000 terms, some of which are relevant to journalism and reporting.

Moshkovitz, Mose. *Dictionary of Television and Audiovisual Terminology*. Jefferson, NC: McFarland, 1998. Some 1,500 terms are briefly defined.

Orlebar, Jeremy. *The Practical Media Dictionary*. London: Arnold / New York: Oxford University Press, 2003. Offers a British guide to terminology of audio, video, and film production as well as multimedia. Included are specialist job and skill definitions, major organizations, multimedia terms, computer graphics, and both studio and location terms.

Penny, Edmund F. *The Facts on File Dictionary of Film and Broadcast Terms*. New York: Facts on File, 1991. Details some 2,500 terms on equipment, technology, program formats, camera shots, talent, production, organizations and general terms. Focus is on creative and business functions of both media.

Pepper, Charles M. *Dictionary of Newspaper and Printing Terms*. New York: Columbia University Press, 1959. English and Spanish terms are provided (as this was published with Inter American Press Association).

Reed, Robert M. *Dictionary of Television, Cable & Video*. New York: Facts on File, 1994. Defines words and terms from three overlapping fields of electronic media.

Watson, James, and Anne Hill. *Dictionary of Media and Communication Studies*. London: Hodder Arnold / New York: Oxford University Press, 2006 (7th ed.). Updates the book first published more than two decades ago. English authors have continually updated this handy guide that includes theories, trends, advertising, broadcasting, commissions and committees, communication models, cyberculture, gender matters, interpersonal communications, media ethics, history, institutions, issues and debates, ownership and control of media, media power and effects, technologies, news media, research methods. *See also* Abercrombie, above, and Downing under encyclopedias.

C. Encyclopedias and Handbooks

More specialized encyclopedias are listed in later sections under the proper topic; those appearing here are fairly wide-ranging in scope. Entries in all of these are longer than in the dictionaries and glossaries listed above.

Broecker, William L., ed. *International Center of Photography Encyclopedia of Photography*. New York: Crown, 1984. Some 1,300 illustrated entries on all aspects of the field including people, techniques, cameras, film types, commercial aspects, famous firsts, processes, organizations and more. Length varies from a paragraph to several columns (book is arranged in a three-column format, well-illustrated, with some in color).

Brown, Les. *Les Brown's Encyclopedia of Television*. Detroit, MI: Gale Research, 1992 (3rd ed.). Dated but still useful historically. Adds 900 new entries to the work first issued in 1977 to include programs, people, organizations, technologies, laws and policies, FCC commissioners, and more in a handy one-volume format. Many appendices provide historical statistics or other information.

Donsbach, Wolfgang, ed. *The International Encyclopedia of Communication*. Malden, MA: Wiley-Blackwell, 2008 (12 vols.). While many of the 1,300 or so entries in this huge work (sponsored by the International Communications Association) range beyond journalism, there is a good deal of valuable and current material presented with a global outlook. Overall coverage includes theory, media research, problems and concepts and technology.

Downing, John D. H., et al., eds. *The SAGE Handbook of Media Studies*. Thousand Oaks, CA: Sage, 2004. Contributors from many countries provide 26 comprehensive survey essays arranged within five interconnected areas: humanistic and social scientific approaches; global and comparative perspectives; relation of media to economy and power; media users; and specific arenas of media research ranging from media ethics to advertising, from popular music to digital technologies, advertising, electronic media, and violence and sex. *See also* Abercrombie, and Watson, under dictionaries above.

Hollis, Daniel W. *The ABC-CLIO Companion to the Media in America*. Santa Barbara, CA:

ABC-CLIO, 1995. Designed for general readers, coverage is very broad here, ranging over history, specific media, key people and publications, events and legal issues, and trends. More a dictionary than an encyclopedia, more than half of its 250 relatively short alphabetical entries cover specific newspapers, magazines, and important people in their history. Most entries include cross-references and further reading lists. Emphasis is largely on history (technology gets relatively short shrift) and general aim of the volume is more at public and high school libraries than academic collections.

Johnston, Donald H., ed. *Encyclopedia of International Media and Communications*. San Diego, CA: Academic Press, 2003 (4 vols.). Emphasizes depth given it has only 219 articles—but they range upwards of 10 to 15 pages each. In addition to entries on media in major countries or regions, this work covers media types and formats, media issues and relationships with other fields, history and "futures" essays. The substantial benefit of this set is its depth—something few other reference works offer—making it suitable for academic libraries. As an example of its approach, journalism ranges throughout the set, with just two entries under "J" (on education, and on codes of ethics and conduct) while the journalistic remainder appears under specific country or media headings. Four broad entries center on newspapers, two on news reporting in broadcasting, and another on world news agencies.

Murray, Michael D., ed. *Encyclopedia of Television News*. Phoenix, AZ: Oryx, 1999. Very useful compendium of information on anchors, reporters, producers, programs, network news departments, and issues in broadcast network news programming.

Newcomb, Horace, ed. *Encyclopedia of Television*. New York: Fitzroy Dearborn/Routledge, 2004 (2nd ed., 4 vols). Several hundred entries on people (actors, producers, directors), programs, organizations, issues, policy and law, technology, and other aspects of broadcast and cable television. All entries from the first edition are available online: http://www.museum.tv/archives/etv/index.html.

Pool, Hilary W., and Christos J. P. Moschovitis, eds. *The Internet: A Historical Encyclopedia*. Santa Barbara, CA: ABC-CLIO, 2005 (3 vols.). Includes one volume each on chronology, biography of key people, and issues. One of the best resources on this subject.

Sterling, Christopher H., ed. *Encyclopedia of Radio*. New York: Fitzroy Dearborn/Routledge, 2003 (3 vols.). Several hundred often lengthy (multipage) entries on people, programs, organizations, issues, policy and law, technology, and other aspects of aural broadcasting with an emphasis on the U.S. and other English-speaking countries.

Sterling, Christopher H., and Cary O'Dell, eds. *The Concise Encyclopedia of American Radio*. New York: Routledge, 2009. Selected from the title immediately above, with updates throughout and about a dozen new entries added.

Wahl-Jorgensen, Karin, and Thomas Hanitzsch, eds. *The Handbook of Journalism Studies*. New York: Routledge, 2009. An impressive collection of 30 academic papers in sections including news production, content, journalism and society, and worldwide journalism studies. It provides a useful summation of academic knowledge about most aspects of journalism, with good summaries of research work done in Europe and the U.S.

D. Bibliographies

The literature of journalism is huge as the following listing begins to hint. Indeed, earlier bibliographies date back to at least the 1920s if not before (for historical bibliographies, see Section 2-A). By definition, any bibliographic publication is selective, and while some make clear what the factors of selection are, many do not.

D-1: Journalism in General

Block, Eleanor S., and James K. Bracken. *Communication and the Mass Media: A Guide to the Reference Literature*. Englewood, CO: Libraries Unlimited, 1991. Arranged by type of publication with sections on bibliographies, dictionaries and encyclopedias, indexes and abstracts, biographical sources, library catalogs, online and CD-ROM databases, core periodicals, research centers and archives, and societies and associations. While dated, this remains useful.

Blum Eleanor, and Frances Wilhoit. *Mass Media Bibliography: An Annotated Guide to Books and Journals for Research and Reference*. Champaign: University of Illinois Press, 1989 (3rd ed.). Final version of a long-standard guide to some 2,100 indexed annotated entries covering wider scope than just journalism. Again, dated but still useful.

Cates, Jo A. *Journalism: A Guide to the Reference Literature*. Westport, CT: Libraries Unlimited, 2004 (3rd ed.). Includes hundreds of annotated sources divided by type of publication, with good author/title and subject indexing. Last revised in 1997, this latest edition features 785 entries, 155 of which are new, 420 have been revised (and 127 cut). There's also a new chapter on Internet resources. Arrangement is by type of publication rather than subject, but the annotations are often extensive and critical—all too rare in such books.

Columbia University Journalism Library. *Journalism Library Reference Resources*. http://www.columbia.edu/cu/lweb/indiv/jour/coll/ref_res.html. Includes print and online materials such as guides to research, bibliographies, dictionaries, directories, encyclopedias, handbooks, and indexes.

Greenberg, Gerald. *Tabloid Journalism: An Annotated Bibliography of English-Language Sources*. Westport, CT: Greenwood, 1986. Compilation of some 800 English-language books and articles, briefly summarized, commenting on phenomenon of sensationalism in news reporting. Coverage includes historical penny and yellow presses; Britain's Fleet Street publications; and supermarket tabloids, spanning the eras of Northcliffe, Pulitzer, Hearst, and Murdoch.

Henderson, Harry. *Power of the News Media*. New York: Facts on File, 2004. Includes development, perspectives and issues, media law, a chronology, biographical listings, a glossary, and how to research news media plus an annotated bibliography and listing of relevant organizations and agencies.

See Lasswell, et al., Section 10-G-1.

McCoy, Ralph E. *Freedom of the Press: An Annotated Bibliography*. Carbondale: University of Southern Illinois Press, 1968; updated with a *Supplement, 1967–77* (1979), and a *Second Supplement, 1978–1992* (1993). Three volumes together provide more than 10,000 citations, though parameters for coverage narrow with supplement volumes. [This had been available online through the SIU university library's website, but now is apparently provided only by subscription.]

McKerns, Joseph. *News Media and Public Policy: An Annotated Bibliography*. New York: Garland, 1986. Includes more than 700 entries, arranged topically.

Milner, Anita Cheek. *News Indexes: A Location and Subject Guide for Researchers*. Metuchen, NJ: Scarecrow, 1977, 1979, 1982 (3 vols.). Lists foreign language papers, subject collections, and church periodicals.

See Nafziger, Section 10-A.

Price, Warren C. *Literature of Journalism: An Annotated Bibliography*. Minneapolis: University of Minnesota Press, 1959. Excellent and standard source for material published to that point, especially for history and biography, arranged by subject. Updated by next entry.

Price, Warren C., and Calder M. Pickett. *An Annotated Journalism Bibliography, 1958–1968*. Minneapolis: University of Minnesota Press, 1970. Updates title immediately above, though arranged alphabetically rather than by subject.

Romero, Lisa. *New Books in the Communications Library*. Urbana: University of Illinois College of Media, quarterly. A very useful accessions list for one of country's major academic media libraries, divided by topic and annotating all materials, print and electronic.

Semonche, Barbara P., ed. *News Media Libraries: A Management Handbook*. Westport, CT: Greenwood, 1993. Not quite a bibliography, but a collection of 30 papers on such topics as their background and history, plus maintaining collections of clippings, photos, electronic resources, microfilms, and the like, with six case studies of effective libraries.

Shedden, David. *Poynter Journalism Bibliographies*. http://www.poynter.org/content/content_view

.asp?id=896. Eighteen of them on various topics, all kept quite current, and including both websites and print resources.

Shedden, David. *Libraries with Journalism Resources*. http://www.poynter.org/content/content_view.asp?id=1247. Another Poynter service, this offers direct links to dozens of libraries and research centers offering more reference material. Includes further links to resources at journalism schools and English departments with media studies.

See Smith, et al., Section 10-G-1.

Sterling, Christopher H., et al. *Mass Communications Research Resources: An Annotated Guide*. Mahwah, NJ: Lawrence Erlbaum Associates, 1998. While dated (there is only limited reference to websites, for example), this includes nearly 1,450 primary and secondary sources, organizations, and online materials assessed under sections on general reference, history, technology, industry and economics, content, research and audiences, policy and regulation, international, media periodicals, and audiovisual resources.

Tonella, Karla, comp. *Journalism Resources*. http://bailiwick.lib.uiowa.edu/journalism. Some 40 annotated webpages citing online material on all aspects (including cyberjournalism, media law, organizations, teaching resources, schools and colleges, news sources, gender and race, listservs, and more), provided by a researcher at University of Iowa, designed both for those who study and those actively involved in journalism.

Wolseley, Roland E., and Isabel Wolseley. *The Journalist's Bookshelf: An Annotated and Selected Bibliography of United States Print Journalism*. Indianapolis: R.J. Berg Co., 1986 (8th ed.). Final edition of a work which first appeared in 1939 and was previously revised in 1961 (with 1,324 entries), this version provides nearly 2,400 entries arranged under 34 topical headings. Emphasis is on practical and "how to" aspects rather than books about journalism.

D-2: Print Media

Paine, Fred K., and Nancy E. Paine. *Magazines: A Bibliography for Their Analysis, with Annotations and Study Guide*. Metuchen, NJ: Scarecrow Press, 1987. While dated, this remains the most comprehensive guide on magazine industry; including some 2,200 items in more than 30 topical sections, with indexes. Part 1 includes an annotated list of popular, trade, and scholarly journals and articles that cover them, and also lists reference books. Part 2 is a bibliography of over 2,000 articles, as well as books and dissertations about magazines.

Schwarzlose, Richard A. *Newspapers: A Reference Guide*. Westport, CT: Greenwood, 1987. Dated but informed narrative guide to abundant literature about newspapers and news people. Topics include histories, newspaper people before the twentieth century, newspaper people during the twentieth century, newspaper work, producing newspapers, newspapers and society, newspapers and law, newspapers and technology, and references and periodicals about newspapers. Appendices provide a chronology of newspapers and descriptions of major research collections of newspapers and about newspapers.

D-3: Electronic Media

Carothers, Diane Foxhill. *Radio Broadcasting from 1920 to 1990: An Annotated Bibliography*. New York: Garland, 1991. This remains the most inclusive listing with some 1,800 resources on radio—with chapters on background, economic aspects, production, programming, international, public, regulation, amateur and ham radio, women and minorities, careers, and reference sources.

Cassata, Mary, and Thomas Skill. *Television: A Guide to the Literature*. Phoenix, AZ: Oryx Press, 1985. While dated, this offers useful coverage of earlier decades in ten topical chapters (history, reference, process and effects, children, television news, television and politics, the industry, criticism, and anthologies of television writing) with discussions and listings of several thousand titles with good author and title indexes.

Emmons, Mark. *Film and Television: A Guide to the Reference Literature*. Westport, CT: Libraries Unlimited, 2006. While much of this material concerns film entertainment and is thus off point, it does serve to identify important recent publications of all kinds. It also reflects how important the Internet has become as a home to reference sites.

Fisher, Kim N. *On the Screen: A Film, Television, and Video Research Guide*. Littleton, CO: Libraries Unlimited, 1986. Annotated and indexed guide to more than 700 publications and associations, arranged by subject.

Garay, Ronald. *Cable Television: A Reference Guide to Information*. Westport, CT: Greenwood, 1988. Useful for early decades of cable development, with narrative discussion about (followed by citations on) general sources, business and industry/economic resources, program services and content as well as cable uses and effects, cable law and regulations, and videotex.

Hill, George H., and Lenwood Davis. *Religious Broadcasting 1920–1983: A Selectively Annotated Bibliography*. New York: Garland, 1984. Includes 80 books, 170 theses and dissertations, and some 1,400 articles, though with few annotations. Not all of this concerns religious news, but many entries do.

Kittross, John M. *A Bibliography of Theses & Dissertations in Broadcasting: 1920–1973*. Washington, DC: Broadcasting Education Association, 1978. Some 4,300 of them are listed with a variety of indexes for ready access. *See also* next entry.

McBride, Donald L. *Doctoral Dissertation on Broadcast Journalism: A Bibliography*. Carbondale: Southern Illinois University, Department of Radio and Television, 1990. Unannotated list. *See also* previous entry.

McCavitt, William E. *Radio and Television: A Selected, Annotated Bibliography,* and *Supplement One: 1977–1981*. Metuchen, NJ: Scarecrow, 1978, 1982. First attempt in decades at a comprehensive bibliography, this includes some 1,500 items in both volumes, topically divided and indexed. Many items are not annotated and there is some confusion in topical arrangement. Updated further by Pringle, Peter K., and Helen H. Clinton. *Radio and Television: A Selected, Annotated Bibliography, Supplement Two: 1982–1986* (1989), adding another 1,000 entries.

Smith, Myron J. *U.S. Television Network News: A Guide to Sources in English*. Jefferson, NC: McFarland, 1984. Some 3,200 entries in a topically arranged bibliography, though only some are annotated.

E. Media Statistics

News media businesses thrive on numbers of all kinds, and there is a whole subindustry that generates commercial information—such as circulation, broadcast receiver sales, and ratings. Most data are a "snapshot" for the present year and perhaps the previous one—historical information is a bit harder to dig out. But beware—all numbers are NOT created equal, and it is important to know how numbers are derived and for what purpose. There is considerable discussion of this in the two Sterling sources noted below.

E-1: General

Two things limit availability of these "numbers" to those outside media industries. For one, government is collecting less data—the FCC, for example, stopped much of its annual data-gathering years ago. For another, trade associations rarely provide anything free anymore, though some still have helpful websites. Once-free publications have either disappeared in recent years, or are provided only online—and even then, at a cost.

Bureau of the Census, U.S. Department of Commerce. *Annual Survey of Communication Services*. Washington, DC: Government Printing Office, 1990–present, annual. Covers telephone, broadcast, cable, and pay cable industries in charts and tables, usually comparing data over a number of years. *See also* chapter on communications in the *Statistical Abstract of the United States* (Government Printing Office, annual and online).

See European Audiovisual Observatory, Section 10-A.

McHale, Magda Cordell. *Facts and Trends: The Changing Information Environment—An Information Chartbook*. Rome: Intergovernmental Bureau for Informatics, n.d., but ca. 1984. Imaginative use of tables and charts to show then-current status of all modes of communication (including supporting technology), with some time-series data as well.

Project for Excellence in Journalism. *The State of the News Media*. http://www.stateofthenews media.org/2008. Invaluable survey drawn from many sources of newspapers, magazines, ethnic media, and electronic media, covering most topics, some with historical data. Reports from 2004 on are also available online. Includes tables and charts from a wide variety of media information sources, many otherwise only available at a price. *See also* trade associations in subsection E-3, below.

Statistical Yearbook: Cinema, Television, Video and New Media in Europe. Strasbourg: European Audiovisual Laboratory, 1994–present, annual. Impressive collection of tabular and chart data, which began in one volume and became several, with current regional and per-country data allowing a variety of comparisons. Most data are given for decade-long periods.

U.S. Census Bureau. *Information and Communications*. http://www.census.gov/compendia/statab/cats/information_communications.html. Relevant section of annual *Statistical Abstract of the United States,* including tables concerning print, electronic, and film media, usually over time and sometimes decades. *See also* Carter, below.

U.S. Department of Commerce. *STAT-USA Internet*. http://www.stat-usa.gov. Fee-based single source access point for a huge variety of government-gathered statistical information on all sectors of the economy. *See also* Carter, below.

See World Press Trends, Section 10-A.

See World Radio and Television Receivers, Section 10-A.

E-2: Historical

Carter, Susan B., et al., eds. "Communications," in *Historical Statistics of the United States: Millennial Edition.* New York: Cambridge University Press, 2006 (5 vols.). Forming part of Vol. 4, "Economic Sectors," this includes multiple time-series tables (some ranging well back into the nineteenth century) along with supporting text concerning print, electronic, and film media as well as telecommunications (telegraph, telephone, etc.). Other sections in this massive publication are relevant as well.

Chapin, Richard E. *Mass Communications: A Statistical Analysis*. East Lansing: Michigan State University Press, 1957. Pioneering attempt to pull together time-series statistics on print (books, magazines, newspapers), film, and electronic media (radio and television), with some discussion of value of those data.

King, D. W., et al. *Statistical Indicators of Scientific and Technical Communication, 1960–1980*. Rockville, MD: King Research, 1976. Primarily charts (with supportive descriptive text), including projections for late 1970s.

Rubin, Michael Rogers, and May Taylor Huber. *The Knowledge Industry in the United States, 1960–1980*. Princeton, NJ: Princeton University Press, 1986. Economic and other measures of knowledge production and distribution (including media) in tables (some with data before 1960) and supporting text.

Sterling, Christopher H., and Timothy R. Haight. *The Mass Media: Aspen Institute Guide to Communication Industry Trends*. New York: Praeger, 1978. Some 200 tables and supporting text that describes what numbers say as well as their sources and value, covering overall media industry size, ownership and control, economics, employment and training, content trends (including news and political uses), media audiences, and American media overseas.

Sterling, Christopher H. *Electronic Media: A Guide to Trends in Broadcasting and Newer Technologies, 1920–1983*. New York: Praeger, 1983. Reprints and updates portions of book immediately above, adding new tables and text on home entertainment and media regulation.

E-3: Trade Associations

Once a valuable source of information, industry trade associations are increasingly only providing information at a price (often a stiff one), whether online or in print. The following were exceptions

at the time of going to press—most are updated annually. *See also* Section 9-D for radio audience statistical information.

Magazine Publishers of America, *The Magazine Handbook*. http://www.magazine.org/advertising/handbook/Magazine_Handbook.aspx. Free download of annual booklet filled with statistical and other information about consumer magazines including circulation trends and readership.

National Cable & Telecommunications Association, *Cable Statistics*. http://www.ncta.com/Statistic/Statistic/IndustryStatistics.aspx. Overall data for cable TV industry, and regularly revised, including number of subscribers, systems, system owners, cable program services or networks, and so on.

Newspaper Association of America, *Trends and Numbers*. http://www.naa.org/TrendsandNumbers.aspx. Offers a changing variety of publications and data, much of it free for downloading, that tout different aspects (circulation, readership, advertising, operations) of newspapers, often broken out by weekday and Sunday distribution.

Radio Advertising Bureau. *Radio Marketing Guide and Fact Book*. http://www.rab.com/public/MediaFacts/factbook.cfm. Regularly updated compendium of information in chart and tabular form about commercial radio business, chiefly designed to attract advertisers.

Television Bureau of Advertising, *TV Basics*. http://www.tvb.org/nav/build_frameset.aspx. Annually revised set of tables and charts about television, sometimes in comparison with other media. Includes some time-series historical information.

F. Major Journalism Awards

As with most media, there is a plethora of available awards—only a handful of the more important ones are represented here.

F-1: Pulitzer Prizes

These are easily the premier annual awards in journalism and have been well recorded in books and websites.

Buell, Hal. *Moments: The Pulitzer Prize Photographs*. New York: Black Dog & Leventhal, 2007 (2nd ed.). Famous photos from World War II into twenty-first century. *See also* Rubin, below.

Columbia University, *The Pulitzer Prize*. http://www.pulitzer.org. Official pages include historical information on journalism (and other) prizes over the years.

Fischer, Heinz-Dietrich, comp. *Outstanding International Press Reporting: Pulitzer-Prize Winning Articles in Foreign Correspondence*. Berlin: de Gruyter, 1983–91 (vols. 1–4); Munich: K. G. Saur, 2000 (vol. 5): reprints the award-winners chronologically. Each volume is arranged into sections by country or region involved in the reporting.

1. *1928–1945*.
2. *1946–1962*.
3. *1963–1977*.
4. *1978–1989*.
5. *1990–1999*.

Fischer, Heinz-Dietrich, and Erika J. Fisher, eds. *The Pulitzer Prize Archive: A History and Anthology of Award-Winning Materials in Journalism, Letters and Arts*. Munich: K. G. Saur, 1987–2000 (8 vols.). Provides detailed lists of winners and selections from top winners. The series includes these volumes devoted to various journalism awards (other volumes concern awards for biography and nonfiction):

1. *International Reporting 1928–1985: From the Activities of the League of Nations to Present-Day Global Problems*. 1987.
2. *National Reporting 1941–1986: From Labor Conflicts to the* Challenger *Explosion*. 1989.
3. *Local Reporting 1947–1987: From A County Vote Fraud to a Corrupt City Council*. 1989.
4. *Political Editorial 1916–1988: From War-Related Conflicts to Metropolitan Disputes*. 1990.
5. *Social Commentary 1969–1989: From University Troubles to a California Earthquake*. 1992.

6. *Cultural Criticism 1969–1990: From Architectural Damages to Press Imperfections*. 1993.
13. *Editorial Cartoon Awards 1922–1997*. 1999.
14. *Press Photography*. 2000.
16. *Complete Biographical Encyclopedia of Pulitzer Prize Winners 1917–2000: Journalists, Writers and Composers on Their Ways to the Coveted Awards*. 2002. Provides biographical information on winners rather than the prize-winning materials detailed in previous volumes.

Garlock, David. *Pulitzer Prize Feature Stories: America's Best Writing, 1979–2003*. Ames: Iowa State Press, 2003 (2nd ed.). The winning stories and some commentary on them. *See also* Sloan and Alexander below.

Harris, Roy J. *Pulitzer's Gold: Behind the Prize for Public Service Journalism*. Columbia: University of Missouri Press, 2008. First book to trace 90-year history of Pulitzer Prize for Public Service, awarded annually to a newspaper rather than to individuals. Harris recalls dozens of stories behind news reports, often allowing journalists involved to share their own accounts.

Hohenberg, John, ed. *The Pulitzer Prize Story*. New York: Columbia University Press, 1959. Includes examples from best as exemplified by prize winners in all categories, most of them journalistic. Updated with author's *The Pulitzer Prize Story II: Award-Winning News Stories, Columns, Editorials, Cartoons, and News Pictures, 1951–80* (Columbia University Press, 1981).

Johnson, Gerald W. *The Lines Are Drawn: American Life since the First World War as Reflected in the Pulitzer Prize Cartoons*. Philadelphia: Lippincott, 1958. Thirty-five of them are reproduced and their context is discussed.

Lewis, Anthony, ed. *Written into History: Pulitzer Prize Reporting of the Twentieth Century from* The New York Times. New York: Times/Holt, 2001. Collection with some brief contextual commentary.

Morrison, Mary E. *The Pulitzer Prize in Journalism—1917–1985*. Ann Arbor, MI: University Microfilms, 1986. Provides an index to the microfilmed files by year, news organization, author, and prize category.

Rubin, Cyma, and Eric Newton, eds. *Capture the Moment: The Pulitzer Prize Photographs*. New York: Norton, 2001. Some 115 of best from 1942 to 2009, arranged chronologically. *See also* Buell, above.

Sloan, William David, and Laird B. Alexander, eds. *Pulitzer Prize Editorials: America's Best Writing, 1917–2003*. Ames: Iowa State Press, 2003 (3rd ed.). Collection first published in 1980 of winning editorials and commentary about them—and why on several occasions, no prize has been awarded. *See also* Garlock, above.

F-2: Other Awards

Columbia University Journalism School, *The Alfred I. duPont-Columbia University Awards*. http://www.journalism.columbia.edu/cs/ContentServer/jrn/1165270069766/page/1175295284582/JRNSimplePage2.htm. Information on current and past awards. *See also* Barrett, Section 4-G.

Shedden, David. *[Journalism] Awards and Contests*. http://www.poynter.org/content/content_view.asp?id=1241. Useful portal to scores of often-annual journalism award programs, some focused on specific media.

University of Georgia Libraries, *Peabody Awards Collection*. http://www.libs.uga.edu/media/collections/peabody/pbdatabase/index.html. Archive of George Foster Peabody Award–winning radio and television network and station programs since 1940, a large proportion of which concern news and public affairs.

Section 2

History

Journalism's long history stretches back at least to the Fugger newsletters of Renaissance Europe, if not to news readers in ancient Greece and Rome. The first daily newspapers date to the early 1700s, early magazines to just a few decades later, motion pictures to the turn of the twentieth century, radio to 1920 (though its journalism role took more than a decade to develop), television (which featured news from the start) to the 1940s, and the commercial Internet only to 1995. Each of these is historically reviewed in the entries that follow, providing a fair sampling of recent historical writing.

While this chapter adheres to the general emphasis of this bibliography (largely books published since 1990, as well as useful websites), here especially will be found a scattering of important earlier studies that provide information often lacking in more recent titles. For development of the various underlying media technologies, see Section 3. Some historical titles appear elsewhere in this guide if they focus on specific subjects (especially specific types or topics of news content, which are covered in Sections 5 and 6).

A. Reference Sources

Included here are a variety of sources largely *intended* to be for historical reference. But many other sources listed in Section 1 and subsequent sections now have historical value as well.

A-1: Historical Dictionaries

Most of these are mini-encyclopedias, providing very short entries ranging from a line or two up to a paragraph or column on major topics. They are essentially historical handbooks to the field described in their titles. For dictionaries of journalists, see Section 7-A.

Eaman, Ross. *Historical Dictionary of Journalism*. Lanham, MD: Scarecrow, 2008. Hundreds of brief (paragraph-long) entries concern people, events, trends, specific newspapers and magazines, broadcast programs, and organizations.

Godfrey, Donald G., and Frederic A. Leigh, eds. *Historical Dictionary of American Radio*. Westport, CT: Greenwood, 1998. Using many contributors, this includes more than 600 brief (from a few lines to a paragraph) entries about people, programs, organizations, laws, technical definitions, networks, and stations.

See Manning, Section 10-G-1.

Reinehr, Robert C., and Jon D. Schwartz. *Historical Dictionary of Old-Time Radio*. Lanham, MD: Scarecrow, 2008. Hundreds of brief entries largely concern entertainment, but include some material on news programs and people.

Roth, Michael P. *Historical Dictionary of War Journalism*. Westport, CT: Greenwood, 1997. Entries cover reporters, photographers, and artists who represented a newspaper, magazine, radio, or television station, or another news source as well as significant events and terms relating to war reporting from 1846 to 1990s Gulf and Yugoslavian conflicts.

Slide, Anthony. *The American Film Industry: A Historical Dictionary*. Westport, CT: Greenwood, 1986. *See* next entry.

Slide, Anthony. *The International Film Industry: A Historical Dictionary*. Westport, CT: Greenwood, 1989. This and the previous volume provide well over 1,200 entries on people, studios, major films, technologies and film equipment, archives, specific places or countries, issues and controversies, laws, film series and genre. Entry length ranges from a few lines to a page or more.

Slide, Anthony. *The Television Industry: A Historical Dictionary*. Westport, CT: Greenwood, 1991. About a thousand short entries on key personnel, programs and program genre, networks and other organizations, cable, educational/public stations, and technical devices. The focus is on American television with occasional global references.

A-2: Archives

A growing number of media-related archives allow for substantial searching for materials online.

Godfrey, Donald G., comp. *Reruns on File: A Guide to Electronic Media Archives*. Hillsdale, NJ: Lawrence Erlbaum, 1992. While dated, this guide arranged by state provides a useful starting point to find archives of broadcasters, networks, historical associations, and other organizations.

Gregory, Winifred, comp. *American Newspapers: A Union List of Files Available in the U.S. and Canada*. New York: Bibliographic Society of America, 1937 (reprinted by Kraus, 1967). Important reference for finding U.S. and Canadian papers published from 1820 to 1935, listing in what libraries or archives they could be found. Earlier newspapers are listed in Brigham, subsection B-1, below.

Heritage Microfilms. *Newspaper Archive*. http://www.newspaperarchive.com/KeywordLaunch.aspx?key=newspapearticles. Allows for subject or individual name searches of more than 90 million newspaper pages covering over 200 years from cities across the nation. It adds more of them daily.

Library of American Broadcasting. http://www.lib.umd.edu/LAB. The one-time Broadcast Pioneers library, this University of Maryland Libraries site is a combination archive and reference library on all aspects of radio and television, including journalism—and is one of the country's largest such collections.

Library of Congress. *Motion Picture and Television Reading Room*. http://www.loc.gov/rr/mopic. Access point for Library's massive collection of audio-visual material, as well as paper archives, some held in Washington, with the remainder now in the new Packard Center in Culpeper, Virginia, about an hour's drive south.

Library of Congress. *Newspaper and Current Periodical Reading Room*. http://www.loc.gov/rr/news/lcnewsp.html. Entry page for extensive collection of both current and historical newspapers stretching back three centuries. *See also* National Digital Newspapers Program website: http://www.loc.gov/ndnp.

Library of Congress. *Newspaper Archive Sources on the Web*. http://www.loc.gov/rr/news/oltitles.html. Useful portal providing access to both national and state/local newspaper archives that are in some way represented or indexed online, though some are available only for a charge.

Library of Congress. *Prints and Photographs Reading Room*. http://www.loc.gov/rr/print. Includes extensive photojournalism holdings from both government and private entities.

Museum of the Moving Image. *The Living Room. Candidate*. http://www.livingroomcandidate.org. A video archive of television political advertising, including examples from presidential races from 1952 campaign up to the present, all available online. This site is typically active online only during presidential campaign season.

National Archives and Record Administration, *Motion Picture Films and Sound and Video Recordings*. http://www.archives.gov/research/formats/film-sound-video.html. Including materials held at 14 presidential libraries, this is best entry point for NARA's extensive holdings.

National Endowment for the Humanities. *U.S. Newspapers Program*. http://www.neh.gov/projects/

usnp.html. A directory of state archives of microfilmed newspapers, a project supported by National Endowment for the Humanities. Users can click on a map to get further information for any state.

National Public Broadcasting Archives. http://www.lib.umd.edu/NPBA/index.html. Official repository for NPR and PBS materials, among other holdings—this useful site provides access to many topics and offers links to others.

Pacifica Foundation. *Pacifica Radio Archive*. http://www.pacificaradioarchives.org/welcome.html. Focused substantially on news and public affairs, these are programs from Pacifica's five stations across the country, the first dating to 1947.

Purdue University. *C-SPAN Video Library*. http://www.c-spanarchives.org/library/index.php?main_page=aboutus. Archive for cable public affairs network, this includes every program aired since 1987, providing a unique record of Congress and many other Washington, D.C., organizations and events. It continues to record all three C-SPAN networks at all times. *See also* Vanderbilt, below.

Special Libraries Association. *International News [paper] Archives on the Web*. http://www.ibiblio.org/slanews/internet/intarchives.htm. Arranged by world region, then country, and then city, right down to individual publications. Same site provides detailed listing of Asian and Canadian newspaper archives as well.

Special Libraries Association. *Other Sources for News on the Web*. http://www.ibiblio.org/slanews/internet/archives_other.html. Includes further resource archives for both U.S. and international newspapers and electronic media, broadcast news archives, media directories, and news search engines.

Special Libraries Association. *U.S. News[paper] Archives on the Web*. http://www.ibiblio.org/slanews/internet/archives.html. Maintained by SLA volunteers, this provides a state-by-state listing of available newspaper archives, many of them searchable online.

Startt, John D., comp. *Oral Histories Relating to Journalism History*. http://facstaff.elon.edu/dcopeland/ajha/oralhistory.htm. Extensive directory of oral history collections found in national and state archives and in presidential libraries.

Vanden Heuvel, Jon. *Untapped Sources: America's Newspaper Archives and Libraries*. New York: Gannett Foundation, Columbia University, 1991. While now dated, this provides holdings and access information about a host of collections as well as general journalism history.

Vanderbilt University. *Television News Archive*. http://tvnews.vanderbilt.edu. Since 1968, Vanderbilt's Archive has recorded and indexed network television evening newscasts (now including Fox and CNN) and some other programs—all can be searched and copies borrowed. For C-SPAN, see Purdue, above.

Wisconsin Historical Society. *Mass Communications History Collections*. http://www.wisconsinhistory.org/libraryarchives/readroom/masscol.asp. One of nation's most important collections—dating back to a gift by newsman H. V. Kaltenborn in 1955—this includes among many archives, those of NBC radio and television networks into the mid-1950s, National Educational Television, academic groups, and many journalists. Much of it can be searched online.

A-3: Bibliographies

Caswell, Lucy Shelton. *Guide to Sources in American Journalism History*. Westport, CT: Greenwood, 1989. Begins with seven essays on bibliographic resources and research methods for American journalism, historiography, trends in research, printed bibliographies and electronic databases, the U.S. Newspaper Program (see above), and oral history, each with bibliographies. Remainder offers a 40-state listing of important archival collections (ten states apparently lacking anything of importance).

Cole, Robert. *Propaganda in Twentieth Century War and Politics: An Annotated Bibliography*. Lanham, MD: Scarecrow Press, 1996. While including a broader range of topics than the present volume, much of this material relates to journalism. Annotations range up to a paragraph of description.

Flannery, Gerald V. *Mass Media: Marconi to MTV 1900–1988: A Selected Bibliography of* New York Times *Sunday Magazine Articles on Communication*. Lanham, MD: University Press of America, 1989. Chronological, and with good indexes, though entries are not annotated.

May, James E. *Bibliography of Studies of Eighteenth Century Journalism and the Periodical Press, [Published from] 1986–2008*. http://www.bibsocamer.org/BibSite/May/May-C18-jour.pdf. Extensive listing of articles and monographs on all aspects of journalism during formative 1700s.

Pollay, Richard W. *Information Sources in Advertising History*. Westport, CT: Greenwood, 1979. While dated and to some extent superceded, much information here remains valid and useful (though many more resources have appeared in years since). Includes an extensive annotated subject-divided bibliography.

Sloan, W. David. *American Journalism History: An Annotated Bibliography*. Westport, CT: Greenwood Press, 1989. A compilation of more than 2,600 scholarly books, dissertations, and articles from 1810 to 1988, broken into 13 chronological periods plus a chapter on broadcasting.

Sterling, Christopher H., and George Shiers. *History of Telecommunications Technology: An Annotated Bibliography*. Lanham, MD: Scarecrow, 2000. Includes, among many other topics, annotated entries of many published historical sources for telegraph, telephone, radio, television, and newer media technologies.

A-4: Encyclopedias

Many of the general encyclopedias listed in Section 1-C also include extensive historical material.

Blanchard, Margaret A., ed. *History of the Mass Media in the United States*. Chicago: Fitzroy-Dearborn, 1998. Covers from 1690 to 1990 and includes technology, law, important people and publications, issues, and trends. Major subject areas include advertising, alternative media, books, broadcasting, general media, legal issues, magazines, motion pictures, news agencies, newspapers, photography, political figures and media, radio, reporting, television, and war. Focus is on trends and issues rather than organizations or people.

Hudson, Robert V. *Mass Media: A Chronological Encyclopedia of Television, Radio, Motion Pictures, Magazines, Newspapers, and Books in the United States*. New York: Garland, 1987. Just that—divides American history into 16 periods, and then into media material for each. In what must have taken far more work than is readily evident, compiler (a professor of journalism at Michigan State University) provides a wealth of often quite specific information, with some entries ranging over a page or two. Important legal cases offer useful concise summaries of what happened and why. Items range from specific events to broader trends.

Vaughn, Stephen L, ed. *Encyclopedia of American Journalism*. New York: Routledge, 2008. Though not clear in its title, this provides some 400 largely historical entries on people, specific media, issues, policies, important stories and more, some of them quite lengthy.

B. General Journalism History

Altschull, J. Herbert. *From Milton to McLuhan: The Ideas Behind American Journalism*. White Plains, NY: Longman, 1990. A historical approach based on 300 years of seminal ideas (such as press freedom, social responsibility, public "right" to know, objectivity and watchdog notion) and thinkers about journalism's social and cultural roles.

See Chapman, Section 10-B.

Cray, Ed, et al., eds. *American Datelines: Major News Stories from Colonial Times to the Present*. Urbana: University of Illinois Press, 2003. Anthology of 100 articles published between 1704 and 2000 by American newspapers: what the editors call "a family photograph album" of "memorable moments in American history," culled primarily from local newspapers and edited down to no more than two pages each.

Emery, Michael, et al., eds. *America's Front Page News: 1690 to 1970*. Garden City, NY: Doubleday,

1970. Reproduces important stories as seen on front pages of nearly 300 different newspapers, each briefly annotated. (This is an update of a book first published five years earlier by the author's father, Edwin.)

Emery, Michael, and Edwin Emery. *The Press in America: An Interpretive History of the Mass Media.* Englewood Cliffs, NJ: Prentice Hall, 1997 (9th ed.). Encyclopedic text describes changes in dominant media, complexity of media industry, and key media figures. This has been a longtime standard university text since its first appearance in 1954.

Folkerts, Jean, et al. *Voices of a Nation: A History of Mass Media in the United States.* New York: Allyn & Bacon, 2008 (5th ed.). Survey text of mass media in the U.S. provides historical, social and legal context, and detail about media professionals/journalists and media organizations, including newspapers, magazines, and news services.

The History of American Journalism [Series]. Westport, CT: Praeger, 1994–2006 (7 vols.). Relates story from colonial era to present, examining changing nature of journalism in each period, noteworthy journalists, and relationship of journalism to society. In order of period covered, volumes include:

1. Sloan, William David, and Julie Hedgepeth Williams. *The Early American Press, 1690–1783.* 1994.
2. Humphrey, Carol Sue. *The Press of the Young Republic, 1783–1833.* 1996.
3. Huntziger, William E. *The Popular Press, 1833–1865.* 1999.
4. Smythe, Ted Curtis. *The Gilded Age Press, 1865–1900.* 2003.
5. Teel, Leonard Ray. *The Public Press, 1900–1945.* 2006.
6. Davies, David R. *The Postwar Decline of American Newspapers, 1945–1965.* 2006.
7. McPherson, James Brian. *Journalism at the End of the American Century, 1965–present.* 2006.

See Kaplan, Section 6-A.

Leonard, Thomas C. *News for All: America's Coming-of-Age with the Press.* New York: Oxford University Press, 1995. Relates the overall story from the early nineteenth century to the end of the twentieth, focusing on print, but including electronic media news as well.

Mindich, David T. Z. *Just the Facts: How Objectivity Came to Define American Journalism.* New York: New York University Press, 1998. Draws on high profile examples, showing degree to which journalism and its evolving commitment to objectivity has altered—and in some cases limited—public understanding of events and issues. Chapters focus on different components including detachment, nonpartisanship, inverted pyramid writing style, "facticity," and balance.

Mott, Frank Luther. *American Journalism: A History 1690–1960.* New York: Macmillan, 1962 (3rd ed.). Long a standard history of newspapers (first published in 1941), this remains useful with its "great man" approach emphasizing editors and publishers and their changing roles. Emphasis is heavily on newspapers with good coverage of magazines (on which author was an authority), though less on broadcasting.

Schudson, Michael. *Perspectives on Mass Communication History.* Hillsdale, NJ: Lawrence Erlbaum, 1991. Comprising 24 historiographical essays, each discussing major interpretations of a different and significant topic in media history.

Sloan, W. David, et al. *The Media in America: A History.* Northport, AL: Vision, 2002 (5th ed.). A college-level survey text, regularly revised.

Sloan, W. David, and Lisa Mullikin Parcell, eds. *American Journalism: History, Principles, Practices.* Jefferson, NC: McFarland, 2002. Gathers 39 essays, each providing a historical overview of an important aspect of journalism history, including ethics and objectivity, types of news coverage such as photojournalism and foreign correspondence, and issues related to television journalism and news transmission.

Stephens, Mitchell. *A History of News.* New York: Oxford University Press, 2007 (3rd ed.).

A wide-ranging history emphasizing long history of printed news, this makes for a useful and concise survey of a huge subject.

Streitmatter, Rodger. *Mightier Than the Sword: How the News Media Have Shaped American History*. Boulder, CO: Westview, 2008 (2nd ed.). Assesses journalism's development by weighing its impact on people and events in more than a dozen case studies, adding one on coverage of 9/11 events and their aftermath.

Tulloch, John. *Journalism: A Brief Global History*. New York: Routledge, 2009. With case studies drawn from Europe, North America, Asia, and the Middle East, this provides a framework for understanding journalism development as a global phenomenon. Compares and contrasts development of multiple journalism systems from the mid-eighteenth century onwards, and their differing functions, and links journalism to creation of global systems of trade and dominion, and resistance to those processes.

B-1: History to 1850

See also subsection C on newspapers, below.

Brigham, Clarence S. *History and Bibliography of American Newspapers (1690–1820)*. Worcester, MA: American Antiquarian Society, 1947 (2 vols.; reprinted by Greenwood, 1976). Remains most thorough work for its period of coverage. Includes information on papers and their founders and printers (more than 2,800 people) and where copies may be found. Some *Additions and Corrections* appeared in 1950. For later years, see Gregory, subsection A-2, above.

Burns, Eric. *Infamous Scribblers: The Founding Fathers and the Rowdy Beginnings of American Journalism*. New York: Public Affairs, 2006. Tells of Ben Franklin, Alexander Hamilton and Sam Adams—leading "Founding Father" journalists; of George Washington and John Adams as leading critics of journalists; and Thomas Jefferson as leading manipulator of journalists of that era.

Copeland, David A., ed. *Debating Historical Issues in the Media of the Time*. Westport, CT: Greenwood, 2000–present (2 vols., but continuing). Each includes some 30 chapters built around important period issues and quoting papers and pamphlets:

1. *Debating the Issues in Colonial Newspapers: Primary Documents on Events of the Period*. 2000.
2. *The Antebellum Era: Primary Documents on Events from 1820 to 1860*. 2003.

John, Richard R. *Spreading the News: The American Postal System from Franklin to Morse*. Cambridge, MA: Harvard University Press, 1995. Describes pretelegraph postal system as an agent of change, its expanding network, and its role in dissemination of newspapers and magazines. *See also* next entry.

Kielbowicz, Richard B. *News in the Mail: The Press, Post Office, and Public Information, 1700–1860s*. Westport, CT: Greenwood, 1989. Intertwined story of press and post office prior to Civil War with discussion of postal rates, post roads, news gathering by mail, postal express service, and other policies. *See also* previous entry.

Levy, Leonard W. *Legacy of Suppression: Freedom of Speech and Press in Early American History*. Cambridge, MA: Harvard University Press, 1960 (revised and expanded as *Emergence of a Free Press,* Oxford University Press, 1985). Growth of press in colonial and early independence eras, arguing that free press views then were considerably narrower than they are now. Revised version somewhat modifies that finding in a valuable reassessment of an oft-quoted period.

Levy, Leonard W., ed. *Freedom of the Press from Zenger to Jefferson*. Indianapolis, IN: Bobbs-Merrill, 1966. Anthology of documents (some of them excerpted) that helps illustrate development of American thinking about press freedom in the eighteenth century. For continuation, see Nelson, subsection B-2, below.

Raymond, Joad. *The Invention of the Newspaper: English Newsbooks, 1641–1649*. New York: Oxford University Press, 1996. First detailed account of origins and early development of the English newspaper, using new evidence on the

origins of newsbooks and their many complex roles in English Civil War society.

Schlesinger, Arthur M. *Prelude to Independence: The Newspaper War on Britain, 1764–1776*. New York: Knopf, 1958. Classic history of a vital dozen years that helped to shape American journalism for decades as editors found an independent political voice through a series of confrontations with England over political and economic issues.

Smith, Jeffrey A. *Printers and Press Freedom: The Ideology of Early American Journalism*. New York: Oxford University Press, 1987. "Early" means pre-Revolution and author disagrees with much previous research, arguing that early views were largely absolutist—journalists should be largely free of any governmental interference.

Williams, Julie Hedgepeth. *The Significance of the Printed Word in Early America: Colonists' Thoughts on the Role of the Press*. Westport, CT: Greenwood, 1999. Surveys distribution and impact of such material through 1765.

B-2: History, 1850–1930

For the muckraking period of the early twentieth century, see Section 5-D.

Abbott, Richard H., and John W. Quist, eds. *For Free Press and Equal Rights: Republican Newspapers in the Reconstruction South*. Athens: University of Georgia Press, 2004. Describes years following Civil War when most Southern newspapers—like most of southern white society—fiercely resisted racial reconciliation. This book studies exceptions to this rule: Republican newspapers that tried to put down roots in the infertile soil of Democratic Dixie. Abbott analyzes more than 400 papers between 1865 and 1877.

See Baker and Brentano, Section 4-B.

Baldasty, Gerald J. *The Commercialization of News in the Nineteenth Century*. Madison: University of Wisconsin Press, 1992. Using content analysis among other techniques, this traces dramatic changes from creation of the penny press in the 1830s to newspaper giants at century's end, how news became a commodity—and why.

Brown, Richard D. *Knowledge Is Power: The Diffusion of Information in Early America, 1700–1865*. New York: Oxford University Press, 1989. Begins in Massachusetts and Virginia in the early eighteenth century, when public information was limited to the wealthy, learned, and powerful, who used it to reinforce political order and cultural unity. Brown explains that by the Civil War era, cultural unity had become a thing of the past. Assisted by changing technology of printing and distribution as well as an expanding economy, Americans had created a pluralistic information marketplace.

Campbell, W. Joseph. *The Year That Defined American Journalism: 1897 and the Clash of Paradigms*. New York: Routledge, 2007. Argues that events of that year are a landmark in newspaper publishing, focusing on the rise of yellow journalism (a term that first appeared that year) and debunking some of its stories. Chapters review what was going on in the country, clash of news paradigms (represented by Hearst's *Journal* on one extreme and Ochs's *New York Times* on the other), and year's major news stories.

Dary, David. *Red Blood and Black Ink: Journalism in the Old West*. New York: Knopf, 1998 (reprinted by University Press of Kansas, 1999). Chronicles the exciting and often surprising story of western journalism—from the freewheeling early 1800s to the classic small-town weeklies and busy city newsrooms of the 1920s. Traces many of the printers who founded the first papers, arriving in town with a shirttail of type and a secondhand press, setting up shop under trees, in tents, in barns or storefronts, moving on if the town failed, or into larger quarters if it flourished, and sometimes forced to defend their right of free speech with fists or guns.

Dicken-Garcia, Hazel. *Journalistic Standards in Nineteenth-Century America*. Madison: University of Wisconsin Press, 1989. Traces the role of nineteenth-century papers and changing news, two chapters on rising criticism of press, and subsequent development of reporting and editing standards.

Dicken-Garcia, Hazel, and Giovanna Dell'Orto. *Hated Ideas and the American Civil War Press*. Seattle: Marquette Books, 2008. Analyzes newspaper coverage of such "hated" ideas as abolitionism and slavery (depending on audience views). Authors conclude that war strengthened journalism's responsibility; editors often had eloquent free speech discussions; and opposition presses were sometimes defended. Yet data suggest tolerance was the exception; editors consistently supported larger political system over any professional journalism ideology, common good over individual rights, and military discretion over constitutional principles.

Douglas, George H. *The Golden Age of the Newspaper*. Westport, CT: Greenwood, 1999. Discusses century from origins of penny press in 1830s to Depression a century later, an era before newspapers faced electronic competition.

See Gregory, subsection A-2, above.

Kaplan, Richard L. *Politics and the American Press: The Rise of Objectivity, 1865–1920*. New York: Cambridge University Press, 2002. Reviews origins of modern journalism's ideals and political practices, changes in political content of the press (using a content analysis of newspaper news and editorials over 55 years), and appropriate political role and professional ethics of journalists in a modern democracy.

See Maihafer, Section 5-B.

Nelson, Harold L., ed. *Freedom of the Press from Hamilton to the Warren Court*. Indianapolis, IN: Bobbs-Merrill, 1966. Covers the nineteenth century and first half of the twentieth in an anthology of documents, many excerpted. For first volume, see Levy, subsection B-1, above.

Spencer, David R. *The Yellow Journalism: The Press and America's Emergence as a World Power*. Evanston, IL: Northwestern University Press, 2007. Offers a different approach to a popular topic—late-nineteenth-century sensational journalism as practiced by William Randolph Hearst and Joseph Pulitzer in New York. Spencer dissects people and trends of the period to sift out some positive elements in yellow journalism, including improved graphic design and writing, covering new beats, and changing relationships between publishers and advertisers.

Weber, Ronald. *News of Paris: American Journalists in the City of Light between the Wars*. Chicago: Ivan R. Dee, 2006. Focused on the 1920s, this reviews lives and journalistic work of a host of soon-to-be-famous expatriate writers, some of whom would make their names reporting about Spain or World War II for radio or newspapers.

See Winfield, Section 7-J.

B-3: History, 1930–1995

Alwood, Edward. *Dark Days in the Newsroom: McCarthyism Aimed at the Press*. Philadelphia: Temple University Press, 2007. Centered on James Eastland's senate committee hearings of 1955, which investigated communism among journalists, as well as the formation and role of Newspaper Guild, Alwood melds individual stories with broader trends, tracing rise of journalist concerns during the Depression, a period that saw many seek out socialist or communist ties. Ten chapters range from 1930s through 1950s plus an epilogue that relates what later happened to key figures discussed.

Baughman, James L. *The Republic of Mass Culture: Journalism, Filmmaking and Broadcasting in America since 1941*. Baltimore: Johns Hopkins University Press, 2006 (3rd ed.). Useful integrated assessment of print, film, and broadcasting development. Emphasizes television's growing dominance, with other media seen as striving rivals.

Edy, Jill A. *Troubled Pasts: News and the Collective Memory of Social Unrest*. Philadelphia: Temple University Press, 2006. Applies framing and narrative theory to better understand uses of historical news events in journalism, focusing specifically on Watts (Los Angeles) riots in 1965, and protests at 1968 Democratic Convention (Chicago) to explore how over time the conflicts were resolved and how those resolutions are represented in media reports. Study is based on newspaper reporting because, as Edy explains, television news archiving only began in 1968 and is only marginally indexed.

Gans, Herbert J. *Deciding What's News: A Study of* CBS Evening News, NBC Nightly News, Newsweek, *and* Time. New York: Pantheon, 1979 (republished, with new introduction, Northwestern University Press, 2004). Landmark study analyzing decision-making by elite national press of the 1960s and 1970s. While the journalistic landscape has changed significantly since then—it has grown, fragmented, and arguably declined in quality—Gans argues that his overall conclusions about how mainstream media decide what's news is largely similar today as it was a quarter century ago.

Halberstam, David. *The Powers That Be*. New York: Knopf, 1979. Powerfully written narrative history of four specific media outlets: *Time,* the *Los Angeles Times,* CBS News, and *The Washington Post,* focusing on key personnel, major events and trends, and the impact of these news services on U.S. history. Provides a good sense of an era when each of them played a far larger national role than they do today.

B-4: News From Washington

While most of the news from the nation's capital is and has been political, not all of it is. Given the centrality of Washington news to the nation, there are probably more books about its journalism than any city outside of New York.

Campbell, Don, and Wendell Cochran. *Inside the Beltway: A Guide to Washington Reporting*. Ames: Iowa State Press, 2003 (2nd ed.). Adds chapters on the relationship between press and government, regional reporters based in Washington, and covering Washington as a foreign correspondent. Also assesses covering Congress, departments and agencies, specialty beats, White House, courts, politics, and money, as well as investigative reporting and reportorial resources. The authors argue that the growth of cable news and the Internet have challenged traditional press–government relationships.

Cater, Douglass. *The Fourth Branch of Government*. Boston: Houghton Mifflin, 1959. An insider's view of the reporter's role in Washington as seen at the end of the Eisenhower administration, including coverage of the President, Congress, the fight against secrecy, and how Washington news looked from abroad.

See Hess, Section 7-C-1.

Hiebert, Ray Eldon, ed. *The Press in Washington: Sixteen Top Newsmen Tell How the News Is Collected, Written, and Communicated from the World's Most Important Capital*. New York: Dodd, Mead, 1966. Based on an American University lecture series, this reviews a variety of media (broadcast, dailies, and magazines), beats (White House, Congress, and departments), and issues (secrecy, types of reporting).

Kimball, Penn. *Downsizing the News: Network Cutbacks in the Nation's Capital*. Baltimore: Johns Hopkins University Press, 1994. Explores how network television news coverage is declining as fewer people are assigned to consistent news beats, due to competition and changing priorities.

Marbut, F. B. *News from the Capital: The Story of Washington Reporting*. Carbondale: Southern Illinois University Press, 1971. Provides an overall history, including two chapters on the Civil War period, two on the late nineteenth century, and coverage of Presidents, federal departments, the role of columnists, and the rise of broadcasting.

See Mudd, Section 7-G.

Reliable Sources: The National Press Club in the American Century. Louisville, KY: Turner Publishing, 1999. Commemorative book on the club's centennial, shedding some light on Washington reporting events and personnel.

Nimmo, Dan. *Newsgathering in Washington: A Study in Political Communication*. New York: Prentice Hall, 1964. How the system worked then and varied roles of government—as both subject and regulator.

Phillips, Cabell, et al., eds. *Dateline: Washington—The Story of National Affairs Journalism in the Life and Times of the National Press Club*. Garden City, NY: Doubleday, 1949 (reprinted by Phillips Press, 2007). Honoring the club's first four decades, these 18 chapters, many by distinguished writers, review most aspects of reporting from the nation's capital.

Ritchie, Donald A. *Reporting from Washington: The History of the Washington Press Corps*. New

York: Oxford University Press, 2005. This is at least the third such survey (see Rosten [1937], for the first, and Marbut [1971] for the second take). Ritchie focuses on period since 1932 when Roosevelt's New Deal began to change relationship of press and government.

Rivers, William L. *The Opinion Makers*. Boston: Beacon Press, 1965. Changing role of Washington political journalists, and overall press–government relationship is assessed using a variety of examples from early Kennedy–Johnson years (1961–65). Includes discussion of news managers and role of key journalists such as James Reston and David Brinkley.

Rosten, Leo C. *The Washington Correspondents*. New York: Harcourt, Brace, 1937 (reprinted by Arno Press, 1974). Classic study of 1935–06 New Deal–era reporting and reporters, with assessments of overall government–press relationship, different beats, a profile of reporters, and many roles they played in that era.

Thomas, Helen. *Watchdogs of Democracy? The Waning Washington Press Corps and How It Has Failed the Public*. New York: Scribner, 2006. Veteran UPI White House correspondent criticizes journalism in Washington, ranging over past and potential of what journalism has been and can be, eruptions of corruption, growing difficulty of reporters getting to the President other than at staged events, increasingly central role of press secretaries, spinning news, protection of leakers and whistle-blowers, newspapers as a business and how that is impacting Washington reportorial scene, recent role of the FCC, press as government lapdogs, varied record of foreign reporters in Iraq, and some of the best recent journalists.

B-5: News From Other Places

There are many books on individual newspapers, but fewer attempting to tell the overall story of news reporting in specific cities or states. Further, many state historical societies and similar groups have issued "union lists" of newspapers found in state and other archives. And many state press associations have issued their own organizational histories as well. Only a selection is included here.

Atwood, Evangeline, and Lew Williams Jr. *Bent Pins to Chains: Alaska and Its Newspapers*. Philadelphia: Xlibris, 2006. Informal narrative history.

Bruce, John. *Gaudy Century: The Story of San Francisco's Hundred Years of Robust Journalism*. New York: Random House, 1948. Covers mainly mid-nineteenth-century Gold Rush years up into World War I period, as seen by a former city editor of the *Chronicle*.

Chapin, Helen G. *Guide to Newspapers of Hawai'i 1834–2000*. Honolulu: Hawaii Historical Society, 2000. Broken out by categories of papers and including a chronology.

Dougan, Michael B. *Community Diaries: Arkansas Newspapering 1819–2002*. Little Rock: August House and Arkansas Press Association, 2003. Mini-narratives on most of the state's papers.

Gilluly, Sam. *The Press Gang: A Century of Montana Newspapers, 1995–1985*. Helena: Montana Press Association, 1985. Good example of locally produced historical record providing considerable detail on people and specific publications.

Hornsher, Lola. *Guide to Wyoming Newspapers*. Cheyenne: Wyoming State Library, 1971. Listed by county, with indication of libraries holding copies.

Janowitz, Morris. *The Community Press in an Urban Setting*. Glencoe, IL: The Free Press, 1952. Scholarly survey of more than 80 small papers (with a total circulation of nearly a million) within city limits of Chicago, assessing them from a variety of viewpoints, including content analysis and readership studies.

Kiska, Tim. *A Newscast for the Masses: The History of Detroit Television Journalism*. Detroit, MI: Wayne State University Press, 2009. Examines evolution of television news in Detroit from its beginnings in the late 1940s, when television was considered a "wild young medium," to the early 1980s, when cable television permanently

altered the broadcast landscape. Shows how local news, initially considered a poor substitute for respectable print journalism, became the cornerstone of television programming and the public's preferred news source.

Lingenfelter, Richard E., and Karen Rix Gash. *The Newspapers of Nevada: A History and Bibliography, 1954–1979*. Reno: University of Nevada Press, 1984. An example of a statewide survey of postwar publications and source material about them, listed by county.

Louisiana Newspapers 1794–1940: A Union List of Louisiana Newspaper Files Available in Offices of Publishers, Libraries, and Private Collections in Louisiana. Baton Rouge: Louisiana State University, Hill Memorial Library, 1941. An example of a Works Progress Administration cultural work, this lists papers by county, then community of publication.

Lyle, Jack. *The News in Megalopolis*. San Francisco: Chandler, 1967. Scholarly assessment of print and broadcast news media in Los Angeles—a scholarly book not written as history, but useful now in that light.

McPhaul, John J. *Deadlines & Monkeyshines: The Fabled World of Chicago Journalism*. Englewood Cliffs, NJ: Prentice Hall, 1962. Informal and people-focused anecdotal review of city's newspapers and some of their major scoops and stories.

Moore, John Hammond. *South Carolina Newspapers*. Columbia: University of South Carolina Press, 1988. County listing, and what organizations retain archives.

Stevens, John D. *Sensationalism and the New York Press*. New York: Columbia University Press, 1991. Growth in newspaper readership among general readers beginning with rise of the penny press in 1830s, ranging through Bennett's *New York Herald,* "yellow journalism" of 1890s, and the illustrated tabloid press in the 1920s.

Turnbull, George S. *History of Oregon Newspapers*. Portland, OR: Binsford & Mort, 1939. One of better prewar surveys that relates the story of both territorial and statehood periods in a thorough fashion.

C. Newspapers

For newspaper illustration and design/layout, see Section 3-B-3.

Bernhard, Jim. *Porcupine, Picayune, and Post: How Newspapers Got Their Names*. Columbia: University of Missouri Press, 2007. A long-needed study of terms and nomenclature, demonstrating that most titles result from historical trend or accident—or even whim—and why there are so many of some names and so few of others.

Cloud, Barbara. *The Coming of the Frontier Press: How the West Was Really Won*. Evanston, IL: Northwestern University Press, 2008. Argues that newspapers played a crucial role in pushing aside both wildlife and Native Americans to make room for settlers who would become their readers. Western news sheets not only shaped reader attitudes but also undertook innovations in content and appearance that would affect newspapers nationwide.

Fedler, Fred. *Media Hoaxes*. Ames: Iowa State University Press, 1989. Inventing often fantastic news stories for newspapers and magazines was especially popular during the nineteenth century.

Harris, Michael, et al., eds. *Studies in Newspaper and Periodical History*. Westport, CT: Greenwood, 1994–97. This brief annual series continued the *Journal of Newspaper and Periodical History* (London, 1984–92) with articles and reviews including an annual survey of scholarly work in newspaper history.

Hench, John B., ed. *Three Hundred Years of the American Newspaper*. Worcester, MA: American Antiquarian Society, 1991. Reprinted from the AAS *Proceedings,* this is a series of six articles surveying the story, including "The Newspapers of Provincial America," "Newspapers and American Nationhood," "The Nineteenth-Century Origins of Modern American Journalism," "Preparing the Minds of the People," and an overview of "The American Journalist."

Knudson, Jerry W. *In the News: American Journalists View Their Craft*. Wilmington, DE: SR Books, 2000. A history told through words of practicing journalists—and their critics—with brief contextual comment.

Lee, Alfred McClung. *The Daily Newspaper in America: The Evolution of a Social Instrument*. New York: Macmillan, 1937 (reprinted by Routledge, 2000). This early classic social and economic history remains invaluable for its focus on larger trends rather than specific papers or editors and was one of earliest studies to make extensive use of economic analysis. Lee's study had an important impact on teaching about journalism.

Lora, Ronald, and William Henry Longton, eds. *The Conservative Press in Twentieth-Century America*. Westport, CT: Greenwood, 1999. Short descriptive essays on some 65 journals that published during the twentieth century (and people behind them), divided into ten parts by type (such as church or literary reviews).

Schudson, Michael. *Discovering the News: A Social History of American Newspapers*. New York: Basic Books, 1978. Social history shows that the idea of impartial, objective "news" was a social product of democratization of political, economic, and social life in the nineteenth century.

Sheppard, Si. *The Partisan Press: A History of Media Bias in the United States*. Jefferson, NC: McFarland, 2008. Relates long history of partisan bias in newspapers, threatened for a time by post–World War II objective journalism as a goal, and now returning thanks to technology-driven partisan media alternatives. Includes material on newspaper endorsements of presidential candidates.

Smith, Anthony. *The Newspaper: An International History*. London: Thames and Hudson, 1979. Reviews principal trends (largely in Britain) over six periods, and in just under 200 pages.

Smith, Anthony. *Goodbye Gutenberg: The Newspaper Revolution of the 1980s*. New York: Oxford University Press, 1980. How computer (and other) technology was even then changing.

Starr, Paul. *The Creation of the Media: Political Origins of Modern Communication*. New York: Basic Books, 2004. Insightful and important analysis (by a Pulitzer Prize winner) of how and why American newspapers (with some mention of broadcasting) developed into important national arbiters of public policy and political development.

Villard, Oswald Garrison. *The Disappearing Daily: Chapters in American Newspaper Evolution*. New York: Knopf, 1944. An important early critical assessment reviewing wartime status of newspapers and seeking reasons for the declining number of daily papers. Offers chapters on key papers, markets, editors and publishers, and Associated Press.

Wallace, Aurora. *Newspapers and the Making of Modern America: A History*. Westport, CT: Greenwood, 2005. A survey of twentieth-century press, this examines case studies of specific papers within their markets, assessing their multiple roles as a prime mover in enacting policy, supporting development, building neighborhoods, and generally modifying physical and built environment.

D. News Agencies

Though central to the process of world news communication, there has been relatively little serious published research about news agencies ("wire services"). Given their importance in global journalism, virtually all the known English-language books are included here.

Agence France-Presse History. http://www.afp.com/english/afp/?pid=history. Offers a brief chronology, mainly of post-Havas years since World War II.

Associated Press: A Complete History. http://www.ap.org/pages/history/comphis.html. Includes sections on origins of AP, its broadcast and news photo arms, role of technology, and its organization.

Baillie, Hugh. *High Tension: The Recollections of Hugh Baillie*. New York: Harper, 1959. Longtime chief of United Press relates his reporting life starting in 1910 and that of the news agency he headed from 1935 into post–World War II years.

Bickel, Karl A. *New Empires: The Newspaper and the Radio*. Philadelphia: Lippincott, 1930. Head of United Press from 1923 to 1935 discusses the relationship, and includes a useful appendix on international radio broadcasting.

See Blondheim, Section 3-D-2.

Boyd-Barrett, Oliver. *The International News Agencies*. London: Constable, 1980. A still-valuable study of main four Western agencies (AP, UPI, Reuters, and Agence France-Presse), which explores them as businesses, their structure and process, wholesaling of news both to domestic and foreign client media, smaller national agencies, and changing markets for news. Compare with Fenby, below.

Boyd-Barrett, Oliver, and Daya Kishan Thussu. *Contra-Flow in Global News: International and Regional News Exchange Mechanisms*. London: John Libbey, 1992. Concerned with news flow *from* developing back *to* industrial nations—hence world "contra" in main title, as most news agency content travels the other way. Chapters on role of news exchanges in context, objectives of news exchanges, their ownership and management, contents and services offered, clients of such exchanges, their resources (finance, people, and technology), and some conclusions.

Boyd-Barrett, Oliver, and Terhi Rantanen. *The Globalization of News*. London: Sage, 1998. Helps bring previous entry up to date. Incorporating institutional, historical, political, economic and cultural studies perspectives, authors provide a solid review of news agencies in a world of fast-changing news communication.

Cooper, Kent. *Barriers Down: The Story of the News Agency Epoch*. New York: Farrar, Rinehart, 1942 (reprinted by Kennikat, 1969). Longtime head of Associated Press relates the story of breaking down of dominance of world news reporting by Havas, Wolff, and Reuters after 1914. *See also* Cooper, Section 6-B.

See Desmond, Section 10-C.

Fenby, Jonathan. *The International News Services*. New York: Schocken Books, 1986. Focusing on major four Western international agencies, this discusses their origins, operation, provisions of business news and photos, finance, their marketing and news process, and news exchanges. Compare to Boyd-Barrett, above.

Gordon, Gregory, and Ronald E. Cohen. *Down to the Wire: UPI's Fight for Survival*. New York: McGraw-Hill, 1990. Ultimately a sad book, this traces often complex but steady decline of UPI in 1980s in face of AP competition—and reasons for that decline (which continued). *See also* Harnett, below.

Gramling, Oliver. *AP: The Story of News*. New York: Farrar & Rinehart, 1940 (reprinted by University Microfilms, 1969). Perhaps the best known popular history, this breaks AP's story into three periods highlighted by years: 1848 when agency began, 1900 at height of world news agency cartel, and 1925 when radio and news photography had begun broadening news.

Harnett, Richard M., and Billy G. Ferguson. *Unipress: United Press International—Covering the 20th Century*. Golden, CO: Fulcrum Publishing, 2001. Informally surveys history of agency from its founding as United Press, through 1958 merger with International News Service, to its fading in late 1990s. Emphasis is on people and how news was reported.

Harris, Phil. *Reporting Southern Africa: Western News Agencies Reporting from Southern Africa*. Paris: UNESCO, 1981. Study of content of stories about developing nations of sub-Saharan Africa, concluding there is too little coverage of this region by Western agencies.

Haskovec, Slavoj. *The News Agency in the System of Mass Media*. Prague: International Organization of Journalists, 1980. Example of cold war propaganda

as IOJ then supported Warsaw Pact (Soviet) political views. This is largely a critique of major western agencies as creatures of their governments and political views.

Jones, Roderick. *A Life in Reuters*. London: Hodder & Stoughton, 1951 / Garden City, NY: Doubleday, 1952. An informal autobiography by longtime (1915–41) managing director of British news agency.

Kim, Soon Jin. *EFE: Spain's World News Agency*. Westport, CT: Greenwood, 1989. One of few English-language books about a news agency in another country (other than the United States or United Kingdom)—indeed, the most important one in Hispanic world. Relates story from EFE's formation at end of the 1930s Spanish Civil War through late 1980s.

Kruglak, Theodore E. *The Two Faces of TASS*. Minneapolis: University of Minnesota Press, 1962. A cold war–era analysis, this remains only English-language study of Soviet news agency and its operations.

Laurenson, John, and Lionel Barber. *The Price of Truth: The Story of the Reuters £££ Millions*. Edinburgh, Scotland: Mainstream Publishing, 1985. Focuses critically on conversion of Reuters from almost a "public trust" to a highly lucrative organization focused on financial news services.

Mooney, Brian, and Barry Simpson. *Breaking News: How the Wheels Came Off at Reuters*. Chichester, England: Capstone, 2003. Investigative journalism and the management decisions that led to near financial collapse of the news agency.

Morris, Joe Alex. *Deadline Every Minute: The Story of United Press*. Garden City, NY: Doubleday, 1957 (reprinted by Greenwood, 1968). On eve of its merger with INS to form UPI, this informally relates story of UP news agency from its formation in 1907.

Planet Earth. *Internet News Agencies*. http://www.geocities.com/TheTropics/Island/2771/links/freenews.htm. Portal providing ready access to nearly two-dozen Internet *only* news agencies.

Rantanen, Terhi. *Foreign News in Imperial Russia: The Relationship between International and Russian News Agencies, 1856–1914*. Helsinki, Finland: Soumalainen Tiedeakatemia, 1990. Development of news agencies, news-sharing agreements among them, and rise of modern news media in pre–World War I Russia, including private and then government agencies within Russia.

Read, Donald. *The Power of News: The History of Reuters 1849–1989*. Oxford, England: Oxford University Press, 1992. Thorough history of London-based news and business data service making clear its ties to British national and foreign policy.

Reporters of the Associated Press. *Breaking News: How the Associated Press Covered War, Peace, and Everything Else*. New York: Princeton Architectural Press, 2007. Coverage of war, trials, aviation, sports, elections, civil rights, foreign news, disasters, and the White House are included in this anthology of behind-the-scenes narratives on how AP got stories and reported them.

Robinson, Gertrude Joch. *News Agencies and World News in Canada, the United States, and Yugoslavia*. Fribourg, Switzerland: Institute for Journalism and Mass Communication Research, University of Fribourg, 1981. Collects author's 1970s papers on operation of news agencies; three on Yugoslavia, four on U.S. and Canadian agencies, and a final two on Canadian Press Agency.

Rosewater, Victor. *History of Cooperative News-Gathering in the United States*. New York: Appleton, 1930 (reprinted by Johnson Reprint, 1970). While obviously dated and largely superceded by Schwarzlose (next entry), this was a pioneering serious history of news agencies.

Schwarzlose, Richard A. *The Nation's Newsbrokers*. Evanston, IL: Northwestern University Press, 1989–90 (2 vols.). Definitive history of American news agencies up to 1920 (based in part on author's dissertation), as follows:

1. *The Formative Years: From Pretelegraph to 1865*. 1989. Details creation and early operation of Associated Press and other lesser news agencies, building on use of telegraphy.

2. *The Rush to Institution: From 1865 to 1920*. 1990. Includes rise and initial development of United Press and International News Service, among others, showing how telephone assisted news reporting.

Scott, J. M. *Extel 100: The Centenary History of the Exchange Telegraph Company*. London: Ernest Benn, 1972. The domestic British news service is reviewed.

Shrivastava, K. M. *News Agencies: From Pigeon to Internet*. Elgin, IL: New Dawn, 2007. Tracing history and growth of international news agencies during past 25 years, clarifying their role and discussing why most have survived technological developments such as Internet. Profiles of several key news organizations, including those in India, are included, as well as a discussion of industry values and diversification strategies.

Storey, Graham. *Reuters: The Story of a Century of News Gathering*. New York: Crown, 1951 (reprinted by Greenwood, 1970). Published to mark centennial of Reuters, this is not documented but includes a good sense of people and events. For a scholarly analysis, see Read, above.

Thomson Reuters History. http://www.thomsonreuters.com/about/company_history. Detailed reverse chronology (most recent events cited first) of the British news agency.

UNESCO. *News Agencies: Their Structure and Operation*. Paris: UNESCO, 1953 (reprinted by Greenwood, 1970). While more than a half century old, this remains an invaluable historical record and detailed review of world's news agencies (most of them confined to one country), legal organization, telegraphic news agencies (meaning major world organizations), telecommunication and transmission of news, international regulation, news agencies and radio broadcasting, and how public receives news.

Whitehurst, Ken, et al. *The Downhold Project*. http://www.thedownholdproject.info. A site devoted to all facets of United Press International (UPI) history, largely by former agency personnel.

Williams, Francis. *Transmitting World News: A Study of Telecommunications and the Press*. Paris: UNESCO, 1953 (reprinted by Arno Press, 1972). Assesses history and then-current operation of technical side of world and national news agency transmission of news over distances.

E. Magazines

Magazine publishing continues to be one segment of American media that is poorly treated historically—perhaps because there are so many magazine titles and it is difficult to generalize from so many cases. For feature stories in magazines, see Section 4-E-4.

E-1: Reference

Endres, Kathleen L., ed. *Trade, Industrial, and Professional Periodicals of the United States*. Westport, CT: Greenwood, 1994. Profiles about 125 titles, including some important titles in communications. Each profile includes history and current trends. *See also* Nourie and Riley, below.

Nourie, Alan, and Barbara Nourie. *America's Mass Market Magazines*. Westport, CT: Greenwood, 1990. More than 100 are profiled here, reviewing their history and (if still published) their current status, along with information on title changes, editors, and the like. *See also* Endres, above, and Riley, below, for other titles in same series.

Riley, Sam G., ed. *Guides and Indexes to Magazines*. Westport, CT: Greenwood, 1986–1993 (6 vols.). These provide either detailed listings (indexes) or multipage narrative profiles of selected titles. *See also* two previous entries for other volumes in same series.

Index to Southern Periodicals. 1986. Nearly 7,000 are listed.

Magazines of the American South. 1986. About 90 are profiled.

Index to City and Regional Magazines of the United States. 1989. Not their content, but listings of pre-1950 geographically specific publications themselves (edited with Gary Selnow).

Regional Interest Magazines of the United States. 1990. Brief profiles (edited with Gary Selnow).

Corporate Magazines of the United States. 1992. Brief profiles of 51 selected titles plus short mention of several hundred additional ones.

Consumer Magazines of the British Isles. 1993. Brief profiles of 50 selected titles.

E-2: General History

Angeletti, Norbeto, and Alberto Oliva. *Magazines That Make History: Their Origins, Development and Influence*. Gainesville: University Press of Florida, 2004. Well-illustrated chapters provide case studies of *Time, Der Spiegel, Life, Paris Match, National Geographic, Reader's Digest, ¡Hola!,* and *People*. Each traces changes in publication and provides a good sense of its graphic design as well.

Cyganowski, Carol Klimick. *Magazine Editors and Professional Authors in Nineteenth-Century America: The Genteel Tradition and the American Dream*. New York: Garland, 1988. Includes discussion of both fiction and nonfiction magazine editors and article authors.

Elson, Robert T. *Time Inc.: The Intimate History of a Publishing Enterprise, 1923–1941*. New York, Atheneum, 1968. Continued by the author's *The World of Time Inc., 1941–1960* (Atheneum, 1973), and Curtis Prendergast's (with Geoffrey Colvin) *The World of Time Inc., 1960–1980* (Atheneum, 1986) to provide one of most in-depth studies of any single publisher and its leadership. This trilogy was an official company project, however, and needs to be read accordingly.

Friedrich, Otto. *Decline and Fall*. New York: Harper & Row, 1970. Dramatic account, partially told from the inside, of the decline and disappearance of the once-mighty weekly, *The Saturday Evening Post,* and its parent, Curtis Publishing Company. *See also* next entry.

Goulden, Joseph C. *The Curtis Caper*. New York: Putnam, 1965. Describes the magazine publishing company in its great years, including its monthly *The Ladies Home Journal* and weekly *The Saturday Evening Post,* focusing on editors and other key personnel. *See also* previous entry.

Janello, Amy, and Brennon Jones. *The American Magazine*. New York: Harry Abrams (with the Magazine Publishers of America, and American Society of Magazine Editors), 1991. Handsome illustrated history of all types of magazines, focusing on mainstream publications. An appendix provides starting (and some closedown) dates.

Kitch, Carolyn. *Pages from the Past: History & Memory in American Magazines*. Chapel Hill: University of North Carolina Press, 2005. Drawing on some 60 magazine titles, author reviews how they have helped to create and record American collective memory and identity. Among other topics, chapters focus on mourning of celebrities, nostalgia magazines and reader recollections, anniversary celebrations of a collective past, and lasting story of 9/11.

Mott, Frank Luther. *A History of Magazines in America*. Cambridge, MA: Harvard University Press, 1930–68 (5 vols.; first volume originally published by Appleton). Though never completed as planned, this classic set remains a magisterial study from 1741 to 1905 in four volumes, with last volume more briefly profiling 21 magazines of 1905–30 era. This is the standard and definitive source for its coverage to the early twentieth century.

Perlmutter, David D. *Picturing China in the American Press: The Visual Portrayal of Sino-American Relations in* Time *Magazine*. Lanham, MD: Lexington Books, 2007. How the then-new People's Republic of China was viewed (including maps and illustrations) in *Time* from 1949 into 1960s, a period of high cold war tensions between the United States and China.

Peterson, Theodore. *Magazines in the Twentieth Century*. Urbana: University of Illinois Press, 1964 (2nd ed.). Though not designed as history per se, this provides a detailed treatment of all aspects of the American periodical industry—and its many magazine types—as seen when television was already showing its impact. It offers the best treatment of magazines during the first six decades of the century.

Schneirov, Matthew. *The Dream of a New Social Order: Popular Magazines in America, 1893–1914*. New York: Columbia University Press, 1994. Melds cultural and journalism history at the turn of the twentieth century.

Tebbel, John, and Mary Ellen Zuckerman. *The Magazine in America 1741–1990*. New York: Oxford University Press, 1991. The most recent attempt at an overall history, by a longtime student of field (Tebbel), providing a broad sweep of trends with much discussion of individual titles and their importance.

Wolseley, Roland E. *Understanding Magazines*. Ames: Iowa State University Press, 1965. A broad survey including history, many types of publication, and their varied roles.

Wood, James Playsted. *Magazines in the United States*. New York: Ronald Press, 1956 (2nd ed.). Overall history and study of their editors, content trends, and influence, with an emphasis on general circulation titles.

Zalampas, Michael. *Adolph Hitler and the Third Reich in American Magazines, 1923–1939*. Bowling Green, OH: Bowling Green State University Popular Press, 1989. Reviews German content and coverage in ten general-circulation magazines of interwar period, including news magazines, then among most popular. Concludes American readers were generally well served with truthful images and stories that most magazines reported.

F. Editorial Cartoons

For current political cartooning, see Section 4-F; biographies by or about cartoonists are listed in Section 7-E.

Block, Herbert. As one good example of a national editorial cartoonist's long history (over a half century) and prodigious output that had considerable impact (and at least three Pulitzer Prizes) not just in the nation's capital city but elsewhere as well (his work was syndicated to more than 200 papers), these are "Herblock's" collected works in book form. *See also* his autobiography, Section 7-E.

1. *The Herblock Book*. Boston: Beacon Press, 1952. His first book, this includes work for *The Washington Post* from mid-1940s covering Truman administration years.
2. *Herblock's Here and Now*. New York: Simon & Schuster, 1955. Some 150 cartoons of early 1950s, with accompanying text.
3. *Herblock's Special for Today*. New York: Simon & Schuster, 1958. Some 430 cartoons (and related text) concerning Eisenhower era.
4. *Straight Herblock*. New York: Simon & Schuster, 1964. More than 450 cartoons focus on end of Eisenhower administration and also cover Kennedy years.
5. *The Herblock Gallery*. New York: Simon & Schuster, 1968. Over 550 cartoons of Lyndon Johnson years.
6. *Herblock's State of the Union*. New York: Simon & Schuster, 1972. Nixon years.
7. *Herblock Special Report*. New York: Norton, 1974. Some 450 cartoons trace Richard Nixon's career to his resignation from office.
8. *Herblock on All Fronts*. New York: New American Library, 1980. Covers the Ford and Carter years.
9. *Herblock through the Looking Glass*. New York: Norton, 1984. Initial Reagan years.
10. *Herblock at Large: "Let's Go Back a Little…" and Other Cartoons*. New York: Pantheon, 1987. More on Reagan years.

Brooks, Charles, et al., ed. *Best Editorial Cartoons of the Year*. New York: Pelican Press, 1975–present, annual. Useful—and often delightful—yearly compilation of work from a wide variety of papers and cartoonists, usually broken into subject categories.

Conrad, Paul. *Conartist: Paul Conrad, 30 Years with the* Los Angeles Times. Los Angeles: Los Angeles Times Co., 1993. With brief texts introducing each decade by radio dramatist Norman Corwin, this includes more than 300 cartoons dating back to 1963.

Dewey, Donald. *The Art of Ill Will: The Story of American Political Cartoons*. New York: New

York University Press, 2007. Includes coverage of Presidents, wars and foreign relations, ethnic and racial issues, domestic politics, and business and labor issues.

See Douglas, Section 5-B-5.

Examining Issues through Political Cartoons. [Series] Detroit, MI: Greenhaven Press/Gale, 2002–05. A series of more than 20 short volumes each focusing on a specific historical topic. An introductory essay offers an overview and each cartoon is presented with information including original publication data, facts about cartoonist, and information and commentary on cartoon itself. Examples from series include:

Dudley, William, ed. *Terrorism*. 2002.

Dudley, William, ed. *Illegal Immigration*. 2003.

Dudley, William, and Scott Barbour, eds. *The Great Depression*. 2004.

Egendorf, Laura K., ed. *World War II*. 2004.

Gerdes, Louise I., ed. *The Vietnam War*. 2004.

Williams, Mary, ed. *Abortion*. 2002.

Fischer, Roger A. *Them Damned Pictures: Explorations in American Political Cartoon Art*. North Haven, CT: Archon, 1996. Nine essays and about 100 cartoon examples from the nineteenth century illustrate work of key figures.

Hess, Stephen, and Milton Kaplan. *The Ungentlemanly Art: A History of American Political Cartoons*. New York: Macmillan, 1975 (2nd ed.). Focuses substantially on nineteenth- and early-twentieth-century material with text and extensive commentary on many illustrated examples. Covers work from both newspapers and magazines.

Hess, Stephen, and Sandy Northrop. *Drawn & Quartered: The History of American Political Cartoons*. Montgomery, AL: River City, 2008 (2nd ed.). First part (to 1975) is much like the book above, but material for last three decades is new here.

See Johnson, Section 1-F.

Keller, Morton. *The Art and Politics of Thomas Nast*. New York: Oxford University Press, 1968. The life and work of the nineteenth-century American cartoonist who created Republican elephant and Democrat's donkey symbols, among many others.

G. Photojournalism

Pulitzer prize winners are found under Section 1-F; current photojournalism is under Section 4-F; and photojournalists are in Section 7-F.

Bezner, Lili Corbus. *Photographs and Politics in America: From the New Deal into the Cold War*. Baltimore: Johns Hopkins University Press, 1999. Role of documentary photography and its censorship concerns as told through story of the Photo League from 1930s into 1950s when political blacklisting did it in.

Brugioni, Dino A. *Photo Fakery: The History and Techniques of Photographic Deception and Manipulation*. Herndon, VA: Brassey's, 1999. Most interesting for its many illustrated examples, dating back to before Civil War. Author also suggests how to spot fakery.

Carlebach, Michael L. *The Origins of Photojournalism in America*. Washington, DC: Smithsonian Press, 1992. First of two volumes (see next entry), this covers four decades to 1880 and how technical development made news photography possible. Traces early photographers and their work during and after Civil War and expanding railways, among other subjects.

Carlebach, Michael L. *American Photojournalism Comes of Age*. Washington, DC: Smithsonian Press, 1997. Continuation of title above into the twentieth century, carrying the story to the 1930s and the Depression, discussing improving technology, key photographers, and the role of press photos.

Chapnick, Howard. *Truth Needs No Ally: Inside Photojournalism*. Columbia: University of Missouri Press, 1994. As seen from the 1930s to the 1990s by the head of the Black Star Agency.

Galassi, Peter, and Susan Kismaric, eds. *Pictures of the* Times*: A Century of Photography from the*

New York Times. New York: Museum of Modern Art, 1996. An exhibition catalogue, this includes an illustrated chronology tracing evolution of technology and business of news photography, with special attention to role of the *Times* and to recent rise of digital technologies in newspaper production.

Giles, Matthew, ed. *Facing the World: Great Moments in Photojournalism*. New York: Abrams, 2001. Displays work of Agence France-Presse photographers since 1985 as seen in some 400 color photos.

Golden, Reuel. *Photojournalism 1855 to the Present: Editor's Choice*. New York: Abbeville, 2006. Some 250 images over more than a century and a half, places in context with a running text.

Hallett, Michael. *Stefan Lorant: Godfather of Photojournalism*. Lanham, MD: Scarecrow Press, 2005. Lorant was a pioneer in European photojournalism in the 1920s and 1930s and did his work in Hungary, Germany, and England. His layouts and interviews became familiar largely through the pages of his own creations, particularly weekly *Picture Post*.

Haynes, Gary. *Picture This!: The Inside Story and Classic Photos of UPI Newspictures*. New York: Bulfinch, 2006. As seen by a member of its staff, this carries story to eventual control of UPI's photo library by Corbus.

Lacayo, Richard. *Eyewitness: 150 Years of Photojournalism*. New York: Time, Inc. Home Entertainment, 1999. Light review of pictorial highlights.

Lewinski, Jorge. *The Camera at War: A History of War Photography from 1848*. New York: Simon & Schuster, 1978. Some 300 photos and considerable text telling the story from the Crimean War to Vietnam. *See also*, Moeller, below.

Michel, Ulli, ed. *The Art of Seeing: The Best of Reuters Photography*. New York: Prentice Hall, 2000. Though news agency only entered this business in 1985, collection exemplifies value of being in right place at right time.

Miller, Russell. *Magnum: Fifty Years at the Front Line of History: The Story of the Legendary Photo Agency*. New York: Grove Press, 1997. Story of the first half century of the agency founded by Robert Capa and Henri Cartier-Bresson, among others. This offers a good collection of its best work with commenting text tying them together.

Moeller, Susan D. *Shooting War: Photography and the American Experience of Combat*. New York: Basic Books, 1989. From the Spanish-American war to the end of fighting in Vietnam nearly 80 years later, this book reviews how photography covered war and reflected changing American society as well. Covers important photographers, changing technology, military censorship issues, press use of photos, and ethical concerns. *See also* Lewinski, above.

Neubauer, Hendrik. *Black Star: 60 Years of Photojournalism*. New York: Black Star Publishing, 1997. Multilingual text describes hundreds of photos from this agency.

Newhall, Beaumont. *History of Photography: From 1839 to the Present*. New York: Bullfinch, 1982 (5th ed.). There are many general histories of photography, but this is one of the better known, written by a longtime authority on the subject, and first issued decades ago.

Panzer, Mary, and Christian Caujolle. *Things as They Are: Photojournalism in Context since 1955*. New York: Aperture, 2006. Published on the fiftieth anniversary of World Press Photo, this begins with the heyday of *Life* magazine and *Picture Post,* and the Museum of Modern Art's defining "Family of Man" exhibition in 1950s, running up to modern digital media. Photos are shown in context on pages of newspapers and magazines as originally experienced.

Yapp, Nick. *150 Years of Photo Journalism*. Columbia, NY: Konemann, 1998. A broad survey from mid-nineteenth century, covering work done in all countries.

