After three previous failures, the first successful transatlantic telegraph cable was completed in July 1866. With completion of the transatlantic cable, information and news could flow between European and North American cities in a matter of minutes. Further undersea telegraph lines expanded across the globe in coming decades.

Telegraphic News Agencies

The impact of the growing telegraph technology on journalism was soon obvious, for editors now could obtain information on events while it was still "new." Many newspapers hired reporters or established bureaus in other major cities to collect and send news back. But this independent reporting was enormously expensive, not the least because each paper paid the full rate for transmission to the telegraph companies. It was common knowledge among newspaper editors that telegraph companies were selling news from their various offices to anyone, even though it was gathered by the staff of a specific newspaper. In 1848, David Hale, publisher of the New York *Journal of Commerce,* learned that certain telegraph companies were even investigating the concept of setting up subsidiary organizations to gather and transmit news for sale. The dangers were obvious. With no government regulation or supervision, telegraph companies could make it impossible for any news but their own to move by wire. Newspapers would be forced to surrender the function of news gathering, and the news itself would be reduced to a commercial and unreliable commodity by those outside the journalism profession. Hale approached James Gordon Bennett, publisher of the New York *Herald,* about the threat.

The two proposed resurrecting a previous scheme by newspapers to pool resources. In May 1846 Moses Yale Beach (1800–68), publisher of the New York *Sun,* forged an agreement with four other New York papers to deliver news of the ongoing Mexican-American War. In the plan, dispatch riders from the front raced to Montgomery, Alabama, to place news reports on mail coaches, which carried them 700 miles to the nearest telegraph station. In offering an equal interest in the express venture to the other papers, Beach effectively created the first cooperative news service. In 1848, Beach formulated a similar venture to obtain and share European news from ships arriving at New York harbor, naming it the Harbor News Association. Hale and Bennett proposed to charter a new organization, forming the "General News Association of the City of New York" in 1851, including *The New York Times* and the New York *Tribune* with the earlier five. It was soon renamed the Associated Press (AP), America's first "wire service."

The AP, under the leadership of its first directors, Alexander Jones (1802–65) and Daniel Craig (1811–95), took on the task of joint telegraphic transmission of news stories to provide its members with a comprehensive summary of daily news. Spurred by the outbreak of the Civil War, the association expanded to include newspapers in other East Coast cities; this would be the first time that battles and developments of a war could be reported to the public within a day or so. Beginning in 1875, successive directors of the AP, over the objections and legal challenges of Western Union, secured leases on telegraph lines, allowing its messages to move untroubled by delays from other traffic. By 1892, the news agency was using nearly 23,000 miles of leased telegraph wires. The success of the AP soon lead to the birth of other wire services including the Western Associated Press, Southern Associated Press, United Press, and International Press.

Use of the telegraph to transmit news stories also led, inevitably, to a more precise and concise journalistic style. Because early telegraph lines were unreliable and prone to failure, the opening paragraphs of a news story, which came to be known as the "lead," presented the most important facts. The rest of the story contained details and background. If telegraph service was interrupted during transmission, at least the most important part would reach the editor. AP correspondents during the Civil War were even ordered to put the most important news in the first

sentence, with less crucial information following in the lead. The uncertainty and the expense of telegraph service contributed to reporters changing from a chronological style of reporting to a fact-based organization of information. Thus, the "inverted pyramid" style of writing was developed. Uncertainty also led to the practice of confirming both stories and sources, with editors often sending back messages asking for more details or ensuring that the original message was not a hoax (as might be transmitted by rivals).

Impact

Historians credit the technical shortcomings and expense of telegraph messages with a terse journalistic style, and a shift away from the flowery nineteenth-century type of news writing. An experienced Morse operator could transmit or decode 40 to 50 words a minute. Lengthy stories took an inordinate amount of time to send, and cost more. Hence, "telegraphese" evolved as an elliptical style of writing. Personal observations by reporters and other embellishments were eliminated as excess verbiage. The extensive use of abbreviations and code phrases to compress meaning into a small number of characters for ease of transmission over telegraph lines spread through journalism as well as business. Soon large commercial telegraph code books were published, less for secrecy than for keeping costs down by letting a brief combination of letters or numbers stand for a complex transaction or idea. Getting the news reading public to accept the new form of news writing took some years, but that terse, impersonal, inverted pyramid style remains the norm for breaking news.

Despite its wonders, technical limitations led to the eventual demise of the telegraph. In 1913, Western Union developed multiplexing, making it possible to send up to eight messages simultaneously over a single wire (four in each direction). Shortly before, in 1906, the teleprinter, an electromechanical typewriter, allowed transmission of news stories directly to editorial offices, and in 1914 the Associated Press adopted it for their wire service. By the 1930s a worldwide network of 60-word-per-minute teletype machines were in use by major news agencies. And, at first within cities, and more slowly over distances, the telephone displaced the telegraph, doing away with the need for codes and letting reporters speak directly to editors. The telegraph remained an important mode of news communication through and even after World War II. Western Union announced the discontinuation of all telegram service in January 2006. Only 20,000 telegrams had been sent the year before, compared to 20 million in 1929.

The telegraph ushered in an era of rapid, regular, and reliable communications. As a result, the telegraph transformed the nature and style of journalism. Newspapers could deliver the latest information on events and details could be quickly checked and confirmed. Readers came to expect newspapers to report national and global events in a timely manner.

Telephone

The telephone, an initial version of which was patented by Alexander Graham Bell in 1876, emerged from research into improving telegraphy. The innovation was a mechanism for delivering voice and audio signals over a short distance via wires. As with most technical developments, however, a number of possible uses were envisioned for this system of distributing sound. One interesting early application was the news and entertainment services offered in the 1890s to subscribers in several European and American cities. These "telephone newspapers" operated as early wired broadcast systems, offering a mix of news, lectures, and a wide range of other information and entertainment options (including church services, concerts, and class lessons). However, with the rise of telephone's second major innovation, the concept of a switched network, where signals were directed to specific recipients rather than broadcast generally, systems found increasing value in the telephone as an interpersonal communication device rather than as a mass medium. With the rise of radio, the remaining "telephone newspapers" were quickly supplanted by the more mass-oriented broadcast medium.

Development and Diffusion

Telephony's two innovations, combined, helped set it apart from existing communication systems, broadened its usability, and prompted its growing diffusion. First, its use of the voice rather than Morse code for messages created a system that could be used by almost anyone. Second, its development as a switched system allowed for a more private, point-to-point network and permitted more efficient accommodation of multiple occasional users. This allowed for development of an interactive, and broadly public, telecommunication system. Widely established in America and Western Europe by World War I (1914–18), the telephone had a number of broad social and economic impacts. Diffusion continued worldwide, particularly in urban areas, and more widely in the United States as a result of a set of policies promoting the idea of universal service. By World War II (1939–45), the telephone was nearly ubiquitous in urban areas, providing local, long distance, and (expensive) international connections.

The initial impact of the telephone on the practice and profession of journalism was arguably as transformative as that of the telegraph, although developing more slowly and on a different scale. The telegraph transformed the industry; it emphasized timeliness and, through the rise of news agencies, standardized reporting styles. The telephone more slowly transformed the newsroom for it allowed reporters to phone in breaking stories, rather than having to travel back to the paper's home office to write them. While having some impact in terms of saving time (and promoting same-day publication), the greater effect was on the structure and operation of newsgathering. Instead of reporters being solely responsible for every component of a story, from coverage and research to writing final copy, the process was increasingly divided up among specialized workers. A field reporter might gather information, from which a rewrite editor or desk reporter would assemble the story into finished form. While a single person could serve all of these roles, efficiency suggested that the time, energy, and expense of traveling back and forth from the newsroom to story locations could be better served by separating the functions. In addition, the telephone allowed editors and reporters to more quickly reach each other, allowing rapid changes in assignment depending on breaking events. In larger papers, this led to the rise of a city editor, who could track and shift assignments as warranted by the day's events.

The impact of the telephone on broadcast station newsroom structure and operations was not as significant, as radio news operations were relatively small until the mid-1930s. Still, the telephone contributed to the rise of radio journalism as competition for print on both a national and local level.

By 1930 radio networks had emerged, using leased telephone lines to feed network signals to affiliate stations, allowing for the development of regional, then national programming, including

newscasts. Starting in the mid-1930s, U.S. radio networks had created news organizations providing national coverage in regular newscasts, sometimes supplemented by smaller local news operations at affiliate stations. The ability to provide national coverage was a competitive advantage unmatched by any newspaper of the period, offering a niche for the small, often underfunded news operations to develop.

Another competitive advantage came from the ability to use the telephone for "live" reports from the scenes of breaking news. Hampered by the mechanics of printing and delivery, newspapers could not bring breaking stories to the public as quickly as could radio. Nor, print media journalists discovered, could their reports have the same impact. Epitomized by CBS reporter Edward R. Murrow's live dispatches from London during the 1940 Blitz of London by Nazi Germany, reports from the scene brought an immediacy that newspapers could not and became a staple of radio journalism.

The early days of television journalism were able to incorporate some of radio's application of the telephone, but on a limited scale. Reliance in the early 1950s on film, and (after 1956) videotape, for visual news coverage limited stations' ability to go "live." By the 1970s, television (and later cable) news organizations were able to integrate microwave and satellite systems in their efforts to expand the range of "live" coverage.

The Cell Phone Revolution

Wireless telephones offered a different level of freedom and opportunity in news reporting. News organizations were generally quick to take advantage of various wireless telephone systems. Like the telephone emerging from the telegraph, the cell phone as a communications system had its own wireless precursors in the early commercial application of radio telephony. Prior to World War I, the primary commercial foundation for radio was as an adjunct to the telephone, although it was mostly for maritime and long distance applications. However, after World War I, the emerging potential of radio as broadcasting quickly pre-empted by the commercial business model. After World War II made more frequencies and new technologies economically viable, the Federal Communications Commission (FCC), in 1947, authorized mobile telephony as a local service option. However, technology and spectrum availability severely limited its use, as few channels were made available over what were generally large urban coverage areas, and these required high power levels for transmission at both ends of the line.

The concept of cell phones was developed (starting in the late 1940s in AT&T's Bell Labs) as a means around these limits—by breaking the larger radio signal coverage area into smaller cells, the limited number of channels could be reused across multiple cells throughout a given area, and the smaller distances required less transmission power. A simple cell system would permit more users and let them use smaller, more portable handsets. The remaining technical challenge was the development of a management system which could track users and switch calls from cell to cell during travel. The development of information processing technologies made the concept viable in the late 1970s, and the FCC authorized commercial cell phone services in 1982. Demand for analog cell phones quickly outstripped the limited initial bandwidth assignments, leading to continued rounds of increased channel allocations, and the gradual shift to digital cellular systems in the 1990s that allowed for greater multiplexing, letting more users on the system simultaneously.

Diffusion and adoption of cell phone systems has continued at high levels, fed by a combination of their economic advantages (cell technologies offer both lower construction and operating costs than traditional switched telephone systems) and rising demand tied to the convenience, freedom, and range of services offered by modern cell phones. Further, the diffusion of cell phone systems has been global in scope, aided by the use of largely compatible technologies around the world, and the development of multistandard cell phones. The economic advantages of cell phone technologies, and the speed with which they could be introduced, contributed to their becoming the telephone system of initial choice in many developing nations.

On a fundamental level, the cell phone has increased the impact of the telephone on journalism. With access to a wired outlet no longer required and flat-rate national access to a system for direct connection between reporter and newsroom increasingly offered by service providers, the

cell phone has expanded the scope, speed, and reach of reporting. No longer tied to wires and physical locations, the global scope of cell phones (and related satellite phone systems) means that reports can be made, live, from virtually any spot on the globe that a reporter can reach. But the modern cell phone is more than a wireless phone. Modern cell phones often incorporate the potential for text and digital communications, picture taking, and even the creation of short video clips. While such images and video are generally not up to the technical standards of professional news outlets, they enable visual media to tap into that sense of immediacy without requiring extra equipment (particularly for unanticipated news events).

A Changing Landscape

The rise of the cell phone as a multimedia device has also contributed to the development of citizen journalism; those at the scene of breaking news can use their cell phones to capture images and video of events and share them with friends (and sometimes the news media). This may have a growing impact on the practice of journalism, as reporters may no longer be the first people with recording devices to reach the scene of a newsworthy event and may increasingly rely on footage captured by private citizens to put together their reports.

Cell phone–based citizen journalism could come to challenge traditional media on several levels. Content from cell phones feeding blogs can bring a speed and immediacy to coverage of breaking news that traditional news outlets would be hard pressed to match. And not only may these new citizen journalists be first with the news, their independent documentation of events may increasingly be used to challenge other, particularly "official," reports.

Teletype

A teletype (teleprinter, teletypewriter, or TTY for TeleTYpe/TeleTYpewriter) is a now obsolete electro-mechanical typewriter which can be used to communicate typed messages from point to point through a simple electrical communications channel, line or wireless. The most modern form of these devices was fully electronic and used a visual display unit with a hard copy printer. The term *teletype* was a trademark of the major American company that manufactured the machines, the Morkrum Company, though it came into general use as well. For much of the twentieth century, teletypes were a vital part of news agency communication with subscriber newspapers.

Origins

The mechanical typewriter was developed in 1867 and was in large-scale U.S. production within a decade, directed primarily at government and business office use. In telegraph offices, operators would listen to the Morse sounder and directly type plain language messages (transcription) onto telegram forms for hand delivery to recipients. Developing a means of mechanizing that transfer would greatly speed up communication.

American engineer Charles Krum began to develop such a device, with financial support from Jay Morton of the Morton Salt Company. To exploit their efforts, the Morkrum Company was founded in 1906 to make Krum's machines, into which an operator would type alphanumeric characters.

New York and Boston were linked in 1910 and the Associated Press began to transmit news to competing New York newspapers four years later. Other news agencies followed suit.

By 1918, the company employed 200 people. The first general purpose teletype that used that name in marketing appeared in 1922. In 1925, a merger between Morkrum and Kleinschmidt Electric Company created the Morkrum-Kleinschmidt Company, which in 1929 became the Teletype Corporation. Some 25,000 teletypes had been sold by this point. In 1930, Teletype Corp was purchased by AT&T and became a subsidiary of its Western Electric manufacturing arm.

For much of the twentieth century, teleprinters (the European term; in the United States, they were called teletypes after the American company that made them) were employed extensively by news agencies and businesses in general. In 1925, the Press Association, the domestic British news agency, began to use a teleprinter network to serve London-based daily newspapers. By 1929, the Reuters and Havas news agencies inaugurated the use of teleprinter networks to service, respectively, Europe and Latin America. But expansion across national borders was often slow due to developing technical standards, overall cost, and agreements on tariffs for journalists and other users.

Concurrently developed with these expanding teleprinter networks was telex (or TWX in AT&T parlance). Starting in the 1930s, large telecommunication carriers began to develop systems that used telephone-like rotary dialing to connect teleprinters. These new devices were called "telex," (combining *tel*eprinter and *ex*change), and they sent code in a system of automated message routing. The first wide-coverage automatic public telex network was implemented in Berlin and Hamburg by the German post office in 1932 and was quickly followed by other technically capable nations before World War II. Although often expensive, telex aided foreign correspondents in getting stories back to their news agencies or papers.

Wartime demand pushed the American Teletype Corporation's machine production up fifteenfold from 1939 to 1944 (by which time 90 percent of its effort was war related), and similar demand impacted Creed, the British teleprinter firm. Communication between Prime Minister Winston Churchill in London and President Franklin Roosevelt in Washington, for example, often used teletype machines with encrypted communication.

Teleprinter networks greatly expanded in Europe and elsewhere after World War II. In Britain, a multichannel teleprinter network connecting newspapers throughout the country was opened in 1949. Six separate channels were used with a capacity of 400 words per minute. The Exchange Telegraph Co. and British United Press operated teleprinter networks of their own to the London and a few provincial papers. Yet by the early 1950s, nearly 30 nations, including 8 in Europe and 9 in the Americas, still lacked teleprinter networks for the press. Developments of coaxial cable and radio links helped expand teleprinter links later in the decade and into the 1960s.

The Teletype Corporation moved to Skokie, a northern suburb of Chicago, in 1960, thus allowing its 6,000 workers to be housed in one modern factory. By the early 1980s, the company introduced new models with electronic display terminals and a variety of printer types.

Demise

A combination of changing technology and regulation ended the long reign of the teletype. Teleprinter operations gradually declined with the introduction of fax and visual display units (cathode ray tubes) from the late 1970s. Today, any personal computer with a printer equipped with a serial port can emulate the functionality of a teleprinter.

In 1984, the divestiture of the Bell System resulted in the Teletype name and logo being replaced with that of AT&T as consolidation started to take its toll. Operations were consolidated in Arkansas and the last remnants of Teletype Corp disappeared by 1990 as manufacturing shifted to overseas sites. Today, its former Skokie, Illinois, headquarters and factory site is a shopping mall.

Television Evening News

See Evening News, Television

Television News Magazines

A television news magazine is a program offering several (typically three or four) segments that each focus on a different story, often presented by a different reporter. Such programs generally focus on soft rather than harder cutting-edge news, on stories driven by personality, investigative reporting, crime news, celebrities, and social trends. Most of them have increasingly trended toward tabloid news.

Origins

By the late 1970s, commercial network documentaries were disappearing given their reliance on a single hard news topic per program, their production cost, relative lack of advertiser interest, and the controversy (and sometimes legal actions) that often resulted from their airing. Only public television's PBS offered regular documentary series. As cable networks developed in the 1980s, they took over much of the documentary role from the broadcast networks. One question facing the broadcast news divisions was how to fully utilize the reporters and stories that often could not fit into the half-hour evening newscasts. Compared to comedy and drama, news material was relatively inexpensive to produce—and while it appealed to smaller audiences than entertainment, those viewers were influential. What was needed was an additional way to feature those reporters and stories without building whole programs around each of them. Perhaps a program with multiple segments was an answer.

One early example of this "magazine" concept applied to television was *Omnibus* (1952–61), what might be dubbed a high-brow cultural variety program. It was broadcast on Sunday afternoons or evenings (in the days before more lucrative professional sports crowded out culture programming), funded by the Ford Foundation, and hosted by the urbane former BBC journalist Alistair Cooke. *Omnibus* featured diverse programming about science, the arts, and the humanities, and included original dramatic works, interviews with celebrated people, and performances by many famous actors, singers, and dancers. It aired originally on CBS, then ABC, before finally moving to NBC in 1957, where it was irregularly scheduled until its demise.

Another application of the magazine approach could be found in the ABC network's *Wide World of Sports* which, beginning in 1961, offered programs made up of multiple segments featuring different sports and locations. Viewers could often see sports that had little presence on television outside of the Olympics, or little previous exposure at all. Originally designed as a summer replacement, the 90-minute telecast became a permanent part of the network's offerings (and was still on the air in the first decade of the 2000s).

Finally, two foreign television news-related programs provided more controversial examples of what could be accomplished with the television news magazine. The BBC's *That Was the Week That Was* series lasted for two seasons (1962–63), and focused on a satirical look at news events. NBC ran an American version in 1964 to 1965. *This Hour Has Seven Days* aired by the Canadian CBC network (1964–66), melded satire with serious segments. Both the British and Canadian series, which provided multiple segments or stories in each broadcast, were popular but created huge controversies at the same time. The mix of satire and news was simply too controversial for many viewers, especially in stories that parodied national leaders or concerning social or political subjects that some viewers perceived as very serious matters, not to be treated with humor.

60 Minutes

The pioneering American network news magazine, CBS television's *60 Minutes,* developed from an idea of longtime CBS news producer Don Hewitt. In a now-famous memo written in 1967, Hewitt asked network officials if "somewhere in all the minutes of make-believe . . . couldn't we make room for 60 minutes of reality?" (quoted in Murray 1999, 237). The resulting program initially aired on September 24, 1968. Designated for Tuesday nights, alternating weeks with other CBS News programs, it featured the quite different reporting styles of Mike Wallace and Harry Reasoner. The trademark Aristo stopwatch opening was at first used only as background to the ending credits, but was quickly added to begin the program. Early seasons were a mite precarious as competing entertainment programs kept its ratings low.

60 Minutes first shifted to its Sunday evening perch in January 1972, though there was more schedule tinkering until 1975 when the Sunday night slot became permanent. The program has remained there ever since and is now the longest running television program still in production. It does still face a problem—preemption for afternoon professional sports programming that run long. In 1980, the program achieved the top spot in prime-time ratings of all network shows, and rarely fell out of the top ten programs for years thereafter. Success bred revenues as large audiences allowed a higher charge to advertisers who clamored to reach the news magazine's upper-middle-class audience.

The gist of the program has remained unchanged from day one—three or four segments or stories, each reported by one of the *60 Minutes* team of journalists. The program staff consists of numerous production teams, each of them working on a variety of stories and vying for inclusion in the broadcast. The stories varied widely, and ranged over both hard and softer news. From time to time, alterations in approach were tried. During most of the 1970s, the brief "Point/Counterpoint" debates were featured. During each program a given issue would be discussed by James J. Kilpatrick on the political right and Nicholas von Hoffman (later Shana Alexander) on the left. The now trademark light commentary by Andy Rooney at the program's end replaced the debate in 1979.

The biggest changes came in the lineup of star reporters who were the public face of the program. Harry Reasoner left after just two years when he moved to ABC in 1970—but returned in 1978 and stayed a dozen more years. When he departed, reporter Morley Safer was added (and by the late 2000s was the longest-serving member of the reporting team). Dan Rather was a *60 Minutes* reporter beginning in 1975, departing when he became the network news anchor in 1981 (he returned briefly in 2005–06). Ed Bradley began his quarter century with the program in 1981, and Diane Sawyer was the first female reporter on the series, serving from 1984 until her, departure for ABC in 1989. Meredith Vieira replaced her and correspondent Steve Kroft joined the program the same year. Leslie Stahl joined in 1991, and Christiane Amanpour served for a decade beginning in 1996 before departing for CNN, the same year Bob Simon joined the program. Scott Pelley became part of the team in 2003. Mike Wallace, the senior reporter in every sense of the word, retired in 2006.

After four decades on the air, *60 Minutes* has become the quintessential news magazine, and one that has avoided some of its competitor's problems. It has successfully melded hard and softer news and avoided the overall trend toward tabloid content.

More Magazines

Tracing the growing success of *60 Minutes* and acknowledging the lower cost of news compared to most entertainment programming, ABC and NBC networks slowly joined the newsmagazine bandwagon and CBS created additional such programs.

The first challenge came from ABC with its *20/20.* Originally created as a temporary summer replacement, the inaugural broadcast in 1978 (a decade after the premier of *60 Minutes*) received scathing reviews. The network made drastic changes to the program and the semiretired Hugh Downs was recruited to take on the role of sole host on the following week's program. *20/20* slowly evolved into a standard newsmagazine broadcast once a month before acquiring a regular Thursday night slot beginning May 31, 1979. Barbara Walters joined the cast in 1979 as something less than a co-anchor and soon became a regular special contributor in the fall of 1981. In

1984 she became Hugh Downs's equal, thus reuniting a duo that had already anchored together on NBC's *Today* from 1964 to 1971. The team would remain together on air until 1999 when Downs retired. Walters served as solo anchor as other co-anchors were tried with her. Walters chose to go into semiretirement as a broadcast journalist in 2004, remaining a frequent contributor. ABC News reporter Elizabeth Vargas was promoted to the co-anchor spot.

Only in 1985 did CBS add a second news magazine to its successful *60 Minutes*. Named for the New York City location of CBS News, *West 57th* would run for four years with Meredith Vieira and Steve Kroft sharing the anchor role. Each broadcast provided several segments. A third CBS program, *48 Hours*, drew its idea and original format from the September 2, 1986, CBS documentary "48 Hours on Crack Street" about the drug crisis plaguing many American neighborhoods. Like the original documentary, the series originally focused on showing events occurring over a 48-hour span. This approach was phased out by the early 1990s, and the program now delves into a single subject (typically crime and human interest mysteries), examining it from multiple angles with saturation coverage and action style. It remained on the air into the latter part of the first decade of the 2000s.

PrimeTime Live began on ABC in 1989, hosted by Sam Donaldson and Diane Sawyer, the latter lured away from CBS and a slot on *60 Minutes*. At first, the program was broadcast live and used a studio audience. Interviews made up part of its content. Over time the format changed and the audience was eliminated. Investigative reporting, including the use of hidden cameras, became a trademark of the program. It was melded into *20/20* from 1998 to 2000, and then reemerged in 2000 with Charles Gibson having replaced Donaldson.

NBC Dateline first aired in 1992, co-hosted by reporters Stone Phillips and Jane Pauley, though many others contributed. It quickly established itself with a focus on human interest and crime stories, prompting some criticism about its tabloid focus. Ann Curry has served as the program's anchor since 2005.

Over strong objection by producer Don Hewitt, CBS sought to expand its news magazine franchise still further when it introduced *60 Minutes II* in 1999. Hewitt was said to have hated the reuse of his program's name. Appearing at first on a Wednesday evening, later Friday, the program had a separate production and on-air staff from the Sunday night original. Although it won numerous awards, it ran into trouble in September 2004 when it broadcast a segment narrated by Dan Rather alleging that President Bush had been declared unfit for duty while in the Texas Air National Guard in the 1970s. The authenticity of the documents on which the segment was based were fairly quickly called into question, and after an investigation, a number of producers were forced to resign. Dan Rather resigned his CBS anchor post in 2005—and *60 Minutes II* ended in September. Reporters Bob Simon and Scott Pelley moved to the Sunday night program.

Comment

The news magazine format has proved an enduring one because of its appeal and relatively low cost. Some programs have been controversial and a few have led to court cases. The clear trend in recent years has been to a more tabloid approach in lieu of hard news. The programs are heavily promoted on their respective network evening news programs and elsewhere. They draw decent ratings, especially given their low cost.

Since the first airing of *60 Minutes* in 1968, the competitive picture for the broadcast networks has changed considerably. Public television has taken over much of the public service documentary role once held by the networks and cable television has since the 1980s offered stiff competition for hard and soft news formats. News magazines have generally succeeded (some have been short-lived) because of their combination of relatively low cost with respectable audience ratings. They rarely add much to the day or week's news menu, though occasional controversies (not to say scandals) highlight their role, as well as their limitations. The longevity of several news magazines attests to a winning combination of economics and appeal.

Terrorism, Coverage of

Political violence—especially its two most significant and visible forms, terrorism and political assassination—has arguably been an important journalistic topic since the creation of newspapers. News of the 1865 assassination of U.S. President Abraham Lincoln, the first President to die from violence in office, was transmitted within a day from coast to coast by telegraph, and newspapers covered the event and its aftermath for days, though more extensively in some areas of the country than others. While a far cry from the almost instantaneous, worldwide blanket coverage of the September 11, 2001, attacks, it is noteworthy for its time.

Given that they are political events intended to send a political message, terrorism and to a lesser extent assassination are loaded terms. There is nevertheless some degree of consensus about each. Terrorism generally refers to violence or threatened violence against civilians to achieve a political or social objective, whereas assassination is the politically motivated murder of an individual, usually a government official, candidate, or politician.

The very substance of these events makes them irresistibly newsworthy. They are significant, exciting, dramatic, controversial, and emotional, all key ingredients for major news stories. Furthermore, the perpetrators of these acts recognize their attractiveness to the media. Media coverage helps create the "propaganda of the deed," as one Italian radical long ago put it. A number of media observers believe terrorism and assassination have a symbiotic relationship with media journalism. Each benefits, at least to some degree, from the other. Terrorists, and sometimes assassins, need publicity to communicate their violent political message to target governments and publics, inspire and possibly build a following, gain support and prestige, and help achieve their policy goals in the process. The media in turn are provided with a subject and story that appeals to audiences and most journalistic values.

Several key issues surround the journalistic practices regarding these events, including how journalists go about covering them; assessing the nature of that coverage; the impact of terrorism and assassination journalism on the public, the government, and the perpetrators themselves; responses to these perceived effects; and the impact of new media technologies.

Reporting Events

Although every case of terrorism or political assassination is unique, journalists appear to approach major acts of political violence in similar ways, treating these events much like other major crises. Prominent, in-depth, and even saturation coverage generally follows, sometimes driving all other news off the front pages or lead broadcasts. The assassination of President John F. Kennedy in November 1963 became a major media event, with all other programming blocked out by the three major networks, with no commercials, for four days afterward. The September 11, 2001, attacks in New York and Washington, D.C., dominated news for weeks, to the extent of almost eliminating other stories. Similarly, the 1998 U.S. Embassy bombings in Africa remained the top

story in many countries' newspapers for almost two weeks, replacing other stories. Some scholars argue that even minor terror attacks—such as the mostly unsuccessful World Trade Center bombing in 1993, or the burning of various new housing developments by "eco-terrorists" in the early twenty-first century—merit substantial coverage, due to their newsworthiness. Similarly, one study of newspaper editors following two attempts on President Ford's life found that even unsuccessful assassination attempts were front-page news.

Both terrorism and assassination journalism likewise share attributes from other reporting genres, including those for disasters, crime, and war. Like disasters, major terror attacks and assassinations create a "breaking news" crisis atmosphere and lead to a focus on the rescues and emergency personnel, victims and their loved ones left behind, the damage (physical or otherwise) caused, and the healing or repair of it in the aftermath. The search for those responsible; the investigation into the attacks, their meaning, planning, and execution; and even postmortem into causes and future preparations, parallels quite closely the motifs of "true crime" journalism. If a military or police-type response from the government is launched, such as is the case in certain terrorist incidents, then a combat mode of reporting is utilized, as the retaliation is chronicled and evaluated for its degree of success. The degree of adherence to these elements depends upon the nature of the violence: a hostage crisis, for example, or a lone assassin, will probably be portrayed only as a crime drama. Yet, in major terror attacks, a pattern does emerge: the initial shock, horror, and disaster response; the investigation, the pursuit of the culprits, and eventually perhaps their being brought to justice; or lastly, a military action to do just that.

On-the-spot, observational reporting may be limited by the context of these events, depending upon whether reporters are directly on the scene and what access they have. For example, during the Kennedy assassination, most White House and other correspondents were traveling on a bus in the motorcade far from the President's limousine. Journalists were thus forced to rely on secondhand accounts from spectators and to a lesser extent from local reporters who knew the area and had better access and sources. On the other hand, the locus of the September 11, 2001, terror attacks in New York and Washington, D.C., the attack sites were easily accessible to journalists, since most national news originates from those two cities—indeed, this may have been one reason why buildings like the World Trade Center were chosen as targets. Proximity also affects the type and amount of stories and subject matter. Comparative studies of media coverage of terrorism from North America, Europe, and Africa confirm that portrayal of these events is influenced by where they take place. Terror attacks that occur in the host nation or locality of a media outlet receive different treatment that those that occur on the other side of the globe. In particular, coverage is greater and is more likely to focus on the victims and impacts on the local level. Even coverage of attacks on foreign soil often contain a local component, such as listing victims from the outlet's own town or country and official reaction from its own leaders in addition to the nation that was struck.

While globalization of media and international journalism may theoretically mean that cases of political violence in one locale will be covered by the media of another, it is nevertheless the case that local angles continue to influence the coverage of these events. One can only presume that a similar pattern exists with regard to political assassinations.

It is also clear that terrorism and assassinations promote a "journalism of unity," that celebrates or emphasizes community values in media portrayals. Indeed, media coverage of the aftermath, the victims, and mourning help bring the community back together and see their interconnections. It commemorates and reconstitutes the common identity of the society and reinforces its worth against the forces that attacked it. Such coverage may also help shape the collective memory of the event (or person) in the future, helping to construct powerful symbols that leaders, journalists, or others may subsequently draw upon. Examples include depictions of the heroic martyrdoms of Abraham Lincoln, John F. Kennedy, Martin Luther King, and Yitzhak Rabin following their assassinations, or the public, mediated memorial services for the victims at "Ground Zero" of the Murrah Federal Building in Oklahoma City in 1995, the American Embassy in Nairobi, Kenya, in 1998, and the twin towers of New York's World Trade Center in 2001, following the terrorist attacks in each place.

Factors that influence reporting political news in general similarly effect coverage of acts of terrorism, such as the competition among political actors for control of the news agenda and the nature and interests of the society within which journalists operate. Studies of coverage of the Palestinian *intifada* uprising and cross-national comparisons of terror attacks demonstrate that cultural or ethnocentric biases color the depiction and interpretation of acts of political violence. These differences may be related to audience tastes as well: Osama Bin Laden may be covered quite differently in Western as opposed to Arabic media outlets, for example, in part because of their public's differing political sympathies.

Assessing Terrorism News

These features of terrorism and assassination journalism have inevitably led to assessments of that coverage and how well journalists do their jobs. Since political violence is so extreme, and leads to loss of life, it is not surprising that reporting of it generates intense debate among media watchers. Several evaluations of terrorism and assassination journalism can be found in the literature on this topic.

Coverage "Overkill"?

Some observers argue that media overplay these events, giving them far more attention than they merit. As noted earlier, even minor terror attacks and failed assassination attempts result in heavy, and often lasting, coverage by the media. Granted, assassinations of heads of state or major terrorist attacks that cause great human suffering and physical damage like those of September, 11, 2001, rightly deserve great media attention, but one could make the case that even the John F. Kennedy and Yitzhak Rabin assassinations or the September 11 attacks were overblown, given that they completely dominated the news for a week or more to the expense of all other topics. The argument is that by making political violence so prominent, journalists inadvertently contribute to the propaganda, prestige, and psychological impact of terrorists and assassins, providing them with the public attention they desire.

Too Sensitive to Perpetrators?

A related critique charges that media coverage is too sensitive to those who commit such acts. By treating them as major news figures, sometimes on par with government leaders, the argument goes, the media intentionally or unintentionally grant them and their political agenda a soapbox. For example, the deadly bomber of the Murrah Federal Builidng in Oklahoma City, Timothy McVeigh, was granted interviews by media outlets to express his views and perspectives. Likewise, videotaped messages by leaders of the Al Qaeda terror network instantly become big news in media outlets across the world upon release, and the Israeli media gave Yigal Amir, the right-wing extremist who killed Rabin, a vehicle to justify why he did it. Still, other studies argue that while indeed terrorists receive coverage, the tone is rarely favorable.

Too Progovernment?

Others argue instead that journalists may be too "progovernment" or cede too much control to officials and dominant elite perspectives following these incidents. While not advocating that the press provide equal treatment to terrorists, nevertheless this perspective suggests that journalists go to the opposite extreme and grant the government too much unquestioned authority. By relying upon official sources and responses, becoming "cheerleaders for the system," and presenting "rally 'round the flag" depictions of national unity that follow major attacks or assassinations, reporters surrender their neutral observer status as well as fail to perform their critical, independent "watchdog" function. Instead, journalists become openly favorable toward the government in power, as when, in the weeks after September 11, American television reporters wore flag lapel pins, unabashedly cheered on the United States in the war against Afghanistan, or publicly proclaimed their support for the government—as CBS News anchor Dan Rather did on a talk show by saying, "If [George Bush] wants me to line up [to fight], just tell me where." This approach in turn narrows the range of ideas presented by the press, thus stifling debate and depriving the public of information that might provide valuable reflection and democratic deliberation. Some might rebut that given the patriotic response by the public (their audience) and politicians (their

sources), it is not surprising that journalists would react similarly. But this critique essentially says that uncritically passing on government propaganda is just as bad as passing on the extremist propaganda of those who commit political violence.

Too Sensational?

Another perspective—not necessarily at odd with the others—criticizes journalists for sensationalism. Journalists hype up the drama, focus on (some say exploit) the victims and the "human angle" of the tragedy, thus trivializing it. In this view, the journalistic focus on blood, damage, and chaos—or personalization and conflict—comes at the expense of discussions of the larger contexts that might help the public understand terrorism and political violence.

Too Much Fear-Mongering?

A related critique attacks news media for playing on or creating public fears. The excessive amount of dramatic, sensationalistic coverage noted above has the effect of exaggerating the threat of political violence and unnecessarily heightening public anxiety. Indeed, some studies have shown that attention to crime news promotes greater anxiety; while the evidence is less clear with terrorism, some evidence suggests a similar pattern, where those who pay greater attention have greater fear, and support government actions.

Who "benefits" from this supposed media fear-mongering isn't exactly clear. Critics who see journalism as aiding terrorists and the like believe that it serves perpetrators' goals of terrorizing the population and undermines security efforts. Others, such as David Altheide in *Terrorism and the Politics of Fear* (2006), believe instead that journalists help create a climate of fear that helps governments justify increased security measures, reductions in civil liberties, and greater power and control over society in response, all in the name of fighting terrorism and political violence. Of course, both perspectives could be true.

Copycat or Contagion Effects?

Perhaps the biggest issue concerning the journalism of political violence is what impact it has on future acts. Does media coverage of political violence beget more such violence? Critics charge that by granting terrorists and would-be assassins publicity and status, both for themselves and their causes, journalists encourage people to engage in violence for political ends. As former British Prime Minister Margaret Thatcher put it, the media provide the "oxygen of publicity" to the fire of terrorism. Just as media coverage of mass murderers may encourage "copy cats," so too does coverage of these actions. Proponents of this view believe that if the media would not cover these events—or at least, would not cover them so extensively and/or favorably—much of the incentive to engage in political violence would cease to exist.

Such an argument would seem to have merit. Terrorists clearly know that media coverage and the publicity it generates is a key component of their actions. As September 11, 2001, showed, they clearly stage events to maximize their media impact. Some studies of this so-called contagion theory have found greater incidents of terrorism in an area following heavy media coverage of terrorism. Likewise, coverage of bomb threats against schools and nuclear power plants tend to increase future threats.

In addition, media attention given to perpetrators grants them celebrity status that may help them achieve their own personal or political aims. Though most criminals shun public attention to their activities, many (but not all) who engage in political violence want it. The lavish media attention that Oklahoma City bomber Timothy McVeigh, Olympic and abortion-clinic bomber Eric Rudolph, and especially "super terrorist" Osama bin Laden received turned them into household names, as was the case with assassins like Lee Harvey Oswald, Kennedy's killer. This attention is clearly attractive to those seeking fame and a platform for their views, as demonstrated by John Hinckley, who shot and seriously wounded President Reagan in 1981; Mark Chapman, the slayer of rock star John Lennon in 1980; and "Unabomber" Ted Kaczynski, who sent mail bombs to prominent scientists and business leaders in the 1990s.

Yet others think the case for "contagion" is overstated and hard to prove. Political violence existed before the media, and perpetrators have goals beyond just media attention. Furthermore,

some believe that such claims may just be an excuse used by government officials to justify more control and censorship over the media.

Responses: Censorship and Reporting Codes

Given the various presumed and known effects of terrorism media reporting, policy responses have been proposed and implemented to mitigate supposed negative effects. The two main approaches are government-mandated censorship (in varied degrees and forms) and journalistic codes of conduct.

Some analysts and policy makers believe that the stakes are so high that government secrecy toward and censorship of the media is required. They advocate governments withholding information or mandating blackouts of terrorist incidents. At the extreme, they believe governments should actively prevent media from disseminating some types of information during or after such events, a policy known as prior restraint.

Given the values of free speech and press underlying journalism, formal censorship is utilized much more often in authoritarian regimes than in democratic nations. It is sometimes, however, used even in democracies, such as when the United Kingdom banned media broadcasts by or about figures in the Irish Republican Army and its Sinn Fein organization during "the Troubles" in Northern Ireland in the 1970s and 1980s. In ostensibly democratic Russia, since 2001, the Putin regime has implemented an expanding policy of access restrictions, intimidation, physical and legal attacks on journalists, and formal censorship to control information about the conflict in Chechnya and the resulting terror attacks by Chechen rebels. The Russian legislature passed legislation in 2005 forcing all media organizations to clear stories beforehand with government counterterrorism agencies, in addition to other limits on the media.

Proponents of censorship argue that there are limits to free speech, and that the lives of actual or potential victims, and safety in general, outweigh unlimited freedom of the media to publish. Opponents retort that censorship rarely works, overstates the degree to which journalists cause or influence political violence, and destroys the very freedom that democratic governments are supposed to protect. In any event, the rise of "new media" outlets such as international cable and satellite television, the Internet, and interactive wireless phones, have effectively decreased the ability of many governments to control coverage of political violence, much like other topics.

Less extreme is the argument that journalists and media organizations should practice informal self-censorship and not publicize information that might inhibit law enforcement efforts or aid terrorist aims. For example, the major American television networks delayed, heavily edited, or even refused to broadcast some videotaped messages from Osama Bin Laden and Al Qaeda at the request of the Bush administration so as to not help the terrorist organization pass on hidden messages to its followers or grant too much attention to it. This approach obviously only works when the media organizations are sensitive to government calls or possible public backlash against the effects of their coverage.

Along these lines, media outlets, recognizing the ramifications of their actions, have developed formal "reporting codes" for use during terrorist attacks, hostage situations, and the like. A number of outlets, including CBS, the BBC, UPI, and some newspapers have formal reporting guidelines for covering terrorism. Such codes give journalists ethical and practical guidelines to follow when dealing with terrorist attacks, including ways to avoid undermining legitimate government security efforts, what information to report, and when to report it. Political scientists David Paletz and Laura Tawney, in their 1992 study of such policies, classified broadcasting agency codes into a continuum of five levels of formality. They conclude that in general, there was a strong sense that terrorism was certainly a newsworthy topic, but also policy preferences toward avoiding sensationalism, coupled with "the desire not to legitimate terrorism or provide a platform for terrorists . . . and to avoid coverage which might endanger hostages." However, not all media outlets develop policies with such sensitivity. A cross-national study of newspaper editors found that while some editors were aware of the potential for their organizations to be used for terrorist ends, as terrorism studies researcher Alex Schmid wrote in 1992, "the division of labor between the terrorist as fear generator and the unwitting editor as fear amplifier and transmitter has not been fully perceived by all those responsible for the media."

No matter how formal the reporting codes may be, however, these voluntary restraints are just that—voluntary. Training of producers, editors, and journalists in these standards and codes of conduct may be varied or spotty. News organizations, in the heat of the moment, up against competition from rivals, facing time pressures, production constraints, and the like—especially given today's global "24/7" news environment—may throw such standards out the window in practice. The perceived lack of responsibility on the part of journalists is in fact one reason why governments and even publics in democracies often favor more heavy-handed controls on media coverage.

It should be noted that these policy debates center almost exclusively on coverage about terrorism. Coverage of political assassinations has not led to the same calls for restraint, nor thoughtful reflections about its ramifications. Perhaps this is because, with the exception of coverage of the pursuit or prosecution of culprits, these events are so unexpected and final that control over their coverage seems irrelevant. There is some implication, however, that media attention may encourage publicity-seeking assassins. As for reporting codes or policies, political assassination coverage has likewise not provoked the same degree of journalistic self-reflection as to how these events should be covered. In the study of failed assassination attempts mentioned above, the editors surveyed seemed relatively oblivious to the idea that there might be a problem or that reporting policies for these events might be necessary. In that survey, 60 percent of editors believed that a newspaper's policy ought to include giving full details and factual coverage of such events without sensationalism, but 40 percent said that a general policy was difficult if not impossible because each event was unique and had to be handled differently. Beyond their policy of giving assassination attempts prominent coverage, the study found editors didn't contemplate the issue of whether their coverage encourages future assassination attempts, nor did they have a formal policy for doing so.

Conclusion

Finding the proper balance in tone or amount of coverage for these types of events is difficult. Journalists seem to be in a no-win situation in covering political violence: they face criticism for giving too much coverage, or not enough; for being too easy on the perpetrators, or being too easy (or hard) on the government; for trivializing coverage by focusing on the human angle, or being insensitive to the needs of victims.

On one hand, media are criticized by governments, law enforcement officials, and some "security-sensitive" scholars and related professionals for overblowing terrorism and assassination coverage and giving undue publicity to its perpetrators. On the other, they are criticized by other observers for passivity, following the government line, uncritically celebrating community values, feeding unreasonable fears and/or exploiting the tragedy of the victims or allowing governments to do so for political ends. Yet it is hard to argue that major terror attacks or political assassinations should not be "news" or that the media should ignore the victims.

The question is how journalism can play its proper democratic function as independent and enlightening critic in the face of events that fundamentally strike the body and soul of the polity. There are no obvious answers. Still, there is no doubt that given the symbiotic relationship between journalism and political violence, this genre of reporting will continue to be prominent, and controversial, just like its subject.

Theories of Journalism

Theories of journalism define its nature and role within the context of different societies. These normative theories do not seek to predict or interpret news media phenomena, nor do they simply describe press systems. Instead, they reflect how news media ideally *should* be structured and operated under certain political conditions and social values. Press theories provide a framework to examine the relationship of journalism and society as well as what is expected of the media according to the social environment. A basic intent of the theories is to set out ideal standards against which the performance of each news media system can be evaluated. Another important goal is to compare key aspects of journalism in different societies and categorize news media systems around the world by the essential similarities and differences. Theories of journalism, therefore, serve as guides for journalists, media critics, and scholars in the field of mass communication.

Origins

Theories of journalism derive from multiple sources. Basic elements have been drawn from perceptions about the press as disparate as those of authoritarians in the late Renaissance, John Milton, John Stuart Mill, Thomas Jefferson, Karl Marx, and Vladimir Lenin. More specific ideas centered upon professionalism, ethics, and social control. The first attempt to systematically study the role and function of mass media within a specific social setting was the work of the Hutchins Commission in the 1940s. In response to the increasing criticisms of the American press, which appeared to be moving toward sensationalism, commercialism, and monopoly—and away from objectivity—Henry Luce, co-founder of *Time* magazine, funded an independent commission of inquiry to deflect possible government intervention. Chaired by Robert Hutchins, chancellor of the University of Chicago, the commission was charged with investigating the state of journalism and the media more generally and making recommendations concerning their role. *A Free and Responsible Press,* the commission's 1947 report, provided a framework for assessing the social responsibilities of American journalism.

Subsequent studies by media scholars compared and contrasted news media systems in different social environments. Several theories of journalism have developed since the mid-1950s. Regardless of how many typologies may be suggested, there are only a few widely accepted approaches to society-news media classification. They are known as *Four Theories, Five Concepts,* and *Three Movements.* Other perspectives are more or less variations of these three models.

Four Theories

No framework of theorizing the relation between journalism and society has been more influential than the University of Illinois Press's all-time nonfiction best-selling book, *Four Theories of the Press.* First published in 1956, it has been widely taught in journalism courses and translated into more languages than any other media textbook. The authors, Fred S. Siebert, Theodore Peterson, and Wilbur Schramm, proposed a typology of four theoretical categories for understanding news media systems: authoritarian, libertarian, social responsibility, and Soviet communist. The proposition underlying the *Four Theories* model was that news media always reflect a country's system of social control.

Authoritarian theory is the oldest concept of journalism, appearing in England in the sixteenth

and seventeenth centuries. Johannes Gutenberg's innovation of printing with movable type in the fifteenth century led to a communication revolution that challenged both church and state monopolies on knowledge. In response, governments severely restricted the press to maintain absolute authority. The authoritarian concept evolved from the philosophy espoused by such thinkers as Plato, Niccolo Machiavelli, Thomas Hobbes, and Georg Hegel. They all consider the individual to be subordinate to society. Possession of knowledge is the province of authorities who justify their control as a means to protect social order. In an authoritarian system, the main purpose of journalism is to support and advance government policies. News media are allowed to operate with government's permission and subjected to government patents, guilds, licensing, and censorship. Although private ownership is provided, news media are obligated to endorse the version of the truth supplied by the national leadership. Journalism must function for "the good of the state" and cannot challenge, criticize, or in any way undermine government's authority. The authoritarian theory of journalism flourishes wherever a "strongman" type of government exists. The concept is widespread in several regions of the world, including parts of Asia, Africa, and Latin America.

Libertarian theory of journalism took root in England and the United States in the seventeenth century and arose in opposition to the authoritarian doctrine. Approval of the English Bill of Rights in 1689 laid the foundation for individual liberties. The concept of a libertarian press was drawn from the writings of John Stuart Mill, John Milton, John Locke and philosophical principles of rationalism and natural rights. Libertarianism means that humans, as rational beings, are able to distinguish between truth and falsehood. The American Bills of Rights a century later expanded libertarian principles to include freedom of the press. In the libertarian view, news media must have an independent and autonomous role to help discover truth and to place a check on government. Libertarian journalism must be free to express ideas without fear of government interference. The separation of journalism and government insures the right of all people with economic means to have access to news media. The media are controlled by "the self-righting process of truth" in a "free marketplace of ideas." In other words, individuals search for truth from competing claims. The libertarian news media, for the most part, are privately owned and free to inform, criticize, entertain, and sell. However, they are barred from defamation, obscenity, indecency, and wartime sedition. Libertarian journalism tends to exist in multiparty political economies featuring free-market capitalism. The news media systems in countries like Germany, France, and Japan are typical examples.

Social responsibility theory is a modification of the libertarian notion. It was born in the United States in the 1940s, when increasing monopolistic conditions and questionable practices on the part of news media led to the advocacy of more moral restrictions on their freedom. The writings of the Commission on Freedom of the Press (the Hutchins Commission), the work of practitioners, as well as various news media codes of ethics formed the basis of the social responsibility concept. This theory differs from libertarianism in seeing the chief purpose of journalism as raising conflict to the plane of discussion rather than checking government. Under the social responsibility theory, everyone with something to say has the right to use news media. A socially responsible media are controlled by community opinion, consumer action, and professional ethics. Journalists must avoid serious invasion of privacy rights and vital social interests. Although the free news media are privately owned, government can take over to ensure public service. The social responsibility theory implies recognition by journalists that they must fulfill obligations to warrant their freedom. Those responsibilities are (a) servicing the political system by providing information, discussion, and debate on public affairs; (b) enlightening the public so as to make it capable of self-government; (c) safeguarding the rights of the individual by serving as a watchdog against government; (d) servicing the economic system, primarily in bringing together the buyers and sellers of goods and services through the medium of advertising; (e) providing entertainment; and (f) maintaining its own financial self-sufficiency so as to be free from the pressures of special interests. Social responsibility theory guides most journalism operating in the United States.

Soviet communist theory of journalism stands at the other end of the spectrum. It flowed from the thoughts of Marx, Lenin, and Joseph Stalin with a mixture of Hegel and nineteenth-century Russian thinking. This theory is based on the premise that such ideas as rationalism and individual rights to know government business are unrealistic. Therefore, journalism in the Communist model functions to transmit governmental social policy rather than to search for truth. The press operates as a collective propagandist, agitator, and organizer to support the government and thus serve the people. Communist news media are considered integral parts of the state. They are controlled by the Communist party government apparatus. Within that system, self-criticism of failure to live up to Communist planning is encouraged, but journalists cannot criticize Party objectives. The Communist concept is an offshoot of authoritarianism but differs from its roots in several aspects. The Soviet news media model disapproves of private ownership, removes the profit motive, and emphasizes media as instruments of government. Since the collapse of the Soviet Union in the early 1990s, news media in North Korea and Cuba remain as typical examples of communist journalism in its traditional form.

Revisiting Four Theories

The four theories of journalism were revised and expanded when Ralph Lowenstein, a media scholar, added a new category based on news media ownership. Slightly different tittles were given to two of the four basic concepts proposed by Siebert, Peterson, and Schramm. Authoritarian and libertarian remained the same. Soviet communist was renamed as *social authoritarian theory* to remove the negative connotations of the original term and also to broaden its application. Social responsibility became *social libertarian* to be rid of the ambiguity in the original term and to reflect the roots of this theory in libertarianism. *Social centrist* was the new theory of journalism that institutes government or public ownership to assure the operational spirit of libertarianism.

In an attempt to broaden the social responsibility concept into a more active role, proponents of *civic* (or *public*) *journalism* suggested that news media should engage audience members in reporting important civic issues. Journalists are encouraged to reach out to the public, to give voice to the people's agenda, and to meet the needs of various social groups. Civic journalism moves beyond the role of a detached reporter in the marketplace of ideas to the role of a fair-minded participant in public life. Although the civic journalism concept has achieved only qualified success in the United States, it has been seen as a direct response to the call for socially responsible news media with a solid commitment to community service. The American civic journalism model has also been experimented with in other countries, including New Zealand.

Five Concepts

As the world's news media adapt to changing social needs, new theories of journalism have emerged to update the basic model proposed in 1956. The *Five Concepts* typology, first introduced by media scholar William Hachten in 1981, is a major deviation from the *Four Theories* approach. Significant changes have been made to sort global journalism into five distinct theories: Western, revolutionary, developmental, authoritarian, and communist. The basic tenet of this classification is that differing perceptions about the nature and role of journalism reflect the values of sociopolitical systems and historical and cultural traditions of the nations within which it operates.

The Western concept combines elements of both libertarianism and social responsibility. The theory holds that a government should not interfere in the process of collecting and disseminating news. News media are independent of authority and exist outside government. Under the Western concept, the press has the right to report and comment on, as well as criticize government without restraints. To maintain its autonomy, news media must be financially strong and profitable. Meanwhile, the privately owned press system has obligations of public service that transcend moneymaking. The Western theory is practiced in democracies with market economies that have an established traditional of independent journalism. Examples of nations meeting these criteria include Britain, Canada, Japan, and the United States.

The revolutionary concept is concerned with illegal and subversive communication, using news media to

overthrow a government or wrest control from alien or rejected rulers. Historically, effective use of communication has been a part of every revolution. In the United States, for example, Thomas Paine used pamphlets to help inspire the rebellion against Britain. In his writings, Jefferson advocated and justified the people's right to revolution. The theory of revolutionary journalism stemmed from Lenin's ideas of utilizing a newspaper as a cover for a revolutionary organization. By definition, revolutionary news media are those of people who believe that the ruling government does not serve their interests. Revolutionary journalism generally functions to (a) end government monopoly on information, (b) organize insurgents, (c) destroy the legitimacy of the rulers, (d) bring down the alien or rejected rulers. The words of the *Pravda* in the 1917 Russian Revolution and the underground press in Nazi-occupied France were classic examples of revolutionary journalism. A contemporary case was the use of audiocassettes and photocopiers by supporters of the Ayatollah Khomeini against the Shah's regime in Iran in 1979.

The developmental concept assumes that news media can function as multipliers of efforts to promote social change. This theory is a mixture of social responsibility ideals, communist ideas, as well as resentments against the West by impoverished and media-poor nations. In its basic form, the developmental concept posits that individual rights are necessarily subordinate to the larger goals of nation-building. Therefore, all instruments of mass communication must be mobilized, directed, and controlled by the central government to serve national goals in economic development, political education, and eradication of illiteracy. Development journalism should support authority rather than criticize or challenge it. News media freedom can be restricted according to the development needs of the society. Since information is a scarce national resource, news media are state property and are used to further national development. Along the same line, a nation can claim a sovereign right to control both foreign journalists and the flow of news back and forth across its borders. Although the concept of development journalism was seen as an emerging pattern associated with the non-communist nations of the developing world, it appeared to be losing momentum by the mid 1990s. Good examples of developmental media can be found in Brazil, Ghana, Honduras, and Zimbabwe, among many others.

Authoritarian and communist concepts in Hachten's classification of news media systems are similar to those of Siebert, Peterson, and Schramm in *Four Theories of the Press*. In the *Five Concepts* model, the developmental and communist theories of journalism are variations of the traditional authoritarianism. Within authoritarian societies, diversity of views is wasteful and irresponsible, while consensus is a sensible goal for journalism. Therefore, journalists generally exercise self-censorship and maintain the status quo. Therein lies a major difference between authoritarian and communist concepts. The communist news media system is planned and built as part of change and to help accomplish change. Another distinction is related to media ownership. Communist news media are state property as opposed to the privately owned press in the authoritarian model.

Revising Five Concepts

Several modifications of the *Five Concepts* typology have been postulated since the mid-1980s. Within the Western concept, media scholar Robert Picard identified democratic socialism along with social responsibility and libertarianism as coequal subcategories. The *democratic socialist theory* was drawn from a mixture of modern Marxist thoughts and the writings of classic liberal philosophers. The roles of democratic socialist journalism are to provide an avenue for expression of diverse voices and to promote democratic governance. News media are operated for the citizen's use and for the protection of the citizen's social, political, and economic rights. In a democratic socialist system, the media are instruments of the people and public utilities rather than tools of the state or privately owned institutions. To ensure the existence of news media plurality and the ability of citizens to access them, the state can intervene in media economics and ownership. Ultimately, this theory of journalism holds that ownership would be public and not-for-profit, through foundations, nonprofit corporations, journalist-oriented cooperations, and other collective organizations. Democratic socialist journalism lies somewhere between the social responsibility and developmental theories.

Along the same vein, *democratic participant theory* represents an effort to expand the boundary of the *Five Concepts* to include an alternative journalism approach. Media theorist Denis McQuail emphasized the role of news media in supporting cultural pluralism at a grassroots level. Public participation and empowerment of pluralistic groups are central to democratic participant journalism. The theory contends that individual citizens and minority groups have a right to be served by news media according to their determination of need. Therefore, the organization and content of news media can be directly controlled by group members rather than the powers of state or industry. Meanwhile, democratic participant journalism systems may receive government subsidies and training to provide their own audiences with nonmainstream, local, small-scale, interactive, and participative news media forms. The democratic participant and democratic socialist concepts represent a reaction against the abuses of private media ownership as well as state control of news media. The two evolving theories of journalism emerged in twentieth-century Western Europe and are active in Scandinavian countries.

Two other concepts of alternative journalism reflect somewhat radical theoretical perspectives on the role of news media. One is emancipatory journalism, and the other is communitarian journalism. *Emancipatory media theory* calls for a reconceptualization of development journalism by charging news media with an activist role in social change. This theory requires bottom-up reporting in forms and formats that challenge and force oppressive structures to change. By disseminating the views and priorities for development of people at the grassroots level, emancipatory journalism empowers marginalized groups and mobilizes action against unequal power. Examples of emancipatory media can be found in, among other locations, rural areas of Bolivia, Uganda, and Zambia.

Meanwhile, the concept of *communitarian journalism* emphasizes the ethical imperative of news media to engage in dialogue with the public it serves. This antilibertarian theory urges journalists to abandon the role of neutral observer in order to help construct community identity. Under the communitarian view, news should be an agent of community formation, and the goal of reporting is not intelligence but a like-minded philosophy among the public. In some respects, the communitarian concept of journalism is reactionary to "mainstream" or "dominant" news media theory. This theory does not seem to have traveled far.

Three Movements

A new approach to theorizing the operation of the media in different social settings emerged in the 1980s when scholars challenged an ideological bias underlying the libertarian-authoritarian dichotomy. According to J. Herbert Altschull, all news media systems are agents of power, and beliefs about journalism in each system are held so passionately that they are not subject to rational or critical analysis. One system's faith may be another's folly. Therefore, the operation of a news media system can only be judged against the ideal values knowable for the specific society. In devising a value-free classification, Altschull conceptualized theories of journalism as three movements of a global symphony: market, Marxist, and advancing. The three movements differ in their journalistic purposes, articles of faith, and views on news media freedom.

Market journalism is assigned with the roles of (a) seeking truth, (b) being socially responsible, (c) informing the people in a nonpolitical way, (d) serving the people impartially, (e) supporting capitalism, and (f) being a watchdog of government. In the market movement, news media should be free of outside interference to serve the public's right to know. Journalists seek to learn and present the truth and must report fairly and objectively. In the market views on news media freedom, journalists are free of all outside controls and not servile or manipulated by power. No national media policy is needed to ensure free journalism. The market movement links to the First or Western World.

Marxist journalism also seeks truth and social responsibility as defined by its own standard. Marxist media educate the people in a political way and serve them by demanding support for socialism. News media, as collective organizers, are assigned the purpose of molding views and changing behavior. In the Marxist system, journalism helps transform false consciousness and educate workers

into class consciousness. News media should provide for the masses and facilitate effective change. Journalists are believed to report objectively about the realities of experience. The Marxist theory of journalism views news media as part of the government. Consequently, a national media policy is required to guarantee that journalism takes a correct form. A free journalist should report the opinions of all people, not only those of the rich. Moreover, a journalist is required to counter oppression. The Marxist movement corresponds to practice in much of the former Soviet Bloc, China, North Korea, and Cuba.

Advancing journalism is the third model of the *Three Movements* classification. The roles assigned to the advancing media can be compared to those of the Marxist movement, but with some variations. In an advancing society, the first purposes of journalism remain serving truth, being socially responsible, and educating people in a political way. However, advancing journalists serve the people, by seeking, in partnership with government, beneficial social change. In addition, news media must be instruments of peace. The advancing movement believes that news media are unifying forces that serve the interests of the people by avoiding divisive reporting. The advancing journalist is meant to be a part of two-way exchanges, not merely one-way flow of information from journalists to the masses. Proper journalism is participatory. Under the advancing theory, news media freedom is less important than the viability of the nation. A national media policy is needed to safeguard journalistic freedom. Meanwhile, free media are not much concerned with freedom of mere information. It is more important that journalists be assured freedom of conscience than that they be flooded with information. The advancing movement applies to much of the developing or Southern World.

Closely connected to the *Three Movements* are the *three world perspectives* outlined by journalism researchers L. John Martin and Anju Grover Chaudhary. They chose the political designations of First, Second, and Third World as the basis for classifying press systems and theorized the three perspectives from six functions of journalism: the concept of news; the social, political, and economic role of the media; the educational, persuasive, and opinion-making function; the entertainment function; press freedom; and media economics.

Conclusion

Since the mid-1950s, increasingly complex theoretical ideas have expressed what news media should do under certain social norms. Normative theories of journalism, organized from various perspectives, have supplied different criteria for evaluating and comparing news media systems. By the turn of the twenty-first century, the *Four Theories* model continued to exert an immense influence. Despite its oversimplified and value-laden view, the work has been widely cited in journalism and mass communication.

Changing media, political, and economic landscapes across the world have outstripped the *Four Theories,* however, as well as two later typologies—*Five Concepts* and *Three Movements*. There have been criticisms that existing theories of journalism were constrained by the ideology and historical circumstances of their inception. The concepts of communist and Marxist media, for example, have been mostly voided with the demise of communism in the Soviet Union and Eastern Europe. In the post–cold war world, a more flexible version of media theory is needed to cope with the differences between orthodox communism (as in Cuba or North Korea) and the "pragmatic market socialism" of China, Laos, or Vietnam. Along the same line, changes in media technology have made it almost impossible to match a theory of journalism and a type of society. In the era of globalization, the World Wide Web has linked people across borders, enabling them to seek, receive, and disseminate information via transnational media that are beyond state control. On the other hand, the Internet has also provided an easy means for even the smallest groups to produce their own media, thereby creating a fragmented audience—an indicator of a Balkanization of the larger society. In settings where vastly diverse news media no longer operate as one system with shared ideals and values, traditional theories of journalism may become irrelevant.

Trade Magazines

Trade magazines are a genre of periodicals intended for specific professional communities. Also known as the trade press, trade magazines differ from general audience publications through their limited focus on a single profession or trade and their use of jargon and concepts familiar to the targeted field. Trade magazines play a crucial role in creating common bonds of community for business and industrial sector professionals who are spread throughout the larger society. These periodicals serve many functions for their communities: they act as primary disseminators of industry-specific news and advances within the field and offer a forum for addressing concerns and challenges, a place to share ideas and suggestions, and a site for targeted advertising and employment listings.

Trade magazines closely resemble general interest magazines with reporter-created articles and, most often, advertising for products and services applicable to the specific business or industry. For some professions, the trade press may also take the form of a newspaper or newsletter. These trade newspapers vary by their frequency, size, and circulation and may appeal to a specific geographical area or profession.

Some trade magazines are distributed to individual subscribers at no charge if those subscribers are a part of the business or industry in question. This "controlled circulation" type of publication subsists on advertisers, eager to reach those focused individuals. In addition, because of their subject matter, many organizations and businesses subscribe to trade magazines for the benefit of their employees. In that sense, trade magazines become a regular part of organizational communication.

Origins

During the nineteenth and twentieth centuries, trade magazines were important in the growth of professionalism. The term *professional* denotes special expertise in a particular area above that of the general population, often involving special training to gain that expertise. A profession is thus a community of individuals that share this expertise. Members of a profession attempt to erect boundaries between those who qualify as a professional and those who do not. In some instances, boundaries are maintained through official licensing, whether from an organization or from the government. For example, to be licensed as a medical doctor requires passing a series of required exams to qualify as such. While other professions lack such rigid professional boundaries, their members still maintain a sense of themselves as a specific community. It is here where trade magazines have been—and remain—important tools for establishing a professional community.

This process can be observed through the example of electrical experts in the nineteenth century. The growing number of electrical experts (in telegraphy, lighting, power, and transport) all called themselves electricians—and initiated several trade magazines in which they not only shared

innovations but also discussed the social importance of their field. As electricians sought to more clearly define their profession, their magazines became an important means for developing a shared technical lexicon. As a textual community—diffused in space, but united through the common consumption of trade publications—electricians sought to establish their expertise and authority as professionals, clearly separating themselves from nonelectricians. The trade press became an important component in the establishment of professional identities. Instead of general audience media or publications specific to a place, the trade press created communities based on an individual's employment activities.

As a professional sensibility took hold and industries grew large enough, trade magazines began to flourish. For example, *Publishers' Weekly* began servicing the publishing industry in 1872. In 1884, *The Journalist* (later *Editor & Publisher*) started as an early effort to provide a trade magazine for newspaper journalists. *Variety* began covering the stage and vaudeville entertainment industry in 1905—predating the modern motion picture industry and broadcasting.

In many instances, trade magazines develop out of professional organizations. The American Institute of Certified Public Accountants began publishing the *Journal of Accountancy* in 1905 and the *Journal of the American Dental Association* debuted in 1913. A publication shared among members has been the staple of professional organizations.

As new lines of business and industry have developed, so have trade magazines. In between the world wars, changes in media production led to the creation of *Graphic Arts Monthly* in 1929, *Advertising Age* and *Hollywood Reporter* in 1930, and the daily version of *Variety* in 1933. Broadcasting trade periodicals appeared with the innovation of radio in the 1920s—and the first trade magazines dealing with air transport appeared late in the same decade. New developments ushered in new titles: *Plastics World* (1943) and *Plastics Engineering* (1944) covered the emerging plastics industry; *Food Service Magazine,* reporting on the restaurant and foodservice industry, was introduced in 1956; and *Electronic Media* (1982) covered visual electronic media (television, cable, and video). Likewise, the rise of digital information technology has more recently led to the creation of trade magazines such as *Database Trends and Applications* (2000), *Boardwatch Magazine* (1989), and the *Web Developer's Journal* (1997).

Changing Technology

Coming up with a comprehensive list of trade press publications is a daunting task. The *Encyclopedia of Associations* notes there are over 100,000 nonprofit membership associations worldwide. There are thousands of different trades and professional associations that go with them. To serve these many players, the trade press market is diffuse, with hundreds of publishers putting out products. Reed Business Information, for example, publishes 80 business periodicals in the United States and many more throughout the world. One count by the American Business Media (formally the American Business Press) lists over 6,000 print and online trade publications.

Among the vast numbers of trade publication, circulations range from a few thousand to a few hundred thousand depending on the size of the community being targeted. For example, the *ABA Journal,* the official magazine of the American Bar Association, has a monthly circulation of 368,000 with a reach of 552,000 members of the legal profession as of 2007. The magazine estimates that it reaches half of the entire U.S. legal community each month. By comparison, *The World of Professional Pet Sitting* with its circulation of over 8,000 serves as the official publication of Pet Sitters International and as an example of a magazine for a newer and more specialized business.

The trade press has participated in the shift from print to electronic publishing forms taking place at the turn of the twenty-first century. Like consumer magazines and newspapers, the majority of trade publications have developed an online presence. In some cases, these websites produce much of their own content on an ongoing basis instead of following the regular publication calendar. This is true, for example, of the magazine industry's chief trade magazine *Folio.* While it remains a print publication, the website enlists a number of bloggers and hosts online forums on many topics to ensure a steady stream of new content. This emphasis on online content and readers has impacted trade magazines. In 2004, *Editor & Publisher* switched from a weekly to a monthly publication. The website became the place for

breaking news about the newspaper industry while the magazine became home to longer, more in-depth reporting. While trade magazines usually require subscription fees, online trade magazines vary in the degree of free content they display.

Before the Internet, the expense of creating, printing, and distributing a new trade magazine for often small, specialized audiences made such publication viable for only a handful—and sometimes only one—publication to exist for a given business or industry community. However, with their low barriers to entry, blogs have become a staple for individuals in various trades. These have become important alternative communication channels to traditional trade publications. For example, since 2005, the Airline Blog (theairlineblog.blogspot.com) has provided news and analysis of the passenger airline industry in much the same way traditional trade magazines have done, including the trade magazine *Aviation Week*, but in a new medium with increased interactivity. Similar to what has happened to journalism generally, competition from new media forms is transforming the trade magazine business. In 2007, advertising in business-to-business magazines dropped nearly 6 percent from the year before. It is likely that online sites will continue to draw advertising dollars and audiences away from their print counterparts.

Conclusion

Trade magazines have long played an important role in circulating information, research, ideas, and news to specific businesses and industries. Such publications help overcome geographic barriers to create a sense of community among individuals practicing the same profession. The growth of professionalism, including the rise of business and trade associations and organizations, encouraged development of more specialized publications. Trade magazines helped create the common identity of communities in many fields. As new industries have emerged, so have trade magazines to serve them. Like their general audience cousins, trade magazines have been learning to adapt to new media technologies.

Although vibrant around the world, the trade press is perhaps the most ignored sector of journalism. Because trade press publications are specialized, they are rarely seen by those outside of the field, making them invisible to most of the population. However, in aggregate, trade publications form a large part of the journalism landscape and play an essential role within the businesses and industries they serve.

Travel Journalism

Travel is a common topic for writers, yet travel journalism has a rather ambiguous definition. Though it appears at first glance to be fairly self-explanatory, the field as a whole is complex, broad, and lends itself to many different forms and styles of journalism. Indeed, it is difficult to pin down a single representative example of travel journalism, because it can be tailored to suit almost any literary need. In the sense of being any communication about a voyage outside one's immediate vicinity, travel journalism can be found in almost every type of publication or periodical. Magazines are devoted to the subject, newspapers have weekly columns, and popular travel destinations readily provide their own literature.

Why, then, is travel literature such a gray area if it is such a popular subject? The genre is certainly well known to almost everyone—whether in the

form of a guidebook on a vacation hotspot, an exposé on political unrest in a foreign country, or a restaurant review from an out-of-town diner. Indeed, the average person comes across this form of journalism quite often. Many people fancy themselves to be amateur travel writers, imagining an *Indiana Jones* style of adventuring and coming back to tell tales of exotic locations. However, this glorified view does not accurately reflect the actual profession.

Development

In the broadest sense, travel journalism has been around since the written word began. Explorers, after surveying new land, would come back with tales of new cultures and places. Marco Polo's *Il Milion* was widely popular among thirteenth-century Europeans, and publications from missionaries and explorers were published for those who remained at home (and who often financed the voyages). In later centuries, tales came back to the old country extolling the beauties and abundance of the new American continent. Early-nineteenth-century writers became famous with tales of their voyages: notable authors like Herman Melville gained fame with his chronicles of voyages as a sailor (*A Narrative of Adventures on the South Seas*), as did Robert Louis Stevenson (*In the South Seas*), James Cook (*The Journals of Captain Hook*), and Paul Theroux (*The Happy Tales of Oceana*).

As technology expanded during the nineteenth and twentieth centuries, making faraway destinations less expensive and quicker to reach, greater accessibility allowed travel writing to rapidly develop. Early publications like *National Geographic* (first published in 1888) began as research journals but slowly changed to allow armchair travelers—those who read for entertainment value with no intention of traveling to the destinations covered—to go to remote, foreign locations. Although the magazine was published irregularly for the first decade of its existence, it had become a monthly magazine by the late 1800s. Initial readership was low but quickly escalated with the introduction of photography—most notably color photographs of the natural world by 1910. The boost that color photography, maps, and in-depth articles gave to National Geographic as it lengthened the magazine in the 1950s indicated that the thirst for travel coverage among the public was large. Many other publications stepped into the growing market. *Travel and Leisure* (introduced in 1971) targets budget-minded travelers, while *Conde Nast Traveler* (introduced in 1987) caters to higher-end travelers, although both claim to appeal to both demographics. Travel and tourism is ranked as the third largest retail-sales industry in the United States, so it is no surprise that the travel writing featured in books, magazines, and newspapers is so popular.

By the 1990s, travel journalism was further aided by printing developments including digital typesetting and inexpensive color printing, which enabled publications to easily and instantaneously publish at a minimal cost. Technological advances have yielded everything from travel blogs, which provide a venue for anyone to post photos and stories from vacations, to multimillion-dollar companies, such as the cable Travel Channel. Inexpensive flights and the tendency for most households to own at least once car has also made travel and short vacations more affordable and accessible, increasing the interest in travel writing. Travel is presented as an affordable respite, not an unattainable luxury reserved for the wealthy.

Forms of Travel Writing

There are four major kinds of travel journalism, most of them familiar to the average reader.

Destinations

The most-well-known style of travel journalism is the destination piece, which is usually a feature article in a magazine or and newspaper focusing on a specific journey. Such pieces are intended to appeal to both armchair travelers and avid world explorers. Although *National Geographic* offers a mix of destination pieces and (more recently) exposes, these pieces are often included in magazines that are mainly devoted to coverage of other topics like politics (*Newsweek*), fashion (*Maxim*), or music (*Rolling Stone*). Major dailies such as *The New York Times* and *The Washington Post* have weekend travel sections featuring destination pieces. These articles require little previous knowledge, allow for escapism, and provide insight (to the reader) on new cultures and people. These

pieces are often produced by freelance writers and can cause controversy when the derivation and possible bias of the piece is unclear. For example, celebrity magazine *People* may feature an article on a resort a famous person just visited, but readers may not know if the destination advertises in the magazine or made a financial deal with celebrities in order to be featured. The destination may not be all that the article promises, but as the magazine is not for travelers, it has no expectation of providing unbiased reviews.

Exposés

A popular style of travel journalism related to destinations is exposés. These are usually investigative stories focused on a serious issue (illegal diamond smuggling, minority oppression) in a location foreign to the intended audience. These pieces are not intended to encourage travel but, rather, to inform readers of what is happening somewhere else. They are often political in nature and may make judgments on the social or humanitarian acceptability of the problem covered. Pieces falling into this category are usually aimed at consumers of hard news and are more likely to be found in news publications like *Newsweek* or *Time* rather than niche or entertainment magazines and papers. Exposés are a very popular type of story for television travel journalism as they are both informative and entertaining.

Guidebooks

One of the oldest types of travel journalism is the guidebook, or travel guide. Created for travelers planning trips to specific destinations, they come in many varieties. Guidebooks are produced by both freelance and staff writers who work for such publishers as Fodor's and Lonely Planet and include (sometimes) candid reviews of hotels and restaurants, cultural advice, tips for pretrip planning, maps and local information, and suggestions of what to do and see. They can cater toward youth backpackers (*MTV Travel Guides*), or older, more experienced travelers (the *Rand-McNally* series. These publications, which are intended to be used day-to-day, include specific information rather than anecdotal or emotional perspectives that are often found in shorter destination pieces. Guidebooks have a built-in conflict of interest in that they are usually positive in tone, as the publisher benefits when tourists choose to travel (and thus purchase the guidebook).

Novels and Travelogues

Another mass-consumed style is the travel novel. These are intended for audiences reading at home, not for readers desirous of a step-by-step guide. They may be long and often share more about the author and his or her life experience than they do the location being visited. Famous examples of this genre of writing include John Steinbeck's 1961 novel about traveling with his French poodle, *Travels with Charlie,* and Ernest Hemingway's *The Sun Also Rises,* which follows a group of American and British expatriates living in France and traveling to Spain. Modern-day popular authors have achieved notoriety via this genre of journalism, such as Bill Bryson with titles like *In a Sunburned Country,* recalling his travels in Australia. Whether pensive, humorous, thought provoking or morose, travel-based novels are intended to contribute to the reader's literary repertoire, not necessary encourage visitation.

Multimedia

The most recent travel journalism format is one that encompasses many of these genres of writing, but presents them via a different platform. Multimedia travel journalism combines television and online venues to present travel stories with video and sound. Such journalism can be found in destination piece form, such as programs on the Discovery Channel and Travel Channel cable networks; in exposé form, as in programs like *60 Minutes* or *Anderson Cooper 360* that cover world issues; and in travel guide form, such as *Ecoluxe* on the Travel Channel, which offers advice on the best hotels and travel deals.

Online travel journalism has become ubiquitous since the turn of the twenty-first century and the increase in travel blogging, which allows anyone to post photos and reviews of his or hers travels. Independent-minded blogs operate on a small scale, usually for friends of the creator, and can complement larger media operations, such as online or print travel magazines. Broadband video is increasingly

available online, with almost any city, country, or travel-related organization featuring video tours on its website. Guidebooks and audio books are also available for download online.

Issues

Although travel journalism is a popular style of writing, it is not without controversy.

Objectivity

Objectivity arises in all facets of travel journalism, but especially with regard to guidebooks. There are many pressures to create positive travel pieces. Often, in order to be featured on television or in a publication, resorts or other destinations (especially newer ones) will offer the writers free or heavily subsidized trips to encourage coverage of what the location wants to see featured. Naturally, this raises issues of bias and objectivity, especially with freelance writing and program producing. Among these issues is whether the end user will be given a valid picture of the destination if the report is only providing a positive view and if it is fair to accept such perks (many newspapers and some magazines ban them) and then report negatively. The only regulations on these issues are those decided by the publishers and broadcasters.

Moreover, the issue can take on important diplomatic or trade relations. If a country encourages travel with luxury resorts, yet fails to mention a thriving drug trade, is that a reputable practice? Because business and tourist travel revenue looms large for many cities and nations, how accurately travel writing portrays such places assumes a larger importance.

Ecotourism

The American approach to travel has increasingly become "green," with earth-friendly products and services becoming more important to the American consumer. Included in this "green" lifestyle is a desire to explore so-called off-the-map destinations that are not traditional tourist attractions. Ecotours and vacations that put the traveler close to nature have become increasingly popular, but raise another controversy: the potential spoiling of natural habitat due to increased tourism. Many spots around the globe face a difficult dilemma—balancing increased revenue from tourism with the ecological destruction such tourism can bring over time. In the context of "green" tourism, travel companies must consider the ultimate well being of the destination—writing a guide to Easter Island, for example, may gain new business for the publisher, but easing the difficulty of traveling to that area only serves to bring new human strains on the environment, like pollution, new noise and light patterns, and human waste on the island.

This creates a very modern-day problem for travel authors and publishers. The public demand for "eco-friendly" lifestyle choices—including travel—means that ecotourism articles are very popular and lucrative. However, publishing these articles encourages travel, which can have harsh environmental consequences. All players in the travel journalism industry—writers, publishers, editors, and consumers—must be aware of these issues. Currently, some individual ecosystems (again, Easter Island) regulate visitation, but time will tell how the industry handles this growing concern.

Cultural Blending

A major controversy that has grown with the advent of cyber communications is cultural blending. Heavy visitation into a culture that is unfamiliar with foreigners can lead to dramatic change to the original culture. Languages, traditions, and cultural values can be lost or blended into dominant foreign cultures as more outsiders come. This poses a potential problem for travel journalists, who must decide whether or not to publish what could be a unique article, but could also result in the destruction or dissolution of a private society. Like ecotourism writing, a balance has to be found between in-demand articles and the ethical and moral concerns of forever changing an established culture.

Associations

With a field as large and diverse as travel writing it can be difficult to distinguish the professional from the amateur. The major organizations for travel journalists are the North American Travel Journalists Association, and the Travel Journalists Guild, though membership in these is by no means

a prerequisite for making a living as a travel writer. However, members can gain a network through which to find writing assignments, and companies seeking writers may feel more confident in one who is part of a reputable organization.

Travel journalism is a broad, well-rounded field offering many different styles of writing. With such technologies as high-definition television and online photo sharing, anyone can access, or even create, a wide variety of travel journalism pieces. Travel journalism, arguably the first kind of journalism created, has evolved into a thriving business, found in many forms of publication, photography, television, and web presentations.

Type and Typography

Typography concerns the design, arrangement, placement, and usage of machine-printed type. Although the notion of mechanical printing predates Johann Gutenberg, the father of modern printing, by at least six centuries, for all intents and purposes, the history of typography begins with the German goldsmith's invention of the letterpress around 1450. Gutenberg's invention was so well conceived that it remained the principal method of printing for more than 400 years. Gutenberg's process for printing from movable type brought together four skills: calligraphy, chemistry, metallurgy, and engraving. The key to the system was metal type.

Gutenberg used steel punches and brass molds to cast individual letters from an alloy of lead, tin, and antimony. Each character was cast hundreds of times as a separate block, then the thousands of individual letters were assembled into pages. After printing, the pages could be disassembled and the type cleaned and reused. Type was stored in compartmentalized storage cases—capital letters in an upper case and small letters in a lower case (thus the terms we still use today)—and pulled out letter by letter to set the lines. The German inventor also had to develop a method of holding the type in place for printing, a slow-drying ink sticky enough to adhere evenly to the metal type, and a press capable of forcing the paper down onto the type for an even impression. Gutenberg modeled his printing press after the wine and cheese presses in use at the time and formulated a linseed oil–based ink, using lead and copper compounds for pigment.

The 42-Line Bible

Bringing all the elements together, Gutenberg began working on the first typographic book, a two-volume, folio-sized (11.75 x 15 inches) Latin Bible. The pages were printed in two columns; the first nine pages had 40 lines per column, the tenth page had 41 and the remaining 1,270-plus pages had 42 lines per column. This may have been the layout of the manuscript he followed, or he may have started a 40-line Bible and increased the number of lines per column to save time and paper. Forty-eight copies of this landmark publication,

out of an estimated press run of about 200, are known still to exist (one is always on display at the Library of Congress, for example). Gutenberg's 42-line Bible remains a magnificent example of the printer's art.

Development of the printing process and printing the 42-line Bible was expensive. Over a period of years, Gutenberg borrowed a considerable sum from wealthy Mainz merchant Johann Fust, putting his printing equipment up as collateral. In 1455, just as the Bible printing neared completion, Fust foreclosed on Gutenberg for nonpayment and seized possession of the equipment and all work in progress. Fust then hired Gutenberg's chief assistant, Peter Schoeffer, to finish production. It is unknown whether Gutenberg had any further hand in completing the project or reaped any financial benefits from his work. But his invention quickly spread throughout Europe. It is estimated that by 1500, there were already more than 1,000 printers operating out of some 200 locations in Europe. The basic printing process remained little changed for the next 400 years. Typography, on the other hand, began to change almost immediately. Gutenberg's heavy Textura typeface was quickly eclipsed by more graceful, easier-to-read letterforms.

Development of Typography

The 42-line Bible was designed and printed to look like a handwritten manuscript. According to early accounts, Fust tried to sell the Bibles as hand-copied originals before being found out in Paris. But during the first fifty years of printing, the so-called *incunabula* period (1450–1500), typographers such as Erhard Ratdolt and Claude Garamond started moving type design away from its dependence on calligraphic models to letterforms more in accordance with metal type and the technical possibilities of printing.

According to the best estimates, close to 10,000 different typefaces have been created since Gutenberg. Early on, printers began to experiment with the size, shape, weight, and spacing of the letters. In particular, they produced typefaces with variations in

- *Letterstrokes,* the lines that are drawn to form the letters. These can vary from hairline to quite thick or can be monotonal, with little or no variation at all.
- *Serifs,* the finishing strokes at the end of a letter's main stroke. Serifs can be rounded or flat, straight or cupped, bracketed or unbracketed—or missing entirely.
- *Finials and terminals,* the final or ending stroke forming a hook or a ball that is attached to some curved letterforms.
- *Counters,* the enclosed or partly enclosed white space within letters.
- *Ascenders and descenders,* the strokes which rise above or go below the main body of some lowercase letters such as *b* and *h* and *p* and *y*. No uppercase letters have ascenders and the *Q* is the only uppercase letter with a descender.
- *X-height,* the height of the body of lowercase letters in proportion to the ascenders and descenders. The measure is actually based on the letter *x*.

Letterforms also vary in posture—whether the letter sits straight or seems to lean; weight, which can range from light to extrabold; and width, which can expand or condense a standard shape. Over the centuries, typographers have tried in several ways to classify the multitudes of type designs. Perhaps the most common is to group typefaces according to common characteristics, into faces, subgroups, families, and fonts.

Faces of Type

Black Letter

Gutenberg modeled his first typeface after the calligraphy of the local German monks. The face of type that developed from Gutenberg's first font is known as "black letter" because of the heavy, compact strokes of the letters. This face is also known as "text" because of its early association with the text or body copy of printed books. Today it is sometimes referred to as "Old English," although old English is actually a particular typeface of the black letter and not a face itself.

Black letter faces feature pointed letters that look as if they were drawn with a broad-nibbed pen. The vertical stems are tightly spaced with pronounced stroke contrast. The terminals often have diamond-shaped finishing strokes. Because of the centuries of tradition associated with this face,

many newspapers still use black letter type for their nameplates.