H. Documentary Film

The overall literature on motion picture history has grown huge over the past four decades—and

continues to expand. Noted here are some of the better assessments of the documentary and nonfiction film. Current documentary is found in Section 4-F.

Bächlin, Peter, and Maurice Muller-Strauss. *Newsreels across the World*. Paris: UNESCO, 1952. Techniques of making such films and how they are exchanged—and early impact of television on their distribution.

Barnouw, Erik. *Documentary: A History of the Non-Fiction Film*. New York: Oxford University Press, 1993 (2nd rev. ed.). Barnouw considers the medium in light of an entirely new political and social climate, exploring filmmaking technology, and effects that video cassettes and cable television had on production of documentaries.

Boon, Timothy. *Films of Fact: A History of Science in Documentary Films and Television*. London: Wallflower, 2008. This is the first in-depth history of the British genre, which began with amateur hobbyists in the early twentieth century, played a key role in government postwar health programs, and became a treasured part of popular culture with BBC2's *Horizon* and programming of Channel 4. Central figures discussed include Paul Rotha and John Grierson.

Ellis, Jack C., and Betsy A. McLane. *A New History of Documentary Film*. New York: Continuum, 2005. An international history arranged in chapters in specific countries' efforts in chronological periods, this includes discussion of television documentary (many of them shot on film) as well.

Evans, Gary. *John Grierson and the National Film Board: The Politics of Wartime Propaganda*. Toronto: University of Toronto Press. Wartime and immediate postwar operations of the Canadian entity responsible for government documentary filmmaking. *See also* next entry.

Evans, Gary. *In the National Interest: A Chronicle of the National Film Board of Canada from 1949 to 1989*. Toronto: University of Toronto Press, 1991. Focuses more on its expansive period based on interviews and documents. Includes discussion of Canadian documentaries, French filmmakers, women's films, and feature drama productions.

Fielding, Raymond. *The March of Time: 1935–1951*. New York: Oxford University Press, 1978. Time, Inc. film documentary series that grew out of both its newsweekly magazine and a radio program of same name is traced in detail.

Fielding, Raymond. *The American Newsreel: A Complete History, 1911–1967*. Jefferson, NC: McFarland, 2006 (2nd ed.). From initial film actualities of the late nineteenth century to final theatrical newsreels of late 1960s, this traces key companies, producers and story trends of the only pre-television means of illustrating news events in motion. New edition adds a chapter on newsreel ethical issues and shortcomings.

Izod, John, et al., eds. *From Grierson to Docu-Soap: Breaking the Boundaries*. Luton, England: University of Luton Press, 2000. Twenty papers review all aspects of documentary history. Much of focus is on John Grierson, important in both British and Canadian documentary production and mentor to many other producers and directors.

Kahana, Jonathan. *Intelligence Work: The Politics of American Documentary*. New York: Columbia University Press, 2008. Historical view of how American documentary developed over eight decades, ranging from federal agency films made about (or by) elements of Roosevelt administration to producers that adopted quite different strategies for commercial television in 1950s and 1960s. Final chapters explore attempts to revitalize documentary form with television and video technologies in 1960s and 1970s, and current trends in political documentary.

Rothman, William. *Documentary Film Classics*. New York: Cambridge University Press, 1997. Offers close readings on a number of major films, such as *Nanook of the North, Land Without Bread, Night and Fog, Chronicle of a Summer* and *Don't Look Back*. Spanning history of documentary film tradition, it analyzes philosophical and historical issues and themes implicit in these and other works.

Smither, Roger, and Wolfgang Klaue, eds. *Newsreels in Film Archives*. Madison, NJ: Fairleigh Dickinson University Press, 1996. Drawn from a 1993 symposium, this surveys issues of developing, indexing, and maintaining such collections, with examples from many countries. Also touches on their applications, such as teaching history.

Swann, Paul. *The British Documentary Film Movement, 1926–1946*. New York: Cambridge University Press, 2008. A political and social history of period characterized by actuality-based films made outside commercial film industry. Based on examinations of official government records, author reviews relationship between John Grierson and civil service bureaucracy when a melding of production, philosophy, and source of funding created a distinguished body of work.

I. Electronic Media

Much of the historical writing on radio and television broadcasting focuses on popular entertainment programming. News has generally gotten less attention, save in times of controversy. *See* Section 4-G for current material; and Section 7-G for broadcasters.

Barnouw, Erik. *A History of Broadcasting in the United States*. New York: Oxford University Press, 1966–70, 3 vols. While now four decades old (it stops with late 1960s), this trilogy is still best narrative on U.S. broadcasting development to that time, based on both primary and secondary sources. It is a wonderfully readable account full of people and events and social impact, with increasing commentary as author moves into later years.

1. *A Tower in Babel: To 1933*. 1966.
2. *The Golden Web: 1933–1953*. 1968.
3. *The Image Empire: From 1953*. 1970.

An expansion and updating of television portions of this history—drawn from volumes 2 and 3 and expanded through 1980s—is found in author's *Tube of Plenty* (Oxford University Press, 1990, 2nd rev. ed.).

Barnouw, Erik. *The Sponsor: Notes on a Modern Potentate*. New York: Oxford University Press, 1978. History and critique of radio and television sponsors and advertising, focusing on television.

Bergreen, Laurence. *Look Now, Pay Later: The Rise of Network Broadcasting*. New York: Doubleday, 1980. Overall survey of both radio and television network development (a surprisingly untreated topic given their importance) in their "classic" period before inception of cable competition.

Bliss, Edward, Jr. *Now the News: The Story of Broadcast Journalism*. New York: Columbia University Press, 1991. Still the only book-length study of both radio and television news history, written by a longtime CBS producer. It focuses substantially on a narrative of people and programs, many of whom author knew.

Gomery, Douglas. *A History of Broadcasting in the United States*. Malden, MA: Wiley-Blackwell, 2008. Explores important social, political, and cultural ramifications of how broadcasting operated through much of the twentieth century, focusing on aesthetics of programming. Relates story in four key periods from 1921 to 1996 to examine recent changes, including impact of cable TV and home video.

Halper, Donna L. *Invisible Stars: A Social History of Women in American Broadcasting*. Armonk, NY: M. E. Sharpe, 2001. First overall history of subject, told in decade-focused chapters from radio through television. Author reviews role of women both on and off air, some of them well known, but many others less so. Study helps correct and balance male-centric history of broadcasting.

Hilliard, Robert L., and Michael C. Keith. *The Broadcast Century and Beyond: A Biography of American Broadcasting*. Stoneham, MA: Focal Press, 2004 (4th ed.). A useful illustrated survey history (designed as a text, and regularly updated), with many sidebars on key figures in the radio–television business.

Hilmes, Michele. *Only Connect: A Cultural History of Broadcasting in the United States*. Belmont, CA: Thomson/Wadsworth, 2006 (2nd ed.). History of American broadcasting from its earliest days in

radio, through the rise of television, to the era of digital media and Internet competition. Each chapter discusses a historical period, traces development of media policy, growth of media industries, and history of programming, closing with ways broadcasting has been understood over time.

Hilmes, Michele. *Connections: A Broadcast History Reader*. Belmont, CA: Wadsworth, 2002. Nineteen contemporary writings keyed to the textbook immediately above.

Hilmes, Michele, ed. *NBC: America's Network*. Berkeley: University of California Press, 2007. Collects about a dozen original chapters by as many authors tracing different aspects of the network's story (including news) over seven decades. This is one of the few research-based studies of networks.

Kahn, Frank J., ed. *Documents of American Broadcasting*. Englewood Cliffs, NJ: Prentice Hall, 1984 (4th ed.). More than 40 excerpted documents from government (including key court decisions), corporate, and other sources, arranged chronologically along with a thematic listing, all to help explain development of radio and television.

Miller, Jeff. *History of American Broadcasting* http://jeff560.tripod.com/broadcasting.html. Extensive series of links divided into sections on AM, FM, and television services and ranging over their whole history: articles, lists of stations at different times, detailed coverage of some stations, chronologies, etc.

Sterling, Christopher H., and John M. Kittross. *Stay Tuned: A History of American Broadcasting*. Mahwah, NJ: Lawrence Erlbaum, 2002 (3rd ed.). Integrated treatment of ten eras in development of radio-TV and related services from their prehistory in the nineteenth century to the beginning of the twenty-first. Includes extensive coverage of stations and networks, advertising, programming (including broadcast journalism's development), policy and regulation, and audiences and research about them.

I-1: Radio

For the development of radio's technology, see Section 3-D-3. A good deal of writing about "old time radio" (OTR) covering up to about 1960 is for the recorded program or radio receiver collecting fraternity. For regulatory development, see Section 8-D.

Baker, John C. *Farm Broadcasting: The First Sixty Years*. Ames: Iowa State University Press, 1981. Records a breed of radio dying when the book appeared. Basically a state-by-state chronicle of stations, broadcasters, and programs, it offers an overview as well, from earliest broadcasts to weather and market programs and the role of regional and national network and wire news services.

Brown, Robert J. *Manipulating the Ether: The Power of Broadcast Radio in Thirties America*. Jefferson, NC: McFarland, 1998. Divided into three parts, this details Roosevelt as a radio President, developing role of radio reporting from abroad, and role of the 1938 "War of the Worlds" broadcast in demonstrating radio's growing impact.

Craig, Douglas B. *Fireside Politics: Radio and Political Culture in the United States, 1920–1940*. Baltimore: Johns Hopkins University Press, 2000. Explores the rise of radio broadcasting and its regulation, expanding role of the medium in political life between world wars, and ways that radio helped contribute (or not) to citizenship. Useful for assessing radio in the era before television changed the older medium's role.

Hosley, David H. *As Good as Any: Foreign Correspondence on American Radio, 1930–1940*. Westport, CT: Greenwood, 1984. One of first narratives of these men (they nearly all were at that point) and their reporting roles in the formative decade of American radio foreign correspondence.

Jackaway, Gwenyth L. *Media at War: Radio's Challenge to the Newspapers, 1924–1939*. Westport, CT: Praeger, 1995. Reviews a hot controversy that peaked in the early 1930s as daily newspapers faced and tried to limit growing radio competition, tracing the growing press fear of radio and the latter's search for respectability among both listeners and advertisers. The media story unfolds against the Depression years and rising tensions abroad that fed the desire for instant (i.e., radio) news.

Miller, Edward D. *Emergency Broadcasting and 1930s American Radio*. Philadelphia: Temple University Press, 2003. Explores how radio covered breaking news, including chapters on the 1937 *Hindenburg* disaster, Roosevelt and Depression "fireside chats," audience impact as seen in the 1938 "War of the Worlds" drama (which was made to sound like breaking news), and many other programs.

Sterling, Christopher H., and Michael C. Keith. *Sounds of Change: A History of FM Broadcasting in America*. Chapel Hill: University of North Carolina Press, 2008. First overall history of the second radio service from its innovation in the 1930s, through its decline in the 1950s, to its eventual rebirth and great success after the 1960s. Melds discussion of government (FCC) policy, industry trends, programming and growing audiences.

Smulyan, Susan. *Selling Radio: The Commercialization of American Broadcasting 1920–1934*. Washington, DC: Smithsonian Press, 1994. A careful study of just how radio came to be largely commercially sponsored, getting behind trend to national programming networks, many arguments over radio broadcasting (advertising was not a done deal by any means, though many today think so), changes in programming from early years to an organized business during the late 1920s and early 1930s, and backlash against radio advertising.

White, Thomas H. *United States Early Radio History*. http://earlyradiohistory.us. A high-quality website with articles, reproduced historical documents, and data on the rise of wireless, radio, and broadcasting to about 1927—with a helpful table of contents to its 24 parts.

I-2: Television

For the development of television's technology, see Section 3-D-5.

Allen, Craig. *News Is People: The Rise of Local TV News and the Fall of News from New York*. Ames: Iowa State University Press, 2001. Using sample stations, offers a history of local market television news, including discussion of news consultants, development of "eyewitness" and "action" news concepts during the late 1960s and early 1970s, rise and role of ENG technology, importance of anchor personnel, and news content trends.

Auletta, Ken. *Three Blind Mice: How the TV Networks Lost Their Way*. New York: Random House, 1991. Journalistic account of three major television networks under siege before and after they all changed ownership during the mid-1980s. Focus on people and anecdotes, but with good insight and some reference to network news divisions.

Ball, Rick. Meet the Press: *Fifty Years of History in the Making*. New York: McGraw-Hill, 1998. Chronological survey of programs on long-running NBC television news interview program, with excerpts and comment.

Bernhard, Nancy E. *U.S. Television News and Cold War Propaganda, 1947–1960*. New York: Cambridge University Press, 1999. Argues importance of network television news in presenting cold war events to Americans, showing important role that federal agencies played in getting certain images and views aired.

Bluem, A. William. *Documentary in American Television: Form, Function, Method*. New York: Hastings House, 1965. First and classic assessment of televised documentary with many examples from the medium's first 15 years, written while genre was still in its heyday. Coverage continues in Hammond, below.

Boddy, William. *Fifties Television: The Industry and its Critics*. Urbana: University of Illinois Press, 1990. Chapters on television regulation and policy, broadcast industry and its major issues, programs and sponsors, and critical reactions to television's first decade. Provides good context for fledgling network news divisions.

Curtin, Michael. *Redeeming the Wasteland: Television Documentary and Cold War Politics*. New Brunswick, NJ: Rutgers University Press, 1995. Focuses on the early 1960s to explore how television explored life under communism, increasing the

global role of American companies, and general growth of television news.

Donovan, Robert J., and Ray Scherer. *Unsilent Revolution: Television News and American Life 1948–1991*. New York: Cambridge University Press, 1992. Useful assessment of four decades of political news making (co-authored by two experienced journalists) divided into two parts: a review of coverage of a dozen specific news events followed by a broader contextual review of TV news in more general terms.

Hammond, Charles Montgomery, Jr. *The Image Decade: Television Documentary 1965–1975*. New York: Hastings House, 1981. Continues Bluem (above) with sections on major themes, producers, reporters, and events during an era of considerable domestic and international unrest and active network documentary production. *See also* Raphael, below.

Henson, Robert. *Television Weathercasting: A History*. Jefferson, NC: McFarland, 1990. Only study of its kind, discussing key people, changing technology, and general place of weather within television newscasts.

MacDonald, J. Fred. *Television and the Red Menace: The Video Road to Vietnam*. New York: Praeger, 1985. Argues that what people saw during the 1950s and early 1960s (both news and entertainment programs) helped create a public acceptance for what government reported about the developing war, thanks to television's portrayal of government, military forces, and larger communist threat.

Mickelson, Sig. *The Decade That Shaped Television News: CBS in the 1950s*. Westport, CT: Praeger, 1998. Former head of developing television network news division relates how it all happened. Discusses the role of improving technology, battles with network officials, key personnel, rise of television documentaries, and relationship of profit and news.

See Mudd, Section 7-G-2.

Murray, Michael D., and Donald G. Godfrey, eds. *Television in America: Local Station History from across the Nation*. Ames: Iowa State University Press, 1997. First video history to approach medium from point of view of 22 local stations drawn from markets, large to small, all over the United States. Considerable focus is on local news and public affairs.

Raphael, Chad. *Investigated Reporting: Muckrakers, Regulators, and the Struggle over Television Documentary*. Champaign: University of Illinois Press, 2005. Assesses 1960–75 period of network documentaries, exploring pressures within news divisions and outside that impacted program content, including varied roles of official and other sources. *See also* Hammond, above.

Shedden, David. *Katie Couric / CBS Timeline (1975–2008)*. http://www.poynter.org/content/content_view.asp?id=104912. Chronology (including many links) of both network's news division and its eventual anchor, beginning when the latter graduated from high school.

See Slide, Section 2-A-1.

See Smith, Section 10-B-1.

Watson, Mary Ann. *The Expanding Vista: American Television in the Kennedy Years*. New York: Oxford, 1990. Good social history on all aspects—including then-vital and important network evening news—during the early 1960s.

Watson, Mary Ann. *Defining Visions: Television and the American Experience in the 20th Century*. Malden, MA: Blackwell, 2008 (2nd ed.). Reviews changing program menu, including news, as a reflection of American life during the second half of the twentieth century.

I-3: Public Broadcasting

For parallel discussion of public service broadcasting in Europe and elsewhere, see Section 10-D-5.

Blakely, Robert J. *To Serve the Public Interest: Educational Broadcasting in the United States*. Syracuse, NY: Syracuse University Press, 1979. Focuses primarily on radio and early development of noncommercial television in first scholarly history, written by an active participant, and often critical.

Carnegie Commission on Educational Television. *Public Television: A Program for Action.* New York: Harper & Row, 1967. Landmark study that led within a year to the creation of Corporation for Public Broadcasting and the modern U.S. public broadcasting system. Most of its recommendations were enacted, though not those on system funding.

Carnegie Commission on the Future of Public Broadcasting. *A Public Trust.* New York: Bantam, 1979. Less well-known (than 1967 study immediately above) assessment of national system's first decade and its need for greatly increased funding. Study failed in changing public policy but remains a useful record of what had been accomplished to that point.

Corporation for Public Broadcasting, *Who Pays for Public Broadcasting?* http://www.cpb.org/aboutpb/faq/pays.html. Annual reports on tax, foundation, and viewer donation statistics.

Day, James. *The Vanishing Vision: The Inside Story of Public Television.* Berkeley: University of California Press, 1995. Best overall history to that point, written by a longtime participant.

Engleman, Ralph. *Public Radio and Television in America: A Political History.* Newbury Park, CA: Sage, 1996. Places modern story in context of battles over public service radio during the 1930s. Several chapters each on public radio, public television, and community television.

Land, Jeff. *Active Radio: Pacifica's Brash Experiment.* St. Paul: University of Minnesota Press, 1999. Brief history (and occasional critique) of controversial stations and developing network formed starting in 1949. *See also* next title.

Lasar, Matthew. *Pacifica Radio: The Rise of an Alternative Network*. Philadelphia: Temple University Press, 1999. A survey of the station group to the mid-1960s, appearing in sections on the war years (exploring World War II genesis of the notion of such a public service network), dialogue (postwar struggle to get KPFA running and funded, and expansion to other markets), and dissent (developing upheavals at New York and Berkeley stations over station direction and management).

Looker, Thomas. *The Sound and the Story: NPR and the Art of Radio.* Boston: Houghton Mifflin, 1995. Something of an ethnographic approach to National Public Radio's people and programs, this is a readable account based heavily on observation and interviews.

McCauley, Michael P. *NPR: The Trials and Triumphs of National Public Radio.* New York: Columbia University Press, 2005. Developing role of news and public affairs at public radio's national network is reviewed. *See also* Mitchell, below.

McCauley, Michael P., et al., eds. *Public Broadcasting and the Public Interest.* Armonk, NY: M. E. Sharpe, 2003. More than 20 papers on most aspects of American public radio and television, arguing the system is generally doing well.

Mitchell, Jack. *Listener-Supported: The Culture and History of Public Radio.* Westport, CT: Praeger, 2005. A study of (to name the books's three parts) dreams, reality, and critiques of National Public Radio's first 35 years, as told by a player in that network. *See also* McCauley, above.

Quality Time? The Report of the Twentieth Century Fund Task Force on Public Television. New York: Twentieth Century Fund, 1993. First such overview since 1979 Carnegie Commission assessment (above), this one calling for substantial changes in structure and operations of the system as it celebrated a quarter century on the air.

Starr, Jerold M. *Air Wars: The Fight to Reclaim Public Broadcasting.* Boston: Beacon Press, 2000. Reviews public movement to make public stations more truely public-minded. Starr reviews issues raised at a number of public television stations.

Stewart, David. *The PBS Companion: A History of Public Television.* New York: RV Books/HarperCollins, 1999. Focuses on three decades of development and airing of important program series, exploring how decisions are made.

Witherspoon, John, et al. *A History of Public Broadcasting.* Washington, DC: Current, 2000 (rev. ed.). First part (originally published in 1987) takes story to the mid-1980s while second covers

the next dozen years, both in Washington policy establishment, and among local stations and program producers.

I-4: Cable Television

Historical writing about cable television is only just beginning to appear.

Baldwin, Thomas F., and D. Stevens McVoy. *Cable Communications*. Englewood Cliffs, NJ: Prentice Hall, 1988 (2nd ed.). While dated, this provides a useful cross-section view of the entire cable business and its underlying technology when it was rapidly expanding thanks to satellite networks.

Frantzich, Stephen, and John Sullivan. *The C-SPAN Revolution*. Norman: University of Oklahoma Press, 1996. First overall history of Cable-Satellite Public Affairs Network (C-SPAN), the cable industry-supported service created and directed by Brian Lamb.

Lockman, Brian, and Don Seavey. *Pioneers of Cable Television: The Pennsylvania Founders of an Industry*. Jefferson, NC: McFarland, 2005. Useful study of the late 1940s and early 1950s and why and how the first community antenna systems got started and developed.

Mullen, Megan. *The Rise of Cable Programming in the United States: Evolution or Revolution?* Austin: University of Texas Press, 2005. First attempt to trace story, this explores the relationship of cable and broadcast television programming over a half century including how business expanded after first use of satellite distribution.

Mullen, Megan. *Television in the Multichannel Age: A Brief History of Cable Television*. Malden, MA: Blackwell, 2008. A concise survey of a now huge industry, arranged in a series of chronological chapters.

Parsons, Patrick R. *Blue Skies: A History of Cable Television*. Philadelphia: Temple University Press, 2008. First six decades of cable are definitively described and assessed in this lengthy history that melds technology with industry, programming, and economic aspects of the business. The expanding role of cable, from carrying a handful of channels to hundreds of them, is traced as is the changing complexity of policy controlling this business.

Whittemore, Hank. *CNN: The Inside Story*. Boston: Little, Brown, 1990. Chatty portrayal of people involved in and planning for CNN, as well as the early development of the news service, which first aired in June 1980.

J. Journalism Depicted in Media

A perhaps surprising number of feature films have focused upon or featured journalists, newspapers or even broadcasting operations. But journalism also figures in fiction, novels—and even art.

Apgar, Garry, et al. *The Newspaper in Art*. Spokane, WA: New Media Ventures, 1996. An impressive album reproducing more than 200 paintings (of people, scenes) where one or more newspapers figure in the image. May be only study of its type.

Barris, Alex. *Stop the Presses! The Newspaperman in American Film*. South Brunswick, NJ: A. S. Barnes, 1976. How reporters, editors, and publishers have been portrayed in feature films over time.

Berry, Thomas Elliott. *The Newspaper in the American Novel, 1900–1969*. Metuchen, NJ: Scarecrow, 1970. Chronological treatment explores a variety of novels.

Ehrlich, Matthew C. *Journalism in the Movies*. Urbana: University of Illinois Press, 2004. Covers many movies about the press, with two of them, *Front Page* and *Citizen Kane,* deservedly getting their own chapters.

Good, Howard. *Acquainted with the Night: The Image of Journalism in American Fiction, 1890–1930*. Metuchen, NJ: Scarecrow, 1986. Explores depictions of the profession in a variety of fictional contexts.

Good, Howard. *Outcasts: The Image of Journalists in Contemporary Film*. Metuchen, NJ: Scarecrow,

1989. Author's initial book on the topic (three more follow), suggesting reporters and others don't come off well in feature motion pictures.

Good, Howard. *Girl Reporter: Gender, Journalism, and the Movies*. Lanham, MD: Scarecrow, 1998. Reviews a classic Hollywood role that suggests that female film reporters—and possibly their real-world counterparts—are the grittiest girls around.

Good, Howard. *The Drunken Journalist: The Biography of a Film Stereotype*. Lanham, MD: Scarecrow, 2000. Analyzes stereotype of hard-drinking journalist, why it exists and how it appears to operate in motion pictures.

Good, Howard, ed. *Journalism Ethics Goes to the Movies*. Lanham, MD: Rowman & Littlefield, 2008. Twelve papers on as many feature films assess ethical issues in journalism that are raised in each of them and how those issues are a part of journalism's real world.

Langman, Larry. *The Media in the Movies: An Illustrated Catalog of American Journalism Films, 1900–1996*. Jefferson, NC: McFarland, 1997. Discusses more than 1,000 feature films that include print, radio, television, and photojournalism, though most entries deal with films about newspaper reporters. Information includes date of release, producing studio or distributor, director, screenwriter, and cast. Annotations average from several lines to half a page and are mainly plot summaries.

Ness, Richard. *From Headline Hunter to Superman: A Journalism Filmography*. Lanham, MD: Scarecrow Press, 1997. Brief mention of each of more than 2,100 feature films from silent era to mid-1990s that deal with journalism. Each entry includes title, studio, running time, production credits, cast, and plot summary and analysis that focus on journalism content.

Schindler, Paul E., Jr. *Journalism Movies*. http://psacot.typepad.com/ps_a_column_on_things/journalism-movies.html. More information about a host of films featuring or focusing upon journalism and journalists.

Slovick, Matt. *Journalists in the Movies*. http://www.washingtonpost.com/wp-srv/local/longterm/tours/newseum/journfilms1.htm. Includes separate sections describing (in a paragraph, with one still each) films concerned with newspapers, television, and foreign correspondents.

See Underwood, Section 5-G.

K. Advertising

The literature on all aspects of advertising is huge—included here are only a few of the classic and more recent and broadly useful titles. For more of the current scene, impact on journalism, and political advertising, see Section 4-D.

Advertising Age. The Advertising Century. http://adage.com/century/index.html. Online version of a 1999 publication includes a timeline that covers nearly 300 years of ad history, and information on top advertising campaigns over the twentieth century and "top" other things such as ad jingles or slogans, and key people.

See Barnow, subsection I, above.

Duke University Libraries. *Emergence of Advertising in America*. http://library.duke.edu/digitalcollections/eaa. More than 9,000 images from one of the key major archives of advertising material.

Fox, Stephen. *The Mirror Makers: A History of American Advertising and Its Creators*. New York: Murrow, 1984 (reprinted by University of Illinois Press, 1998). Social history based heavily on primary source materials, and focusing on key individuals (copywriters, artists, managers), ad agencies and their accounts.

Goodrum, Charles, and Helen Dalrymple. *Advertising in America: The First 200 Years*. New York: Abrams, 1990. Handsomely illustrated survey arranged more by topic than chronology, naturally stressing print advertising, which is reproduced throughout.

Hower, Ralph M. *The History of an Advertising Agency: N. W. Ayer & Son at Work, 1869–1949*. Cambridge, MA: Harvard University Press, 1949 (rev. ed.). Classic history first published in 1939

about one of the earliest and largest ad agencies and its role in shaping ad campaigns in print and later broadcast media.

Lears, Jackson. *Fables of Abundance: A Cultural History of Advertising in America*. New York: Basic Books, 1994. A serious study (with 50 pages of notes) that places changing advertising trends against what was going on in the United States at the time. Particularly good for its discussion of some main themes in advertising messages.

Marchand, Roland. *Creating the Corporate Soul: The Rise of Public Relations and Corporate Imagery in American Big Business*. Berkeley: University of California Press, 1998. Detailed case studies of AT&T, General Motors, General Electric, Metropolitan Life, and other firms, showing developing role of institutional advertising during the first half of the twentieth century.

McGovern, Charles F. *Sold American: Consumption and Citizenship, 1890–1945*. Chapel Hill: University of North Carolina Press, 2006. Explores growing conflict between advertisers and consumer advocates, much of it played out in newspapers and magazines. This is a study of key people and organizations (such as Consumer's Union) and persuasive themes used by both sides.

Presbrey, Frank. *The History and Development of Advertising*. New York: Doubleday, Doran, 1929 (several later reprints). Classic and still valuable history of print (mainly newspaper) advertising with hundreds of examples. Includes chapters on transit, outdoor, and early radio advertising, and assesses role of changing technology (such as halftone printing) on ad content.

See Ross and Richards, Section 7-J-1.

Samuel, Lawrence R. *Brought to You By: Postwar Television Advertising and the American Dream*. Austin: University of Texas Press, 2001. Covers period to the mid-1960s, demonstrating changing trends and themes in the growing amount of on-air advertising, touching on some controversies and policies of the period.

See Smulyan, subsection I-1, above.

Tungate, Mark. *Adland: A Global History of Advertising*. London: Kogan Page, 2007. A brief survey with much on British trends and those in Europe and elsewhere, centering on key people and ad agencies as well as overall trends and themes.

Wood, James Playsted. *The Story of Advertising*. New York: Ronald Press, 1958. An early and still useful narrative focused largely on print advertising with some discussion of broadcast and other forms of advertising.

L. Online Services

These titles focus on development of the relevant software applications for computers and on the Internet. For the underlying technology, see Section 3-E.

Aspray, William, and Paul E. Ceruzzi, eds. *The Internet and American Business*. Cambridge: MIT Press, 2008. Seventeen papers appear in sections on the Internet before its commercialization, developing an Internet business model, development of retail and dot.com online businesses, Internet transformation and selective adoption, old and new business uses, and lessons learned and future opportunities. Section 9 focuses specifically on media business.

Bourne, Charles P., and Trudi Bellardo Hahn. *A History of Online Information Services, 1963–1976*. Cambridge: MIT Press, 2003. Inception and initial development of things we now all take for granted, told in a detailed survey of programs, people, and companies.

Campbell-Kelly, Martin. *From Airline Reservations to Sonic the Hedgehog: A History of the Software Industry*. Cambridge: MIT Press, 2003. From origins of software business during 1950s to shaping of both personal and corporate software markets.

Cortada, James W. *The Digital Hand, Volume 2: How Computer Changed the Work of American Financial, Telecommunications, Media, and Entertainment Industries*. New York: Oxford University Press, 2006. Second of three volumes focusing on different sectors of the economy, this

one includes journalism and how computers have revolutionized news gathering, reporting, and dissemination.

Internet Society. *Histories of the Internet*. http://www.isoc.org/internet/history. An annotated collection of highly useful links to many websites.

Keirstead, Philip O. *Computers in Broadcast and Cable Newsrooms: Using Technology in Television News Production*. Mahwah, NJ: Lawrence Erlbaum, 2005. Designed to help train students about electronic media news production techniques. Discusses what a television news producer does, what people use to produce news and how they do it, where it all comes together, gathering up stories (their audio and video parts), assembling a production team, assignment desk, computers in television control room, computer-assisted reporting, and managing a computerized newsroom.

Li, Xigen, ed. *Internet Newspapers: The Making of a Mainstream Medium*. Mahwah, NJ: Lawrence Erlbaum, 2006. Explores the rise and growth of online newspapers as seen in 16 research papers. They assess information delivery and access of Internet newspapers, the role of an emerging medium in an interactive process, and Internet newspapers and public including their utility for news use, and contribution of net news to cyber democracy.

Owen, Bruce M. *The Internet Challenge to Television*. Cambridge, MA: Harvard University Press, 1999. Reviews technology, economics and business, and policy factors in expansion of Internet and what threats each poses to broadcast television. Sections compare and contrast rise and key elements of both analog and digital systems, and how they may meld in coming years.

Steinbock, Dan. *The Birth of Internet Marketing Communications*. Westport, CT: Quorum, 2000. How the Internet became a commercial resource is traced, including development of websites, portals, and home pages.

Section 3

Technology

Technical literature on all media services is substantial, including historical works dating to the nineteenth century. Some of this material concerning electronic media gets quite technical indeed, being aimed primarily at engineers. Other sources center on "great men" inventors and their breakthroughs. More recently technical history has sought to place media innovations within larger social and political contexts. Noted here are some of the more useful secondary sources that include technical history as well as surveys of current media technology.

A. General Histories

These are wide-ranging sources surveying many different technologies, often over lengthy periods of time. More specialized material appears in other sections of this chapter.

Chandler, Alfred D., Jr., and James W. Cortada, eds. *A Nation Transformed by Information: How Information Has Shaped the United States from Colonial Times to the Present*. New York: Oxford University Press, 2000. While this ranges back to print and the mails in the eighteenth century, study primarily focuses on electrical era since the 1830s. Includes considerable discussion of growing uses of computers in business and industry.

Dooley, Patricia L. *The Technology of Journalism: Cultural Agents, Cultural Icons*. Evanston, IL: Northwestern University Press, 2007. Discusses dynamics of change, quest for more news, printers and readers, electrification, visualizing news, development of digital modes, and likely future of printed news given growing Internet competition.

Fang, Irving. *A History of Mass Communication: Six Information Revolutions*. Newton, MA: Focal Press, 1997. Revolutions include those created by writing, printing, mass media, entertainment, electronic communication into households, and the Internet.

Fang, Irving. *Alphabet to Internet: Mediated Communication in Our Lives*. St. Paul, MN: Rada Press, 2007. Very broad-scale history by a longtime student of changing communication technology, ranging from writing up to digital video games, with a chapter on each over time.

Gardner, Robert, and Dennis Shortelle. *From Talking Drums to the Internet: An Encyclopedia of Communications Technology*. Santa Barbara, CA: ABC-CLIO, 1997. Some 210 entries, written (and often illustrated) for a general readership.

Lacy, Dan. *From Grunts to Gigabytes: Communications and Society*. Champaign: University of Illinois Press, 1996. Development of communication systems from writing and printing to audiovisual revolution, and coming of computers.

Lebow, Irwin. *Information Highways and Byways: From the Telegraph to the 21st Century*. New York: Institute of Electrical and Electronic Engineers, 1995. Telegraph and telephone, radio and television, growing communication–computer symbiosis and ongoing digital revolution are all outlined.

Lubar, Steven. *Infoculture: The Smithsonian Book of Information Age Inventions*. Boston: Houghton Mifflin, 1993. Handsome coffee table book illustrating most communication inventions and some of their applications. Designed in part as a catalog for a long-running "Information Age" display, study focuses on print, film, and electrical media innovations as well as computers and related devices.

Meadow, Charles T. *Making Connections: Communication through the Ages*. Lanham, MD: Scarecrow, 2002. Described by publisher as "a Cook's tour of communication technologies across time," this begins with writing and printing and progresses to modern scene in clear nontechnical language.

B. Printing Technology

B-1: History

See also Section 4-C for labor's reactions to technological change.

Eisenstein, Elizabeth L. *The Printing Press as an Agent of Change*. London: Cambridge University Press, 1979 (2 vols.; reprinted as one in 1980). A classic analysis of watershed 1400s and 1500s revolution in printing technology (moveable type) in Europe. *See also* the author's shorter *The Printing Revolution in Early Modern Europe* (Cambridge, 1983), which contains the essential story. Author's discussion of the rise of print culture and its interaction with and speeding effects of both Renaissance and Reformation movements is unsurpassed.

Marshall, Alan. *Changing the Word: The Printing Industry in Transition*. London: Comedia, 1983. Based on British trends and examples, this illustrated survey reviews development of and changes in printing focusing on developments in recent decades as electronic systems grew to dominance.

McMurtrie, Douglas C. *The Book: The Story of Printing & Bookmaking*. New York: Oxford University Press, 1943 (3rd ed.). A standard history with many examples, most drawn from books rather than periodicals.

Spencer, Otha C. *Staley McBrayer and the Offset News Revolution*. Commerce, TX: Texas A&M University, 1997. Brief illustrated treatment of the 1950s creation of web-offset printing and its use in suburban newspapers.

Steinberg, S. H., and John Trevitt. *Five Hundred Years of Printing*. London: British Library, 1996 (new ed.). Illustrated updating of a long-standard history of printing, which emphasizes books but reviews changing printing technology.

Thompson, John Smith. *The Mechanism of the Linotype and the History of Composing Machines*. New York: Garland, 1980. Crucial late-nineteenth-century mechanisms that allowed great expansion of newspaper print runs.

B-2: Typewriters

An essential tool used by journalists during the twentieth century, these were replaced by desktop and laptop computers—and PDAs—in the twenty-first.

Beeching, Wilfred. *A Century of Typewriters*. New York: St. Martin's Press, 1974. Insightful review of its development with hundreds of photos, and chapters on different keyboard arrays, information on type styles and changing mechanics of these machines.

Bellis, Mary. *Typewriters, QWERTY, and Typing*. http://inventors.about.com/library/inventors/bltypewriter.htm. Includes discussion of keyboard design (and why it matters), various uses and many links to further information, historical and otherwise.

Bliven, Bruce, Jr. *The Wonderful Writing Machine*. New York: Random House, 1954. While more than a half century old, this remains one of best popular histories of how this vital this machine developed up through early electric typewriters.

IBM Archives. *The Typewriter*. http://www-03.ibm.com/ibm/history/exhibits/modelb/modelb_informal.html. Useful overall history plus detailed information on IBM machines, including IBM's long history of developing electric devices.

Lundmark, Torbjorn. *Quirky Qwerty: The Story of the Keyboard @ Your Fingertips*. Sydney:

University of New South Wales Press, 2002. Explains how we ended up with the current keyboard ("QWERTY" being the first six letters on the upper left side of universal English keyboards of both typewriters and computers)—and why it matters.

Polt, Richard. *The Classic Typewriter Page*. http://staff.xu.edu/~polt/typewriters/index.html. All about many types of machines manufactured, their makers, many pictures and references, plus a brief history.

Richards, G. Tilghman. *The History and Development of Typewriters*. London: Science Museum, 1964. Well-illustrated exhibit guide to steadily improving machine, including electric typewriters.

Russo, Thomas A. *Mechanical Typewriters: Their History, Value, and Legacy*. Atglen, PA: Schiffer, 2002. Designed as a collector's guide, this provides color pictures and descriptions of changes in machines over more than a century.

B-3: Graphics, Layout, and Design

Most titles dealing with these topics are textbooks.

Allen, John E. *Newspaper Designing*. New York: Harper, 1949. Combines and updates author's *Newspaper Makeup* (1936) and *The Modern Newspaper* (1940), providing a good sense of mid-century design concepts.

Ames, Steven E. *Elements of Newspaper Design*. New York: Praeger, 1989. Covers every aspect of newspaper design from typography to photography, from redesign to specifics of a design style book.

Arnold, Edmund C. *Modern Newspaper Design*. New York: Harper & Row, 1969. Updating of his *Functional Newspaper Design* (1956), this is a standard treatment including some historical background.

Baker, Nicholson, and Margaret Brentano. *The World on Sunday: Graphic Art in Joseph Pulitzer's Newspaper, 1898–1911*. New York: Bullfinch, 2005. Reproduced from bound copies in British Library collection, this illustrates many layouts and glorious use of color that will surprise those who think papers of this era were just grey type.

Barnhurst, Kevin G. *Seeing the Newspaper*. New York: St. Martin's Press, 1994. An informal history of changing newspaper design and use of such visual elements as photos and charts, placing those changes against broader journalism context and functions as well as general technological change.

Barnhurst, Kevin G., and John C. Nerone. *The Form of News: A History*. New York: Guilford Press, 2002. Using four historical periods, authors explore genres of presentation, including typography, space, and pictures using archival material to trace the changing "look" of newspapers from Revolutionary era to present day.

Brown, Joshua. *Beyond the Lines: Pictorial Reporting, Everyday Life, and the Crisis of Gilded Age America*. Berkeley: University of California Press, 2002. Reviews the role and impact of wood engravings in newspapers and magazines (especially *Frank Leslie's Illustrated Newspaper*) of late-nineteenth-century America, including coverage of politics, race and ethnicity, and labor's struggles.

Garcia, Mario R. *Contemporary Newspaper Design*. Englewood Cliffs, NJ: Prentice Hall, 1993. Discusses typography, layout, photo features, sports and editorial sections, and information graphics.

Garcia, Mario R. *Newspaper Evolutions*. St. Petersburg, FL: Poynter Institute, 1997. Details the changes made in 20 newspapers around the world, showing growing use of color, modified layouts, and the like.

Harrower, Tim. *The Newspaper Designers' Handbook*. Dubuque, IA: William C. Brown, 1992. Just that, with some historical context.

Heller, Steven, and Julie Lasky. *Borrowed Design: Use and Abuse of Historical Form*. New York: Van Nostrand Reinhold, 1993. Analysis of recurring themes in graphic art, especially advertising, including values of nostalgia, defining intellectual

property, art of parody, five "commandments of borrowing," and overall background and uses of typography.

Heller, Steven, and Teresa Fernandes. *Magazines inside and Out*. New York: PBC International, 1996. Arranged by type of magazine (for example, art and architecture, news and business, lifestyle, science and technology, culture) to show the latest design ideas.

Heller, Steven, and Seymour Chwast. *Graphic Style: From Victorian to Digital*. New York: Abrams, 2000 (new ed.). Traces changes in graphic thinking and layout over more than a century, reviewing newspapers and other print outlets.

Hutt, Allen. *The Changing Newspaper: Typographic Trends in Britain and America, 1622–1972*. London: Fraser, 1973 (reprinted by Sandstone Press in 1981). Useful and well-illustrated comparisons of development in both countries.

Kraus, Jerelle. *All the Art That's Fit to Print (And Some That Wasn't): Inside* The New York Times *Op-Ed Page*. New York: Columbia University Press, 2009. Fascinating text and graphics assess the development of the world's pioneering op-ed page, making clear the importance of illustrations—and the frustration of internal editorial battles over their use. Focuses on 1970s and 1980s, but includes examples through the 2008 elections.

Meggs, Philip B. *Type and Image: The Language of Graphic Design*. New York: Wiley, 2002. Demonstrates elements that combine to form a design—signs, symbols, words, pictures, and supporting forms. Discusses graphic design's ability to function as language, and innovative ways that designers combine words and pictures, illustrated with case studies.

Meggs, Philip B., and Alston W. Purvis. *Meggs' History of Graphic Design*. New York: Wiley, 2005 (4th ed.). Standard history of the field and its changing technology, divided into several historical periods, and demonstrating the impact of different printing technologies as well as uses of color.

Moen, Daryl, R. *Newspaper Layout and Design*. Ames: Iowa State University Press, 1995 (3rd ed.). A standard text.

Silverstein, Louis. *Newspaper Design for the Times*. New York: Van Nostrand Reinhold, 1990. The author was chief designer for *The New York Times* and demonstrates changes there and in four regional papers, using both text and sample pages.

Society for News Design. *Best of Newspaper Design*. Beverly, MA: Rockport, 1980–present (annual). Featuring work selected by a panel of judges from thousands of international publication entries, this annual survey provides a good record of excellence in journalistic design. Layouts feature best in news, features, portfolios, visuals, and more. Each entry is accompanied by commentary on elements that made example pieces standout winners.

C. Photography and Film

For current photojournalism, see Section 4-F-3.

C-1: Photographic History

This topic has generated a huge literature that is only briefly indicated here.

Barger, Susan, and William White. *The Daguerreotype: Nineteenth Century Technology and Modern Science*. Baltimore: Johns Hopkins University Press, 1991. Reviews development of the pre-photography technology in mid-nineteenth-century America, its many uses and its important limitations.

Coe, Brian. *Cameras from Daguerreotypes to Instant Pictures*. New York: Crown, 1978. Clear diagrams—many printed in color—supplement a history of analog equipment and processes. Chapters cover early apparatus, folding stand cameras, hand plate cameras, early roll-film cameras, the 35mm camera, small and miniature cameras, reflex cameras, twin-lens and stereo cameras, panoramic cameras, and lenses, shutters, exposure meters, and flash equipment.

Digicam, *History of Cameras*. http://www.digicamhistory.com. Extensively illustrated and very

detailed chronological history covering all types of cameras and, toward the end, focusing on digital cameras, with numerous links to additional sites.

Jenkins, Reese V. *Images & Enterprise: Technology and the American Photographic Industry, 1839 to 1925*. Baltimore: Johns Hopkins University Press, 1975. Divides story into major technical eras: Daguerreotypes (to 1855), collodion technology (1855–80), gelatin plate systems (1880–95), amateur roll film systems (1895 to 1909), and silent cinematography (1909–25).

Mees, C. E. Kenneth. *From Dry Plates to Ektachrome Film: A Story of Photographic Research*. New York: Ziff-Davis, 1961. Based heavily on author's half-century career with Kodak, this is a broad survey of early-twentieth-century research developments concerning different applications of photographic methods.

C-2: Film Technology History

This literature is slowly growing—most writing on film technology concerns the "here and now" in how-to form.

Barclay, Stephen. *Motion Picture Image: From Film to Digital*. Woburn, MA: Focal Press, 2000. Details the production process through postproduction, reviewing current equipment and approaches including high-definition television.

Enticknap, Leo. *Moving Image Technology: From Zoetrope to Digital*. New York: Wallflower Press, 2005. A history and theory of moving image film, video, sound recording, and allied technologies as well as a discussion of impacts of new and emerging media technologies, including e-cinema and digital video. Chapters discuss film, cinematography and film formats, color, sound, cinema exhibition, television and video, and archival preservation and restoration.

Fielding, Raymond, ed. *A Technological History of Motion Pictures and Television*. Berkeley: University of California Press, 1967. Collects 28 documented historical papers on motion picture technology and four on television, reprinted from issues of *SMPTE Journal*.

Haines, Richard W. *Technicolor Movies: The History of Dye Transfer Printing*. Jefferson, NC: McFarland, 1993. History of different types of color film and their early applications.

Macgowan, Kenneth. *Behind the Screen: The History and Technology of the Motion Picture*. New York: Delacorte Press, 1965. Insightful analysis to about 1930, and then more episodic treatment of film history with strong emphasis on development of underlying technologies. Useful especially for silent film era and early development of sound techniques.

McGee, Marty. *Encyclopedia of Motion Picture Sound*. Jefferson, NC: McFarland, 2001. Entries on people, systems and processes, specific films, manufacturers, and sound technicians from 1920s to the present.

Raimondo-Souto, H. Mario. *Motion Picture Photography: A History, 1891–1960*. Jefferson, NC: McFarland, 2007. Relates development of equipment and the process of shooting films: early cameras and their lenses, first studios, film processing, initial color formats, development of mobile camera, silent newsreels, cameramen on location, motion picture laboratories, impact of sound as well as developments in lighting and special effects, film during World War II, and rise of wide-screen and 3-D film techniques during 1950s—in all up to when color became industry standard.

Schoenherr, Steven E. *Motion Picture Sound*. http://history.sandiego.edu/GEN/recording/motionpicture1.html. Three-part website (up to 1929, 1930–89, and 1990–2000) with extensive information on origin and development of motion picture sound systems. Incorporates many links to other sites.

D. Electrical/Electronic Technologies

D-1: Surveys

Most historical overviews of electrical technologies take a biographical approach centering on key inventors and innovators.

Bray, John. *Innovation and the Communications Revolution: From the Victorian Pioneers to*

Broadband Internet. London: Institution of Electrical Engineers, 2002. Reviews key people and innovations on both sides of Atlantic from era of telegraphy to Internet, well illustrated with diagrams and photos.

Burns, Russell W. *Communications: An International History of the Formative Years*. London: Institution of Electrical Engineers, 2004. Development of electrical and electronic communications from telegraph to the rise of black-and-white television in the late 1930s, so relating about a century of development. This important study includes both point-to-point and mass communication technology.

Chandler, Alfred D., Jr. *Inventing the Electronic Century: The Epic Story of the Consumer Electronics and Computer Industries*. New York: The Free Press, 2001. Surveys expansion across many nations of both industries, especially tracing the story in the United States. and Japan with some reference to Europe as well.

Inglis, Andrew F. *Behind the Tube: A History of Broadcasting Technology and Business*. Stoneham, MA: Focal Press, 1990. Topic-by-topic approach to technical history is useful, though with something of an RCA bias; the business history is less insightful.

D-2: Facsimile

Hills, Lee, and Timothy J. Sullivan. *Facsimile*. New York: McGraw-Hill, 1949. Two newspaper facsimile editors detail developments to that point and offer many case studies of what then appeared to be a technology on the verge of wide-spread adoption.

McConnell, Kenneth R., et al. *Fax: Facsimile Technology and Systems*. Dedham, MA: Artech House, 1999. Includes fairly detailed history in its second chapter, and more on current systems ("group 3" standards).

Rensen, Marius. *History and Development of Facsimile*. http://www.hffax.de/history/index.html. Extensive site making clear in timeline and other sections many generations of fax machine from the early-nineteenth-century innovations to equipment used today.

D-3: Telegraph and Telephone

Nineteenth- and early-twentieth-century literature on the telegraph and telephone is immense. Included here is a selection of the more useful modern history material. Both devices proved vital to journalism, and the telephone (now usually in its mobile form) still is. For news agency use of telegraphy and telegraph cables, see Section 2-D.

Ahvenainen, Jorma. *The Far Eastern Telegraphs: The History of Telegraphic Communications between the Far East, Europe, and America before the First World War*. Helskinki: Suomalainen Tiedeakatemia, 1981. An important study, this focuses on Danish Great Northern and British Eastern companies, mainly on business and politics, including use of telegraph cables for transmission of news.

Blondheim, Menaham. *News over the Wires: The Telegraph and the Flow of Public Information in America, 1844–1897*. Cambridge, MA: Harvard University Press, 1994. An important study, this provides a history of news wire services (mainly Associated Press of New York and its relationship with Western Union) focusing on effects of its technology on speed and content of news reporting.

Boettinger, H. M. *The Telephone Book: Bell, Watson, Vail and American Life, 1876–1983*. Croton-on-Hudson, NY: Riverwood Publishers, 1977; New York: Stearn Publishers, 1983 (2nd ed.). Lavish pictorial history (much in color) of people (especially Bell and his assistant, plus early AT&T chief Theodore Vail) and appliances of telephony, especially those of AT&T.

Bowers, Raymond, et al., eds. *Communications for a Mobile Society: An Assessment of New Technology*. Beverly Hills, CA: Sage, 1978. One historical paper; remaining 15 papers now form a useful historical record of early mobile communication development globally and its many early applications.

Calvert, James B. *Telegraph: History of Telecommunications and Related Matters*. http://mysite.du.edu/~jcalvert/tel/telhom.htm1. Offers very extensive historical descriptions and analysis

of telegraphy and equipment that made it possible, with many links to further details.

Casle, John. *Telegraph-History*. http://www.telegraph-history.org. Primarily articles that first appeared in "Key and Telegraph" column of *The AWA Journal* (a quarterly published by the Antique Wireless Association), these web versions have been expanded to include additional information, images and illustrations. Other articles include original works by telegraph pioneers, engineers, and inventors.

Coates, Vary T., and Bernard S. Finn. *A Retrospective Technology Assessment: Submarine Telegraphy—The Transatlantic Cable of 1866*. San Francisco: San Francisco Press, 1979. Unique and insightful analysis of numerous and varied impacts (on journalism, diplomacy, business)—not all of them predicted—of initial successful trans-Atlantic telegraph cable, based on careful analysis of many contemporary resources.

Fischer, Claude S. *America Calling: A Social History of the Telephone to 1940*. Berkeley: University of California Press, 1992. Important analysis of how telephone technology impacted American life before World War II, told through analysis of contemporary literature and studies of several California communities.

Garard, Garry A. *Cellular Communications: Worldwide Market Development*. Norwood, MA: Artech, 1998. Considerable historic background is provided here on radio before cellular, development of cellular and its trial systems, initial development of cellular in Europe, development of GSM digital standard, and digital developments (including PCS) in the United States.

Israel, Paul. *From Machine Shop to Industrial Laboratory: Telegraphy and the Changing Context of American Invention, 1830–1920*. Baltimore: Johns Hopkins University Press, 1992. Unique study exploring relationship of research and telegraphy—and how the former became more corporate over time.

Kieve, Jeffrey. *The Electric Telegraph in the U.K.: A Social and Economic History*. Newton Abbot, England / New York: Barnes & Noble, 1973. Best modern history that, despite its subtitle, includes technical development of the telegraphy system as well.

Lubrano, Annteresa. *The Telegraph: How Technological Innovation Caused Social Change*. New York: Garland, 1997. Based on a dissertation, this reviews telegraphy's impact on formal organizations, politics, culture, social stratification, law, nationalism—and on processes of news reporting.

Pool, Ithiel de Sola, ed. *The Social Impact of the Telephone*. Cambridge: MIT Press "Bicentennial Studies," 1977. Twenty-one original papers from a two-day seminar at MIT, these range over telephone's technology and its cultural impact during its first century of usage.

Pool, Ithiel de Sola. *Forecasting the Telephone: A Retrospective Technology Assessment of the Telephone*. Norwood, NJ: Ablex, 1983. Reviews and assesses forecasts of telephone's future applications and impact made from 1876 through the eve of World War II in 1940.

Standage, Tom. *The Victorian Internet: The Remarkable Story of the Telegraph and the Nineteenth Century's On-Line Pioneers*. New York: Walker, 1998. A popular and readable history of telegraphy in Britain and America and its impact, described as an early version of the Internet.

U.S. Congress, Office of Technology Assessment. *Wireless Technologies and the National Information Infrastructure*. Washington, DC: Government Printing Office, 1995. One of best surveys to that point of development and status of various technologies and their application, with emphasis on policy concerns and options.

Wasserman, Neil H. *From Invention to Innovation: Long-Distance Telephone Transmission at the Turn of the Century*. Baltimore: Johns Hopkins University Press, 1985. Study of the application of "loading coils" in early long-distance voice transmission—and their effect on telephony's increasingly effective application.

Young, Peter. *Person to Person: The International Impact of the Telephone.* Cambridge, England: Granta Editions, 1991. An informal journalistic social history of telephony and its varied effects around the world, arranged in approximate chronological fashion. Published with some support from British Telecom.

D-4: Radio

This is another growing literature, generally melding biography and technology.

Aitken, Hugh G. J. *The Continuous Wave: Technology and American Radio, 1900–1932.* Princeton, NJ: Princeton University Press, 1985. Pathbreaking study focuses on American developments: Fessenden's alternator transmitter, Elwell's arc transmitter, de Forest's Audion vacuum tube, radio and cables and national interest, development of RCA (three chapters), and expansion of the radio business based on vacuum tube technology during the 1920s.

Douglas, Susan J. *Inventing American Broadcasting, 1899–1922.* Baltimore: Johns Hopkins University Press, 1987. Readable yet scholarly analysis of how a combination of technological innovation, institutional development, and both visions and business realities led to the radio broadcasting business by the early 1920s. Chapters focus on Marconi as inventor-hero, various inventors' struggles for technical distinction, wireless telegraphy in the U.S. Navy, ups and downs of wireless as a business, the important role of amateur operators prior to World War I, initial radio regulation, growing military and corporate control, and social constructions of broadcasting.

Federal Communications Commission. *The Ideas That Made Radio Possible.* http://www.fcc.gov/omd/history/radio/ideas.html. Online exhibition by the Federal Communications Commission on radio's technical history with audio and visual elements.

See Slotten, Section 8-D.

See White, Section 2-I-1.

D-5: Television

Here again, the literature tends to meld biography and technology.

Abramson, Albert. *The History of Television, 1880 to 1941.* Jefferson, NC: McFarland, 1987. Valuable overall source for pre-war development of American and world television. Useful for specifics on inventors and patents as well as general trends in technical development of both mechanical and electronic systems. *See* next entry and also Burns, below.

Abramson, Albert. *The History of Television, 1942 to 2000.* Jefferson, NC: McFarland, 2002. Continuation of the study above, this ranges over black-and-white and color systems, development of television recording, transmission and studio equipment, and consumer receivers.

Bellamy, Robert V., Jr., and James R. Walker, eds. *The Remote Control in the New Age of Television.* Westport, CT: Praeger, 1993. Sixteen research papers discuss development of the remote device, individual use, group viewing, and its impact on the television industry.

Bellamy, Robert V., Jr. *Television and the Remote Control: Grazing on a Vast Wasteland.* New York: Guilford, 1996. A more integrated (than the entry immediately above) assessment of remote control development and its many implications.

Brinkley, Joel. *Defining Vision: The Battle for the Future of Television.* New York: Harcourt Brace, 1997. A *New York Times* reporter reviews the on-again, off-again, history of eventual American digital HDTV standard. Very useful record of people and organizations, which shows considerable insight on the changing strategies of key stakeholders during the transition from analog to digital systems.

Burns, R. W. *Television: An International History.* London: Institute of Electrical Engineers, 1997. Discusses developments up to 1940 in the United States, Britain, Germany, and France. This is a definitive treatment of this pioneering era, providing comparisons of developments in different countries

(chiefly Britain and the U.S., but with discussion of France, Germany, Japan, and the Soviet Union as well) in text and tables. *See also* Abramson, above.

Cremer, Charles F., et al. *ENG: Television News*. New York: McGraw-Hill, 1996 (3rd ed.). Updates book first published in 1981, which includes discussion of the expanding use of computers in newsrooms, digital editing and news and developing information superhighway.

Dupagne, Michel, and Peter B. Seel. *High-Definition Television: A Global Perspective*. Ames: Iowa State University Press, 1998. First extensive scholarly assessment of global HDTV development and prospects, including both analog and digital systems. Chapters review technical and then policy developments in the United States, Japan, and Europe.

Federal Communications Commission. *Historical Periods in Television Technology*. http://www.fcc.gov/omd/history/tv. An extensive online exhibition from the Federal Communications Commission.

Fisher, David E., and Marshall Jon Fisher. *Tube: The Invention of Televison*. Washington, DC: Counterpoint, 1996. One of a series of popular histories funded by Sloan Foundation, this is a useful modern survey of television that must be used carefully on some matters of detail. Other than a final section on recent developments (such as HDTV), this is largely a pre-1940 story of the trend from mechanical to electronic systems.

Genova, Tom. *Television History—The First 75 Years*. http://www.tvhistory.tv. An extensive online exhibition of the changing television receiver over time, from experimental mechanical models to high-definition sets, and including those from a variety of countries. Also includes time lines, early advertising, and access to content of early television books and articles.

Howett, Dicky. *Television Innovations: 50 Technological Developments—A Personal Selection*. Tiverton, England: Kelly Books Limited, 2006. Provides something quite different—one authority's assessment of the 50 most important innovations in television. It illustrates with photos and diagrams) and places in context a variety of camera, sound, lighting, and other related innovations, arranged by type of device.

D-6: Recording

Once perfected, means of recording audio and later video became central in electronic news media.

British Broadcasting Corporation. *History of Magnetic Recording*. http://www.bbc.co.uk/dna/h2g2/A3224936. A site with good information and extensive links to numerous related, relevant sites.

Daniel, Eric D., et al., eds. *Magnetic Recording: The First 100 Years*. New York: IEEE Press, 1999. An important historical anthology traces the development of watershed products and technical breakthroughs, including discussion of recording of sound, early devices, audio and video recording methods, and magnetic storage.

Dobrow, Julia R., ed. *Social and Cultural Aspects of VCR Use*. Hillsdale, NJ: Lawrence Erlbaum, 1990. Eleven research papers including discussion of a historical perspective of VCR use, audience measurement of VCR use, VCR libraries, use of VCRs to time-shift and re-view programs, and camcorders and the personalization of television.

Ganley, Gladys E., and Oswald H. Ganley. *Global Political Fallout: The First Decade of the VCR, 1976–1985*. Norwood, NJ: Ablex, 1987. Development and expansion of VCR use, government concerns about uses of VCRs, efforts to control or limit VCR expansion, and implications of that use.

Hoover, Cynthia A. *Music Machines—American Style*. Washington, DC: Smithsonian Institution Press, 1971. Based on a museum exhibition, this illustrates nineteenth-century mechanical and electrical devices including phonographs, acoustic and electric recordings, impact of radio, movies and music, music jukebox, high fidelity, and electronic instruments.

Marlow, Eugene, and Eugene Secunda. *Shifting Time and Space: The Story of Videotape*. New York: Praeger, 1991. First book devoted to this topic, including discussion of videotape's impact on advertising, programs, and home consumer market.

Morton, David L., Jr. *Sound Recording: The Life Story of a Technology*. Westport, CT: Greenwood, 2004. Ranges from the mid-nineteenth to early twenty-first century: birth of recording ideas and crude technologies, commercial debut of commercial devices, introduction of discs (rather than more cumbersome cylinders), roles of recording in business world, phonograph's heyday, talking movies, records and radio, recording in World War II, hi-fi trends and development of tape recording, mobile sound, the changing role of record companies, and online future of music listening.

Nwungwun, Aaron Foisi. *Video Recording Technology: Its Impact on Media and Home Entertainment*. Stoneham, MA: Focal Press, 1990. Details multination rise of audio and then video recording system technologies.

D-7: Satellites

Satellite communication, first theorized by Arthur C. Clarke in a 1945 article, was a technology developed (and paid for) by the military that quickly expanded into civilian use.

Butrica, Andrew J., ed. *Beyond the Ionosphere: Fifty Years of Satellite Communication*. Washington, DC: Government Printing Office (NASA History Office, "The NASA History Series," NASA SP-4217), 1997. Twenty-two detailed chapters by as many contributors divided into sections on passive military satellite origins, military and commercial developments in the United States. and Canada, European satellite, developing world's satellite system, and applications—an important collection. Also available online at http://history.nasa.gov/SP-4217/contents.htm.

Hudson, Heather E. *Communication Satellites: Their Development and Impact*. New York: The Free Press, 1990. Useful combination of history, technological description, and review of the impact of both domestic and international satellites.

Martin, Donald H., et al. *Communication Satellites*. San Diego, CA: Aerospace Press, 2006 (5th ed.). Careful record of both commercial and military communications satellites, providing full details and specifications for satellites launched by all countries, including coverage maps and often diagrams of satellites themselves. Regularly updated.

Pelton, Joseph N., et al., eds. *Communication Satellites: Global Change Agents*. Mahwah, NJ: Lawrence Erlbaum, 2004. Discusses technology (three chapters on their evolution, various services, and launch vehicles); history and politics (three chapters on geopolitics and institutions, regulatory issues, and the push–pull between military and civil satellite programs); business, media and economics (role of satellites with Internet and IP networking, benefits of satellite telecommunications, and news and sports as well as entertainment by satellite); impact on society (new opportunities in the twenty-first century, promise of tele-education and telehealth, and satellites and global diversity); future trends (one chapter); and synthesis and conclusions.

Rees, David W. E. *Satellite Communications: The First Quarter Century of Service*. New York: Wiley Interscience, 1990. One of first books to historically survey Intelsat and other global satellite organizations. Chapters discuss needs, international organizations as service providers, international satellite system competitors, international services, business applications, broadcasting applications, mobile services, national telecommunications via domestic satellites, and a future view.

Whalen, David J. *The Origins of Satellite Communications, 1945–1965*. Washington, DC: Smithsonian Press, 2002. Along with Butricia, above, this is the second of the most important historical works. This focuses on the changing relationship between military and civilian manufacturers of space technology, and policy debate about military or civilian control of space research in the United States.

Wood, James. *Satellite Communications & DBS Systems*. Oxford, England: Focal Press, 1992. Describes changing technologies in chapters on history, television transmission systems, high-definition television, DBS, propagation of satellite signals, domestic reception of DBS signals, satellite

television as a mass medium, European efforts, and potential fiber optic competition.

E. Converging Media Technologies

For development of applications of these technologies, see Section 2-L.

E-1: Surveys

Bagdikian, Ben H. *The Information Machines: Their Impact on Men and the Media*. New York: Harper & Row, 1971. One of more thoughtful journalists of his time assesses the projected impact of changing technology on traditional print and broadcast news media. While some of the analysis is economic and organizational, the root of the volume concerns expanding technological options including an appendix projecting what would be available. Useful today for a sense of what was expected decades ago.

Dodds, Philip V. W., ed. *Digital Multimedia Cross-Industry Guide*. Newton, MA: Focal, 1995. Institutions' approach to how expanding use of digital technology is impacting all aspects of media entities. Each chapter assesses a different segment with a brief history, legal issues, and how each may develop. Useful snapshot of media on the eve of Internet development, which changed everything.

Grant, August, et al., eds. *Communication Technology Update*. Newton, MA: Focal Press, 1992–present, issued roughly every other year. Useful and concise survey, regularly revised, with more than 30 chapters including a dozen on various electronic media, and as many on telecommunication services.

Jones, Steve, ed. *Encyclopedia of New Media: An Essential Reference to Communication and Technology*. Thousand Oaks, CA: Sage, 2003. Some 250 entries range from a column to several pages and include cyberculture, legal topics, networks and networking, key people, social issues, and many specific technologies. Includes applications in business and commerce, art, and music.

Koch, Tom. *The Message Is the Medium: Online All The Time for Everyone*. Westport, CT: Praeger, 1996. A very early view of the commercial Internet and its likely impact.

Martin, Shannon E., and Kathleen Hansen. *Newspapers of Record in a Digital Age: From Hot Type to Hot Link*. Westport, CT: Praeger, 1998. Focuses on traditional uses of newspapers by those who use the "newspaper of record" concept, and compares traditional to online newspapers as "records." After a historical review, examines legal and archival uses for newspapers, offers case studies of online newspaper production, and concludes with suggestions for future scholarly, legal, and industry focus on the newspaper of record concept.

Rolls, Albert. *New Media*. New York: Wilson "Reference Shelf" 78:2, 2006. Collection of brief articles and graphics providing a survey of popular press views.

Shedden, David. *New Media Timeline*. http://alpha.poynter.org/content/content_view.asp?id=75953&sid=26. Extensive Poynter Institute year-by-year timeline of media developments and new technologies and their applications, from 1969 to the present.

Willis, Jim. *The Age of Multimedia and Turbonews*. Westport, CT: Praeger, 1994. On the eve of the commercial Internet's introduction, this surveys electronic publishing, interactive television, multimedia, and the impacts of each on journalism.

E-2: Computer

Computer history has a rapidly growing literature, and only a selection of the better material is included here.

Akera, Atsushi, and Frederik Nebeker, eds. *From 0 to 1: An Authoritative History of Modern Computing*. New York: Oxford University Press, 2002. Fifteen original papers appear in sections about machines, software, and computer industry. Appendices review history of computer literature, archives, oral history, and artifact collections.

Campbell-Kelly, Martin, and William Aspray. *Computer: A History of the Information Machine*. New York: HarperCollins, 1996. A readable study

by two authorities, this a Sloan Foundation technology history and appears in four parts: before computer, creating computers, innovation and expansion, and development of personal computer.

Ceruzzi, Paul. *A History of Modern Computing*. Cambridge: MIT Press, 2003 (2nd ed.). Standard history covering from 1945 to the early twenty-first century, focusing on work of important pioneer innovators and companies and including government's role.

Computer History Museum. *Timeline of Computer History*. http://www.computerhistory.org/timeline/?gclid=COrT3YSyypUCFQwuHgodfA0giw. This is a year-by-year tracing from 1939 with illustrations and many sidebars on people and companies.

Cortada, James W. *The Computer in the United States: From Laboratory to Market, 1930 to 1960*. Armonk, NY: M. E. Sharpe, 1993. Development of equipment and the companies that produced them over three decades, laying the ground for eventual widespread use.

Freiberger, Paul, and Michael Swaine. *Fire in the Valley: The Making of the Personal Computer*. New York: McGraw-Hill, 2000 (2nd ed.). Very readable survey of computer history that eventually focuses on the rise of Silicon Valley and the PC. It includes discussion of how improving equipment was marketed from original adopters to widespread application.

Norman, Jeremy M., ed. *From Gutenberg to the Internet: A Sourcebook on the History of Information Technology*. Novato, CA: Historyofscience.com, 2005. While ranging back to early printing, the focus of this large anthology reprinting dozens of historical documents is on the rise of computers and systems based on them. Includes a detailed timeline.

Orton, John. *The Story of Semiconductors*. New York: Oxford University Press, 2004. An engineering history of core technology found in digital equipment of all kinds. Some material included here is not for beginners, but the story is well told and quite complete.

E-3: Internet

While barely a dozen years old as a consumer service, historical writing is already appearing.

Abbate, Janet. *Inventing the Internet*. Cambridge: MIT Press, 1999. Standard history of start-up years from DARPAnet beginnings to commercial web of the mid-1990s and since.

Dodds, Philip V. W. *Digital Multimedia Cross-Industry Guide*. Newton, MA: Focal, 1995. Interesting for its early appearance—indeed, the very year commercial Internet operations began. Reviews existing analog media and provides an early sense of digital options and their likely effects.

See Ha and Ganahl, Section 10-B.

Hafner, Katie, and Matthew Lyon. *Where Wizards Stay Up Late: The Origins of the Internet*. New York: Simon and Schuster, 1996. Popular narrative about key figures behind the development of the Internet in the late 1960s (ARPANET) and early 1970s, and what became the World Wide Web.

Kristula, Dave. *The History of the Internet*. http://www.davesite.com/webstation/net-history.shtml. A year-by-year timeline including a number of backbones and hosts.

Public Broadcasting Service. *Nerds 2.0.1*. http://www.pbs.org/opb/nerds2.0.1/timeline. Based on a PBS television series on the Internet, this includes many links to further information built right into its timeline.

Rayburn, Dan, and Michael Hock. *The Business of Streaming & Digital Media*. Burlington, MA: Focal, 2005. A practical guide with many case study examples of what has worked and what has not.

Tonella, Karla, comp. *Digital Media Resources* http://www.uiowa.edu/~commstud/resources/digitalmedia/index.html. A wide variety of annotated links to many resources on hypertext, cybernetics, multimedia production, news and 'zines, and more.

Tremayne, Mark, ed. *Blogging, Citizenship, and the Future of Media*. New York: Routledge, 2006.

Explores what is on the blogosphere, recognizing that it is difficult to generalize about such a huge and varied topic. Fourteen scholarly research papers cover blogging research using content analysis, examining blog use, antecedents, and consequences and the likely impact of blogging on journalism.

Zakon, Robert Hobbes. *Hobbes' Internet Timeline*. http://www.zakon.org/robert/internet/timeline. Very detailed and often updated.

E-4: Other Systems

Some of these were short lived; other studies provide integrative analyses of multiple services.

Bretz, Rudy, with Michael Schmidbauer. *Media for Interactive Communication*. Beverly Hills, CA: Sage, 1983. Still useful early study includes applications of audio and video systems, alphameric systems, data response, teletext and videotex, and developments to come.

Cook, Mark, and Mike Brown. *Teletext Then and Now*. http://teletext.mb21.co.uk/timeline. Useful timeline with many links to period documents and equipment—this focuses largely on British developments.

Dholakia, Ruby Roy, et al., eds. *New Infotainment Technologies in the Home: Demand-Side Perspectives*. Mahwah, NJ: Lawrence Erlbaum, 1996. Fourteen scholarly papers discuss forecasting demand for newer services, developing strategies for innovation and marketing, entertainment as the driver of most new consumer services, changing definitions of literacy, and case studies in introducing new electronic information services.

Hecht, Jeff. *City of Light: The Story of Fiber Optics*. New York: Oxford University Press, 1999. Another in the Sloan Foundation–sponsored historical series, this traces the history of fiber optic technology including key innovators and technical developments as well as applications.

McLellan, Michele, and Tim Porter. *News, Improved: How America's Newsrooms Are Learning to Change*. Washington, DC: CQ Press, 2007. Reports on a four-year project where newspapers experimented with substantially changing how their newsrooms worked, largely through more efficent use of technology.

Tydeman, John, et al. *Teletext and Videotex in the United States: Market Potential, Technology, Public Policy Issues*. New York: McGraw-Hill, 1982. Best single survey of these technologies during the brief time when their outlook appeared bright. Includes several chapters (4 of 15) specifically devoted to wire and wireless versions of such technologies.

Section 4

Journalism Business and Process

The process of gathering, reporting, and distributing news goes unseen by most who regularly consume journalism's product. Yet the economics, structure, and ownership of news media have important impacts on that process. This chapter surveys the literature on media businesses, and then moves on to the news process (reporting, editing, etc.) itself, ways of picturing the news, and the large and complex field of broadcast and cable journalism. It concludes with the most rapidly expanding part of journalism today—online uses of blogs and other modes of news dissemination.

A. Media Industries

The study of news media as businesses and their economic aspects is a relatively recent focus of academic research, though business schools often used media entities as case studies. But media economics as a topic of focused study dates back less than a generation.

A-1: Media Economics

The growing study of media economics has spawned titles applying the methods of economics to the often confused media industry scene.

Albarran, Alan B. *Media Economics: Understanding Markets, Industries and Concepts*. Ames: Iowa State Press, 2002 (2nd ed.). Principles of media economics, electronic media, film and recording industries, print industries, and the future of media economics research. This edition added a chapter on the Internet.

Alexander, Alison, et al., eds. *Media Economics: Theory and Practice*. Hillsdale, NJ: Lawrence Erlbaum, 2003 (3rd ed.). Thirteen papers by as many academic contributors on techniques of economic and business analysis, overall characteristics of the media environment, and contemporary business practices within specific media industries, including print, electronic, movie, advertising, and online sectors. Added for this edition were chapters on advertising and both book and magazine publishing.

Hoskins, Colin, et al. *Media Economics: Applying Economics to New and Traditional Media*. Thousand Oaks, CA: Sage, 2004. Sets out economic principles needed to understand media industry issues with examples drawn from the United States, Canada, Britain, and Australia. Chapters on demand and supply, markets, consumer behavior, production and cost, revenue and profit and management decisions, market structure and theory of the firm, competition and monopoly, oligopoly, pricing and market segmentation, advertising, labor markets, government intervention, and international trade.

Picard, Robert G. *The Economics of Financing of Media Companies*. New York: Fordham University Press, 2002. Survey of financial structures of various media companies, including their marketing and distribution systems using both American and European companies as examples. Discusses product life cycles, as well as outside forces such as global and local economies, interest rates, and trade barriers that impact a company's financial health.

Vogel, Harold L. *Entertainment Industry Economics: A Guide for Financial Analysis*. New York: Cambridge University Press, 2007 (7th ed.). About half devoted to film, broadcasting, and cable, but also including sports, performing arts, and theme parks. Regularly updated, this is the only book of its kind and is directed chiefly at potential investors.

A-2: Business of Media

Most of these titles seek to survey the business and management side of one or more media.

Albarran, Alan B., and Angel Arrese, eds. *Time and Media Markets*. Mahwah, NJ: Lawrence Erlbaum, 2003. Eleven papers—some discussing other countries than the United States—on the many ways time is central to media operations; how media view time and make business decisions based on it; time constraints and competition among different media; quantity and quality of time spent in media consumption; audience and readership time valuation/costing/pricing; and emergence of new media businesses around individual time management.

See Albarran and Chan-Olmsted, Section 10-B.

See Artz and Kamalipour, Section 10-B.

A Complete Guide to the Industry. New York: Peter Lang, 2006 (3 vols. thus far). Very brief books covering specific sectors of the media business, including career suggestions. They are hardly "complete" but do provide a quick overview.

McDowell, Walter S. *Broadcast Television*.

Richter, William A. *Radio*.

Sumner, David E., and Shirrel Rhoades. *Magazines*.

Croteau, David, and William Hoynes. *The Business of Media: Corporate Media and the Public Interest*. Thousand Oaks, CA: Pine Forge Press/Sage, 2006 (2nd ed.). A critique of media industry amidst change, including (among other topics) discussion of recent mergers, policy changes, continuing integration of the Internet into all media, how business strategy shapes media content, and how media influence society.

See Gershon, Section 10-B.

Kaniss, Phyllis. *Making Local News*. Chicago: University of Chicago Press, 1991. Surveys both print and electronic reporting on the market level, including commercial pressures, professional values, alternate voices to mainstream media, local government officials as sources, and a case study of the Philadelphia convention center as news.

Media Industry Series. Boston: Allyn & Bacon, 1996–2000 (9 vols.). Series of college texts that describe respective industries: with a brief history, review of scope and impact, survey of their core functions and processes, legal environment, and economics (advertising, etc.). Specific titles include:

Albarran, Alan B., and Gregory C. Pitts. *The Radio Broadcasting Industry*. 2000.

Daly, Charles, P., et al. *The Magazine Publishing Industry*. 1996.

Greco, Albert N. *The Book Publishing Industry*. 1996. (New York: Routledge, 2004, 2nd ed.)

Greco, Albert N., ed. *The Media and Entertainment Industries: Readings in Mass Communications*. 1999.

Hull, Geoffrey P. *The Recording Industry*. 1997. (New York: Routledge, 2004, 2nd ed.)

Litman, Barry. *The Motion Picture Mega-Industry*. 1998.

Parsons, Patrick R., and Robert M. Frieden. *The Cable and Satellite Television Industries*. Allyn & Bacon, 1997.

Picard, Robert G., and Jeffrey H. Brody. *The Newspaper Publishing Industry*. 1996.

Walker, James R., and Douglas Ferguson. *The Broadcast Television Industry*. 1998.

Media Management Center of Northwestern University. *Media Info Center*. http://www.mediainfocenter.org/index.asp. A project of the university's

business and media schools, this provides an ongoing news service for all media-related news and data with extensive links to other resources. Includes print and electronic media, audience data, management, and trends.

NewsLink. http://www.newslink.org/index.html. A ready means of linking to American and overseas media by medium, country, type of content carried, etc. Includes newspapers, magazines, and radio-television.

See Picard, Section 10-B-1.

Steinbock, Dan. *Triumph & Erosion in the American Media & Entertainment Industries*. Westport, CT: Quorum, 1995. Financial analysis of changes in American media, based on extensive work in business records and journals. Includes discussion of ownership consolidation, a review of major companies, and general trends over previous decade.

Turow, Joseph. *Media Systems in Society: Understanding Industries, Strategies and Power*. White Plains, NY: Longman, 1996 (2nd ed.). Broad sociological study reviewing how media businesses work, power roles within them, role of government, audience targeting, and their content production processes.

Veronis Suhler Stevenson. *Communication Industry Forecast and Report*. New York: Veronis Suhler Stevenson, 1985–present, annual. Useful industry assessment of the past year or so and projections for the next few years for each business sector within communications in text, charts, and tables.

A-3: Print Media

ASNE—American Association of Newspaper Editors. Reston, VA: ASNE, 1982–2004, annual. A continuation of *Problems of Journalism* (1923–81, annual), this provided an edited transcript of the association's annual convention, with a good sense of the most important newspaper concerns each year.

Broder, David S. *Behind the Front Page: A Candid Look at How the News Is Made*. New York: Simon & Schuster, 1987 (reissued in 2000). Though focused on political news, this work by a noted *Washington Post* journalist surveys from news rooms to various beats to show how reporters do their jobs and shape what they write.

Cose, Ellis. *The Press*. New York: Morrow, 1989. Describes, compares, and contrasts *The Washington Post,* the Times Mirror company, *The New York Times,* and the Gannett and Knight-Ridder chains of newspapers.

Ellis, L. Ethan. *Newsprint: Producers, Publishers, Political Pressures*. New Brunswick, NJ: Rutgers University Press, 1960. Economic study of newsprint production, distribution, and use over a two-decade period.

See Gough-Yates, Section 10-E-1.

Hamilton, John Maxwell, and George A. Krimsky. *Hold the Press: The Inside Story on Newspapers*. Baton Rouge: Louisiana State University Press, 1996. Useful behind-the-scenes survey of how the world of newspapers worked in an era before the Internet—from reporting to the final product.

Johnson, Sammye, and Patricia Prijatel. *Magazine Publishing*. Lincolnwood, IL: NCT/Contemporary Publishing, 2000. Covers development of a magazine from concept to production, including legal issues and production.

Lacy, Stephen, and Todd F. Simon. *The Economics and Regulation of United States Newspapers*. Norwood, NJ: Ablex, 1993. Includes chapters on newspaper demand and supply, ownership and competition, changing technology, antitrust and market regulation, and business regulation of newspapers.

Madigan, Charles M., ed. *-30- The Collapse of the Great American Newspaper*. Chicago: Ivan R. Dee, 2007. Explores many (usually cited) reasons for the decline: flight of readers (especially youth) to television and the Internet, falling ad revenue and circulation, and misplaced belief that the blogosphere can replace mainstream media. Several case studies of specific newspaper meltdowns are included. ("-30-" is traditional type "slug" meaning the end of copy for a news story.)

Meyer, Philip. *The Vanishing Newspaper: Saving Journalism in the Information Age*. Columbia: University of Missouri Press, 2006. By describing factors that once made journalism work as a business, this provides a model that can make it work amidst changing technologies. Key points are supported with statistical assessments of quality and influence of journalism's product, as well as its effects on business success.

Thorn, William J., and Mary Pat Pfeil. *Newspaper Circulation: Marketing the News*. New York: Longman, 1987. Description of how circulation—getting papers into readers' hands—operates at most newspapers, with several illustrative case studies.

See Villard, Section 2-C.

A-4: Electronic Media

Blumenthal, Howard J., and Oliver R. Goodnough. *This Business of Television*. New York: Billboard Books, 2006 (3rd rev. ed.). Short chapters arranged in parts on distribution, regulation, audience measurement and advertising, programming, large companies, public and religious television, production, legal and business affairs, and television outside America.

Brown, James, and Quaal Ward. *Radio-Television-Cable Management*. New York: McGraw-Hill, 1997 (3rd ed.). Textbook treatment of what management takes and its many sectors (technical, sales, programming, personnel) and ramifications at different types of electronic media.

Collins, Scott. *Crazy Like a Fox: The Inside Story of How Fox News Beat CNN*. New York: Portfolio/Penguin, 2004. Chatty personality-driven story of how Fox News, though formed only in 1996, rose in less than a decade to dominate 24/7 cable news, despite—or perhaps because of—its right-leaning tone. Relates who said what to whom (based on interviews with most of key figures) as cable news networks developed and jockeyed for a competitive advantage. This is largely a story of corporate strategy in an ever-tighter marketplace. *See also* next entry.

Kimmel, Daniel M. *The Fourth Network: How Fox Broke the Rules and Reinvented Television*. Chicago: Ivan R. Dee, 2004. Takes a broader approach to the Fox story than Collins (see above), dealing with the whole development of Fox Network, including but not limited to its later news operation. This is a more analytical approach to Fox's story, though written in a popular fashion. The author makes clear at the beginning that he got no cooperation from Fox, basing his findings on interviews and archival work. *See also* previous entry.

Owen, Bruce M., and Steven Wildman. *Video Economics*. Cambridge, MA: Harvard University Press, 1992. Dated but still useful as it details pre-Internet economics of network television, cable, and VCRs in terms of supply and demand and both traditional and new models of program choice. The final 100 pages focus on public policy alternatives, including public and children's TV.

B. Media Ownership and Management

Save for a few critics, the literature on media ownership is also fairly recent, much of it strong on argument but weak on data.

B-1: Ownership

Bagdikian, Ben. *The New Media Monopoly*. Boston: Beacon Press, 2004. First published in 1983, this retitled and strongly critical book helps explain why and how the number of corporations controlling most of America's daily newspapers, magazines, radio and television stations, book publishers, and movie companies (and primary online news sources) has dwindled from 50 to only a handful.

Baker, C. Edwin. *Media Concentration and Democracy: Why Ownership Matters*. New York: Cambridge University Press, 2007. The author argues against allowing market pressures to dictate media control, feeling that will merely lead to monopoly. He takes on the Federal Communications Commission's arguments to loosen ownership controls and finds them wanting. Some of his numbers are compelling—such as the decline in cities or towns with competing newspapers from 689 in 1910, to 181 in 1940—to only 14 by 2006 and fewer still by the end of the decade.

Barnouw, Erik, et al. *Conglomerates and the Media*. New York: The New Press, 1998. Eight papers drawn from 1996 lectures, critiquing aspects of media ownership concentration. One concern is the blunting of news because of ownership conflicts of interest, but the general tone is one of concern about, if not fear of, what is happening.

Busterna, John C., and Robert G. Picard. *Joint Operating Agreements: The Newspaper Preservation Act and Its Application*. Norwood, NJ: Ablex, 1993. First book-length analysis of 1970 law that largely exempted newspaper owners from antitrust law; it argues that consolidation has been hastened to the detriment of service to readers.

Compaine, Benjamin M., and Douglas Gomery. *Who Owns the Media? Competition and Concentration in the Mass Media Industry*. Mahwah, NJ: Lawrence Erlbaum, 2000 (3rd ed.). Provides a vast amount of information on media ownership in the 1990s, covering film, broadcast, cable, satellite—but also newspapers, magazines and book publishing, and motion pictures. Authors draw different conclusions and thus write separate closing chapters. *See also* second edition (Compaine, et al., Crown, 1982), which includes much more historical background.

The Failing Newspaper/Newspaper Preservation Act. Washington, DC: Government Printing Office, 1967–69. These volumes of congressional hearings on bills to exempt newspapers from antitrust law (to allow joint operating agreements among formerly competing newspapers in the same city), a law finally enacted in 1970, provide some of most detailed economic information on the state of newspapers during the 1960s. Each reprints law review articles and other background material.

> *The Failing Newspaper Act: Hearings* [7 parts]. U.S. Senate, Committee on the Judiciary, 90th Cong., 1st Sess. 1967. Most extensive hearings, under the original negative name of the proposed law:
>
> *Newspaper Preservation Act: Hearings*. U.S. House of Representatives, Committee on the Judiciary, 90th Cong., 2nd Sess. 1968. This is the bill's name as eventually used on the final (1970) law.
>
> *The Newspaper Preservation Act: Hearings*. U.S. Senate, Committee on the Judiciary, 91st Cong., 1st Sess. 1969.

Klinenberg, Eric. *Fighting for Air: The Battle to Control America's Media*. New York: Metropolitan Books/Holt, 2007. Argues strongly against the ongoing trend toward media consolidation, and the steady disappearance of local programming, including news and public affairs.

Kunz, William M. *Culture Conglomerates: Consolidation in the Motion Picture and Television Industries*. Lanham, MD: Rowman & Littlefield, 2008. Critical survey arguing too much consolidation has been allowed. Chapters review trends in film, broadcast television, and cable and satellite businesses, making clear the author's views on why concerns about ownership matter.

McCord, Richard. *The Chain Gang: One Newspaper Versus the Gannett Empire*. Columbia: University of Missouri Press, 1996. Account of two battles waged by the author with his independent newspapers against the Gannett Company. In Santa Fe, New Mexico, a small weekly he started had to fight for survival against Gannett, and in Green Bay, Wisconsin, he again waged war against Gannett. His experiences provide a real-life account of the struggle for an independent voice in face of corporate competition.

Noam, Eli. *Media Ownership and Concentration in America*. New York: Oxford University Press, 2009. Surveys media concentration, covering everything from early media holdings of Benjamin Franklin to the modern-day cellular phone industry, using a wealth of current data about media outlets, including radio, television, music, print, and publishing, but also discussing ownership and concentration in the information technology sector (computers and software), and telecommunications industry (long-distance and local phone services, and mobile phone services).

Picard, Robert G., et al. *Press Concentration and Monopoly: New Perspectives on Newspaper Ownership and Operation*. Norwood, NJ: Ablex Publishing, 1988. Reports results of multiple studies of practices and economics of American papers,

presented with concern over preserving multiplicity of opinions available to the public as chain ownership increases.

Rice, Ronald E. *Media Ownership: Research and Regulation*. Cresskill, NJ: Hampton Press, 2008. Offers 18 research papers that cover topic in five parts: public interest issues; historical and political issues (including how six firms have come to dominate media); ownership and influence; regulatory and legal matters; and ethical and access concerns including the role of competitive newer media.

Thomas, Pradip N., and Zaharom Nain. *Who Owns the Media? Global Trends and Local Resistance*. London: Zed, 2005. Focuses on both local and international forces behind the control of media. Critiques international capital, but acknowledges bargains struck between local operators and transnational firms. Demonstrates the misfit between media ownership and public accountability.

B-2: Management

Albarron, Alan B., et al., eds. *Handbook of Media Management and Economics*. Mahwah, NJ: Lawrence Erlbaum, 2006. Collection of 30 scholarly papers on most economic aspects of American mass media industries. Papers discuss, among other topics, historical trends and patterns in media management research and media economics, paradigms and analytical frameworks in media economics, and regulatory and political influences on media management. Includes human relations and strategic management, finance, media project management, transnational media, changing technology, sector-specific management concerns, media competition and consolidation, programming economics, and distribution economics.

Aris, Annet, and Jacques Bughin. *Managing Media Companies: Harnessing Creative Value*. New York: Wiley, 2005. In-depth study of strategies and management practices of leading media companies as well as the core competences media companies need to have to win in the changing media marketplace. Using European company examples, the book is focused on applicability and long-standing best practices with innovative approaches.

Herrick, Dennis F. *Media Management in the Age of Giants: Business Dynamics of Journalism*. Ames: Iowa State Press, 2003. Chapters review media firm responsibilities, preparing for a management post, motivation and work force, qualities of leadership and management, decision-making, media ethics and law, operations and structures of news media companies, budgeting and financial management, sales and marketing analysis, consolidation and convergence, entrepreneurship, and changing technology as a creator of newer media competitors.

Killebrew, Kenneth C. *Managing Media Convergence: Pathways to Journalistic Cooperation*. Ames, IA: Blackwell Publishing, 2005. Reviews how media corporations can manage convergence of print, broadcast, and online technologies, including globalization, technological innovation, management theory, government regulation, and corporate ownership, while attempting to offer some specifics about how to manage "creative" newsroom personnel who are resistant to change.

Küng-Shankleman, Lucy. *Inside the BBC and CNN: Managing Media Organizations*. London: Routledge, 2000. Based on interviews and internal documents, this study looks into two quite different organizations, focusing on BBC as it entered a more competitive marketplace and CNN's quite different corporate ethos. BBC culture comes across as layered and complex (and unhappy) compared to the more open CNN operation.

Lacy, Stephen, et al. *Media Management: A Casebook Approach*. Mahwah, NJ: Lawrence Erlbaum, 2007 (4th ed.). Ten categories of management issues (such as leadership, motivation, planning, marketing, and strategic management) with several cases provided for each.

Pringle, Peter K., and Michael F. Starr. *Electronic Media Management*. Boston: Focal Press, 2006 (5th ed.). Discusses the Internet and convergence, purchase of stations and systems, and public radio-television stations, regulation and policies, case studies, management theory, audience analysis, broadcast promotion, and marketing.

Wicks, Jan LeBlank. *Media Management: A Casebook Approach*. Mahwah, NJ: Lawrence

Erlbaum, 2004 (3rd ed.). Chapters—each with several cases—discuss managerial decision-making, leadership and work force, motivation, media organizations, regulation and self-regulation, planning and market analysis, and budgeting.

C. Journalism Unions and Labor

Given the importance of organized labor in media, especially as a part of urban newspaper union strife, there is not much book-length material about the topic. There are numerous studies of motion picture and entertainment media unions that are not covered here. For journalistic coverage of labor and unions across all fields of employment, see Section 5-L.

Cowie, Jefferson. *Capital Moves: RCA's Seventy-Year Quest for Cheap Labor*. New York: New Press, 2000 (updated ed.). Study of the consumer electronics manufacturer's labor policies, focusing on its employment and union role in Bloomington, Indiana, and Ciudad Juarez in Mexico, across the Texas border. This is a story of migration from the industrial centers of the Northeast to the rural communities of the Midwest and South, and then outside the country—one aspect of globalization.

Dertouzos, James N., and Timothy H. Quinn. *Bargaining Responses to the Technology Revolution: The Case of the Newspaper Industry*. Santa Monica, CA: Rand Corporation, 1985. This econometric study based on information from 400 papers concludes that unions were not a barrier to adoption of new equipment and systems and that adjustments came with a minimum of economic pain to workers.

Holtzberg-Call, Maggie. *The Lost World of Craft Printer*. Urbana: University of Illinois Press, 1992. Explores change from use of hot to cold type and its many ramifications for printers and publications—and employment.

Keil, Thomas J. *On Strike: Capital Cities and the Wilkes Barre Newspaper Unions*. Tuscaloosa: University of Alabama Press, 1988. Case study of a long multiunion strike in a Pennsylvania town, and some of its impacts.

Kelber, Harry, and Carl Schlesinger. *Union Printers and Controlled Automation*. Glencoe, IL: The Free Press, 1967. Describes the development and impact of the Linotype machine and its effect on unions and automation with a history of the 114-day newspaper strike in New York in the early 1960s that killed a number of dailies. Includes 24 pages of photographs illustrating each typesetting process from Gutenberg to cathode-ray imaging tube.

Koenig, Allen E., ed. *Broadcasting and Bargaining: Labor Relations in Radio and Television*. Madison: University of Wisconsin Press, 1970. Collects 17 papers on the craft, performers, technical unions, federal arbitration activities, particular problem areas, and the unions' likely future as then perceived.

Leab, Daniel J. *A Union of Individuals: The Formation of the American Newspaper Guild, 1933–1936*. New York: Columbia University Press, 1970. Covers the difficulties of unionizing writers and other journalists during Roosevelt's New Deal.

Lipset, Seymour Martin, et al. *Union Democracy: The Internal Politics of the International Typographical Union*. Glencoe, IL: The Free Press, 1956. One of the very few such analyses of media-related union leadership and politics.

Marjoribanks, Timothy. *News Corporation, Technology and the Workplace: Global Strategies, Local Change*. London: Cambridge University Press, 2000. Assesses technological innovations and workplace restructuring carried out by Rupert Murdoch's News Corp. with its newspapers in Britain (and their shift from Fleet Street to Wapping as part of a labor face-off), the United States, and Australia. The study reveals that existing social relations in a particular location have a major impact on workplace reforms.

Mooney, Jack. *Printers in Appalachia: The International Printing Pressmen and Assistants' Union of North America 1907–1967*. Bowling Green, OH: Bowling Green State University Popular Press "Working Class Culture Series," 1993. Chronology of six decades of International Printing Pressmen & Assistants' Union.

Rumble, Walter. *The Swifts: Printers in the Age of Typesetting Races*. Charlottesville: University of Virginia Press, 2003. Story of an elite group of nineteenth-century compositors (printers who set

type) who became famous by winning typesetting races. Discusses displacement of hyper-skilled typesetters by more automated printing processes; broadening of work opportunities for women as they were increasingly able to enter the printer's trade; rise of an entertainment culture; and redefinition of printer competency from primarily valuing speed to aesthetics of typographical design.

A Study of the History of the International Typographical Union, 1852–1963. Colorado Springs, CO: The Executive Council of the ITU, 1964, 1967 (2 vols.). Detailed history focusing on internal union operations and conventions.

U.S. National Labor Relations Board. *Collective Bargaining in the Newspaper Industry*. Washington, DC: Government Printing Office, 1939. Useful early study of the then relatively new Newspaper Guild, as well as several mechanical trade unions, and their conflicts within the newspaper industry during the New Deal period.

D. Advertising

The literature on all aspects of advertising is—as might be expected—huge, and only a relative handful of important reference sources are included here. For sources on advertising history, see Section 2-K; for the extensive literature on political advertising, see Section 6-F.

"Advertising Age." *Datacenter*. http://adage.com/datacenter. Includes considerable information from the standard trade weekly, including top ad agencies and their holdings, leading advertisers domestically and abroad, top 100 media companies, largest magazine publishers, and other measures.

Baker, C. Edwin. *Advertising and a Democratic Press*. Princeton, NJ: Princeton University Press, 1994. Strong critique of the impact of advertising on news content, speaking of "structural subversion" of the journalism process by seriously distorting and diminishing the media's independent role.

Bogart, Leo. *Commercial Culture: The Media System and the Public Interest*. New York: Oxford University Press, 1995. A longtime authority explores tensions between the media system and the broader public interest. He concludes that media are excessively commercial; content serves advertisers' rather than public's purpose; sensational, vulgar programming dominates; and sensationalism distorts perceptions and distracts public attention from social problems.

Jones, John Philip. *Advertising Organizations and Publications: A Resource Guide*. Thousand Oaks, CA: Sage, 2000. Information on nearly 80 organizations (30 of them outside the United States), including trade groups, research organizations, academic groups, and groups that use advertising to promote their own views. Each is described in several pages.

McDonough, John, et al., eds. *Encyclopedia of Advertising*. Chicago: Fitzroy-Dearborn, 2003 (3 vols.). Perhaps the most inclusive survey of advertising history, agencies, and trends by different products, key creative people, etc. Entries range from a column or so up to several pages for major topics, and are all signed by their authors. Cross-references and further readings for each entry. Includes reference to 120 ad agencies, 52 entries on advertising in other nations, nearly 50 key people, 160 corporate advertisers, entries on market research methods and companies, and nearly 70 entries on major themes in advertising.

University of Iowa, Online Communication Studies Resources. *Advertising Resources*. http://www.uiowa.edu/~commstud/resources/advertising.html. Valuable annotated listing of a wide variety of online resources on all aspects of advertising.

E. The News Process

Over the last half century or so, researchers have looked more deeply into how news is gathered and reported, and with what effect. Often journalists themselves contribute to this research, as both observers and subjects. For the many criticisms of this process, and the resulting news that is reported, see Section 8-H.

E-1: General

Auletta, Ken. *Backstory: Inside the Business of News*. New York: Penguin, 2003. Collection of previously published essays by *The New Yorker*'s

media critic, briefly updated here. Coverage includes the role of former *New York Times* executive editor Howell Raines, New York's tabloid newspaper wars, and the role of Fox News. The author explores such issues as dangers of conglomerate ownership and public distrust of news media.

Babb, Laura Longley, ed. *Of the Press, by the Press, for the Press, and Others, Too: A Critical Study of the Inside Workings of the News Business from the News Pages, Editorials, Columns and Internal Staff Memos of* The Washington Post. Boston: Houghton Mifflin, 1976 (2nd ed.). Pastiche of material from the newspaper on a wide variety of issues and problems in the press of the time.

Mayer, Martin. *Making News*. Garden City, NY: Doubleday, 1987 (reissued by Harvard Business School Press, 1993). Interweaving analyses of then recent stories such as the Tylenol contamination cases, 1984 elections, and 1989 Chernobyl nuclear disaster, this is an insider's look at print and broadcast media—how they evolved, how they function, and their influence. Discusses news media people, industry, and influence.

McClellan, Michele, and Tim Porter. *News, Improved: How America's Newsrooms Are Learning to Change*. Washington, DC: Congressional Quarterly Press, 2007. Summarizes results of four years of study by Knight Foundation–supported researchers, most of them practising journalists. Using case examples, reviews leadership, goals, newsroom culture, training and education, and business imperatives.

Overholser, Geneva, and Kathleen Hall Jamieson, eds. *The Press: Institutions of American Democracy*. New York: Oxford University Press, 2005. Twenty-five original papers by as many journalists and scholars reviewing most aspects of news media in American life, including sections on the orientation of the press, functions of news media in a democracy, ambivalent relationship of the press and government, and the structure and nature of the U.S. news media.

Speck, Bruce W. *Managing the Publishing Process: An Annotated Bibliography*. Westport, CT: Greenwood, 1995. Hundreds of entries broken into sections on products, personnel, and other.

E-2: Reporting

The many college-level texts on reporting methods are not included here.

Alsop, Joseph, and Stewart Alsop. *The Reporter's Trade*. New York: Reynal, 1958. Two longtime fixtures of the Washington press corps describe and critique what they and others do, and perhaps remarkably, much remains the same a half century later.

Colón, Aly, and Julie Moos. *Best News Writing*. Washington, DC: CQ Press / St. Petersburg, FL: Poynter Institute, 1979–present, annual. The winners and finalists in the American Society of Newspaper Editors Award competition are reprinted. Includes all types of news reporting.

DeFleur, Margaret H. *Computer-Assisted Investigative Reporting: Development and Methodology*. Mahwah, NJ: Lawrence Erlbaum, 1997. Offers a history of CAIR and then a series of applications, the legal status of some electronic records (and how they can be used—or not), and basic techniques of using large databases.

Goldstein, Norm. *The Associated Press Stylebook and Briefing on Media Law*. New York: Basic Books, 2007 (rev. ed.). Contains a 40-page section on media law, guides for punctuation and bibliographies, and specialized glossaries for business and sports writing, all in addition to its 280-page generalized stylebook.

Lasky, Melvin J. *The Language of Journalism*. New Brunswick, NJ: Transaction Books, 2000–2005 (3 vols.). An extended and quite critical discussion on how language used by journalists in their reporting is based on and reflects its cultural context.

> *Volume One: Newspaper Culture*. 2000. Covers a lot of ground: deficiencies in grammar and syntax with examples from newspapers and magazines drawn from German as well as English-language press; accuracy and authenticity; problem of bias in everything from racial reporting to cultural correctness; and competition between popular media and redefinition of pornography and its language.

Volume Two: Profanity, Obscenity and the Media. 2004. Has a long descriptive subtitle: "Being a second volume, wherein the language of journalism is examined, its splendors and miseries—including clichès and trivia, sensationalism and prurience, wit and witlessness, fiction and faction, pseudery and jabberwocky, scoops and hoaxes, racism and sexism, profanity and obscenity, virtue and reality, culture and anarchy—and the abuse of slang, style, and the habits of writing good prose."

Volume Three: Media Warfare—The Americanization of Language. 2005. Again, a long subtitle that partially explains its critical content: author argues strongly that journalism has been harmed by its use of "cliches and trivia, sensationalism and prurience, wit and witlessness, fiction and faction…scoops and hoaxes, racism and sexism, profanity and obscenity, virtue and reality, culture and anarchy—and the abuse of slang, style, and the habits of good writing prose."

Strentz, Herbert. *News Reporters and News Sources: Accomplices in Shaping and Mis-Shaping News*. Ames: Iowa State University Press, 1989. Assesses their relationship before stories are published and proper ways to extract information.

E-3: Editing

Most of the books on this topic are also texts and how-to guides, and are thus not covered here

After "Jimmy's World": Tightening Up in Editing. New York: National News Council, 1981. Most extensive study in the council's eight years, following up on what turned out to be a fake series in *The Washington Post,* because of which it had to return a Pulitzer Prize and fire reporter Janet Cooke. Offers a good analysis of what happened and why.

Patterson, Benton Rain, and Coleman E. P. Patterson. *The Editor-in-Chief: A Management Guide for Magazine Editors*. Ames: Iowa State University Press, 2003 (2nd ed.). How to acquire, edit, and display content; planning an issue; selecting a cover; spotting legal or ethical problems; and a chapter on online magazines' special editing concerns.

Speck, Bruce W. *Editing: An Annotated Bibliography*. Westport, CT: Greenwood, 1991. Covers the topic broadly, from 1960 to time of publication, with nearly 650 entries. Annotations are quite detailed.

E-4: Features

Such reporting figures in both newspapers and magazines. For more on the latter, often including material on feature writing, see Section 2-E. Investigative reporting—which often leads to features, is covered in Section 5-D, while literary and narrative journalism is in Section 5-G.

Abrahamson, David, ed. *The American Magazine: Research Perspectives and Prospects*. Ames: Iowa State University Press, 1995. Seventeen papers review all aspects of magazine content (and other topics) including their political content, specialized business press, editorial content of selected magazines, magazine feature writing, city and regional magazines, and use of magazines to trace social trends.

Paulos, John Allen. *A Mathematician Reads the Newspaper*. New York: Basic Books, 1995. The good, bad, and ugly when it comes to using statistics and numbers in newspaper stories and features, including many short vignettes of how numbers have been used, sometimes correctly, but often not. Covers a variety of subject stories.

Weldon, Michele. *Everyman News: The Changing American Front Page*. Columbia: University of Missouri Press, 2008. Demonstrates how, and to some extent why, feature stories are taking space from breaking news in American dailies, based on a sample of 800 front pages from 20 papers in varied markets over a four-year period.

F. Picturing the News

For well over a century, newspapers have offered more than just print. This subsection assesses editorial cartoons (for the cartoonists themselves, see Section 7-E), maps in the news, photojournalism (for photojournalists, see Section 7-F), and documentary film.

F-1: Editorial Cartoons

For their history, see Section 2-F. There are many published collections of the work of individual cartoonists, and some of cartoons from specific newspapers—most of those are not included here. The emphasis below is generally broader—the work of many people, over time, to pull out themes and trends.

Cagle, Daryl. *Daryl Cagle's Professional Cartoonists Index*. http://www.cagle.com. Wide variety of current political/editorial cartooning is displayed.

Lamb, Chris. *Drawn to Extremes: The Use and Abuse of Editorial Cartoons*. New York: Columbia University Press, 2004. Penetrating look at changes in the world of newspaper editorial (or political) cartooning from the pioneering days of Thomas Nast to the glory years of Herbert Block ("Herblock") of *The Washington Post* and Paul Conrad with the *Los Angeles Times,* to the all-too-timid efforts of many cartoonists today. The author takes on wimpy cartoonists, but even more their editors, fearful of offending anyone and thus rarely defending cartoonists' rights.

Somers, Paul P. *Editorial Cartooning and Caricature: A Reference Guide*. Westport, CT: Greenwood, 1998. Chapters assess reference materials on the history and criticism of cartooning, anthologies and reprints, reference works and periodicals and research collections in 36 states. Appendices provide a chronology, list of Pulitzer winners, etc.

Trostle, J. P. *Attack of the Political Cartoonists: Insights and Assaults from Today's Editorial Pages*. Madison, WI: Dork Storm Press, 2004. Here 150 members of the Association of American Editorial Cartoonists, whose work has appeared in most major newspapers in North America, join in this celebration of an art form. These cartoonists have won hundreds of journalism awards, including a dozen Pulitzers.

Wallis, David. *Killed Cartoons: Casualties from the War on Free Expression*. New York: Norton, 2007. Collects a variety of unpublished cartoons from many intended sources, detailing why they never appeared and thus issues of censorship in cartooning.

F-2: Maps

Though long an important aspect of newspaper journalism, there has been little research done into the use of maps.

Bosse, David, comp. *Civil War Newspaper Maps: A Cartobibliography of the Northern Daily Press*. Westport, CT: Greenwood, 1993. Scholarly papers discuss map makers, the developing newspaper map enterprise, map production, design and appearance, contemporary criticism, and published record and map accuracy.

Herzog, David. *Mapping the News: Case Studies in GIS and Journalism*. Redlands, CA: ESRI Press, 2003. Ten examples from a variety of newspapers showing how geographic information systems (GIS) can contribute to investigative reporting.

Monmonier, Mark. *Maps with the News: The Development of American Journalistic Cartography*. Chicago: University of Chicago Press, 1989. Development and use of maps in news reporting in both print and electronic media, looking at the impact of technology as well as integration of maps with news. (*See also* the same author's *How to Lie with Maps,* University of Chicago Press, 1991.)

F-3: Photojournalism

For more on the development of photojournalism, see Section 2-G; for the professional lives of photojournalists, Section 7-F.

Adatto, Kiku. *Picture Perfect: Life in the Age of the Photo Op*. Princeton, NJ: Princeton University Press, 2008 (updated ed.). Reviews use and misuse of photos and other images in an era of Photoshop editing and Facebook. Originally issued in 1993, the book makes many of the same points but with a variety of newer examples, including some from political campaigns, drawn from the online world.

Best of Photojournalism. Durham, NC: National Press Photographers Association, 1976–present, annual. Now published as a special issue of the NPPA's *News Photography,* this includes the best work of the previous year. For past winners, see http://bop.nppa.org/archive.html. Professionals

judge the work of their peers—this includes awards (since 2002) in categories on still photography, photo editing, websites, and work done for television news. *See also World Press Photo,* below.

Brennen, Bonnie, and Hanno Hardt, eds. *Picturing the Past: Media, History, and Photography*. Champaign: University of Illinois Press, 1999. Ten scholarly papers explore how photojournalism shapes what we remember, and how we remember it, including many examples such as presidential deaths, the Holocaust, and other stories.

Chapnick, Howard. *Truth Needs No Ally: Inside Photojournalism*. Columbia: University of Missouri Press, 1994. Introductory survey of the field, including development, professional responsibilities, and standards of conduct, as well as selected examples of great photographic essays. Includes roles of women and minorities in photojournalism, and reference information on workshops, awards, and grants available.

Evans, Harold. *Pictures on a Page: Photo-Journalism, Graphics and Picture Editing*. New York: Pimlico, 1997 (rev. ed.). A noted editor combines history and how-to advice in this guide to effective photojournalism techniques.

The Eyes of History. Washington, DC: White House News Photographers Association, 1975–present, annual. More than just photos of politicians or the President, this is a fairly wide-ranging work.

Horton, Brian. *Associated Press Guide to Photojournalism*. New York: McGraw-Hill, 2000 (2nd ed.). Using his work and that of others, the author illustrates key factors in newsworthy photography.

Howe, Peter. *Shooting under Fire: The World of the War Photographer*. New York: Artisan, 2002. A brief history, assessing problems, horrors and highs of such work, featuring 150 sample photos by ten photographers. (*See* Section 5-B for related works.)

Lester, Paul Martin, and Susan Dente Ross, eds. *Images That Injure: Pictorial Stereotypes in the Media*. Westport, CT: Praeger, 2003 (2nd ed.). Ethnic, gender, age, physical, sexual orientation, and other types of stereotyping are discussed, each with examples.

Newton, Julianne H. *The Burden of Visual Truth: The Role of Photojournalism in Mediating Reality*. Mahwah, NJ: Lawrence Erlbaum, 2001. Examines theoretical and ideological bases for visual truth, particularly as conveyed by news media, and discusses photojournalism and reality imagery in contemporary newspaper, broadcast, and Internet professional practice.

Perlmutter, David D. *Photojournalism and Foreign Policy: Icons of Outrage in International Crises*. Westport, CT: Praeger, 1998. Explores the interplay of news images and public press and political reaction, using case studies including the execution of a Vietcong suspect in Saigon in 1968, a protester in front of Chinese tanks in 1989, and American soldiers in Somalia in the 1990s. Author dubs these "icons of outrage" and assesses their impact.

World Press Photo. London: Thames & Hudson (publisher has varied), 1977–present, annual. Provides the results of an annual contest for the best work that began in 1955, with submissions from around the world. *See also Best of Photojournalism,* above.

F-4: Documentary Film

There is a large literature here—the few titles that follow only suggests what is available. For documentary film development, see Section 2-H.

Aitken, Ian, ed. *Encyclopedia of the Documentary Film*. London: Routledge, 2005 (3 vols.). Includes 256 entries on specific films and nearly 300 on specific individuals, ranging from 500-word treatments to longer discussions (up to 5,000 words) of more important films and filmmakers. Entries also discuss nearly 60 production companies, organizations, festivals, and institutions, and 112 entries cover documentary film traditions of various countries and regions, as well as thematic topics and theoretical issues.

Hogarth, David. *Realer Than Real: Global Directions in Documentary*. Austin: University of

Texas Press, 2006. Reveals how the documentary form has become a transnational product in terms of its business and production, its many forms of exhibition, and citizens who view films and television shows. Introduction of television coupled with more recent advances in technology have transformed the documentary from what was once an educational public service into a popular, and sometimes influential, televised commodity.

G. Broadcast Journalism

The emphasis here is on the network news divisions, different types of news programming, and how they work. What they broadcast about (as well as print media content) is the focus of Sections 5 and 6; for broadcast journalists, see Section 7-G.

G-1: General

The focus here is on broadcast network news operations.

Barrett, Marvin, et al. *The Alfred I. duPont-Columbia University Survey of Broadcast Journalism*. New York, Grosset & Dunlap, then Crowell, 1969–1980 (7 vols.). While including awards, this now discontinued series of volumes was primarily devoted to an often critical review of one or two years in radio and television journalism, topical essays, and reports about broadcast coverage of specific events or issues. While annual publication ceased, the awards are still given. Specifically:

1. *1968–1969*. Grosset & Dunlap, 1969.
2. *Year of Challenge, Year of Crisis: 1969–1970*. Grosset & Dunlap, 1970.
3. *A State of Siege: 1970–1971*. Grosset & Dunlap, 1971.
4. *The Politics of Broadcasting: 1971–1972*. Crowell, 1973.
5. *Moments of Truth? [1972–1974]*. Crowell, 1975.
6. *Rich News, Poor News [1976–1977]*. Crowell, 1978.
7. *The Eye of the Storm [1978–1979]*. Lippincott & Crowell, 1980.

Boyer, Peter J. *Who Killed CBS? The Undoing of America's Number One News Network*. New York: Random House, 1988. Best of several books about the sharp decline in quality, personnel, and budget of CBS News due to a combination of ownership changes, financial cuts, sometimes poor management, bad decisions, and other factors.

Buzenberg, Susan and Bill, eds. *Salant, CBS, and the Battle for the Soul of Broadcast Journalism: The Memoirs of Richard S. Salant*. Boulder, CO: Westview, 1998. Salant headed CBS News for 16 years (most of 1963–79 period) and had begun his memoirs, here rounded out and edited after his death. This is a valuable record of network news development and management and the impact of profit on news programming.

Friendly, Fred W. *Due to Circumstances beyond Our Control*.... New York: Random House, 1967. Former head of CBS News writes compellingly about his years working with Edward R. Murrow and the changing economics of network news decision-making, ending with an indictment of network money over public service concerns. In all, a highly charged critical assessment from the inside.

Gunther, Marc. *The House That Roone Built: The Inside Story of ABC News*. Boston: Little, Brown, 1994. Explores the role of Roone Arledge, former sports producer, in turning the weak ABC news operation into a leader, including key people he hired and their coverage of major events.

Kalbfeld, Brad. *The Associated Press Broadcast News Handbook*. New York: McGraw-Hill, 2000. Essentially a hands-on guide for the radio or television station newsroom.

Wenger, Debora Halpern, and Deborah Potter. *Advancing the Story: Broadcast Journalism in a Multimedia World*. Washington, DC: CQ Press, 2008. Covers the basics of good television reporting practices, including the strengths of each medium, and how depth, interactivity, and immediacy play different roles as content is separated from "container."

G-2: Radio News and Talk

Here the literature can barely keep up with the plethora of radio talk shows, the vast majority of them conservative if not right-wing in tone.

Barker, David C. *Rushed to Judgment: Talk Radio, Persuasion, and American Political Behavior*. New York: Columbia University Press, 2002. Focuses on the rise and role of Rush Limbaugh in an analysis of how call-in radio programs contribute (or do not) to American political discourse, given their largely right-wing bias. Radio today is compared to partisan press of nineteenth century.

Kern, Jonathan. *Sound Reporting: The NPR Guide to Audio Journalism and Production*. Chicago: University of Chicago Press, 2008. Narrates a day in the life of a host and lays out nuts and bolts of radio production, explaining the importance of writing how one speaks, how National Public Radio books guests ranging from world to neighborhood news makers, and gives advice on everything from proposing stories to editors to maintaining balance and objectivity, all with examples from popular shows and personalities.

Laufer, Peter. *Inside Talk Radio: America's Voice or Just Hot Air?* New York: Birch Lane/Carol, 1995. Combines historical review with an assessment of those on the air—and why they (and their call-in listeners) "do it." Reporter and former talk show host reviews the rise and role of many specific talkers (Stern, Imus, Limbaugh, etc.), dealing as well with those who peddle hate and sleaze, the battle between right and left political views, the difference between talk hosts and journalists, and the mechanics of getting talk shows on air.

Levin, Murray B. *Talk Radio and the American Dream*. Boston: Lexington Books, 1987. Published the year FCC's Fairness Doctrine was repealed, many of this book's conclusions regarding the political nature and influence of the radio talk show genre are both revealing and prescient. They are based on a survey of talk radio programs in the Boston area in the late 1970s and early 1980s.

Munson, Wayne. *All-Talk: The Talk Show in Media Culture*. Philadelphia: Temple University Press, 1993. Survey of radio talk shows on nearly 900 stations and their television counterparts: development, how they work, and peoples' reactions to them.

Wertheimer, Linda, ed. *Listening to America: Twenty-Five Years in the Life of a Nation as Heard on National Public Radio*. Boston: Houghton Mifflin, 1995. Includes many selections from *All Things Considered* including news, features, interviews, and debates.

G-3: Television News

Television broadcast network news has been in decline since at least the 1990s, though many local stations thrive with long newsblocks that do well with viewers and advertisers—and the literature reflects these changes. For TV news anchors, see Section 7-G-2.

Barkin, Steve M. *American Television News: The Media Marketplace and the Public Interest*. Armonk, NY: M. E. Sharpe, 2002. Concise history of news broadcasting from radio in the 1920s to television after World War II through to the present, demonstrating how commercial interests, regulatory matters, and financial considerations have long shaped broadcasting. In the 1980s, cable news created intense competition for viewers of both national and local news.

Epstein, Edward Jay. *News from Nowhere: Television and the News*. New York: Random House, 1973 (reissued by Ivan R. Dee, 2000, with a new introduction by the author). Well-received critique of network news—how it was then organized and operated—and some of its strengths and weaknesses in an era before any discernable competition.

Hinds, Lynn Boyd. *Broadcasting the Local News: The Early Years of Pittsburgh's KDKA-TV*. University Park: Pennsylvania State University Press, 1995. Useful historical study of one of the early station news operations from 1949 to 1960, exploring what then shaped local news reporting, much of it based on interviews.

Kerbel, Matthew R. *If It Bleeds, It Leads: An Anatomy of Television News*. Boulder, CO: Westview Press, 2000. Former public broadcast writer takes reader minute-by-minute through two-and-one-half real hours of syndicated, local, and network information programming to uncover

what passes as news and brevity and simplicity with which stories are crafted.

Postman, Neil, and Steve Powers. *How to Watch TV News*. New York: Penguin, 2008 (rev. ed.). Fifteen years after the first edition, the authors again conclude that anyone who relies exclusively on television for accurate world news is making a big mistake. Laden with money from advertisers, "news" gluts viewers with celebrity coverage rather than what they really should know. And problems have multiplied—along with competitive power of the Internet and an abundance of cable channels.

Rosensteil, Tom, et al. *We Interrupt This Newscast: How to Improve Local News and Win Ratings, Too*. New York: Cambridge University Press, 2007. Argues—based on five years of research—that local television news need not rely so heavily on crime, disaster, and fires ("shake and bake") or dumbed-down news to gain and hold audiences. Chapters discuss various elements of research that back up discussion of local television news ("I-teams" and "eye candy"), myths that dominate the field (including the fallacy of the "hook and hold" method of presenting news), how to make local television news that viewers will watch, techniques for changing newsroom culture, and the likely future of local news.

G-4: Television Documentary/ Magazine Programs

Most television documentary for the past two decades has been increasingly light in tone, focusing on crime news or show business rather than the hard news focus of TV network golden age production in the 1960s and 1970s.

Blum, David. *Tick…Tick…Tick: The Long Life and Turbulent Times of* 60 Minutes. New York: HarperCollins, 2004. Somewhat superficial history of the most successful network television news program. With what was an original format when it began, the program pioneered the use of hidden cameras and "ambush" interviews at the network level, earned 68 Emmy awards in four decades, and turned its on-camera stars into household names.

Bullert, J. B. *Public Television: Politics and the Battle over Documentary Film*. New Brunswick, NJ: Rutgers University Press, 1997. Based largely on interviews with public TV officials, this examines factors in public television's agenda for determining and airing documentary programs. This is a study of power relationships within the system as much as a survey of what is aired—or not.

Campbell, Richard. 60 Minutes *and the News: A Mythology for Middle America*. Urbana: University of Illinois Press, 1991. Argues there are at least four frames by which most people view this program and most TV news—mystery, therapy, adventure, and arbitration. There is a chapter on each plus others on news as narrative, news and myth of individualism, and the program's search for "the center."

Einstein, Daniel. *Special Edition: A Guide to Network Television Documentary Series and Special News Reports*. Metuchen, NJ: Scarecrow Press, 1987, 1997 (2 vols.). Some 10,000 programs are recorded and described, arranged by series (nearly 200 of them) or individual program title, and noting air dates for individual episodes as well as their content. Series and special reports are listed in separate sections in both volumes. This is the definitive guide to broadcast network documentaries for the 1955–90 period (that another volume has not appeared says something about the decline of the network documentary genre). The two volumes:

1. *1955–1979*. 1987.
2. *1980–1989*. 1997.

Koppel, Ted, and K. Gibson. Nightline: *History in the Making and the Making of Television*. New York: Times Books, 1996. Longtime host of ABC late-night news interview program reviews how it developed and provides a sense of its impact.

Madsen, Axel. 60 Minutes: *The Power & The Politics of America's Most Popular TV News Show*. New York: Dodd, Mead, 1984. Background of the program's rise and key personalities after 16 years, and reviews of some of its major stories.

Rosteck, Thomas. See It Now *Confronts McCarthyism: Television Documentary and the*

Politics of Representation. Tuscaloosa: University of Arizona Press, 1994. Focuses on four 1953–54 Murrow *See It Now* documentaries at CBS, all centered on the anticommunist crusade of Sen. Joseph McCarthy (R-WI).

G-5: Television Talk

Very little of this programming is news based (though Sunday morning news interview programs are among the longest-running in the medium). More programs are concerned with human interest stories of people in trouble.

Gamson, Joshua. *Freaks Talk Back: Tabloid Talk Shows and Sexual Nonconformity*. Chicago: University of Chicago Press, 1998. A solid portrayal of "them" in American society as seen on tabloid talk program. Discusses how they developed and are produced, and the political issues raised.

Hirsch, Alan. *Talking Heads: Political Talk Shows and Their Star Pundits*. New York: St. Martin's, 1991. Something of a professional biography of key figures and their programs, along with comment on their role and impact.

Joyner, Patricia. *Public Intimacies: Talk Show Participants and Tell-All TV*. Creskill, NY: Hampton, 1995. Seeks reasons why some people (many types are explored) will talk about seemingly anything on television, and how the medium certifies and lends credence to those who do appear.

Kurtz, Howard. *Hot Air: All Talk, All the Time*. New York: Times/Random House, 1996. Takes on political talk shows especially, but also right-wing on-air nuts and entertaining daytime hosts to seek their appeal and potential impact.

Linder, Laura R. *Public Access Television: America's Electronic Soapbox*. Westport, CT: Praeger, 1999. Chronicles the development of public access channels on American cable TV systems, and offers some practical advice to would-be users.

Timberg, Bernard M. *Television Talk: A History of the TV Talk Show*. Austin: University of Texas Press, 2002. Scholarly history of genre through five periods of its development, including discussion of key figures and nationally televised programs. A 100-page directory details network and syndicated programs discussed.

Tolson, Andrew, ed. *Television Talk Shows: Discourse, Performance, Spectacle*. Mahwah, NJ: Lawrence Erlbaum, 2001. Offers eight essays applying a unified approach to television talk programs. Topics include analyzing verbal discourse, three main types of talk programs (audience participation, issue-oriented, and trash talk), and an analysis of three American, two British, and one Israeli talk program.

White, Mimi. *Tele-Advising: Therapeutic Discourse in American Television*. Chapel Hill, NC: University of North Carolina Press, 1992. Reviews the content and role of daytime television game and talk programs, shopping channels, and televangelism, suggesting the important role the medium has for those who appear, let alone those who watch.

G-6: Cable News and Talk

Cable, of course, has been the chief competitor that has changed (diminished) the news role of broadcast television. Cable's specialized public service networks have created the 24/7 mode of reporting of news of all kinds.

Batten, Frank, with Jeffrey L. Cruikshank. *The Weather Channel: The Improbable Rise of a Media Phenomenon*. Cambridge, MA: Harvard Business School Press, 2002. Informal history of the cable network from its founding in 1982.

Beichman, Arnold, ed. *CNN's Cold War Documentary: Issues and Controversy*. Stanford, CA: Hoover Institution, 2000. Critical analysis of the multipart documentary history aired by the network. The collection of important articles, commentaries, and reviews about the CNN-published book and series presents material on varied sides of the debate over its content.

Frantzich, Stephen, and John Sullivan. *The C-SPAN Revolution*. Norman: University of Oklahoma Press, 1996. Brief history of public affairs network,

its key people (including founder Brian Lamb), and some of its problems and controversies.

Fuller, Linda K. *Community Television in the United States: A Sourcebook on Public, Educational and Governmental Access*. Westport, CT: Greenwood, 1994. How community and access programming developed, with many examples of each type, and a discussion of policy and other reasons such programming has not developed to its full potential.

Robinson, Piers. *The CNN Effect: The Myth of News Media, Foreign Policy and Intervention*. New York: Routledge, 2002. Examines "CNN effect"—the saturation of viewers with nonstop, real-time news footage from foreign civil unrest, which often constitute a powerful plea for action. The book examines the relationship between government and news media, and considers the role played by the CNN effect in a series of interventions in Iraq, Somalia, Bosnia, Kosovo, and Rwanda.

Schonfeld, Reese. *Me and Ted against the World: The Unauthorized Story of the Founding of CNN*. New York: Cliff Street, 2001. Autobiographical account of the development and early operation of CNN and parallel Headline News channel as well—until the author was fired by Turner in 1982.

Whittemore, Hank. *CNN: The Inside Story*. Boston: Little, Brown, 1990. Relates the development, initial airing in mid-1980, key people behind and in front of the camera, and subsequent development of the Atlanta-based 24/7 news network that began to change the face of television journalism.

H. Online Journalism

For history, see Section 2-L; for more general discussions of the technology, see Section 3-E.

Anderson, David M., and Michael Cornfield, eds. *The Civic Web: Online Politics and Democratic Values*. Lanham, MD: Rowman & Littlefield, 2003. A dozen scholarly essays concerning the role of the Internet in campaigns and governance, including such topics as online campaigns, election law, issue advocacy, civic participation, and technological imbalance (often termed a "digital divide").

Barlow, Aaron. *The Rise of the Blogosphere*. Westport, CT: Praeger, 2007. Discusses conception of a popular press, rise of advocacy journalism, heyday of partisan press, rise of professional journalism and press empires, domination of news by electronic media, alternative journalism, failure of American news media, movement toward public journalism, growth of discussion board and birth of blogs, 9/11 and the rise of the blogosphere, and the blog's power.

Beckett, Charlie. *SuperMedia: Saving Journalism so It Can Save the World*. Malden, MA: Wiley-Blackwell, 2008. Centers on the growing role of online networked journalism, melding efforts of both citizen and professional journalists, but not seeking to marginalize either group. Author discusses the new and still-changing media landscape, networked journalism and politics, terror and community and networked journalism, and editorial diversity and media literacy.

Boczowski, Pablo J. *Digitizing the News: Innovation in Online Newspapers*. Cambridge: MIT Press, 2004. Suggests that technology itself may not be all that revolutionary. In a case study of how three newspapers established news websites, the author found that newer media seem to evolve slowly by merging with already pre-existing forms. Online versions of *The New York Times, Houston Chronicle,* and a consortium of New Jersey newspapers grapple with cyber publishing. He traces newspapers' early tinkering with computers in the 1980s to the winnowing of digital options in early 1990s, to their online activities in late 1990s.

Gant, Scott. *We're All Journalists Now: The Transformation of the Press and Reshaping of the Law in the Internet Age*. New York: The Free Press, 2007. Discusses the press and the public under the constitution, press priority, transformation of journalism, and citizen journalists' battle for equality.

Gillmor, Dan. *We the Media: Grassroots Journalism by the People, for the People*. Sebastopol, CA: O'Reilly, 2006. Describes new breed of grassroots journalists armed with laptops, cell phones, and digital cameras, who are transforming news from

a lecture into a conversation, a deep shift in how news is made and consumed.

Gunter, Barrie. *News and the Net.* Mahwah, NJ: Lawrence Erlbaum, 2003. Broad survey of just how much digital modes are changing how news is gathered, presented, and paid for. The search for an effective new business model where audiences expect a free news product is at center of this discussion.

Küng, Lucy, et al. *The Internet and the Mass Media.* Thousand Oaks, CA: Sage, 2008. Nine research papers review how web use has changed legacy media use patterns, including perspectives on the impact of the Internet on mass media industries, media technology and innovation, media content, audiences, media policy and copyright law, media organization strategies and structures, and a sector-by-sector assessment of the Internet's impact on media business models.

Li, Xigen, ed. *Internet Newspapers: The Making of a Mainstream Medium.* Mahwah, NJ: Lawrence Erlbaum, 2006. Sixteen papers explore the first decade of Internet newspapers and both how and why they have grown, structure of an emerging medium in an interactive practice, and Internet papers and their public, mostly based on empirical data.

Perlmutter, David D. *Blog Wars.* New York: Oxford University Press, 2008. Explores how blogs—especially widely used ones—may influence political life, and are in any case becoming essential campaign tools.

Rosenberg, Howard, and Charles S. Feldman. *No Time to Think: The Menace of Media Speed and the 24-Hour News Cycle.* New York: Continuum, 2008. Reviews what is happening to American journalism because of what is sometimes dubbed the "CNN effect," the always-there nature of cable television news (let alone Internet sources) leading to massive coverage of "breaking" stories, often with more words than substance. Much that gets reported isn't correct—and there seems to be no time to think about or assess anything.

Salwen, Michael B., et al. *Online News and the Public.* Mahwah, NJ: Lawrence Erlbaum, 2005. Provides uses and effects perspective to online news, focusing on websites of newspapers and other traditional news sources, but also reviewing search engine services and web-only publications like *Salon* and *Slate.* Studies are based on five national telephone surveys conducted in 2001–02, examining online news credibility, measures of community building at online newspaper sites, uses and gratifications of online and offline news, the displacement effect of online news on traditional news media consumption, and the use of available technologies on newspaper websites.

Wilkinson, Jeffrey S., et al. *Principles of Convergent Journalism.* New York: Oxford University Press, 2008. Designed to provide important advice and instruction for print, broadcast, and online journalism personnel. Chapters discuss the notion of convergence in journalism, basic skills and roles, repurposing content from print to online, new types of content, repurposing broadcast content to online use, basics of broadcasting, basics of print, Internet news, adding multimedia to websites, converging with other emerging media systems, and a career guide.

Section 5

News Categories

Most books and articles written about American journalism center on its content—either in general or, more likely, focused on one topical subject or medium. This is understandable given that the prime purpose of the news enterprise is to communicate information—and make money doing so. This section includes citations concerning journalism's content save for political communication of all kinds, which is covered in Section 6.

A. General News Content

See also Section 6-B for surveys of media coverage of politics, and 8-H for critiques of journalism.

Beaubien, Michael P., and John S. Wyeth, Jr., eds. *Views on the News: The Media and Public Opinion.* New York: New York University Press, 1994. Contains the Chet Huntley (a former NBC anchorman) memorial lectures from 1979 through 1990 by a host of luminaries addressing different aspects of news reporting, some historically, others critically.

Clayman, Steven, and John Heritage. *The News Interview: Journalists and Public Figures on the Air.* New York: Cambridge University Press, 2002. Academic study of the modern broadcast interview, using "conversation analysis"—a kind of linguistic content analysis—to dissect transcripts of some 250 news interviews conducted in the United States and Britain over a 20-year span. While style and format of interviews vary for different broadcast programs and among different questioners in England and America, authors conclude that interviewing conventions are nonetheless remarkably similar in both countries.

Cook, Philip, et al. *The Future of News: Television, Newspapers, Wires, Newsmagazines.* Baltimore: Johns Hopkins University Press, 1992. Fifteen papers from a 1989 Wilson Center conference range widely but focus on news content (and how it is changing, often for the worse) in different media, ending with a case study of coverage of the 1989 Yellowstone Park fires.

Hamilton, James T. *All the News That's Fit to Sell: How the Market Transforms Information into News.* Princeton, NJ: Princeton University Press, 2004. Analyzes economic factors that shape news content. Discusses economic theories of news, and prescribes policies to ensure that news media serve the public good: reforms to influence news market (among them reducing cost of information about how government operates); an expanded role for nonprofits in funding journalism; development of norms that stress hard-news reporting; and less-stringent copyright protection to encourage flow of political news.

Newseum. *Today's Front Pages*. http://www.newseum.org/todaysfrontpages/flASH. Outline maps allows one to locate the newspaper front page for many local daily papers on that day from the United States and elsewhere—some 400 of them (and there is an archive of past front pages). Useful for seeing how major news stories "play" in different parts of the country and world.

Winch, Samuel P. *Mapping the Cultural Space of Journalism: How Journalists Distinguish News from Entertainment.* Westport, CT: Praeger, 1997. Many argue that this division is ignored these days—giving us "infotainment"—but the author

reviews how both were then defined and who (at least then) enforced the division.

B. Wars and the Military

In addition to foreign correspondence (see Sections 6-G and 7-C), war reporting is probably the most romantic—and dangerous—of journalism specializations.

B-1: Survey Histories

These titles tend to range over long periods and multiple wars.

Andersen, Robin. *A Century of Media, A Century of War*. New York: Peter Lang, 2006. How military or war stories change and morph from the original reporting done onsite to what is printed or aired in New York and elsewhere, from World War I and the birth of war propaganda to the failed Vietnam War and smaller wars since. Anderson also focuses on the role of CNN and its 24/7 coverage of war, as well as coverage of terrorism.

Carruthers, Susan L. *The Media at War: Communication and Conflict in the Twentieth Century*. New York: St. Martin's Press, 2000. Theory-based assessment of media's role in war, this traces growth of wartime reporting from World War I through the Gulf War of 1990–91, the impact of the 24-hour reporting day, and how media view past wars. The author sees media as too often an instrument of government in wartime coverage.

Connelly, Mark, and David Welch, eds. *War and the Media: Reportage and Propaganda, 1900–2003*. London: I. B. Tauris, 2005. Collection of essays that treat the topic primarily in context of British conflicts over the past 100 years, from the Boer War through the 2003 invasion of Iraq. Essays touch on various media, including print, radio, film, television, and newer technologies, as well as the complex relationship between propaganda and censorship.

Cooke, John Byrne. *Reporting the War: Freedom of the Press from the American Revolution to the War on Terrorism*. New York: Palgrave Macmillan, 2007. Cooke, son of veteran journalist Alistair Cooke, discusses how media have affected the course of some, though not all, American wars, how government has tried to suppress opposing opinion, and how war has been alternately encouraged, used, and abused.

Cornebise, Alfred E. *Ranks and Columns: Armed Forces Newspapers in American Wars*. Westport, CT: Greenwood, 1994. Survey from the Civil War through Vietnam. See also the author's earlier study of *The Stars and Stripes* in World War I (under "World Wars" below).

Cumings, Bruce. *War and Television*. New York: Verso, 1992. Reviews the overall story, with special focus (a chapter each) on the Korean, Vietnam, and Gulf Wars. Two chapters review dramatic 1989–92 changes in Eastern Europe.

The Greenwood Library of American War Reporting. Westport, CT: Greenwood, 2005 (8 vols.). Chronologically presents news reports from more than 2,000 newspapers and magazines, and later radio and television, on major conflicts from the French and Indian War to the current war on terror. Each volume has a consistent format: wars in question are first covered by a multipage timeline and overall introduction, then numbered topical segments present examples of war reporting.

1. Copeland, David A., and Carol Sue Humphrey, eds. *The French and Indian War & the Revolutionary War*.
2. Copeland, David A., and Carol Sue Humphrey, eds. *The War of 1812 & the Mexican-American War*.
3. Reynolds, Amy, and Debra Redin van Tuyll, eds. *The Civil War, North & South*.
4. Coward, John M., and W. Joseph Campbell, eds. *The Indian Wars & The Spanish-American War*.
5. Collins, Ross F., and Patrick S. Washburn, eds. *World War I & World War II, the European Theater*.
6. Hamm, Bradley, and Donald Lewis Shaw, eds. *World War II, the Asian Theater & the Korean War*.
7. Cook, Russel J., and Shannon E. Martin, eds. *The Vietnam War & Post-Vietnam Conflicts*.
8. Barnett, Brooke, ed. *The Iraq Wars and the War on Terror & Index*.

Knightley, Phillip. *The First Casualty: From the Crimea to Iraq: The War Correspondent as Hero, Propagandist, and Myth Maker*. Baltimore: Johns Hopkins University Press, 2004 (3rd ed.). This classic historical narrative, first issued in 1975, focuses more on correspondents' lives and reported war events than on analysis. The title refers to truth as the "first casualty" of such reporting for many reasons discussed here including the growing role of government control of news since the Vietnam era.

Young, Peter, and Peter Jesser. *The Media and the Military: From the Crimea to Desert Strike*. New York: St. Martin's Press, 1997. The changing nature of war—and reporting about it—is reviewed plus the evolution of tensions between military authorities and news media, coverage of hostilities in several hot spots (Ireland, Vietnam, and elsewhere), exclusion of media from the Panama incursion by the United States, and media access during the Gulf War.

B-2: Issues and Controversies

The focus here is on the many problems and drawbacks of war reporting.

Allan, Stuart, and Barbie Zelizer, eds. *Reporting War: Journalism in Wartime*. New York: Routledge, 2004. Nearly 20 papers challenge familiar assumptions about war reporting from varied perspectives, including the influence of censorship and propaganda, "us" and "them" news narratives, access to sources, 24/7 rolling presentation of news and the CNN effect, military jargon (such as "friendly fire" and "collateral damage"), "embedded" and "unilateral" reporters, and tensions between objectivity and patriotism, among others.

Aubin, Stephen P. *Distorting Defense: Network News and National Security*. Westport, CT: Praeger, 1998. Presents a strongly negative analysis of how poorly "liberal network news programs" reported on defense and national security issues during the selected periods during the 1980s and 1990s. The book is an analysis of nearly 3,000 network news reports from Reagan, Bush, and Clinton administrations on *ABC World News Tonight, CBS Evening News,* and *NBC Nightly News*. The author provides nearly a dozen recommendations for improvement, chiefly more specialized and trained reporting.

Feinstein, Anthony. *Journalists under Fire: The Psychological Hazards of Covering War*. Baltimore: Johns Hopkins University Press, 2006. Based on recent studies investigating the emotional impact of war on journalists, including trauma-related disorders. Reviews life-threatening hazards war reporters face—abductions, mock executions, the deaths of close colleagues—and discusses their psychological consequences: post-traumatic stress disorder, depression, deterioration of personal relationships, and substance abuse.

Heise, Juergen Arthur. *Minimum Disclosure: How the Pentagon Manipulates the News*. New York: Norton, 1979. Begins with a case study of the My Lai (Vietnam) massacre story and how it broke, then turns to issues involved in covering (or not) the military establishment, and the role of national security.

Kennedy, William V. *The Military and the Media: Why the Press Cannot Be Trusted to Cover a War*. Westport, CT: Praeger, 1993. Here the military are heroes and media are not to be trusted—reverse of most books on wartime journalism. The author argues for more specialized reporters dealing with military matters and until that time, greater military control of media access to battlefields.

Paul, Christopher, and James J. Kim. *Reporters on the Battlefield: The Embedded Press System in Historical Context*. Santa Monica, CA: Rand Corporation, 2004. Assesses the Iraq war experience with war correspondents in light of historical developments, discussing issues defining the relationship between media and the military, a comparative case study history of that relationship (examining conflicts in Vietnam, Grenada, Panama, the first Gulf War, Somalia, Haiti, former Yugoslavia, and Afghanistan), and various systems for press access and measures for evaluating outcomes.

Smith, Jeffrey A. *War and Press Freedom: The Problem of Prerogative Power*. New York: Oxford University Press, 1999. Although U.S. military forces might believe they have the right and power to regularly repress news activity in wartime, Smith finds no support for that contention, save for a relatively short list of exceptions

including defense secrets. He points out that instantaneous communication with newer technologies will force an accommodation between the military and news media, because faster communication is harder to control.

Sweeney, Michael S. *The Military and the Press: An Uneasy Truce*. Evanston, IL: Northwestern University Press, 2007. The author reviews the role of war correspondents before World War I, World War I propaganda and censorship, journalists and the home front during World War II, "on the team" reporting of that war (this all takes up roughly half the book), Korea and Vietnam as a great divide in media–military relations, military control of access to media during the 1980s and 1990s, accommodation in twenty-first century, and the likely future.

Sylvester, Judith, and Suzanne Huffman. *Reporting from the Front: The Media and the Military*. Lanham, MD: Rowman & Littlefield, 2005. Largely a study of the embedded reporter approach used during the Iraq war, based on interviews with people who were there as well as back at home. Chapters discuss how the military managed war (and how media reported the same thing), visual journalism, print journalists, television (station and network) journalists, NPR radio journalists, competition and complaints about news coverage and the reporting process in Iraq, and a conclusion.

Tumber, Howard, and Frank Webster. *Journalists Under Fire: Information War and Journalism Practice*. Thousand Oaks, CA: Sage, 2006. Based on more than 50 interviews with journalists about reporting issues—and dangers—in covering modern military events, the authors discuss who war correspondents are and why they do the job despite dangers, what being on assignment in a war zone means, working relations among and between reporters and related personnel (video or still photographers, for example), the role of middlemen such as "fixers" and translators (often locals), fundamental questions of danger and safety, training for such reporting, and coping with fear and danger.

B-3: Civil War (1861–65)

Just as the literature on the Civil War is huge and continues to grow, so we are seeing a continuing flow of studies assessing the period's journalism and just what people knew of major Civil War events at the time.

Andrews, J. Cutler. *The North Reports the Civil War*. Pittsburgh: University of Pittsburgh Press, 1955. *See* next entry.

Andrews, J. Cutler. *The South Reports the Civil War*. Princeton, NJ: Princeton University Press, 1970 (reprinted by University of Pittsburgh Press, 1985). Two still-valuable anthologies telling the story of the Civil War as seen at the time by newspaper reporters on both sides, with much material coming from reporters' diaries, dispatches and published news stories. Campaigns in the East were better covered than those farther West. Also compares and contrasts censorship by both armies.

See Bosse, Section 4-F-2.

Coopersmith, Andrew S. *Fighting Words: An Illustrated History of Newspaper Accounts of the Civil War*. New York: New Press, 2004. Includes illuminating (and often contradictory) accounts of the first battle of Manassas the capture and occupation of New Orleans, Emancipation, enlistment of black soldiers, class conflict within the Confederacy between poor whites and slaveholders, New York City draft riots, Sherman's "march to the sea," and Lincoln's assassination, including over 100 reproductions from period newspapers.

See Dicken-Garcia, Section 2-B-2.

Harris, Brayton. *Blue & Gray in Black & White: Newspapers in the Civil War*. Reston, VA: Brassey's, 2000. Newspapering during Civil War, including lengthy extracts from the finest war reporting. Discusses censorship, racial attitudes, and the military's role in news.

Home of the American Civil War. *Civil War Links: Journalism*. http://www.civilwarhome.com/links11.htm#Journalism. Unannotated listing of events and other news elements ("communication" and "telegraph" can also be searched) providing a portal to online contemporary news reports of Civil War developments.

Lewin, J. G., and P. J. Huff. *Lines of Contention: Political Cartoons of the Civil War*. New York: HarperCollins, 2007. Many humorous, clever, and scathing editorial cartoons are reproduced from publications such as *Harper's Weekly, Vanity Fair, Punch,* and *Leslie's Illustrated*. They illuminate the social, political, and cultural climate of Civil War–era America as seen from both sides, providing insight into incidents and opinions surrounding fighting as well as mind-sets and actions of major figures.

Maihafer, Harry J. *The General and the Journalists: Ulysses S. Grant, Horace Greeley, and Charles Dana*. Darby, PA: Diane Publishing, 1998. Discusses interactions of the Union Army commander and two important editors in the 1860–80 era to show how Grant was presented to the American public, from his earliest command appearance, through his final wartime campaigns, and how he was covered during his troubled presidential tenure.

McPherson, James M. *The Most Fearful Ordeal: Original Coverage of the Civil War by Writers and Reporters of* The New York Times. New York: St. Martin's, 2004. Illustrates the drawbacks of contemporary wartime reporting where news melded into propaganda and "facts" were too often wrong. Many stories are fully reproduced, giving a good sense of their tone and coverage.

Miner, Craig. *Seeding Civil War: Kansas in the National News, 1854–1858*. Lawrence: University Press of Kansas, 2008. "Bleeding Kansas" as it was then covered in major newspapers and magazines in an important lead-up to the Civil War.

Perry, James M. *A Bohemian Brigade: The Civil War Correspondents—Mostly Rough, Sometimes Ready*. New York: John Wiley, 2000. Begins with earlier Crimean War, then focuses on a small selection of reporters for the Union and Confederacy, making clear their drawbacks as well as successes.

Ratner, Lorman A., and Dwight L. Teeter Jr. *Fanatics and Fire-Eaters: Newspapers and the Coming of Civil War*. Champaign: University of Illinois Press, 2003. By tracing coverage of selected news events in five years leading to the opening Confederate attack on Ft. Sumter, the authors show how papers helped shape and promote increasingly disparate points of view of the North and South.

Reynolds, Donald E. *Editors Make War: Southern Newspapers in the Secession Crisis*. Nashville, TN: Vanderbilt University Press, 1970. Explores increasingly shrill newspaper promotion of secession during 1860–61 in what would become the 11 Confederate states.

Sachsman, David B., et al., eds. *The Civil War and the Press*. New Brunswick, NJ: Transaction Press, 2000. Collects more than 30 research papers on the role of journalism before, during, and after the 1861–65 war. Newspapers (and other periodicals) formed the chief means of promoting pro and con views on slavery, for example.

Sachsman, David B. *Words at War: The Civil War and American Journalism*. Purdue, IN: Purdue University Press, 2008. Analyzes various ways in which newspaper editors and war correspondents covered Civil War events, and in doing so reflected and shaped responses of their readers. Four sections (Fighting Words, Confederates and Copperheads, The Union Forever, and Continuing Conflict) trace the evolving press role in antebellum, wartime, and postwar periods.

Starr, Louis M. *Bohemian Brigade*. New York: Knopf, 1954 (reissued as *Reporting the Civil War: The Bohemian Brigade in Action, 1861–1865* by Collier, 1962; and again by the University of Wisconsin Press, 1987). Useful history of reporters on both sides, though largely focusing on those reporting from and for the Union.

B-4: World War I (1914–18)

The so-called Great War, as it was called before 1939, has a fairly limited literature as far as journalism is concerned—though there are several titles concerned with propaganda media that do not appear here.

Carmichael, Jane. *First World War Photographers*. London: Routledge, 1989. An Imperial War Museum presentation on people and techniques used to get that picture, often in appalling conditions. Includes discussion of official controls.

Cornebise, Alfred E. *The* Stars and Stripes*: Doughboy Journalism in World War I*. Westport, CT: Greenwood, 1984. American army newspaper than ran 71 weekly issues from February 1918 to June 1919; how it began and was produced, and key people involved.

Crozier, Emmet. *American Reporters on the Western Front, 1914–1918*. New York: Oxford University Press, 1959. Lives and work of reporters based primarily in London and Paris, though sometimes gaining access to military personnel and battlefront locations, and types of stories they posted along with issues of censorship and other controls.

Douglas, Roy. *The Great War, 1914–1918: The Cartoonist's Vision*. London: Routledge, 1995. Provides international selection of over 100 cartoons covering key themes, events, and figures in the war. Both "establishment" and "subversive" cartoons demonstrated concerns of participants from governments, to the soldiers, to the home front. See the author's parallel book on World War II, below.

Paperless Archives *Stars and Stripes* Newspaper. http://www.paperlessarchives.com/wwi_newspapers.html. While this is marketing a full collection of all 71 weeks of the France-based publication, it also provides a useful survey of the army paper's history, relating its different sections and uses of illustrations.

Zacher, Dale E. *The Scripps Newspapers Go to War, 1914–1918*. Urbana: University of Illinois Press, 2008. Scripps controlled more than 20 newspapers, plus United Press and a news syndication service in an era without competition from electronic media. The author offers three related stories—the internal family dynamic of the company, costs and logistics of war reporting, and promotion of Wilson administration causes.

B-5: World War II (1939–45)

As might be expected, there are far more books on this conflict than for the earlier world war. For biographies of many individual reporters, see Sections 7-C and 7-G.

Bernstein, Mark, and Alex Lubertozzi. *World War II on the Air: Edward R. Murrow and the Broadcasts That Riveted a Nation*. Naperville, IL: Sourcebooks, 2003. One of a series of books by this author team that combine text with a CD reproducing broadcasts in question. They focus here on live shortwave broadcasts Murrow sent back from London and elsewhere during the 1939–45 period. The narrative, arranged in chronological order, ranges over the whole "Murrow Boys" team that he assembled, many of whom went on to distinguished careers of their own. The book's text is keyed to specific broadcasts included on the CD.

Douglas, Roy. *The World War, 1939–1945: The Cartoonists' Vision*. London: Routledge, 1990. Relates war as seen by editorial cartoonists on all sides, with many examples. *See* author's parallel book on World War I, above.

Preston, Paul. *We Saw Spain Die: Foreign Correspondents in the Spanish Civil War*. London: Constable, 2008. The war (1936–39) was widely seen as a predecessor to the world war that soon followed. Both sides varied greatly in how they worked with reporters—Republicans gave them a free hand while Nationalists were very restrictive. Explores the work of many reporters from different countries, including difficulties of getting stories out.

Pulwers, Jack E. *The Press of Battle: The GI Reporter and the American People*. Raleigh, NC: Ivy House, 2003 (2 vols.). Extensive survey of combat correspondents, information, and news writing about the war as seen in the pages of the three service publications: Army's *Stars and Stripes,* Navy's *All Hands,* and the Marine's *Leatherneck*.

Reporting World War II, 1938–1946. New York: Library of America, 1995 (2 vols.). Includes about 200 pieces selected from all theaters, some in full form, others excerpted, drawn from magazines, books, radio, and newspapers.

Roeder, George. *The Censored War: American Visual Experience during World War Two*. New Haven, CT: Yale University Press, 1995. How American public opinion about World War II was manipulated both by wartime images citizens were

allowed to see (in pictures, ads, and posters) and by suppressed images. Text is amplified by visual essays that include many previously unpublished photographs from army files.

Steele, Richard. *Free Speech in the Good War*. New York: St. Martin's Press, 1999. How President Franklin Roosevelt's three attorneys general and their staffs struggled to adjust and apply the free speech ideal (including that for news media) in face of demands from the President and the public for ideological conformity and total security.

Sweeney, Michael S. *Secrets of Victory: The Office of Censorship and the American Press and Radio in World War II*. Chapel Hill: University of North Carolina Press, 2001. The 1941–45 federal agency and its largely voluntary guideline system is reviewed with a good discussion of how military secrets were handled, even those that at least partially fell into the hands of newspapers or radio.

Voss, Frederick S. *Reporting the War: The Journalistic Coverage of World War II*. Washington, DC: Smithsonian National Portrait Gallery, 1994. Exhibition catalog, with useful profiles of specific reporters and broader essays as well. Includes roles of women, minorities, and also combat artists.

B-6: Vietnam (1959–73)

The controversial Asian war has generated considerable research, especially as media coverage is credited with turning Americans against involvement, forcing withdrawal of U.S. forces in 1973.

Anderegg, Michael, ed. *Inventing Vietnam: The War in Film and Television*. Philadelphia: Temple University Press, 1991. Examines many documentary and feature films, reviewing changing attitudes toward war.

Bartimus, Tad, et al., eds. *War Torn: Stories of War from the Women Reporters Who Covered Vietnam*. New York: Random House, 2002. Nine women report on different periods during which they reported Vietnamese events between 1966 and 1975.

Benjamin, Burton. *Fair Play: CBS, General Westmoreland, and How a Television Documentary Went Wrong*. New York: Harper & Row, 1988. Concerns a *CBS Reports* broadcast and its use of quotations out of context. Benjamin conducted the network's later investigation into what happened. *See also* Brewin and Shaw, below.

Braestrup, Peter. *Big Story: How the American Press and Television Reported and Interpreted the Crisis of Tet 1968 in Vietnam and Washington*. Boulder, CO: Westview, 1977 (abridged into single volume, Yale University Press, 1983; Presidio Press, 1994). Then a reporter for *The Washington Post,* the author wrote a detailed and informed critique of media performance (and its shortcomings) during a critical moment in the long war, revealing underlying politics that influenced reporting styles and choices.

Brewin, Bob, and Sydney Shaw. *Vietnam on Trial: Westmoreland v. CBS*. New York: Atheneum, 1987. Narrative of a controversial libel trial brought by General. Westmoreland, which grew out of a *CBS Reports* documentary on the war. Useful emphasis on key media and military figures. *See also* Benjamin, above.

Hallin, Daniel C. *The "Uncensored War:" The Media and Vietnam*. New York: Oxford University Press, 1986. Content analysis of *The New York Times* from 1961 to mid-1965, and of the television networks from 1965 to early 1973. The author argues that real war issues were rarely if ever covered by news media.

Hammond, William M. *Public Affairs: The Military and the Media*. Washington, DC: Government Printing Office, 1988, 1996 (2 vols.). Part of a larger "The U.S. Army in Vietnam" series, these two volumes provide the official military view of its relations with print and electronic media over nearly a dozen years. The volumes divide the narrative story about equally:

1. *1962–1968*. 1988.
2. *1968–1973*. 1996.

Hammond, William M. *Reporting Vietnam: Media and Military at War*. Lawrence: University Press of Kansas, 1998. Drawn from the official study immediately above, this is a more informal account,

though one still stressing institutions over individual reporters.

Landers, James. *The Weekly War: Newsmagazines and Vietnam*. Columbia: University of Missouri Press, 2004. Investigation of some 900 articles published by *Newsweek, Time,* and *U.S. News & World Report*, and the impact of their coverage on the American public and policymakers. Each had its own editorial style: *Newsweek* provided mainstream liberal perspective; *Time* took a more conservative viewpoint; and *U.S. News & World Report* was ultraconservative.

Lembcke, Jerry. *CNN's Tailwind Tale: Inside Vietnam's Last Great Myth*. Lanham, MD: Rowman & Littlefield, 2003. Sociological analysis of CNN's infamous 1998 report claiming the Pentagon illegally used chemical weapons during the Vietnam War in a covert military operation called "Operation Tailwind," a story soon disproved.

Prochnau, William. *Once upon a Distant War: Young War Correspondents and the Early Vietnam Battles*. New York: Crown, 1995. Early years of the war (early 1960s) involved newspaper reporters—television only became important later on. Reviews the developing war story as seen by reporters fighting censorship, battlefield conditions, and disbelieving home editorial offices.

Reporting Vietnam: American Journalism 1959–1975. New York: Library of America, 2000. Collects about 100 examples of newspaper, magazine, book, and television reporting of events in Vietnam and elsewhere related to the war.

Rudenstine, David. *The Day the Presses Stopped: A History of the Pentagon Papers Case*. Berkeley: University of California Press, 1996. Relates Nixon administration's efforts to prohibit *The New York Times* and *The Washington Post* from publishing the top-secret "Pentagon Papers," which traced development of the U.S. involvement in Vietnam. Examines new evidence and challenges conventional views of a historic moment.

Small, Melvin. *Covering Dissent: The Media and the Anti-Vietnam War Movement*. New Brunswick, NJ: Rutgers University Press, 1994. Historical survey, placing these largely college-based protests in context with previous ones, while focusing on the 1965–71 period of focused objection to both the war and the draft.

Turner, Kathleen J. *Lyndon Johnson's Dual War: Vietnam and the Press*. Chicago: University of Chicago Press, 1985. Based on documents and interviews, this is a careful assessment of how war changed the administration and became its increasing focus after 1965. Covers interaction of news media, Washington politics, and the actual fighting itself.

Wyatt, Clarence R. *Paper Soldiers: The American Press and the Vietnam War*. New York: Norton, 1993; University of Chicago Press, 1995. Argues that news media generally carried official reports and were not as critical as conventional wisdom suggests. Most reporting centered upon small actions rather than the larger picture.

B-7: Falklands (1982)

Several books assess media coverage of the short war between Britain and Argentina over control of the Falkland (Malvinas) Islands.

Harris, Robert. *Gotcha! The Media, The Government and the Falklands Crisis*. London: Faber & Faber, 1983. How British newspaper and television news media fought each other and government officials in covering the fighting, including difficulties of reporting a war so far away from media home markets. (The main title comes from a notorious *Sun* headline announcing the sinking of an Argentinian warship.)

Hooper, Alan. *The Military and the Media*. Brookfield, CT: Gower, 1982. An officer of the Royal Marines discusses the widespread misunderstanding between media and the military as evidenced in the Falklands conflict. Reviews newspapers and both commercial and BBC broadcast coverage, and draws lessons from coverage of Vietnam and Irish "troubles."

Monaghan, David. *The Falklands War: Myth and Countermyth*. London: Palgrave Macmillan, 1998. Role of rhetoric and journalistic writing in

contributing to an image of British greatness reborn in the conflict with Argentina. Focuses on how the Thatcher government's reading of events was developed through political speeches and journalistic writing, and the later films, plays, cartoon strips, and travel books that found national metaphors of a very different kind.

Morrison, David E., and Howard Tumber. *Journalists at War: The Dynamics of News Reporting During the Falklands Conflict*. London: Sage, 1988. Uses coverage of this war as a general treatise on the profession of journalism, demonstrating that journalists in similar situations would show similar patterns of behavior, handling of news in London, and the role of information in liberal democracies during war time.

B-8: Gulf War (1990–91)

The media-related literature on this short and very limited war is surprisingly extensive.

Dennis, Everette, et al., eds. *The Media at War: The Press and the Persian Gulf Conflict*. New York: Gannett Foundation Media Center, Columbia University, 1991. Several papers provide historical background, a survey of journalists involved, the impact of technology on news reporting, various means of measuring reportorial output of war coverage, and assessing public reaction to news reports.

Denton, Robert E., Jr., ed. *The Media and the Persian Gulf War*. Westport, CT: Praeger, 1993. Thirteen research papers review most aspects of news media access to and reporting of the 1990–91 conflict, including talk radio and C-SPAN, and a seven-country comparison of coverage of the war's beginning.

Fialka, John J. *Hotel Warriors: Covering the Gulf War*. Baltimore: Johns Hopkins University Press, 1991. Brief first-hand account of reporting from Baghdad and differing points of view about that coverage from military, government sources, and news media.

Greenberg, Bradley S., and Walter Gantz, eds. *Desert Storm and the Mass Media*. Creskill, NY: Hampton, 1993. Anthology of 28 original papers on virtually all aspects of news coverage of the war, including institutions involved, news media and their war content, and public response to the conflict in and outside of the United States.

Jeffords, Susan, and Lauren Rabinovitz. *Seeing Through the Media: The Persian Gulf War*. New Brunswick, NJ: Rutgers University Press, 1994. About 20 academic papers, a few of which look back to earlier war coverage, though most center on the 1990–91 conflict and its coverage in news media. Some review gender issues, Arab women and war, and military censorship.

Kellner, Douglas. *The Persian Gulf TV War*. Boulder, CO: Westview, 1992. Argues the limitations of visual medium in dealing with a barrage of government propaganda favoring the military effort against Iraq. Combines content analysis with critical commentary.

MacArthur, John R. *Second Front: Censorship and Propaganda in the Gulf War*. New York: Hill & Wang, 1992 (reissued by University of California Press, 1993, 2004). Examines government's assault on constitutional freedoms of American media during the "Desert Storm" Gulf War.

McCain, Thomas A., and Leonard Shyles, eds. *The 1,000 Hour War: Communication in the Gulf*. Westport, CT: Greenwood, 1993. Ten papers about press–military relationships during the Gulf War, high tech communication from the war zone, and issues and images as they appeared on television.

Morrison, David E. *Television and the Gulf War*. London: John Libbey, 1992. Detailed study of viewer reaction to British television coverage of the Gulf conflict and a content analysis of four British television channels' coverage as well as that of CNN and German, French, Italian, and Russian services.

Mowlana, Hamid, et al., eds. *Triumph of the Image: The Media's War in the Persian Gulf—A Global Perspective*. Boulder, CO: Westview, 1992. Nearly 30 papers by authors from 18 nations review the political and audience impact of news coverage, exploring social, economic, and political

context of coverage in their countries, domination of one image (backing the United States) in most of them, and the struggle for alternative perspectives.

Smith, Hedrick, ed. *The Media and the Gulf War/ the Press and Democracy in Wartime*. Arlington, VA: Seven Locks Press, 1992. Anthology of newspaper articles and documents from many national perspectives is critical of American military and their attempts at controlling news media. Includes a discussion of government policy toward media in wartime.

Taylor, Philip M. *War and the Media: Propaganda and Persuasion in the Gulf War*. Manchester, England: Manchester University Press / New York: St. Martin's Press, 1998 (2nd ed.). Analysis of coverage by ten international broadcasters of events of January and March 1991, arguing that coverage is too often more nationalistic propaganda than fair and balanced news. The author argues that part of the problem is lack of sufficiently specialized reporters.

B-9: Iraq/Afghanistan (2002–Present)

These ongoing efforts have attracted considerable research and commentary, in part because of the controversial political nature of both struggles.

Dadge, David. *The War in Iraq and Why the Media Failed Us*. Westport, CT: Praeger, 2006. Reviews how the Bush administration sought to control news media before and during the Iraq war, sharply limiting news most Americans heard. Dadge notes there are many causes for this press failure, chief among them a rising sense of patriotism after 9/11. Criticism of war became—to the administration's backers and most conservatives—criticism of soldiers in Iraq. But many problems came from within news media—including the constant fight for ratings and advertisers, and occasional scandals over faked stories.

Engel, Richard. *War Journal: My Five Years in Iraq*. New York: Simon & Schuster, 2008. NBC reporter reviews successes and setbacks of the Iraq war, including searching for missing soldiers, surviving IED and kidnap attempts, hotel bombings, and ambushes. Engel was the longest-serving broadcaster in Iraq and the only American television reporter to cover the country continuously since before the 2003 U.S. invasion.

Hoyt, Mike, et al. *Reporting Iraq: An Oral History of the War by the Journalists Who Covered It*. Hoboken, NJ: Melville House, 2007. How the war was reported, including contributions from 44 reporters, photographers, translators, editors, and stringers from around the world. Most journalists saw a disaster in Iraq before they were allowed to report that view.

Isikoff, Michael, and David Corn. *Hubris: The Inside Story of Spin, Scandal and the Selling of the Iraq War*. New York: Crown, 2006. A riveting narrative account of how the Bush administration manipulated news media, the bureaucracy, and ultimately the American public to press its case for war in Iraq, focusing on reporting by Judith Miller about (as it turned out) nonexistent weapons of mass destruction.

Katovsky, Bill, and Timothy Carlson. *Embedded: The Media at War in Iraq—An Oral History*. Guilford, CT: Lyons Press, 2003. Many of the 2,700 journalists covering the Iraq war were "embedded" with military forces, a role assessed here in their own words.

Kuypers, Jim A. *Bush's War: Media Bias and Justifications for War in a Terrorist Age*. Lanham, MD: Rowman & Littlefield, 2006. Reviews terrorism as a new justification for war, and assesses several speeches by President Bush carried by news media. The study compares Bush's statements with press coverage, arguing that the nature of American public knowledge concerning our global role has been changed not by 9/11, but by the subsequent argumentative back-and-forth between Bush and the press.

Lewis, Justin, et al. *Shoot First and Ask Questions Later: Media Coverage of the 2003 Iraq War*. New York: Peter Lang, 2006. Offers a study of how print and television covered the early period of fighting from a British point of view, the comparing British and American media. Discusses background to the embedding process, Pentagon and British military perspectives, journalist's views on embedding, themes

in coverage of fighting, sources, watching fighting on television, and public relations and journalism.

Tumber, Howard, and Jerry Palmer. *Media at War: The Iraq Crisis*. Thousand Oaks, CA: Sage, 2004. Covers both pre- and postwar phases, as well as public reaction to these events, and provides a framework for understanding how media and news organizations operated during the Iraq incursion in 2003.

C. Conflict, Terrorism, and Disasters

C-1: Terrorism

Contrary to widespread belief, concern and published research about the role of news media in acts of terrorism did not begin with the events of 9/11 but, in fact, decades earlier.

Alali, A. Odasuo, and Kenoye Kelvin Eke, eds. *Media Coverage of Terrorism: Methods of Diffusion*. Newbury Park, CA: Sage, 1981. Nine papers review (among other topics) coverage in three American dailies, news magazine labeling of terrorists, a case study of network evening broadcasts, BBC coverage of the Irish conflict, and the literature on terrorism.

Dobkin, Bethani A. *Tales of Terror: Television News and the Construction of the Terrorist Threat*. Westport, CT: Praeger, 1992. Descriptive and rhetorical analysis of news coverage in 200 selected newscasts during the 1980s, arguing that media often escalate public panic about terrorism. Focuses on narrative framing in network news.

Hess, Stephen, and Marvin Kalb. *The Media and the War on Terrorism*. Washington, DC: Brookings Institution, 2003. Compiles edited transcripts of remarks made by nearly 70 journalists, government officials, and educators. Chapters cover early stages of fighting in Afghanistan, the CNN effect, anthrax attacks and bio-terrorism, and Pentagon officials versus news media. Among content threads that weave though the discussion: journalists are readily aware of how changes in technology have affected their work.

Hoskins, Andrew, and Ben O'Loughlin. *Television and Terror: Conflicting Times and the Crisis of News Discourse*. New York: Palgrave Macmillan, 2007. Discusses television and time, Hurricane Katrina and the failure of the CNN effect, political discourse and the 2003 Iraq war, television's quagmire, drama and documentary, and security and the public.

Kuypers, Jim A. *Bush's War: Media Bias and Justifications for War in a Terrorist Age*. Lanham, MD: Rowman & Littlefield, 2006. Offers an analysis of what President Bush said on and after 9/11 and how what he said was reported in news media. The author focuses on potential conflicts between media bias and the President's justifications for his war on terror—and on Iraq—as seen in several national speeches.

Livingston, Steven. *The Terrorism Spectacle*. Boulder, CO: Westview, 1994. Explores what a terrorist is and roles played by news media in helping to define such a person and disseminate his or her views. There are several case studies drawing on examples in America and elsewhere.

Llali, A., and Gary W. Byrd. *Terrorism and the News Media: A Selected, Annotated Bibliography*. Jefferson, NC: McFarland, 1994. Discusses how news media cover terrorism in their reporting. Over 600 entries are divided into three areas: understanding terrorism, terrorism in electronic media, and terrorism depicted in print media.

Miller, Abraham H., ed. *Terrorism: The Media and the Law*. Dobbs Ferry, NY: International, 1982. A 1970s' view with eight papers assessing different aspects, including dealing with hostages, police and media coverage, and recommendations for covering local instances of terrorism.

Nacos, Brigitte L. *Terrorism & the Media: From the Iran Hostage Crisis to the World Trade Center Bombing*. New York: Columbia University Press, 1994. Explores how media responded to anti-U.S. terrorism over the previous 15 years, exploring how media can inadvertently serve terrorist needs, polls and the theater of terror, and news choices during terror events.

Nacos, Brigitte L *Mass-Mediated Terrorism: The Central Role of the Media in Terrorism and*

Counterterrorism. Lanham, MD: Rowman & Littlefield, 2007 (2nd ed.). Updates a book that first appeared in 2002, adding a chapter on terrorism, counterterrorism, and public opinion, plus other updates, though the purpose of the study remains unchanged—to describe how journalists report about events that are often played directly to media to broaden their impact. The author questions the degree to which media are unwittingly spreading the impact of terrorism simply by their regular news reports, let alone by wall-to-wall coverage.

Picard, Robert G. *Media Portrayals of Terrorism: Functions and Meaning of News Coverage*. Ames: Iowa State University Press, 1993. Psychology of terrorism, setting and types of communication, government and terrorism news, and implications of coverage.

Schaffert, Richard W. *Media Coverage and Political Terrorists: A Quantitative Analysis*. Westport, CT: Praeger, 1992. Detailed study of four years of terrorism and how it was covered and with what likely impact—in British, German, and American news media.

Weimann, Gabriel, and Conrad Winn. *The Theater of Terror: Mass Media and International Terrorism*. White Plains, NY: Longman, 1994. Using a quarter-century of data of reports in nine world newspapers and American television network news, the authors assess factors predicting news coverage, media presentations of terrorism, and the emerging character of international terrorism.

C-2: Coverage of 9/11

This epochal terrorist attack has generated considerable writing.

Finnegan, Lisa. *No Questions Asked: News Coverage Since 9/11*. Westport, CT: Praeger, 2007. Reviews media coverage from the 9/11 attacks of 2001 through the 2003 war in Iraq. It also compares and contrasts how American versus international media covered key events during this period. Explains why journalists responded the way they did during wartime and explores the ramifications for democracy of a comparatively weak news media.

Gilbert, Allison, ed. *Covering Catastrophe: Broadcast Journalists Report September 11*. Chicago: Bonus Books, 2002. Melds recollections of numerous network and local radio and television reporters in covering events in New York, Washington, and Pennsylvania, recreating the chaos and confusion of that day.

Greenberg, Bradley S., ed. *Communication and Terrorism: Public and Media Responses to 9/11*. Creskill, NY: Hampton Press, 2002. Contains 23 essays in two parts—how the story was disseminated, content of many news stories about 9/11 events, and some sense of the news impact on news audiences. *See also* next entry.

Noll, A. Michael, ed. *Crisis Communications: Lessons from September 11*. Lanham, MD: Rowman & Littlefield, 2003. Papers on the function and uses of media during the crisis, diffusion of news about the attacks, problems with communications at the World Trade Center, social dynamics of wireless links that day, content analysis of network newscasts on that and following days, comparing reporting in Germany and America, and comparing online and legacy media content and uses. *See also* previous entry.

Zelizer, Barbie, and Stuart Allan, eds. *Journalism after September 11*. New York: Routledge, 2002. Sixteen researchers from different countries assess coverage and the likely impact of those events on future journalism. Coverage includes photography, Internet, supermarket tabloids, and both broadcast and traditional print news media.

C-3: Disasters

What roles news media play in both natural and man-made disasters (other than terrorism and assassinations) have been receiving more attention in recent years.

Disasters and the Mass Media. Washington, DC: National Academy of Sciences, 1980. Papers from a workshop covering international practices, national and local perspectives, disaster warning and relief and news media, positives and negatives in media reporting of disasters, and research needs. Each topic includes at least two papers.

Fry, Katherine. *Constructing the Heartland: Television News and Natural Disaster*. Cresskill, NJ: Hampton Press, 2003. How people and technology combine to create vivid news images of weather (such as hurricanes) and other natural disasters.

Masel-Walters, Lynne, et al., eds. *Bad Tidings: Communication and Catastrophe*. Hillsdale, NJ: Lawrence Erlbaum, 1989. Ten research papers on the role of news media in reporting natural and man-made disasters, with many case studies to illustrate points made.

Smith, Conrad. *Media and Apocalypse: News Coverage of the Yellowstone Forest Fires,* Exxon Valdez *Oil Spill, and Loma Prieta Earthquake*. Westport, CT: Greenwood, 1992. How American television covered three big 1988–89 stories, including how sources were identified and used and how that is often a weak point of such news.

Sylvester, Judith. *The Media and Hurricanes Katrina and Rita: Lost and Found*. New York: Palgrave Macmillan, 2008. Reviews the disastrous 2005 hurricane season and its impact on New Orleans and elsewhere and how news media portrayed these storms and their devastating aftermath.

Wilkins, Lee. *Shared Vulnerability: The Media and American Perceptions of the Bhopal Disaster*. Westport, CT: Greenwood, 1987. The chemical plant spill in an Indian city in 1984 is reviewed, as to both news reports and public opinion about it.

C-4: Conflict and Violence

The impact of televised violence (much of it in drama programs) is a long-standing research concern.

Cohen, Akiba, et al. *Social Conflict and Television News*. Newbury Park, CA: Sage, 1990. The role of television in covering and sometimes having an impact upon social conflicts, using both content analysis and survey research methods to review issues and discuss relationships between media presentation and audience perceptions.

Dart Center for Journalism and Trauma. http://www.dartcenter.org. Wide-ranging site concerning coverage of stories of violence and disaster and consequences for journalists (and health and other workers) who cover such stories.

Edy, J. A. *Troubled Pasts: News and the Collective Memory of Social Unrest*. Philadelphia: Temple University Press, 2006. Observes the process of negotiating meaning for the past as it unfolds in news, exploring ways that news practices, relationships between actors who make news, expectations of news media audiences, and the impact of current events affect development of collective memories in a mass society. Uses case studies of the 1965 Watts riots and 1968 Democratic Convention in Chicago.

Gitlin, Todd. *The Whole World Is Watching: Mass Media in the Making and Unmaking of the New Left*. Berkeley: University of California Press, 1980. Insightful sociological study of how television (especially) expanded the reach and impact of protesting campus activists (especially over the Vietnam War), but later also underlined their darker aspects. The title comes from what protesters at the 1968 Democratic convention in Chicago chanted as they were arrested.

Michigan State University, School of Journalism. *Victims and the Media Program*. http://victims.jrn.msu.edu. Designed to assist news media in reporting about crime, trauma, and catastrophe, this includes symposia of experts, links, and available resources.

Nerone, John. *Violence against the Press: Policing the Public Sphere in U.S. History*. New York: Oxford University Press, 1994. Reviews incidents of violence against news media from the country's beginning to year of publication. The author finds such attacks are systematic and recurring.

Simpson, Roger, and William Coté. *Covering Violence: A Guide to Ethical Reporting about Victims and Trauma*. New York: Columbia University Press, 2006 (2nd ed.). Melds examples to assess reporting, including what trauma is, how journalists can be at risk for trauma, lessons from 9/11, reporting the scene, interviews, writing trauma stories, pictures and sounds of trauma,

reporting about children, the Columbine High School shootings, reporting on rape trauma, and the Oklahoma City bombing.

D. Investigative Journalism

The first well-known investigative reporting was that of the muckrakers in the early twentieth century. *See also* reporter biographies, Section 7-C.

Aucoin, James L. *The Evolution of American Investigative Journalism*. Columbia: University of Missouri Press, 2005. Traces the rise of in-depth investigative reporting from 1960 to 1990, and more specifically the role of the Investigative Reporters and Editors (IRE) group, including its roles in "mainstreaming" such reporting and its expensive and thus fairly rare social practice in journalism.

See Berry, Section 1-F-1.

Borjesson, Kristina. *Into the Buzzsaw: Leading Journalists Expose the Myth of a Free Press*. Amherst, NY: Prometheus Books, 2004 (rev. ed.). Expanded anthology of articles by investigative reporters whose work ran into criticism by the mainstream media. Some of the case studies are more convincing than others, as one journalist's reputed censorship may be little more than sour grapes or even journalistic malpractice.

Center for Public Integrity. *The Corruption Notebooks: 25 Investigative Journalists Report on Abuses of Power in Their Home Country*. Washington, DC: Public Integrity Books, 2004. Collection of 25 articles by different investigative reporters detailing corruption in their home countries—a compendium of bribery, kickbacks, scams, nepotism, cheating, and organized crime penetration of government, politics, military, and business life.

Collins, Anthony. *Words of Fire: Independent Journalists Who Challenge Dictators, Drug Lords, and Other Enemies of a Free Press*. New York: New York University Press, 2001. Reviews world of independent journalists and the challenges they face confronting dictators, hostile military forces, and narcoterrorists. Such "guerrilla" journalists are often the first on a story and may thus face the brunt of their subject's wrath.

DeFleur, Margaret H. *Computer-Assisted Investigative Reporting: Development and Methodology*. Mahwah, NJ: Lawrence Erlbaum, 1997. How to do it (electronic records analysis), or do it better, using a number of useful case studies.

Ettema, James S., and Theodore L. Glasser. *Custodians of Conscience: Investigative Journalism and Public Virtue*. New York: Columbia University Press, 1998. Reviews reporter's craft as moral discourse, how values and even anger can get lost in the stream of news stories, and the interdependence of fact and value—all illustrated with a number of detailed examples.

Greenwald, Marilyn, and Joseph Bernt, eds. *The Big Chill: Investigative Reporting in the Current Media Environment*. Ames: Iowa State University Press, 2000. Scholarly papers (nearly a dozen) on public and institutional reactions to investigative reports published or broadcast during the late 1990s. Using a variety of methods, the authors come up with a mixed verdict and suggest future changes.

Investigative Reporters and Editors. http://www.ire.org. This University of Missouri journalism school-based organization provides access to some of the most recent investigative journalism, and provides training in investigative techniques.

Jensen, Carl, ed. *Stories That Changed America: Muckrakers of the 20th Century*. New York: Seven Stories Press, 2002. Anthology of some of muckraking's "greatest hits" from 1902 to 1971, edited with explanatory introductions. The editor tilts to book authors on the political left in his choice of journalistic heroes, but it is a roster few could challenge.

Miraldi, Robert. *Muckrakers and Objectivity: Journalism's Colliding Traditions*. Westport, CT: Greenwood, 1990. Reviews both press and broadcast cases and people to project the future of investigative reporting. Reviews role of muckrakers as heroes and villains, the storytelling function of news reporting, why traditional muckraking ended, and the roles of Edward R. Murrow documentaries at CBS in the 1950s and the *New York Times* crusades.

Miraldi, Robert. *The Muckrakers: Evangelical Crusaders*. Westport, CT: Greenwood, 2000. Eight case studies of key practioners.

Patterson, Margaret Jones, and Robert H. Russell. *Behind the Lines: Case Studies in Investigative Journalism*. New York: Columbia University Press, 1986. Useful narrative of six fairly recent stories and the journalistic digging that brought them to light.

Serrin, Judith, and William Serrin, eds. *Muckraking! The Journalism That Changed America*. New York: The New Press, 2002. An anthology of 121 different articles that celebrate the history of investigative reporting from colonial times to the present, arranged topically into more than a dozen chapters on politics, race, women, war, workers' rights, conservation, courts, the poor, sports, news press, and public health and safety.

Tichi, Cecelia. *Exposes and Excess: Muckraking in America, 1900–2000*. Philadelphia: University of Pennsylvania Press, 2004. Centers on the 1890s and the 1990s "gilded" eras and the growing gulf between those at the economic top and everybody else, focusing on the work of exemplar journalists in each period—and five reprinted stories from the latter era.

Weir, David, and Dan Noyes. *Raising Hell: How the Center for Investigative Reporting Gets the Story*. Reading, MA: Addison-Weslety, 1983. Collection of eight stories with context for each, assessing the first five years' work of the center.

Wilson, Harold. McClure's Magazine *and the Muckrakers*. Princeton, NJ: Princeton University Press, 1970. A history of *McClure's,* the most important of muckraking monthlies so popular at the turn of twentieth century, which provided a new medium for many literary and political writers working in the vanguard of the Progressive movement, including Robert Louis Stevenson, Kipling, and Arthur Conan Doyle.

E. Courts and the Law

This covers reporting about courts, crime, and the law. For works on free press/fair trial legal issues, see Section 8-C-4.

Alexander, S. L. *Media and American Courts: A Reference Handbook*. Santa Barbara, CA: ABC-CLIO, 2004. Offers a broad introductory survey including a historical overview of the free press/fair trial conflict. Includes a survey of multiple controversies and problems, a chronology and biographical sketches (of judges, reporters, and attorneys—about 20 of them), some facts and data, an annotated guide to associations, organizations and government agencies, and, finally, some selected print and nonprint resources.

Alexander, S. L. *Covering the Courts: A Handbook for Journalists*. Lanham, MD: Rowman & Littlefield, 2003 (2nd ed.). Provides detailed descriptions of each step of the judicial process along with tips from top journalists on how best to create a comprehensive analysis of courtroom activities.