Roman

Gutenberg purposely designed his type to look like the hand lettering it replaced. But within 20 years, printing had expanded south to Italy, and there a new face of type soon developed that has remained dominant through five centuries. In the spirit of the Renaissance, Italian printers moved away from handwriting as a model toward the simpler, more open letterforms chiseled on Roman buildings. The first truly successful roman typeface was introduced in 1470 by Nicholas Jenson, a French-born Venetian publisher and printer. Jenson's roman face was refined by fellow Venetian publisher, Aldus Manuticus, and his typographer Francesco Griffo. Griffo also produced the first italic typeface, although his design had only lowercase letters set with regular roman capitals. Matching italic capitals were added by another Viennese printer in 1524. The influence of Venetian printers soon made roman type dominant in all Europe outside the German-speaking areas. Development has continued through the generations, with the romans still the most numerous typefaces by far, and the most popular for text type. Most books, nearly all newspapers, and at least half of all magazines use roman typestyles for body copy. One of the most popular is Times New Roman, designed in 1931 under the direction of Stanley Morison. Times New Roman was designed for the exclusive use of *The Times* of London, but was released for general sale a year later. It has become one of the most widely used typefaces in the English-speaking world, not just by newspapers, but by book and magazine publishers, advertisers, and printers.

Roman types are defined by contrasting thick and thin strokes and the presence of a finishing stroke or serif at the end of the major stem and hairline strokes. Because these faces are so profuse and so varied, they are usually divided into subgroups based on three characteristics: contrast in the thickness of letter strokes; stress—the angle or axis of the curves; and serif treatment. "Old face" or "old style" types feature strokes that make a gentle transition from thick to thin. Serifs are bracketed or molded into the terminals of the main strokes. The serifs of the ascenders in the lowercase slant and at the bottom of the uppercase E and top of the uppercase T extend outward. The axis of the curves is inclined to the left. Modern romans were popularized by Giambattista Bodoni, the renowned Italian type designer and friend of Benjamin Franklin, after their prototypes were introduced by French typographers in the late 1700s. In the moderns, the last vestiges of type's origin as handwritten letterforms disappeared. Rather, these faces have a distinct mechanical look reflecting strict emphasis on form and structure. These faces have a strong contrast between thick and thin strokes. Serifs are straight, thin and unbracketed. The serifs on the lowercase ascenders are horizontal. Stress is vertical. Many designs fall somewhere between old style and modern with characteristics of both. Contrast between thick and thin strokes is not as pronounced as in modern, but more than in old style. Serifs are bracketed and those of the lowercase ascenders are oblique, but the slant is not as steep as old style. These faces are known as transitional roman.

Some typographers would classify italic typefaces as a separate face, but it is better to look at them as roman. Like the romans, they have strokes of various thicknesses. They have serifs or curved finishing strokes called finials. Their letter shapes correspond to their companion roman face. Their most striking difference is their slant to the right.

Romans come in every weight and size and are suitable for almost any application.

Sans Serif

Second only to romans in number and frequency of use are sans serif faces. *Sans* means "without" in French, and as the name implies, none of the members of this large face of type has serifs of any kind. Their variety comes from variations in stroke thickness and weight differences. Modeled after the flat, uniform strokes of ancient Greek letters, the first recorded sans serif typeface was introduced in 1816, but the designation sans serif was not applied until 1832. They had become very popular by the mid-1800s. Their stature was propelled further a century later by the German Bauhaus Institute, which emphasized functional design in furniture, architecture, product design, and typography. In the

last half century, their popularity has increased to the point that today the use of sans serif faces rivals that of romans.

Sans serifs can be divided into two easily distinguishable categories: monolines and gothics. Monolines, sometimes called true sans serifs, have little or no variation in the thickness of strokes. They are geometric, precise, and elegant. Their letterforms are round and lightweight as compared to gothics. Gothics have some variation in the letter strokes, although the contrast is not as apparent as in romans. Thickness variations are often found where curved and stem strokes connect, causing them to look somewhat less graceful than their monotonal counterparts.

At one time, most newspapers set their headlines in a roman typeface, but now more than half use sans serif or a combination of serif and sans serif. The switch to sans serif for body type, however, has not been as pronounced. Roman typefaces are less monotonous, are considered easier to read than sans serif faces, and have been retained by most newspapers for text type. But sans serifs play an increasingly important role in advertising, magazines and newsletters, consumer product labeling, and web design.

Square Serifs or Egyptians

About the same time sans serif type was launched by William Caslon IV early in the nineteenth century, a fourth face of type was introduced by another English typefoundry, the Vincent Figgins Foundry in London. The first of the square serif faces was listed in the catalog as "Egyptian," and the name stuck. There was a great fascination at this time, both in England and America, with all things Egyptian, intensified by Napoleon's invasion and occupation of Egypt in 1798 and 1799, and the discovery of the Rosetta Stone in 1799. This tablet of black basalt had parallel inscriptions in Greek and Egyptian hieroglyphic characters that provided the key to deciphering the ancient Egyptian writing. Whether Figgins wanted the shape of his letters to call to mind Egyptian architecture or to suggest the visual qualities of popular Egyptian artifacts, the face became associated with the tremendous interest in Egyptian culture.

Egyptian faces are also called "square serifs," "slab serifs" and "antiques," but the Egyptian designation is the most prevalent, leading to names such as Cairo, Karnak, and Memphis.

Egyptian faces are characterized by pronounced square or rectangular serifs, uniform stroke formation, and short ascenders and descenders. Serifs vary from tall serifs thicker than the stem strokes of the letters, to monoline types with little or no contrast between the serif and letter thickness, to more moderate serifs which contrast with stroke thickness.

The Egyptian faces were designed for advertising purposes rather than for book or newspaper printing. They are monotonous and tiring when used for body copy, but work well for headings and headlines. In the mid-1800s, they were used extensively for theatrical posters in large sizes, often from wooden rather than metal type. Since then, they have gone through several periods of decline and revival. Today they are popular for newspaper and magazine ads, especially for reverses, white lettering on a dark background, and surprints, copy that is printed over photographic illustrations.

Hand-Formed

With scripts and cursives, typography comes full circle. These forms are designed, as was Gutenberg's first typeface, to resemble handwriting. They are meant to emulate letters written with hand-held instruments—first quill pens, then fountain pens, brushes, broad-nibbed lettering pens or felt-tip markers. Together, scripts and cursives make up the hand-formed face, sometimes shortened to "hands."

Script letters generally slant to the right and the lowercase letters connect or appear to connect. The capitals are graceful and flowing and can stand alone without connecting to the lowercase letters. Cursives also slant like handwriting, but neither the upper or lowercase letters connect. Cursive faces often include flourished capitals and may also include some alternate lowercase characters. Cursives are sometimes confused with roman italics, but italic typefaces have serifs that cursives do not. Some typographers refer to all hand-formed faces as "scripts"—those with connecting letters as "formal scripts," and those with letters that do not connect as "informal scripts."

Hand-formed faces, both scripts and cursives, have proliferated since the 1930s, but only a few

examples produced before that time are still in use. These faces are much more difficult to read than serif or sans serif faces. Newspapers and magazines occasionally use them for titles, headings and subheads. Their more common use is for announcements, invitations, letterheads, and in retail advertising.

Decorative

Gutenberg's 42-line Bible had blank spaces left for decorative initials to be drawn in later by a scribe. Soon afterward, printers were using two-part blocks to stamp in highly ornate capitals after the text was printed. From there it was but a short step for typographers to "embellish" existing, identifiable letterforms.

Actually this sixth face is not a face at all. Rather, it is a catchall category for the great number of miscellaneous designs that do not have the distinctive characteristics of the other faces. Also known as "novelty," "specialty," "ornamental," or "mood," this category includes standard forms that have been modified with outlines, inlines, shadows, and textures; typefaces that have been decorated with flowers or leaves or other designs; and specially created faces with letters fashioned from natural forms such as paper clips, wooden logs, or smoke.

These typefaces are very rarely used in news typography. In other uses they are attention grabbers used almost exclusively for display type expressing ideas of a few words.

Families and Fonts

Within the faces and subgroups are the various individual typefaces. Most of these have a number of closely related faces, all very similar in design but varying in posture, weight, or style. The collection of related designs all bear the name of their parent typeface and are known as families. A font consists of the upper- and lowercase alphabet, numbers, punctuation marks, and symbols in any one size of a particular typeface.

Before computerization, each font of a typeface had to be cast separately, and most type was available in fewer than a dozen standard sizes. Measurement was not standardized until the late 1800s, when a point system was adopted by the U.S. Type Founders association. A point equals just under 1/72 of an inch. Another common measurement used by typographers is the pica. A pica equals 12 points. So there are approximately six picas or 72 points to the inch.

With the advent of photocomposition and digital composition, designers are no longer limited to a few faces in a limited number of sizes. The computer age has given every desktop publisher easy access to virtually every typeface that has ever existed.

But typography is more than just the development of typefaces. It is also their selection and arrangement to convey a message. In this respect, typography revolutionized human society. Printing—first books, then newspapers and magazines—became the basis for education and enlightenment that began the modern information age, to which the print news media are so indispensable.

United Press International

United Press International (UPI), a 1958 amalgamation of the International News Service and United Press, was a major American news agency for more than seven decades. Owned in the early twenty-first century by News World Communications, UPI is now but a shadow of the international news and information provider it once was.

Origins

Though founded under its present name in 1958, UPI traces its roots to United Press Associations (UP). Publisher E. W. Scripps, in order to battle AP's then-restrictive membership policies, had formed three regional Scripps news services in the early 1900s, and merged them to become the UP on June 21, 1907. He argued there should be no restrictions on which papers (369 of them at first) could buy his developing news service. He hired Roy Howard to lead the wire service and it is Howard who is largely credited for the spirit of innovativeness and doggedness at UP, pioneering the use of bylines on wire service reports and offering feature stories long before they appeared on the AP. In its early years, as the number of subscribers doubled, the UP scrounged and scraped to cover the Mexican revolution and the growing labor movement, and then it scored big with coverage of the tragic 1911 Triangle Shirtwaist Factory fire in New York City.

"Thud-dead! Thud-dead! Thud-dead!" began UP correspondent Bill Shepherd's account of the gruesome fire that killed 146 people, many of whom jumped from high windows to avoid the flames. "I learned a new sound," he wrote, "a more horrible sound than description can picture. It was the thud of a speeding, living body on a stone sidewalk" (Gordon and Cohen 1990, 7). Such writing became a hallmark of UP's approach, and it was well received by newspapers and readers alike. It also became part of the correspondent lore of wire service competitiveness that veteran AP and UPI staffers shared with younger cohorts.

Among these stories of UP's early years was its handling of the Armistice ending World War I. Receiving word from a bogus informant, the U.S. Embassy in Paris passed word to UP that an armistice had been signed. On November 7, 1918, UP ran the bulletin pronouncing the war's end and tens of thousands of Americans poured into the streets to celebrate. For hours, the AP stubbornly held out for official word and was subjected to angry demonstrations and cries of being pro-German. When the AP was able to confirm that the Germans had not yet signed the agreement, UP was forced to issue a correction, and the AP was redeemed. Three days later, the war did officially end. The UP restored some of its reputation when roles were reversed in 1927 and the AP prematurely reported that Charles

Lindbergh had landed safely after the first solo transatlantic flight from New York to Paris.

Competing after the war with "The Ring" news agency cartel operated by Reuters, Havas, Wolff, and the AP, UP became the first American news service to provide service to subscriber newspapers in Europe, South America, and the Far East. Indeed, its success was such that Reuters invited it to join the ring in 1912. UP turned down the offer and continued to expand. Direct service to Europe came in 1921, China a year later, and, through a subsidiary, colonies of the British Empire by 1922. By 1929, UP was serving nearly 1,200 newspapers in 45 countries. Despite the Depression, that number grew to 1,715 newspapers and radio stations (UP was the first news agency to serve them, starting in 1935) by 1939.

UP staffers often toiled in less than optimum conditions and the agency was seriously understaffed. But the circumstances became something of a badge of honor, and many who went on to television news fame with CBS, including Walter Cronkite, recalled their work for UP as demanding yet enjoyable. As a UP war correspondent, Cronkite covered D-Day, parachuted with the One Hundred and First Airborne, flew bombing missions over Germany, covered the Nuremburg trials, and opened the UP's first postwar Moscow bureau.

World War II helped boost the UP as newspapers sought the latest and most compelling accounts of the battles in Europe and in the Pacific. UP, with the only news transmission system in Hawaii, helped break the news of the 1941 Pearl Harbor attack. Toward the end of the war, the UP scored major scoops with stories about the crossing of the Rhine River by Allied forces and the joining of American and Russian troops in Germany. The UP gave rise in this period to some of the biggest names in journalism. Besides Cronkite, UP claimed credit for the early careers of David Brinkley, Merriman Smith, Howard K. Smith, H. Allen Smith, Eric Sevareid, and Helen Thomas, among others.

Thomas, who joined UP in 1943, began as a radio news writer for the agency and was one of its longest-serving and best-known correspondents. Early on in her career, she covered several capital beats including the Department of Justice, FBI, and Capitol Hill. In 1960, she began covering President-elect John F. Kennedy and has reported on every White House administration since. She resigned from UPI in 2000, when the agency was acquired by News World Communications. She is known for her hard-hitting questions and persistence during briefings and press conferences, and more recently stridently challenged President George W. Bush on his reasons for going to war in Iraq.

When she first joined the UPI White House staff, Thomas worked for UPI's Merriman Smith—known to UP colleagues as "Smitty." Smith had covered the administrations of President Roosevelt and President Truman, but he is most remembered for his coverage of the assassination of President Kennedy. Riding several cars behind the President in the Dallas motorcade on November 22, 1963, Smith was able to grab the car phone first, battling AP's Jack Bell, who pounded on Smith's back for the phone. Smith dictated to UPI that three shots had been fired at the motorcade. Arriving at Parkland Hospital, he was able to confirm that the President had been hit and was first to report that the President had died, minutes ahead of AP. He flew back to Washington, D.C., in *Air Force One* with new President Lyndon Johnson and Mrs. Kennedy and witnessed Johnson's swearing in. For his coverage of the assassination, Smith received the Pulitzer Prize, one of ten eventually earned by the agency.

In the early 1950s, UP expanded its technology with the teletypesetter, which allowed news stories to be set into type at subscribing newspapers. It began a newsfilm service for television stations as well as a facsimile service for news pictures in 1952. The news agency turned 50 in 1957. But all was not well behind the scenes.

Merger

The amalgamated UPI was formed in 1958 when UP merged with William Randolph Hearst's International News Service (INS) under Scripps's leadership. The merger was the ironic result of a 1945 federal antitrust action against the Associated Press, which, for many years, had refused membership (and thus news service) to many of Scripps's and Hearst's newspapers. When the government ruled that AP's actions constituted a violation of antitrust law, the AP was forced to open up its membership to any paper or broadcast station willing to pay for its service. Many papers subsequently dropped the weaker agencies for the AP, leaving the UP and INS financially weak.

Discussions to merge the two wire services had taken place many times, some as early as the 1920s, but the changing competitive landscape created by the AP lawsuit made the situation one of some peril. On May 24, 1958, UP and INS became United Press International (UPI) serving roughly 5,600 print and broadcast clients. The AP at that point served more than 7,000 U.S. and international news organizations.

The coverage of Kennedy's assassination five years later was proof that despite the financial urgency of the merger, UPI could provide a lively news report of aggressive spot news and interpretation that often matched the AP's dependable and accurate, if more stodgy, news reporting. UPI began an audio service of news and actualities for radio stations the year of the merger. But UPI's doggedness would not be enough to sustain the agency as a long-term competitor.

UPI's Decline

During the 1960s, both UPI and AP were roughly comparable in terms of their financial security, technological innovation, and customer relations. UPI was at least marginally profitable. By 1970, however, UPI was beginning to suffer pressure from the costs associated with technology upgrades, aggressive news coverage by broadcast television, and the decline in number of local daily newspapers. The chief subscriber problem was that fewer papers could afford subscriptions to two at least partially overlapping news agencies—–and given the choice, they nearly always chose the more robust AP. UPI was soon losing $3 million to $4 million a year.

The introduction of computers in the 1970s and satellites (where UPI was a pioneer) a decade later proved to be an enormous expense and led to major personnel shifts and some layoffs. On March 18, 1974, the reporters' Wire Service Guild struck UPI, the first strike ever in the agency's history. The financial stresses began to show. In the summer of 1974, UPI established a 15-member Newspaper Advisory Board to address common management concerns and policies for all UPI subscribers. By 1977, the board approved UPI rate hikes of 9.5 percent and ended its practice of price bargaining to gain subscribers. In 1978, during negotiations with the Wire Service Guild, UPI asked for a wage freeze for most of one year to help offset a $2.2 million annual jump in its costs of leased telecommunications circuits. The union agreed to the request. The situation grew dire enough by 1979 that UPI sought to entice more than 40 news organizations to become partners in UPI, but the request failed, and the Scripps Company put UPI up for sale in 1980, at which point UPI served more than 7,000 subscribers (including 2,250 in 92 countries), most of which were broadcasters. Indeed, UPI was the world's largest privately owned news service. But the inception of Cable News Network (CNN) that same year was another indicator of the changing news agency marketplace. UPI operated 177 bureaus around the world with some 1,200 staff in the United States and 580 abroad.

On June 2, 1982, Scripps sold the New York–based UPI for a nominal one dollar to Media News Corporation, a group specially formed to acquire the troubled agency. It was reported in the trade press that Scripps had given Media News $12 million in cash and forgiven debt to rid itself of the continued costs of operating UPI. The UPI Audio service became the UPI Radio Network in 1983. But the new owner could not stop the financial losses that continued to mount. In 1984, the guild at UPI accepted a 25 percent pay cut for three months and the firing of 100 staff. The atmosphere affected the leadership, and by 1985, just three years after the ownership change, UPI was forced to file for bankruptcy.

A year later Mario Vazquez Rana, a millionaire publisher of daily newspapers in Mexico, bought the agency and invested almost $7 million on new technology. But Rana's acquisition prompted cancellations by many subscribing newspapers and other clients and led to the resignations of several top managers. Industry leaders viewed the sale to Rana as further evidence of UPI's decline. Others viewed Rana's inability to speak English and his unfamiliarity with American journalism as significant hurdles to rescuing UPI. In 1988, Rana handed off control of UPI to Dr. Earl W. Brian and sold his World News Wire (WNW), part of the Financial News Network, an irrevocable proxy to operate UPI for at least ten years. Under the agreement, Rana gave up all management and financial obligations, though he retained ownership. Dr. Brian was chairman of Infotechnology, Inc., an information technology company based in New

York, and that company became a minority investor in WNW. But faced with rising costs and declining subscribers, WNW cut more jobs. In 1990, the Securities and Exchange Commission announced a formal investigation into the company, and WNW announced that it might be forced to sell due to UPI's increasing debt.

In 1991, UPI filed again for bankruptcy, listing total liabilities at $65 million owing to some 4,000 creditors. It was serving just 16 percent of American daily papers, down from more than half in 1966. It emerged from bankruptcy again in 1992 thanks to a group of Saudi investors. Middle East Broadcasting Center Ltd., a London-based television news and entertainment company, acquired UPI in bankruptcy court for nearly $4 million in cash. The court selected the Saudi investors over religious broadcaster Pat Robertson, who also sought control of the wire service. At the time, UPI had about 450 full-time staff members and 2,000 part-time employees. By 1997, however, those numbers were down to about 300 staff members and 800 part-timers, serving about 1,000 broadcast and 1,000 newspaper and Internet clients. The UPI Radio Network accounted for about half the new service's income, but was closed down in August 1999. UPI adopted a new writing style for its main news feed, limiting its stories to no more than 350 words.

In May 2000, News World Communications, a conservative media group founded by the Rev. Sun Myung Moon that includes *The Washington Times* newspaper, purchased UPI for an undisclosed sum, pledging to retain its editorial independence. At the time of that sale, UPI had dwindled to 157 employees and the Washington, D.C., headquarters building was soon put up for sale. The rest was a slow but continuing dwindling of people and capacity. By 2007, it appeared that UPI had only a handful of reporters, all based in Washington and no longer reporting breaking news.

Conclusion

United Press International (UPI) began in 1907 as United Press and became UPI in 1958 when UP merged with the International News Service. While UP and later UPI maintained an active competitive alternative to the Associated Press for much of the twentieth century, it ultimately failed due to the costs of changes in information technology and within the newspaper business that began in the 1970s. Surviving "Unipressers" left behind a record of which they could be proud.

USA Today

Launched in the fall of 1982 as "the country's first national, general-interest daily newspaper" with the express intent of supplying an enjoyable, easy read, especially to affluent Americans on the move, *USA Today* met with immediate critical derision. Its emphasis on short, tight writing, generous use of photos and graphics, and expanded attention to lifestyle and sports earned it the moniker "McPaper," the "fast food" of newspapers.

Wags likened the encounter with *USA Today* to "reading the radio," and said the paper might win a Pulitzer for "best paragraph." Industry analysts were skeptical as well, doubtful that a new paper could succeed in an era when dailies were closing.

From the start, however, readers were enthusiastic, advertisers responded, and after five years of losing money, *USA Today* began to turn a profit in 1987. Ultimately, the paper would achieve both editorial and financial success, and would continue to gain circulation even as the newspaper industry overall posted steep declines. Moreover, its editorial innovations would have lasting influence, as other papers came around to the snappy style and visual pizzazz that had worked for *USA Today*.

Launch and Development

The brainchild of Gannett Corp.'s then-CEO and publisher Al Newharth, *USA Today* reflected the ambition, brashness, and ingenuity that led others to call its founder both a tyrant and a genius. When the initial edition of 155,000 copies came off the presses on September 15, 1982, Newharth's determination to defy convention could be seen on the very first page: The previous day, Princess Grace of Monaco had been killed in a car accident, and Newharth had insisted on leading with that story, a controversial choice since most other papers led with the killing of Lebanon's President-elect. That first issue, printed and distributed in the Washington-Baltimore area, sold out.

A quarter of a century later, *USA Today*'s basic configuration remained much the same. Enduring characteristics included the four color-coded sections, titled News, Money, Sports, and Life, with only the main story on each section front long enough to "jump" to an inside page; a color weather map of the United States dominating the back page of the news section; and a daily amalgamation of paragraph-long news briefs from each of the 50 states.

In subtler ways, *USA Today* had changed a great deal. Initial emphasis on domestic over international news had given way to much greater attention to global affairs; and while celebrity and entertainment news and sports coverage remained staples, solid beat and enterprise reporting as well as special investigations had earned the paper editorial respect. Reporters regularly used open records laws to gain comprehensive information for features on issues of nationwide interest, from salaries of college presidents and sports coaches to transportation safety.

In its initial years, *USA Today* was a drain on the Gannett organization in several respects. To staff its newsroom, the paper cannibalized labor from Gannett's extensive local newspaper chain; of more than 200 reporters and editors starting out, two-thirds came from other Gannett papers while remaining on the loaner papers' payrolls. *USA Today*'s circulation grew to more than a million in its first half-year, making the paper the third largest and fastest-growing in the country, but the operation was losing more than $10 million a month. Cumulatively, *USA Today* had lost an estimated $300 million after tax by the time it posted its first monthly operating profit, in May 1987; and by its tenth anniversary in 1992, with cumulative deficit of some $800 million, it had yet to show an annual profit—that turning point came in 1993, a dozen years after the project's start.

From the nation's capital, *USA Today*'s publication expanded via satellite technology to 15 additional metropolitan areas within six months; by the 1990s, the paper was printed at 39 presses at 36 printing sites. The need to attract national advertising dictated the decision to print in full color from the start; advertisers otherwise had little reason to choose *USA Today* over magazines. Gannett already used full-color printing at *Today* (now *Florida Today,* in Brevard County, begun in 1966), the chain's first venture in starting a new paper (as opposed to acquiring an existing paper—through purchase), but quality control for picture reproduction at diverse printing sites around the country proved a major challenge in the early days.

Distribution was another challenge; since local papers would always hold an advantage for garnering local subscriptions, *USA Today* depended largely on daily sales. A great deal of planning went into the design of coin boxes, resulting in striking newsracks mounted on pedestals that resembled TV sets, the paper visible through a window and serving as its own advertisement. At first, returns of unsold papers were huge, and complaints about old papers left in racks common; in addition, delivery arrangements ran into union opposition that included a major confrontation with the Teamsters in Philadelphia. The racks also were costly to maintain. As the paper itself gained

ground, however, the racks, too, acquired acceptance as a familiar sidewalk fixture.

An experiment during the summer of 1985 affirmed reader enthusiasm while illuminating the need to strike a balance between circulation ambitions and advertising revenue. Under an arrangement with food processing company General Mills, customers could send in eight proof of purchase seals to get a free six-month subscription to *USA Today,* with General Mills paying for the first 52,000 takers and the paper covering the rest—but rather than the anticipated hundred thousand responses, half a million new subscribers took the deal, with the extra printing and delivery required nearly crushing the three-year-old operation.

A more successful endeavor was targeting travelers through what came to be called "blue-chip circulation"—bulk sales to airlines and hotel chains. Eastern and Delta were the first airlines to distribute *USA Today* to their customers, and the hotel program took a leap when Marriott and Sheraton signed on. In two decades of steady growth, such sales rose from about 15 percent of circulation in 1987 to more than half the paper's circulation by 2007.

USA Today's national circulation surpassed 1.5 million in 1987, second only to *The Wall Street Journal,* with all but a few pockets of the country having same-day delivery. It reached 2 million by 1993 and passed the *Journal* to take the top spot in 1999. When *USA Today* turned 25 in 2007, its circulation was nearly 2.3 million and still growing, albeit slowly, and the paper continued to outperform industry trends as most others were recording circulation and advertising losses.

A website "relaunch" in March 2007 heralded *USA Today*'s move into interactive "network journalism" that also included mobile text and video feeds, messaging, and podcasts. Within two months, the company claimed a web audience of 11 million unique visitors per month, with online revenue growing faster than print. Plans for further extending the *USA Today* name included the opening of *USA Today* stores selling branded souvenirs and the introduction of *USA Today*–branded games.

Major Controversies

USA Today's greatest credibility crisis followed the 2003 Jayson Blair plagiarism and story fabrication scandal at *The New York Times,* when Jack Kelley, a 21-year veteran and star international reporter at *USA Today,* turned out to have had a much longer career of deception than Blair. Initially, an anonymous complaint set off an inquiry focusing on a single story, but the investigation eventually broadened, and three experienced journalists from outside the paper were enlisted to do a thorough review. They determined that Kelley had plagiarized, fabricated, and embellished extensively over at least seven years of reporting from many parts of the world and that his star status had insulated him from editorial scrutiny. The team examined and researched 720 articles Kelley had written from 1993 to 2006, and found evidence of substantial malfeasance in about 100 of the stories. Among his many fantasies that *USA Today* had carried as fact were purported eyewitness accounts of a night spent with Egyptian terrorists, a high-speed chase after Osama Bin Laden, and the aftermath of a suicide bombing—complete with the description of a decapitated head rolling down the street.

Also highly embarrassing, if less sensational, was the controversy surrounding a special two-page promotional piece, using the likeness and logo of *USA Today,* created for the pharmaceutical giant Glaxo Wellcome in 1998 for distribution at an international AIDS conference in Geneva. The "articles" in the phony paper, written by Glaxo publicists and quoting Glaxo officials as main sources, focused on the drug company's AIDS remedies. Critics charged that this "special edition" was easy to confuse with a real issue of the newspaper and unacceptably blurred the lines between editorial content and advertising. *USA Today* acknowledged it had provided a similar service hundreds of times for other advertisers and said such materials were carefully controlled and not intended to confuse.

Lasting Impact

USA Today's early use of telephone polls to invite reader involvement were precursors of today's Internet interactivity; its info-graphics, sidebars, and lists presaged the sort of information segmentation that is now widespread on the web; and its quest to develop a cross-platform identity that spans old and new media anticipated the emphasis on branding that is now commonplace for news

organizations. Most influential of all, however, was the paper's overall editorial vision. In valuing terse prose, pioneering the use of information "nuggets," and above all, elevating the role of graphics, *USA Today* forever changed how news is packaged. Largely because of its example, art and design, which were once service departments, are now integral to news content. The very features for which the paper drew ridicule at the outset—shorter stories, more photos, expanded sports coverage, splashy graphics, and other departures from "serious" news—became precisely those other media organizations would emulate. Its full-color weather map may be the most widely imitated newspaper innovation ever.

U.S. International Communications

U.S. international communications refer to American government-sponsored efforts at publicizing information about the country's actions, goals, and image abroad. Although they date back to World War I, when President Woodrow Wilson formed the Committee on Public Information in 1917, its activities ended as the War came to a close in 1919, and sustained attempts at reaching international audiences were not exercised prior to World War II.

Since 1945, U.S. international communications predominantly refers to the country's official broadcasting, such as, among others, the Voice of America and Radio Free Europe, whose task was to disseminate information and views from the U.S. standpoint to foreign audiences during the cold war. These organizations are often credited with playing a crucial role in bringing down the Iron Curtain. After the attacks of September 11, 2001, these communication outlets have continued to promote America's image abroad, this time with an increasing focus on the Middle East.

Origins

The first sustained effort at reaching out to foreign audiences, U.S. international radio broadcasting in languages other than English, came as a reaction to Nazi radio propaganda during World War II. After the German invasion of the Soviet Union in June 1941, President Roosevelt formed a Foreign Information Service (FIS), under the leadership of playwright Robert Sherwood, who also wrote presidential speeches. Sherwood then initiated broadcasting to Europe via privately owned (shortwave) radio stations.

The Voice of America (VOA) was founded under the auspices of FIS on February 24, 1942, and continued to operate after World War II as international broadcasting in foreign languages became a common phenomenon worldwide. An umbrella organization that handled all of the U.S. government's international communication efforts (non-military), the United States Information Agency (USIA), was created in 1953 under President Dwight Eisenhower (1953–61), and VOA became the agency's largest department. During its existence, USIA played an important role in informing the foreign press and public about U.S. government activities. The most prominent among USIA's activities targeted toward the international press was the so-called Washington File, a daily text and information service. Washington File staff would distribute texts on most important global events,

which were then given to foreign government officials and the press for publication in newspapers, TV, and radio. In addition to the Washington File, USIA also published electronic journals and posters. In the United States, the agency ran Foreign Press centers to assist foreign journalists.

As of October 1999, USIA activities in the field of nonmilitary international broadcasting were fully taken over by the Broadcasting Board of Governors (BBG) and the agency itself ceased to exist.

Voice of America (VOA)

The Voice of America is a "multimedia international broadcasting service" that is funded by the U.S. government through the BBG. As of 2008, VOA broadcasts more than 1,000 hours of news and cultural programming to an international audience of roughly 115 million people in 45 languages. Determined to present "straight-arrow news, public service programming, and enlightened comment to people everywhere, the organization adopted the motto of letting 'the facts be submitted to a candid world'" (Heil 2003).

After the end of World War II in 1945, VOA was brought under the supervision of the State Department and suffered cuts in the number of broadcast services, from almost 40 to 23, and by April 1946 nearly two-thirds of its staff had been dismissed. Congress was not eager to allocate funds for its continued operation in 1946 and 1947. But development of the cold war set the scene for VOA's continuing operation. Once again, the government was reacting to propaganda, this time on behalf of the Soviet Union, as well as to the Berlin Blockade in 1948 to 1949, when the USSR prevented ground access to parts of Berlin occupied by the Americans, British, and French. This was the context for passage of the benchmark "United States Information and Educational Exchange Act," also known as the Smith-Mundt Act, which gave statutory standing to VOA but did not create guidelines as to who would control its programming. A substantial debate followed on the ultimate purpose of VOA broadcasting: whether it should merely report what took place in America, or whether it should be used as a foreign policy instrument to counter the Soviet Union. Congress decided the latter should prevail and by the middle of 1951, new services were introduced, amounting to 45 languages, and 400 more airtime hours per week.

During the domestic "red scare" of 1953 led by Senator Joseph McCarthy, however, Congress had begun to suspect that VOA broadcasts were favoring communism and conducted several hearings to investigate the issue. The charges were not proven, but many dismissals took place, the budget was reduced, and language services were cancelled. Even before the hearings ended, President Eisenhower had undertaken a review of U.S. foreign information activities and decided to create the U.S. Information Agency, and VOA came under its supervision, also moving its headquarters from New York to Washington, D.C. There it diversified its content, introducing more music programs, such as *Jazz Hour,* which became popular in Eastern Block countries and helped promote American culture. VOA also introduced slow-paced English-language broadcasts, meant to facilitate comprehension of American English.

Supported by USIA, VOA employees drafted an organizational charter in 1960, a formal statement of broadcasting principles that became an institutional constitution. The charter held that "news will be accurate, objective and comprehensive [that] VOA will represent America, not any single segment of American society [. . .] and will therefore present a balanced and comprehensive projection of significant American thought and institutions" (VOA website). The charter was later signed into law by President Gerald Ford (1974–77) in 1976 and it formally protects the independence and integrity of VOA programming.

Despite numerous success stories, such as the milestone coverage of Neil Armstrong's 1969 landing on the Moon, when 450 million people all over the globe tuned into VOA (the largest audience in the history of radio), the available financial resources from the government were not sufficient and led again to flagging broadcasting standards. However, during the Reagan administration (1981–89), VOA received new resources of $1.3 billion to refurbish its programming. New language services were introduced, most notably to Afghanistan because of the 1980 Soviet intervention there.

During 1990s, major institutional restructuring took place as the USIA formed a Bureau of

Broadcasting, which brought under the same organizational umbrella numerous U.S. international broadcasting institutions: VOA, WORLDNET Television and Film service, and Radio and TV Marti, which broadcast to Cuba. Under the 1994 International Broadcasting Act, signed by President Bill Clinton (1993–2001), new managing institutions were formed, including the International Broadcasting Bureau (IBB), also within USIA, as well as the BBG. The close of the decade saw further restructuring following President Clinton's Foreign Affairs Reform and Restructuring Act of 1998.

Thus on October 1, 1999, the BBG became an "independent federal entity" supervising IBB, Radio Free Europe/Radio Liberty, and the more recent Radio Asia, founded five years earlier. USIA was abolished and its activities placed under State Department jurisdiction. With the end of the cold war, many of VOA's East European services were deemed superfluous and underwent restructuring. However, new services were introduced as well, such as the Kurdish one in 1992, which began broadcasting to Iraq and Iran. This decade also saw the beginning of VOA's simulcasting tradition. In 1994, VOA started offering its programming online, thus becoming the first international broadcaster to do so. By 1999 most of the programs in all VOA languages were available in this form. After the events of September 11, 2001, BBG refocused its efforts toward the Middle East. VOA's Arabic Services was replaced with Radio Sawa (*Together* in Arabic), which seeks to attract larger audiences by operating like a commercial station with music and entertainment. BBG also added TV Alhurra (*The Free One*), Arabic satellite news, which airs throughout the Middle East. As for Iran, Radio Farda (*Tomorrow*) was introduced, a cooperative effort between VOA and Radio Free Europe.

Radio Free Europe and Radio Liberty (RFE/RL)

Radio Free Europe and Radio Liberty used to be two separate radio services that were officially merged in 1975 into one organization known today as RFE/RL. The organization was long described as private, but was in fact also funded from the start by the U.S. government. It broadcasts to Southeastern and Eastern Europe, Russia, the Caucasus, the Middle East, and Central and Southwestern Asia. By the first decade of the twenty-first century, RFE/RL produced more than 1,000 hours of programming per week in 29 languages. It is the second-oldest U.S. international broadcaster with a specific programming mission, which is why it also merits additional attention.

RFE/RL's role in international broadcasting has always differed from the rest of the U.S. government-sponsored outlets, which were meant to be surrogate radios—their programming dealing with the issues related to the specific country for which the broadcasting was intended. The underlying idea was to provide the kind of broadcasting that might have been present had the respective countries been in the position to enjoy full media freedom. This programming was hence different from that of the VOA, whose content focused more on events and issues within the United States, and whose primary goal was to present official government policy without emphatic expression of political arguments. Another trademark feature of RFE/RL was that its programming was targeted primarily toward elites of the oppressed societies, rather than the masses, which is why the programming often included more sophisticated news analysis.

Free Europe Inc. was established in 1949 with the purpose of programming to East European countries behind the Iron Curtain. The Radio Liberty Committee Inc. was founded two years later with the goal of reaching out to the peoples inside the Soviet Union. Both organizations were funded by the CIA, as well as with the help of private donations. The involvement of the CIA was not initially made public. Despite the connection to the CIA, RFE/RL experienced little editorial supervision from the U.S. government. The public only learned that the funding of the radios was CIA managed in 1967, when *The New York Times* and *The Washington Post* broke the news. Only a small part of the radios' budget was coming from public funding campaigns such as "Crusade for Freedom," during which people were asked to contribute money so that the radios could continue to operate, thus supporting freedom from communism in Europe. The official involvement of the CIA ended in 1971. Ever since the beginning of the 1970s Congress has appropriated funds for RFE/RL during allocation of the yearly budget for the federal government—as with the VOA. BBG now allocates money to RFE/RL through a grant.

Perhaps the most famous event in the history of radio and U.S. international broadcasting took place in late 1956 during the Hungarian Revolution, when radio organizations were accused of promoting an uprising against communism in their broadcasts. The uprising eventually resulted in the deaths of 10,000 to 20,000 people when the Soviets put down the revolt. The United Nations, the West German government, and the Council of Europe as well as the U.S. Congress investigated the nature of the broadcasts and RFE was absolved from accusations that it was inciting an uprising. Yet the organization was criticized for leaving an impression that the West would whole-heartedly aid the revolution.

That the RFE/RL contributed to the later fall of communism is widely accepted. For decades during the cold war the jamming of RFE/RL's signal by the Soviet and East European governments was a regular practice. After the fall of communism in 1989 to 1990, however, the organization underwent considerable deliberations as to whether it was still needed. While the organization continued to operate, many RFE/RL services were shut down. Among other language services suspended were Hungarian in 1993, Polish in 1997, and Czech in 2002.

New services were gradually opened reflecting the regional strategic shift in the organization's broadcasting aims and adapting to regional political developments. In 1998, it opened a Persian service as well as Radio Free Iraq in Arabic. With the 1990s conflict in Kosovo between the Serbs and Kosovo Albanians, it introduced broadcasts to Kosovo in Albanian; and in Afghanistan it started broadcasting in both Dari and Pashto from 2002. As of 2008, it offered 18 services in 28 languages. The closure of the East European services and the shift of resources toward the Middle East has been the subject of some controversy.

Into the New Century

A discernable overarching programming trend in U.S. international broadcasting since the year 2000 has been the idea of marrying the mission to the market. To an extent sparked by the need to reach out to the Arab world after September 11, the underlying idea behind this trend has been to modernize American international broadcasting to attract bigger audiences. To this end, the broadcasting services introduced after September 11 (such as Arabic Radio Sawa, as well as Iranian Radio Farda) are more focused on entertainment, with shorter news formats as well as more music. Radio Farda, for instance, broadcasts more hours of American and Iranian pop music than news. Since Farda is a joint project of RFE and VOA, this programming presents a departure from traditional in-depth news reporting that targets elites. The trend is evident in more than broadcasting to the Middle East. The RFE/RL Russian Service was trying to introduce similar changes in its news format after receiving feedback that their broadcasts resembled old-fashioned dissident programming from the time of the cold war. Programming content continues to be the subject of much political dispute. A typical example of such disagreement is the appearance of the leader of Hezbollah, a terrorist organization famous for its anti-Americanism, on Alhurra TV. Whether U.S. government–funded broadcasts should give voice to anti-American ideology has raised questions among politicians in Congress.

The Voice of America and Radio Free Europe have played a significant role in conveying U.S. policies to foreign audiences since World War II. They played a significant role in the battle against communism as well as in making American culture and lifestyle more desirable abroad. The organizations also helped reduce traditional U.S. isolationism by promoting American involvement in international affairs. As part of government-sponsored informational activities, international broadcasting also presents an important public diplomacy tool, along with government-sponsored international cultural and educational activities. After the events of September 11, the organizations continued to be relevant by shifting their aim to a regional focus on the Middle East. The content and format of U.S. government–funded international communications has always been the subject of political dispute.

Video Journalism

Video journalism is a form of video news production in which one person shoots, writes, and edits news stories using digital technologies, to be disseminated via broadcasting cable, or broadband Internet. Video journalists (VJs), also known as "backpack journalists" (BPJs) or "mobile journalists" (MoJos), may work for television stations, cable services, newspapers, websites, or citizen journalism organizations. They might, also be independent freelancers. Their work is often stylistically different from traditional television journalism, and in some settings, it is taking on a distinct narrative form.

Brief History of Video Journalism

While so-called one-man bands have long existed in television news and documentary film production, they tended to be the exception. Single-person units were more often found in smaller markets, where young reporters would shoot, write, and edit their own material as they worked their way into larger markets where they'd work as part of a team with a photographer and (though no longer) sound technicians. Conventional television newsgathering generally still involves teams of videographers, reporters, and producers to shoot, write, and narrate stories.

While the term *video journalism* came into popular use relatively recently, its history goes back to the last decade of the twentieth century, and it is rooted in both documentary filmmaking and photojournalism. Many of the earliest documentary filmmakers, such as Robert Flaherty (who produced *Nanook of the North*) or employees of the Lumière brothers, shot their own film, despite cumbersome, heavy equipment. The earliest video cameras were enormous, but by the 1970s it was possible for one person to carry a video camera and recorder and soon such electronic news gathering (ENG) became the norm for television news. In 1972, documentary filmmaker Jon Alpert started the Downtown Community Television Project in an old firehouse in New York City to teach non-professionals how to create video programs.

In the late 1980s, Michael Rosenblum, a former network television producer, saw potential in the new, highly portable "Hi-8" video cameras and established "Video News International." VNI deployed VJs who, by working as solo international correspondents, formed an operation that was cheaper to operate and more mobile than a conventional broadcast television network. VNI eventually became New York Times Television and years later was folded into the larger Times newsgathering operation.

Video journalism's dramatic growth is due in great part to the smaller camera, which, at five

pounds, weighs about one-sixth that of a conventional TV camera. However, a number of other key technologies also fueled the expansion of video journalism, including lighter-weight laptop computers, user-friendly video editing software, wireless Internet, and the availability of faster broadband connections.

Fans of video journalism consider it a distinct narrative form, due to the more flexible technology and its singular authorship. The host of Australia's VJ-staffed *Dateline* program, Jana Wendt, noted that "One of the benefits and charms of this style is that you can get in where others cannot" (quoted in Fidgeon 2004). Jon Alpert, who continues to produce documentaries around the world, says it is easier to blend in and look like a tourist in countries that are hostile to journalists. Rosenblum teaches that video journalism has the potential for what he calls a "new grammar," with greater intimacy, access, depth, ownership, reality, freedom and a more intensely local perspective. David Dunkley Gyimah, a video journalist who conducts workshops in Britain, writes, "I represent a new discourse in story telling and journalism blurring the boundaries between technologist and artisan, the net and TV, a writer and visual blogger."

Styles of Video Journalism

VJ stories, whether produced for an institution like the BBC, *The Guardian,* or activist websites such as Indymedia, vary widely in length, narrative structure, authorship, strategies for proximity and temporality, and modes of audience-address. Some institutions insist on a standup (a short appearance by a reporter, also known as a "piece to camera" in Britain) in every story, in accordance with local news formats, while others use only the voices of the story's subjects. This diversity of format is likely to continue as the convergence of print, television, and other media platforms affects contemporary news organizations.

Not all institutions are adopting video journalism in the same way, changing its form and process to fit the media logic of various operations. The BBC, for instance, has trained hundreds of VJs for its Nations and Regions division (the local news arm of the BBC), but many of them do not shoot stories on a regular basis. In places such as Oxford, England, however, a nearly all-VJ staff produces a daily hyper-local (community level) newscast, something that was not financially possible just a few years earlier. A television station in San Francisco, KRON, was among the first local stations in the United States to convert to an all VJ staff; yet KRON's stories are almost indistinguishable from those produced by competing, non-VJ stations. Many other U.S. stations employ all VJ staffs; others are introducing VJs as part of their employee mix.

Video journalists are becoming increasingly important to newspapers, where web video is considered crucial to competitiveness in an increasingly convergent environment. It is here that video journalism is taking on a more distinctive form. Newspaper VJs may edit in a pure documentary style using only interview sound to create a narrative; they may use text-titles on the screen to help the story along, or they may even record their own voiced narration. Dirck Halstead, one of the original members of VNI, has become a leader in helping still photographers make the transition to video through his annual "Platypus" workshops, and he maintains a website devoted to the practice. Halstead encourages his students to create their own storytelling style and avoid trying to copy TV news.

Recognition of video journalism as a distinct form became more widespread after the turn of the twenty-first century. The flagship professional publication of the National Press Photographer's Association (NPPA), *News Photographer,* began using the term regularly in 2004. Two years later the NPPA's annual "Best of Photojournalism" contest included an entry for solo video journalists. Significantly, in 2008 the organization considered changing its name to the Society of Visual Journalists in order to recognize the changes underway for its membership; the motion was tabled for further study.

Issues and Controversies

Video journalism has drawn considerable criticism and resistance, particularly among traditional television journalists. The amount of time and effort needed for a VJ to deliver a quality story disrupts the workflow for many local television news operations. In some the BBC locations, many VJs have not put their new skills into practice with any regularity. Safety concerns come into play for some stories, particularly potentially violent situations. Finally, some traditional television journalists

believe that video journalism lowers the quality of television news both technologically and journalistically and that it simply represents an attempt to do more with less money—and fewer employees.

Video journalism has the potential to disrupt many aspects of newsgathering. As more journalists wield their own cameras and write multimedia stories, the nature of newswork, the resulting narratives, and journalists' own identities are likely to shift. Video journalism requires a journalist's physical presence—something long taken for granted by photojournalists but not necessarily by text-based journalists, who may do much of their fact-gathering remotely. Still photographers, whose previous job was to capture one decisive moment extremely well, are being asked to learn how to learn an entirely new technique. Video journalism involves not only a moving image but audio as well in the form of interviews and background audio. Those who previously might have written captions only are expected to be visual storytellers, who produce, write, and occasionally even narrate complete news packages.

The relatively low cost of video journalism has made it a popular tool for citizen journalists. In 1999, activists armed with lightweight video cameras were able to produce a form of "counter coverage" of the protest against the World Trade Organization in Seattle. Since then, citizen video journalism has taken root with human rights groups such as Witness.Org, and other populist activist organizations devoted to giving voice to those outside the mainstream media. The video site YouTube makes it possible for anyone, from the occasional amateur hobbyist to the devoted activist, to upload video stories to the world. IndyMedia, a now-national network of grassroots organizations, teaches multimedia and video production to volunteers as a counterbalance to mainstream journalism. Such efforts echo the early efforts of Alpert at the DCTV in New York—though today the technology far more accessible, in financial and practical terms, than ever before.

Video journalism's strongest advocates consider it to be a new narrative form, not merely a faster, cheaper way to produce television. But filmmakers like Alpert, whose documentary projects have garnered 15 Emmy awards, might argue that the form is not new at all—only its mainstream acceptance is new. Video journalism is indeed taking hold in a variety of media institutions, changing journalistic identity and daily newsroom practices along the way. Travis Fox, an award-winning VJ for WashingtonPost.com, sees no end to the possibilities for this emerging news practice: ". . . as the technology gets simpler, if more individuals shoot and cut video—like they create writing—you are going to get a lot more interesting styles, and a lot richer body of work as a whole."

Video News Releases

Video News Releases (VNRs) are public relations tools frequently used by corporations, nonprofit

organizations, and government entities. Any VNR is the television equivalent of a press packet. It includes an entire TV news story being promoted by the organization. A typical VNR contains many parts:

- A package complete with narration from a "reporter" who actually works for the PR firm creating the VNR.
- A "donut" version of the same package so a reporter or anchor from the television station simply can add his or her voice in the appropriate spots, giving the false appearance the reporter or anchor played a more active role in the creation of the story.
- Extra interview segments, sound "bites" typically 5 to 15 seconds, from on-camera experts quoted in the story.
- Extra video of the subjects mentioned in the story. For example, let's say the VNR was from the National Cattleman's Association and concerned an increase in the use of beef in restaurant meals. The extra video (the trade slang is B-roll), may include shots of cattle, cattlemen, wrapped beef in a supermarket, and a waitress delivering some beef-related meal to a customer. These typically will include natural sound of the action being shown.
- A suggested script for the story (often presented as a full screen or more of text against a bland background) so the producer or reporter more easily can craft the material into an item for one of that day's newscasts.

VNRs began in the 1970s as rather obvious promotional items, often sent to television news operations through the mail in the form of videotapes with an attached hard copy of additional information and the suggested script. VNRs today, however, are more subtle, pervasive, and technologically sophisticated. Several large firms specialize in their creation and distribution, mostly through satellite feeds but also as high-quality streaming video to be downloaded. The VNRs even will include an encoded "tag," known as the Sigma system, so their actual use by station, market, length, and time of day can be tracked.

Sometimes it takes a careful and trained eye to spot a VNR in use, but certain examples may help. If a viewer is watching a health news story involving new cancer research, the piece might include interviews at a lab thousands of miles away. The name of a drug company sponsoring the research is shown on close-up shots of bottles and stationery. It is possible these bits of video were assembled and distributed by the station's affiliated network news operation, but it is far more likely they came from a VNR created at the behest of the medical journal or the drug company. Or, to take another example, a viewer notices a brief news story about a growing trend in consumers buying used cars from car rental companies. The copy is not blatantly promotional, but all the sound bites and video show representatives or logos of only one car rental firm. This story may very well be a VNR from that company.

Television newscasts often conclude with a kicker, a short amusing story meant to leave viewers feeling upbeat. The kicker could be the new Miss World as she rides a new roller coaster, or cute kids test marketing green and purple ketchup all over hamburgers and hot dogs. Both of these likely are VNRs, the former perhaps from the amusement park promoting the new ride, the latter from the foods corporation launching the new ketchup.

Some early research efforts to study VNR usage made the mistake of sending surveys to news directors. Few responded, and even fewer admitted to much VNR usage. News directors, especially in large markets, concern themselves with big matters such as hiring, firing, relations with station management, and techniques to improve ratings. Day-to-day, newscast-by-newscast decisions about individual stories use tend to fall to producers for those programs. The best usage data likely come from the Sigma tracking.

Research by Mark Harmon and Candace White in 2001, using Sigma tracking, found widespread use of VNRs, especially in a short form in which only 20 or 30 seconds was used for video, a quick sound bite, or both. They found greatest VNR use during times when newsroom resources are stretched thin, such as early morning, noon, and soft feature–oriented early afternoon newscasts. VNRs rarely appear in the hard-news opening segments of newscasts but creep in as health segments, soft features, or kickers later in programs.

One *New York Times* report found several news directors decrying VNRs as unethical misrepresentations, only to be confronted by tracking data showing significant VNR use in their own

newsrooms. Perhaps the most famous and controversial VNR use, one that raised both ethical and legal questions, was a Department of Health and Human Services VNR promoting the Bush Administration's Medicare plan in 2004. It featured narration from a fake reporter named Karen Ryan and was used in its entirety by several local TV news operations.

The Federal Communications Commission (FCC) heightened the debate about VNRs in the fall of 2007. The FCC fined Comcast Corporation $4,000 for airing within a news program a VNR touting a product, Nelson's Rescue Sleep, without identifying Nelson as the video source (Gelles 2007).

Critics of VNRs assail them on ethical grounds, the most common argument being that VNRs deceive the audience into thinking they are seeing the results of station news gathering and editorial decision making rather than a well-crafted pitch from a corporation or a government agency. One also could argue that VNRs waste time that could be spent on genuine news gathering and thus facilitate the understaffing of news operations. The Center for Media and Democracy has taken on the task of quantifying and disclosing what it calls the widespread and undisclosed use of fake news.

Videotex and Teletext

For a relatively brief period during the 1970s and into the early 1990s, these twin technologies appeared to offer a viable means of transforming the news (and many other) businesses. Videotex (spelled without the final "t") worked through cable while teletext used part of the television over-the-air transmission channel. Both services offered access to a digital database of information that could be ordered up—as text and very basic graphics—on a television screen. Save for one exception, however, none of the several technical systems survived long (though the French Minitel operation lasted for about two decades). Today the Internet offers far more breadth and depth of service, is accessed more easily, and is presented in finer graphic form. But the Internet as we know it today did not then exist, and the personal computer was a brand-new and expensive technology.

Development of these services began in Britain British Broadcasting Corporation (BBC) engineers discovered a way of using spare capacity in the television channel's vertical blanking interval (VBI, the thick black bar that separates television pictures and is normally not seen). Originally developed for the use of those hard of hearing, and then applied only internally, the resulting BBC teletext system was announced in 1972, and a public test of the "Ceefax" ("see facts") system began two years later. British independent (commercial) television offered an advertiser-supported teletext service called "Oracle" by 1977. Although this system began with only about 30 "pages" or screens of information, by utilizing more of the VBI, they had ramped up to 600 or so by the early 1980s, serving an audience of 1.5 million homes with television receivers equipped to decode the signals. Content initially echoed and then expanded upon the main broadcast channel—program listings, expanded information from newscasts, and directory services. Videotex (called viewdata in Britain) was introduced by the British Post Office as "Prestel" in 1976. By the early 1980s, it hosted more than 150 service providers providing hundreds of pages of largely directory-type information to a largely business audience (the service had failed to penetrate the expected residential market). All of these services lasted into the early

1990s; after that, computer-based Internet offerings proved far superior.

France's National Center for Telecommunications Studies began to develop its "Antiope" videotex/teletext system in the early 1970s as well. A videotex service marketed as "Teletel" was by 1981 providing stock market and agricultural reports, news and weather, and traffic updates, adding up to thousands of available pages of information. Beginning a year later, French Telecom sought to end the expense of regularly updating and publishing paper telephone directories with its "Minitel" videotex system, which developed rapidly thanks to the utility giving away the "dumb" terminals that looked a bit like later laptop computers but lacked their capabilities. Service users were then charged depending on the type of information and amount used, much as was the case with telephone service. By 1990, Minitel reached about 5.5 million subscribers, or about a quarter of the French population, doubling that by the end of the century. Although French Telecom sought to make their terminals Internet friendly, the long-lasting system had largely disappeared by 2005, pushed out by far more capable personal computers and widespread Internet services.

Canada's government backed the development of its "Teledon" videotex system, announced in 1978. This offered much improved graphics over the British and French systems, and versions could be provided by either broadcasters or cable systems. The Canadian Broadcasting Corporation (CBC) began to offer its version in 1981, providing program directories, news reports, and the like. But when field tests showed a public resistance to the high-priced terminals, the experiment ended in 1985.

The American experience with videotex and teletext was considerably different. Indeed, it may have started earlier—with RCA experiments utilizing the VBI to send fax messages to homes in the 1960s. But most American efforts were based on one or more of the systems already described. Of the many experiments run during the 1980s, several focused on journalistic offerings. Time Inc. considered both videotex and teletext and decided in 1983 that to offer either would merely divide up their existing magazine audiences. Knight-Ridder newspapers offered an experiment called "Viewtron" in Miami, and Times-Mirror tested its "Gateway" system in Los Angeles. Closely watched due to the importance of both newspaper chains, the companies offered extensive videotex systems that both drew on and expanded their big-city newspaper content. In one sense, these chains were playing it safe and testing the waters of a technology that some thought might replace the printed newspaper. But both closed down by 1986 when they failed to achieve much audience penetration, despite having spent millions of dollars on development and promotion.

Videotex and teletext systems failed for many reasons, but chief among them was a failure to achieve a viable market, defined as sufficient user interest. Somewhat cumbersome to use, and even then providing (in modern terms) too little information in a not very user-friendly fashion, these early attempts to provide information electronically foundered on multiple incompatible technical systems, fuzzy marketing, and their use of the television—rather than the (then rare in homes) computer—screen. Today's Internet offerings are vastly broader, faster to access, easier to use, and nicer to view. In a sense, videotex and teletext pioneers had the right idea but lacked the technology to make it successful.

Violence Against Journalists

Investigating stories, let alone actually reporting them, can be a very dangerous profession. Indeed, each year several dozen reporters are killed (or otherwise threatened) for doing their jobs, most of them in developing nations or countries with repressive political regimes. Being the bearers of bad or unwanted news can and has made journalists targets for reprisal for many years. Indeed, the problem may be getting worse.

Journalists are special targets for repression because by shedding light on people or events they can rouse public opinion domestically or abroad. Indeed, news people can create or change the political agenda, and often have. Foreign journalists are often most feared in developing countries as they may have access to widespread distribution of their investigative stories.

What Can Happen

The Committee to Protect Journalists (CPJ) is an independent, nonprofit organization founded in 1981 to track attacks of various kinds on journalists and to try to prevent them. In nearly three decades of effort around the world, the CPJ has classified the various things that can happen to journalists. The list includes the following potential actions, listed alphabetically. In the course of pursuing a story, a journalist may be

- abducted;
- attacked physicall;
- censored (defined as "suppressed, banned, or closed down"), expelled, and harassed (defined as "access denied or limited; materials confiscated or damaged; entry or exit denied; family members attacked or threatened; dismissed or demoted [when it is clearly the result of political or outside pressure]; freedom of movement impeded; [or] detained for less than 48 hours");
- imprisoned ("arrested or detained by a government entity for at least 48 hours");
- killed (includes those journalists killed in crossfire or while covering dangerous assignments or where the motive is unconfirmed);
- made the subject of legal action ("such as having [needed] credentials denied or suspended fined sentenced to prison; visas denied or canceled; passage of a restrictive law; libel suit intended to inhibit coverage");
- missing or vanished ("where no group has taken responsibility for the journalist's disappearance"); and
- threatened with physical harm or some other type of retribution.

The CPJ issues an annual report detailing the various attacks on journalists during the previous year. From 1992 through 2008, they document more than 720 journalists who have been killed. Most at risk have been print media reporters (32 percent of reported deaths), followed by broadcast reporters (21 percent) or editors (16 percent). Nearly 18 percent have been video or still photographers. One can readily follow the continuing problem in the daily press and online as attacks on the press are widely covered in Western media.

And while not clear in the list provided above, intimidation of publishers or media owners can have the same effect—scaring off nosy reporter employees who may be getting too close to information that would be embarrassing (or worse) if publicized. In many developing countries, the threat of losing one's job is a serious one, often hard to overcome just to get the story. Such indirect threats are much harder to trace but can have effective results in closing down reporting efforts.

Sources of Violence

Unfortunately there are many potential sources of attacks on journalists. While government officials are often thought the most likely perpetrators, especially in repressive political regimes, they are not alone. Criminals of various kinds (especially those dealing in drugs), shady business owners or managers, crooked sports teams, rival journalism entities—indeed anyone whose activities may be uncovered by investigative journalists may be the source of threats—or worse—to journalists.

Journalists typically get into trouble in countries that either have strongman repressive regimes or have very weak governments and multiple groups contesting for power or economic gain. In either of these extremes, there are "interests" who do not want their activities discussed (exposed might be a better term) in news media. The latter nearly

always means newspapers, but in nations with high rates of illiteracy, reporters for radio or television may become the prime targets because of the audience reach of their employers.

The problem has become systemic in some countries, leading to various means of tracking which countries are especially dangerous for reporters. Entities in Europe and America both track press freedom (for attacks on news people are one way to assess that measure) on a continuing basis, with cumulative annual summaries. Even the United Nations has become involved in expressing concern in resolutions, though how effective that can be in practical terms "on the ground" is less clear.

Examples of attacks on journalists during the first decade of the twenty-first century have included predictable trouble spots. For example, a multiyear, ongoing struggle between drug cartels and various federal and local Mexican government bodies has led to a rising death toll, and a number of incidents of threats or worse to journalists trying to cover the conflict. For a much longer period, many Latin American media, especially investigative newspaper reporters, have been under pressure not to report too closely on the often cozy relationships between business owners and government officials. In Venezuela, a Caracas television station was forced off the air by the populist government which did not approve of its critical reporting. Several Central American countries have seen local media censor their own reports and reporters to avoid trouble.

Where actual military action breaks out, reporters can be in special danger. Ongoing and sometimes shooting conflicts between Israeli and Palestinian extremist factions in Gaza and the West Bank are an example of a long-running story well worth reporting, though often dangerous to cover. The mix of religion, politics, and control of land is complex and incendiary. Emotions run high on both sides, leaving an uncomfortably narrow ground for those in the middle—who may include journalists. Likewise, reporters embedded with American units in Iraq and elsewhere have often been subject to attack just as if they were armed soldiers. Russia, as well as some of the former Russian republics now independent of Moscow, have all too often been in the news for attacks (often killings) of journalists, especially those reporting on dissidents or the shortcomings or even illegal actions of government or military officials. Dissent of any kind is labeled as "terrorism" and reporting about it can and has led to attacks on the reporters. And if, as has often happened, the attackers are not identified or are protected by the powers that be, a clear message is sent to other journalists.

Countries that lack a viable government or strong social controls are the most dangerous of all. Somalia, for example, became a center of concern with rising action by pirate groups that—quite literally—abducted huge ships and held them for ransom. Trying to report this important story is almost impossible as no one can or will guarantee the safety of reporters. Afghanistan is another such country where since 1980, outside of a few cities, nobody seems to rule and the safety of anyone (journalists included) is at risk. The same situation has developed in the tragic ethnic warfare afflicting many African states where one's tribal (or religious) identity is far more important than anything else. Rural parts of many other developing nations are just as dangerous. In such conditions, potential news sources, too, are subject to reprisal and rapidly disappear.

High-Profile Cases

While all too many attacks on journalists are only reported locally, a few cases have received widespread coverage. Most take place in tension-filled areas (or countries with strong-arm governments) where journalists are trying to report facts that one side or another clearly does not want heard.

Among those was the early 2002 murder of *Wall Street Journal* reporter Daniel Pearl near Karachi, Pakistan. He had driven to a supposed meeting with a local political leader when he was kidnapped by an Islamist group who videotaped his murder several days later when their list of demands (including the release of specified prisoners in Pakistani and U.S. prisons) went unmet. His body was found months later. The brutality of the recorded killing created widespread revulsion and remained in the news for some time. Several men were later arrested and convicted for the crime, though none had been put to death (despite their sentences) by the time this volume went to press.

Through 2008 to 2009, a number of Russian journalists were attacked, and several were

murdered, though nobody was arrested for the crimes. Several of the attacks took place in Moscow, and some of the victims were gunned down in broad daylight in gang execution style. In nearly every case, the journalist attacked had been pursuing stories unfavorable to the government of Vladimir Putin, though no direct connection was ever proved.

Likewise, many journalists have come into the line of fire (quite literally) in both Mexico and Colombia, where drug cartels are seeking dominance and resisting government attempts to crack down on their activity. Journalists are among the many who have fled the city of Juarez, across the Rio Grande from El Paso, Texas, as the total number of drug-related killings rose to thousands every year. Intimidating reporters works to the drug lords' interest, as less reporting of their activity is beneficial to staying in business.

What Can Be Done

Shedding light on the problem—as the CPJ and other groups do very well—is clearly the first step in trying to combat violence against journalists. Reporters and editors know better than most other groups how to get necessary attention focused on an issue, including their own safety. Rousing public outrage at attacks on reporters and other journalists is one way to achieve a degree of "crowd" protection.

There are many practical things journalists can do to reduce their exposure to trouble. Keeping in close touch with editors and colleagues (and their own families) is important. Working in teams with others rather than alone, if possible, can be helpful as well. Avoiding dangerous locations (nighttime visits to isolated spots, for example) is also an obvious safeguard, if one that is not always possible given the need to make confidential meetings with important sources. Making sure colleagues are aware of where a journalist is operating can be useful. Certainly an ability to speak the local language (something too few American reporters in many countries can do) may be helpful as well.

In the end, however, journalists must, by the nature of their profession, often take risks to get information for their stories. As long as their reporting threatens some established interest, they may be placing their media employer, their jobs—or themselves—in danger.

Wall Street Journal, The

The Wall Street Journal, the flagship publication of Dow Jones, is a primary American business newspaper, largely devoted to financial news and issues. Launched in 1889 to cover the Wall Street stock market, it has expanded its coverage in recent decades to report on politics, culture, and technology. The *Journal* launched an Asian edition in 1976, a European version in 1983, and its online edition in 1996. In 2006, Dow Jones claimed that the paper and its various editions had a worldwide circulation of more than 2 million readers, with over 900,000 paying online subscribers. It was the largest circulation newspaper in the United States until November 2003, when it was surpassed by *USA Today*.

History

In 1882, with two associates, newspaperman Charles Dow founded Dow Jones and Company Inc., "a news agency for the financial world." In November 1883, the company began producing the *Customers' Afternoon Letter,* a printed two-page summary of the reports dispatched that day. On July 8, 1889, the *Afternoon Letter* became *The Wall Street Journal*. The four-page newspaper sold for two cents, with advertising priced at 20 cents a line.

Two years previous, the company had joined in an agreement with Clarence Barron to exchange financial news items. Barron managed a news bureau in Boston and had been producing a business newspaper for several years covering that city. The two offices, Dow Jones in New York and Barron's in Boston, reinforced one another's coverage of American business. In 1896, Barron expanded coverage into Philadelphia with the *Financial Journal*. But it was *The Wall Street Journal,* now six pages, that had the strongest reputation, and increasingly its stories reported on the national economy as well as the New York Stock Exchange. In 1898 a morning edition of the *Journal* was added.

When Charles Dow died in 1902, the circulation was about 7,000. In March 1903, Barron, along with *The Wall Street Journal*'s then-editor Thomas Woodlock, bought Dow Jones for $130,000. Unhappy with the profits of the company, in 1912 Barron took over as president of Dow Jones and appointed himself as editor of the *Journal*. The paper soon reached 50,000 subscriptions.

Barron died in 1928, and was succeeded as president by Hugh Bancroft, his son-in-law, who served as president for the next five years; the Bancroft family would control the company until 2007. Kenneth Hogate became the *Journal*'s managing editor, with the mandate to make it the United States' first national newspaper. The first issue of *The Wall Street Journal's Pacific Coast Edition,* published in San Francisco to carry West Coast financial news, appeared eight days before the October 1929 stock market crash. Although the paper was hard hit by the Depression—circulation dropped below 30,000—Hogate began a series of changes in 1934 that would eventually shape *The Wall Street Journal* into a new kind of daily

newspaper. Among these was the "What's News" digest and the paper's now iconic front-page design. The newspaper won its first Pulitzer Prize in 1947 for its editorials; it had won 33 by 2006.

The man who most shaped the modern *Wall Street Journal* was Bernard "Barney" Kilgore, who became editor in 1941. He expanded coverage to all aspects of business, economics, and consumer affairs, as well as any aspect of American life that had an impact on business. He also decreed that not all stories had to be in the inverted pyramid style of reporting; instead, he not only encouraged reporters to produce in-depth stories, but to experiment with literary styles. Coverage of the stock market and corporate America remained the prime objective, but it no longer dominated the pages. Kilgore also ended the use of photographs in the *Journal,* for both aesthetic and financial reasons, declaring them to be an unnecessary and frivolous expense.

Kilgore pioneered the use of layout delivery from a central location to regional printing plants for home and newsstand delivery across the United States. A southwest edition was launched in 1948, printed in Dallas, and a Midwest edition in 1951. Kilgore's system of regional printing plants became the model that other national newspapers such as *USA Today* and *The New York Times* later followed. By the time of Kilgore's death, circulation had reached 1.1 million.

In 1976, the *Asian Wall Street Journal* was launched, with its regional offices in Hong Kong. With nine printing plants and 15 news bureaus in countries from China to Australia, it is the largest regional paper serving the Far East. Average paid circulation for the first half of 2007 was over 80,000, with a total readership estimated by the publishers to be over 370,000. *The Wall Street Journal Europe* was begun in 1983. Printed in six countries, it is distributed in over 50 countries; total readership in April 2008 was 219,000.

In December 2007, Dow Jones shareholders approved the company's acquisition by Rupert Murdoch's News Corp. The controversial $5 billion sale added *The Wall Street Journal* and *Barron's* to Murdoch's news empire, which already included Fox Television, the *New York Post,* and *The Times* of London. At the time, *Journal* staffers and union representatives feared that the merger would have a negative impact on the quality and independence of the paper's news-gathering role, while academics and others condemned such major corporate consolidation of news media as a threat to democracy and free speech.

In 2006, *The Wall Street Journal* had a staff of more than 750, part of the Dow Jones network of more than 1,800 news staff worldwide. The company owns 17 printing plants in the United States, with a combined print run of the various editions of the *Journal* of over 2 million copies daily from Monday through Friday. Newsprint is supplied by plants that Dow Jones owns. The Asian and the European versions continue to grow annually. The *Journal* publishes four regional editions across the United States, and is distributed through a complex same-day delivery system.

The paper retains its focus on corporate news and political reporting, but has added several sections in response to the changing interests of its affluent readership. The second section covers the marketplace, and includes coverage of the health, technology, and media industries. Another section focuses on money and investing for investment professionals and advisors. The "Personal Journal" section covers personal investments, careers, and cultural pursuits. Other sections explore real estate, travel, and sports. Special reports offer the editors' picks about topics as varied as personal health and fitness, travel and leisure, cars and gadgets, fashion and food, and education.

The Wall Street Journal Interactive Edition, now *The Wall Street Journal Online,* was launched in 1996; it is held to be the largest paid-subscription online site in the world, with nearly a million readers in mid-2007. *The Wall Street Journal Report* is a syndicated television show and has run nationally since 1982. *The Wall Street Journal Report* and the *Dow Jones Report* are radio broadcasts that are aired and updated throughout the business day on stations across the country. "JournalPhone" is an interactive financial news service with real-time stock market updates accessed by telephone.

Few newspapers have been as successful, innovative, and influential as *The Wall Street Journal.* Under the guidance of a series of insightful editors the paper set the standard for business journalism, then expanded its coverage to other facets of American life. In the process it became the nation's first national newspaper. With its overseas versions and successful online version, the largest paid

news site on the Internet, it might be argued that the *Journal* is on its way to becoming the first global newspaper.

War and Military Journalism

With few exceptions, the American public supports the country's armed forces at the onset of war—and so have American news media. War's early stages encourage patriotic sentiment, a phenomenon known as rallying around the flag. New York editor Horace Greeley (1811–72) famously called for the invasion of the Confederacy by placing "Forward to Richmond!" in the masthead of the *New York Tribune* at the start of the Civil War in 1861. In 1898, New York press barons William Randolph Hearst (1863–1951) and Joseph Pulitzer (1847–1911) clamored for hostilities with Spain during the two months between the mysterious destruction of the battleship U.S.S. *Maine* in Havana harbor and the congressional declaration of war. Rarer is the case of the press achieving peace despite public support for war. One example occurred in 1895, when Pulitzer's New York *World* editorialized against efforts by Congress and President Grover Cleveland to intervene in a boundary dispute between Venezuela and British Guyana. While the majority of American newspapers echoed the government's talk of possible war with Britain, Pulitzer defused the crisis by publishing telegrams of good will from British government and church officials.

Passions for war erode with time, both among the public and the news media. Lengthy wars are difficult to justify to a large and heterogeneous nation with a continuing strain of isolationism in some quarters. It is equally difficult to long sustain a belligerent mood among civilians whose lives are little affected by distant conflicts. Although the connection between war news and public opinion is complex and not yet fully understood, extended combat provides journalists with prolonged opportunities to portray war's violence, scandal, heroism, and human error, as well as to raise questions about strategy and tactics, all of which become linked with shifts in public attitudes.

World War I proved an aberration. The press and public were slow to support American belligerence, even after Congress voted overwhelmingly for a declaration of war in April 1917. America had supported neutrality, and President Woodrow Wilson had won a second term in 1916 by campaigning on the theme of having kept the United States out of war. In the first six weeks after the congressional declaration, only 73,000 Americans volunteered for service. Wilson responded with a campaign to mobilize public opinion. The federal Committee on Public Information, which Wilson created, fomented pro-war attitudes by distributing thousands of press releases and millions of propaganda pamphlets and posters, and by censoring unpleasant news of the war in Europe. According to photography historian Susan Moeller, the military and government suppressed all civilian combat photography during World War I because they realized the danger to morale posed by images of trench warfare, gas attacks, and wide-scale devastation. The combination of censorship and propaganda created anti-German hysteria by war's end in 1918.

Images, more than the printed or spoken word, are credited with significantly impacting audiences' interpretations of war. "The transformation of mass calamity into individual people and incidents arrests the viewers," Moeller noted. "Through photography,

war becomes personal and comprehensible—more than just grand patriotic schemes and unintelligible statistics" (Moeller 1989, 377). The press and public hailed the government's release of photographs of casualties halfway through World War II as a worthy documentation of the nation's sacrifice. Two decades later in the Vietnam War, video, film, and photographic images of combat and its victims had a different result, feeding a growing debate over conduct of the war. While only 26 percent of Americans opposed sending troops to South Vietnam in March 1966, 60 percent did so by January 1973. Many military and government officials blamed television in particular—the Vietnam War was the first to be extensively covered by TV network correspondents (critic Michael Arlen dubbed it "The Living Room War")—for the loss of public support. The U.S. Army, however, noted in its official history of the war that rising casualty rates had a greater impact than television on public opinion. According to the official Army history, in the Korean and Vietnam wars, each increase of a factor of ten—from a hundred casualties to a thousand, from a thousand to ten thousand, and so on—prompted a decrease of 15 percentage points in public support for the war (Hammond 1996, 262).

News images of war affected public opinion in a variety of ways in later wars. The press and public expressed amazement at government-supplied video of high-tech weapons during the Persian Gulf War of 1991, followed by revulsion at images of death and destruction from the war zones and Iraqi cities. Live images from the armed forces advancing into Iraq in 2003 captured the public's imagination and gave concrete evidence of the assault's swift success. Later, images of tortured Iraqi prisoners and the results of ongoing violence contributed to a loss of public support for the war.

Apart from opinion about warfare itself, the public's view of the armed forces—shaped by the mass media—remained high in the early twenty-first century. Surveys by the Pew Research Center found more than 80 percent of Americans expressed favorable views of the military in 2005 and 2007, while at the same time opposition to the war in Iraq steadily increased. Similarly, the press lauded the sacrifice of individual soldiers, sailors, and airmen in the twenty-first century's first decade. *The New York Times* and other news media published the names and photographs of the servicemen and -women killed in Iraq beginning in 2003. The practice had historical roots. Publications during World War I printed heroic portraits of Americans who died in France, and *Life* magazine honored the 12,987 Americans killed in World War II combat up to July 1943 by printing all of their names. Fighting personnel, especially in death, remain icons even while public and press support for war fades.

Coverage of the Armed Forces

Army

The U.S. Army historically has been the largest and most easily covered branch of the armed services. Correspondents have generally been welcomed to army installations at least since troops marched on Mexico in the 1840s. Reporters usually have access to both officers and common soldiers for information, and they sometimes can witness enough of battle to draw their own conclusions. The amount of coverage, as well as its tone, often depends on the battlefield commander. Restrictive and suspicious generals such as William Tecumseh Sherman in the Civil War and Douglas MacArthur in World War II tried to minimize or otherwise control press coverage of their troops. Other military leaders, such as Col. Theodore Roosevelt in the Spanish-American War and General Dwight D. Eisenhower in World War II, allowed free access. The latter two received adulatory press coverage and parlayed their popularity into the presidency.

News coverage of the Army also has benefited from simple logistics. Combat on the ground offers the most consistent day-to-day source of news, unlike sea and air battles, which tend to be episodic, unpredictable, and widespread and thus hard to access. In addition, ground-based communication has historically provided the most reliable means of sending news from the battlefield; correspondents often resort to using their own means to transmit stories and pictures. Those covering a battle from the deck of a warship, however, have little choice but to rely on naval cooperation. Correspondents stationed at air bases may have greater flexibility than those at sea, but relatively few journalists actually accompany air combat missions.

The Army's most devoted chronicler was Ernest Taylor "Ernie" Pyle (1900–45), who covered various units in World War II. Pyle hailed infantrymen as the "mud-rain-frost-and-wind boys."

He reported the war from the point of view of one soldier at a time because each man's experience, though a small part of the big picture, was real and understandable to a mass audience. His devotion to the infantry helped popularize an image of "G.I. Joe" as an ordinary man doing extraordinary work. More than a half century later, the Department of Defense's embedding program during the Iraq war of 2003 allowed hundreds of journalists to mimic Pyle's methods and gave the public a close-up view of combat units, primarily in the Army and Marine Corps.

Other notable journalists associated with coverage of the Army include Homer Bigart (1907–91) and Rick Atkinson (1951–). Bigart earned a reputation as a no-nonsense reporter in World War II and the Korean and Vietnam wars. His aggressive, critical reports on strategic and tactical problems in fighting the Vietnam War, reported in the *New York Herald Tribune* and *The New York Times*, helped establish the dominant tone of war coverage of the 1960s and 1970s. Atkinson led *The Washington Post*'s coverage of the Persian Gulf War and the 2003 invasion of Iraq. In the latter, Atkinson embedded with the headquarters of General David Petraeus of the Army's 101st Airborne Division.

Navy

The U.S. Navy historically served as America's first line of defense. Warships at sea or in foreign ports were among the first units to see action through World War II. Their isolation at sea makes them more vulnerable than ground and air units, and therefore potentially more newsworthy. Yet the navy has received less wartime attention from the news media than would be suggested by its important role in national defense.

There are two main reasons for this disparity. First, correspondents may not be on hand to witness naval encounters at sea, or may lack the ability to transmit information to distant audiences in a timely manner. The first accounts of the U.S. Navy's Asiatic Squadron's decisive encounter with Spanish warships in Manila Bay in 1898 reached America in the most truncated form. The telegraph cable connecting the Philippines and Hong Kong had been cut after the battle, leaving American readers only with the news that "heavy losses" had been inflicted during the fighting. Full accounts of Admiral George Dewey's victory arrived nearly a week later, when the American ships and correspondents reached Hong Kong. During the early months of World War II, naval battles in the Pacific also were underplayed by the news media. Chief of Naval Operations Ernest King set the tone for truncated news coverage of the Navy in 1941 and 1942 with his reluctance to release information about battles out of concern that the news might prove useful to the enemy. Office of War Information Director Elmer Davis said of King that his "idea of War Information was that there should be just one communiqué. Some morning we would announce that the war was over and that we won it" (Sweeney 2006, 87). Adding to the lower coverage of the navy during World War II were the difficulties faced by shipboard correspondents and the lack of such correspondents on the vitally important submarines. The vulnerability of ships historically has raised concerns among high-ranking naval officers about the risk of news to operational security. Newspapers underplayed accounts of the pivotal 1942 Battle of Midway because of the navy's reticence to discuss the battle in detail—it had gained a tactical advantage beforehand by breaking the Japanese navy's operational code, information which had to remain secret during the war. In addition, King insisted during the war's first months that full accounts of sinkings had to be withheld from publication in order to keep valuable information from the enemy. *New York Times* reporter Hanson Baldwin (1903–91) protested and helped gain a partial relaxation of the policy in October 1942. The navy still kept many secrets, however, and until late in the war insisted on banning press use of names of ordinary sailors from news accounts of battles. Relations between the navy and news media became strained again in 1983 during the American invasion of the Caribbean island of Grenada. A naval blockade kept reporters off the island during the initial invasion. The navy detained two correspondents who tried to run the blockade and ordered a fighter jet to fire warning shots at other journalists who approached the island in a private boat.

Marines

Though part of the navy, and smallest of the four services, the U.S. Marine Corps has enjoyed

one of the closest relationships with the press, resulting in disproportionate coverage during wartime. The increased attention dates to World War I, when American censors decreed that individual units of the armed forces could not be identified in dispatches from the Western Front. Instead, reporters wrote about "the American Army" and other branches of the Allied armed services in combat. Floyd Gibbons (1887–1939) of the *Chicago Tribune* and other journalists effectively skirted the order. They wrote about "Marines" in combat. As American Marines fought in relatively small numbers along a small part of the American sector, which was dominated by Army troops, their coverage seemed more intimate and personal. Gibbons' account of the Marines in the Argonne Forest brought their renowned fighting ability to world attention. In subsequent wars, the Marines have often spearheaded invasions or taken on the heaviest fighting—from Guadalcanal in World War II to the retreat from the Chosin Reservoir early in the Korean War, to Khe Sahn in South Vietnam—resulting in extensive coverage.

The Marine Corps ensured it would receive an extra measure of news coverage through the creation of an organization of combat correspondents working under the corps' Public Relations Department in World War II. Unique among the armed forces, the combat correspondents consisted of civilian journalists recruited and trained by the corps. If the reporters and photojournalists passed the notoriously difficult Marine basic training at Parris Island, North Carolina, they were shipped to combat zones. As Marines, the correspondents were expected to fight and then file dispatches and photographs. During World War II, they carried eight-pound Hermes typewriters along with all other standard combat gear. More than 40 died in World War II and later conflicts.

During the 2003 invasion of Iraq, the Marines invited embedded journalists to experience an unusual degree of transparency. "Go wherever you want, ask whatever you want," Marine Colonel Bryan McCoy told John Koopman (1956–) of the *San Francisco Chronicle* upon his arrival at division headquarters. "As long as you know that and I know that you're not going to abuse that trust, do whatever you want; talk to whoever you want; write whatever story you want" (Katovsky and Carlson 2003, 115, 121).

After Gibbons, perhaps the most notable chronicler of the Marines was photojournalist and writer Dickey Chapelle (born Georgette Louise Meyer, 1918–65). Chapelle, who worked for *National Geographic* and other magazines, covered Marines in battle at Iwo Jima and Okinawa during World War II, and on patrol in South Vietnam. She earned Marines' respect for her toughness and willingness to gather news as close to combat as possible. "In fatigues and helmet," said a Marine Corps commander in Vietnam, "you couldn't tell her from one of the troops, and she could keep up front with the best of them" ("The Press: Woman at War," 54). Chapelle died of shrapnel wounds from a Viet Cong booby trap.

Air Force

Media coverage of the U.S. Air Force, newest of the service branches, has been shaped by the inaccessibility of warplanes to most journalists, as well as public and journalistic fascination with high-technology weaponry—a phenomenon the media watchdog organization Fairness & Accuracy In Reporting calls "weapons fetishism." Air combat has captivated the public since World War I, when aviators in biplanes fought dogfights and harassed ground troops but had little impact on the outcome of the war. Journalists including Edward R. Murrow (1908–65) of CBS and Walter Cronkite (1916–2009) of the United Press observed bombing raids during World War II, and William L. Laurence (1888–1977) of *The New York Times* accompanied the atomic attack on Nagasaki, Japan, in 1945. During the Korean War, when the air force first fought as a separate branch of the armed services, *Life* photographer David Douglas Duncan (1916–) became the first journalist to fly aboard a fighter jet. Like many journalists covering air war, his accounts focused more on the experience of high-speed combat than on tactics and strategy.

For such context, journalists covering the air force typically have turned to official sources at air bases, the Pentagon, and the White House. During the Persian Gulf War, most journalists relied on military briefings and other official sources for news of air strikes against Iraq. Military-supplied video of the air war dominated television coverage and contributed to record ratings for cable news programs, but the images distorted perceptions

about the war. Journalists and the public initially marveled at the precision of laser-guided "smart" bombs and Patriot interceptor missiles in action. It was not until after the war that the Defense Department revealed Patriots destroyed only 40 percent of the Iraqi "Scud" missiles aimed at Israel, and that the telegenic smart weapons accounted for only 7 percent of bombs dropped on Iraq.

War Coverage and "Spin"

The armed forces received supportive news coverage at the beginning of most American wars, including those of the late twentieth and early twenty-first centuries. The war in Iraq proved popular, at first, and that popularity raised public support for the military and the news media. During the first weeks of the war in Iraq in spring 2003, a Pew survey found 85 percent of Americans reported having at least a fair amount of confidence in military information, compared with 81 percent similarly confident that the news media were reporting the war accurately. Four years later, however, those percentages fell to 21 percent for the military and 27 percent for the press. Military operations were marked by a series of scandals, including intelligence failures, prisoner torture at Abu Ghraib, and inadequate health care for injured veterans at Walter Reed Hospital. Press coverage also suffered lapses, including lack of skepticism about White House claims of weapons of mass destruction and hasty, erroneous reporting on the rescue of captured Army Private Jessica Lynch. Thus, the war tarnished both press and military. Extended news coverage helped undermine public opinion, prompting some military observers to question whether, if future military actions are to be effective, they must be fought to swift and decisive conclusions—before long-term coverage has an impact.

In the late twentieth century, journalists confronted increasing efforts by military and government news sources to put a positive "spin" on coverage of combat. Official attempts to slant the news toward supportive, noncontroversial coverage have existed for many decades. During World War I, military censors allowed correspondents to file reports for American newspapers when soldiers in the American Expeditionary Force captured their first German prisoner. The censors deleted the fact that in their nervous excitement, the Americans bayoneted the soldier and he died. At the conclusion of World War II, military censors prevented *Chicago Daily News* correspondent George Weller (1907–2002) from filing dispatches about his touring the city of Nagasaki a few weeks after it was leveled by an atomic bomb in 1945. Weller had written the first accounts of radiation sickness, but military authorities preferred to sanitize news that might provoke sympathy for the bomb's victims or imply that the bombing was inhumane. The federal government continued to spin news about atomic weapons for many years. Amid growing public fears about radioactive fallout during atomic tests in the 1950s, the U.S. Civil Defense Administration published a pamphlet that said, "Fallout is nothing more than particles of matter in the air." Acknowledging that the particles were radioactive, the pamphlet added, "Radioactivity is nothing new . . . the whole world is radioactive."