Benedict, Helen. *Virgin or Vamp: How the Press Covers Sex Crimes*. New York: Oxford University Press, 1992. Rape myths and language, how stereotypes get in the way of accurate reporting the portrayal of women in news media, and a chapter each on four such crimes during the 1978–90 period and how they were handled by news media.

Bybee, Keith J., ed. *Bench Press: The Collision of Courts, Politics and the Media*. Stanford, CA: Stanford University Press, 2007. Nine papers focusing heavily on courts and their judges and how the latter are selected or elected—and whether the process aids or harms their insulation from politics. Three papers focus on journalists' problems in covering judicial nominations and court proceedings.

Chermak, Steven M. *Victims in the News: Crime and the American News Media*. Boulder, CO: Westview Press, 1995. Examines three decades of media portrayals of crime victims, combining content analysis, ethnography, and interviews. Some crime types are more covered than others, especially those affecting children or the elderly.

Chiasson, Lloyd, Jr., ed. *The Press on Trial: Crimes and Trials as Media Events*. Westport, CT: Praeger, 1997. Chapters on 15 famous trials dating back to John Peter Zenger in 1735 up to the infamous O. J. Simpson criminal trial in 1995. Each chapter describes a case and its background.

Criminal Justice Journalists, *Covering Crime and Justice: A Guide for Journalists*. http://www.justicejournalism.org/crimeguide. A dozen very extensive

chapters covering all aspects of such reporting, with further resources and story ideas.

Cuklanz, Lisa M. *Rape on Trial: How the Mass Media Construct Legal Reform and Social Change*. Philadelphia: University of Pennsylvania Press, 1995. Examines both news and fictional accounts of three highly publicized trials, discovering more favorable treatment of victims' viewpoints.

Davis, Richard. *Decisions and Images: The Supreme Court and the Press*. Englewood Cliffs, NJ: Prentice Hall, 1994. Key media-relevant decisions are assessed and placed in context.

Denniston, Lyle W. *The Reporter and the Law: Techniques of Covering the Courts*. New York: Columbia University Press, 1992 (rev. ed.). First issued by the American Bar Association in 1980, this offers practical advice that includes covering legislative bodies.

Ericson, Richard V., ed. *Crime and the Media*. Brookfield, VT: Ashgate, 1995. Anthology of more than 20 scholarly papers from both sides of the Atlantic, including discussions of televised trials, what makes crime news, media politics of crime and criminal justice, police news, reporting of crime numbers and images, drug problems in print media, news media influences on public views of sentencing, and the effects of framing on attributions of responsibility for crime and terrorism.

Ericson, Richard V., et al. *Representing Order: Crime, Law, and Justice in the News Media*. Toronto: University of Toronto Press, 1991. Assessment of media content concerning different aspects of the legal system.

Fox, Richard L., et al. *Tabloid Justice: Criminal Justice in an Age of Media Frenzy*. Boulder, CO: Lynne Rienner, 2007 (2nd ed.). Based on both content analysis and survey research, study assesses amount and impact of "trial of the century" coverage by both newspapers and television/cable during the 1990s and early 2000s. Discusses growing news role of each such trial, steady shift of news media to tabloid reporting, the role of these trials in the emergence of newer media (including cable's Court TV, among others), how this kind of coverage affects reader and viewer perceptions of criminal justice system, and the roles of race, gender, and class in these stories.

Hayslett, Jerrianne. *Anatomy of a Trial: Public Loss, Lessons Learned from The People vs. O. J. Simpson*. Columbia: University of Missouri Press, 2008. As the court's media liaison, the author mediated between the judge and the media. Written with Judge Ito's cooperation, the study shows how the trial produced a bunker mentality in the judicial system, shaping media and public access to courts with a lasting impact on cameras in the courtroom, jury selection, and fair-trial/free-press tensions.

Hunt, Darnell M. *O. J. Simpson Facts and Fictions: News Rituals in the Construction of Reality*. New York: Cambridge University Press, 1999. Focusing on local television and press coverage of this case and story, the sociologist author looks at race ("race card") and gender reactions by audiences and compares and contrasts news media images with reality. *See also* Thaler, below.

Jewkes, Yvonne. *Media and Crime*. Thousand Oaks, CA: Sage, 2004. A basic text on the topic including news reporting of crime; media constructions of children and women as victims and offenders; moral panics over pedophiles; the relationship between media and police; "reality" crime shows; surveillance and social control; and newer media.

Jewkes, Yvonne, ed. *Crime and Media*. Thousand Oaks, CA: Sage, 2009 (3 vols.). Anthology includes important work from contemporary and classic literature that bridges media studies and criminology. The individual volumes:

I. Surveys theoretical issues in the study of crime and news media and explores both production and consumption of crime-related media in news, documentary and current affairs, soap opera, situation comedy, and docudrama television.

II. Explores notions of "newsworthiness" and news values that underpin media representations of crime.

III. Discusses innovative media technologies and surveillance technologies.

Krajicek, David J. *Scooped! Media Miss Real Story on Crime while Chasing Sex, Sleaze, and Celebrities*. New York: Columbia University Press, 1998. Criticizes news media for "drive by" journalism, stressing latest crimes and alarming readers and viewers rather than informing them of the context and larger trends inherent in such stories.

Lawrence, Regina G. *The Politics of Force: Media and the Construction of Policy Brutality*. Berkeley: University of California Press, 2000. Drawing on a decade-long content analysis of the *Los Angeles Times* and *The New York Times,* the author provides a picture of media coverage of police use of force. *See also* Perlmutter, below.

Lipschultz, Jeremy H., and Michael L. Hilt. *Crime and Local Television News*. Mahwah, NJ: Lawrence Erlbaum, 2002. Examines how local television newsrooms cover crime, including such controversial issues as use of crime coverage to build ratings and new models for reform of local TV newscasts. Includes national survey data from news managers and content analyses from late night newscasts in a range of markets.

Lotz, Edward Roy. *Crime and the American Press*. Westport, CT: Praeger, 1991. Investigates the ample space American papers devote to crime, and justifications and criticisms this has generated. Concludes that 30 percent of front-page stories cover police, courts, and criminals and discusses functions and dysfunctions of crime reporting, ideological biases of crime news, and the balance between coverage of explosive events and less dramatic news of courts and prisons.

Mackenzie, Margaret A. *Courting the Media: Public Relations for the Accused and the Accuser*. Westport, CT: Praeger, 2006. Chapters discuss the power of news media, problems with trials of celebrities, accusations in custody disputes, matters of life and death, the media "face" of murder suspects, white-collar crimes, empowering those who are disenfranchised, sexual abuse accusations and motives, "mea culpa" press conferences, and insanity and gag orders, among other topics.

Muraskin, Roslyn, and Shelly Feuer Domash. *Crime and the Media: Headlines vs. Reality*. Upper Saddle River, NJ: Prentice Hall, 2006. Examines, through study of ten cases that have made headlines, the fear of crime, especially among heavy users of television. In addition to cases such as Scott Peterson, Marilyn Sheppard, and Jon Benet Ramsey, the authors focus on changes in sentencing laws, policies, and increased incarceration rates, as well as the war on drugs, and seek factors that brought about change.

Perlmutter, David D. *Policing the Media: Street Cops and Public Perception of Law Enforcement*. Thousand Oaks, CA: Sage, 2000. Centers on police in a small Minneapolis area community, offering a photo-documentary along with interviews and observations about crime coverage based on several mini-case studies when the author was present. *See also* Lawrence, above.

Scheutz, Janice, and Kathryn Snedaker. *Communication and Litigation: Case Studies of Famous Trials*. Carbondale: Southern Illinois University Press, 1988. Narrative of seven trials over nearly a century shows how they were covered and what impact that coverage had on trial participants.

Slotnick, Elliot E., and Jennifer A. Segal. *Television News and the Supreme Court: All the News That's Fit to Air?* New York: Cambridge University Press, 1998. Explores how important selected decisions were covered by television, how producers decide which cases to report, and accuracy in covering often complex decisions, especially on deadline. Offers useful suggestions for improvement based on the importance of television reporting about the least known or understood branch of the federal government.

Surette, Ray. *Media, Crime, and Criminal Justice: Images, Realities and Policies*. Belmont, CA: Wadsworth, 2006 (3rd ed.). Provides a bridge between relevant mass media research findings and criminal justice practice and corrects common misconceptions regarding media effects on crime and justice.

Thaler, Paul. *The Watchful Eye: American Justice in the Age of the Television Trial*. Westport, CT: Praeger, 1994. Reviews the role and impact of having cameras in courtrooms

using a New York case study and interviews with participants.

Thaler, Paul. *The Spectacle: Media and the Making of the O.J. Simpson Story*. Westport, CT: Praeger, 1997. First book-length study of what many dubbed the "trial of the century," divided into sections on the murders and their coverage, and the televised trial of a former sports hero. *See also* Hunt, above.

Tucher, Andie. *Froth & Scum: Truth, Beauty, Goodness and the Ax Murder in America's First Mass Medium*. Chapel Hill: University of North Carolina Press, 1994. Examines news coverage of the notorious 1836 and 1841 New York City murders and how the penny press covered them, including issues of class and power, presumptions about sin and evil, and who got justice and who did not.

Wilson, Jerry V., and Paul Q. Fuqua. *The Police and the Media*. Boston: Little, Brown, 1975. Presents steps necessary (or at least helpful) to establish or improve the public information process in police departments of all sizes.

Wykes, Maggie. *News, Crime and Culture*. Sterling, VA: Pluto Press, 2001. Explores links between culture, criminality, and social control, reviewing how news reports reinforce particular responses to race, poverty, class, and gender. Considers extent to which crime reporting obscures endemic, fundamental and profound issues of poverty, racism, and patriarchy, and operates instead to emphasize deviancy.

Yocum, Robin. *Dead before Deadline: And Other Tales from the Police Beat*. Akron, OH: University of Akron Press, 2004. Vignettes that describe the sad, funny, and often physically repulsive life of this newspaper crime reporter and the police, criminals, innocent victims of violence, and others he meets.

F. Science, Technology, and Medicine

F-1: General

This is a topic of increasing research focus given the growing role of all three subjects in media coverage.

Bauer, Martin W., and Massimiano Bucchi, eds. *Journalism, Science and Society: Science Communication between News and Public Relations*. New York: Routledge, 2007. Assessment in three parts: science journalists speak to what they do and why; followed by a brief history of science journalism; and finally several scholars comment on the realm of science news.

Burkett, Warren. *News Reporting: Science, Medicine, and High Technology*. Ames: Iowa State University Press, 1986. Essentially a how-to manual for doing the job better.

Dunwoody, Sharon M., et al., eds. *Communicating Uncertainty: Media Coverage of New and Controversial Science*. Mahwah, NJ: Lawrence Erlbaum, 1999. Fourteen research papers focus on problems (as well as some successes) of news about the uncertainty inherent in scientific work. Contributors include both journalists and scientists.

Friedman, Sharon M., et al., eds. *Scientists and Journalists: Reporting Science as News*. New York: The Free Press, 1986. Eighteen papers (plus two annotated bibliographies) describe and assess relationships between science and news media from a variety of points of view.

Friedman, Sharon M., et al., eds. *Communicating Uncertainty: Media Coverage of New and Controversial Science*. Mahwah, NJ: Lawrence Erlbaum, 1999. Exploring interactions around scientific uncertainty and its coverage by news media, the study takes three perspectives: that of communicaton scholars who have studied uncertainty in a number of ways; science journalists who have covered these issues; and scientists who have been involved in researching uncertain science and talking to reporters about it.

Gregory, Jane, and Steve Miller. *Science in Public: Communication, Culture, and Credibility*. New York: Basic Books, 2000. Explores the lengthy history of scientific mass communication and various rationales for encouraging greater public understanding of research processes and results, and assessing forces of academe, government, business, and news media that have profoundly different interests in scientific communication.

Gwin, Louis. *Speak No Evil: The Promotional Heritage of Nuclear Risk Communication.* New York: Praeger, 1990. Examines how the nuclear power industry communicates information about nuclear power risks—this a decade after the Three Mile Island near-disaster. The study ranges from the early film *Our Friend, the Atom* to communicating with those living near nuclear plants.

Kiernam, Vincent. *Embargoed Science.* Champaign: University of Illinois Press, 2006. Describes how science news reaches people—and who controls what and when it is released. The "embargo" of the title is how some scholarly journals distribute copies of research findings, but limit recipients (often journalists) as to when they can report results. Discusses how print and broadcast media treat these subjects, lack of sufficient specialized reporters, inevitable questions of time and money, a brief history of embargoes in science journalism, accuracy in reporting, and a conclusion that embargoes should end.

Krieghbaum, Hillier. *Science and the Mass Media.* New York: New York University Press, 1967. One of earlier studies of the relationship, covering the decade after the 1957 launch of the first (Soviet) space satellite, noting how reporting of science can impact policy makers.

Nelkin, Dorothy. *Selling Science: How the Press Covers Science and Technology*. New York: Freeman, 1987. Suggests the danger of excessive hype rather than careful analysis in science stories, assessing the scientist as a "star," the role of news media on public attitudes, promotion and PR in science, and how scientists can control news. Most examples are from newspapers.

Weiss, Carol H., and Eleanor Singer. *Reporting of Social Science in the National Media.* New York: Russell Sage Foundation, 1987. Based in part on content analysis, this reviews the issues and limitations of such journalism.

Wilkins, Lee, and Philip Patterson, eds. *Risky Business: Communicating Issues of Science, Risk, and Public Policy*. Westport, CT: Greenwood, 1991. Fifteen papers about coverage of science, medicine, technology, and disasters by news media as seen from several different disciplines. Questions why the media are generally uncritical about science and technology.

F-2: Environment

Research is expanding here, too, just as the issue itself grows more important to government and business.

Benarde, Melvin A. *You've Been Had! How the Media and Environmentalists Turned America into a Nation of Hypochondriacs.* New Brunswick, NJ: Rutgers University Press, 2002. Argues that media reports exaggerate dangers to the environment and needlessly scare consumers. He argues for a higher degree of scientific literacy among news media and consumers to place reports about dangers to health in better context.

Neuzil, Mark, and William Kovarik. *Mass Media and Environmental Conflict: America's Green Crusades*. Thousand Oaks, CA: Sage, 1996. Historical anecdotes and examples of growing media awareness of and reporting about environmental issues with an appendix providing a timeline of environmental coverage.

Prato, Lou. *Covering the Environmental Beat: An Overview for Radio and TV Journalists.* Washington, DC: Media Institute, 1992. Covers some politics of the environmental movement, broadcast coverage of its issues, risk assessment and environmental science, and other concerns.

Simon, Julian L. *Hoodwinking the Nation.* New Brunswick, NJ: Transaction, 1999. Argues that journalistic methods poorly and unfairly present environmental news given the news media emphasis on bad news to sell newspapers. Put another way, too much positive news is ignored.

Wyss, Bob. *Covering the Environment: How Journalists Work the Green Beat.* New York: Routledge, 2007. Provides background to help reporters identify audiences of interest and anticipate their reactions to environmental news, the role of such journalists attempting to fairly report such news, and examples of reporting environmental science.

F-3: Medicine and Public Health

As in other scientific disciplines, some of the focus here is on translating research findings into consumer-accessible reporting.

Atkin, Charles, and Lawrence Wallack, eds. *Mass Communication and Public Health: Complexities and Conflicts*. Newbury Park, CA: Sage, 1990. Eleven papers on such things as communicating health information, media and health promotion, news media responsiveness to public health, controversies in advertising of health-related products, and regulatory policies.

Friedman, Lester D., ed. *Cultural Sutures: Medicine and Media*. Durham, NC: Duke University Press, 2004. Anthology of 21 original research papers by scholars from different fields, divided into sections about different media, pondering issues of accessibility, accountability, and professionalism raised by popular films and television series, and considering ways in which digital technologies have redefined medicine—all employing many examples and case studies.

Levi, Ragnar. *Medical Journalism: Exposing Fact, Fiction, Fraud*. New York: Wiley/Blackwell, 2001. Explains how journalists can improve stories by asking sharper questions and tapping better sources, and how medical experts should be able to back up statements about treatment effects, health risks, and diagnostic tests.

Seale, Clive. *Media and Health*. Thousand Oaks, CA: Sage, 2003. Reviews research literature on media representations of health, illness, and health care, covering their production, characteristic forms, and relationships with the everyday lives of media audiences. Brings together both well-known and lesser-known studies in the context of an integrated, sociological argument about media and health.

Shoemaker, Pamela J., ed. *Communication Campaigns about Drugs: Government, Media and the Public*. Hillsdale, NJ: Lawrence Erlbaum, 1989. Ten papers discuss how news media were marshaled in government antidrug campaigns during the 1980s, benefits and limits of media use, and what effects have resulted.

Ziporyn, Terra. *Disease in the Popular American Press: The Case of Diphtheria, Typhoid Fever, and Syphilis, 1870–1920*. Westport, CT: Greenwood, 1988. Explores the depiction of medical science to people through popular magazines, analyzing very different depictions of these diseases: diphtheria was associated with children, typhoid fever with uncleanliness, and syphilis with immorality. Medical popularizers presented theory as certainty, and medical science as devoid of error.

G. Literary and Narrative Journalism

A style of writing to some, and of reporting to others, this has been a matter of research and commentary for more than a century.

Carey, James W., ed. *Media, Myths and Narratives: Television and the Press*. Newbury, CA: Sage, 1988. A dozen scholarly assessments of news as narrative make effective use of a number of case studies.

Frus, Phyllis. *The Politics and Poetics of Journalistic Narrative: The Timely and the Timeless*. New York: Cambridge University Press, 1994. Explores the relationship between journalism in periodicals and fiction as well as the nonfiction novel genre.

Hartsock, John C. *A History of American Literary Journalism: The Emergence of a Modern Narrative Form*. Amherst: University of Massachusetts Press, 2000. Traces roots of this distinctive form of writing—whether called new or literary journalism or creative nonfiction at least as far back as late nineteenth century. Drawing on techniques of the realistic novel, the writers developed a new narrative style of reporting. By the 1890s, literary journalism had achieved critical recognition.

Harvard University. *Narrative Journalism Bibliography 2004*. http://www.harvard.com/events/nieman2004.pdf. Produced for a Nieman Center conference, this is arranged by broad topic and includes only those titles then in print.

Keeble, Richard, and Sharon Wheeler, eds. *The Journalistic Imagination: Literary Journalists from*

Defoe to Capote and Carter. New York: Routledge, 2007. Ten papers on one or more aspects of journalistic efforts by Daniel Defoe, William Hazlitt, George Sand, Charles Dickens, Willa Cather, Graham Greene, George Orwell, Martha Gellhorn, Truman Capote, and Angela Carter.

Kerrane, Kevin, and Ben Yagoda, eds. *The Art of Fact: A Historical Anthology of Literary Journalism*. New York: Simon & Schuster, 1997. In a collection spanning 372 years, the editors focus on the evolution of New Journalism, a term that, we learn, "was originally coined by Matthew Arnold in 1887 to describe the style of Stead's *Pall Mall Gazette:* brash, vivid, personal, reform-minded, and—occasionally, from Arnold's conservative viewpoint—'featherbrained.'"

Koch, Tom. *The News As Myth: Fact and Context in Journalism*. Westport, CT: Greenwood, 1990. Shows that the narrative form accepted by most academics and practicing news professionals creates a consistent and structural bias that is at root of most "false truths." Demonstrates with early case studies how the use of computer information technologies might modify inadequate narrative styles.

Sims, Norman, ed. *Literary Journalism in the 20th Century*. New York: Oxford University Press, 1990; reprinted by Northwestern University Press, 2008. Collection of a dozen pieces that explore the fine line between fiction and nonfiction from both historical and critical perspectives.

Treglown, Jeremy, and Bridget Bennett, eds. *Grub Street and the Ivory Tower: Literary Journalism and Literary Scholarship from Fielding to the Internet*. Oxford: Oxford University Press, 1998. Fourteen papers provide a British review of literary journalism over 200 years, beginning with Henry Fielding, exploring how scholarly interest in literature is often reflected in literary journalism as well.

Underwood, Doug. *Journalism and the Novel: Truth and Fiction, 1700–2000*. New York: Cambridge University Press, 2008. Focuses on notable journalists-turned-novelists since the early eighteenth century, when novels and commercial periodicals began to emerge as cultural forces. Writers from both sides of the Atlantic are discussed, from Defoe to Dickens, and Twain to Didion. Author shows how literary reputations can be built on journalistic foundations of research and reporting, and how this impacts questions of realism and authenticity throughout the work of many authors.

Weingarten, Marc. *The Gang That Couldn't Write Straight: Wolfe, Thompson, Didion, and the New Journalism Revolution*. New York: Crown, 2006. Critical group biography of the late-twentieth-century new journalists and what they accomplished.

Whitt, Jan. *Settling the Borderland: Other Voices in Literary Journalism*. Lanham, MD: University Press of America, 2008. Focuses on work on Katherine Anne Porter, Eudora Welty, Joan Didion, Sara Davidson, and Susan Orlean, placing them in the larger context of literary journalism more generally.

H. Ethnicity and Minorities

This subsection focuses on news media content; for the minority journalists themselves, see Section 7-I.

H-1: Surveys

These works range from descriptive analyses to how best to undertake such reporting.

Aldrich, Leigh Stephens. *Covering the Community: A Diversity Handbook for Media*. Thousand Oaks, CA: Pine Forge Press, 1999. Brief guide on how to do a better reporting job across different ethnic groups.

Biagi, Shirley, and Marilyn Kern-Foxworth. *Facing Difference: Race, Gender, and Mass Media*. Thousand Oaks, CA: Pine Forge, 1997. Designed as an undergraduate survey text of issues involved in reporting and media portrayals of minorities.

Browne, Donald R., et al. *Television/Radio News & Minorities*. Queenstown, MD: Aspen Institute, 1994. A product of (former President Jimmy) Carter Center, chapters explore examples from several countries reviewing mainstream and specialized programming, coverage of conflict, employment concerns, and obtaining information about minority groups.

Campbell, Christopher P. *Race, Myth, and the News*. Thousand Oaks, CA: Sage, 1995. Seven brief chapters (one a news story case study) exploring myths of marginality, difference, and assimilation with many appendices providing transcripts for each case study.

Cropp, Fritz, et al. *Journalism Across Cultures*. Ames: Iowa State Press, 2003. Provides an overview of journalism issues and research across lines of race, culture, gender, age, sexual orientation, and ideology.

Dines, Gail, and Jean M. Humez, eds. *Gender, Race and Class in Media: A Text-Reader*. Thousand Oaks, CA: Sage, 2002 (2nd ed.). More than 60 research papers, 10 new to this edition, arranged by type of media content (including news) being discussed.

Ghareeb, Edmund. *Split Vision: The Portrayal of Arabs in the American Media*. Washington, DC: American-Arab Affairs Council, 1983. Based on two waves of interviews with journalists in the Middle East (or those who know the region), focusing on newspaper and editorial cartoon images. Other sections review American reporting about the region. *See also* Nacos, below.

Hamamoto, Darrell Y. *Monitored Peril: Asian Americans and the Politics of TV Representation*. Minneapolis: University of Minnesota Press, 1994. Media portrayals and stereotypes are assessed, contrasting recent immigrants with longtime American citizens.

Heider, Don. *White News: Why Local News Programs Don't Cover People of Color*. Mahwah, NJ: Lawrence Erlbaum, 2000. Detailed study of Albuquerque and Honolulu markets using both the author's own on-air experience and ethnographic research. A final chapter offers suggestions on how to improve things.

Hilliard, Robert L., and Michael C. Keith. *Waves of Rancor: Tuning in the Radical Right*. Armonk, NY: M. E. Sharpe, 1999. Provides a chilling review of right-wing "anti" broadcasters since the 1940s, most of whom harp against one or more minority groups. Coverage ranges from "mainstream" figures like Limbaugh to fringe neo-Nazi types.

Keever, Beverly Ann Deepe, et al., eds. *U.S. News Coverage of Racial Minorities: A Sourcebook, 1934–1996*. Westport, CT: Greenwood, 1997. Extensive literature review of research on news coverage of Native, African, Hispanic, and Asian Americans, as well as Pacific Islanders, divided into six historical periods.

Leff, Laurel. *Buried by The Times: The Holocaust and America's Most Important Newspaper*. New York: Cambridge University Press, 2005. Critical history of how *The New York Times* deliberately downplayed Hitler's genocide. Acknowledges difficulties of reporting about wartime atrocities, but argues the paper was hobbled by reliance on official sources when the Roosevelt administration was downplaying the Holocaust, because it sought to deflect isolationist criticism that Jews caused the war.

Miller, Sally M., ed. *The Ethnic Press in the United States: A Historical Analysis and Handbook*. Westport, CT: Greenwood, 1987. Includes coverage of 27 different groups (all immigrants at one time or another) by a variety of academic authors, assessing the development of newspapers, often in native languages, and their influence.

Morgan, Arlene Notoro, et al., eds. *The Authentic Voice: The Best Reporting on Race and Ethnicity*. New York: Columbia University Press, 2006. Combines multimedia (there's a DVD and related website) drawn from a series of Columbia University workshops to suggest models of good reporting in this often difficult subject area. Editors provide a host of examples in text and video that "reflect the way news organizations tend to frame coverage" (p. xvi).

Nacos, Brigitte L., and Oscar Torres-Reyna. *Fueling our Fears: Stereotyping, Media Coverage, and Public Opinion of Muslim Americans*. Lanham, MD: Rowman & Littlefield, 2007. Study of New York City's and the nation's reaction to the 9/11 attacks. Includes New York group interviews and content analyses of newspaper and television news. Later chapters review Americans' views about Arabs and Muslims here and abroad, detaining and torturing of terrorism suspects, and American Muslim views about American media. *See also* Ghareeb, above.

Nelson, Jack A., ed. *The Disabled, the Media, and the Information Age*. Westport, CT: Praeger, 1994. Fifteen papers discuss portrayals of those with disabilities, disability coverage in news media, disability and civil rights, news media workplace for the disabled, and ethical concerns. Includes several case studies.

Riggins, Stephen Harold, ed. *Ethnic Minority Media: An International Perspective*. Newbury Park, CA: Sage, 1992. Twelve papers on models of aboriginal survival (Alaska, Greenland, Australia, and more), and the quest for media space by immigrants and indigenous minority groups.

Shah, Hemant, and Michael C. Thornton. *Newspaper Coverage of Interethnic Conflict: Competing Visions of America*. Thousand Oaks, CA: Sage, 2004. Using content analysis methodology, this study examines how news media covered conflicts among black, Latino, and Asian American ethnic groups in the final years of the twentieth century in three U.S. cities: Miami, Washington, D.C., and Los Angeles, each of which suffered major racial confrontations.

Simon, Rita J. *Public Opinion and the Immigrant: Print Media Coverage, 1880–1980*. Lexington, MA: Lexington Books, 1985. Traces how major magazines have treated the topic, with one chapter reporting newspaper coverage including an analysis of *New York Times* editorials.

Squires, Catherine R. *Dispatches from the Color Line: The Press and Multiracial America*. Albany: State University of New York Press, 2007. Reviews how journalists utilize information from many sources to link multiracial identity to particular racial norms, policy preferences, and cultural trends. Compares how a new racial group is framed in mass media, and how different media sources reinforce or challenge long-standing assumptions about racial identity and belonging.

Van Dijk, Teun A. *Racism and the Press: Critical Studies in Racism and Migration*. New York: Routledge, 1991. Ethnic affairs reporting during the 1980s as seen in Dutch and British media, including their headlines and subjects of stories, editorials, quotes, and sources.

Wilson, Clint C., III, et al. *Racism, Sexism, and the Media: The Rise of Class Communication in Multicultural America*. Thousand Oaks, CA: Sage, 2003 (3rd ed.). Examines how people of color fit into American life, and how media tell them (and others) how they fit in, including media portrayals and issues of stereotyping.

H-2: Foreign Language

As the nation assumes a more multilingual profile, this subject is receiving greater attention, though to this point most is historical in nature.

Hoerder, Dirk, ed. *The Immigrant Labor Press in North America, 1840s-1970s: An Annotated Bibliography*. Westport, CT: Greenwood, 1987 (3 vols.). Provides a comprehensive guide to literature about these papers. The aim was to provide a comprehensive record of non-English language periodical literature produced by European ethnic groups in North America. Material is arranged by language group. The project began with a 1978 academic symposium. Focus throughout is on labor and radical press to enable researchers to compare and contrast experiences of various ethnic groups as part of the North American working class. The volumes:

1. *Migrants from Northern Europe.*
2. *Labor Migrants from Eastern and Southeastern Europe.*
3. *Migrants from Southern and Western Europe.*

Kanellos, Nicolás, and Helvetia Martell. *Hispanic Periodicals in the United States: Origins to 1960—A Brief History and Comprehensive Bibliography*. Houston, TX: Arte Público Press, 2000. First comprehensive source on production, content, and distribution of these periodicals. Includes some 1,700 annotated entries, notes, and three indexes: by subject, date, and geography.

Mansfield-Richardson, Virginia. *Asian Americans and the Mass Media: A Content Analysis of Twenty United States Newspapers and a Survey of Asian American Journalists*. New York: Garland, 2000. Long title sums it up.

Meyer, Doris. *Speaking for Themselves: Neomexicano Cultural Identity and the Spanish-Language Press, 1880–1920*. Albuquerque: University of New Mexico Press, 1996. Reviews different types of content carried in those four decades.

Rodriguez, America. *Making Latino News: Race, Language, Class*. Thousand Oaks, CA: Corwin Press, 1999. Examines Latino news making as part of a larger narrative about cultural productions and conceptions of Latinos. Traces historical and commercial contexts of Latino orientated news production, beginning with late-nineteenth- and early-twentieth-century Spanish language newspapers, and examines production of contemporary Latino news.

Shore, Elliott, et al., eds. *The German-American Radical Press: The Shaping of a Left Political Culture, 1850–1940*. Champaign: University of Illinois Press, 1992. Eleven papers review newspapers aimed at post-1848 immigrants in America, reviewing their editors, a St. Louis paper, labor movement papers in Chicago during the Civil War, the working-class press in Philadelphia during the so-called gilded age, and a socialist paper in New York City.

Wittke, Carl Frederick. *The German-Language Press in America*. Lexington: University Press of Kentucky, 1957. Covers more than 200 years, taking an overall view of the importance of such papers for immigrants, and profiling some of the more important titles.

H-3: African Americans

Many additional titles discussing the role of blacks and black imagery in popular television entertainment programs are not included here.

Acham, Christine. *Revolution Televised: Prime Time and the Struggle for Black Power*. Minneapolis: University of Minnesota Press, 2004. Focuses on several network television drama programs from the late 1960s through the 1970s—those featuring blacks and aimed (at least in part) at a black audience. While not journalism per se, their content echoed much of what was in the news (and some of the controversies) of the time.

African American History in the Press, 1851–1899: From the Coming of the Civil War to the Rise of Jim Crow, as Reported and Illustrated in Selected Newspapers of the Time. Detroit, MI: Gale Research, 1996 (2 vols.). First volume includes a timeline and carries material through 1869. All entries are arranged by year and include a brief summary of historical events.

Daniel, Walter C. *Black Journals in the United States*. Westport, CT: Greenwood, 1982. Offers multipage profiles of about 100 black-oriented journals and magazines.

Danky, James Philip, and Maureen E. Hady, eds. *African-American Newspapers and Periodicals: A National Bibliography*. Cambridge, MA: Harvard University Press, 1999. Includes some 6,500 publications (from 1827 to 1998) showing, for each one, their frequency of publication, editor and editorial address, subscription rates, publisher, previous editors, variations in title and place or frequency of publication, where they are indexed, and various library holdings. Indexed by writing genres, subjects, editor's and publisher's names, and state.

Dates, Jannette L., and William Barlow, eds. *Split Image: African Americans in the Mass Media*. Washington, DC: Howard University Press, 1990. After a brief history, provides coverage of most media and content types including journalism in print and on commercial and public broadcasting.

Entman, Robert M., and Andrew Rojecki. *The Black Image in the White Mind: Media and Race in America*. Chicago: University of Chicago Press, 2000. Authors find very little in the media that intentionally promotes racism, but find even less that advances racial harmony. They reveal instead a subtle pattern of images that, while making room for blacks, implies a racial hierarchy with whites on top and promotes a sense of difference and conflict.

Fisher, Paul, and Ralph L. Lowenstein. *Race and the News Media*. New York: Praeger, 1967. An early study assessing press coverage, written in the midst of the civil rights struggle across the American South.

Hunt, Darnelle M., ed. *Channeling Blackness: Studies on Television and Race in America*. New York: Oxford University Press, 2004. Presents 15 studies of the shifting relationship between popular television and being black. Using many methodological approaches, examines four issues that have framed popular and scholarly inquiries into the nature of race on television: what authors term the black-white binary; power of news media; distinguishing between "negative" and "positive" images; and the relative importance of markets versus racial motives in television.

Jacob, Donald M., ed. *Antebellum Black Newspapers: Indices*. Westport, CT: Greenwood Press, 1976. Includes reference access to four short-lived titles published in New York City between 1827 and 1841.

Martindale, Carolyn. *The White Press and Black America*. Westport, CT: Greenwood, 1986. Assesses trends in reporting of black America, difficulties in covering racial news, past coverage deficiencies, and results of a content analysis of the previous three decades of coverage.

Pride, Armistead, and Clint Wilson II. *A History of the Black Press*. Washington, DC: Howard University Press, 1997. Begins with *Freedom's Journal* in 1827, and carries the story to broadcasting in the late twentieth century.

Reporting Civil Rights: 1941–1973. New York: Library of America, 2003 (2 vols.). Starting with A. Philip Randolph's call in 1941 for African Americans to march on Washington, this presents firsthand accounts of events that overthrew American segregation, including nearly 200 newspaper and magazine reports and book excerpts, and the work of 151 writers. *See also* the website, which includes visual and audio material related to the topic: http://reportingcivilrights.loa.org.

Roberts, Gene, and Hank Klibanoff. *The Race Beat: The Press, The Civil Rights Struggle, and The Awakening of a Nation*. New York: Knopf, 2006. Pulitzer Prize–winning study explores why the mainstream press took so long to cover the South—and the impact media had on the country once such coverage began. Reviews the role of several key reporters and editors who went against the racist Southern hierarchy to bring change.

Sampson, Henry T. *Swingin' on the Ether Waves: A Chronological History of African Americans in Radio and Television Broadcasting, 1925–1955*. Lanham, MD: Scarecrow, 2005 (2 vols.). Offers a detailed record of the black experience in American radio and television in chapters dividing the story into five-year chunks. Explores an almost forgotten topic—how the country's largest minority was presented on radio and early television in an era of (compared to today) inherent racism. Largely an annotated chronology, each entry (some quite lengthy) relates a specific event or program, and usually includes a period quote.

Savage, Barbara Dianne. *Broadcasting Freedom: Radio, War, and the Politics of Race, 1938–1948*. Chapel Hill: University of North Carolina Press, 1999. Closely evaluates several government-produced programs (*Americans All, Immigrants All, Freedom's People,* etc.) intended to explore the interface of radio with politics and race. The book points out the importance of radio's role in ongoing debates over the place of black Americans in society.

Simmons, Charles A. *The African American Press*. Jefferson, NC: McFarland, 1998. Following a survey of the topic, the book focuses on four newspapers published before World War II: *Chicago Defender, Pittsburgh Courier,* (Oklahoma City) *Black Dispatch,* and *Jackson Advocate* (Mississippi).

Smith-Shomade, Beretta E. *Shaded Lives: African-American Women and Television*. New Brunswick, NJ: Rutgers University Press, 2002. Concludes African American women are still presented on television as distorted and deviant in comedy, music video, television news, and talk shows (Oprah Winfrey is highlighted), showing how they are represented, what forces may influence such images, and what alternates might be available.

Suggs, Henry Lewis, ed. *The Black Press in the South: 1865–1979*. Westport, CT: Greenwood, 1983. Broad survey of the post–Civil War black press covering ownership, finances, and, most importantly, the many topics they covered.

Suggs, Henry Lewis, ed. *The Black Press in the Middle West, 1865–1985*. Westport, CT: Greenwood, 1996. Ten essays cover different states and many different aspects (including types of stories carried) of the growing black press.

Thompson, Julius E. *The Black Press in Mississippi, 1865–1985*. Gainesville: University Press of Florida, 1993. Chronological discussion of black newspapers within a segregationist society, focusing on developments after 1960.

Ward, Brian. *Radio and the Struggle for Civil Rights in the South*. Gainesville: University Press of Florida, 2004. Reviews the growing role of radio in helping blacks define their role in a changing south. Indeed, the author argues that "radio was often the most important mass medium operating within southern black communities during the zenith of the civil rights struggle of the 1950s and 1960s; that it played an important role in laying the foundations for those struggles and was occasionally decisive in determining their outcome" (p. 2).

Washburn, Patrick S. *A Question of Sedition: The Federal Government's Investigation of the Black Press during World War II*. New York: Oxford University Press, 1986. Tells the story of an event (an attempt by the Roosevelt administration to use wartime sedition powers to suppress publication of major black newspapers during World War II) that almost happened, didn't, and why it never occurred.

Washburn, Patrick S. *The African American Newspaper: Voice of Freedom*. Evanston, IL: Northwestern University Press, 2007. Provides a broad view of how the black press developed from the nineteenth century to the present, how such papers got started, their difficult early operation in a racially divided society, many examples of important early-twentieth-century papers and editors, the changing black press between the wars, black press during World War II, black press just before the Civil Rights movement, and the roles and impact of the black press during the Civil Rights struggle from the late 1950s into the 1960s.

Wasserman, Ira. *How the American Media Packaged Lynching (1850–1940): Constructing the Meaning of Social Events*. Lewiston, NY: Edwin Mellen, 2006. How national media framed and thus covered this grim topic, including those in favor and against lynching, over four periods in different parts of the country.

Wickham, DeWayne. *Thinking Black: Some of the Nation's Best Black Columnists Speak Their Minds*. New York: Crown, 1996. Anthology of lesser-known newspaper contributors, writing about different aspects of racial discrimination within the black community, political issues, and other things, generally from a liberal perspective.

Wolseley, Roland E. *The Black Press, U.S.A.* Ames: Iowa State University Press, 1990. A longtime student of black newspapers and magazines surveys their history and then-current status including profiles of major publications, the role of journalism education for black reporters, and the pros and cons of black newspapers.

H-4: Native Peoples

With important exceptions cited here, this is a relatively thin literature thus far.

Browne, Donald R. *Electronic Media and Indigenous Peoples: A Voice of Our Own?* Ames: Iowa State University Press, 1996. Includes the theory and definition of indigenous media, programming and operating such enterprises, a case study of Maori electronic media in New Zealand, the role of language, and the politics of indigenous broadcasting.

Coward, John M. *The Newspaper Indian: Native American Identity in the Press, 1820–90*. Urbana: University of Illinois Press, 1999. Explores newspaper images of Native Americans as impediments to progress and cultural outsiders with some "Noble Savage" portraits as well. By the 1870s, an Indian "frame" was evident in most coverage as such mythology helped sell newspapers.

Daley, Patrick J., and Beverly A. James. *Cultural Politics and the Mass Media: Alaska Native Voices*. Champaign: University of Illinois Press, 2004. Provides a series of case studies exploring varied uses of newspapers, radio stations, and television programs and how they "became strategic sites of Native resistance to political, economic, and

cultural agendas of non-Native settlers" (from the dustwrapper). A brief conclusion discusses how effective use of various media has helped empower Native groups that long lacked any such tool.

Danky, James P., ed. *Native American Periodicals and Newspapers, 1828–1982: Bibliography, Publishing Record, and Holdings*. Westport, CT: Greenwood, 1984. After a lengthy introduction, nearly 1,200 titles are listed and indexed in a variety of ways. *See also* Littlefield and Parins, below.

Keith, Michael C. *Signals in the Air: Native Broadcasting in America*. Westport, CT: Praeger, 1995. The first book on the subject, in seven chapters this relates the story from the earliest "Indian" broadcasts to initial stations devoted to Native American audiences, their funding and impact, and challenges facing such operations. Based largely on interviews with those doing the broadcasting.

Littlefield, Daniel F., and James W. Parins, eds. *American Indian and Alaska Native Newspapers and Periodicals*. Westport, CT: Greenwood, 1984–86 (3 vols.). Very detailed aid to finding these often elusive publications, some issued by individual tribes, some by government agencies, and some merely writing *about* "Indians." *See also* Danky, above. As follows:

1. *1826–1924*. 1984. Includes about 200 titles.
2. *1925–1970*. 1986. Adds 500 titles.
3. *1971–1985*. 1986. Adds a final 1,000 titles.

Murphy, James E., and Sharon M. Murphy. *Let My People Know: American Indian Journalism*. Norman: University of Oklahoma Press, 1981. Provides a brief historical view of American Indian newspapers as they worked against misinformation promulgated by many white newspapers in their complicity to provoke fear and hatred of the native population, to denigrate its culture, and to despoil its homelands. It then focuses on modern Native American newspapers and journals, the hopes of their writers and editors, and their assessments of the future.

Strom, Karen M. *Index of Native American Media Resources on the Internet*. http://www.hanksville.org/NAresources/indices/NAmedia.html. Lists and links for general information, newspapers, journals and magazines, documentary photographs, and broadcasting.

Weston, Mary Ann. *Native Americans in the News: Images of Indians in the Twentieth Century Press*. Westport, CT: Greenwood, 1996. Shows how some images that date from the time of Columbus have persisted to the present, asking whether journalistic practices have helped or hindered accurate portrayals of Native Americans.

H-5: Sexual Orientation

Always controversial in America, research into this subject is growing.

Alwood, Edward. *Straight News: Gays, Lesbians, and the News Media*. New York: Columbia University Press, 1996. Reviews the role of gay men and lesbians in both print and electronic journalism. This is basically historical, drawing, as author points out, on a paucity of source material.

Casteñeda, Laura, and Shannon Campbell, eds. *News and Sexuality: Media Portraits of Diversity*. Thousand Oaks, CA: Sage, 2006. Anthology of 14 papers about the portrayal in news media of gays and related minority groups. Includes many case studies as well as gay men and lesbians in the media between the two world wars, lesbian and gay representation in U.S. news media during in the 1950s, framing the AIDS epidemic story, transgender images in media, news coverage of sex-related hate crimes, media coverage of the U.S. ban on gays in military service, same-sex marriage in a cultural and historical context (a guide for beginning journalists), representation of lesbian and gay parents in the news media, and images of sexual minorities on television.

I. Women's Interests

For works about women journalists, see Section 7-H.

Aronson, Amy Beth. *Taking Liberties: Early American Women's Magazines and Their Readers*.

Westport, CT: Praeger, 2002. Reveals how participatory dynamics and public visibility offered special advantages to women, especially to those with sufficient education, access, and financial means, for whom "ladies magazines" offered opportunities for self-expression, collective discussion, and cultural response.

Bradley, Patricia. *Mass Media and the Shaping of American Feminism, 1963–1975*. Jackson: University of Mississippi Press, 2003. Examines media traditions that served to curtail understandings of feminism as journalists, following craft formulas of their trade, equated feminism with the bizarre and unusual. Asks how public issues are to be raised when those who ask questions are negatively defined before issues are discussed.

Endres, Kathleen L., and Therese L. Lueck, eds. *Women's Periodicals in the United States*. Westport, CT: Greenwood Press, 1995–96 (2 vols.). Essentially a descriptive handbook of magazines directed toward women, with multipage profiles of selected titles.

Consumer Magazines. 1995. General overview, with profiles of 75 past and present periodicals.

Social and Political Issues. 1996. A wide variety of titles are covered including those on religion, labor, suffrage, and pacifism.

Farrell, Amy Erdman. *Yours in Sisterhood:* Ms *Magazine and the Promise of Popular Feminism*. Chapel Hill: University of North Carolina Press, 1998. Traces the history of *Ms.* from its origins in 1972 to its final commercial issue in 1989. Drawing on interviews with former editors, archival materials, and text of the magazine itself, the author examines its efforts to forge a role within a commercial culture.

Harris, Sharon M., and Ellen Gruber Garvey, eds. *Blue Pencils and Hidden Hands: Women Editing Periodicals, 1830–1910*. Boston: Northeastern University Press, 2002. Anthology of original critical essays exploring how women periodical editors redefined women's identities and roles, and influenced public opinion about such issues as abolition and woman suffrage.

Humphreys, Nancy K. *American Women's Magazines: An Annotated Historical Guide*. Westport, CT: Greenwood, 1989. Some 900 descriptive entries are divided into sections on alternative and mainstream publications.

Kitch, Carolyn. *The Girl on the Magazine Cover: The Origins of Visual Stereotypes in American Mass Media*. Chapel Hill: University of North Carolina Press, 2000. The role of 1895–1930 magazine cover imagery in establishing accepted and only slowly changing social norms of women in American life, noting connections between editorial and advertiser interests.

Lent, John A. *Women and Mass Communications: An International Annotated Bibliography*. Westport, CT: Greenwood, 1991. Some 3,200 items, 85 percent of them annotated, in a broad survey covering all time periods, topics, and global regions (the book is organized by region), and all forms of media. *See also* next entry.

Lent, John A. *Women and Mass Communications in the 1990s: An International, Annotated Bibliography*. Westport, CT: Greenwood, 1999. Continues the bibliography immediately above, adding 3,800 entries from around the world. Both volumes together provide an excellent survey of a huge mass of relevant material. Annotations range from a few words to several sentences and cover general studies, historical studies, women's media, images of women in news media, women as an audience, and women as mass media professionals.

McCracken, Ellen. *Decoding Women's Magazines: From* Mademoiselle *to* Ms. New York: St. Martin's, 1993. Reviews a number of selected titles during the early 1980s, assessing their covers and internal advertisements.

Meyers, Marian. *News Coverage of Violence against Women: Engendering Blame*. Thousand Oaks, CA: Sage, 1997. Argues and shows evidence (including example stories) that criminal violence against women is reported differently than violence against males.

Poindexter, Paula, et al., eds. *Women, Men, and News: Divided and Disconnected in the News*

Media Landscape. New York: Erlbaum/Routledge, 2008. Explores the divide in gender use of news media, looking at how men and women have read and used news in the past and present, how they use technology to access news, and how news pertains to and is used by women. Also addresses women's use of news, considering racial, ethnic, international and feminist perspectives.

Walker, Nancy A. *Women's Magazines, 1940–1960: Gender Roles and the Popular Press*. New York: St. Martin's, 1998. This compendium of articles and advertisements from women's magazines during the 1940s and 1950s chronicles the debate over women's domestic and public roles during two decades of enormous social change in America.

Walker, Nancy A. *Shaping Our Mothers' World: American Women's Magazines*. Jackson: University Press of Mississippi, 2000. Reviews the content of a range of popular titles in the mid-twentieth century to understand how these publications reflected society, including their role in World War II and postwar consumerism.

Zuckerman, Mary Ellen. *Sources on the History of Women's Magazines, 1792–1960: An Annotated Bibliography*. Westport, CT: Greenwood, 1991. Business, advertising, market research, content analysis, editors and writers, and images of women in news media are among topics covered in hundreds of entries.

Zuckerman, Mary Ellen. *A History of Popular Women's Magazines in the United States, 1792–1995*. Westport, CT: Greenwood, 1998. Compares and contrasts magazines and their content with larger social developments at the same time, as well as the role of advertisers and research in changing content and means of presentation. Also illustrates growing specialization of such titles in recent decades.

J. Religion

Another subject controversial by its very nature, much religious writing in news media has been descriptive rather than analytic.

Buddenbaum, Judith M. *Reporting News about Religion: An Introduction for Journalists*. Ames: Iowa State University Press, 1998. Understanding religion and religious news (trends, audiences), and the writing and reporting process.

Buddenbaum, Judith M., and Debra L. Mason, eds. *Readings on Religion as News*. Ames: Iowa State University Press, 1999. More than 130 newspaper and magazine articles are collected in chronological order (starting in 1690!), most concerning Christianity, but showing diverse opinions.

Connolly, Diane and Debra L. Mason. *Reporting on Religion: A Primer on Journalism's Best Beat*. Westerville, OH: Religion Newswriters Association, 2006. Offers an overview of what it is like to cover a media religion beat, with practical advice and information for those already covering religion and for those who are new to this area. Included are seven chapters devoted to the field of religious journalism and to those who write about religion and related spiritual and ethical issues for various media.

Erickson, Hal. *Religious Radio and Television in the United States, 1921–1991: The Programs and Personalities*. Jefferson, NC: McFarland, 1991. Encyclopedia of the genre with entries on many specific programs, key personalities, and program categories. Includes both mainline programs of years ago and today's evangelists.

Fackler, P. Mark, and Charles H. Lippy, eds. *Popular Religious Magazines of the United States*. Westport, CT: Greenwood, 1995. Partially updates Lippy's original guide (*Religious Periodicals of the United States: Academic and Scholarly Journals,* Greenwood, 1986) focusing on those publications aimed at general readers. About 100 magazine profiles range from three to ten pages each.

Hangen, Tona J. *Redeeming the Dial: Radio, Religion & Popular Culture in America*. Chapel Hill: University of North Carolina Press, 2002. Seeks origins of today's televangelism by reviewing radio religion to 1939 (mainly free time given to "mainstream" religions), some early on-air religious figures, and the relation of radio religion to postwar popular culture generally.

Hoover, Stuart M. *Religion in the News: Faith and Journalism in American Public Discourse*.

Thousand Oaks, CA: Sage, 1998. Based on surveys and interviews, this study surveys religious reporting in print and electronic media with some discussion of religious journalism audiences.

Lochte, Bob. *Christian Radio: The Growth of a Mainstream Broadcasting Force.* Jefferson, NC: McFarland, 2006. An amalgam of both scholarly and popular literature, this is a history of Christian (Protestant) radio broadcasting in the United States, examining people whose work has contributed to its success and, more importantly, an analysis of why Christian radio has expanded far beyond its small station origins to mainstream television and radio.

McCloud, Sean. *Making the American Religious Fringe: Exotics, Subversives, and Journalists, 1955–1993.* Chapel Hill: University of North Carolina Press, 2004. Offers content analysis of coverage of sects and fringe religions in America published in well-known newsweeklies, general interest magazines, some highly regarded religious magazines, and other titles such as *Life, Look, Esquire, Jet, Seventeen,* and *Catholic World.* Concludes that our definition of "mainstream" religion has changed in press coverage over time.

Melton, J. Gordon, et al. *Prime-Time Religion: An Encyclopedia of Religious Broadcasting.* Phoenix, AZ: Oryx, 1997. Nearly 400 brief entries about radio and television people and programs, past (since 1921) and present.

Meyer, Birgit, and Annelies Moors, eds. *Religion, Media, and the Public Sphere.* Bloomington: Indiana University Press, 2006. Scholarly papers examine how media are used by religions and why religion and media have become so interdependent. Authors argue that there is a clear "public presence of religion in the information age" reflected in the Internet, book publishing, press, broadcasting, music, and recordings.

Said, Edward W. *Covering Islam: How the Media and the Experts Determine How We See the Rest of the World.* London: Vintage, 1997 (2nd ed.). How American popular media have used and perpetuated an unfavorable image of Islamic people, and how this has prevented understanding while providing a fictitious common enemy for Americans.

Schmalzbauer, John. *People of Faith: Religious Convictions in American Journalism and Higher Education.* Ithaca, NY: Cornell University Press, 2003. Examines the role and meaning of religion in the private lives of journalists and university teachers and how this colors their professional work. The author argues an overarching theme: That there is an "acute (tension) between professional and religious ways of knowing in American society," and thus most journalists and educators wrestle with what is the truth. Two of seven chapters relate to journalism.

Silk, Mark. *Unsecular Media: Making News of Religion in America.* Urbana: University of Illinois Press, 1998. A mixture of history and current assessment, this focuses on a content analysis of religious reporting in newspapers and news magazines, arguing that such reporting generally reflects (though it may not be keeping up with) general American beliefs.

Sloan, W. David, ed. *Media and Religion in American History.* Northport, AL: Vision Press, 2000. Anthology of media and scholarly reports offering a review of changing relationships over time.

Soukup, Paul A. *Christian Communication: A Bibliographical Survey.* Westport, CT: Greenwood, 1989. Some 1,300 annotated entries arranged in topical sections, including major European languages as well as English.

Underwood, Doug. *From Yahweh to Yahoo: The Religious Roots of the Secular Press.* Urbana: University of Illinois Press, 2002. Argues that the roots, values, and ethics of American journalism lie in past religious history. Reviews past as well as current religious thinking of a national sample of journalists who, the author concludes, are "covertly religious people." Later chapters assess how religion is reported, roles of televangelists, and the Internet's impact.

K. Business and Economics

While they both concern money, these two topics of journalism (*not* the same, as practitioners make

clear) are relative newcomers to the journalistic scene and have developed substantially in recent decades, often taking on a policy coloration.

Epstein, Gene. *Econospinning: How to Read Between the Lines When the Media Manipulate the Numbers*. New York: Wiley, 2006. Covers a variety of topics including eldercare fraud, ways to measure employment, long-term unemployment myths, what the employment-population ratio tells us, average hourly earnings and unemployment rates, wages and productivity, changes in payroll employment data, Greenspan idolatry, "Freakonomics," and Lou Dobbs and jobs.

Greco, Albert N. *Business Journalism: Management Notes and Cases*. New York: New York University, 1988. A case book on the processes of gathering and editing business news.

Gussow, Don. *The New Business Journalism: An Insider's Look at the Workings of America's Business Press*. San Diego, CA: Harcourt, 1984. Useful now for its snapshot of the structure and operations of the sector before substantial digital technology entered the picture.

Kirsch, Donald. *Financial and Economic Journalism: Analysis, Interpretation, and Reporting*. New York: New York University Press, 1979. Briefly reviews development of the this kind of press, then many different types of stories and business records that support such stories. One chapter reviews selected types of specialized industries; another government regulators.

Parsons, Wayne. *The Power of the Financial Press: Journalism and Economic Opinion in Britain and America*. New Brunswick, NJ: Rutgers University Press, 1990. Comparative study of the growth of such journalism in both countries, with a focus on *The Economist, The Financial Times,* and *The Wall Street Journal*.

Roush, Chris. *History of Business Journalism*. http://www.bizjournalismhistory.org. A University of North Carolina journalism school site providing a timeline on the development of business and economic journalism in all its forms.

Roush, Chris. *Profits and Losses: Business Journalism and Its Role in Society*. Oak Park, IL: Marion Street Press, 2006. Asserts that current social attitudes were set in place by twentieth-century reporting on finance, business trends, markets, unemployment, governmental economic policy, corporate malfeasance, and consumers. Breakthroughs in automobile safety, food and drug regulation, and public health were brought about, the author argues, by scrutiny from national news media.

Schuster, Thomas. *The Markets and the Media: Business News and Stock Market Movements*. Lanham, MD: Lexington Books, 2006. Explores the impact of business (and other) news on broadcast and specialized cable business networks and financial market performance. Includes a 50-page bibliography of business and financial communication.

L. Unions and Labor

Somewhat surprisingly, journalism about unions and employment has thus far produced only a limited literature. *See* Section 4-C for works about media-related unions and labor.

Atkins, Joseph B. *Covering for the Bosses: Labor and the Southern Press*. Jackson: University of Mississippi Press, 2008. Probes the often difficult relationship between press coverage and organized labor in the South to the present, focusing on the era since World War II. Details the decline of the once-dominant textile industry, the arrival of foreign automakers from Asia and Germany, and the effects of millions of immigrant workers from Mexico and elsewhere. With few exceptions, news media have acted as partners to business and political interests that keep the South the least-unionized region.

Fones-Wolf, Elizabeth. *Waves of Opposition: Labor and the Struggle for Democratic Radio*. Urbana: University of Illinois Press, 2006. Focuses on the (often fruitless) struggle of labor and unions to have their political, social, and economic views heard over commercial radio stations up to World War II.

Martin, Christopher R. *Framed! Labor and the Corporate Media*. Ithaca, NY: Cornell University Press, 2004. Argues that American news media

have given labor a bum rap by framing stories about labor relations from a consumer perspective; that five news frames dominated news coverage of labor in the 1990s: the consumer is king; the process of production is none of the public's business; the economy is driven by great business leaders and entrepreneurs; the workplace is a meritocracy; and collective economic action is bad. Succeeding chapters critically analyze coverage of five major labor events from the 1990s.

Pizzigati, Sam, and Fred J. Solowey, eds. *The New Labor Press: Journalism for a Changing Union Movement*. Cornell, NY: Cornell University Press, 1992. Anthology of papers on different aspects of labor union publications, including their use of photographs and editorial cartoons. Incorporates several case studies of different union periodicals.

M. Alternative, Dissident, and Underground News Media

Dissent has always been a part of the American press. Underground papers reached their height on college campuses and elsewhere in the 1960s and early 1970s, seeking a very different America from that of mainstream media.

The Alternative Press Center. http://www.altpress.org. Useful entry point for information on alternative publications and trends. Includes an extensive directory of alternative publications of all types.

Armstrong, David. *A Trumpet to Arms: Alternative Media in America*. Los Angeles: Tarcher, 1981 (reissued by South End Press, 1999). Chronicles 200 years of publication, from Tom Paine's *Common Sense* to *I.F. Stone's Weekly,* plus *The Berkeley Barb, L.A. Free Press, Mother Jones,* and *New Age Journal.*

Atton, Chris. *Alternate Media*. Thousand Oaks, CA: Sage, 2001. Examines how and why people produce and use alternative media (to make meaning, to interpret, and to change the world in which they live), reviews a wide range of alternative media with examples from the United States and Britain, placing contemporary alternative media within their cultural, historical and political contexts.

Embardo, Ellen. *Voices from the Underground*. http://www.lib.uconn.edu/online/research/speclib/ASC/exhibits/voices. An online exhibition from University of Connecticut libraries about "Radical Protest and the Underground Press in the Sixties," including a focus on media and the Vietnam War.

Fulton, Len, ed. *The International Directory of Little Magazines and Small Presses*. Paradise, CA: Dustbooks, 1966–present, annual. While much of this material is cultural and not journalism, this directory is aimed at potential authors, with both a regional and a subject index.

Gitlin, Todd. *The Whole World Is Watching: Mass Media in the Making and Unmaking of the New Left*. Berkeley: University of California Press, 1980. Sociological study of free speech and anti-Vietnam war demonstrations on American campuses and elsewhere, largely in late 1960s and early 1970s, and how media coverage impacted protesters and viewer reactions to protesters.

Glessing, Robert J. *The Underground Press in America*. Bloomington: Indiana University Press, 1970. Early survey of the history and development of such newspapers.

Johnson, Michael I. *The New Journalism: The Underground Press, The Artists of Nonfiction, and Changes in the Established Media*. Lawrence: University Press of Kansas, 1971. Compares and contrasts writers and their work for mainstream and underground newspapers.

Kessler, Lauren. *The Dissident Press: Alternative Journalism in America*. Beverly Hills, CA: Sage, 1984. Provides a brief history of papers outside the mainstream.

Leamer, Laurence. *The Paper Revolutionaries: The Rise of the Underground Press*. New York: Simon & Schuster, 1972. Another historical survey.

Ostertag, Bob. *People's Movements, People's Press: The Journalism of Social Justice Movements*. Boston: Beacon Press, 2007. Focuses thematically rather than chronologically on how five movements—abolition, women's suffrage, gay and lesbian liberation, Vietnam antiwar position, and

environmental concerns—were covered in specialized alternative media devoted to each. This study grew out of a report commissioned by the Independent Press Association.

Peck, Abe. *Uncovering the Sixties: The Life and Times of the Underground Press*. New York: Pantheon, 1985. Traces the underground press's origins to *Mad* magazine, and documents fortunes of papers such as *Los Angeles Free Press* and *The East Village Other*. Draws on extensive interviews with writers, readers, and publishers of the underground press, out of which came some notable newspapers and magazines, among them *Village Voice* and *Rolling Stone*.

Roberts, Nancy L. *American Peace Writers, Editors and Periodicals: A Dictionary*. Westport, CT: Greenwood, 1991. Reviews one genre or focus of alternative publishing.

Streitmatter, Roger. *Voices of Revolution: The Dissident Press in America*. New York: Columbia University Press, 2001. Dissident publications and press movements of the last two centuries, and the often colorful individuals behind them, including abolitionist and labor press, black power publications of 1960s, crusade against barbarism of lynching, the women's movement, antiwar journals, gay and lesbian publications, contemporary online journals, and counterculture papers that flourished during the 1960s.

N. Sports

Much of the writing here has focused on the overwhelming role of commercial television coverage of professional sports.

N-1: Surveys

These tend to focus on the development of such reporting as well as its economic effect.

Baker, Aaron, and Todd Boyd, eds. *Out of Bounds: Sports, Media, and the Politics of Identity*. Bloomington: Indiana University Press, 1997. Anthology that views media representation of professional sports through the lens of cultural studies. The editors contend that the popularity of sports derives not simply from their appeal as leisure entertainment, but from their contribution to the discussion of larger issues of class, race, gender, and masculinity.

Best American Sports Writing. Boston: Houghton Mifflin, 1991–present, annual. Anthology of newspaper and magazine reporting from the previous year.

Boyle, Raymond, et al., eds. *Sports and Media: Recent Economic, Legal, and Technological Developments*. Mahwah, NJ: Lawrence Erlbaum, 2004. Collection of scholarly papers published as a double issue of *Trends in Communication,* discussing how reliable sportscasting is in the anchor role, the development of sportscasting and specialized sporting services as a response to audience demand, and whether the sports fan is being well served.

Caren, Eric C. *Baseball Extra: The Newspaper History of the Glorious Game from Its Beginnings to the Present*. Edison, NJ: Castle, 2000. This collection of rare newspapers chars baseball's history from its beginnings in the mid-1800s to the 1999 World Series game.

Castle, George. *Baseball and the Media: How Fans Lose in Today's Coverage of the Game*. Lincoln: University of Nebraska Press, 2006. Wide-ranging study of press and broadcast coverage including the baseball beat writer, red and blue states of baseball journalism, politics of baseball media, sports-talk radio, and old versus newer media.

Conrad, Mark. *The Business of Sports: A Primer for Journalists*. Mahwah, NJ: Lawrence Erlbaum, 2006. Something of a meld of business and law, this reviews the structure of professional sports, structure of individual sports, college and high school sports, the international sports system (including the Olympics), sports contracts by type of sport, labor relations in sports, sports agents, team relocation and facility issues, sports injuries and liability, drug testing in sports, discrimination issues, intellectual property ownership and sports teams, and traditional and newer media sports coverage.

Jeanrenaud, Claude, and Stefan Kesenne, eds. *The Economics of Sport and the Media*.

Cheltenham, England: Edward Elgar, 2006. Ten papers on such aspects as domestic and international sports rights; most examples concern European teams and events, though three center on American concerns.

Lowes, Mark Douglas. *Inside the Sports Pages: Work Routines, Professional Ideologies, and the Manufacture of Sports News*. Toronto: University of Toronto Press, 1999. An ethnographic study of several sports writers and their methods of producing daily reports for Canadian papers. Centers on how little coverage adult amateur sports receives.

MacCambridge, Michael. *The Franchise: A History of* Sports Illustrated *Magazine*. New York: Hyperion, 1997. Launched by Time Inc. in 1954, *SI* has often pushed change, revolutionizing color printing and making careers of writers and photographers. The author analyzes editorial and marketing strategies, including the infamous swimsuit issue, and profiles most key players—with an emphasis on sportswriters.

Oriard, Michael. *Reading Football: How the Popular Press Created an American Spectacle*. Chapel Hill: University of North Carolina Press, 1993. Explores football's formative years, beginning in the 1870s as a game to be played rather than watched. Within a decade, it became a public spectacle with an immense following, caused primarily by commentary in popular newspapers and magazines. Includes football as a pastime, a sport of gentlemen, a science, a game of rules and their infringements, and a series of cultural stories about power, luck, strategy, and deception—all magnified by football's omnipresence on television. *See* next entry.

Oriard, Michael. *King Football: Sport & Spectacle in the Golden Age of Radio & Newsreels, Movies and Magazines, the Weekly and the Daily Press*. Chapel Hill: University of North Carolina Press, 2001. Building on his earlier study (above), the author describes football from the 1920s through the 1950s when it became embedded in American life. Though millions experienced college and professional football firsthand, more encountered it through newspapers or radio broadcasts, and in newsreels shown at theaters.

Raney, Arthur A. and Jennings Bryant, eds. *Handbook of Sports and Media*. Mahwah, NJ: Lawrence Erlbaum, 2006. A research and teaching anthology that creates a compendium of literature summaries, issue discussions, and critical essays. Chapters appear in four sections covering history and development, business and programming, media audiences, and cases and issues.

Wenner, Lawrence A., ed. *Media, Sports and Society*. Newbury Park, CA: Sage, 1989. Offers 13 papers on such things as history of sports coverage in the U.S., media sports production process, media strategies of professional sports, media sports content, and audiences for media sports.

N-2: Broadcast/Cable Sports

The huge financial implications of televised professional team sports has been the subject of much comment and some research. Many of these books are personal memoirs.

Barnett, Steven. *Games and Sets: The Changing Face of Sports on Television*. London: British Film Institute, 1990. Overall mutual impacts of sports and television are reviewed in chapters on British, European, and American media, including development, costs, the role of technology, scheduling and audiences, and sponsorship.

Chandler, Joan M. *Television and National Sport: The United States and Britain*. Urbana: University of Illinois Press, 1988. Comparative study of live coverage of various professional sports in both nations, and the impact of that coverage on sports, media, and fans, placed against differing national social contexts.

Daddario, Gina. *Women's Sport and Spectacle: Gendered Television Coverage and the Olympic Games*. Westport, CT: Praeger, 1998. The gendering of sports coverage at the 1992–96 games is discussed within a context of feminist sports studies, including lack of much coverage (and/or use of stereotypes) in the past, the Olympic skating scandal in 1994, and rhetorical ways of marginalizing women in competition.

Dempsey, John Mark. *Sports-Talk Radio in America*. Binghampton, NY: Haworth Press, 2006. Profiles ten American radio stations with this format to see how they developed, what they program, and how they differ.

Evey, Stuart, and Irv Broughton. *Creating an Empire: ESPN—The No-Holds-Barred Story of Power, Ego, Money, and Vision That Transformed a Culture*. Chicago: Triumph Books, 2004. Origins of the cable network (and its struggle for rights to televise major events) as told by its original chairman, who eventually sold it to ABC. *See also* next entry.

Freeman, Michael. *ESPN: The Uncensored History*. Dallas, TX: Taylor, 2000. Cable sports network's first two decades are detailed, including scandals within its operations (among them, sexual harassment issues), early financial problems and the network's several ownership changes. *See also* previous entry.

Klatell, David A., and Norman Marcus. *Sports for Sale: Television, Money, and the Fans*. New York: Oxford University Press, 1988. Explores numerous connections among sports, television, money, and fans, including the emergence of major cable sports networks, growth of corporate marketing campaigns, and the vast impact that TV has had on sports, for good and ill. Includes a study of the Olympics, describing network bidding wars, logistics, and the technical brilliance of broadcasts; as well as careers of major sports media figures.

O'Neill, Terry. *The Game behind the Game: High Stakes, High Pressure in Television Sports*. New York: Harper & Row, 1989. Television producer's view of coverage over previous two decades on ABC Sports.

Patton, Phil. *Razzle-Dazzle: The Curious Marriage of Television and Professional Football*. Garden City, NY: Dial, 1984. Relates how television turned a sport into a multimillion-dollar industry, and the impact of that relationship.

Powers, Ron. *Supertube: The Rise of Television Sports*. New York: Coward-McCann, 1984. Tells, based substantially on 100 interviews, how over three decades the networks and professional sports found each other. Many crucial decisions date to the 1960s and earlier.

Rader, Benjamin G. *In Its Own Image: How Television Has Transformed Sports*. New York: The Free Press, 1984. Highlights some of negative aspects including the passing of minor leagues, sports playing to television's needs rather than to live spectators, the impact of network money on sports, and the decline (or elevation, depending on your point of view) of sports heroes.

Schultz, Brad. *Sports Broadcasting*. Woburn, MA: Focal Press, 2002. A practitioner's handbook relating the rise of such content and its impact, writing and producing sports news, ethical issues in covering big-money sports events, and some of the major on-air sports broadcasters.

Smith, Curt. *Voices of the Game: The First Full-Scale Overview of Baseball Broadcasting, 1921 to the Present*. South Bend, IN: Diamond Communications, 1987. Informal and personality-driven history of radio (first 125 pages) and television coverage of professional baseball.

Smith, Ronald A. *Play-by-Play: Radio, Television, and Big-Time College Sport*. Baltimore: Johns Hopkins University Press, 2001. Examines the troubled relationship between higher education and broadcasting, the effects of TV revenue on college athletics (notably football), and the odds of achieving meaningful reform.

Spence, Jim. *Up Close and Personal: The Inside Story of Network Television Sports*. New York: Atheneum, 1988. Primarily a study of ABC Sports by a former network official who reviews the people and events he witnessed over a quarter-century.

Walker, James R., and Robert V. Bellamy Jr. *Center Field Shot: A History of Baseball on Television*. Lincoln: University of Nebraska Press, 2008. Traces a sometimes contentious but mutually beneficial relationship from the first televised game in 1939 to the era of Internet broadcasts, satellite radio, and high-definition TV, considered from the perspective of businessmen collecting merchandising fees and advertising rights, franchise owners with ever more money to spend on

talent, and broadcasters trying to present a game long considered "unfriendly" to television.

O. Entertainment and Celebrities

Though subject to considerable debate within news media arguments over hard versus soft news, coverage of these topics has thus far received only limited research focus.

Evans, Jessica, and David Hesmondhaigh, eds. *Understanding Media: Inside Celebrity*. New York: Open University Press, 2005. Cites current scholarship to shed light on how celebrities are manufactured by media and why audiences respond as they do. With case studies, it examines the construction of celebrity in four concepts: history, text, production, and audience.

Kitch, Carolyn, and Janice Hume. *Journalism in a Culture of Grief*. New York: Routledge, 2008. Focuses on how broadcast and print media cover death, especially that of celebrities in the world of entertainment and politics.

Thussu, Daya Kishan. *News as Entertainment: The Rise of Global Infotainment*. Thousand Oaks, CA: Sage, 2008. Provides a historical appraisal of infotainment; the infrastructure for its globalization as well as coverage of recent wars on television news as high-tech infotainment and growing synergies between Hollywood- and Bollywood-originated infotainment. A "global infotainment sphere" is emerging, the author argues, within which competing versions of news—from 24/7 news networks to bloggers—coexist.

Section 6

Political Communication

As noted in the first entries below, political communication melds many fields—communication studies (including journalism) and political science most obviously, but also sociology, psychology, history, and rhetoric, among others. It also increasingly depends on a whole menu of technologies to connect politicians and candidates with citizens and voters. The Internet is merely the latest.

This is a vast literature and one that is rapidly growing. While publications were few and far between until fairly late in the twentieth century, researchers appear to be making up for lost time as elections increasingly rely on media coverage (and as political communications is increasingly a topic of research interest). Every election is analyzed, some many times. Patterns of communication by politicians in office are also a focus of research interest. A growing amount of interesting work is being done on this topic in Europe as well—see Section 10-D; for political commentators, see Section 7-F.

A. Reference Sources

For public opinion polling, see Section 9-D.

American Political Science Association, *Political Communication Teaching Resources*. http://www.apsanet.org/~polcomm/teaching.html. University course syllabi and other materials useful in learning more about the field.

Bennett, W. Lance. *Political Communication Resources*. http://depts.washington.edu/bennett. One of the important academic researchers (two of his books lead the next subsection) provides a portal to all types of information sources including public opinion and media resources.

Kaid, Lynda Lee, and Christina Holtz-Bacha, eds. *Encyclopedia of Political Communication*. Thousand Oaks, CA: Sage, 2008 (2 vols.). Several hundred entries in this valuable compendium include biographies, programs and publications, campaigns and elections, issues, law and regulation, political organizations, and theoretical concepts. Most entries, some of which run for several pages, have suggested readings and cross-references. Emphasizes the American scene but includes material from Europe and elsewhere.

See Kaid and Holtz-Bacha, Section 10-A.

Miles, William. *The People's Voice: An Annotated Bibliography of American Campaign Newspapers, 1828–1984*. Westport, CT: Greenwood, 1987. Details more than 730 examples of a medium many don't know as fewer than 100 were issued after 1900, underlining that such papers were largely a nineteenth-century phenomenon. Following an introductory history of campaign newspapers with a discussion of significant examples, the bibliography lists newspapers supporting major-party and third-party candidates and other presidential hopefuls.

Newman, Bruce I., ed. *Handbook of Political Marketing*. Thousand Oaks, CA: Sage, 1999. Scholars and political professionals from nine different countries contribute to this review of the role of both good and bad marketing in political campaigns. The 40 papers are organized in six sections: conceptual and historical origins of political marketing; management of political campaigns; analysis of political marketplace; development of

political strategies; execution of political campaigns; and political marketing and democracy.

Nimmo, Dan, and Keith R. Sanders, eds. *The Handbook of Political Communication*. Beverly Hills, CA: Sage, 1981. Experts author 28 chapters that range over the past, present, and likely future of the field in one of its earliest broad reference works. Papers deal with theory, means and modes of communication, settings of and for political communication, and methodologies.

Schaefer, Todd M., and Thomas A. Birkland, eds. *Encyclopedia of Media and Politics*. Washington, DC: Congressional Quarterly Press, 2007. Some 300 generally brief entries review American media's influence on public policy, elections, and politics, to cover relevant events, people, principles, and organizations past and present. Defines concepts, trends, and issues in media and politics and surveys policy, legal issues, and legal cases.

Stempel, Guido H., III, and Jacqueline Nash Gifford. *Historical Dictionary of Political Communication in the United States*. Westport, CT: Greenwood, 1999. Covers concepts, trends, events, journalists, campaign figures, legal cases, candidates, and campaigns through American history. Each entry includes at least one source, and entries (which range from a brief paragraph to a page or more) are signed by their contributors (in many cases, one of the editors).

Stempel, Guido, III. *Media and Politics in America: A Reference Handbook*. Santa Barbara, CA: ABC-CLIO, 2003. Intended as a first-stop source for those lacking much background, in handbook fashion it provides introductory surveys of the history and evolution of political communications, some of its problems, processes of gathering it, a chronology, biographical sketches of key people, selected documents and court cases, a directory of associations and organizations, and an annotated guide to print and nonprint resources.

See Strömbäck and Kaid, Section 10-C.

University of Iowa, Online Communication Studies Resources. *Political Communication and Campaigns*. http://www.uiowa.edu/~commstud/resources/polcomm.html. Annotated listing of links across a wide range of relevant material.

B. Surveys of Media and Politics

These are wide-ranging and often theoretical books (exploring such concepts as agenda-setting and framing, for example), assessing elements in the news media and politics relationship.

Bennett, W. Lance, and Robert M. Entman, eds. *Mediated Politics: Communication in the Future of Democracy*. New York: Cambridge University Press, 2001. Anthology containing 22 articles by postbehavioral political communication scholars. Editors argue that there are more variables to consider, more communication routes to examine, and more methods to use than just public opinion and voter behavior studies.

Bennett, W. Lance. *News: The Politics of Illusion*. New York: Pearson Longman, 2009 (8th ed.). Standard introductory text, first published in 1983, that surveys what news is published or broadcast and what is not—and why—as seen in examples in *The New York Times* and *The Washington Post*, which make clear how much politicians and government officials "control" news.

Braden, Maria. *Women Politicians and the Media*. Lexington: University Press of Kentucky, 1996. Uses a variety of female politicians, past and present, to assess their use of media and media coverage of their careers, suggesting different standards are applied than for men, but that the situation may be easing toward more equality. *See also* Norris, below.

Cook, Timothy E. *Governing with the News: The News Media as a Political Institution*. Chicago: University of Chicago Press, 2005 (2nd ed.). Argues that news media are an integral part of three branches of government—indeed, they are inseparable. The author traces the development of this relationship, how media are political institutions, and the roles of government publicity and media.

Davis, Richard. *The Press and American Politics: The New Mediator*. Upper Saddle River, NJ: Prentice Hall, 1995 (2nd ed.). Chapters on shaping the news, the context of media's role, covering political institutions, media and policy, and the mass public and electoral process.

Davis, Richard, and Diana Owen. *New Media and American Politics*. New York: Oxford University Press, 1998. Focuses on the role of talk radio and television, tabloid journalism of all kinds, and "computer networks" (the commercial Internet was but three years old at this point). Authors see "new" media as largely providing a venue for ranting and venting rather than true political give-and-take.

Diamond, Edwin, and Robert A. Silverman. *White House to Your House: Media and Politics in Virtual America*. Cambridge: MIT Press, 1997. Analyses of what's behind image makers' takeover of Washington policy-making, how Clinton prevailed in 1992 only to lose both good press and job approval ratings less than two years later, what the rise of right-wing populism signifies, how media struggled to identify Hillary Clinton, why health care reform was defeated in newspapers without a vote in Congress, who are audiences for talk radio, and effects of proliferating television channels on political coverage.

Entman, Robert M. *Democracy without Citizens: Media and the Decay of American Politics*. New York: Oxford University Press, 1989. Argues that the media system virtually compels politicians to practice demagoguery. Reviewing news events of the 1980s, the author proposes creating subsidized, party-based news outlets as a way of promoting new modes of news gathering and analysis, of spurring established media to more innovative coverage, and of increasing political awareness and participation.

Fallows, James. *Breaking the News: How the Media Undermine American Democracy*. New York: Pantheon, 1996. Offers a jeremiad about the current sad state of American political journalism, noting how news media treat issues as complex as health-care reform and foreign policy as mere exercises in political gamesmanship.

Gamson, William A. *Talking Politics*. New York: Cambridge University Press, 1992. Reports on an analysis of discussions among small groups of working-class people on four controversial issues: affirmative action, nuclear power, the Arab-Israeli conflict, and the troubles in American industry. Also analyzes how these issues have been covered in news media to review how closely group discussions matched news media coverage.

Gans, Herbert J. *Democracy and the News*. New York: Oxford University Press, 2003. Explores links between a weakened news media and weakened democracy; how despite the advent of cable news networks, the Internet, and other sources, the role of journalists has shrunk as the audience for news moves away from major print and electronic media to smaller outlets. Argues that journalism suffers from too much assembly-line production of publicity for the President and other top political officials.

Ginsberg, Benjamin, and Martin Shefter. *Politics by Other Means: Politicians, Prosecutors, and the Press from Watergate to Whitewater*. New York: Norton, 1999 (2nd ed.). Assesses the growing power of print and electronic media in the electoral and political process, thanks to coverage of Congressional hearings and criminal justice cases as well as general adversarial journalism. The study stresses adversarial use of the judicial system more than news media.

Graber, Doris. *Processing Politics: Learning from Television in the Internet Age*. Chicago: University of Chicago Press, 2001. Integrating a broad range of current research on how people learn, this study demonstrates that the best televised presentations excel at transmitting information and facilitating learning. Critiques current political offerings in terms of their compatibility with our learning capacities and interests, and considers economic and political obstacles that affect content received on the air, cable, or Internet.

Graber, Doris. *Mass Media and American Politics*. Washington, DC: Congressional Quarterly, 2005 (7th ed.). Explores the foundations of the media system focusing on political and technological developments to show how media influence governmental institutions and functions, and in turn how government shapes how media work and disseminate information. Focuses on news media roles in public and private sectors; the media impact on attitudes and perceptions of ordinary Americans and political elites; and how news media cover governmental institutions and political situations.

Graber, Doris, ed. *Media Power in Politics*. Washington, DC: Congressional Quarterly, 2006 (5th ed.). Some 36 selections, half new to this edition, include the work of scholars and professionals who mirror the interdisciplinary nature of the field in six sections: media effects in general; the influence of media on political perceptions and opinions, on presidential and referendum elections, on participants within and outside the political power structure, and on formation and implementation of domestic and foreign policies; plus a final part on private and public efforts to control media impact and offerings.

Graber, Doris, et al., eds. *The Politics of News: The News of Politics*. Washington, DC: Congressional Quarterly, 2008 (2nd ed.). A dozen research papers discuss the political role of journalists in America and abroad, government news management, the role of news media in the 1993–94 Clinton health care reform attempt, the public journalism movement, and the impacts of changing technology.

Hart, Rod P. *Seducing America: How Television Charms the Modern Voter*. Thousand Oaks, CA: Sage, 1998. How television's format of presenting politics has changed how television-watching citizens act, vote, and feel about politics.

Iyengar, Shanto. *News That Matters: Television and American Public Opinion*. Chicago: University of Chicago Press, 1987. Assesses the impact of television newscasts on what people think—agenda setting, essentially.

Iyengar, Shanto. *Is Anyone Responsible? How Television Frames Political Issues*. Chicago: University of Chicago Press, 1991. How television has impoverished political discourse, yet still molds political consciousness.

Iyengar, Shanto, and Richard Reeves, eds. *Do the Media Govern? Politicians, Voters, and Reporters in America*. Thousand Oaks, CA: Sage, 1997. Includes nearly 50 papers in five sections: reporting and the business of news, reporters and public officials, media-based political campaigns, the effects of news on its audiences, and uses of media in policymaking process.

Iyengar, Shanto, and Jennifer A. McGrady. *Media Politics: A Citizen's Guide*. New York: Norton, 2007. Introductory survey comparing American and foreign systems: Reviews the media marketplace, the decline of adversarial journalism between reporters and official sources, the rise of newer media (chiefly the Internet), ways of campaigning using media (managing news media, advertising, negative ads), and the process and consequences of governing through media (presidential and congressional communication, issue advertising).

Kaid, Lynda Lee, ed. *Handbook of Political Communication Research*. Mahwah, NJ: Lawrence Erlbaum, 2004. Scholarly papers on the theoretical background and diversity of the field, messages in political communication, news media coverage of politics, political issues, and political institutions, international perspectives, and the Internet's role in changing political communication.

Kraus, Sidney, ed. *Mass Communication and Political Information Processing*. Hillsdale, NJ: Lawrence Erlbaum, 1990. Thirteen papers reviewing developments across several countries, with information on theory, strategies and effects, and image-information stimuli (a look at campaign slogans).

Kuhn, Raymond, and Erik Neveu, eds. *Political Journalism: New Challenges, New Practices*. New York: Routledge, 2007. A dozen papers review, among other topics, manipulation of journalists by politicians and vice versa, spin-doctoring, "dumbing-down" of political debate, reporting of scandals, and invention of new styles of news such as public journalism.

Lang, Kurt, and Gladys Engel Lang. *Politics and Television Re-Viewed*. Beverly Hills, CA: Sage, 1984. Two longtime students of political media gather decades of their research into a summary volume including their studies from 1951 into the 1970s, examining many applications of television to politics. (*See also* their classic collection of their earlier papers in *Politics and Television,* Chicago: Quadrangle, 1968.)

Leonard, Thomas C. *The Power of the Press: The Birth of American Political Reporting*. New York:

Oxford University Press, 1986. History of journalism's political role as seen through several selected incidents from the colonial period to turn-of-the-century muckraking.

Linsky, Martin. *Impact: How the Press Affects Federal Policymaking*. New York: Norton, 1986. Study of media–government relations, how policymakers deal with news media, and six case studies. The latter are expanded in the author's parallel volume, *How the Press Affects Federal Policymaking: Six Case Studies* (Norton, 1986).

McCombs, Maxwell, et al., eds. *Communication and Democracy: Exploring the Intellectual Frontiers in Agenda-Setting Theory*. Mahwah, NJ: Lawrence Erlbaum, 1997. Edited by key figures in agenda-setting research, this anthology offers 15 research papers on the agenda-setting process, including both theory and specific examples.

McNair, Brian. *Journalism and Democracy: An Evaluation of the Political Public Sphere*. New York: Routledge, 1999. Challenges the commonly held view that "dumbing down" of the public sphere, "tabloidization" of news, and proliferation of "infotainment" and "spin" are adversely affecting the quality of political journalism and of democracy itself. Combining textual analysis and in-depth interviews with political journalists, editors, presenters and documentary makers, the author offers a more optimistic evaluation of the contemporary public sphere.

See Mindich, Section 2-B.

Neumann, W. Russell, et al. *Common Knowledge: News and the Construction of Political Meaning*. Chicago: University of Chicago Press, 1992. Reports on an extensive study of some 1,300 Bostonians to learn how they try to make sense of the news, the role media play in that process, how people learn from news, and how they construct meaning from what they hear, see, and learn.

Nimmo, Dan, and James E. Combs. *Mediated Political Realities*. White Plains, NY: Longman, 1990 (2nd ed.). How media color our reading of and reactions to political events and personalities. Includes many case studies in its discussion of television, women and political celebrities, and popular sports and politics.

Norris, Pippa, ed. *Women, Media and Politics*. New York: Oxford University Press, 1996. This collection of 20 papers by academics and journalists examines the impact of media on women's power in America, focusing on how women as citizens, political leaders, and feminist activists have been influenced by news media, for better or worse. Applies various approaches including surveys, content analysis, focus groups, interviews, and personal experience to review the role of women as journalists, the impact of campaign coverage, images of women in power, and coverage of the women's movement and feminist policy issues. *See also* Braden, above.

Paletz, David. *The Media in American Politics: Contents and Consequences*. New York: Longman, 2002 (2nd ed.). A basic text that examines the field broadly with added discussion in this edition on the Internet and a discussion of the 2000 election.

Perloff, Richard M. *Political Communication: Politics, Press, and Public in America*. Mahwah, NJ: Lawrence Erlbaum, 1998. Wide-ranging introductory survey text of the whole field divided into three parts; media and government institutions, political communication theories and effects, and communication and presidential elections.

Sabato, Larry. *Feeding Frenzy: How Attack Journalism Has Transformed American Politics*. New York: The Free Press, 1991. Based on some 200 interviews with media and political figures alike, the author argues that political coverage has become an inquisition, a kind of mob or bandwagon mentality turning politics into a kind of political warfare.

Savage, Robert L., and Dan Nimmo, eds. *Politics through Familiar Contexts: Projecting Politics through Popular Media*. Norwood, NJ: Ablex, 1990. Fourteen papers about the relationship between news media and politics, noting the role of popular culture as well as journalism.

Shaw, Donald L., and Maxwell E. McCombs. *The Emergence of American Political Issues: The Agenda-Setting Function of the Press*. St. Paul, MN:

West, 1977. Classic early research on the subject from which so many other studies have developed.

Stanyer, James. *Modern Political Communication: Mediated Politics in Uncertain Times*. Cambridge, England: Polity, 2007. Relates how governments, political parties, established media organizations and citizen audiences, in both the United States and the United Kingdom, are adapting to this systemic change. Provides a critical appraisal of the evolving relationships between political communicators and their audience.

Swanson, David L., and Dan Nimmo, eds. *New Directions in Political Communication: A Resource Book*. Newbury Park, CA: Sage, 1990. Ten papers review political communication research of the 1980s, updating an earlier version (Nimmo and Sanders, *Handbook of Political Communication*, Sage, 1981). Covers political language and learning, political messages, an institutional perspective, and a bibliography of recent work.

Zukin, Cliff, et al. *A New Engagement? Political Participation, Civic Life and the Changing American Citizen*. New York: Oxford University Press, 2006. Explores generational differences underlying participation in the political process, focusing on why those under 40 often turn away from political participation. Based on two national telephone surveys with more than 5,000 respondents, one distinction drawn is the difference between civic and political participation . . . and younger people are more involved with the former than the latter.

C. Presidents and News Media

This subsection focuses on the relations between news media and presidential administrations. Presidential election campaign communication is found under E-2 and E-3 below.

C-1: Historical Surveys

These books typically range over many administrations, offering a comparative assessment of change over time.

Beasley, Maurine H. *Eleanor Roosevelt and the Media: A Public Quest for Self-Fulfillment*. Champaign: University of Illinois Press, 1987. Details how FDR's wife became the first important First Lady through news media. Substantial coverage of her White House years, but a good deal as well on postwar era until her death in 1962.

Beasley, Maurine H. *First Ladies and the Press: The Unfinished Partnership of the Media Age*. Evanston, IL: Northwestern University Press, 2005. Presidential spouses and their varied relationships with news media. *See also* next entry.

Burns, Lisa M. *First Ladies and the Fourth Estate: Press Framing of Presidential Wives*. DeKalb: Northern Illinois University Press, 2008. Analyzes coverage of twentieth-century Presidents' wives in five leading newspapers and magazines—*The New York Times, The Washington Post, Ladies' Home Journal, Good Housekeeping,* and *McCall's*—to show that news media have helped shape the First Lady institution as well as influence changing social and political roles of American women. *See also* previous entry.

Edwards, George C., III. *The Public Presidency: The Pursuit of Popular Support*. New York: St. Martin's, 1983. Offers a useful discussion of how and why Presidents and their administrations use news media (and polls) to seek support for their policies. Such a push is one way to place pressure on Congress to act, for example.