While efforts to spin stories continued in the early twenty-first century, journalists found new allies and adversaries in attempting to report fully and accurately. The advent of cable television and the World Wide Web, and weblogs ("blogs") in particular, allowed nonjournalists to publish their own critiques of government news management and the media's presentation of the news. Some of the information on independent websites was of high value—the website Iraq Body Count, for example, provided reliable documentation on casualties after the U.S. military refused to give figures to reporters—but other sites reported rumors or focused on some elements of war news to the exclusion of others. "If you rely on newspapers and TV networks for your news, chances are you have no idea that the controversial performance of western reporters in Iraq is emerging as a big issue," the conservative magazine *U.S. News & World Report* noted in October 2003 (Leo, 59). Citing allegations on the Internet and on the conservative Fox News network, as well as six members of Congress, the magazine accused journalists of reporting little but bad news out of the ongoing conflict in Iraq. *U.S. News* credited Internet bloggers, notably University of Tennessee law professor Glenn Reynolds's "Instapundit" website, with leading the campaign for more "balance" in coverage of the war. Meanwhile, commercial radio, led by the conservative, continental-wide

Clear Channel chain of stations, contributed to the spin on war news by banning antiwar songs and using the airwaves to organize prowar rallies.

While right-wing observers assailed the news media for a perceived lack of support for the war, left-wing observers added their critiques as well. For example, during the months leading to the invasion of Iraq in 2003, *New York Times* reporter Judith Miller (1948–) published stories bolstering the American government's case that Iraq possessed weapons of mass destruction. The presence of such weapons became one or the government's key reasons to invade. However, the invading troops found little or no credible evidence of the existence of nuclear, biological, or chemical weapons. Miller and *The New York Times* took heavy criticism from the Fairness & Accuracy In Reporting watchdog group and the liberal online magazine *Slate* over their failure to see through the government's prowar publicity campaign. After the war began, left-wing critics accused the media of playing down the war's impact on Iraqi civilians. Fuller accounts were available not only on the web, but also in satellite broadcasts from international news organizations, such as the BBC and the fledgling Arabic-language al Jazeera network in Qatar.

Changing Dynamics of War Reporting

The task of covering war has grown more complex since the first professional war correspondents rode into Mexico with the U.S. Army in the 1840s. Partisanship was the norm for the American press until the beginning of the twentieth century, and news stories about the Mexican-American War, Civil War, and Spanish-American War reflected the patriotic tenor of the home front. Coverage was relatively easy—journalists wrote not only what they saw, but what they thought about it. The rise of objectivity as the goal of a more professional press, targeting mass audiences, coincided with the onset of total war and widespread censorship in World War I. That combination of factors made the job of reporting war more difficult. Restrictions on journalist movements along the Western Front, particularly in the early years when England and France suffered heavy losses, were coupled with military censorship that prevented correspondents from sending home true accounts of the horrors of gas and machine gun attacks, trench warfare tactics, and massive casualties. Journalists relied heavily on official accounts of action, essentially allowing government sources to "spin" the news for civilian consumption. Only after the war, as veterans came home and the censorship lifted, did families in Allied countries get a more complete picture of the war. World War II was heavily covered by more than 1,000 accredited American correspondents, but military restrictions and patriotic self-censorship once again sanitized much of the news.

Not until the conflict in Vietnam, when television cameras dramatized combat and the lack of field censorship in the undeclared war allowed virtually unrestrained coverage, did Americans witness the scope of combat's violence. Television dominated the news media in the 1960s and 1970s, when only three major networks existed and cable did not yet provide news competition. News accounts tended to have high credibility levels, with CBS News anchorman Walter Cronkite sometimes described as the most trusted man in America. Thus, the era of the Vietnam War is considered by many observers as the pinnacle of American war correspondence.

Conclusion

Journalists of the twenty-first century contend with much more competition than existed during the Vietnam War. Technology has empowered not only journalists in new media of communication, such as the World Wide Web, but has also shortened the production cycle for news, making information available nearly instantly from any point on the globe through the use of mobile and satellite phones, Internet connections, and broadcast signals. Journalists enjoyed as much access to the armed forces during the Iraq war as they had in Vietnam, easing their ability to gather news. However, the competition to be first among the many outlets of news to report significant developments raised the danger of publishing or broadcasting erroneous information, as well as the risk of having those errors dissected and criticized via the web and other watchdog outlets. In addition, the so-called War on Terror added new dimensions to war coverage, placing new burdens on journalists to assess progress against an enemy that does not fight with conventional armies or tactics. Given the continuing advances in technology and the difficulty of stamping out stateless

terrorism, war coverage is unlikely to become any less demanding.

War Correspondents

War correspondence emerged in Europe during the French Revolution and Napoleonic Wars (1789–1815) as British newspapers sought to speed information from the continent to growing lists of subscribers. The identity of the first war journalists is subject to debate, in part because questions have been raised since. Were they true reporters? Were they hired specifically to write about war?

Pioneers

Journalists of the late eighteenth and early nineteenth centuries rarely acted as field correspondents, relying instead on letters from soldiers, gossip, and other newspapers as means of collecting information. Furthermore, "war correspondence" implies a measure of substantial, purposeful coverage, yet early chroniclers included amateurs and victims of circumstance. Some historians nominate John Bell (1745–1831) of London's *Oracle and Public Advertiser,* who witnessed cannonading from a Flemish tower in 1794, as the first war journalist. However, Bell was visiting the Continent intending to round up letter writers for the *Oracle;* it was only after he arrived that he decided to report on his own. The first journalist commissioned to cover war news probably was diarist and lawyer Henry Crabb Robinson (1775–1867). The London *Times* hired him in 1807 to write about Napoleon's army on the Continent. Although Robinson described the Battle of Freidland and other military actions, he never witnessed combat. Instead, he gathered information from hotels and German-language newspapers. The first to report as an eyewitness from a war zone may have been Charles Lewis Gruneison (1806–79), who wrote about engagements of the Spanish civil war of the 1830s for the London *Morning Post.*

War correspondence became widely established by the middle of the nineteenth century, when American journalists observed the Mexican-American War (1846–48) and Irish-born correspondent William Howard Russell (1821–1907) helped topple the British government by exposing the barbarity and mismanagement of the Crimean War (1853–56) in the London *Times.*

Elements of the Job

War correspondence is widely considered one of the most significant forms of journalism. "War journalists are thought to do what all journalists do, only in a more heightened, vibrantly important

fashion," wrote professors Stuart Allan and Barbie Zelizer.

> To cover a story will entail, more likely than not, encountering conditions of an entirely different order than anything ordinarily associated with newswork. Images of the war reporter as adventurer or risk-taker, in the optimum sense, or as daredevil, fortune-hunter, or rogue, in the negative, help to fuel their celebration in novels, films, plays, and other fictional treatments. (Allan and Zelizer 2004, 4)

The work can be rewarding. Top war correspondents have won many Pulitzer Prizes and other honors. However, journalists who report from war zones typically suffer higher casualty rates than actual combatants, as was the case in America's wars of the late twentieth and early twenty-first centuries. In addition, war correspondents suffer higher rates of divorce and substance abuse than their counterparts. According to a study by Canadian psychiatrist Anthony Feinstein, 29 percent of war journalists suffer post-traumatic stress disorder as a result of their prolonged exposure to violence.

In addition to the physical and psychological toll, war's horrors create difficult choices for journalists. The high drama of combat coverage can expand audiences for newspapers, radio, television, and Internet news sites. However, if journalists share detailed accounts of violence, they risk alienating the public as well as the armed forces and the government that typically provide them logistical support. Correspondents also must choose between the news industry's norm of objectivity and their own pro- or antiwar attitudes. They often compromise by practicing a measure of self-censorship. "We edited ourselves much more than we were edited," novelist John Steinbeck wrote of his time as a World War II correspondent. "We felt responsible to what was called the home front. There was a general feeling that unless the home front was carefully protected from whole account of what war was like, it might panic." He concluded that war reporters who tried to tell the unvarnished truth faced expulsion by military authorities (Steinbeck 1986, xvii). *New York Times* war reporter Christopher Hedges (1956–), writing about the wars at the end of the twentieth century, similarly noted the anger war correspondents created among their audiences when their stories and pictures exploded popular myths. For example, journalists debunked initial reports of heroic resistance by Army Pfc. Jessica Lynch to avoid capture during the 2003 invasion of Iraq. A year later, journalists revealed that former National Football League star Pat Tillman, whom the Army had awarded a posthumous Silver Star for heroism in Afghanistan, had died from friendly fire. The delayed truth led to widespread public suspicion that the Pentagon had tried to manipulate the news for public relations purposes.

Correspondents of the nineteenth century favored patriotic, subjective views of war. Civil War photographer Alexander Gardner (1821–82), for example, captioned a photograph of dead Confederate soldiers at Gettysburg with reference to death as the "price of their treason," and reporter Richard Harding Davis (1864–1916) confessed that he wanted to cheer as he watched Colonel Theodore Roosevelt lead a charge in the Spanish-American War. The tone of coverage changed in the twentieth century as the news industry moved toward standards that included balance and emotional distance. Journalists wrote more critically about war, including American tactical defeats during World War II, and the Korean and Vietnam wars. Journalists' clashes with the military and the government grew notably during the Vietnam War, when correspondents in South Vietnam reported discrepancies between what they saw and what official sources told them. The American government and military attempted to shape ("spin") more supportive coverage during later wars by expanding restrictions on accredited journalists in war zones. Many journalists countered by avoiding accreditation or traveling in territory not under American military control, becoming "unilateral" reporters.

By the beginning of the twenty-first century, war correspondence took on added difficulties as America fought new kinds of enemies. The so-called War on Terror, launched after the attacks of September 11, 2001, shifted military operations from the clash of armies to widespread, small-scale actions targeting bands of guerrillas. Skilled journalists reported on pacification campaigns that included elements of economics, religion, public opinion, and politics, expanding the definition of "war correspondent" to its broadest limits.

Some Noted American War Correspondents

Christiane Amanpour (1958–)

Amanpour had much of her life shaped by conflict. Born in London to a British mother and Iranian father, she grew up in Iran and fled with her family after the Islamic Revolution toppled the government of Shah Mohammad Reza Pahlavi. She worked briefly for a Rhode Island radio station before moving in 1983 to CNN, the fledgling, 24-hour cable TV news network created by Ted Turner (1938–). As a CNN international correspondent, Amanpour reported from virtually every major conflict of the late twentieth and early twenty-first centuries. She achieved fame filing stories with Peter Arnett from Baghdad during the Persian Gulf War of 1991, helping establish CNN as a serious outlet for war coverage and drawing criticism from some conservatives for reporting from an enemy capital during wartime. Similar criticisms arose during the 2003 invasion of Iraq by American, British, and allied forces. Amanpour said the administration of President George W. Bush and its supporters among conservative media outlets created a "climate of fear and self-censorship" to distort news of the war. The conservative Fox News replied by calling her a "spokeswoman" for the terrorist al-Qaeda organization. With her outspoken advocacy of civilian victims, particularly during the Balkan conflicts of the 1990s, Amanpour focused attention on whether war correspondents should remain emotionally detached from the news they report. "There are some situations one simply cannot be neutral about, because when you are neutral you are an accomplice. Objectivity doesn't mean treating all sides equally. It means giving each side a hearing," she said after the ethnic clashes in Sarajevo, Bosnia (Schmitt 1996).

Peter Arnett (1934–)

Arnett, a native of New Zealand, covered the Vietnam War from 1962 to its end in 1975 as a print reporter and moved on to a series of subsequent wars. He won a Pulitzer Prize for the Associated Press in 1966. His stories captured the confusion and chaos that became a hallmark of the Vietnam War. During the 1968 Tet Offensive, when Viet Cong guerrillas surprised U.S. forces by carrying out numerous coordinated attacks across South Vietnam, Arnett published a statement from a U.S. officer that became widely quoted by the war's opponents: "It became necessary to destroy the town to save it." After joining CNN in 1981, Arnett helped push the cable network to its highest ratings by reporting live from Baghdad during the Persian Gulf War a decade later. Along with colleagues Earl Holliman (1948–98) and Bernard Shaw (1940–), Arnett reported live, via telephone, from a hotel room as an American-led coalition began bombing Baghdad. Later reports featured live television broadcasts from the hotel and city streets. Arnett's stories about the bombing of buildings he identified as a civilian air raid shelter and a baby milk factory, recording significant non-military casualties, prompted a sharp response from the White House and dozens of members of Congress. However, after CNN aired video of civilian casualties, the rate of American missile attacks on Baghdad declined. General Norman Schwarzkopf, the architect of the assault that liberated Kuwait during the Persian Gulf War, questioned whether the public needed to see news from the enemy's point of view. A Gallup poll on that issue, taken shortly after the bombings depicted in Arnett's reports, reported 69 percent of Americans in favor of journalists reporting for the U.S. media from Baghdad. He had narrated a CNN-*Time* magazine news story alleging American use of poison gas in the Vietnam War. The Pentagon vigorously protested the story as false, and CNN issued a retraction. CNN reprimanded Arnett in 1998 and fired him in 1999. Arnett reported later wars for other networks.

Richard Harding Davis (1864–1916)

Davis, an immensely popular reporter and novelist, portrayed warfare as a masculine adventure in the 1890s, but within two decades turned toward a more negative view of war's tragedy and bloodshed. Davis first found fame writing newspaper stories about New York City theaters and slums. Newspaper baron William Randolph Hearst (1863–1951) hired Davis in 1897 to cover the Cuban rebellion against Spain. Davis developed a detail-driven narrative style that attracted readers. Two of his stories from Cuba stoked anti-Spanish opinion during the months leading to the Spanish-American War. The first portrayed a young Cuban guerrilla as steadfast and heroic while awaiting execution by a Spanish firing squad. The second

described Spanish authorities boarding an American steamship, where Davis said they undressed and searched a Cuban woman suspected of smuggling rebel documents. An illustration in Hearst's *New York Journal* exaggerated the details and portrayed the woman as being stripped naked in front of a group of Spanish men. Davis subsequently covered virtually every major armed conflict until his death, including the Greco-Turkish War (1897), the Spanish-American War (1898), the Boer War (1899–1902), the Russo-Japanese War (1904–05), and the opening weeks (1914) of World War I. Davis's accounts of the Rough Riders, an American volunteer unit in Cuba during the Spanish-American War, helped establish the reputation of Theodore Roosevelt as a colorful and active leader. Although Davis witnessed many problems that hampered the American invasion of Cuba, he did not publicize them. He rationalized that they would do little but raise an outcry from soldiers' families. Davis filed his final war dispatches in 1914, reporting as a neutral observer during the German invasion of Belgium. Captured by the Germans and accused of being a British spy, Davis barely managed to avoid execution.

Floyd Gibbons (1887–1939)

Gibbons, a reporter for the *Chicago Tribune,* covered General John "Black Jack" Pershing's pursuit of Mexican insurgent and border raider Pancho Villa in 1916. A few months later, when Germany declared its intention to fight a World War I naval blockade by resuming unrestricted submarine warfare in the North Atlantic, Gibbons deliberately sought to book passage to Europe aboard a nonmilitary ship likely to be targeted. A U-boat sank the *Laconia* in February 1917, providing Gibbons with a first-person account of German naval combat. Gibbons, who survived in a lifeboat, said the submarine surfaced and its captain called out to ask the ship's identification. Gibbons's story fueled anti-German sentiment in the United States, as the captain apparently did not know he had targeted a transport carrying civilians. After America entered the war, Gibbons renewed his contacts with General Pershing, commander of the American Expeditionary Force. Pershing forbade correspondents from mentioning specific military units in their dispatches, but Gibbons circumvented the rule's intent by publicizing the relatively small contingent of Marines on the Western Front. Gibbons lost an eye to a German sniper's bullet while witnessing the Marines advance into Belleau Wood in 1918. France awarded Gibbons the Croix de Guerre. Gibbons's eyepatch became a central part of his later public image.

Marguerite Higgins (1920–66)

Higgins covered World War II, the Korean War, and the Vietnam War for New York City newspapers. Her exceptional ability to gather information as well as her knack for being in the right place at the right time made her one of the top correspondents of the twentieth century. She demonstrated women could cover combat effectively and shared a Pulitzer Prize for international reporting in 1951. Higgins reported on the liberation of the Dachau concentration camp in 1945 and the postwar Nuremberg war crimes trials for the *New York Herald Tribune*. She complained about the paper transferring her to its Far East bureau in spring 1950; the Korean War broke out three weeks later. Her initial eyewitness dispatches accurately described the rout of American and South Korean troops by better-equipped North Korean invaders. She saw soldiers killed in close fighting and survived repeated shellings. General Walton Walker banned her and other women from the front lines on the pretense of a lack of toilets, but General Douglas MacArthur rescinded the order and expressed his confidence in Higgins. She and another *Herald Tribune* reporter, the veteran combat correspondent Homer Bigart (1907–91), developed a hostile rivalry, pushing each other to take ever-greater risks. Higgins waded ashore during the pivotal invasion of Inchon in September 1950. She and Bigart survived the Korean War and reported the early stages of American involvement in South Vietnam. Higgins, reporting for *Newsday,* remained supportive of the American military presence in South Vietnam and the rationale for intervention, while Bigart grew increasingly skeptical of America's strategy and tactics. Higgins died of leishmaniasis, a tropical disease she contracted on assignment in South Vietnam, and was buried in Arlington National Cemetery.

George Wilkins Kendall (1809–67)

Kendall, co-founder of the *New Orleans Picayune,* fought as a volunteer in the Mexican-American War and became one of the first American war correspondents when he filed dispatches from the Rio Grande Valley, Veracruz, and Monterrey. Along with about ten other journalists, Kendall moved freely among the American lines and believed mixing civilian and military responsibilities did not compromise his role as a journalist. He helped capture a Mexican flag, served as an aide-de-camp, and answered to the title "Major." Kendall established a communication system linking the Mexican interior with New Orleans, the closest American city, by horse and steamship. It proved more reliable than the military dispatch system and earned the nickname "Mr. Kendall's Express." Typesetters aboard the *Picayune*'s ships prepared stories for the press while steaming toward port. From New Orleans, the accounts reached cities along the East Coast via railroads and the first telegraph lines. The system resulted in a series of scoops for Kendall, including the news of war's end. The *Picayune* sped the terms of the Treaty of Guadalupe Hidalgo to New Orleans, printed an "extra" edition, and sent copies to the East Coast. The *Baltimore Sun* reprinted the news and forwarded copies to the White House before official accounts had arrived from the War Department.

Edward R. Murrow (1908–65)

Murrow (born Egbert Murrow) helped establish broadcasting as the pre-eminent news medium with a series of reports for CBS News from Europe during World War II and from East Asia during the Korean War. Murrow majored in speech in college and learned how to write and speak for the ear instead of the eye, a difference that made his radio broadcasts dramatic yet accessible to a mass audience. Broadcasting live from the streets and rooftops of London during the Nazi Blitz of 1940, Murrow evoked sympathy for the British from listeners in the United States. His broadcasts contributed to a shift in public opinion to favor sending more military assistance to Britain while the United States remained technically neutral. After America entered the war, Murrow reported about bombing raids on the continent and from the newly liberated Buchenwald concentration camp, lending his credibility to stories about the Holocaust. Murrow pioneered television documentaries at CBS and briefly returned to war correspondence during the Korean War. One of his initial reports, filed during the first weeks of fighting on the Korean Peninsula in 1950, accurately portrayed the rout of South Korean and American forces and raised questions about military decisions. Murrow's report said, "When we start moving up through dead valleys, through villages to which we have put the torch by retreating, what then of the people who live there?…Will our reoccupation of that flea-bitten land lessen or increase the attraction of communism?" CBS, fearing the story could raise North Korean morale and put the network's broadcasting license in jeopardy, refused to air the story (Persico 1998, 292). Murrow protested but failed to overturn the decision. Like those of Ernie Pyle, Murrow's later stories from South Korea depicted the lives of common soldiers, a less controversial subject than his hard-edged commentaries. A Murrow documentary, *Christmas in Korea,* portrayed United Nations troops during the year-end holiday and contributed to Murrow's reputation as a master storyteller in the new medium of television.

Ernest Taylor "Ernie" Pyle (1900–45)

Pyle set a much-emulated standard for detailed observation of ordinary people and events, which he called "the worm's-eye view" of war, in syndicated newspaper columns during World War II. Born on a sharecropper's farm, Pyle discovered journalism while attending Indiana University. After leaving school, he took jobs as a copy editor and aviation columnist in Washington, D.C., before beginning a seven-year assignment as a traveling correspondent for the Scripps-Howard newspaper chain. After the beginning of World War II in Europe, he filed stories from London during the German air raids of 1940. He became an accredited reporter with the U.S. Army after America joined the Allies. Pyle reported from North Africa in 1942, Sicily and the Italian mainland in 1943, France in 1944, and the Pacific in 1945. He typically spent weeks with troops near the front lines before retreating to write a series of columns. Pyle repeatedly suffered depression and physical breakdowns after long exposure to combat. He vowed to make the Okinawa campaign of spring 1945 his final tour before retirement, but a Japanese sniper

killed him on Ie Shima. Pyle's folksy columns, written like plain speech, read like letters from the front, endearing him to civilians and soldiers alike. His most famous column described a group of soldiers quietly saying goodbye to the body of their captain, killed during combat in the Italian mountains. The *Washington Daily News* set the column in large type as the only story on its front page, and a Hollywood filmmaker re-created the scene from Pyle's description as the climax of the 1945 movie *The Story of G.I. Joe.*

"Shadow"

Shadow, a remarkably reliable and insightful newspaper reporter for the Confederacy during the Civil War, hid his identity behind a pseudonym. Civil War correspondents often used colorful pen names to shield themselves from military reprisals and to circumvent their editors' ban on earning extra pay by filing for multiple papers. Shadow distinguished himself by writing clearly and honestly as the Confederacy suffered a series of setbacks. He reported from the Western front from June 1863 to January 1865, first for the *Memphis Daily Appeal* and later for the *Mobile Advertiser and Register*. Historians have tried to identify Shadow through comparing his movements with those of Confederate reporters, by searching historical archives, and by performing computer-assisted analyses of writing samples. Autobiographical details are sparse in Shadow's dispatches, but he volunteered that he had served as "captain of a company of Confederate pikemen [infantrymen] at Nashville after the fall of Fort Donelson in February 1862." Opinion about Shadow's identity primarily has settled on either John H. Linebaugh, a *Daily Appeal* reporter known to have used the pen name Ashantee, or Henry Watterson, who became editor of the *Louisville Courier Journal* in 1868.

George Washburn Smalley (1833–1916)

Smalley reported for the *New York Tribune* on the Army of the Potomac during the Civil War and later formed a European news bureau to telegraph news to the United States via the newly laid transatlantic cable. Trained as a lawyer, Smalley switched to journalism at the start of the Civil War. In September 1862, he demonstrated resourcefulness in covering the Battle of Antietam, the bloodiest day in American military history. Smalley ran errands for Union General Joseph Hooker during the battle, allowing him close observation of the fighting. After dark, Smalley rode for six consecutive hours to reach the nearest telegraph office only to find it shuttered. When the office opened an hour later, Smalley sent a short dispatch about the Union victory, then journeyed by train to Baltimore and New York. He wrote his account while en route, handing it to printers at the *Tribune* when he arrived more than a day after the battle. Having avoided Union military censorship, Smalley produced the first detailed account of the battle, recounting the fierce fighting that turned back the Confederate invasion of Maryland yet blaming Union generals for errors that blunted the victory. Fourteen hundred newspapers reprinted Smalley's report. Two years after the war's end, in 1867, Smalley traveled to Europe to organize an overseas network of reporters for the *Tribune*. He set up a partnership with the *London Daily News* to pool resources. Reporters, including Moncure D. Conway (1832–1907), sent the syndicate news of the opening battles of the Franco-Prussian War of 1870. Another syndicate reporter delivered to Smalley's London office the most important news of the war: an account of the collapse of the French army at Sedan and the capture of Emperor Napoleon III. White had attempted to cable the news from Belgium, but telegraph operators refused to believe the story or to wire it to England.

Conclusion

The role of correspondents in wartime has evolved over nearly two centuries and, for a segment of the American news media, has come full circle. Journalists who covered the wars of the nineteenth century practiced advocacy and in some cases assisted in the battles they covered. A more detached, objective approach arose in the wars of the mid-twentieth century as correspondents attempted to portray more of warfare's violence and create more nuanced accounts of the origins, strategy, tactics, and costs of battle. As television grew to dominate the news media coverage of war in the late twentieth century, television images from war zones gave viewers the most detailed view of war. War-zone television broadcasters drew record television

ratings, becoming visibly associated with the combat they covered. With greater exposure came greater public scrutiny of their motives and attitudes. Journalists such as Christiane Amanpour and Peter Arnett did not merely report on war; their opinions also became news in ways that earlier correspondents could not have imagined. Conservative, prowar media outlets such as Fox News recognized the immediate economic benefits of having correspondents and commentators provide patriotic coverage. They mixed nineteenth-century advocacy with straight reportage to attract large audiences during the rally-'round-the-flag effect of America's entry into war with Iraq in 2003.

News media pundits debated the significance of war correspondents' personal views, as well as the use of nationalistic appeals to build audiences. The central question, left unresolved at the start of the twenty-first century, was whether a war correspondent could be simultaneously patriotic and objective. While the debate sparked caustic exchanges between conservative cable TV networks and their competitors, the ability of war correspondents to actually influence short-term public opinion remained in doubt. "Does the media shape public opinion?" war correspondent Christopher Hedges asked rhetorically. "Not in war. When everyone's waving a flag, the media waves a flag. When middle-class families start wondering why their boy is coming home in a rubber bag, then the media starts asking questions, too" (Ferrari 2003, 204). Amanpour said she believed war journalism cannot have a significant impact on public policy unless the government has failed to create and execute its own policy.

Army studies charting changes in public opinion during the Vietnam and Korean wars suggest media opinion about wars lags behind public opinion. Public support for those wars fell 15 percentage points with every tenfold increase in casualties, independent of the content and tone of news coverage. For example, when American casualties rose from 100 to 1,000, public support dropped 15 percentage points. Future war planners likely will emphasize the need to fight swift, high-tech wars—not to manage media coverage as much as to directly influence public opinion by minimizing casualties. Finding ways to cover swift, conventional wars as well as unconventional engagements with terrorists and guerrillas likely will remain issues for war correspondents, as will finding the proper balancing point between objectivity and advocacy.

WASHINGTON, D.C.

As the seat of the United States federal government, Washington, D.C., serves as a magnet for print and broadcast journalists from around the world. Indeed, news media have been attracted to the capital city since the government moved there from Philadelphia in 1800. Over the next two centuries the Washington press corps grew in size and complexity along with the nation, and rose and fell in public esteem along with attitudes toward the government. Local Washington media struggled to compete with national reporters, emerging as another significant force in American journalism.

The federal government both generates and manipulates the news. Decisions by Presidents, executive agencies, Congress, and the Supreme Court affect the lives of all citizens and claim a prominent place on front pages and in broadcast news programs. Having a large stake in their news coverage, political office-holders seek to shape that coverage through news releases and conferences, interviews, background briefings, and leaks. To get beyond the press release, Washington reporters have cultivated well-placed sources throughout the government, and have been willing to risk imprisonment to protect those sources from exposure. Because of these intimate relationships, critics have accused the Washington press of shielding officials from appropriate scrutiny.

When the federal government first located in Washington, political parties established newspapers there as official organs. The *Federalist* newspaper immediately suffered a blow when its party lost the election of 1800 and began a decade of descent into extinction. The victorious Democratic-Republican Party established the *National Intelligencer,* which promoted the policies of President Thomas Jefferson (1801–09) and his immediate successors. The *National Intelligencer* reaped profitable federal printing contracts and in return its staff provided stenographic services for the debates in Congress. Copies of the *Intelligencer* were mailed free to newspapers elsewhere in the growing country, which reprinted its verbatim accounts of congressional debates.

Growing regional tensions in the 1820s rendered inadequate the *National Intelligencer*'s monopoly on Washington reporting. Southern planters and Northern business leaders sought news of pending tariff legislation that would affect them financially and sent their own reporters to spend the congressional session in Washington and cover developments from an agrarian or commercial perspective. Without needing to duplicate the *Intelligencer*'s verbatim accounts, they crafted critical analyses of the legislative battles they witnessed. Since they mailed their stories back to their papers, they became known as Washington correspondents. Members of Congress came to distinguish between the impartial reporters, to whom they gave access to the House and Senate floors, and the critical correspondents, whom they relegated to the public galleries. Seeking to placate the growing press corps, in 1841 Senator Henry Clay, a Kentucky Whig with presidential ambitions, persuaded the Senate to establish the first press gallery, just above the presiding officer's dais in the Senate chamber. The House set up a similar press gallery when it moved to its current chamber in 1857. By contrast, the White House did not designate a press room until the construction of the West Wing in 1902.

Technology speeded the news from Washington. The first trains reached the capital in the 1830s, and in 1844 Samuel F. B. Morse publicly demonstrated his telegraph at the Capitol, with signals carried on wires to Baltimore. "What is the news from Washington?" was one of the first messages from Baltimore, whose newspapers were the first to publish telegraphic dispatches from Washington. Several New York newspapers soon pooled their resources to establish the Associated Press, to provide telegraphed news.

The Civil War (1861–65) swelled the ranks of the Washington press corps, as newspaper correspondents arrived to cover both the government and the military campaigns fought near the capital. They set up offices in a row of small buildings along Fourteenth Street, flanked by the telegraph office and the major hotels, where news could be gathered in the lobbies and at the bar, conveniently located between the White House and the Capitol. Known as Newspaper Row, it flourished for the rest of the nineteenth century, and in 1927 was replaced by the National Press Club building.

Newspapers initially paid their Washington correspondents only for the months that Congress was in session, about half the year. Most returned to their home papers during the long adjournment.

To supplement their incomes, some of the leading correspondents also took part-time jobs as clerks for congressional committees. Since many of their papers were overtly partisan, as was their reporting, working for the politicians they covered was not seen as a conflict of interest. Congress traditionally has been the most open branch of the federal government, with members eager to be interviewed and quoted. Nineteenth-century reporters could talk to Presidents of the United States but generally could not quote them directly. Not until the impeachment trial of President Andrew Johnson (1865–69) in 1868 did a chief executive seek to influence public opinion by granting on-the-record interviews. Johnson recognized that more citizens would read newspapers than his official proclamations, and his use of the press to state his case contributed to his acquittal.

During the late nineteenth-century Gilded Age, some Washington reporters engaged in lobbying and some lobbyists posed as journalists. When the press became implicated in the lobbying scandals it was reporting, leaders of the Washington press corps approached the Speaker of the House and the Senate Rules Committee in 1879, proposing that reporters take over accrediting members of the congressional press galleries. Reporters elected a Standing Committee of Correspondents to judge accreditation and enforce new rules adopted by the House and Senate that prohibited reporters from lobbying and provided press passes only to those who reported to a daily newspaper by telegraph. (Press gallery rules and the names and affiliations of all accredited reporters, commentators, and photographers are published each year in the *Congressional Directory*.) These rules eliminated lobbyists from the press gallery but also shut out women and racial minorities. Newspapers hired women reporters to cover social aspects of Washington news, which did not qualify for the expense of telegraphing, so they mailed their stories instead. The nineteenth-century black press consisted entirely of weekly papers, and the white dailies did not hire African American journalists. Not until the 1940s did many women or any racial minorities obtain access to the press galleries.

The congressional press galleries provided a convenient working environment, with easy access to sources and telegraph offices. By contrast, nineteenth-century reporters had to stand outside the White House to interview arriving and departing presidential visitors. The executive branch did not provide much hospitality toward the press corps or generate enough news to keep reporters in Washington year-round. Papers instead relied on the wire services for Washington news during congressional adjournments. President William McKinley (1897–1901), a former representative, brought a congressional sensibility to the White House in 1897, inviting the press inside to encourage a more positive treatment of his administration. McKinley's dynamic successor, Theodore Roosevelt (1901–09), set up the first press room and gave informal interviews while he was being shaved. Roosevelt provided news on slow Sundays to assure himself Monday headlines, and floated trial balloons to test public sentiments. Woodrow Wilson (1913–21) initiated the formal weekly presidential press conference and used his mastery of facts, language, and wit to win over the largely Republican press corps. (Outside of the South, the overwhelming majority of American newspapers were then published by Republicans.)

White House press relations declined during the 1920s, when reporters could identify the tight-lipped President Calvin Coolidge (1923–29) only as "a White House spokesman." Herbert Hoover (1929–33) required reporters to submit questions in writing in advance, and simply ignored those he did not want to answer. Presidential press relations changed dramatically when Franklin D. Roosevelt (1933–45) inaugurated his twice weekly press conferences in the Oval Office to win favorable press coverage for New Deal programs. Doubting that he could ever win over Republican papers' editorial pages, Roosevelt concentrated on cultivating the sympathies of their Washington reporters. Although he reserved the right to go off the record, he usually allowed them to quote him directly. FDR also made skillful use of radio to speak directly to the public, both through formal addresses and informal "fireside chats."

Radio had begun covering Washington as early as its coverage of Coolidge's state of the union message in 1923, but under congressional press gallery rules, radio reporters could not obtain press passes unless they also reported for a daily newspaper. Responding to the radio reporters' complaints, Congress created a separate Radio Correspondents Gallery in the House and Senate in 1939 (it later

became the Radio-TV Gallery). Congress also established Periodical Press Galleries and a Press Photographers Gallery. Each of the new galleries elected its own standing committees to judge accreditation (and each committee handled both the House and Senate galleries). Only in Washington, D.C., does the government separate its press galleries according to their technologies, or allow the journalists themselves to control press accreditation.

The rise of the United States as a world power brought greater numbers of foreign correspondents to Washington. During World War I (1914–18), the federal government established a Committee on Public Information, headed by the former journalist George Creel (1876–1953), to promote favorable reporting on the American war effort. The Creel Committee financed foreign correspondents both during the war and during the Senate debates on the Treaty of Versailles to end the war. Foreign correspondents at first based their operations in New York to monitor American commercial activities, and visited Washington only occasionally for political news. World War II (1939–45) and the cold war (1945–90) made Washington a more essential location for international news. The U.S. Information Agency established a Washington Foreign Press Center to provide press briefings, reference services, and communications facilities to assist the labor of the many small, under-funded foreign press bureaus. The United States also created the Voice of America to broadcast news in many languages, aimed against the Germans during World War II, and then expanded against Soviet influence during the cold war.

The growth of the federal government saw a corresponding spread of press secretaries, agency public affairs or press officers, formal news conferences, and reams of press releases. Reporters grew used to taking handouts from the executive departments, which helped explain complex programs, and which they could rewrite and submit as their own articles. Over time, elected officials began placing political consultants and pollsters on their staffs to shape favorable news coverage and public opinion and turn the governing process into a "permanent campaign."

The Washington press corps expanded from a few hundred to several thousand during the twentieth century, and slowly became more diverse. Long barred from political news assignments, women reporters got a boost from First Lady Eleanor Roosevelt, who from 1933 to 1945 held press conferences open only to women. During World War II, women took over the assignments of male reporters who had gone overseas as war correspondents and combatants. Although the men reclaimed their jobs after the war, women continued reporting on politics and government. As reporters for weekly papers, African Americans faced barriers until 1947, when the Senate Rules and Administration Committee ordered the Standing Committee of Correspondence to grant accreditation to a representative of the National Negro Publishers Association, because its membership included the first black daily paper, the *Atlanta Daily World*. The later need to cover the brewing civil rights movement slowly pushed the mainstream press to hire more minority reporters.

Commercial television gave new visibility to events in Washington. When television covered congressional hearings it made national stars out of legislators such as Senator Estes Kefauver (D-TN), whose investigation into organized crime was televised in 1951. The cameras helped demolish the public standing of Senator Joseph R. McCarthy (R-WI) by exposing his bullying tactics during the televised Army–McCarthy hearings in 1954. Washington-based Sunday-morning news programs such as *Face the Nation* and *Meet the Press* regularly gave air time to government officials. Candidates made increasing use of television in their campaigns, and the 1960 televised debates between John F. Kennedy and Richard M. Nixon played a deciding role in their presidential contest. In 1955, Dwight Eisenhower (1953–61) had been the first President to allow television cameras to record his press conferences, but in 1961 Kennedy became the first to permit live broadcasts of press meetings. As more Americans admitted to getting their news from television rather than newspapers, the networks' evening news programs expanded to a half hour in 1963, and Washington news became a staple of their nightly reports.

Since liberals dominated the federal government from the 1930s to the 1960s, sentiments in the Washington press corps shifted to the left with their sources. Conservative politicians complained of a "liberal bias" in the news and during Richard Nixon's (1969–74) presidency, Vice President Spiro Agnew publicly attacked the network correspondents as an "unelected elite" who provided a

distorted view of federal policies and American values. Compiling an "enemies list," the Nixon administration used federal agencies to harass prominent journalists. When a burglary occurred at the Watergate headquarters of the Democratic National Committee in 1972, most of the Washington press corps accepted Nixon's denial of any involvement. *The Washington Post* instead launched a series of exposés that traced the scandal back to the Committee to Reelect the President and the White House. The *Post* relied on inside information from within the government. Its source, known as "Deep Throat," was much later revealed to be the deputy director of the Federal Bureau of Investigation, W. Mark Felt, who leaked elements of the growing scandal to prevent Nixon from sabotaging the FBI investigation. Eventually, Congress and the rest of the press corps pursued the scandal, resulting in Nixon's 1974 resignation to avoid impeachment.

The ascendancy of *The Washington Post* reflected the changing status of the local Washington media that had long been regarded as provincial and overly influenced by whatever administration held power. Until the 1960s, the Washington bureau of *The New York Times* fielded as many national reporters as did any of the Washington newspapers. Once the *Post* became more profitable, it expanded its staff and could tackle issues with reporters from multiple desks, including its national, international, metro, and even lifestyle sections. The Washington Post Company offered a nationally syndicated news service that distributed both its news reporting and Washington columnists who offered their opinion on national and international developments.

As C-SPAN (Cable-Satellite Public Affairs Network) began televising the House (1979) and Senate (1986) floor debates together with selected committee hearings, news briefings, and other Washington events, news from the capital became more publicly accessible. In 1990 telegraph offices and teletype machines were removed from the Capitol since news could now be collected and disseminated electronically via telephone, and soon by email and the Internet. Newspapers and networks launched their own news websites, and self-selection webloggers—bloggers—gained public attention with their freewheeling commentary and criticism. Websites provided access to wire service reports before they could appear in print or on the evening news programs. When the bloggers sought press credentials, however, they renewed the problem of defining who was a legitimate news reporter and forced the Washington news corps to undergo further self-examination.

Proliferating Washington news outlets were ironically greeted by mounting public indifference to their reports. The twentieth century ended with news media shifting attention from politics and government to cultural and consumer news. Some news organizations cut the size of their Washington bureaus, until the shock of the attacks on September 11, 2001, renewed interest in what the government was doing. So long as the United States stands as a superpower in world affairs, homeland security persists as an issue, and the policies of the federal government impact on the daily lives of its citizens, the news from Washington will remain a sought-after commodity.

Weather Journalism

While weather-related disasters have been newsworthy since the day of the town crier, weather has been an inherent part of the daily news only since the mid-1800s. Weather journalism, complete with forecasts, warnings, and records, is now expected in local newspapers and news broadcasts. Arrival of the telegraph in 1844 and the rise of meteorology as a science over the next two decades combined to make weather "news."

Origins

The electric telegraph allowed reports of weather conditions across a wide area to be received almost simultaneously. As scientists came to understand the complex interactions among atmosphere, land, and water, this allowed forecasts to be made given conditions nearby and elsewhere. British hydrographer Francis Beaufort and his protégé Robert Fitzroy are the two most credited with the birth of weather forecasting as a science. Beaufort's development of his Wind Force Scale and "Weather Notation" coding, along with his production of reliable tide tables for the British Isles, which motivated similar efforts elsewhere in Europe and North America, laid the foundation for documenting weather conditions. Continuing Beaufort's work, Fitzroy invented the "storm glass" (barometer) in 1854. A costly storm in 1859 inspired Fitzroy to develop weather charts based on barometric and wind force readings sent to him by naval stations using telegraph lines. These readings allowed predictions of bad weather to be made in advance, which he termed *forecasting*. The "Weather Book," which he published in 1863 setting forth his methods, was critical in establishing meteorology as an acceptable field of scientific study. Both Beaufort and Fitzroy were influential in British governmental circles and, though ridiculed at times, their work eventually gained public credibility, was accepted by the Royal Navy for navigation purposes, and formed the basis for modern meteorology.

In 1849, Joseph Henry, Secretary of the Smithsonian Institution, organized the first network of meteorological observers in the United States who reported to him daily by telegraph. Their reports included temperature readings, wind directions and velocities, and precipitation measurements. By the late 1850s Henry was displaying daily weather maps of the observations for the public. In 1860, the Dutch chemist C. H. D. Buys Ballot, who developed theories of air currents and the behavior of large weather systems, began issuing the world's first storm warnings in Holland, based on telegrams from observers at six places in that country. At the same time, Robert Fitzroy was collecting weather data from a network of English and continental stations and using the information to construct "synoptic" weather charts, with tentative forecasts of coming weather fronts. In August 1861, British newspapers began occasionally carrying Fitzroy's weather forecasts, which were based on his daily weather charts.

Although New England printer Ebenezer Merriam, who originated a theory of cycles of atmospheric phenomena, had occasionally offered weather forecasts in New York newspapers as early as 1853, it was not until the consolidation of telegraphic service by Western Union in 1866 that an organization was in place to supply extensive weather data. The Associated Press had an early weather-reporting network, but there is no evidence that there was any consideration given to supplementing its brief reports of temperature and precipitation with forecasts. Instead, a few papers carried reports of the previous day's local weather.

In 1868 meteorologist Cleveland Abbe at the Cincinnati Observatory attempted to launch a quasi-private meteorological news service, seeking financial support from the Associated Press, Western Union, the Cincinnati Chamber of Commerce, and several local newspapers. His plan included a system of 100 reporting stations, which

would supply weather data to a central location where his staff would use it to compose a daily forecast. The Cincinnati Chamber of Commerce, whose president published the *Cincinnati Commercial,* funded the project for three months in 1869. But Abbe never had more than ten reports on any one day and was able to provide only occasional forecasts. He continued to receive limited support from Western Union in the collection of weather observations after this three-month trial, but he fell short in raising funds or promoting his forecasts. His "Weather Bulletin" was not even published in the *Cincinnati Commercial.*

Growing Sophistication

It was left to the federal government, with its bigger budget and continent-spanning system of military bases, to provide regular weather reports and forecasts to the public. The United States Weather Bureau was founded in February 1870 through a joint congressional resolution. Its mission was to "provide for taking meteorological observations at the military stations in the interior of the continent and at other points in the States and Territories… and for giving notice on the northern Lakes and on the seacoast by magnetic telegraph and marine signals of the approach and force of storms." The new agency was assigned to the U.S. Army Signal Corps. In 1890 the Weather Bureau became a civilian agency and was transferred to the Department of Agriculture; in 1940 it moved to the Department of Commerce. Finally, the bureau was renamed the National Weather Service in 1967, and became part of the National Oceanic and Atmospheric Administration, still in the Department of Commerce.

The Weather Bureau originally divided up the country east of the Mississippi River and around the Great Lakes into forecast "zones." The first "official" weather forecast in the United States was issued at noon on November 8, 1870, by Increase Lapham, an author and naturalist known as the "Father of the Weather Service," out of Chicago warning of high winds and falling barometric pressure. By the end of 1871 new zones were being established to the west. Forecasts were initially sent from Washington to local telegraph and railroad stations around the country, where they were posted on public message boards. Copies were also sent to the Associated Press and other news agencies for distribution to daily newspapers. By 1873, thousands of U.S. Post Offices displayed the forecasts. Within a few years, a series of diplomatic agreements between many nations to share information—based on the belief that the accuracy of weather predictions would improve with more reporting stations, the detail and frequency of observations, and the speed with which they could be reported—led to the regular release to the press in Europe and North America of international weather updates generated by national weather services.

Most of the data collection and forecasting by the National Weather Service is aimed at public use, and is made available to news media in many formats. Most Weather Service products (reports and forecasts) intended for publication are written using basic meteorological terminology in narrative sentence format. Among these, the main offerings include Zone Forecasts (seven-day predictions of expected weather conditions within each area of the country); Short-Term Forecasts (six-hour, localized, event-driven weather reports and alerts during significant or fast-changing conditions); Surf Zone Forecasts (for local beach regions, including coastal weather hazards); and Area Forecast Discussions (a semi-technical product explaining the scientific rationale behind forecasts and summarizing current watches/warnings/advisories intended for weather journalists).

Perhaps the most iconic feature of weather reporting is the weather map; no other kind of map—printed or broadcast—is so recognizable or has such a persistent following. Although there had been earlier printed weather maps, in April 1875 the *Times* of London printed the first daily weather map showing the previous day's weather across the British Isles. As a one-time experiment, the *New York Herald* published America's first weather map in 1876. On May 9, 1879, the *New York Daily Graphic* began regular publication of a weather map, crafted by Stephen Horgan, inventor of the halftone engraving screen. But it was not until August 1934, when the conservative *New York Times* began publishing one on a daily basis, that the weather map was widely accepted as more than simply a curiosity by news readers. The next year the Associated Press Wirephoto network began transmitting weather maps via telephone lines to its members. In 1960, NASA launched its

first geosynchronous weather satellite, TIROS-1, which sent back pictures of the United States from space; the National Weather Service provided these to newspapers and television stations for use with their weather coverage.

After the launch of *USA Today* in 1982, newspapers throughout the world began dropping their black-and-white weather maps and satellite photos in favor of colorful weather infographics. One of the key staff of *USA Today* was George Rorick, who had been recruited specifically to create an eye-catching weather page. He crafted a cheery, colorful, easily readable daily weather report, highlighted by a large weather map. From its inception, the weather map of *USA Today* received praise and engendered much envy on the part of its competitors. Media critic Peter Boyle declared the map "the most imitated feature in American journalism." In a 1987 poll of newspaper editors, more than half had increased their weather coverage, and 25 percent admitted the increase was spurred by the popularity of the *USA Today*'s presentation of the weather.

Weather on the Air

The British Broadcasting Company (predecessor of today's BBC) may have aired the world's first radio weather forecast—a shipping warning—in November 1922 on behalf of the British Meteorological Office. On March 26, 1923, the BBC began broadcasting daily radio reports and forecasts. In November 1936, the BBC experimented with the world's first televised weather maps; the map filled the entire screen, with an off-camera narrator commenting on the next day's weather. Following the suspension of service during World War II, BBC television resumed showing weather maps with captions. A shadowy hand sketched isobars and numbers on a map while an off-screen voice, backed by soothing music, supplied pertinent information. Other television networks and local stations soon followed suit.

The idea of "personalized" weather forecasting was first raised in 1953. The BBC's then-director, Sir Ian Jacob, noted a "young but highly professional meteorologist" (according to his papers in the Churchill Archives Centre at Cambridge) who made the point that it would be better if, instead of just maps and charts, the weather forecaster actually appeared on screen to explain these and to educate the public about the science behind the forecasts. On January 11, 1954, George Cowling of the British Met Office became the first British on-air weatherman in a live, five-minute segment on BBC television. Within three years, the "weatherman" was an integral part of the morning and evening newscast at most local television stations around the world.

In America, television weather reporting has vacillated between the silly and the serious. At first, weather was often treated as a light diversion from the seriousness of the news. WNBT-TV (later WNBC) broadcast the first regular American weather segment in 1941; sponsored by Botany's wrinkle-proof ties, on these weathercasts a cartoon character named "Botany Lamb" sang the forecasts. After that light-hearted start, trained meteorologists dominated the profession in the late 1940s. These weathercasts bore little resemblance to the graphic-oriented ones now common, as most were (according to researcher Mark Monmonier) a "no-frills, dry and pedantic" reading by those looking for extra income in a part-time gig on television.

The 1950s were the most uninhibited period in American television's weather coverage. Since most of the data and forecasts were taken directly from the U.S. Weather Bureau, stations resorted to a variety of puppets, costumes, animals, and other gimmicks to present the weather in a more "entertaining" manner. It was during this period that women first made forays into this heretofore exclusively male bastion. By 1955, women represented the majority of on-air weathercasters, most selected for their sex appeal to television viewers. (A national online poll by *Playboy* in 2007 to choose the "sexiest weathercaster" indicates such trends still continue.) Advances in technology leading to the use of satellite and radar imagery brought another era of serious weathercasting to television in the 1970s. In the 1980s and 1990s, the "happy talk news" (a description first coined by newsman Al Primo in 1974) style was developed, encouraging more interaction and joviality among the on-air news personalities. The weathercasters were once again expected to deliver a more lighthearted balance to the hard news of the day.

The changeable tenor of American weather reporting during its early years—fluctuating as it did between offering information and providing

entertainment—gave rise to efforts by professional organizations to grant credibility to those who met their (sometimes controversial) standards. The American Meteorological Society began their "seal of approval" program in 1957 and conferred it on those weather journalists that met the society's guidelines for "completeness, clarity and professionalism." The society's system remains in effect, although it has gone through significant changes over the past decades, including requirement of a meteorological degree. Between 1959 and 2004, the seal of approval has been granted to more than 1,300 television stations and 150 weathercasters. In February 1982, in reaction to another move in the general trend toward entertainment over information, the National Weather Association created an alternate credential for weathercasters; although it does not have an educational requirement, it requires passing a written exam, professional development (including approved courses and workshops), and periodic recertification. Despite sometimes divergent attitudes toward these efforts, many on-air weathercasters are required to be certified in some manner for employment.

As with newspapers, graphics have been an important element of televised weather reporting. From television's earliest days, and continuing at some stations into the late 1960s, weather graphics often consisted of maps and weather symbols drawn on butcher paper or equally crude chalk renderings on a blackboard. In the 1950s, more advanced weathercasters worked with grease pencils in hand, sketching on a plastic backdrop. To the horror of the American Meteorological Society, most television weathercasters of the time were better cartoonists than meteorologists. By the late 1960s, clever set designers had developed the technique of painting maps on metal surfaces, which allowed the weather reporters to use magnetic letters, numbers, and symbols to depict dynamic weather conditions.

With the advent of computerized graphics in the late 1980s and early 1990s (the first use of a computerized weather display was by the BBC in February 1985), it has become standard procedure for weathercasters to work in front of a green or blue chroma-key wall while animated weather graphics and maps are electronically shown behind them. The weathercasters use small, handheld remote controls to change the images. Thorough preproduction preparation is vital in order for the wide assortment of data and graphics to appear effortless and in proper sequence. Increasingly, video footage is included in weather broadcasts for dramatic effect.

Commercial Weather Services

Modern meteorology relies on increasingly expensive technology (both to gather information and to display it), as well as extensive training, which puts the production of sophisticated weather reports and forecasts beyond the capability and budget of many local news outlets. In 1962 the first private weather service in the United States since Abbe's abortive attempt was established in State College, Pennsylvania, by Joel Myers, a graduate student at Pennsylvania State University. His AccuWeather service was launched to provide forecasts to a Pennsylvania gas utility company, but soon grew to include service to ski resorts, construction companies, fuel oil dealers, and a number of other businesses. In 1971, AccuWeather offered its services to radio and television stations. In 1974, the forecasting company began serving newspapers; by 1983 it was transmitting weather data, maps, and text to newspapers' typesetting equipment. In 1986 it pioneered the electronic delivery of complete weather pages to subscribing newspapers.

AccuWeather's history has been marked by innovation in the reporting of weather. In 1975, it was the first to introduce seven-day local forecasts for television, and in 1983 it began offering ready-for-air color weather graphics. In 1986, AccuWeather began satellite delivery of weather radar images. After years of operating from various converted buildings, in 1998 the company moved into a custom-designed video production facility in central Pennsylvania with satellite uplinks and Internet distribution. By 2005, it had 18 digitally equipped studios scattered across the United States, and most broadcast station subscribers received reports via digital lines with recorded forecasts transmitted over the Internet as MP3 or WAV files. In 2002, the company began service to PDAs and cell phones. In 2005, AccuWeather had several hundred broadcast stations and newspapers across North America as clients, and continues as the most successful private meteorological service in the world.

Although the oldest and largest, AccuWeather is not the only commercial weather service in operation. The National Weather Service lists over 300 private sector meteorological services that provide forecasts and reports in the United States. Only a few of these—such as CompuWeather (founded in 1976) and Intellicast (1996)—offer national and international coverage to the news industry. Most serve either a limited geographical region (such as the Baja Weather Service or New England Weather Associates) or a specific commercial industry (such as Aviation Weather, Inc. or Roffer's Ocean Fishing Forecasting Service, Inc.). Meteorology remains an expensive and sophisticated venture.

For years on-air weather broadcasters sought credibility as hard-working journalists, even as technological advancements in meteorology very slowly changed audience expectations. The public demanded ever more visual presentations backed by more data and interpretation. In 1982, the Weather Channel cable network was launched to deliver timely weather news 24 hours each day, seven days a week. It was founded by Chicago WLS-TV meteorologist John Coleman and Landmark Communications' Frank Batten. Based in the northwest Atlanta suburbs, the Weather Channel originally obtained its regional data from the U.S. National Oceanic and Atmospheric Administration and local forecasts from the National Weather Service. Since 2002, however, it has compiled data and done local forecasting in-house at its Atlanta complex.

By 2006 the channel reached over 87 million households and was offered on 95 percent of all cable systems nationwide. With a staff of over 120 weather journalists, the Weather Channel provides reports on national and local conditions, observations for regional areas, local and regional radar, satellite images, extended forecasts, and special weather-related original series. Its best known programming, the "Local on the 8s" segment that debuted in 1996, gives information on local conditions and forecasts and warnings inserted through special proprietary equipment available to cable systems that carry the channel. The channel also operates weather networks in Canada and Latin America, as well as weather websites in the United Kingdom, France, and Germany.

In addition to its television content, the Weather Channel provides weather services to radio stations and newspapers and maintains an extensive online presence, both through its own website, which attracted 20 million users per month in 2006, and through feeds to other news websites around the world. The Weather Channel website provides a wide variety of content beyond the traditional weather reports, forecasts, and satellite images; it offers video, blogs, and reader-generated content on everything from health to history—all with a weather theme. The Weather Channel radio network supplies weather forecasts to over 250 markets across the United States, along with immediate information on severe weather conditions. Through a partnership with Universal Press, it offers a syndicated weather page to over 157 newspapers (as of 2007) with a combined circulation of about 23 million subscribers. It also provides weather information to the *USA Today,* as well as that paper's international editions.

While the Weather Channel website might be the most used by the public, most online news sites offer weather related content. Many include webcams, weather alerts and real-time data, and updated forecasts. More and more people are turning to their computers for local weather news. However, the future of weather reporting may lie in the proliferation of mobile devices, from cell phones to personal digital assistants (PDAs). Firms such as AccuWeather and My-Cast already offer customizable weather services via satellite for a number of handheld communication devices, even GPS navigation systems. Like financial news and sports, weather reporting is becoming more personal and immediate through such technology.

A 2004 survey of 3,000 people conducted by the management firm Ipsos-Reid and the Weather Channel found that over 80 percent of adults check daily weather forecasts on some news medium. News directors and editors view weather as an integral part of every broadcast or newspaper edition. All agree that weather journalists have a responsibility to simplify complex meteorological concepts and data and deliver news and forecasts in a manner that strives to be accessible, timely, newsworthy, and, above all, accurate.

Weekly Newspapers

According to the Newspaper Association of America, a weekly newspaper is one published less than four times a week. Most are based in smaller communities and tend to have lower circulations than daily newspapers. They often serve two or more small towns or even an entire county. In 2006, there were just under 8,000 such newspapers published in the United States, with a total circulation exceeding 50 million. These figures do not include alternative weeklies and weekly free shoppers aimed at specific audiences.

Origins

In the English-speaking world, the first newspapers were produced only when some noteworthy event occurred. As printing became more economical and public literacy increased, a burgeoning interest in world affairs created a market for regular news reports. The first periodically published newspaper was the *Weekly Newes* in 1622, and it set the precedent for weekly news production (the first daily newspaper, the *Daily Courant* of London, would not appear until 1702). First published in April 1704, the *Boston News-Letter* was a weekly half-sheet, a single page printed on both sides. By 1750, 14 weekly four-page newspapers were being published in the six largest colonies. After independence, weekly newspapers thrived in the new United States. The *Maryland Gazette,* now a twice-weekly subsidiary of *The Capital,* is the oldest continuously published weekly in America, its first issue appearing in 1727. During the westward expansion, a weekly newspaper was one of the signals of the "arrival of respectability" in small towns across the country. Today, local weekly newspapers continue that tradition of fostering a sense of community, civility, and neighborliness.

Most weekly newspapers started as family-owned businesses. Typically, all the business functions, and often the editorial chores, are handled by family members. The majority of weekly newspapers remain locally owned; in 2006, for example, 52 percent of the 141 weekly newspapers in North Carolina were independently owned and managed. However, as newspapers became more expensive to publish and new generations declined to join the "family business," many weeklies have been purchased by newspaper chains, either regional or national. The McClatchy Company, the second-largest newspaper publisher in the United States, owned 46 weekly newspapers in 2007, while the Gannett Company, the largest, published nearly 1,000 nondaily newspapers that year. These companies often have a business manager overseeing several weeklies in a state or region, with individual editors at each newspaper. These managers and editors enjoy considerable autonomy, often more so than their daily newspaper counterparts in the newspaper chains.

In such an atmosphere, it may be surprising that most modern technological advances in newspaper production have been pioneered by weekly newspapers—in part because newspaper unions are stronger at large urban papers. Cold type first replaced Linotype at weeklies. Weekly newspaper

staff were doing layout with personal computers—usually Macintosh—perhaps a decade before it became common at the large urban daily newspapers. Weekly newspapers in Illinois were among the first to convert from petroleum-based ink to soybean ink. Use of digital cameras for news was begun by reporters at weekly newspapers that lacked photojournalists on staff. Tom Terry, who formerly owned three award-winning weekly newspapers, credits this nimbleness on the part of weeklies to the absence of layers of management that can curtail innovation due to concerns about cost effectiveness and reliability. Once proven to be useful in the production of weekly newspapers, technological innovations are adopted and adapted by major newspapers.

In contrast to the declining readership of daily newspapers, in recent years weekly newspapers have shown strong circulation gains, especially in suburban communities. Weekly newspaper circulation tripled between 1965 and 1998. According to the Newspaper Association of America, in 1996 there were 6,580 weekly newspapers with an average circulation of 6,977 readers; by 2003, there were 6,704 weeklies with an average circulation of 7,490. The readership of the largest weekly newspapers rivals that of many daily newspapers serving urban areas; the largest paid weekly was the *People's Weekly World* (New York) with 67,000 subscriptions while the largest free one, the *Trend Midweek* (Bucks County, Pennsylvania), distributed an average 625,000 copies each week in 2004. In 2005, weeklies were received in over 60 percent of the nation's households, an increase of one-third since 1970. Although there are no firm statistics, the Newspaper Advertising Bureau's industry experts estimate that weeklies now generate $3 billion to $5 billion in annual advertising revenues.

Some weeklies, particularly those in upscale suburbs, offer sophisticated coverage of community concerns. Others feature a homey mix of household tips and local social events. Small town weekly newspapers are more traditional. The success of all these approaches is sometimes called "telephone book journalism" because of the emphasis on names and addresses, drawing on the theory that many people buy newspapers to see their names in print. It is undeniable that what weekly newspapers have in common is that they cover their communities in a detail that metro daily newspapers have neither the staff nor space to match. To the discomfort of the metropolitan dailies, many advertisers are following their customers to the suburban weeklies. Advertisers have found that space in such weekly newspapers costs less and is more likely to reach potential customers.

Content

In general, traditional weekly newspapers follow a format similar to that of daily newspapers, although the primary focus is on items of local interest. While the typically small staff of a weekly newspaper produces local news, sports, entertainment, and editorial pieces, much of the space is filled with material not produced by the reporters. For instance, the "family news pages," which include the announcements of births, engagements, weddings, anniversaries, and obituaries, are usually extensive. Also prominent in weekly newspapers is the public record section, which offers summaries of police incident reports, fire department calls, and court decisions and settlements. Many weekly newspapers feature a listing of building permits that have been issued locally. The minutes of school board and city council meetings are frequently published verbatim.

In addition, public notices often fill several pages in weekly newspapers. Most American states have laws that dictate that a municipality and/or county must designate an "official newspaper," which is required to publish all public notices. Public notices include announcements about public hearings, adoption of local ordnances, government financial reports, and notices by the court system and local law enforcement agencies (such as bench warrants, divorce settlements, and foreclosures). Since weekly newspapers tend to cover multiple towns or a county, by default these are often the "official newspaper" for the region. Two examples are the *Clayton County Register,* the official newspaper of Clayton County, Iowa, and the *Bitterroot Star,* the official newspaper for several communities in the Bitterroot Valley in Montana.

Alternative newspapers are usually published on a weekly schedule as well. In 1955, a group of bohemian friends living in New York City's Greenwich Village, including Norman Mailer and Don Wolf, decided to launch a community newspaper, one that offered a counterculture view of

the issues. The weekly *Village Voice* became the prototype for the many alternative newspapers launched during the 1960s. An alternative newspaper foregoes general news in favor of opinionated reviews, columns, editorials, in-depth examinations of controversial topics and lifestyles, and feature stories that highlight local people and culture. Typically, alternative newspapers are published in tabloid format on a weekly schedule, often with controlled circulation. Most metro areas of the United States boost at least one alternative paper, although a few are published in rural towns or suburban locales. There appears to be an expanding audience for alternative weeklies; circulation for such doubled between 1990 and 2008 to 7.6 million readers. This may be due to the fact that the alternative weekly newspapers are redefining themselves. The most successful of these—the *Village Voice, L.A. Weekly, Boston Phoenix,* and *Seattle Weekly*—have prospered by attracting young professionals rather than the disaffected radicals who were the original audience. In 2007, the Association of Alternative Newsweeklies represented 130 established alternative newspapers with a readership of more than 20 million.

Twenty-First-Century Trends

As with other technological advances, weekly newspapers adapted to the Internet much quicker than the large daily newspapers. Among the first was *ThisWeek* (Columbus, Ohio), which began in 1989 and now consists of 22 "pages" of local news and events. Although there are no firm figures of weekly newspapers online, the 2007 listings in *Editor & Publisher* indicate that over half of the weekly newspapers published in the United States now have an online presence. These online papers offer both traditional news items and local advertising and services not usually found in any newspaper, ranging from traffic and weather cams to reader-generated community calendars to reporters' blogs. In 1999, the *Southport* (UK) *Reporter* was launched as a web-only weekly newspaper, perhaps signaling a new trend in weekly newspapers. According to Nielson Online, newspaper websites attracted more than 66.4 million unique visitors in the first quarter of 2008, a record number. Although there is no distinction made between visitors to weekly newspaper sites as compared to those to daily newspaper sites, increasingly a reader traveling anywhere in the world can check up on his or her hometown news.

Although the Internet has opened new opportunities for weekly newspapers, it also offers significant challenges. Weekly newspapers face increased competition from Internet sites such as craigslist for classified advertising, especially for jobs, real estate, and cars, the local advertising of which has long been a key source of revenue. In terms of news content, weekly newspapers face increased competition from bloggers, especially in the recent trend toward "placeblogging." Placeblogs—such as Baristanet, Buffalo Rising, and Fresno Famous—are sometimes termed *hyperlocal sites* because they focus on news events and items that cover a particular area in great detail, in places that might be too physically small or sparsely populated to attract traditional newspaper coverage. Because of this, many readers have associated placebloggers with "citizen journalism." Weekly newspapers, which have long faced competition for local advertisers and audiences from television and radio, now have new challenges for hometown attention.

The weekly press embodies most precepts of American journalism. Traditional weekly newspapers focus on local issues and individuals, serve as public record, entertain and enlighten, and contribute to a sense of community. Alternative newspapers offer contrasting viewpoints to the mainstream, are vocal watchdogs for the public, and set new agendas for their readers. With longer deadlines and "shelf life" than daily newspapers or broadcast news, the weekly press remains one vital heartbeat of modern journalism.

Wire Services

See individual news agencies

Wolff

Formed shortly after the Havas and Reuters news agencies, for 75 years Wolff served as the primary German news agency, and one of a handful of international news services.

Origins

Bernhard Wolff (1811–79) originally studied medicine. In 1847 and 1848 he served as a translator of medical and also financial news for the developing Havas Agency in Paris. After returning to Berlin and acting as editor of a newspaper, Wolff formed his own financial news cooperative in 1849. The Berlin Telegraphische Anstaltt made early use of the spreading network of electric telegraph lines. Most of Wolff's initial clients were banks and other businesses, not newspapers.

Taking over several smaller competitors, he broadened his operation to cover general news in 1855 and took on newspaper clients. By 1859, Wolff was exchanging news with both Havas and Reuters. The operation underwent several name changes, finally becoming the Wolff'sche Telegraphische Büro. The Prussian government began contributing some financial support (and indirect control) by 1865.

A secret 1869 agreement between the government and the news agency gave the latter priority use of the expanding network of German telegraph cables in return for which Prussia gained some degree of control over the political news transmitted and even the hiring of staff. With this, the news agency became effectively an instrument of Prussian official policy (but it also achieved primacy in issuing official news), and Dr. Wolff retired as managing director in 1871.

News Cartel

As early as 1856, Wolff, along with Havas in France and Reuters in Britain, signed an exchange agreement to share financial news from their own countries. It soon expanded to more general news, and in 1859 to agreement to create joint offices in different cities, subject at different times to the imperialist moves by the countries' respective governments.

By 1870, the three agencies established a cooperative news cartel, soon dubbed "The Ring," each agency taking responsibility for part of the world (Wolff covered Austria-Hungary, Russia, and Scandinavia) and thus eliminating overlapping reporting and their related costs. For many years, Wolff controlled the national news bureaus in Sweden and Norway. Being the smallest of the three, Wolff was subject to its partner's agreement to any expansion of its services—for which it paid a premium. All three made effective use of the growing web of undersea cables as well as land telegraphy and were accordingly often called "wire" services. With some changes, the cartel agreement was renewed in 1890 and again in 1914.

Decline

Increasingly by the turn of the twentieth century, Wolff was seen as an agency of the Prussian, and later German, governments. With the outbreak of World War I in August 1914, the agency was cut off from its usual news sources and many of its clients when all German undersea cables were cut by the allies. Further weakening its once strong national role, the German government set up a separate wireless news bureau, Transocean, in 1915. Wolff came under full government control in 1917 to 1919. The loss of the war a year later, and Germany's subsequent occupation and economic

turmoil (and growing news competition) greatly weakened the Wolff agency during the Weimar Republic of the 1920s, and Reuters and Havas now served many of its non-German territories.

Wireless technology allowed for more efficient news delivery. Larger newspaper subscribers used teleprinters served—by 1932—by a multiple address radio system. By the early 1930s, Wolff fielded the largest number of reporters outside of Germany and distributed many specialized news services (including those for finance, sports, and editorials) within the country.

After some three quarters of a century of operation, however, the Wolff agency was effectively closed in 1933 by the new Nazi regime, to be replaced by the government-controlled Deutches Nachrichten Büro. With its increasingly overt propaganda content, the new agency helped bring about the demise of The Ring news agency cartel with Havas and Reuters.

Women in Journalism

Women have been a part of journalism for centuries, although many of their names and faces might not be familiar to the average person. From newspaper printers in the seventeenth century to the anchors of television newscasts in the twenty-first, women journalists have climbed out of the print shops and on to the front pages and top broadcasts of journalism. The road was not always a smooth one. Many media scholars, journalism organizations, and newsroom executives maintain that having diverse representation of journalism staffs in terms of gender, race, ethnicity, and religion is crucial to making certain the voices of *all* the public, not just a privileged few, are heard. Although great strides have been made by women in journalism, in 2009 women still were seeking equal representation in the highest newsroom ranks.

Development

Some of the earliest women to enter journalism came from families operating printing presses. From the late seventeenth into the eighteenth centuries, men who worked as printers often trained their wives and daughters to help with the family business. Printing businesses sometimes involved publishing a small newspaper. Mary Katherine Goddard, who worked in her brother's print shops, is among the most famous of these early printers. During the American Revolution, she became editor and publisher of Baltimore's first newspaper, the *Maryland Journal,* and was the first to print the Declaration of Independence with the names of the signers.

Margaret Fuller is often cited as the first woman to work at a major newspaper. In the 1840s Fuller worked for the *New York Tribune* and is believed to be the first woman foreign and war correspondent. Among other events, she covered the Italian revolution for the *Tribune*. Most women journalists, however, didn't find themselves overseas covering wars. Before the U.S. Civil War, magazines geared specifically to women began as a way to attract circulation revenue (and eventually advertising dollars), opening up new opportunities for women writers and editors. After the Civil War, technological production improvements and postal system changes lowered the cost of producing magazines and made them easier to distribute. About 40 magazines existed in the United States in 1800. By 1900, that number increased to 5,500. The Civil War itself also opened up new avenues for women journalists as they took on slavery and

the right to vote for both blacks and women. In 1868, two of the most famous crusaders for women's suffrage, Susan B. Anthony and Elizabeth Cady Stanton, published and edited *The Revolution,* a newspaper focused on equal rights for women. More newspapers focused on women's rights followed, as did publications and stories aimed at social reform. In the 1890s, Ida Wells-Barnett risked her life calling for a stop to the lynching of black Americans. After her newspaper office was burned, she moved from Memphis to New York, where she continued writing.

By 1886 some 500 women worked on a regular basis in American newsrooms. They took their craft seriously and began to form press associations. Among the earliest were the Woman's Press Club of New York and the Woman's National Press Association. Such groups allowed women journalists to build solidarity, as they would not be allowed into male-dominated journalism clubs until the 1970s.

While the nineteenth century brought women journalists initial opportunities to lobby for social reform, the late nineteenth and early twentieth centuries were a period dominated by stunt journalists and "sob sisters." Stunt journalists were those who did something sensational to get attention. Foremost among them was Nellie Bly, who traveled around the world in 72 days in order to beat the character in author Jules Verne's novel, *Around the World in 80 Days*. Sob sisters were women journalists covering crime and romance whose stories were meant to make the reader weep. A woman journalist might play both roles. Publishers employed stunt journalists and sob sisters to increase circulation.

Making Headway

Women journalists in the early twentieth century wanted to right wrongs and expose abuses of power. They were known as muckrakers, and among them was journalist Ida Tarbell. Through meticulous reporting, she exposed the unfair business practices used by John D. Rockefeller's Standard Oil Company. Her work, first featured in *McClure's Magazine,* became a widely read book in 1904 and led to government prosecution of Standard Oil for violations of the Sherman Anti-Trust Act.

The 1920s brought a new opportunity for women journalists with the advent of radio. But because of narrow male ideas about acceptable voices on the air, few were permitted to broadcast, let alone to provide news. Men's voices were thought to have more "authority." Other than singers and other entertainers, women who made it to radio's airwaves found themselves on informational programs focused on home and domestic issues.

At about the same time, journalism schools were beginning to open their doors to women students. While women could attend, they often were encouraged to focus on marriage and family rather than on a career in journalism. Women students were often given lighter assignments such as a soft feature story instead of a hard-hitting headline story. Some of those who graduated found it difficult to get journalism jobs. By 1900, the number of full-time women journalists was 2,193. By 1910, the number of women writers and editors was estimated at more than 4,000. By 1930, that number grew to 12,000.

World War II brought many employment opportunities to women as newspaper and broadcast companies had to fill spaces when men left to serve or cover the war. Women took positions as reporters, editors, and newscasters. First Lady Eleanor Roosevelt worked to help women journalists by holding women-only press conferences and providing stories to women reporters. CBS hired one of the first women broadcast news executives, Helen Sioussat, to take the place of legendary broadcast journalist Edward R. Murrow as director of talks when Murrow went to Europe to cover the war. Helen Thomas, a wire service reporter who covered U.S. Presidents for more than 40 years, got her start in journalism in 1943 because of vacancies left by men. Thanks to these and other wartime efforts, women's journalistic work became more widely recognized. The first woman awarded a Pulitzer Prize, in 1937, was Anne O'Hare McCormick, who won for her foreign correspondence for *The New York Times*. Sigrid Schultz became one of the first women radio foreign correspondents and broadcast the bombing of Berlin.

Changing Work Conditions

As men returned from the war, many women lost their positions or ended up in different jobs. The 1950s brought a renewed interest in women-specific pages in newspapers and programs on radio and nascent television. While these topics did

provide jobs to women, many yearned for something more. Marguerite Higgins, who had covered World War II for the New York *Herald Tribune,* went on to become the first woman to win a Pulitzer Prize for international reporting in 1951 for her coverage of the Korean War. But even she could not escape smears that her success was based on her gender more than her talent. Higgins, like so many other women journalists, often faced discrimination or harassment. The civil and women's rights movements of the 1960s and 1970s led to landmark legislation that aimed to change the work environment. Yet even in the 1970s, women journalists at *Newsday, The New York Times,* and other major news organizations complained that employers were discriminating based on gender. Complaints often led to action, with financial settlements and affirmative action plans to hire and promote women in the newsroom.

In broadcasting, a 1971 ruling by the Federal Communications Commission held that women should be given equal hiring opportunities. Building on the ruling, women pushed for increased hiring and promoting in broadcast news. But women still continued to face harsh criticism. Barbara Walters became the first woman to anchor a nightly network newscast in 1976 but faced criticism for her million dollar salary, her appearance, and her way of speaking. Though she left the newscast within two years, she remained a major figure at ABC for decades, becoming one of the medium's top interviewers.

In the 1970s, while women were using the courts to increase hiring and promotion equality in newsrooms, women students increased to a majority of undergraduate journalism majors at American colleges. This created a growing pool of candidates for journalism jobs. But the fight for gender equality continued in the 1980s, centering on gender and age. Christine Craft, a 37-year-old woman television anchor in Kansas City, was fired in 1981 after a consultant's report said viewers thought she was too old, not attractive enough, and not deferential enough to men. She initially won her 1983 sex discrimination suit but lost on appeal in 1985 and the Supreme Court declined to hear the case in 1986. Age discrimination was an issue that continued to trouble women broadcast journalists far more than males in the early twenty-first century. Yet in many markets, a woman co-anchor of evening station newscasts is now common.

The women's rights movement and increased feminist activity in the 1970s and 1980s were accompanied by an examination of the role of and description of women in the media. Researchers including Donna Allen, H. Leslie Steeves, and Maurine Beasley began studying the absence of women in media portrayals and stories as well as their roles (or lack thereof) as makers of journalistic and media stories. For example, researchers studied (and continue to study) the number of male sources in stories compared to the number of female sources in stories.

In 1981, 1982, and 1992, Indiana University scholars conducted surveys that showed women made up a third of newsroom staffs. According to the U.S. Census, the workforce as a whole was made up of 42 to 45 percent women during the same time period. In the 1990s newspapers, for example, sought to increase readership by focusing on attracting women and realized their women staffers helped in the effort. A version of the "women's" pages returned, now more broadly dubbed "life" or "style" with a focus on domestic issues and needs—indeed, anything of concern to women.

In 1993, the second woman co-anchor of a network evening news program, Connie Chung, joined the *CBS Evening News* with Dan Rather. Amidst criticism of some of her stories and style, she accused CBS of sexism and left in 1995. Only a decade later, the same *CBS Evening News* became the first network evening newscast to feature a solo woman anchor when Katie Couric moved over from a successful morning career at NBC's *Today* show.

Noted Women in Print Journalism

Nellie Bly (1864–1922)

Bly was one of the earliest investigative reporters. Born Elizabeth Jane Cochran, Bly wanted to report on how the mentally ill were treated and famously had herself committed to a mental institution in pursuit of a story. Her stories of abuse, neglect, and poor sanitation at the Women's Lunatic Asylum on Blackwell's Island led to reform in care for the mentally ill. She also became known as the first "stunt reporter," and her feats included having herself arrested so she could reveal the inside of women's prisons and pretending to be unemployed so she could show how employment agencies worked.

Margaret Bourke-White (1904–71)

Bourke-White was the first woman photographer to be hired by a major publication when she went to work for *Fortune* magazine in 1930. She was the first woman photojournalist at *Life* magazine in 1936 and one of her photos, of the construction of Fort Peck Dam in Montana, was featured on the inaugural cover. She worked there until the 1950s. She also made news as the first Western photographer allowed into the Soviet Union. Her photographs of the Great Depression, World War II, and many foreign countries were widely distributed.

Katharine Graham (1917–2001)

Graham helped *The Washington Post* become one of the most respected U.S. newspapers. She served as publisher and chair of the board of the newspaper after the death of her husband in 1963. Graham was lauded for her 1970s decision to run the Pentagon Papers story—the story of a secret U.S. government study on Vietnam—after *The New York Times*'s publication of the same study was stopped by a court order. She also supported the 1972 to 1974 Watergate investigation of political scandals that lead to the downfall of President Richard Nixon and that made two of her reporters, Bob Woodward and Carl Bernstein, journalism legends.

Marguerite Higgins (1920–66)

Higgins earned her master's degree at Columbia University's journalism school. She became the first woman to win a Pulitzer Prize for international reporting in 1951 for her coverage of the Korean War. Higgins also covered World War II and was among the first journalists to report on the U.S. military's seizure of the Dachau concentration camp, writing a haunting eyewitness account. In her final years, she reported the early Vietnam War.

Clare Boothe Luce (1903–87)

Luce, who worked as a magazine editor and writer in her early years, became known as a playwright and politician. Luce met her husband, Henry R. Luce, publisher of *Time* and *Life* magazines, in 1935 after her four-year stint as an editor at *Vogue* and *Vanity Fair*. She wrote several plays that were turned into movies including *The Women, Kiss the Boys Goodbye,* and *Margin for Error*. After working as a war correspondent for *Life* from 1939 to 1940, Luce served in the U.S. House of Representatives as a Republican from Connecticut from 1943 to 1947 and ambassador to Italy from 1953 to 1956.

Eleanor "Cissy" Patterson (1881–1948)

Patterson was part of one of the U.S. major newspaper families, the Medill family, and left her own mark on the newspaper industry as editor and owner of the *Washington Times* and *Washington Herald,* which she merged into the *Washington Times-Herald*. Among her famous family members were her grandfather, Joseph Medill, editor in chief of the *Chicago Tribune,* and her brother, Joseph Medill Patterson, publisher of the *New York Daily News*. She was known for her wit and eccentricity. She went undercover to report her stories, fired employees on impulse, and carried a gun for protection. She published two novels under the penname Eleanor Gizycka, *Glass Houses* (1926) and *Fall Flight* (1928).

Ethel L. Payne (1911–91)

Payne is known as "the First Lady of the black press." Focusing on civil rights and international news, she spent much of her career working for the black press and was the first black woman to work as a commentator for a major broadcast network, CBS. Much of the award-winning journalist's work appeared in the *Chicago Defender*.

Gloria Steinem (1934–)

Steinem co-founded *Ms.,* a magazine aimed at telling stories from a feminist perspective, in 1971. At first, it was a one-time insert in *New York* magazine, for which Steinem was one of the original writers. In 1972 *Ms.* became its own publication. The feminist icon, author, and organizer has continued to work as a contributing editor at *Ms.* She also is co-founder of the Women's Media Center, a group whose goals include ensuring that women and their experiences are shown in the media and that women media professionals have equal opportunities.

Ida Tarbell (1857–1944)

Tarbell, an early investigative journalist, was one of the "Muckrakers," a group of journalists whose work ferreted out corruption and abuse of power in American society. Her most famous work, *History of the Standard Oil Company*, first appeared in *McClure's Magazine* and was ranked the number five news story of the twentieth century by a group of 36 judges (journalists and journalism teachers) working under the auspices of New York University's journalism department.

Helen Thomas (1920–)

Thomas became the "dean of the White House press corps" and "the First Lady of the press." For more than 40 years, Thomas covered U.S. Presidents for United Press International. She was the first woman to close a U.S. presidential news conference by saying, "Thank you, Mr. President" while covering President John F. Kennedy. She was also the first woman officer of the White House Correspondents Association. Thomas was named one of the 25 most influential women in America by the *World Almanac* in 1976.

Dorothy Thompson (1893–1961)

Thompson was the first American woman to head a news bureau in Europe. After working on the suffrage movement and in publishing, Thompson headed to Europe where, after three years writing news stories, she became the Berlin bureau chief for the Philadelphia *Public Ledger* and the New York *Evening Post* in 1924. Thompson returned to New York in 1928 and continued to write for magazines and newspapers. She was expelled from Germany because of her opposition to the Nazi government. She became a syndicated columnist for the New York *Herald Tribune* and was a well-known political analyst in the 1930s and 1940s. She also wrote a nonpolitical column for *Ladies Home Journal* for 20 years.

Noted Women in Broadcast News

Christiane Amanpour (1958–)

Amanpour, chief international news correspondent for CNN, brought wars, international crises, and interviews with top world leaders to television screens from the 1990s and into the twenty-first century. One of a growing number of women foreign correspondents, Amanpour credited her experiences as the daughter of a privileged Iranian for her desire to be a journalist. Educated in England and the United States, Amanpour not only covered world events but explained the context and people behind those events. She has received numerous awards for her reporting efforts.

Katie Couric (1957–)

Couric became the first woman solo anchor of a weekday network evening news broadcast in 2006. She also worked as a correspondent for the CBS news program *60 Minutes*. Couric was co-anchor of NBC's morning *Today* show for 15 years, from 1991 to 2006. Before that, she worked as a TV journalist for more than a decade for ABC, NBC, and CNN, starting in local television news in her native Washington, D.C. Couric has won numerous awards.

Pauline Frederick (1906–90)

Frederick was a pioneering radio and later television news reporter for both ABC and then NBC when women were rare on the air. The award-winning reporter earned a bachelor's degree in political science and a master's degree in international law from American University. At the urging of one of her professors, she focused on journalism. Despite her educational qualifications, she had a difficult time breaking into political journalism early on because she was a woman, but she kept trying and eventually covered the Nuremberg trials for ABC radio. She built her final two decades on NBC television on her detailed knowledge of the United Nations.

Anne Garrels (1951–)

Garrels, senior foreign correspondent for National Public Radio (NPR), has won numerous awards for her reporting, including the Courage in Journalism Award from the International Women's Media Foundation for her reporting from Iraq during the American invasion. During the early days of the Iraq war, she was one of only a few non-embedded U.S. journalists who stayed in Baghdad and reported live

when the Americans invaded and Baghdad fell. She wrote *Naked in Baghdad: The Iraq War and the Aftermath as Seen by NPR's Correspondent Anne Garrels,* which mixed reportage with personal reflections and stories depicting her daily life of a war correspondent. Prior to joining NPR in 1988, Garrels reported for NBC and ABC News.

Gwen Ifill (1955–)

Ifill has worked as moderator and managing editor of *Washington Week* and senior correspondent for *The NewsHour with Jim Lehrer* since 1999. Ifill joined PBS after five years at NBC News as chief political and congressional correspondent. Before NBC, she was a journalist for *The New York Times, The Washington Post,* the *Baltimore Evening Sun,* and *Boston Herald American.* She got her first full-time journalism job at the Boston *Herald* after a staff member left a racially derogatory note for her when she was an intern. The *Herald*'s editors hired her in response to the note.

Jane Pauley (1950–)

Pauley is best known as the longtime morning host of NBC's *Today Show,* where she worked from 1976 to 1990, and as correspondent and host for *Dateline NBC* from 1992 to 2003. She left *Today* amid media rumors of ageism when she was replaced by the younger Deborah Norville. Pauley also anchored the weekend edition of *NBC Nightly News,* appeared as a regular substitute anchor on *NBC Nightly News,* and hosted *Time and Again,* a news program that delved into NBC's news archives to highlight a particular moment in American history.

Cokie Roberts (1943–)

Roberts, born Mary Martha Corinne Morrison Claiborne Boggs, has served as a political analyst for ABC News and a senior news analyst for National Public Radio (NPR). During her more than 40 years in broadcasting, Roberts covered Congress for NPR for more than ten years, co-anchored the ABC program *This Week* with Sam Donaldson from 1996 to 2002, served as a substitute host for ABC's *Nightline,* and authored four best-selling books including *Ladies of Liberty* in 2008.

Diane Sawyer (1945–)

Sawyer, award-winning reporter and co-anchor of ABC's *Good Morning America,* ranked 65 on *Forbes* magazine's list of "The 100 Most Powerful Women in the World" in 2008. Sawyer, who started out as a weather reporter in Kentucky, worked in U.S. President Richard Nixon's administration as part of the Nixon–Ford transition team and assisted Nixon with writing his memoirs. She worked for CBS as a reporter and co-anchor from 1978 to 1989 and became the first woman correspondent on *60 Minutes* in 1984. Sawyer left CBS to co-anchor *Primetime Live* in 1989. She began co-anchoring *Good Morning America* in 1999.

Carole Simpson (1940–)

Simpson, the first African American woman to anchor a major broadcast evening newscast, brought the news to American audiences as weekend anchor on ABC for 15 years from 1988 to 2003. During her career, she won every major broadcast award, and in 1992 she was named Journalist of the Year by the National Association of Black Journalists. She founded the International Women's Media Foundation.

Helen Sioussat (1902–95)

Sioussat was an early woman network news executive. She served as director of talks and public affairs for CBS from 1937 to 1958. Sioussat replaced famed broadcaster Edward R. Murrow in the role when he left it to cover World War II. She oversaw hundreds of broadcasts a year and created the first program to focus on talking about television.

Sigrid Schultz (1893–1980)

Schultz was the first woman radio foreign correspondent, and she made her mark with the Mutual Broadcasting System during World War II. In 1926, Schultz was named correspondent-in-chief in Central Europe for the *Chicago Tribune,* a position that is believed to have made her the highest ranking woman journalist in Europe at the time. She spoke three languages, including English and German. Because she was known as an anti-Nazi, she often had to leave Germany to file her stories.