Klein, Woody. *All the President's Spokesmen: Spinning the News—White House Press Secretaries From Franklin D. Roosevelt to George W. Bush*. Westport, CT: Praeger, 2008. This first attempt to relate the stories of all 26 White House press secretaries (only two of them women) places them against both their presidential bosses and the period in which they operated. Chapters focus on major issues that Presidents have dealt with—fighting wars, the cold war, scandals, domestic crises (from school integration in the 1950s to Hurricane Katrina a half-century later), domestic controversies, and global issues. *See also* Nelson, below.

Lanoue, David J., and Peter R. Schrott. *The Joint Press Conference: The History, Impact, and Prospects of American Presidential Politics*. Westport, CT: Greenwood, 1991. Compares and

contrasts the political view that debates impact voter decisions and social science findings that suggest they do not. Reviews their history since 1960, their actual content, and research on their impact. *See* Hellweg, above, and Maltese, below.

Liebovich, Louis W. *The Press and the Modern Presidency: Myths and Mindsets from Kennedy to Election 2000*. Westport, CT: Praeger, 2001 (2nd ed.). Traces forces that have led news media to focus upon scandals and have encouraged presidential attempts to control news provided to media, leading to a corrosive spiral of sour mistrust pitting White House against press corps, and interfering with responsibly reporting important news to the public. Updated to include the late 1990s' Lewinski scandal, Clinton's impeachment, and the 2000 election.

Maltese, John Anthony. *Spin Control: The White House Office of Communications and the Management of Presidential News*. Chapel Hill: University of North Carolina Press, 1992. Relates the development of the office from Nixon's administration (focus of the first 100 pages), reviewing people involved as the much as the organization.

Nelson, W. Dale. *Who Speaks for the President? The White House Press Secretary from Cleveland to Clinton*. Syracuse, NY: Syracuse University Press, 1998. Historical survey of the men (they all were to this point) who filled the role from 1893 to the 1990s. *See also* Klein, above.

Pollard, James E. *Presidents and the Press*. New York: Macmillan, 1947. A classic, this is the first serious scholarly study, with careful documentation, of the changing role between news media and Presidents, covering the administrations of George Washington through Franklin Roosevelt. It is focused almost entirely on newspapers. *See* next entry.

Pollard, James E. *The Presidents and the Press: Truman to Johnson*. Washington, DC: Public Affairs Press, 1964 (reprinted 1980). Not a continuing narrative like the previous entry, this gathers previously published articles by the author, one on each administration, and adds a new chapter to cover Johnson, who had just been elevated on Kennedy's death.

Ponder, Stephen. *Managing the Press: Origins of the Media Presidency, 1897–1933*. New York: St. Martin's, 1999. Explores the role of Presidents from McKinley through Hoover and how they utilized or were covered by the press. The variance in press relations of those White House occupants who enjoyed press give and take (McKinley and Theodore Roosevelt) versus those who did not (Taft, Wilson, and Hoover) comes clear.

Tebbel, John, and Sarah Miles Watts. *The Press and the Presidency from George Washington to Ronald Reagan*. New York: Oxford University Press, 1985. Chronological telling of the often complex relations between news media and the White House, including the impact of radio and later television broadcasting.

Walsh, Kenneth T. *Feeding the Beast: The White House versus the Press*. New York: Random House, 1996. Historical account of successes and mistakes in building the relationship, with emphasis on recent presidencies.

C-2: Lincoln Through Roosevelt (to 1945)

Historical studies of presidential communication, with the exception of Lincoln, are generally restricted to twentieth-century administrations—and most focus on the period during and since the New Deal of the 1930s.

Best, Gary Dean. *The Critical Press and the New Deal: The Press versus Presidential Power, 1933–1938*. Westport, CT: Greenwood, 1993. Arguing that newspapers of the New the Deal era were more liberal in tone than many historians have suggested, this outlines how the White House and press relationship changed over this five-year period as news media moved away from their initial strong support.

Harper, Robert S. *Lincoln and the Press*. New York: McGraw-Hill, 1951. Covers from the first press reports in 1836 to his death, especially the often vituperative hostility toward Lincoln expressed by large segments of the press, the failure of most papers to note his great qualities until after his death, Lincoln's use of the press as a war weapon, the destruction of newspaper plants hostile to Lincoln, and interpretations of Lincoln's

own writing for and manipulation of the press. *See also* Maihafer and Mitang, below.

Juergens, George. *News from the White House: The Presidential-Press Relationship in the Progressive Era*. Chicago: University of Chicago Press, 1981. Study of early twentieth-century political news and how it was handled.

Levin, Linda Lotridge. *The Making of FDR: The Story of Stephen T. Early, America's First Modern Press Secretary*. New York: Prometheus, 2008. How Early converted a fairly low-key press briefing function into an important daily news source, drawing on his background with the AP, and having worked with Roosevelt in varying degrees from 1912 to 1945.

Liebovich, Louis W. *Bylines in Despair: Herbert Hoover, the Great Depression, and the U.S. News Media*. Westport, CT: Praeger, 1994. Reviews the 1929–33 administration and its dismal press relations amidst a worsening Depression, offering something of a press-oriented biography of Hoover.

Maihafer, Harry J. *War of Words: Abraham Lincoln and the Civil War Press*. Dulles, VA: Potomac Books, 2001. Lincoln was always under fire by some hostile portion of news media, but he successfully wooed numerous prominent newspapermen into aiding his agenda. Whether he edited a speech in a newspaper office or invited reporters to the White House to leak a story, he skillfully played his own public relations game. *See also* Harper, above, and next entry.

Mitang, Herbert. *Abraham Lincoln: A Press Portrait*. Chicago: Quadrangle, 1971 (reprinted by University of Georgia Press, 1989; Fordham University Press, 2000). Relates his life and times from original newspaper reports from the Union, Confederacy, and Europe. *See also* Harper and Maihafer, above.

Startt, James D. *Woodrow Wilson and the Press: Prelude to the Presidency*. New York: Palgrave, 2004. Demonstrates the future President's understanding of the press role in American democracy from his 1902–10 time as a university president, to state governor, to his 1912 campaign to win the nomination, the convention, and then to defeat Republican President Taft and Progressive candidate Roosevelt.

Steele, Richard W. *Propaganda in an Open Society: The Roosevelt Administration and the Media, 1933–1941*. Westport, CT: Greenwood, 1985. Demonstrates the variance in relations with many press reporters as opposed to broadcasting and Hollywood figures, and how this changed through various events and crises to the eve of World War II.

Winfield, Betty Houchin. *FDR and the News Media*. Champaign: University of Illinois Press, 1990 (reissued by Columbia University Press, 1994). The role of press conferences, relations with Washington reporters, the New Deal publicity system, roles of radio and film, wartime press relations, and the lasting legacy of the 1933–45 period.

C-3: Truman and Eisenhower (1945–61)

These center on the rise and impact of television as a political force.

Allen, Craig. *Eisenhower and the Mass Media: Peace, Prosperity, and Prime-Time*. Chapel Hill: University of North Carolina Press, 1993. Relates the story of the Eisenhower administration (1953–61) in its relation to news media and especially developing television networks. The growing role of television in politics is one theme; another is its coverage of international affairs such as the 1956 crises in the Middle East and Hungary.

Evensen, Bruce J. *Truman, Palestine, and the Press: Shaping Conventional Wisdom at the Beginning of the Cold War*. Westport, CT: Greenwood, 1992. Analyzes the roles of media, public opinion, and Zionists in the evolution of Palestine policy, claiming that news media and an aroused public opinion frustrated Truman's course and elicited his support of the UN partition of Jewish and Arab states and his early recognition of Israel. The media role in reflecting and shaping competing "visions of reality," which became policy, is a key element.

C-4: Kennedy and the Assassination (1961–63)

The Kennedy assassination has generated a library of research to build on that of the brief

administration itself—which marked the first live use of television at news conferences.

Benson, Thomas W. *Writing JFK: Presidential Rhetoric and the Press in the Bay of Pigs Crisis*. College Station: Texas A&M University, 2003. Examines two speeches and a press conference held shortly after the early 1961 crisis, shedding light on the ways the press mediates and even helps to formulate presidential rhetoric.

Chase, Harold W., and Allen H. Lerman, eds. *Kennedy and the Press: The News Conferences*. New York: Crowell, 1965. Includes edited and annotated transcripts of all of them, many sparked with the President's noted humor. These were the first to be televised live.

Frewin, Anthony, comp. *The Assassination of John F. Kennedy: An Annotated Film, TV, and Videography, 1963–1992*. Westport, CT: Greenwood, 1993. Lists more than 230 items ranging from TV programs to film and video materials, arranged chronologically and then thematically, covering TV broadcasts, documentary films, collector's archive videos, theatrical motion pictures, and libraries holding assassination footage in the United States and in Britain.

Greenberg, Bradley S., and Edwin B. Parker, eds. *The Kennedy Assassination and the American Public: Social Communication in Crisis*. Stanford, CA: Stanford University Press, 1965. Important collection of papers on different aspects pulled together in the year after the 1963 assassination and reviewing the response and performance of news media, how people used channels of communication, public attitudes, and the impact of events on political cognition.

Hlavach, Laura, and Darwin Payne, eds. *Reporting the Kennedy Assassination: Journalists Who Were There Recall Their Experiences*. Dallas: Three Forks Press, 1996. Based on a later reunion at Southern Methodist University in Dallas, this anthology includes many reporter's first-hand reminiscences.

Huffaker, Bob, et al. *When the News Went Live: Dallas 1963*. Lanham, MD: Taylor, 2003. A KRLD radio reporter relates the process of reporting a routine political trip and how it became a national tragedy.

Kern, Montague, et al. *The Kennedy Crises: The Press, the Presidency, and Foreign Policy*. Chapel Hill: University of North Carolina Press, 1983. Addresses the role of news media in the Laotian and Berlin crises (both 1961), the Cuban Missile Crisis (fall 1962), and the growing Vietnam crisis of 1963.

The New York Times, editors of. *Four Days in November: The Original Coverage of the John F. Kennedy Assassination*. New York: St. Martin's Press, 2003. Anthology of the paper's contemporary reporting in late November 1963.

Rajski, Raymond B. *A Nation Grieved: The Kennedy Assassination in Editorial Cartoons*. Rutland, VT: Tuttle, 1967. Reproduces more than 100 of them.

Salinger, Pierre. *With Kennedy*. Garden City, NY: Doubleday, 1966. Relates the 1960 campaign and the 1961–63 administration as seen by its press secretary.

Trost, Cathy, and Susan Bennett. *President Kennedy Has Been Shot: The Inside Story of the Murder of a President*. Nashville, IL: Sourcebooks, 2003. Tightly edited collection of more than 40 moments from coverage, combining actual reports (including an audio CD with excerpts) with later recollections by reporters who were there.

Zelizer, Barbie. *Covering the Body: The Kennedy Assassination, The Media, and the Shaping of Collective Memory*. Chicago: University of Chicago Press, 1992. Main title refers to the charge given journalists to follow a President. This is a reassessment of media's role in shaping the memory of the assassination; it notes that of more than 50 reporters covering Kennedy's visit to Dallas, not one actually witnessed the assassination, and most had no time to verify leads or substantiate reports. Combines those reports with analyses of accounts and investigations since the shooting.

C-5: Johnson, Nixon, and Watergate (1963–74)

For studies of the Vietnam War and media, see Section 5-B-6.

Keogh, James. *President Nixon and the Press*. New York: Funk & Wagnalls, 1972. A former presidential assistant provides a pre-Watergate account of the intensive efforts of the Nixon administration to combat what it saw as biased news coverage, and to get its views before the American public.

Lang, Gladys Engel, and Kurt Lang. *The Battle for Public Opinion: The President, the Press and the Polls during Watergate*. New York: Columbia University Press, 1983. One of the better surveys of the complex 1972–74 scandal, its coverage in newspapers and on television (and the various roles media played during the crisis), and the role of public opinion polls.

Lashner, Marilyn A. *The Chilling Effect in TV News: Intimidation by the Nixon White House*. New York: Praeger, 1984. Based on her dissertation, this is an analysis of network news coverage of the White House from 1969 to 1974.

Liebovich, Louis W. *Richard Nixon, Watergate, and the Press: A Historical Retrospective*. Westport, CT: Praeger, 2003. After detailing news media coverage of the Watergate debacle and drawing on newly available documents, the study recounts the scandal's long-lasting, corrosive effect on presidential and popular politics.

Schudson, Michael. *Watergate in American Memory: How We Remember, Forget, and Reconstruct the Past*. New York: Basic Books, 1992. Sees memory as a group social function allowing for a variety of interpretations of the Watergate scandal two decades after it happened. Helps bridge research in culture with that concerning communication.

Spear, Joseph C. *Presidents and the Press: The Nixon Legacy*. Cambridge: MIT Press, 1986. Documents Nixon's strategy, which relied on a constant flow of positive news, sophisticated use of television to evade media and address viewers directly, and intimidation through classified or censored information. Demonstrates the extent to which so-called experts (media specialists, pollsters, and the like) and technology shape views of the presidency.

See Turner, Section 5-B.

Woodward, Bob, and Carl Bernstein. *All the President's Men*. New York: Simon & Schuster, 1974. From perhaps the leading investigative political journalism team of its generation, this famous volume (and subsequent film of the same name) relates the story of *The Washington Post* reporters and their sources. The team's *The Final Days* (Simon & Schuster, 1976) fills out the story through the President's resignation.

C-6: Ford Through Clinton (1974–2001)

Presidents Ford, Carter, Reagan, and Clinton had very different experiences with the news media.

Fitzwater, Marlin. *Call the Briefing! Bush and Reagan, Sam and Helen: A Decade with the Presidents and the Press*. New York: Times Books, 1995. Informal memoirs of a press secretary for Presidents Reagan and Bush, focusing mainly on events but with some comment on the process of White House news management and reporting.

Foote, Joe S. *Television Access and Political Power: The Networks, the Presidency, and the "Loyal Opposition."* New York: Praeger, 1990. Reviews the fading role of networks and reporting of political opposition to the administration, amidst economic realities of network journalism.

Grossman, Michael Baruch, and Martha Joynt Kumar. *Portraying the President: The White House and the News Media*. Baltimore: Johns Hopkins University Press, 1981. Based on direct observation of reporters and officials at the White House and the White House press office.

Hayden, Joseph. *Covering Clinton: The President and the Press in the 1990s*. Westport, CT: Praeger, 2001. Examines presidential–press relationships in the 1990s, focusing first on the 1992 campaign, then on issues and events over Clinton's two terms, including the press response to programs of the Clinton era as well as scandals, roles of consultants, effectiveness of various press secretaries, and use of pollsters.

Hertsgaard, Mark. *On Bended Knee: The Press and the Reagan Presidency*. New York: Farrar,

Straus & Giroux, 1988. An indictment of relations between major news media and the Reagan administration based on more than 175 interviews with most key figures in the White House and press. Argues the press was far too accepting and nowhere near critical enough.

Kurtz, Howard. *Spin Cycle: Inside the Clinton Propaganda Machine*. New York: The Free Press, 1998. A *Washington Post* media correspondent discusses how the administration tried to control the White House message in the news media and those involved in the process.

Mueller, James E. *Tag Teaming the Press: How Bill and Hillary Clinton Work Together to Handle the Media*. Lanham, MD: Rowman & Littlefield, 2008. Spans the period from the couple's earliest student political activism in the 1960s and continues through Hillary's run for the White House in 2008, based largely on interviews with journalists who covered them.

Nesson, Ron. *It Sure Looks Different from the Inside*. Chicago: Playboy Publishers, 1978. President Ford's press secretary draws useful comparisons between his former life as a television network correspondent and serving as the voice of a President, especially following the Watergate scandal.

Rozell, Mark J. *The Press and the Carter Presidency*. Boulder, CO: Westview, 1989. Three national newspapers and weekly newsmagazines are reviewed during the Carter era (1977–81), tracing press coverage of major events in an administration that started with high hopes and ended in inflation, hostages, and a seeming lack of vision. *See also* next two entries.

Rozell, Mark J. *The Press and the Ford Presidency*. Ann Arbor: University of Michigan Press, 1992. Covers the brief (1974–77) administration that followed Nixon's resignation.

Rozell, Mark J. *The Press and the Bush Presidency*. Westport, CT: Praeger, 1996. Details the senior Bush administration (1989–93).

Smith, Carolyn. *Presidential Press Conferences: A Critical Approach*. New York: Praeger, 1990. Surveys the development of the adversarial press conference, focusing on the Reagan administration with some historical background as well. Assesses structure, agendas, and content of televised news conferences.

Smoller, Fredrik T. *The Six o'Clock Presidency: A Theory of Presidential Press Relations in the Age of Television*. New York: Praeger, 1990. Critical view of the negative stance of television news about the White House and the "sound bite" political response.

terHorst, Jerald F. *Gerald Ford and the Future of the Presidency*. New York: Third Press, 1974. Briefly Ford's first press secretary, terHorst writes of the man and somewhat of the early White House operations of the post-Watergate administration.

C-7: Since 2001

For press coverage of the attacks of September 11, 2001, see Section 5-C-2.

Boehlert, Eric. *Lapdogs: How the Press Rolled Over for Bush*. New York: The Free Press, 2006. A strongly partisan argument that news media (particularly television) did not sufficiently question the Bush White House on policy issues, especially the 2003 invasion of Iraq and reasons for it. The administration saw the press as just another special interest group that needed to be either appeased or held at bay—or, in some cases, squashed.

Cohen, Jeffrey E. *The Presidency in the Era of 24-Hour News*. Princeton, NJ: Princeton University Press, 2008. Reveals how the decline of regulation and growth of the Internet and cable news outlets have made news organizations more competitive, resulting in decreased coverage of the President in traditional news media and an increasingly negative tone in the coverage that does occur.

Dadge, David. *Casualty of War: The Bush Administration's Assault on a Free Press*. New York: Prometheus Books, 2004. Assesses the first term of George W. Bush (2001–05), providing a critical examination of press freedom in the wake of the September 11 events.

Fritz, Ben, et al. *All the President's Spin: George W. Bush, the Media, and the Truth*. New York: Simon & Schuster, 2004. Highly critical assessment covering the 2000 and 2004 campaigns, but also many of the policy initiatives of the administration and how the White House sought to play news media.

Kumar, Martha Joynt. *Managing the President's Message: The White House Communications Operation*. Baltimore: Johns Hopkins University Press, 2007. Draws on first-hand reporting and interviewing to produce analyses of media and communications operations of the past four administrations, including chapters on George W. Bush and Bill Clinton.

McClellan, Scott. *What Happened: Inside the Bush White House and Washington's Culture of Deception*. New York: Public Affairs, 2008. Offers a sharp variation on the usual press secretary volume. This is a hard-bitten attack on the President the author served—and while the former was still in office. McClellan served the President for more than seven years (only some of that as press secretary) and witnessed day-to-day exactly how the administration veered off course.

Mueller, James E. *Towel Snapping the Press: Bush's Journey from Locker-Room Antics to Message Control*. Lanham, MD: Rowman & Littlefield, 2006. Follows the President's lifelong association with news media, showing how he has developed and, over time, modified his tactics. During Bush's years in Texas, news media did not scrutinize him; but as President he became a subject of intense analysis.

D. Congress and News Media

Coverage of the House and Senate by the news media is included here, as well as use of the media by congressmen and the struggle for broadcast access to the floors of both houses.

Bayley, Edwin R. *Joe McCarthy and the Press*. Madison: University of Wisconsin Press, 1981. A study of the communist-baiting junior senator from Wisconsin showing how the press made his career and how well he, in turn, played to news media. The author focuses on several key points in the early 1950s period of "McCarthyism," as well as the news media's role in his eventual fall.

Blanchard, Robert O., ed. *Congress and the News Media*. New York: Hastings House, 1974. Useful anthology of views about how well or poorly Congress was covered prior to live television coverage of both houses.

Cook, Timothy E. *Making Laws and Making News: Media Strategies in the U.S. House of Representatives*. Washington, DC: Brookings Institution Press, 1989. The complex relationship between publicity and legislation is explored with some reference to history but a primary focus on media and congressional power.

Garay, Ronald. *Congressional Television: A Legislative History*. Westport, CT: Greenwood, 1984. Issues and debate (since 1922) over radio and then television coverage of floor and committee action in both the House and Senate, including creation of C-SPAN to carry coverage of both houses.

See Hess, Section 7-C-1.

Johnson, Dennis W. *Congress Online: Bridging the Gap between Citizens and Their Representatives*. New York: Routledge, 2004. Examines how members of Congress, congressional committees, and their staffs incorporated technology in communicating with constituents. Reviews advocacy groups, federal, state, and local government agencies, and others whose adoption of electronic communication set an example and a challenge for the more slow-moving Congress. Assesses the role of e-mail on the Hill, including processes employed to deal with the huge volume of messages.

Mann, Thomas E., and Norman J. Ornstein, eds. *Congress, the Press, and the Public*. Washington, DC: Brookings Institution Press/AEI, 1994. Eight papers review how the press can do a better job of covering Congress, offer a historical look at press coverage from 1946 to 1992 and television news coverage of Congress from 1972 to 1992, assess public opinion about Congress, and review the decline of congressional news and reasons for it.

Povich, Elaine S. *Partners and Adversaries: The Contentious Connection between Congress and the Media*. Arlington, VA: Freedom Forum, 1996. Detailed assessment includes history, the image issue, public relations and the press, the quality of coverage of Congress, the impact of television, national versus regional media coverage, and the role of new media.

Ritchie, Donald A. *Press Gallery: Congress and the Washington Correspondents*. Cambridge, MA: Harvard University Press, 1991. Covers key reporters of the post–Civil War era and how their coverage of important scandals and other events helped shape the modern press gallery of both House and Senate.

Rozell, Mark J. *In Contempt of Congress: Postwar Press Coverage on Capitol Hill*. Westport, CT: Praeger, 1996. Examines the electorate's ongoing disgust with its legislature and reasons for it, including negative press coverage of Congress and government in general, as once healthy skepticism has now largely been replaced by a debilitating cynicism.

E. Election Campaigns

The core of political communication for many, this includes all types of elections, though the most has been written, as one might expect, about presidential elections. For political opinion polling, see Section 9-G-2.

E-1: General Surveys

These usually range over a number of campaigns.

Adams, William C. *Election Night News & Voter Turnout: Solving the Projection Puzzle*. Boulder, CO: Lynne Rienner, 2005. Provides insight into why western states have complained if New York–based television networks made election projections before West Coast polls closed—thus possibly skewing people's plans to vote. Reviews conflicting findings of past studies and election night newscasts, offering a series of western state case studies, concluding that vote predictions do not appear to impact voting in western states.

Clark, Peter, and Susan Evans. *Covering Campaigns: Journalism in Congressional Elections*. Stanford, CA: Stanford University Press, 1983. A relatively early study of often-overlooked campaigns, using several case studies.

Hollihan, Thomas A. *Uncivil Wars: Political Campaigns in a Media Age*. New York: St. Martin's, 2001. Explores how modern political campaigns work and discusses the complex issues surrounding them, the development of campaign strategy, creation of candidate images, how media cover and shape campaigns, the role of political advertising, and use of strategic polling.

Littlewood, Thomas B. *Calling Elections: The History of Horse-Race Journalism*. Notre Dame, IN: University of Notre Dame Press, 1998. Examines how treating elections as sporting events has dominated reporting of ideas, including presidential elections as spectator sport, infusion of sports language into political rhetoric, methodological development of "scientific" polling, the perverse conviction of many journalists that substantive politics bore most news consumers, and that partisan speech belongs in the paid advertising portion of newspapers.

Nimmo, Dan. *Political Persuaders: The Techniques of Modern Election Campaigns*. New Brunswick, NJ: Transaction, 1999 (rev. ed.). Critiques the emerging political industry of professional political management and consulting, the first book-length treatment (when issued in 1970) to do so. With his new introduction, Nimmo hones his critique in light of 30 years and their effects on campaign organization, research, and communication.

Tuman, Joseph S. *Political Communication in American Campaigns*. Thousand Oaks, CA: Sage, 2007. Argues that modern elections are not really between candidates or parties; rather, they are more about competing messages each player must present to persuade and reach voters. Discussion includes all forms of campaign speech and oratory, rhetorical dimensions of campaign debate, and candidate/campaign interaction with news media.

E-2: Past Presidential Campaigns

These titles review one or more specific presidential election campaigns.

Denton, Robert E., Jr., ed. *The 1992 Presidential Campaign: A Communication Perspective*. Westport, CT: Praeger, 1994. The role of print and electronic news media in the Bush–Clinton–Perot race, including nominating conventions, debates, campaign advertising, and early use of interactive systems. *See also* next entry.

Denton, Robert E., Jr. *The 1996 Presidential Campaign: A Communication Perspective*. Westport, CT: Praeger, 1998. This assesses the Clinton–Dole contest. *See also* the previous entry.

Falk, Erika. *Women for President: Media Bias in Eight Campaigns*. Urbana: University of Illinois Press, 2008. While Hillary Clinton was the first woman to be a front-runner for a major party nomination, she was far from the first to seek the office. More than 100 women have run, though few for a major party nomination, and most lacked experience or even campaigned hard. Eight are described here, from Virginia Woodhull (first known woman to seek the office—in 1872) to Carol Moseley Braun who sought the Democratic nomination in 2004.

Jamieson, Kathleen Hall, and Paul Waldman. *The Press Effect: Politicians, Journalists, and the Stories That Shape the Political World*. New York: Oxford University Press, 2004. Analyzes both press coverage and public opinion in the 2000 presidential election, using the Annenberg 2000 survey of more than 100,000 people to examine the period from the summer of 2000 through the aftermath of September 11.

Kaid, Lynda Lee, and D. G. Bystrom, eds. *The Electronic Election: Perspectives on the 1996 Campaign*. Mahwah, NJ: Lawrence Erlbaum, 1999. Contributions cover both candidate-controlled communication (political advertising, convention appearances, and internet sites), as well as news and debates not under the control of candidates. Among the results are details on women candidates, antecedents of voter cynicism, and the parts various communication formats play in voter disengagement.

Kendall, K. E. *Communication in the Presidential Primaries: Candidates and the Media, 1912–2000*. Westport, CT: Praeger, 2000. Topics covered include the effect of party rules on communication, the role of speeches and debates, the role of political advertising, and media construction of primaries in the pretelevision and television eras. Examines the 1996 primaries in light of patterns discovered in earlier years.

Kerbel, Matthew Roberts. *Edited for Television: CNN, ABC and the 1992 Presidential Campaign*. Boulder, CO: Westview, 1994. Reviews cable versus broadcast network coverage, how news media covered themselves as campaign news, and issues and nonissues in political reporting. A second part reviews behind-the-scenes decision-making processes.

Lazarsfeld, Paul F., et al. *The People's Choice: How the Voter Makes Up His Mind in a Presidential Campaign*. New York: Duell, Sloan & Pearce, 1944 (many later reprints). Pioneering sociological account of Eric County, Ohio, voters in the 1940 Roosevelt–Wilkie campaign and how they decided which way to vote.

McGinnis, Joe. *The Selling of the President, 1968*. New York: Trident, 1969. Classic popular account of Nixon's campaign, focusing on its extensive use of television to successfully create a new and positive image of the candidate using commercial advertising techniques.

Mears, Walter R. *Deadlines Past: Forty Years of Presidential Campaigning: A Reporter's Story*. Kansas City, MO: Andrews McMeel, 2003. Personal account of a Pulitzer Prize reporter who spent 45 years with the Associated Press and covered 11 campaigns. Argues that changes were gradual from Nixon versus Kennedy in 1960 through Bush versus Gore in 2000, but the historical significance of each match-up only becomes evident with time.

Museum of the Moving Image. *The Living Room Candidate: Presidential Campaign Commercials, 1952–2008*. http://www.livingroomcandidate.org. Some 300 of them from over the years, showing dramatic changes in style and content and approach.

Owen, Diana. *Media Messages in American Presidential Campaigns*. Westport, CT: Greenwood, 1991. Surveys of the 1984 and 1988 campaigns looking at public opinion polling, televised debates as the "ultimate pseudoevent," uses and gratifications in campaign messages, and a model of audience media usage. *See also* Stempel, below.

Patterson, Thomas E., and R. D. McClure. *The Unseeing Eye: The Myth of Television Power in National Elections*. New York: Putnam, 1976. Analysis of the effects of television on the 1972 presidential election that argues television news and political advertising have no influence on the outcome of national elections, thus contradicting prevailing assumptions about television's power.

Patterson, Thomas E. *Out of Order*. New York: Knopf, 1993. Argues that the process of electing Presidents is broken. Culprits include poorly planned performances by newscasters who talk more than candidates and too many primaries that only weaken parties. Patterson calls for a shortened nominating primary season of six weeks and a televised forum in which candidates could speak, debate, and be questioned. (Sadly, of course, it's only gotten worse since.)

Reinsch, J. Leonard. *Getting Elected: From Radio and Roosevelt to Television and Reagan*. New York: Hippocrene, 1988. The author was a key Democratic party broadcast consultant from 1944 to 1969 and writes with that experience in mind.

Rosenberg, William L., et al. *The Politics of Disenchantment: Bush, Clinton, Perot, and the Press*. Cresskill, NY: Hampton Press, 1996. Reviews 1992 campaign where Perot was a third-party candidate.

Rosenstiel, Tom. *Strange Bedfellows: How Television and the Presidential Candidates Changed American Politics*. New York: Hyperion, 1993. As networks cut their political coverage in 1992, presuming George Bush would win re-election, candidates turned to other venues to get out their message.

Shogan, Robert. *Bad News: Where the Press Goes Wrong in the Making of the President*. Chicago: Ivan R. Dee, 2001. Draws on lessons of nine presidential elections to show where news media go wrong in the making of the President. Media play the role of enablers; they allow and abet abuse of the political process by candidates and their handlers.

Stempel, Guido, III, and John W. Windhauser, eds. *The Media in the 1984 and 1988 Presidential Campaigns*. Westport, CT: Greenwood, 1991. Covers broadcast and print (newspaper and magazine) reporting, public attitudes about reporting, and newspaper editorials on elections. *See also* Owen, above.

Taylor, Paul. *See How They Run: Electing the President in an Age of Mediaocracy*. New York: Knopf, 1990. Account of the 1988 race between George Bush and Michael Dukakis—and the candidates and their roles.

Thomson, Charles A. H. *Television and Presidential Politics: The Experience in 1952 and the Problems Ahead*. Washington, DC: Brookings Institution Press, 1956. Pioneering study of the techniques and role of then-new television in a national campaign, including coverage of political conventions and the role of network decision-making.

E-3: Modern Presidential Campaigning

Included here are studies of recent campaigns—generally since 2000—often including discussion of the impact of increasing technological options.

Cunningham, Liz. *Talking Politics: Choosing the President in the Television Age*. Westport, CT: Praeger, 1995. Collects the author's interviews with national television journalists on their interaction with presidential candidates.

Kaid, Lynda Lee, and Anne Johnston. *Videostyle in Presidential Campaigns: Style and Content of Televised Political Advertising*. Westport, CT: Praeger, 2001. Systematic analysis of political commercials used in general election campaigns from 1952 through 1996 presidential contests.

Panagopolous, Costas. *Rewiring Politics: Presidential Nominating Conventions in the Media Age*. Baton Rouge: Louisiana State University Press, 2007.

Fourteen media and politics authorities examine how conventions have been transformed by technologies of "coverage." First radio, and then television, cable networks, and the Internet have transfigured both the presentation and content of nominating process.

Parmelee, J. H. *Meet the Candidate Videos: Analyzing Presidential Primary Campaign Videocassettes*. Westport, CT: Praeger, 2003. Assesses use of videocassettes in the 2000 race, those which include images and issues often based on polling data and focus groups, and which are sent out before primaries to battleground states to establish an initial candidate image. Multiple methods are used to explore the efforts of candidates who released such videos.

Pfau, Michael, et al. *Mediating the Vote: The Challenging Media Landscape in U.S. Presidential Campaigns*. Lanham, MD: Rowman & Littlefield, 2007. Explores a number of questions about media use and its relation to democratic engagement, analyzing the effects of communication forms on the 2004 presidential elections.

Plissner, Martin. *The Control Room: How Television Calls the Shots in Presidential Elections*. New York: The Free Press, 1999. Former political director of CBS News shows how many elements of elections—primaries, conventions, and counting of ballots—are shaped by the networks' struggle for supremacy.

Skewes, Elizabeth A. *Message Control: How News Is Made on the Presidential Campaign Trail*. Lanham, MD: Rowman & Littlefield, 2007. Reviews the role of media in the 2000 and 2004 presidential elections and notes that modern campaigns are a development of the past four decades as the role of media, and particularly television (and more recently the web) have come to dominate the process.

E-4: Televised Debates

These began with the so-called Great Debates of 1960 between Nixon and Kennedy, resumed again in 1976, and have since become a central part of the quadrennial race—now for vice presidential candidates as well.

American Presidency Project. *Presidential Debates, 1960–2008*. http://www.presidency.ucsb.edu/debates.php. Includes transcripts of all of them, in reverse chronological order, with links to many related materials.

Bishop, George F., et al., eds. *The Presidential Debates: Media, Electoral, and Policy Perspectives*. New York: Praeger, 1978. An early study, drawing on the Ford–Carter debates of 1976, only the second set of presidential televised debates. *See also* Kraus, below.

Commission on Presidential Debates. http://www.debates.org. The organization that sponsors the quadrennial presidential and vice presidential debates explains its role and background.

Hellweg, Susan, et al. *Televised Presidential Debates: Advocacy in Contemporary America*. New York: Praeger, 1992. Argues that these have dramatically changed campaigns by reviewing their history since 1960, formats used, verbal and visual dimensions of these debates, and their impact.

Jamieson, Kathleen Hall, and David S. Birdsell. *Presidential Debates: The Challenge of Creating an Informed Electorate*. New York: Oxford University Press, 1988. Three chapters on debates before broadcasting, then the development and impact of debates on radio and later television, arguing that electronic media have not helped the depth of discussion any.

Kraus, Sidney, ed. *The Great Debates*. Bloomington: Indiana University Press, 1962. Pioneering assessment of the 1960 Nixon–Kennedy televised face-off that probably decided that election and laid the ground for now-regular campaign debates that take place every four years.

Kraus, Sidney. *The Great Debates: Carter vs. Ford 1976*. Bloomington: Indiana University Press, 1979. Examination of the genesis and impact of the 1976 presidential debates (the first since 1960) between President Gerald Ford and Georgia Governor Jimmy Carter. *See also* Bishop, above.

Kraus, Sidney. *Televised Presidential Debates and Public Policy*. Mahwah, NJ: Lawrence Erlbaum,

1999 (2nd ed.). Examines formal presidential debates, considering experience of television in presidential elections, reviewing what has been learned about televised debates, and evaluating that knowledge in the context of election and political processes. Includes the general media role in presidential elections.

Lemert, James B., et al. *News Verdicts, the Debates, and Presidential Campaigns*. New York: Praeger, 1991. The authors conducted 2,350 surveys and analysis of news reports to scrutinize postdebate news of the 1988 campaign (as well as the effects of attack ads used by Bush and Dukakis), and found that news media consistently downplay debate content and instead emphasize their own views on candidate performance.

Minow, Newton N., and Craig L. LaMay. *Inside the Presidential Debates: Their Improbable Past and Promising Future*. Chicago: University of Chicago Press, 2008. Combines a review of televised debates (Minow played a key role in organizing them) and discussion of their shortcomings and how they might improve.

Museum of Broadcast Communications. *The History of Televised Presidential Debates*. http://www.museum.tv/debateweb/html/index.htm. Details and sound bites from the 1960–2000 debates and guides to further information.

Schroeder, Alan. *Presidential Debates: 40 Years of High-Risk TV*. New York: Columbia University Press, 2001. Drawing on experience as a TV reporter and producer and through interviews with those who have worked on presidential debates, the author sheds light on every debate from 1960 to 2000. From the selection of questioners to camera angles, from issues of makeup to lighting and stage set, he shows how decisions are made that influence audience perceptions of the results.

Twentieth Century Fund Task Force on Presidential Debates. *Let America Decide*. New York: The Fund, 1995. Offers a 35-page report with recommendations that build on the success of the 1992 debates, followed by a background paper on the issues involved. *See* Hellweg and Lanoue, above.

F. Campaign Advertising

The coming of television as a political tool dramatically changed the face—and cost—of campaigns. The Internet may have as dramatic an impact (see subsection H, below).

F-1: History

Covers campaigns prior to about 2000.

Ansolabehere, Stephen, and Shanto Iyengar. *Going Negative: How Political Advertisements Shrink and Polarize the Electorate*. New York: The Free Press, 1995. Based on some 3,500 interviews, this study demonstrates that negative campaigning turns off voters.

Diamond, Edwin, and Stephen Bates. *The Spot: The Rise of Political Advertising on Television*. Cambridge: MIT Press, 1996 (4th ed.). A standard though now dated history (first issued a dozen years earlier) that describes changes in televised political advertising from 1952's first political spot ads through their use in the 1994 off-year elections.

Jamieson, Kathleen Hall. *Packaging the Presidency: A History and Criticism of Presidential Campaign Advertising*. New York: Oxford University Press, 1984. Reviews 1952–80 campaigns and their media images for both parties.

Kaid, Lynda Lee, and Anne Johnson. *Videostyle in Presidential Campaigns: Style and Content in Televised Political Advertising*. Westport, CT: Praeger, 2000. Results of a systematic analysis of virtually all political commercials used in general election presidential campaigns from 1952 through 1996.

Kern, Montague. *30-Second Politics: Political Advertising in the Eighties*. New York: Praeger, 1989. Samples ads from national and state-level campaigns in 1984, 1986, and 1988 and finds an increasing amount of negative advertising.

West, Darrell M. *Air Wars: Television Advertising in Election Campaigns, 1952–2004*. Washington, DC: CQ Press, 2005 (4th ed.). Including material

from the 2004 election, this examines political advertising in election campaigns. The author discusses how ads are put together, emphasizing several key principles such as stereotyping, visual context, and editing; decisions candidates make when buying air time; the messages presented in ads (both broadcast and Internet); relationship between ads and the news; impact of ads on viewers and what citizens learn about candidates; and advertising's role within the democratic process.

F-2: Current

Includes studies since about 2000.

Brader, Ted. *Campaigning for Hearts and Minds: How Emotional Appeals in Political Ads Work*. Chicago: University of Chicago Press, 2006. Motivational and persuasive appeals in campaign advertising are studied using social science surveys.

Bystrom, Dianne G., et al. *Gender and Candidate Communication: VideoStyle, WebStyle, and NewsStyle*. New York: Routledge, 2004. Digs into campaigns of the previous decade including thousands of ads, websites, and newspaper articles to find out how successful candidates have been in breaking down gender stereotypes. Among the findings: female candidates dress more formally, smile more, act "tougher" when they can, and prefer scare tactics to aggressive attack ads—and web coverage tends to draw more heavily on old stereotypes.

Franz, Michael M., et al. *Campaign Advertising and American Democracy*. Philadelphia: Temple University Press, 2007. Ties together work done through the 2000s, largely at the University of Wisconsin Advertising project, and drawing on studies of the 2000 and 2004 election cycles. Reviews campaign advertising as a "whipping boy," a spillover theory of campaign advertising effects, measuring exposure to campaign ads, tracing their volume and content, making sense of campaign ads, what target audiences knew and when did they know it, campaign advertising and voter attitudes toward the political process, and advertising tone and citizen engagement.

Thurber, James A., et al., eds. *Crowded Airwaves: Campaign Advertising in Elections*. Washington, DC: Brookings Institution Press, 2000. Analysis of political advertising: its causes, growth, and consequences on American elections, including the merits (or not) of negative advertising, the role of campaign advertising, and the ascendance of issue advertising and its continuing proliferation.

University of Iowa Online Communication Studies Resources. *Political Advertising*. http://www.uiowa.edu/~commstud/resources/pol_ads.html. Provides a host of links on all aspects of campaign advertising on the air and in print over many election cycles.

G. News and Foreign Affairs

The relationship of news media, diplomacy, and international affairs has long been a matter of study and comment—at least since the era of the telegraph in the mid-nineteenth century.

Baum, Matthew A. *Soft News Goes to War: Public Opinion and American Foreign Policy in the New Media Age*. Princeton, NJ: Princeton University Press, 2003. Develops the "byproduct" theory of information consumption to explain how technology has fundamentally changed how news media (especially television) cover foreign policy. By transforming political issues involving scandal or violence (especially attacks against America) into entertainment, "soft news" media have captured more viewers who may follow news about foreign crises due to its entertainment value, even if they remain uninterested in foreign policy. Baum tests his theory through content analyses of traditional and soft news media coverage of various post-1945 American foreign crises and statistical analyses of public opinion surveys.

Berry, Nicholas O. *Foreign Policy and the Press: An Analysis of* The New York Times *Coverage of U.S. Foreign Policy*. Westport, CT: Greenwood, 1990. Examines five case studies from 1961 to the early 1980s, comparing the paper's coverage to administration policy press releases.

Carpenter, Ted Galen. *The Captive Press: Foreign Policy Crises and the First Amendment*. Washington, DC: Cato Institute, 1995. Examines the period since World War II and growing tensions between

government and journalists in international crises, citing examples where officials pressured journalists to abandon their role as monitors of policy and become members of the country's foreign policy team, or to either intimidate or circumvent media. Too often news media join forces with government and the military to rally behind policy instead of asking necessary questions.

Cohen, Bernard C. *The Press and Foreign Policy*. Princeton, NJ: Princeton University Press, 1963. Important early account of the mutual impact of journalism and foreign policymaking. Discusses how media and those engaged in developing and guiding foreign policy mutually interact, and with what effect.

Dayan, Daniel, and Elihu Katz. *Media Events: The Live Broadcasting of History*. Cambridge, MA: Harvard University Press, 1992. Television news coverage is seen as a kind of world ritual, using six case studies: the Olympic Games, Anwar Sadat's trip to Jerusalem in the late 1970s, the royal wedding in London in 1981, the funeral of John Kennedy in 1963, the first Moon landing in 1969, and Pope John Paul II's trips to Poland.

Dennis, Everette, et at., eds. *Beyond the Cold War: Soviet and American Media Images*. Newbury Park, CA: Sage, 1991. Fifteen papers on how news media were covering the transition from Soviet-controlled Europe to post–Berlin Wall era, based on a 1989 Moscow conference with American and Russian media scholar participants. Covers print and broadcasting, stereotypes, coverage of summit meetings, and some discussion of news coverage about China.

Desmond, Robert W. *The Press and World Affairs*. New York: Appleton-Century, 1937 (reprinted by Arno Press, 1972). Classic early account reviewing the roles of reporters and news agencies, how news was transmitted, obstacles to news flow (censorship and propaganda), then sections on news reporting in different parts of the world. Useful survey of the pre–World War II situation.

Dorman, William A., and Mansour Farhang. *The U.S. Press and Iran: Foreign Policy and the Journalism of Deference*. Berkeley: University of California Press, 1988. Explores the complex link between press and policy and ways in which American mainstream journalism portrays a one-time Third World ally, suggesting that news media are far from fulfilling the watchdog role.

Entman, Robert M. *Projections of Power: Framing News, Public Opinion, and U.S. Foreign Policy*. Chicago: University of Chicago Press, 2004. Offers a model of how media framing works—a model that explains why news media cheered American victories over small-time dictators in Grenada and Panama but barely noticed the success of far more difficult missions in Haiti and Kosovo. Suggests ways to more effectively the encourage the exchange of ideas among the government, news media, and the public.

Gilboa, Eytan. *Media and Conflict: Framing Issues, Making Policy, Shaping Opinions*. Ardsley, NY: Transnational Publishers, 2002. Seventeen papers provide a multicultural and transnational survey of current research on the role of media in covering or resolving conflicts. These include a variety of case studies, among them Middle East conflicts, protests against world organizations, land disputes between nations, the CNN effect on global journalism, Russian media on border conflicts, and media and public opinion.

Heald, Morrell. *Transatlantic Vistas: American Journalists in Europe, 1900–1940*. Kent, OH: Kent State University Press, 1988. Two world wars created a golden age of American international journalism when figures like John Gunther, William L. Shirer, Dorothy Thompson, and Vincent Sheean turned to interpretation and analysis.

See Hess, Section 7-C-1.

Hohenberg, John. *Between Two Worlds: Policy, Press, and Public Opinion in Asian-American Relations*. New York: Random House, 1967. Assesses the role of the press and public opinion in Asian policy from 1945 to 1965, and thus the early Vietnam War period.

Larson, James F. *Television's Window on the World: International Affairs Coverage of the U.S. Networks*. Norwood, NJ: Ablex, 1984. Coverage by ABC, CBS, and NBC of overseas places and

events of the 1972–81 period is closely assessed—making clear how much less such coverage is the norm three decades later.

Neuman, Johanna. *Lights, Camera, War: Is Media Technology Driving International Politics?* New York: St. Martin's Press, 1996. How technology is changing the pace and shape of international affairs and reporting. The author begins with telegraph and traces changes over 150 years with telling examples.

O'Heffernan, Patrick. *Mass Media and American Foreign Policy: Insider Perspectives on Global Journalism and the Foreign Policy Process*. Norwood, NJ: Ablex, 1991. Study of 1977–78 Carter administration policymaking and media coverage about it. Three specific Middle East stories were used as case studies.

Perlmutter, David D., and John Maxwell Hamilton, eds. *From Pigeons to News Portals: Foreign Reporting and the Challenge of New Technology*. Baton Rouge: Louisiana State University Press, 2007. Seven research papers probe whether better technology leads to improved foreign reporting, including rethinking foreign news from a transnational perspective, reemergence of amateur journalism and what it means for international affairs, bloggers as the new "foreign" correspondents, how American media teach negative and flawed beliefs about the United States to youths in 12 countries, the impact of instant connection, a defense of "parachute" journalism, and the speed and integrity of international news coverage.

Raboy, Marc, and Bernard Dagenais, eds. *Media, Crisis, and Democracy: Mass Communication and the Disruption of Social Order*. Newbury Park, CA: Sage, 1992. Eleven essays on such topics as television and the Persian Gulf War, framing the crisis in Eastern Europe, the terminal crisis of communism in Poland, violence and terror in news media, and the varied roles of media in covering crises.

Rotberg, Robert I., and Thomas G. Weiss, eds. *From Massacres to Genocide: The Media, Public Policy and Humanitarian Crises*. Washington, DC: Brookings Institution Press, 1996. Nine papers on how news media have become increasingly important global crisis agenda setters by reporting on events, refugees, and rescue efforts.

Serfaty, Simon, ed. *The Media and Foreign Policy*. New York: St. Martin's, 1991. Sixteen papers by journalists or senior government officials, divided into sections on who sets the policy agenda (the role of news media), who says what (for example, leakers), do media matter (covering national security and intelligence issues), and news coverage as perceived outside Washington.

H. Politics and Changing Technology

Starting in the 1990s, first e-mail and then the Internet began to exert a growing influence on campaigns—and in governing, too. Considerable research has already resulted.

Bimber, Bruce. *Information and American Democracy: Technology in the Evolution of Political Power*. New York: Cambridge University Press, 2003. Sets the information revolution in historical context, asserting that past developments offer lessons for understanding how the Internet is affecting politics. Examines how citizens and organizations use it for political purposes and whether new technology is making Americans more engaged in their government.

Bimber, Bruce, and Richard Davis. *Campaigning Online: The Internet in U.S. Elections*. New York: Oxford University Press, 2003. Reviews the dynamics of the 2000 election on the Internet including how candidates presented themselves online, how voters responded to their efforts—including whether they learned from candidates' websites and whether their opinions were affected by what they saw. Includes data drawn from national and statewide surveys, laboratory experiments, interviews with campaign staff, and analysis of websites.

Chadwick, Andrew. *Internet Politics: States, Citizens, and New Communication Technologies*. New York: Oxford University Press, 2006. Examines the impact of changing communication technologies on political parties and elections, pressure groups, social movements, local democracy, public bureaucracies, and global governance. Analyzes persistent policy problems, including the often-expressed "digital divide;" Internet governance; tensions between surveillance, privacy, and security; and the political economy of the Internet

sector, providing numerous examples from the United States, Britain, and other countries.

Chadwick, Andrew, ed. *Routledge Handbook of Internet Politics*. New York: Routledge, 2008. Concerned with theoretical and conceptual debates, political institutions and practices, and how the Internet creates new policy problems for both democratic and nondemocratic nations, not to mention their roles in the global system. Reflects a steady stream of high-quality research literature over the last five years and offers contributions from scholars from Britain, Europe, and the United States.

Cornfield, Michael. *Politics Moves Online: Campaigning and the Internet*. New York: Century Foundation Press, 2004. After a survey of the political context of late the 1990s and early 2000s, Cornfield discusses uses of the Internet for research by campaigns, campaign websites, problems and prospects of raising money online, a review of several case studies of online use, and a summary that assesses the transition the political world is going through.

Foot, Kirsten A., and Steven M. Schneider. *Web Campaigning*. Cambridge: MIT Press, 2006. Examines the evolution of campaigns' web practices, based on hundreds of campaign websites produced by a range of political actors during the American elections of 2000, 2002, and 2004. Developmental analyses of how and why campaign organizations create specific online structures illuminates the reciprocal relationship between production practices and structures of campaign organization and the electoral arena.

Howard, Philip N. *New Media Campaigns and the Managed Citizen*. New York: Cambridge University Press, 2005. With evidence from ethnographic research, survey data, and social network analysis, examines the evolving act of political campaigning and the changing organization of political campaigns over the last five election cycles, from 1996 to 2004 where both grassroots and elite political campaigns have gone online, built multimedia strategies, and constructed complex relational databases.

Oates, Sarah, et al. *The Internet and Politics: Citizens, Voters, and Activists*. New York: Routledge, 2006. Explores the nature of the Internet's impact on civil society, including: Is the web qualitatively different from more traditional media forms; has it demonstrated real potential to provide an enhancement of communication between government and citizen or via better state transparency; or does it pose a threat to the coherence of civil society as people are encouraged to abandon shared experience for individual and narrow interests?

Prior, Marcus. *Post-Broadcast Democracy: How Media Choice Increases Inequality in Political Involvement and Polarizes Elections*. New York: Cambridge University Press, 2007. Examines how differences in access to a growing variety of media affects political behavior, using experiments and survey data to show how changes in the media environment reverberate through the political system, affecting news exposure, political learning, turnout, and voting behavior.

Williams, Andrew Paul, and John C. Tedesco, eds. *The Internet Election: Perspectives on the Web in Campaign 2004*. Lanham, MD: Rowman & Littlefield, 2006. Analyzes the unprecedented role of the web in the 2004 presidential campaign with an eye toward future elections, including a discussion of grassroots organizing via the Internet, candidate e-mail strategies, blogs, online discourse about candidates' spouses, and gendering of (other than presidential) candidates on websites.

Section 7

Journalists

Those who practice journalism are—and always have been—a varied lot. Only fairly recently, however, has research underpinned this "known" fact. The subsections that follow provide both general reference and a variety of individual biographies and autobiographies. For sources on journalism labor and unions, see Section 4-C.

Most of the subsections in this section appear in two parts—surveys about that role (publisher, reporter, etc.) including group biographies, followed by individual biographies and autobiographies. Given the massive number of books in this second category, what follows should only be seen as suggestive of what is available, emphasizing works since 1990 and important earlier titles.

A. Reference and General

Included here are biographical dictionaries and other reference works pertaining to journalists of all types, as well as the few general works assessing journalists as a whole.

A-1: Reference

Most of these provide collected bibliography of selected figures, ranging from very brief paragraphs to multipage essays.

Abrams, Alan B., comp. *Journalism Biographies Master Index: A Guide to 90,000 References to Historical and Contemporary Journalists in 200 Biographical Directories and Other Sources*. Detroit, MI: Gale Research, 1979. Arranged by journalist's name (and including publishers, editors, reporters, columnists), this includes some famous people who were only journalists for a time, and covers broadcasters as well as print media news personnel. This is a guide to other guides—the format lists journalist name plus birth and (if applicable) death dates, then a series of abbreviations where more biographical information may be found. But its age is showing—lots of people who are now well known do not appear here.

Applegate, Edd. *The Ad Men and Women: A Biographical Dictionary of Advertising*. Westport, CT: Greenwood, 1994. More than 50 advertising professionals past and present are profiled, including copywriters, art directors and other creative personnel, and other key figures.

Applegate, Edd. *Literary Journalism: A Biographical Dictionary of Writers and Editors*. Westport, CT: Greenwood, 1996. Covers—in short essays of a page or two—more than 150 American and British writers and editors, focusing on those then active, but reaching back to the seventeenth- and eighteenth-century authors in Britain who gave birth to the genre. In a short introductory essay, Applegate asserts that these literary journalists use techniques of the novelist that sharply differ in form, style, and language from the objective reportage of a newspaper reporter. *See also* Kaul, below.

Applegate, Edd. *Journalistic Advocates and Muckrakers: Three Centuries of Crusading Writers*. Jefferson, NC: McFarland, 1997. Includes more than 100 of them, arranged alphabetically, from famous ones like Tarbell and others up to more recent examples in the 1960s and 1970s. Entries range from several pages to a couple of paragraphs.

Applegate, Edd. *Muckrakers: A Biographical Dictionary of Writers and Editors*. Lanham, MD: Scarecrow, 2008. Some 50 of them are covered, in essays ranging from two to eight pages, including listings of some of their output.

Ashley, Perry J., ed. *American Newspaper Journalists*. Detroit, MI: Gale Research, "Dictionary of Literary Biography" (DLB). Four volumes collectively offer lengthy illustrated essays on hundreds of journalists. The preface to each volume provides historical context for the period covered.

1. *1690–1872*. 1985, DLB vol. 43.
2. *1873–1900*. 1983, DLB vol. 23.
3. *1901–1925*. 1984, DLB vol. 25.
4. *1926–1950*. 1984, DLB vol. 29.

Ashley, Perry J., ed. *American Newspaper Publishers 1950–1990*. Detroit, MI: Gale Research, "Dictionary of Literary Biography," 1993, DLB vol. 127. Profiles 55 leaders of the postwar newspaper press—perhaps a bit of a bending of this series' usual "literary" bent.

Brewer, Annie M. *Talk Shows and Hosts on Radio: A Directory Including Show Titles and Formats, Biographical Information on Hosts, and Topics/Subjects Index*. Dearborn, MI: Whitefoord Press, 1996 (4th ed.). Covers people on networks and in syndication, plus local stations.

Connery, Thomas B., ed. *A Sourcebook of American Literary Journalism: Representative Writers in an Emerging Genre*. Westport, CT: Greenwood, 1992. Provides lengthy profiles of 35 figures, including Stephen Crane, Dorothy Day, John Hersey, Norman Mailer, and Joan Didion, arranged chronologically from Mark Twain to Tracy Kidder.

Downs, Robert B., and Jane B. Downs. *Journalists of the United States: Biographical Sketches of Print and Broadcast News Shapers from the Late 17th Century to the Present*. Jefferson, NC: McFarland, 1991. Alphabetically arranged biographies of major people in U.S. newspaper and broadcast journalism. Introduction surveys issues and topics in U.S. journalism history, including censorship, muckraking, women journalists, and wartime journalism.

Dziki, Sylwester. *Who's Who in Mass Communications*. Munich: Saur (and the Press Research Centre), 1990 (2nd rev. ed.). Though badly dated, and admittedly far from complete, this is a still-useful collection of self-reported biographical information (a paragraph each) on academic researchers from around the world.

See Fisher and Fisher, Section 1-F-1.

Harrison, S. L. *Cavalcade of Journalists 1900–2000: Chroniclers of an American Century*. Miami, FL: Wolf Den, 2002. Some 230 are listed with a paragraph each, though there is no clear sense provided of how they were chosen.

High Bean Encyclopedia. *Journalism and Publishing: Biographies*. http://www.encyclopedia.com/category/Literature_and_the_Arts/Biographies/pubbio.html. Provides brief information on hundreds of people past and present, with bibliographic references and links to other information (such as obituaries).

Journalism & Mass Communication Directory. Columbia, SC: Association for Education in Journalism and Mass Communication, 1982–present, annual. Includes most higher education academics and college and university programs devoted to journalism education.

Kaul, Arthur J., ed. *American Literary Journalists, 1945–1995, First Series*. Detroit, MI: Gale Research, "Dictionary of Literary Biography," 1997, DLB vol. 185. *See also* Applegate, above.

McKerns, Joseph P., ed. *Biographical Dictionary of American Journalism*. Westport, CT: Greenwood, 1989. Biographical essays about both living and deceased journalists, describing the lives and professional contributions of nearly 1,000 women and men in U.S. journalism. Well-written entries by journalism scholars include standard biographical information and nonstandard evaluative information about careers and contributions. Appendices include an index of personal names, publication

titles, and a list of entries by category (e.g., columnist, humorist), minority and ethnic journalism, and women in journalism.

MediaPost. *MediaPost Directories*. http://www.mediapost.com/directories. Available by free registration, this includes access to thousands of people working in a variety of news media, as well as directories of various media industries and sectors.

News Media Yellow Book: Who's Who among Reporters, Writers, Editors and Producers in the Leading National News Media. New York: Leadership Directories, 1988–present, quarterly. Directory of personnel (some 33,000 by 2008) rather than media organizations or outlets. Includes people at news services, newspapers, networks, television stations, radio stations, programs, periodicals, non-U.S. media, and publishers. Multiple indexes.

Newton, Eric, ed. *Crusaders, Scoundrels, Journalists: The Newseum's Most Intriguing Newspeople*. New York: Times Books, 1999. Album of nearly 300 news people of all types—from owners and publishers to reporters, photographers, and humorists—who have illuminated American journalism history, each getting one page.

Orodenker, Richard, ed. *Twentieth-Century American Sports Writers*. Detroit, MI: Gale Research, "Dictionary of Literary Biography," 1996, DLB vol. 171. *See* next entry.

Orodenker, Richard. *American Sportswriters and Writers on Sports*. Detroit, MI: Gale Research, "Dictionary of Literary Biography," 2001, DLB vol. 241. Combined with prior entry, this is a highly selective survey of in-depth profiles of sportswriters, nearly all of whom are journalists, though a few have also done books. Each essay is contributed by a different author and includes bibliographic references.

Riley, Sam G., ed. *American Magazine Journalists*. [Series] Detroit, MI: Gale Research, "Dictionary of Literary Biography" (DLB), various years. These four volumes provide solid, heavily illustrated, scholarly biographies of both living and dead U.S. editors, publishers, and writers, supplemented with primary and secondary bibliographies.

1. *1741–1850*. 1988, DLB vol. 73.
2. *1850–1900*. 1988, DLB vol. 79.
3. *1900–1960: First Series*. 1990, DLB vol. 91.
4. *1900–1960: Second Series*. 1994, DLB vol. 137.

Riley, Sam G. *Biographical Dictionary of American Newspaper Columnists*. Westport, CT: Greenwood, 1995. Some 600 figures are included, with entries ranging from a few sentences to two pages.

Riley, Sam G. *The American Newspaper Columnist*. Westport, CT: Praeger, 1998. Provides a review of the emergence of columnists and who they have been from Civil War era to present. Nearly 800 of them and their work are examined chronologically—according to when their columns first appeared—within several categories: early (1800s), humor, column poets, syndicated political, other syndicated, local, and minority.

Roberts, Nancy L. *American Peace Writers, Editors and Periodicals: A Dictionary*. Westport, CT: Greenwood, 1991. Two main parts—writers and editors (short paragraphs on each person), and an annotated listing of American peace advocacy periodicals.

Roth, Mitchel P. *Historical Dictionary of War Journalism*. Westport, CT: Greenwood, 1997. Despite its title, this is a guide to individual war reporters who have covered conflicts. Entries include reporters, photographers, and artists who represented a newspaper, magazine, radio, or television station, as well as significant events and terms relating to war reporting from 1846 to the early 1990s' Gulf War and Balkan conflicts. It is selective and excludes freelancers and independent observers—and military officers.

Sies, Luther F. *Encyclopedia of American Radio, 1920–1960*. Jefferson, NC: McFarland, 2008 (2nd ed., 2 vols.). Somewhat mistitled as the vast majority of its thousands of entries are very brief citations to individual performers (the rest concern programs), many of them involved with radio journalism.

Sies, Leora M., and Luther F. Sies. *The Encyclopedia of Women in Radio, 1920–1960*. Jefferson, NC:

McFarland, 2003. Includes many newscasters and commentators, though women were rare in such posts in these years.

Taft, William H. *Encyclopedia of Twentieth-Century Journalists*. New York: Garland, 1986. Biographical sketches of over 1,000 media personalities with emphasis on the period since 1945. Inclusion is based on a judgment of the person's achievement and reputation.

A-2: General

Few works have thus far attempted to analyze collectively who journalists are, where they come from and their backgrounds, and what they think about what they do.

Dooley, Patricia L. *Taking Their Political Place: Journalists and the Making of an Occupation*. Westport, CT: Greenwood, 1997. Explores the rise of the news function in the eighteenth and nineteenth centuries, when journalism's specialized career patterns first became established.

See Fedler, subsection C-1, below.

Johnstone, John W., et al. *The News People: A Sociological Portrait of American Journalists and Their Work*. Urbana: University of Illinois Press, 1976. Pioneering study based on a national sample. *See* Weaver et al., below.

McKercher, Catherine, and Vincent Mosco, eds. *Knowledge Workers in the Information Society*. Lanham, MD: Lexington, 2007. The changing nature of work and workers in media, information, and knowledge industries is reviewed in multiple papers, including journalists among many roles.

Tuchman, Gaye. *Making News: A Study of the Construction of Reality*. New York: The Free Press, 1978. An important participant observation study of news making as a social activity with professionals operating within complex organizations. Focusing on television news and daily newspapers, the research demonstrates the interaction among reporters and editors, working with facts and sources, and generally how "objective" news is developed.

Weaver, David H., et al. *The American Journalist*. Published over two decades, this is unusual longitudinal research about who works in journalism, their backgrounds, what they do, and why. A team of Indiana University scholars under Weaver's direction provides a window into journalism workers at a time of dramatic change in their field. (*See also* Johnstone, above.) This important series, based on interviews with a national sample, is as follows:

> *The American Journalist: A Portrait of U.S. News People and Their Work*. Bloomington: Indiana University Press, 1991 (2nd ed.). Updates first book that appeared in 1986;
>
> *The American Journalist in the 1990s: U.S. News People at the End of an Era*. Mahwah, NJ: Lawrence Erlbaum, 1996; and
>
> *The American Journalist in the 21st Century: U S. News People at the Dawn of a New Millennium*. Mahwah, NJ: Lawrence Erlbaum, 2007. This includes a summary of comparative data across previous volumes.

Weaver, David H., ed. *The Global Journalist: News People around the World*. Cresskill, NY: Hampton Press, 1998. Though skipping coverage of sub-Saharan Africa, the Middle East, and much of Eurasia and Central Asia, this provides 23 reports on specific nations in different parts of the world. Some 20,000 journalists responded to early 1990s' surveys on which descriptive discussions are based.

B. Editors and Publishers

These two roles were sometimes combined—and were even more often confused—well into the twentieth century, especially in smaller markets.

B-1: Surveys

Includes multiple biographies as well as broader surveys of their roles.

Brendon, Piers. *The Life and Death of the Press Barons*. New York: Atheneum, 1983. Compares and contrasts many of the most important British and American publishers from the beginning of the penny press in the 1830s through the next 150 years, arguing that the one-time "baron" role largely disappeared

after World War II with the stellar exception of Rupert Murdoch.

Coleridge, Nicholas. *Paper Tigers: The Latest, Greatest Newspaper Tycoons*. New York: Birch Lane, 1994. Profiles the influential world of twenty-five of the most important newspaper owners and tycoons and their newspaper dynasties, including Sulzberger, Graham, Chandler, Cox, Ingersoll, Maxwell, and Murdoch.

Daniels, Jonathan. *They Will Be Heard: America's Crusading Newspaper Editors*. New York: McGraw-Hill, 1965. A survey from the eighteenth to the twentieth century, profiling activities of a selection of editors against the context of their times.

Emery, Edwin. *History of the American Newspaper Publishers Association*. Minneapolis: University of Minnesota Press, 1950 (reprinted by Greenwood, 1970). Established in 1887, now part of the Newspaper Association of America (formed in 1992), this was a major voice in the newspaper field for a century.

Ghiglione, Loren, ed. *Gentlemen of the Press: Profiles of American Newspaper Editors—Selections from the* Bulletin *of the American Society of Newspaper Editors*. Indianapolis, IN: R. J. Berg, 1983. Anthology of reprinted brief articles profiling selected daily newspaper editors.

Pitts, Alice Fox. *Read All about It! Fifty Years of the American Society of Newspaper Editors*. Washington, DC: ASNE, 1974. Written by the organization's first executive secretary, this provides an overview and assesses the role of ASNE in journalism education, Pulitzer Prizes, the American Press Institute, relations abroad, the fight for freedom of information, and highlights from its *Bulletin*. *See* next entry.

Pratte, Paul Alfred. *Gods within the Machine: A History of the American Society of Newspaper Editors, 1923–1993*. Westport, CT: Praeger, 1995. A sometimes critical history of ASNE, presented in both chronological and topical form, this discusses leadership (or lack of same) concerning such issues as ethics, freedom of the press, world press freedom, newspaper economics, journalism education, diversity, and minority affairs. *See* previous entry.

Seldes, George. *Lords of the Press*. New York: Messner, 1938. A longtime press critic takes on most of the newspaper publishers of the pre–World War II era as selfish and ignoring public interest. Of many discussed here, only a handful come out looking well.

Sneed, Don, and Daniel Riffe. *The Publisher-Public Official: Real or Imagined Conflict of Interest?* New York: Praeger, 1992. First published research study about people filling both roles and how they deal with potential ethical conflicts. More than 100 were interviewed for the case studies presented here.

Stewart, Kenneth, and John Tebbel. *Makers of Modern Journalism*. New York: Prentice Hall, 1952. A history of American journalism told largely through the lives of important editors and publishers—this is a good example of the once-popular "great men" approach to history.

B-2: Biographies

Journalists are writers—nowhere is this more evident than in biography and autobiography. There is scarcely an editor or publisher of any importance who has not been treated in book form.

Baldasty, Gerald J. *E. W. Scripps and the Business of Newspapers*. Urbana: University of Illinois Press, 1999. Scripps began the first national newspaper chain and then formed a news agency to service his network of often small working-class papers. This is based on Scripps's personal papers and presumes some knowledge of newspaper history by the reader.

Baughman, James L. *Henry R. Luce and the Rise of the American News Media*. New York: Twayne, 1987 (reprinted by Johns Hopkins University Press, 2001). The twentieth century's most influential magazine publisher, Luce cofounded *Time* in 1923 and later initiated *Fortune* (1930), *Life* (1936), and *Sports Illustrated* (1954). Baughman argues that Luce wielded less political power than his overall impact on the press. Indeed, 40 years after his death, Luce's legacy continues to influence how the news is reported and understood. A new afterword in the 2001 edition chronicles Time Inc. after its mergers

with Warner and AOL. *See also* Herzstein and Swanberg, below.

Bellows, Jim. *The Last Editor: How I Saved* The New York Times, The Washington Post, *and the* Los Angeles Times *from Dullness and Complacency*. Kansas City, MO: Andrews McMeel, 2002. The editor "saved" these papers by editing the now-defunct *New York Herald Tribune,* the *Washington Star,* and the *Los Angeles Herald-Examiner* that competed with them. He helped hire some later-famous writers and innovated widely.

Bower, Tom. *Maxwell: The Outsider*. New York: Viking, 1992. Updated from the earlier British edition to include Maxwell's demise and the end of his publishing empire. *See also* Greenslade and Haines, below.

Bradlee, Ben. *A Good Life: Newspapering and Other Adventures*. New York: Simon & Schuster, 1995. Bradlee served as editor of *Newsweek* and then of *The Washington Post* at the time of its Watergate scoop.

Bradon, Russell. *Roy Thomson of Fleet Street*. London: Collins, 1965. An early life of the Canadian-born press and publishing magnate controlling with outlets in many countries including the United States.

Brain, Denis. *Pulitzer: A Life*. New York: Wiley, 2001. Biography of the immigrant turned "yellow journalism" publisher (1847–1911), ironically the founder of the country's first journalism school and the famous prizes bearing his name. *See also* Swanberg, below.

Catledge, Turner. *My Life and* The Times. New York: Harper & Row, 1971. For many years the top news editor at the New York paper, Catledge relates his four-decade professional life.

Chadwell, William Robert. *Horace Greeley: Champion of American Freedom*. New York: New York University Press, 2006. There are many biographies of this nineteenth-century journalist; this is among the most recent. *See also* Williams, below.

Chisholm, Anne, and Michael Davie. *Lord Beaverbrook: A Life*. New York: Knopf, 1993. One of the fascinating twentieth-century British publishers, born in Canada but a mover and shaker in mid-century thanks to his control of mass-circulation newspapers and closeness to Winston Churchill. *See also* Taylor, below.

Cohn, Jan. *Creating America: George Horace Lorimer and the* Saturday Evening Post. Pittsburgh: University of Pittsburgh Press, 1989. The longtime (1899–1936) editor of the popular weekly magazine is defined against developments in both journalism and America in general.

Columbia University Journalism Library. *Pulitzer Collections at Columbia*. http://www.columbia.edu/cu/lweb/indiv/jour/coll/pulitzer.html. Annotated guide to materials about the publisher (and the prizes—see also Section 1-F-1), both in print and online.

Cooper, Kent. *Kent Cooper and the Associated Press: An Autobiography*. New York: Random House, 1959. Longtime head of AP news agency tells his story, which is largely that of his employer in the early twentieth century, and its operations as a part of and then against the world news service cartel.

Drew, John M. L. *Dickens the Journalist*. New York: Palgrave Macmillan, 2003. First critical study to review Charles Dickens's journalism in its own right, and to assess the justice of recent reviews of Dickens's journalism as "outstanding" by relating his 40-year career in media (1833–70) as both writer and editor.

Duncan, Bingham. *Whitelaw Reid: Journalist, Politician, Diplomat*. Athens: University of Georgia Press, 1975. From his Civil War reporting to his role as editor and then publisher of *The New York Tribune* and later years in government, this is a solid biography of the Gilded Age figure (1837–1901).

Frankel, Max. *The Times of My Life and My Life at* The Times. New York: Random House, 2000. Longtime reporter, then an editor and columnist with *The New York Times*.

Gelb, Arthur. *City Room*. New York: Putnam, 2003. Legendary Horatio Alger story of starting as

a night copy boy in 1944 and rising to become managing editor of *The New York Times*.

Graham, Katherine. *Personal History*. New York: Knopf, 1997. Wonderfully written and quite open, telling of her life largely as publisher (after her husband's suicide) of *The Washington Post* and some of its major triumphs (Watergate) and troubles (labor unrest and strikes).

Greenslade, Roy. *Maxwell: The Rise and Fall of Robert Maxwell and His Empire*. New York: Birch Lane, 1994. Life of the British publisher (1923–91), which ended with his seeming suicide as creditors closed in. *See also* Bower, above, and Haines, below.

Greenwald, Marilyn S. *Woman of* The Times*: Journalism, Feminism, & Career of Charlotte Curtis*. Athens: Ohio University Press, 1999. Traces her career from reporter to "women's page" editor to finally editing the newspaper's op-ed page before her premature death at age 59.

Griffith, Sally Forman. *Home Town News: William Allen White and the* Emporia Gazette. New York: Oxford University Press, 1989. Biography of the Kansas editor (1868–1944) whose editorial role grew far beyond his small-town paper to assume national stature. *See also* White, below.

Haines, Joe. *Maxwell*. Boston: Houghton Mifflin, 1988. Said to have been the first biography of the British publisher to make use of the subject's archives just a few years before his death. *See also* Bower and Greenslade, above.

Healy, Paul F. *Cissy*. Garden City, NY: Doubleday, 1966. Life and publishing career of Eleanor "Cissy" Patterson (1881–1948), editor of the Hearst-owned (until she bought it) *Washington Herald*.

Herzstein, Robert E. *Henry R. Luce,* Time, *and the American Crusade in Asia*. New York: Cambridge University Press, 2005. Luce used his famous magazines to advance his interventionist agenda in cold war China, Korea, Japan, and above all Vietnam. Using hitherto undiscovered or inaccessible sources, the author describes how Luce saw his notion of the "American Century" as heir to the fading British Empire, though he failed to see the hubris and cultural blindness that would lead to disaster in Vietnam after his own death. *See also* Baughman, above, and Swanberg, below.

Judis, John B. *William F. Buckley, Jr.: Patron Saint of the Conservatives*. New York: Simon & Schuster, 1989. A solid biography of the founder and long-time editor of the *National Review*.

Lyon, Peter. *Success Story: The Life and Times of S. S. McClure*. New York: Scribner, 1963. Engaging biography of muckraking magazine publisher who also helped create some of the first feature syndicates.

Maier, Thomas. *Newhouse: All the Glitter, Power, and Glory of America's Richest Media Empire and the Secretive Man Behind It*. New York: St. Martin's, 1994. New York–based S. I. Newhouse and his family, publishers of newspapers and magazines (and primary donor to Syracuse University's communications school), and electronic media. *See also* Meeker, below.

See Maihafer, Section 5-B-3.

Margolies, Daniel S. *Henry Watterson and the New South: The Politics of Empire, Free Trade, and Globalization*. Lexington: University Press of Kentucky, 2006. Watterson was the influential editor of the *Louisville Courier-Journal* from the 1860s through World War I, indeed one of the most widely read newspaper editors in American history. An influential New South supporter of sectional reconciliation and economic development, he was also the country's premier advocate of free trade and globalization.

McDougal, Dennis. *Privileged Son: Otis Chandler and the Rise and Fall of the L.A.* Times *Dynasty*. Cambridge: Perseus, 2001. Tells the tale of both the family and their paper from 1884, when the Chandler family gained control of the just-born daily, through April 2000, when they sold it to the Tribune Company. Focuses on the life of Otis Chandler, the paper's chief architect after 1960, whose flamboyant exploits changed the newspaper's perspective as well as Los Angeles.

Meeker, Richard H. *Newspaperman: S. I. Newhouse and the Business of News*. New Haven, CT: Ticknor & Fields, 1983. Relates the story of the publisher (1895–1979) and his growing family, firm, and many publications. *See also* Maier, above.

Nasaw, David. *The Chief: The Life of William Randolph Hearst*. Boston: Houghton Mifflin, 2000. Probably the definitive one-volume treatment, this is a readable account of a complex man, life, and his companies. *See also* Proctor, Swanberg, and Whyte, below.

Nissenson, Marilyn. *The Lady Upstairs: Dorothy Schiff and the* New York Post. New York: St. Martin's, 2007. From 1939 until 1976 (when the paper was sold to Rupert Murdoch) she owned and guided the *Post,* the oldest continuously published daily newspaper in America. "Dolly" made it a dedicated supporter of New Deal liberalism.

Ogden, Christopher. *Legacy: A Biography of Moses and Walter Annenberg*. Boston: Little, Brown, 1999. Father and son publishers in Philadelphia, owners of the *Inquirer* and *Daily News* and later of *TV Guide*. The son endowed Annenberg communication schools at the Universities of Southern California and Pennsylvania. (For an earlier view, see John Cooney, *The Annenbergs,* Simon & Schuster, 1982.)

Page, Bruce. *The Murdoch Archipelago*. New York: Simon & Schuster, 2003. Among the more recent studies of the Australian-born publisher and his extensive print and electronic media holdings in Britain, the U.S., and Asia. *See also* Shawcross, and Wolff, below.

Pfaff, Daniel W. *No Ordinary Joe: A Life of Joseph Pulitzer III*. Columbia: University of Missouri Press, 2005. The longtime publisher of the *St. Louis Post-Dispatch* when it was among the best papers in the country, the grandson and namesake of the famous yellow journalist was also a leader in business and the arts.

Proctor, Ben. *William Randolph Hearst*. New York: Oxford University Press, 1998, 2007 (2 vols.). Drawing on previously unavailable letters and manuscripts, and quoting from Hearst's own editorials, this covers all aspects of Hearst's career: his journalistic innovations, his patriotism, his fierce belief in "government by newspaper," his frustrated political aspirations, profligate spending and art collecting, building of his "castle" at San Simeon, and his tumultuous Hollywood years. *See also* Nasaw, above, and Swanberg and Whyte, both below.

1. *The Early Years, 1863–1910*. 1998.
2. *The Later Years, 1911–1951*. 2007.

Shawcross, William. *Murdoch*. New York: Simon & Schuster, 1992 (revised paperback, Touchstone, 1997). The powerful innovator of the modern media empire (one of the six largest in the world) that melds print and electronic services across continents is profiled at length. *See also* Page, above, and Wolff, below.

Smith, Richard Norton. *The Colonel: The Life and Legend of Robert R. McCormick, 1880–1955*. Boston: Houghton Mifflin, 1997. Biography of the editor and owner of the *Chicago Tribune,* and based in part on his own papers, this relates the story of the sharply conservative daily that under McCormick's leadership became the most widely read full-size newspaper in the United States. (An older study looking at the broader publishing family is John Tebbel's *An American Dynasty: The Story of the McCormicks, Medills and Pattersons*. Garden City, NY: Doubleday, 1947.)

Steele, Janet E. *The Sun Shines for All: Journalism and Ideology in the Life of Charles F. Dana*. Syracuse, NY: Syracuse University Press, 1993. Publisher of the *New York Sun* is profiled and placed against events and journalism of his nineteenth-century times. *See also* Maihafer, Section 5-B-3.

Steinberg, Salme Harju. *Reformer in the Marketplace: Edward W. Bok and* The Ladies Home Journal. Baton Rouge: Louisiana State University Press, 1979. Bok was the longtime editor (1889–1919) of the *Journal* when it undertook various campaigns to rid society of patent medicines and venereal disease—among other ills.

Swanberg, W. A. *Citizen Hearst: A Biography of William Randolph Hearst*. New York: Scribner's,

1961. Well-received and best-selling biography of William Randolph Hearst, his companies, and his lavish lifestyle. Now largely superceded by Nasaw and Proctor, noted above.

Swanberg, W. A. *Pulitzer*. New York: Scribners, 1967. The story of the man, his two primary papers (the *St. Louis Post-Dispatch* and the *New York World,* and his late-life work to develop journalism higher education and the prizes that bear his name. *See also* Brain, above.

Swanberg, W. A. *Luce and His Empire*. New York: Scribner's, 1972. Exhaustive and readable critical biography of Henry R. Luce and his magazine publishing house (including *Time, Life,* and *Fortune,* among others) and its often considerable impact. *See also* Baughman and Herzstein, above.

Taylor, A. J. P. *Beaverbrook*. London: Hamish Hamilton, 1972. Relates the life of distinguished British historian and admirer of the British press, Lord Beaverbrook. *See also* Chisholm and Davie, above.

Teachout, Terry. *The Skeptic: A Life of H. L. Mencken*. New York: HarperCollins, 2002. From a teenage cub reporter in turn-of-the-century Baltimore to his noisy tenure as founding editor of the *American Mercury,* the most influential magazine of the 1920s, Mencken showed a contrary spirit, a razor-sharp wit, and a keen eye for up-and-coming authors. He covered everything, from the 1925 Scopes evolution trial to the 1948 presidential elections, in pages of the *Baltimore Sun*. He also wrote best-selling books.

Tifft, Susan E., and Alex S. Jones. *The Patriarch: The Rise and Fall of the Bingham Dynasty*. New York: Summit Books, 1991. Latest of several biographies of the Louisville, Kentucky, family that long published the *Louisville Courier Journal* but finally fell out with one another and sold their award-winning paper. Jones (with *The New York Times*) won a Pulitzer for his reporting on the family.

Tifft, Susan E., and Alex S. Jones. *The Trust: The Private and Powerful Family behind the* New York Times. Boston: Little, Brown, 1999. Something of a group biography, this centers on Adolph Ochs who founded the modern paper when he took it over in the 1890s, Arthur Hays Sulzberger, and later Sulzbergers and their impact on the changing paper of national record.

Tofel, Richard J. *Restless Genius: Barney Kilgore and the Invention of Modern Journalism*. New York: St. Martin's, 2009. Kilgore was editor of *The Wall Street Journal* from 1941 to 1967 and helped shape its modern role.

See Tuchman, under "Reporters," below.

Vitek, Jack. *The Godfather of Tabloid: Generoso Pope Jr. and the* National Enquirer. Lexington: University Press of Kentucky, 2008. Grounded in interviews with many of Pope's supporters, detractors, and associates, this is the first comprehensive biography of the man who created the supermarket tabloid and changed publishing. At its peak, the *Enquirer* had a circulation of 5 million.

White, William Allen. *The Autobiography of William Allen White*. New York: Macmillan, 1946 (reprinted by University Press of Kansas, 1990). A real classic among journalism books, this tells the tale of the "sage of Emporia" (1868–1944). *See also* Griffith, above.

Whited, Charles. *Knight: A Publisher in the Tumultuous Century*. New York: Dutton, 1988. The life and newspaper chain of John S. Knight (1894–1981) illustrates the role of important newspapers in the twentieth century.

Whyte, Kenneth. *The Uncrowned King: The Sensational Rise of William Randolph Hearst*. New York: Counterpoint, 2009. The latest biography of the endlessly fascinating swashbuckling publisher, this anecdotal narrative chronicles Hearst's rivalry with Joseph Pulitzer, the undisputed king of New York journalism, in the spectacular "yellow" newspaper war. *See also* Nasaw, Proctor, and Swanberg, above.

Williams, R. C. *Horace Greeley: Champion of American Freedom*. New York: New York University Press, 2006. Greeley was a key figure in New York journalism from the 1830s to his death in 1872 after a disastrous run for the presidency. *See also* Chadwell, above.

Wilner, Isaiah. *The Man Time Forgot: A Tale of Genius, Betrayal, and the Creation of* Time *Magazine*. New York: HarperCollins, 2006. Modern study of co-founder Briton Haddon (1898–1929) who helped Henry Luce form *Time* in 1923 but died tragically young and is largely forgotten today. (For an earlier biography, see Noel F. Busch, *Briton Hadden: A Biography of the Co-Founder of* Time. New York: Farrar, Straus, 1949.)

Wolff, Michael. *The Man Who Owns the News: Inside the Secret World of Rupert Murdoch*. New York: Broadway, 2008. This study builds on many interviews with its subject and others to chronicle the growth of Murdoch's $70 billion media kingdom, probing the Murdoch family dynasty. Focuses substantially on Murdoch's purchase of Dow Jones and *The Wall Street Journal*. *See also* Page and Shawcross, above.

C. Reporters

This subsection focuses on those who write for newspapers and magazines (for radio and television, see Section 7-G). For women reporters, see Section 7-H; for Washington reporters and reporting, see Section 2-B-4; for investigative and muckraking reporting, see Section 5-D; and for foreign reporting, see Section 6-G.

C-1: Surveys

These cover reporters generally, including multiple biographies.

Bassow, Whitman. *The Moscow Correspondents: Reporting on Russia from the Revolution to Glasnost*. New York: Morrow, 1988. The author was one of those about whom he writes—he surveys some 300 of them here.

Emery, Michael. *On the Front Lines: Following America's Foreign Correspondents across the Twentieth Century*. Washington, DC: American University Press, 1995. Reviews the people and process across seven periods, assessing many of the problems.

Fedler, Fred. *Lessons from the Past: Journalists' Lives and Work, 1850–1950*. Prospect Heights, IL: Waveland Press, 2000. Chapters discuss getting hired (and sometimes fired), reporting, journalistic ethics in different eras, how the telephone and typewriter transformed newsrooms (most papers were late adopters of both—adoption of the telegraph and linotype were quicker), and behavior (such as drinking). The author makes good use of examples culled from his subjects' own writings.

Heald, Morrill. *Transatlantic Vistas: American Journalists in Europe, 1900–1940*. Kent, OH: Kent State University Press, 1989. Survey of many different reporters over four decades.

Hess, Stephen. Newswork Series. Washington, DC: Brookings Institution Press, 1981–2005 (6 vols.). Based on interviews with practicing journalists, this important and ongoing series of studies profiles Washington and international reporters—what they do and think about their own work, their backgrounds, and the like. The specific titles:

1. *The Washington Reporters*. 1981.
2. *The Government/Press Connection: Press Officers and Their Offices*. 1984.
3. *The Ultimate Insiders: U.S. Senators in the National Media*. 1986.
4. *Live from Capitol Hill*. 1992.
5. *International News & Foreign Correspondents*. 1996.
6. *Through Their Eyes: Foreign Correspondents in the United States*. 2005.

Hohenberg, John. *Foreign Correspondence: The Great Reporters and Their Times*. New York: Columbia University Press, 1964. Development of overseas reporting, beginning with the late eighteenth-century French Revolution, as seen through the lives and work of key figures.

Inglis, Fred. *People's Witness: The Journalist in Modern Politics*. New Haven, CT: Yale University Press, 2002. Historical collective biography of twentieth-century news people, nearly all of them reporters, and their political impact.

McLaughlin, Greg. *The War Correspondent*. London: Pluto / Sterling, VA: Stylus, 2002. The

rise and current role of war reporters in five chapters tracing their history as well as the impact of technology, the role of objectivity, and British reporters' experiences.

Milton, Joyce. *The Yellow Kids: Foreign Correspondents in the Heyday of Yellow Journalism*. New York: Harper & Row, 1992. Covers many of them, focusing on Sylvester "Harry" Scovel, Pulitzer's top overseas reporter during the Spanish-American War, the Klondike gold rush and other turn-of-the-twentieth-century events.

Randall, David. *The Great Reporters*. Ann Arbor, MI: Pluto (dist. by University of Michigan Press), 2005. A compendium of 13 "greatest" English-language reporters, chosen by a British journalist. The nine Americans and four Britons include such notables as Ernie Pyle, Nellie Bly, A. J. Liebling, George Seldes, and Edna Buchanan, people who would certainly top any journalism historian's list. But there are limitations: Only individuals, not collaborative teams, were considered, and broadcasting was deemed too collaborative to include. News was valued over news analysis or commentary.

Tunstall, Jeremy. *Journalists at Work: Specialist Correspondents, Their News Organizations, News Sources and Competitor Colleagues*. London: Constable, 1971. Sociological study of specialized journalists in Britain, their backgrounds, how they worked as news gatherers, and how they competed.

Weber, Ronald. *News of Paris: American Journalists in the City of Light between the Wars*. Chicago: Ivan Dee, 2006. Freelancers, reporters for American publications, wire service journalists and budding novelists—they all seemed to congregate in Paris in the 1920s and into the 1930s. This study focuses on a golden era for expatriates at work reporting news across Europe.

C-2: Biographies

Again, journalists—and especially reporters—write for a living. Not surprisingly, there are shelves of books by (or about) many of the better known figures. What follows is a representative sample. Women reporters appear under subsection H, below.

Arnett, Peter. *Live from the Battlefield: From Vietnam to Baghdad—35 Years in the World's War Zones*. New York: Simon & Schuster, 1994. The war correspondent assesses his role from Vietnam (where he was an AP reporter) through the 1990–91 Gulf War, where he played a central part in CNN's reporting of that brief conflict.

Burlingame, Robert. *Don't Let Them Scare You: The Life and Times of Elmer Davis*. Philadelphia: Lippincott, 1961. Davis was a respected newspaper correspondent, later a radio commentator, and headed World War II's Office of War Information.

Cottrell, Robert C. *Izzy: A Biography of I. F. Stone*. New Brunswick, NJ: Rutgers University Press, 1992. The often outspoken reporter and editor is profiled.

Harry Ransom Center. *Woodward and Bernstein Watergate Papers* (online exhibition). http://www.hrc.utexas.edu/exhibitions/web/woodstein. The reporters' archive of notes and documents from 1972 to Nixon's resignation in August 1974 and the books related to those events are illustrated in a University of Texas Libraries online exhibition.

Harsch, Joseph C. *At the Hinge of History: A Reporter's Story*. Athens: University of Georgia Press, 1993. Longtime correspondent for the *Christian Science Monitor* as well as a regular on radio and television networks, Harsch had a knack for being in the right place at the right time.

Johnson, Owen V. *Ernie Pyle: 60 Years after His Death*. http://journalism.indiana.edu//news/041505pyle. The Indiana-born war reporter of World War II is profiled in a state university site, including a link to some of his stories and an archive of his papers.

Krock, Arthur. *Memoirs: Sixty Years on the Firing Line*. New York: Funk & Wagnalls, 1968. Longtime foreign affairs reporter with *The New York Times* tells his story and that of news gathering in his time.

Langford, Gerald. *The Richard Harding Davis Years: A Biography of a Mother and Son*.

New York: Holt, Rinehart & Winston, 1961. A life of the swashbuckling foreign and war correspondent (and his accomplished mother as well) in the last half of the nineteenth century and early years of the twentieth.

Lubow, Arthur. *The Reporter Who Would Be King: A Biography of Richard Harding Davis*. New York: Scribner, 1992. Biography of perhaps the best-known American derring-do foreign and war reporter of the late nineteenth century.

MacPherson, Myra. *All Governments Lie: The Life and Times of Rebel Journalist I. F. Stone*. New York: Scribner, 2006. After making his mark on New York dailies and in *The Nation*—scoring such scoops as the discovery of American cartels doing business with Nazi Germany—Stone became unemployable during the McCarthyism era of the early 1950s. Out of desperation he started his four-page *I. F. Stone's Weekly,* which ran from 1953 to 1971. He was an investigative reporter and a strong critic of his own field.