Nina Totenberg (1944–)

Totenberg, National Public Radio's (NPR) legal affairs correspondent, has explained legal issues and Supreme Court rulings to Americans for decades. Her award-winning coverage has been lauded by media organizations and the American Bar Association. Totenberg, who joined NPR in 1975, gained national attention in 1991 with her stories about Oklahoma Law Professor Anita Hill's allegations of sexual harassment by then–Supreme Court justice nominee Clarence Thomas.

Barbara Walters (1929–)

Walters was the first woman to anchor a weekday U.S. network newscast and became known for her interviews with heads of states and celebrities. After more than a decade at the *Today* show on NBC, Walters headed to ABC in 1976 to co-host the nightly news. She faced criticism for the way she spoke, the questions she asked, and the money she made. After being released from the newscast within two years, she rebuilt her career with interviews with heads of states and celebrities. She became known for getting her interview subjects to talk about things they wouldn't talk about with other journalists. She also started *The View* in 1997, a weekday TV show that focuses on women's views of current events and issues.

Linda Wertheimer (1943–)

Wertheimer has reported stories on National Public Radio (NPR) for more than 30 years. She was the director of NPR's flagship news program *All Things Considered* when it debuted in 1971. From 1974 to 1989 the award-winning reporter covered national politics. She became one of the first women to anchor network coverage of a presidential convention and election night in 1976. Wertheimer hosted *All Things Considered* from 1989 to 2002 and then became NPR's first senior national correspondent.

Conclusion

Research indicated in 2002 that women were less likely than men to stay in journalism throughout their careers. Some reasons that women left the field included a desire for more time with their families; a need for a different, more flexible, or more lucrative career; and a feeling that they had hit a "glass ceiling," meaning they had gone as far as they could.

In 2006, women made up two-thirds of students graduating from American journalism and mass communication college programs, a fact that had not changed since the late 1970s. About the same percentage (68 percent) of master's degrees in the field were granted to women, along with 58 percent of doctoral degrees in 2006.

Yet women journalists, in the early twenty-first century, still had not yet reached true equality in newsrooms, particularly in the highest ranks of management and in prestige reporting positions. Surveys by organizations such as American Society of Newspaper Editors continued to show most high-ranking positions were still held by men in 2008.

While it was clear in 2008 that women had come a long way in journalism, it was also clear they still faced many obstacles on their journey into positions of power. For women in journalism, the fight to reach the top in equal numbers continues.

Women's Magazines

The first American women's magazine, *The Lady's Magazine and Repository of Entertaining Knowledge,* appeared in Philadelphia in 1792. Between 1806 and 1849, women founded and edited 25 women's magazines, and before the Civil War, about 100 national and regional women's periodicals were published. Aimed at the elite, most were modeled on English magazines and focused on fashion, manners, and literature. *Godey's Lady's Book* (1830–98) is considered the first popular modern women's magazine. In the 1890s, Congress lowered postal rates, printing technology was revolutionized, and manufacturers sought outlets to advertise their mass-produced goods. Consequently, publishers dropped magazine prices, circulation skyrocketed, and middle-class homemakers replaced upper-class "ladies" as the magazines' readers.

Women's magazines have played an important historical role. At a time when few women attended college, they educated readers about a wide range of topics and offered correspondence classes and even scholarships. During the fight over the Equal Rights Amendment (1970–79), some women's magazines pushed for passage of the constitutional amendment. Magazines continue to keep women informed about developments in health, science, the environment, and the economy.

Today most magazine readers are women, and women's magazines are big business. Ownership is concentrated in the hands of a few publishers, for example, Advance Publications (Condé Nast Publications and Fairchild), Meredith Corporation, Hearst Corporation, Hachette Fillipachi Media, and Time Warner Company. There is also foreign ownership—Germany's Gruner + Jahr and Bauer Verlagsgruppe, France's Hachette Fillipachi, and Mexico's Editorial Televisa are examples. This trend goes two ways—U.S. women's magazines, such as *Cosmopolitan, Harper's Bazaar, Vogue,* and *Glamour,* have editions in other countries. Male editors and publishers have dominated many women's magazines for years. For example, *Redbook,* founded in 1903, didn't have its first woman editor until 1982. In recent decades, the number of female editors and publishers has increased dramatically.

Service Magazines and the Seven Sisters

Service magazines, which focus on the home and include helpful articles readers can use in their daily lives, dominate the women's category. Fashion and beauty magazines and periodicals that focus on smaller, specific audiences follow this group in readership and ad revenue.

The famous Seven Sisters, the nation's best-selling mass-market women's periodicals, are all service magazines. They include *Ladies Home Journal* (1883), *Good Housekeeping* (1885), *Redbook* (1903), *Better Homes and Gardens* (1924), *Family Circle* (1932), and *Woman's Day* (1937). These titles have dominated newsstand and subscription sales for generations. While their combined 1979 circulation of 45 million dropped to 26.5 million in 2007, they remain among the most popular U.S. magazines of any kind.

The one sister missing from the list above is *McCall's*. In 1873, tailor James McCall founded a magazine to promote his dressmaking patterns. Over time, *McCall's* developed into a large-format glossy and changed ownership several times before German publisher Gruner + Jahr bought it in 1994. G+J later teamed with talk-show host Rosie O'Donnell to overhaul *McCall's* image to attract younger readers. Renamed *Rosie,* it took over *McCall's* 4.2 million readers when it was launched in April 2001. Despite this strong start, O'Donnell quit in September 2002 over editorial differences, and the magazine ceased publication.

While *McCall's* was never resuscitated, the other sisters fared better. *Ladies Home Journal,* the eldest sister and one of the leading magazines of the twentieth century, was the highly successful product of a husband-and-wife team. Cyrus Curtis, the publisher, was on the cutting edge of changes taking place in the magazine industry during the late nineteenth century. For six years, his wife Louisa Knapp edited the magazine, which had grown out of a newspaper column she wrote. Her editorial mix of advice, household hints, inspirational articles, short stories, and serialized novels, combined with his promotion of the magazine, allowed its circulation to jump from 31,000 five months after it was founded in 1883 to more than 1 million ten years later. The *Journal,* still one of the country's most popular magazines, had a 2008 circulation of 3.8 million.

Circulation for *Good Housekeeping,* the second eldest sister, is even higher—4.7 million, as of 2008. Its current editorial mix of inspirational and personal stories and articles on the home, cooking, entertaining, style, children, and family has changed little since it was founded in 1885. *GH* went through several owners before William Randolph Hearst bought it in 1911. Because of its Good Housekeeping Research Institute (GHRI) and its famous Good Housekeeping Seal, *GH* has long been associated with consumer protection and quality. In 1900, the GHRI began rigorously testing products *GH* advertised. Manufacturers often bought advertising just to get the sought-after seal.

Redbook, with a 2008 circulation of 2.2 million, has had more incarnations than the other sisters since it was founded in 1903. Originally a short-story magazine for men and women, it became a general-interest magazine in the late 1920s. After World War II, it became a service magazine aimed at young adults. When Hearst bought it in 1982, fiction was de-emphasized and women (18–34) who juggled home and career became its audience.

Better Homes and Gardens was one of the country's largest magazines at the beginning of the twenty-first century. Because of its features on building and remodeling projects, male readers were a significant part of its 7.7 million circulation in 2008. In 1922, publisher Edwin Meredith founded *Fruit, Garden and Home,* which became *Better Homes and Gardens* in 1924. The fledgling magazine benefited from great timing: many middle-class Americans were buying, building, and remodeling homes and were interested in learning more about homes, landscaping, and gardening. Starting with a circulation of 150,000, it quickly garnered a mass audience, hitting 1 million by 1928. Today the magazine focuses on decorating, home improvement, recipes and food, gardening, crafts, family, and health.

Family Circle (1932; 3.9 million in 2008) and *Woman's Day* (1937; 3.9 million in 2008) began as grocery store giveaways during the Depression. *Family Circle* was a collaboration between Harry Evans, a *Life* editor, and Charles E. Merrill, founder of Merrill Lynch. At first it was sold to three grocery chains and featured articles on food, childcare, fashion, and beauty, as well as short stories and coverage of movies and radio. In 1945, it changed from a weekly to a monthly publication, and in 1946, it was first sold for five cents. By 1951, it was distributed at 14 grocery chains. *Woman's Day,* which was designed to make customers at A&P grocery stores buy more, carried content similar to *Family Circle*'s. It actually began a year before *FC* did, but its official starting date is 1937, shortly after the A&P chain opened its first supermarket in 1936. *WD* sold for two cents.

Newer Service Magazines

Woman's World (1981; 1.3 million in 2008) competes with *FC* and *WD* at grocery checkout counters. The weekly tabloid, published by Germany's Bauer Verlagsgruppe, runs short stories, profiles, service pieces, and weight-loss stories, hence its nickname—"Weight Loss World." Bauer also launched *First for Women* (1989; 1.3 million in 2008) as a competitor for the Seven Sisters. It is also distributed at grocery stores.

Martha Stewart Living (1990; 2 million in 2008), which focuses on cooking, entertaining, decorating, and gardening, grew out of Stewart's best-selling cookbooks. Two publishing companies turned down her idea for a guide to living well before Time Warner accepted it. Stewart's TV show came afterward. She gained control of her magazine in 1997, when she bought it and combined it with her other activities in Martha Stewart Living Omnimedia Inc.

Talk-show host Oprah Winfrey in partnership with the Hearst Corporation started *O, the Oprah Magazine* (2000; 2.3 million in 2008). With Winfrey's name and a blend of articles on traditional

women's fare and spiritual growth, the oversized *O* was off to an extraordinary start with newsstand sales alone of 1.6 million its first week. By February 2008, the newsstand average was down 25 percent to just under 837,000 from the second half of 2007. Some of its decline was blamed on disenchanted John McCain and Hillary Clinton supporters offended by Oprah Winfrey's outspoken support of Barack Obama in the 2008 presidential election. However, there was also an overall decline of over 11 percent in newsstand sales of all magazines during the same time period, according to the Audit Bureau of Circulations. This newsstand trend has been blamed on the recession and the price of gas, which discourages frequent trips to the grocery store. The following women's magazines have had declines: *Cosmopolitan* (6 percent), *Glamour* (18 percent), *Family Circle* (20 percent), *Women's Day* (22 percent), *Redbook* (33 percent), *Better Homes and Gardens* (39 percent), and *Ladies Home Journal* (40 percent).

Fashion Magazines

Fashion and beauty magazines, the second-largest grouping of women's magazines, have their critics, and their content is dissected in university classrooms across America. Nonetheless, they are an important part of the women's niche. Two of them—*Harper's Bazaar* and *Vogue*—have molded taste in fashion, entertainment, literature, art, and photography for more than a hundred years.

Book publisher Harper and Brothers founded *Harper's Bazaar* (1867; 700,000 in 2008). Originally aimed at middle- and upper-class women, it covered household affairs and fashion. Today it strictly covers fashion and beauty, emphasizing what's new and upcoming. Some of its editors, considered fashion icons, have helped advance the careers of talented photographers (Richard Avendon), designers (Christian Dior), and illustrators (Erté). Although this Hearst publication's circulation is small, ad revenue is high because of its affluent readership.

Vogue, Harper's longtime rival, led it in circulation (1.3 million) in 2008, although it was down 6 percent in the first half of 2008. When *Vogue* was founded in 1892, it was a society newspaper. After publisher Condé Nast bought it in 1910 and began transforming it into a limited-circulation magazine, its wealthy readership turned to it for news of high fashion and high society as well as coverage of art, culture, politics, and ideas.

Nast, who founded the Vogue Pattern Company in 1914, created the Hollywood Pattern Book during the Depression to provide young women with inexpensive patterns based on movie stars' clothes. Renamed *Glamour of Hollywood* in 1939, it was transformed into a hybrid fanzine/fashion magazine with a circulation of 200,000. Today *Glamour* (2.3 million in 2008) is aimed at young women interested in fashion, beauty, health, relationships, and careers.

Fashion designers, manufacturers, and buyers have long read *Women's Wear Daily,* Fairchild Publications' trade newspaper for fashion industry coverage, scoops, trends, and society gossip. *WWD*'s John Fairchild thought consumers would be interested in a magazine with a similar editorial mix, so he published his company's first magazine, *W* (1972). The oversized fashion/lifestyle periodical covers art, culture, and entertainment. Though it has never had a huge circulation (470,000 in 2008), its readers have median household incomes of $159,560 and can afford the couture it features, which in turn attracts high-end advertisers, rendering its modest circulation numbers largely moot.

In 1985, Hachette Filipacchi Media published an English-language version of the French fashion magazine *Elle* in America. Today *Elle* (meaning "she") has a 2008 circulation of 1.1 million and has 39 editions in 60 countries, making it the world's largest fashion magazine. Another French fashion import, *Marie Claire,* arrived in the United States in 1995. The Hearst Corporation is its franchisee. Its slogan—"more than a pretty face"—is reflected in content that keeps readers abreast of current affairs around the world. U.S. circulation in 2008 was 1 million; worldwide circulation was 21 million in 2007.

Three other start-ups in the 1990s included *Allure* (1991; 1 million in 2008), *InStyle* (1994; 1.7 million in 2008), and *More* (1998; 1.3 million in 2008). *Allure* focuses more on beauty than on fashion. In each issue, readers get celebrity beauty tips and expert advice. Time Inc.'s *InStyle,* a thick oversized magazine, covers celebrity lifestyles and teaches its readers simple ways to get the style and

look of their favorite celebrities. *More* filled a need for a magazine for women 40 and older. Published by Meredith, it covers health, career, money, and travel and uses models older than 40 in its fashion and beauty sections.

Condé Nast's *Lucky* (2000; 1.1 million in 2008), a shopping magazine, started a new trend—the magalog. Blurring the line between magazines and catalogs, it is based on Japanese shopping magazines, features little editorial content, and includes detailed listings of where to buy products it features.

In a Class of Their Own

Cosmopolitan (1886; 2.9 million in 2008) and *Ms.* (1972; 100,000 in 2008) magazines have some things in common. Neither fits the standard women's magazine stereotype, and both have contributed to the feminist movement in their own way. *Cosmopolitan* was transformed in 1965, when Helen Gurley Brown, author of the 1962 best-seller *Sex and the Single Girl,* became the magazine's first woman editor, despite having no editorial experience. The Hearst Corporation hired her to change *Cosmo*'s audience from housewives to younger career women. Many critics argue that in recent years *Cosmopolitan* has been reversing the accomplishments of the feminist movement, but when Brown first switched the magazine's focus to sex, a previously taboo topic, she freed women to talk openly about sex, including topics such as birth control and sexually transmitted diseases. Gloria Steinem and Patricia Carbine, editors and founders of *Ms.* magazine, are the flip side of the flamboyant Brown. Carbine, a publishing executive, and Steinem, a journalist who helped start *New York* magazine, worked with many colleagues to create a magazine that reflected the goals of the second woman's movement. Its first issue in July 1972 sold out in four days. *Ms.,* an influential voice for almost 40 years, has covered topics that were being ignored by the mainstream press. Some of the topics it ran that were not covered in the other women's magazines included date rape, black feminism, marriage contracts, passage of the Equal Rights Amendment, decriminalization of abortion, and welfare. It has struggled over the years but is still published.

The Future

Circulation numbers for most women's magazines dropped dramatically in the first half of 2008. Newsstand sales of *Good Housekeeping, Marie Clair, O, Glamour, Vogue,* and *Teen Vogue* tumbled by double-digit percentages. Still the six remaining Seven Sisters accounted for a combined 26,230,132 in all of 2008. This was down by about 300,000 from 2007. Many factors are blamed for circulation woes: the economic downturn that began in 2007; massive amounts of free content on the Internet, including digital magazines, blogs, and social networking websites, such as Facebook; and the myriad of news and entertainment options on cable television. Others blame women's magazines themselves, arguing that there are too many competing titles and that publishers expect unrealistic profits. Still others complain that content doesn't adequately reflect readers' changing lifestyles and concerns.

The future of women's magazines is uncertain. Some predictions are downright dire. In the magazine industry in general, paper prices and printing costs are increasing, bankruptcies are on the rise, CEOs are stepping down, ad sales are dipping, and more than 500 magazines went out of business in 2008. There is speculation that 50 percent of all magazines may go under or have their frequency scaled back. In the first part of 2009, Meredith, which publishes several women's titles, slashed 250 jobs. While it's not unusual for women's titles to come and go, new business models and ways of engaging readers are being sought. A switch to strictly online women's magazines is a possibility. However, many women have been resisting online versions of their favorite magazines for a variety of reasons—some complain about design and content and that the website is there solely to push the print magazine, not to bolster or supplement it. While women's magazines will probably be around for a while, they will increasingly have to justify their presence in the marketplace as they attempt to remain relevant in a new media environment in which free content is easily accessible and audiences are fractured.

Section I Introduction

Journalism is the most pervasive and contentious of professions. The reporting process pushes journalists to vigorously pursue, confront, or on occasion pick apart people and institutions on all levels. Then news stories are put out for public consumption and have an impact on every corner of society. By its very nature, journalism breeds broad scrutiny, strong reactions, and a legal tug-of-war mentality—the right of the public to know versus the outcry to control the aggressiveness of the press. This section recognizes the demand for journalism students, new hires, and veterans alike to know where their professional rights end and legal restrictions begin.

Journalism and media law is rooted in the Constitution and the First Amendment promise of a free press. It is an enormous area of the law with a long history and a penchant for growing ever more expansive each year. There has been a steady stream of federal and state legislation to address key issues in reporting that arise, and to mirror the ever-changing attitudes toward the role of journalism across the country. In more recent years, major technological innovations in news delivery and communications have added a massive collection of media rules and regulations as well. And the courts' interpretation of all these considerations has caused the body of law governing journalism and media to burgeon exponentially.

All the relevant documents in journalism and media law could easily fill several complete reference volumes. Such a compendium might be a boon to certain law students but far exceeds the day-to-day needs of most journalists. So this Journalism, Media, and the Law section focuses on a "representative sampling" of only the most important documents addressing the most essential issues. Subjects under consideration run from key constitutional amendments, national security concerns, and First Amendment issues—like danger speech, prior restraint, and libel—to privacy protection, public records access, confidential sources, copyright, and regulating electronic media. Each of these selected subjects then offers one to three government acts or landmark cases that greatly impact the way journalists of all stripes do their jobs.

The length of various laws and court decisions—often in the scores or even hundreds of pages—also factor into the way individual documents are treated here. The section adopts a "key documents" rather than full primary documents approach in the print version of Volume 5. This means a number of the legal documents have been edited down to make them more accessible without losing their original intent or import. For instance, most Supreme Court decisions stick to just the majority opinions with footnotes and summaries removed. Yet, in *Branzburg v. Hayes,* a rare landmark dissenting opinion is included with the majority opinion for the edification of the reader.

The introduction for each key document chosen usually begins with some perspective on the journalistic issue or aspect of the law at hand. Readers then get a sense of the case or piece of legislation in question and how it advances or dramatically changes the body of law on that subject. Ultimately, the introduction should also spell out how the document substantially affects a journalist's approach to a particular part of their work or mission. If studied and used correctly, certain documents can help embolden journalists in areas where the law is clearly on their side. And other documents can communicate the need for caution where the law clearly fails to support a journalistic practice or mindset.

Constitutional Amendments

Bill of Rights (1791)

Introduction

The Bill of Rights, the first ten amendments to the Constitution of the United States, established a collection of basic human prerogatives on a federal level that mirrored many of the rights already guaranteed by individual states. The First Amendment—designed to protect freedom of speech and of the press, along with freedom of religion and the right to peaceable assembly—became the basis for many of the laws that govern the practice of journalism in the United States. The Fourth and Sixth Amendments, to a lesser degree, also influenced the legal guidelines for journalists.

The meaning of the First Amendment for journalists is largely based on the way the Supreme Court and more minor courts interpret the original intent of the framers of the Bill of Rights. Various justices over the years have embraced a number of different theories on just how freedom of speech and of the press should be defined. These theories have run the gamut from zero tolerance for government censorship of free speech or the press to claims that the language of the Constitution is fluid and leaves all protections under the First Amendment open to continual reinterpretation.

The question of what constitutes seditious behavior on the part of the press became one of the earliest and most consistently important challenges to the First Amendment. Over the years, especially in time of war or national emergency, people in power often equate criticism of the government and its elected officials with disloyalty. Prior restraint, another key First Amendment issue, deals with censorship of the press and what it can cover before publication. Most legal experts agree that the First Amendment was meant as a protection against the government predetermining what the public should be allowed to know or discuss. First Amendment issues like "hate speech"—the use of abusive or derisive language to describe people in terms of race, religion, or gender—deal more with the attempt to set tolerable limits for the press rather than absolutes.

The Sixth Amendment demands that a man accused of a crime be "confronted with witnesses against him" and that he needs to "have compulsory process for obtaining witnesses in his favor." This gives the Sixth Amendment a direct impact on the journalist's ability to protect "anonymous sources" and to honor "confidentiality agreements" in criminal cases. The Sixth Amendment also provides for a "public trial" and strives to guarantee a fair trial with an "impartial jury." This can put the Sixth Amendment in direct conflict with the First Amendment when judges worry that press coverage of witnesses or criminal suspects might prejudice the public and, in turn, the jury.

The Fourth Amendment protects the right of people to be "secure in their persons, houses, papers and effects" in respect to "unreasonable searches or seizures" and stipulates that no warrants be issued without "probable cause." There is an argument that the Fourth Amendment can be used to protect the press from unwarranted searches of newsrooms or workplaces where nobody accused of a crime—or involved in a crime—works. This means the Fourth Amendment can be used to argue against the seizure of reporter's notes, photographs, or other relevant news gathering material without "probable cause."

—Glenn Lewis
Volume Editor

Constitution of the United States: Bill of Rights

I—Freedom of Speech, Press, Religion and Petition

Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press; or the right of the people peaceably to assemble, and to petition the Government for a redress of grievances.

II—Right to keep and bear arms

A well-regulated militia, being necessary to the security of a free State, the right of the people to keep and bear arms, shall not be infringed.

III—Conditions for quarters of soldiers

No soldier shall, in time of peace be quartered in any house, without the consent of the owner, nor in time of war, but in a manner to be prescribed by law.

IV—Right of search and seizure regulated

The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no warrants shall issue, but upon probable cause, supported by oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized.

V—Provisions concerning prosecution

No person shall be held to answer for a capital, or otherwise infamous crime, unless on a presentment or indictment of a Grand Jury, except in cases arising in the land or naval forces, or in the militia, when in actual service in time of war or public danger; nor shall any person be subject for the same offense to be twice put in jeopardy of life or limb; nor shall be compelled in any criminal case to be a witness against himself, nor be deprived of life, liberty, or property, without due process of law; nor shall private property be taken for public use without just compensation.

VI—Right to a speedy trial, witnesses, etc.

In all criminal prosecutions, the accused shall enjoy the right to a speedy and public trial, by an impartial jury of the State and district wherein the crime shall have been committed, which district shall have been previously ascertained by law, and to be informed of the nature and cause of the accusation; to be confronted with the witnesses against him; to have compulsory process for obtaining witnesses in his favor, and to have the assistance of counsel for his defense.

VII—Right to a trial by jury

In suits at common law, where the value in controversy shall exceed twenty dollars, the right of trial by jury shall be preserved, and no fact tried by a jury shall be otherwise reexamined in any court of the United States, than according to the rules of the common law.

VIII—Excessive bail, cruel punishment

Excessive bail shall not be required, nor excessive fines imposed, nor cruel and unusual punishments inflicted.

IX—Rule of construction of Constitution

The enumeration in the Constitution, of certain rights, shall not be construed to deny or disparage others retained by the people.

X—Rights of the States under Constitution

The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people.

Bill of Rights. United States Constitution Amendments 1–10, http://www.gpoaccess.gov/constitution/browse2002.html#annotations (accessed July 2, 2008).

Antigovernment Issues and National Security

The Alien and Sedition Acts (July 14, 1798)

Introduction

Four separate 1798 laws passed by Congress in rapid succession—euphemistically titled The Naturalization Act, The Alien Act, The Alien Enemies Act, and The Sedition Act—comprise The Alien and Sedition Acts. The first three laws allow the president to lengthen residence requirements for citizenship and to remove or imprison aliens deemed dangerous to the country, especially in time of war. The Sedition Act—in particular Section 2—attempts to carry over an ominous British practice of punishing editors, journalists, and others who write and utter views that defame or breed contempt for the government, or who stir up rebellious behavior in the United States.

The Sedition Act clearly targeted pro–Thomas Jefferson publications that criticized the administration of President John Adams. More than a dozen prosecutions were mounted under this law and a number led to the conviction of prominent newspaper publishers. The attempt to silence the press backfired on Adams and apparently contributed to his losing bid for re-election in 1800. The Sedition Act was allowed to expire in 1801.

The Sedition Act was an early example of laws that serve to have a "chilling effect" on certain kinds of writing, speech or political activity. These laws look to punish what should be acceptable behavior by journalists and others after the fact, and then they prompt people to hesitate to write or speak the next time. Other versions of these laws—the 1918 Sedition Act, the Smith Act of 1940, and the USA Patriot Act passed in 2001—coincide with government anxiety over "seditious" activities produced by World War I, the cold war, and the threat of terrorism after the attacks on September 11, respectively.

Fifth Congress of the United States:

At the Second Session,

Begun and help at the city of Philadelphia, in the state of Pennsylvania, on Monday, the thirteenth of November, one thousand seven hundred and ninety-seven.

An Act Concerning Aliens.

SECTION 1. Be it enacted by the Senate and the House of Representatives of the United States of America in Congress assembled, That it shall be lawful for the President of the United States at any time during the continuance of this act, to order all such aliens as he shall judge dangerous to the peace and safety of the United States, or shall have reasonable grounds to suspect are concerned in any treasonable or secret machinations against the government thereof, to depart out of the territory of the United States, within such time as shall be expressed in such order, which order shall be served on such alien by delivering him a copy thereof, or leaving the same at

his usual abode, and returned to the office of the Secretary of State, by the marshal or other person to whom the same shall be directed. And in case any alien, so ordered to depart, shall be found at large within the United States after the time limited in such order for his departure, and not having obtained a license from the President to reside therein, or having obtained such license shall not have conformed thereto, every such alien shall, on conviction thereof, be imprisoned for a term not exceeding three years, and shall never after be admitted to become a citizen of the United States. Provided always, and be it further enacted, that if any alien so ordered to depart shall prove to the satisfaction of the President, by evidence to be taken before such person or persons as the President shall direct, who are for that purpose hereby authorized to administer oaths, that no injury or danger to the United States will arise from suffering such alien to reside therein, the President may grant a license to such alien to remain within the United States for such time as he shall judge proper, and at such place as he may designate. And the President may also require of such alien to enter into a bond to the United States, in such penal sum as he may direct, with one or more sufficient sureties to the satisfaction of the person authorized by the President to take the same, conditioned for the good behavior of such alien during his residence in the United States, and not violating his license, which license the President may revoke, whenever he shall think proper.

SEC. 2. And be it further enacted, That it shall be lawful for the President of the United States, whenever he may deem it necessary (for the public safety, to order to be removed out of the territory thereof, any alien who may or shall be in prison in pursuance of this act; and to cause to be arrested and sent out of the United States such of those aliens as shall have been ordered to depart therefrom and shall not have obtained a license as aforesaid, in all cases where, in the opinion of the President, the public safety requires a speedy removal. And if any alien so removed or sent out of the United States by the President shall voluntarily return thereto, unless by permission of the President of the United States, such alien on conviction thereof, shall be imprisoned so long as, in the opinion of the President, the public safety may require.

SEC. 3. And be it further enacted, That every master or commander of any ship or vessel which shall come into any port of the United States after the first day of July next, shall immediately on his arrival make report in writing to the collector or other chief officer of the customs of such port, of all aliens, if any, on board his vessel, specifying their names, age, the place of nativity, the country from which they shall have come, the nation to which they belong and owe allegiance, their occupation and a description of their persons, as far as he shall be informed thereof, and on failure, every such master and commander shall forfeit and pay three hundred dollars, for the payment whereof on default of such master or commander, such vessel shall also be holden, and may by such collector or other officer of the customs be detained. And it shall be the duty of such collector or other officer of the customs, forthwith to transmit to the office of the department of state true copies of all such returns.

SEC. 4. And be it further enacted, That the circuit and district courts of the United States, shall respectively have cognizance of all crimes and offences against this act. And all marshals and other officers of the United States are required to execute all precepts and orders of the President of the United States issued in pursuance or by virtue of this act.

SEC. 5. And be it further enacted, That it shall be lawful for any alien who may be ordered to be removed from the United States, by virtue of this act, to take with him such part of his goods, chattels, or other property, as he may find convenient; and all property left in the United States by any alien, who may be removed, as aforesaid, shall be, and remain subject to his order and disposal, in the same manner as if this act had not been passed.

SEC. 6. And be it further enacted, That this act shall continue and be in force for and during the term of two years from the passing thereof.

Jonathan Dayton, Speaker of the House of Representatives.

TH. Jefferson, Vice President of the United States and President of the Senate.

I Certify that this Act did originate in the Sentate.

Attest, Sam. A. Otis, Secretary

An Act Respecting Alien Enemies

SECTION 1. Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That whenever there shall be a declared war between the United States and any foreign nation or government, or any invasion or predatory incursion shall be perpetrated, attempted, or threatened against the territory of the United States, by any foreign nation or government, and the President of the United States shall make public proclamation of the event, all natives, citizens, denizens, or subjects of the hostile nation or government, being males of the age of fourteen years and upwards, who shall be within the United States, and not actually naturalized, shall be liable to be apprehended, restrained, secured and removed, as alien enemies. And the President of the United States shall be, and he is hereby authorized, in any event, as aforesaid, by his proclamation thereof, or other public act, to direct the conduct to be observed, on the part of the United States, towards the aliens who shall become liable, as aforesaid; the manner and degree of the restraint to which they shall be subject, and in what cases, and upon what security their residence shall be permitted, and to provide for the removal of those, who, not being permitted to reside within the United States, shall refuse or neglect to depart therefrom; and to establish any other regulations which shall be found necessary in the premises and for the public safety: Provided, that aliens resident within the United States, who shall become liable as enemies, in the manner aforesaid, and who shall not be chargeable with actual hostility, or other crime against the public safety, shall be allowed, for the recovery, disposal, and removal of their goods and effects, and for their departure, the full time which is, or shall be stipulated by any treaty, where any shall have been between the United States, and the hostile nation or government, of which they shall be natives, citizens, denizens or subjects: and where no such treaty shall have existed, the President of the United States may ascertain and declare such reasonable time as may be consistent with the public safety, and according to the dictates of humanity and national hospitality.

SEC. 2. And be it further enacted, That after any proclamation shall be made as aforesaid, it shall be the duty of the several courts of the United States, and of each state, having criminal jurisdiction, and of the several judges and justices of the courts of the United States, and they shall be, and are hereby respectively, authorized upon complaint, against any alien or alien enemies, as aforesaid, who shall be resident and at large within such jurisdiction or district, to the danger of the public peace or safety, and contrary to the tenor or intent of such proclamation, or other regulations which the President of the United States shall and may establish in the premises, to cause such alien or aliens to be duly apprehended and convened before such court, judge or justice; and after a full examination and hearing on such complaint. and sufficient cause therefor appearing, shall and may order such alien or aliens to be removed out of the territory of the United States, or to give sureties of their good behaviour, or to be otherwise restrained, conformably to the proclamation or regulations which shall and may be established as aforesaid, and may imprison, or otherwise secure such alien or aliens, until the order which shall and may be made, as aforesaid, shall be performed.

SEC. 3. And be it further enacted, That it shall be the duty of the marshal of the district in which any alien enemy shall be apprehended, who by the President of the United States, or by order of any court, judge or justice, as aforesaid, shall be required to depart, and to be removed, as aforesaid, to provide therefor, and to execute such order, by himself or his deputy, or other discreet person or persons to be employed by him, by causing a removal of such alien out of the territory of the United States; and for such removal the marshal shall have the warrant of the President of the United States, or of the court, judge or justice ordering the same, as the case may be.

APPROVED, July 6, 1798.

Fifth Congress of the United States:

At the Second Session,

Begun and help at the city of Philadelphia, in the state of Pennsylvania, on Monday, the thirteenth of November, one thousand seven hundred and ninety-seven.

An Act in Addition to the Act, Entitled "An Act for the Punishment of Certain Crimes Against the United States."

SECTION 1. Be it enacted by the Senate and House of Representatives of the United States of America, in Congress assembled, That if any persons shall unlawfully combine or conspire together, with intent to oppose any measure or measures of the government of the United States, which are or shall be directed by proper authority, or to impede the operation of any law of the United States, or to intimidate or prevent any person holding a place or office in or under the government of the United States, from undertaking, performing or executing his trust or duty, and if any person or persons, with intent as aforesaid, shall counsel, advise or attempt to procure any insurrection, riot, unlawful assembly, or combination, whether such conspiracy, threatening, counsel, advice, or attempt shall have the proposed effect or not, he or they shall be deemed guilty of a high misdemeanor, and on conviction, before any court of the United States having jurisdiction thereof, shall be punished by a fine not exceeding five thousand dollars, and by imprisonment during a term not less than six months nor exceeding five years; and further, at the discretion of the court may be holden to find sureties for his good behaviour in such sum, and for such time, as the said court may direct.

SEC. 2. And be it farther enacted, That if any person shall write, print, utter or publish, or shall cause or procure to be written, printed, uttered or published, or shall knowingly and willingly assist or aid in writing, printing, uttering or publishing any false, scandalous and malicious writing or writings against the government of the United States, or either house of the Congress of the United States, or the President of the United States, with intent to defame the said government, or either house of the said Congress, or the said President, or to bring them, or either of them, into contempt or disrepute; or to excite against them, or either or any of them, the hatred of the good people of the United States, or to stir up sedition within the United States, or to excite any unlawful combinations therein, for opposing or resisting any law of the United States, or any act of the President of the United States, done in pursuance of any such law, or of the powers in him vested by the constitution of the United States, or to resist, oppose, or defeat any such law or act, or to aid, encourage or abet any hostile designs of any foreign nation against United States, their people or government, then such person, being thereof convicted before any court of the United States having jurisdiction thereof, shall be punished by a fine not exceeding two thousand dollars, and by imprisonment not exceeding two years.

SEC. 3. And be it further enacted and declared, That if any person shall be prosecuted under this act, for the writing or publishing any libel aforesaid, it shall be lawful for the defendant, upon the trial of the cause, to give in evidence in his defence, the truth of the matter contained in publication charged as a libel. And the jury who shall try the cause, shall have a right to determine the law and the fact, under the direction of the court, as in other cases.

SEC. 4. And be it further enacted, That this act shall continue and be in force until the third day of March, one thousand eight hundred and one, and no longer: Provided, that the expiration of the act shall not prevent or defeat a prosecution and punishment of any offence against the law, during the time it shall be in force.

Jonathan Dayton, Speaker of the House of Representatives.

Theodore Sedgwick, President of the Sentate pro tempore.

I Certify that this Act did originate in the Sentate.

A Century of Lawmaking for a New Nation: U.S. Congressional Documents and Debates, 1774–1875 Statutes at Large, 5th Congress, 2nd Session

CHAP. LIV.—An Act supplementary to and to amend the act, inituled [sic] "An act to establish a uniform rule of naturalization; and to repeal the act heretofore passed on that subject."

SECTION 1. *Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled*, That no alien shall be admitted to become a citizen of the United States, or of any state unless in the manner prescribed by the act intituled [sic] "An act to establish an uniform rule of naturalization; and to repeal the act heretofore passed on that subject," he shall have declared his intention to become a citizen of the United States, five years, at least, before his admission, and shall, at the time of his application to be admitted, declare and prove, to the satisfaction of the court having jurisdiction in the case, that he has resided within the United States fourteen years, at least, and within the state or territory where, or for which such court is at the time held, five years, at least, besides conforming to the other declarations, renunciations and proofs, by the said act required, any thing therein to the contrary hereof notwithstanding: *Provided*, that any alien, who was residing within the limits, and under the jurisdiction of the United States, before the twenty-ninth day of January, one thousand seven hundred and ninety five, may, within one year after the passing of this act—and any alien who shall have made the declaration of his intention to become a citizen of the United States, in conformity to the provisions of the act, intituled [sic] "An act to establish an uniform rule of naturalization, and to repeal the act heretofore passed on that subject," may, within four years after having made the declaration aforesaid, be admitted to become a citizen, in the manner prescribed by the said act, upon his making proof that he has resided five years, at least, within the limits, and under the jurisdiction of the United States: *And provided also*, that no alien, who shall be a native, citizen, denizen or subject of any nation or state with whom the United States shall be at war, at the time of his application, shall be then admitted to become a citizen of the United States.

SEC. 2. *And be it further enacted,* That it shall be the duty of the clerk, or other recording officer of the court before whom a declaration has been, or shall be made, by any alien, of his intention to become a citizen of the United States, to certify and transmit to the office of the Secretary of State of the United States, to be there filed and recorded, an abstract of such declaration, in which, when hereafter made, shall be a suitable description of the name, age, nation, residence and occupation, for the time being, of the alien; such certificate to be made in all cases, where the declaration has been or shall be made, before the passing of this act, within three months thereafter; and in all other cases, within two months after the declaration shall be received by the court. And in all cases hereafter arising, there shall be paid to the clerk, or recording officer as aforesaid, to defray the expense of such abstract and certificate, a fee of two dollars; and the clerk or officer to whom such fee shall be paid or tendered, who shall refuse or neglect to make and certify an abstract, as aforesaid, shall forfeit and pay the sum of ten dollars.

SEC. 3. *And be it further enacted,* That in all cases of naturalization heretofore permitted or which shall be permitted, under the laws of the United States, a certificate shall be made to, and filed in the office of the Secretary of State, containing a copy of the record respecting the alien, and the decree or order of admission by the court before whom the proceedings thereto have been, or shall be had: And it shall be the duty of the clerk or other recording officer of such court, to make and transmit such certificate, in all cases which have already occurred, within three months after the passing of this act; and in all future cases, within two months from and after the naturalization of an alien shall be granted by any court competent thereto. And in all future cases, there shall be paid to such clerk or recording officer the sum of two dollars, as a fee for such certificate, before the naturalization prayed for, shall be allowed. And the clerk or recording officer, whose duty it shall be, to make and transmit the certificate aforesaid, who shall be convicted of a willful neglect therein, shall forfeit and pay the sum of ten dollars, for each and every offence.

SEC. 4. *And be it further enacted,* That all white persons, aliens, (accredited foreign ministers, consuls, or agents, their families and domestics,

excepted) who, after the passing of this act, shall continue to reside, or who shall arrive, or come to reside in any port or place within the territory of the United States, shall be reported, if free, and of the age of twenty-one years, by themselves, or being under the age of twenty-one years, or holden in service, by their parent, guardian, master or mistress in whose care they shall be, to the clerk of the district court of the district, if living within ten miles of the port or place, in which their residence or arrival shall be, and otherwise, to the collector of such port or place, or some officer or other person there, or nearest thereto, who shall be authorized by the President of the United States, to register aliens: And report, as aforesaid, shall be made in all cases of residence, within six months from and after the passing of this act, and in all after cases, within forty-eight hours after the first arrival or coming into the territory of the United States, and shall ascertain the sex, place of birth, age, nation, place of allegiance or citizenship, conditions or occupation, and place of actual or intended residence within the United States, of the alien or aliens reported, and by whom the report is made. And it shall be the duty of the clerk, or other officer, or person authorized, who shall receive such report, to record the same in a book to be kept for that purpose, and to grant to the person making the report, and to each individual concerned therein, whenever required, a certificate of such report and registry; and whenever such report and registry shall be made to, and by any officer or person authorized, as aforesaid, other than the clerk of the district court, it shall be the duty of such officer, or other person, to certify and transmit, within three months thereafter, a transcript of such registry, to the said clerk of the district court of the district in which the same shall happen; who shall file the same in his office, and shall enter and transcribe the same in a book to be kept by him for that purpose. And the clerk, officer or other person authorized to register aliens, shall be entitled to receive, for each report and registry of one individual or family of individuals, the sum of fifty cents, and for every certificate of a report and registry the sum of fifty cents, to be paid by the person making or requiring the same, respectively. And the clerk of the district court, to whom a return of the registry of any alien, shall have been made, as aforesaid, and the successor of such clerk, and of any other officer or person authorized to register aliens, who shall hold any former registry, shall and may grant certificates thereof, to the same effect as the original register might do. And the clerk of each district court shall, during one year from the passing of this act, make monthly returns to the department of State, of all aliens registered and returned, as aforesaid, in his office.

SEC. 5. *And be it further enacted,* That every alien who shall continue to reside, or who shall arrive, as aforesaid, of whom a report is required as aforesaid, who shall refuse or neglect to make such report, and to receive a certificate thereof, shall forfeit and pay the sum of two dollars; and any justice of the peace, or other civil magistrate, who has authority to require surety of the peace, shall and may, on complaint to him made thereof, cause such alien to be brought before him, there to give surety of the peace and good behaviour during his residence within the United States, or for such term as the justice or other magistrate shall deem reasonable, and until a report and registry of such alien shall be made, and a certificate thereof, received as aforesaid; and in failure of such surety, such alien shall and may be committed to the common gaol [sic], and shall be there held, until the order which the justice or magistrate shall and may reasonably make, in the premises, shall be performed. And every person, whether alien, or other, having the care of any alien or aliens, under the age of twenty-one years, or of any white alien holden in service, who shall refuse and neglect to make report thereof, as aforesaid, shall forfeit the sum of two dollars, for each and every such minor or servant, monthly, and every month, until a report and registry, and a certificate thereof, shall be had, as aforesaid.

SEC. 6. *And be it further enacted,* That in respect to every alien, who shall come to reside within the United States after the passing of this act, the time of the registry of such alien shall be taken to be the time when the term of residence within the limits, and under the jurisdiction of the United States, shall have commenced, in case of an application by such alien, to be admitted a citizen of the United States; and a certificate of such registry shall be required, in proof of the term of

residence, by the court to whom such application shall may be made.

SEC. 7. *And be it further enacted,* That all and singular the penalties established by this act, shall and may be recovered in the name, and to the use of any person, who will inform and sue for the same, before any just, justice, or court, having jurisdiction in such case, and to the amount of such penalty, respectively.

APPROVED, June 18, 1798.

Alien and Sedition Acts 1798. *A Century of Lawmaking for a New Nation: U.S. Congressional Documents and Debates, 1774–1875*. (Stats at Large of USA , 5th Cong., 2d. sess.) http://memory.loc.gov/cgi-bin/ampage?collId=llsl&fileName=001/llsl001.db&recNum=689 (accessed December 18, 2007).

Clear and Present Danger Speech

Brandenburg v. Ohio *(1969)*

Introduction

The judicial question of exactly when speech becomes actionable or seditious, and exceeds the protection of the First Amendment, has plagued American courts and journalists from the nation's inception. Justice Oliver Wendell Holmes, in a 1919 unanimous Supreme Court decision for *Schenck v. United States*, argued that governments were obligated to prohibit speech that posed "a clear and present danger" to the country. However, the tests for when speech becomes threatening enough to constitute a clear and present danger remained inconsistent for 50 years until the decision in *Brandenburg v. Ohio* created a distinct measuring stick.

The *Brandenburg* Test, or Incitement Test, stipulates that advocating violent behavior as an abstract concept or philosophy remains protected by the First Amendment. Yet the decision noted that speech that clearly "intends" to incite "imminent" violence or illicit actions, and is "likely to incite or produce such actions," loses that protection. As a result, the *Brandenburg* Test demands that the time span between advocating for violence or illegal actions and the expectation of the action occurring must be short, and there should be a strong chance the action will take place.

Clarence Brandenburg, a Ku Klux Klan leader, invited a television reporter and cameraman to film a rally where hooded people carried guns, burned a cross and speeches were made. He was filmed making offensive racial remarks and qualified threats against the President, Congress and the Supreme Court that included statements like "it's possible that there might have to be some revengeance [sic] taken." Brandenburg was convicted of breaking an Ohio sedition law, but the Supreme Court's *per curiam* opinion surmised that a state statute that fails to meet the incitement standards "intrudes upon the freedom guaranteed by the First and Fourteenth Amendments." The *Brandenburg* Test can also likely serve as a buffer for journalists speculating about certain violent or illegal actions.

U.S. Supreme Court
BRANDENBURG v. OHIO, 395 U.S. 444
(1969) 395 U.S. 444

BRANDENBURG v. OHIO.

APPEAL FROM THE SUPREME COURT OF OHIO.

No. 492.

Argued February 27, 1969.

Decided June 9, 1969.

PER CURIAM.

The appellant, a leader of a Ku Klux Klan group, was convicted under the Ohio Criminal Syndicalism statute for "advocat[ing] . . . the duty, necessity, or propriety [395 U.S. 444, 445] of crime, sabotage, violence, or unlawful methods of terrorism as a means of accomplishing industrial or political reform" and for "voluntarily assembl[ing] with any society, group, or assemblage of persons formed to teach or advocate the doctrines of criminal syndicalism." Ohio Rev. Code Ann. §2923.13. He was fined $1,000 and sentenced to one to 10 years' imprisonment. The appellant

challenged the constitutionality of the criminal syndicalism statute under the First and Fourteenth Amendments to the United States Constitution, but the intermediate appellate court of Ohio affirmed his conviction without opinion. The Supreme Court of Ohio dismissed his appeal, sua sponte, "for the reason that no substantial constitutional question exists herein." It did not file an opinion or explain its conclusions. Appeal was taken to this Court, and we noted probable jurisdiction. 393 U.S. 948 (1968). We reverse.

The record shows that a man, identified at trial as the appellant, telephoned an announcer-reporter on the staff of a Cincinnati television station and invited him to come to a Ku Klux Klan "rally" to be held at a farm in Hamilton County. With the cooperation of the organizers, the reporter and a cameraman attended the meeting and filmed the events. Portions of the films were later broadcast on the local station and on a national network.

The prosecution's case rested on the films and on testimony identifying the appellant as the person who communicated with the reporter and who spoke at the rally. The State also introduced into evidence several articles appearing in the film, including a pistol, a rifle, a shotgun, ammunition, a Bible, and a red hood worn by the speaker in the films.

One film showed 12 hooded figures, some of whom carried firearms. They were gathered around a large wooden cross, which they burned. No one was present [395 U.S. 444, 446] other than the participants and the newsmen who made the film. Most of the words uttered during the scene were incomprehensible when the film was projected, but scattered phrases could be understood that were derogatory of Negroes and, in one instance, of Jews. Another scene on the same film showed the appellant, in Klan regalia, making a speech. The speech, in full, was as follows:

> "This is an organizers' meeting. We have had quite a few members here today which are—we have hundreds, hundreds of members throughout the State of Ohio. I can quote from a newspaper clipping from the Columbus, Ohio Dispatch, five weeks ago Sunday morning. The Klan has more members in the State of Ohio than does any other organization. We're not a revengent organization, but if our President, our Congress, our Supreme Court, continues to suppress the white, Caucasian race, it's possible that there might have to be some revengeance taken.
>
> "We are marching on Congress July the Fourth, four hundred thousand strong. From there we are dividing into two groups, one group to march on St. Augustine, Florida, the other group to march into Mississippi. Thank you." [395 U.S. 444, 447]

The second film showed six hooded figures one of whom, later identified as the appellant, repeated a speech very similar to that recorded on the first film. The reference to the possibility of "revengeance" was omitted, and one sentence was added: "Personally, I believe the nigger should be returned to Africa, the Jew returned to Israel." Though some of the figures in the films carried weapons, the speaker did not.

The Ohio Criminal Syndicalism Statute was enacted in 1919. From 1917 to 1920, identical or quite similar laws were adopted by 20 States and two territories. E. Dowell, A History of Criminal Syndicalism Legislation in the United States 21 (1939). In 1927, this Court sustained the constitutionality of California's Criminal Syndicalism Act, Cal. Penal Code 11400-11402, the text of which is quite similar to that of the laws of Ohio. Whitney v. California, 274 U.S. 357 (1927). The Court upheld the statute on the ground that, without more, "advocating" violent means to effect political and economic change involves such danger to the security of the State that the State may outlaw it. Cf. Fiske v. Kansas, 274 U.S. 380 (1927). But Whitney has been thoroughly discredited by later decisions. See Dennis v. United States, 341 U.S. 494, at 507 (1951). These later decisions have fashioned the principle that the constitutional guarantees of free speech and free press do not permit a State to forbid or proscribe advocacy of the use of force or of law violation except where such advocacy is directed to inciting or producing imminent lawless action and is likely to incite or produce such action. As we [395 U.S. 444, 448] said in Noto v. United States, 367 U.S. 290, 297-298 (1961), "the mere abstract teaching . . . of the moral propriety or even moral necessity for a resort to force and violence, is not the same as preparing a group for violent action and steeling it to such action." See also Herndon v. Lowry, 301 U.S. 242, 259-261 (1937); Bond v. Floyd, 385

U.S. 116, 134 (1966). A statute which fails to draw this distinction impermissibly intrudes upon the freedoms guaranteed by the First and Fourteenth Amendments. It sweeps within its condemnation speech which our Constitution has immunized from governmental control. Cf. Yates v. United States, 354 U.S. 298 (1957); De Jonge v. Oregon, 299 U.S. 353 (1937); Stromberg v. California, 283 U.S. 359 (1931). See also United States v. Robel, 389 U.S. 258 (1967); Keyishian v. Board of Regents, 385 U.S. 589 (1967); Elfbrandt v. Russell, 384 U.S. 11 (1966); Aptheker v. Secretary of State, 378 U.S. 500 (1964); Baggett v. Bullitt, 377 U.S. 360 (1964).

Measured by this test, Ohio's Criminal Syndicalism Act cannot be sustained. The Act punishes persons who "advocate or teach the duty, necessity, or propriety" of violence "as a means of accomplishing industrial or political reform"; or who publish or circulate or display any book or paper containing such advocacy; or who "justify" the commission of violent acts "with intent to exemplify, spread or advocate the propriety of the doctrines of criminal syndicalism"; or who "voluntarily assemble" with a group formed "to teach or advocate the doctrines of criminal syndicalism." Neither the indictment nor the trial judge's instructions to the jury in any way refined the statute's bald definition of the crime [395 U.S. 444, 449] in terms of mere advocacy not distinguished from incitement to imminent lawless action.

Accordingly, we are here confronted with a statute which, by its own words and as applied, purports to punish mere advocacy and to forbid, on pain of criminal punishment, assembly with others merely to advocate the described type of action. Such a statute falls within the condemnation of the First and Fourteenth Amendments. The contrary teaching of Whitney v. California, supra, cannot be supported, and that decision is therefore overruled.

Reversed.

Brandenburg v. Ohio, 395 U.S. 444 (1969).

Prior Restraint

Near v. Minnesota *(1931)*

Introduction

The Supreme Court has determined over the years that a free press cannot function when prior restraint is tolerated. In essence, prior restraint is in place when either government approval must be given before news can be published and ideas spoken—or when the dissemination of certain ideas or information gets stopped by the government altogether. Prior restraint has come to be seen as the most egregious form of media censorship because it allows government to keep news from the court of public opinion.

The 1931 Supreme Court decision in *Near v. Minnesota* set the modern standards for challenging the constitutionality of prior restraint. Jay Near and his partner published a weekly newspaper that vehemently attacked government officials in Minneapolis for not stopping the illegal actions of Jewish gangsters around the city. The paper's anti-Semitic articles also repeatedly charged that just about every gangster in Minneapolis was a Jew. City officials in their case against Near invoked a state nuisance law that allowed local courts to issue an injunction to halt publications that had printed malicious, scandalous or defamatory copy, unless the publisher could prove the claims true and well intended.

In a 5–4 decision, the Supreme Court found the Minnesota statute unconstitutional primarily because it permitted courts to totally preclude the publishing of news or criticism of public officials rather than allowing them or others to sue for libel after the material appeared in print. The Court essentially ruled that one of the main purposes of the First Amendment was to prevent prior restraint of publications and speech. Chief Justice Charles Evan Hughes in his opinion for the Court stipulated however that prior restraint was not necessarily applicable in all cases. Hughes wrote that prior restraint could be acceptable to stop the publishing of obscene pieces, material that incited violence or the overthrow of the government by force, and words that obstructed recruitment by the military or gave away vital information about the troops during a war.

U.S. Supreme Court
***Near v. State of Minnesota Ex Rel. Olson*, 283 U.S. 697 (1931)**

No. 91
Argued January 30, 1930.
Decided June 1, 1931.

Mr. Chief Justice HUGHES delivered the opinion of the Court.

Chapter 285 of the Session Laws of Minnesota for the year 1925 provides for the abatement, as a public nuisance, of a 'malicious, scandalous and defamatory newspaper [283 U.S. 697, 702], magazine or other periodical.' Section 1 of the act is as follows:

> Section 1. Any person who, as an individual, or as a member or employee of a firm, or association or organization, or as an officer, director, member or employee of a corporation, shall be engaged in the business of regularly or customarily producing, publishing or circulating, having in possession, selling or giving away.
>
> '(a) an obscene, lewd and lascivious newspaper, magazine, or other periodical, or

> '(b) a malicious, scandalous and defamatory newspaper, magazine or other periodical,
>
> -is guilty of a nuisance, and all persons guilty of such nuisance may be enjoined, as hereinafter provided.
>
> 'Participation in such business shall constitute a commission of such nuisance and render the participant liable and subject to the proceedings, orders and judgments provided for in this Act. Ownership, in whole or in part, directly or indirectly, of any such periodical, or of any stock of interest in any corporation or organization which owns the same in whole or in part, or which publishes the same, shall constitute such participation.
>
> 'In actions brought under (b) above, there shall be available the defense that the truth was published with good motives and for justifiable ends and in such actions the plaintiff shall not have the right to report (sic) to issues or editions or periodicals taking place more than three months before the commencement of the action.'

Section 2 provides that, whenever any such nuisance is committed or exists, the county attorney of any county where any such periodical is published or circulated, or, in case of his failure or refusal to proceed upon written request in good faith of a reputable citizen, the Attorney General, or, upon like failure or refusal of the latter, any citizen of the county, may maintain an action in the district court of the county in the name of the state to enjoin [283 U.S. 697, 703] perpetually the persons committing or maintaining any such nuisance from further committing or maintaining it. Upon such evidence as the court shall deem sufficient, a temporary injunction may be granted. The defendants have the right to plead by demurrer or answer, and the plaintiff may demur or reply as in other cases.

The action, by section 3, is to be 'governed by the practice and procedure applicable to civil actions for injunctions,' and after trial the court may enter judgment permanently enjoining the defendants found guilty of violating the act from continuing the violation, and, 'in and by such judgment, such nuisance may be wholly abated.' The court is empowered, as in other cases of contempt, to punish disobedience to a temporary or permanent injunction by fine of not more than $1,000 or by imprisonment in the county jail for not more than twelve months.

Under this statute (section 1, clause b), the county attorney of Hennepin county brought this action to enjoin the publication of what was described as a 'malicious, scandalous and defamatory newspaper, magazine or other periodical,' known as The Saturday Press. published by the defendants in the city of Minneapolis. The complaint alleged that the defendants, on September 24, 1927, and on eight subsequent dates in October and November, 1927, published and circulated editions of that periodical which were 'largely devoted to malicious, scandalous and defamatory articles' concerning Charles G. Davis, Frank W. Brunskill, the Minneapolis Tribune, the Minneapolis Journal, Melvin C. Passolt, George E. Leach, the Jewish Race, the members of the grand jury of Hennepin county impaneled in November, 1927, and then holding office, and other persons, as more fully appeared in exhibits annexed to the complaint, consisting of copies of the articles described and constituting 327 pages of the record. While the complaint did not so allege, it [283 U.S. 697, 704] appears from the briefs of both parties that Charles G. Davis was a special law enforcement officer employed by a civic organization, that George E. Leach was mayor of Minneapolis, that Frank W. Brunskill was its chief of police, and that Floyd B. Olson, the relator in this action, was county attorney.

Without attempting to summarize the contents of the voluminous exhibits attached to the complaint, we deem it sufficient to say that the articles charged, in substance, that a Jewish gangster was in control of gambling, bootlegging, and racketeering in Minneapolis, and that law enforcing officers and agencies were not energetically performing their duties. Most of the charges were directed against the chief of police; he was charged with gross neglect of duty, illicit relations with gangsters, and with participation in graft. The county attorney was charged with knowing the existing conditions and with failure to take adequate measures to remedy them. The mayor was accused of inefficiency and dereliction. One member of the grand jury was stated to be in sympathy with the gangsters. A special grand jury and a special prosecutor were demanded to deal with the situation in general, and, in particular, to investigate an attempt to assassinate one Guilford, one of the original defendants, who, it appears from the articles, was shot by gangsters after the first issue of the periodical

had been published. There is no question but that the articles made serious accusations against the public officers named and others in connection with the prevalence of crimes and the failure to expose and punish them.

At the beginning of the action on November 22, 1927, and upon the verified complaint, an order was made directing the defendants to show cause why a temporary injunction should not issue and meanwhile forbidding the defendants to publish, circulate, or have in their possession any editions of the periodical from September [283 U.S. 697, 705] 24, 1927, to November 19, 1927, inclusive, and from publishing, circulating or having in their possession, 'any future editions of said The Saturday Press' and 'any publication, known by any other name whatsoever containing malicious, scandalous and defamatory matter of the kind alleged in plaintiff's complaint herein or otherwise.'

The defendants demurred to the complaint upon the ground that it did not state facts sufficient to constitute a cause of action, and on this demurrer challenged the constitutionality of the statute. The district court overruled the demurrer and certified the question of constitutionality to the Supreme Court of the state. The Supreme Court sustained the statute (174 Minn. 457, 219 N. W. 770, 58 A. L. R. 607), and it is conceded by the appellee that the act was thus held to be valid over the objection that it violated not only the State Constitution, but also the Fourteenth Amendment of the Constitution of the United States.

Thereupon the defendant Near, the present appellant, answered the complaint. He averred that he was the sole owner and proprietor of the publication in question. He admitted the publication of the articles in the issues described in the complaint, but denied that they were malicious, scandalous, or defamatory as alleged. He expressly invoked the protection of the due process clause of the Fourteenth Amendment. The case then came on for trial. The plaintiff offered in evidence the verified complaint, together with the issues of the publication in question, which were attached to the complaint as exhibits. The defendant objected to the introduction of the evidence, invoking the constitutional provisions to which his answer referred. The objection was overruled, no further evidence was presented, and the plaintiff rested. The defendant then rested, without offering evidence. The plaintiff moved that the court direct the issue of a permanent injunction, and this was done. [283 U.S. 697, 706] The district court made findings of fact, which followed the allegations of the complaint and found in general terms that the editions in question were 'chiefly devoted to malicious, scandalous and defamatory articles' concerning the individuals named. The court further found that the defendants through these publications 'did engage in the business of regularly and customarily producing, publishing and circulating a malicious, scandalous and defamatory newspaper,' and that 'the said publication' 'under said name of The Saturday Press, or any other name, constitutes a public nuisance under the laws of the State.' Judgment was thereupon entered adjudging that 'the newspaper, magazine and periodical known as The Saturday Press,' as a public nuisance, 'be and is hereby abated.' The judgment perpetually enjoined the defendants 'from producing, editing, publishing, circulating, having in their possession, selling or giving away any publication whatsoever which is a malicious, scandalous or defamatory newspaper, as defined by law,' and also 'from further conducting said nuisance under the name and title of said The Saturday Press or any other name or title.'

The defendant Near appealed from this judgment to the Supreme Court of the State, again asserting his right under the Federal Constitution, and the judgment was affirmed upon the authority of the former decision. 179 Minn. 40, 228 N. W. 326. With respect to the contention that the judgment went too far, and prevented the defendants from publishing any kind of a newspaper, the court observed that the assignments of error did not go to the form of the judgment, and that the lower court had not been asked to modify it. The court added that it saw no reason 'for defendants to construe the judgment as restraining them from operating a newspaper in harmony with the public welfare, to which all must yield,' that the allegations of the complaint had been [283 U.S. 697, 707] found to be true, and though this was an equitable action defendants had not indicated a desire 'to conduct their business in the usual and legitimate manner.'

From the judgment as thus affirmed, the defendant Near appeals to this Court.

This statute, for the suppression as a public nuisance of a newspaper or periodical, is unusual, if not unique, and raises questions of grave

importance transcending the local interests involved in the particular action. It is no longer open to doubt that the liberty of the press and of speech is within the liberty safeguarded by the due process clause of the Fourteenth Amendment from invasion by state action. It was found impossible to conclude that this essential personal liberty of the citizen was left unprotected by the general guaranty of fundamental rights of person and property. Gitlow v. New York, 268 U.S. 652, 666, 45 S. CT. 625; Whitney v. California, 274 U.S. 357, 362, 373 S., 47 S. Ct. 641; Fiske v. Kansas, 274 U.S. 380, 382, 47 S. Ct. 655; Stromberg v. California, 283 U.S. 359, 51 S. Ct. 532, decided May 18, 1931. In maintaining this guaranty, the authority of the state to enact laws to promote the health, safety, morals, and general welfare of its people is necessarily administered. The limits of this sovereign power must always be determined with appropriate regard to the particular subject of its exercise. Thus, while recognizing the broad discretion of the Legislature in fixing rates to be charged by those undertaking a public service, this Court has decided that the owner cannot constitutionally be deprived of his right to a fair return, because that is deemed to be of the essence of ownership. Railroad Commission Cases, 116 U.S. 307, 331, 6 S. Ct. 334, 388, 1191; Northern Pacific Railway Company v. North Dakota, 236 U.S. 585, 596, 35 S. Ct. 429, L. R. A. 1917F, 1148 Ann. Cas. 1916A. So, while liberty of contract is not an absolute right, and the wide field of activity in the making of contracts is subject to legislative supervision (Frisbie v. United States, 157 U.S. 161, 165 , 15 S. Ct. 586), this Court has held that the power of the state stops short of interference with what are deemed [283 U.S. 697, 708] to be certain indispensable requirements of the liberty assured, notably with respect to the fixing of prices and wages. (Tyson v. Banton, 273 U.S. 418 , 47 S. Ct. 426, 58 A. L. R. 1236; Ribnik v. McBride, 277 U.S. 350, 48 S. Ct. 545, 56 A. L. R. 1327; Adkins v. Children's Hospital, 261 U.S. 525, 560 , 561 S., 43 S. Ct. 394, 24 A. L. R. 1238). Liberty of speech and of the press is also not an absolute right, and the state may punish its abuse. Whitney v. California, supra; Stromberg v. California, supra. Liberty, in each of its phases, has its history and connotation, and, in the present instance, the inquiry is as to the historic conception of the liberty of the press and whether the statute under review violates the essential attributes of that liberty.

The appellee insists that the questions of the application of the statute to appellant's periodical, and of the construction of the judgment of the trial court, are not presented for review; that appellant's sole attack was upon the constitutionality of the statute, however it might be applied. The appellee contends that no question either of motive in the publication, or whether the decree goes beyond the direction of the statute, is before us. The appellant replies that, in his view, the plain terms of the statute were not departed from in this case, and that eve n if they were, the statute is nevertheless unconstitutional under any reasonable construction of its terms. The appellant states that he has not argued that the temporary and permanent injunctions were broader than were warranted by the statute; he insists that what was done was properly done if the statute is valid, and that the action taken under the statute is a fair indication of its scope.

With respect to these contentions it is enough to say that in passing upon constitutional questions the court has regard to substance and not to mere matters of form, and that, in accordance with familiar principles, the state must be tested by its operation and effect. Henderson v. Mayor, 92 U.S. 259, 268; Bailey v. Alabama, 219 [283 U.S. 697, 709] U. S. 219, 244, 31 S. Ct. 145; United States v. Reynolds, 235 U.S. 133, 148, 149 S., 35 S. Ct. 86; St. Louis Southwestern Railway Company v. Arkansas, 235 U.S. 350, 362, 35 S. Ct. 99; Mountain Timber Company v. Washington, 243 U.S. 219, 237, 37 S. Ct. 260, Ann. Cas. 1917D, 642. That operation and effect we think is clearly shown by the record in this case. We are not concerned with mere errors of the trial court, if these be such, in going beyond the direction of the statute as construed by the Supreme Court of the state. It is thus important to note precisely the purpose and effect of the statute as the state court has construed it.

First. The statute is not aimed at the redress of individual or private wrongs. Remedies for libel remain available and unaffected. The Statute, said the state court (174 Minn. 457, 219 N. W. 770, 772, 58 A. L. R. 607), 'is not directed at threatened libel but at an existing business which, generally

speaking, involves more than libel.' It is aimed at the distribution of scandalous matter as 'detrimental to public morals and to the general welfare,' tending 'to disturb the peace of the community' and 'the provoke assaults and the commission of crime.' In order to obtain an injunction to suppress the future publication of the newspaper or periodical, it is not necessary to prove the falsity of the charges that have been made in the publication condemned. In the present action there was no allegation that the matter published was not true. It is alleged, and the statute requires the allegation that the publication was 'malicious.' But, as in prosecutions for libel, there is no requirement of proof by the state of malice in fact as distinguished from malice inferred from the mere publication of the defamatory matter. The judgment in this case proceeded upon the mere proof of publication. The statute permits the defense, not of the truth alone, but only that the truth was published with good motives and [283 U.S. 697, 710] for justifiable ends. It is apparent that under the statute the publication is to be regarded as defamatory if it injures reputation, and that it is scandalous if it circulates charges of reprehensible conduct, whether criminal or otherwise, and the publication is thus deemed to invite public reprobation and to constitute a public scandal. The court sharply defined the purpose of the statute, bringing out the precise point, in these words: 'There is no constitutional right to publish a fact merely because it is true. It is a matter of common knowledge that prosecutions under the criminal libel statutes do not result in efficient repression or suppression of the evils of scandal. Men who are the victims of such assaults seldom resort to the courts. This is especially true if their sins are exposed and the only question relates to whether it was done with good motive and for justifiable ends. This law is not for the protection of the person attacked nor to punish the wrongdoer. It is for the protection of the public welfare.'

Second. The statute is directed not simply at the circulation of scandalous and defamatory statements with regard to private citizens, but at the continued publication by newspapers and periodical of charges against public officers of corruption, malfeasance in office, or serious neglect of duty. Such charges by their very nature create a public scandal. They are scandalous and defamatory within the meaning of the statute, which has its normal operation in relation to publications dealing prominently and chiefly with the alleged derelictions of public officers. [283 U.S. 697, 711]

Third. The object of the statute is not punishment, in the ordinary sense, but suppression of the offending newspaper or periodical. The reason for the enactment, as the state court has said, is that prosecutions to enforce penal statutes for libel do not result in 'efficient repression or suppression of the evils of scandal.' Describing the business of publication as a public nuisance does not obscure the substance of the proceeding which the statute authorizes. It is the continued publication of scandalous and defamatory matter that constitutes the business and the declared nuisance. In the case of public officers, it is the reiteration of charges of official misconduct, and the fact that the newspaper or periodical is principally devoted to that purpose, that exposes it to suppression. In the present instance, the proof was that nine editions of the newspaper or periodical in question were published on successive dates, and that they were chiefly devoted to charges against public officers and in relation to the prevalence and protection of crime. In such a case, these officers are not left to their ordinary remedy in a suit for libel, or the authorities to a prosecution for criminal libel. Under this statute, a publisher of a newspaper or periodical, undertaking to conduct a campaign to expose and to censure official derelictions, and devoting his publication principally to that purpose, must face not simply the possibility of a verdict against him in a suit or prosecution for libel, but a determination that his newspaper or periodical is a public nuisance to be abated, and that this abatement and suppression will follow unless he is prepared with legal evidence to prove the truth of the charges and also to satisfy the court that, in [283 U.S. 697, 712] addition to being true, the matter was published with good motives and for justifiable ends.

This suppression is accomplished by enjoining publication, and that restraint is the object and effect of the statute.

Fourth. The statute not only operates to suppress the offending newspaper or periodical, but to put the publisher under an effective censorship. When a newspaper or periodical is found to be 'malicious, scandalous and defamatory,' and is suppressed as such, resumption of publication is punishable as a

contempt of court by fine or imprisonment. Thus, where a newspaper or periodical has been suppressed because of the circulation of charges against public officers of official misconduct, it would seem to be clear that the renewal of the publication of such charges would constitute a contempt, and that the judgment would lay a permanent restraint upon the publisher, to escape which he must satisfy the court as to the character of a new publication. Whether he would be permitted again to publish matter deemed to be derogatory to the same or other public officers would depend upon the court's ruling. In the present instance the judgment restrained the defendants from 'publishing, circulating, having in their possession, selling or giving away any publication whatsoever which is a malicious, scandalous or defamatory newspaper, as defined by law.' The law gives no definition except that covered by the words 'scandalous and defamatory,' and publications charging official misconduct are of the class. While the court, answering the objection that the judgment was too broad, saw no reason for construing it as restraining the defendants 'from operating a newspaper in harmony with the public welfare to which all must yield,' and said that the defendants had not indicated 'any desire to conduct their business in the usual and legitimate manner,' the manifest inference is that, at least with respect to a [283 U.S. 697, 713] new publication directed against official misconduct, the defendant would be held, under penalty of punishment for contempt as provided in the statute, to a manner of publication which the court considered to be 'usual and legitimate' and consistent with the public welfare.

If we cut through mere details of procedure, the operation and effect of the statute in substance is that public authorities may bring the owner or publisher of a newspaper or periodical before a judge upon a charge of conducting a business of publishing scandalous and defamatory matter-in particular that the matter consists of charges against public officers of official dereliction-and, unless the owner or publisher is able and disposed to bring competent evidence to satisfy the judge that the charges are true and are published with good motives and for justifiable ends, his newspaper or periodical is suppressed and further publication is made punishable as a contempt. This is of the essence of censorship.

The question is whether a statute authorizing such proceedings in restraint of publication is consistent with the conception of the liberty of the press as historically conceived and guaranteed. In determining the extent of the constitutional protection, it has been generally, if not universally, considered that it is the chief purpose of the guaranty to prevent previous restraints upon publication. The struggle in England, directed against the legislative power of the licenser, resulted in renunciation of the censorship of the press. The liberty deemed to be established was thus described by Blackstone: 'The liberty of the press is indeed essential to the nature of a free state; but this consists in laying no previous restraints upon publications, and not in freedom from censure for criminal matter when published. Every freeman has an [283 U.S. 697, 714] undoubted right to lay what sentiments he pleases before the public; to forbid this, is to destroy the freedom of the press; but if he publishes what is improper, mischievous or illegal, he must take the consequence of his own temerity.' 4 Bl. Com. 151, 152. See Story on the Constitution, 1884, 1889. The distinction was early pointed out between the extent of the freedom with respect to censorship under our constitutional system and that enjoyed in England. Here, as Madison said, 'the great and essential rights of the people are secured against legislative as well as against executive ambition. They are secured, not by laws paramount to prerogative, but by constitutions paramount to laws. This security of the freedom of the press requires that it should be exempt not only from previous restraint by the Executive, as in Great Britain, but from legislative restraint also.' Report on the Virginia Resolutions, Madison's Works, vol. IV, p. 543. This Court said, in Patterson v. Colorado, 205 U.S. 454, 462, 27 S. Ct. 556, 558, 10 Ann. Cas. 689: 'In the first place, the main purpose of such constitutional provisions is 'to prevent all such previous restraints upon publications as had been practiced by other governments,' and they do not prevent the subsequent punishment of such as may be deemed contrary to the public welfare. Commonwealth v. Blanding, 3 Pick. (Mass.) 304, 313, 314 (15 Am. Dec. 214); Respublica v. Oswald, 1 Dall. 319, 325, 158. The preliminary freedom extends as well to the false as to the true; the subsequent punishment may extend as well to the true as to the false. This was the law of criminal libel apart from statute in most cases, if

not in all. Commonwealth v. Blanding, ubi supra; 4 Bl. Com. 150.'

The criticism upon Blackstone's statement has not been because immunity from previous restraint upon publication has not been regarded as deserving of special emphasis, but chiefly because that immunity cannot be deemed to exhaust the conception of the liberty guaranteed by [283 U.S. 697, 715] State and Federal Constitutions. The point of criticism has been 'that the mere exemption from restraints cannot be all that is secured by the constitutional provisions,' and that 'the liberty of the press might be rendered a mockery and a delusion, and the phrase itself a by-word, if, while every man was at liberty to publish what he pleased, the public authorities might nevertheless punish him for harmless publications.' 2 Cooley, Const. Lim. (8th Ed.) pp. 885. But it is recognized that punishment for the abuse of the liberty accorded to the press is essential to the protection of the public, and that the common-law rules that subject the libeler to responsibility for the public offense, as well as for the private injury, are not abolished by the protection extended in our Constitutions Id. pp. 883, 884. The law of criminal libel rests upon that secure foundation. There is also the conceded authority of courts to punish for contempt when publications directly tend to prevent the proper discharge of judicial functions. Patterson v. Colorado, supra; Toledo Newspaper Company v. United States, 247 U.S. 402, 419, 38 S. Ct. 560. In the present case, we have no occasion to inquire as to the permissible scope of subsequent punishment. For whatever wrong the appellant has committed or may commit, by his publications, the state appropriately affords both public and private redress by its libel laws. As has been noted, the statute in question does not deal with punishments; it provides for no punishment, except in case of contempt for violation of the court's order, but for suppression and injunction-that is, for restraint upon publication.

The objection has also been made that the principle as to immunity from previous restraint is stated too [283 U.S. 697, 716] broadly, if every such restraint is deemed to be prohibited. That is undoubtedly true; the protection even as to previous restraint is not absolutely unlimited. But the limitation has been recognized only in exceptional cases. 'When a nation is at war many things that might be said in time of peace are such a hindrance to its effort that their utterance will not be endured so long as men fight and that no Court could regard them as protected by any constitutional right.' Schenck v. United States, 249 U.S. 47, 52, 39 S. Ct. 247, 249. No one would question but that a government might prevent actual obstruction to its recruiting service or the publication of the sailing dates of transports or the number and location of troops. On similar grounds, the primary requirements of decency may be enforced against obscene publications. The security of the community life may be protected against incitements to acts of violence and the overthrow by force of orderly government. The constitutional guaranty of free speech does not 'protect a man from an injunction against uttering words that may have all the effect of force. Gompers v. Buck's Stove & Range Co., 221 U.S. 418, 139 , 31 S. Ct. 492, 34 L. R. A. (N. S.) 874.' Schenck v. United States, supra. These limitations are not applicable here. Nor are we now concerned with questions as to the extent of authority to prevent publications in order to protect private rights according to the principles governing the exercise of the jurisdiction of courts of equity.

The exceptional nature of its limitations places in a strong light the general conception that liberty of the press, historically considered and taken up by the Federal Constitution, has meant, principally although not exclusively, immunity from previous restraints or censorship. The conception of the liberty of the press in this country had broadened with the exigencies of the colonial [283 U.S. 697, 717] period and with the efforts to secure freedom from oppressive administration. That liberty was especially cherished for the immunity it afforded from previous restraint of the publication of censure of public officers and charges of official misconduct. As was said by Chief Justice Parker, in Commonwealth v. Blanding, 3 Pick. (Mass.) 304, 313, 15 Am. Dec. 214, with respect to the Constitution of Massachusetts: 'Besides, it is well understood and received as a commentary on this provision for the liberty of the press, that it was intended to prevent all such previous restraints upon publications as had been practiced by other governments, and in early times here, to stifle the efforts of patriots towards enlightening their fellow

subjects upon their rights and the duties of rulers. The liberty of the press was to be unrestrained, but he who used it was to be responsible in case of its abuse.' In the letter sent by the Continental Congress (October 26, 1774) to the Inhabitants of Quebec, referring to the 'five grate rights' it was said: 'The last right we shall mention, regards the freedom of the press. The importance of this consists, besides the advancement of truth, science, morality, and arts in general, in its diffusion of liberal sentiments on the administration of Government, its ready communication of thoughts between subjects, and its consequential promotion of union among them, whereby oppressive officers are shamed or intimidated, into more honourable and just modes of conducting affairs.' Madison, who was the leading spirit in the preparation of the First Amendment of the Federal Constitution, thus described the practice and sentiment which led to the guaranties of liberty of the press in State Constitutions: [283 U.S. 697, 718] 'In every State, probable, in the Union, the press has exerted a freedom in canvassing the merits and measures of public men of every description which has not been confined to the strict limits of the common law. On this footing the freedom of the press has stood; on this footing it yet stands. ... Some degree of abuse is inseparable from the proper use of everything, and in no instance is this more true than in that of the press. It has accordingly been decided by the practice of the States, that it is better to leave a few of its noxious branches to their luxuriant growth, than, by pruning them away, to injure the vigour of those yielding the proper fruits. And can the wisdom of this policy be doubted by any who reflect that to the press alone, checkered as it is with abuses, the world is indebted for all the triumphs which have been gained by reason and humanity over error and oppression; who reflect that to the same beneficent source the United States owe much of the lights which conducted them to the ranks of a free and independent nation, and which have improved their political system into a shape so auspicious to their happiness? Had 'Sedition Acts,' forbidding every publication that might bring the constituted agents into contempt or disrepute, or that might excite the hatred of the people against the authors of unjust or pernicious measures, been uniformly enforced against the press, might not the United States have been languishing at this day under the infirmities of a sickly Confederation? Might they not, possibly, be miserable colonies, groaning under a foreign yoke?'

The fact that for approximately one hundred and fifty years there has been almost an entire absence of attempts to impose previous restraints upon publications relating to the malfeasance of public officers is significant of the deep-seated conviction that such restraints would violate constitutional right. Public officers, whose character and [283 U.S. 697, 719] conduct remain open to debate and free discussion in the press, find their remedies for false accusations in actions under libel laws providing for redress and punishment, and not in proceedings to restrain the publication of newspapers and periodicals. The general principle that the constitutional guaranty of the liberty of the press gives immunity from previous restraints has been approved in many decisions under the provisions of state constitutions.

The importance of this immunity has not lessened. While reckless assaults upon public men, and efforts to bring obloquy upon those whom are endeavoring faithfully to discharge official duties, exert a baleful influence and deserve the severest condemnation in public opinion, it cannot be said that this abuse is greater, and it is believed to be less, than that which characterized the period in which our institutions took shape. Meanwhile, the administration of government has become more complex, the opportunities for malfeasance and corruption have multiplied, crime has grown to most serious proportions, and the danger of its protection by unfaithful officials and of the impairment of the fundamental security of life and [283 U.S. 697, 720] property by criminal alliances and official neglect, emphasizes the primary need of a vigilant and courageous press, especially in great cities. The fact that the liberty of the press may be abused by miscreant purveyors of scandal does not make any the less necessary the immunity of the press from previous restraint in dealing with official misconduct. Subsequent punishment for such abuses as may exist is the appropriate remedy, consistent with constitutional privilege.

In attempted justification of the statute, it is said that it deals not with publication per se, but with the 'business' of publishing defamation. If, however, the publisher has a constitutional right to publish, without previous restraint, an edition of

his newspaper charging official derelictions, it cannot be denied that he may publish subsequent editions for the same purpose. He does not lose his right by exercising it. If his right exists, it may be exercised in publishing nine editions, as in this case, as well as in one edition. If previous restraint is permissible, it may be imposed at once; indeed, the wrong may be as serious in one publication as in several. Characterizing the publication as a business, and the business as a nuisance, does not permit an invasion of the constitutional immunity against restraint. Similarly, it does not matter that the newspaper or periodical is found to be 'largely' or 'chiefly' devoted to the publication of such derelictions. If the publisher has a right, without previous restraint, to publish them, his right cannot be deemed to be dependent upon his publishing something else, more or less, with the matter to which objection is made.

Nor can it be said that the constitutional freedom from previous restraint is lost because charges are made of derelictions which constitute crimes. With the multiplying provisions of penal codes, and of municipal charters and ordinances carrying penal sanctions, the conduct of [283 U.S. 697, 721] public officers is very largely within the purview of criminal statutes. The freedom of the press from previous restraint has never been regarded as limited to such animadversions as lay outside the range of renal enactments. Historically, there is no such limitation; it is inconsistent with the reason which underlies the privilege, as the privilege so limited would be of slight value for the purposes for which it came to be established.

The statute in question cannot be justified by reason of the fact that the publisher is permitted to show, before injunction issues, that the matter published is true and is published with good motives and for justifiable ends. If such a statute, authorizing suppression and injunction on such a basis, is constitutionally valid, it would be equally permissible for the Legislature to provide that at any time the publisher of any newspaper could be brought before a court, or even an administrative officer (as the constitutional protection may not be regarded as resting on mere procedural details), and required to produce proof of the truth of his publication, or of what he intended to publish and of his motives, or stand enjoined. If this can be done, the Legislature may provide machinery for determining in the complete exercise of its discretion what are justifiable ends and restrain publication accordingly. And it would be but a step to a complete system of censorship. The recognition of authority to impose previous restraint upon publication in order to protect the community against the circulation of charges of misconduct, and especially of official misconduct, necessarily would carry with it the admission of the authority of the censor against which the constitutional barrier was erected. The preliminary freedom, by virtue of the very reason for its existence, does not depend, as this court has said, on proof of truth. Patterson v. Colorado, supra.

Equally unavailing is the insistence that the statute is designed to prevent the circulation of scandal which tends [283 U.S. 697, 722] to disturb the public peace and to provoke assaults and the commission of crime. Charges of reprehensible conduct, and in particular of official malfeasance, unquestionably create a public scandal, but the theory of the constitutional guaranty is that even a more serious public evil would be caused by authority to prevent publication. 'To prohibit the intent to excite those unfavorable sentiments against those who administer the Government, is equivalent to a prohibition of the actual excitement of them; and to prohibit the actual excitement of them is equivalent to a prohibition of discussions having that tendency and effect; which, again, is equivalent to a protection of those who administer the Government, if they should at any time deserve the contempt or hatred of the people, against being exposed to it by free animadversions on their characters and conduct.' There is nothing new in the fact that charges of reprehensible conduct may create resentment and the disposition to resort to violent means of redress, but this well-understood tendency did not alter the determination to protect the press against censorship and restrain upon publication. As was said in New Yorker Staats-Zeitung v. Nolan, 89 N. J. Eq. 387, 388, 105 A. 72: 'If the township may prevent the circulation of a newspaper for no reason other than that some of its inhabitants may violently disagree with it, and resent it circulation by resorting to physical violence, there is no limit to what may be prohibited.' The danger of violent reactions becomes greater with effective organization of defiant groups resenting exposure, and, if this

consideration warranted legislative interference with the initial freedom of publication, the constitutional protection would be reduced to a mere form of words.

For these reasons we hold the statute, so far as it authorized the proceedings in this action under clause (b) [283 U.S. 697, 723] of section 1, to be an infringement of the liberty of the press guaranteed by the Fourteenth Amendment. We should add that this decision rests upon the operation and effect of the statute, without regard to the question of the truth of the charges contained in the particular periodical. The fact that the public officers named in this case, and those associated with the charges of official dereliction, may be deemed to be impeccable, cannot affect the conclusion that the statute imposes an unconstitutional restraint upon publication.

Judgment reversed.

Near v. State of Minnesota Ex Rel. Olson, 283 U.S. 697 (1931).

New York Times Co. v. United States *(1971)*

Introduction

Daniel Ellsberg, a minor contributor to a massive Pentagon examination of the United States' role in the Vietnam War, triggered events that led to the most prominent Supreme Court hearing involving prior restraint on the media—the Pentagon Papers case. Ellsberg took it upon himself to leak parts of the classified study to first *The New York Times* and then *The Washington Post*. The documents he gave the newspapers described the government's secret agenda for Vietnam and suggested that there had been an effort to mislead the public on foreign policy in the region. President Richard Nixon ordered the Justice Department to seek an injunction that would prevent any further publication of articles on the disputed material.

The effort of the Nixon administration to place a prior restraint on the dissemination of politically sensitive information raised a serious constitutional dilemma for the courts. The U.S. Court of Appeals in New York stopped *The New York Times* from publishing further articles on the Pentagon documents, while the U.S. Court of Appeals in Washington, D.C., supported the right of *The Washington Post* to print future pieces on the topic. In *Near v. Minnesota* (1931) and other cases, the Supreme Court had already established that prior restraint on the publishing of political material was essentially contrary to the protections of the First Amendment. The burden of proof in these prior restraint cases always fell clearly on the government. The Supreme Court had reasoned in the past that it was hard to discern in advance how damaging a political article might ultimately prove to be, and the delay in publication could severely harm freedom of the press and expression in these situations.

The split decision in the Circuit Courts prompted the Supreme Court to immediately halt publication of articles on the Pentagon Papers in *The Washington Post* as well, and to move quickly on a ruling. In *New York Times Co. v. United States*, the government claimed that publishing the contents of this classified study would harm the country and its political policies in Asia. The Court decided 6–3 to deny the injunction to stop publication. The unsigned majority decision specifically declared "any system of prior restraints of expression comes to this court bearing a heavy presumption against its validity" due to the First Amendment, and therefore the government "carries a heavy burden of showing justification for the imposition of such a restraint." In this instance, the Court found that the government did not meet the nebulous "heavy burden" required to justify prior restraint.