McKeen, William. *Outlaw Journalist: The Life and Times of Hunter S. Thompson*. New York: Norton, 2008. Among the most recent of several biographies of the "gonzo" or "new" journalist who melded creative prose with reporting. The biography draws on Thompson's colleagues as well as the man himself.

Reston, James B. *Deadline: A Memoir*. New York: Random House, 1991. Reston was a longtime reporter, later the Washington bureau chief and editor/columnist for *The New York Times*. *See also* Stacks, below.

Shepard, Alicia C. *Woodward and Bernstein: Life in the Shadow of Watergate*. Hoboken, NJ: John Wiley, 2007. Decades after they became journalistic folk heroes, the legend of *Washington Post* reporters Bob Woodward and Carl Bernstein bringing down a corrupt President endures. The author reviews this folklore and extends it by tracing the very different subsequent careers of its two leading men.

Smith, Merriman. *Thank You, Mr. President: A White House Notebook*. New York: Harper, 1946. Early journalistic life of the United Press White House reporter, talking here about covering the Roosevelt and Truman administrations, who would later win a Pulitzer for his coverage of the Kennedy assassination. *See also* his *A White House Memoir* (New York: Norton, 1972) for a broader overview of his life.

Stacks, John F. *Scotty: James B Reston and the Rise and Fall of American Journalism*. Boston: Little, Brown, 2002. Biography of longtime *New York Times* reporter, columnist, and editor. *See also* Reston, above.

D. Columnists and Commentators

See also subsections C and G of this section, as many of the print and broadcast reporters also became columnists and commentators.

D-1: Surveys

Includes multiple biographies.

See Braden, subsection H-1, below.

Bulman, David, ed. *Molders of Opinion*. Milwaukee, WI: Bruce, 1945. Includes both newspaper and radio commentators of the World War II era, in informal profiles written by other journalists.

Fisher, Charles. *The Columnists*. New York: Howell, Soskin, 1944. Twenty leading newspaper columnists during World War II are profiled here in a somewhat tongue-in-cheek fashion.

Grauer, Neil R. *Wits & Sages*. Baltimore: Johns Hopkins University Press, 1984. Includes portraits of Jack Anderson, Russell Baker, Erma Bombeck, Jimmy Breslin, David Broder, Art Buchwald, William F. Buckley Jr., Ellen Goodman, James J. Kilpatrick, Carl T. Rowan, Mike Royko, and George F. Will.

Meyer, Karl E. *Pundits, Poets and Wits: An Omnibus of American Newspaper Columnists*. New York: Oxford University Press, 1990. More an anthology of their writings, but with some biographical background as well.

Nimmo, Dan, and James E. Combs. *The Political Pundits*. New York: Praeger, 1992. Explores the

rising importance of political commentators in the press, television, and on the lecture circuit. Chapters explore different types of pundit regarding what they talk about and the media they use. Takes a somewhat "bardic" or comic approach to pundits and their output.

Riley, Sam G. *The Best of the Rest: Non-Syndicated Newspaper Columnists Select Their Best Work*. Westport, CT: Greenwood, 1993. Presents work of 77 of America's most talented local newspaper columnists from 41 states—those chosen for inclusion were "nominated" by a nationwide panel of journalism professors. *See also* the author's other books on columnists in subsection A, above.

Soley, Lawrence C. *The News Shapers: The Sources Who Explain the News*. New York: Praeger, 1992. Discusses oft-quoted academic and other "public intellectuals" and how they are picked and what roles they play in news reporting. Makes clear they are rarely the neutral sources they are made out to be in a comparison of their use in the late 1970s and late 1980s, and using the Persian Gulf War as one case study.

D-2: Biographies

Individuals are covered here.

Abell, Tyler, ed. *Drew Pearson: Diaries, 1949–1959*. New York: Holt, Rinehart & Winston, 1974. Investigative reporter and author of the widely syndicated "Washington Merry-Go-Round" column of national capital political and other gossip. *See also* Klurfeld and Pilat, below.

Anderson, Jack, with James Boyd. *Confessions of a Muckraker*. New York: Random House, 1979. Covers the reporting and writing of the "Washington Merry-Go-Round" column from 1947 to 1969.

Gabler, Neal. *Winchell: Gossip, Power, and the Culture of Celebrity*. New York: Knopf, 1994. Melds a biography of the newspaper and radio (and, though briefly, television) gossip columnist (1897–1972), his life, work, and times.

Klurfeld, Herman. *Behind the Lines: The World of Drew Pearson*. Englewood Cliffs, NJ: Prentice Hall, 1968. *See also* Abell, above, and Pilat, below.

Pilat, Oliver Ramsey. *Drew Pearson: An Unauthorized Biography*. New York: Harper's Magazine Press, 1973. *See also* Abell and Klurfeld, above.

Riccio, Barry D. *Walter Lippmann: Odyssey of a Liberal*. New Brunswick, NJ: Transaction, 1994. Biography focusing on his views. *See also* Steel, below.

Steel, Ronald. *Walter Lippmann and the American Century*. Boston: Little, Brown, 1980 (reprinted by Transaction, 1999). Still considered the standard biography of the longtime political columnist and reporter. *See also* Riccio, above.

E. Political Cartoonists

The biographical literature here is fairly thin—cartoonists do their graphic thing and that rarely seems to include writing about themselves or how they achieve what they do. *See also* Section 2-F for related titles.

Adler, John, and Draper Hill. *Doomed by Cartoon: How Cartoonist Thomas Nast and the New York Times Brought Down Boss Tweed and His Ring of Thieves*. Garden City, NY: Morgan James, 2008. Nast was the dominant American political cartoonist of the late nineteenth century; he attacked Tweed in his 160-plus cartoons, almost like a serialized but intermittent comic book covering 1866 through 1878.

Block, Herbert. *Herblock: A Cartoonist's Life*. New York: Macmillan, 1993. The longtime *Washington Post* cartoonist tells his story and reproduces many of his cartoons. (*See also* his many volumes of collected work, listed under Section 2-F.)

Conrad, Paul. *I, Con: The Autobiography of Paul Conrad, Editorial Cartoonist*. Los Angeles: Angel City, 2007. Life and work (mostly the latter reproduced here) of the longtime *Los Angeles Times* cartoonist.

Desparats, Peter. *The Hecklers: A History of Canadian Political Cartooning and a Cartoonists' History of Canada*. Toronto: McClelland &

Stewart, 1979. Cartoonists north of the U.S. border make for an interesting comparison with their American counterparts.

Goldstein, Nancy. *Jackie Ormes: The First African American Woman Cartoonist*. Ann Arbor: University of Michigan Press, 2008. Ormes's (1911–85) cartoon characters (including Torchy Brown, Candy, and Patty-Jo 'n' Ginger) delighted readers of the *Pittsburgh Courier* and *Chicago Defender*, and spawned other products, including dolls. Includes a selection of her cartoons and comic strips, which survey U.S. culture and history in the 1937–56 era.

Henry, John M., ed. *Ding's Half Century*. New York: Duell, Sloan & Pearce, 1962. A retrospective of "Ding" Darling's best work. *See also* Lendt, below.

Keller, Morton. *The Art and Politics of Thomas Nast*. New York: Oxford University Press, 1968. The life and work of the famous nineteenth-century American cartoonist who created the Republican elephant and Democrat donkey symbols, among many others.

Lendt, David L. *Ding: The Life of Jay Norwood Darling*. Ames: Iowa State University Press, 1979. "Ding" Darling (1876–1962) worked for the Des Moine paper for a half century with a few time-outs, and his editorial cartoon output was widely followed in the early twentieth century. *See also* Henry, above.

Low, David. *Low's Autobiography*. London: Michael Joseph, 1956. The longtime British political cartoonist (who began life in New Zealand) relates his life and work. *See also* Seymour-Ure and Schoff, below.

Rall, Ted. *Attitude: The New Subversive… Cartoonists*. New York: Nantier Beall Minoustchine, 2002–06 (3 vols.). Profiles the professional lives and assesses the work of cartoonists whose work runs in local weekly alternative papers or online, including interviews with many of them, plus examples of their work.

1. *Attitude: The New Subversive Political Cartoonists*. 2002.
2. *Attitude 2: The New Subversive Alternative Cartoonists*. 2004.
3. *Attitude 3: The New Subversive Online Cartoonists*. 2006.

Seymour-Ure, Colin, and Jim Schoff. *David Low*. London: Secker & Warburg, 1985. One of the relatively few seriously researched analyses of work of any editorial cartoonist, in this case of the famous British political cartoonist (1891–1963). Well-illustrated papers assess the man, his times, and his work. *See also* Low, above.

Trostle, J. P. *Attack of the Political Cartoonists: Insights and Assaults from Today's Editorial Pages*. Madison, WI: Dork Storm, 2004. Pulls together some of the work and commentary of 150 members of the Association of American Political Cartoonists.

West, Richard S. *Satire on Stone: The Political Cartoons of Joseph Kepler*. Urbana: University of Illinois Press, 1988. The cartoonist for the satirical magazine *Puck*.

F. Photojournalists

Most of these treatments emphasize pictures (and often wartime photos) as might be expected. *See also* Sections 2-G for history and 4-F-3 for current role.

F-1: Surveys

Faas, Host, and Tim Page, eds. *Requiem: By the Photographers Who Died in Vietnam and Indochina*. New York: Random House, 1997. How wartime pictures were taken despite or because of the dangers involved.

Howe, Peter. *Shooting under Fire: The World of the War Photographer*. New York: Artisan, 2002. A wide-ranging survey, emphasizing such recent wars as the Gulf War of 1990–91.

Light, Ken, ed. *Witness in Our Time: Working Lives of Documentary Photographers*. Washington, DC: Smithsonian Institution Press, 2000. Explores the work of those in journalism as well as other fields.

Lindekugel, D. M. *Shooters: TV News Photographers and Their Work*. Westport, CT: Praeger, 1994. The occupational world of electronic news-gathering photographers is the focus here. It seeks to reveal their perceptions of their own work and the competence that underlies it. This is an ethnographic analysis based upon participant observation at work. The study explores the emerging nature of the occupation, context of markets within which it exists, types and roles of people involved, and practical skills required.

F-2: Biographies

Individual memoirs are included here.

Bresson-Cartier, Henri. *Robert Capa, Photographs*. New York: Aperture, 1996. Capa was known for (and died taking) his wartime photos. This collects much of that work and provides background on his life.

Callahan, Sean. *Margaret Bourke-White, 1904–1971*. Boston: Little, Brown, 1998. She did industrial work and other news photos before becoming famous as a war photographer during and after World War II. *See also* Goldberg and Keller, both below.

Goldberg, Bicki. *Margaret Bourke-White: A Biography*. Reading, MA: Addison-Wesley, 1987. *See also* Callahan, above, and Keller, below.

Eisenstaedt, Alfred. *Eisenstaedt on Eisenstaedt*. New York: Abbeville Press, 1985. For decades, he was one of *Life* magazine's best-known photographers—this album reproduces some of his famous work as he provides background context.

Hallett, Michael. *Stefan Lorant: Godfather of Photojournalism*. Lanham, MD: Scarecrow Press, 2005. Lorant was a pioneer in European photojournalism in the 1920s and 1930s and did his work in Hungary, Germany, and England. His layouts and interviews became familiar largely through the pages of his own creations, particularly the weekly *Picture Post*.

Keller, Emily. *Margaret Bourke-White: A Photographer's Life*. Minneapolis, MN: Lerner, 1996. *See also* Callahan, Goldberg, above.

Mydans, Carl. *Carl Mydans: Photojournalist*. New York: Abrams, 1993. Longtime photographer for the weekly *Life* magazine tells his own story and that of some of his work.

Panzer, Mary. *Matthew Brady and the Image of History*. Washington, DC: Smithsonian Institution Press, 1997. Modern survey (there are many books on Brady) of the life and work of the Civil War–era photographer.

Yochelson, Bonnie, and Daniel Czitrom. *Rediscovering Jacob Riis: Exposure Journalism and Photography in Turn-of-the-Century New York*. New York: The New Press, 2007. Reviews the often startling work of Riis (1849–1914) in shooting poverty, slums, and immigrants in the city.

G. Broadcasters and Cablecasters

This is a large and growing literature, much of it made up of individual memoirs of on-air figures, but including some industry leaders as well.

G-1: Radio

Given the decline of radio news, most of these studies are historical.

Culbert, David Holbrook. *News for Everyman: Radio and Foreign Affairs in Thirties America*. Westport, CT: Greenwood, 1976. Useful professional biographies of six pioneering journalists placed in the context of developing news programming on commercial networks before World War II.

Fang, Irving. *Those Radio Commentators!* Ames: Iowa State University Press, 1977. Fourteen men (and Dorothy Thompson), all network commentators in the 1930s and 1940s (a few later) are profiled sufficiently to get a good sense of their careers and how they differed from one another, with others more briefly mentioned.

Phillips, Lisa A. *Public Radio: Behind the Voices*. Cambridge, MA: CDS Books, 2006. Part 1 focuses

on news and information program hosts on National Public Radio, while part 2 deals with talk and entertainment hosts. (Part 3 concerns music.)

Smith, Curt. *The Storytellers: From Mel Allen to Bob Costas*. New York: Macmillan, 1995. Explores the professional lives and impact of national and local radio and television sportscasters.

Widner, James F. *Radio News Commentators*. http://www.otr.com/news.shtml. Thirteen of them are briefly profiled, and recordings of one or more of their broadcasts are provided.

G-2: Television

See also women journalists, subsection H, below.

Alan, Jeff, with James Martin Lane. *Anchoring America: The Changing Face of Network News*. Chicago: Bonus Books, 2003. Offers brief biographies of 19 network anchors from the 1950s to the present, illustrating the changing roles of television news and its decline in recent years.

Auletta, Ken. *The Highwaymen: Warriors of the Information Highway*. New York: Random House, 1997. Anthology of the author's profiles that appeared in *The New Yorker,* focused largely on electronic media figures and some behind-the-scenes media dealmakers.

Fensch, Thomas, ed. *Television News Anchors: An Anthology of Profiles of the Major Figures and Issues in United States Network Reporting*. Jefferson, NC: McFarland, 1993. Aside from a few "issue" selections, this gathers previously published profiles on about 25 television figures, past and present. Many are interviews.

Foot, Joe S. *Live from the Trenches: the Changing Role of the Television News Correspondent*. Carbondale: Southern Illinois University Press, 1998. Major network newscasters describe different aspects of their jobs and newsbeats in interviews, often featuring insightful use of examples.

Goldberg, Robert, and Gerald Jay Goldberg. *Anchors: Brokaw, Jennings, Rather and the Evening News*. New York: Birch Lane/Carol, 1990. Breezy journalistic survey of the three men who headed the network evening news programs (then watched by 40 million viewers a night)—and did so for another dozen years after the book appeared. The book profiles anchors and their newscasts and some of reporters featured therein.

Kurtz, Howard. *Reality Show: Inside the Last Great Television News War*. New York: The Free Press, 2007. A media critic for *The Washington Post* provides a readable (even gossipy) survey of network anchors of the early twenty-first century as they faced stiff competition from cable and online sources. Much of the focus is on how Brian Williams, Charles Gibson, and Katie Couric reached their elevated status, and how they handled it.

Matusow, Barbara. *The Evening Stars: The Making of the Network News Anchor*. Boston: Houghton Mifflin, 1983. Briefly tracing developments to the time of publication, the author centers attention on key players (some of them only briefly anchors) of the late 1970s and early 1980s. The resulting profiles of journalists are often insightful.

Shedden, David. *Early TV Anchors*. http://alpha.poynter.org/content/content_print.asp?id=99440. The Poynter Institute library director provides useful clips from network newscasts from as early as 1948 while outlining who was on the air on each of the networks and when.

G-3: Biographies

Individual memoirs or biographies are included here.

Arledge, Roone. *Roone: A Memoir*. New York: HarperCollins, 2003. Autobiography of the leading sports and news executive at ABC in the 1970s to 1990s, discussing his key decisions and the events covered.

Bliss, Edward, Jr. *In Search of Light: The Broadcasts of Edward R. Murrow*. New York: Knopf, 1967. Published only two years after Murrow's death, this anthology includes excerpts (and sometimes complete broadcasts) over the CBS reporter's career.

Cloud, Stanley, and Lynne Olson. *The Murrow Boys: Pioneers on the Front Lines of Broadcast Journalism*. Boston: Houghton Mifflin, 1996. Readable account of the CBS broadcast team developing during and after World War II by their star journalist Edward R. Murrow. Included are Eric Sevareid, Wlliam L. Shirer, Charles Collingwood, Richard C. Hottelet, Larry LeSeur, and many others.

Cronkite, Walter. *A Reporter Remembers*. New York: Random House, 1996. The longtime CBS anchorman (1962–81), and before that a network correspondent and UP wire service reporter relates his life.

Darnton, Kate, et al. *Peter Jennings*. New York: Public Affairs, 2007. Anchor of ABC's *World News Tonight* (1983–2005); his life is related through memories of his friends, family, competitors, colleagues, and interview subjects.

Donaldson, Sam. *Hold On, Mr. President!* New York: Random House, 1987. The longtime ABC journalist's career in Washington and elsewhere is surveyed.

Frank, Reuven. *Out of Thin Air: The Brief Wonderful Life of Network News*. New York: Simon & Schuster, 1991. Frank headed NBC news and produced many of their documentaries—this is a combination memoir and critique of how the network news business was changing.

Frantzich, Stephen E. *Founding Father: How C-SPAN's Brian Lamb Changed Politics in America*. Lanham, MD: Rowman & Littlefield, 2008. Lamb created C-SPAN's public service cable network.

Ghiglione, Loren. *CBS's Don Hollenbeck: An Honest Reporter in the Age of McCarthyism*. New York: Columbia University Press, 2008. Troubled story of a New York radio newsman widely respected in his time (1905–54), but eventually hounded to his suicide death by a McCarthyite radio-television columnist for the Hearst papers. *See also* the author's *Radio's Revolution: Don Hollenbeck's* CBS Views the Press (Lincoln: University of Nebraska Press, 2008) for transcripts of some of Hollenbeck's best work.

Goldberg, Robert, and Gerald Jay Goldberg. *Citizen Turner: The Wild Rise of an American Tycoon*. New York: Harcourt, 1995. Biography of Ted Turner both on the screen and off, along with many of his key aides, focusing on the rise and development of CNN cable news service.

Leonard, Bill. *In the Eye of the Storm: A Lifetime with CBS*. New York: Putnam, 1987. A reporter who rose to head network's news division at a difficult time of retrenchment.

McVane, John. *On the Air in World War II*. New York: Morrow, 1979. NBC's man in Europe for much of the war tells his story—he was one of the few allowed to broadcast with little or no censorship.

Paley, William S. *As It Happened: A Memoir*. Garden City, NY: Doubleday, 1979. Autobiography of the longtime CBS leader ranging through his years in radio and then television. *See also* Smith, below.

Persico, Joseph E. *Edward R. Murrow: An American Original*. New York: McGraw-Hill, 1988. Thought by many of the "Murrow Boys" to be the best among several biographies of the CBS newsman. Persico made excellent use of interviews (and a technique Murrow himself used of teasing out more information from his informants) with people from Murrow's private and public lives. *See also* Sperber, below.

Rather, Dan, and Mickey Herskowitz. *The Camera Never Blinks*. New York: Morrow, 1977. *See* next entry.

Rather, Dan, and Mickey Herskowitz. *The Camera Never Blinks Twice: The Further Adventures of a Television Journalist*. New York: Morrow, 1994. The CBS reporter, White House correspondent, and 1981–2006 evening news anchor relates his professional life as a parade of anecdotes.

Schorr, Daniel. *Clearing the Air*. Boston: Houghton Mifflin, 1982. Longtime correspondent, often controversial, on CBS (for the period covered here) and later NPR.

Schroth, Raymond A. *The American Journey of Eric Sevareid*. South Royalton, VT: Steerforth

Press, 1995. Details the life of the CBS correspondent (1912–92) on and off the microphone. One of the revered "Murrow Boys," he made his name with World War II reporting and ended up offering commentary on the network evening news before retiring in 1977.

Seib, Philip. *Broadcasts from the Blitz: How Edward R. Murrow Helped Lead America into War*. Dulles, VA: Potomac Books, 2007. Offers a new consideration of the CBS radio journalist—and how he became that way and with what impact. Seib focuses on Murrow's broadcasts from 1939 until American entry into the war at the end of 1941. *See also* Bernstein, above.

Smith, Howard K. *Events Leading Up to My Death: The Life of a Twentieth-Century Reporter*. New York: St. Martin's, 1996. He began as one of the "Murrow boys" in World War II, worked for CBS for years, and then shifted to ABC.

Smith, Sally Bedell. *In All His Glory: The Life of William S. Paley, the Legendary Tycoon and His Brilliant Circle*. New York: Simon & Schuster, 1990. Exhaustive and insightful biography telling the story of the CBS network through the life of its longtime leader, including his often tense relationship to the news division, its personnel, and programs. *See also* Paley, above.

Sperber, A. M. *Murrow: His Life and Times*. New York: Freundlich Books, 1986; reprinted by Fordham University Press, 1998. Most comprehensive of the several biographies of the CBS reporter (*see also* that by Persico, above). Here is the private (and sometimes inwardly tortured) Murrow who grew out of an unlikely background to world prominence before he reached 30. About 40 percent of this study details the period up to 1945, when it then concentrates increasingly on the growing role of television—and Murrow's decidedly dark view of that medium.

Utley, Garrick. *You Should Have Been Here Yesterday: A Life in Television News*. New York: Public Affairs, 2000. Longtime NBC political correspondent, son of another journalist, relates his own career.

Wallace, Mike, and Gary Paul Gates. *Close Encounters: Mike Wallace's Own Story*. New York: Morrow, 1984. The life and accomplishments of the CBS personality and later newsman, a longtime figure on *60 Minutes*.

Weisman, Alan. *Lone Star: The Extraordinary Life and Times of Dan Rather*. Hoboken, NJ: Wiley, 2006. A short, breezy, and balanced biography of the rise-and-fall of the controversial CBS News anchorman, written by one of his former TV producers. *See also* Rather's own volumes, above.

H. Women Journalists

Women have played a growing role in all aspects of journalism, especially since the mid-twentieth century. For biographies of several female publishers, see subsection B-2, above. Other female journalists are all here.

H-1: Surveys and Print Media

There have been many "survey" books that attempt to sum up the role of women in journalism, or group biographies of many of them.

Abramson, Phyllis Leslie. *Sob Sister Journalism*. Westport, CT: Greenwood, 1990. Focuses on the infamous Harry Thaw murder of architect Stanford White in 1906 and explores how "sob sister" reporting was born. Relates the role of four female reporters covering the story.

Beasley, Maurine, and Kathryn Theus. *The New Majority: A Look at What the Preponderance of Women in Journalism Education Means to the Schools and to the Professions*. Lanham, MD: University Press of America, 1988. Long title largely sums up this Gannett Foundation–supported study.

Beasley, Maurine Hoffman, and Sheila J. Gibbons. *Taking Their Place: A Documentary History of Women and Journalism*. Washington, DC: American University Press, 2003 (2nd ed.). Updates and expands Donna Allen's *Women in Media* (1977) and reprints seminal documents, legal decisions, and other materials including image and

language guidelines of newspapers and other media. Combines historical narrative with interviews and other primary material.

Belford, Barbara. *Brilliant Bylines: A Biographical Anthology of Notable Newspaperwomen in America*. New York: Columbia University Press, 1986. Lives and careers of 24 newpaperwomen, including Ellen Goodman, Mary McGrory, Marguerite Higgins, Judith Crist, Dorothy Thompson, and Georgie Anne Geyer, and the many personal friends and professional colleagues who influenced their journalism efforts.

Bois, Danuta. *Distinguished Women in Journalism and Broadcasting*. http://www.distinguished-women.com/subject/journ.html. Alphabetical listing by name of Americans and female journalists of other nationalities, providing access to multiple sources of information. Divided into two groups—those born before the twentieth century, and those born in that century.

Braden, Marie. *She Said What?: Interviews with Women Newspaper Columnists*. Lexington: University Press of Kentucky, 2003. Thirteen of them are included, among them pioneers Mary McGrory of *The Washington Post,* syndicated columnist Erma Bombeck, *Chicago Daily News* foreign correspondent Georgie Anne Geyer, *Boston Globe* associate editor Ellen Goodman, syndicated conservative political columnist Mona Charon, Judith Martin ("Miss Manners"), and two black women: Dorothy Gilliam of *The Washington Post* and Marlene Davis of the Lexington (KY) newspaper.

Bradley, Patricia, and Gail Collins. *Women and the Press: the Struggle for Equality*. Evanston, IL: Northwestern University Press, 2005. Relates the fight for job and salary equity in print journalism.

Broussard, Jinx Coleman. *Giving a Voice to the Voiceless: Four Pioneering Black Women Journalists*. New York: Routledge, 2004. Describes the journalism careers of four black women within the context of the era in which they lived and worked. Ida B. Wells-Barnett, Mary Church Terrell, Alice Dunbar-Nelson, and Amy Jacques Garvey were among about 20 black women journalists who wrote for newspapers and magazines during the late nineteenth and early twentieth centuries.

Burt, Elizabeth V. *Women's Press Organizations, 1881–1999*. Westport, CT: Greenwood, 2000. Description and analysis of 40 women's press organizations that have been key to the development of women press writers since the first established organization in 1881. Entries describe challenges that brought about each organization's establishment, some women who played key roles in the group's leadership, its major activities and programs, and its contributions to women.

Cairns, Kathleen A. *Front-Page Women Journalists: 1920–1950*. Lincoln: University of Nebraska Press, 2003. Profiles three of the pioneers (reporters and editors) in an era when few women had much of a chance to excel in the field, though more than 20,000 were so employed.

Chambers, Deborah, et al. *Women and Journalism*. New York: Routledge, 2004. Examines strategies women have adopted to gain power in a male-dominated media environment, charting women's independent press, radio, television and Internet initiatives in the United States and Britain.

Creedon, Pamela J., and Judith Cramer, eds. *Women in Mass Communication*. Thousand Oaks, CA: Sage, 2007 (3rd ed.). Standard treatment that adds material on women's opportunities and problems with online journalism, the role of women in health communication, sports journalism, religious media, and more. Other chapters review the growing role of women in journalism, focused assessments of specific media over the past decade, specializations (health communications, scholastic media), the varied role of women in different Western countries, religious media, and a global view of women in media.

Edwards, Julia. *Women of the World: The Great Foreign Correspondents*. Boston: Houghton Mifflin, 1988. Collective biography of about a dozen of those who made it to the top of their calling—including Margaret Bourke-White, Helen Kirkpatrick, Dorothy Thompson, Anne O'Hare McCormick, Mary Roberts Rinehart, Marguerite Higgins, and Dickey Chapelle.

Hoffman, Joyce. *On Their Own: Women Journalists and the American Experience in Vietnam*. Cambridge, MA: Da Capo, 2008. Women journalists who covered the Vietnam War are described as pioneers in being war journalists in what had been a male-dominated role, and that they were every bit as good as their male counterparts in terms of in-depth reporting and analysis.

Library of Congress. *Women Come to the Front: Journalists, Photographers, and Broadcasters during World War II*. http://www.loc.gov/exhibits/wcf/wcf0001.html. The work of eight women is detailed in this online exhibition.

Lutes, Jean Marie. *Front Page Girls: Women Journalists in American Culture and Fiction*. Ithaca, NY: Cornell University Press, 2006. Constructs an imaginative exchange between real-life reporters like Nellie Bly and Ida B. Wells and fictional characters like Henrietta Stackpole, the lady-correspondent in Henry James's *Portrait of a Lady*. Chronicles exploits of a neglected group of American women writers and uncovers an alternative reporter–novelist tradition that runs counter to the familiar story of gritty realism generated in male newsrooms.

Marzolf, Marion. *Up from the Footnote: A History of Women Journalists*. New York: Hastings House, 1977. An early history of the slowly expanding role of women in print and in electronic journalism (and a wonderful title).

Middleton, Ken. *American Women's History: A Research Guide—Journalists*. http://frank.mtsu.edu/~kmiddlet/history/women/wh-jour.html. Offers extensive linking to a large number of sites, including many primary resources and also print materials, prepared by a university reference librarian.

Mills, Eleanor, Kira Cochrane, and Naomi Wolf. *Journalistas: 100 Years of the Best Writing and Reporting by Women Journalists*. New York: Carroll & Graf, 2005. Using examples from both sides of the Atlantic, this includes both breaking news reports and feature writing.

Mills, Kay. *A Place in the News: From the Women's Pages to the Front Page*. New York: Dodd, Mead, 1988; reprinted by Columbia University Press, 1990. History of women's growing journalism role. Describes how today's women journalists have reached their present positions and argues that the increased presence of women reporters is having an impact on news that appears in daily papers.

Ricchiardi, Sherry, and Virginia Young, eds. *Women on Deadline: A Collection of America's Best*. Ames: Iowa State University Press, 1991. Collects work of nine female journalists as well as interviews with each of them to profile their professional lives. A final chapter discusses "common threads" of those nine careers.

Robertson, Nan. *The Girls in the Balcony: Women, Men, and the* New York Times. New York: Random House, 1992. Story of female reporters at the *Times* and their fight to the gain respect and parity in jobs and pay. The title refers to the once-odious symbol of gender discrimination in journalism—the balcony of Washington's all-male National Press Club, the only place from which women reporters could cover speeches of world leaders, while males sat at tables and could question speakers.

Schilpp, Madelon Golden, and Sharon M. Murphy. *Great Women of the Press*. Carbondale: Southern Illinois University Press, 1983. Brief biographical sketches of selected figures.

Signorelli, Nancy, ed. *Women in Communication: A Biographical Sourcebook*. Westport, CT: Greenwood, 1996. Profiles 50 women in a variety of fields and positions, with an appendix including briefer information on 30 more.

Sorel, Nancy Caldwell. *The Women Who Wrote the War*. New York: Arcade, 1999. Provides the story of more than 100 female journalists during World War II, based on interviews and other sources. While some names are well known, most are not, thus providing a useful behind-the-scenes survey of the slowly the growing acceptance of women in newsrooms and on battlefronts.

Tusan, Michelle Elizabeth. *Women Making News: Gender and Journalism in Modern Britain*. Urbana: University of Illinois Press, 2005. Traces the growing

role of female journalists in early twentieth century British media, including origins of women's political press, the rise of a woman-identified publishing community, suffrage advocacy and Edwardian political culture, women's wartime political journalism, and the remaking of women's political culture after World War I.

Wagner, Lilya. *Women War Correspondents in World War II*. Westport, CT: Greenwood, 1989. Based on interviews with 18 of them, but lists many more accredited to newspapers or news agencies.

Washington Press Club Foundation. *Women in Journalism* (oral histories). http://wpcf.org/oralhistory/ohhome.html. The Washington Press Club Foundation provides this collection of nearly 60 interviews with women news reporters, columnists, and editors, some of them active as far back as the 1920s.

Whitt, Jan. *Women in American Journalism: A New History*. Champaign: University of Illinois Press, 2008. Explores the lives of women reporters who achieved significant historical recognition, such as Ida Tarbell and Ida Wells-Barnett, as well as literary authors such as Joan Didion, Susan Orlean, Willa Cather, and Eudora Welty, whose work blends influences from both journalism and literature. Numerous women broadened the editorial scope of newspapers and journals, transformed women's professional roles, used journalism as a training ground for major literary works, and led breakthroughs in lesbian and alternative presses.

H-2: Electronic Media

Beadle, Mary, and Michael D. Murray, eds. *Indelible Images: Women of Local Television*. Ames: Iowa State University Press, 2001. Profiles 19 women from various local broadcast markets as a means of assessing their varied roles in on-air, production, and writing positions.

Duncan, Jacci, ed. *Making Waves: The 50 Greatest Women in Radio and Television as Selected by American Women in Radio and Television*. Kansas City, MO: Andrews McMeel, 2001. Something of a light "puff" piece produced for the American Women in Radio and Television organization, the book provides a brief background on some important women in a variety of different roles (many not in journalism). They are profiled in three pages and add a page or so of comment themselves.

Gelfman, Judith S. *Women in Television News*. New York: Columbia University Press, 1976. Based substantially on interviews (from which extensive remarks are quoted), this remains useful for its relatively early description of many pioneers and the issues they faced.

Hosley, David H., and Gayle Yamada. *Hard News: Women in Broadcast Journalism*. Westport, CT: Greenwood, 1987. Provides a narrative history of the slowly expanding variety of women's roles in radio and television news.

Marlane, Judith. *Women in Television News Revisited: Into the Twenty-first Century*. Austin: University of Texas Press, 1999. Updates the author's 1976 book, profiling some 70 women television journalists and describing some of what they faced to achieve success.

See Mitchell, Section 9-D-1.

O'Dell, Cary, ed. *Women Pioneers and Television: Biographies of Fifteen Industry Leaders*. Jefferson, NC: McFarland, 1997. Most are on-air figures from the 1950s, but a few important managers (and one regulator) are included.

Sanders, Marlene, and Marcia Rock. *Waiting for Prime Time: The Women of Television News*. Urbana: University of Illinois Press, 1988. A survey and brief history of the growing role of women both on and off the air in television news, noting both successes and some reasons for long delays in achieving the beginnings of parity with men. (Sanders was a pioneering reporter and later network executive.)

H-3: Individual Biographies

There are more memoirs appearing almost weekly—here is a sample of the better ones, primarily from recent years.

Barbas, Samantha. *The First Lady of Hollywood: A Biography of Louella Parsons*. Berkeley: University of California Press, 2005. From 1915 to 1960, Parsons was America's premier movie gossip reporter and columnist and in her heyday enjoyed a following of more than 40 million readers. This first biography explores her work including complex interactions of publicity, journalism, and movie-making as well as such events as attempts to suppress Welles's 1941 film, *Citizen Kane,* seen as critical of Hearst, her employer.

Geyer, Georgie Anne. *Buying the Night Flight: The Autobiography of a Woman Foreign Correspondent*. Chicago: University of Chicago Press, 2001. One of the first American woman to cover wars abroad, tells of her rise from cub reporter to foreign correspondent as she made her way in male-dominated journalism. She relates 30 years of reporting experience in Guatemala, Cuba, Egypt, Russia, and Cambodia, recounting history and politics, adventure and exhaustion of the times with political insight, humor, and passion.

Gross, Terry. *All I Did Was Ask: Conversations with Writers, Actors, Musicians, and Artists*. New York: Hyperion, 2004. The longtime NPR host and interviewer for *Fresh Air* reviews her career in broadcasting about the arts.

Kochersberger, Robert C., ed. *More Than a Muckraker: Ida Tarbell's Lifetime in Journalism*. Knoxville: University of Tennessee Press, 1994. Papers on her life (1857–1944) and work, including the all-important studies of Standard Oil and Owen D. Young, among others. *See also* Weinberg, below.

Kurth, Peter. *American Cassandra: The Life of Dorothy Thompson*. Boston: Little, Brown, 1990. The life and times of a longtime foreign affairs reporter and columnist (1893–1961). *See also* the earlier Marian K. Sanders, *Dorothy Thompson: A Legend in Her Time* (Boston: Houghton Mifflin, 1973).

Oppenheimer, Jerry. *Barbara Walters: An Unauthorized Biography*. New York: St. Martin's, 1990. *See* Walters, below.

Rehm, Diane. *Finding My Voice*. New York: Knopf, 1999. Longtime talk show host for WAMU and NPR relates her history—and the fight to keep going when health issues arose.

Thomas, Helen. *Dateline: White House*. New York: Macmillan, 1975. *See* next entry.

Thomas, Helen. *Front Row at the White House: My Life and Times*. New York: Simon & Schuster, 2000. *See* next entry.

Thomas, Helen. *Thanks for the Memories, Mr. President*. New York: Simon & Schuster, 2002. Thomas was for several decades UPI's White House correspondent, and toward the end of her career, as the senior journalist present, ended presidential news conferences with "Thank you, Mr. President."

Trotta, Liz. *Fighting for Air: In the Trenches with Television News*. New York: Simon & Schuster, 1991. Trotta reported for both CBS and NBC at different times. She may have been the first female war correspondent in Vietnam.

Walters, Barbara. *Audition: A Memoir*. New York: Knopf, 2008. Reviews her half-century career in television, most notably as an interviewer, first for NBC and for most of the time with ABC where she briefly served as a news co-anchor.

Ware, Susan. *It's One O'Clock and Here Is Mary Margaret McBride*. New York: New York University Press, 2005. Relates the life of the long-time radio network interviewer (1899–1976) of all types of people. At the height of her fame, she attracted 6 million to 8 million listeners to her afternoon broadcast. McBride was one of the first to explore the potential of talk radio, pioneering the magazine approach many such programs still use.

Weinberg, Steve. *Taking on the Trust: The Epic Battle of Ida Tarbell and John D. Rockefeller*. New York: Norton, 2008. How Tarbell (1857–1944) confronted the company known simply as "The Trust" while she was a muckraking reporter at *McClure's,* helping pioneer investigative journalism. Based on Tarbell and Rockefeller archives, this is a solid history of an important journalist during the Progressive Era. *See also* Kochersberger, above.

I. Ethnic Journalists

This subsection covers minority employment in journalism; for studies of ethnic minority media *content,* see Section 5-H. *See also* women journalists, subsection H, immediately above.

Browne, Donald R., et al. *Television/Radio News & Minorities*. Queenstown, MD: Aspen Institute, 1994. Study of all aspects of hiring and retaining minority employees in broadcast journalism.

Curry, George E., ed. *The Affirmative Action Debate*. Reading, MA: Addison-Wesley, 1996. Explores how affirmative-action policies came to be, who benefits and who suffers from them, and how such programs work in hiring, contracting, and other fields. Also, what will recent Supreme Court rulings and legislative initiatives mean and does any race-conscious remedy simply perpetuate discrimination? Includes discussion of women, Latinos, and Asian Americans in addition to African Americans.

Nelson, Jack A., ed. *The Disabled, the Media and the Information Age*. Westport, CT: Greenwood, 1994. Fifteen research papers cover different disability groups and issues, ranging across all programming, not just journalism.

Newkirk, Pamela. *Within the Veil: Black Journalists, White Media*. New York: New York University Press, 2000. Unmasks how race continues to influence reportage, both overtly and covertly; charts a series of race-related conflicts at news organizations across the country, illustrating how African American journalists have influenced and been denied influence to the content, presentation, and very nature of news. Anecdotes are culled from interviews with over 100 broadcast and print journalists.

Streitmatter, Rodger. *Raising Her Voice: African-American Women Journalists Who Changed History*. Lexington: University Press of Kentucky, 1994. Eleven case studies of print and broadcast media journalists.

Terry, Wallace. *Missing Pages: Black Journalists of Modern America: An Oral History*. New York: Carroll & Graf, 2007. Covers 19 people over several decades, exploring problems each faced in entering and operating within print or broadcast journalism.

Wolseley, Roland E. *Black Achievers in American Journalism*. Nashville, TN: Winston-Derek, 1995. Examples of those who have made it provides something of a goal for those still striving to do so.

J. Journalism Education

University-level education and training for journalists is more than a century old. There is a growing literature on current issues as well as historical developments.

J-1: General

As media education expands, a growing number of observers and researchers are seeking to trace how it works and how it can be improved.

Blanchard, Robert O., and William G. Christ. *Media Education and the Liberal Arts: A Blueprint for the New Professionalism*. Hillsdale, NJ: Lawrence Erlbaum, 1993. Argues for more of a commitment to diversity, to generalized education, and to modes of course delivery. Reviews factors pushing for reform and suggests what "new professionalism" might entail.

Dickson, Thomas. *Mass Media Education in Transition: Preparing for the 21st Century*. Mahwah, NJ: Lawrence Erlbaum, 1999. History of and major issues in media education, focusing on journalism, public relations, advertising and media studies. Includes assessment of long-existing tension between media practitioners and academics.

Martindale, Carolyn, ed. *Pluralizing Journalism Education: A Multicultural Handbook*. Westport, CT: Greenwood, 1993. Provides a rationale and a brief history of efforts to pluralize journalism education, defines ways to recruit and retain students and faculty of color, and surveys ways to pluralize the curriculum in relation to specific minority groups and women.

Murray, Michael D., ed. *Teaching Mass Communications: A Guide to Better Instruction*. New York: Praeger, 1992. Seventeen papers on how best to teach different aspects of the field, with a strong bias toward print journalism. Includes introductory survey courses, applied coursework (such as news writing), advanced courses (such as law and history), and pitfalls to avoid.

Murray, Michael D., and Roy I. Moore, eds. *Mass Communication Education*. Ames: Iowa State University Press, 2003. Chapters trace different types of college-level journalism courses and how they have developed and their likely future, including both practical and theoretical classes. Some 20 important academic researchers are also profiled here, focusing on their impact on a new generation of teaching faculty.

Rush, Ramona R., et al., eds. *Seeking Equity for Women in Journalism and Mass Communication Education: A 30-Year Update*. Mahwah, NJ: Lawrence Erlbaum, 2004. Concentrates on efforts of women and minority men to gain respect and parity in journalism and mass communication, focusing on trends over the past three decades. Contributions provide a history of equity efforts in both academe and professions. Theoretical and international perspectives on equity are also included, as are concerns about equity from new generations now entering the profession.

Zelizer, Barbie. *Taking Journalism Seriously: News and the Academy*. Thousand Oaks, CA: Sage, 2004. Melds media studies, sociology, cultural studies, and journalism and mass communications by a reporter-turned-academic who tries to integrate practical with theoretical aspects. She reviews literature about journalism—historical, sociological, political, linguistic, and cultural—and argues that it should be taken seriously by scholars and practitioners in ways each discipline often misses. In all, a thought-provoking analysis of journalistic and academic framing best suited for graduate students.

J-2: Development

This literature centers on histories of education in academic specialties, or of specific academic programs.

Boylan, James. *Pulitzer's School: Columbia University's School of Journalism, 1903–2003*. New York: Columbia University Press, 2003. A centennial history of the country's first ivy league university journalism program. Changes and development of the program reflect larger changes in the profession and education for it, both described here. It is a story of people (leadership, teachers, famed alumni), publications (home of the respected *Columbia Journalism Review*), curriculum conflicts, and changing technology.

Garay, Ronald. *The Manship School: A History of Journalism Education at LSU*. Baton Rouge: Louisiana State University Press, 2009. Beginning with one course in 1912–13, Garay chronicles the subsequent building of full-fledged journalism units in liberal arts colleges; the addition of new fields such as broadcasting, advertising, public relations, and political communication; creation of doctoral programs; and the emergence of serious research on the impacts of media on society.

Ross, Billy I., ed. *Seventy-Five Years of Journalism and Mass Communication Leadership: The History of the Association of Schools of Journalism and Mass Communication*. Columbia, SC: ASJMC, 1993. Useful for the light it reflects on changing standards of what a good university journalism program was at different times. More than half of this publication is given over to brief histories of the 100 or so ASJMC member journalism schools across the country.

Ross, Billy I., and Jef I. Richards, eds. *A Century of Advertising Education*. New York: American Academy of Advertising, 2008. Eighteen chapters assess the development of college and university programs, including a brief review of specific selected programs.

Sloan, William David, ed. *Makers of the Media Mind: Journalism Educators and Their Ideas*. Hillsdale, NJ: Lawrence Erlbaum, 1990. Describes the importance of nearly 40 of them (only one is female), many then still active and productive. Divided into sections by specialty: practitioners, historians, philosophers, policy scholars, theorists, and methodologists. Collectively, the profiles help to demonstrate the field's academic development.

Weinberg, Steve. *A Journalism of Humanity: A Candid History of the World's First Journalism School*. Columbia: University of Missouri Press, 2008. Centennial history of the Missouri School of Journalism, founded by journalist who lacked a degree, now considered one of best in the country.

Winfield, Betty Houchin. *Journalism, 1908: Birth of a Profession*. Columbia: University of Missouri Press, 2008. Issued for the centennial of Missouri's journalism school, this explores how American news media were fundamentally changed by formation of academic departments and schools of journalism, the founding of the National Press Club, and by technical advances that included early newsreels, use of halftone photos in periodicals, and changes in newspaper design.

J-3: International

Most educational programs overseas were formed much more recently than those in the U.S., as is evident in these surveys.

Bazalgette, Cary, et al. *New Directions: Media Education Worldwide*. London: British Film Institute, 1993. The first study to cover all world regions, based on a conference held in 1990, with chapters on (from Europe): Britain, France, Switzerland, Netherlands, Norway, Austria, Italy, Denmark, Russia, and Germany; (from the developing world): Venezuela, Brazil, Chile, Colombia, India, Jordan, and Peru; (and) Canada, Australia, Wales, and Japan.

Gaunt, Philip. *Making the Newsmakers: International Handbook of Journalism Training*. Westport, CT: Greenwood, 1992. A UNESCO-sponsored survey of training programs in 70 countries, the first one since *The Training of Journalists* (Paris: UNESCO, 1958). After a survey of what is needed and available, most of the study is devoted to descriptions of programs in individual countries.

Katzen, May, ed. *Mass Communication: Teaching and Studies at Universities—A World-wide Survey on the Role of Universities in the Study of the Mass Media and Mass Communication*. Paris: UNESCO, 1975. Arranged by parts of the world, this provides historical background and a detailed snapshot of how things stood at the time of publication—one of the earliest global surveys.

Terzis, Georgios. *European Journalism Education*. London: Intellect, 2009. Provides an updated overview of journalism studies in 33 countries with a brief review of journalism education history in each country, and who provides training today, to whom, and where. Each chapter incorporates an analysis of all university programs in each nation and training provided by private media or journalists' associations. The study also examines substance of this education, i.e., theory vs. practice, communication or journalism studies or a mixed system, studying PR and advertising at the same curriculum as journalism, the impact of new media in the curriculum, the role of internships, the level of different degrees offered, and exchange programs with other institutions.

K. Careers

There are a host of books on journalism careers, many aimed at young people, and often revised fairly regularly. A sample is noted below. A relative handful of books review patterns in news media employment as well as internships. For media-related labor unions and organized labor, see Section 4-C.

K-1: Career Guides

Becker, Lee B., et al. *The Training and Hiring of Journalists*. Norwood, NJ: Ablex, 1987. Given that upwards of 20,000 graduate with journalism degrees annually and only half find work in the field, this assesses data from 1980 to 1983 to find out career paths and how journalists are hired, with case studies of media personnel practices.

Bull, Andy. *The NCTJ Essential Guide to Careers in Journalism*. Thousand Oaks, CA: Sage, 2007. Written on behalf of the National Council for the Training of Journalists.

Goldbert, Jan. *Careers in Journalism*. New York: McGraw-Hill, 2005 (3rd ed.). Based in part on interviews with professionals, this details the responsibilities, education, and training required, and employment outlooks for the journalism field.

Grimm, Joe. *Ask the Recruiter: Journalism Career Strategies as Published on Poynter Online for Reporters, Photographers and Editors in Newspapers, TV and Magazines*. Grand Rapids, MI: David Crumm Media, 2008. Takes into account the recent downturn in many journalism jobs.

Lindner, Ken. *Broadcasting Realities: Real-Life Issues and Insights for Broadcast Journalists, Aspiring Journalists and Broadcasters*. Chicago: Bonus Books, 1999. This realistic perspective equips readers with requisite information to make informed and constructive decisions regarding their broadcasting careers.

Mulligan, Joseph, et al. *The Mulligan Guide to Sports Journalism Careers*. Chicago: NTC, 1998. Explores most aspects of careers in print or electronic media dealing with college, professional teams, and other sporting events.

Stone, Vernon. *Let's Talk Pay in Television and Radio News*. Chicago: Bonus Books, 1993. In text and tables, the author makes clear how little most broadcast journalists earn, with discussions of women, minorities, the role of interns, and salary ranges in different fields.

K-2: Internships

Alexander, James P. *Internships in Communications*. Ames: Iowa State University Press, 1995. While dated, this still provides some useful general advice on finding and getting them, then a guide by field to many then available (many still are).

Gross, Lynne Schafer. *The Internship Experience*. Prospect Heights, IL: Waveland Press, 1993 (2nd ed.). Details the process of obtaining one (largely still true despite passage of time) and how to get the most out of it.

Section 8

Regulation, Ethics, and Critique

Under the American system of governance, government agencies and decisions help define the largely private or commercial arena within which journalism is practiced. Under the country's constitution, law provides both benefits and protections but also limitations on what media can or cannot do or report. Generally, however, thanks especially to the First Amendment (1791), government is quite limited in the degree to which it can control news media content.

The literature on all of the topics included in this section is substantial and ever changing thanks to new findings and legal determinations, especially those of the U.S. Supreme Court. Thus for other than historical work, it is necessary to have the latest information at hand, and increasingly that is found online rather than in print. Furthermore, some of this material is narrowly legal in nature, while other studies retain a broader policy context.

A. Reference Sources

American Society of Newspaper Editors. *Codes of Ethics*. http://www.asne.org/ideas/codes/codes.htm. Includes those from a dozen national organizations or associations, plus a survey of important newspapers' codes from around the country. *See also* University of Tampere, below.

Bennett, James R. *Control of the Media in the United States: An Annotated Bibliography*. New York: Garland, 1992. Includes some 4,700 books and articles published since 1945 on both print and broadcasting issues. "Control" here includes that by corporate media as well as government.

Bertrand, Claude-Jean. *Media Accountability Systems*. http://www.media-accountability.org. Now housed at the University of Missouri, this extensive site details many different "MAS" types including codes of ethics, news councils, and other approaches, most of which are found in the United States.

First Amendment Center: Collins, Ronald K. L. *The First Amendment Library*. http://www.firstamendmentcenter.org/faclibrary/index.aspx. Portal for a considerable amount of information on relevant Supreme Court petitions for review, arguments, and decisions since 2000, and both information and reviews of new books and reports on all aspects of the First Amendment published since 2003.

First Amendment Center. *First Amendment Glossary*. http://www.firstamendmentcenter.org/about.aspx?item=glossary. Quite good paragraph-length definitions of legal and other relevant First Amendment terms.

First Amendment Center. *First Amendment & Free Expression Sources*. http://www.firstamendmentcenter.org/about.aspx?item=related_links. Extensive listing, with brief description of each site.

Foerstel, Herbert N. *Free Expression and Censorship in America: An Encyclopedia*. Westport, CT: Greenwood, 1997. Offers alphabetical entries that range from a paragraph to as much as three or four pages for more important topics such as the Freedom of Information Act, or the House Un-American Activities Committee; broad issues such as cryptography, hate speech, and whistle

blowing; and major figures such as Justice Hugo Black. Most entries end with suggestions for further reading (primarily current monographs, but also some journal articles, videocassettes, and dissertations). The range of material is obviously wider than "journalism" per se, but is strongly relevant nonetheless. *See also* next entry.

Foerstel, Herbert N. *Banned in the Media: A Reference Guide to Censorship in the Press, Motion Pictures, Broadcasting, and the Internet*. Westport, CT: Greenwood, 1998. A companion to the title immediately above. Chapters survey book and other media censorship, prominent media cases, a chronological history of media cases (a paragraph or so each—most are Supreme Court decisions), and profiles of six media figures of importance. Appendices deal with school censorship and relevant organizations.

Hixson, Richard F. *Mass Media and the Constitution: An Encyclopedia of Supreme Court Decisions*. New York: Garland, 1989. Reviews some 200 cases; for each we are told the date of its argument and decision, a summary of the issues, circumstances surrounding the case, a paragraph on the opinion, cases it references, and further reading (usually other related cases). Material is divided into sections on broadcasting business censorship, commercial speech, copyright, fair trial, the freedom of information act, free speech libel, news gathering, obscenity, and privacy. *See also* Campbell and Eastland, next subsection.

Ingelhart, Louis Edward. *Press and Speech Freedoms in America, 1619–1985*. Westport, CT: Greenwood, 1987. Provides a chronology in 18 chapters paralleling political periods in American colonial and then independent life, with the last half century divided by decade. Arrangement within each year is alphabetical by person or institution involved. Included are views and comments of people about overall issues of freedom of speech or the press, specific incidents or episodes that shed light on the topic, and technological changes that have impacted freedoms. Some reference is made to important Supreme Court findings.

Ingelhart, Louis Edward. *Press Freedoms: A Descriptive Calendar of Concepts, Interpretations, Events, and Court Actions, from 4000 BC to the Present*. Westport, CT: Greenwood, 1987. Examines events, concepts, and interpretations that led to the idea of freedom of the press in the United States and to often slower and later recognition of the concept of a "free press" in more than 100 other countries. The calendar extends over six millennia and chronicles the historical progress of freedom of the press, involving thousands of people as well as thousands of publishing and media efforts, including newspapers, books, pamphlets, radio, television, and motion pictures.

Jones, Derek, ed. *Censorship: A World Encyclopedia*. Chicago: Fitzroy Dearborn, 2001 (4 vols.). An important resource, this includes hundreds of often quite lengthy entries covering all historical aspects, including legal cases and principles, specific controversies, important people, and varied media. Subject areas of censorship covered—many of which relate to media—include religion, literature, performing arts, sexuality and violence, politics and ideology, and visual arts. The role of censorship in virtually every country is discussed.

Murray, John. *The Media Law Dictionary*. Washington, DC: University Press of America, 1978. Dated (and probably hard to find) but still useful as definitions include quotes from court cases to provide vital context. Covers both print and electronic media regulation and general law terms with media applications.

Phillips, Peter, and Project Censored, eds. *Censored: The Top 25 Censored Stories of [Year]*. New York: Seven Stories Press, 1994–present, annual. The year's 25 most important underreported news stories, designed to alert readers to deficiencies in corporate news media and the resurgence of alternative media news sources.

Reporters Committee on Freedom of the Press. http://www.rcfp.org. Constant updating on the latest stories concerning broadcasting, freedom of information, intellectual property, Internet regulation, libel, legal issues in news gathering, prior restraints, privacy, reporter's privilege, legal action in secret courts, and state open government laws.

Shedden, David. *Media Ethics Bibliography*. http://poynteronline.org/content/content_view.asp?id=1208. Includes both online and printed resources; regularly updated.

Swinder, William F. *A Bibliography of Law on Journalism*. New York: Columbia University Press, 1947. Useful for tracing the early development of media law, this includes some 1,200 entries of books, documents, and articles.

University of Tampere (Finland). *EthicNet—Collection of Codes of Journalism Ethics in Europe*. http://ethicnet.uta.fi. Covers most countries in Europe, providing their codes in English. Regularly updated.

B. First Amendment/Freedom of Expression

As might be expected, the subject of free speech and expression has created a huge American literature. What follows emphasizes freedom of the press (and thus media) questions, generally bypassing, for example, works concerning obscenity and indecency or freedom of religion, which rarely arise in journalism.

Allen, David S., and Robert Jensen, eds. *Freeing the First Amendment: Critical Perspectives on Freedom of Expression*. New York: New York University Press, 1995. Closely reasoned papers question whether more speech is the answer to harmful speech. By including many points of view and issues, the editors seek a better understanding of freedom of expression, which they claim creates an aura of sanctity around the very idea of freedom of speech.

Campbell, Douglas D. *The Supreme Court and the Mass Media: Selected Cases, Summaries, and Analyses*. Westport, CT: Praeger, 1990. More focused than Hixson (see below), this is divided into sections on libel, privacy (just five cases), and general First Amendment issues—and most cases included were decided after 1964. Cases are summarized in three to five pages, with sections on background, circumstances, a summary of the court's analysis, part of the actual ruling, and a brief sense of its significance. This is the first of three similar titles (*see* Eastland and Hixson, both below).

See Commission on Freedom of the Press (Chafee), subsection H, below.

Cornwell, Nancy C. *Freedom of the Press: Rights and Liberties under the Law*. Santa Barbara, CA: ABC-CLIO, 2004. Provides a tightly organized guide to relevant issues. Chapters introduce basic concepts, trace their origins and early developments (with a page or so to each topic), twentieth-century issues (again, a page or so each), twenty-first-century issues, key people and cases (short profiles), and documents (most are brief abstracts of court cases). As is typical in such a book, coverage is wide but not terribly deep, making this a useful place to begin.

Dickerson, Donna Lee. *The Course of Tolerance: Freedom of the Press in Nineteenth-Century America*. Westport, CT: Greenwood, 1990. Chapters discuss "mobocracy" and the War of 1812, defining boundaries for libel, abolitionist publications, and post office rules, Civil War and censorship, the press and Reconstruction, and coverage during the Spanish-American war.

Eastland, Terry, ed. *Freedom of Expression in the Supreme Court: The Defining Cases*. Lanham, MD: Rowman & Littlefield, 2000. Covers 60 selected cases over 80 years, from the 1919 *Schenck v. United States* up to cases in the late 1990s. In each case, the author provides the gist of the case, the main Court opinion, major dissenting views, and press commentary. A useful appendix lists the Court's Justices over the 1919–2000 period. *See* Campbell, above, and Hixon, below.

First Amendment Center. *State of the First Amendment*. http://www.fac.org/sofa_reports/index.aspx. Annual report issued since 1997 on how Americans view their first freedoms of speech, press, assembly, religion, and petition, prepared by the Center for Survey Research & Analysis. All past reports are also available here.

Friendly, Fred W. *Minnesota Rag: Corruption, Yellow Journalism, and the Case That Saved Freedom of the Press*. New York: Random House, 1981 (reprinted by University of Minnesota Press, 2003). Tells the story of people and events behind the landmark *Near v. Minnesota* case of 1931—the

first "press" First Amendment Supreme Court decision.

Garry, Patrick M. *Scrambling for Protection: The New Media and the First Amendment*. Pittsburgh: University of Pittsburgh Press, 1994. Describes the degree to which the First Amendment works—or does not—for newer media technologies, and how to bring them into greater congruence.

Gleason, Timothy W. *The Watchdog Concept: The Press and the Courts in Nineteenth Century America*. Ames: Iowa State University Press, 1990. Suggests that litigation shaped the law of freedom of the press including the watchdog concept, and argues that it should now be abandoned in favor of an individual rights-based concept of freedom of the press.

Hindman, Elizabeth Blanks. *Rights and Responsibilities: The Supreme Court and the Media*. Westport, CT: Greenwood, 1997. Analyzing every Supreme Court media case from 1931 to 1996 (nearly 200 of them), this explores how the Court has perceived media freedom, educational and political functions of news media, and the ethical principles of truth telling.

Hixson, Richard F. *Mass Media and the Constitution: An Encyclopedia of Supreme Court Decisions*. New York: Garland, 1989. Covers all the media cases decided to that point, each briefly described with its context and importance. *See also* Campbell and Eastland, above.

Kersch, Ken I. *Freedom of Speech: Rights and Liberties under the Law*. Santa Barbara, CA: ABC-CLIO, 2003. Aimed at those relatively new to the topic, chapters review precursors and origins of the First Amendment to the Constitution, developments in the twentieth century, the future of freedom of speech, a directory of key people, cases, and events (a mini-encyclopedia in its arrangement), and then a lengthy (a bit over 100 pages) documentary appendix with brief information and then longer quotations from key publications and cases (often several pages on each).

Lewis, Anthony. *Freedom for the Thought That We Hate: A Biography of the First Amendment*. New York: Basic Books, 2007. Readable book that focuses on important Supreme Court cases that helped to define First Amendment freedoms, which were anything but a given, even after 1791 when the Amendment became part of the Constitution. Among topics dealt with are libel, privacy, whether reporters should have a right to keep their sources confidential, copyright, and hate speech and the Amendment.

Lidsky, Lyrissa Barnett, and R. George Wright. *Freedom of the Press: A Reference Guide to the United States Constitution*. Westport, CT: Praeger, 2004. This is what attorneys call a hornbook or treatise and the authors discuss the text and history of the First Amendment, theory and method, prior restraint, content-bound restrictions on media, content-neutral regulation of news media, defamation, liability for publications that invade privacy or inflict emotional distress, legal regulation of harmful media effects on nonconsenting or vulnerable persons (such as children), investigative news gathering and "neutral limits" on press rights, police operations and media, and press access to persons, sites, proceedings, and documents.

O'Neil, Robert M. *The First Amendment and Civil Liability*. Bloomington: Indiana University Press, 2001. Assesses seven areas where civil liability can be imposed upon media: libel and slander; privacy; defective or dangerous products; incitement (as in portrayal of dangerous acts that are then copied by someone else); advertising; news gathering; and threats and incitement through the Internet. The author warns that while media have generally prevailed in such cases, that could change.

Parker, Richard A., ed. *Free Speech on Trial: Communication Perspectives on Landmark Supreme Court Decisions*. Tuscaloosa: University of Alabama Press, 2003. Scholarly papers on 18 cases, not all of them seemingly centered on communication concerns, but clearly having relevance to media issues.

Powe, Lucas A. *The Fourth Estate and the Constitution*. Berkeley: University of California Press, 1991. After a historical survey up to the Pentagon papers case, reviews major legal issues confronting modern news media: libel, prior

restraints, access to sources and information, and mergers and acquisitions reducing number of voices heard.

Russomanno, Joseph. *Speaking Our Minds: Conversations with the People behind Landmark First Amendment Cases*. Mahwah, NJ: Lawrence Erlbaum, 2002. Offers interviews with protagonists in ten recent Supreme Court decisions, providing some sense of context of how cases came to the Court, and context about each.

Stein, Laura. *Speech Rights in America: The First Amendment, Democracy, and the Media*. Champaign: University of Illinois Press, 2006. Argues that courts are unduly restricting speech rights of Americans and suggests that media owners are more often winners in such cases rather than general population—indeed, that present day First Amendment law is not conducive to protecting free speech rights needed in a democracy.

Stone, Geoffrey R. *Perilous Times: Free Speech in Wartime from the Sedition Act of 1798 to the War on Terrorism*. New York: Norton, 2004. Investigates how First Amendment and other civil liberties have been compromised in America during wartime by delineating consistent suppression of free speech in six historical periods from Sedition Act of 1798 to the Vietnam War, and ends with assessment of civil liberties in the 2001–09 Bush administration.

Weinstein, James. *Hate Speech, Pornography and the Radical Attack on Free Speech Doctrine*. Boulder, CO: Westview, 1999. Questions when free speech has to be limited, reviewing media issues with both pornography and hate speech of all kinds, including the relationship of free speech, equality of treatment of different social groups, and the costs of regulation.

Wittern-Keller, Laura, and Raymond J. Haberski Jr. *The* Miracle *Case: Film Censorship and the Supreme Court*. Lawrence: University Press of Kansas, 2008. How Supreme Court's unanimous 1952 ruling sparked a chain of litigation that eventually brought filmmaking under protection of the First Amendment, weakening ability of state censorship boards and Catholic Church to influence films Americans were allowed to see.

C. Media Law

For citations on news media coverage of courts and their decisions, see Section 5-E. There are at least a dozen general media law college textbooks in print as this is written, some updated on an annual basis—they are not listed here.

Baker, C. Edwin. *Media, Markets, and Democracy*. New York: Cambridge University Press, 2002. Uses economic and democratic theory to undermine two beliefs—that media give people what they want (thus justifying deregulation), and freedom of the press justifies resisting any government action concerning media. Evaluates journalistic practice, to recommend appropriate governmental media policy and defend a preferred constitutional conception of press freedom.

Barron, Jerome A. *Freedom of the Press for Whom?* Bloomington: Indiana University Press, 1973. Expands the author's seminal *Harvard Law Review* paper arguing that the public does deserve a right of response and speaking out on media, though the Supreme Court disagrees.

Barron, Jerome A. *Public Rights and the Private Press*. Toronto: Butterworths, 1981. One of more thoughtful legal critics of media policy reviews recent Supreme Court cases concerning both print and broadcasting and argues there is too little access (or privacy) for the general public as big media and government grapple for dominance.

Carter, T. Barton, et al. *Mass Communication Law in a Nutshell*. St. Paul, MN: Thomson/West, 2007 (6th ed.). This helpful pocket volume covers a lot of ground, including chapters on the First Amendment in perspective, defamation, privacy, obscenity, restraint for purposes of national security, free press-fair trial, freedom to gather news, reporter's privilege and subpoenas, regulation of advertising, and regulation of electronic mass media.

First Amendment Center. *Jailed and Subpoenaed Journalists—A Timeline*. http://www.firstamendmentcenter.org/about.aspx?id=16896. Chronological listing of people and cases since 1735 with about a paragraph on each, plus further sources.

Lawson, Linda. *Truth in Publishing: Federal Regulation of the Press's Business Practices, 1880–1920*. Carbondale: Southern Illinois University Press, 1993. Concerns the Newspaper Publicity Act (1912), which requires commercial newspapers and magazines using preferential second-class mail rates to identify their owners and investors and to label advertisements that resemble news stories or editorials. Daily newspapers are also required to disclose circulation data along with their ownership statements. Analyzes what this episode reveals about Progressive ideology with its reliance on publicity and regulation to solve social and economic problems.

Lomicky, Carol S., and Trudy C. de Goede. *Handbook for Research in Media Law*. Ames, IA: Blackwell, 2005. Guide to undertaking such research in the digital era, this is a how-to guide built largely around the widely used LexisNexis Academic online service.

Pring, George W., and Penelope Canan. *SLAPPS: Getting Sued for Speaking Out*. Philadelphia: Temple University Press, 1996. Demonstrates how Strategic Lawsuits Against Public Participation (SLAPPs) have developed as businesses try and stop people from petitioning for redress of grievances. The authors coined the term "SLAPP," so they know whereof they speak. Their study traces the history of SLAPP suits, looks at what groups are most likely to bring such legal actions and what groups are the most likely targets, and then reviews potential legal remedies.

Ramey, Carl R. *Mass Media Unleashed: How Washington Policymakers Shortchanged the American Public*. Lanham, MD: Rowman & Littlefield, 2007. Argues against the deregulation of recent decades amidst technological change, especially for commercial broadcasting, because of the disappearance of most public service programming, content diversity, and reliance on the bottom line means of judging value.

Reynolds, Amy, and Brooke Barnett, eds. *Communication and Law: Multidisciplinary Approaches to Research*. Mahwah, NJ: Lawrence Erlbaum, 2006. Offers 16 papers divided into two sections: theoretical perspectives and multidisciplinary methods. The first includes the future of interdisciplinary scholarship in communication and law and legal methodology. The second part covers merging legal and social science research in comparing state access laws, researching blacks in the news, dehumanizing depictions of race in television news, defamation in television news, use of public databases, conceptions of free speech in the nineteenth century, federal public interest standards, and advertising in class action lawsuits.

Sanford, Bruce W. *Don't Shoot the Messenger: How Our Growing Hatred of the Media Threatens Free Speech for All of Us*. New York: The Free Press, 1999. Suggests that news media are threatened by public and judicial dislike of their content. Among the evidence the author offers is that an increasing number of jury decisions are going against journalists and that judges across the country are imposing more restrictions on what he considers to be a First Amendment right to gather and disseminate information. He finds repeated examples of misjudgment and misbehavior by journalists that help increase public dislike of media, noting problems that a bottom line emphasis have created.

C-1: Libel

This is among the most important legal problems for journalists and news media, most often resulting in legal proceedings, though the media usually win, or at least sharply reduce financial judgments.

Hopkins, W. Wat. *Actual Malice: Twenty-Five Years after* Times v. Sullivan. New York: Praeger, 1989. Details the story behind the landmark 1964 Supreme Court libel decision that created the "actual malice" standard for public officials seeking to bring libel suits, and its impact since. *See* next entry.

Lewis, Anthony. *Make No Law: The Sullivan Case and the First Amendment*. New York: Random House, 1991. A *New York Times* reporter places the landmark 1964 decision in larger context. *See* previous entry.

Media Law Resource Center. *MLR 50-State Survey: Media Libel Law [Year]*. New York: MLR Center, annual. This large compendium of the law is arranged into chapters by state, prepared by experts in that jurisdiction, and presents case decisions

from the year in a uniform outline format. Though focused on the United States, it also includes Canada and England.

Smolla, Rodney A. *Jerry Falwell v. Larry Flynt: The First Amendment on Trial.* Champaign: University of Illinois Press, 1988. This classic libel case based on a 1983 published satire about the religious leader (who lost his suit) is described from its inception through the Supreme Court's final decision.

Soloski, John, and Randall P. Bezanson, eds. *Reforming Libel Law.* New York: Guilford Press, 1992. Ten papers by as many lawyers and judges review ways to update and refine libel statutes and also ways to use alternatives, as well as the potential for a uniform libel law, no-fault suits, and legislative efforts at change.

C-2: Privacy

This is the second most often cited area of concern for news media, one often subject to inadvertent violation. Once again, news media usually win in legal actions.

Alderman, Ellen, and Caroline Kennedy. *The Right to Privacy.* New York: Random House, 1995. Through an interweaving of landmark cases, lesser-known but equally important trial decisions, and dozens of anecdotal narratives, the authors assess a complicated issue. They delve into six general areas: privacy versus law enforcement, privacy and yourself, privacy versus. the press, privacy versus. the voyeur, privacy in the workplace, and privacy and information.

Decew, Judith Wagner. *In Pursuit of Privacy: Law, Ethics, and the Rise of Technology.* Ithaca, NY: Cornell University Press, 1997. Surveys the history of the notion of privacy as it first evolved in American tort and constitutional law and then analyzes privacy defined on the basis of information, autonomy, property, and intimacy. Argues that privacy has a fundamental value because it allows us to create ourselves as individuals, offering us freedom from judgment, scrutiny, and the pressure to conform.

Frankel, Ellen, et al., eds. *The Right to Privacy.* New York: Cambridge University Press, 2000. A baker's dozen of scholarly papers offering a variety of points of view, including assessments of privacy as a matter of taste and right, privacy and constitutional theory, privacy and technology, the right of privacy for medical information, and privacy and the right to die.

Media Law Resource Center. *MLR 50-State Survey: Media Privacy and Related Law [Year].* New York: MLR Center, annual. This large compendium is arranged into chapters by state and prepared by experts in that jurisdiction. It presents privacy case decisions from the year in a uniform outline format. Though focused on the United States, it also includes Canada and England.

Regan, Priscilla M. *Legislating Privacy: Technology, Social Values, and Public Policy.* Chapel Hill: University of North Carolina Press, 1995. Insight as to why law so often lags behind technology in eight chapters that trace different kinds of privacy as well as the role of Congress.

Solove, Daniel J., et al. *Privacy, Information and Technology.* New York: Aspen, 2006. Treats all important issues involving information privacy including law and policy issues relating to information privacy and computers, databases, and the Internet, coverage of government surveillance topics, wiretapping, computer searches, ISP records, the Electronic Communications Privacy Act, the Foreign Intelligence Surveillance Act, and the USA Patriot Act; plus examination of issues such as privacy and access to public records and government access to personal information.

Solove, Daniel J., et al. *Information Privacy Law.* New York: Wolters Kluwer Law & Business, 2008 (3rd ed.). Readings and cases cover the full range of privacy issues, from Megan's Law to employee monitoring to genetic privacy. It also includes the first extensive coverage of several important topics, especially in such key areas as medical privacy and international law. Includes explanations of key statutes and regulations such as the Freedom of Information Act, the Children's Online Privacy Protection Act, the European Union Data Protection Directive, and the Electronic Communications Privacy Act, among others.

Solove, Daniel J. *Understanding Privacy*. Cambridge, MA: Harvard University Press, 2008. Provides an overview of the difficulties involved in privacy and suggests resolution. Argues that no single definition can be workable, as there are multiple forms of privacy related to one another by family resemblances. Draws on array of interdisciplinary sources.

Staples, William G., ed. *Encyclopedia of Privacy*. Westport, CT: Greenwood, 2007 (2 vols.). Includes essays on 226 different topics, such as banking and financial records, and nearly 50 individual court decisions (mostly U.S. Supreme Court). Essays vary in length from paragraphs to pages—one on the Internet, for example, is 17 pages long.

C-3: Intellectual Property/Copyright

Copyright is both a protection for and a limitation on media and is subject to constant legal and research attention, especially given the impact of changing technology.

Branscomb, Anne. *Who Owns Information? From Privacy to Public Access*. New York: Basic Books, 1994. Valuable insight and analysis of the changing world of copyright and protection of other intellectual property, suggesting technology is tearing up long-held views.

Einhorn, Michael A. *Media, Technology and Copyright: Integrating Law and Economics*. Cheltenham, England: Edward Elgar, 2004. Applies economic reasoning to issues in American copyright law, including a rationale of fair use and economic analysis, digital rights management and licensing and privacy concerns, Napster and peer-to-peer issues, digital music and the "anti-commons," publicity rights and consumer rights, software search and data, and open source and innovative copyright.

Ekstrand, Victoria Smith. *News Piracy and the Hot News Doctrine: Origins in Law and Implications for the Digital Age*. New York: LFB Scholarly, 2005. Explores legal protections for the newsman's scoop, or the "hot news" doctrine. Now more than 80 years old, this protects facts for a short period after publication in opposition to American copyright law, which dedicates facts to the public domain. Though imperfect, controversial, and ill defined, the hot news doctrine may offer the best approach to protect uncopyrighted work delivered by newer technologies.

Lutzger, Arnold P. *Content Rights for Creative Professionals: Copyright and Trademarks in a Digital Age*. Boston: Focal Press, 2003 (2nd ed.). Discusses all aspects of both protections, including "things you cannot ignore" (unfair competition, antitrust laws, trade secrets), content rights in media and film (including sports, station call signs, slogans), licensing and distribution and the Internet (Digital Millennium Copyright Act, among other laws).

Matsuura, Jeffrey H. *Managing Intellectual Assets in the Digital Age*. Norwood, MA: Artech House, 2003. Provides a survey including traditional software protection strategies, open source as an alternative model, trademark protection online, protecting the look and feel of online content, managing digital media, the challenge of peer-to-peer and distributed computing, property law and commercial transactions law applied to digital content, controls on technology development and transfer, valuing and managing knowledge assets, and principles for managing intellectual property and knowledge assets.

Meriden, Trevor. *Irresistible Forces: The Business Legacy of Napster & the Growth of the Underground Internet*. New York: John Wiley/Capstone, 2001. Suggests what the Napster peer-to-peer copying case may suggest for a viable model of Internet sharing in the future. Early chapters detail the case, while later ones turn to policy issues such as whether subscription services online can work.

National Research Council. *The Digital Dilemma: Intellectual Property in the Information Age*. Washington, DC: National Academy Press, 2000. Careful assessment of concerns raised by digital technology (and recording, especially) or, as the report puts it in describing music rights in a chapter title: "intellectual property's canary in the digital coal mine." Includes discussion of privacy and fair use questions, protecting digital intellectual property, and a variety of recommendations.

New York School of Law. *The Fair Use Network*. http://fairusenetwork.org/index.php. Information and resources for both owners and users of intellectual property—what can be used and under what circumstances? Includes basic tutorials, recent actions, evaluating and responding to legal correspondence, and definitions of legal terms.

Perelman, Michael. *Steal This Idea: Intellectual Property Rights and the Corporate Confiscation of Creativity*. New York: Palgrave, 2002. Argues that patent and copyright laws are too stringent and serve to limit creativity while helping greedy corporations make even more money.

Vaidhyanathan, Siva. *Copyrights and Copywrongs: The Rise of Intellectual Property and How It Thwarts Creativity*. New York: New York University Press, 2001. Argues that extension of the sweep and length of copyrights is harming creativity; includes discussion of digital systems and their likely impact.

C-4: Free Press/Fair Trial

The focus here is on journalistic access to courtrooms, sometimes seen as a constitutional conflict between the First and Sixth Amendments. Until the 1980s, broadcasters and photographers were generally banned from courtrooms. For titles on media coverage *of* the courts and crime, see Section 5-E.

Barber, Susanna. *News Cameras in the Courtroom: A Free Press-Fair Trial Debate*. Norwood, NJ: Ablex, 1987. Background on decades of debate concerning broadcast access to courtrooms (banned in most places until the 1980s), and research done on courtroom coverage.

Bruschke, Jon, and William E. Loges. *Free Press vs. Fair Trials: Examining Publicity's Role in Trial Outcomes*. Mahwah, NJ: Lawrence Erlbaum, 2005. The authors argue that case law is not well developed as regards tension between protecting a defendant's right to a fair trial and maintaining First Amendment guarantees of a free press—because social science has thus far not provided clear findings of publicity effects.

Bunker, Matthew D. *Justice and the Media: Reconciling Fair Trials and a Free Press*. Mahwah, NJ: Lawrence Erlbaum, 1997. Argues for a consistent policy favoring media access to court proceedings in chapters about (among other topics) the role of the Supreme Court, courts and prejudicial publicity, prior restraints mandated by some judges, and postpublication sanctions.

Freedman, Warren. *Press and Media Access to the Criminal Courtroom*. New York: Quorum, 1988. Discusses the extent to which media coverage of criminal court proceedings should be permitted. Points out the central question as how to strike a balance between the public's right to information and the individual's right to privacy. Reviews underlying legal principles and constitutional issues, describes important cases, and provides citations of applicable case law.

Gillmor, Donald M. *Free Press and Fair Trial*. Washington, DC: Public Affairs Press, 1966. Balanced assessment of conflicts involved in news media coverage of court trials—written at a time broadcasting was banned from nearly all courtrooms.

Scherer, Mark R. *Rights in the Balance: Free Press, Fair Trial, and* Nebraska Press Association v. Stuart. Lubbock: Texas Tech University Press, 2008. From a 1975 murder, the author traces the battle to overturn a media gag order imposed by a state court judge. Prohibited from publishing certain details about the crimes, the association appealed, leading to a landmark Supreme Court ruling, still one of the high court's controlling precedents on recurring conflicts between rights of free press and fair trial.

D. FCC and Electronic Media Law

Federal licensing (and other regulation) of broadcasting stations has been a topic of legal and social science research and comment for three-quarters of a century.

D-1: Development

There is a growing literature on the origin and development of electronic media regulation.

Benjamin, Louise M. *Freedom of the Air and the Public Interest: First Amendment Rights in Broadcasting to 1935*. Carbondale: Southern Illinois University Press, 2001. Historical assessment of the role and definition of free speech on the radio from its inception through passage of the Communications Act of 1934, including interaction among social, political, and economic entities and issues.

Bensman, Marvin R. *Broadcast/Cable Regulation*. Lanham, MD: University Press of America, 1990 (2nd ed.). Very useful compilation of decades of FCC decisions and court cases on all aspects of electronic media policy and regulation. This version is topical in organization rather than chronological.

Brinson, Susan L. *The Red Scare, Politics, and the Federal Communications Commission, 1941–1960*. Westport, CT: Praeger, 2004. Reviews two decades of changing FCC views about Communism and its possible dangers in radio (and television). Given political flows of the 1940s and 1950s, many who seemed central and centered early in this period became politically suspect later on, including some broadcast station owners. In an era of political blacklisting, pressure on the commission to license or not to license often had whiffs of witch-hunting.

McChesney, Robert W. *Telecommunications, Mass Media & Democracy: The Battle for the Control of U.S. Broadcasting, 1928–1935*. New York: Oxford University Press, 1993. Important analysis of policy debates about radio before the Federal Radio Commission and leading up to passage of the 1934 Communications Act. The author argues that industry largely shaped legislation to its own liking, ignoring radio's potential public interest potential.

Rosen, Philip T. *The Modern Stentors: Radio Broadcasters and the Federal Government, 1920–1934*. Westport, CT: Greenwood, 1980. Despite a good deal of more recent research, this remains one of the earliest historical analyses of early radio regulation and policy. Rosen does a creditable job of taking the story from the Hoover radio conferences of the early 1920s through the Radio Act of 1927 and up to the still-on-the-books 1934 statute.

Slotten, Hugh R. *Radio and Television Regulation: Broadcast Technology in the United States, 1920–1960*. Baltimore: Johns Hopkins University Press, 2000. Underlines the importance of technical limits and standards in broadcasting policy with six case studies ranging from the government's role in radio before 1927 up to color television standards in the 1950s. While these don't deal with news directly, they demonstrate how technology defines the realm of electronic media.

D-2: Agencies and Issues

What follows is a sampling of the literature on more or less current regulatory issues.

Brainard, Lori A. *Television: The Limits of Deregulation*. Boulder, CO: Lynne Rienner, 2004. Reviewing three examples of attempts to deregulate television (an attempted rewrite of the 1934 Communications Act in 1978, Mark Fowler's early 1980s regime at the FCC, and the 1996 Telecommunications Act), the author argues that real change comes slowly in this field.

Dunham, Corydon B. *Fighting for the First Amendment: Stanton of CBS vs. Congress and the Nixon White House*. Westport, CT: Praeger, 1997. Dramatic retelling of a 1971 confrontation between the network president and Congress over control of documentary "outtakes."

Federal Communications Commission, Media Bureau website. http://www.fcc.gov/mb. Primary center of FCC affairs concerning media, including journalism. Most of the material concerns station licensing and technical regulations.

Friendly, Fred W. *The Good Guys, The Bad Guys and the First Amendment: Free Speech vs. Fairness in Broadcasting*. New York: Random House, 1975. Behind-the-scenes story of what became the landmark 1969 *Red Lion* Supreme Court decision, demonstrating the difficulty of regulating fairness over the air.

Krasnow, Erwin G., et al. *FCC Lobbying: A Handbook of Insider Tips and Practical Advice*. Washington, DC: Telecommunications Reports, 2001. Unique guide to how the commission

operates, designed for those lobbying the agency. Assesses lobbying strategy, making meetings work, the FCC's rules of the road in making decisions, understanding that process, and a series of appendices providing further guidance.

Krattenmaker, Thomas G., and Lucas H. Powe Jr. *Regulating Broadcast Programming*. Cambridge: MIT Press, 1994. Broad review of how the broadcast regulatory system developed, the limits of competition, diversity, conformity, broadcast issues before the Supreme Court, comparing broadcast and print regulation, the Fairness Doctrine, and regulatory failure.

Napoli, Philip M. *Foundations of Communications Policy: Principles and Process in the Regulation of Electronic Media*. Cresskill, NY: Hampton Press, 2001. Seeks to get behind day-to-day regulation to seek some of the whys and wherefores of the regulatory process. The author spends a chapter each digging into the background of public interest, the marketplace of ideas, diversity, competition, universal service, and localism—all terms widely used in FCC proceedings.

Opel, Andy. *Micro Radio and the FCC: Media Activism and the Struggle over Broadcast Policy*. Westport, CT: Praeger, 2004. Useful study of the sad and largely failed struggle for tiny, low-power FM radio stations in the United States. It's something of a morality tale, and the author takes a critical studies approach to this story of how the established broadcast business beat back chances for hundreds (perhaps thousands) of tiny specialized radio outlets.

Powe, Lucas A. *American Broadcasting and the First Amendment*. Berkeley: University of California Press, 1987. Questions why radio and later television never received the same degree of First Amendment protection as newspapers and magazines.

Ramey, Carl R. *Mass Media Unleashed: How Washington Policymakers Shortchanged the American Public*. Lanham, MD: Rowman & Littlefield, 2007. As the title suggests, this is a strong attack on media deregulation over the previous decade, citing many examples of what has gone wrong and why.

Simmons, Steven J. *The Fairness Doctrine and the Media*. Berkeley: University of California Press, 1978. One of the better surveys of the pros and cons of this controversial FCC regulatory stance (then still in force) that would be dropped in 1987—but is still debated.

Studies in Telecommunication Deregulation: Cable Television. Cambridge: MIT Press, 1994–97 (3 vols.). These form part of a larger series; the others focus on telephone policy:

> Hazlett, Thomas W., and Matthew L. Spitzer. *Public Policy toward Cable Television: The Economics of Rate Controls*. 1997. Primarily concerns subscriber costs and experiments in federal deregulation of same.
>
> Johnson, Leland L. *Toward Competition in Cable Television*. 1994. A longtime student of the industry, and an economist, Johnson argues about the potential for deregulating cable in light of the growing number of technology-based competitive options.
>
> Waterman, David, and Andrew A. Weiss. *Vertical Integration in Cable Television*. 1997. Questions the role and regulation of companies controlling cable networks as well as local cable systems.

Zarkin, Kimberly A., and Michael J. Zarkin. *The Federal Communications Commission: Front Line in the Culture and Regulation Wars*. Westport, CT: Greenwood, 2006. Surveys the 70-plus-year history of the FCC in both broadcast media and common carrier issues. Includes origins and purpose of the agency, how it operates and its political environment, notable controversies in mass media, short biographies of commissioners, an annotated listing of Supreme Court decisions involving the FCC, and a brief chronology.

E. Cyberlaw

This is a relatively new and expanding area of law. Books date quickly here given the continuing flow of often defining court decisions. *See also* subsection G-3, below.

Chilling Effects Clearinghouse. http://www.chillingeffects.org. A shared project of Harvard, Stanford, and other universities, this clearinghouse "monitors

the legal climate for Internet activity," including copyright and privacy issues, and especially receipt of "cease and desist" orders directed to website operators.

Garry, Patrick M. *Scrambling for Protection: The New Media and the First Amendment*. Pittsburgh, PA: University of Pittsburgh Press, 1994. Argues that participation-oriented electronic media (such as the then-new World Wide Web) deserves to be protected from regulatory infringement.

Lessig, Lawrence. *Code: And Other Laws of Cyberspace, Version 2.0*. New York: Basic Books, 2006. Updated from the 1999 publication, this edition was, in part, revised online by some of its users. It relates the transition from an online world (one modifying the ground on which constitutions have been written) subject to little control to one more subject to regulation, though what that is and from whom remains to be defined clearly.

Siegel, Stuart. *Beyond Our Control? Confronting the Limits of Our Legal System in the Age of Cyberspace*. Cambridge: MIT Press, 2001. Discusses how law relates (or doesn't) to the emerging Internet work, including file-sharing issues, combating fraudulent activity, dealing with online hate and other content, and international models.

F. Comparative Policy and Law

For other studies of news media abroad, see Section 10.

F-1: General Surveys

These review a broad variety of policy issues across multiple nations.

Bertrand, Claude-Jean, ed. *An Arsenal for Democracy: Media Accountability Systems*. Cresskill, NJ: Hampton Press, 2004. Nearly 30 papers center on news councils or ombudsmen for newspapers and broadcast operations, media codes of ethics, and journalism reviews—using the more inclusive "media accountability systems" term. Focus is heavily on the United States, where many of these notions originated and have been tried out, though in some cases only briefly, with some coverage of European nations as well. *See also* McQuail, below.

Hoffman-Riem, Wolfgang. *Regulating Media: The Licensing and Supervision of Broadcasting in Six Countries*. New York: Guilford, 1996. Countries covered are Britain, Germany, France, Canada, Australia, and the United States. For each the basic provisions of the licensing of radio and television stations is described and assessed.

McQuail, Denis. *Media Accountability and Freedom of Publication*. Oxford: Oxford University Press, 2003. Argues that freedom and accountability are not incompatible, reviews theory and practical examples from several countries, and then suggests ways forward to greater responsibility. *See also* Bertrand, above.

Paraschos, Emmanuel E. *Media Law and Regulation in the European Union: National, Transnational, and U.S. Perspectives*. Ames: Iowa State University Press, 1998. Compares and contrasts general EU law with that of the (then) 15 member states and American practices.

Price, Monroe E., et al., eds. *Media Reform: Democratizing the Media, Democratizing the State*. London: Routledge, 2002. A dozen papers, two providing an integrative overview, while the remainder focus on specific countries: China, Uzbekistan, Indonesia, Bosnia-Herzegovina, Jordan, Ukraine, Uganda, India, Poland, and Uruguay.

Robillard, Serge. *Television in Europe: Regulatory Bodies: Status, Functions and Powers in 35 European Countries*. London: John Libbey, 1995. Very useful handbook (though it needs updating) on varied legal regimes and organizations, exploring parallels and differences.

Seabright, Paul, and Jürgen von Hagen, eds. *The Economic Regulation of Broadcasting Markets: Evolving Technology and Challenges for Policy*. New York: Cambridge University Press, 2007. Offers a comparative look at the impact of technology changes (new digital options) of recent years. Ten papers discuss broadcast technology and regulatory developments, competition and market power, the changing status of public service broadcasting,

regulation for pluralism in media markets and of television advertising, lessons for broadcasting from market definitions in printed media, and studies of the U.S. situation, the European Union, and a broader assessment of competition policy and sector-specific economic media regulation.

Smith, Rachael Craufurd. *Broadcasting Law and Fundamental Rights*. New York: Oxford University Press, 1997. Scholarly study of the development of European broadcast law and varied systems that have developed from that law. Good discussion of derivation and the changing role of public monopoly systems.

Terzis, Georgios, ed. *European Media Governance*. Bristol, England: Intellect Books / Chicago: University of Chicago Press, 2008 (2 vols.), as follows:

1. *The Brussels Dimension*. Makes clear that European governments are gradually ceding control of their national media to international organizations, especially the European Union. Anthology of 14 papers investigates how various media industries are lobbying EU bureaucrats in Brussels.
2. *National and Regional Dimensions*. Extensive anthology of papers on most European nations, demonstrating how they are slowly shifting direction of their national media systems from government (or government oversight) to marketplace forces including convergence, concentrated ownership, and globalization. Provides an overview of media ownership structures in each country as well as analyses of policies, accountability systems, and technological developments in the regions discussed.

Venturelli, Shalini. *Liberalizing the European Media: Politics, Regulation, and the Public Sphere*. Oxford: Oxford University Press, 1998. Centers on political rights of information and participation within the public sphere, concluding that public service has diminished in the face of competition and deregulation.