The general perception among journalists at the time was that the findings in *New York Times Co. v. United States* thoroughly rebuked prior restraint and guaranteed freedom of the press in these cases. But some justices, in concurring and minority opinions, raised questions about how meaningful this decision would prove to be in the long run. These justices suggested several conditions where the government might better argue that prior restraint was necessary and constitutional to prevent more imminent threats to the nation's interests. And nowhere in the brief majority opinion does the Supreme Court spell out exactly what it would take to meet the threshold of proof needed to make a case for prior restraint.

403 U.S. 713 (1971)
403 U.S. 713

NEW YORK TIMES CO. v.
UNITED STATES
CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE SECOND CIRCUIT
No. 1873.
Argued June 26, 1971
Decided June 30, 1971*

* Together with No. 1885, United States v. Washington Post Co. et al., on certiorari to the United States Court of Appeals for the District of Columbia Circuit.

PER CURIAM.

We granted certiorari in these cases in which the United States seeks to enjoin the New York Times and the Washington Post from publishing the contents of a classified study entitled "History of U.S. Decision-Making Process on Viet Nam Policy." Post, pp. 942, 943.

> "Any system of prior restraints of expression comes to this Court bearing a heavy presumption against its constitutional validity." Bantam Books, Inc. v. Sullivan, 372 U.S. 58, 70 (1963); see also Near v. Minnesota, 283 U.S. 697 (1931). The Government "thus carries a heavy burden of showing justification for the imposition of such a restraint." Organization for a Better Austin v. Keefe, 402 U.S. 415, 419 (1971). The District Court for the Southern District of New York in the New York Times case and the District Court for the District of Columbia and the Court of Appeals for the District of Columbia Circuit in the Washington Post case held that the Government had not met that burden. We agree.

The judgment of the Court of Appeals for the District of Columbia Circuit is therefore affirmed. The order of the Court of Appeals for the Second Circuit is reversed and the case is remanded with directions to enter a judgment affirming the judgment of the District Court for the Southern District of New York. The stays entered June 25, 1971, by the Court are vacated. The judgments shall issue forthwith.

So ordered.

MR. JUSTICE BRENNAN, concurring.

I

I write separately in these cases only to emphasize what should be apparent: that our judgments in the present cases may not be taken to indicate the propriety, in the future, of issuing temporary stays and restraining [403 U.S. 713, 725] orders to block the publication of material sought to be suppressed by the Government. So far as I can determine, never before has the United States sought to enjoin a newspaper from publishing information in its possession. The relative novelty of the questions presented, the necessary haste with which decisions were reached, the magnitude of the interests asserted, and the fact that all the parties have concentrated their arguments upon the question whether permanent restraints were proper may have justified at least some of the restraints heretofore imposed in these cases. Certainly it is difficult to fault the several courts below for seeking to assure that the issues here involved were preserved for ultimate review by this Court. But even if it be assumed that some of the interim restraints were proper in the two cases before us, that assumption has no bearing upon the propriety of similar judicial action in the future. To begin with, there has now been ample time for reflection and judgment; whatever values there may be in the preservation of novel questions for appellate review may not support any restraints in the future. More important, the First Amendment stands as an absolute bar to the imposition of judicial restraints in circumstances of the kind presented by these cases.

II

The error that has pervaded these cases from the outset was the granting of any injunctive relief whatsoever, interim or otherwise. The entire thrust of the Government's claim throughout these cases has been that publication of the material sought to be enjoined "could," or "might," or "may" prejudice the national interest in various ways. But the First Amendment tolerates absolutely no prior judicial restraints of the press predicated upon surmise or conjecture that

untoward consequences [403 U.S. 713, 726] may result.* Our cases, it is true, have indicated that there is a single, extremely narrow class of cases in which the First Amendment's ban on prior judicial restraint may be overridden. Our cases have thus far indicated that such cases may arise only when the Nation "is at war," Schenck v. United States, 249 U.S. 47, 52 (1919), during which times "[n]o one would question but that a government might prevent actual obstruction to its recruiting service or the publication of the sailing dates of transports or the number and location of troops." Near v. Minnesota, 283 U.S. 697, 716 (1931). Even if the present world situation were assumed to be tantamount to a time of war, or if the power of presently available armaments would justify even in peacetime the suppression of information that would set in motion a nuclear holocaust, in neither of these actions has the Government presented or even alleged that publication of items from or based upon the material at issue would cause the happening of an event of that nature. "[T]he chief purpose of [the First Amendment's] guaranty [is] to prevent previous restraints upon publication." Near v. Minnesota, supra, at 713. Thus, only governmental allegation and proof that publication must inevitably, directly, [403 U.S. 713, 727] and immediately cause the occurrence of an event kindred to imperiling the safety of a transport already at sea can support even the issuance of an interim restraining order. In no event may mere conclusions be sufficient: for if the Executive Branch seeks judicial aid in preventing publication, it must inevitably submit the basis upon which that aid is sought to scrutiny by the judiciary. And therefore, every restraint issued in this case, whatever its form, has violated the First Amendment—and not less so because that restraint was justified as necessary to afford the courts an opportunity to examine the claim more thoroughly. Unless and until the Government has clearly made out its case, the First Amendment commands that no injunction may issue.

MR. JUSTICE STEWART, with whom MR. JUSTICE WHITE joins, concurring. In the governmental structure created by our Constitution, the Executive is endowed with enormous power in the two related areas of national defense and international relations. This power, largely unchecked by the Legislative and Judicial branches, has been pressed to the very hilt since the advent of the nuclear missile age. For better or for worse, the simple fact is that a [403 U.S. 713, 728] President of the United States possesses vastly greater constitutional independence in these two vital areas of power than does, say, a prime minister of a country with a parliamentary from of government.

In the absence of the governmental checks and balances present in other areas of our national life, the only effective restraint upon executive policy and power in the areas of national defense and international affairs may lie in an enlightened citizenry—in an informed and critical public opinion which alone can here protect the values of democratic government. For this reason, it is perhaps here that a press that is alert, aware, and free most vitally serves the basic purpose of the First Amendment. For without an informed and free press there cannot be an enlightened people.

Yet it is elementary that the successful conduct of international diplomacy and the maintenance of an effective national defense require both confidentiality and secrecy. Other nations can hardly deal with this Nation in an atmosphere of mutual trust unless they can be assured that their confidences will be kept. And within our own executive departments, the development of considered and intelligent international policies would be impossible if those charged with their formulation could not communicate with each other freely, frankly, and in confidence. In the area of basic national defense the frequent need for absolute secrecy is, of course, self-evident.

I think there can be but one answer to this dilemma, if dilemma it be. The responsibility must

* Freedman v. Maryland, 380 U.S. 51 (1965), and similar cases regarding temporary restraints of allegedly obscene materials are not in point. For those cases rest upon the proposition that "obscenity is not protected by the freedoms of speech and press." Roth v. United States, 354 U.S. 476, 481 (1957). Here there is no question but that the material sought to be suppressed is within the protection of the First Amendment; the only question is whether, notwithstanding that fact, its publication may be enjoined for a time because of the presence of an overwhelming national interest. Similarly, copyright cases have no pertinence here: the Government is not asserting an interest in the particular form of words chosen in the documents, but is seeking to suppress the ideas expressed therein. And the copyright laws, of course, protect only the form of expression and not the ideas expressed.

be where the power is. If the Constitution gives the Executive [403 U.S. 713, 729] a large degree of unshared power in the conduct of foreign affairs and the maintenance of our national defense, then under the Constitution the Executive must have the largely unshared duty to determine and preserve the degree of internal security necessary to exercise that power successfully. It is an awesome responsibility, requiring judgment and wisdom of a high order. I should suppose that moral, political, and practical considerations would dictate that a very first principle of that wisdom would be an insistence upon avoiding secrecy for its own sake. For when everything is classified, then nothing is classified, and the system becomes one to be disregarded by the cynical or the careless, and to be manipulated by those intent on self-protection or self-promotion. I should suppose, in short, that the hallmark of a truly effective internal security system would be the maximum possible disclosure, recognizing that secrecy can best be preserved only when credibility is truly maintained. But be that as it may, it is clear to me that it is the constitutional duty of the Executive—as a matter of sovereign prerogative and not as a matter of law as the courts know law—through the promulgation and enforcement of executive regulations, to protect [403 U.S. 713, 730] the confidentiality necessary to carry out its responsibilities in the fields of international relations and national defense.

This is not to say that Congress and the courts have no role to play. Undoubtedly Congress has the power to enact specific and appropriate criminal laws to protect government property and preserve government secrets. Congress has passed such laws, and several of them are of very colorable relevance to the apparent circumstances of these cases. And if a criminal prosecution is instituted, it will be the responsibility of the courts to decide the applicability of the criminal law under which the charge is brought. Moreover, if Congress should pass a specific law authorizing civil proceedings in this field, the courts would likewise have the duty to decide the constitutionality of such a law as well as its applicability to the facts proved.

But in the cases before us we are asked neither to construe specific regulations nor to apply specific laws. We are asked, instead, to perform a function that the Constitution gave to the Executive, not the Judiciary. We are asked, quite simply, to prevent the publication by two newspapers of material that the Executive Branch insists should not, in the national interest, be published. I am convinced that the Executive is correct with respect to some of the documents involved. But I cannot say that disclosure of any of them will surely result in direct, immediate, and irreparable damage to our Nation or its people. That being so, there can under the First Amendment be but one judicial resolution of the issues before us. I join the judgments of the Court.

New York Times Co. v. United States, 403 U.S. 713 (1971).

Libel Issues

New York Times Co. v. Sullivan *(1964)*

Introduction

Journalists have always felt an obligation to hold public officials to a more intense level of scrutiny than private citizens. Besieged public officials had long tried to ward off the criticism this attention produced by filing a steady stream of libel suits against the press. The frequency of these defamation charges, and the ease with which the suits were won, elevated the importance of the decision in the 1964 *New York Times Co. v. Sullivan* Supreme Court case to landmark status. Justice William J. Brennan Jr. began the majority opinion by saying that for the "first time" a case would determine how much constitutional protections should "limit a State's power to award damages in a libel action brought by a public official against critics of his official conduct."

Justice Brennan fully realized the potential impact of this case on the freedom of the press and other watchdog groups. He wrote eight drafts of his opinion in order to successfully convince initially dissenting colleagues to back a more powerful unanimous decision. The Court's ruling dramatically raised the level of proof required for a public official to win a libel suit against the press. The official could no longer triumph in a libel action by merely establishing that a journalist's statement about him had eventually been shown to be false.

Public officials now had to prove that the false statements of journalists were written or said with "actual malice" for libel to exist. This means the press had to know in advance that their comments about the officials were false or made with a "reckless disregard" as to whether they conveyed the truth. Brennan's majority opinion indicated that the actual malice standard for libel also demanded that the public official now prove that the journalist's statements were both malicious in nature and intentionally hurtful as well. Justice Arthur J. Goldberg, in a concurring opinion, suggested raising the bar even further for public servants to prove libel when he argued that the press and others be granted "an absolute, unconditional privilege to criticize official conduct despite the harm that may flow from excesses and abuses."

New York Times Co. v. Sullivan can be traced to a 1960, full-page *Times* ad based on an earlier editorial that called for readers to "heed rising voices" of peaceful civil rights demonstrators in the South. The ad recounted stories of official abuse of demonstrators in Montgomery, Alabama, and Orangeburg, South Carolina. L. B. Sullivan, the Montgomery commissioner responsible for the police department, saw the ad as false in certain claims and as an unwarranted attack on him, his city, and the police. Sullivan and a number of others sued the *Times* in the Alabama courts and won large damage decisions based on the state civil libel laws. The Supreme Court ruling effectively overturned these state libel laws and also served to empower the press in its coverage of the civil rights struggle.

U.S. Supreme Court
New York Times Co. v. Sullivan,
376 U.S. 254 (1964)
376 U.S. 254

NEW YORK TIMES CO. v. SULLIVAN.

CERTIORARI TO THE SUPREME COURT OF ALABAMA.

No. 39.

Argued January 6, 1964.

Decided March 9, 1964.

MR. JUSTICE BRENNAN delivered the opinion of the Court.

We are required in this case to determine for the first time the extent to which the constitutional protections for speech and press limit a State's power to award damages in a libel action brought by a public official against critics of his official conduct.

Respondent L. B. Sullivan is one of the three elected Commissioners of the City of Montgomery, Alabama. He testified that he was "Commissioner of Public Affairs and the duties are supervision of the Police Department, Fire Department, Department of Cemetery and Department of Scales." He brought this civil libel action against the four individual petitioners, who are Negroes and Alabama clergymen, and against petitioner the New York Times Company, a New York corporation which publishes the New York Times, a daily newspaper. A jury in the Circuit Court of Montgomery County awarded him damages of $500,000, the full amount claimed, against all the petitioners, and the Supreme Court of Alabama affirmed. 273 Ala. 656, 144 So.2d 25.

Respondent's complaint alleged that he had been libeled by statements in a full-page advertisement that was carried in the New York Times on March 29, 1960. Entitled "Heed Their Rising Voices," the advertisement began by stating that "As the whole world knows by now, thousands of Southern Negro students are engaged in widespread non-violent demonstrations in positive affirmation of the right to live in human dignity as guaranteed by the U.S. Constitution and the Bill of Rights." It went on to charge that "in their efforts to uphold these guarantees, they are being met by an unprecedented wave of terror by those who would deny and negate that document which the whole world looks upon as setting the pattern for modern freedom. . . ." Succeeding [376 U.S. 254, 257] paragraphs purported to illustrate the "wave of terror" by describing certain alleged events. The text concluded with an appeal for funds for three purposes: support of the student movement, "the struggle for the right-to-vote," and the legal defense of Dr. Martin Luther King Jr., leader of the movement, against a perjury indictment then pending in Montgomery.

The text appeared over the names of 64 persons, many widely known for their activities in public affairs, religion, trade unions, and the performing arts. Below these names, and under a line reading "We in the south who are struggling daily for dignity and freedom warmly endorse this appeal," appeared the names of the four individual petitioners and of 16 other persons, all but two of whom were identified as clergymen in various Southern cities. The advertisement was signed at the bottom of the page by the "Committee to Defend Martin Luther King and the Struggle for Freedom in the South," and the officers of the Committee were listed.

Of the 10 paragraphs of text in the advertisement, the third and a portion of the sixth were the basis of respondent's claim of libel. They read as follows:

Third paragraph:

> "In Montgomery, Alabama, after students sang 'My Country, 'Tis of Thee' on the State Capitol steps, their leaders were expelled from school, and truckloads of police armed with shotguns and tear-gas ringed the Alabama State College Campus. When the entire student body protested to state authorities by refusing to re-register, their dining hall was padlocked in an attempt to starve them into submission."

Sixth paragraph:

> "Again and again the Southern violators have answered Dr. King's peaceful protests with intimidation and violence. They have bombed his home almost killing his wife and child. They have [376 U.S. 254, 258] assaulted his person. They have arrested him seven times—for 'speeding,' 'loitering' and similar 'offenses.' And now they have charged him with 'perjury'—a felony under which they could imprison him for ten years. . . ."

Although neither of these statements mentions respondent by name, he contended that the word "police" in the third paragraph referred to him as the Montgomery Commissioner who supervised the Police Department, so that he was being

accused of "ringing" the campus with police. He further claimed that the paragraph would be read as imputing to the police, and hence to him, the padlocking of the dining hall in order to starve the students into submission. As to the sixth paragraph, he contended that since arrests are ordinarily made by the police, the statement "They have arrested [Dr. King] seven times" would be read as referring to him; he further contended that the "They" who did the arresting would be equated with the "They" who committed the other described acts and with the "Southern violators." Thus, he argued, the paragraph would be read as accusing the Montgomery police, and hence him, of answering Dr. King's protests with "intimidation and violence," bombing his home, assaulting his person, and charging him with perjury. Respondent and six other Montgomery residents testified that they read some or all of the statements as referring to him in his capacity as Commissioner.

It is uncontroverted that some of the statements contained in the paragraphs were not accurate descriptions of events which occurred in Montgomery. Although Negro students staged a demonstration on the State Capitol steps, they sang the National Anthem and not "My [376 U.S. 254, 259] Country, 'Tis of Thee." Although nine students were expelled by the State Board of Education, this was not for leading the demonstration at the Capitol, but for demanding service at a lunch counter in the Montgomery County Courthouse on another day. Not the entire student body, but most of it, had protested the expulsion, not by refusing to register, but by boycotting classes on a single day; virtually all the students did register for the ensuing semester. The campus dining hall was not padlocked on any occasion, and the only students who may have been barred from eating there were the few who had neither signed a preregistration application nor requested temporary meal tickets. Although the police were deployed near the campus in large numbers on three occasions, they did not at any time "ring" the campus, and they were not called to the campus in connection with the demonstration on the State Capitol steps, as the third paragraph implied. Dr. King had not been arrested seven times, but only four; and although he claimed to have been assaulted some years earlier in connection with his arrest for loitering outside a courtroom, one of the officers who made the arrest denied that there was such an assault.

On the premise that the charges in the sixth paragraph could be read as referring to him, respondent was allowed to prove that he had not participated in the events described. Although Dr. King's home had in fact been bombed twice when his wife and child were there, both of these occasions antedated respondent's tenure as Commissioner, and the police were not only not implicated in the bombings, but had made every effort to apprehend those who were. Three of Dr. King's four arrests took place before respondent became Commissioner. Although Dr. King had in fact been indicted (he was subsequently acquitted) on two counts of perjury, each of which carried a possible five-year sentence, respondent had nothing to do with procuring the indictment. [376 U.S. 254, 260]

Respondent made no effort to prove that he suffered actual pecuniary loss as a result of the alleged libel. One of his witnesses, a former employer, testified that if he had believed the statements, he doubted whether he "would want to be associated with anybody who would be a party to such things that are stated in that ad," and that he would not re-employ respondent if he believed "that he allowed the Police Department to do the things that the paper say he did." But neither this witness nor any of the others testified that he had actually believed the statements in their supposed reference to respondent.

The cost of the advertisement was approximately $4,800, and it was published by the Times upon an order from a New York advertising agency acting for the signatory Committee. The agency submitted the advertisement with a letter from A. Philip Randolph, Chairman of the Committee, certifying that the persons whose names appeared on the advertisement had given their permission. Mr. Randolph was known to the Times' Advertising Acceptability Department as a responsible person, and in accepting the letter as sufficient proof of authorization it followed its established practice. There was testimony that the copy of the advertisement which accompanied the letter listed only the 64 names appearing under the text, and that the statement, "We in the south . . . warmly endorse this appeal," and the list of names thereunder, which included those of the individual petitioners, were subsequently added when the first proof of the advertisement was received. Each of the individual petitioners

testified that he had not authorized the use of his name, and that he had been unaware of its use until receipt of respondent's demand for a retraction. The manager of the Advertising Acceptability [376 U.S. 254, 261] Department testified that he had approved the advertisement for publication because he knew nothing to cause him to believe that anything in it was false, and because it bore the endorsement of "a number of people who are well known and whose reputation" he "had no reason to question." Neither he nor anyone else at the Times made an effort to confirm the accuracy of the advertisement, either by checking it against recent Times news stories relating to some of the described events or by any other means.

Alabama law denies a public officer recovery of punitive damages in a libel action brought on account of a publication concerning his official conduct unless he first makes a written demand for a public retraction and the defendant fails or refuses to comply. Alabama Code, Tit. 7, 914. Respondent served such a demand upon each of the petitioners. None of the individual petitioners responded to the demand, primarily because each took the position that he had not authorized the use of his name on the advertisement and therefore had not published the statements that respondent alleged had libeled him. The Times did not publish a retraction in response to the demand, but wrote respondent a letter stating, among other things, that "we…are somewhat puzzled as to how you think the statements in any way reflect on you," and "you might, if you desire, let us know in what respect you claim that the statements in the advertisement reflect on you." Respondent filed this suit a few days later without answering the letter. The Times did, however, subsequently publish a retraction of the advertisement upon the demand of Governor John Patterson of Alabama, who asserted that the publication charged him with "grave misconduct and . . . improper actions and omissions as Governor of Alabama and Ex-Officio Chairman of the State Board of Education of Alabama." When asked to explain why there had been a retraction for the Governor but not for respondent, the [376 U.S. 254, 262] Secretary of the Times testified: "We did that because we didn't want anything that was published by The Times to be a reflection on the State of Alabama and the Governor was, as far as we could see, the embodiment of the State of Alabama and the proper representative of the State and, furthermore, we had by that time learned more of the actual facts which the ad purported to recite and, finally, the ad did refer to the action of the State authorities and the Board of Education presumably of which the Governor is the ex-officio chairman…." On the other hand, he testified that he did not think that "any of the language in there referred to Mr. Sullivan."

The trial judge submitted the case to the jury under instructions that the statements in the advertisement were "libelous per se" and were not privileged, so that petitioners might be held liable if the jury found that they had published the advertisement and that the statements were made "of and concerning" respondent. The jury was instructed that, because the statements were libelous per se, "the law . . . implies legal injury from the bare fact of publication itself," "falsity and malice are presumed," "general damages need not be alleged or proved but are presumed," and "punitive damages may be awarded by the jury even though the amount of actual damages is neither found nor shown." An award of punitive damages—as distinguished from "general" damages, which are compensatory in nature—apparently requires proof of actual malice under Alabama law, and the judge charged that "mere negligence or carelessness is not evidence of actual malice or malice in fact, and does not justify an award of exemplary or punitive damages." He refused to charge, however, that the jury must be "convinced" of malice, in the sense of "actual intent" to harm or "gross negligence and recklessness," to make such an award, and he also refused to require that a verdict for respondent differentiate between compensatory and punitive damages. The judge rejected petitioners' contention [376 U.S. 254, 263] that his rulings abridged the freedoms of speech and of the press that are guaranteed by the First and Fourteenth Amendments.

In affirming the judgment, the Supreme Court of Alabama sustained the trial judge's rulings and instructions in all respects. 273 Ala. 656, 144 So.2d 25. It held that "where the words published tend to injure a person libeled by them in his reputation, profession, trade or business, or charge him with an indictable offense, or tend to bring the individual into public contempt," they are "libelous per se"; that "the matter complained of is, under the above doctrine, libelous per se, if it was published of and concerning the plaintiff"; and that it was actionable without "proof of pecuniary injury . . ., such injury being implied." Id., at 673, 676, 144 So.2d, at 37,

41. It approved the trial court's ruling that the jury could find the statements to have been made "of and concerning" respondent, stating: "We think it common knowledge that the average person knows that municipal agents, such as police and firemen, and others, are under the control and direction of the city governing body, and more particularly under the direction and control of a single commissioner. In measuring the performance or deficiencies of such groups, praise or criticism is usually attached to the official in complete control of the body." Id., at 674-675, 144 So.2d at 39. In sustaining the trial court's determination that the verdict was not excessive, the court said that malice could be inferred from the Times' "irresponsibility" in printing the advertisement while "the Times in its own files had articles already published which would have demonstrated the falsity of the allegations in the advertisement"; from the Times' failure to retract for respondent while retracting for the Governor, whereas the falsity of some of the allegations was then known to the Times and "the matter contained in the advertisement was equally false as to both parties"; and from the testimony of the Times' Secretary that, [376 U.S. 254, 264] apart from the statement that the dining hall was padlocked, he thought the two paragraphs were "substantially correct." Id., at 686-687, 144 So.2d at 50-51. The court reaffirmed a statement in an earlier opinion that "There is no legal measure of damages in cases of this character." Id., at 686, 144 So.2d, at 50. It rejected petitioners' constitutional contentions with the brief statements that "The First Amendment of the U.S. Constitution does not protect libelous publications" and "The Fourteenth Amendment is directed against State action and not private action." Id., at 676, 144 So.2d, at 40.

Because of the importance of the constitutional issues involved, we granted the separate petitions for certiorari of the individual petitioners and of the Times. 371 U.S. 946. We reverse the judgment. We hold that the rule of law applied by the Alabama courts is constitutionally deficient for failure to provide the safeguards for freedom of speech and of the press that are required by the First and Fourteenth Amendments in a libel action brought by a public official against critics of his official conduct. We [376 U.S. 254, 265] further hold that under the proper safeguards the evidence presented in this case is constitutionally insufficient to support the judgment for respondent.

I

We may dispose at the outset of two grounds asserted to insulate the judgment of the Alabama courts from constitutional scrutiny. The first is the proposition relied on by the State Supreme Court—that "The Fourteenth Amendment is directed against State action and not private action." That proposition has no application to this case. Although this is a civil lawsuit between private parties, the Alabama courts have applied a state rule of law which petitioners claim to impose invalid restrictions on their constitutional freedoms of speech and press. It matters not that that law has been applied in a civil action and that it is common law only, though supplemented by statute. See, e. g., Alabama Code, Tit. 7, 908-917. The test is not the form in which state power has been applied but, whatever the form, whether such power has in fact been exercised. See Ex parte Virginia, 100 U.S. 339, 346–347; American Federation of Labor v. Swing, 312 U.S. 321.

The second contention is that the constitutional guarantees of freedom of speech and of the press are inapplicable here, at least so far as the Times is concerned, because the allegedly libelous statements were published as part of a paid, "commercial" advertisement. The argument relies on Valentine v. Chrestensen, 316 U.S. 52, where the Court held that a city ordinance forbidding street distribution of commercial and business advertising matter did not abridge the First Amendment freedoms, even as applied to a handbill having a commercial message on one side but a protest against certain official action on the other. The reliance is wholly misplaced. The Court in Chrestensen reaffirmed the constitutional protection for "the freedom of communicating [376 U.S. 254, 266] information and disseminating opinion"; its holding was based upon the factual conclusions that the handbill was "purely commercial advertising" and that the protest against official action had been added only to evade the ordinance.

The publication here was not a "commercial" advertisement in the sense in which the word was used in Chrestensen. It communicated information, expressed opinion, recited grievances, protested claimed abuses, and sought financial support on behalf of a movement whose existence and objectives are matters of the highest public interest and concern. See N. A. A. C. P. v. Button, 371 U.S. 415, 435. That the Times was paid for publishing

the advertisement is as immaterial in this connection as is the fact that newspapers and books are sold. Smith v. California, 361 U.S. 147, 150; cf. Bantam Books, Inc., v. Sullivan, 372 U.S. 58, 64, n. 6. Any other conclusion would discourage newspapers from carrying "editorial advertisements" of this type, and so might shut off an important outlet for the promulgation of information and ideas by persons who do not themselves have access to publishing facilities—who wish to exercise their freedom of speech even though they are not members of the press. Cf. Lovell v. Griffin, 303 U.S. 444, 452; Schneider v. State, 308 U.S. 147, 164. The effect would be to shackle the First Amendment in its attempt to secure "the widest possible dissemination of information from diverse and antagonistic sources." Associated Press v. United States, 326 U.S. 1, 20. To avoid placing such a handicap upon the freedoms of expression, we hold that if the allegedly libelous statements would otherwise be constitutionally protected from the present judgment, they do not forfeit that protection because they were published in the from of a paid advertisement. [376 U.S. 254, 267]

II

Under Alabama law as applied in this case, a publication is "libelous per se" if the words "tend to injure a person…in his reputation" or to "bring [him] into public contempt"; the trial court stated that the standard was met if the words are such as to "injure him in his public office, or impute misconduct to him in his office, or want of official integrity, or want of fidelity to a public trust…." The jury must find that the words were published "of and concerning" the plaintiff, but where the plaintiff is a public official his place in the governmental hierarchy is sufficient evidence to support a finding that his reputation has been affected by statements that reflect upon the agency of which he is in charge. Once "libel per se" has been established, the defendant has no defense as to stated facts unless he can persuade the jury that they were true in all their particulars. Alabama Ride Co. v. Vance, 235 Ala. 263, 178 So. 438 (1938); Johnson Publishing Co. v. Davis, 271 Ala. 474, 494-495, 124 So.2d 441, 457-458 (1960). His privilege of "fair comment" for expressions of opinion depends on the truth of the facts upon which the comment is based. Parsons v. Age-Herald Publishing Co., 181 Ala. 439, 450, 61 So. 345, 350 (1913). Unless he can discharge the burden of proving truth, general damages are presumed, and may be awarded without proof of pecuniary injury. A showing of actual malice is apparently a prerequisite to recovery of punitive damages, and the defendant may in any event forestall a punitive award by a retraction meeting the statutory requirements. Good motives and belief in truth do not negate an inference of malice, but are relevant only in mitigation of punitive damages if the jury chooses to accord them weight. Johnson Publishing Co. v. Davis, supra, 271 Ala., at 495, 124 So.2d, at 458. [376 U.S. 254, 268]

The question before us is whether this rule of liability, as applied to an action brought by a public official against critics of his official conduct, abridges the freedom of speech and of the press that is guaranteed by the first and Fourteenth Amendments.

Respondent relies heavily, as did the Alabama courts, on statements of this Court to the effect that the Constitution does not protect libelous publications. Those statements do not foreclose our inquiry here. None of the cases sustained the use of libel laws to impose sanctions upon expression critical of the official conduct of public officials. The dictum in Pennekamp v. Florida, 328 U.S. 331, 348-349, that "when the statements amount to defamation, a judge has such remedy in damages for libel as do other public servants," implied no view as to what remedy might constitutionally be afforded to public officials. In Beauharnais v. Illinois, 343 U.S. 250, the Court sustained an Illinois criminal libel statute as applied to a publication held to be both defamatory of a racial group and "liable to cause violence and disorder." But the Court was careful to note that it "retains and exercises authority to nullify action which encroaches on freedom of utterance under the guise of punishing libel"; for "public men, are, as it were, public property," and "discussion cannot be denied and the right, as well as the duty, of criticism must not be stifled." Id., at 263-264, and n. 18. In the only previous case that did present the question of constitutional limitations upon the power to award damages for libel of a public official, the Court was equally divided and the question was not decided. Schenectady Union Pub. Co. v. Sweeney, 316 U.S. 642. [376 U.S. 254, 269] In

deciding the question now, we are compelled by neither precedent nor policy to give any more weight to the epithet "libel" than we have to other "mere labels" of state law. N. A. A. C. P. v. Button, 371 U.S. 415, 429. Like insurrection, contempt, advocacy of unlawful acts, breach of the peace, obscenity, solicitation of legal business, and the various other formulae for the repression of expression that have been challenged in this court, libel can claim no talismanic immunity from constitutional limitations. It must be measured by standards that satisfy the First Amendment.

The general proposition that freedom of expression upon public questions is secured by the First Amendment has long been settled by our decisions. The constitutional safeguard, we have said, "was fashioned to assure unfettered interchange of ideas for the bringing about of political and social changes desired by the people." Roth v. United States, 354 U.S. 476, 484. "The maintenance of the opportunity for free political discussion to the end that government may be responsive to the will of the people and that changes may be obtained by lawful means, an opportunity essential to the security of the Republic, is a fundamental principle of our constitutional system." Stromberg v. California, 283 U.S. 359, 369. "[I]t is a prized American privilege to speak one's mind, although not always with perfect good taste, on all public institutions," Bridges v. California, 314 U.S. 252, 270, and this opportunity is to be afforded for "vigorous advocacy" no less than "abstract discussion." N. A. A. C. P. v. Button, 371 U.S. 415, 429. [376 U.S. 254, 270] The First Amendment, said Judge Learned Hand, "presupposes that right conclusions are more likely to be gathered out of a multitude of tongues, than through any kind of authoritative selection. To many this is, and always will be, folly; but we have staked upon it our all." United States v. Associated Press, 52 F. Supp. 362, 372 (D.C. S. D. N. Y. 1943). Mr. Justice Brandeis, in his concurring opinion in Whitney v. California, 274 U.S. 357, 375-376, gave the principle its classic formulation:

> "Those who won our independence believed . . . that public discussion is a political duty; and that this should be a fundamental principle of the American government. They recognized the risks to which all human institutions are subject. But they knew that order cannot be secured merely through fear of punishment for its infraction; that it is hazardous to discourage thought, hope and imagination; that fear breeds repression; that repression breeds hate; that hate menaces stable government; that the path of safety lies in the opportunity to discuss freely supposed grievances and proposed remedies; and that the fitting remedy for evil counsels is good ones. Believing in the power of reason as applied through public discussion, they eschewed silence coerced by law—the argument of force in its worst form. Recognizing the occasional tyrannies of governing majorities, they amended the Constitution so that free speech and assembly should be guaranteed."

Thus we consider this case against the background of a profound national commitment to the principle that debate on public issues should be uninhibited, robust, and wide-open, and that it may well include vehement, caustic, and sometimes unpleasantly sharp attacks on government and public officials. See Terminiello v. Chicago, 337 U.S. 1, 4; De Jonge v. Oregon, 299 U.S. 353, [376 U.S. 254, 271] 365. The present advertisement, as an expression of grievance and protest on one of the major public issues of our time, would seem clearly to qualify for the constitutional protection. The question is whether it forfeits that protection by the falsity of some of its factual statements and by its alleged defamation of respondent.

Authoritative interpretations of the First Amendment guarantees have consistently refused to recognize an exception for any test of truth—whether administered by judges, juries, or administrative officials—and especially one that puts the burden of proving truth on the speaker. Cf. Speiser v. Randall, 357 U.S. 513, 525-526. The constitutional protection does not turn upon "the truth, popularity, or social utility of the ideas and beliefs which are offered." N. A. A. C. P. v. Button, 371 U.S. 415, 445. As Madison said, "Some degree of abuse is inseparable from the proper use of every thing; and in no instance is this more true than in that of the press." 4 Elliot's Debates on the Federal Constitution (1876), p. 571. In Cantwell v. Connecticut, 310 U.S. 296, 310, the Court declared:

> "In the realm of religious faith, and in that of political belief, sharp differences arise. In both fields the tenets of one man may seem the rankest

> error to his neighbor. To persuade others to his own point of view, the pleader, as we know, at times, resorts to exaggeration, to vilification of men who have been, or are, prominent in church or state, and even to false statement. But the people of this nation have ordained in the light of history, that, in spite of the probability of excesses and abuses, these liberties are, in the long view, essential to enlightened opinion and right conduct on the part of the citizens of a democracy."

That erroneous statement is inevitable in free debate, and that it must be protected if the freedoms of expression [376 U.S. 254, 272] are to have the "breathing space" that they "need . . . to survive," N. A. A. C. P. v. Button, 371 U.S. 415, 433, was also recognized by the Court of Appeals for the District of Columbia Circuit in Sweeney v. Patterson, 76 U.S. App. D.C. 23, 24, 128 F.2d 457, 458 (1942), cert. denied, 317 U.S. 678. Judge Edgerton spoke for a unanimous court which affirmed the dismissal of a Congressman's libel suit based upon a newspaper article charging him with anti-Semitism in opposing a judicial appointment. He said:

> "Cases which impose liability for erroneous reports of the political conduct of officials reflect the obsolete doctrine that the governed must not criticize their governors.... The interest of the public here outweighs the interest of appellant or any other individual. The protection of the public requires not merely discussion, but information. Political conduct and views which some respectable people approve, and others condemn, are constantly imputed to Congressmen. Errors of fact, particularly in regard to a man's mental states and processes, are inevitable.... Whatever is added to the field of libel is taken from the field of free debate."

Injury to official reputation affords no more warrant for repressing speech that would otherwise be free than does factual error. Where judicial officers are involved, this Court has held that concern for the dignity and [376 U.S. 254, 273] reputation of the courts does not justify the punishment as criminal contempt of criticism of the judge or his decision. Bridges v. California, 314 U.S. 252. This is true even though the utterance contains "half-truths" and "misinformation." Pennekamp v. Florida, 328 U.S. 331, 342, 343, n. 5, 345. Such repression can be justified, if at all, only by a clear and present danger of the obstruction of justice. See also Craig v. Harney, 331 U.S. 367; Wood v. Georgia, 370 U.S. 375. If judges are to be treated as "men of fortitude, able to thrive in a hardy climate," Craig v. Harney, supra, 331 U.S., at 376, surely the same must be true of other government officials, such as elected city commissioners. Criticism of their official conduct does not lose its constitutional protection merely because it is effective criticism and hence diminishes their official reputations.

If neither factual error nor defamatory content suffices to remove the constitutional shield from criticism of official conduct, the combination of the two elements is no less inadequate. This is the lesson to be drawn from the great controversy over the Sedition Act of 1798, 1 Stat. 596, which first crystallized a national awareness of the central meaning of the First Amendment. See Levy, Legacy of Suppression (1960), at 258 et seq.; Smith, Freedom's Fetters (1956), at 426, 431, and passim. That statute made it a crime, punishable by a $5,000 fine and five years in prison, "if any person shall write, print, utter or publish . . . any false, scandalous and malicious [376 U.S. 254, 274] writing or writings against the government of the United States, or either house of the Congress..., or the President..., with intent to defame...or to bring them, or either of them, into contempt or disrepute; or to excite against them, or either or any of them, the hatred of the good people of the United States." The Act allowed the defendant the defense of truth, and provided that the jury were to be judges both of the law and the facts. Despite these qualifications, the Act was vigorously condemned as unconstitutional in an attack joined in by Jefferson and Madison. In the famous Virginia Resolutions of 1798, the General Assembly of Virginia resolved that it

> "doth particularly protest against the palpable and alarming infractions of the Constitution, in the two late cases of the 'Alien and Sedition Acts,' passed at the last session of Congress.... [The Sedition Act] exercises...a power not delegated by the Constitution, but, on the contrary, expressly and positively forbidden by one of the

> amendments thereto—a power which, more than any other, ought to produce universal alarm, because it is levelled against the right of freely examining public characters and measures, and of free communication among the people thereon, which has ever been justly deemed the only effectual guardian of every other right." 4 Elliot's Debates, supra, pp. 553–554.

Madison prepared the Report in support of the protest. His premise was that the Constitution created a form of government under which "The people, not the government, possess the absolute sovereignty." The structure of the government dispersed power in reflection of the people's distrust of concentrated power, and of power itself at all levels. This form of government was "altogether different" from the British form, under which the Crown was sovereign and the people were subjects. "Is [376 U.S. 254, 275] it not natural and necessary, under such different circumstances," he asked, "that a different degree of freedom in the use of the press should be contemplated?" Id., pp. 569-570. Earlier, in a debate in the House of Representatives, Madison had said: "If we advert to the nature of Republican Government, we shall find that the censorial power is in the people over the Government, and not in the Government over the people." 4 Annals of Congress, p. 934 (1794). Of the exercise of that power by the press, his Report said: "In every state, probably, in the Union, the press has exerted a freedom in canvassing the merits and measures of public men, of every description, which has not been confined to the strict limits of the common law. On this footing the freedom of the press has stood; on this foundation it yet stands…." 4 Elliot's Debates, supra, p. 570. The right of free public discussion of the stewardship of public officials was thus, in Madison's view, a fundamental principle of the American form of government. 15 [376 U.S. 254, 276]

Although the Sedition Act was never tested in this Court, the attack upon its validity has carried the day in the court of history. Fines levied in its prosecution were repaid by Act of Congress on the ground that it was unconstitutional. See, e. g., Act of July 4, 1840, c. 45, 6 Stat. 802, accompanied by H. R. Rep. No. 86, 26th Cong., 1st Sess. (1840). Calhoun, reporting to the Senate on February 4, 1836, assumed that its invalidity was a matter "which no one now doubts." Report with Senate bill No. 122, 24th Cong., 1st Sess., p. 3. Jefferson, as President, pardoned those who had been convicted and sentenced under the Act and remitted their fines, stating: "I discharged every person under punishment or prosecution under the sedition law, because I considered, and now consider, that law to be a nullity, as absolute and as palpable as if Congress had ordered us to fall down and worship a golden image." Letter to Mrs. Adams, July 22, 1804, 4 Jefferson's Works (Washington ed.), pp. 555, 556. The invalidity of the Act has also been assumed by Justices of this Court. See Holmes, J., dissenting and joined by Brandeis, J., in Abrams v. United States, 250 U.S. 616, 630; Jackson, J., dissenting in Beauharnais v. Illinois, 343 U.S. 250, 288 -289; Douglas, The Right of the People (1958), p. 47. See also Cooley, Constitutional Limitations (8th ed., Carrington, 1927), pp. 899-900; Chafee, Free Speech in the United States (1942), pp. 27–28. These views reflect a broad consensus that the Act, because of the restraint it imposed upon criticism of government and public officials, was inconsistent with the First Amendment.

There is no force in respondent's argument that the constitutional limitations implicit in the history of the Sedition Act apply only to Congress and not to the States. It is true that the First Amendment was originally addressed only to action by the Federal Government, and [376 U.S. 254, 277] that Jefferson, for one, while denying the power of Congress "to controul the freedom of the press," recognized such a power in the States. See the 1804 Letter to Abigail Adams quoted in Dennis v. United States, 341 U.S. 494, 522, n. 4 (concurring opinion). But this distinction was eliminated with the adoption of the Fourteenth Amendment and the application to the States of the First Amendment's restrictions. See, e. g., Gitlow v. New York, 268 U.S. 652, 666; Schneider v. State, 308 U.S. 147, 160; Bridges v. California, 314 U.S. 252, 268; Edwards v. South Carolina, 372 U.S. 229, 235.

What a State may not constitutionally bring about by means of a criminal statute is likewise beyond the reach of its civil law of libel. The fear of damage awards under a rule such as that invoked by the Alabama courts here may be markedly more inhibiting than the fear of prosecution under a criminal statute. See City of Chicago v. Tribune Co., 307 Ill. 595, 607, 139 N. E. 86, 90

(1923). Alabama, for example, has a criminal libel law which subjects to prosecution "any person who speaks, writes, or prints of and concerning another any accusation falsely and maliciously importing the commission by such person of a felony, or any other indictable offense involving moral turpitude," and which allows as punishment upon conviction a fine not exceeding $500 and a prison sentence of six months. Alabama Code, Tit. 14, 350. Presumably a person charged with violation of this statute enjoys ordinary criminal-law safeguards such as the requirements of an indictment and of proof beyond a reasonable doubt. These safeguards are not available to the defendant in a civil action. The judgment awarded in this case—without the need for any proof of actual pecuniary loss—was one thousand times greater than the maximum fine provided by the Alabama criminal statute, and one hundred times greater than that provided by the Sedition Act. [376 U.S. 254, 278] And since there is no double-jeopardy limitation applicable to civil lawsuits, this is not the only judgment that may be awarded against petitioners for the same publication. 18 Whether or not a newspaper can survive a succession of such judgments, the pall of fear and timidity imposed upon those who would give voice to public criticism is an atmosphere in which the First Amendment freedoms cannot survive. Plainly the Alabama law of civil libel is "a form of regulation that creates hazards to protected freedoms markedly greater than those that attend reliance upon the criminal law." Bantam Books, Inc., v. Sullivan, 372 U.S. 58, 70.

The state rule of law is not saved by its allowance of the defense of truth. A defense for erroneous statements honestly made is no less essential here than was the requirement of proof of guilty knowledge which, in Smith v. California, 361 U.S. 147, we held indispensable to a valid conviction of a bookseller for possessing obscene writings for sale. We said:

> "For if the bookseller is criminally liable without knowledge of the contents,…he will tend to restrict the books he sells to those he has inspected; and thus the State will have imposed a restriction upon the distribution of constitutionally protected as well as obscene literature.…And the bookseller's burden would become the public's burden, for by restricting him the public's access to reading matter would be restricted. . . . [H]is timidity in the face of his absolute criminal liability, thus would tend to restrict the public's access to forms of the printed word which the State could not constitutionally [376 U.S. 254, 279] suppress directly. The bookseller's self-censorship, compelled by the State, would be a censorship affecting the whole public, hardly less virulent for being privately administered. Through it, the distribution of all books, both obscene and not obscene, would be impeded." (361 U.S. 147, 153–154.)

A rule compelling the critic of official conduct to guarantee the truth of all his factual assertions—and to do so on pain of libel judgments virtually unlimited in amount—leads to a comparable "self-censorship." Allowance of the defense of truth, with the burden of proving it on the defendant, does not mean that only false speech will be deterred. Even courts accepting this defense as an adequate safeguard have recognized the difficulties of adducing legal proofs that the alleged libel was true in all its factual particulars. See, e.g., Post Publishing Co. v. Hallam, 59 F. 530, 540 (C. A. 6th Cir. 1893); see also Noel, Defamation of Public Officers and Candidates. 49 Col. L. Rev. 875, 892 (1949). Under such a rule, would-be critics of official conduct may be deterred from voicing their criticism, even though it is believed to be true and even though it is in fact true, because of doubt whether it can be proved in court or fear of the expense of having to do so. They tend to make only statements which "steer far wider of the unlawful zone." Speiser v. Randall, supra, 357 U.S., at 526. The rule thus dampens the vigor and limits the variety of public debate. It is inconsistent with the First and Fourteenth Amendments.

The constitutional guarantees require, we think, a federal rule that prohibits a public official from recovering damages for a defamatory falsehood relating to his official conduct unless he proves that the statement was made [376 U.S. 254, 280] with "actual malice"—that is, with knowledge that it was false or with reckless disregard of whether it was false or not. An oft-cited statement of a like rule, which has been adopted by a number of state courts, is found in the Kansas case of Coleman v. MacLennan, 78 Kan. 711, 98 P. 281

(1908). The State Attorney General, a candidate for re-election and a member of the commission charged with the management and control of the state school fund, sued a newspaper publisher for alleged libel in an article purporting to state facts relating to his official conduct in connection with a school-fund transaction. The defendant pleaded privilege and the trial judge, over the plaintiff's objection, instructed the jury that

> "where an article is published and circulated among voters for the sole purpose of giving what the defendant [376 U.S. 254, 281] believes to be truthful information concerning a candidate for public office and for the purpose of enabling such voters to cast their ballot more intelligently, and the whole thing is done in good faith and without malice, the article is privileged, although the principal matters contained in the article may be untrue in fact and derogatory to the character of the plaintiff; and in such a case the burden is on the plaintiff to show actual malice in the publication of the article."

In answer to a special question, the jury found that the plaintiff had not proved actual malice, and a general verdict was returned for the defendant. On appeal the Supreme Court of Kansas, in an opinion by Justice Burch, reasoned as follows (78 Kan., at 724, 98 P., at 286):

> "It is of the utmost consequence that the people should discuss the character and qualifications of candidates for their suffrages. The importance to the state and to society of such discussions is so vast, and the advantages derived are so great, that they more than counterbalance the inconvenience of private persons whose conduct may be involved, and occasional injury to the reputations of individuals must yield to the public welfare, although at times such injury may be great. The public benefit from publicity is so great, and the chance of injury to private character so small, that such discussion must be privileged."

The court thus sustained the trial court's instruction as a correct statement of the law, saying:

> "In such a case the occasion gives rise to a privilege, qualified to this extent: any one claiming to be defamed by the communication must show actual malice or go remediless. This privilege extends to a great variety of subjects, and includes matters of [376 U.S. 254, 282] public concern, public men, and candidates for office." 78 Kan., at 723, 98 P., at 285.

Such a privilege for criticism of official conduct is appropriately analogous to the protection accorded a public official when he is sued for libel by a private citizen. In Barr v. Matteo, 360 U.S. 564, 575, this Court held the utterance of a federal official to be absolutely privileged if made "within the outer perimeter" of his duties. The States accord the same immunity to statements of their highest officers, although some differentiate their lesser officials and qualify the privilege they enjoy. 22 But all hold that all officials are protected unless actual malice can be proved. The reason for the official privilege is said to be that the threat of damage suits would otherwise "inhibit the fearless, vigorous, and effective administration of policies of government" and "dampen the ardor of all but the most resolute, or the most irresponsible, in the unflinching discharge of their duties." Barr v. Matteo, supra, 360 U.S., at 571. Analogous considerations support the privilege for the citizen-critic of government. It is as much his duty to criticize as it is the official's duty to administer. See Whitney v. California, 274 U.S. 357, 375 (concurring opinion of Mr. Justice Brandeis), quoted supra, p. 270. As Madison said, see supra, p. 275, "the censorial power is in the people over the Government, and not in the Government over the people." It would give public servants an unjustified preference over the public they serve, if critics of official conduct [376 U.S. 254, 283] did not have a fair equivalent of the immunity granted to the officials themselves.

We conclude that such a privilege is required by the First and Fourteenth Amendments.

III

We hold today that the Constitution delimits a State's power to award damages for libel in actions brought by public officials against critics of their official conduct. Since this is such an action, the rule requiring proof of actual malice is applicable. While Alabama law apparently requires proof of actual

malice for an award of punitive damages, where general damages are concerned malice is "presumed." Such a presumption is inconsistent [376 U.S. 254, 284] with the federal rule. "The power to create presumptions is not a means of escape from constitutional restrictions," Bailey v. Alabama, 219 U.S. 219, 239; "the showing of malice required for the forfeiture of the privilege is not presumed but is a matter for proof by the plaintiff …." Lawrence v. Fox, 357 Mich. 134, 146, 97 N. W. 2d 719, 725 (1959). Since the trial judge did not instruct the jury to differentiate between general and punitive damages, it may be that the verdict was wholly an award of one or the other. But it is impossible to know, in view of the general verdict returned. Because of this uncertainty, the judgment must be reversed and the case remanded. Stromberg v. California, 283 U.S. 359, 367–368; Williams v. North Carolina, 317 U.S. 287, 291–292; see Yates v. United States, 354 U.S. 298, 311–312; Cramer v. United States, 325 U.S. 1, 36, n. 45.

Since respondent may seek a new trial, we deem that considerations of effective judicial administration require us to review the evidence in the present record to determine [376 U.S. 254, 285] whether it could constitutionally support a judgment for respondent. This Court's duty is not limited to the elaboration of constitutional principles; we must also in proper cases review the evidence to make certain that those principles have been constitutionally applied. This is such a case, particularly since the question is one of alleged trespass across "the line between speech unconditionally guaranteed and speech which may legitimately be regulated." Speiser v. Randall, 357 U.S. 513, 525. In cases where that line must be drawn, the rule is that we "examine for ourselves the statements in issue and the circumstances under which they were made to see…whether they are of a character which the principles of the First Amendment, as adopted by the Due Process Clause of the Fourteenth Amendment, protect." Pennekamp v. Florida, 328 U.S. 331, 335; see also One, Inc., v. Olesen, 355 U.S. 371; Sunshine Book Co. v. Summerfield, 355 U.S. 372. We must "make an independent examination of the whole record," Edwards v. South Carolina, 372 U.S. 229, 235, so as to assure ourselves that the judgment does not constitute a forbidden intrusion on the field of free expression.

Applying these standards, we consider that the proof presented to show actual malice lacks the convincing [376 U.S. 254, 286] clarity which the constitutional standard demands, and hence that it would not constitutionally sustain the judgment for respondent under the proper rule of law. The case of the individual petitioners requires little discussion. Even assuming that they could constitutionally be found to have authorized the use of their names on the advertisement, there was no evidence whatever that they were aware of any erroneous statements or were in any way reckless in that regard. The judgment against them is thus without constitutional support.

As to the Times, we similarly conclude that the facts do not support a finding of actual malice. The statement by the Times' Secretary that, apart from the padlocking allegation, he thought the advertisement was "substantially correct," affords no constitutional warrant for the Alabama Supreme Court's conclusion that it was a "cavalier ignoring of the falsity of the advertisement [from which] the jury could not have but been impressed with the bad faith of The Times, and its maliciousness inferable therefrom." The statement does not indicate malice at the time of the publication; even if the advertisement was not "substantially correct"—although respondent's own proofs tend to show that it was—that opinion was at least a reasonable one, and there was no evidence to impeach the witness' good faith in holding it. The Times' failure to retract upon respondent's demand, although it later retracted upon the demand of Governor Patterson, is likewise not adequate evidence of malice for constitutional purposes. Whether or not a failure to retract may ever constitute such evidence, there are two reasons why it does not here. First, the letter written by the Times reflected a reasonable doubt on its part as to whether the advertisement could reasonably be taken to refer to respondent at all. Second, it was not a final refusal, since it asked for an explanation on this point—a request that respondent chose to ignore. Nor does the retraction upon the demand of the Governor supply the [376 U.S. 254, 287] necessary proof. It may be doubted that a failure to retract which is not itself evidence of malice can retroactively become such by virtue of a retraction subsequently made to another party. But in any event that did not happen here, since the explanation given by the

Times' Secretary for the distinction drawn between respondent and the Governor was a reasonable one, the good faith of which was not impeached.

Finally, there is evidence that the Times published the advertisement without checking its accuracy against the news stories in the Times' own files. The mere presence of the stories in the files does not, of course, establish that the Times "knew" the advertisement was false, since the state of mind required for actual malice would have to be brought home to the persons in the Times' organization having responsibility for the publication of the advertisement. With respect to the failure of those persons to make the check, the record shows that they relied upon their knowledge of the good reputation of many of those whose names were listed as sponsors of the advertisement, and upon the letter from A. Philip Randolph, known to them as a responsible individual, certifying that the use of the names was authorized. There was testimony that the persons handling the advertisement saw nothing in it that would render it unacceptable under the Times' policy of rejecting advertisements containing "attacks of a personal character"; their failure to reject it on this ground was not unreasonable. We think [376 U.S. 254, 288] the evidence against the Times supports at most a finding of negligence in failing to discover the misstatements, and is constitutionally insufficient to show the recklessness that is required for a finding of actual malice. Cf. Charles Parker Co. v. Silver City Crystal Co., 142 Conn. 605, 618, 116 A. 2d 440, 446 (1955); Phoenix Newspapers, Inc., v. Choisser, 82 Ariz. 271, 277-278, 312 P.2d 150, 154-155 (1957).

We also think the evidence was constitutionally defective in another respect: it was incapable of supporting the jury's finding that the allegedly libelous statements were made "of and concerning" respondent. Respondent relies on the words of the advertisement and the testimony of six witnesses to establish a connection between it and himself. Thus, in his brief to this Court, he states:

> "The reference to respondent as police commissioner is clear from the ad. In addition, the jury heard the testimony of a newspaper editor . . .; a real estate and insurance man . . .; the sales manager of a men's clothing store . . .; a food equipment man . . .; a service station operator . . .; and the operator of a truck line for whom respondent had formerly worked . . . . Each of these witnesses stated that he associated the statements with respondent . . . ." (Citations to record omitted.)

There was no reference to respondent in the advertisement, either by name or official position. A number of the allegedly libelous statements—the charges that the dining hall was padlocked and that Dr. King's home was bombed, his person assaulted, and a perjury prosecution instituted against him—did not even concern the police; despite the ingenuity of the arguments which would attach this significance to the word "They," it is plain that these statements could not reasonably be read as accusing respondent of personal involvement in the acts [376 U.S. 254, 289] in question. The statements upon which respondent principally relies as referring to him are the two allegations that did concern the police or police functions: that "truckloads of police . . . ringed the Alabama State College Campus" after the demonstration on the State Capitol steps, and that Dr. King had been "arrested . . . seven times." These statements were false only in that the police had been "deployed near" the campus but had not actually "ringed" it and had not gone there in connection with the State Capitol demonstration, and in that Dr. King had been arrested only four times. The ruling that these discrepancies between what was true and what was asserted were sufficient to injure respondent's reputation may itself raise constitutional problems, but we need not consider them here. Although the statements may be taken as referring to the police, they did not on their face make even an oblique reference to respondent as an individual. Support for the asserted reference must, therefore, be sought in the testimony of respondent's witnesses. But none of them suggested any basis for the belief that respondent himself was attacked in the advertisement beyond the bare fact that he was in overall charge of the Police Department and thus bore official responsibility for police conduct; to the extent that some of the witnesses thought respondent to have been charged with ordering or approving the conduct or otherwise being personally involved in it, they based this notion not on any statements in the advertisement, and not on any evidence that he had in fact been so involved, but solely on the unsupported assumption that,

because of his official position, he must have been. This reliance on the bare [376 U.S. 254, 290] fact of respondent's official position was made explicit by the Supreme Court of Alabama. That court, in holding that the trial court "did not err in overruling the demurrer [of the Times] in the aspect that the libelous [376 U.S. 254, 291] matter was not of and concerning the [plaintiff,]" based its ruling on the proposition that:

> "We think it common knowledge that the average person knows that municipal agents, such as police and firemen, and others, are under the control and direction of the city governing body, and more particularly under the direction and control of a single commissioner. In measuring the performance or deficiencies of such groups, praise or criticism is usually attached to the official in complete control of the body." 273 Ala., at 674-675, 144 So.2d. at 39.

This proposition has disquieting implications for criticism of governmental conduct. For good reason, "no court of last resort in this country has ever held, or even suggested, that prosecutions for libel on government have any place in the American system of jurisprudence." City of Chicago v. Tribune Co., 307 Ill. 595, 601, 139 N. E. [376 U.S. 254, 292] 86, 88 (1923). The present proposition would sidestep this obstacle by transmuting criticism of government, however impersonal it may seem on its face, into personal criticism, and hence potential libel, of the officials of whom the government is composed. There is no legal alchemy by which a State may thus create the cause of action that would otherwise be denied for a publication which, as respondent himself said of the advertisement, "reflects not only on me but on the other Commissioners and the community." Raising as it does the possibility that a good-faith critic of government will be penalized for his criticism, the proposition relied on by the Alabama courts strikes at the very center of the constitutionally protected area of free expression. We hold that such a proposition may not constitutionally be utilized to establish that an otherwise impersonal attack on governmental operations was a libel of an official responsible for those operations. Since it was relied on exclusively here, and there was no other evidence to connect the statements with respondent, the evidence was constitutionally insufficient to support a finding that the statements referred to respondent.

The judgment of the Supreme Court of Alabama is reversed and the case is remanded to that court for further proceedings not inconsistent with this opinion.

New York Times Co. v. Sullivan, 376 U.S. 254 (1964).

Ollman v. Evans *(1979)*

Introduction

Bertell Ollman, a reputed Marxist, was hired by the University of Maryland to serve as chair of its Government and Economics Department. Noted columnists Robert Novak and Rowland Evans teamed up to write a scathing piece that appeared in *The Washington Post* and other publications questioning the wisdom of putting a Marxist in this lofty position. The university ultimately withdrew its offer to Ollman. He filed a suit against the columnists that said the article contained false facts and should be seen as defamatory because it damaged his reputation as a scholar and portrayed him more as a "political activist," "pamphleteer," and someone who would use the classroom to foment revolution.

Although the *Ollman v. Evans* case wound up at the Supreme Court, the most significant legal principles came out of the tightly contested decision rendered a step below at the United States Court of Appeals in Washington, D.C. The argument for the defense hinged on the assertion that the article offered fair opinions based on accepted reporting techniques. It is widely recognized that published opinions, even from antagonistic sources, serve the welfare of the public and fall under the protection of the First Amendment. False facts, on the other hand, can more readily serve as the basis for a libel claim. Judge Kenneth Starr wrote the 6-to-5-majority opinion favoring the defendants and their take on what constitutes opinion.

In his ruling, Judge Starr crafted what came to be known as the "*Ollman* Test" for delineating when a journalist's assertions should be perceived as a statement of fact or merely as the offering of an opinion. The test contained four basic criteria for separating fact from opinion:

1. Can the statement be shown to be true or false—with the assumption that an opinion cannot be proved to be either?
2. What is the common meaning of the words—certain words are used more frequently to state opinions?
3. What is the journalistic context for the words—readers expect to see facts asserted in a hard news story and opinions offered in a column?
4. What is the broader social context for the statement—opinions fit certain political or social settings while the reporting of facts, say at a lecture, seem expected at others?

Bertell Ollman, Plaintiff, v. Rowland Evans and Robert Novak, Defendants
United States District Court for the District of Columbia
479 F. Supp. 292; 1979 U.S. Dist.

September 26, 1979
OPINION BY: ROBINSON, Jr.

OPINION

MEMORANDUM OPINION AND ORDER

Before the Court is Defendant's Motion for Summary Judgment in a defamation action brought by Bertell Ollman against Rowland Evans and Robert Novak. This Court has jurisdiction under 28 U.S.C. § 1332 and Rule 56 of the Federal Rules of Civil Procedure.

The material facts in this case are not in dispute. Plaintiff is a Marxist professor of political science. He was nominated for the position of Chairman of the Department of Government and Economics at the University of Maryland. Defendants Evans and Novak are syndicated columnists. They wrote a scathing article that questioned the nomination. Plaintiff was subsequently denied the above-stated position. He claims that the article damaged his reputation as a scholar, causing great distress and mental anguish.

The alleged defamatory article was published in The Washington Post, The New York Post, and other newspapers throughout the country on May 4, 1978.[1] Plaintiff asserts that the article is defamatory because (1) it denies Ollman's reputation as a scholar and portrays him as a political activist, (2) it states that Plaintiff is widely viewed in his profession as a political activist, (3) it alleges that Ollman is an outspoken proponent of "political Marxism," (4) it asserts that Ollman is a "pamphleteer," and (5) it contends that Plaintiff desires to use the classroom as a tool for preparing what Ollman calls "the revolution." Defendants move for summary judgment on one issue, namely: they claim that the article in question is essentially a statement of opinions and conclusions, and as such no cause of action for defamation arises.

The First Amendment precludes liability based on the utterance of defamatory opinions. As the Supreme Court stated in Gertz v. Welch,[2] "Under the First Amendment there is no such thing as a false idea. However pernicious an opinion may seem, we depend for its correction not on the conscience of judges and juries but on the competition of other ideas."[3] As the Gertz Court noted, however, "there is no constitutional value in false statements of fact."[4] For any statement to be actionable, it must depict false facts in a defamatory light.

1. The article may be summarized as follows: His (Ollman's) candid writings avow his desire to use the classroom as an instrument for preparing what he calls "the revolution." Whether this is a form of indoctrination that could transform the real function of a university and transcend limits of academic freedom is a concern to academicians who are neither McCarthyite nor know-nothing….While Ollman is described in news accounts as a "respected Marxist scholar," he is widely viewed in his profession as a political activist. Amid the increasingly popular Marxist movement in university life, he is distinct from philosophical Marxists. Rather, he is an outspoken proponent of "political Marxism." He twice sought election to the council of the American Political Science Association as a candidate of the "Caucus for a New Political Science" and finished last out of the 16 candidates each time. Whether or not that represents a professional judgment by his colleagues, as some critics contend, the verdict clearly rejected his campaign pledge: "If elected…I shall use every means at my disposal to promote the study of Marxism and Marxist approaches to politics throughout the profession." Ollman's intentions become explicit in "On Teaching Marxism and Building the Movement," his article in the Winter 1978 issue of New Political Science. Most students, he claims, conclude his course with a "Marxist outlook." Ollman concedes that will be seen "as an admission that the purpose of my course is to convert students to socialism." That bothers him not at all because "a correct understanding of Marxism (as indeed of any body of scientific truths) leads automatically to its acceptance." Non-Marxist students are defined as those "who do not yet understand Marxism." The "classroom" is a place where the students' "bourgeois ideology is being dismantled." "Our prior task" before the revolution, he writes, "is to make more revolutionaries. The revolution will only occur, when there are enough of us to make it…." Ollman's principal scholarly work, "Alienation: Marx's Conception of Man in Capitalist Society," is a ponderous tome in adoration of the master (Marxism "is like a magnificently rich tapestry"). Published in 1971, it does not abandon hope for the revolution forecast by Karl Marx in 1848. "The present youth rebellion," he writes, by "helping to change the workers of tomorrow" will, along with other factors, make possible "a socialist revolution." Such pamphleteering is hooted at by one political scientist in a major eastern university, whose scholarship and reputation as a liberal are well known. "Ollman has no status within the profession, but is a pure and simple activist," he said. Would he say that publicly? "No chance of it. Our academic culture does not permit the raising of such questions."

2. 418 U.S. 323, 94 S. Ct. 2997, 41 L. Ed. 2d 789 (1974).

3. Id., at 339-340, 94 S. Ct. at 3007.

4. Id., at 340, 94 S. Ct. at 3007.

The First Amendment requires indefeasible protection of opinion to facilitate the free flow of ideas. Opinion Qua opinion cannot provide the basis for an actionable claim. A cause of action will accrue, however, if a statement implies the existence of undisclosed "facts" which are both false and defamatory.[5] According to the Restatement (Second), Torts, § 566.

> A defamatory communication may consist of an opinion, but a statement of this nature is actionable only if it implies the allegation of undisclosed defamatory facts as the basis of the opinion.

If an author bases his opinion on disclosed facts, the opinion itself does not give rise to a cause of action. Should the underlying facts prove false, they (rather than the opinion) would be actionable. If the author supplies no such facts, but utters a defamatory opinion, a claim arises. It is the libelous underlying "facts," rather than the opinion, that makes the defamatory statement actionable.

This approach strikes a balance between competing legitimate needs. It encourages unfettered inquiry, contemplation, and communication, yet does not preclude redress to individuals for damage to their reputation. This analysis has been adopted in three jurisdictions,[6] and is adopted here.

It is imperative to distinguish between statements of opinion and assertions of fact. While the difference may be hazy at times, this Court finds that "loosely definable, variously interpretable statements…made inextricably in the context of political, social, or philosophical debate"[7] are opinions. Statements imputing objective reality, uncolored by possible interpretation or bias, are assertions of fact.

This Court has carefully parsed the article in question. While Defendants refer to Plaintiff's writings and speeches, Ollman's statements are selected to reflect Defendants' opinion. Portions contrary to Evan's and Novak's viewpoint are carefully omitted. While this may be thought of as biased journalism, it is afforded the same constitutional protection as writing thought of as "balanced."

Defendants accuse Plaintiff of being a "political Marxist," a "political activist," and a "pamphleteer." These are merely the opinions of two people, couched in obscure words that defy concrete definition. Defendants also submit that Plaintiff lacks a reputation in his field as a scholar. A person's reputation is derived from opinion. Conclusions based on opinion must by definition be opinion. Finally, Defendants' claim that "Ollman's writings candidly profess the desire to use the classroom as an instrument for preparing what he (Ollman) calls the 'revolution.'" This statement reflects nothing more than Defendants' interpretation of Plaintiff's writings.

Under Gertz and its progeny, no cause of action arises unless Defendants' opinions imply underlying false and defamatory statements of fact. No such implication is apparent. Rather, Defendants have quoted Plaintiff's writings and speeches, and have cited his campaign for election to the council of the American Political Science Association as "proof" that their allegations are grounded in fact. There is no evidence that any of the data supporting Evan's and Novak's conclusions is false or defamatory. Nor is there any reason to assume that Defendants relied on any other evidence in support of their contentions.

Accordingly, it is by the Court this 26th day of September, 1979,

ORDERED, that Defendants' Motion for Summary Judgment is hereby GRANTED.

Ollman v. Evans, 479 F. Supp. 292 (D. C. Cir. 1979).

5. Plaintiff's burden of proof depends upon whether he is a public official, public figure or private person. New York Times v. Sullivan, 376 U.S. 254, 84 S. Ct. 710, 11 L. Ed. 2d 686 (1964); Curtis Publishing Co. v. Butts, 388 U.S. 130, 87 S. Ct. 1975, 18 L. Ed. 2d 1094 (1967); Gertz v. Welch, supra. The varying burdens of proof, however, do not determine whether a cause of action has accrued. Herbert v. Lando, 441 U.S. 153 at 175-177, 99 S. Ct. 1635, 60 L. Ed. 2d 115.

6. See Hotchner v. Castillo-Puche, 551 F.2d 910 at 913. (2d Cir. 1977) Cert. den. 434 U.S. 834, 98 S. Ct. 120, 54 L. Ed. 2d 95; Buckley v. Littell, 539 F.2d 882 at 893 (2d Cir. 1976) Cert. den. 429 U.S. 1062, 97 S. Ct. 785, 50 L. Ed. 2d 777; Orr v. Argus-Press Co., 586 F.2d 1108 (6th Cir. 1978) Cert. den. 440 U.S. 960, 99 S. Ct. 1502, 59 L. Ed. 2d 773; Yerkie v. Post-Newsweek Stations, 470 F. Supp. 91 (D.Md.1979).

Privacy Protection

The Florida Star v. B. J. F. *(1989)*

Introduction

Privacy protection has generally been considered perhaps the most nebulous and contentious area of media-related law. The word privacy does not appear anywhere in the U.S. Constitution or the Bill of Rights, and privacy law did not begin to evolve until 1890 when two lawyers, Louis Brandeis (a future Supreme Court justice) and Samuel Warren, wrote an article in the *Harvard Law Review* that argued for a "right to privacy" to keep "newspaper enterprise" from invading the "sacred precincts of private and domestic life." In the decades to follow, most states passed statutes and courts generated a wide range of common law to regulate the right to privacy versus the First Amendment right of the press to foster a free flow of ideas and information. But privacy law did not get really organized until 1960 when law school dean William Prosser wrote an article that divided it into four distinct categories: appropriation (use of a name or likeness for commercial purposes), intrusion (intentionally interfering with another's solitude), private facts (publication of true and highly sensitive private information), and false light (intentionally publishing false and offensive material about an individual).

The Florida Star v. B. J. F. Supreme Court case dealt with issues that fell squarely in the private facts category. B. J. F., initials of a rape victim, filed a report containing her full name with the local sheriff's office that was left in the pressroom where a *Florida Star* reporter gained access to it. The newspaper ran a story based on the report that violated a state law prohibiting the publishing of names of sexual assault victims. B. J. F. won a settlement from the sheriff's office and a suit against the newspaper that went to a Florida appeals court. But Justice Thurgood Marshall, in a majority opinion for the Supreme Court, argued that the newspaper could not be punished in this instance because it published "truthful information" that was "lawfully obtained" and did not conflict with "a state interest of the highest order."

Private facts suits, to be successful, usually must show that the information involved is both true and intimate in nature, becomes widely published or publicized, and would clearly be embarrassing to a reasonable person. In addition, the plaintiff must prove that these intimate facts are not of legitimate concern to the public. The Supreme Court here decided that the focus should be on the significance of the story's topic rather than the revealing of a person's name in dessstermining legitimate concern to the public. In *Florida Star v. B. J. F.,* the Court held that violent crimes are publicly significant subjects and should be addressed by the media even if the name of the victim appears.

U.S. Supreme Court
THE FLORIDA STAR v. B. J. F., 491 U.S. 524 (1989)

JUSTICE MARSHALL delivered the opinion of the Court.

Florida Stat. 794.03 (1987) makes it unlawful to "print, publish, or broadcast . . . in any instrument of mass communication" the name of the victim of a sexual offense. Pursuant to this statute, appellant The Florida Star was found civilly liable for publishing the name of a rape victim which it had obtained from a publicly released police report. The issue presented here is whether this result comports with the First Amendment. We hold that it does not.

I

The Florida Star is a weekly newspaper which serves the community of Jacksonville, Florida, and which has an average circulation of approximately 18,000 copies. A regular feature of the newspaper is its "Police Reports" section. [491 U.S. 524, 527] That section, typically two to three pages in length, contains brief articles describing local criminal incidents under police investigation.

On October 20, 1983, appellee B. J. F. reported to the Duval County, Florida, Sheriff's Department (Department) that she had been robbed and sexually assaulted by an unknown assailant. The Department prepared a report on the incident which identified B. J. F. by her full name. The Department then placed the report in its pressroom. The Department does not restrict access either to the pressroom or to the reports made available therein.

A Florida Star reporter-trainee sent to the pressroom copied the police report verbatim, including B. J. F.'s full name, on a blank duplicate of the Department's forms. A Florida Star reporter then prepared a one-paragraph article about the crime, derived entirely from the trainee's copy of the police report. The article included B. J. F.'s full name. It appeared in the "Robberies" subsection of the "Police Reports" section on October 29, 1983, one of 54 police blotter stories in that day's edition. The article read:

> "[B. J. F.] reported on Thursday, October 20, she was crossing Brentwood Park, which is in the 500 block of Golfair Boulevard, enroute to her bus stop, when an unknown black man ran up behind the lady and placed a knife to her neck and told her not to yell. The suspect then undressed the lady and had sexual intercourse with her before fleeing the scene with her 60 cents, Timex watch and gold necklace. Patrol efforts have been suspended concerning this incident because of a lack of evidence." [491 U.S. 524, 528]

In printing B. J. F.'s full name, The Florida Star violated its internal policy of not publishing the names of sexual offense victims.

On September 26, 1984, B. J. F. filed suit in the Circuit Court of Duval County against the Department and The Florida Star, alleging that these parties negligently violated 794.03. See n. 1, supra. Before trial, the Department settled with B. J. F. for $2,500. The Florida Star moved to dismiss, claiming, inter alia, that imposing civil sanctions on the newspaper pursuant to 794.03 violated the First Amendment. The trial judge rejected the motion. App. 4.

At the ensuing daylong trial, B. J. F. testified that she had suffered emotional distress from the publication of her name. She stated that she had heard about the article from fellow workers and acquaintances; that her mother had received several threatening phone calls from a man who stated that he would rape B. J. F. again; and that these events had forced B. J. F. to change her phone number and residence, to seek police protection, and to obtain mental health counseling. In defense, The Florida Star put forth evidence indicating that the newspaper had learned B. J. F.'s name from the incident report released by the Department, and that the newspaper's violation of its internal rule against publishing the names of sexual offense victims was inadvertent.

At the close of B. J. F.'s case, and again at the close of its defense, The Florida Star moved for a directed verdict. On both occasions, the trial judge denied these motions. He ruled from the bench that 794.03 was constitutional because it reflected a proper balance between the First Amendment and privacy rights, as it applied only to a narrow set of

"rather sensitive . . . criminal offenses." App. 18-19 (rejecting first motion); see id., at 32-33 (rejecting second motion). At the close of the newspaper's defense, the judge granted B. J. F.'s motion for a directed verdict on the issue of negligence, finding the newspaper per se negligent based upon its [491 U.S. 524, 529] violation of 794.03. Id., at 33. This ruling left the jury to consider only the questions of causation and damages. The judge instructed the jury that it could award B. J. F. punitive damages if it found that the newspaper had "acted with reckless indifference to the rights of others." Id., at 35. The jury awarded B. J. F. $75,000 in compensatory damages and $25,000 in punitive damages. Against the actual damages award, the judge set off B. J. F.'s settlement with the Department.

The First District Court of Appeal affirmed in a three-paragraph per curiam opinion. 499 So.2d 883 (1986). In the paragraph devoted to The Florida Star's First Amendment claim, the court stated that the directed verdict for B. J. F. had been properly entered because, under 794.03, a rape victim's name is "of a private nature and not to be published as a matter of law." Id., at 884, citing Doe v. Sarasota-Bradenton Florida Television Co., 436 So.2d 328, 330 (Fla. App. 1983) (footnote omitted). The Supreme Court of Florida denied discretionary review.

The Florida Star appealed to this Court. We noted probable jurisdiction, 488 U.S. 887 (1988), and now reverse. [491 U.S. 524, 530]

II

The tension between the right which the First Amendment accords to a free press, on the one hand, and the protections which various statutes and common-law doctrines accord to personal privacy against the publication of truthful information, on the other, is a subject we have addressed several times in recent years. Our decisions in cases involving government attempts to sanction the accurate dissemination of information as invasive of privacy, have not, however, exhaustively considered this conflict. On the contrary, although our decisions have without exception upheld the press' right to publish, we have emphasized each time that we were resolving this conflict only as it arose in a discrete factual context.

The parties to this case frame their contentions in light of a trilogy of cases which have presented, in different contexts, the conflict between truthful reporting and state-protected privacy interests. In Cox Broadcasting Corp. v. Cohn, 420 U.S. 469 (1975), we found unconstitutional a civil damages award entered against a television station for broadcasting the name of a rape-murder victim which the station had obtained from courthouse records. In Oklahoma Publishing [491 U.S. 524, 531] Co. v. Oklahoma County District Court, 430 U.S. 308 (1977), we found unconstitutional a state court's pretrial order enjoining the media from publishing the name or photograph of an 11-year-old boy in connection with a juvenile proceeding involving that child which reporters had attended. Finally, in Smith v. Daily Mail Publishing Co., 443 U.S. 97 (1979), we found unconstitutional the indictment of two newspapers for violating a state statute forbidding newspapers to publish, without written approval of the juvenile court, the name of any youth charged as a juvenile offender. The papers had learned about a shooting by monitoring a police band radio frequency and had obtained the name of the alleged juvenile assailant from witnesses, the police, and a local prosecutor.

Appellant takes the position that this case is indistinguishable from Cox Broadcasting. Brief for Appellant. Alternatively, it urges that our decisions in the above trilogy, and in other cases in which we have held that the right of the press to publish truth overcame asserted interests other than personal privacy, can be distilled to yield a broader First Amendment principle that the press may never be punished, civilly or criminally, for publishing the truth. Id., at 19. Appellee counters that the privacy trilogy is inapposite, because in each case the private information already appeared on a "public record," Brief for Appellee 12, 24, 25, and because the privacy interests at stake were far less profound than in the present case. See, e. g., id., at 34. In the alternative, appellee urges that Cox Broadcasting be overruled and replaced with a categorical rule that publication of the [491 U.S. 524, 532] name of a rape victim never enjoys constitutional protection. Tr. of Oral Arg. 44.

We conclude that imposing damages on appellant for publishing B. J. F.'s name violates the First Amendment, although not for either of the reasons appellant urges. Despite the strong resemblance this case bears to Cox Broadcasting, that case cannot fairly be read as controlling here. The name

of the rape victim in that case was obtained from courthouse records that were open to public inspection, a fact which JUSTICE WHITE's opinion for the Court repeatedly noted. 420 U.S., at 492 (noting "special protected nature of accurate reports of judicial proceedings") (emphasis added); see also id., at 493, 496. Significantly, one of the reasons we gave in Cox Broadcasting for invalidating the challenged damages award was the important role the press plays in subjecting trials to public scrutiny and thereby helping guarantee their fairness. Id., at 492-493. That role is not directly compromised where, as here, the information in question comes from a police report prepared and disseminated at a time at which not only had no adversarial criminal proceedings begun, but no suspect had been identified.

Nor need we accept appellant's invitation to hold broadly that truthful publication may never be punished consistent with the First Amendment. Our cases have carefully eschewed reaching this ultimate question, mindful that the future may bring scenarios which prudence counsels our not resolving anticipatorily. See, e. g., Near v. Minnesota ex rel. Olson, 283 U.S. 697, 716 (1931) (hypothesizing "publication of the sailing dates of transports or the number and location of troops"); see also Garrison v. Louisiana, 379 U.S. 64, 72, [491 U.S. 524, 533] n. 8, 74 (1964) (endorsing absolute defense of truth "where discussion of public affairs is concerned," but leaving unsettled the constitutional implications of truthfulness "in the discrete area of purely private libels"); Landmark Communications, Inc. v. Virginia, 435 U.S. 829, 838 (1978); Time, Inc. v. Hill, 385 U.S. 374, 383 , n. 7 (1967). Indeed, in Cox Broadcasting, we pointedly refused to answer even the less sweeping question "whether truthful publications may ever be subjected to civil or criminal liability" for invading "an area of privacy" defined by the State. 420 U.S., at 491. Respecting the fact that press freedom and privacy rights are both "plainly rooted in the traditions and significant concerns of our society," we instead focused on the less sweeping issue "whether the State may impose sanctions on the accurate publication of the name of a rape victim obtained from public records—more specifically, from judicial records which are maintained in connection with a public prosecution and which themselves are open to public inspection." Ibid. We continue to believe that the sensitivity and significance of the interests presented in clashes between First Amendment and privacy rights counsel relying on limited principles that sweep no more broadly than the appropriate context of the instant case.

In our view, this case is appropriately analyzed with reference to such a limited First Amendment principle. It is the one, in fact, which we articulated in Daily Mail in our synthesis of prior cases involving attempts to punish truthful publication: "[I]f a newspaper lawfully obtains truthful information about a matter of public significance then state officials may not constitutionally punish publication of the information, absent a need to further a state interest of the highest order." 443 U.S., at 103. According the press the ample protection provided by that principle is supported by at least three separate considerations, in addition to, of course, the overarching "'public interest, secured by the Constitution, in the dissemination of truth.'" Cox Broadcasting, [491 U.S. 524, 534] supra, at 491, quoting Garrison, supra, at 73 (footnote omitted). The cases on which the Daily Mail synthesis relied demonstrate these considerations.

First, because the Daily Mail formulation only protects the publication of information which a newspaper has "lawfully obtain[ed]," 443 U.S., at 103, the government retains ample means of safeguarding significant interests upon which publication may impinge, including protecting a rape victim's anonymity. To the extent sensitive information rests in private hands, the government may under some circumstances forbid its nonconsensual acquisition, thereby bringing outside of the Daily Mail principle the publication of any information so acquired. To the extent sensitive information is in the government's custody, it has even greater power to forestall or mitigate the injury caused by its release. The government may classify certain information, establish and enforce procedures ensuring its redacted release, and extend a damages remedy against the government or its officials where the government's mishandling of sensitive information leads to its dissemination. Where information is entrusted to the government, a less drastic means than punishing truthful publication almost always exists for guarding against the dissemination of private facts. See, e. g., Landmark Communications, supra, at 845 ("[M]

uch of the risk [from disclosure of sensitive information regarding judicial disciplinary proceedings] can be eliminated through careful internal procedures to protect the confidentiality of Commission proceedings"); Oklahoma Publishing, 430 U.S., at 311 (noting trial judge's failure to avail himself of the opportunity, provided by a state statute, to close juvenile hearing to the public, including members of the press, who later broadcast juvenile defendant's name); Cox Broadcasting, supra, at 496 ("If there are privacy interests to be protected in judicial proceedings, the States must respond by means which [491 U.S. 524, 535] avoid public documentation or other exposure of private information").

A second consideration undergirding the Daily Mail principle is the fact that punishing the press for its dissemination of information which is already publicly available is relatively unlikely to advance the interests in the service of which the State seeks to act. It is not, of course, always the case that information lawfully acquired by the press is known, or accessible, to others. But where the government has made certain information publicly available, it is highly anomalous to sanction persons other than the source of its release. We noted this anomaly in Cox Broadcasting: "By placing the information in the public domain on official court records, the State must be presumed to have concluded that the public interest was thereby being served." 420 U.S., at 495. The Daily Mail formulation reflects the fact that it is a limited set of cases indeed where, despite the accessibility of the public to certain information, a meaningful public interest is served by restricting its further release by other entities, like the press. As Daily Mail observed in its summary of Oklahoma Publishing, "once the truthful information was 'publicly revealed' or 'in the public domain' the court could not constitutionally restrain its dissemination." 443 U.S., at 103.

A third and final consideration is the "timidity and self-censorship" which may result from allowing the media to be punished for publishing certain truthful information. Cox Broadcasting, supra, at 496. Cox Broadcasting noted this concern with overdeterrence in the context of information made public through official court records, but the fear of excessive [491 U.S. 524, 536] media self-suppression is applicable as well to other information released, without qualification, by the government. A contrary rule, depriving protection to those who rely on the government's implied representations of the lawfulness of dissemination, would force upon the media the onerous obligation of sifting through government press releases, reports, and pronouncements to prune out material arguably unlawful for publication. This situation could inhere even where the newspaper's sole object was to reproduce, with no substantial change, the government's rendition of the event in question.

Applied to the instant case, the Daily Mail principle clearly commands reversal. The first inquiry is whether the newspaper "lawfully obtain[ed] truthful information about a matter of public significance." 443 U.S., at 103. It is undisputed that the news article describing the assault on B. J. F. was accurate. In addition, appellant lawfully obtained B. J. F.'s name. Appellee's argument to the contrary is based on the fact that under Florida law, police reports which reveal the identity of the victim of a sexual offense are not among the matters of "public record" which the public, by law, is entitled to inspect. Brief for Appellee 17-18, citing Fla. Stat. 119.07(3)(h) (1983). But the fact that state officials are not required to disclose such reports does not make it unlawful for a newspaper to receive them when furnished by the government. Nor does the fact that the Department apparently failed to fulfill its obligation under 794.03 not to "cause or allow to be . . . published" the name of a sexual offense victim make the newspaper's ensuing receipt of this information unlawful. Even assuming the Constitution permitted a State to proscribe receipt of information, Florida has not taken this step. It is, clear, furthermore, that the news article concerned "a matter of public significance," 443 U.S., at 103, in the sense in which the Daily Mail synthesis of prior cases used that term. That is, the article generally, as opposed to the specific identity contained within it, involved a [491 U.S. 524, 537] matter of paramount public import: the commission, and investigation, of a violent crime which had been reported to authorities. See Cox Broadcasting, supra (article identifying victim of rape-murder); Oklahoma Publishing Co. v. Oklahoma County District Court, 430 U.S. 308 (1977) (article identifying juvenile alleged to have committed murder); Daily Mail, supra (same); cf. Landmark Communications, Inc. v. Virginia, 435

U.S. 829 (1978) (article identifying judges whose conduct was being investigated).

The second inquiry is whether imposing liability on appellant pursuant to 794.03 serves "a need to further a state interest of the highest order." Daily Mail, 443 U.S., at 103. Appellee argues that a rule punishing publication furthers three closely related interests: the privacy of victims of sexual offenses; the physical safety of such victims, who may be targeted for retaliation if their names become known to their assailants; and the goal of encouraging victims of such crimes to report these offenses without fear of exposure. Brief for Appellee 29-30.

At a time in which we are daily reminded of the tragic reality of rape, it is undeniable that these are highly significant interests, a fact underscored by the Florida Legislature's explicit attempt to protect these interests by enacting a criminal statute prohibiting much dissemination of victim identities. We accordingly do not rule out the possibility that, in a proper case, imposing civil sanctions for publication of the name of a rape victim might be so overwhelmingly necessary to advance these interests as to satisfy the Daily Mail standard. For three independent reasons, however, imposing liability for publication under the circumstances of this case is too precipitous a means of advancing these interests to convince us that there is a "need" within the meaning of the Daily Mail formulation for Florida to take this extreme step. Cf. Landmark Communications, supra (invalidating penalty on publication despite State's expressed interest in non-dissemination, [491 U.S. 524, 538] reflected in statute prohibiting unauthorized divulging of names of judges under investigation).