Ward, David, ed. *Television and Public Policy: Change and Continuity in an Era of Global Liberalization*. New York: Routledge, 2008. Sixteen papers reviewing television policy and deregulatory trends over the past two decades in as many countries, to illustrate the general trend toward liberalization and privatization.

F-2: Specific Legal Subjects

These focus on comparative law in particular topics—such as libel, copyright, or privacy.

Amponsah, Peter N. *Libel Law, Political Criticism, and Defamation of Public Figures: The United States, Europe, and Australia*. El Paso, TX: LFB Scholarly Publishing, 2004. Studies political defamation laws in the United States, the European Court of Human Rights, Britain, and Australia. The prevailing jurisprudence of each weighs political speech against reputation through a preferred balancing approach that gives more protection to political speech.

Aplin, Tanya. *Copyright Law in the Digital Society: The Challenges of Multimedia*. New York: Hart, 2005. Comparative study of British and European Union law concerning protection of content on multimedia.

Glasser, Charles J., Jr., ed. *International Libel and Privacy Handbook: A Global Reference for Journalists, Publishers, Webmasters, and Lawyers*. New York: Bloomberg Press, 2009 (2nd ed.). Written for nonlawyers, this offers a nation-by-nation summary covering Europe, Asia, and the Americas, designed for rapid analysis of media law as it applies to globally accessible publications, Internet sites, and wire services.

Kenyon, Andrew T., and Megan Richardson, eds. *New Dimensions in Privacy Law: International and Comparative Perspectives*. New York: Cambridge University Press, 2006. Encompasses three overlapping areas of analysis: privacy protection under general law; legislative measures for data protection in digital communications networks; and the influence of transnational agreements and other pressures toward harmonized privacy standards. Leading, internationally recognized authors discuss developments across these three areas in the United Kingdom, Europe, the United States, APEC (Asia-Pacific Economic Cooperation), Australia, and New Zealand.

Towse, Ruth, ed. *Copyright in the Cultural Industries*. Cheltenham, England: Edward Elgar, 2002. Compares and contrasts intellectual property laws across a number of European countries, arguing that they should be more openly administered.

G. Journalism Ethics

Long a backwater in both reality and research, this subject has become "hot" over the past decade or so and thus literature about it is rapidly expanding.

G-1: Reference

Cohen, Elliot D., and Deni Elliott. *Journalism Ethics: A Reference Handbook*. Santa Barbara, CA: ABC-CLIO, 1997. Designed as a "first stop" for those seeking information on the subject. Part of a larger series on ethical concerns, it includes a chronology, issues in journalistic ethics (short pithy summaries), court cases, journalistic codes, print and non-print resources (annotated), and a guide to relevant organizations. Information provided is basic and brief, designed to get readers to dig further elsewhere.

Cooper, Thomas W., et al. *Television and Ethics: A Bibliography*. Boston: G. K. Hall, 1988. Some 1,200 entries, most published after 1970, arranged by topic.

Society of Professional Journalists, *Codes of Ethics*. http://www.spj.org/ethics.asp. Extensive site includes their own code and those of other groups, teaching about ethics, an archive of relevant articles, and an ethics hotline.

G-2: General

This includes many oft-revised texts and casebooks for university use.

Bivins, Thomas. *Mixed Media: Moral Distinctions in Advertising, Public Relations and Journalism*. Mahwah, NJ: Lawrence Erlbaum, 2004. Discusses what makes an ethical issue, moral claimants, obligation, social responsibility, news media and professionalism, ethical theory, telling the truth, avoiding harm, and a checklist for ethical decision making. Includes codes of ethics of such major groups as SPJ, ASNE, RTNDA, AAF, ASME, PRSA, and IABC.

Christians, Clifford, et al. *Good News: Social Ethics and the Press*. New York: Oxford University Press, 1993. Building on the 1947 Hutchins Commission report, and the classic 1956 *Four Theories of the Press,* this offers a new model rooted in whole community rather than individuals, thus trying to address the lack of normative theory in this field.

Christians, Clifford, et al. *Media Ethics: Cases and Moral Reasoning*. Boston: Pearson/Allyn & Bacon, 2005 (7th ed.). Demonstrates an understanding of the philosophical bases of mass media ethics, with a series of nearly 80 pertinent cases (about 30 new to this edition) with which to illustrate these principles and their practical consequences.

Craig, David. *The Ethics of the Story: Using Narrative Techniques Responsibly in Journalism*. Lanham, MD: Rowman & Littlefield, 2006. Explores ethical aspects of typical narrative journalistic writing at three large newspapers: the *Los Angeles Times,* the *Portland Oregonian,* and the *Dallas Morning News*. Includes perspectives of writers, copy editors, assigning editors, and top-level managers. Chapters range over the power and ethics of a news story, use of anecdotes, the importance of description and attribution, use of quotes and paraphrasing, word choice and bias, interpretation and analysis, and various forms of "voice."

Day, Louis Alvin. *Ethics in Media Communications: Cases and Controversies*. Belmont, CA: Thomson Wadsworth, 2006 (5th ed.). Now-standard text with dozens of real-life case examples. Includes discussions ethics and moral development, ethics and society, and ethics and moral reasoning, followed by cases concerning truth and honesty in media communications, media and privacy, confidentiality, and other issues.

Harcup, Tony. *The Ethical Journalist*. London: Sage, 2007. Chapters discuss ethical journalism in general, why it matters, knowledge as power, news in the public interest, news values at work, journalists and their sources, how crime is reported in news media, regulation of journalism, standing up

for standards, and ethical journalism as good journalism. Most examples (and the regulation discussion) are based on British practices, though basic ethical points apply equally anywhere.

See Howard, Section 2-J.

Merrill, John C. *Journalism Ethics: Philosophical Foundations for News Media*. New York: St. Martin's Press, 1997. An experienced journalism professor and author distills his experience of a career here, providing connections to ethical thinking in other fields, with good profiles of key people and ideas.

Meyer, Philip, ed. *Newspaper Ethics in the New Century: A Report to the American Society of Newspaper Editors*. Reston, VA: American Society of Newspaper Editors (distribution by Carolina Academic Press), 2006. Updates and compares findings with a 1982 study on the same topic. Based on survey data from 2003 to 2005, chapters discuss the editor–publisher relationship, blogging to stay relevant, why not all journalists are miserable, news gathering on shaky ground, the changing role of ombudsmen, newspapers and the right to privacy, newsroom diversity, financial and other conflicts of interest, fabrication and plagiarism, protecting sources, declining support for news councils, and a 2005 survey of journalist concerns.

Rivers, William L., et al. *Responsibility in Mass Communications*. New York: Harper & Row, 1980 (3rd ed.). A classic, first authored by Wilbur Schramm in 1957 and revised in 1969, this was a pioneering book about ethics and responsibility issues in media.

Rosenstiel, Tom, and Amy S. Mitchell, eds. *Thinking Clearly: Cases in Journalistic Decision-Making*. New York: Columbia University Press, 2003. Eight case studies that raise questions about ethics and the social value of news reporting.

Smith, Ron F. *Groping for Ethics in Journalism*. Ames: Iowa State University Press, 2003 (5th ed.). Principles and guidelines, conflicts of interest, and case studies on such things as photo manipulation, undercover reporting, and corporate news ownership.

Wilkins, Lee, and Renata Coleman. *The Moral Media: How Journalists Reason*. Mahwah, NJ: Lawrence Erlbaum, 2005. Report of an extensive survey of more than 200 working journalists about how they reason about matters of ethics. Discussion includes history of moral development theory; research methods (multiple approaches to asking questions); context and results (the Defining Issues Test [DIT] used here); quotations that authors believe reflect the moral development of those interviewed, pictures and ethical reasoning; stereotypes (particularly racial stereotypes), the "color blind," and interaction between views of race and the DIT instrument.

G-3: Digital and Online Ethics

As with anything concerning the Internet, this is a growing realm of research.

Berkman, Robert I., and Christopher A. Shumway. *Digital Dilemmas: Ethical Issues for Online Media Professionals*. Ames: Iowa State University Press, 2003. Assesses how ethics fit into digital modes of communication including questions of free speech, intellectual property, and speed versus accuracy, among others. Material on the use of sources and information searches impact more than media professionals.

Friend, Cecilia, and Jane B. Singer. *Online Journalism Ethics: Traditions and Transitions*. Armonk, NY: M. E. Sharpe, 2007. Assesses what happens when traditional print or broadcast journalists begin to offer service online, including traditions and conventions—as well as the ethics—of traditional journalism facing changing technology, the process of newsrooms going online and how the gatekeeping function changes, gathering and sharing of information, ethics and law, bloggers and other "participatory journalists," other interactive news forms, commercial issues and content linking, and cross-platform journalism partnering and cross-ownership.

Wheeler, Thomas H. *Phototruth or Photofiction: Ethics and Media Imagery in the Digital Age*. Mahwah, NJ: Lawrence Erlbaum, 2002. How digital editing makes it all too easy to modify a photo in ways often difficult to detect. Chapters

arguing for a new digital ethics protocol are supported by many examples. The "implied authenticity" of news photos gets special attention.

H. Critiques of Journalism

Criticism of journalism is as old as journalism itself, as is evidenced in the large literature that has accumulated over the years. Everybody blames the messenger, it seems. *See also* further relevant titles in Sections 5-A and 6-B.

Bennett, W. Lance, et al. *When the Press Fails: Political Power and the News Media from Iraq to Katrina*. Chicago: University of Chicago Press, 2007. Asks why the press did such a poor job questioning government policies and follow-through during the Bush administration. As the authors put it, "We explore this tendency of the press to record rather than critically examine the official pronouncements of government…" (p. 9).

Capella, Joseph, and Kathleen Hall Jamieson. *Spiral of Cynicism: The Press and the Public Good*. New York: Oxford University Press, 1997. The authors hold media accountable for much public apathy because of how they perpetuate style over substance, emphasizing sound bites and flash rather than the objective study of issues. Relying heavily on statistics gleaned from three experiments, the study traces the origin and rise of voter cynicism. It concludes that media should look closely at their methods of coverage and take responsibility for contributing to this pervasive negativity.

Commission on Freedom of the Press. *A Free and Responsible Press: A General Report on Mass Communication: Newspapers, Radio, Motion Pictures, Magazines, and Books*. Chicago: University of Chicago Press, 1947. Main report of the "Hutchins" commission (after its chair, Robert M. Hutchins), an important watershed document that contributed to the debate over news media's "social responsibility" for many years. Several supporting reports came from the commission staff and same publisher:

> Chafee, Zechariah, Jr. *Government and Mass Communications*. 1947 (2 vols.). In-depth analysis of all aspects of the relationship divided into sections on government powers to limit or suppress discussion, government's role in encouraging communication of news and ideas, and government as a party to communications.
>
> Hocking, William Ernest. *Freedom of the Press: A Framework of Principle*. 1947. The role of freedom in a changing society, freedom of the press as freedom for speakers, nonpolitical impediments to press freedom, press freedom as affected by community and consumer interests, and a summation.
>
> Inglis, Ruth A. *Freedom of the Movies: A Report on Self-Regulation*. 1947. A useful history of the film business and detailed review of early attempts to control film content, evolution and operation of self regulation, and conclusions and recommendations.
>
> White, Llewellyn. *The American Radio: A Report on the Broadcasting Industry*. 1947. Detailed history of the radio business, self-regulation, the failure of educational radio, listener reactions, and government's role.
>
> White, Llewellyn, and Robert D. Leith. *Peoples Speaking to Peoples: A Report on International Mass Communication*. 1946. Physical means of global communication, merchants of words and images, quality of content, and proposals.

Fallows, James. *Breaking the News: How the Media Undermine American Democracy*. New York: Pantheon, 1996. Scathing assessment of how journalists' behavior affects public life with many examples of poor judgment or bad behavior in war reporting, domestic politics, and other realms.

Flink, Stanley E. *Sentinel under Siege: The Triumphs and Troubles of America's Free Press*. Boulder, CO: Westview, 1997. Study of newspaper struggles over restrictions on content, whether from official or other sources, including (most recently) conflicts of interest.

Gower, Karla K. *Public Relations and the Press: The Troubled Embrace*. Evanston, IL: Northwestern University Press, 2007. Reviews a relationship that seems to make both sides uncomfortable—a growing corporate mentality that inflicts media, making

"news" more and more like public relations in too many cases, and blurring roles between two once very different fields.

Hachten, William A. *The Troubles of Journalism: A Critical Look at What's Right and Wrong with the Press*. Mahwah, NJ: Lawrence Erlbaum, 1998. A senior journalism professor reviews and assesses the field, finding much to his liking (how technology boosts the ability to report, for example) but much to lament as well (trivial stories, fading international coverage, and the push for profit above service).

Hallin, Daniel C. *We Keep America on Top of the World: Television Journalism and the Public Sphere*. New York: Routledge, 1994. Sharply critical analysis of such things as coverage of the Vietnam War, elections, White House events, and summit meetings.

Hayes, Arthur S. *Press Critics Are the Fifth Estate: Media Watchdogs in America*. Westport, CT: Praeger, 2008. Offers an interesting collection of opinions, with each chapter providing a separate essay on a given subject. After an introduction, we learn more about Reed Irvine's AIM attacking liberal media, the growing role of bloggers, Ben Bagdikian as a critic ahead of the curve, the Washington [State] news council and how it fared, the role of the FAIR progressive think tank, the fascinating tale of the rise and fall of *Brill's Content*—and why it failed, the shape of "public" journalism as one source of criticism, television news parody making press criticism a laughing matter, and more.

Kennedy, George, and Daryl Moen. *What Good Is Journalism? How Reporters and Editors Are Saving America's Way of Life*. Columbia: University of Missouri Press, 2007. Poses the question—though perhaps not an answer (as seen in the subtitle) that many critics would prefer to hear. Not a book of criticism (as editors make clear in their initial sentence), this anthology of nine papers discusses why we value but also criticize news media, journalism as the lifeblood of democracy, the role of NPR in providing news and companionship, the role of hometown newspapers, journalism as the watchdog of government, the value(s) of investigative reporting, computer-assisted journalism as one means of creating new information, and how to the get the journalism you deserve.

Kovach, Bill, and Tom Rosenstiel. *Warp Speed: America in the Age of Mixed Media*. New York: Century Fund, 1999. Critical study of the 24-hour news cycle, primarily as revealed in the press frenzy over the Clinton–Lewinsky scandal and the role of anonymous sources.

McChesney, Robert W., and Ben Scott. *Our Unfree Press: 100 Years of Radical Media Criticism*. New York: The Free Press, 2004. Anthology of highly critical articles arranged into sections on press ownership, advertising control, profit and partisanship, and the need for a free press.

McManus, John H. *Market-Driven Journalism: Let the Citizen Beware?* Thousand Oaks, CA: Sage, 1994. Suggests television news may be driven too much by market factors (especially advertisers, and what is interesting as opposed to what may be important) and that public or civic journalism may make this trend worse.

Scheuer, Jeffrey. *The Big Picture: Why Democracies Need Journalistic Excellence*. New York: Routledge, 2008. Argues that the United States is in trouble because (among other things) journalism is withering. Less a work of original research than as an extended essay drawing on the work of many others, this book builds on three "salient" moments in American media—the 1920s debate between Walter Lippmann and John Dewey over the role of the press in a democracy, the late 1940s Hutchins commission reports, and the 1990s public journalism movement.

Willis, Jim. *The Shadow World: Life between the News Media and Reality*. New York: Praeger, 1991. Reviews why there is such a gap between reality and media reporting of that reality, including several case studies and some analysis. Includes discussion of errant sources, competing media influences, and issues concerning the structure of news stories themselves.

I. Citizen/Civic/Public Journalism

Though it has been known by different (at least three) names, this reform movement has elicited considerable comment by journalists and others.

Anderson, Rob, et al. *The Conversation of Journalism: Communication, Community, and News*. Westport, CT: Praeger, 1994. Arguing that accurately reporting news is a surprisingly limiting if not disabling mission, the authors suggest a more ecumenical, constructive, participative, and democratically responsive role for journalism's future. Includes many current trends: minority voices, contextualizing news, providing interactive community forums, reconciling information and entertainment functions, and understanding the nature of bias.

Black, Jay, ed. *Mixed News: The Public/Civic/Communitarian Journalism Debate*. Mahwah, NJ: Lawrence Erlbaum, 1997. Thirteen research papers on different aspects, including press accountability, the ethics of civic journalism, and communitarian and environmental journalism—each with responses from journalism practitioners.

Charity, Arthur. *Doing Public Journalism*. New York: Guilford, 1995. Based on a Kettering Foundation project, this explains why the movement began in the 1990s and how it has been practiced. Compares traditional and public journalists' points of view.

Christian, Sue Ellen. *Civic and Citizen Journalism Interest Group Bibliography*. http://www.has.vcu.edu/civic-journalism/bibliography. Print and online resources are included in this extensive and current bibliography.

Clark, Roy Peter, and Cole C. Campbell, eds. *The Value and Craft of American Journalism: Essays from the Poynter Institute*. Gainesville: University Press of Florida, 2002. Some 15 contributors assess important issues: how to restore the credibility of journalism, how journalists see their craft and how they connect it to values, and how leadership is expressed in news companies. Aspects considered: reporting, writing, judgment, editing, visual journalism, ethics, community coverage, language, ownership and leadership, new media, and race and diversity.

Corrigan, Don H. *The Public Journalism Movement in America: Evangelists in the Newsroom*. Westport, CT: Praeger, 1999. A critique of public journalism showing that its advocates have failed to diagnose what ails American journalism and that their prescriptions are more likely to harm than to help the profession. The author introduces data from an extensive survey of newspaper editors and academics, as well as a comprehensive lexicon of public journalism.

Dahlgren, Peter, and Colin Sparks, eds. *Communication and Citizenship: Journalism and the Public Sphere in the New Media Age*. New York: Routledge, 1991. Each contributor to this collection concentrates on one aspect of the role and future of public opinion in the United States and Europe, including American politics and television news, feminist perspectives on the public sphere, the Polish media after Stalinism, and popular press and television in Britain.

Dahlgren, Peter. *Journalism and Popular Culture*. Newbury Park, CA: Sage, 1992. Papers address limits and possibilities of journalism within the contemporary media environment including tabloid journalism, photojournalism practices, and the prevalence of celebrities in media.

Dahlgren, Peter. *Television and the Public Sphere: Citizenship, Democracy and the Media*. Thousand Oaks, CA: Sage, 1995. Clarifies the underlying theoretical concepts of civil society and the public sphere and relates these to a critical analysis of television journalism, information, and entertainment. Demonstrates the limits and possibilities of television and formats of popular journalism to the audience's potential to interpret, resist, or construct its own meanings.

Dahlgren, Peter, ed. *Young Citizens and New Media: Learning for Democratic Participation*. New York: Routledge, 1997. These papers integrate four topics: young people, citizenship, new media, and learning processes, which, when taken together, merge to define an arena of social and research attention that has become compelling.

Dahlgren, Peter. *Media and Political Engagement: Citizens, Communication and Democracy*. New York: Cambridge University Press, 2009. Focuses on media's key role in shaping civic engagement, the role of new interactive media, the relationship

of key notions such as citizenship, the public sphere, agency, identity, deliberation, and practice, and offers an analytic framework called "civic cultures," which is applied to television, popular culture, journalism, the EU, and global activism.

Eksterowicz, Anthony J., and Robert N. Roberts, eds. *Public Journalism and Political Knowledge*. Lanham, MD: Rowman & Littlefield, 2000. Journalists, communication scholars, and political scientists assess the state of contemporary public journalism—its origins, arguments for and against it, and public state of political knowledge. Addressing theoretical and academic notions, these papers explore whether public journalism can help elevate political knowledge.

Friedland, Lewis. *Public Journalism: Past and Future*. Dayton, OH: Kettering Foundation Press, 2003. Uses four medium-size daily newspapers—*The Wichita Eagle, The Charlotte Observer, The Virginian-Pilot,* and the *Colorado Springs Gazette*—to critically examine public journalism's successes, failures, and future challenges.

Gillmor, Dan. *We the Media: Grassroots Journalism by the People, for the People*. Sebastopol, CA: O'Reilly Media, 2004. Shows how anyone can produce news using personal blogs, Internet chat groups, e-mail, and a host of other tools, thus sending a wake-up call to newsmakers, politicians, business executives, celebrities, and marketers and PR flacks who promote them. The author explains how to successfully play by the rules of this new era and shift from "control" to "engagement."

Glasser, Theodore L., ed. *The Idea of Public Journalism*. New York: Guilford Press, 1999. These papers offer a critical and constructive examination of public journalism, the controversial movement aimed at getting journalists to promote and indeed improve—not merely report on—the quality of public life.

Haas, Tanni. *The Pursuit of Public Journalism: Theory, Practice and Criticism*. New York: Routledge, 2007. Introduction to the theoretical foundations and practices of the reform movement that seeks to reinvest journalism with its fundamental responsibilities to democracy and public life. Argues against many deeply ingrained practices ranging from journalistic detachment to framing stories via polar conflict in favor of greater civic involvement by journalists.

Lambeth, Edmund B. *Committed Journalism: An Ethic for the Profession*. Bloomington: Indiana University Press, 1986. Chapters discuss the journalist and classical ethical theory; the eclectic system of journalism ethics; applying principles to cases; values, virtues, and principles; ethics, the media, and the law; and social science and journalism ethics.

Lambeth, Edmund B., et al., eds. *Assessing Public Journalism*. Columbia: University of Missouri Press, 1998. Provides the necessary framework for examining issues surrounding public journalism and determining what must be done to enable it to meet its full potential.

Merrill, John C., et al. *Twilight of Press Freedom: The Rise of People's Journalism*. Mahwah, NJ: Lawrence Erlbaum, 2001. Postulates that institutionalized journalism is fading away and world journalism—prompted by people—is veering toward more order and social harmony, and away from the traditional idea of the press freedom. Provides a critical examination of the trend toward public journalism and considers how press freedom will be impacted by this trend in coming years.

Merritt, Davis "Buzz." *Public Journalism and the Public Life: Why Telling the News Is Not Enough*. Hillsdale, NJ: Lawrence Erlbaum, 1997 (2nd ed.). Develops the public journalism idea, responds to arguments against it, outlines how specific principles can be applied, and explains the importance of public deliberation and values in public journalism. Divided into three sections: why journalism and public life are inseparably bound in success or failure; evolution of the profession's culture and its impact on the author's extensive career; and implications of public journalism philosophy.

Perry, David K. *Roots of Civic Journalism: Darwin, Dewey, and Mead*. Lanham, MD: Rowman & Littlefield, 2003. Discusses the philosophical roots of the civic journalism movement by focusing on

the ideas of Charles Darwin, John Dewey, and George H. Mead.

Ripley, Casey, Jr. *The Media and the Public*. New York: H. W. Wilson "Reference Shelf," 1994. Anthology of material on the relationship and how it is changing.

Rosen, Jay. *What Are Journalists For?* New Haven, CT: Yale University Press, 1999. Relates the development of the public journalism movement that emerged after the 1988 presidential election as a countermeasure against eroding trust in news media and widespread public disillusionment with politics and civic affairs.

Section 9

Audiences

Who reads, listens to, or watches media, and especially news and public affairs? The answers to those and related questions have been changing in recent years as more media options become available. This chapter provides a glimpse at sources describing what is known and what still needs to be researched, and how we know what we know.

Several important strains of media research, about which a lot has been published, are *not* included here, however, as they have little directly to do with journalism. These include the effects of media (and especially television) on children, the potential impact of televised or movie violence on their audiences, and the broad effects and impact of advertising and public relations efforts. Each of these topics has a substantial and growing literature.

A. General Surveys

Generally, this is a very large literature that can only be hinted at here—the emphasis below being on studies at least including journalism, though a good deal of research centers on entertainment audiences.

A-1: Media Audiences

These studies range over a variety of media (specific media are covered further below) and methods.

Anderson, James A., and Timothy P. Meyer. *Mediated Communications: A Social Action Perspective*. Newbury Park, CA: Sage, 1988. An integrated treatment of the massive theoretical and empirical research literature from the previous two decades—what we know, how we know it, and what we still need to know. An organizing theory ties it all together.

Ang, Ien. *Living Room Wars: Rethinking Media Audiences for a Postmodern World*. New York: Routledge, 1996. Gathers ten of the Australian researcher's edited and updated writings over the previous decade, arranged into three sections on audiences in general, gendered audiences, and audiences and global culture. She argues that people's time is increasingly being "colonized" by the growing variety of media.

Becker, Lee B., and Klaus Schoenbach, eds. *Audience Response to Media Diversification*. Hillsdale, NJ: Lawrence Erlbaum, 1989. Research papers exploring the impact of more channel choice and how it has affected audiences in several countries.

Dervin, Brenda, et al., eds. *Rethinking Communications*. Newbury Park, CA: Sage, 1989 (2 vols.). Some 60 papers growing out of an International Communications Association reassessment of where research in the field stands as to theory development, application of research methods, research findings, and what is still not definitively known.

Gaunt, Philip, ed. *Beyond Agendas: New Directions in Communication Research*. Westport, CT: Greenwood, 1993. Assessment of where things stand in media audience research as well as the work still needed in most major research topics.

Giles, David. *Media Psychology*. Mahwah, NJ: Lawrence Erlbaum, 2003. Seventeen chapters survey

the field, presuming no prior subject background. Includes discussion of media theory, research methods, such major issues as violence and pornography, key audiences, major content types (including news), and the impact of changing technology. The discussion of research modes is balanced and useful.

Harindranath, Ramaswami. *Audience-Citizens: The Media, Public Knowledge, and Interpretive Practice*. New Delhi: Sage, 2009. Examines media and politics in contemporary India and in the developing world, exploring how sociological and cultural factors affect interpretations of mediated knowledge. Examines the notion that understanding is irretrievably linked to the interpreter's sociocultural position and explains the influence of sociocultural factors on the capacity for understanding. On a micro level, the author focuses on the evaluation and interpretation of nonfiction programs by different audience groups in India. He explores the sociocultural positioning of audiences and inequality of access to symbolic resources and cultural capital.

Harris, Richard J. *A Cognitive Psychology of Mass Communication*. Hillsdale, NJ: Lawrence Erlbaum, 1989. A topically organized review of what was then known about media impacts, including the psychology of advertising, sports, news, politics, and prosocial uses of media.

Hay, James, et al., eds. *The Audience and Its Landscape*. Boulder, CO: Westview, 1996. Theoretical discussion in 21 scholarly papers of the media audience as a kind of landscape, including an assessment of the convergence of research traditions, rethinking audiences as an object of study, the politics of audience studies, and locating audiences within academic fields of research.

Klapper, Joseph. *The Effects of Mass Communication*. Glencoe, IL: The Free Press, 1960. While a half century old, the findings of this classic remains largely correct even today—that media reinforce rather than create (let alone change) opinions. To the time of its publication, it provides probably the best summation of media audience research efforts, both commercial and academic.

Machin, David, and Barrie Gunter, eds. *Media Audiences*. London: Sage, 2009 (4 vols.). This substantial collection gathers a range of theoretical, methodological, and thematically diverse articles and chapters that map important work and ideas in international audience studies. The individual volumes in this largest-ever anthology on the topic:

1. Surveys the history of audience research and how audiences have been conceptualized, including papers that consider how debates about audiences have changed in the context of media developments.
2. Deals with different ways that audiences and their responses/uses of media have been measured, paying attention to how audience studies have responded to challenges of different media.
3. Focuses on specific genres of entertainment, specific media, and on specific media groups.
4. Looks specifically at audience research that has tested the way that the media influence society, attitudes, and behaviors.

Napoli, Philip M. *Audience Economics: Media Institutions and the Audience Marketplace*. New York: Columbia University Press, 2003. How electronic media (including Internet) audiences are "manufactured," valued, and sold to advertisers. Audiences are perceived here as an economic product. While the focus is on electronic media, many points fit print media as well.

Neuman, W. Russell. *The Future of the Mass Audience*. New York: Cambridge University Press, 1991. The conclusions of a five-year study of the splintering of mass audiences caused by newer media and substantial multiplication of options available to audiences. Argues that traditional national media will continue to be important despite the rise of newer (and often narrower) services.

Ross, Karen, and Virginia Nightingale. *Media and Audiences*. London: Open University Press, 2003. Introductory survey across a wide literature, taking both a chronological and thematic approach to explore how audience as an analytical concept has changed, as well as examining relationships

audiences have with texts and how they exert power as consumers. Discusses the political economy of audiences and how they are delivered to advertisers, ratings wars waged by broadcasters, and the development of narrowcasting and niche audiences. *See also* the authors' related anthology: *Critical Readings: Media and Audiences* (Open University, 2003).

Salvaggio, Joseph L., and Jennings Bryant, eds. *Media Use in the Information Age: Emerging Patterns of Adoption and Consumer Use*. Hillsdale, NJ: Lawrence Erlbaum, 1989. Useful multiauthor survey of research developments and findings from the 1970s and 1980s.

Webster, James G., and Patricia F. Phalen. *The Mass Audience: Rediscovering the Dominant Model*. Mahwah, NJ: Lawrence Erlbaum, 1997. Focusing on television but arguing its points more generally, this reviews the breaking up of the once-mass audience into a series of smaller and more specialized groups. Compares and contrasts traditional and new views of audiences, concluding the "mass" rubric still fits to a substantial degree.

Wicks, Robert H. *Understanding Audiences: Learning to Use the Media Constructively*. Mahwah, NJ: Lawrence Erlbaum, 2001. Reviews media in the construction of social reality (how people process information from media and other sources), constructing and framing media messages, and using them. Includes uses and gratifications research, and discussion of the Internet as an interactive medium.

A-2: Media Literacy

There is a growing literature on this and related topics, though most titles are introductory textbooks. "Literacy" in this sense means being an informed media user, aware of how media content (including news) is developed and presented.

Baker, Frank W. *Political Campaigns and Political Advertising: A Media Literacy Guide*. Westport, CT: Greenwood, 2009. Discusses the maze of blandishments and spin that is a hallmark of modern political campaigns, and how to dissect persuasive strategies embedded in political messages, assessing political advertising in traditional media (news papers, television, radio) and online (blogs, social networking, and user-generated websites).

Potter, W. James. *Media Literacy*. Thousand Oaks, CA: Sage, 2008 (4th ed.). Standard text designed to help readers gain skills needed to navigate mass messages—which are variously designed to inform, entertain, and to sell them. Offers a plan for gaining a clearer perspective on borders between the real world and the simulated media world, helping readers become responsible media consumers.

Potter, W. James. *Theory of Media Literacy: A Cognitive Approach*. Thousand Oaks, CA: Sage, 2004. Explains how audiences absorb floods of information in a media-saturated society and examines how we often construct faulty meanings from those messages. By building on a foundation of principles about how humans think, the author examines decisions about filtering messages, standard schema to match meaning, and higher level skills to construct meaning. A central theme is what governs the degree to which a person is media literate.

B. News Media Audiences

This has been a relatively limited literature (save for television) until fairly recently but is slowly expanding as more is learned.

B-1: General

Altheide, David L. *Creating Fear: News and the Construction of Crisis*. Hawthorne, NY: Aldine de Gruyter, 2002. Discusses how and the degree to which news media are making people more fearful of their surroundings and life in general. After a chapter discussing the concept of fear in various contexts, the author reviews the production of fear, the discourse of fear, journalistic interviewing, policing crime and fear in news media (fear coverage builds in readers and viewers), children and the discourse of fear, and the lens (media, that is) of fear. Much of this is based on content analysis of stories and headlines in key national newspapers.

Graber, Doris A. *Processing the News: How People Tame the Information Tide*. New York:

Longman, 1984. How people process (select and retain) news information to get what they want and need, based on a year-long multiwave panel of 21 residents of a Chicago suburb. Concludes that two-thirds of newspaper and broadcast news stories are passed over by most audience members.

Media Management Center of Northwestern University. *News Consumption*. http://www.mediainfocenter.org/journalism/news_consumption. The latest time-series information on who uses which media for news, showing changes over the past decade.

Mindich, David T. Z. *Tuned Out: Why Americans Under 40 Don't Follow the News*. New York: Oxford University Press, 2005. Important analysis of a clear factor in declining news audiences, the "loss" of younger readers and viewers. Based in part on 2001–03 survey interviews with a variety of young people in different areas, the author defines some of the reasons—and likely impacts—of the decline in the use of legacy news sources.

Poindexter, Paula, et al. *Women, Men, and News: Divided and Disconnected in the News Media Landscape*. Mahwah, NJ: Lawrence Erlbaum, 2007. Explores the divide between men and women in their consumption of news media, reviewing how genders read and use news historically and currently, how they use technology to access news, how today's news pertains to and is used by women, and the diversity issues among women's use of news (considering racial, ethnic, international and feminist perspectives).

Schudson, Michael. *The Power of News*. Cambridge, MA: Harvard University Press, 1995. Explores concepts of news, journalism, and information as framed by culture within a society and suggests that journalism would be reinvented should it not exist, because society requires interpretation of information.

B-2: Newspaper and Magazine Readers

There are markedly few books on this topic, odd when one considers the importance of the subject.

Bennett, Charles O. *Facts without Opinion*. Chicago: Audit Bureau of Circulation, 1965. A fiftieth-anniversary history of the circulation-measuring service. *See* next item.

Bennett, Charles O. *Integrity in a Changing World: Seventy-Five Years of Industry Self-Regulation through the Audit Bureau of Circulations*. Chicago: Mobium Press, 1989. Updates information in the previous item.

Bogart, Leo. *Press and Public*. Hillsdale, NJ: Lawrence Erlbaum, 1990 (2nd ed.). Reviews what was then known about readers of American daily newspapers, the evolution of reading habits, news in the press and television, editors and their readers, and what portions of typical papers are most read. Very useful for its pre-Internet viewpoint.

Leonard, Thomas C. *News for All: America's Coming-of-Age with the Press*. New York: Oxford University Press, 1995. Organized into three sections: creation of an audience for news in the nineteenth century; how readers have chosen what news to read and how to respond to editors; and how market forces and ideas of community collided in the twentieth century—reading newspapers is dying a slow death.

Nord, David Paul. *Communities of Journalism: A History of American Newspapers and Their Readers*. Urbana: University of Illinois Press, 2001. Reveals how newspapers have intersected with religion, politics, reform, and urban life over nearly three centuries in a wide-ranging discussion that shows journalism to be a vital component of community in settings ranging from religion-infused towns of colonial America to rapidly expanding urban metropolises of the late nineteenth century. Explores the cultural work of the press and how ordinary readers use journalism to form community attachments and engage in civic life.

Stone, Gerald L. *Examining Newspapers: What Research Reveals about America's Newspapers*. Beverly Hills, CA: Sage, 1987. Reviews significant findings about newspapers and the newspaper industry, focusing upon news gathering, news paper content, editing, writing, management, readership, and audience effects.

B-3: Broadcast Ratings

Because of longtime advertiser interest, broadcast audience information fills a large literature that falls into two categories—descriptions of commercial research (chiefly ratings, covered in this subsection), and scholarly studies using quantitative and qualitative research (next subsection).

A Guide to Understanding and Using Radio Audience Estimates. Columbia, MD: Arbitron, annual. Useful explanation of commercial radio ratings by a company that produces them, how they are derived and how to use them. Each edition updates to include the latest changes in how ratings are derived (such as use of portable people meters) and reported.

Arbitron, *American Radio Listening Trends*. http://www.arbitron.com/home/arlt.asp. Usually updated regularly, this includes program format trends and popularity, plus data on radio audience composition and people using radio information for commercial stations.

Beville, Hugh Malcolm, Jr. *Audience Ratings: Radio, Television, Cable*. Hillsdale, NJ: Lawrence Erlbaum, 1988 (2nd ed.). The best source of historical information on how audience ratings developed for radio and then television and the many companies (and methods) involved over time. One chapter focuses on cable audience measurement. Many ratings issues are covered, and a summary assesses what has been learned since 1930.

Buzzard, Karen S. *Chains of Gold: Marketing the Ratings and Rating the Markets*. Metuchen, NJ: Scarecrow, 1990. Brief historical survey of Nielsen and Arbitron (primarily) with some mention of other firms involved in developing and providing radio and television ratings.

Webster, James G., et al. *Ratings Analysis: The Theory and Practice of Audience Research*. Mahwah, NJ: Lawrence Erlbaum, 2006 (3rd ed.). A standard textbook treating broadcasting and cable audience research plus that concerning advertising. Chapters assess audience research concerning program preferences, ratings and financial analysis, the role of research in social policy, and how audience data are gathered and used.

B-4: Broadcast Audiences

Note nearly all of this concerns television—there is very little research other than ratings concerning radio.

Ang, Ien. *Desperately Seeking the Audience*. New York: Routledge, 1991. After a general discussion of ways of viewing television audience roles, this provides a review of audience research methods and findings in both America and Europe.

Austin, Bruce A. *The Film Audience: An International Bibliography of Research*. Metuchen, NJ: Scarecrow, 1983. Some 1,200 annotated entries are included in one of the few reference sources on this medium, now closely allied to television and video distribution.

Barfield, Ray. *A Word from Our Viewers: Reflections from Early Television Audiences*. Westport, CT: Praeger, 2008. Tracing public and critical responses to TV from its pioneering days, the author provides context to reactions of those who watched television's early broadcasts—from a privileged few in the 1930s, to those who bought TV sets in the post–World War II television boom, to still more who invested in color receivers and cable subscriptions during the 1960s.

Bianculli, David. *Teleliteracy: Taking Television Seriously*. New York: Continuum, 1992. Argues against many antitelevision views held by critics and explores some of the medium's more important roles for its users.

Bird, S. Elizabeth. *The Audience in Everyday Life: Living in a Media World*. New York: Routledge, 2003. The anthropologist argues that television's audience cannot be studied in front of the television alone—their interaction with media does not end when the set is turned off. Applying new developments in cultural anthropology and folklore to media studies, this offers a series of empirically based audience studies of media scandals, fan culture, representations of race and ethnicity, tabloid journalism, and runaway media hoaxes.

Bogart, Leo. *The Age of Television*. New York: Ungar, 1972 (3rd ed.). This reprints the 1958 edition (important in its own time), adding a separate section of notes to bring it up to date, thus providing a window into the first decade of commercial television in America, what audiences thought of it, and what was learned over the next 15 years. In all, this is a still-useful period piece.

Bower, Robert T. *The Changing Television Audience in America*. New York: Columbia University Press, 1985. This is the second volume (*see also* Bower's *Television and the Public,* Holt, Rinehart & Winston, 1973) that builds on Steiner's original 1963 study (see below), tracing how audiences for broadcast television were changing in their demographics and usage patterns. Many comparisons are made between the 1970 and 1980 national surveys on which the study is based.

Bryant, Jennings, ed. *Television and the American Family*. Hillsdale, NJ: Lawrence Erlbaum, 1990. Seventeen papers on uses by families, the portrayal of families on television, the effects of the medium on families, mediating television's impact, and public policy concerns.

Comstock, George, et al. *Television and Human Behavior*. New York: Columbia University Press, 1978. Despite its age, this remains an important volume summarizing from a vast amount of research what was then known. To the time of its publication, it was an unsurpassed summation of what was known about television's many "effects."

Comstock, George, and E. Scharrer. *Television: What's on, Who's Watching, and What It Means*. San Diego, CA: Academic Press, 1999. A briefer summary and updating of the prior entry.

Condry, John. *The Psychology of Television*. Hillsdale, NJ: Lawrence Erlbaum, 1989. Overview of research literature on the psychological impacts of viewing television, including viewing behavior, attention, comprehension, influence on beliefs and judgments, and imitation.

Fowles, Jib. *Why Viewers Watch: A Reappraisal of Television Affects*. Newbury Park, CA: Sage, 1992 (2nd ed.). Argues positive points of television viewing to undermine arguments of critics, and debunks many myths propagated by media scholars and "television prigs."

Houston, Aletha C., et al. *Big World, Small Screen: The Role of Television in American Society*. Lincoln: University of Nebraska Press, 1992. Important summary of scholarly findings on TV impacts as seen in a multiyear American Psychology Association study, reviewing research results of the previous decade.

Kubey, Robert, and Mihaly Csikszentmihalyi. *Television and the Quality of Life: How Viewing Shapes Everyday Experience*. Hillsdale, NJ: Lawrence Erlbaum, 1990. Solid overview on research and its limits, the method of "experience sampling," and results from that research on television viewing as cause, habit, and effect. Demonstrates that "heavy viewers" were usually more passive and less alert.

Lewis, Justin. *Ideological Octopus: An Exploration of Television and Its Audience*. New York: Routledge, 1991. Reviews what is known of the television audience, new modes of research (including the previous decade's efforts in semiology and cultural studies), the audience for news specifically, and a review using case studies of other programs' audiences.

Lull, James, ed. *World Families Watch Television*. Newbury Park, CA: Sage, 1988. One of relatively few comparative studies of media audiences, this relates culture and socioeconomic status to viewing patterns in Britain, Venezuela, Germany, India, America, and China.

Morley, David. *Television Audiences & Cultural Studies*. New York: Routledge, 1992. The development of audience research, theoretical frameworks, class and ideology, gender and viewing practices, and the consumption of television as a commodity. Draws on a host of previous research studies to develop a view of the changing multiple audiences for television.

Robinson, John P., and Mark R. Levy. *The Main Source: Learning from Television News*. Beverly

Hills, CA: Sage, 1986. What viewers seek, watch, and retain from local and network television newscasts. Argues that most Americans do *not* get most of their news from television.

Rosenstiel, Tom, et al. *We Interrupt This Newscast: How to Improve Local News and Win Ratings, Too*. New York: Cambridge University Press, 2007. Using audience ratings data, the authors suggest how to shift local television away from crime and fire coverage to a broader menu of information.

Seiter, Ellen. *Television and New Media Audiences*. New York: Oxford University Press, 1999. Through a range of case studies, the book explains what audience research tells about uses of technologies in the domestic sphere and classroom, the relationships between gender and genre, and varied interpretations of media technologies and media forms. The book reviews the most important research on television audiences and recommends the use of ethnographic, longitudinal methods for the study of media consumption, and computer use at home as well as in the workplace.

Selnow, Gary W., and Richard R. Gilbert. *Society's Impact on Television: How the Viewing Public Shapes Television Programming*. Westport, CT: Greenwood, 1993. Reverses the usual order of "audience" books and examines how various groups (including advertisers) impact the making of television programs, including many examples and case studies.

Steiner, Gary A. *The People Look at Television*. New York: Knopf, 1963. Historically, this remains *the* classic study of television viewing, based on a national survey about a dozen years after the inception of commercial television network programming. It includes some reference to news and documentaries prior to their expansion after 1960.

Svennevig, Michael, et al. *Godwatching: Viewers, Religion, and Television*. London: John Libbey, 1988. The British television audience for religious programming is compared with similar surveys done in the 1960s.

B-5: Cable and Newer Media Audiences

A fast-moving target of a subject, given the constant parade of new technologies and related difficulties in audience measurement, the literature here reflects how little is really known of audience patterns.

Castells, Manuel, et al. *Mobile Communication and Society: A Global Perspective*. Cambridge: MIT Press, 2007. Wireless networks and the broadening menu of services for mobile phones is the focus here, along with how these will impact everyday life in its several contexts including news and public affairs both domestically and on an international basis.

De Vaney, Ann, ed. *Watching Channel One: The Convergence of Students, Technology, and Private Business*. Albany: State University of New York Press, 1995. A sometimes critical study of commercially supported satellite news system delivered into thousands of the nation's high schools.

Dobrow, Julia R., ed. *Social and Cultural Aspects of VCR Use*. Hillsdale, NJ: Lawrence Erlbaum, 1990. Eleven papers on how "watching TV" now means many different things because of VCR time shifting and other uses, including patterns in other countries and use of camcorders.

Heeter, Carrie, and Bradley S. Greenberg, eds. *Cableviewing*. Norwood, NJ: Ablex, 1988. Provides 21 papers on all aspects of cable audiences including making choices of what to watch, viewing styles (zappers, grazers, and more), viewing time and channel type, program type preferences, and pay channel watchers.

Howard, Philip N., and Steve Jones, eds. *Society Online: The Internet in Context*. Thousand Oaks, CA: Sage, 2004. Examines how new technologies have been diffused and how quickly they become embedded in society. Explores various impacts of multiple newer services including, but not limited to, the web. One section focuses specifically on news and politics.

Katz, James E., and Ronald E. Rice. *Social Consequences of Internet Use: Access, Involvement*

and Interaction. Cambridge: MIT Press, 2002. Based on national telephone surveys in 1995 and 2000, the authors explore questions of access, social capital, and identity. Their "Syntopia Project" sought to place the web in context of other media and activities.

Levy, M. R., ed. *The VCR Age: Home Video and Mass Communications*. Newbury Park, CA: Sage, 1989. Papers demonstrate how the video recorder gradually changed viewing patterns.

Lievorouw, Leah, and Sonia Livingstone, eds. *The Handbook of New Media: Social Shaping and Consequences of ICTs*. Thousand Oaks, CA: Sage, 2002. Reviews the past two decades of social science research on information communication technologies. There are 45 academic papers in six sections, the gist of which center on a growing research understanding of how people use newer technologies, and with what impact or effect.

Mackay, Hugh, and Darren Ivey. *Modern Media in the Home: An Ethnographic Study*. Rome: John Libbey, 2004. An intensive study of ten households in Wales that reviews the role of media in everyday life and social relationships, showing how global media can impact local communities and cultural issues (including language).

Reeves, Byron, and Clifford Nass. *The Media Equation: How People Treat Computers, Television, and New Media Like Real People and Places*. New York: Cambridge University Press, 1996. Compares mediated (meaning those devices noted in the subtitle) to interpersonal interactions using results of various psychological experiments.

Rosenberg, Howard, and Charles S. Feldman. *No Time to Think: The Menace of Media Speed and the 24-Hour News Cycle*. New York: Continuum, 2008. As much about impact on audiences as on the media, this is a critical assessment of blogs and other modern modes of disseminating news.

Silverstone, Roger, and Eric Hirsch, eds. *Consuming Technologies: Media and Information in Domestic Spaces*. New York: Routledge, 1992. On the eve of the commercial Internet's introduction, this examines household uses of various legacy media as researched using different disciplines, including anthropology and cultural studies.

Turow, Joseph, and Andrea L. Kavanaugh, eds. *The Wired Homestead: An MIT Press Sourcebook on the Internet and the Family*. Cambridge: MIT Press, 2003. Twenty-one scholarly papers on the new web world in context, the Internet and parents and their kids, and the wired homestead and online life as well as civic life. The authors argue the Internet rivals the advent of the telephone, radio, or television in social significance.

Turow, Joseph, and Tsui Lokman, eds. *The Hyperlinked Society: Questioning Connections in the Digital Age*. Ann Arbor: University of Michigan Press, 2008. Seventeen papers discuss the use of web links to organize attention and online behavior, in the business of media, and for social reasons.

Walker, James R., and Robert V. Bellamy Jr. *The Remote Control in the New Age of Television*. New York: Praeger, 1993. Sixteen research papers on the history and development, individual use, uses and gratifications research, group viewing and use of remote devices, and the impact of such devices on media industries.

C. Audience Research Methodologies

This is but a selection of a growing number of textbooks or "cookbooks" offering menus of applicable research instruments, all of which focus specifically on media research and examples.

C-1: Research Development

Studies of how media research has developed are relatively recent, and meld biographical study of key figures with development of both methods and findings.

See Beville, subsection B-3, above.

Dennis, Everette E., and Ellen Wartella, eds. *American Communication Research: The Remembered History*. Mahwah, NJ: Lawrence Erlbaum, 1996. Fourteen contributed chapters appear in sections on the schools of thought (such

as work done at Yale, Columbia, and on the press as a social institution), eyewitness accounts (including early ratings, Frank Stanton, master teachers, and research and public policy), and reassessment (developing a historiography).

Glander, Timothy. *Origins of Mass Communications Research during the American Cold War: Educational Effects and Contemporary Implications*. Mahwah, NJ: Lawrence Erlbaum, 2000. Focuses on the work of a number of pioneers, including chapters devoted to the pioneering work of both Paul Lazarsfeld and Wilbur Schramm.

Lerner, Daniel, and Lyle M. Nelson, eds. *Communication Research—A Half-Century Appraisal*. Honolulu: University Press of Hawaii, 1977. One of the first books to take a summary of what had been learned in primarily academic work since the 1920s.

Lowery, Shearon A., and Melvin L. DeFleur. *Milestones in Mass Communication Research: Media Effects*. White Plains, NY: Longman, 1995 (3rd ed.). A dozen key studies from the early 1930s to the 1990s are discussed in the context of what is known now. This is valuable as it helps trace growing sophistication in method and what was (and is) known about media usage.

Rogers, Everett M. *A History of Communication Study: A Biographical Approach*. New York: The Free Press, 1994. Readable biographical approach to our growing understanding of audiences and the effects of media. Chapters generally focus on one researcher or specific school of study, ranging over about 150 years. This collection of research biographies makes clear how later work has built on that done before. *See* next entry.

Scannell, Paddy. *Media and Communication*. Thousand Oaks, CA: Sage, 2007. While the title doesn't make it clear, this is a study of major media researchers from the 1930s to the present, chiefly those in Britain and America (with some reference to German researchers as well). Valuable for its comparative approach, the study melds well- and lesser-known researchers to illustrate how knowledge of media impact has developed over seven decades. *See* previous entry.

Schramm, Wilbur, as edited by Steven H. Chaffee and Everett M. Rogers. *The Beginnings of Communication Study in America*. Thousand Oaks, CA: Sage, 1997. A manuscript found after Schramm's death and edited by two scholars to rescue his memory of who did what and when.

C-2: Methods

Much of this material is in textbook form, often revised.

Anderson, James A. *Communication Research: Issues and Methods*. New York: McGraw-Hill, 1987. Broad survey of methods, ethics, and trends used in different types of communication (chiefly media) research with many interesting case studies to illustrate key points and approaches.

Bryant, Jennings, and Mary Beth Oliver, eds. *Media Effects: Advances in Theory and Research*. New York: Routledge, 2009 (3rd ed.). Begun as *Perspectives on Media Effects* (1986) and revised under this title (1994, 2002), this new edition was much expanded and in many aspects reconceived. The number of chapters grew from 16 to 27, many revised, and others explore new topics—such as the Internet. It is a cookbook of what is known, drawing on years of research effort by countless scholars.

Dominick, Joseph T., and James K. Fletcher. *Broadcasting Research Methods*. Boston: Allyn & Bacon, 1985. A basic text that remains useful, despite passage of time, as it focuses on difficulties and options in studying broadcast audiences both for commercial and scholarly purposes.

Gunter, J. *Media Research Methods: Measuring Audiences, Reactions, and Impact*. London: Sage, 2000. A summary text, largely reflecting British experiences.

Iorio, Sharon Hartin, ed. *Qualitative Research in Journalism: Taking It to the Streets*. Mahwah, NJ: Lawrence Erlbaum, 2004. Research methods (including focus groups, oral and life histories, ethnographic studies, textual analysis, and others) are discussed along with case studies of their application.

Jensen, Klaus Bruhn, ed. *A Handbook of Media and Communication Research: Qualitative and Quantitative Methodologies*. New York: Routledge, 2002. Offers a comprehensive review of earlier research and guidelines for how to think about, plan, and carry out studies of media in different social and cultural contexts. Divided into sections on history, systematics, and pragmatic aspects of research.

Lindlof, Thomas R., ed. *Natural Audiences: Qualitative Research on Media Uses and Effects*. Norwood, NJ: Ablex, 1987. Anthology of papers on different approaches, with case studies of their application.

Lindlof, Thomas R., and Brian C. Taylor. *Qualitative Communication Research Methods*. Thousand Oaks, CA: Sage, 2002 (2nd ed.). Addresses the theory and technique of qualitative research across a breadth of approaches with substantive and illuminating examples drawn from a variety of topical areas.

McQuail, Denis. *Audience Analysis*. Thousand Oaks, CA: Sage, 1997. Provides a succinct account of the "media audience" concept in terms of its history and its place in present-day media theory and research; describes main types of audiences, alternative theories about audiences, and main traditions and fields of audience research.

Moores, Shaun. *Interpreting Audiences: The Ethnography of Media Consumption*. London: Sage, 1994. Charts the emergence of a critical ethnographic perspective on everyday consumer practice in sections on debates about media power to determine meanings made by their readers, an examination of relationships between media genres and social patterns of taste, day-to-day settings and dynamic social situations of reception, and cultural uses and interpretations of communication technologies in households.

Poindexter, Paula M., and Maxwell E. McCombs. *Research in Mass Communication: A Practical Guide*. Boston: Berdford/St. Martin's, 2000. Two senior academics offer a three-phase process for survey research, and offer coverage of content analysis, experiments, focus groups, and other methods as well.

Rubin, Rebecca B., et al., eds. *Communication Research Measures: A Sourcebook*. New York: Guildford, 1994. Reference guide to various quantitative texts and scales, all briefly described, with discussion of their reliability and validity.

Stempel, Guido H., III, et al. *Mass Communication Research and Theory*. Boston: Allyn & Bacon, 2003. Greatly updates Stempel and Westley's research guide of decades earlier, with a wide variety of methods including practical industry research. Authors of individual chapters are generally well-known academics in media research.

Wimmer, Roger, and Joseph Dominick. *Mass Media Research: An Introduction*. Belmont, CA: Wadsworth, 2005 (8th ed.). A standard and oft-revised survey text discussing overall research process, approaches and methods, and applications of research findings.

D. Polls and Public Opinion

This is a large research area with a substantial literature, as polling impacts many fields, not just media and politics. For more on political communication, see Section 6.

D-1: General

Best, Samuel J., and Benjamin Radcliff, eds. *Polling America: An Encyclopedia of Public Opinion*. Westport, CT: Greenwood, 2005 (2 vols.). Some 170 entries of two types—many types and methods of polling, and essays on changing public opinion about selected subjects that were polled over time.

Geer, John, ed. *Public Opinion and Polling around the World: A Historical Encyclopedia*. Santa Barbara, CA: ABC-CLIO, 2004 (2 vols.). First volume covers the U.S. with both a survey of polling history and nearly 35 topics about which polls have been taken. The second covers other countries and adds a detailed bibliography.

University of Pennsylvania Libraries. *Public Opinion Polls—Research Guide*. http://gethelp.library.upenn.edu/guides/polisci/polls.html. Resources and strategies for researching public

opinion polls, including access to and information about past polls, current polling series, survey indexes and bibliographies, and further reading.

D-2: Political

American National Election Studies. http://www.electionstudies.org. A project of Stanford and the University of Michigan, this provides data on voting, public opinion, and political participation, including an extensive bibliography and information on elections around the world.

Brace, Paul, and Barbara Hinkley. *Follow the Leader: Opinion Polls and the Modern Presidents*. New York: Basic Books, 1992. How Presidents from Truman on were shaped by polls, with special focus on the first Bush administration (1989–93). Discusses the impact of polls on relations with Congress and in foreign affairs.

Cantril, Albert H. *The Opinion Connection: Polling, Politics, and the Press*. Washington, DC: Congressional Quarterly Press, 1991. Overview of the first half century or so of professional polling reviews the changing environment of polls and reporting about them, the reciprocal effects of polls and politics on one another, why polls are not equal in quality, and poll standards and accountability.

Crespi, Irving. *Public Opinion, Polls, and Democracy*. Boulder, CO: Westview, 1990. Uses the 1988 presidential election as a vehicle for a practical and theoretical discussion of the rights and wrongs of polling, including how they are used, methods and meanings of polls, and polls and newer media.

Fishkin, James S. *The Voice of the People: Public Opinion and Democracy*. New Haven, CT: Yale University Press, 1995. Evaluates modern democratic practices and explains how the public voice has struggled to make itself heard. The author tells of changing concepts and practices of democracy, with examples that range from ancient Sparta, to early Gallup polls, to Ross Perot in 1992, and develops a rationale for a "deliberative opinion poll" that uses modern media and survey research to legitimately rediscover the people's voice.

See Iyengar, Section 6-B.

Lavrakas, Paul J., and Jack K. Holley, eds. *Polling and Presidential Election Coverage*. Newbury Park, CA: Sage, 1991. Ten papers include discussion of polls during the 1988 election, a short history of exit polls, public polls and election participants, public attitudes about news organizations, and reporting on the technical details of polls.

Lippman, Walter. *Public Opinion*. New York: Harcourt, 1922. Pioneering book by a longtime political columnist that over the years prompted many more and a closer look at the whole subject.

Mann, Thomas E., and Gary R. Orren, eds. *Media Polls in American Politics*. Washington, DC: Brookings Institution Press, 1992. Seven papers on how polls can be and often are misreported with potentially serious impact on news veracity. Includes the growth in use of news polls, when to poll (and when not), technology and polling, why even well-designed polls disagree, sources of error, and the impact of poll results on reporters.

Pew Research Center for the People & the Press. *Survey Reports*. http://people-press.org/reports. Archive of more than two decades of research into public opinion about media and political communication. Datasets are available since 1997, and all are posted here.

Section 10

Global and Comparative Journalism

This section includes a selection (and given the pace of publication, it is only that) of English-language books on news media outside the United States. Published research on this broad topic is extensive, and only a sample of the best and more recent work can be included here. Please note: some very subject-specific comparative material appears in earlier sections, especially if it includes discussions of American journalism. For material on comparative policy and regulation, see Section 8-F.

A. Reference Sources

Attacks on the Press. New York: Committee to Protect Journalists, 1987–present, annual. Detailed accounting of violence and death in the line of reporting duty. Editors vary each year. The current version can be found online: http://www.cpj.org.

Balnaves, Mark, et al. *The Penguin Atlas of Media and Information: Key Issues and Global Trends*. Harmondsworth, England: Penguin, 2001. Color diagrams and maps provide a graphic way to illustrate the information age, press and radio, cinema, television and beyond, ownership and control, advertising, information and communication technology, and the media-created global village.

Columbia University Journalism Library. *News Magazines*. http://www.columbia.edu/cu/lweb/eresources/enews/magazines.html. Allows ready linking to current issues of about 75 news magazines around the world with continental lists arranged by country.

European Audiovisual Observatory. *Statistical Yearbook: Cinema, Television, Video and New Media in Europe*. Strasbourg, France: EAO, 1995–present, annual. Invaluable collection of statistics, charts and tables, and related text, comparing and contrasting trends in all European countries.

Freedom of the Press: A Global Survey of Media Independence. New York: Freedom House / Lanham, MD: Rowman & Littlefield, annual. Very useful survey, annually updated, on virtually every country in the world, written by regional authorities. Each nation is ranked as to its legal, political, and the economic media environment (lower scores show a more open and the democratic system) and recent developments are reviewed. *See* Volume 6, Appendix B, for additional data and information on journalism.

Freedom of the Press throughout the World. Paris: Reporters Sans [Without] Frontiers, 1992–present, annual. Very detailed annual survey, with country-by-country reports, on the status of press freedom around the world. Several mid-1990s reports were published by John Libbey in England. Since 2002 they are available online at http://www.rsf.org/rubrique.php3?id_rubrique=736.

Kaid, Lynda Lee, and Christina Holtz-Bacha, eds. *The SAGE Handbook of Political Advertising*. Thousand Oaks, CA: Sage, 2006. Gathers nearly 30 academic papers from a variety of scholars worldwide to provide an assessment of practice in other nations which underlines just how different national policies and practices are in different political and media systems. Coverage includes Britain, France, Spain and Portugal, Israel, Brazil, Chile, Germany, Nordic and Baltic States, Greece,

Netherlands, Italy, Mexico, Australia and New Zealand, East Asia (Japan, South Korea, and Taiwan), and evolving democracies such as Russia, Poland, Hungary, Bulgaria, Czech Republic, Turkey, Southeast Asia (Philippines, Hong Kong, Singapore, Indonesia, and Malaysia), West Africa, and South Africa, with many comparisons and conclusions.

Media Sustainability Index: Development of Sustainable Independent Media. Washington, DC: IREX [International Research and Exchanges Board], 2001–present, annual. These volumes—also available free online (http://www.irex.org/msi/index.asp)—are produced with support from the U.S. Agency for International Development, and provide detailed assessments of independent (of government) media development in a growing number of Third World countries. The Media Sustainability Index reviews five topics: availability of legal and social norms to protect and promote free speech and access to public information; whether journalism meets professional standards of quality; whether there are multiple news sources to provide citizens with reliable and objective news; whether independent media are well-managed businesses, allowing editorial independence; and if there are supporting institutions that function in the professional interests of independent media. Thus far, there are three regions covered in the annual series that are accumulating the ability to show trends over time:

1. *Europe and Eurasia*. 2001–present. Covers 21 countries in southeastern Europe and Central Asia.
2. *Middle East and North Africa*. 2006–present. Includes 18 largely Muslim countries.
3. *Africa*. 2006–present. Includes 37 sub-Saharan nations, and considerable discussion of community radio.

Nafziger, Ralph D. *International News and the Press: Communications, Organizations of News-Gathering, International Affairs, and the Foreign Press*. New York: Wilson, 1940 (reprinted by Arno Press, 1972). Very useful for pre–World War II material, much of it annotated, this well-organized survey includes radio but is largely focused on newspapers.

Quick, Amanda C., ed. *World Press Encyclopedia: A Survey of Press Systems Worldwide*. Detroit, MI: Thomson Gale, 2003 (2nd ed., 2 vols.). Arranged by country with extensive information, focusing on events in the 1990s and since, this includes background on each country, newspapers, censorship and press law, news agencies, electronic news media, and education and training for journalism. For more historical background, see the first edition: George T. Kurian, ed. *World Press Encyclopedia* (Facts on File, 1982).

UNESCO. *World Communications*. Paris: U.N. Educational, Scientific and Cultural Organization, 1950, 1951, 1956, 1964, and 1975. These sequential editions provide country-by-country reports on the state of print, film, radio (and in later issues) television in most countries. There is some discussion of news agencies and journalism education as well. All but the final edition include colored charts as well. For various reasons, UNESCO did not continue this valuable series, though *World Communications Report* (1989; revised 1997 with subtitle *The Media and the Challenges of the New Technologies*) offered a far wider variety of information, including telecommunications, in chapters arranged by subject (including training, technology, economic and industrial patterns) rather than a directory by country.

World Press Freedom Review. Vienna: International Press Institute, annual. For some years issued as a special annual issue of the *IPI Report*, this extensive annual provides information on virtually every country of the world, plus some regional overviews.

World Press Trends. Paris: World Association of Newspapers, 1987–present, annual. By 2008 this had become a substantial publication with 150 pages of general press statistics, 232 reports ranging from two to eight pages on virtually every country's press media, and a section of quick reference data. The annual publication has grown greatly in size in recent years. The WAN also issues many special studies (including those on its "Shaping the Future of the Newspaper" project), and these additional annual reports combining text and statistics:

Innovations in Newspapers: World Report (2004–present).

World Digital Media Trends (2007–present).

Trends in Newsrooms (2005–present).

World Radio & Television Receivers. London: BBC World Service, International Broadcasting and Audience Research, Annual. A tabular accounting of the availability of receivers, VCRs, and related equipment in virtually all countries, including the number available per 100 persons, a valuable standard measure.

World Radio & TV Handbook: The Directory of International Broadcasting. New York: WRTH Inc, annual. Standard guide published since World War II, with text, tables, and charts on hours, frequencies, and programs of domestic and international shortwave and television broadcasting, as well as Internet access for such broadcasts.

B. Global and Comparative Media

For material on comparative media policy and regulation, see Section 8-F.

B-1: General

Albarran, Alan B., and Sylvia N. Chan-Olmsted, eds. *Global Media Economics: Commercialization, Concentration and Integration of World Media Markets*. Ames: Iowa State University Press, 1998. Twenty-one papers, most focused on one country or a specific region, arranged in sections on parts of the world. All review primary media economic and structure issues in "their" nation as well as underlying factors and trends behind those issues.

Artz, Lee, and Yahya R. Kamalipour, eds. *The Globalization of Corporate Media Hegemony*. Albany: State University of New York Press, 2003. Examines how commercial media practices, when infused into different cultures around the globe, often exacerbate social inequalities and class conflict, sometimes with the consent of media consumers. The anthology contains 15 research papers, most of them case studies of corporate media influence in selected countries: Brazil, Turkey, India, and Africa.

Boyd-Barrett, Oliver, ed. *Communications Media, Globalization and Empire*. Eastleigh, England: John Libbey, 2006. Fourteen papers analyze and critique the political economy of media worldwide, reviewing conflicting trends of globalization by media conglomerates and nationalism or even neo-imperialism (U.S. quest for national security). Includes discussion of news agencies, deregulation trends, and global advertising and public relations.

Browne, Donald R. *Ethnic Minorities, Electronic Media, and the Public Sphere: A Comparative Study*. Cresskill, NJ: Hampton, 2005. Using case studies from a number of countries, this describes the growing media presence of indigenous and minority peoples and their increasing public role.

Chapman, Jane. *Comparative Media History: An Introduction, 1789 to the Present*. London: Polity, 2005. Beginning with Europe and then slowing expanding its coverage, discusses eighteenth- and nineteenth-century developments, assesses roles of technology and growing globalization through World War I, reviews expansion of mass culture and news through World War II, and discusses global media since the late 1940s. One of the few attempts at such a wide-ranging history.

Corner, John, et al. *International Media Research: A Critical Survey*. New York: Routledge, 1997. Nine contributed chapters discuss such topics as gender and media studies, postcommunist media in transition, media policy in North America, media and culture in Latin America, media and war, and Western European media research.

Fortner, Robert S. *International Communication: History, Conflict, and Control in the Global Metropolis*. Belmont, CA: Wadsworth, 1993. The rise and development of media (and telecommunications) from the birth of the telegraph in the mid-nineteenth century to World War I, expansion from 1914 to 1932, international propaganda in prewar and the World War II era, and the developments since that war.

Gershon, Richard A. *The Transnational Media Corporation: Global Messages and Free Market Competition*. Mahwah, NJ: Lawrence Erlbaum, 1997. Timely analysis of the growing importance and clout of major international media players and their varied roles. Divided into two parts: the first looks at overall patterns while the second focuses on Time Warner, Sony, Bertelsmann, Disney, and News Corp.

Giffard, C. Anthony. *UNESCO and the Media*. White Plains, NY: Longman, 1989. Analyzes and critiques (as biased and one-sided) American news media coverage (some 4,000 reports) of the United States. withdrawal of its UNESCO membership. *See also* Preston, below.

Ha, Louisa S., and Richard J. Ganahl III, eds. *Webcasting Worldwide: Business Models of an Emerging Global Medium*. Mahwah, NJ: Lawrence Erlbaum, 2007. Assesses a still-new medium as it is being developed in 17 countries. Included are reports on how best to analyze business models for emerging media, and webcasting in North America, Europe, Asia, and the Arab region of the world.

International Commission for the Study of Communication Problems. *Many Voices, One World: Toward a New More Just and More Efficient World Information and Communication Order*. London: Kogan Page, 1980. This is the famous UNESCO MacBride report that marked the peak of interest in New World Information and Communication Order (NWICO). Discusses Western news agency dominance of world news flow, and the need for greater government controls among many other recommendations.

McMillin, Divya C. *International Media Studies*. Malden, MA: Blackwell, 2007. Moving away from once-traditional East versus West frame, this volume places media within a world of global interconnections addressing comparative themes rather than national systems, and applies case studies within a context of interdisciplinary theory.

McPhail, Thomas L. *Global Communication: Theories, Stakeholders, and Trends*. Malden, MA: Blackwell, 2006 (2nd ed.). A theory-based overview of media companies and institutions conducting business across national borders, including corporations or institutions as far ranging as the BBC, Voice of America, Deutsche Welle, UNESCO, Time Warner, and Wal-Mart.

Nerone, John C., ed. *Last Rights: Revising Four Theories of the Press*. Urbana: University of Illinois Press, 1995. Eight Illinois scholars critique and build on the classic 1956 study (*see* Siebert, below), arguing it was a product of its cold war times and though once very influential, has now been superceded. This eight-author volume discusses how 40 years of change influences the original theories.

Newsom, Doug. *Bridging the Gaps in Global Communication*. Malden, MA: Blackwell, 2007. Designed as an introductory text to the field, introducing both theoretical and practical aspects.

Picard, Robert G. *Media Firms: Structures, Operations and Performance*. Mahwah, NJ: Lawrence Erlbaum, 2002. Fourteen papers compare industry operations in a variety of (primarily European) countries.

Preston, William, Jr., et al. *Hope & Folly: The United States and UNESCO, 1945–1985*. Minneapolis: University of Minnesota Press, 1989. History of the relationship with the U.N. agency, news media coverage of UNESCO and the American decision to withdraw membership, and out-of-date U.S. information policy. *See also* Giffard, above.

Price, Monroe E. *Media and Sovereignty: The Global Information Revolution and Its Challenge to State Power*. Cambridge: MIT Press, 2002. Reviews emerging foreign policies that govern media in a world where war now has information and military fronts, asks how states (given institutional and technological change) control forms of information reaching their citizens, and provides a framework for analyzing techniques used by states to influence populations in other states. Draws on a global array of examples of regulation of media for political ends, including "self-regulation," media regulation in conflict zones, control of harmful and illegal content, and use of foreign aid to alter media in target societies.

Siebert, Fred W., et al. *Four Theories of the Press: The Authoritarian, Libertarian, Social Responsibility and Soviet Communist Concepts of What the Press Should Be and Do*. Urbana: University of Illinois Press, 1956. Hugely influential book comparing and contrasting four approaches. While strongly colored by cold war thinking, and written before most colonies achieved their independence, the study's basic approach held up for decades. Widely used as a text, it

became the publisher's largest selling academic book. *See also* Nerone, above.

Smith, Anthony. *The Age of the Behemoths: The Globalization of Mass Media Firms*. Washington, DC: Brookings Institution Press/Twentieth Century Fund, 1991. Explores the economic trend to centralized control and multicontinent chains of media outlets.

Tunstall, Jeremy. *The Media Were American: U.S. Mass Media in Decline*. New York: Oxford University Press, 2008. Comparative study exploring how American media no longer dominate world markets, including the growing role of Brazil, India, China, European nations, and Arab-language media. This is really a study of world media trade patterns and how they are changing.

B-2: Broadcasting

Browne, Donald R. *Comparing Broadcast Systems: The Experience of Six Industrialized Nations*. Ames: Iowa State University Press, 1989. Included are France, the Netherlands, Germany (both halves as they then were), the Soviet Union, and Japan.

Head, Sydney W. *World Broadcasting Systems: A Comparative Analysis*. Belmont, CA: Wadsworth, 1985. Though dated in its detail, this provides a valuable picture of broadcasting before serious competition from newer media, analog or digital. It is topical in approach rather than country-by-country, providing an excellent sense of the system now largely replaced thanks to an explosion in viewing and listening options.

Lewis, Peter M., and Jerry Booth. *The Invisible Medium: Public, Commercial and Community Radio*. Washington, DC: Howard University Press, 1990. A study of the changing role of radio in Britain, America, Australia, Italy, and France, reviewing traditional public service radio, different roles of listeners in different countries, and the struggle for viable radio systems in developing countries.

Negrine, Ralph, and S. Papathanassapoulos. *The Internationalization of Television*. London: Pinter, 1990. Assesses trends in the 1980s including restructuring of national television systems, new media challenging old, the role of international agencies in Europe, programming, the role of conglomerate firms, and multiple future TV channels.

Noam, Eli M., and Joel C. Millonzi, eds. *The International Market in Film and Television Programs*. Norwood, NJ: Ablex, 1993. Nine research papers explore most aspects of a rising trend (largely with entertainment content, but including some documentary and news as well).

Quester, George H. *The International Politics of Television*. New York: Lexington, 1990. Survey of how transborder television services have been treated in terms of their economics, politics, ethnicity, and culture. Many examples illustrate the variety of issues that can arise.

Sinclair, John, and Graeme Turner, eds. *Contemporary World Television*. London: British Film Institute / Berkeley: University of California Press, 2004. Collects 33 brief essays on most aspects of television around the world, including commercialization of news, TV and war, international programming trade and distribution with papers on the impact of all this on national identity, TV and local communities, case study of StarTV in Asia, Europe as a television market, the ecology of multichannel television, TV and the Internet, and the like. A final section includes a comparison of television systems in Canada, Australia, the European Union, Germany, France, Italy, Russia, Eastern Europe, Latin American and Spain, India, Africa, Southeast Asia, Japan, Greater China, and the Arab-speaking world.

Smith, Anthony, ed. *Television: An International History*. New York: Oxford University Press, 1995 (2nd ed.). A useful anthology on the growth and status of broadcast television around the world, this is divided into sections on the origins and institutions of television, various program genre, television's impact on society, and television in the United States, Japan, Third World, Australia, and Africa.

Straubhaar, Joseph D. *World Television: From Global to Local*. Thousand Oaks, CA: Sage, 2007. Offers an integrative assessment of varied roles of television around the world in an era of increasing globalization, but also of national and ethnic pride.

The book is grounded in theory and a broad world view rather than traditional country-by-country surveys that used to define this field. It assesses the roots of transnational, geocultural, and cultural-linguistic markets—the broad political, economic, and social context of television services. Discussion of creating national and regional television and cultural industries develops a new term, "glocalization," as another way of saying hybridization.

C. Global Journalism

See also Section 6-G, for references on journalism and foreign affairs.

Boyd-Barrett, Oliver, and Daya Kishan Thussu. *Contra-Flow in Global News: International and Regional News Exchange Mechanisms*. London: John Libbey, 1992. Draws on UNESCO research to see how much news flows back into developed nations, the objectives of news exchange, contents and clients, and the applicability of UNESCO's MacBride report of a dozen years earlier.

Collins, Ross F., and E. M. Palmegiano, eds. *The Rise of Western Journalism, 1815–1914: Essays on the Press in Australia, Canada, France, Germany, Great Britain and the United States*. Jefferson, NC: McFarland, 2007. Focuses on principal trends and chief personnel essential to journalistic development in each country, and incorporates analysis of how each country's journalists influenced, or were influenced by, journalists from outside its borders.

deBeer, Arnold S., and John C. Merrill, eds. *Global Journalism: Topical Issues and Media Systems*. New York: Allyn & Bacon, 2003 (4th ed.). Basic text in two parts, first of which analyzes the impact of improving technology, coverage of world figures, and media organizations. The second offers a survey of eight major parts of the world, plus a case study of journalism in Afghanistan.

Desmond, Robert W. *World News Reporting*. Iowa City: University of Iowa Press, 1978–1984 (4 vols.). Going on three decades later, these four volumes remain a unique narrative of the development of news, news media, news agencies, and news people as a national and worldwide business. There is rich detail here on reporting across media in many countries, with a focus on the West, and expanding to include radio journalism in the final two volumes.

1. *The Information Process: To the Twentieth Century*. 1978. Beginnings of newspapers in Europe and America, news reporting processes, news agency development, and reporting wars.
2. *Windows on the World: 1900–1920*. 1980. Flow of news, establishment of wireless and its role, British and U.S. developments, reporting World War I, photojournalism, and news magazines.
3. *Crisis and Conflict: Between Two World Wars, 1920–1940*. 1982. Flow of news in and around various parts of the world, news agencies, newspaper services, and media coverage of the rising world crisis of the 1930s.
4. *Tides of War: 1931–1945*. 1984. Media reporting (by all sides) of the prewar and wartime period, with some attention to nonwar news as well.

Dunnett, Peter J. S. *The World Newspaper Industry*. London: Croom Helm, 1988. Chapters discuss the United States, Britain, Europe, Japan, Canada, and Asia, the Communist world, and the Third World and its newspapers.

Flournoy, Don M. *CNN World Report: Ted Turner's International News Coup*. London: John Libbey, 1992. Reviews the development and the first five years of this portion of the cable news service, as well as how it works. *See also* Section 2-I-4.

Flournoy, Don M., and Robert K. Stewart. *CNN: Making News in the Global Market*. Luton, England: University of Luton Press/John Libbey Media, 1997. Good description of the development and growing role of CNN around the world, with some discussion of both its application of technology and its content.

Gaunt, Phillip. *Choosing the News: The Profit Factor in News Selection*. Westport, CT: Greenwood, 1990. Comparative study of foreign news coverage in regional newspapers in Britain,

France, and the United States, reviewing different traditions in each country, recent technical and economic developments, and how profit dictates most news choices.

Hachten, William A., and James Scotten. *The World News Prism: Global Information in a Satellite Age*. Malden, MA: Wiley-Blackwell, 2006 (7th ed.). Basic introductory survey of issues and controversies—and opportunities in news reporting. Among the topics covered are globalization and its shortcomings, propaganda in the coverage of the Iraq war, Arab communications satellite news, China's media, and a focus on how technological developments—Internet, blogs, and the camcorder's increasing role in documenting world events—affect news coverage.

Johnston, Carla Brooks. *International Television Co-Production: From Access to Success*. Stoneham, MA: Focal, 1992. Discusses how the process works (most often with dramatic productions, but sometimes including news or sports), legal and economic realities, acquisitions, and distribution.

Johnston, Carla Brooks. *Winning the Global TV News Game*. Newton, MA: Focal, 1995. Combines analysis with practical advice, focusing on how the process changed thanks to improving technology. Reviews the role of news agencies, television and cable news providers, and consumers of global journalism.

Johnston, Carla Brooks. *Global News Access: The Impact of New Communications Technologies*. Westport, CT: Praeger, 1998. Based on interviews and practical experience worldwide, the author argues it is time to drop the fascination with newer technologies and deal with their application on a day-to-day basis. Includes many relevant Internet websites.

MacGregor, Brent. *Live, Direct and Biased? Making Television News in the Satellite Age*. London: Arnold, 1997. The British view of changing processes and the impacts of global televised news. Noting both technological innovation and changes in the conception of public service broadcasting, the author reviews roles of BBC, CNN, and other international services.

McNair, Brian. *Cultural Chaos: Journalism, News and Power in a Globalised World*. London: Routledge, 2006. Argues for an alternative to the critical studies view of media power, holding that dissent, openness, and diversity are more likely in modern times; discusses the growing role of materialism in media and in life as well as the decline of deference in political and social interaction, transnational satellite news, online journalism and the blogosphere, and how these are contributing to a growing public sphere, global news culture and authoritarianism, and changing modes of democracy.

Merrill, John C., ed. *Global Journalism: Survey of International Communications*. White Plains, NY: Longman, 1995 (3rd ed.). Includes chapters on topics such as freedom of the press, ethics, media and development, as well as analyses of specific global regions.

Newspaper Association of America. *NewsVoyager: A Gateway to Your Local Newspaper*. http://www.newsvoyager.com/about.cfm. A comprehensive portal to newspaper websites, American and international, that can be searched by title or region (or state).

O'Neil, Michael J. *The Roar of the Crowd: How Television and People Power Are Changing the World*. New York: Times Books, 1993. Begins with an account of the attempted communist coup in Russia in 1991 to underpin a discussion of how television is best able to portray news events and political leaders as well as crises.

Parker, Richard. *Mixed Signals: The Prospects for Global Television News*. New York: Twentieth Century Fund, with distribution by Brookings Institution, 1995. Discusses how few of the world's people have access to news and how CNN and other services are modifying our view of the world.

Paterson, Chris, and Annabelle Sreberny, eds. *International News in the Twenty-first Century*. Eastleigh, England: John Libbey / Bloomington: Indiana University Press, 2004. Sixteen papers on structures, alternatives, meanings, and innovations. Running through this anthology are some key themes in the field—the growing conglomeration

of media firms, imbalances in reporting, the impact of changing technology, and audience perceptions of international news.

Shanor, Donald R. *News from Abroad*. New York: Columbia University Press, 2003. Divided into two parts: the first questioning whether foreign news matters (including the balance between costs and effect, technology and getting news from abroad, and media gatekeepers), and the second covering the transformation of foreign news (by use of improvised and temporary coverage rather than foreign bureaus, for example). A former international journalist, the author suggests immigration patterns are an important overlooked factor in foreign news.

Shoemaker, Pamela J., and Akiba A. Cohen, eds. *News around the World: Content, Practitioners, and the Public*. New York: Routledge, 2006. Develops the first author's theories about what makes news in different countries: Australia, Chile, China, Germany, India, Israel, Jordan, Russia, South Africa, and the United States. Each includes analysis of news in at least two cities, with a total of some 60 different news media studied. Content analyses of some 2,400 newspaper stories contributed to the findings.

Silvia, Tony, ed. *Global News: Perspectives on the Information Age*. Ames: Iowa State University Press, 2001. Sixteen papers range across the origins of the 24-hour news cycle, markets for news, the role of cultural values in determining what is news, the global audience for American news, the impact of imported news on small nations, and the reporting process.

Smith, Anthony. *Newspapers and Democracy: International Essays in a Changing Medium*. Cambridge: MIT Press, 1980. Anthology of 13 of the author's papers on the state of newspapers and electronic media in a variety of largely European countries.

Sparks, Colin, and John Tulloch, eds. *Tabloid Tales: Global Debates over Media Standards*. Lanham, MD: Rowman & Littlefield, 2000. History of tabloid papers over time and across borders—examples are drawn from nine nations. The authors conclude that tabloids do serve a valuable function of informing those who likely would not seek news elsewhere.

Stanton, Richard C. *All News Is Local: The Failure of the Media to Reflect World Events in a Globalized Age*. Jefferson, NC: McFarland, 2007. Argues that western news media must change if they are to retain their edge, given rising competition from Third World and other countries. A local news emphasis ignores important aspects of globalization impacting everyone.

Strömbäck, Jesper, and Lynda Lee Kaid, eds. *The Handbook of Election News Coverage around the World*. New York: Routledge, 2008. Compares election news coverage in numerous democracies utilizing a single framework, thus providing a systematic comparison of important factors across countries and news media systems.

Volkmer, Ingrid, ed. *News in Public Memory: An International Study of Media Memories across Generations*. New York: Peter Lang, 2006. Among 14 papers are studies of nine countries and how audiences in those nations recall major news events as well as their perceptions of both global and local news.

Voltmer, Katrin, ed. *Mass Media and Political Communication in New Democracies*. New York: Routledge, 2006. These papers review developments in a number of countries, including Spain in the 1970s, postcommunist Russia (several papers), post-apartheid South Africa, journalism in Latin America, the 2002 Ukrainian election campaign, and Taiwan.

Wallis, Roger, and Stanley Baran. *The Known World of Broadcast News: International News and the Electronic Media*. New York: Routledge, 1990. Comparative study of how different countries (including Britain, Sweden, and the United States) and global regions report news and see the world. Includes a comparison of broadcast news with other media sectors.

See Weaver, Section 7-A.

Worldpress.org. *World Newspapers and Magazines*. http://www.worldpress.org/gateway.htm. One

of the web's largest and most comprehensive directories of world newspapers and magazines, sorted by country, region, and political affiliation.

D. Industrial Nations: Europe and the OECD

The Organisation for Economic Co-operation and Development (OECD) countries include the world's developed economies, among them Britain, Europe, North America, Australia, and Japan.

D-1: Surveys

These studies assess the status of media across multiple nations.

Anderson, Peter J., and Geoff Ward, eds. *The Future of Journalism in the Advanced Democracies*. Williston, VT: Ashgate, 2007. Anthology largely by British academics (plus a German, an Italian, and a Japanese) that provides an assessment of changing journalism, competing models of journalism and democracy, a number of British case studies (national newspapers, regional and local papers, radio journalism, online journalism, television news, and the changing face of sports journalism and its relationship to hard news) and comparisons with Japan, Germany, America, Italy, and France.

de Vreese, Claes H., and Holli Semetko. *Political Campaigning in Referendums: Framing the Referendum Issue*. London: Routledge, 2004. Reviews research on campaigns and elections and investigates the effects of campaigning in European integration referendums over 30 years, drawing on a panel survey and media content data, focus groups, and interviews with journalists and campaign managers. Argues that media coverage influences public perceptions of campaigns, referendum issues, and party leaders.

Esser, Frank, and Barbara Pfetsch, eds. *Comparing Political Communication: Theories, Cases, and Challenges*. Cambridge: Cambridge University Press, 2004. Seventeen research papers ranging across cases drawn from multiple industrialized countries.

Gibson, Rachel K., et al., eds. *Political Parties and the Internet: Net Gain?* New York: Routledge, 2003. Provides an assessment of how political parties are adapting to the rise of newer information technologies, and what the consequences of that adaptation will be. Includes case studies of America, Britain, Australia, Korea, Mexico, France, Romania, and the Mediterranean region.

Hallin, Daniel C., and Paolo Mancini. *Comparing Media Systems: Three Models of Media and Politics*. Cambridge: Cambridge University Press, 2004. Identifies the principal dimensions of variation in media systems and the political variables that have shaped their evolution. It then pinpoints three models of media systems development (Polarized Pluralist, Democratic Corporatist, and Liberal models) and explains why media play a different political role in each.

Kaid, Lynda Lee, and Christina Holtz-Bacha, eds. *Political Advertising in Western Democracies: Parties and Candidates on Television*. Thousand Oaks, CA: Sage, 1995. A dozen research papers reviewing political television in America and in selected Western European nations.

Merrill, John C., et al. *The Foreign Press*. Baton Rouge: Louisiana State University Press, 1968. Something of an encyclopedia rather than a narrative description of newspapers around the world as they were four decades ago.

Merrill, John C. *The Elite Press: Great Newspapers of the World*. New York: Pitman, 1968. Primarily a descriptive survey of selected European papers plus a few from other parts of the world.

Merrill, John C., and Harold A. Fisher. *The World's Great Dailies: Profiles of Fifty Newspapers*. New York: Hastings House, 1980. Includes a selection of major metropolitan dailies from around the world, with an emphasis on developed nations. For each, the authors provide history and background and the context of the paper's operations and their impact.

Schramm, Wilbur, ed. *One Day in the World's Press: Fourteen Great Newspapers on a Day of Crisis*. Stanford: Stanford University Press, 1959.

A different kind of comparative assessment: How newspapers covered the then ongoing Suez and Hungarian crises on November 2, 1956, reproducing their front pages as translated into English.

Walker, Martin. *Powers of the Press: Twelve of the World's Influential Newspapers*. New York: Pilgrim Press, 1983. All save one (from Cairo) are from developed countries, providing an interesting picture of important papers before technological competition began to chip away at their role.

D-2: Britain

As might be imagined, the literature on British media (journalistic and otherwise) past and present is massive and steadily expanding (in quality as well as quantity), and only a sample can be included here.

Brake, Laurel, and Marysa Demoor, eds. *A Dictionary of Nineteenth Century Journalism*. London: British Museum, 2009. Includes 1,700 entries by an international team of researchers, which reflect the range of the press, including art, children, illustration, literature, religion, sports, politics, local and regional titles, satire, and trade journals. "DNCJ" includes newspapers and periodicals in England, Ireland, Scotland, and Wales, and includes entries on journals, journalists, illustrators, editors, publishers, proprietors, printers, and topics such as advertising, frequency, magazine day, printing presses, readership, social science and the press, and war and journalism. A bibliography, a chronology, and indexes provide finding aids.

Briggs, Asa. *A History of Broadcasting in the United Kingdom*. Cambridge: Oxford University Press, 1961–95 (5 vols.). Definitive history of the BBC from its experimental beginnings into the mid-1970s before commercial radio competition appeared. Includes extensive discussion of news and public affairs programming on both radio and television. See Briggs's *The BBC: The First Fifty Years* (Oxford, 1986) for a briefer summary of the story to 1972. *See also* Sendall et al., below.

Cohen, Stanley, and Jock Young, eds. *The Manufacture of News: A Reader*. London: Constable, 1973. A relatively early anthology treating news media coverage of social dissent and "deviance"—how news is selected and presented in general, coverage of a series of social problems, and some sense of the effects of such news coverage.

Cox, Geoffrey. *Pioneering Television News: A First Hand Report on a Revolution in Journalism*. London: John Libbey, 1995. Editor of the British commercial television news operation relates the story from its formation in the mid-1950s through the 1960s, eventually launching *The News at Ten* as a national service. There are useful comparisons made with American practice.

Curran, James. *Power without Responsibility: The Press, Broadcasting and New Media in Britain*. London: Routledge, 2009 (7th ed.). A longtime scholar provides a current and critical overview ranging over all news media.

Elliott, Philip. *The Making of a Television Series: A Case Study in the Sociology of Culture*. London: Constable, 1972. Participant observation study of the making of a documentary series on the nature of prejudice, reviewing both program makers and some of their audiences.

Franklin, Bob, ed. *Televising Democracies*. London: Routledge, 1992. Focuses on the introduction of cameras into the British House of Commons (how it happened and results to that point) but includes televising the German Bundestag, C-SPAN coverage of U.S. Congress, and similar moves in Europe.

Franklin, Bob. *Packaging Politics: Political Communications in Britain's Media Democracy*. London: Arnold / New York: Oxford University Press, 2004 (2nd ed.). Traces the rising popularity of media spin in Britain's domestic political scene. Includes discussion of censorship and news management, New Labour and "the end of spin?," government advertising, local government public relations, packaging postmodern elections, local newspapers, parliamentary communications as "the best show in town," and a final chapter on whether all of this is informing and/or persuading the reading and viewing public.

Freeman, Des. *Television Policies of the Labour Party, 1951–2001*. London: Routledge, 2003.