First is the manner in which appellant obtained the identifying information in question. As we have noted, where the government itself provides information to the media, it is most appropriate to assume that the government had, but failed to utilize, far more limited means of guarding against dissemination than the extreme step of punishing truthful speech. That assumption is richly borne out in this case. B. J. F.'s identity would never have come to light were it not for the erroneous, if inadvertent, inclusion by the Department of her full name in an incident report made available in a pressroom open to the public. Florida's policy against disclosure of rape victims' identities, reflected in 794.03, was undercut by the Department's failure to abide by this policy. Where, as here, the government has failed to police itself in disseminating information, it is clear under Cox Broadcasting, Oklahoma Publishing, and Landmark Communications that the imposition of damages against the press for its subsequent publication can hardly be said to be a narrowly tailored means of safeguarding anonymity. See supra, at 534-535. Once the government has placed such information in the public domain, "reliance must rest upon the judgment of those who decide what to publish or broadcast," Cox Broadcasting, 420 U.S., at 496, and hopes for restitution must rest upon the willingness of the government to compensate victims for their loss of privacy and to protect them from the other consequences of its mishandling of the information which these victims provided in confidence.

That appellant gained access to the information in question through a government news release makes it especially likely that, if liability were to be imposed, self-censorship would result. Reliance on a news release is a paradigmatically "routine newspaper reporting techniqu[e]." Daily Mail, supra, at 103. The government's issuance of such a release, without qualification, can only convey to recipients that the [491 U.S. 524, 539] government considered dissemination lawful, and indeed expected the recipients to disseminate the information further. Had appellant merely reproduced the news release prepared and released by the Department, imposing civil damages would surely violate the First Amendment. The fact that appellant converted the police report into a news story by adding the linguistic connecting tissue necessary to transform the report's facts into full sentences cannot change this result.

A second problem with Florida's imposition of liability for publication is the broad sweep of the negligence per se standard applied under the civil cause of action implied from 794.03. Unlike claims based on the common-law tort of invasion of privacy, see Restatement (Second) of Torts 652D (1977), civil actions based on 794.03 require no case-by-case findings that the disclosure of a fact about a person's private life was one that a reasonable person would find highly offensive. On the contrary, under the per se theory of negligence adopted by the courts below, liability follows automatically from publication. This is so regardless of

whether the identity of the victim is already known throughout the community; whether the victim has voluntarily called public attention to the offense; or whether the identity of the victim has otherwise become a reasonable subject of public concern—because, perhaps, questions have arisen whether the victim fabricated an assault by a particular person. Nor is there a scienter requirement of any kind under 794.03, engendering the perverse result that truthful publications challenged pursuant to this cause of action are less protected by the First Amendment than even the least protected defamatory falsehoods: those involving purely private figures, where liability is evaluated under a standard, usually applied by a jury, of ordinary negligence. See Gertz v. Robert Welch, Inc., 418 U.S. 323 (1974). We have previously noted the impermissibility of categorical prohibitions upon media access where important First Amendment interests are at stake. See Globe [491 U.S. 524, 540] Newspaper Co. v. Superior Court of Norfolk County, 457 U.S. 596, 608 (1982) (invalidating state statute providing for the categorical exclusion of the public from trials of sexual offenses involving juvenile victims). More individualized adjudication is no less indispensable where the State, seeking to safeguard the anonymity of crime victims, sets its face against publication of their names.

Third, and finally, the facial underinclusiveness of 794.03 raises serious doubts about whether Florida is, in fact, serving, with this statute, the significant interests which appellee invokes in support of affirmance. Section 794.03 prohibits the publication of identifying information only if this information appears in an "instrument of mass communication," a term the statute does not define. Section 794.03 does not prohibit the spread by other means of the identities of victims of sexual offenses. An individual who maliciously spreads word of the identity of a rape victim is thus not covered, despite the fact that the communication of such information to persons who live near, or work with, the victim may have consequences as devastating as the exposure of her name to large numbers of strangers. See Tr. of Oral Arg. 49-50 (appellee acknowledges that 794.03 would not apply to "the backyard gossip who tells 50 people that don't have to know").

When a State attempts the extraordinary measure of punishing truthful publication in the name of privacy, it must demonstrate its commitment to advancing this interest by applying its prohibition evenhandedly, to the smalltime disseminator as well as the media giant. Where important First Amendment interests are at stake, the mass scope of disclosure is not an acceptable surrogate for injury. A ban on disclosures effected by "instrument[s] of mass communication" simply cannot be defended on the ground that partial prohibitions may effect partial relief. See Daily Mail, 443 U.S., at 104-105 (statute is insufficiently tailored to interest in protecting anonymity where it restricted only newspapers, not [491 U.S. 524, 541] the electronic media or other forms of publication, from identifying juvenile defendants); id., at 110 (REHNQUIST, J., concurring in judgment) (same); cf. Arkansas Writers' Project, Inc. v. Ragland, 481 U.S. 221, 229 (1987); Minneapolis Star & Tribune Co. v. Minnesota Comm'r of Revenue, 460 U.S. 575, 585 (1983). Without more careful and inclusive precautions against alternative forms of dissemination, we cannot conclude that Florida's selective ban on publication by the mass media satisfactorily accomplishes its stated purpose.

III

Our holding today is limited. We do not hold that truthful publication is automatically constitutionally protected, or that there is no zone of personal privacy within which the State may protect the individual from intrusion by the press, or even that a State may never punish publication of the name of a victim of a sexual offense. We hold only that where a newspaper publishes truthful information which it has lawfully obtained, punishment may lawfully be imposed, if at all, only when narrowly tailored to a state interest of the highest order, and that no such interest is satisfactorily served by imposing liability under 794.03 to appellant under the facts of this case. The decision below is therefore

Reversed.

The Florida Star v. B. J. F., 491 U.S. 524 (1989).

Access to Public Records

Freedom of Information Act Guide (May 2004)

Introduction

The following document is the Introduction to the federal Freedom of Information Act (FOIA) Guide from May 2004. It offers insights into the intentions of the original FOIA legislation in 1966 to provide public access to federal executive branch information in order to "ensure an informed citizenry" deemed necessary to "check against corruption and to hold the governors accountable to the governed." The guide discusses where the FOIA, considered one of the most widely used and effective newsgathering tools, has traditionally worked for journalists and where it has fallen short of disclosure goals. It also references subsequent acts, amendments, and additions (1974, 1976, 1986, and 1996) over the years that served to expand or limit the impact of the FOIA.

Although *The Congressional Record* had long provided key information for reporting on the business of the federal government, the sheer size and complexity of the executive branch—and its expanding role in governing—made it imperative for journalists to gain access to the "records" of its various "agencies." The FOIA first controls the breadth of this access by carefully defining what constitutes an agency and what qualifies as a record. It then further limits the scope of record requests by stipulating nine specific categories where disclosure can be denied. The FOIA exemption categories include national security matters, internal agency regulations and procedures, disclosures banned by other statutes, trade secrets, agency memoranda or working papers, personal privacy material, law enforcement records, financial institution documents, and geological data. There have been much greater restrictions placed on records seen as national security-related since the terrorist acts of September 11, 2001.

The FOIA requests can cover records in both print and electronic formats. Government agencies are mandated to respond to requests for records within 20 working days, and members of the press can get "expedited review" when immediate need for material exists. Executive agencies must report annually to Congress on the records where access was given or denied and the costs involved. In addition, further accountability has been assured by requiring the agency employees to identify themselves to the requester when access to a government record has been denied. Members of the press pay no search fees for record requests and get the first 100 pages of copies without charge.

Freedom of Information Act Guide, May 2004

Introduction

The Freedom of Information Act generally provides that any person has a right, enforceable in court, to obtain access to federal agency records, except to the extent that such records (or portions of them) are protected from public disclosure by one of nine exemptions or by one of three special law enforcement record exclusions.

Enacted in 1966, and taking effect on July 4, 1967, the FOIA firmly established an effective statutory right of public access to executive branch

information in the federal government. The principles of government openness and accountability underlying the FOIA, however, are inherent in the democratic ideal: "The basic purpose of [the] FOIA is to ensure an informed citizenry, vital to the functioning of a democratic society, needed to check against corruption and to hold the governors accountable to the governed." The United States Supreme Court has emphasized that only "[o]fficial information that sheds light on an agency's performance of its statutory duties falls squarely within that statutory purpose."

To be sure, achieving an informed citizenry is a goal often counterpoised against other vital societal aims. Society's strong interest in an open government can conflict with other important interests of the general public—such as the public's interests in the effective and efficient operations of government; in the prudent governmental use of limited fiscal resources; and in the preservation of the confidentiality of sensitive personal, commercial, and governmental information. Though tensions among these competing interests are characteristic of a democratic society, their resolution lies in providing a workable scheme that encompasses, balances, and appropriately protects all interests, while placing primary emphasis on the most responsible disclosure possible. It is this accommodation of strongly countervailing public concerns, with disclosure as the animating objective, that the FOIA seeks to achieve.

The FOIA evolved after a decade of debate among agency officials, legislators, and public interest group representatives. It revised the public disclosure section of the Administrative Procedure Act, which generally had been recognized as "falling far short" of its disclosure goals and had come to be looked upon as more a withholding statute than a disclosure statute.

By contrast, under the thrust and structure of the FOIA, virtually every record possessed by a federal executive branch agency must be made available to the public in one form or another, unless it is specifically exempted from disclosure or specially excluded from the Act's coverage in the first place. The nine exemptions of the FOIA ordinarily provide the only bases for nondisclosure, and generally they are discretionary, not mandatory, in nature. (For a discussion of the discretionary nature of FOIA exemptions, see Discretionary Disclosure and Waiver.) Dissatisfied record requesters are given a relatively speedy remedy in the United States district courts, where judges determine the propriety of agency withholdings de novo and agencies bear the burden of proof in defending their nondisclosure actions.

The FOIA contains seven subsections, the first two of which establish certain categories of information that must "automatically" be disclosed by federal agencies. Subsection (a)(1) of the FOIA requires disclosure (through publication in the Federal Register) of information such as descriptions of agency organizations, functions, and procedures; substantive agency rules; and statements of general agency policy. This requirement provides the public with automatic access to very basic information regarding the transaction of agency business.

Subsection (a)(2) of the FOIA requires that certain types of records—final agency opinions and orders rendered in the adjudication of cases, specific policy statements, certain administrative staff manuals, and some records previously processed for disclosure under the Act—be routinely made "available for public inspection and copying." This is commonly referred to as the "reading room" provision of the FOIA, and it requires that some such records be made available by agencies in "electronic reading rooms" as well. (For a discussion of the operation of this FOIA subsection, see FOIA Reading Rooms.)

The courts have held that providing official notice and guidance to the general public is the fundamental purpose of the publication requirement of subsection (a)(1) and the "reading room" availability requirement of subsection (a)(2). Failure to comply with the requirements of either subsection can result in invalidation of related agency action, unless the complaining party had actual and timely notice of the unpublished agency policy, unless he is unable to show that he was adversely affected by the lack of publication, or unless he fails to show that he would have been able to pursue "an alternative course of conduct" had the information been published. However, unpublished interpretive guidelines that were available for copying and inspection in an agency program manual have been held not to violate subsection (a)(1), and it also has been held that regulations pertaining solely to internal personnel matters that do not affect members of the public need not be published. Of course, an agency is not required to publish substantive rules and policy statements of general applicability that it has not adopted.

Under subsection (a)(3) of the FOIA—by far the most commonly utilized part of the Act—all records not made available to the public under subsections (a)(1) or (a)(2), or exempted from mandatory disclosure under subsection (b), or excluded under subsection (c), are subject to disclosure upon an agency's receipt of a proper FOIA request from any person. (See the discussions of the procedural aspects of subsection (a)(3) (including fees and fee waivers), the exemptions of subsection (b), and the exclusions of subsection (c).)

Subsection (c) of the FOIA, which was added as part of the Freedom of Information Reform Act of 1986, establishes three special categories of law enforcement-related records that are entirely excluded from the coverage of the FOIA in order to safeguard against unique types of harm. The extraordinary protection embodied in subsection (c) permits an agency to respond to a request for such records as if the records in fact did not exist. (See the discussion of the operation of these special provisions under Exclusions.)

Subsection (d) of the FOIA makes clear that the Act was not intended to authorize any new withholding of information, including from Congress. While individual Members of Congress possess merely the same rights of access as those guaranteed to "any person" under subsection (a)(3), Congress as a body (or through its committees and subcommittees) cannot be denied access to information on the grounds of FOIA exemptions.

Subsection (e) of the FOIA, which was modified as part of the Electronic Freedom of Information Act Amendments of 1996, requires an annual report from each federal agency regarding its FOIA operations and an annual report from the Department of Justice to Congress regarding both FOIA litigation and the Department of Justice's efforts (primarily through the Office of Information and Privacy) to encourage agency compliance with the FOIA. Agencies now prepare their annual reports for submission to the Department of Justice, which reviews them for completeness and then makes them available to the public, in a consolidated compilation, at a single World Wide Web site. Each agency also must make its annual FOIA report readily available on its own FOIA Web site, and it should do so promptly in order to facilitate the Department of Justice's preparation of a summary compilation of all agencies' aggregate annual report data for each fiscal year.

Subsection (f) of the FOIA defines the term "agency" so as to subject the records of nearly all executive branch entities to the Act and defines the term "record" to include information maintained in an electronic format. (See the discussions of these terms under Procedural Requirements, Entities Subject to the FOIA, and Procedural Requirements, "Agency Records.") Lastly, subsection (g) of the FOIA requires agencies to prepare FOIA reference guides describing their information systems and their processes of FOIA administration, as an aid to potential FOIA requesters.

As originally enacted in 1966, the FOIA contained, in the views of many, several weaknesses that detracted from its ideal operation. In response, the courts fashioned certain procedural devices, such as the requirement of a "Vaughn Index"—a detailed index of withheld documents and the justification for their exemption, established in Vaughn v. Rosen—and the requirement that agencies release segregable nonexempt portions of a partially exempt record, which was first articulated in EPA v. Mink.

In an effort to further extend the FOIA's disclosure requirements, and also as a reaction to the abuses of the "Watergate era," the FOIA was substantially amended in 1974. The 1974 FOIA amendments considerably narrowed the overall scope of the Act's law enforcement and national security exemptions, and also broadened many of its procedural provisions—such as those relating to fees, time limits, segregability, and in camera inspection by the courts. At the same time, Congress enacted the Privacy Act of 1974, which supplements the FOIA when requests are made by individuals for access to records about themselves and also contains a variety of separate privacy protections. (For an extensive discussion of the Privacy Act's provisions, see the Department of Justice's "Overview of the Privacy Act of 1974.")

In 1976, Congress again limited what could be withheld as exempt from disclosure under the FOIA, this time by narrowing the Act's incorporation of the nondisclosure provisions of other statutes. (See the discussion of Exemption 3.) A technical change was made in 1978 to update the FOIA's provision for administrative disciplinary proceedings, and in 1984 Congress repealed the expedited judicial review provision previously contained in former subsection (a)(4)(D) of the Act,

replacing it with a more general statutory provision that allows courts to expedite a FOIA lawsuit only if "good cause therefore is shown."

In 1986, after many years of administrative experience with the FOIA demonstrated that the Act was in need of both substantive and procedural reform, Congress enacted the Freedom of Information Reform Act of 1986, which amended the FOIA to provide broader exemption protection for law enforcement information, plus special law enforcement record exclusions, and also created a new fee and fee waiver structure. The Department of Justice and other federal agencies took several steps to implement the provisions of the 1986 FOIA amendments.

In 1996, after several years of legislative consideration of "electronic record" issues, Congress enacted the Electronic Freedom of Information Act Amendments of 1996, which addressed the subject of electronic records, as well as the subject areas of FOIA reading rooms and agency backlogs of FOIA requests, among other procedural provisions. (See the discussions of the various provisions of the Electronic FOIA amendments under FOIA Reading Rooms, Procedural Requirements, Fees and Fee Waivers, and Litigation Considerations.) The Department of Justice and other federal agencies have taken a number of steps to implement the provisions of the Electronic FOIA amendments.

A more recent significant Freedom of Information Act development was the issuance in October 2001 of a statement of FOIA policy by Attorney General John Ashcroft. The Ashcroft FOIA Memorandum emphasizes the Bush Administration's commitment to full compliance with the FOIA as an important means of maintaining an open and accountable system of government. At the same time, it recognizes the importance of protecting the sensitive institutional, commercial, and personal interests that can be implicated in government records—such as the need to safeguard national security, to enhance law enforcement effectiveness, to respect business confidentiality, to protect internal agency deliberations, and to preserve personal privacy.

The Ashcroft FOIA Memorandum establishes a "sound legal basis" standard governing the Department of Justice's decisions on whether to defend agency actions under the FOIA when they are challenged in court. Under this newer standard, agencies should reach the judgment that their use of a FOIA exemption is on sound footing, both factually and legally, whenever they withhold requested information. The Ashcroft FOIA Memorandum also recognizes the continued agency practice of considering whether to make "discretionary disclosures" of information that is exempt under the Act, upon "full and deliberate consideration" of all interests involved. While it places particular emphasis on the right to privacy among the other interests that are protected by the Act's exemptions, it reminds agencies "to carefully consider the protection of all such values and interests when making disclosure determinations under the FOIA."

Most recently, the FOIA was amended by the Intelligence Authorization Act of 2003, effective as of November 27, 2002. The FOIA now contains language that precludes agencies of the "intelligence community" from disclosing records in response to any FOIA request that is made by any foreign government or international governmental organization, either directly or through a representative. Significantly, this is the first time that Congress has departed from the general rule that "any person" may submit a FOIA request. It is perhaps part and parcel of heightened concerns about national security and now also homeland security in the wake of the horrific attacks of September 11, 2001, and the growth of both worldwide and domestic terrorism. (See the discussions of these concerns under Exemption 1, Homeland Security-Related Information, below, and Exemption 2, Homeland Security-Related Information.)

In sum, the FOIA is a vital and continuously developing government disclosure mechanism which, with refinements over time to accommodate both technological advancements and society's maturing interests in an open and fully responsible government, truly enhances our democratic way of life.

Reporter's Privilege to Withhold Information

Branzburg v. Hayes *(1972)*

Introduction

Paul Branzburg wrote investigative pieces for the *Louisville Courier-Journal* in 1969 and 1971 where he gave first-hand accounts of illegal drug activities. He then battled two separate grand jury orders to reveal the identities of his sources. Branzburg lost his fight at both the state appellate level and in a tight 5-4 decision at the Supreme Court. But a rare, landmark dissenting opinion turned *Branzburg v. Hayes* into a qualified victory—as well as a clear defeat—for the right of journalists to protect their confidential sources in court.

The plight of two other journalists, who had also defied grand juries in a similar fashion, was bundled into the Branzburg case. Justice Byron White wrote a majority opinion that specifically rejected the First Amendment as a buffer against compelling journalists to testify in criminal cases in front of a grand jury. White believed the Court could not ascribe to the idea that "it is better to write about crime than to do something about it." He also gave little credence to the notion that reporter testimony would stifle the cooperation of news sources down the line. Yet, White said that there was some merit to First Amendment protection of confidential sources, and legislatures rather than courts should be deciding on reporter privilege in this area.

Justice Potter Stewart wrote a dissenting opinion that spelled out the parameters for journalists to have a somewhat limited right to protect sources. Stewart said a First Amendment privilege for reporters to refuse to testify should be guaranteed except where the government met a "heavy burden of justification" to suggest otherwise. Stewart's *Branzburg* Test required officials to show: probable cause to believe that a reporter has information clearly relevant to a specific violation of law, the information sought cannot be obtained by alternate means less destructive of the First Amendment values, a compelling and overriding interest in the information. Lower courts have demonstrated a tendency to apply Stewart's limited privilege test when grand juries don't come into play, and White's call for legislators to handle reporter-source protection issues has helped lay the groundwork for shield laws in more than 30 states.

U.S. Supreme Court
***Branzburg v. Hayes*, 408 U.S. 665 (1972)**

No. 70-85
Argued February 23, 1972
Decided June 29, 1972

Opinion of the Court by MR. JUSTICE WHITE, announced by THE CHIEF JUSTICE.

The issue in these cases is whether requiring newsmen to appear and testify before state or federal grand juries abridges the freedom of speech and press guaranteed by the First Amendment. We hold that it does not.

I

The writ of certiorari in No. 70-85, Branzburg v. Hayes and Meigs, brings before us two judgments of the Kentucky Court of Appeals, both involving petitioner Branzburg, a staff reporter for the Courier-Journal, a daily newspaper published in Louisville, Kentucky.

On November 15, 1969, the Courier-Journal carried a story under petitioner's by-line describing in detail his observations of two young residents of Jefferson County synthesizing hashish from marihuana, an activity which, they asserted, earned them about $5,000 in three weeks. The article included a photograph of a pair of hands working above a laboratory table on which was a substance identified by the caption as hashish. The article stated that petitioner had promised not to [408 U.S. 665, 668] reveal the identity of the two hashish makers. Petitioner was shortly subpoenaed by the Jefferson County grand jury; he appeared, but refused to identify the individuals he had seen possessing marihuana or the persons he had seen making hashish from marihuana. A state trial court judge ordered petitioner to answer these questions and rejected his contention that the Kentucky reporters' privilege statute, Ky. Rev. Stat. 421.100 (1962), the First Amendment of the United States Constitution, or 1, 2, and 8 of the Kentucky Constitution authorized his refusal to answer. Petitioner then sought prohibition and mandamus in the Kentucky Court of Appeals on the same grounds, but the Court of Appeals denied the petition. Branzburg v. [408 U.S. 665, 669] Pound, 461 S. W. 2d 345 (1970), as modified on denial of rehearing, Jan. 22, 1971. It held that petitioner had abandoned his First Amendment argument in a supplemental memorandum he had filed and tacitly rejected his argument based on the Kentucky Constitution. It also construed Ky. Rev. Stat. 421.100 as affording a newsman the privilege of refusing to divulge the identity of an informant who supplied him with information, but held that the statute did not permit a reporter to refuse to testify about events he had observed personally, including the identities of those persons he had observed.

The second case involving petitioner Branzburg arose out of his later story published on January 10, 1971, which described in detail the use of drugs in Frankfort, Kentucky. The article reported that in order to provide a comprehensive survey of the "drug scene" in Frankfort, petitioner had "spent two weeks interviewing several dozen drug users in the capital city" and had seen some of them smoking marihuana. A number of conversations with and observations of several unnamed drug users were recounted. Subpoenaed to appear before a Franklin County grand jury "to testify in the matter of violation of statutes concerning use and sale of drugs," petitioner Branzburg moved to quash the summons; the motion was denied, although [408 U.S. 665, 670] an order was issued protecting Branzburg from revealing "confidential associations, sources or information" but requiring that he "answer any questions which concern or pertain to any criminal act, the commission of which was actually observed by [him]." Prior to the time he was slated to appear before the grand jury, petitioner sought mandamus and prohibition from the Kentucky Court of Appeals, arguing that if he were forced to go before the grand jury or to answer questions regarding the identity of informants or disclose information given to him in confidence, his effectiveness as a reporter would be greatly damaged. The Court of Appeals once again denied the requested writs, reaffirming its construction of Ky. Rev. Stat. 421.100, and rejecting petitioner's claim of a First Amendment privilege. It distinguished Caldwell v. United States, 434 F.2d 1081 (CA9 1970), and it also announced its "misgivings" about that decision, asserting that it represented "a drastic departure from the generally recognized rule that the sources of information of a newspaper reporter are not privileged under the First Amendment." It characterized petitioner's fear that his ability to obtain [408 U.S. 665, 671] news would be destroyed as "so tenuous that it does not, in the opinion of this court, present an issue of abridgment of the freedom of the press within the meaning of that term as used in the Constitution of the United States."

Petitioner sought a writ of certiorari to review both judgments of the Kentucky Court of Appeals, and we granted the writ. 402 U.S. 942 (1971). [408 U.S. 665, 672]

In re Pappas, No. 70-94, originated when petitioner Pappas, a television newsman-photographer working out of the Providence, Rhode Island, office of a New Bedford, Massachusetts, television station, was called to New Bedford on July 30, 1970, to report on civil disorders there which involved fires and other turmoil. He intended to cover a Black Panther news conference at that group's headquarters in a boarded-up store. Petitioner found the

streets around the store barricaded, but he ultimately gained entrance to the area and recorded and photographed a prepared statement read by one of the Black Panther leaders at about 3 p. m. He then asked for and received permission to re-enter the area. Returning at about 9 o' clock, he was allowed to enter and remain inside Panther headquarters. As a condition of entry, Pappas agreed not to disclose anything he saw or heard inside the store except an anticipated police raid, which Pappas, "on his own," was free to photograph and report as he wished. Pappas stayed inside the headquarters for about three hours, but there was no police raid, and petitioner wrote no story and did not otherwise reveal what had occurred in the store while he was there. Two months later, petitioner was summoned before the Bristol [408 U.S. 665, 673] County Grand Jury and appeared, answered questions as to his name, address, employment, and what he had seen and heard outside Panther headquarters, but refused to answer any questions about what had taken place inside headquarters while he was there, claiming that the First Amendment afforded him a privilege to protect confidential informants and their information. A second summons was then served upon him, again directing him to appear before the grand jury and "to give such evidence as he knows relating to any matters which may be inquired of on behalf of the Commonwealth before…the Grand Jury." His motion to quash on First Amendment and other grounds was denied by the trial judge who, noting the absence of a statutory newsman's privilege in Massachusetts, ruled that petitioner had no constitutional privilege to refuse to divulge to the grand jury what he had seen and heard, including the identity of persons he had observed. The case was reported for decision to the Supreme Judicial Court of Massachusetts. The record there did not include a transcript of the hearing on the motion to quash, nor did it reveal the specific questions petitioner had refused to answer, the expected nature of his testimony, the nature of the grand jury investigation, or the likelihood of the grand jury's securing the information it sought from petitioner by other means. The [408 U.S. 665, 674] Supreme Judicial Court, however, took "judicial notice that in July, 1970, there were serious civil disorders in New Bedford, which involved street barricades, exclusion of the public from certain streets, fires, and similar turmoil. We were told at the arguments that there was gunfire in certain streets. We assume that the grand jury investigation was an appropriate effort to discover and indict those responsible for criminal acts." 358 Mass. 604, 607, 266 N. E. 2d 297, 299 (1971). The court then reaffirmed prior Massachusetts holdings that testimonial privileges were "exceptional" and "limited," stating that "[t]he principle that the public 'has a right to every man's evidence'" had usually been preferred, in the Commonwealth, to countervailing interests. Ibid. The court rejected the holding of the Ninth Circuit in Caldwell v. United States, supra, and "adhere[d] to the view that there exists no constitutional newsman's privilege, either qualified or absolute, to refuse to appear and testify before a court or grand jury." 358 Mass., at 612, 266 N. E. 2d, at 302-303. Any adverse effect upon the free dissemination of news by virtue of petitioner's being called to testify was deemed to be only "indirect, theoretical, and uncertain." Id., at 612, 266 N. E. 2d, at 302. The court concluded that "[t]he obligation of newsmen … is that of every citizen . . . to appear when summoned, with relevant written or other material when required, and to answer relevant and reasonable inquiries." Id., at 612, 266 N. E. 2d, at 303. The court nevertheless noted that grand juries were subject to supervision by the presiding [408 U.S. 665, 675] judge, who had the duty "to prevent oppressive, unnecessary, irrelevant, and other improper inquiry and investigation," ibid., to insure that a witness' Fifth Amendment rights were not infringed, and to assess the propriety, necessity, and pertinence of the probable testimony to the investigation in progress. The burden was deemed to be on the witness to establish the impropriety of the summons or the questions asked. The denial of the motion to quash was affirmed and we granted a writ of certiorari to petitioner Pappas. 402 U.S. 942 (1971).

United States v. Caldwell, No. 70-57, arose from subpoenas issued by a federal grand jury in the Northern District of California to respondent Earl Caldwell, a reporter for the New York Times assigned to cover the Black Panther Party and other black militant groups. A subpoena duces tecum was served on respondent on February 2, 1970, ordering him to appear before the grand jury to testify and to bring with him notes and tape recordings of interviews given him for publication by officers and spokesmen of the Black Panther Party concerning the aims, purposes, and activities of that organization. Respondent objected to the scope [408 U.S. 665,

676] of this subpoena, and an agreement between his counsel and the Government attorneys resulted in a continuance. A second subpoena, served on March 16, omitted the documentary requirement and simply ordered Caldwell "to appear…to testify before the Grand Jury." Respondent and his employer, the New York Times, moved to quash on the ground that the unlimited breadth of the subpoenas and the fact that Caldwell would have to appear in secret before the grand jury would destroy his working relationship with the Black Panther Party and "suppress vital First Amendment freedoms…by driving a wedge of distrust and silence between the news media and the militants." App. 7. Respondent argued that "so drastic an incursion upon First Amendment freedoms" should not be permitted "in the absence of a compelling governmental interest—not shown here—in requiring Mr. Caldwell's appearance before the grand jury." Ibid. The motion was supported by amicus curiae memoranda from other publishing concerns and by affidavits from newsmen asserting the unfavorable impact on news sources of requiring reporters to appear before grand juries. The Government filed three memoranda in opposition to the motion to quash, each supported by affidavits. These documents stated that the grand jury was investigating, among other things, possible violations of a number of criminal statutes, including 18 U.S.C. 871 (threats against the President), 18 U.S.C. 1751 [408 U.S. 665, 677] (assassination, attempts to assassinate, conspiracy to assassinate the President), 18 U.S.C. 231 (civil disorders), 18 U.S.C. 2101 (interstate travel to incite a riot), and 18 U.S.C. 1341 (mail frauds and swindles). It was recited that on November 15, 1969, an officer of the Black Panther Party made a publicly televised speech in which he had declared that "[w]e will kill Richard Nixon" and that this threat had been repeated in three subsequent issues of the Party newspaper. App. 66, 77. Also referred to were various writings by Caldwell about the Black Panther Party, including an article published in the New York Times on December 14, 1969, stating that "[i]n their role as the vanguard in a revolutionary struggle the Panthers have picked up guns," and quoting the Chief of Staff of the Party as declaring: "We advocate the very direct overthrow of the Government by way of force and violence. By picking up guns and moving against it because we recognize it as being oppressive and in recognizing that we know that the only solution to it is armed struggle [sic]." App. 62. The Government also stated that the Chief of Staff of the Party had been indicted by the grand jury on December 3, 1969, for uttering threats against the life of the President in violation of 18 U.S.C. 871 and that various efforts had been made to secure evidence of crimes under investigation through the immunization of persons allegedly associated with the Black Panther Party.

On April 6, the District Court denied the motion to quash, Application of Caldwell, 311 F. Supp. 358 (ND Cal. 1970), on the ground that "every person within the jurisdiction of the government" is bound to testify upon being properly summoned. Id., at 360 (emphasis in original). Nevertheless, the court accepted respondent's First Amendment arguments to the extent of issuing a protective order providing that although respondent had to divulge [408 U.S. 665, 678] whatever information had been given to him for publication, he "shall not be required to reveal confidential associations, sources or information received, developed or maintained by him as a professional journalist in the course of his efforts to gather news for dissemination to the public through the press or other news media." The court held that the First Amendment afforded respondent a privilege to refuse disclosure of such confidential information until there had been "a showing by the Government of a compelling and overriding national interest in requiring Mr. Caldwell's testimony which cannot be served by any alternative means." Id., at 362.

Subsequently, the term of the grand jury expired, a new grand jury was convened, and a new subpoena ad testificandum was issued and served on May 22, 1970. A new motion to quash by respondent and memorandum in opposition by the Government were filed, and, by stipulation of the parties, the motion was submitted on the prior record. The court denied the motion to quash, repeating the protective provisions in its prior order but this time directing Caldwell to appear before the grand jury pursuant to the May 22 subpoena. Respondent refused to appear before the grand jury, and the court issued an order to show cause why he should not be held in contempt. Upon his further refusal to go before the grand jury, respondent was ordered committed for contempt until such time as he complied with the court's order or until the expiration of the term of the grand jury. [408 U.S. 665, 679]

Respondent Caldwell appealed the contempt order, and the Court of Appeals reversed. Caldwell v. United States, 434 F.2d 1081 (CA9 1970). Viewing the issue before it as whether Caldwell was required to appear before the grand jury at all, rather than the scope of permissible interrogation, the court first determined that the First Amendment provided a qualified testimonial privilege to newsmen; in its view, requiring a reporter like Caldwell to testify would deter his informants from communicating with him in the future and would cause him to censor his writings in an effort to avoid being subpoenaed. Absent compelling reasons for requiring his testimony, he was held privileged to withhold it. The court also held, for similar First Amendment reasons, that, absent some special showing of necessity by the Government, attendance by Caldwell at a secret meeting of the grand jury was something he was privileged to refuse because of the potential impact of such an appearance on the flow of news to the public. We granted the United States' petition for certiorari. 402 U.S. 942 (1971).

II

Petitioners Branzburg and Pappas and respondent Caldwell press First Amendment claims that may be simply put: that to gather news it is often necessary to agree either not to identify the source of information published or to publish only part of the facts revealed, or both; that if the reporter is nevertheless [408 U.S. 665, 680] forced to reveal these confidences to a grand jury, the source so identified and other confidential sources of other reporters will be measurably deterred from furnishing publishable information, all to the detriment of the free flow of information protected by the First Amendment. Although the newsmen in these cases do not claim an absolute privilege against official interrogation in all circumstances, they assert that the reporter should not be forced either to appear or to testify before a grand jury or at trial until and unless sufficient grounds are shown for believing that the reporter possesses information relevant to a crime the grand jury is investigating, that the information the reporter has is unavailable from other sources, and that the need for the information is sufficiently compelling to override the claimed invasion of First Amendment interests occasioned by the disclosure. Principally relied upon are prior cases emphasizing the importance of the First Amendment guarantees to individual development and to our system of representative government, decisions requiring that official action with adverse impact on First Amendment rights be justified by a public interest that is "compelling" or "paramount," and those precedents establishing the principle that justifiable governmental goals may not be achieved by unduly broad means having an unnecessary impact [408 U.S. 665, 681] on protected rights of speech, press, or association. The heart of the claim is that the burden on news gathering resulting from compelling reporters to disclose confidential information outweighs any public interest in obtaining the information.

We do not question the significance of free speech, press, or assembly to the country's welfare. Nor is it suggested that news gathering does not qualify for First Amendment protection; without some protection for seeking out the news, freedom of the press could be eviscerated. But these cases involve no intrusions upon speech or assembly, no prior restraint or restriction on what the press may publish, and no express or implied command that the press publish what it prefers to withhold. No exaction or tax for the privilege of publishing, and no penalty, civil or criminal, related to the content of published material is at issue here. The use of confidential sources by the press is not forbidden or restricted; reporters remain free to seek news from [408 U.S. 665, 682] any source by means within the law. No attempt is made to require the press to publish its sources of information or indiscriminately to disclose them on request.

The sole issue before us is the obligation of reporters to respond to grand jury subpoenas as other citizens do and to answer questions relevant to an investigation into the commission of crime. Citizens generally are not constitutionally immune from grand jury subpoenas; and neither the First Amendment nor any other constitutional provision protects the average citizen from disclosing to a grand jury information that he has received in confidence. The claim is, however, that reporters are exempt from these obligations because if forced to respond to subpoenas and identify their sources or disclose other confidences, their informants will

refuse or be reluctant to furnish newsworthy information in the future. This asserted burden on news gathering is said to make compelled testimony from newsmen constitutionally suspect and to require a privileged position for them.

It is clear that the First Amendment does not invalidate every incidental burdening of the press that may result from the enforcement of civil or criminal statutes of general applicability. Under prior cases, otherwise valid laws serving substantial public interests may be enforced against the press as against others, despite [408 U.S. 665, 683] the possible burden that may be imposed. The Court has emphasized that "[t]he publisher of a newspaper has no special immunity from the application of general laws. He has no special privilege to invade the rights and liberties of others." Associated Press v. NLRB, 301 U.S. 103, 132-133 (1937). It was there held that the Associated Press, a news-gathering and disseminating organization, was not exempt from the requirements of the National Labor Relations Act. The holding was reaffirmed in Oklahoma Press Publishing Co. v. Walling, 327 U.S. 186, 192-193 (1946), where the Court rejected the claim that applying the Fair Labor Standards Act to a newspaper publishing business would abridge the freedom of press guaranteed by the First Amendment. See also Mabee v. White Plains Publishing Co., 327 U.S. 178 (1946). Associated Press v. United States, 326 U.S. 1 (1945), similarly overruled assertions that the First Amendment precluded application of the Sherman Act to a news-gathering and disseminating organization. Cf. Indiana Farmer's Guide Publishing Co. v. Prairie Farmer Publishing Co., 293 U.S. 268, 276 (1934); Citizen Publishing Co. v. United States, 394 U.S. 131, 139 (1969); Lorain Journal Co. v. United States, 342 U.S. 143, 155-156 (1951). Likewise, a newspaper may be subjected to nondiscriminatory forms of general taxation. Grosjean v. American Press Co., 297 U.S. 233, 250 (1936); Murdock v. Pennsylvania, 319 U.S. 105, 112 (1943).

The prevailing view is that the press is not free to publish with impunity everything and anything it desires to publish. Although it may deter or regulate what is said or published, the press may not circulate knowing or reckless falsehoods damaging to private reputation without subjecting itself to liability for damages, including punitive damages, or even criminal prosecution. See New York Times Co. v. Sullivan, 376 U.S. 254 , [408 U.S. 665, 684] 279-280 (1964); Garrison v. Louisiana, 379 U.S. 64, 74 (1964); Curtis Publishing Co. v. Butts, 388 U.S. 130, 147 (1967) (opinion of Harlan, J.,); Monitor Patriot Co. v. Roy, 401 U.S. 265, 277 (1971). A newspaper or a journalist may also be punished for contempt of court, in appropriate circumstances. Craig v. Harney, 331 U.S. 367, 377-378 (1947).

It has generally been held that the First Amendment does not guarantee the press a constitutional right of special access to information not available to the public generally. Zemel v. Rusk, 381 U.S. 1, 16-17 (1965); New York Times Co. v. United States, 403 U.S. 713, 728-730 (1971), (STEWART, J., concurring); Tribune Review Publishing Co. v. Thomas, 254 F.2d 883, 885 (CA3 1958); In the Matter of United Press Assns. v. Valente, 308 N. Y. 71, 77, 123 N. E. 2d 777, 778 (1954). In Zemel v. Rusk, supra, for example, the Court sustained the Government's refusal to validate passports to Cuba even though that restriction "render[ed] less than wholly free the flow of information concerning that country." Id., at 16. The ban on travel was held constitutional, for "[t]he right to speak and publish does not carry with it the unrestrained right to gather information." Id., at 17.

Despite the fact that news gathering may be hampered, the press is regularly excluded from grand jury proceedings, our own conferences, the meetings of other official bodies gathered in executive session, and the meetings of private organizations. Newsmen have no constitutional right of access to the scenes of crime or [408 U.S. 665, 685] disaster when the general public is excluded, and they may be prohibited from attending or publishing information about trials if such restrictions are necessary to assure a defendant a fair trial before an impartial tribunal. In Sheppard v. Maxwell, 384 U.S. 333 (1966), for example, the Court reversed a state court conviction where the trial court failed to adopt "stricter rules governing the use of the courtroom by newsmen, as Sheppard's counsel requested," neglected to insulate witnesses from the press, and made no "effort to control the release of leads, information, and gossip to the press by police officers, witnesses, and the counsel for both sides." Id., at 358, 359. "[T]he trial court might well have proscribed extrajudicial statements by any lawyer, party, witness, or court official which divulged

prejudicial matters." Id., at 361. See also Estes v. Texas, 381 U.S. 532, 539-540 (1965); Rideau v. Louisiana, 373 U.S. 723, 726 (1963).

It is thus not surprising that the great weight of authority is that newsmen are not exempt from the normal duty of appearing before a grand jury and answering questions relevant to a criminal investigation. At common law, courts consistently refused to recognize the existence of any privilege authorizing a newsman to refuse to reveal confidential information to a grand jury. See, e.g., Ex parte Lawrence, 116 Cal. 298, 48 P. 124 (1897); Plunkett v. Hamilton, 136 Ga. 72, 70 S. E. 781 (1911); Clein v. State 52 So.2d 117 (Fla. 1950); In re Grunow, 84 N. J. L. 235, 85 A. 1011 (1913); People ex rel. Mooney v. Sheriff, 269 N. Y. 291, 199 N. E. 415 (1936); Joslyn v. People, 67 Colo. 297, 184 P. 375 (1919); Adams v. Associated Press, 46 F. R. D. 439 (SD Tex. 1969); Brewster v. Boston Herald-Traveler Corp., 20 F. R. D. 416 (Mass. 1957). See generally Annot., 7 A. L. R. 3d 591 (1966). In 1958, a news gatherer asserted for the first time that the First Amendment [408 U.S. 665, 686] exempted confidential information from public disclosure pursuant to a subpoena issued in a civil suit, Garland v. Torre, 259 F.2d 545 (CA2), cert. denied, 358 U.S. 910 (1958), but the claim was denied, and this argument has been almost uniformly rejected since then, although there are occasional dicta that, in circumstances not presented here, a newsman might be excused. In re Goodfader, 45 Haw. 317, 367 P.2d 472 (1961); In re Taylor, 412 Pa. 32, 193 A. 2d 181 (1963); State v. Buchanan, 250 Ore. 244, 436 P.2d 729, cert. denied, 392 U.S. 905 (1968); Murphy v. Colorado (No. 19604, Sup. Ct. Colo.), cert. denied, 365 U.S. 843 (1961) (unreported, discussed in In re Goodfader, supra, at 366, 367 P.2d, at 498 (Mizuha, J., dissenting)). These courts have applied the presumption against the existence of an asserted testimonial privilege, United States v. Bryan, 339 U.S. 323, 331 (1950), and have concluded that the First Amendment interest asserted by the newsman was outweighed by the general obligation of a citizen to appear before a grand jury or at trial, pursuant to a subpoena, and give what information he possesses. The opinions of the state courts in Branzburg and Pappas are typical of the prevailing view, although a few recent cases, such as Caldwell, have recognized and given effect to some form of constitutional newsman's privilege. See State v. Knops, 49 Wis. 2d 647, 183 N. W. 2d 93 (1971) (dictum); Alioto v. Cowles Communications, Inc., C. A. No. 52150 (ND Cal. 1969); In re Grand Jury Witnesses, 322 F. Supp. 573 (ND Cal. 1970); People v. Dohrn, Crim. No. 69-3808 (Cook County, Ill., Cir. Ct. 1970).

The prevailing constitutional view of the newsman's privilege is very much rooted in the ancient role of the grand jury that has the dual function of determining if there is probable cause to believe that a crime has been committed and of protecting citizens against unfounded [408 U.S. 665, 687] criminal prosecutions. Grand jury proceedings are constitutionally mandated for the institution of federal criminal prosecutions for capital or other serious crimes, and "its constitutional prerogatives are rooted in long centuries of Anglo-American history." Hannah v. Larche, 363 U.S. 420, 489-490 (1960) (Frankfurter, J., concurring in result). The Fifth Amendment provides that "[n]o person shall be held to answer for a capital, or otherwise infamous crime, unless on a presentment or indictment of a Grand Jury." The adoption of the grand jury "in our Constitution as the sole method for preferring charges in serious criminal cases shows the high place it held as an instrument of justice." Costello v. United States, 350 U.S. 359, 362 (1956). Although state systems of criminal procedure differ greatly among themselves, the grand jury is similarly guaranteed by many state constitutions and plays an important role in fair and effective law enforcement in the overwhelming [408 U.S. 665, 688] majority of the States. Because its task is to inquire into the existence of possible criminal conduct and to return only well-founded indictments, its investigative powers are necessarily broad. "It is a grand inquest, a body with powers of investigation and inquisition, the scope of whose inquiries is not to be limited narrowly by questions of propriety or forecasts of the probable result of the investigation, or by doubts whether any particular individual will be found properly subject to an accusation of crime." Blair v. United States, 250 U.S. 273, 282 (1919). Hence, the grand jury's authority to subpoena witnesses is not only historic, id., at 279-281, but essential to its task. Although the powers of the grand jury are not unlimited and are subject to the supervision of a judge, the longstanding principle that "the public …has a right to every man's evidence," except for those persons protected by a

constitutional, common-law, or statutory privilege, United States v. Bryan, 339 U.S., at 331 ; Blackmer v. United States, 284 U.S. 421, 438 (1932); 8 J. Wigmore, Evidence 2192 (McNaughton rev. 1961), is particularly applicable to grand jury proceedings. [408 U.S. 665, 689]

A number of States have provided newsmen a statutory privilege of varying breadth, but the majority have not done so, and none has been provided by federal statute. Until now the only testimonial privilege for unofficial witnesses that is rooted in the Federal Constitution [408 U.S. 665, 690] is the Fifth Amendment privilege against compelled self-incrimination. We are asked to create another by interpreting the First Amendment to grant newsmen a testimonial privilege that other citizens do not enjoy. This we decline to do. Fair and effective law enforcement aimed at providing security for the person and property of the individual is a fundamental function of government, and the grand jury plays an important, constitutionally mandated role in this process. On the records now before us, we perceive no basis for holding that the public interest in law enforcement and in ensuring effective grand jury proceedings is insufficient to override the consequential, but uncertain, burden on news gathering that is said to result from insisting that reporters, like other citizens, respond to relevant [408 U.S. 665, 691] questions put to them in the course of a valid grand jury investigation or criminal trial.

This conclusion itself involves no restraint on what newspapers may publish or on the type or quality of information reporters may seek to acquire, nor does it threaten the vast bulk of confidential relationships between reporters and their sources. Grand juries address themselves to the issues of whether crimes have been committed and who committed them. Only where news sources themselves are implicated in crime or possess information relevant to the grand jury's task need they or the reporter be concerned about grand jury subpoenas. Nothing before us indicates that a large number or percentage of all confidential news sources falls into either category and would in any way be deterred by our holding that the Constitution does not, as it never has, exempt the newsman from performing the citizen's normal duty of appearing and furnishing information relevant to the grand jury's task.

The preference for anonymity of those confidential informants involved in actual criminal conduct is presumably a product of their desire to escape criminal prosecution, and this preference, while understandable, is hardly deserving of constitutional protection. It would be frivolous to assert—and no one does in these cases—that the First Amendment, in the interest of securing news or otherwise, confers a license on either the reporter or his news sources to violate valid criminal laws. Although stealing documents or private wiretapping could provide newsworthy information, neither reporter nor source is immune from conviction for such conduct, whatever the impact on the flow of news. Neither is immune, on First Amendment grounds, from testifying against the other, before the grand jury or at a criminal trial. The Amendment does not reach so far as to override the interest of the public in ensuring [408 U.S. 665, 692] that neither reporter nor source is invading the rights of other citizens through reprehensible conduct forbidden to all other persons. To assert the contrary proposition.

> "is to answer it, since it involves in its very statement the contention that the freedom of the press is the freedom to do wrong with impunity and implies the right to frustrate and defeat the discharge of those governmental duties upon the performance of which the freedom of all, including that of the press, depends. . . . It suffices to say that, however complete is the right of the press to state public things and discuss them, that right, as every other right enjoyed in human society, is subject to the restraints which separate right from wrong-doing." Toledo Newspaper Co. v. United States, 247 U.S. 402, 419-420 (1918).

Thus, we cannot seriously entertain the notion that the First Amendment protects a newsman's agreement to conceal the criminal conduct of his source, or evidence thereof, on the theory that it is better to write about crime than to do something about it. Insofar as any reporter in these cases undertook not to reveal or testify about the crime he witnessed, his claim of privilege under the First Amendment presents no substantial question. The crimes of news sources are no less reprehensible and threatening to the public interest when

witnessed by a reporter than when they are not. [408 U.S. 665, 693]

There remain those situations where a source is not engaged in criminal conduct but has information suggesting illegal conduct by others. Newsmen frequently receive information from such sources pursuant to a tacit or express agreement to withhold the source's name and suppress any information that the source wishes not published. Such informants presumably desire anonymity in order to avoid being entangled as a witness in a criminal trial or grand jury investigation. They may fear that disclosure will threaten their job security or personal safety or that it will simply result in dishonor or embarrassment.

The argument that the flow of news will be diminished by compelling reporters to aid the grand jury in a criminal investigation is not irrational, nor are the records before us silent on the matter. But we remain unclear how often and to what extent informers are actually deterred from furnishing information when newsmen are forced to testify before a grand jury. The available data indicate that some newsmen rely a great deal on confidential sources and that some informants are particularly sensitive to the threat of exposure and may be silenced if it is held by this Court that, ordinarily, newsmen must testify pursuant to subpoenas, but the evidence fails to demonstrate that there would be a significant constriction of the flow of news to the public if this Court reaffirms the prior common-law and constitutional rule regarding the testimonial obligations of newsmen. Estimates of the inhibiting effect of such subpoenas on the willingness of informants to make disclosures to newsmen are widely divergent and [408 U.S. 665, 694] to a great extent speculative. It would be difficult to canvass the views of the informants themselves; surveys of reporters on this topic are chiefly opinions of predicted informant behavior and must be viewed in the light of the professional self-interest of the interviewees. Reliance by the press on confidential informants does not mean that all such sources will in fact dry up because of the later possible appearance of the newsman before a grand jury. The reporter may never be called and if he objects to testifying, the prosecution may not insist. Also, the relationship of many informants to the press is a symbiotic one which is unlikely to be greatly inhibited by the threat of subpoena: quite often, such informants are members of a minority political or cultural group that [408 U.S. 665, 695] relies heavily on the media to propagate its views, publicize its aims, and magnify its exposure to the public. Moreover, grand juries characteristically conduct secret proceedings, and law enforcement officers are themselves experienced in dealing with informers, and have their own methods for protecting them without interference with the effective administration of justice. There is little before us indicating that informants whose interest in avoiding exposure is that it may threaten job security, personal safety, or peace of mind, would in fact be in a worse position, or would think they would be, if they risked placing their trust in public officials as well as reporters. We doubt if the informer who prefers anonymity but is sincerely interested in furnishing evidence of crime will always or very often be deterred by the prospect of dealing with those public authorities characteristically charged with the duty to protect the public interest as well as his.

Accepting the fact, however, that an undetermined number of informants not themselves implicated in crime will nevertheless, for whatever reason, refuse to talk to newsmen if they fear identification by a reporter in an official investigation, we cannot accept the argument that the public interest in possible future news about crime from undisclosed, unverified sources must take precedence over the public interest in pursuing and prosecuting those crimes reported to the press by informants and in thus deterring the commission of such crimes in the future.

We note first that the privilege claimed is that of the reporter, not the informant, and that if the authorities independently identify the informant, neither his own reluctance to testify nor the objection of the newsman would shield him from grand jury inquiry, whatever the impact on the flow of news or on his future usefulness as a secret source of information. More important, [408 U.S. 665, 696] it is obvious that agreements to conceal information relevant to commission of crime have very little to recommend them from the standpoint of public policy. Historically, the common law recognized a duty to raise the "hue and cry" and report felonies to the authorities. Misprision of a felony—that is, the concealment of a felony "which a man knows, but never assented to . . . [so as to become]

either principal or accessory," 4 W. Blackstone, Commentaries *121, was often said to be a common-law crime. The first Congress passed a statute, 1 Stat. 113, 6, as amended, Stat. 1114, 146, 62 Stat. 684, which is still in effect, defining a federal crime of misprision:

> "Whoever, having knowledge of the actual commission of a felony cognizable by a court of the United States, conceals and does not as soon as possible make known the same to some judge or other person in civil or military authority under the United States, shall be [guilty of misprision]". 18 U.S.C. 4. [408 U.S. 665, 697]

It is apparent from this statute, as well as from our history and that of England, that concealment of crime and agreements to do so are not looked upon with favor. Such conduct deserves no encomium, and we decline now to afford it First Amendment protection by denigrating the duty of a citizen, whether reporter or informer, to respond to grand jury subpoena and answer relevant questions put to him.

Of course, the press has the right to abide by its agreement not to publish all the information it has, but the right to withhold news is not equivalent to a First Amendment exemption from the ordinary duty of all other citizens to furnish relevant information to a grand jury performing an important public function. Private restraints on the flow of information are not so favored by the First Amendment that they override all other public interests. As Mr. Justice Black declared in another context, "[f]reedom of the press from governmental interference under the First Amendment does not sanction repression of that freedom by private interests." Associated Press v. United States, 326 U.S., at 20.

Neither are we now convinced that a virtually impenetrable constitutional shield, beyond legislative or judicial control, should be forged to protect a private system of informers operated by the press to report on criminal conduct, a system that would be unaccountable to the public, would pose a threat to the citizen's justifiable expectations of privacy, and would equally protect well-intentioned informants and those who for pay or otherwise betray their trust to their employer or associates. The public through its elected and appointed [408 U.S. 665, 698] law enforcement officers regularly utilizes informers, and in proper circumstances may assert a privilege against disclosing the identity of these informers. But

> "[t]he purpose of the privilege is the furtherance and protection of the public interest in effective law enforcement. The privilege recognizes the obligation of citizens to communicate their knowledge of the commission of crimes to law-enforcement officials and, by preserving their anonymity, encourages them to perform that obligation." Roviaro v. United States, 353 U.S. 53, 59 (1957).

Such informers enjoy no constitutional protection. Their testimony is available to the public when desired by grand juries or at criminal trials; their identity cannot be concealed from the defendant when it is critical to his case. Id., at 60-61, 62; McCray v. Illinois, 386 U.S. 300, 310 (1967); Smith v. Illinois, 390 U.S. 129, 131 (1968); Alford v. United States, 282 U.S. 687, 693 (1931). Clearly, this system is not impervious to control by the judiciary and the decision whether to unmask an informer or to continue to profit by his anonymity is in public, not private, hands. We think that it should remain there and that public authorities should retain the options of either insisting on the informer's testimony relevant to the prosecution of crime or of seeking the benefit of further information that his exposure might prevent.

We are admonished that refusal to provide a First Amendment reporter's privilege will undermine the freedom of the press to collect and disseminate news. But this is not the lesson history teaches us. As noted previously, the common law recognized no such privilege, and the constitutional argument was not even asserted until 1958. From the beginning of our country the press has operated without constitutional protection [408 U.S. 665, 699] for press informants, and the press has flourished. The existing constitutional rules have not been a serious obstacle to either the development or retention of confidential news sources by the press.

It is said that currently press subpoenas have multiplied, that mutual distrust and tension between press and officialdom have increased, that reporting styles have changed, and that there is now more need for confidential sources, particularly where the press seeks news about minority

cultural and political groups or dissident organizations suspicious of the law and public officials. These developments, even if true, are treacherous grounds for a far-reaching interpretation of the First Amendment fastening a nationwide rule on courts, grand juries, and prosecuting officials everywhere. The obligation to testify in response to grand jury subpoenas will not threaten these sources not involved with criminal conduct and without information relevant to grand jury investigations, and we cannot hold that the Constitution places the sources in these two categories either above the law or beyond its reach.

The argument for such a constitutional privilege rests heavily on those cases holding that the infringement of protected First Amendment rights must be no broader than necessary to achieve a permissible governmental purpose, see cases cited at n. 19, supra. We do not deal, however, with a governmental institution that has abused [408 U.S. 665, 700] its proper function, as a legislative committee does when it "expose[s] for the sake of exposure." Watkins v. United States, 354 U.S. 178, 200 (1957). Nothing in the record indicates that these grand juries were "prob[ing] at will and without relation to existing need." DeGregory v. Attorney General of New Hampshire, 383 U.S. 825, 829 (1966). Nor did the grand juries attempt to invade protected First Amendment rights by forcing wholesale disclosure of names and organizational affiliations for a purpose that was not germane to the determination of whether crime has been committed, cf. NAACP v. Alabama, 357 U.S. 449 (1958); NAACP v. Button, 371 U.S. 415 (1963); Bates v. Little Rock, 361 U.S. 516 (1960), and the characteristic secrecy of grand jury proceedings is a further protection against the undue invasion of such rights. See Fed. Rule Crim. Proc. 6 (e). The investigative power of the grand jury is necessarily broad if its public responsibility is to be adequately discharged. Costello v. United States, 350 U.S., at 364.

The requirements of those cases, see n. 18, supra, which hold that a State's interest must be "compelling" or "paramount" to justify even an indirect burden on First Amendment rights, are also met here. As we have indicated, the investigation of crime by the grand jury implements a fundamental governmental role of securing the safety of the person and property of the citizen, and it appears to us that calling reporters to give testimony in the manner and for the reasons that other citizens are called "bears a reasonable relationship to the achievement of the governmental purpose asserted as its justification." Bates v. Little Rock, supra, at 525. If the test is that the government "convincingly show a substantial relation between the information sought and a subject of overriding and compelling state interest," Gibson v. Florida Legislative Investigation Committee, [408 U.S. 665, 701] 372 U.S. 539, 546 (1963), it is quite apparent (1) that the State has the necessary interest in extirpating the traffic in illegal drugs, in forestalling assassination attempts on the President, and in preventing the community from being disrupted by violent disorders endangering both persons and property; and (2) that, based on the stories Branzburg and Caldwell wrote and Pappas' admitted conduct, the grand jury called these reporters as they would others—because it was likely that they could supply information to help the government determine whether illegal conduct had occurred and, if it had, whether there was sufficient evidence to return an indictment.

Similar considerations dispose of the reporters' claims that preliminary to requiring their grand jury appearance, the State must show that a crime has been committed and that they possess relevant information not available from other sources, for only the grand jury itself can make this determination. The role of the grand jury as an important instrument of effective law enforcement necessarily includes an investigatory function with respect to determining whether a crime has been committed and who committed it. To this end it must call witnesses, in the manner best suited to perform its task. "When the grand jury is performing its investigatory function into a general problem area . . . society's interest is best served by a thorough and extensive investigation." Wood v. Georgia, 370 U.S. 375, 392 (1962). A grand jury investigation "is not fully carried out until every available clue has been run down and all witnesses examined in every proper way to find if a crime has been committed." United States v. Stone, 429 F.2d 138, 140 (CA2 1970). Such an investigation may be triggered by tips, rumors, evidence proffered by the prosecutor, or the personal knowledge of the grand jurors. Costello v. United States, 350 U.S., at 362. It is [408 U.S. 665, 702] only after the grand jury

has examined the evidence that a determination of whether the proceeding will result in an indictment can be made.

> "It is impossible to conceive that in such cases the examination of witnesses must be stopped until a basis is laid by an indictment formally preferred, when the very object of the examination is to ascertain who shall be indicted." Hale v. Henkel, 201 U.S. 43, 65 (1906).

See also Hendricks v. United States, 223 U.S. 178 (1912); Blair v. United States, 250 U.S., at 282-283. We see no reason to hold that these reporters, any more than other citizens, should be excused from furnishing information that may help the grand jury in arriving at its initial determinations.

The privilege claimed here is conditional, not absolute; given the suggested preliminary showings and compelling need, the reporter would be required to testify. Presumably, such a rule would reduce the instances in which reporters could be required to appear, but predicting in advance when and in what circumstances they could be compelled to do so would be difficult. Such a rule would also have implications for the issuance of compulsory process to reporters at civil and criminal trials and at legislative hearings. If newsmen's confidential sources are as sensitive as they are claimed to be, the prospect of being unmasked whenever a judge determines the situation justifies it is hardly a satisfactory solution to the problem. For them, it would appear that only an absolute privilege would suffice. [408 U.S. 665, 703]

We are unwilling to embark the judiciary on a long and difficult journey to such an uncertain destination. The administration of a constitutional newsman's privilege [408 U.S. 665, 704] would present practical and conceptual difficulties of a high order. Sooner or later, it would be necessary to define those categories of newsmen who qualified for the privilege, a questionable procedure in light of the traditional doctrine that liberty of the press is the right of the lonely pamphleteer who uses carbon paper or a mimeograph just as much as of the large metropolitan publisher who utilizes the latest photocomposition methods. Cf. In re Grand Jury Witnesses, 322 F. Supp. 573, 574 (ND Cal. 1970). Freedom of the press is a "fundamental personal right" which "is not confined to newspapers and periodicals. It necessarily embraces pamphlets and leaflets.... The press in its historic connotation comprehends every sort of publication which affords a vehicle of information and opinion." Lovell v. Griffin, 303 U.S. 444, 450 , 452 (1938). See also Mills [408 U.S. 665, 705] v. Alabama, 384 U.S. 214, 219 (1966); Murdock v. Pennsylvania, 319 U.S. 105, 111 (1943). The informative function asserted by representatives of the organized press in the present cases is also performed by lecturers, political pollsters, novelists, academic researchers, and dramatists. Almost any author may quite accurately assert that he is contributing to the flow of information to the public, that he relies on confidential sources of information, and that these sources will be silenced if he is forced to make disclosures before a grand jury.

In each instance where a reporter is subpoenaed to testify, the courts would also be embroiled in preliminary factual and legal determinations with respect to whether the proper predicate had been laid for the reporter's appearance: Is there probable cause to believe a crime has been committed? Is it likely that the reporter has useful information gained in confidence? Could the grand jury obtain the information elsewhere? Is the official interest sufficient to outweigh the claimed privilege?

Thus, in the end, by considering whether enforcement of a particular law served a "compelling" governmental interest, the courts would be inextricably involved in [408 U.S. 665, 706] distinguishing between the value of enforcing different criminal laws. By requiring testimony from a reporter in investigations involving some crimes but not in others, they would be making a value judgment that a legislature had declined to make, since in each case the criminal law involved would represent a considered legislative judgment, not constitutionally suspect, of what conduct is liable to criminal prosecution. The task of judges, like other officials outside the legislative branch, is not to make the law but to uphold it in accordance with their oaths.

At the federal level, Congress has freedom to determine whether a statutory newsman's privilege is necessary and desirable and to fashion standards and rules as narrow or broad as deemed necessary to deal with the evil discerned and, equally important, to refashion those rules as experience from time to time may dictate. There is also merit in

leaving state legislatures free, within First Amendment limits, to fashion their own standards in light of the conditions and problems with respect to the relations between law enforcement officials and press in their own areas. It goes without saying, of course, that we are powerless to bar state courts from responding in their own way and construing their own constitutions so as to recognize a newsman's privilege, either qualified or absolute.

In addition, there is much force in the pragmatic view that the press has at its disposal powerful mechanisms of communication and is far from helpless to protect itself from harassment or substantial harm. Furthermore, if what the newsmen urged in these cases is true—that law enforcement cannot hope to gain and may suffer from subpoenaing newsmen before grand juries—prosecutors will be loath to risk so much for so little. Thus, at the federal level the Attorney General has already fashioned a set of rules for federal officials in connection [408 U.S. 665, 707] with subpoenaing members of the press to testify before grand juries or at criminal trials. These rules are a major step in the direction the reporters herein desire to move. They may prove wholly sufficient to resolve the bulk of disagreements and controversies between press and federal officials.

Finally, as we have earlier indicated, news gathering is not without its First Amendment protections, and grand jury investigations if instituted or conducted other than in good faith, would pose wholly different issues for resolution under the First Amendment. Official harassment of the press undertaken not for purposes of law enforcement but to disrupt a reporter's relationship [408 U.S. 665, 708] with his news sources would have no justification. Grand juries are subject to judicial control and subpoenas to motions to quash. We do not expect courts will forget that grand juries must operate within the limits of the First Amendment as well as the Fifth.

III

We turn, therefore, to the disposition of the cases before us. From what we have said, it necessarily follows that the decision in United States v. Caldwell, No. 70-57, must be reversed. If there is no First Amendment privilege to refuse to answer the relevant and material questions asked during a good-faith grand jury investigation, then it is a fortiori true that there is no privilege to refuse to appear before such a grand jury until the Government demonstrates some "compelling need" for a newsman's testimony. Other issues were urged upon us, but since they were not passed upon by the Court of Appeals, we decline to address them in the first instance.

The decisions in No. 70-85, Branzburg v. Hayes and Branzburg v. Meigs, must be affirmed. Here, petitioner refused to answer questions that directly related to criminal conduct that he had observed and written about. The Kentucky Court of Appeals noted that marihuana is defined as a narcotic drug by statute, Ky. Rev. Stat. 218.010 (14) (1962), and that unlicensed possession or compounding of it is a felony punishable by both fine and imprisonment. Ky. Rev. Stat. 218.210 (1962). It held that petitioner "saw the commission of the statutory felonies of unlawful possession of marijuana and the unlawful conversion of it into hashish," in Branzburg v. Pound, 461 S. W. 2d, at 346. Petitioner may be presumed to have observed similar violations of the state narcotics laws during the research he did for the story that forms the basis of the subpoena in Branzburg v. Meigs. In both cases, if what petitioner wrote was true, [408 U.S. 665, 709] he had direct information to provide the grand jury concerning the commission of serious crimes.

The only question presented at the present time in In re Pappas, No. 70-94, is whether petitioner Pappas must appear before the grand jury to testify pursuant to subpoena. The Massachusetts Supreme Judicial Court characterized the record in this case as "meager," and it is not clear what petitioner will be asked by the grand jury. It is not even clear that he will be asked to divulge information received in confidence. We affirm the decision of the Massachusetts Supreme Judicial Court and hold that petitioner must appear before the grand jury to answer the questions put to him, subject, of course, to the supervision of the presiding judge as to "the propriety, purposes, and scope of the grand jury inquiry and the pertinence of the probable testimony." 358 Mass., at 614, 266 N. E. 2d, at 303-304.

So ordered.

MR. JUSTICE STEWART, with whom MR. JUSTICE BRENNAN and MR. JUSTICE MARSHALL join, dissenting.

The Court's crabbed view of the First Amendment reflects a disturbing insensitivity to the critical role of an independent press in our society. The question whether a reporter has a constitutional right to a confidential relationship with his source is of first impression here, but the principles that should guide our decision are as basic as any to be found in the Constitution. While MR. JUSTICE POWELL'S enigmatic concurring opinion gives some hope of a more flexible view in the future, the Court in these cases holds that a newsman has no First Amendment right to protect his sources when called before a grand jury. The Court thus invites state and federal authorities to undermine the historic independence of the press by attempting to annex the journalistic profession as an investigative arm of government. Not only will this decision impair performance of the press' constitutionally protected functions, but it will, I am convinced, in the long run harm rather than help the administration of justice.

I respectfully dissent.

I

The reporter's constitutional right to a confidential relationship with his source stems from the broad societal interest in a full and free flow of information to the public. It is this basic concern that underlies the Constitution's [408 U.S. 665, 726] protection of a free press, Grosjean v. American Press Co., 297 U.S. 233, 250; New York Times Co. v. Sullivan, 376 U.S. 254, 269,[1] because the guarantee is "not for the benefit of the press so much as for the benefit of all of us." Time, Inc. v. Hill, 385 U.S. 374, 389.[2]

Enlightened choice by an informed citizenry is the basic ideal upon which an open society is premised,[3] and a free press is thus indispensable to a free society. Not only does the press enhance personal self-fulfillment [408 U.S. 665, 727] by providing the people with the widest possible range of fact and opinion, but it also is an incontestable precondition of self-government. The press "has been a mighty catalyst in awakening public interest in governmental affairs, exposing corruption among public officers and employees and generally informing the citizenry of public events and occurrences . . . ." Estes v. Texas, 381 U.S. 532, 539; Mills v. Alabama, 384 U.S. 214, 219; Grosjean, supra, at 250. As private and public aggregations of power burgeon in size and the pressures for conformity necessarily mount, there is obviously a continuing need for an independent press to disseminate a robust variety of information and opinion through reportage, investigation, and criticism, if we are to preserve our constitutional tradition of maximizing freedom of choice by encouraging diversity of expression.

A

In keeping with this tradition, we have held that the right to publish is central to the First Amendment and basic to the existence of constitutional democracy. Grosjean, supra, at 250; New York Times, supra, at 270.

A corollary of the right to publish must be the right to gather news. The full flow of information to the public protected by the free-press guarantee would be severely curtailed if no protection whatever were afforded to the process by which news is assembled and disseminated. We have, therefore, recognized that there is a right to publish without prior governmental approval, Near v. Minnesota, 283 U.S. 697; New York Times Co. v. United States, 403 U.S. 713, a right to distribute information, see, e.g., Lovell v. Griffin, 303 U.S. 444, 452; Marsh v. Alabama, 326 U.S. 501; Martin v. City of Struthers, 319 U.S. 141; Grosjean, supra, and a right to receive printed matter, Lamont v. Postmaster General, 381 U.S. 301. [408 U.S. 665, 728]

No less important to the news dissemination process is the gathering of information. News must not be unnecessarily cut off at its source, for without freedom to acquire information the right to publish would be impermissibly compromised. Accordingly, a right to gather news, of some dimensions, must exist. Zemel v. Rusk, 381 U.S. 1.[4] As Madison wrote: "A popular Government, without popular information, or the means of acquiring it, is but a Prologue to a Farce or a Tragedy; or, perhaps both." 9 Writings of James Madison 103 (G. Hunt ed. 1910).

B

The right to gather news implies, in turn, a right to a confidential relationship between a reporter and his source. This proposition follows as a

matter of simple logic once three factual predicates are recognized: (1) newsmen require informants to gather news; (2) confidentiality—the promise or understanding that names or certain aspects of communications will be kept off the record—is essential to the creation and maintenance of a news-gathering relationship with informants; and (3) an unbridled subpoena power—the absence of a constitutional right protecting, in any way, a confidential relationship from compulsory process—will either deter sources from divulging information or deter reporters from gathering and publishing information. [408 U.S. 665, 729]

It is obvious that informants are necessary to the news-gathering process as we know it today. If it is to perform its constitutional mission, the press must do far more than merely print public statements or publish prepared handouts. Familiarity with the people and circumstances involved in the myriad background activities that result in the final product called "news" is vital to complete and responsible journalism, unless the press is to be a captive mouthpiece of "newsmakers."[5]

It is equally obvious that the promise of confidentiality may be a necessary prerequisite to a productive relationship between a newsman and his informants. An officeholder may fear his superior; a member of the bureaucracy, his associates; a dissident, the scorn of majority opinion. All may have information valuable to the public discourse, yet each may be willing to relate that information only in confidence to a reporter whom he trusts, either because of excessive caution or because of a reasonable fear of reprisals or censure for unorthodox [408 U.S. 665, 730] views. The First Amendment concern must not be with the motives of any particular news source, but rather with the conditions in which informants of all shades of the spectrum may make information available through the press to the public. Cf. Talley v. California, 362 U.S. 60, 65; Bates v. Little Rock, 361 U.S. 516; NAACP v. Alabama, 357 U.S. 449.[6]

In Caldwell, the District Court found that "confidential relationships . . . are commonly developed and maintained by professional journalists, and are indispensable to their work of gathering, analyzing and publishing the news."[7] Commentators and individual reporters have repeatedly noted the importance of confidentiality.[8] [408 U.S. 665, 731] And surveys among reporters and editors indicate that the promise of nondisclosure is necessary for many types of news gathering.[9]

Finally, and most important, when governmental officials possess an unchecked power to compel newsmen to disclose information received in confidence, sources will clearly be deterred from giving information, and reporters will clearly be deterred from publishing it, because uncertainty about exercise of the power will lead to "self-censorship." Smith v. California, 361 U.S. 147, 149-154; New York Times Co. v. Sullivan, 376 U.S., at 279. The uncertainty arises, of course, because the judiciary has traditionally imposed virtually no limitations on the grand jury's broad investigatory powers. See Antell, The Modern Grand Jury: Benighted Super-government, 51 A. B. A. J. 153 (1965). See also Part II, infra.

After today's decision, the potential informant can never be sure that his identity or off-the-record communications will not subsequently be revealed through the compelled testimony of a newsman. A public-spirited person inside government, who is not implicated in any crime, will now be fearful of revealing corruption or other governmental wrongdoing, because he will now know he can subsequently be identified by use of compulsory process. The potential source must, therefore, choose between risking exposure by giving information or avoiding the risk by remaining silent.

The reporter must speculate about whether contact with a controversial source or publication of controversial material will lead to a subpoena. In the event of a [408 U.S. 665, 732] subpoena, under today's decision, the newsman will know that he must choose between being punished for contempt if he refuses to testify, or violating his profession's ethics[10] and impairing his resourcefulness as a reporter if he discloses confidential information.[11]

Again, the commonsense understanding that such deterrence will occur is buttressed by concrete evidence. The existence of deterrent effects through fear and self-censorship was impressively developed in the District Court in Caldwell.[12] Individual reporters[13] and commentators[14] have noted such effects. Surveys have verified that an unbridled subpoena power will substantially [408 U.S. 665, 733] impair the flow of news to the public, especially in sensitive areas involving governmental officials, financial affairs, political figures, dissidents, or minority groups that require in-depth,

investigative reporting.[15] And the Justice Department has recognized that "compulsory process in some circumstances may have a limiting effect on the exercise of First Amendment rights."[16] No evidence contradicting the existence of such deterrent effects was offered at the trials or in the briefs here by the petitioner in Caldwell or by the respondents in Branzburg and Pappas.

The impairment of the flow of news cannot, of course, be proved with scientific precision, as the Court seems to demand. Obviously, not every news-gathering relationship requires confidentiality. And it is difficult to pinpoint precisely how many relationships do require a promise or understanding of nondisclosure. But we have never before demanded that First Amendment rights rest on elaborate empirical studies demonstrating beyond any conceivable doubt that deterrent effects exist; we have never before required proof of the exact number of people potentially affected by governmental action, who would actually be dissuaded from engaging in First Amendment activity.

Rather, on the basis of common sense and available information, we have asked, often implicitly, (1) whether there was a rational connection between the cause (the governmental action) and the effect (the deterrence or [408 U.S. 665, 734] impairment of First Amendment activity), and (2) whether the effect would occur with some regularity, i.e., would not be de minimis. See, e.g., Grosjean v. American Press Co., 297 U.S., at 244-245; Burstyn, Inc. v. Wilson, 343 U.S. 495, 503.... And, in making this determination, we have shown a special solicitude towards the "indispensable liberties" protected by the First Amendment, NAACP v. Alabama, supra, at 461; Bantam Books, Inc. v. Sullivan, 372 U.S. 58, 66, for "[f]reedoms such as these are protected not only against heavy-handed frontal attack, but also from being stifled by more subtle governmental interference." Bates, supra, at 523.[17] Once this threshold inquiry has been satisfied, we have then examined the competing interests in determining whether [408 U.S. 665, 735] there is an unconstitutional infringement of First Amendment freedoms.

For example, in NAACP v. Alabama, supra, we found that compelled disclosure of the names of those in Alabama who belonged to the NAACP "is likely to affect adversely the ability [of the NAACP] and its members to pursue their . . . beliefs which they admittedly have the right to advocate, in that it may induce members to withdraw from the Association and dissuade others from joining it because of fear of exposure of their beliefs shown through their associations and of the consequences of this exposure." Id., at 462-463. In Talley, supra, we held invalid a city ordinance that forbade circulation of any handbill that did not have the distributor's name on it, for there was "no doubt that such an identification requirement would tend to restrict freedom to distribute information and thereby freedom of expression." Id., at 64. And in Burstyn, Inc., supra, we found deterrence of First Amendment activity inherent in a censor's power to exercise unbridled discretion under an overbroad statute. Id., at 503.

Surely the analogous claim of deterrence here is as securely grounded in evidence and common sense as the claims in the cases cited above, although the Court calls the claim "speculative." See ante, at 694. The deterrence may not occur in every confidential relationship between a reporter and his source.[18] But it will certainly [408 U.S. 665, 736] occur in certain types of relationships involving sensitive and controversial matters. And such relationships are vital to the free flow of information.

To require any greater burden of proof is to shirk our duty to protect values securely embedded in the Constitution. We cannot await an unequivocal—and therefore unattainable—imprimatur from empirical studies.[19] We can and must accept the evidence developed in the record, and elsewhere, that overwhelmingly supports the premise that deterrence will occur with regularity in important types of news-gathering relationships.[20]

Thus, we cannot escape the conclusion that when neither the reporter nor his source can rely on the shield of confidentiality against unrestrained use of the grand jury's subpoena power, valuable information will not be published and the public dialogue will inevitably be impoverished.

II

Posed against the First Amendment's protection of the newsman's confidential relationships in these cases is society's interest in the use of the grand jury to administer [408 U.S. 665, 737] justice fairly and effectively. The grand jury serves

two important functions: "to examine into the commission of crimes" and "to stand between the prosecutor and the accused, and to determine whether the charge was founded upon credible testimony or was dictated by malice or personal ill will." Hale v. Henkel, 201 U.S. 43, 59. And to perform these functions the grand jury must have available to it every man's relevant evidence. See Blair v. United States, 250 U.S. 273, 281; Blackmer v. United States, 284 U.S. 421, 438.

Yet the longstanding rule making every person's evidence available to the grand jury is not absolute. The rule has been limited by the Fifth Amendment,[21] the Fourth Amendment,[22] and the evidentiary privileges of the common law.[23] So it was that in Blair, supra, after recognizing that the right against compulsory self-incrimination prohibited certain inquiries, the Court noted that "some confidential matters are shielded from considerations of policy, and perhaps in other cases for special reasons a witness may be excused from telling all that he knows." Id., at 281 (emphasis supplied). And in United States v. Bryan, 339 U.S. 323, the Court observed that any exemption from the duty to testify before the grand jury "presupposes a very real interest to be protected." Id., at 332.

Such an interest must surely be the First Amendment protection of a confidential relationship that I have discussed above in Part I. As noted there, this protection does not exist for the purely private interests of the [408 U.S. 665, 738] newsman or his informant, nor even, at bottom, for the First Amendment interests of either partner in the newsgathering relationship.[24] Rather, it functions to insure nothing less than democratic decision making through the free flow of information to the public, and it serves, thereby, to honor the "profound national commitment to the principle that debate on public issues should be uninhibited, robust, and wide-open." New York Times Co. v. Sullivan, 376 U.S., at 270.

In striking the proper balance between the public interest in the efficient administration of justice and the First Amendment guarantee of the fullest flow of information, we must begin with the basic proposition that because of their "delicate and vulnerable" nature, NAACP v. Button, 371 U.S., at 433, and their transcendent importance for the just functioning of our society, First Amendment rights require special safeguards.

A

This Court has erected such safeguards when government, by legislative investigation or other investigative means, has attempted to pierce the shield of privacy inherent in freedom of association.[25] In no previous case have we considered the extent to which the First Amendment limits the grand jury subpoena power. But the [408 U.S. 665, 739] Court has said that "[t]he Bill of Rights is applicable to investigations as to all forms of governmental action. Witnesses cannot be compelled to give evidence against themselves. They cannot be subjected to unreasonable search and seizure. Nor can the First Amendment freedoms of speech, press . . . or political belief and association be abridged." Watkins v. United States, 354 U.S. 178, 188. And in Sweezy v. New Hampshire it was stated: "It is particularly important that the exercise of the power of compulsory process be carefully circumscribed when the investigative process tends to impinge upon such highly sensitive areas as freedom of speech or press, freedom of political association, and freedom of communication of ideas." 354 U.S., at 245 (plurality opinion).

The established method of "carefully" circumscribing investigative powers is to place a heavy burden of justification on government officials when First Amendment rights are impaired. The decisions of this Court have "consistently held that only a compelling state interest in the regulation of a subject within the State's constitutional power to regulate can justify limiting First Amendment freedoms." NAACP v. Button, 371 U.S., at 438. And "it is an essential prerequisite to the validity of an investigation which intrudes into the area of constitutionally protected rights of speech, press, association and petition that the State convincingly show a substantial relation between the information sought and a subject of overriding and compelling state interest." Gibson v. Florida Legislative Investigation Committee, 372 U.S., at 546 (emphasis supplied). See also DeGregory v. Attorney General of New Hampshire, 383 U.S. 825; NAACP v. Alabama, 357 U.S. 449; Sweezy, supra; Watkins, supra.

Thus, when an investigation impinges on First Amendment rights, the government must not only show that [408 U.S. 665, 740] the inquiry is of "compelling and overriding importance" but it must also

"convincingly" demonstrate that the investigation is "substantially related" to the information sought.

Governmental officials must, therefore, demonstrate that the information sought is clearly relevant to a precisely defined subject of governmental inquiry. Watkins, supra; Sweezy, supra.[26] They must demonstrate that it is reasonable to think the witness in question has that information. Sweezy, supra; Gibson, supra.[27] And they must show that there is not any means of obtaining the information less destructive of First Amendment liberties. Shelton v. Tucker, 364 U.S., at 488; Louisiana ex rel. Gremillion v. NAACP, 366 U.S. 293, 296-297.[28]

These requirements, which we have recognized in decisions involving legislative and executive investigations, serve established policies reflected in numerous First [408 U.S. 665, 741] Amendment decisions arising in other contexts. The requirements militate against vague investigations that, like vague laws, create uncertainty and needlessly discourage First Amendment activity.[29] They also insure that a legitimate governmental purpose will not be pursued by means that "broadly stifle fundamental personal liberties when the end can be more narrowly achieved." Shelton, supra, at 488.[30] As we said in Gibson, supra, "Of course, a legislative investigation—as any investigation—must proceed 'step by step,'...but step by step or in totality, an adequate foundation for inquiry must be laid before proceeding in such a manner as will substantially intrude upon and severely curtail or inhibit constitutionally protected activities or seriously interfere with similarly protected associational rights." 372 U.S., at 557.

I believe the safeguards developed in our decisions involving governmental investigations must apply to the grand jury inquiries in these cases. Surely the function of the grand jury to aid in the enforcement of the law is no more important than the function of the legislature, and its committees, to make the law. We have long recognized the value of the role played by legislative investigations, see, e.g., United States v. Rumely, [408 U.S. 665, 742] 345 U.S. 41, 43; Barenblatt v. United States, 360 U.S. 109, 111-112, for the "power of the Congress to conduct investigations is inherent...[encompassing] surveys of defects in our social, economic or political system for the purpose of enabling the Congress to remedy them." Watkins, supra, at 187. Similarly, the associational rights of private individuals, which have been the prime focus of our First Amendment decisions in the investigative sphere, are hardly more important than the First Amendment rights of mass circulation newspapers and electronic media to disseminate ideas and information, and of the general public to receive them. Moreover, the vices of vagueness and overbreadth that legislative investigations may manifest are also exhibited by grand jury inquiries, since grand jury investigations are not limited in scope to specific criminal acts, see, e.g., Wilson v. United States, 221 U.S. 361, Hendricks v. United States, 223 U.S. 178, 184, United States v. Johnson, 319 U.S. 503, and since standards of materiality and relevance are greatly relaxed. Holt v. United States, 218 U.S. 245; Costello v. United States, 350 U.S. 359. See generally Note, The Grand Jury as an Investigatory Body, 74 Harv. L. Rev. 590, 591-592 (1961).[31] For, as the United States notes in its brief in Caldwell, the [408 U.S. 665, 743] grand jury "need establish no factual basis for commencing an investigation, and can pursue rumors which further investigation may prove groundless."

Accordingly, when a reporter is asked to appear before a grand jury and reveal confidences, I would hold that the government must (1) show that there is probable cause to believe that the newsman has information that is clearly relevant to a specific probable violation of law;[32] (2) demonstrate that the information sought cannot be obtained by alternative means less destructive of First Amendment rights; and (3) demonstrate a compelling and overriding interest in the information.[33]

This is not to say that a grand jury could not issue a subpoena until such a showing were made, and it is not to say that a newsman would be in any way privileged to ignore any subpoena that was issued. Obviously, before the government's burden to make such a showing were triggered, the reporter would have to move to quash the subpoena, asserting the basis on which he considered the particular relationship a confidential one. [408 U.S. 665, 744]

B

The crux of the Court's rejection of any newsman's privilege is its observation that only "where news sources themselves are implicated in crime or possess information relevant to the grand jury's

task need they or the reporter be concerned about grand jury subpoenas." See ante, at 691 (emphasis supplied). But this is a most misleading construct. For it is obviously not true that the only persons about whom reporters will be forced to testify will be those "confidential informants involved in actual criminal conduct" and those having "information suggesting illegal conduct by others." See ante, at 691, 693. As noted above, given the grand jury's extraordinarily broad investigative powers and the weak standards of relevance and materiality that apply during such inquiries, reporters, if they have no testimonial privilege, will be called to give information about informants who have neither committed crimes nor have information about crime. It is to avoid deterrence of such sources and thus to prevent needless injury to First Amendment values that I think the government must be required to show probable cause that the newsman has information that is clearly relevant to a specific probable violation of criminal law.[34] [408 U.S. 665, 745]

Similarly, a reporter may have information from a confidential source that is "related" to the commission of crime, but the government may be able to obtain an indictment or otherwise achieve its purposes by subpoenaing persons other than the reporter. It is an obvious but important truism that when government aims have been fully served, there can be no legitimate reason to disrupt a confidential relationship between a reporter and his source. To do so would not aid the administration of justice and would only impair the flow of information to the public. Thus, it is to avoid deterrence of such sources that I think the government must show that there are no alternative means for the grand jury to obtain the information sought.