Argues that Labour has taken part in all main debates concerning British broadcasting and has produced proposals for reform, modernization, and consolidation of television structures in Britain. Examines the party's divided response to the development of commercial television in the 1950s and assesses the impact of Harold Wilson's governments on television in the 1960s. It concludes with an evaluation of the role of television in the emergence of New Labour and a critique of Tony Blair's government record concerning television developments.

Gavin, Neil T. *Press and Television in British Politics: Media, Money and Mediated Democracy*. London: Palgrave Macmillan, 2007. Explores ways media portray a range of political and economics-related topics and assesses the likely impact of that coverage. Issues include British domestic economy, antiglobalization protest, European Single Currency, and Europe's economy.

Gough-Yates, Anna. *Understanding Women's Magazines: Publishing, Markets and Readerships*. London: Routledge, 2003. Explores changes in production, advertising, and marketing of British women's magazines in the late twentieth century. Through an analysis of magazine trade press and several case studies, the author argues that political and economic changes in the last two decades of the twentieth century led the women's magazine industry to shift its target audience from housewives with children to young professional women.

Griffiths, Dennis, ed. *The Encyclopedia of the British Press, 1492–1992*. London: Palgrave Macmillan, 1993. Includes biographies of editors, journalists, press magnates and other people with a formative influence on the British press over five centuries. After about 65 pages of historical period essays, entries in two-column format cover a wide range of people: famous newspaper dynasties such as the Aitkens, Berrys, and Harmsworths; newspaper giants such as Caxton and Daniel Defoe; and all modern national and regional newspapers, as well as many historical papers such as the *Pall Mall Gazette, North Briton, Daily Courant,* and Charles Dickens's *Household Words*.

Hampton, Mark. *Visions of the Press in Britain, 1850–1950*. Champaign: University of Illinois Press, 2004. Analysis of differing historical views of the role of the press in British society between the mid-nineteenth and twentieth centuries using pamphlets, periodicals, parliamentary debate, and private correspondence to trace how historical conceptions about media shaped contemporary practices—everything from immediacy and lively writing style to objectivity and crusading exposés.

Harrison, Jackie. *Terrestrial TV News in Britain: The Culture of Production*. Manchester, England: Manchester University Press, 2000. Chapters on the BBC, ITN, structures and practices of television news, television news values, and terrestrial services competing with growing satellite (and Internet) sources.

Havers, Richard. *Here Is the News: The BBC and the Second World War*. Stroud, England: Sutton, 2007. Examines the role of BBC domestic news broadcasts as well as broadcasts directed at Europe. Before September 1939 there were no BBC news bulletins until 6 p.m.; daytime news was reserved for newspapers. Soon listeners were relying on radio both for their daily bulletin on how the war was progressing and for updates on particular operations in which family, friends, or neighbors were involved.

Linton, David, and Ray Boston, eds. *The Newspaper Press in Britain: An Annotated Bibliography*. London: Mansell, 1987. Includes nearly 3,000 very briefly (often just a line or two) entries of mainly books plus some articles, with a detailed subject (but no title) index. "Press" includes photojournalism and political cartooning, but not magazines. One appendix offers a brief chronology of the British press, while another locates existing newspaper archives. *See also* next entry.

Linton, David, ed. *The Twentieth-Century Newspaper Press in Britain: An Annotated Bibliography*. London: Mansell, 1994. An updating and narrowing of the previous title, focusing on only the twentieth century, with some 3,700 entries of books, articles, and theses, very briefly annotated as with its predecessor.

Mitchell, Caroline, ed. *Women and Radio: Airing Differences*. London: Routledge, 2000. More than

20 papers review all angles of women and radio, including studies of program content and employment issues.

Raymond, Joad, ed. *News, Newspapers, and Society in Early Modern Britain*. London: Frank Cass, 1999. Originally a special issue of *Prose Studies,* these essays explore the impact of printed periodicals on British culture and society from 1590 to 1800, including the origins of printed newspapers; the role of manuscript transmission of news; the relationship between newsbooks and theatre; use of newspapers by political radicals during the Civil War of mid-seventeenth century; the role of women in the early periodical press; emergence of a public sphere of popular political opinion; distribution and readership of newspapers in the provinces; and the role of medical and philosophical journals in promoting medical reform.

Riley, Sam G., ed. *Consumer Magazines of the British Isles*. Westport, CT: Greenwood, 1993. History and current status (if then still published) of some 50 titles ranging over two centuries of publishing. There is also a directory of 330 further titles.

Schlesinger, Philip. *Putting "Reality" Together: BBC News*. London: Constable, 1978. A participant-observation study (that began as a dissertation) with more than 120 interviews gets behind the scenes at the making of BBC television news, especially that concerning troubles in Northern Ireland.

Sendall, Bernard, et al. *Independent Television in Britain*. London: Macmillan, 1982–2002 (6 vols.). Standard history of terrestrial commercial television operating companies in Britain, along with the Independent Television Authority, with much information on their news and public affairs programming. Later volumes explore the development of satellite and cable services as well. For the BBC, see Briggs, above.

Seymour-Ure, Colin. *Prime Ministers and the Media: Issues of Power and Control*. Oxford: Blackwell, 2003. Explores the many roles of a prime minister and the media of public communication, the growth of the Downing Street press office, political rumors, the nature of London news media, political cartoons, and media barons. Includes numerous comparisons with other countries, especially the United States.

Sommerville, C. John. *The News Revolution in England: Cultural Dynamics of Daily Information*. New York: Oxford University Press, 1996. The first book to analyze the essential feature of periodical media—their periodic appearance. Having to sell the next issue as well as present one changes the relation between authors and readers—or customers—and subtly shapes how everything is reported, whether politics, arts and science, or social issues. With the birth of commercial periodicals in the late seventeenth-century England, news became a commodity. What constituted news, how it was presented and received, and how people responded to it underwent a fundamental change, dictating what was discussed and how.

Street, Seán. *Historical Dictionary of British Radio*. Lanham, MD: Scarecrow, 2006. Several hundred entries on the BBC and more recent independent (commercial) stations and services, including people, organizations, major programs, awards, places and many references to public affairs and news programming.

Thomas, James. *Popular Newspapers, the Labour Party and British Politics; From Beaverbrook to Blair*. London: Frank Cass, 2005. Reviews one of the chief features of British politics during the twentieth century—the conflict between a socialist Labour party and a capitalist popular press. The study assesses these competing claims, looking not only at 1992 but both back and forward to examine newspaper coverage of British politics and the Labour Party, exploring whether the popular press has lived up to its claim of being a democratic "fourth estate," or has merely, as Labour politicians have argued, been a powerful "fifth column" distorting the democratic process.

Tunstall, Jeremy. *The Media in Britain*. London: Constable, 1983. A broad view of print, film, and broadcast media amidst dramatic change, ranging over both journalism and entertainment services. Includes discussion of both London and provincial media, economic issues, and media policy.

Tunstall, Jeremy. *Newspaper Power: The New National Press in Britain*. Oxford: Oxford University Press, 1996. Based heavily on more than 200 interviews with senior journalists and executives in the early 1990s, this reviews changes since the 1960s in British upmarket, midmarket, and downmarket papers, the changing role of unions and reading habits, ownership shifts, and more.

D-3: Canada, Australia, New Zealand

Here, too, there is extensive research and commentary, some of the latter highly critical. Emphasis below is on Canadian studies given that nation's widespread use of American media to supplement its own.

Barton, Richard L. *Ties That Bind in Canadian/American Relations: Politics of News Discourse*. Hillsdale, NJ: Lawrence Erlbaum, 1990. Comparative analysis of American and international press accounts of several selected issues in Canadian-U.S. relations presented within a theoretical framework.

Collins, Richard. *Culture, Communication, and National Identity: The Case of Canadian Television*. Toronto: University of Toronto Press, 1990. Analysis of successes and failures of national identity policies in broadcasting.

Cooper, Barry. *Sins of Omission: Shaping the News at CBC-TV*. Toronto: University of Toronto Press, 1994. Takes a dim view of televised news at the government-run channel, based on a content analysis of some 250 broadcasts in 1987–88, focusing on coverage of the Soviet Union, the Reagan–Gorbachev summit talks, and of Africa. Coverage is found technically competent and often entertaining, but biased, and the study provides examples to support this.

Crane, Rhonda J. *The Politics of International Standards: France and the Color TV War*. Norwood, NJ: Ablex, 1979. Explains why there are three analog systems of color television in the world, focusing on the French political and economic quest to balance Germany's PAL and the American NTSC systems. For a more technical review, see Russell Burns, *The Struggle for Unity: Colour Television, The Formative Years* (London: Institute of Engineering & Technology Press, 2008).

Fetherling, Douglas. *The Rise of Canadian Newspapers*. Toronto: Oxford University Press, 1990. Concise survey of the story to about 1980 using existing data and bypassing some of the then-current ownership debates.

Lochead, Richard, ed. *Beyond the Printed Word: The Evolution of Canada's Broadcast News Heritage*. Kingston, ON: Quarry Press, 1991. This bilingual collection of papers includes broadcasting in Quebec, Canadian newsreels, CBC news research, the news services, news anchors, and coverage of Canadian identity.

Moran, Albert. *Historical Dictionary of Australian Radio and Television*. Lanham, MD: Scarecrow, 2007. Includes some references to broadcast news and public affairs people and programs.

Osborne, Graeme, and Glen Lewis. *Communication Traditions in 20th Century Australia*. Sydney: Oxford University Press, 1995. Reviews changes during three periods of the twentieth century—the neo-colonial nation to 1920, monopolies in the 1940s, and the postwar generation.

Raboy, Marc. *Missed Opportunities: The Story of Canada's Broadcasting Policy*. Montreal: McGill-Queen's University Press, 1990. Starting in 1928, the author argues that policy has been shortsighted and narrow and has thus limited what broadcasting services could be provided. After reviewing periods of policy development, Raboy presents a picture of what might have been had decisions been different.

Russell, Nick. *Morals and the Media: Ethics in Canadian Journalism*. Seattle: University of Washington Press, 2005. First in-depth study of journalism ethics as it applies to Canadian media, which have a very different context than those in America. Examines why media behave as they do, discusses how values have been developed and applied, and suggests value systems that can be used to judge special situations.

Spoonley, Paul, and Walter Hirsh, eds. *Between the Lines: Racism and New Zealand Media*. Auckland: Heinemann Reed, 1990. Growing out of concern over media treatment of 1987–88 racial incidents,

this provides 22 papers on the country's media and race relations, with several case studies.

Sutherland, Fraser. *The Monthly Epic: A History of Canadian Magazines: 1789–1989*. Toronto: Fitzhenry & Whiteside, 1988. The first such history, though it focuses on content with little on business, circulation, or even art and layout aspects. Most Canadian efforts failed when advertising went south of the border.

Winter, James P., ed. *The Silent Revolution: Media Democracy and the Free Trade Debate*. Ottawa: University of Ottawa Press, 1990. Political aspects of media coverage of the 1988 federal election in Canada and Free Trade Agreement issues are assessed using content analysis techniques. Little corporate tinkering was discovered here, save for public relations efforts pushing the agreement.

D-4: Europe

Naturally, much of the European news media research and commentary is in languages other than English, especially German and French. Here are some of the English-language studies.

See Anderson and Ward, subsection D-1, above.

Collins, Richard. *Broadcasting and Audio-Visual Policy in the European Single Market*. London: John Libbey, 1994. The development of pan-European policies and working out differences among countries and media.

Euromedia Resesearch Group. *The Media in Western Europe*. London: Sage, 2004 (3rd ed.). Though developments date such a book quickly, this remains a useful survey, offering a chapter each on 17 countries of Western Europe detailing both print and electronic media and their regulation. Includes useful references.

Frachon, Claire, and Marion Vargaftig, eds. *European Television: Immigrants and Ethnic Minorities*. London: John Libbey, 1995. Combines topical essays (as on television and racial equality, migrant perspectives, black and independent producers, Council of Europe guidelines) and individual country reports.

Iosifidis, Petros, et al. *European Television Industries*. London: BFI Publishing / Berkeley: University of California Press, 2005. Reviews some of commercial, legal, and regulatory changes that have come to shape European television in recent years. The study places developments within a historical context, provides an overview of changing organizational and ownership structures, explains and analyzes policy and legislative frameworks at both national and pan-Europan levels, reviews changing technology and its impact, and places Europe within a global television marketplace.

Jankowski, Nick, et al. *The People's Voice: Local Radio and Television in Europe*. London: John Libbey, 1992. Eighteen papers discuss two decades of generally commercial local radio development, including 11 focused on developments within specific countries.

Kuhn, Ramond. *The Media in France*. London: Routledge, 1995. Developments since World War II, including economics, the decline and fall of the ORTF broadcast monopoly, liberalization of television, and developing new media.

Machet, Emmanuelle, and Serge Robillard. *Television and Culture: Policies and Regulations in Europe*. Düsseldorf: European Institute for the Media, 1998. Discusses cultural policies and international organizations and national regulation, the means of assessing cultural program output, and cultural program output in a digital age, with recommendations for change.

Maxwell, Richard. *The Spectacle of Democracy: Spanish Television, Nationalism, and Political Transition*. Minneapolis: University of Minnesota Press, 1995. A study of changing content in post-Franco Spain, including funding of and programming on private television stations, the roles of political parties and other societal groups, and ownership of some media by those outside Spain.

Moragas Spà, Miguel de, et al., eds. *Decentralization in the Global Era: Television in the Regions, Nationalities and Small Countries of the European Union*. London: John Libbey, 1995. Fourteen chapters by as many European authorities explore different policies and developments in Western Europe.

Moragas Spà, Miguel de, et al., eds. *Television on Your Doorstep: Decentralization Experiences in the European Union*. Luton, England: University of Luton Press, 1999. One overview and 14 papers each devoted to a specific country, looking at financial, legal, and structural factors of smaller outlets, generally those outside of major cities. Indeed, local news often surpasses national programs in audience popularity.

Noam, Eli M. *Television in Europe*. New York: Oxford University Press, 1991. Provides a comprehensive view of European broadcasting systems, using the perspective of economics and policy analysis. Introductory part offers a framework for understanding media and forces of change affecting them. The main section provides a series of chapters covering broadcast and cable television systems of almost 30 European countries.

Olson, Kenneth E. *The History Makers: The Press of Europe from Its Beginnings through 1965*. Baton Rouge: Louisiana State University Press, 1966. This wide-ranging history provides extensive chapters devoted to each country and the development of its (often many) newspapers.

Paulu, Burton K. *Radio and Television Broadcasting on the European Continent*. Minneapolis: University of Minnesota Press, 1967. Remains useful as a historical record of how things had developed up to and during the cold war on both sides of the Iron Curtain.

Siune, Karen, and Wolfgang Truetzschler, eds. *Dynamics of Media Politics: Broadcast and Electronic Media in Western Europe*. London: John Libbey, 1992. Members of Danish and Irish university communication faculties survey the building of media empires, regulation, technology, television content, public broadcasting in flux, and the role of media in smaller states.

Silj, Alessandro, ed. *The New Television in Europe*. London: John Libbey, 1992. This large anthology covers national broadcasting, changing technology, programming and viewers, public service systems in a multichannel world, reliability and comparability of statistics across countries, changing regulatory authorities and rules, and Europe's television advertising market. Final chapters assess specific regions and countries.

Wedell, George, and Phillip Crookes. *Radio 2000: The Opportunities for Public and Private Radio Services in Europe*. London: John Libbey, 1991. Surveys the status of radio broadcasting across the Continent including ownership, market politics, technology, changing program patterns, and radio audiences.

Zaharopoulos, Thimios, and Manny E. Paraschos. *Mass Media in Greece*. Westport, CT: Greenwood, 1993. Surveys print, radio, and television services past and present, placed against a background of recent Greek history and politics.

D-5: Public Service Broadcasting

The rise of cable and then satellite services threatened the Eurocentric model of public service radio (and television). For parallel U.S. studies, see Section 2-I-3.

Avery, Robert K., ed. *Public Service Broadcasting in a Multichannel Environment*. New York: Longman, 1993. Includes chapters describing public service broadcasting in Britain, France, Germany, Holland, Scandinavia, Italy, Canada and the United States.

Blumler, Jay, ed. *Broadcasting Finance in Transition: A Comparative Handbook*. New York: Oxford University Press, 1991. Details the changing structure, role, and finances of developed nations' broadcast services as commercial pressures squeeze public service functions.

Blumler, Jay. *Television and the Public Interest: Vulnerable Values in West European Broadcasting*. London: Sage, 1992. Fourteen research papers demonstrating pressures on public service broadcasting amidst a growing number of commercial options. Chapters tend to focus on the situation in an individual nation, with three final overview surveys of the status across Europe.

Blumler, Jay, and Michael Gurevich. *The Crisis of Public Communication*. London: Routledge, 1995. Troubles of public service media in an

increasingly commercial media world are reviewed in chapters on media and politics and changes in that relationship after the mid-1960s, focusing substantially on the British scene.

Groombridge, Brian, and Jocelyn Hay, eds. *The Price of Choice: Public Service Broadcasting in a Competitive European Market Place*. London: John Libbey, 1995. Nine papers assessing non-commercial systems amidst growing competition and roles of broadcasters, government authorities, audiences, etc.

Helm, Dieter, et al. *Can the Market Deliver? Funding Public Service Television in the Digital Age*. Eastleigh, England: John Libbey / Bloomington: Indiana University Press, 2005. Nine papers review the British television market's mixture of public service (BBC) and commercial services amidst technological change at a time when the BBC's Royal Charter was up for renewal consideration. After a useful executive summary, papers explore public service broadcasting and BBC operations, the public realm in broadcasting, and Britain's public service broadcasting ecology.

Lowe, Gregory Ferrell, ed. *Broadcasting & Convergence: New Articulation of the Public Service Remit*. Göteborg, Sweden: Nordicom/ Göteborg University, 2003. Papers from a 2002 Finnish conference that surveyed public service broadcasting in Europe and the United States and the impact of newer technologies on that system.

McDonnell, James, ed. *Public Service Broadcasting: A Reader*. London: Routledge, 1991. From the Broadcasting Research Unit in London, this is a concise chronological and document-based historical summary of the BBC (from 1924) and later IBA (1955 on) development in Britain.

Nissen, Christian S., ed. *Making a Difference: Public Service Broadcasting in the European Media Landscape*. Eastleigh, England: John Libbey / Bloomington: Indiana University Press, 2006. Includes 13 papers covering the European audio-visual industry at the verge of convergence, public media in service of civil society and democracy, public service media and market failure, content provision between popularity and elitism, public media as a new means of education, new services and copyright questions, editorial autonomy and public control, European Union experiences, financing public media, and public service beyond the obsession with technology and marketplace.

Price, Monroe E. *Television, the Public Sphere, and National Identity*. New York: Oxford University Press, 1995. Covers the rise of global and transnational identities and related decline in national broadcasting, how theories of government and media have played out in practice, and how the U.S. government deals with competing media interests.

Raboy, Marc, ed. *Public Broadcasting for the 21st Century*. Luton, England: University of Luton Press/John Libbey Media, 1997. Sixteen country chapters, half dealing with shifting paradigms in the developed "heartland" of public broadcasting, and half assessing emerging models in developing nations.

Tracey, Michael. *The Decline and Fall of Public Service Broadcasting*. New York: Oxford University Press, 1998. Traces the dramatic changes in non-commercial radio and television over the past two decades, touching on developments in Britain, Europe, America, and Japan.

E. Russia and the CIS

The dramatic changes in Eastern Europe and Russia over the past two decades have sparked a considerable literature on news media in the region. This is a fair sampling of English-language material.

Androunas, Elena. *Soviet Media in Transition: Structural and Economic Alternatives*. Westport, CT: Praeger, 1993. Dramatic changes in print and broadcast media from the final years of the Soviet Union to the more confusing early Russian era.

Aumente, Jerome, et al. *Eastern European Journalism before, during and after Communism*. Cresskill, NY: Hampton Press, 1999. A comparative study of several related themes—the roots of journalism in the region, the role and effects of reporting leading up to the revolutions of 1989, journalism during the transition years of 1989–96, and the state of journalism education.

Buzek, Anthony. *How the Communist Press Works*. New York: Praeger, 1964. Useful for its description of how things operated at the height of the cold war, including discussion of Eastern Europe, then under Soviet control.

Ganley, Gladys D. *Unglued Empire: The Soviet Experience with Communications Technologies*. Norwood, NJ: Ablex Publishing, 1996. Tells of media and political changes from 1985 through 1991 as the Soviet Union once again became Russia.

Goban-Klas, Tomasz. *The Orchestration of the Media: The Politics of Mass Communications in Communist Poland and the Aftermath*. Boulder, CO: Westview, 1994. Largely historical study of media's role in communist governments after 1960, with some discussion of the post-Soviet era of change.

Koltsova, Olessia. *News Media and Power in Russia*. London: Routledge, 2006. Assesses the historical context, then the primary agents of power (owners, advertisers, government), and several case study examples of what has been happening in recent years.

Markham, James W. *Voices of the Red Giants*. Ames: Iowa State University Press, 1967. Cold war–era view of the press (and some mention of broadcasting) in both the Soviet Union and what little could then be gleaned from "Red" China, as it was termed.

McReynolds, Louise. *The News under Russia's Old Regime: The Development of a Mass-Circulation Press*. Princeton, NJ: Princeton University Press, 1991. Covers the 1855–1917 period, reviewing the varied roles of publishers, editors, writers, and readers.

Mickiewicz, Ellen. *Split Signals: Television and Politics in the Soviet Union*. New York: Oxford University Press, 1990. Compares over 100 hours of Soviet and American television, covering programs broadcast during the last (Chernenko and Gorbachev) Soviet governments. The author describes the significance and popularity of news programs and how Soviet journalists work in the United States.

Mickiewicz, Ellen. *Changing Channels: Television and the Struggle for Power in Russia*. New York: Oxford University Press, 1997 (expanded edition issued by Duke University Press, 1999). A longtime observer of Soviet/Russian media reviews the rapid changes in electronic media in the 1985–95 period, much of her information coming from interviews with key personnel.

Mickiewicz, Ellen. *Television, Power, and the Public in Russia*. New York: Cambridge University Press, 2008. Unveils a profound mismatch between the assumption of Russian leaders that people will absorb their messages, and what viewers really think. This may be first book to reveal what Russian audiences really think of TV news and the mental strategies they use to process it, using focus groups of ordinary people, rather than elites.

Oates, Sarah. *Television, Democracy and Elections in Russia*. London: Routledge, 2006. How television has helped to shape post-Communist politics, and why media not only failed to promote democracy, but appear to have served as tools for government. Includes discussion of Russian audiences based on a survey and focus group interviews.

Paletz, David L., ed. *Glasnost and after: Media and Change in Central and Eastern Europe*. Creskill, NY: Hampton, 1995. Media are described as agents of change in these country-by-country assessments, plus discussion of "westernification" of eastern European media.

Splichal, Slavko. *Media beyond Socialism: Theory and Practice in East-Central Europe*. Boulder, CO: Westview, 1994. Reviews dramatic changes after 1989 with some context of what had gone before, and whether privatization of media systems would make sense.

Turpin, Jennifer. *Reinventing the Soviet Self: Media and Social Change in the Former Soviet Union*. Westport, CT: Praeger, 1995. Compares and contrasts various print news media under Brezhnev and Gorbachev to show how much changed even before the fall of the Soviet Union.

Zassoursky, Ivan. *Media and Power in Post-Soviet Russia*. Armonk, NY: M. E. Sharpe, 2004.

Describes the rise of independent media from the Gorbachev era in late the 1980s to the turn of the century. This study is especially useful for its inside view by a Russian of the dramatic changes from about 1985 that have transformed the once-stodgy Soviet media image to something quite different now. But he stresses that changes continue and the system will soon look different again, for a variety of reasons.

F. Developing World

Early studies of media in the development process appeared in the 1950s when most developing regions were still European (primarily British and French) colonies. Sparked by the expanding number of newly independent countries after about 1960, research on the role of their media has greatly increased in the past few decades.

Katz, Elihu, and George Wedell. *Broadcasting and the Third World: Promise and Performance*. Cambridge, MA: Harvard University Press, 1977. After three decades, this remains among the best discussions of how radio can help in the development process, using multiple case studies.

Reeves, Geoffrey. *Communications and the "Third World."* New York: Routledge, 1995. Explores the differences among different world regions, past research efforts, the "media imperialism" thesis, varying roles of the state and media in different countries, technology, and different types of media content including news—all with numerous country examples.

F-1: Latin America

Most studies are in Spanish or Portuguese as might be expected. The region has typically not been as well studied as other developing areas.

Alarcon, Antonio V. Menendez. *Power and Television in Latin America: The Dominican Case*. Westport, CT: Greenwood, 1992. The control and role of TV and its presentation of news is strongly critiqued, noting that five of the country's seven stations are mirror images of one another and suggesting that commercial competition may not serve the country well.

Cole, Richard R., ed. *Communication in Latin America: Journalism, Mass Media and Society*. Wilmington, DE: Scholarly Resources, 1996. A dozen research papers including a discussion of the role of women in Latin journalism, the effects of international propaganda and U.S.–Cuban relations, and journalism education—plus country studies of Mexico, Cuba, Chile, Argentina, Andean nations, and Brazil.

Dunn, Hopeton S., ed. *Globalization, Communications and Caribbean Identity*. New York: St. Martin's, 1995. Explores the economic, social, political, and cultural implications of changing technologies in the region, with case studies of Barbados, Jamaica, and Trinidad and Tobago.

Ferreira, Leonardo. *Centuries of Silence: The Story of Latin American Journalism*. Westport, CT: Praeger, 2006. Provides a critical history, as the author finds the press too much under control of various national elites, and rarely sticking up for common people or criticizing government personnel or policies. Begins with Spanish colonial newspapers, the role of the press in the early-nineteenth-century break from Spain, changes amidst various wars governmental upheavals, the rise of radio television, growing social and political pressures on papers, and more recent struggles against drugs, terrorism, and globalization.

Fox, Elizabeth. *Latin American Broadcasting: From Tango to Telenovela*. Luton, England: John Libbey Media / University of Luton Press, 1997. Surveys the recent development and current status in eight Latin countries: Mexico, Brazil, Venezuela, Peru, Colombia, Argentina, Uruguay, and Chile.

Fox, Elizabeth, and Silvio Waisbord, eds. *Latin Politics, Global Media*. Austin: University of Texas Press, 2002. A dozen papers, all but one providing a survey of a single country (there are two on Mexico) in the context of growing governmental democracy and trade globalization.

Hughes, Sallie. *Newsrooms in Conflict: Journalism and the Democratization of Mexico*. Pittsburgh, PA: University of Pittsburgh Press, 2006. Examines changes within Mexican society, politics, and journalism that transformed an authoritarian

media institution into many conflicting styles of journalism with implications for democracy. Combining interviews with content analysis spanning two decades, the author explains how Mexican journalism changed from a passive institution into conflicting clusters of news organizations exhibiting citizen-oriented, market-driven, and adaptive authoritarian tendencies.

Latin American Network Information Center. *Journalism*. http://www1.1anic.utexas.edu/la/region/journalism. A University of Texas guide to organizations, topics, and countries on all aspects of news media in the region.

Lawson, Chappell H. *Building the Fourth Estate: Democratization and the Rise of a Free Press in Mexico*. Berkeley: University of California Press, 2002. Assesses whether a free press can "cause" a democratic system or is an outgrowth from it, concluding both are true. Chapters trace the old system of close media control and the ways in which newspapers broadened their role and readership.

Lent, John A. *Mass Communications in the Caribbean*. Ames: Iowa State University Press, 1990. Handbook of historical and then-current information on print, broadcast, and film media across the region. Chapters deal with specific regions (with an emphasis on British Commonwealth countries), and also with overarching topics, such as media's role in development.

Lent, John A. *Bibliographic Guide to Caribbean Mass Communication*. Westport, CT: Greenwood, 1992. Some 3,600 citations appear in sections on comparative and regional studies, and then individual parts of the region: the Commonwealth Caribbean and the French Caribbean.

Lent, John A. *Bibliography of Cuban Mass Communications*. Westport, CT: Greenwood, 1992. More than 4,000 citations, though only a few are annotated, which range over history and the current media scene.

Lent, John A. *Press Freedom in the Americas*. Miami, FL: Inter American Press Association, 1994–present, annual. Overview articles and profiles of each country's press freedom and events of the previous year.

Rockwell, Rick, and Noreen Janus. *Media Power in Central America*. Urbana: University of Illinois Press, 2003. Individual country chapters plus discussions of state power and the media, threats to journalism in the region, corruption and corporate censorship, and recent evolution.

Schwoch, James. *The American Radio Industry and Its Latin American Activities, 1900–1939*. Champaign: University of Illinois Press, 1990. Reviews the role of American wireless companies in the region, the growth of broadcasting, the rise of a military-industrial complex, and international conferences on radio.

Skidmore, Thomas E., ed. *Television, Politics, and the Transition to Democracy in Latin America*. Baltimore: Johns Hopkins University Press, 1993. Academic researchers assess the role of television in elections in Central and South America in the 1980s, especially in Argentina, Brazil, Chile, and Mexico.

Vanden Heuvel, Jon, and Everette E. Dennis. *Latin America's Vital Media: Changing Patterns*. New York: Freedom Forum, 1995. Covers eight Central and South American countries based on several onsite visits and some 300 interviews, suggesting that media professionalism is increasing and government–press tension is down.

Waisbord, Silvio. *Watchdog Journalism in South America: News, Accountability, and Democracy*. New York: Columbia University Press, 2000. Assesses (using both description and empirical data) the growing role of news media in exposing government wrongdoing, something previously lacking in most Latin journalism, focusing largely on case studies of Argentina, Brazil, Colombia, and Peru.

F-2: Africa

Given its huge variation, this is a hard continent about which to generalize, whether about its news media or other topics. Research has barely scratched the surface of what must be done.

Ainslie, Rosalynde. *The Press in Africa: Communications Past and Present*. London: Gollancz, 1966.

Interesting for its early viewpoint, just as many former colonies were achieving their independence and making their first independent decisions about media control and operation.

Barton, Frank. *The Press of Africa: Persecution and Perseverance*. New York: Holmes & Meier, 1979. Largely historical treatment of the continent's newspapers and people who have helped shape them. A clearly demonstrated trend is the strong role of government in press operations.

Bourgault, Louise M. *Mass Media in Sub-Saharan Africa*. Bloomington: Indiana University Press, 1995. This topical rather than country approach includes discussion of the precolonial legacy, colonial media and their impact, radio and television, style and freedom of the press, and media modernization in the development process.

Faringer, Gunilla L. *Press Freedom in Africa*. New York: Praeger, 1991. Focuses on English-speaking sub-Saharan Africa (Ghana, Nigeria, Kenya) as representing different courses of political development, and relations between government and the news media (chiefly newspapers).

Frere, Marie-Soleil. *The Media and Conflicts in Central Africa*. Boulder, CO: Lynne Reinner, 2007. This investigation of the role that local news media play in Central African conflicts combines theoretical analysis with case studies from nine African countries: Burundi, Cameroon, the Central African Republic, Chad, the Democratic Republic of Congo, Equatorial Guinea, Gabon, the Republic of Congo, and Rwanda. Each case study—a comprehensive discussion of media influences during conflict and their impact on the peace process—is introduced by a short contextual essay.

Hadland, Adrian, et al. *Power, Politics and Identity in South African Media*. Pretoria: Human Sciences Research Council, 2008. Explores the often-overlooked role of media in the shaping of identity and culture in postapartheid South Africa, shedding new light on how identities are constructed through media and providing case studies that illustrate the complex process of identity renegotiation taking place, giving a fresh focus to topics that scholarship has overlooked—such as the pervasive impact of tabloid newspapers. The contributors include both established scholars and new voices.

Hawk, Beverly G., ed. *Africa's Media Image*. New York: Praeger, 1992. Examines coverage of African news in American television, newspapers, and magazines in four parts: overall issues, patterns in African news over time, the continuing South African apartheid story, and how coverage is changing.

Ibelema, Minabere. *The African Press: Civic Cynicism and Democracy*. New York: Palgrave Macmillan, 2008. Explores the thesis that civic cynicism in African countries is a major obstacle to the consolidation of democracy, and that the African press should address issue not just among leaders, but also among the general populace. Asserts that the growing independent press needs to intensify its critique of public attitudes and civic orientation, ground on which corruption in public life has thrived.

Thompson, Allan. *The Media and the Rwanda Genocide*. London: Pluto Press / Ottawa: International Development Research Centre, 2007. Brings into focus the horror of the 1994 genocide that killed as many as a million people.The book's 31 papers focus on media missteps that led to a skewed world view of what was happening then—and in years since. Not an easy book to read because of the horrors it covers—but it carries vitally important messages for news media. Coverage is discussed as it was within Rwanda and elsewhere.

Windrich, Elaine. *The Cold War Guerrilla: Jonas Savimbi, the U.S. Media and the Angolan War*. Westport, CT: Praeger, 1992. American newspaper and magazine coverage of the Angolan war in Africa, and how it played out in publications favorable to or against U.S. administration policies. Reviews how "freedom fighters" were portrayed in both right- or left-wing accounts.

F-3: Asia

Here research tends to focus, as might be expected, on China, India, and Japan as the major nations and media voices.

Chang, Won Ho. *Mass Media in China: The History and the Future*. Ames: Iowa State University Press, 1989. Includes history, chapters on media (the

Xinhua news agency, radio, television, newspapers), and journalism education in the country.

Cole, Benjamin, ed. *Conflict, Terrorism and the Media in Asia*. New York: Routledge, 2006. Anthology of papers discussing American journalism as both servant and scourge; Al Qaeda and the struggle for moderate Islam in Malaysia; Indonesia, globalized media and the War on Terror; Philippines media; and political violence in India.

Gunaratne, Shelton A., ed. *Handbook of the Media in Asia*. New Delhi: Sage, 2000. Offers a country-by-country assessment of 22 countries that together make up half the world's population. Divided into sections on South, Southeast, and East Asia, the basic outline of each chapter is similar, with nation's background and context and then details on its media. Major country chapters are 20 to 25 pages long.

See Joseph and Sharma, Section 5-J.

Lee, Chin-Chuan, ed. *Voices of China: The Interplay of Politics and Journalism*. New York: Guilford Press, 1990. Seven papers by Chinese and Western scholars on the tribulations of Chinese reporters after a decade of reform, the structure and function of Chinese television, Shangai's reform media, press freedoms, Sino-American relations in the press, and reporting in America about China, among other topics.

Lull, James. *China Turned On: Television, Reform and Resistance*. New York: Routledge, 1992. Examines the role of television in the protests of 1989 and since, including the medium's expanding role, peoples' use of it, reform on prime-time television, popular culture and censorship, viewing habits, and cultural consequences.

McDaniel, Drew. *Broadcasting in the Malay World: Radio, Television, and Video in Brunei, Indonesia, Malaysia, and Singapore*. Norwood, NJ: Ablex, 1994. The development of radio and then television in each country plus a review of media policy and content.

McDaniel, Drew. *Electronic Tigers of Southeast Asia: The Politics of Media, Technology, and National Development*. Ames: Iowa State University Press, 2002. Analytic survey of changing media in ten nations—Philippines, Indonesia, Brunei, Singapore, Malaysia, Thailand, Cambodia, Laos, Vietnam, and Myanmar (Burma). Approach is topical rather than by nation, reviewing culture and economics as well as information policy of the region, archetypes and trends of state information and media policy, home video and the changing media environment, competition for satellite dominance, technology infrastructures, Internet policies, media content and audiences, censorship, and the Asian Values debate.

Page, David, and William Crawley. *Satellites over South Asia: Broadcasting Culture and the Public Interest*. New Delhi: Sage, 2001. Explores the increasingly central role played by satellite transmission in the region's news and popular culture in India, Pakistan, Bangladesh, Nepal, and Sri Lanka—and the impact of such services on national broadcast systems.

Sahay, Uday, ed. *Making News: Handbook of the Media in Contemporary India*. New Delhi: Oxford University Press, 2006. Anthology based on firsthand experiences in news media by eminent Indian media personalities, exploring different kinds of news reporting across TV, print, and radio and across different genres like sports, business, entertainment, and war.

Steele, Janet. *Wars within: The Story of* Tempo*, an Independent Magazine in Soeharto's Indonesia*. Jakarta: Equinox / Singapore: Institute of Southeast Asian Studies, 2005. Tells an important story that is not widely known outside of Indonesia. *Tempo,* modeled on the American *Time* newsweekly, began publication in 1971, was suspended in 1994 by Soeharto's regime, and resumed publication in 1998 after Soeharto's fall. It is the most important newsweekly in the world's largest Muslim country.

Wang, Jing. *Brand New China: Advertising, Media and Commercial Culture*. Cambridge, MA: Harvard University Press, 2008. Explores the dramatic changes in China's cultural world with the increasing presence of advertising and entertainment media, and how American branding practices are being widely applied in the growing business and commercial sector.

F-4: Muslim Middle East

These studies may or may not include North Africa. There are some studies on Israeli media that are not included here as that country is considered developed (and most are published in Hebrew).

Boyd, Douglas A. *Broadcasting in the Arab World: A Survey of the Electronic Media in the Middle East*. Ames: Iowa State University Press, 1999 (3rd ed.). Country-by-country survey of national systems in the Middle East, Gulf States, and North Africa, and international broadcasting in Arabic, including a brief history and current developments.

Eickelman, Dale F., and Jon W. Anderson, eds. *New Media in the Muslim World: The Emerging Public Sphere*. Bloomington: Indiana University Press, 2003 (2nd ed.). Focuses on the arrival and impact of such things as the Internet, satellite television, and fax machines, as well as new uses of older media. The geographic focus is as broad as the Muslim world, including coverage of South and Southeast Asia in addition to the Middle East and Muslim communities elsewhere.

Kamalipour, Yahya R., and Hamid Mowlana, eds. *Mass Media in the Middle East: A Comprehensive Handbook*. Westport, CT: Greenwood, 1994. Covers North Africa and the Middle East as far east as Pakistan in detailed country chapters by more than 30 scholars.

Lynch, Marc. *Voices of the New Arab Public: Iraq, Al-Jazeera, and Middle East Politics Today*. New York: Columbia University Press, 2006. Focuses on coverage of the Iraq war and the special role that Al Jazeera satellite news service plays in public perception and politics. A number of tables trace changes in media coverage and other indicators of public opinion. Chapters assess the Iraq war and the Arab public, structural transformation of the Arab public sphere, the Al Jazeera era, the impact of the fall of Baghdad, and emerging Iraq and new Arab publics, thanks largely to media reporting.

Mellor, Noha. *Modern Arab Journalism: Problems and Prospects*. Edinburgh: Edinburgh University Press, 2008. Poses a series of questions: How is Arab journalism different from or similar to that in other countries, what defines its tasks, who has access to this field, how is power distributed in Arab journalism, and when were media programs launched at Arab universities and what characterizes them? Reviews Arab scholars' media research, and offers a case study of reporting the Iraq war in 2003.

Rugh, William A. *Arab Mass Media: Newspapers, Radio, and Television in Arab Politics*. Westport, CT: Praeger, 2004. Describes media services across the Middle East: their function and structure; mobilization press of Syria, Libya, the Sudan and pre-2003 Iraq; loyalist press of Saudi Arabia, Bahrain, Qatar, Oman, the United Arab Emirates, and Palestine; diverse print media as found in Lebanon, Kuwait, Morocco, and Yemen; transitional print media of Egypt, Jordan, Tunisia, and Algeria; offshore pan-Arab print media; Arab radio and television prior to 1990; the structure of Arab television in years since; and Arab television programming.

Rugh, William, ed. *Engaging the Arab and Islamic Worlds through Public Diplomacy: A Report and Action Recommendations*. Washington, DC: Public Diplomacy Council, George Washington University, 2004. Eleven papers reviewing print and electronic media channels, academic and professional exchanges, and the impact of security concerns on communication links.

Sakr, Naomi. *Satellite Realms: Transnational Television, Globalization, & the Middle East*. London: I. B. Tauris / New York: St. Martin's Press, 2001. Explores the rise of transnational satellite channels in the region, the need for such services, who owns channels, regulation on an international and regional basis, and their content.

Zayani, Mohamed, and Sofiane Sahraoui. *The Culture of Al Jazeera: Inside an Arab Media Giant*. Jefferson, NC: McFarland, 2007. Reviews the channel as an organization more than its role as a news service. Chapters place the channel within the context of other Arab media, and then assess factors behind the channel's success, how Al Jazeera differs from other services, the organizational model used, the values and beliefs that guide it, and who controls operations.

G. Propaganda

A closely allied field to our prime focus, it is often difficult to say where journalism leaves off and

propaganda efforts begin. This section includes but a small selection of the large and growing literature about propaganda (in the twenty-first century, it is more often termed "public diplomacy") that has expanded since the first studies appeared in the aftermath of World War I.

G-1: Reference Sources

Cole, Robert. *Propaganda in Twentieth Century War and Politics: An Annotated Bibliography.* Lanham, MD: Scarecrow, 1996. Includes hundreds of subject-divided citations, arranged in chronological chapters, with annotations running a paragraph long. Defined broadly, many entries have a direct relationship to journalism, while others center on motion pictures.

Cole, Robert, ed. *The Encyclopedia of Propaganda.* Armonk, NY: Sharpe Reference, 1998 (3 vols.). A great deal of this material relates to journalism, including entries on people, countries, media, wars and other events, and government agencies, among other topics. Entries range from a column to several pages. *See also* next title.

Cull, Nicholas J., et al., eds. *Propaganda and Mass Persuasion: A Historical Encyclopedia, 1500 to the Present.* Santa Barbara, CA: ABC-CLIO, 2004. Wide-ranging coverage includes many topics relevant to news and journalism. *See also* previous title.

Lasswell, Harold D., et al., eds. *Propaganda and Promotional Activities: An Annotated Bibliography.* Chicago: University of Chicago Press, 1935 (reprinted, with a new introduction, by University of Minnesota Press, 1969). A classic, which defines its topic very broadly and thus includes a lot of journalism material. Annotations are very brief and many items are not described at all. *See also* the two volumes edited by Smith, below.

Manning, Martin, with Herbert Romerstein. *Historical Dictionary of American Propaganda.* Westport, CT: Greenwood, 2004. Some 350 entries focusing mainly on U.S. government communications efforts and ranging from the mid-eighteenth century to the present. Topics include events, publications, media, people, government agencies and plans, organizations, and symbols.

Nelson, Richard Alan. *A Chronology and Glossary of Propaganda in the United States.* Westport, CT: Greenwood Press, 1996. About half of this volume is devoted to each, plus adding a useful list of selected references. The glossary uses the term "propaganda" very broadly, and its definitions range up to half a page. Useful reference by a noted authority.

Smith, Bruce Lannes, et al., eds. *Propaganda, Communication, and Public Opinion: A Comprehensive Reference Guide.* Princeton, NJ: Princeton University Press, 1946. Continuation of Lasswell, above, though more selective and narrowly defined. Begins with four essays totaling 100 pages that survey the field, and then more than 2,500 citations from 1934 to 1943, nearly all briefly annotated.

Smith, Bruce Lannes, et al., eds. *International Communication and Political Opinion: A Guide to the Literature.* Princeton, NJ: Princeton University Press, 1956. Third in a series (see previous entry), this focuses more on international elements, with some 2,600 entries from 1943 to 1955, often described at some length.

G-2: General

Jowett, Garth S., and Victoria O'Donnell. *Propaganda and Persuasion.* Thousand Oaks, CA: Sage, 2006 (4th ed.). Basic introductory survey text covering history and various applications. Authors also edited *Readings in Propaganda and Persuasion: New and Classic Essays* (Sage, 2006), an anthology of 14 scholarly papers past and present.

Lasswell, Harold D., et al., eds. *Propaganda and Communication in World History.* Honolulu: University of Hawaii Press, 1979–80 (3 vols.). Very wide ranging in both its historical and topical scope, this anthology includes more than 50 papers by some of the field's foremost authorities, discussing all types of communication from a variety of countries and using many examples.

G-3: American Efforts

There are many analyses of U.S. government efforts at both print and electronic public diplomacy, a good number stressing historical development.

Cull, Nicholas J. *The Cold War and the United States Information Agency: American Propaganda and Public Diplomacy, 1945–1989*. New York: Cambridge University Press, 2008. USIA was created in 1953 to "tell America's story to the world" and, by engaging with the world through international information, broadcasting, culture, and exchange programs, it became an essential element of American foreign cold war policy. Based on declassified archives and more than 100 interviews with public diplomacy veterans from the Truman administration to the fall of the Berlin Wall, the author relates achievements and flaws of American public diplomacy.

Dizard, Wilson P., Jr. *Inventing Public Diplomacy: The Story of the U.S. Information Agency*. Boulder, CO: Lynne Rienner, 2004. Relates the story of the USIA (1953–99) as seen by a former official. Assesses wartime Office of War Information, the formation of USIA in 1953, the Murrow years (early 1960s, under John Kennedy), the "high summer" of the USIA in the 1960s and 1970s, operation of the USIA and USIS (as it was known abroad) globally, the delicate art of exporting culture, the sunset years and end of the USIA (its functions were shifted into the State Department), and the future of public diplomacy.

Heil, Alan L., Jr. *Voice of America: A History*. New York: Columbia University Press, 2003. The standard and most detailed history of the first 60 years (1942–2002) written by a veteran VOA staffer. Much focuses on the role of news reporting on the government service and who would control its content.

Puddington, Arch. *Broadcasting Freedom: The Cold War Triumph of Radio Free Europe and Radio Liberty*. Lexington: University Press of Kentucky, 2000. A retired deputy director relates the often controversial history of two U.S. government services aimed at Eastern Europe and Soviet Union.

Shanahan, James, ed. *Propaganda Without Propagandists? Six Case Studies in U.S. Propaganda*. Cresskill, NJ: Hampton Press, 2001. Includes framing of statehood for Hawaii, environmental issues at Hanford Nuclear Reservation in Washington, participation in the 1990–91 Gulf War, and news of Wall Street.

Simpson, Christopher. *Science of Coercion: Communication Research & Psychological Warfare, 1945–1960*. New York: Oxford University Press, 1994. How government funding, pushed by cold war exigencies, hastened mass communication research, some of it with wide ramifications for journalism.

Sosin, Gene. *Sparks of Liberty: An Insider's Memoir of Radio Liberty*. University Park: Pennsylvania State University Press, 1999. The author was a director of program planning for the lesser-known of two American radio services based in Europe.

Sweeney, Michael S. *Secrets of Victory: The Office of Censorship and the American Press and Radio in World War II*. Chapel Hill: University of North Carolina Press, 2001. Story of the civilian agency that administered largely voluntary censorship of wartime military information for American media.

Vaughn, Stephen L. *Holding Fast the Inner Lines: Democracy, Nationalism, and the Committee on Public Information*. Chapel Hill: University of North Carolina Press, 1980. The story of the Wilson administration's "Creel Committee," which controlled much of the federal government's wartime information during World War I.

Winkler, Allan M. *The Politics of Propaganda: The Office of War Information, 1942–1945*. New Haven, CT: Yale University Press, 1978. A study of the primary federal agency that provided war news to U.S. news media.

G-4: International Radio

Such radio services, directed across borders, have traditionally focused substantially on news and public affairs in their programming.

Berg, Jerome S. *On the Short Waves, 1923–1945: Broadcast Listening in the Pioneer Days of Radio*. Jefferson, NC: McFarland, 1999. Three main sections trace shortwave in the 1920s, shortwave broadcasting and listening in the 1930s ("Dxing" is emphasis here), and wartime use of shortwave services, with considerable discussion of equipment, QSL cards, shortwave publications (an excellent historical survey), and station operations.

Berg, Jerome S. *Broadcasting on the Short Waves, 1945 to Today*. Jefferson, NC: McFarland, 2008.

Updates and expands on the previous volume (see entry above), with a chronological approach to detail year-by-year developments among global broadcasters. Illustrated with QSL cards and program guides. *See also* next entry.

Berg, Jerome S., *Listening on the Short Waves, 1945 to Today*. Jefferson, NC: McFarland, 2008. A companion to the previous entry, this reviews audience makeup and size, listening clubs, publications, receivers, collecting QSL cards, the impact of computers and the web on shortwave listening.

Berg, Jerome S., and John C. Herkimer. *On the Short waves.com*. http://www181.pair.com/otsw/index.html. Background information on shortwave and "DXing," or listening at a distance, and especially annotated pages of further links to many other sites.

Browne, Donald R. *International Radio Broadcasting: The Limits of the Limitless Medium*. New York: Praeger, 1982. A detailed review of international radio services with case studies of American and overseas government and private operations, and a survey of audience research.

Fortner, Robert S. *Public Diplomacy and International Politics: The Symbolic Constructs of Summits an International Radio News*. Westport, CT: Praeger, 1994. International radio service coverage of six political summit meetings from 1987 to mid-1990 is reviewed through content analysis. The period covered includes the fall of much of European communism.

Mansell, Gerard. *Let Truth Be Told: 50 Years of BBC External Broadcasting*. London: Weidenfeld & Nicolson, 1982. A history by a 1970s managing director, tracing the development from Empire Service, through world war, to modern international news and features service. *See also* Walker, below.

Nelson, Michael. *War of the Black Heavens: The Battles of Western Broadcasting in the Cold War*. Syracuse, NY: Syracuse University Press, 1997. A study of radio propaganda story making use of interviews and files of the Soviet central committee to argue strongly that Western radio services played a major part in the 1989–90 fall of communism. Ranges from the postwar start of the cold war, to the inception of RFE and RL and their role in the uprisings of 1953–56 in Eastern Europe, the beginnings of detente, other major broadcasters, the 1968 "Prague Spring" and invasion of Czechoslovakia, Poland's Solidarity movement and its use of the radio services, and final revolutions of 1989 and the role of radio in fomenting them.

Soley, Lawrence C., and John S. Nichols. *Clandestine Radio Broadcasting: A Study of Revolutionary and Counterrevolutionary Electronic Communication*. Westport, CT: Praeger, 1986. Discusses material dealing with *other* than classic East-West propaganda. After an introduction to "the dark side of the spectrum," which defines and explains what clandestine radio means, the authors discuss the lead-up to and World War II, two decades of cold war radio, clandestine radio in the 1970s, changes wrought by the 1980s, Castro and clandestine radio in the Caribbean region, clandestine radio and the crisis of communism (as became even more evident just three years later), broadcasting and insurgency in Central America, lack of such services in most of East Asia, and a conclusion.

Street, Nancy Lynch, and Marilyn J. Matelski. *Messages from the Underground: Transnational Radio in Resistance and in Solidarity*. Westport, CT: Praeger, 1997. Studies of Vatican, British, and American international radio services during the cold war. Nine further case studies in transnational radio cover Vatican radio and the Polish Solidarity movement, media and church leadership during a Philippine crisis, the BBC and the French resistence during World War II, anti-Castro broadcasting, organization and operation of Radio Liberty and related U.S. services, and Radio Free Asia.

Walker, Andrew. *A Skyful of Freedom: 60 Years of the BBC World Service*. London: Broadside Books, 1992. Account from the inception of Empire Service in the early 1930s, through World War II, to widely respected modern service, including a section on longtime Bush House headquarters.

Wood, James. *History of International Broadcasting*. London: Institution of Electrical Engineers and the Science Museum, 1992, 2000 (2 vols.). Exhaustive though largely technical history of facilities and operations of (primarily) shortwave radio services intended for transborder listening. The second volume centers on changes with the end of the cold war.

Section 11

Journalism Periodicals

As one might imagine, journalists write a lot about their trade. So do academics studying the media field. Listed here are, first, the major trade publications ("serials" in library-speak) about the media and closely related fields, and, second the more important academic or scholarly journals. All titles included here were actively publishing in early 2009.

Each entry provides the periodical's title, International Standard Serial Number (unique to each title and often helpful in locating it in libraries), the publisher, the year the periodical started (and sometimes information about title changes), how often it appears, its official website, and a few lines of description (in the case of the research journals, this is often a quote from the periodical's statement of its purpose).

A. Trade Publications

These titles demonstrate the breadth of professional trade publications available in North America. But the listing can't be complete, for depending on how you define the category, many others might be included. Further, there are many more titles (some of which appear in English) published elsewhere as well. Nearly all maintain some kind of web presence, often including both current and past issue access and sometimes a means of searching specific topics.

Advertising Age
ISSN: 0001-8899
Crain Communications
1930, weekly
http://adage.com
The most important advertising trade periodical, this covers news of and trends in print, broadcast, cable, and online advertising venues.

Adweek
ISSN: 1549-9553
Nielsen Business Media
1978, 36 issues a year
http://www.adweek.com/aw/index.jsp
News magazine for the advertising business.

The American Editor
ISSN: 1083-5210
American Society of Newspaper Editors
1923 (as *Bulletin of the ASNE* before 1995), quarterly
http://www.asne.org/index.cfm?id=27
News of the editing profession, chiefly newspapers but increasingly including online venues.

American Journalism Review
ISSN: 1067-8654
University of Maryland College of Journalism
1991 (as *Washington Journalism Review*), bimonthly
http://www.ajr.org
Critical commentary on all aspects of news media, with some emphasis on news of the federal government.

American Printer
ISSN: 0744-6616
Penton Media
1883 (as *Inland Printer*; later *American Printer and Lithographer*; took present title in 1982), monthly

http://americanprinter.com
Production side of newspapers, magazines, and other printed media.

AP World
ISSN: 0094-2189
Associated Press
1945 (as *AP Inter-Office*), quarterly
[no apparent website]
What is happening within the news agency, who is where, and behind-the-scenes pieces.

Broadcasting & Cable
ISSN: 1068-6827
Reed Business
1931 (as *Broadcasting*; took present title in 1993), fortnightly to 1941, then weekly
http://www.broadcastingcable.com
Standard industry news weekly covering programming, advertising, and policy events, issues, and trends in electronic media, chiefly broadcasting and cable.

Columbia Journalism Review
ISSN: 0010-194X
Columbia University Graduate School of Journalism
1962, bimonthly
http://www.cjr.org
The oldest and largest U.S. journalism review, *CJR* reviews and critiques print and electronic media content and trends.

Communication Arts
ISSN: 0010-3519
Coyne & Blanchard
1969 (as *CA Magazine*), eight per year
http://www.commarts.com
Focused largely on the design of print communication, including advertising.

Current: The Newspaper About Public TV and Radio
ISSN 0739-991X
Current LLC
1980, biweekly
http://www.current.org
Standard source for information about public (noncommercial) broadcasting organizations, programming, and people, including national organizations (CPB, PBS, NPR, etc.) and stations.

Design
ISSN: 1050-9224
Society for News Design
1980, quarterly
http://www.snd.org/resources/pubs.html
Focuses on magazine design trends.

Documentary
ISSN: 1559-1034
International Documentary Association
1989 (as *International Documentary*), quarterly
http://www.documentary.org
Covers all aspects of film, video, and online documentary making.

Editor & Publisher
ISSN: 0013-094X
Nielsen Business Media
1901, weekly to 2004, then monthly
http://www.editorandpublisher.com/eandp/index.jsp
Standard news magazine format covering American newspapers: its change from weekly to monthly publication after more than a century was an indicator of newspaper economic troubles.

Extra!
ISSN: 0895-2310
Fairness & Accuracy In Reporting (FAIR)
1987, bimonthly
http://www.fair.org/index.php?page=4
Calling itself a "progressive voice," FAIR's journal offers a critical assessment of news stories and trends in print and electronic services.

Folio
ISSN: 0046-4333
Red 7 Media
1972, monthly
http://www.foliomag.com
Print media design and graphics are covered.

Graphic Arts Monthly
ISSN: 1047-9325
Reed Business

1987 (as *Graphic Arts Monthly and the Printing Industry*), monthly
http://magazine-directory.com/Graphic-Arts-Monthly.htm
Centers on design issues in print media.

Grassroots Editor
ISSN: 0017-3541
Missouri State Southern University
(for the International Conference of Weekly Newspaper Editors)
1960, quarterly
http://www.mssu.edu/iswne/grhome.htm
Covers smaller market newspapers, often weeklies.

The IRE Journal
ISSN: 0164-7016
Investigative Reporters and Editors, Inc.
1978, bimonthly
https://www.ire.org/store/periodicals/periodicals.html
News about the organization's activities, and investigative reporting more generally.

The Masthead
ISSN: 0025-5122
National Conference of Editorial Writers
1949, quarterly
http://www.ncew.org/web/2005/06/the_masthead.aspx
By, for, and about the editorial writer and his/her product.

Multichannel News
ISSN: 0276-8593
Reed Business
1980, weekly
http://www.multichannel.com
Standard source for "new" (postbroadcast) electronic media developments.

News
ISSN: 0733-7795
Associated Press Managing Editors Association
ca. 1990, quarterly
http://www.apme.com
News of and about the news agency.

The News Media and the Law
ISSN: 0149-0737
Reporters Committee for Freedom of the Press
1973 (as *Press Censorship Newsletter*), quarterly
http://www.rcfp.org/readingroom/index.php
Invaluable guide to state and federal court decisions as well as administrative law impacting the news reporting process; often includes reference guides to specific types of press-related laws in the 50 states.

News Photographer
ISSN: 0199-2422
National Press Photographers Association
1946 (as *National Press Photographer* until 1974), monthly
http://www.nppa.org/news_and_events/magazine
The world of "press" photography in all its forms; December is the annual "Best of" issue.

NewsInc: The Business of the Newspaper Business
ISSN: 1043-7452
The Cole Group
1989, monthly, later weekly (1997 to date archived on line)
http://www.newsinc.net
Just what the subtitle says.

Nieman Reports
ISSN: 0028-9817
Nieman Foundation, Harvard University
1947, quarterly
http://www.nieman.harvard.edu/reports/index.html
Wide-ranging journal of comment, largely by professional journalists temporarily at the Nieman center.

Presstime
ISSN: 0194-3243
Newspaper Association of America
1979, monthly
http://www.naa.org/Resources/Publications/PRESSTIME.aspx
The state of newspapers, covering virtually all aspects.

Public Broadcasting Report
ISSN: 0193-3663
Warren Communications
1978, biweekly
http://www.warren-news.com/tvandcableservices.htm
Newsletter on national and local developments and people in noncommercial broadcasting.

Publishers' Auxiliary
ISSN: 0048-5942
National Newspaper Association
1865, weekly, later monthly
http://www.nna.org/eweb/dynamicpage.aspx?webcode=aboutpubaux&site=nna_eweb
Coverage of the smaller market and weekly newspaper business.

Quill
ISSN: 0033-6475
Society of Professional Journalists
1912, nine a year
http://www.spj.org/quill.asp
"Surveys and interprets today's journalism while stimulating its readers to collective and individual action for the good of our profession" [from masthead].

Quill & Scroll
ISSN: 0033-6505
Quill and Scroll Society
1926, bimonthly
http://www.uiowa.edu/~quill-sc/magazine/magazine.html
Published by the International Honor Society for High School Journalists, this provides a window into secondary school newspapers.

RTNDA Communicator
ISSN: 1529-3106
Radio-Television News Directors Association
1947 (as *Communicator* to 1994), bimonthly
http://www.rtnda.org/pages/communicator.php
Trends in television and radio station news operations and their employees.

SND Update
ISSN: 1520-426X
Society for News Design (*was* Society of Newspaper Designers)
1991, eight per year
http://www.snd.org/resources/pubs.html
Design and graphics in all of the news media, chiefly print formats.

St. Louis Journalism Review
ISSN: 0036-2972
St. Louis Journalism Review
1970, monthly
http://www.stljr.org
Despite the title, tends to range over the whole Midwest news scene.

Student Press Law Center Report
ISSN: 0160-3825
Student Press Law Center
1979, three times a year
http://www.splc.org
Discusses cases and controversies involving the rights of student (both high school and college) newspapers.

Television Broadcast
ISSN: 1556-3588
NewBay Media
2005 (as *Digital TV*), monthly
http://www.televisionbroadcast.com
Commercial television business, both network and station.

TVWeek
ISSN: 1544-0516
Crain Communications
1982 (as *Electronic Media* to 2003), weekly
http://www.tvweek.com
News magazine for the commercial television business.

The Tyndall Report
No ISSN
Tyndall Report
Daily (online only)
http://tyndallreport.com
Summary report of ABC, CBS, and NBC evening network news stories.

Videography
ISSN: 0363-1001
NewBay Media
1976 (as *Corporate Video Decisions*), monthly
http://www.videography.com
Industrial and business video primarily.

B. Academic Journals

Academic research in scholarly (usually peer-reviewed) journals adds to our understanding of journalism. The major titles below show their current publisher (often a commercial firm different from the academic association that controls their editorial content). Many of these journals maintain websites, and increasingly also publish electronic versions. All ISSNs shown are for the print version of each journal, though many are also available electronically. The descriptive comments are taken from the respective journals' websites.

For further information on these and many other (though less relevant) titles, see *The Iowa Guide: Scholarly Journals in Mass Communication and Related Fields,* edited by Carolyn Stewart Dyer, at http://fm.iowa.uiowa.edu/fmi/xsl/iowaguide/search.xsl.

American Journalism
ISSN: 0882-1127
American Journalism Historians Association
1983, quarterly
http://ajhaonline.org/journal.html
"Contributions may focus on social, economic, intellectual, political, or legal issues. AJ also welcomes articles that treat the history of communication in general; the history of broadcasting, advertising, and public relations; the history of media outside the United States; and theoretical issues in the literature or methods of media history."

British Journalism Review
ISSN: 0956-4748
Sage
1989, quarterly
http://www.bjr.org.uk/index
"Designed as a forum of analysis and debate, to monitor the media, submit the best as well as the worst to scrutiny, and to raise the level of the dialogue."

Communication Abstracts
ISSN 1075-5470
Sage
1977, quarterly, later bi-monthly
http://www.sagepub.com/journalsProdDesc.nav?prodId=Journal200918&currTree=Subjects&level1=700&
"A comprehensive source of information about communication-related publications on a worldwide scale. *Communication Abstracts* covers communication-related articles, reports, papers, and books from a variety of publishers, research institutions, and information sources."

Communication Booknotes Quarterly
ISSN 1094-8007
Taylor & Francis
1998, quarterly (continuing a variably titled review publication that began in 1969)
http://www.tandf.co.uk/journals/journal.asp?issn=1094-8007&subcategory =AH150000
"A review service for books, reports, documents, and electronic publications on all aspects of mass communication, telecommunication, and the information industry."

Communication Law & Policy
ISSN: 1081-1680
Taylor & Francis (for Law Division of the Association for Education in Journalism and Mass Communication)
1996, quarterly
http://www.comm.vt.edu/CL&P/index.html
"The journal seeks research that is informed theoretically by First Amendment constitutional analyses, historical approaches to communication law and policy issues, contemporary social theory literatures that treat the law as cultural forms, the sociology and philosophy of law, system approaches, critical theory and other appropriate theoretical bases."

Convergence
ISSN: 1354-8565
Sage
1995, quarterly

http://www.sagepub.com/journalsProdDesc.nav?prodId=Journal201774

"Topics include: Video games; Cable and telecomms; Mobile media/content; Internet studies; Digital/new media art; Digital photography; VR; Control and censorship of the media; Copyright/intellectual property; New media policy; New media industries/institutions; New media history; New media in cross-cultural/international contexts; New media products; Digital TV; DVD; Digital music—recording, production, distribution, file formats/file sharing; Cinema; Gender and technology."

Critical Studies in Media Communication
ISSN: 1529-5036
Taylor & Francis (for National Communications Association)
1984, quarterly, later five a year
http://www.tandf.co.uk/journals/journal.asp? issn=0739-3180&subcategory=AH150000

"Publishes scholarship about media audiences, representations, institutions, technologies, and professional practices. It includes work in history, political economy, critical philosophy, race and feminist theorizing, rhetorical and media criticism, and literary theory. It takes an inclusive view of media, including newspapers, magazines and other forms of print, cable, radio, television, film, and new media technologies such as the Internet."

Electronic News
ISSN: 1931-2431
Taylor & Francis
2007, quarterly
http://www.tandf.co.uk/journals/journal.asp?issn=1931-2431&subcategory=AH150000

Focuses on "readily accessible research and ideas that have clear relevance to the content, practice, and administration of electronic news, especially radio, television, and the Internet, and related areas, such as station Web sites. The journal will also provide articles for those who practice and/or teach broadcast/electronic journalism and related topics."

European Journal of Communication
ISSN: 1460-3705
Sage
1986, quarterly
http://www.sagepub.com/journalsProdDesc.nav?prodId=Journal200857

"Provides the best communication research and scholarship. It promotes dialogue on key issues across disciplinary and national boundaries, and offers a comprehensive diet of the best of empirical and conceptual work."

Federal Communications Law Journal
ISSN: 0163-7606
Indiana University School of Law (for Federal Communications Bar Association)
1937 (as *Federal Communications Bar Journal*), three times a year
http://www.law.indiana.edu/fclj/index.shtml

Law journal that "often features articles and essays by commissioners in the Federal Communications Commission ("FCC") as well as members of Congress."

Feminist Media Studies
ISSN: 1468-0777
Taylor & Francis
2001, quarterly
http://www.tandf.co.uk/journals/titles/14680777.asp

"Offers a transdisciplinary, transnational forum for researchers pursuing feminist approaches to the field of media and communication studies, with attention to the historical, philosophical, cultural, social, political, and economic dimensions and analysis of sites including print and electronic media, film and the arts, and new media technologies."

Global Journalism
no ISSN available
Reynolds Journalism Institute, University of Missouri School of Journalism
1994, quarterly
http://rji.missouri.edu/global-journalist/index.php

News and features magazine that explores the "state of press freedom around the world, covers developments in international journalism and serves international journalists."

Global Media and Communication
ISSN: 1742-7665

Sage
2005, three times a year
http://www.sagepub.com/journalsProdDesc.nav?prodId=Journal201699

Covers "the international aspects of: communication studies, media studies, cultural studies, anthropology, telecommunications, sociology, politics, public policy, migration and diasporic studies, economics, geography/urban studies, transnational security and international relations."

Comm/Ent: Hastings Communications and Entertainment Law Journal
ISSN: 1061-6578
Hastings College of Law (San Francisco)
1990, three times a year
http://w3.uchastings.edu/comment/index.html

"Law journal covering the rubric of communications, entertainment, and intellectual property law. *Comm/Ent*'s subject matter has expanded to include issues such as the Internet, telecommunications, biotechnology, multimedia, broadcasting, and constitutional law."

Historical Journal of Film, Radio, and Television
ISSN: 0143-9685
Taylor & Francis
1981, quarterly
http://www.tandf.co.uk/journals/journal.asp?issn=0143-9685&subcategory=AH300000

"An interdisciplinary journal concerned with the evidence produced by the mass media for historians and social scientists, and with the impact of mass communications on the political and social history of the twentieth century."

Howard Journal of Communications
ISSN: 1064-6175
Taylor & Francis (for Howard University)
1988, quarterly
http://www.tandf.co.uk/journals/journal.asp?issn=1064-6175&subcategory=AH150000

"Culture, ethnicity, and gender influence multicultural organizations, mass media portrayals, interpersonal interaction, development campaigns, and rhetoric. Dealing with these issues, *The Howard Journal of Communications* is a quarterly that examines ethnicity, gender, and culture as domestic and international communication concerns."

Index on Censorship
ISSN: 0306-4220
Taylor & Francis (for Writers & Scholars International)
1972, quarterly
http://www.tandf.co.uk/journals/titles/03064220.asp

"The only magazine devoted to protecting and promoting free expression. International in outlook, outspoken in comment, publishing some of the world's finest writers, *Index* exposes stories that are suppressed, publishes banned writing, initiates debate and gives breadth to news that has often been dumbed down in the world's media. In addition, every issue of *Index* since its inception has included a 30-page, country by country index recording violations of free speech."

International Communication Gazette
ISSN: 1748-0485
Sage
1955 (as *Gazette*), quarterly; later bimonthly
http://www.sagepub.com/journalsProdDesc.nav?prodId=Journal200826

"Covers all aspects of communications including the modern mass media, the traditional media, community and alternative media, telecommunications and information and communication technologies."

International Journal of Media Management
ISSN 1214-1277
Taylor & Francis (for Institute for Media and Communications Management)
1998, quarterly
http://www.tandf.co.uk/journals/journal.asp?issn=1424-1277&subcategory=AH150000

"Provides a global examination of the fields of media and telecommunications management, with a strong emphasis on management issues. The goal of the journal is to osffer a close analysis of new industry structures, organizational forms, and critical competencies in the changing media environment."

International Journal of Press/Politics
ISSN: 1081-180X
Sage
1995 (as *Harvard International Journal of Press/Politics*), quarterly
http://www.sagepub.com/journalsProdDesc.nav?prodId=Journal201283
"Interdisciplinary journal for the analysis and discussion of the role of the press and politics in a globalized world. The Journal publishes theoretical and empirical research which analyzes the linkages between the news media and political processes and actors."

International Journal of Public Opinion Research
ISSN: 0954-2892
Oxford University Press (for World Association for Public Opinion Research)
1988, quarterly
http://ijpor.oxfordjournals.org/?code=intpor&.cgifields=code
Offers "informed analysis and comment for both professionals and academics…the journal is the first truly comparative, multidisciplinary forum serving the international community."

Journal of Advertising
ISSN: 0091-3367
M. E. Sharpe
1972, quarterly
http://www.mesharpe.com/mall/results1.asp?acr=joa
Designed "to provide a public forum where ideas about advertising can be expressed. Research dealing with the economic, political, social, and environmental aspects of advertising, and methodological advances in advertising research."

Journal of Advertising Research
ISSN: 0021-8499
World Advertising Research Association (for the Advertising Research Foundation)
1960, quarterly
http://www.jar.warc.com
Intended as "the R&D vehicle for professionals in all areas of marketing including media, research, advertising and communications."

Journal of Broadcasting & Electronic Media
ISSN: 0883-8151
Taylor & Francis (for Broadcast Education Association)
1956 (as *Journal of Broadcasting*), quarterly
http://www.tandf.co.uk/journals/journal.asp?issn=0883-8151&subcategory=AH150000
"Contains timely articles about new developments, trends, and research in electronic media written by academicians, researchers, and other electronic media professionals. The Journal invites submissions of original research that examine a broad range of issues concerning the electronic media, including the historical, technological, economic, legal, policy, cultural, social, and psychological dimensions."

Journal of Communication
ISSN: 0021-9916
Wiley-Blackwell (for International Communication Association)
1951, quarterly
http://www.blackwellpublishing.com/journal.asp?ref=0021-9916&site=1
"Concentrates on communication research, practice, policy, and theory"

Journal of Current Issues and Research in Advertising
ISSN: 1064-1734
CtC Press
1978 (as *Current Issues and Research in Advertising*), semiannual
[apparently no statement of content, nor any online presence]

Journal of Mass Media Ethics
ISSN: 0890-0523
Taylor & Francis
1986, quarterly
http://www.tandf.co.uk/journals/titles/08900523.asp
"Publishes original essays exploring the philosophical bases of decisions, reports from empirical studies, and literature searches and reviews dealing with mass media content and the behavior of practitioners in journalism, broadcasting, public relations, advertising, and other mass communication disciplines."

Journal of Media and Religion
ISSN 1534-8423
Taylor & Francis
2001, quarterly

http://www.tandf.co.uk/journals/titles/15348423.asp

"Discuss[es] implications of the relationship between religion and mass media, generate[s] theory about the nature and behavior of religious audiences, explore[s] the social and cultural impact of religious involvement in public discourse about media"

Journal of Media Economics
ISSN: 0899-7764
Taylor & Francis
1988, quarterly
http://www.tandf.co.uk/journals/titles/08997764.asp

"Publishes original research on the economics and policy of mediated communication, focusing on firms, markets, and institutions. Reflecting the increasing diversity of analytical approaches employed in economics and recognizing that policies promoting social and political objectives may have significant economic impacts on media, the Journal encourages submissions reflecting the insights of diverse disciplinary perspectives and research methodologies, both empirical and theoretical."

Journal of Radio & Audio Media
ISSN: 1937-6529
Taylor & Francis (for Broadcast Education Association)
1991 (as *Journal of Radio Studies* until 2008), annual then semiannual
http://www.tandf.co.uk/journals/titles/19376529.asp

Publishes "interdisciplinary inquiries regarding radio's contemporary and historical subject matter as well as those audio media that have challenged radio's traditional use. Scholars are invited to submit articles pertaining to any area of radio and audio media. Areas of interest include, but are not limited to, formats and programming, new technology, policy and regulation, rating systems, commercial and noncommercial networks, radio history, management and innovation, personalities, popular cultures, uses and effects studies, propaganda, social movements, advertising and sales, market concentration, Internet and satellite radio, podcasting, alternative formats, diversity, gender and international radio."

Journalism
ISSN: 1464-8849
Sage
2000, quarterly, became bimonthly in 2007
http://www.sagepub.com/journalsProdDesc.nav?prodId=Journal200905

"Publishes both theoretical and empirical work and contributes to the social, economic, political, cultural and practical understanding of journalism. It includes contributions on current developments and historical changes within journalism."

Journalism & Mass Communication Abstracts
no ISSN
Association for Education in Journalism and Mass Communication
1963 (as *Journalism Abstracts)*, annual (printed through 1999 [vol. 37]; now available only online)
http://www.aejmc.org/abstracts

Provides brief summaries of MA, MS, and PhD theses in journalism and mass communication subjects.

Journalism & Mass Communication Educator
ISSN: 1077-6958
Association for Education in Journalism and Mass Communication
1944 (as *Journalism Educator*), quarterly
http://www.aejmc.org/_scholarship/_publications/_journals/_jmce/educator.php

"Addresses itself to the professional needs of the journalism and mass communication educator and administrator on both secondary and collegiate levels. Articles on teaching techniques, new courses and technology help promote excellence in the classroom. Statistical information on student enrollments and career interests, trends in curriculum design, surveys and opinion polls are featured."

Journalism & Mass Communication Monographs
ISSN: 1522-6379
Association for Education in Journalism and Mass Communication
1966 (as *Journalism Monographs*), irregular, then quarterly
http://www.aejmc.org/_scholarship/_publications/_journals/_jcm/monographs.php

"Presents in-depth research on specific topics within journalism and mass communication. The mission of the journal is to provide a venue for scholarly works, particularly those that provide a critical or applied synthesis of significant scholarship."

Journalism & Mass Communication Quarterly
ISSN: 1077-6990
Association for Education in Journalism and Mass Communication
1924 (as *Journalism Quarterly)*, quarterly
http://www.aejmc.org/_scholarship/_publications/_journals/_jmcq/quarterly.php
"Focuses on research in journalism and mass communication. Each issue features reports of original investigation, presenting the latest developments in theory and methodology of communication, international communication, journalism history, and social and legal problems."

Journalism History
ISSN: 0094-7679
Ohio University School of Journalism
1974, quarterly
http://www.scripps.ohiou.edu/jh/jh.htm
"Seeks articles on topics related to the full scope of mass communication history. They may discuss individuals, institutions, or events"

Journalism Practice
ISSN: 1751-2786
Taylor & Francis
2007, three per year
http://www.tandf.co.uk/journals/titles/17512786.asp
"Devoted to: the study and analysis of significant issues arising from journalism as a field of professional practice; relevant developments in journalism training and education, as well as the construction of a reflective curriculum for journalism; analysis of journalism practice across the distinctive but converging media platforms of magazines, newspapers, online, radio and television; and the provision of a public space for practice-led, scholarly contributions from journalists as well as academics."

Journalism Studies
ISSN: 1461-670X
Taylor & Francis
2000, bimonthly
http://www.tandf.co.uk/journals/titles/1461670X.asp
"Provides a forum for the critical discussion and study of journalism as both a subject of academic inquiry and an arena of professional practice. The Journal's editorial board and contributors reflect the intellectual interests of a global community of academics and practitioners concerned with addressing and analysing all aspects of journalism scholarship, journalism practice and journalism education."

Mass Communication & Society
ISSN: 1520-5436
Taylor & Francis (for Association for Education in Journalism & Mass Communications)
1973 (as *Mass Comm Review*), quarterly
http://www.tandf.co.uk/journals/titles/15205436.asp
"Publish[es] articles from a wide variety of perspectives and approaches that advance mass communication theory, especially at the societal or macrosocial level. It draws heavily from many other disciplines, including sociology, psychology, anthropology, philosophy, law, and history. Methodologically, journal articles employ qualitative and quantitative methods, survey research, ethnography, laboratory experiments, historical methods, and legal analysis."

Media, Culture & Society
ISSN: 0163-4437
Sage
1979, bimonthly
http://www.sagepub.com/journalsProdDesc.nav?prodId=Journal200958
"Forum for the presentation of research and discussion concerning the media, including the newer information and communication technologies, within their political, economic, cultural and historical contexts."

Media Ethics
ISSN: none
Media Ethics
1993, semiannual (was *Media Ethics Update* through 1992)
http://www.mediaethicsmagazine.com

"To provide a forum for opinion and research articles on media ethics."

Media History
ISSN: 1368-8804
Taylor & Francis
1998, three a year
http://www.tandf.co.uk/journals/titles/13688804.asp
"Interdisciplinary journal which welcomes contributions addressing media and society from the fifteenth century to the present. Its perspective is both historical and international. It will explore all forms of serial publication in manuscript, print and electronic media and will encourage work which crosses the boundaries of politics, culture and communications."

Media Psychology
ISSN: 1521-3269
Taylor & Francis
1999, quarterly
http://www.tandf.co.uk/journals/titles/15213269.asp
"An interdisciplinary journal devoted to publishing theoretically-oriented empirical research that is at the intersection of psychology and media communication. These topics include media uses, processes, and effects."

Media, War and Conflict
ISSN 1748-0493
Sage
2008, three per year
http://www.sagepub.com/journalsProdDesc.nav?prodId=Journal201796
"Maps the shifting arena of war, conflict and terrorism in an intensively and extensively mediated age. It will explore cultural, political and technological transformations in media-military relations, journalistic practices, and new media, and their impact on policy, publics, and outcomes of warfare."

New Media & Society
ISSN: 1461-4448
Sage
1999, bimonthly
http://www.sagepub.com/journalsProdDesc.nav?prodId=Journal200834
"Engages in critical discussions of the key issues arising from the scale and speed of new media development, drawing on a wide range of disciplinary perspectives and on both theoretical and empirical research."

Newspaper Research Journal
ISSN: 0739-5329
University of Memphis (for the Newspaper Division of the Association for Education in Journalism and Mass Communication)
1979, quarterly
http://www.newspaperresearchjournal.org
"Answers questions about U.S. newspaper performance and related topics of interest. Significant themes of research range from balance and fairness to the use of computer analysis in newspaper reporting."

Political Communication
ISSN: 1058-4609
Taylor & Francis
1992, quarterly
http://www.tandf.co.uk/journals/titles/10584609.asp
"Features cutting-edge research at the intersection of politics and communication, broadly conceived. Its expansive subject is the site of rapid changes and pressing policy concerns worldwide. The journal welcomes all research methods and analytical viewpoints that advance understanding of the practices, processes, and policy implications of political communication in all its forms."

Public Opinion Quarterly
ISSN: 0033-362X
Oxford University Press
1937, quarterly
http://poq.oxfordjournals.org/?code=poq&.cgifields=code
"Publishes important theoretical contributions to opinion and communication research, analyses of current public opinion, and investigations of methodological issues involved in survey validity—including questionnaire construction, interviewing and interviewers, sampling strategy, and mode of administration."

Television and New Media
ISSN: 1527-4764
Sage

2000, quarterly
http://www.sagepub.com/journalsProdDesc.nav?prodId=Journal200756

"Addresses questions of how issues of economics and power are enacted in television. The journal focuses on textual analysis, political economy, cultural history, policy advocacy, audience ethnography, and economic and power issues that have an impact on the media."

Television Quarterly
ISSN: 0040-2796
National Academy of Television Arts and Sciences

Includes informal papers by practitioners as well as more academic work, plus reviews.

Section 12

A Library User's Guide for Journalism and Mass Communication Subjects

This brief guide is designed to help users in library shelf searches on most aspects of journalism and mass communications. Almost any library of significance has an online guide or other materials on how to best utilize that particular library—and this section is intended to supplement such published material.

Although there are many schemes for organizing libraries, this guide covers the two most common systems used in academic and public collections. Indeed, many libraries use both as they decided some years ago to switch from the Dewey to Library of Congress (LC) system, but lacked funds and manpower to totally reclassify existing collections (indeed, this guide had its inception in difficulties arising from use of just such a library). The two systems detailed here are:

DEWEY DECIMAL (Dewey): Compiled by Melvil Dewey as the earliest of "modern" systems of library organization, the system first appeared in 1876 and has gone through more than 20 revised editions since. It consists of 10 classes each covering one large sector of knowledge. Most relevant to this book are 00–99 (general works), 300s (social science), 600s (technology), 700s (the arts), and 900s (history). It is still considered one of the best means of organizing a small-to-medium-sized library because it can expand with the collection, although it lacks the flexibility for a truly large collection. Citations in the Dewey system consist of numbers, often carried to two or three decimal places as human knowledge has expanded and become more complex.

LIBRARY OF CONGRESS: As the largest library in the country and one of the biggest in the world, the Library of Congress needed a completely expandable classification scheme and so several people over many decades devised the letter-number scheme now in use. It is a complicated and detailed system, and one constantly under revision. Citations in the LC scheme always begin with one or two letters and then numbers (often up to four digits or more).

Most government documents are filed by a classification scheme established by the issuing agency (state, U.S. government, League of Nations, United Nations) and are ordered by agency rather than subject. Each library handles documents differently; some file them separately, others intermix them in the stacks using the overall library classification scheme. The same holds true for periodicals—some libraries file them all in a single place by title; others arrange them throughout the library by subject. Most libraries maintain reference collections, a cross-section of the full collection filed on a non-circulating basis, and the only copy of a mass communications reference may be there.

This guide is based on the published detailed descriptions of both Dewey and LC (the latter supplements amounting to over 50 volumes) rather than on books in any specific library because each collection takes a certain amount of liberty in using the schemes. Be warned: Misclassification in journalism and mass communications topics is all too common, so be sure to check related categories.

---

Using This Guide

In an attempt to be more useful, this guide incorporates a subject division that tends to over-compartmentalize what is increasingly an integrated whole. Cable and newer media usually appear within sections labeled broadcasting (or television) on these lists.

1. General Reference–Bibliographies
2. History
3. Technology
4. Industry and Economics
5. Content
6. Research and Audiences
7. Policy and Regulation
8. International

The listing appears in two columns, with classification for the Dewey System on the left, and the newer and usually more complex LC system on the right. Following each classification is a brief notation very roughly explaining what will be found there. General references come first, followed by print and then electronic media. As much as possible, given the vagaries of both systems, similar material appears in both columns on the same line. Please understand, however, that this brief summary is suggestive rather than exhaustive.

1. General Reference–Bibliographies

LC is more complicated than Dewey in that the former has many classifications whereas the latter crowds all bibliographies under a single main number.

Dewey	LC
016.001 5 (communications) 016.659 (same, all aspects)	Z 5630 (communications)
016.301 (advertising)	Z 7164.C81 (advertising)
016.070-79 (periodicals)	Z 6940-72 (journalism)
016.384 (broadcasting business)	Z 771 1 (television in general)
016.632 (technical aspects)	Z 6455.R2 (broadcast law)
016.371-74 (broadcasting in education)	Z 5814 (broadcasting in education)

2. History

Historical references are both technical and general, and are thus often found in two places under either classification scheme.

Dewey	LC
655.1 (printing history)	Z 4-8 (printing history)
070.1 (periodicals in general)	PN 48014829 (periodicals in general)
070.9 (specific histories)	PN 4832 (magazines)

	PN 4855-4900 (American periodicals)
384.5 (radio business history)	TK 5711-5739 (wireless telegraphy history)
621.384 (radio technical history)	TK 6545-6548 (radio technical history)
	HE 8660-8678 (wireless industry history)
	HE 8690-8698 (radio broadcasting history)
	PN 1991.2 (radio programs)
384.55 (television business history)	TK 6600-6635 (television technical history)
621.388 (television technical history)	HE 8690-8698 (television broadcasting history)
	PN 1992.2 (television programs)
	D 619.3 (propaganda in WWI)
940.488 (propaganda in WWI)	D 639.P6-7 (public opinion and propaganda)
	D 753.3 (propaganda in WWII)
940.548 (propaganda in WWII)	D 910.6-7 (same)

3. Technology

Although this overlaps somewhat with history, the intent here is to stress current state of the art. Check here and under history for full coverage.

Dewey	LC
655.2-3 (methods of printing)	Z 124-242 (printing)
655.7 (specific types, methods)	Z 250-276 (all aspects of printing)
534 (sound)	QC 221-146 (sound)
535 (optics)	QC 350495 (optics)
384.5-384.54 (radio)	TK 5700-5865 (wireless telegraphy)
621.384 (radio technology)	TK 6540-6575 (radio technology)
690.523, 725.23 (antenna towers)	
384.55 (general television)	TK 6600-6653 (television technology)
621.388 (television technology)	TR 882 (television cameras)

4. Industry and Economics

Included are management, finance, advertising, industry organization, operations, personnel, and related topics.

Dewey	LC
659.1 (advertising)	HF 5801-5866 (advertising)
	HF6178-81 (advertising agencies)
070.2-3 (periodicals)	HF 5871-6141(newspapers and magazines)
	PN 4709-28 (periodical reference)
	PN 4826-99 (American periodicals)
384.5 (radio industry)	HD 9999.R15 (radio industry)
	HE 8688-98 (radio broadcasting)
659.14 (radio advertising)	HF 6146.R3 (radio advertising)
384.55 (television industry)	HD 999.T37 (television industry)
	HE 8690-98 (television broadcasting)
659.143 (television advertising)	HE 6146.T42 (television advertising)

5. Content

Most aspects of journalism and mass communication content are included here.

Dewey	LC
070.4 (periodical content)	PN 47094731, 4751-477 1 (general and reference sources for periodicals) PN 48254853 (same) PN 48774899 (specific titles in U.S. by area)
371.805 (school newspapers)	LH 1-3 (school and college papers and magazines) LB 1044.N4 (newspapers as teaching aids)
374.26 (radio in adult education)	LB 1044.5 (radio in education) LC 6751-6779 (extension courses, instruction by radio)
070.46 (broadcast journalism)	PN 4784 (broadcast journalism)
254.3 (broadcast religion)	BV 656.3 (broadcast religion)
789.91 (recordings content)	ML 155.5-157 (recordings content)
371.335 8 (television in education)	LB 1044.7 (television in education)
374.27 (television in adult education)	LC 6751-6779 (extension courses, television instruction)

6. Research and Audiences

Includes information about audiences and the influences of media on audiences (and vice versa).

Dewey	LC
001.5 (general and theoretical works communications)	P 85-92 (general works on human on communication) HM 251-299 (social psychology in general)
301.183 (social psychology of audiences) 301.343 (cultural effects of media)	
070.1 (periodical audiences, impact) 070.33 (circulation studies)	PN 4756-71 (relationship of periodicals to society)
384.5 (broadcasting audiences)	HE 8694,8697.A6 (radio audiences)
791.4445 (roles of broadcasting)	PN 1991.6 (radio's influence) HQ 784 (broadcasting and children) PN 1992.6 (television's influence)

7. Law, Policy, and Regulation

Includes all aspects of law, regulation, policy, and industry responsibility. Many of the classifications listed below are most likely found in law libraries.

Dewey	LC
323.4 (freedom of speech)	HE 8697.L5 (freedom of the press)
016, 243, 277, 364 (press law and defamation)	KF 4774-4775 (press law)
177.3 (press law)	KF 2760 (press law)

	PN 47314751 (press regulation and control)
340 & 655.6 (copyright)	Z 55 1-656 (copyright)
338.8 and 658.04 (monopoly and antitrust)	KF 1631-1663 (monopoly and antitrust)
070.11 (press ethics)	KF 5386 (business ethics)
659.1934 (advertising law)	HF 5817-19.5833 (general advertising law)
384 (general electronic media law)	KF 2761-64 (general electronic media law)
	KF 2765 (FRC and FCC)
	KF 2801-28 (radio broadcasting law)
	KF 284049 (television law)
	TK 215-255 (electronic media legislation)

8. Foreign and International

References concern foreign (domestic service within a single country) and international (services reaching across the borders of more than one country) media communications.

Dewey	LC
072-079 (periodicals by country)	PN 4701-05 (foreign periodicals)
	PN 4714, 4736 (world news agencies)
	PN 4748 (press law, by country)
	PN 4793 (foreign media training and research)
	PN 4830 (general foreign journalism)
	PN 4900-5639 (media by country)
384.5 (radio by country)	HE 8665 (wireless in specific countries)
	HE 8668-70 (international radio law)
	HE 8692-93, 8699 (broadcasting abroad)
	PN 1991.3 (foreign radio)
384.55 (television by country)	PN 1992.3 (foreign television)
301 .I52 3 (propaganda, general)	HM 263 (propaganda, general)
327.14 (propaganda and international relations)	JF 1525.P8 (government publicity and propaganda)
	JK 468.R3 (government use of radio)
	KF 2765.2 (wartime propaganda controls)
016.301 (propaganda bibliographies)	Z 7204.S67 (propaganda bibliographies)