Both the "probable cause" and "alternative means" requirements would thus serve the vital function of mediating between the public interest in the administration of justice and the constitutional protection of the full flow of information. These requirements would avoid a direct conflict between these competing concerns, and they would generally provide adequate protection for newsmen. See Part III, infra.[35] No doubt the courts would be required to make some delicate judgments in working out this accommodation. But that, after all, [408 U.S. 665, 746] is the function of courts of law. Better such judgments, however difficult, than the simplistic and stultifying absolutism adopted by the Court in denying any force to the First Amendment in these cases.[36]

The error in the Court's absolute rejection of First Amendment interests in these cases seems to me to be most profound. For in the name of advancing the administration of justice, the Court's decision, I think, will only impair the achievement of that goal. People entrusted with law enforcement responsibility, no less than private citizens, need general information relating to controversial social problems. Obviously, press reports have great value to government, even when the newsman cannot be compelled to testify before a grand jury. The sad paradox of the Court's position is that when a grand jury may exercise an unbridled subpoena power, and sources involved in sensitive matters become fearful of disclosing information, the newsman will not only cease to be a useful grand jury witness; he will cease to investigate and publish information about issues of public import. I cannot subscribe to such an anomalous result, for, in my view, the interests protected by the First Amendment are not antagonistic to the administration of justice. Rather, they can, in the long run, only be complementary, and for that reason must be given great "breathing space." NAACP v. Button, 371 U.S., at 433.

III

In deciding what protection should be given to information a reporter receives in confidence from a news source, the Court of Appeals for the Ninth Circuit affirmed the holding of the District Court that the grand [408 U.S. 665, 747] jury power of testimonial compulsion must not be exercised in a manner likely to impair First Amendment interests "until there has been a clear showing of a compelling and overriding national interest that cannot be served by any alternative means." Caldwell v. United States, 434 F.2d 1081, 1086. It approved the request of respondent Caldwell for specification by the government of the "subject, direction or scope of the Grand Jury inquiry." Id., at 1085. And it held that in the circumstances of this case Caldwell need not divulge confidential information.

I think this decision was correct. On the record before us the United States has not met the burden that I think the appropriate newsman's privilege should require.

In affidavits before the District Court, the United States said it was investigating possible violations of 18 U.S.C. 871 (threats against the President), 18 U.S.C. 1751 (assassination, attempts to assassinate, conspiracy to assassinate the President), 18 U.S.C. 231 (civil disorders), 18 U.S.C. 2101 (interstate travel to incite a riot), 18 U.S.C. 1341 (mail fraud and swindles) and other crimes that were not specified. But, with one exception, there has been no factual showing in this case of the probable commission of, or of attempts to commit, any crimes.[37] The single exception relates to the allegation that a Black Panther Party leader, David Hilliard, violated 18 U.S.C. 871 during the course of a speech in November 1969. But Caldwell was subpoenaed two months after an indictment was returned against Hilliard, and that charge could not, subsequent to the indictment, be investigated by a grand jury. See In re National Window Glass Workers, 287 F. 219; United [408 U.S. 665, 748] States v. Dardi, 330 F.2d 316, 336.[38] Furthermore, the record before us does not show that Caldwell probably had any information about the violation of any other federal criminal laws,[39] or that alternative [408 U.S. 665, 749] means of obtaining the desired information were pursued.[40]

In the Caldwell case, the Court of Appeals further found that Caldwell's confidential relationship with the leaders of the Black Panther Party would be impaired if he appeared before the grand jury at all to answer questions, even though not privileged. Caldwell v. United States, 434 F.2d, at 1088. On the particular facts before it,[41] the court concluded that the very [408 U.S. 665, 750] appearance by Caldwell before the grand jury would jeopardize his relationship with his sources, leading to a severance of the news-gathering relationship and impairment of the flow of news to the public:[42]

> "Appellant asserted in affidavit that there is nothing to which he could testify (beyond that which he has already made public and for which, therefore, his appearance is unnecessary) that is not protected by the District Court's order. If this is true—and the Government apparently has not believed it necessary to dispute it—appellant's response to the subpoena would be a barren performance [408 U.S. 665, 751]- one of no benefit to the Grand Jury. To destroy appellant's capacity as news gatherer for such a return hardly makes sense. Since the cost to the public of excusing his attendance is so slight, it may be said that there is here no public interest of real substance in competition with the First Amendment freedoms that are jeopardized.
>
> "If any competing public interest is ever to arise in a case such as this (where First Amendment liberties are threatened by mere appearance at a Grand Jury investigation) it will be on an occasion in which the witness, armed with his privilege, can still serve a useful purpose before the Grand Jury. Considering the scope of the privilege embodied in the protective order, these occasions would seem to be unusual. It is not asking too much of the Government to show that such an occasion is presented here." Id., at 1089.

I think this ruling was also correct in light of the particularized circumstances of the Caldwell case. Obviously, only in very rare circumstances would a confidential relationship between a reporter and his source be so sensitive that mere appearance before the grand jury by the newsman would substantially impair his newsgathering function. But in this case, the reporter made out a prima facie case that the flow of news to the public would be curtailed. And he stated, without contradiction, that the only non-confidential material about which he could testify was already printed in his newspaper articles.[43] Since the United States has not attempted to [408 U.S. 665, 752] refute this assertion, the appearance of Caldwell would, on these facts, indeed be a "barren performance." But this aspect of the Caldwell judgment I would confine to its own facts. As the Court of Appeals appropriately observed: "[T]he rule of this case is a narrow one...." Caldwell, supra, at 1090.

Accordingly, I would affirm the judgment of the Court of Appeals in No. 70-57, United States v. Caldwell.[44] In the other two cases before us, No. 70-85, Branzburg v. Hayes and Meigs, and No. 70-94, In re Pappas, I would vacate the judgments and remand the cases for further proceedings not inconsistent with the views I have expressed in this opinion.

Branzburg v. Hayes, 408 U.S. 665 (1999).

Intellectual Property Protection

Eldred v. Ashcroft *(2003)*

Introduction

The U.S. Constitution guarantees the opportunity of retaining a copyright in intellectual creations by giving Congress the power to "promote the Progress of Science and the useful Arts, by securing for limited Times to Authors and Inventors the exclusive Right to their respective Writings and Discoveries." The term *limited times* suggests that the framers of the Constitution saw the need for all original copyrights to lapse at some point and fall into the public domain—a time when these works become open to use by anyone without obtaining permission from the creator. One key issue in intellectual property law revolves around what exactly the Constitution intended by the term *limited times* and what amounts to a fair duration for a creator's copyright to exist.

The creator's copyright in a work was initially limited to 14 years with the right to a 14-year renewal period by the first Congress back in 1790. Those numbers jumped to a 28-year copyright with a 28-year renewal option by 1909, and The Copyright Revision Act of 1976 dramatically upped copyright limits to the length of the creator's lifetime plus an additional 50 years. Then, almost immediately, Congress passed the Sonny Bono Copyright Extension Act in 1978 that pushed copyrights to 70 years beyond the creator's lifetime. Eric Eldred, who originally planned to put Robert Frost poems online once they fell into the public domain in 1998, challenged the Bono Act in court.

Eldred believed the Bono Act ran contrary to the Constitution's edict of *limited times* for copyrights and the First Amendment promise of free expression. In *Eldred v. Ashcroft,* Justice Ruth Bader Ginsburg wrote the majority opinion that affirmed the constitutionality of systematically prolonging the copyright period. She argued that the Constitution's *limited times* wording did not imply an inflexible amount of time and that the term had never been clearly defined. The Court also upheld the right of Congress to repeatedly extend the copyright period and keep the intent of *limited times,* so long as the copyright duration remains "confined within certain boundaries" and not endless.

ELDRED et al. v. ASHCROFT, ATTORNEY GENERAL
537 U.S. 186 (2003)

Justice Ginsburg delivered the opinion of the Court.

This case concerns the authority the Constitution assigns to Congress to prescribe the duration of copyrights. The Copyright and Patent Clause of the Constitution, Art. I, §8, cl. 8, provides as to copyrights: "Congress shall have Power . . . [t]o promote the Progress of Science . . . by securing [to Authors] for limited Times . . . the exclusive Right to their ... Writings." In 1998, in the measure here under inspection, Congress enlarged the duration of copyrights by 20 years. Copyright Term Extension Act (CTEA), Pub. L. 105-298, §102(b) and (d), 112 Stat. 2827-2828 (amending 17 U. S. C. §§302, 304). As in the case of prior extensions, principally in 1831, 1909, and 1976, Congress provided for application of the enlarged terms to existing and future copyrights alike.

Petitioners are individuals and businesses whose products or services build on copyrighted works that have gone into the public domain. They seek a determination that the CTEA fails constitutional review under both the Copyright Clause's "limited Times" prescription and the First Amendment's free speech guarantee. Under the 1976 Copyright Act, copyright protection generally lasted from the work's creation until 50 years after the author's death. Pub. L. 94-553, §302(a), 90 Stat. 2572 (1976 Act). Under the CTEA, most copyrights now run from creation until 70 years after the author's death. 17 U. S. C. §302(a). Petitioners do not challenge the "life-plus-70-years" time span itself. "Whether 50 years is enough, or 70 years too much," they acknowledge, "is not a judgment meet for this Court." Brief for Petitioners 14.[1] Congress went awry, petitioners maintain, not with respect to newly created works, but in enlarging the term for published works with existing copyrights. The "limited Tim[e]" in effect when a copyright is secured, petitioners urge, becomes the constitutional boundary, a clear line beyond the power of Congress to extend. See ibid. As to the First Amendment, petitioners contend that the CTEA is a content-neutral regulation of speech that fails inspection under the heightened judicial scrutiny appropriate for such regulations.

In accord with the District Court and the Court of Appeals, we reject petitioners' challenges to the CTEA. In that 1998 legislation, as in all previous copyright term extensions, Congress placed existing and future copyrights in parity. In prescribing that alignment, we hold, Congress acted within its authority and did not transgress constitutional limitations.

I

A

We evaluate petitioners' challenge to the constitutionality of the CTEA against the backdrop of Congress' previous exercises of its authority under the Copyright Clause. The Nation's first copyright statute, enacted in 1790, provided a federal copyright term of 14 years from the date of publication, renewable for an additional 14 years if the author survived the first term. Act of May 31, 1790, ch. 15, §1, 1 Stat. 124 (1790 Act). The 1790 Act's renewable 14-year term applied to existing works (i.e., works already published and works created but not yet published) and future works alike. Ibid. Congress expanded the federal copyright term to 42 years in 1831 (28 years from publication, renewable for an additional 14 years), and to 56 years in 1909 (28 years from publication, renewable for an additional 28 years). Act of Feb. 3, 1831, ch. 16, §§1, 16, 4 Stat. 436, 439 (1831 Act); Act of Mar. 4, 1909, ch. 320, §§23-24, 35 Stat. 1080-1081 (1909 Act). Both times, Congress applied the new copyright term to existing and future works, 1831 Act §§1, 16; 1909 Act §§23-24; to qualify for the 1831 extension, an existing work had to be in its initial copyright term at the time the Act became effective, 1831 Act §§1, 16.

In 1976, Congress altered the method for computing federal copyright terms. 1976 Act §§302-304. For works created by identified natural persons, the 1976 Act provided that federal copyright protection would run from the work's creation, not—as in the 1790, 1831, and 1909 Acts—its publication; protection would last until 50 years after the author's death. §302(a). In these respects, the 1976 Act aligned United States copyright terms with the then-dominant international standard adopted under the Berne Convention for the Protection of Literary and Artistic Works. See H. R. Rep. No. 94-1476, p. 135 (1976). For anonymous works, pseudonymous works, and works made for hire, the 1976 Act provided a term of 75 years from publication or 100 years from creation, whichever expired first. §302(c).

These new copyright terms, the 1976 Act instructed, governed all works not published by its effective date of January 1, 1978, regardless of when the works were created. §§302-303. For published works with existing copyrights as of that date, the 1976 Act granted a copyright term of 75 years from the date of publication, §304(a) and (b), a 19-year increase over the 56-year term applicable under the 1909 Act.

The measure at issue here, the CTEA, installed the fourth major duration extension of federal copyrights.[2] Retaining the general structure of the 1976 Act, the CTEA enlarges the terms of all existing and future copyrights by 20 years. For works created by identified natural persons, the term now lasts from creation until 70 years after the author's death. 17 U. S. C. §302(a). This standard harmonizes the baseline United States copyright term

with the term adopted by the European Union in 1993. See Council Directive 93/98/EEC of 29 October 1993 Harmonizing the Term of Protection of Copyright and Certain Related Rights, 1993 Official J. Eur. Cmty. 290 (EU Council Directive 93/98). For anonymous works, pseudonymous works, and works made for hire, the term is 95 years from publication or 120 years from creation, whichever expires first. 17 U. S. C. §302(c).

Paralleling the 1976 Act, the CTEA applies these new terms to all works not published by January 1, 1978. §§302(a), 303(a). For works published before 1978 with existing copyrights as of the CTEA's effective date, the CTEA extends the term to 95 years from publication. §304(a) and (b). Thus, in common with the 1831, 1909, and 1976 Acts, the CTEA's new terms apply to both future and existing copyrights.[3]

B

Petitioners' suit challenges the CTEA's constitutionality under both the Copyright Clause and the First Amendment. On cross-motions for judgment on the pleadings, the District Court entered judgment for the Attorney General (respondent here). 74 F. Supp. 2d 1 (DC 1999). The court held that the CTEA does not violate the "limited Times" restriction of the Copyright Clause because the CTEA's terms, though longer than the 1976 Act's terms, are still limited, not perpetual, and therefore fit within Congress' discretion. Id., at 3. The court also held that "there are no First Amendment rights to use the copyrighted works of others." Ibid.

The Court of Appeals for the District of Columbia Circuit affirmed. 239 F. 3d 372 (2001). In that court's unanimous view, Harper & Row, Publishers, Inc. v. Nation Enterprises, 471 U. S. 539 (1985), foreclosed petitioners' First Amendment challenge to the CTEA. 239 F. 3d, at 375. Copyright, the court reasoned, does not impermissibly restrict free speech, for it grants the author an exclusive right only to the specific form of expression; it does not shield any idea or fact contained in the copyrighted work, and it allows for "fair use" even of the expression itself. Id., at 375-376.

A majority of the Court of Appeals also upheld the CTEA against petitioners' contention that the measure exceeds Congress' power under the Copyright Clause. Specifically, the court rejected petitioners' plea for interpretation of the "limited Times" prescription not discretely but with a view to the "preambular statement of purpose" contained in the Copyright Clause: "To promote the Progress of Science." Id., at 377-378. Circuit precedent, Schnapper v. Foley, 667 F. 2d 102 (CADC 1981), the court determined, precluded that plea. In this regard, the court took into account petitioners' acknowledgment that the preamble itself places no substantive limit on Congress' legislative power. 239 F. 3d, at 378.

The appeals court found nothing in the constitutional text or its history to suggest that "a term of years for a copyright is not a 'limited Time' if it may later be extended for another 'limited Time.'" Id., at 379. The court recounted that "the First Congress made the Copyright Act of 1790 applicable to subsisting copyrights arising under the copyright laws of the several states." Ibid. That construction of Congress' authority under the Copyright Clause "by [those] contemporary with [the Constitution's] formation," the court said, merited "very great" and in this case "almost conclusive" weight. Ibid. (quoting Burrow-Giles Lithographic Co. v. Sarony, 111 U. S. 53, 57 (1884)). As early as McClurg v. Kingsland, 1 How. 202 (1843), the Court of Appeals added, this Court had made it "plain" that the same Clause permits Congress to "amplify the terms of an existing patent." 239 F. 3d, at 380. The appeals court recognized that this Court has been similarly deferential to the judgment of Congress in the realm of copyright. Ibid. (citing Sony Corp. of America v. Universal City Studios, Inc., 464 U. S. 417 (1984); Stewart v. Abend, 495 U. S. 207 (1990)).

Concerning petitioners' assertion that Congress might evade the limitation on its authority by stringing together "an unlimited number of 'limited Times,'" the Court of Appeals stated that such legislative misbehavior "clearly is not the situation before us." 239 F. 3d, at 379. Rather, the court noted, the CTEA "matches" the baseline term for "United States copyrights [with] the terms of copyrights granted by the European Union." Ibid. "[I]n an era of multinational publishers and instantaneous electronic transmission," the court said, "harmonization in this regard has obvious practical benefits" and is "a 'necessary and proper' measure to meet contemporary circumstances rather than a step on the way to making copyrights perpetual." Ibid.

Judge Sentelle dissented in part. He concluded that Congress lacks power under the Copyright Clause to expand the copyright terms of existing works. Id., at 380-384. The Court of Appeals subsequently denied rehearing and rehearing en banc. 255 F. 3d 849 (2001).

We granted certiorari to address two questions: whether the CTEA's extension of existing copyrights exceeds Congress' power under the Copyright Clause; and whether the CTEA's extension of existing and future copyrights violates the First Amendment. 534 U. S. 1126 and 1160 (2002). We now answer those two questions in the negative and affirm.

II

A

We address first the determination of the courts below that Congress has authority under the Copyright Clause to extend the terms of existing copyrights. Text, history, and precedent, we conclude, confirm that the Copyright Clause empowers Congress to prescribe "limited Times" for copyright protection and to secure the same level and duration of protection for all copyright holders, present and future.

The CTEA's baseline term of life plus 70 years, petitioners concede, qualifies as a "limited Tim[e]" as applied to future copyrights.[4] Petitioners contend, however, that existing copyrights extended to endure for that same term are not "limited." Petitioners' argument essentially reads into the text of the Copyright Clause the command that a time prescription, once set, becomes forever "fixed" or "inalterable." The word "limited," however, does not convey a meaning so constricted. At the time of the Framing, that word meant what it means today: "confine[d] within certain bounds," "restrain[ed]," or "circumscribe[d]." S. Johnson, A Dictionary of the English Language (7th ed. 1785); see T. Sheridan, A Complete Dictionary of the English Language (6th ed. 1796) ("confine[d] within certain bounds"); Webster's Third New International Dictionary 1312 (1976) ("confined within limits"; "restricted in extent, number, or duration"). Thus understood, a time span appropriately "limited" as applied to future copyrights does not automatically cease to be "limited" when applied to existing copyrights. And as we observe, infra, at 18, there is no cause to suspect that a purpose to evade the "limited Times" prescription prompted Congress to adopt the CTEA.

To comprehend the scope of Congress' power under the Copyright Clause, "a page of history is worth a volume of logic." New York Trust Co. v. Eisner, 256 U. S. 345, 349 (1921) (Holmes, J.). History reveals an unbroken congressional practice of granting to authors of works with existing copyrights the benefit of term extensions so that all under copyright protection will be governed evenhandedly under the same regime. As earlier recounted, see supra, at 3, the First Congress accorded the protections of the Nation's first federal copyright statute to existing and future works alike. 1790 Act §1.[5] Since then, Congress has regularly applied duration extensions to both existing and future copyrights. 1831 Act §§1, 16; 1909 Act §§23-24; 1976 Act §§302-303; 17 U. S. C. §§302-304.[6]

Because the Clause empowering Congress to confer copyrights also authorizes patents, congressional practice with respect to patents informs our inquiry. We count it significant that early Congresses extended the duration of numerous individual patents as well as copyrights. See, e.g., Act of Jan. 7, 1808, ch. 6, 6 Stat. 70 (patent); Act of Mar. 3, 1809, ch. 35, 6 Stat. 80 (patent); Act of Feb. 7, 1815, ch. 36, 6 Stat. 147 (patent); Act of May 24, 1828, ch. 145, 6 Stat. 389 (copyright); Act of Feb. 11, 1830, ch. 13, 6 Stat. 403 (copyright); see generally Ochoa, Patent and Copyright Term Extension and the Constitution: A Historical Perspective, 49 J. Copyright Society 19 (2001). The courts saw no "limited Times" impediment to such extensions; renewed or extended terms were upheld in the early days, for example, by Chief Justice Marshall and Justice Story sitting as circuit justices. See Evans v. Jordan, 8 F. Cas. 872, 874 (No. 4,564) (CC Va. 1813) (Marshall, J.) ("Th[e] construction of the constitution which admits the renewal of a patent is not controverted. A renewed patent ... confers the same rights, with an original."), aff'd, 9 Cranch 199 (1815); Blanchard v. Sprague, 3 F. Cas. 648, 650 (No. 1,518) (CC Mass. 1839) (Story, J.) ("I never have entertained any doubt of the constitutional authority of congress" to enact a 14-year patent extension that "operates retrospectively"); see also Evans v. Robinson, 8 F. Cas. 886, 888 (No. 4,571) (CC Md. 1813) (Congresses "have the exclusive

right . . . to limit the times for which a patent right shall be granted, and are not restrained from renewing a patent or prolonging" it.).[7]

Further, although prior to the instant case this Court did not have occasion to decide whether extending the duration of existing copyrights complies with the "limited Times" prescription, the Court has found no constitutional barrier to the legislative expansion of existing patents.[8] McClurg v. Kingsland, 1 How. 202 (1843), is the pathsetting precedent. The patentee in that case was unprotected under the law in force when the patent issued because he had allowed his employer briefly to practice the invention before he obtained the patent. Only upon enactment, two years later, of an exemption for such allowances did the patent become valid, retroactive to the time it issued. McClurg upheld retroactive application of the new law. The Court explained that the legal regime governing a particular patent "depend[s] on the law as it stood at the emanation of the patent, together with such changes as have been since made; for though they may be retrospective in their operation, that is not a sound objection to their validity." Id., at 206.[9] Neither is it a sound objection to the validity of a copyright term extension, enacted pursuant to the same constitutional grant of authority, that the enlarged term covers existing copyrights.

Congress' consistent historical practice of applying newly enacted copyright terms to future and existing copyrights reflects a judgment stated concisely by Representative Huntington at the time of the 1831 Act: "[J]ustice, policy, and equity alike forb[id]" that an "author who had sold his [work] a week ago, be placed in a worse situation than the author who should sell his work the day after the passing of [the] act." 7 Cong. Deb. 424 (1831); accord Symposium, The Constitutionality of Copyright Term Extension, 18 Cardozo Arts & Ent. L. J. 651, 694 (2000) (Prof. Miller) ("[S]ince 1790, it has indeed been Congress's policy that the author of yesterday's work should not get a lesser reward than the author of tomorrow's work just because Congress passed a statute lengthening the term today."). The CTEA follows this historical practice by keeping the duration provisions of the 1976 Act largely in place and simply adding 20 years to each of them. Guided by text, history, and precedent, we cannot agree with petitioners' submission that extending the duration of existing copyrights is categorically beyond Congress' authority under the Copyright Clause.

Satisfied that the CTEA complies with the "limited Times" prescription, we turn now to whether it is a rational exercise of the legislative authority conferred by the Copyright Clause. On that point, we defer substantially to Congress. Sony, 464 U. S., at 429 ("[I]t is Congress that has been assigned the task of defining the scope of the limited monopoly that should be granted to authors . . . in order to give the public appropriate access to their work product.").[10]

The CTEA reflects judgments of a kind Congress typically makes, judgments we cannot dismiss as outside the Legislature's domain. As respondent describes, see Brief for Respondent 37-38, a key factor in the CTEA's passage was a 1993 European Union (EU) directive instructing EU members to establish a copyright term of life plus 70 years. EU Council Directive 93/98, p. 4; see 144 Cong. Rec. S12377-S12378 (daily ed. Oct. 12, 1998) (statement of Sen. Hatch). Consistent with the Berne Convention, the EU directed its members to deny this longer term to the works of any non-EU country whose laws did not secure the same extended term. See Berne Conv. Art. 7(8); P. Goldstein, International Copyright §5.3, p. 239 (2001). By extending the baseline United States copyright term to life plus 70 years, Congress sought to ensure that American authors would receive the same copyright protection in Europe as their European counterparts.[11] The CTEA may also provide greater incentive for American and other authors to create and disseminate their work in the United States. See Perlmutter, Participation in the International Copyright System as a Means to Promote the Progress of Science and Useful Arts, 36 Loyola (LA) L. Rev. 323, 330 (2002) ("[M]atching th[e] level of [copyright] protection in the United States [to that in the EU] can ensure stronger protection for U. S. works abroad and avoid competitive disadvantages vis-à-vis foreign rightholders."); see also id., at 332 (the United States could not "play a leadership role" in the give-and-take evolution of the international copyright system, indeed it would "lose all flexibility," "if the only way to promote the progress of science were to provide incentives to create new works").[12]

In addition to international concerns,[13] Congress passed the CTEA in light of demographic, economic,

and technological changes, Brief for Respondent 25-26, 33, and nn. 23 and 24,[14] and rationally credited projections that longer terms would encourage copyright holders to invest in the restoration and public distribution of their works, id., at 34-37; see H. R. Rep. No. 105-452, p. 4 (1998) (term extension "provide[s] copyright owners generally with the incentive to restore older works and further disseminate them to the public").[15]

In sum, we find that the CTEA is a rational enactment; we are not at liberty to second-guess congressional determinations and policy judgments of this order, however debatable or arguably unwise they may be. Accordingly, we cannot conclude that the CTEA—which continues the unbroken congressional practice of treating future and existing copyrights in parity for term extension purposes—is an impermissible exercise of Congress' power under the Copyright Clause.

B

Petitioners' Copyright Clause arguments rely on several novel readings of the Clause. We next address these arguments and explain why we find them unpersuasive.

1

Petitioners contend that even if the CTEA's 20-year term extension is literally a "limited Tim[e]," permitting Congress to extend existing copyrights allows it to evade the "limited Times" constraint by creating effectively perpetual copyrights through repeated extensions. We disagree.

As the Court of Appeals observed, a regime of perpetual copyrights "clearly is not the situation before us." 239 F. 3d, at 379. Nothing before this Court warrants construction of the CTEA's 20-year term extension as a congressional attempt to evade or override the "limited Times" constraint.[16] Critically, we again emphasize, petitioners fail to show how the CTEA crosses a constitutionally significant threshold with respect to "limited Times" that the 1831, 1909, and 1976 Acts did not. See supra, at 3-5; Austin, supra, n. 13, at 56 ("If extending copyright protection to works already in existence is constitutionally suspect," so is "extending the protections of U. S copyright law to works by foreign authors that had already been created and even first published when the federal rights attached."). Those earlier Acts did not create perpetual copyrights, and neither does the CTEA.[17]

2

Petitioners dominantly advance a series of arguments all premised on the proposition that Congress may not extend an existing copyright absent new consideration from the author. They pursue this main theme under three headings. Petitioners contend that the CTEA's extension of existing copyrights (1) overlooks the requirement of "originality," (2) fails to "promote the Progress of Science," and (3) ignores copyright's quid pro quo.

Petitioners' "originality" argument draws on Feist Publications, Inc. v. Rural Telephone Service Co., 499 U. S. 340 (1991). In Feist, we observed that "[t]he sine qua non of copyright is originality," id., at 345, and held that copyright protection is unavailable to "a narrow category of works in which the creative spark is utterly lacking or so trivial as to be virtually nonexistent," id., at 359. Relying on Feist, petitioners urge that even if a work is sufficiently "original" to qualify for copyright protection in the first instance, any extension of the copyright's duration is impermissible because, once published, a work is no longer original.

Feist, however, did not touch on the duration of copyright protection. Rather, the decision addressed the core question of copyrightability, i.e., the "creative spark" a work must have to be eligible for copyright protection at all. Explaining the originality requirement, Feist trained on the Copyright Clause words "Authors" and "Writings." Id., at 346-347. The decision did not construe the "limited Times" for which a work may be protected, and the originality requirement has no bearing on that prescription.

More forcibly, petitioners contend that the CTEA's extension of existing copyrights does not "promote the Progress of Science" as contemplated by the preambular language of the Copyright Clause. Art. I, §8, cl. 8. To sustain this objection, petitioners do not argue that the Clause's preamble is an independently enforceable limit on Congress' power. See 239 F. 3d, at 378 (Petitioners acknowledge that "the preamble of the Copyright Clause is not a substantive limit on Congress' legislative power." (internal quotation marks omitted)). Rather, they maintain that the preambular

language identifies the sole end to which Congress may legislate; accordingly, they conclude, the meaning of "limited Times" must be "determined in light of that specified end." Brief for Petitioners 19. The CTEA's extension of existing copyrights categorically fails to "promote the Progress of Science," petitioners argue, because it does not stimulate the creation of new works but merely adds value to works already created.

As petitioners point out, we have described the Copyright Clause as "both a grant of power and a limitation," Graham v. John Deere Co. of Kansas City, 383 U. S. 1, 5 (1966), and have said that "[t]he primary objective of copyright" is "[t]o promote the Progress of Science," Feist, 499 U. S., at 349. The "constitutional command," we have recognized, is that Congress, to the extent it enacts copyright laws at all, create a "system" that "promote[s] the Progress of Science." Graham, 383 U. S., at 6.[18]

We have also stressed, however, that it is generally for Congress, not the courts, to decide how best to pursue the Copyright Clause's objectives. See Stewart v. Abend, 495 U. S., at 230 ("Th[e] evolution of the duration of copyright protection tellingly illustrates the difficulties Congress faces… [I]t is not our role to alter the delicate balance Congress has labored to achieve."); Sony, 464 U. S., at 429 ("[I]t is Congress that has been assigned the task of defining the scope of [rights] that should be granted to authors or to inventors in order to give the public appropriate access to their work product."); Graham, 383 U. S., at 6 ("Within the limits of the constitutional grant, the Congress may, of course, implement the stated purpose of the Framers by selecting the policy which in its judgment best effectuates the constitutional aim."). The justifications we earlier set out for Congress' enactment of the CTEA, supra, at 14-17, provide a rational basis for the conclusion that the CTEA "promote[s] the Progress of Science."

On the issue of copyright duration, Congress, from the start, has routinely applied new definitions or adjustments of the copyright term to both future works and existing works not yet in the public domain.[19] Such consistent congressional practice is entitled to "very great weight, and when it is remembered that the rights thus established have not been disputed during a period of [over two] centur[ies], it is almost conclusive." Burrow-Giles Lithographic Co. v. Sarony, 111 U. S., at 57. Indeed, "[t]his Court has repeatedly laid down the principle that a contemporaneous legislative exposition of the Constitution when the founders of our Government and framers of our Constitution were actively participating in public affairs, acquiesced in for a long term of years, fixes the construction to be given [the Constitution's] provisions." Myers v. United States, 272 U. S. 52, 175 (1926). Congress' unbroken practice since the founding generation thus overwhelms petitioners' argument that the CTEA's extension of existing copyrights fails per se to "promote the Progress of Science."[20]

Closely related to petitioners' preambular argument, or a variant of it, is their assertion that the Copyright Clause "imbeds a quid pro quo." Brief for Petitioners 23. They contend, in this regard, that Congress may grant to an "Autho[r]" an "exclusive Right" for a "limited Tim[e]," but only in exchange for a "Writin[g]." Congress' power to confer copyright protection, petitioners argue, is thus contingent upon an exchange: The author of an original work receives an "exclusive Right" for a "limited Tim[e]" in exchange for a dedication to the public thereafter. Extending an existing copyright without demanding additional consideration, petitioners maintain, bestows an unpaid-for benefit on copyright holders and their heirs, in violation of the quid pro quo requirement.

We can demur to petitioners' description of the Copyright Clause as a grant of legislative authority empowering Congress "to secure a bargain—this for that." Brief for Petitioners 16; see Mazer v. Stein, 347 U. S. 201, 219 (1954) ("The economic philosophy behind the clause empowering Congress to grant patents and copyrights is the conviction that encouragement of individual effort by personal gain is the best way to advance public welfare through the talents of authors and inventors in 'Science and useful Arts.'"). But the legislative evolution earlier recalled demonstrates what the bargain entails. Given the consistent placement of existing copyright holders in parity with future holders, the author of a work created in the last 170 years would reasonably comprehend, as the "this" offered her, a copyright not only for the time in place when protection is gained, but also for any renewal or extension legislated during that time.[21] Congress could rationally seek to "promote ... Progress" by including in every copyright statute an express guarantee that authors would receive

the benefit of any later legislative extension of the copyright term. Nothing in the Copyright Clause bars Congress from creating the same incentive by adopting the same position as a matter of unbroken practice. See Brief for Respondent 31-32.

Neither Sears, Roebuck & Co. v. Stiffel Co., 376 U. S. 225 (1964), nor Bonito Boats, Inc. v. Thunder Craft Boats, Inc., 489 U. S. 141 (1989), is to the contrary. In both cases, we invalidated the application of certain state laws as inconsistent with the federal patent regime. Sears, 376 U. S., at 231-233; Bonito, 489 U. S., at 152. Describing Congress' constitutional authority to confer patents, Bonito Boats noted: "The Patent Clause itself reflects a balance between the need to encourage innovation and the avoidance of monopolies which stifle competition without any concomitant advance in the 'Progress of Science and useful Arts.'" Id., at 146. Sears similarly stated that "[p]atents are not given as favors ... but are meant to encourage invention by rewarding the inventor with the right, limited to a term of years fixed by the patent, to exclude others from the use of his invention." 376 U. S., at 229. Neither case concerned the extension of a patent's duration. Nor did either suggest that such an extension might be constitutionally infirm. Rather, Bonito Boats reiterated the Court's unclouded understanding: "It is for Congress to determine if the present system" effectuates the goals of the Copyright and Patent Clause. 489 U. S., at 168. And as we have documented, see supra, at 10-13, Congress has many times sought to effectuate those goals by extending existing patents.

We note, furthermore, that patents and copyrights do not entail the same exchange, and that our references to a quid pro quo typically appear in the patent context. See, e.g., J. E. M. Ag Supply, Inc. v. Pioneer Hi-Bred International, Inc., 534 U. S. 124, 142 (2001) ("The disclosure required by the Patent Act is 'the quid pro quo of the right to exclude.'" (quoting Kewanee Oil Co. v. Bicron Corp., 416 U. S. 470, 484 (1974))); Bonito Boats, 489 U. S., at 161 ("the quid pro quo of substantial creative effort required by the federal [patent] statute"); Brenner v. Manson, 383 U. S. 519, 534 (1966) ("The basic quid pro quo ... for granting a patent monopoly is the benefit derived by the public from an invention with substantial utility."); Pennock v. Dialogue, 2 Pet. 1, 23 (1829) (If an invention is already commonly known and used when the patent is sought, "there might be sound reason for presuming, that the legislature did not intend to grant an exclusive right," given the absence of a "quid pro quo."). This is understandable, given that immediate disclosure is not the objective of, but is exacted from, the patentee. It is the price paid for the exclusivity secured. See J. E. M. Ag Supply, 534 U. S., at 142. For the author seeking copyright protection, in contrast, disclosure is the desired objective, not something exacted from the author in exchange for the copyright. Indeed, since the 1976 Act, copyright has run from creation, not publication. See 1976 Act §302(a); 17 U. S. C. §302(a).

Further distinguishing the two kinds of intellectual property, copyright gives the holder no monopoly on any knowledge. A reader of an author's writing may make full use of any fact or idea she acquires from her reading. See §102(b). The grant of a patent, on the other hand, does prevent full use by others of the inventor's knowledge. See Brief for Respondent 22; Alfred Bell & Co. v. Catalda Fine Arts, 191 F. 2d 99, 103, n. 16 (CA2 1951) (The monopoly granted by a copyright "is not a monopoly of knowledge. The grant of a patent does prevent full use being made of knowledge, but the reader of a book is not by the copyright laws prevented from making full use of any information he may acquire from his reading." (quoting W. Copinger, Law of Copyright 2 (7th ed. 1936))). In light of these distinctions, one cannot extract from language in our patent decisions—language not trained on a grant's duration—genuine support for petitioners' bold view. Accordingly, we reject the proposition that a quid pro quo requirement stops Congress from expanding copyright's term in a manner that puts existing and future copyrights in parity.[22]

3

As an alternative to their various arguments that extending existing copyrights violates the Copyright Clause per se, petitioners urge heightened judicial review of such extensions to ensure that they appropriately pursue the purposes of the Clause. See Brief for Petitioners 31-32. Specifically, petitioners ask us to apply the "congruence and proportionality" standard described in cases evaluating exercises of Congress' power under §5 of

the Fourteenth Amendment. See, e.g., City of Boerne v. Flores, 521 U. S. 507 (1997). But we have never applied that standard outside the §5 context; it does not hold sway for judicial review of legislation enacted, as copyright laws are, pursuant to Article I authorization.

Section 5 authorizes Congress to enforce commands contained in and incorporated into the Fourteenth Amendment. Amdt. 14, §5 ("The Congress shall have power to enforce, by appropriate legislation, the provisions of this article." (emphasis added)). The Copyright Clause, in contrast, empowers Congress to define the scope of the substantive right. See Sony, 464 U. S., at 429. Judicial deference to such congressional definition is "but a corollary to the grant to Congress of any Article I power." Graham, 383 U. S., at 6. It would be no more appropriate for us to subject the CTEA to "congruence and proportionality" review under the Copyright Clause than it would be for us to hold the Act unconstitutional per se.

For the several reasons stated, we find no Copyright Clause impediment to the CTEA's extension of existing copyrights.

III

Petitioners separately argue that the CTEA is a content-neutral regulation of speech that fails heightened judicial review under the First Amendment.[23] We reject petitioners' plea for imposition of uncommonly strict scrutiny on a copyright scheme that incorporates its own speech-protective purposes and safeguards. The Copyright Clause and First Amendment were adopted close in time. This proximity indicates that, in the Framers' view, copyright's limited monopolies are compatible with free speech principles. Indeed, copyright's purpose is to promote the creation and publication of free expression. As Harper & Row observed: "[T]he Framers intended copyright itself to be the engine of free expression. By establishing a marketable right to the use of one's expression, copyright supplies the economic incentive to create and disseminate ideas." 471 U. S., at 558.

In addition to spurring the creation and publication of new expression, copyright law contains built-in First Amendment accommodations. See id., at 560. First, it distinguishes between ideas and expression and makes only the latter eligible for copyright protection. Specifically, 17 U. S. C. §102(b) provides: "In no case does copyright protection for an original work of authorship extend to any idea, procedure, process, system, method of operation, concept, principle, or discovery, regardless of the form in which it is described, explained, illustrated, or embodied in such work." As we said in Harper & Row, this "idea/expression dichotomy strike[s] a definitional balance between the First Amendment and the Copyright Act by permitting free communication of facts while still protecting an author's expression." 471 U. S., at 556 (internal quotation marks omitted). Due to this distinction, every idea, theory, and fact in a copyrighted work becomes instantly available for public exploitation at the moment of publication. See Feist, 499 U. S., at 349-350.

Second, the "fair use" defense allows the public to use not only facts and ideas contained in a copyrighted work, but also expression itself in certain circumstances. Codified at 17 U. S. C. §107, the defense provides: "[T]he fair use of a copyrighted work, including such use by reproduction in copies . . . , for purposes such as criticism, comment, news reporting, teaching (including multiple copies for classroom use), scholarship, or research, is not an infringement of copyright." The fair use defense affords considerable "latitude for scholarship and comment," Harper & Row, 471 U. S., at 560, and even for parody, see Campbell v. Acuff-Rose Music, Inc., 510 U. S. 569 (1994) (rap group's musical parody of Roy Orbison's "Oh, Pretty Woman" may be fair use).

The CTEA itself supplements these traditional First Amendment safeguards. First, it allows libraries, archives, and similar institutions to "reproduce" and "distribute, display, or perform in facsimile or digital form" copies of certain published works "during the last 20 years of any term of copyright ... for purposes of preservation, scholarship, or research" if the work is not already being exploited commercially and further copies are unavailable at a reasonable price. 17 U. S. C. §108(h); see Brief for Respondent 36. Second, Title II of the CTEA, known as the Fairness in Music Licensing Act of 1998, exempts small businesses, restaurants, and like entities from having to pay performance royalties on music played from licensed radio, television, and similar facilities. 17 U. S. C. §110(5)(B); see Brief for Representative

F. James Sensenbrenner, Jr., et al. as Amici Curiae 5-6, n. 3.

Finally, the case petitioners principally rely upon for their First Amendment argument, Turner Broadcasting System, Inc. v. FCC, 512 U. S. 622 (1994), bears little on copyright. The statute at issue in Turner required cable operators to carry and transmit broadcast stations through their proprietary cable systems. Those "must-carry" provisions, we explained, implicated "the heart of the First Amendment," namely, "the principle that each person should decide for himself or herself the ideas and beliefs deserving of expression, consideration, and adherence." Id., at 641.

The CTEA, in contrast, does not oblige anyone to reproduce another's speech against the carrier's will. Instead, it protects authors' original expression from unrestricted exploitation. Protection of that order does not raise the free speech concerns present when the government compels or burdens the communication of particular facts or ideas. The First Amendment securely protects the freedom to make—or decline to make—one's own speech; it bears less heavily when speakers assert the right to make other people's speeches. To the extent such assertions raise First Amendment concerns, copyright's built-in free speech safeguards are generally adequate to address them. We recognize that the D. C. Circuit spoke too broadly when it declared copyrights "categorically immune from challenges under the First Amendment." 239 F. 3d, at 375. But when, as in this case, Congress has not altered the traditional contours of copyright protection, further First Amendment scrutiny is unnecessary. See Harper & Row, 471 U. S., at 560; cf. San Francisco Arts & Athletics, Inc. v. United States Olympic Comm., 483 U. S. 522 (1987).[24]

IV

If petitioners' vision of the Copyright Clause held sway, it would do more than render the CTEA's duration extensions unconstitutional as to existing works. Indeed, petitioners' assertion that the provisions of the CTEA are not severable would make the CTEA's enlarged terms invalid even as to tomorrow's work. The 1976 Act's time extensions, which set the pattern that the CTEA followed, would be vulnerable as well.

As we read the Framers' instruction, the Copyright Clause empowers Congress to determine the intellectual property regimes that, overall, in that body's judgment, will serve the ends of the Clause. See Graham, 383 U. S., at 6 (Congress may "implement the stated purpose of the Framers by selecting the policy which in its judgment best effectuates the constitutional aim." (emphasis added)). Beneath the facade of their inventive constitutional interpretation, petitioners forcefully urge that Congress pursued very bad policy in prescribing the CTEA's long terms. The wisdom of Congress' action, however, is not within our province to second guess. Satisfied that the legislation before us remains inside the domain the Constitution assigns to the First Branch, we affirm the judgment of the Court of Appeals.

It is so ordered.

Eldred et al. v. Ashcroft, Attorney General, 537 U.S. 186 (2003).

New York Times Co., Inc., et al. v. Tasini et al. *(2001)*

Introduction

Freelance journalists and photographers are in an ongoing battle to get published while retaining as many rights as possible in the works they create. The freelancers, as creators, usually own the copyright to the works and initially sell some form of one-time publication permission to a newspaper or magazine while retaining salable rights for reproduction in other formats. Publishers often attempt to usurp these creator rights through "work-for-hire" agreements that give authorship and copyright to publishers, mandatory "all-rights" deals, and the distribution of the works through collections or compilations in other media. The explosive growth of publishing on the Internet and through databases adds a lucrative, new dimension to the freelancer–publisher tug of war over rights.

Jonathan Tasini and five other journalists wrote a total of 21 articles from 1990 to 1993 as freelancers for *The New York Times, Newsday,* and *Sports Illustrated* and had registered copyrights for each of the works. All three print publishers had the typical "collective work copyrights" for each of the issues of the periodicals where the articles first appeared. The publishers sold the collective contents of these publications to two electronic database companies without further compensation to the writers or seeking permission. The publishers were in effect claiming that the freelancers sold their work to them for initial publication *and* for the resale of the collective issue in electronic databases. The journalists sued the publishers for copyright infringement and the case ultimately went to the Supreme Court.

Justice Ruth Bader Ginsburg, in the majority opinion in the *Tasini* case, felt the databases recreated and distributed each article separately and not as an entire issue of a publication. The electronic versions did not just do a "revision" of the original publication, which the publishers have the right to do without further permission. As a result, the freelancers kept their copyright and right of approval for these electronic reproductions of their works, and deserved additional payment. In a later decision based on *Tasini*, a U.S. Court of Appeals ruled that *National Geographic Magazine*'s collecting of over 100 years of photos in a digital archive did not equal a new work and avoided infringement on the copyright of freelance photographers.

Volume Editor

New York Times Co., Inc., et al. v. Tasini et al.
No. 00-201 (2001)

Justice Ginsburg delivered the opinion of the Court.

This copyright case concerns the rights of freelance authors and a presumptive privilege of their publishers. The litigation was initiated by six freelance authors and relates to articles they contributed to three print periodicals (two newspapers and one magazine). Under agreements with the periodicals' publishers, but without the freelancers' consent, two computer database companies placed copies of the freelancers' articles—along with all other articles from the periodicals in which the freelancers' work appeared—into three databases. Whether written by a freelancer or staff member, each article is presented to, and retrievable by, the user in isolation, clear of the context the original print publication presented.

The freelance authors' complaint alleged that their copyrights had been infringed by the inclusion of their articles in the databases. The publishers, in response, relied on the privilege of reproduction

and distribution accorded them by §201(c) of the Copyright Act, which provides:

"Copyright in each separate contribution to a collective work is distinct from copyright in the collective work as a whole, and vests initially in the author of the contribution. In the absence of an express transfer of the copyright or of any rights under it, the owner of copyright in the collective work is presumed to have acquired only the privilege of reproducing and distributing the contribution as part of that particular collective work, any revision of that collective work, and any later collective work in the same series." 17 U. S. C. §201(c).

Specifically, the publishers maintained that, as copyright owners of collective works, *i.e.*, the original print publications, they had merely exercised "the privilege" §201(c) accords them to "reproduc[e] and distribut[e]" the author's discretely copyrighted contribution.

In agreement with the Second Circuit, we hold that §201(c) does not authorize the copying at issue here. The publishers are not sheltered by §201(c), we conclude, because the databases reproduce and distribute articles standing alone and not in context, not "as part of that particular collective work" to which the author contributed, "as part of…any revision" thereof, or "as part of…any later collective work in the same series." Both the print publishers and the electronic publishers, we rule, have infringed the copyrights of the freelance authors.

I

A

Respondents Jonathan Tasini, Mary Kay Blakely, Barbara Garson, Margot Mifflin, Sonia Jaffe Robbins, and David S. Whitford are authors (Authors). Between 1990 and 1993, they wrote the 21 articles (Articles) on which this dispute centers. Tasini, Mifflin, and Blakely contributed 12 Articles to The New York Times, the daily newspaper published by petitioner The New York Times Company (Times). Tasini, Garson, Robbins, and Whitford wrote eight Articles for Newsday, another New York daily paper, published by petitioner Newsday, Inc. (Newsday). Whitford also contributed one Article to Sports Illustrated, a weekly magazine published by petitioner Time, Inc. (Time). The Authors registered copyrights in each of the Articles. The Times, Newsday, and Time (Print Publishers) registered collective work copyrights in each periodical edition in which an Article originally appeared. The Print Publishers engaged the Authors as independent contractors (freelancers) under contracts that in no instance secured consent from an Author to placement of an Article in an electronic database.[1]

At the time the Articles were published, all three Print Publishers had agreements with petitioner LEXIS/NEXIS (formerly Mead Data Central Corp.), owner and operator of NEXIS, a computerized database that stores information in a text-only format. NEXIS contains articles from hundreds of journals (newspapers and periodicals) spanning many years. The Print Publishers have licensed to LEXIS/NEXIS the text of articles appearing in the three periodicals. The licenses authorize LEXIS/NEXIS to copy and sell any portion of those texts.

Pursuant to the licensing agreements, the Print Publishers regularly provide LEXIS/NEXIS with a batch of all the articles published in each periodical edition. The Print Publisher codes each article to facilitate computerized retrieval, then transmits it in a separate file. After further coding, LEXIS/NEXIS places the article in the central discs of its database.

Subscribers to NEXIS, accessing the system through a computer, may search for articles by author, subject, date, publication, headline, key term, words in text, or other criteria. Responding to a search command, NEXIS scans the database and informs the user of the number of articles meeting the user's search criteria. The user then may view, print, or download each of the articles yielded by the search. The display of each article includes the print publication (*e.g.*, The New York Times), date (September 23, 1990), section (Magazine), initial page number (26), headline or title ("Remembering Jane"), and author (Mary Kay Blakely). Each article appears as a separate, isolated "story"—without any visible link to the other stories originally published in the same newspaper or magazine edition. NEXIS does not contain pictures or advertisements, and it does not reproduce the original print publication's formatting features such as headline size, page placement (*e.g.*, above or below the fold for newspapers), or location of continuation pages.

The Times (but not Newsday or Time) also has licensing agreements with petitioner University Microfilms International (UMI). The agreements

authorize reproduction of Times materials on two CD-ROM products, the New York Times OnDisc (NYTO) and General Periodicals OnDisc (GPO).

Like NEXIS, NYTO is a text-only system. Unlike NEXIS, NYTO, as its name suggests, contains only the Times. Pursuant to a three-way agreement, LEXIS/NEXIS provides UMI with computer files containing each article as transmitted by the Times to LEXIS/NEXIS. Like LEXIS/NEXIS, UMI marks each article with special codes. UMI also provides an index of all the articles in NYTO. Articles appear in NYTO in essentially the same way they appear in NEXIS, *i.e.*, with identifying information (author, title, etc.), but without original formatting or accompanying images.

GPO contains articles from approximately 200 publications or sections of publications. Unlike NEXIS and NYTO, GPO is an image-based, rather than a text-based, system. The Times has licensed GPO to provide a facsimile of the Times' Sunday Book Review and Magazine. UMI "burns" images of each page of these sections onto CD-ROMs. The CD-ROMs show each article exactly as it appeared on printed pages, complete with photographs, captions, advertisements, and other surrounding materials. UMI provides an index and abstracts of all the articles in GPO.

Articles are accessed through NYTO and GPO much as they are accessed through NEXIS. The user enters a search query using similar criteria (*e.g.*, author, headline, date). The computer program searches available indexes and abstracts, and retrieves a list of results matching the query. The user then may view each article within the search result, and may print the article or download it to a disc. The display of each article provides no links to articles appearing on other pages of the original print publications.[2]

B

On December 16, 1993, the Authors filed this civil action in the United States District Court for the Southern District of New York. The Authors alleged that their copyrights were infringed when, as permitted and facilitated by the Print Publishers, LEXIS/NEXIS and UMI (Electronic Publishers) placed the Articles in the NEXIS, NYTO, and GPO databases (Databases). The Authors sought declaratory and injunctive relief, and damages. In response to the Authors' complaint, the Print and Electronic Publishers raised the reproduction and distribution privilege accorded collective work copyright owners by 17 U. S. C. §201(c). After discovery, both sides moved for summary judgment.

The District Court granted summary judgment for the Publishers, holding that §201(c) shielded the Database reproductions. 972 F. Supp. 804, 806 (1997). The privilege conferred by §201(c) is transferable, the court first concluded, and therefore could be conveyed from the original Print Publishers to the Electronic Publishers. *Id.*, at 816. Next, the court determined, the Databases reproduced and distributed the Authors' works, in §201(c)'s words, "as part of ... [a] revision of that collective work" to which the Authors had first contributed. To qualify as "revisions," according to the court, works need only "preserve some significant original aspect of [collective works]—whether an original selection or an original arrangement." *Id.*, at 821. This criterion was met, in the District Court's view, because the Databases preserved the Print Publishers' "selection of articles" by copying all of the articles originally assembled in the periodicals' daily or weekly issues. *Id.*, at 823. The Databases "highlight[ed]" the connection between the articles and the print periodicals, the court observed, by showing for each article not only the author and periodical, but also the print publication's particular issue and page numbers. *Id.*, at 824 ("[T]he electronic technologies not only copy the publisher defendants' complete original `selection' of articles, they tag those articles in such a way that the publisher defendants' original selection remains evident online.").

The Authors appealed, and the Second Circuit reversed. 206 F. 3d 161 (1999). The Court of Appeals granted summary judgment for the Authors on the ground that the Databases were not among the collective works covered by §201(c), and specifically, were not "revisions" of the periodicals in which the Articles first appeared. *Id.*, at 167-170. Just as §201(c) does not "permit a Publisher to sell a hard copy of an Author's article directly to the public even if the Publisher also offered for individual sale all of the other articles from the particular edition," the court reasoned, so §201(c) does not allow a Publisher to "achieve the same goal indirectly" through computer databases. *Id.*, at 168. In the Second Circuit's view, the

Databases effectively achieved this result by providing multitudes of "individually retrievable" articles. *Ibid.* As stated by the Court of Appeals, the Databases might fairly be described as containing "new anthologies of innumerable" editions or publications, but they do not qualify as "revisions" of particular editions of periodicals in the Databases. *Id.*, at 169. Having concluded that §201(c) "does not permit the Publishers," acting without the author's consent, "to license individually copyrighted works for inclusion in the electronic databases," the court did not reach the question whether the §201(c) privilege is transferable. *Id.*, at 165, and n. 2.

We granted certiorari to determine whether the copying of the Authors' Articles in the Databases is privileged by 17 U. S. C. §201(c). 531 U. S. 978 (2000). Like the Court of Appeals, we conclude that the §201(c) privilege does not override the Authors' copyrights, for the Databases do not reproduce and distribute the Articles as part of a collective work privileged by §201(c). Accordingly, and again like the Court of Appeals, we find it unnecessary to determine whether the privilege is transferable.

II

Under the Copyright Act, as amended in 1976, "[c]opyright protection subsists . . . in original works of authorship fixed in any tangible medium of expression . . . from which they can be perceived, reproduced, or otherwise communicated." 17 U. S. C. §102(a). When, as in this case, a freelance author has contributed an article to a "collective work" such as a newspaper or magazine, see §101 (defining "collective work"), the statute recognizes two distinct copyrighted works: "Copyright in *each separate contribution to a collective work* is distinct from copyright in *the collective work as a whole* . . . " §201(c) (emphasis added). Copyright in the separate contribution "vests initially in the author of the contribution" (here, the freelancer). *Ibid.* Copyright in the collective work vests in the collective author (here, the newspaper or magazine publisher) and extends only to the creative material contributed by that author, not to "the preexisting material employed in the work," §103(b). See also *Feist Publications, Inc.* v. *Rural Telephone Service Co.*, 499 U. S. 340, 358 (1991) (copyright in "compilation"—a term that includes "collective works," 17 U. S. C. §101—is limited to the compiler's original "selection, coordination, and arrangement").

Prior to the 1976 revision, as the courts below recognized, see 206 F. 3d, at 168; 972 F. Supp., at 815, authors risked losing their rights when they placed an article in a collective work. Pre-1976 copyright law recognized a freelance author's copyright in a published article only when the article was printed with a copyright notice in the author's name. See Copyright Act of 1909, §18, 35 Stat. 1079. When publishers, exercising their superior bargaining power over authors, declined to print notices in each contributor's name, the author's copyright was put in jeopardy. See A. Kaminstein, Divisibility of Copyrights, Study No. 11, in Copyright Law Revision Studies Nos. 11-13, prepared for the Senate Committee on the Judiciary, 86th Cong., 2d Sess., p. 18 (1960). The author did not have the option to assign only the right of publication in the periodical; such a partial assignment was blocked by the doctrine of copyright "indivisibility." See *id.*, at 11. Thus, when a copyright notice appeared only in the publisher's name, the author's work would fall into the public domain, unless the author's copyright, in its entirety, had passed to the publisher. See *id.*, at 18. Such complete transfer might be accomplished by a contract, perhaps one with a provision, not easily enforced, for later retransfer of rights back to the author. See *id.*, at 20-22. Or, absent a specific contract, a court might find that an author had tacitly transferred the entire copyright to a publisher, in turn deemed to hold the copyright in "trust" for the author's benefit. See *id.*, at 18-19; see generally 3 M. Nimmer, Copyright §10.01[C][2], pp. 10-12 to 10-14 (2000).

In the 1976 revision, Congress acted to "clarify and improve [this] confused and frequently unfair legal situation with respect to rights in contributions." H. R. Rep. No. 94-1476, p. 122 (1976) (hereinafter H. R. Rep.).[3] The 1976 Act rejected the doctrine of indivisibility, recasting the copyright as a bundle of discrete "exclusive rights," 17 U. S. C. §106 (1994 ed. and Supp. V),[4] each of which "may be transferred ... and owned separately," §201(d)(2).[5] Congress also provided, in §404(a), that "a single notice applicable to the collective work as a whole is sufficient" to protect the

rights of freelance contributors. And in §201(c), Congress codified the discrete domains of "[c]opyright in each separate contribution to a collective work" and "copyright in the collective work as a whole." Together, §404(a) and §201(c) "preserve the author's copyright in a contribution even if the contribution does not bear a separate notice in the author's name, and without requiring any unqualified transfer of rights to the owner of the collective work." H. R. Rep. 122.

Section 201(c) both describes and circumscribes the "privilege" a publisher acquires regarding an author's contribution to a collective work:

> "In the absence of an express transfer of the copyright or of any rights under it, the owner of copyright in the collective work is presumed to have acquired *only* the privilege of reproducing and distributing the contribution as part of that particular collective work, any revision of that collective work, and any later collective work in the same series." (Emphasis added.)

A newspaper or magazine publisher is thus privileged to reproduce or distribute an article contributed by a freelance author, absent a contract otherwise providing, only "as part of" any (or all) of three categories of collective works: (a) "that collective work" to which the author contributed her work, (b) "any revision of that collective work," or (c) "any later collective work in the same series." In accord with Congress' prescription, a "publishing company could reprint a contribution from one issue in a later issue of its magazine, and could reprint an article from a 1980 edition of an encyclopedia in a 1990 revision of it; the publisher could not revise the contribution itself or include it in a new anthology or an entirely different magazine or other collective work." H. R. Rep. 122-123.

Essentially, §201(c) adjusts a publisher's copyright in its collective work to accommodate a freelancer's copyright in her contribution. If there is demand for a freelance article standing alone or in a new collection, the Copyright Act allows the freelancer to benefit from that demand; after authorizing initial publication, the freelancer may also sell the article to others. Cf. *Stewart* v. *Abend*, 495 U. S. 207, 229 (1990) ("[w]hen an author produces a work which later commands a higher price in the market than the original bargain provided, the copyright statute [*i.e.*, the separate renewal term of former 17 U. S. C. §24] is designed to provide the author the power to negotiate for the realized value of the work"); *id.*, at 230 (noting author's "inalienable termination right" under current 17 U. S. C. §§203, 302). It would scarcely "preserve the author's copyright in a contribution" as contemplated by Congress, H. R. Rep. 122, if a newspaper or magazine publisher were permitted to reproduce or distribute copies of the author's contribution in isolation or within new collective works. See Gordon, Fine-Tuning *Tasini*: Privileges of Electronic Distribution and Reproduction, 66 Brooklyn L. Rev. 473, 484 (2000).[6]

III

In the instant case, the Authors wrote several Articles and gave the Print Publishers permission to publish the Articles in certain newspapers and magazines. It is undisputed that the Authors hold copyrights and, therefore, exclusive rights in the Articles.[7] It is clear, moreover, that the Print and Electronic Publishers have exercised at least some rights that §106 initially assigns exclusively to the Authors: LEXIS/NEXIS' central discs and UMI's CD-ROMs "reproduce ... copies" of the Articles, §106(1); UMI, by selling those CD-ROMs, and LEXIS/NEXIS, by selling copies of the Articles through the NEXIS Database, "distribute copies" of the Articles "to the public by sale," §106(3); and the Print Publishers, through contracts licensing the production of copies in the Databases, "authorize" reproduction and distribution of the Articles, §106.[8]

Against the Authors' charge of infringement, the Publishers do not here contend the Authors entered into an agreement authorizing reproduction of the Articles in the Databases. See *supra*, at 3, n. 1. Nor do they assert that the copies in the Databases represent "fair use" of the Authors' Articles. See 17 U. S. C. §107 ("fair use of a copyrighted work ... is not an infringement"; four factors identified among those relevant to fair use determination). Instead, the Publishers rest entirely on the privilege described in §201(c). Each discrete edition of the periodicals in which the Articles appeared is a "collective work," the Publishers agree. They contend, however, that reproduction and distribution of

each Article by the Databases lie within the "privilege of reproducing and distributing the [Articles] as part of ... [a] revision of that collective work," §201(c). The Publishers' encompassing construction of the §201(c) privilege is unacceptable, we conclude, for it would diminish the Authors' exclusive rights in the Articles.

In determining whether the Articles have been reproduced and distributed "as part of" a "revision" of the collective works in issue, we focus on the Articles as presented to, and perceptible by, the user of the Databases. See §102 (copyright protection subsists in original works fixed in any medium "from which they can be perceived, reproduced, or otherwise communicated"); see also §101 (definitions of "copies" and "fixed"); Haemmerli, Commentary: *Tasini v. New York Times Co.*, 22 Colum.-VLA. J. L. & Arts 129, 142-143 (1998). In this case, the three Databases present articles to users clear of the context provided either by the original periodical editions or by any revision of those editions. The Databases first prompt users to search the universe of their contents: thousands or millions of files containing individual articles from thousands of collective works (*i.e.*, editions), either in one series (the Times, in NYTO) or in scores of series (the sundry titles in NEXIS and GPO). When the user conducts a search, each article appears as a separate item within the search result. In NEXIS and NYTO, an article appears to a user without the graphics, formatting, or other articles with which the article was initially published. In GPO, the article appears with the other materials published on the same page or pages, but without any material published on other pages of the original periodical. In either circumstance, we cannot see how the Database perceptibly reproduces and distributes the article "as part of " either the original edition or a "revision" of that edition.

One might view the articles as parts of a new compendium—namely, the entirety of works in the Database. In that compendium, each edition of each periodical represents only a miniscule fraction of the ever-expanding Database. The Database no more constitutes a "revision" of each constituent edition than a 400-page novel quoting a sonnet in passing would represent a "revision" of that poem. "Revision" denotes a new "version," and a version is, in this setting, a "distinct form of something regarded by its creators or others as one work." Webster's Third New International Dictionary 1944, 2545 (1976). The massive whole of the Database is not recognizable as a new version of its every small part.

Alternatively, one could view the Articles in the Databases "as part of" no larger work at all, but simply as individual articles presented individually. That each article bears marks of its origin in a particular periodical (less vivid marks in NEXIS and NYTO, more vivid marks in GPO) suggests the article was *previously* part of that periodical. But the markings do not mean the article is *currently* reproduced or distributed as part of the periodical. The Databases' reproduction and distribution of individual Articles—simply *as individual Articles*—would invade the core of the Authors' exclusive rights under §106.[9]

The Publishers press an analogy between the Databases, on the one hand, and microfilm and microfiche, on the other. We find the analogy wanting. Microforms typically contain continuous photographic reproductions of a periodical in the medium of miniaturized film. Accordingly, articles appear on the microforms, writ very small, in precisely the position in which the articles appeared in the newspaper. The Times, for example, printed the beginning of Blakely's "Remembering Jane" Article on page 26 of the Magazine in the September 23, 1990, edition; the microfilm version of the Times reproduces that same Article on film in the very same position, within a film reproduction of the entire Magazine, in turn within a reproduction of the entire September 23, 1990, edition. True, the microfilm roll contains multiple editions, and the microfilm user can adjust the machine lens to focus only on the Article, to the exclusion of surrounding material. Nonetheless, the user first encounters the Article in context. In the Databases, by contrast, the Articles appear disconnected from their original context. In NEXIS and NYTO, the user sees the "Jane" Article apart even from the remainder of page 26. In GPO, the user sees the Article within the context of page 26, but clear of the context of page 25 or page 27, the rest of the Magazine, or the remainder of the day's newspaper. In short, unlike microforms, the Databases do not perceptibly reproduce articles as part of the collective work to which the author contributed or as part of any "revision" thereof.[10]

Invoking the concept of "media neutrality," the Publishers urge that the "transfer of a work

between media" does not "alte[r] the character of" that work for copyright purposes. Brief for Petitioners 23. That is indeed true. See 17 U. S. C. §102(a) (copyright protection subsists in original works "fixed in any tangible medium of expression"). But unlike the conversion of newsprint to microfilm, the transfer of articles to the Databases does not represent a mere conversion of intact periodicals (or revisions of periodicals) from one medium to another. The Databases offer users individual articles, not intact periodicals. In this case, media neutrality should protect the Authors' rights in the individual Articles to the extent those Articles are now presented individually, outside the collective work context, within the Databases' new media.[11]

For the purpose at hand—determining whether the Authors' copyrights have been infringed—an analogy to an imaginary library may be instructive.[12] Rather than maintaining intact editions of periodicals, the library would contain separate copies of each article. Perhaps these copies would exactly reproduce the periodical pages from which the articles derive (if the model is GPO); perhaps the copies would contain only typescript characters, but still indicate the original periodical's name and date, as well as the article's headline and page number (if the model is NEXIS or NYTO). The library would store the folders containing the articles in a file room, indexed based on diverse criteria, and containing articles from vast numbers of editions. In response to patron requests, an inhumanly speedy librarian would search the room and provide copies of the articles matching patron-specified criteria.

Viewing this strange library, one could not, consistent with ordinary English usage, characterize the articles "as part of" a "revision" of the editions in which the articles first appeared. In substance, however, the Databases differ from the file room only to the extent they aggregate articles in electronic packages (the LEXIS/NEXIS central discs or UMI CD-ROMs), while the file room stores articles in spatially separate files. The crucial fact is that the Databases, like the hypothetical library, store and retrieve articles separately within a vast domain of diverse texts. Such a storage and retrieval system effectively overrides the Authors' exclusive right to control the individual reproduction and distribution of each Article, 17 U. S. C. §§106(1), (3). Cf. *Ryan* v. *Carl Corp.*, 23 F. Supp. 2d 1146 (ND Cal. 1998) (holding copy shop in violation of §201(c)).

The Publishers claim the protection of §201(c) because users can manipulate the Databases to generate search results consisting entirely of articles from a particular periodical edition. By this logic, §201(c) would cover the hypothetical library if, in response to a request, that library's expert staff assembled all of the articles from a particular periodical edition. However, the fact that a third party can manipulate a database to produce a noninfringing document does not mean the database is not infringing. Under §201(c), the question is not whether a user can generate a revision of a collective work from a database, but whether the database itself perceptibly presents the author's contribution as part of a revision of the collective work. That result is not accomplished by these Databases.

The Publishers finally invoke *Sony Corp. of America* v. *Universal City Studios, Inc.,* 464 U. S. 417 (1984). That decision, however, does not genuinely aid their argument. *Sony* held that the "sale of copying equipment" does not constitute contributory infringement if the equipment is "capable of substantial noninfringing uses." *Id.*, at 442. The Publishers suggest that their Databases could be liable only under a theory of contributory infringement, based on end-user conduct, which the Authors did not plead. The Electronic Publishers, however, are not merely selling "equipment"; they are selling copies of the Articles. And, as we have explained, it is the copies themselves, without any manipulation by users, that fall outside the scope of the §201(c) privilege.

IV

The Publishers warn that a ruling for the Authors will have "devastating" consequences. Brief for Petitioners 49. The Databases, the Publishers note, provide easy access to complete newspaper texts going back decades. A ruling for the Authors, the Publishers suggest, will punch gaping holes in the electronic record of history. The Publishers' concerns are echoed by several historians, see Brief for Ken Burns et al. as *Amici Curiae*, but discounted by several other historians, see Brief for Ellen Schrecker et al. as *Amici Curiae*; Brief for Authors' Guild, Jacques Barzun et al. as *Amici Curiae*.

Notwithstanding the dire predictions from some quarters, see also *post*, at 16 (*Stevens, J.,* dissenting), it hardly follows from today's decision that an injunction against the inclusion of these Articles in the Databases (much less all freelance articles in any databases) must issue. See 17 U. S. C. §502(a) (court "may" enjoin infringement); *Campbell* v. *Acuff-Rose Music, Inc.,* 510 U. S. 569, 578, n. 10 (1994) (goals of copyright law are "not always best served by automatically granting injunctive relief"). The parties (Authors and Publishers) may enter into an agreement allowing continued electronic reproduction of the Authors' works; they, and if necessary the courts and Congress, may draw on numerous models for distributing copyrighted works and remunerating authors for their distribution. See, *e.g.*, 17 U. S. C. §118(b); *Broadcast Music, Inc.* v. *Columbia Broadcasting System, Inc.,* 441 U. S. 1, 4-6, 10-12 (1979) (recounting history of blanket music licensing regimes and consent decrees governing their operation).[13] In any event, speculation about future harms is no basis for this Court to shrink authorial rights Congress established in §201(c). Agreeing with the Court of Appeals that the Publishers are liable for infringement, we leave remedial issues open for initial airing and decision in the District Court.

*****

We conclude that the Electronic Publishers infringed the Authors' copyrights by reproducing and distributing the Articles in a manner not authorized by the Authors and not privileged by §201(c). We further conclude that the Print Publishers infringed the Authors' copyrights by authorizing the Electronic Publishers to place the Articles in the Databases and by aiding the Electronic Publishers in that endeavor. We therefore affirm the judgment of the Court of Appeals.

It is so ordered.

New York Times Co., Inc., et al. v. Tasini et al., 533 U.S. 483 (2001).

Digital Millennium Copyright Act (1998)

Introduction

Early copyright legislation in the United States was created to protect the rights of print journalists and authors at home and then abroad. But the advent of specific types of technology have been the driving force behind new law since The 1976 Copyright Act included protected categories like motion picture and audiovisual works, among others. The Internet and use of computers, still in experimental stages back in 1976, were excluded from the covered categories. It took the Digital Millennium Copyright Act (DMCA) of 1998 to place the Internet and digital world under the legal umbrella of American copyright controls.

The DMCA attempts to balance off the rights of those who own digitized content with the needs of millions of Internet users who feel entitled to sample the broad spectrum of works within reach. It gives a solid foundation to protect against copyright infringement online while carrying the concept of "fair use" into the digital realm. However, the speed with which technology now allows the home production and distribution of almost original-quality copies of compact discs and digital video devices has created the need for higher levels of protection like encryption. This act outlaws software and other equipment used to disable these special protective innovations.

Internet service providers (ISPs), such as AOL, turned out to need protection as well against the illegal actions of their huge clientele. It became common practice for Internet users to access and post copyrighted material without the knowledge of the ISP. The DMCA looks to protect the ISP from copyright infringement suits if the service provider takes down the offending content—and the user cannot later sue the ISP if the post proves not to be a violation of an existing copyright. The ISP is considered liable if it intentionally posts copyright protected content.

Pub. L. No. 105-304, 112 Stat. 2860 (Oct. 28, 1998).
The Digital Millennium Copyright Act of 1998

U.S. Copyright Office Summary
December 1998

Introduction

The Digital Millennium Copyright Act (DMCA) was signed into law by President Clinton on October 28, 1998. The legislation implements two 1996 World Intellectual Property Organization (WIPO) treaties: the WIPO Copyright Treaty and the WIPO Performances and Phonograms Treaty. The DMCA also addresses a number of other significant copyright-related issues.

The DMCA is divided into five titles:

Title I, the "WIPO Copyright and Performances and Phonograms Treaties Implementation Act of 1998," implements the WIPO treaties.

Title II, the "Online Copyright Infringement Liability Limitation **Act**," creates limitations on the liability of online service providers for copyright infringement when engaging in certain types of activities.

Title III, the "Computer Maintenance Competition Assurance **Act**," creates an exemption for making a copy of a computer program by activating a computer for purposes of maintenance or repair.

Title IV contains six **miscellaneous provisions**, relating to the functions of the Copyright Office, distance education, the exceptions in the Copyright Act for libraries and for making ephemeral

recordings, "webcasting" of sound recordings on the Internet, and the applicability of collective bargaining agreement obligations in the case of transfers of rights in motion pictures.

Title V, the "**Vessel Hull Design Protection Act**," creates a new form of protection for the design of vessel hulls.

This memorandum summarizes briefly each title of the DMCA. It provides merely an overview of the law's provisions; for purposes of length and readability a significant amount of detail has been omitted. **A complete understanding of any provision of the DMCA requires reference to the text of the legislation itself.**

Title I: WIPO Treaty Implementation

Title I implements the WIPO treaties. First, it makes certain technical amendments to U.S. law, in order to provide appropriate references and links to the treaties. Second, it creates two new prohibitions in Title 17 of the U.S. Code—one on circumvention of technological measures used by copyright owners to protect their works and one on tampering with copyright management information—and adds civil remedies and criminal penalties for violating the prohibitions. In addition, Title I requires the U.S. Copyright Office to perform two joint studies with the National Telecommunications and Information Administration of the Department of Commerce (NTIA).

Technical Amendments

National Eligibility

The WIPO Copyright Treaty (WCT) and the WIPO Performances and Phonograms Treaty (WPPT) each require member countries to provide protection to certain works from other member countries or created by nationals of other member countries. That protection must be no less favorable than that accorded to domestic works.

Section 104 of the Copyright Act establishes the conditions of eligibility for protection under U.S. law for works from other countries. Section 102(b) of the DMCA amends section 104 of the Copyright Act and adds new definitions to section 101 of the Copyright Act in order to extend the protection of U.S. law to those works required to be protected under the WCT and the WPPT.

Restoration of Copyright Protection

Both treaties require parties to protect preexisting works from other member countries that have not fallen into the public domain in the country of origin through the expiry of the term of protection. A similar obligation is contained in both the Berne Convention and the TRIPS Agreement. In 1995 this obligation was implemented in the Uruguay Round Agreements Act, creating a new section 104A in the Copyright Act to restore protection to works from Berne or WTO member countries that are still protected in the country of origin, but fell into the public domain in the United States in the past because of a failure to comply with formalities that then existed in U.S. law, or due to a lack of treaty relations. Section 102(c) of the DMCA amends section 104A to restore copyright protection in the same circumstances to works from WCT and WPPT member countries.

Registration as a Prerequisite to Suit

The remaining technical amendment relates to the prohibition in both treaties against conditioning the exercise or enjoyment of rights on the fulfillment of formalities. Section 411(a) of the Copyright Act requires claims to copyright to be registered with the Copyright Office before a lawsuit can be initiated by the copyright owner, but exempts many foreign works in order to comply with existing treaty obligations under the Berne Convention. Section 102(d) of the DMCA amends section 411(a) by broadening the exemption to cover all foreign works.

Technological Protection and Copyright Management Systems

Each of the WIPO treaties contains virtually identical language obligating member states to prevent circumvention of technological measures used to protect copyrighted works, and to prevent tampering with the integrity of copyright management information. These obligations serve as technological adjuncts to the exclusive rights granted by copyright law. They provide legal protection that the international copyright community deemed critical to the safe and efficient exploitation of works on digital networks.

Circumvention of Technological Protection Measures

General approach

Article 11 of the WCT states:

> Contracting Parties shall provide adequate legal protection and effective legal remedies against the circumvention of effective technological measures that are used by authors in connection with the exercise of their rights under this Treaty or the Berne Convention and that restrict acts, in respect of their works, which are not authorized by the authors concerned or permitted by law.

Article 18 of the WPPT contains nearly identical language.

Section 103 of the DMCA adds a new chapter 12 to Title 17 of the U.S. Code. New section 1201 implements the obligation to provide adequate and effective protection against circumvention of technological measures used by copyright owners to protect their works.

Section 1201 divides technological measures into two categories: measures that prevent unauthorized *access* to a copyrighted work and measures that prevent unauthorized *copying* of a copyrighted work. Making or selling devices or services that are used to circumvent either category of technological measure is prohibited in certain circumstances, described below. As to the act of circumvention in itself, the provision prohibits circumventing the first category of technological measures, but not the second.

This distinction was employed to assure that the public will have the continued ability to make fair use of copyrighted works. Since copying of a work may be a fair use under appropriate circumstances, section 1201 does not prohibit the act of circumventing a technological measure that prevents copying. By contrast, since the fair use doctrine is not a defense to the act of gaining unauthorized access to a work, the act of circumventing a technological measure in order to gain access is prohibited.

Section 1201 proscribes devices or services that fall within any one of the following three categories:

- they are primarily designed or produced to circumvent;
- they have only limited commercially significant purpose or use other than to circumvent; or
- they are marketed for use in circumventing.

No mandate

Section 1201 contains language clarifying that the prohibition on circumvention devices does not require manufacturers of consumer electronics, telecommunications or computing equipment to design their products affirmatively to respond to any particular technological measure. (Section 1201(c)(3)). Despite this general 'no mandate' rule, section 1201(k) does mandate an affirmative response for one particular type of technology: within 18 months of enactment, all analog videocassette recorders must be designed to conform to certain defined technologies, commonly known as Macrovision, currently in use for preventing unauthorized copying of analog videocassettes and certain analog signals. The provision prohibits rightholders from applying these specified technologies to free television and basic and extended basic tier cable broadcasts.

Savings clauses

Section 1201 contains two general savings clauses. First, section 1201(c)(1) states that nothing in section 1201 affects rights, remedies, limitations or defenses to copyright infringement, including fair use. Second, section 1201(c)(2) states that nothing in section 1201 enlarges or diminishes vicarious or contributory copyright infringement.

Exceptions

Finally, the prohibitions contained in section 1201 are subject to a number of exceptions. One is an exception to the operation of the entire section, for law enforcement, intelligence and other governmental activities. (Section 1201(e)). The others relate to section 1201(a), the provision dealing with the category of technological measures that control access to works.

The broadest of these exceptions, section 1201(a)(1)(B)-(E), establishes an ongoing administrative rule-making proceeding to evaluate the impact of the prohibition against the act of circumventing such access-control measures. This conduct prohibition does not take effect for two years. Once it does, it is subject to an exception for users of a work which is in a particular class of works if they are or are likely to be adversely affected by

virtue of the prohibition in making noninfringing uses. The applicability of the exemption is determined through a periodic rulemaking by the Librarian of Congress, on the recommendation of the Register of Copyrights, who is to consult with the Assistant Secretary of Commerce for Communications and Information.

The six additional exceptions are as follows:

1. ***Nonprofit library, archive and educational institution exception*** (section 1201(d)). The prohibition on the act of circumvention of access control measures is subject to an exception that permits nonprofit libraries, archives and educational institutions to circumvent solely for the purpose of making a good faith determination as to whether they wish to obtain authorized access to the work.
2. ***Reverse engineering*** (section 1201(f)). This exception permits circumvention, and the development of technological means for such circumvention, by a person who has lawfully obtained a right to use a copy of a computer program for the sole purpose of identifying and analyzing elements of the program necessary to achieve interoperability with other programs, to the extent that such acts are permitted under copyright law.
3. ***Encryption research*** (section 1201(g)). An exception for encryption research permits circumvention of access control measures, and the development of the technological means to do so, in order to identify flaws and vulnerabilities of encryption technologies.
4. ***Protection of minors*** (section 1201(h)). This exception allows a court applying the prohibition to a component or part to consider the necessity for its incorporation in technology that prevents access of minors to material on the Internet.
5. ***Personal privacy*** (section 1201(i)). This exception permits circumvention when the technological measure, or the work it protects, is capable of collecting or disseminating personally identifying information about the online activities of a natural person.
6. ***Security testing*** (section 1201(j)). This exception permits circumvention of access control measures, and the development of technological means for such circumvention, for the purpose of testing the security of a computer, computer system or computer network, with the authorization of its owner or operator.

Each of the exceptions has its own set of conditions on its applicability, which are beyond the scope of this summary.

Integrity of Copyright Management Information

Article 12 of the WCT provides in relevant part:

> Contracting Parties shall provide adequate and effective legal remedies against any person knowingly performing any of the following acts knowing, or with respect to civil remedies having reasonable grounds to know, that it will induce, enable, facilitate or conceal an infringement of any right covered by this Treaty or the Berne Convention:
>
> (i) to remove or alter any electronic rights management information without authority;
>
> (ii) to distribute, import for distribution, broadcast or communicate to the public, without authority, works or copies of works knowing that electronic rights management information has been removed or altered without authority.

Article 19 of the WPPT contains nearly identical language.

New section 1202 is the provision implementing this obligation to protect the integrity of copyright management information (CMI). The scope of the protection is set out in two separate paragraphs, the first dealing with false CMI and the second with removal or alteration of CMI. Subsection (a) prohibits the knowing provision or distribution of false CMI, if done with the intent to induce, enable, facilitate or conceal infringement. Subsection (b) bars the intentional removal or alteration of CMI without authority, as well as the dissemination of CMI or copies of works, knowing that the CMI has been removed or altered without authority. Liability under subsection (b) requires that the act be done with knowledge or, with respect to civil remedies, with reasonable grounds to know that it will induce, enable, facilitate or conceal an infringement.

Subsection (c) defines CMI as identifying information about the work, the author, the copyright owner, and in certain cases, the performer, writer or director of the work, as well as the terms and conditions for use of the work, and such other information as the Register of Copyrights may prescribe by regulation. Information concerning users of works is explicitly excluded.

Section 1202 is subject to a general exemption for law enforcement, intelligence and other governmental activities. (Section 1202(d)). It also contains limitations on the liability of broadcast stations and cable systems for removal or alteration of CMI in certain circumstances where there is no intent to induce, enable, facilitate or conceal an infringement. (Section 1202(e)).

Remedies

Any person injured by a violation of section 1201 or 1202 may bring a civil action in Federal court. Section 1203 gives courts the power to grant a range of equitable and monetary remedies similar to those available under the Copyright Act, including statutory damages. The court has discretion to reduce or remit damages in cases of innocent violations, where the violator proves that it was not aware and had no reason to believe its acts constituted a violation. (Section 1203(c)(5)(A)). Special protection is given to nonprofit libraries, archives and educational institutions, which are entitled to a complete remission of damages in these circumstances. (Section 1203(c)(5)(B)).

In addition, it is a criminal offense to violate section 1201 or 1202 wilfully and for purposes of commercial advantage or private financial gain. Under section 1204 penalties range up to a $500,000 fine or up to five years imprisonment for a first offense, and up to a $1,000,000 fine or up to 10 years imprisonment for subsequent offenses. Nonprofit libraries, archives and educational institutions are entirely exempted from criminal liability. (Section 1204(b)).

Copyright Office and NTIA Studies Relating to Technological Development

Title I of the DMCA requires the Copyright Office to conduct two studies jointly with NTIA, one dealing with encryption and the other with the effect of technological developments on two existing exceptions in the Copyright Act. New section 1201(g)(5) of Title 17 of the U.S. Code requires the Register of Copyrights and the Assistant Secretary of Commerce for Communications and Information to report to the Congress no later than one year from enactment on the effect that the exemption for encryption research (new section 1201(g)) has had on encryption research, the development of encryption technology, the adequacy and effectiveness of technological measures designed to protect copyrighted works, and the protection of copyright owners against unauthorized access to their encrypted copyrighted works.

Section 104 of the DMCA requires the Register of Copyrights and the Assistant Secretary of Commerce for Communications and Information to jointly evaluate (1) the effects of Title I of the DMCA and the development of electronic commerce and associated technology on the operation of sections 109 (first sale doctrine) and 117 (exemption allowing owners of copies of computer programs to reproduce and adapt them for use on a computer), and (2) the relationship between existing and emergent technology and the operation of those sections. This study is due 24 months after the date of enactment of the DMCA.

Title II: Online Copyright Infringement Liability Limitation

Title II of the DMCA adds a new section 512 to the Copyright Act to create four new limitations on liability for copyright infringement by online service providers.

The limitations are based on the following four categories of conduct by a service provider:

1. Transitory communications;
2. System caching;
3. Storage of information on systems or networks at direction of users; and
4. Information location tools.

New section 512 also includes special rules concerning the application of these limitations to nonprofit educational institutions.

Each limitation entails a complete bar on monetary damages, and restricts the availability of injunctive relief in various respects. (Section 512(j)).

Each limitation relates to a separate and distinct function, and a determination of whether a service provider qualifies for one of the limitations does not bear upon a determination of whether the provider qualifies for any of the other three. (Section 512(n)).

The failure of a service provider to qualify for any of the limitations in section 512 does not necessarily make it liable for copyright infringement. The copyright owner must still demonstrate that the provider has infringed, and the provider may still avail itself of any of the defenses, such as fair use, that are available to copyright defendants generally. (Section 512(l)).

In addition to limiting the liability of service providers, Title II establishes a procedure by which a copyright owner can obtain a subpoena from a federal court ordering a service provider to disclose the identity of a subscriber who is allegedly engaging in infringing activities. (Section 512(h)).

Section 512 also contains a provision to ensure that service providers are not placed in the position of choosing between limitations on liability on the one hand and preserving the privacy of their subscribers, on the other. Subsection (m) explicitly states that nothing in section 512 requires a service provider to monitor its service or access material in violation of law (such as the Electronic Communications Privacy Act) in order to be eligible for any of the liability limitations.

Eligibility for Limitations Generally

A party seeking the benefit of the limitations on liability in Title II must qualify as a "service provider." For purposes of the first limitation, relating to transitory communications, "service provider" is defined in section 512(k)(1)(A) as "an entity offering the transmission, routing, or providing of connections for digital online communications, between or among points specified by a user, of material of the user's choosing, without modification to the content of the material as sent or received." For purposes of the other three limitations, "service provider" is more broadly defined in section 512(k)(l)(B) as "a provider of online services or network access, or the operator of facilities therefor."

In addition, to be eligible for any of the limitations, a service provider must meet two overall conditions: (1) it must adopt and reasonably implement a policy of terminating in appropriate circumstances the accounts of subscribers who are repeat infringers; and (2) it must accommodate and not interfere with "standard technical measures." (Section 512(i)). "Standard technical measures" are defined as measures that copyright owners use to identify or protect copyrighted works, that have been developed pursuant to a broad consensus of copyright owners and service providers in an open, fair and voluntary multi-industry process, are available to anyone on reasonable nondiscriminatory terms, and do not impose substantial costs or burdens on service providers.

Limitation for Transitory Communications

In general terms, section 512(a) limits the liability of service providers in circumstances where the provider merely acts as a data conduit, transmitting digital information from one point on a network to another at someone else's request. This limitation covers acts of transmission, routing, or providing connections for the information, as well as the intermediate and transient copies that are made automatically in the operation of a network.

In order to qualify for this limitation, the service provider's activities must meet the following conditions:

- The transmission must be initiated by a person other than the provider.
- The transmission, routing, provision of connections, or copying must be carried out by an automatic technical process without selection of material by the service provider.
- The service provider must not determine the recipients of the material.
- Any intermediate copies must not ordinarily be accessible to anyone other than anticipated recipients, and must not be retained for longer than reasonably necessary.
- The material must be transmitted with no modification to its content.

Limitation for System Caching

Section 512(b) limits the liability of service providers for the practice of retaining copies, for a limited time, of material that has been made available online by a person other than the provider, and then transmitted to a subscriber at his or her direction. The service provider retains the material

so that subsequent requests for the same material can be fulfilled by transmitting the retained copy, rather than retrieving the material from the original source on the network.

The benefit of this practice is that it reduces the service provider's bandwidth requirements and reduces the waiting time on subsequent requests for the same information. On the other hand, it can result in the delivery of outdated information to subscribers and can deprive website operators of accurate "hit" information—information about the number of requests for particular material on a website—from which advertising revenue is frequently calculated. For this reason, the person making the material available online may establish rules about updating it, and may utilize technological means to track the number of "hits."

The limitation applies to acts of intermediate and temporary storage, when carried out through an automatic technical process for the purpose of making the material available to subscribers who subsequently request it. It is subject to the following conditions:

- The content of the retained material must not be modified.
- The provider must comply with rules about "refreshing" material—replacing retained copies of material with material from the original location—when specified in accordance with a generally accepted industry standard data communication protocol.
- The provider must not interfere with technology that returns "hit" information to the person who posted the material, where such technology meets certain requirements.
- The provider must limit users' access to the material in accordance with conditions on access (e.g., password protection) imposed by the person who posted the material.
- Any material that was posted without the copyright owner's authorization must be removed or blocked promptly once the service provider has been notified that it has been removed, blocked, or ordered to be removed or blocked, at the originating site.

Limitation for Information Residing on Systems or Networks at the Direction of Users

Section 512(c) limits the liability of service providers for infringing material on websites (or other information repositories) hosted on their systems. It applies to storage at the direction of a user. In order to be eligible for the limitation, the following conditions must be met:

- The provider must not have the requisite level of knowledge of the infringing activity, as described below.
- If the provider has the right and ability to control the infringing activity, it must not receive a financial benefit directly attributable to the infringing activity.
- Upon receiving proper notification of claimed infringement, the provider must expeditiously take down or block access to the material.

In addition, a service provider must have filed with the Copyright Office a designation of an agent to receive notifications of claimed infringement. The Office provides a suggested form for the purpose of designating an agent (http://www.loc.gov/copyright/onlinesp/) and maintains a list of agents on the Copyright Office website (http://www.loc.gov/copyright/onlinesp/list/).

Under the knowledge standard, a service provider is eligible for the limitation on liability only if it does not have actual knowledge of the infringement, is not aware of facts or circumstances from which infringing activity is apparent, or upon gaining such knowledge or awareness, responds expeditiously to take the material down or block access to it.

The statute also establishes procedures for proper notification, and rules as to its effect. (Section 512(c)(3)). Under the notice and take-down procedure, a copyright owner submits a notification under penalty of perjury, including a list of specified elements, to the service provider's designated agent. Failure to comply substantially with the statutory requirements means that the notification will not be considered in determining the requisite level of knowledge by the service provider. If, upon receiving a proper notification, the service provider promptly removes or blocks access to the material identified in the notification, the provider is exempt from monetary liability. In addition, the provider is protected from any liability to any person for claims based on its having taken down the material. (Section 512(g)(1)).

In order to protect against the possibility of erroneous or fraudulent notifications, certain safeguards

are built into section 512. Subsection (g)(1) gives the subscriber the opportunity to respond to the notice and takedown by filing a counter notification. In order to qualify for the protection against liability for taking down material, the service provider must promptly notify the subscriber that it has removed or disabled access to the material. If the subscriber serves a counter notification complying with statutory requirements, including a statement under penalty of perjury that the material was removed or disabled through mistake or misidentification, then unless the copyright owner files an action seeking a court order against the subscriber, the service provider must put the material back up within 10–14 business days after receiving the counter notification.

Penalties are provided for knowing material misrepresentations in either a notice or a counter notice. Any person who knowingly materially misrepresents that material is infringing, or that it was removed or blocked through mistake or misidentification, is liable for any resulting damages (including costs and attorneys' fees) incurred by the alleged infringer, the copyright owner or its licensee, or the service provider. (Section 512(f)).

Limitation for Information Location Tools

Section 512(d) relates to hyperlinks, online directories, search engines and the like. It limits liability for the acts of referring or linking users to a site that contains infringing material by using such information location tools, if the following conditions are met:

- The provider must not have the requisite level of knowledge that the material is infringing. The knowledge standard is the same as under the limitation for information residing on systems or networks.
- If the provider has the right and ability to control the infringing activity, the provider must not receive a financial benefit directly attributable to the activity.
- Upon receiving a notification of claimed infringement, the provider must expeditiously take down or block access to the material.

These are essentially the same conditions that apply under the previous limitation, with some differences in the notification requirements. The provisions establishing safeguards against the possibility of erroneous or fraudulent notifications, as discussed above, as well as those protecting the provider against claims based on having taken down the material apply to this limitation. (Sections 512(f)-(g)).

Special Rules Regarding Liability of Nonprofit Educational Institutions

Section 512(e) determines when the actions or knowledge of a faculty member or graduate student employee who is performing a teaching or research function may affect the eligibility of a nonprofit educational institution for one of the four limitations on liability. As to the limitations for transitory communications or system caching, the faculty member or student shall be considered a "person other than the provider," so as to avoid disqualifying the institution from eligibility. As to the other limitations, the knowledge or awareness of the faculty member or student will not be attributed to the institution. The following conditions must be met:

- the faculty member or graduate student's infringing activities do not involve providing online access to course materials that were required or recommended during the past three years;
- the institution has not received more than two notifications over the past three years that the faculty member or graduate student was infringing; and
- the institution provides all of its users with informational materials describing and promoting compliance with copyright law.

Title III: Computer Maintenance or Repair

Title III expands the existing exemption relating to computer programs in section 117 of the Copyright Act, which allows the owner of a copy of a program to make reproductions or adaptations when necessary to use the program in conjunction with a computer. The amendment permits the owner or lessee of a computer to make or authorize the making of a copy of a computer program in the course of maintaining or repairing that computer. The exemption only permits a copy that is made

automatically when a computer is activated, and only if the computer already lawfully contains an authorized copy of the program. The new copy cannot be used in any other manner and must be destroyed immediately after the maintenance or repair is completed.

Title IV: Miscellaneous Provisions

Clarification of the Authority of the Copyright Office

Section 401(b), adds language to section 701 of the Copyright Act confirming the Copyright Office's authority to continue to perform the policy and international functions that it has carried out for decades under its existing general authority.

Ephemeral Recordings for Broadcasters

Section 112 of the Copyright Act grants an exemption for the making of "ephemeral recordings." These are recordings made in order to facilitate a transmission. Under this exemption, for example, a radio station can record a set of songs and broadcast from the new recording rather than from the original CDs (which would have to be changed "on the fly" during the course of a broadcast).

As it existed prior to enactment of the DMCA, section 112 permitted a transmitting organization to make and retain for up to six months (hence the term "ephemeral") no more than one copy of a work if it was entitled to transmit a public performance or display of the work, either under a license or by virtue of the fact that there is no general public performance right in sound recordings (as distinguished from musical works).

The Digital Performance Right in Sound Recordings Act of 1995 (DPRA) created, for the first time in U.S. copyright law, a limited public performance right in sound recordings. The right only covers public performances by means of digital transmission and is subject to an exemption for digital broadcasts (i.e., transmissions by FCC licensed terrestrial broadcast stations) and a statutory license for certain subscription transmissions that are not made on demand (i.e. in response to the specific request of a recipient).

Section 402 of the DMCA expands the section 112 exemption to include recordings that are made to facilitate the digital transmission of a sound recording where the transmission is made under the DPRA's exemption for digital broadcasts or statutory license. As amended, section 112 also permits in some circumstances the circumvention of access control technologies in order to enable an organization to make an ephemeral recording.

Distance Education Study

In the course of consideration of the DMCA, legislators expressed an interest in amending the Copyright Act to promote distance education, possibly through an expansion of the existing exception for instructional broadcasting in section 110(2). Section 403 of the DMCA directs the Copyright Office to consult with affected parties and make recommendations to Congress on how to promote distance education through digital technologies. The Office must report to Congress within six months of enactment.

The Copyright Office is directed to consider the following issues:

- The need for a new exemption;
- Categories of works to be included in any exemption;
- Appropriate quantitative limitations on the portions of works that may be used under any exemption;
- Which parties should be eligible for any exemption;
- Which parties should be eligible recipients of distance education material under any exemption;
- The extent to which use of technological protection measures should be mandated as a condition of eligibility for any exemption;
- The extent to which the availability of licenses should be considered in assessing eligibility for any exemption; and
- Other issues as appropriate.

Exemption for Nonprofit Libraries and Archives

Section 404 of the DMCA amends the exemption for nonprofit libraries and archives in section 108 of the Copyright Act to accommodate digital technologies and evolving preservation practices. Prior to enactment of the DMCA, section 108 permitted such libraries and archives to make a single facsimile (i.e., not digital) copy of a work for

purposes of preservation or interlibrary loan. As amended, section 108 permits up to three copies, which may be digital, provided that digital copies are not made available to the public outside the library premises. In addition, the amended section permits such a library or archive to copy a work into a new format if the original format becomes obsolete—that is, the machine or device used to render the work perceptible is no longer manufactured or is no longer reasonably available in the commercial marketplace.

Webcasting Amendments to the Digital Performance Right in Sound Recordings

As discussed above, in 1995 Congress enacted the DPRA, creating a performance right in sound recordings that is limited to digital transmissions. Under that legislation, three categories of digital transmissions were addressed: broadcast transmissions, which were exempted from the performance right; subscription transmissions, which were generally subject to a statutory license; and on-demand transmissions, which were subject to the full exclusive right. Broadcast transmissions under the DPRA are transmissions made by FCC-licensed terrestrial broadcast stations.

In the past several years, a number of entities have begun making digital transmissions of sound recordings over the Internet using streaming audio technologies. This activity does not fall squarely within any of the three categories that were addressed in the DPRA. Section 405 of the DMCA amends the DPRA, expanding the statutory license for subscription transmissions to include webcasting as a new category of "eligible nonsubscription transmissions."

In addition to expanding the scope of the statutory license, the DMCA revises the criteria that any entity must meet in order to be eligible for the license (other than those who are subject to a grandfather clause, leaving the existing criteria intact). It revises the considerations for setting rates as well (again, subject to a grandfather clause), directing arbitration panels convened under the law to set the royalty rates at fair market value.

This provision of the DMCA also creates a new statutory license for making ephemeral recordings. As indicated above, section 402 of the DMCA amends section 112 of the Copyright Act to permit the making of a single ephemeral recording to facilitate the digital transmission of sound recording that is permitted either under the DPRA's broadcasting exemption or statutory license. Transmitting organizations that wish to make more than the single ephemeral recording of a sound recording that is permitted under the outright exemption in section 112 are now eligible for a statutory license to make such additional ephemeral recordings. In addition, the new statutory license applies to the making of ephemeral recordings by transmitting organizations other than broadcasters who are exempt from the digital performance right, who are not covered by the expanded exemption in section 402 of the DMCA.

Assumption of Contractual Obligations upon Transfers of Rights in Motion Pictures

Section 416 addresses concerns about the ability of writers, directors and screen actors to obtain residual payments for the exploitation of motion pictures in situations where the producer is no longer able to make these payments. The guilds' collective bargaining agreements currently require producers to obtain assumption agreements from distributors in certain circumstances, by which the distributor assumes the producer's obligation to make such residual payments. Some production companies apparently do not always do so, leaving the guilds without contractual privity enabling them to seek recourse from the distributor.

The DMCA adds a new chapter to Title 28 of the U.S. Code that imposes on transferees those obligations to make residual payments that the producer would be required to have the transferee assume under the relevant collective bargaining agreement. The obligations attach only if the distributor knew or had reason to know that the motion picture was produced subject to a collective bargaining agreement, or in the event of a court order confirming an arbitration award under the collective bargaining agreement that the producer cannot satisfy within ninety days. There are two classes of transfers that are excluded from the scope of this provision. The first is transfers limited to public performance rights, and the second is grants of security interests, along with any subsequent transfers from the security interest holder.

The provision also directs the Comptroller General, in consultation with the Register of Copyrights, to conduct a study on the conditions in the motion picture industry that gave rise to this provision, and the impact of the provision on the industry. The study is due two years from enactment.

Title V: Protection of Certain Original Designs

Title V of the DMCA, entitled the Vessel Hull Design Protection Act (VHDPA), adds a new chapter 13 to Title 17 of the U.S. Code. It creates a new system for protecting original designs of certain useful articles that make the article attractive or distinctive in appearance. For purposes of the VHDPA, "useful articles" are limited to the hulls (including the decks) of vessels no longer than 200 feet.

A design is protected under the VHDPA as soon as a useful article embodying the design is made public or a registration for the design is published. Protection is lost if an application for registration is not made within two years after a design is first made public, but a design is not registrable if it has been made public more than one year before the date of the application for registration. Once registered, protection continues for ten years from the date protection begins.

The VHDPA is subject to a legislative sunset: the Act expires two years from enactment (October 28, 2000). The Copyright Office is directed to conduct two joint studies with the Patent and Trademark Office—the first by October 28, 1999 and the second by October 28, 2000—evaluating the impact of the VHDPA.

Effective Dates

Most provisions of the DMCA are effective on the date of enactment. There are, however, several exceptions. The technical amendments in Title I that relate to eligibility of works for protection under U.S. copyright law by virtue of the new WIPO treaties do not take effect until the relevant treaty comes into force. Similarly, restoration of copyright protection for such works does not become effective until the relevant treaty comes into force. The prohibition on the act of circumvention of access control measures does not take effect until two years from enactment (October 28, 2000).

Regulating Electronic Media

Red Lion Broadcasting Co. v. FCC *(1969)*

Introduction

The Federal Communications Commission (FCC) was given the authority by Congress back in 1934 to extensively regulate first radio and then, over time, network television, cable television, and direct broadcast satellites. Government control over what appears on air has always been greater than what circulates in print. As a result, many in the broadcast industry had complained that their First Amendment protections and choices were limited in comparison to those afforded newspapers and magazines. Congress justified the extreme FCC scrutiny of broadcasters by pointing to the relatively few on-air licenses available in comparison to societal demands.

The FCC asked that broadcasters further earn the privilege of a license to use the airwaves by serving the public interest with a "fairness doctrine" that granted access not inherent in print publications. In the fairness doctrine, the FCC said broadcasters had to provide a reasonable amount of on-air time for examination of public issues and for the presentation of conflicting perspectives on important public controversies. The FCC supported specific outgrowths of the fairness doctrine like the political editorial rule (chance for candidates to reply to editorials), the Zapple Rule (option for candidates to buy equal airtime), and the "personal attacks rule" that offered time for a reply to an individual or group attacked during discussion of a heated public issue.

The Supreme Court, in *Red Lion Broadcasting Co. v. FCC,* supported the authority of the Commission by upholding the constitutionality of the personal attacks rule. Although this rule and most others associated with the fairness doctrine would be struck down by 2000, the Courts general reason in this instance for backing FCC control over broadcasting endures. Justice Byron White authorized his ruling here "in view of the scarcity of broadcast frequencies," the FCC "role in allocating those frequencies," and for "those unable without governmental assistance to gain access to those frequencies for expression of their views."

Volume Editor

Red Lion Broadcasting Co. v. FCC, 395 U.S. 367 (1969)

MR. JUSTICE WHITE delivered the opinion of the Court.

The Federal Communications Commission has for many years imposed on radio and television broadcasters the requirement that discussion of public issues be presented on broadcast stations, and that each side of those issues must be given fair coverage. This is known as the fairness doctrine, which originated very early in the history of broadcasting and has maintained its present outlines for some time. It is an obligation whose content has been defined in a long series of FCC rulings in particular cases, and which is distinct from the statutory [395 U.S. 367, 370] requirement of 315 of the Communications Act that equal time be allotted all qualified candidates for public office. Two aspects of the fairness doctrine, relating to personal attacks in the context of controversial public issues and to political editorializing, were codified more precisely

in the form of FCC regulations in 1967. The two cases before us now, which were decided separately below, challenge the constitutional and statutory bases of the doctrine and component rules. Red Lion [395 U.S. 367, 371] involves the application of the fairness doctrine to a particular broadcast, and RTNDA arises as an action to review the FCC's 1967 promulgation of the personal attack and political editorializing regulations, which were laid down after the Red Lion litigation had begun.

I.

A.

The Red Lion Broadcasting Company is licensed to operate a Pennsylvania radio station, WGCB. On November 27, 1964, WGCB carried a 15-minute broadcast by the Reverend Billy James Hargis as part of a "Christian Crusade" series. A book by Fred J. Cook entitled "Goldwater—Extremist on the Right" was discussed by Hargis, who said that Cook had been fired by a newspaper for making false charges against city officials; that Cook had then worked for a Communist-affiliated publication; that he had defended Alger Hiss and attacked J. Edgar Hoover and the Central Intelligence Agency; and that he had now written a "book to smear and destroy Barry Goldwater." When Cook heard of the broadcast he [395 U.S. 367, 372] concluded that he had been personally attacked and demanded free reply time, which the station refused. After an exchange of letters among Cook, Red Lion, and the FCC, the FCC declared that the Hargis broadcast constituted a personal attack on Cook; that Red Lion had failed to meet its obligation under the fairness doctrine as expressed in Times-Mirror Broadcasting Co., 24 P & F Radio Reg. 404 (1962), to send a tape, transcript, or summary of the broadcast to Cook and offer him reply time; and that the station must provide reply time whether or not Cook would pay for it. On review in the Court of Appeals for the District of Columbia Circuit, the [395 U.S. 367, 373] FCC's position was upheld as constitutional and otherwise proper. 127 U.S. App. D.C. 129, 381 F.2d 908 (1967).

B.

Not long after the Red Lion litigation was begun, the FCC issued a Notice of Proposed Rule Making, 31 Fed. Reg. 5710, with an eye to making the personal attack aspect of the fairness doctrine more precise and more readily enforceable, and to specifying its rules relating to political editorials. After considering written comments supporting and opposing the rules, the FCC adopted them substantially as proposed, 32 Fed. Reg. 10303. Twice amended, 32 Fed. Reg. 11531, 33 Fed. Reg. 5362, the rules were held unconstitutional in the RTNDA litigation by the Court of Appeals for the Seventh Circuit, on review of the rule-making proceeding, as abridging the freedoms of speech and press. 400 F.2d 1002 (1968).

As they now stand amended, the regulations read as follows:

> "Personal attacks; political editorials.
>
> "(a) When, during the presentation of views on a controversial issue of public importance, an attack is made upon the honesty, character, integrity or like personal qualities of an identified person or group, the licensee shall, within a reasonable time and in no event later than 1 week after the attack, transmit to the person or group attacked (1) notification of the date, time and identification of the broadcast; (2) a script or tape (or an accurate summary if a script or tape is not available) of the [395 U.S. 367, 374] attack; and (3) an offer of a reasonable opportunity to respond over the licensee's facilities.
>
> "(b) The provisions of paragraph (a) of this section shall not be applicable (1) to attacks on foreign groups or foreign public figures; (2) to personal attacks which are made by legally qualified candidates, their authorized spokesmen, or those associated with them in the campaign, on other such candidates, their authorized spokesmen, or persons associated with the candidates in the campaign; and (3) to bona fide newscasts, bona fide news interviews, and on-the-spot coverage of a bona fide news event (including commentary or analysis contained in the foregoing programs, but the provisions of paragraph (a) of this section shall be applicable to editorials of the licensee).
>
> "NOTE: The fairness doctrine is applicable to situations coming within [(3)], above, and, in a specific factual situation, may be applicable in the general area of political broadcasts [(2)], above. See, section 315 (a) of the Act, 47 U.S.C. 315 (a); Public Notice: Applicability of the

Fairness Doctrine in the Handling of Controversial Issues of Public Importance. 29 F. R. 10415. The categories listed in [(3)] are the same as those specified in section 315 (a) of the Act.

"(c) Where a licensee, in an editorial, (i) endorses or (ii) opposes a legally qualified candidate or candidates, the licensee shall, within 24 hours after the editorial, transmit to respectively (i) the other qualified candidate or candidates for the same office or (ii) the candidate opposed in the editorial (1) notification of the date and the time of the editorial; (2) a script or tape of the editorial; and (3) an offer of a reasonable opportunity for a candidate or a spokesman of the candidate to respond over the [395 U.S. 367, 375] licensee's facilities: Provided, however, That where such editorials are broadcast within 72 hours prior to the day of the election, the licensee shall comply with the provisions of this paragraph sufficiently far in advance of the broadcast to enable the candidate or candidates to have a reasonable opportunity to prepare a response and to present it in a timely fashion." 47 CFR 73.123, 73.300, 73.598, 73.679 (all identical).

C.

Believing that the specific application of the fairness doctrine in Red Lion, and the promulgation of the regulations in RTNDA, are both authorized by Congress and enhance rather than abridge the freedoms of speech and press protected by the First Amendment, we hold them valid and constitutional, reversing the judgment below in RTNDA and affirming the judgment below in Red Lion.

II.

The history of the emergence of the fairness doctrine and of the related legislation shows that the Commission's action in the Red Lion case did not exceed its authority, and that in adopting the new regulations the Commission was implementing congressional policy rather than embarking on a frolic of its own.

A.

Before 1927, the allocation of frequencies was left entirely to the private sector, and the result was chaos. [395 U.S. 367, 376] It quickly became apparent that broadcast frequencies constituted a scarce resource whose use could be regulated and rationalized only by the Government. Without government control, the medium would be of little use because of the cacaphony of competing voices, none of which could be clearly and predictably heard. Consequently, the Federal Radio Commission was established [395 U.S. 367, 377] to allocate frequencies among competing applicants in a manner responsive to the public "convenience, interest, or necessity."

Very shortly thereafter the Commission expressed its view that the "public interest requires ample play for the free and fair competition of opposing views, and the commission believes that the principle applies . . . to all discussions of issues of importance to the public." Great Lakes Broadcasting Co., 3 F. R. C. Ann. Rep. 32, 33 (1929), rev'd on other grounds, 59 App. D.C. 197, 37 F.2d 993, cert. dismissed, 281 U.S. 706 (1930). This doctrine was applied through denial of license renewals or construction permits, both by the FRC, Trinity Methodist Church, South v. FRC, 61 App. D.C. 311, 62 F.2d 850 (1932), cert. denied, 288 U.S. 599 (1933), and its successor FCC, Young People's Association for the Propagation of the Gospel, 6 F. C. C. 178 (1938). After an extended period during which the licensee was obliged not only to cover and to cover fairly the views of others, but also to refrain from expressing his own personal views, Mayflower Broadcasting Corp., 8 F. C. C. 333 (1940), the latter limitation on the licensee was abandoned and the doctrine developed into its present form.

There is a twofold duty laid down by the FCC's decisions and described by the 1949 Report on Editorializing by Broadcast Licensees, 13 F. C. C. 1246 (1949). The broadcaster must give adequate coverage to public issues, United Broadcasting Co., 10 F. C. C. 515 (1945), and coverage must be fair in that it accurately reflects the opposing views. New Broadcasting Co., 6 P & F Radio Reg. 258 (1950). This must be done at the broadcaster's own expense if sponsorship is unavailable. Cullman Broadcasting Co., 25 P & F Radio Reg. 895 (1963). [395 U.S. 367, 378] Moreover, the duty must be met by programming obtained at the licensee's own initiative if available from no other source. John J. Dempsey, 6 P & F Radio Reg. 615 (1950); see Metropolitan Broadcasting Corp., 19 P & F Radio Reg. 602 (1960); The Evening News Assn., 6 P &

F Radio Reg. 283 (1950). The Federal Radio Commission had imposed these two basic duties on broadcasters since the outset, Great Lakes Broadcasting Co., 3 F. R. C. Ann. Rep. 32 (1929), rev'd on other grounds, 59 App. D.C. 197, 37 F.2d 993, cert. dismissed, 281 U.S. 706 (1930); Chicago Federation of Labor v. FRC, 3 F. R. C. Ann. Rep. 36 (1929), aff'd, 59 App. D.C. 333, 41 F.2d 422 (1930); KFKB Broadcasting Assn. v. FRC, 60 App. D.C. 79, 47 F.2d 670 (1931), and in particular respects the personal attack rules and regulations at issue here have spelled them out in greater detail.

When a personal attack has been made on a figure involved in a public issue, both the doctrine of cases such as Red Lion and Times-Mirror Broadcasting Co., 24 P & F Radio Reg. 404 (1962), and also the 1967 regulations at issue in RTNDA require that the individual attacked himself be offered an opportunity to respond. Likewise, where one candidate is endorsed in a political editorial, the other candidates must themselves be offered reply time to use personally or through a spokesman. These obligations differ from the general fairness requirement that issues be presented, and presented with coverage of competing views, in that the broadcaster does not have the option of presenting the attacked party's side himself or choosing a third party to represent that side. But insofar as there is an obligation of the broadcaster to see that both sides are presented, and insofar as that is an affirmative obligation, the personal attack doctrine and regulations do not differ from the preceding fairness doctrine. The simple fact that the attacked men or unendorsed candidates may respond themselves or through [395 U.S. 367, 379] agents is not a critical distinction, and indeed, it is not unreasonable for the FCC to conclude that the objective of adequate presentation of all sides may best be served by allowing those most closely affected to make the response, rather than leaving the response in the hands of the station which has attacked their candidacies, endorsed their opponents, or carried a personal attack upon them.

B.

The statutory authority of the FCC to promulgate these regulations derives from the mandate to the "Commission from time to time, as public convenience, interest, or necessity requires" to promulgate "such rules and regulations and prescribe such restrictions and conditions . . . as may be necessary to carry out the provisions of this chapter . . ." 47 U.S.C. 303 and 303 (r). The Commission is specifically directed to consider the demands of the public interest in the course of granting licenses, 47 U.S.C. 307 (a), 309 (a); [395 U.S. 367, 380] renewing them, 47 U.S.C. 307; and modifying them. Ibid. Moreover, the FCC has included among the conditions of the Red Lion license itself the requirement that operation of the station be carried out in the public interest, 47 U.S.C. 309 (h). This mandate to the FCC to assure that broadcasters operate in the public interest is a broad one, a power "not niggardly but expansive," National Broadcasting Co. v. United States, 319 U.S. 190, 219 (1943), whose validity we have long upheld. FCC v. Pottsville Broadcasting Co., 309 U.S. 134, 138 (1940); FCC v. RCA Communications, Inc., 346 U.S. 86, 90 (1953); FRC v. Nelson Bros. Bond & Mortgage Co., 289 U.S. 266, 285 (1933). It is broad enough to encompass these regulations.

The fairness doctrine finds specific recognition in statutory form, is in part modeled on explicit statutory provisions relating to political candidates, and is approvingly reflected in legislative history.

In 1959 the Congress amended the statutory requirement of 315 that equal time be accorded each political candidate to except certain appearances on news programs, but added that this constituted no exception "from the obligation imposed upon them under this Act to operate in the public interest and to afford reasonable opportunity for the discussion of conflicting views on issues of public importance." Act of September 14, 1959, 1, 73 Stat. 557, amending 47 U.S.C. 315 (a) (emphasis added). This language makes it very plain that Congress, in 1959, announced that the phrase "public interest," which had been in the Act since 1927, imposed a duty on broadcasters to discuss both sides of controversial public issues. In other words, the amendment vindicated the FCC's general view that the fairness doctrine inhered in the public interest standard. Subsequent legislation declaring the intent of an earlier statute [395 U.S. 367, 381] is entitled to great weight in statutory construction. And here this principle is given special force by the equally venerable principle that the construction of a statute by those charged with its execution should be followed unless there are

compelling indications that it is wrong, especially when Congress has refused to alter the administrative construction. Here, the Congress has not just kept its silence by refusing to overturn the administrative construction, but has ratified it with [395 U.S. 367, 382] positive legislation. Thirty years of consistent administrative construction left undisturbed by Congress until 1959, when that construction was expressly accepted, reinforce the natural conclusion that the public interest language of the Act authorized the Commission to require licensees to use their stations for discussion of public issues, and that the FCC is free to implement this requirement by reasonable rules and regulations which fall short of abridgment of the freedom of speech and press, and of the censorship proscribed by 326 of the Act.

The objectives of 315 themselves could readily be circumvented but for the complementary fairness doctrine ratified by 315. The section applies only to campaign appearances by candidates, and not by family, friends, campaign managers, or other supporters. Without the fairness doctrine, then, a licensee could ban all campaign appearances by candidates themselves from the air and [395 U.S. 367, 383] proceed to deliver over his station entirely to the supporters of one slate of candidates, to the exclusion of all others. In this way the broadcaster could have a far greater impact on the favored candidacy than he could by simply allowing a spot appearance by the candidate himself. It is the fairness doctrine as an aspect of the obligation to operate in the public interest, rather than 315, which prohibits the broadcaster from taking such a step.

The legislative history reinforces this view of the effect of the 1959 amendment. Even before the language relevant here was added, the Senate report on amending 315 noted that "broadcast frequencies are limited and, therefore, they have been necessarily considered a public trust. Every licensee who is fortunate in obtaining a license is mandated to operate in the public interest and has assumed the obligation of presenting important public questions fairly and without bias." S. Rep. No. 562, 86th Cong., 1st Sess., 8-9 (1959). See also, specifically adverting to Federal Communications Commission doctrine, id., at 13.

Rather than leave this approval solely in the legislative history, Senator Proxmire suggested an amendment to make it part of the Act. 105 Cong. Rec. 14457. This amendment, which Senator Pastore, a manager of the bill and a ranking member of the Senate Committee, considered "rather surplusage," 105 Cong. Rec. 14462, constituted a positive statement of doctrine and was altered [395 U.S. 367, 384] to the present merely approving language in the conference committee. In explaining the language to the Senate after the committee changes, Senator Pastore said: "We insisted that that provision remain in the bill, to be a continuing reminder and admonition to the Federal Communications Commission and to the broadcasters alike, that we were not abandoning the philosophy that gave birth to section 315, in giving the people the right to have a full and complete disclosure of conflicting views on news of interest to the people of the country." 105 Cong. Rec. 17830. Senator Scott, another Senate manager, added that: "It is intended to encompass all legitimate areas of public importance which are controversial," not just politics. 105 Cong. Rec. 17831.

It is true that the personal attack aspect of the fairness doctrine was not actually adjudicated until after 1959, so that Congress then did not have those rules specifically before it. However, the obligation to offer time to reply to a personal attack was presaged by the FCC's 1949 Report on Editorializing, which the FCC views as the principal summary of its ratio decidendi in cases in this area:

"In determining whether to honor specific requests for time, the station will inevitably be confronted with such questions as . . . whether there may not be other available groups or individuals who might be more appropriate spokesmen for the particular point of view than the person making the request. The latter's personal involvement in the controversy may also be a factor which must be considered, for elementary considerations of fairness may dictate that time be allocated to a person or group which has been specifically attacked over the station, where otherwise no such obligation would exist." 13 F. C. C., at 1251-1252. [395 U.S. 367, 385]

When the Congress ratified the FCC's implication of a fairness doctrine in 1959 it did not, of course, approve every past decision or pronouncement by the Commission on this subject, or give it a completely free hand for the future. The statutory authority does not go so far. But we cannot say that when a station publishes personal attacks or endorses political candidates, it is a misconstruction of the public interest standard to require

the station to offer time for a response rather than to leave the response entirely within the control of the station which has attacked either the candidacies or the men who wish to reply in their own defense. When a broadcaster grants time to a political candidate, Congress itself requires that equal time be offered to his opponents. It would exceed our competence to hold that the Commission is unauthorized by the statute to employ a similar device where personal attacks or political editorials are broadcast by a radio or television station.

In light of the fact that the "public interest" in broadcasting clearly encompasses the presentation of vigorous debate of controversial issues of importance and concern to the public; the fact that the FCC has rested upon that language from its very inception a doctrine that these issues must be discussed, and fairly; and the fact that Congress has acknowledged that the analogous provisions of 315 are not preclusive in this area, and knowingly preserved the FCC's complementary efforts, we think the fairness doctrine and its component personal attack and political editorializing regulations are a legitimate exercise of congressionally delegated authority. The Communications Act is not notable for the precision of its substantive standards and in this respect the explicit provisions of 315, and the doctrine and rules at issue here which are closely modeled upon that section, are far more explicit than the generalized "public interest" standard in which the Commission ordinarily finds its [395 U.S. 367, 386] sole guidance, and which we have held a broad but adequate standard before. FCC v. RCA Communications, Inc., 346 U.S. 86, 90 (1953); National Broadcasting Co. v. United States, 319 U.S. 190, 216-217 (1943); FCC v. Pottsville Broadcasting Co., 309 U.S. 134, 138 (1940); FRC v. Nelson Bros. Bond & Mortgage Co., 289 U.S. 266, 285 (1933). We cannot say that the FCC's declaratory ruling in Red Lion, or the regulations at issue in RTNDA, are beyond the scope of the congressionally conferred power to assure that stations are operated by those whose possession of a license serves "the public interest."

III.

The broadcasters challenge the fairness doctrine and its specific manifestations in the personal attack and political editorial rules on conventional First Amendment grounds, alleging that the rules abridge their freedom of speech and press. Their contention is that the First Amendment protects their desire to use their allotted frequencies continuously to broadcast whatever they choose, and to exclude whomever they choose from ever using that frequency. No man may be prevented from saying or publishing what he thinks, or from refusing in his speech or other utterances to give equal weight to the views of his opponents. This right, they say, applies equally to broadcasters.

A.

Although broadcasting is clearly a medium affected by a First Amendment interest, United States v. Paramount Pictures, Inc., 334 U.S. 131, 166 (1948), differences in the characteristics of new media justify differences in the First Amendment standards applied to them. Joseph [395 U.S. 367, 387] Burstyn, Inc. v. Wilson, 343 U.S. 495, 503 (1952). For example, the ability of new technology to produce sounds more raucous than those of the human voice justifies restrictions on the sound level, and on the hours and places of use, of sound trucks so long as the restrictions are reasonable and applied without discrimination. Kovacs v. Cooper, 336 U.S. 77 (1949).

Just as the Government may limit the use of sound-amplifying equipment potentially so noisy that it drowns out civilized private speech, so may the Government limit the use of broadcast equipment. The right of free speech of a broadcaster, the user of a sound truck, or any other individual does not embrace a right to snuff out the free speech of others. Associated Press v. United States, 326 U.S. 1, 20 (1945).

When two people converse face to face, both should not speak at once if either is to be clearly understood. But the range of the human voice is so limited that there could be meaningful communications if half the people in the United States were talking and the other half listening. Just as clearly, half the people might publish and the other half read. But the reach of radio signals is [395 U.S. 367, 388] incomparably greater than the range of the human voice and the problem of interference is a massive reality. The lack of know-how and equipment may keep many from the air, but only a tiny fraction of those with resources and intelligence can hope to communicate by radio at the same time if

intelligible communication is to be had, even if the entire radio spectrum is utilized in the present state of commercially acceptable technology.

It was this fact, and the chaos which ensued from permitting anyone to use any frequency at whatever power level he wished, which made necessary the enactment of the Radio Act of 1927 and the Communications Act of 1934, as the Court has noted at length before. National Broadcasting Co. v. United States, 319 U.S. 190, 210-214 (1943). It was this reality which at the very least necessitated first the division of the radio spectrum into portions reserved respectively for public broadcasting and for other important radio uses such as amateur operation, aircraft, police, defense, and navigation; and then the subdivision of each portion, and assignment of specific frequencies to individual users or groups of users. Beyond this, however, because the frequencies reserved for public broadcasting were limited in number, it was essential for the Government to tell some applicants that they could not broadcast at all because there was room for only a few.

Where there are substantially more individuals who want to broadcast than there are frequencies to allocate, it is idle to posit an unabridgeable First Amendment right to broadcast comparable to the right of every individual to speak, write, or publish. If 100 persons want broadcast [395 U.S. 367, 389] licenses but there are only 10 frequencies to allocate, all of them may have the same "right" to a license; but if there is to be any effective communication by radio, only a few can be licensed and the rest must be barred from the airwaves. It would be strange if the First Amendment, aimed at protecting and furthering communications, prevented the Government from making radio communication possible by requiring licenses to broadcast and by limiting the number of licenses so as not to overcrowd the spectrum.

This has been the consistent view of the Court. Congress unquestionably has the power to grant and deny licenses and to eliminate existing stations. FRC v. Nelson Bros. Bond & Mortgage Co., 289 U.S. 266 (1933). No one has a First Amendment right to a license or to monopolize a radio frequency; to deny a station license because "the public interest" requires it "is not a denial of free speech." National Broadcasting Co. v. United States, 319 U.S. 190, 227 (1943).

By the same token, as far as the First Amendment is concerned those who are licensed stand no better than those to whom licenses are refused. A license permits broadcasting, but the licensee has no constitutional right to be the one who holds the license or to monopolize a radio frequency to the exclusion of his fellow citizens. There is nothing in the First Amendment which prevents the Government from requiring a licensee to share his frequency with others and to conduct himself as a proxy or fiduciary with obligations to present those views and voices which are representative of his community and which would otherwise, by necessity, be barred from the airwaves.

This is not to say that the First Amendment is irrelevant to public broadcasting. On the contrary, it has a major role to play as the Congress itself recognized in 326, which forbids FCC interference with "the right [395 U.S. 367, 390] of free speech by means of radio communication." Because of the scarcity of radio frequencies, the Government is permitted to put restraints on licensees in favor of others whose views should be expressed on this unique medium. But the people as a whole retain their interest in free speech by radio and their collective right to have the medium function consistently with the ends and purposes of the First Amendment. It is the right of the viewers and listeners, not the right of the broadcasters, which is paramount. See FCC v. Sanders Bros. Radio Station, 309 U.S. 470, 475 (1940); FCC v. Allentown Broadcasting Corp., 349 U.S. 358, 361-362 (1955); 2 Z. Chafee, Government and Mass Communications 546 (1947). It is the purpose of the First Amendment to preserve an uninhibited market-place of ideas in which truth will ultimately prevail, rather than to countenance monopolization of that market, whether it be by the Government itself or a private licensee. Associated Press v. United States, 326 U.S. 1, 20 (1945); New York Times Co. v. Sullivan, 376 U.S. 254, 270 (1964); Abrams v. United States, 250 U.S. 616, 630 (1919) (Holmes, J., dissenting). "[S]peech concerning public affairs is more than self-expression; it is the essence of self-government." Garrison v. Louisiana, 379 U.S. 64, 74-75 (1964). See Brennan, The Supreme Court and the Meiklejohn Interpretation of the First Amendment, 79 Harv. L. Rev. 1 (1965). It is the right of the public to receive suitable access to social, political, esthetic, moral, and

other ideas and experiences which is crucial here. That right may not constitutionally be abridged either by Congress or by the FCC.

B.

Rather than confer frequency monopolies on a relatively small number of licensees, in a Nation of 200,000,000, the Government could surely have decreed that [395 U.S. 367, 391] each frequency should be shared among all or some of those who wish to use it, each being assigned a portion of the broadcast day or the broadcast week. The ruling and regulations at issue here do not go quite so far. They assert that under specified circumstances, a licensee must offer to make available a reasonable amount of broadcast time to those who have a view different from that which has already been expressed on his station. The expression of a political endorsement, or of a personal attack while dealing with a controversial public issue, simply triggers this time sharing. As we have said, the First Amendment confers no right on licensees to prevent others from broadcasting on "their" frequencies and no right to an unconditional monopoly of a scarce resource which the Government has denied others the right to use.

In terms of constitutional principle, and as enforced sharing of a scarce resource, the personal attack and political editorial rules are indistinguishable from the equal-time provision of 315, a specific enactment of Congress requiring stations to set aside reply time under specified circumstances and to which the fairness doctrine and these constituent regulations are important complements. That provision, which has been part of the law since 1927, Radio Act of 1927, 18, 44 Stat. 1170, has been held valid by this Court as an obligation of the licensee relieving him of any power in any way to prevent or censor the broadcast, and thus insulating him from liability for defamation. The constitutionality of the statute under the First Amendment was unquestioned. Farmers Educ. & Coop. Union v. WDAY, 360 U.S. 525 (1959). [395 U.S. 367, 392]

Nor can we say that it is inconsistent with the First Amendment goal of producing an informed public capable of conducting its own affairs to require a broadcaster to permit answers to personal attacks occurring in the course of discussing controversial issues, or to require that the political opponents of those endorsed by the station be given a chance to communicate with the public. Otherwise, station owners and a few networks would have unfettered power to make time available only to the highest bidders, to communicate only their own views on public issues, people and candidates, and to permit on the air only those with whom they agreed. There is no sanctuary in the First Amendment for unlimited private censorship operating in a medium not open to all. "Freedom of the press from governmental interference under the First Amendment does not sanction repression of that freedom by private interests." Associated Press v. United States, 326 U.S. 1, 20 (1945).

C.

It is strenuously argued, however, that if political editorials or personal attacks will trigger an obligation in broadcasters to afford the opportunity for expression [395 U.S. 367, 393] to speakers who need not pay for time and whose views are unpalatable to the licensees, then broadcasters will be irresistibly forced to self-censorship and their coverage of controversial public issues will be eliminated or at least rendered wholly ineffective. Such a result would indeed be a serious matter, for should licensees actually eliminate their coverage of controversial issues, the purposes of the doctrine would be stifled.

At this point, however, as the Federal Communications Commission has indicated, that possibility is at best speculative. The communications industry, and in particular the networks, have taken pains to present controversial issues in the past, and even now they do not assert that they intend to abandon their efforts in this regard. It would be better if the FCC's encouragement were never necessary to induce the broadcasters to meet their responsibility. And if experience with the administration of these doctrines indicates that they have the net effect of reducing rather than enhancing the volume and quality of coverage, there will be time enough to reconsider the constitutional implications. The fairness doctrine in the past has had no such overall effect.

That this will occur now seems unlikely, however, since if present licensees should suddenly prove timorous, the Commission is not powerless

to insist that they give adequate and fair attention to public issues. [395 U.S. 367, 394] It does not violate the First Amendment to treat licensees given the privilege of using scarce radio frequencies as proxies for the entire community, obligated to give suitable time and attention to matters of great public concern. To condition the granting or renewal of licenses on a willingness to present representative community views on controversial issues is consistent with the ends and purposes of those constitutional provisions forbidding the abridgment of freedom of speech and freedom of the press. Congress need not stand idly by and permit those with licenses to ignore the problems which beset the people or to exclude from the airways anything but their own views of fundamental questions. The statute, long administrative practice, and cases are to this effect.

Licenses to broadcast do not confer ownership of designated frequencies, but only the temporary privilege of using them. 47 U.S.C. 301. Unless renewed, they expire within three years. 47 U.S.C. 307 (d). The statute mandates the issuance of licenses if the "public convenience, interest, or necessity will be served thereby." 47 U.S.C. 307 (a). In applying this standard the Commission for 40 years has been choosing licensees based in part on their program proposals. In FRC v. Nelson Bros. Bond & Mortgage Co., 289 U.S. 266, 279 (1933), the Court noted that in "view of the limited number of available broadcasting frequencies, the Congress has authorized allocation and licenses." In determining how best to allocate frequencies, the Federal Radio Commission considered the needs of competing communities and the programs offered by competing stations to meet those needs; moreover, if needs or programs shifted, the Commission could alter its allocations to reflect those shifts. Id., at 285. In the same vein, in FCC v. Pottsville Broadcasting Co., 309 U.S. 134, 137-138 (1940), the Court noted that [395 U.S. 367, 395] the statutory standard was a supple instrument to effect congressional desires "to maintain . . . a grip on the dynamic aspects of radio transmission" and to allay fears that "in the absence of governmental control the public interest might be subordinated to monopolistic domination in the broadcasting field." Three years later the Court considered the validity of the Commission's chain broadcasting regulations, which among other things forbade stations from devoting too much time to network programs in order that there be suitable opportunity for local programs serving local needs. The Court upheld the regulations, unequivocally recognizing that the Commission was more than a traffic policeman concerned with the technical aspects of broadcasting and that it neither exceeded its powers under the statute nor transgressed the First Amendment in interesting itself in general program format and the kinds of programs broadcast by licensees. National Broadcasting Co. v. United States, 319 U.S. 190 (1943).

D.

The litigants embellish their First Amendment arguments with the contention that the regulations are so vague that their duties are impossible to discern. Of this point it is enough to say that, judging the validity of the regulations on their face as they are presented here, we cannot conclude that the FCC has been left a free hand to vindicate its own idiosyncratic conception of the public interest or of the requirements of free speech. Past adjudications by the FCC give added precision to the regulations; there was nothing vague about the FCC's specific ruling in Red Lion that Fred Cook should be provided an opportunity to reply. The regulations at issue in RTNDA could be employed in precisely the same way as the fairness doctrine was in Red Lion. Moreover, the FCC itself has recognized that [395 U.S. 367, 396] the applicability of its regulations to situations beyond the scope of past cases may be questionable, 32 Fed. Reg. 10303, 10304 and n. 6, and will not impose sanctions in such cases without warning. We need not approve every aspect of the fairness doctrine to decide these cases, and we will not now pass upon the constitutionality of these regulations by envisioning the most extreme applications conceivable, United States v. Sullivan, 332 U.S. 689, 694 (1948), but will deal with those problems if and when they arise.

We need not and do not now ratify every past and future decision by the FCC with regard to programming. There is no question here of the Commission's refusal to permit the broadcaster to carry a particular program or to publish his own views; of a discriminatory refusal to require the licensee to broadcast certain views which have

been denied access to the airwaves; of government censorship of a particular program contrary to 326; or of the official government view dominating public broadcasting. Such questions would raise more serious First Amendment issues. But we do hold that the Congress and the Commission do not violate the First Amendment when they require a radio or television station to give reply time to answer personal attacks and political editorials.

E.

It is argued that even if at one time the lack of available frequencies for all who wished to use them justified the Government's choice of those who would best serve the public interest by acting as proxy for those who would present differing views, or by giving the latter access directly to broadcast facilities, this condition no longer prevails so that continuing control is not justified. To this there are several answers.

Scarcity is not entirely a thing of the past. Advances [395 U.S. 367, 397] in technology, such as microwave transmission, have led to more efficient utilization of the frequency spectrum, but uses for that spectrum have also grown apace. Portions of the spectrum must be reserved for vital uses unconnected with human communication, such as radio-navigational aids used by aircraft and vessels. Conflicts have even emerged between such vital functions as defense preparedness and experimentation in methods of averting midair collisions through radio warning devices. "Land mobile services" such as police, ambulance, fire department, public utility, and other communications systems have been occupying an increasingly crowded portion of the frequency spectrum and there are, apart from licensed amateur radio operators' equipment, 5,000,000 transmitters operated on the "citizens' band" which is also increasingly congested. Among the various uses for radio frequency space, including marine, [395 U.S. 367, 398] aviation, amateur, military, and common carrier users, there are easily enough claimants to permit use of the whole with an even smaller allocation to broadcast radio and television uses than now exists.

Comparative hearings between competing applicants for broadcast spectrum space are by no means a thing of the past. The radio spectrum has become so congested that at times it has been necessary to suspend new applications. The very high frequency television spectrum is, in the country's major markets, almost entirely occupied, although space reserved for ultra high frequency television transmission, which is a relatively recent development as a commercially viable alternative, has not yet been completely filled. [395 U.S. 367, 399]

The rapidity with which technological advances succeed one another to create more efficient use of spectrum space on the one hand, and to create new uses for that space by ever growing numbers of people on the other, makes it unwise to speculate on the future allocation of that space. It is enough to say that the resource is one of considerable and growing importance whose scarcity impelled its regulation by an agency authorized by Congress. Nothing in this record, or in our own researches, convinces us that the resource is no longer one for which there are more immediate and potential uses than can be accommodated, and for which wise planning is essential. This does not mean, of course, that every possible wavelength must be occupied at every hour by some vital use in order to sustain the congressional judgment. The [395 U.S. 367, 400] substantial capital investment required for many uses, in addition to the potentiality for confusion and interference inherent in any scheme for continuous kaleidoscopic reallocation of all available space may make this unfeasible. The allocation need not be made at such a breakneck pace that the objectives of the allocation are themselves imperiled.

Even where there are gaps in spectrum utilization, the fact remains that existing broadcasters have often attained their present position because of their initial government selection in competition with others before new technological advances opened new opportunities for further uses. Long experience in broadcasting, confirmed habits of listeners and viewers, network affiliation, and other advantages in program procurement give existing broadcasters a substantial advantage over new entrants, even where new entry is technologically possible. These advantages are the fruit of a preferred position conferred by the Government. Some present possibility for new entry by competing stations is not enough, in itself, to render unconstitutional the Government's effort to assure that a broadcaster's programming ranges widely enough to serve the public interest.

In view of the scarcity of broadcast frequencies, the Government's role in allocating those frequencies, and the legitimate claims of those unable without governmental assistance to gain access to those frequencies for expression of their views, we hold the regulations and [395 U.S. 367, 401] ruling at issue here are both authorized by statute and constitutional. The judgment of the Court of Appeals in Red Lion is affirmed and that in RTNDA reversed and the causes remanded for proceedings consistent with this opinion.

It is so ordered.

Red Lion Broadcasting Co., v. FCC, 395 U.S. 367 (1969).

Janet Reno, Attorney General of the United States, et al., Appellants v. American Civil Liberties Union et al. *(1997)*

Introduction

The courts have generally supported the freedom of the press afforded by the First Amendment. But both the Supreme Court and Congress never really saw the First Amendment rights of each medium as created equal. The Court usually applied several key factors in deciding the extent to which the government should control communications within a certain medium. These criteria included the degree to which channels were limited for public use, how active the recipient had to be to secure information, the history of government regulation for that medium, and barriers set up to impede access for children to questionable material.

It has not been surprising that the broadcast medium (radio and television)—with its limited spectrum of airways, invasive nature and longstanding FCC relationship—should be most closely monitored. By contrast, print outlets have traditionally met with minimal government restrictions—and cable television and telephone transmissions have fallen somewhere in between. The Supreme Court, in *Reno v. ACLU,* decided that the Internet merited the same high level of First Amendment protection from government interference granted print. Like newspapers, magazines, and books, public channels to posting information on the Internet were boundless, users had to actively seek material online, no history of government regulation existed, and children usually could not just stumble on to inappropriate content without warnings or confronting certain safeguards.

The Supreme Court's determination that the Internet deserved maximum First Amendment protection arose from an objection by the American Civil Liberties Union to the Communications Decency Act (CDA), a part of the Telecommunications Act of 1996. The CDA sought to block transmission over the Internet of indecent, patently offensive or obscene content to children. In *Reno v. ACLU,* the Court found the rather vague CDA unconstitutional and eliminated the limits placed on transmitting indecent or offensive material over the Internet—but the ban on obscene postings was upheld because the First Amendment does not protect this content in any medium. Justice John Paul Stevens, in the majority opinion, noted that the government's urge to protect children from harmful materials "does not justify an unnecessarily broad suppression of speech addressed to adults."

U.S. Supreme Court No. 96-511
Janet Reno, Attorney General of the United States, et al., Appellants v. American Civil Liberties Union et al.

On appeal from the United States District Court for the Eastern District of Pennsylvania
June 26, 1997, Decided

Justice Stevens delivered the opinion of the Court.

At issue is the constitutionality of two statutory provisions enacted to protect minors from "indecent" and "patently offensive" communications on the Internet. Notwithstanding the legitimacy and importance of the congressional goal of protecting children from harmful materials, we agree with the three judge District Court that the statute abridges "the freedom of speech" protected by the First Amendment.[1]

The District Court made extensive findings of fact, most of which were based on a detailed stipulation prepared by the parties. See 929 F. Supp. 824, 830-849 (ED Pa. 1996).[2] The findings describe the character and the dimensions of the Internet, the availability of sexually explicit material in that medium, and the problems confronting

age verification for recipients of Internet communications. Because those findings provide the underpinnings for the legal issues, we begin with a summary of the undisputed facts.

The Internet

The Internet is an international network of interconnected computers. It is the outgrowth of what began in 1969 as a military program called "ARPANET,"[3] which was designed to enable computers operated by the military, defense contractors, and universities conducting defense related research to communicate with one another by redundant channels even if some portions of the network were damaged in a war. While the ARPANET no longer exists, it provided an example for the development of a number of civilian networks that, eventually linking with each other, now enable tens of millions of people to communicate with one another and to access vast amounts of information from around the world. The Internet is "a unique and wholly new medium of worldwide human communication."[4]

The Internet has experienced "extraordinary growth."[5] The number of "host" computers—those that store information and relay communications—increased from about 300 in 1981 to approximately 9,400,000 by the time of the trial in 1996. Roughly 60% of these hosts are located in the United States. About 40 million people used the Internet at the time of trial, a number that is expected to mushroom to 200 million by 1999.

Individuals can obtain access to the Internet from many different sources, generally hosts themselves or entities with a host affiliation. Most colleges and universities provide access for their students and faculty; many corporations provide their employees with access through an office network; many communities and local libraries provide free access; and an increasing number of storefront "computer coffee shops" provide access for a small hourly fee. Several major national "online services" such as America Online, CompuServe, the Microsoft Network, and Prodigy offer access to their own extensive proprietary networks as well as a link to the much larger resources of the Internet. These commercial online services had almost 12 million individual subscribers at the time of trial.

Anyone with access to the Internet may take advantage of a wide variety of communication and information retrieval methods. These methods are constantly evolving and difficult to categorize precisely. But, as presently constituted, those most relevant to this case are electronic mail ("email"), automatic mailing list services ("mail exploders," sometimes referred to as "listservs"), "newsgroups," "chat rooms," and the "World Wide Web." All of these methods can be used to transmit text; most can transmit sound, pictures, and moving video images. Taken together, these tools constitute a unique medium—known to its users as "cyberspace"—located in no particular geographical location but available to anyone, anywhere in the world, with access to the Internet.

Email enables an individual to send an electronic message—generally akin to a note or letter—to another individual or to a group of addressees. The message is generally stored electronically, sometimes waiting for the recipient to check her "mailbox" and sometimes making its receipt known through some type of prompt. A mail exploder is a sort of email group. Subscribers can send messages to a common email address, which then forwards the message to the group's other subscribers. Newsgroups also serve groups of regular participants, but these postings may be read by others as well. There are thousands of such groups, each serving to foster an exchange of information or opinion on a particular topic running the gamut from, say, the music of Wagner to Balkan politics to AIDS prevention to the Chicago Bulls. About 100,000 new messages are posted every day. In most newsgroups, postings are automatically purged at regular intervals. In addition to posting a message that can be read later, two or more individuals wishing to communicate more immediately can enter a chat room to engage in real time dialogue—in other words, by typing messages to one another that appear almost immediately on the others' computer screens. The District Court found that at any given time "tens of thousands of users are engaging in conversations on a huge range of subjects."[6] It is "no exaggeration to conclude that the content on the Internet is as diverse as human thought."[7]

The best-known category of communication over the Internet is the World Wide Web, which allows users to search for and retrieve information stored in remote computers, as well as, in some cases, to communicate back to designated sites. In

concrete terms, the Web consists of a vast number of documents stored in different computers all over the world. Some of these documents are simply files containing information. However, more elaborate documents, commonly known as Web "pages," are also prevalent. Each has its own address—rather like a telephone number."[8] Web pages frequently contain information and sometimes allow the viewer to communicate with the page's (or "site's") author. They generally also contain "links" to other documents created by that site's author or to other (generally) related sites. Typically, the links are either blue or underlined text—sometimes images.

Navigating the Web is relatively straightforward. A user may either type the address of a known page or enter one or more keywords into a commercial "search engine" in an effort to locate sites on a subject of interest. A particular Web page may contain the information sought by the "surfer," or, through its links, it may be an avenue to other documents located anywhere on the Internet. Users generally explore a given Web page, or move to another, by clicking a computer "mouse" on one of the page's icons or links. Access to most Web pages is freely available, but some allow access only to those who have purchased the right from a commercial provider. The Web is thus comparable, from the readers' viewpoint, to both a vast library including millions of readily available and indexed publications and a sprawling mall offering goods and services.

From the publishers' point of view, it constitutes a vast platform from which to address and hear from a worldwide audience of millions of readers, viewers, researchers, and buyers. Any person or organization with a computer connected to the Internet can "publish" information. Publishers include government agencies, educational institutions, commercial entities, advocacy groups, and individuals.[9] Publishers may either make their material available to the entire pool of Internet users, or confine access to a selected group, such as those willing to pay for the privilege. "No single organization controls any membership in the Web, nor is there any centralized point from which individual Web sites or services can be blocked from the Web."[10]

Sexually Explicit Material

Sexually explicit material on the Internet includes text, pictures, and chat and "extends from the modestly titillating to the hardest core."[11] These files are created, named, and posted in the same manner as material that is not sexually explicit, and may be accessed either deliberately or unintentionally during the course of an imprecise search. "Once a provider posts its content on the Internet, it cannot prevent that content from entering any community."[12] Thus, for example,

> "when the UCR/California Museum of Photography posts to its Web site nudes by Edward Weston and Robert Mapplethorpe to announce that its new exhibit will travel to Baltimore and New York City, those images are available not only in Los Angeles, Baltimore, and New York City, but also in Cincinnati, Mobile, or Beijing—wherever Internet users live. Similarly, the safer sex instructions that Critical Path posts to its Web site, written in street language so that the teenage receiver can understand them, are available not just in Philadelphia, but also in Provo and Prague."[13]

Some of the communications over the Internet that originate in foreign countries are also sexually explicit.[14]

Though such material is widely available, users seldom encounter such content accidentally. "A document's title or a description of the document will usually appear before the document itself . . . and in many cases the user will receive detailed information about a site's content before he or she need take the step to access the document. Almost all sexually explicit images are preceded by warnings as to the content."[15] For that reason, the "odds are slim" that a user would enter a sexually explicit site by accident.[16] Unlike communications received by radio or television, "the receipt of information on the Internet requires a series of affirmative steps more deliberate and directed than merely turning a dial. A child requires some sophistication and some ability to read to retrieve material and thereby to use the Internet unattended."[17]

Systems have been developed to help parents control the material that may be available on a home computer with Internet access. A system may either limit a computer's access to an approved list of sources that have been identified as containing no adult material, it may block designated inappropriate sites, or it may attempt to block

messages containing identifiable objectionable features. "Although parental control software currently can screen for certain suggestive words or for known sexually explicit sites, it cannot now screen for sexually explicit images."[18] Nevertheless, the evidence indicates that "a reasonably effective method by which parents can prevent their children from accessing sexually explicit and other material which parents may believe is inappropriate for their children will soon be available."[19]

Age Verification

The problem of age verification differs for different uses of the Internet. The District Court categorically determined that there "is no effective way to determine the identity or the age of a user who is accessing material through email, mail exploders, newsgroups or chat rooms."[20] The Government offered no evidence that there was a reliable way to screen recipients and participants in such for age. Moreover, even if it were technologically feasible to block minors' access to newsgroups and chat rooms containing discussions of art, politics or other subjects that potentially elicit "indecent" or "patently offensive" contributions, it would not be possible to block their access to that material and "still allow them access to the remaining content, even if the overwhelming majority of that content was not indecent."[21]

Technology exists by which an operator of a Web site may condition access on the verification of requested information such as a credit card number or an adult password. Credit card verification is only feasible, however, either in connection with a commercial transaction in which the card is used, or by payment to a verification agency. Using credit card possession as a surrogate for proof of age would impose costs on non-commercial Web sites that would require many of them to shut down. For that reason, at the time of the trial, credit card verification was "effectively unavailable to a substantial number of Internet content providers." Id., at 846 (finding 102). Moreover, the imposition of such a requirement "would completely bar adults who do not have a credit card and lack the resources to obtain one from accessing any blocked material."[22]

Commercial pornographic sites that charge their users for access have assigned them passwords as a method of age verification. The record does not contain any evidence concerning the reliability of these technologies. Even if passwords are effective for commercial purveyors of indecent material, the District Court found that an adult password requirement would impose significant burdens on noncommercial sites, both because they would discourage users from accessing their sites and because the cost of creating and maintaining such screening systems would be "beyond their reach."[23]

In sum, the District Court found:

> "Even if credit card verification or adult password verification were implemented, the Government presented no testimony as to how such systems could ensure that the user of the password or credit card is in fact over 18. The burdens imposed by credit card verification and adult password verification systems make them effectively unavailable to a substantial number of Internet content providers." Ibid. (finding 107).

The Telecommunications Act of 1996, Pub. L. 104-104, 110 Stat. 56, was an unusually important legislative enactment. As stated on the first of its 103 pages, its primary purpose was to reduce regulation and encourage "the rapid deployment of new telecommunications technologies." The major components of the statute have nothing to do with the Internet; they were designed to promote competition in the local telephone service market, the multichannel video market, and the market for over the air broadcasting. The Act includes seven Titles, six of which are the product of extensive committee hearings and the subject of discussion in Reports prepared by Committees of the Senate and the House of Representatives. By contrast, Title V—known as the "Communications Decency Act of 1996" (CDA)—contains provisions that were either added in executive committee after the hearings were concluded or as amendments offered during floor debate on the legislation. An amendment offered in the Senate was the source of the two statutory provisions challenged in this case.[24] They are informally described as the "indecent transmission" provision and the "patently offensive display" provision.[25]

The first, 47 U. S. C. A. §223(a) (Supp. 1997), prohibits the knowing transmission of obscene or

indecent messages to any recipient under 18 years of age. It provides in pertinent part:

> "(a) Whoever—
>
> (1) in interstate or foreign communications—
>
> . . . . .
>
> "(B) by means of a telecommunications device knowingly—
>
> (i) makes, creates, or solicits, and
>
> (ii) initiates the transmission of,
>
> any comment, request, suggestion, proposal, image, or other communication which is obscene or indecent, knowing that the recipient of the communication is under 18 years of age, regardless of whether the maker of such communication placed the call or initiated the communication;
>
> . . . . .
>
> "(2) knowingly permits any telecommunications facility under his control to be used for any activity prohibited by paragraph (1) with the intent that it be used for such activity, shall be fined under Title 18, or imprisoned not more than two years, or both."

The second provision, §223(d), prohibits the knowing sending or displaying of patently offensive messages in a manner that is available to a person under 18 years of age. It provides:

> "(d) Whoever—
>
> "(1) in interstate or foreign communications knowingly—
>
> "(A) uses an interactive computer service to send to a specific person or persons under 18 years of age, or
>
> "(B) uses any interactive computer service to display in a manner available to a person under 18 years of age, any comment, request, suggestion, proposal, image, or other communication that, in context, depicts or describes, in terms patently offensive as measured by contemporary community standards, sexual or excretory activities or organs, regardless of whether the user of such service placed the call or initiated the communication; or
>
> "(2) knowingly permits any telecommunications facility under such person's control to be used for an activity prohibited by paragraph (1) with the intent that it be used for such activity, shall be fined under Title 18, or imprisoned not more than two years, or both."

The breadth of these prohibitions is qualified by two affirmative defenses. See §223(e)(5).[26] One covers those who take "good faith, reasonable, effective, and appropriate actions" to restrict access by minors to the prohibited communications. §223(e)(5)(A). The other covers those who restrict access to covered material by requiring certain designated forms of age proof, such as a verified credit card or an adult identification number or code. §223(e)(5)(B).

On February 8, 1996, immediately after the President signed the statute, 20 plaintiffs 27 filed suit against the Attorney General of the United States and the Department of Justice challenging the constitutionality of §§223(a)(1) and 223(d). A week later, based on his conclusion that the term "indecent" was too vague to provide the basis for a criminal prosecution, District Judge Buckwalter entered a temporary restraining order against enforcement of §223(a)(1)(B)(ii) insofar as it applies to indecent communications. A second suit was then filed by[27] additional plaintiffs,[28] the two cases were consolidated, and a three judge District Court was convened pursuant to §561 of the Act.[29] After an evidentiary hearing, that Court entered a preliminary injunction against enforcement of both of the challenged provisions. Each of the three judges wrote a separate opinion, but their judgment was unanimous.

Chief Judge Sloviter doubted the strength of the Government's interest in regulating "the vast range of online material covered or potentially covered by the CDA," but acknowledged that the interest was "compelling" with respect to some of that material. 929 F. Supp., at 853. She concluded, nonetheless, that the statute "sweeps more broadly than necessary and thereby chills the expression of adults" and that the terms "patently offensive" and "indecent" were "inherently vague." Id., at 854. She also determined that the affirmative defenses were not "technologically or economically feasible for most providers," specifically considering and rejecting an argument that providers could avoid liability by "tagging" their material in a manner that would allow potential readers to screen out unwanted transmissions. Id., at 856. Chief Judge Sloviter also rejected the Government's suggestion that the scope of the statute could be narrowed by construing it to apply only to commercial pornographers. Id., at 854-855.

Judge Buckwalter concluded that the word "indecent" in §223(a)(1)(B) and the terms "patently offensive" and "in context" in §223(d)(1) were so vague that criminal enforcement of either section would violate the "fundamental constitutional principle" of "simple fairness," id., at 861, and the specific protections of the First and Fifth Amendments, id., at 858. He found no statutory basis for the Government's argument that the challenged provisions would be applied only to "pornographic" materials, noting that, unlike obscenity, "indecency has not been defined to exclude works of serious literary, artistic, political or scientific value." Id., at 863. Moreover, the Government's claim that the work must be considered patently offensive "in context" was itself vague because the relevant context might "refer to, among other things, the nature of the communication as a whole, the time of day it was conveyed, the medium used, the identity of the speaker, or whether or not it is accompanied by appropriate warnings." Id., at 864. He believed that the unique nature of the Internet aggravated the vagueness of the statute. Id., at 865, n. 9.

Judge Dalzell's review of "the special attributes of Internet communication" disclosed by the evidence convinced him that the First Amendment denies Congress the power to regulate the content of protected speech on the Internet. Id., at 867. His opinion explained at length why he believed the Act would abridge significant protected speech, particularly by noncommercial speakers, while "[p]erversely, commercial pornographers would remain relatively unaffected." Id., at 879. He construed our cases as requiring a "medium specific" approach to the analysis of the regulation of mass communication, id., at 873, and concluded that the Internet—as "the most participatory form of mass speech yet developed," id., at 883—is entitled to "the highest protection from governmental intrusion," ibid.[30]

The judgment of the District Court enjoins the Government from enforcing the prohibitions in §223(a)(1)(B) insofar as they relate to "indecent" communications, but expressly preserves the Government's right to investigate and prosecute the obscenity or child pornography activities prohibited therein. The injunction against enforcement of §§223(d)(1) and (2) is unqualified because those provisions contain no separate reference to obscenity or child pornography.

The Government appealed under the Act's special review provisions, §561, 110 Stat. 142-143, and we noted probable jurisdiction, see 519 U.S. ___ (1996). In its appeal, the Government argues that the District Court erred in holding that the CDA violated both the First Amendment because it is overbroad and the Fifth Amendment because it is vague. While we discuss the vagueness of the CDA because of its relevance to the First Amendment overbreadth inquiry, we conclude that the judgment should be affirmed without reaching the Fifth Amendment issue. We begin our analysis by reviewing the principal authorities on which the Government relies. Then, after describing the overbreadth of the CDA, we consider the Government's specific contentions, including its submission that we save portions of the statute either by severance or by fashioning judicial limitations on the scope of its coverage.

In arguing for reversal, the Government contends that the CDA is plainly constitutional under three of four prior decisions: (1) Ginsberg v. New York, 390 U.S. 629 (1968); (2) FCC v. Pacifica Foundation, 438 U.S. 726 (1978); and (3) Renton v. Playtime Theatres, Inc., 475 U.S. 41 (1986). A close look at these cases, however, raises—rather than relieves—doubts concerning the constitutionality of the CDA.

In Ginsberg, we upheld the constitutionality of a New York statute that prohibited selling to minors under 17 years of age material that was considered obscene as to them even if not obscene as to adults. We rejected the defendant's broad submission that "the scope of the constitutional freedom of expression secured to a citizen to read or see material concerned with sex cannot be made to depend on whether the citizen is an adult or a minor." 390 U.S., at 636. In rejecting that contention, we relied not only on the State's independent interest in the well being of its youth, but also on our consistent recognition of the principle that "the parents' claim to authority in their own household to direct the rearing of their children is basic in the structure of our society."[31] In four important respects, the statute upheld in Ginsberg was narrower than the CDA. First, we noted in Ginsberg that "the prohibition against sales to minors does not bar parents who so desire from purchasing the magazines for their children." Id., at 639. Under the CDA, by contrast, neither the

parents' consent—nor even their participation—in the communication would avoid the application of the statute.[32] Second, the New York statute applied only to commercial transactions, id., at 647, whereas the CDA contains no such limitation. Third, the New York statute cabined its definition of material that is harmful to minors with the requirement that it be "utterly without redeeming social importance for minors." Id., at 646. The CDA fails to provide us with any definition of the term "indecent" as used in §223(a)(1) and, importantly, omits any requirement that the "patently offensive" material covered by §223(d) lack serious literary, artistic, political, or scientific value. Fourth, the New York statute defined a minor as a person under the age of 17, whereas the CDA, in applying to all those under 18 years, includes an additional year of those nearest majority.

In Pacifica, we upheld a declaratory order of the Federal Communications Commission, holding that the broadcast of a recording of a 12-minute monologue entitled "Filthy Words" that had previously been delivered to a live audience "could have been the subject of administrative sanctions." 438 U.S., at 730 (internal quotations omitted). The Commission had found that the repetitive use of certain words referring to excretory or sexual activities or organs "in an afternoon broadcast when children are in the audience was patently offensive" and concluded that the monologue was indecent "as broadcast." Id., at 735. The respondent did not quarrel with the finding that the afternoon broadcast was patently offensive, but contended that it was not "indecent" within the meaning of the relevant statutes because it contained no prurient appeal. After rejecting respondent's statutory arguments, we confronted its two constitutional arguments: (1) that the Commission's construction of its authority to ban indecent speech was so broad that its order had to be set aside even if the broadcast at issue was unprotected; and (2) that since the recording was not obscene, the First Amendment forbade any abridgement of the right to broadcast it on the radio.

In the portion of the lead opinion not joined by Justices Powell and Blackmun, the plurality stated that the First Amendment does not prohibit all governmental regulation that depends on the content of speech. Id., at 742-743. Accordingly, the availability of constitutional protection for a vulgar and offensive monologue that was not obscene depended on the context of the broadcast. Id., at 744-748. Relying on the premise that "of all forms of communication" broadcasting had received the most limited First Amendment protection, id., at 748-749, the Court concluded that the ease with which children may obtain access to broadcasts, "coupled with the concerns recognized in Ginsberg," justified special treatment of indecent broadcasting. Id., at 749-750.

As with the New York statute at issue in Ginsberg, there are significant differences between the order upheld in Pacifica and the CDA. First, the order in Pacifica, issued by an agency that had been regulating radio stations for decades, targeted a specific broadcast that represented a rather dramatic departure from traditional program content in order to designate when—rather than whether—it would be permissible to air such a program in that particular medium. The CDA's broad categorical prohibitions are not limited to particular times and are not dependent on any evaluation by an agency familiar with the unique characteristics of the Internet. Second, unlike the CDA, the Commission's declaratory order was not punitive; we expressly refused to decide whether the indecent broadcast "would justify a criminal prosecution." Id., at 750. Finally, the Commission's order applied to a medium which as a matter of history had "received the most limited First Amendment protection," id., at 748, in large part because warnings could not adequately protect the listener from unexpected program content. The Internet, however, has no comparable history. Moreover, the District Court found that the risk of encountering indecent material by accident is remote because a series of affirmative steps is required to access specific material.

In Renton, we upheld a zoning ordinance that kept adult movie theaters out of residential neighborhoods. The ordinance was aimed, not at the content of the films shown in the theaters, but rather at the "secondary effects"—such as crime and deteriorating property values—that these theaters fostered: "'It is th[e] secondary effect which these zoning ordinances attempt to avoid, not the dissemination of "offensive" speech.'" 475 U.S., at 49 (quoting Young v. American Mini Theatres, Inc., 427 U.S. 50, 71, n. 34 (1976)). According to the Government, the CDA is constitutional because

it constitutes a sort of "cyberzoning" on the Internet. But the CDA applies broadly to the entire universe of cyberspace. And the purpose of the CDA is to protect children from the primary effects of "indecent" and "patently offensive" speech, rather than any "secondary" effect of such speech. Thus, the CDA is a content based blanket restriction on speech, and, as such, cannot be "properly analyzed as a form of time, place, and manner regulation." 475 U.S., at 46. See also Boos v. Barry, 485 U.S. 312, 321 (1988) ("Regulations that focus on the direct impact of speech on its audience" are not properly analyzed under Renton); Forsyth County v. Nationalist Movement, 505 U.S. 123, 134 (1992) ("Listeners' reaction to speech is not a content neutral basis for regulation").

These precedents, then, surely do not require us to uphold the CDA and are fully consistent with the application of the most stringent review of its provisions.

In Southeastern Promotions, Ltd. v. Conrad, 420 U.S. 546, 557 (1975), we observed that "[e]ach medium of expression . . . may present its own problems." Thus, some of our cases have recognized special justifications for regulation of the broadcast media that are not applicable to other speakers, see Red Lion Broadcasting Co. v. FCC, 395 U.S. 367 (1969); FCC v. Pacifica Foundation, 438 U.S. 726 (1978). In these cases, the Court relied on the history of extensive government regulation of the broadcast medium, see, e.g., Red Lion, 395 U.S., at 399-400; the scarcity of available frequencies at its inception, see, e.g., Turner Broadcasting System, Inc. v. FCC, 512 U.S. 622, 637-638 (1994); and its "invasive" nature, see Sable Communications of Cal., Inc. v. FCC, 492 U.S. 115, 128 (1989).

Those factors are not present in cyberspace. Neither before nor after the enactment of the CDA have the vast democratic fora of the Internet been subject to the type of government supervision and regulation that has attended the broadcast industry.[33] Moreover, the Internet is not as "invasive" as radio or television. The District Court specifically found that "[c]ommunications over the Internet do not 'invade' an individual's home or appear on one's computer screen unbidden. Users seldom encounter content 'by accident.'" 929 F. Supp., at 844 (finding 88). It also found that "[a]lmost all sexually explicit images are preceded by warnings as to the content," and cited testimony that "'odds are slim' that a user would come across a sexually explicit sight by accident." Ibid.

We distinguished Pacifica in Sable, 492 U.S., at 128, on just this basis. In Sable, a company engaged in the business of offering sexually oriented prerecorded telephone messages (popularly known as "dial a porn") challenged the constitutionality of an amendment to the Communications Act that imposed a blanket prohibition on indecent as well as obscene interstate commercial telephone messages. We held that the statute was constitutional insofar as it applied to obscene messages but invalid as applied to indecent messages. In attempting to justify the complete ban and criminalization of indecent commercial telephone messages, the Government relied on Pacifica, arguing that the ban was necessary to prevent children from gaining access to such messages. We agreed that "there is a compelling interest in protecting the physical and psychological well being of minors" which extended to shielding them from indecent messages that are not obscene by adult standards, 492 U.S., at 126, but distinguished our "emphatically narrow holding" in Pacifica because it did not involve a complete ban and because it involved a different medium of communication, id., at 127. We explained that "the dial it medium requires the listener to take affirmative steps to receive the communication." Id., at 127-128. "Placing a telephone call," we continued, "is not the same as turning on a radio and being taken by surprise by an indecent message." Id., at 128.

Finally, unlike the conditions that prevailed when Congress first authorized regulation of the broadcast spectrum, the Internet can hardly be considered a "scarce" expressive commodity. It provides relatively unlimited, low cost capacity for communication of all kinds. The Government estimates that "[a]s many as 40 million people use the Internet today, and that figure is expected to grow to 200 million by 1999."[34] This dynamic, multifaceted category of communication includes not only traditional print and news services, but also audio, video, and still images, as well as interactive, real time dialogue. Through the use of chat rooms, any person with a phone line can become a town crier with a voice that resonates farther than it could from any soapbox. Through the use of Web pages, mail exploders, and newsgroups, the same individual can become a pamphleteer. As the District

Court found, "the content on the Internet is as diverse as human thought." 929 F. Supp., at 842 (finding 74). We agree with its conclusion that our cases provide no basis for qualifying the level of First Amendment scrutiny that should be applied to this medium.

Regardless of whether the CDA is so vague that it violates the Fifth Amendment, the many ambiguities concerning the scope of its coverage render it problematic for purposes of the First Amendment. For instance, each of the two parts of the CDA uses a different linguistic form. The first uses the word "indecent," 47 U. S. C. A. §223(a) (Supp. 1997), while the second speaks of material that "in context, depicts or describes, in terms patently offensive as measured by contemporary community standards, sexual or excretory activities or organs," §223(d). Given the absence of a definition of either term,[35] this difference in language will provoke uncertainty among speakers about how the two standards relate to each other[36] and just what they mean.[37] Could a speaker confidently assume that a serious discussion about birth control practices, homosexuality, the First Amendment issues raised by the Appendix to our Pacifica opinion, or the consequences of prison rape would not violate the CDA? This uncertainty undermines the likelihood that the CDA has been carefully tailored to the congressional goal of protecting minors from potentially harmful materials.

The vagueness of the CDA is a matter of special concern for two reasons. First, the CDA is a content-based regulation of speech. The vagueness of such a regulation raises special First Amendment concerns because of its obvious chilling effect on free speech. See, e.g., Gentile v. State Bar of Nev., 501 U.S. 1030, 1048-1051 (1991). Second, the CDA is a criminal statute. In addition to the opprobrium and stigma of a criminal conviction, the CDA threatens violators with penalties including up to two years in prison for each act of violation. The severity of criminal sanctions may well cause speakers to remain silent rather than communicate even arguably unlawful words, ideas, and images. See, e.g., Dombrowski v. Pfister, 380 U.S. 479, 494 (1965). As a practical matter, this increased deterrent effect, coupled with the "risk of discriminatory enforcement" of vague regulations, poses greater First Amendment concerns than those implicated by the civil regulation reviewed in Denver Area Ed. Telecommunications Consortium, Inc. v. FCC, 518 U.S. ___ (1996).

The Government argues that the statute is no more vague than the obscenity standard this Court established in Miller v. California, 413 U.S. 15 (1973). But that is not so. In Miller, this Court reviewed a criminal conviction against a commercial vendor who mailed brochures containing pictures of sexually explicit activities to individuals who had not requested such materials. Id., at 18. Having struggled for some time to establish a definition of obscenity, we set forth in Miller the test for obscenity that controls to this day:

> "(a) whether the average person, applying contemporary community standards would find that the work, taken as a whole, appeals to the prurient interest; (b) whether the work depicts or describes, in a patently offensive way, sexual conduct specifically defined by the applicable state law; and (c) whether the work, taken as a whole, lacks serious literary, artistic, political, or scientific value." Id., at 24 (internal quotation marks and citations omitted).

Because the CDA's "patently offensive" standard (and, we assume arguendo, its synonymous "indecent" standard) is one part of the three-prong Miller test, the Government reasons, it cannot be unconstitutionally vague.

The Government's assertion is incorrect as a matter of fact. The second prong of the Miller test—the purportedly analogous standard—contains a critical requirement that is omitted from the CDA: that the proscribed material be "specifically defined by the applicable state law." This requirement reduces the vagueness inherent in the open-ended term "patently offensive" as used in the CDA. Moreover, the Miller definition is limited to "sexual conduct," whereas the CDA extends also to include (1) "excretory activities" as well as (2) "organs" of both a sexual and excretory nature.

The Government's reasoning is also flawed. Just because a definition including three limitations is not vague, it does not follow that one of those limitations, standing by itself, is not vague.[38] Each of Miller's additional two prongs—(1) that, taken as a whole, the material appeal to the "prurient" interest, and (2) that it "lac[k] serious literary, artistic, political, or scientific value"—critically limits the

uncertain sweep of the obscenity definition. The second requirement is particularly important because, unlike the "patently offensive" and "prurient interest" criteria, it is not judged by contemporary community standards. See Pope v. Illinois, 481 U.S. 497, 500 (1987). This "societal value" requirement, absent in the CDA, allows appellate courts to impose some limitations and regularity on the definition by setting, as a matter of law, a national floor for socially redeeming value. The Government's contention that courts will be able to give such legal limitations to the CDA's standards is belied by Miller's own rationale for having juries determine whether material is "patently offensive" according to community standards: that such questions are essentially ones of fact.[39]

In contrast to Miller and our other previous cases, the CDA thus presents a greater threat of censoring speech that, in fact, falls outside the statute's scope. Given the vague contours of the coverage of the statute, it unquestionably silences some speakers whose messages would be entitled to constitutional protection. That danger provides further reason for insisting that the statute not be overly broad. The CDA's burden on protected speech cannot be justified if it could be avoided by a more carefully drafted statute.

We are persuaded that the CDA lacks the precision that the First Amendment requires when a statute regulates the content of speech. In order to deny minors access to potentially harmful speech, the CDA effectively suppresses a large amount of speech that adults have a constitutional right to receive and to address to one another. That burden on adult speech is unacceptable if less restrictive alternatives would be at least as effective in achieving the legitimate purpose that the statute was enacted to serve.

In evaluating the free speech rights of adults, we have made it perfectly clear that "[s]exual expression which is indecent but not obscene is protected by the First Amendment." Sable, 492 U.S., at 126. See also Carey v. Population Services Int'l, 431 U.S. 678, 701 (1977) ("[W]here obscenity is not involved, we have consistently held that the fact that protected speech may be offensive to some does not justify its suppression"). Indeed, Pacifica itself admonished that "the fact that society may find speech offensive is not a sufficient reason for suppressing it." 438 U.S., at 745.

It is true that we have repeatedly recognized the governmental interest in protecting children from harmful materials. See Ginsberg, 390 U.S., at 639; Pacifica, 438 U.S., at 749. But that interest does not justify an unnecessarily broad suppression of speech addressed to adults. As we have explained, the Government may not "reduc[e] the adult population . . . to . . . only what is fit for children." Denver, 518 U. S., at ___ (slip op., at 29) (internal quotation marks omitted) (quoting Sable, 492 U.S., at 128).[40] "[R]egardless of the strength of the government's interest" in protecting children, "[t]he level of discourse reaching a mailbox simply cannot be limited to that which would be suitable for a sandbox." Bolger v. Youngs Drug Products Corp., 463 U.S. 60, 74-75 (1983).

The District Court was correct to conclude that the CDA effectively resembles the ban on "dial a porn" invalidated in Sable. 929 F. Supp., at 854. In Sable, 492 U.S., at 129, this Court rejected the argument that we should defer to the congressional judgment that nothing less than a total ban would be effective in preventing enterprising youngsters from gaining access to indecent communications. Sable thus made clear that the mere fact that a statutory regulation of speech was enacted for the important purpose of protecting children from exposure to sexually explicit material does not foreclose inquiry into its validity.[41] As we pointed out last Term, that inquiry embodies an "over arching commitment" to make sure that Congress has designed its statute to accomplish its purpose "without imposing an unnecessarily great restriction on speech." Denver, 518 U.S., at ___ slip op., at 11).

In arguing that the CDA does not so diminish adult communication, the Government relies on the incorrect factual premise that prohibiting a transmission whenever it is known that one of its recipients is a minor would not interfere with adult to adult communication. The findings of the District Court make clear that this premise is untenable.

Given the size of the potential audience for most messages, in the absence of a viable age verification process, the sender must be charged with knowing that one or more minors will likely view it. Knowledge that, for instance, one or more members of a 100 person chat group will be minor—and therefore that it would be a crime to

send the group an indecent message—would surely burden communication among adults.[42]

The District Court found that at the time of trial existing technology did not include any effective method for a sender to prevent minors from obtaining access to its communications on the Internet without also denying access to adults. The Court found no effective way to determine the age of a user who is accessing material through email, mail exploders, newsgroups, or chat rooms. 929 F. Supp., at 845 (findings 90-94). As a practical matter, the Court also found that it would be prohibitively expensive for noncommercial—as well as some commercial—speakers who have Web sites to verify that their users are adults. Id., at 845-848 (findings 95-116).[43] These limitations must inevitably curtail a significant amount of adult communication on the Internet. By contrast, the District Court found that "[d]espite its limitations, currently available user based software suggests that a reasonably effective method by which parents can prevent their children from accessing sexually explicit and other material which parents may believe is inappropriate for their children will soon be widely available." Id., at 842 (finding 73) (emphases added).

The breadth of the CDA's coverage is wholly unprecedented. Unlike the regulations upheld in Ginsberg and Pacifica, the scope of the CDA is not limited to commercial speech or commercial entities. Its open ended prohibitions embrace all nonprofit entities and individuals posting indecent messages or displaying them on their own computers in the presence of minors. The general, undefined terms "indecent" and "patently offensive" cover large amounts of nonpornographic material with serious educational or other value.[44] Moreover, the "community standards" criterion as applied to the Internet means that any communication available to a nationwide audience will be judged by the standards of the community most likely to be offended by the message.[45] The regulated subject matter includes any of the seven "dirty words" used in the Pacifica monologue, the use of which the Government's expert acknowledged could constitute a felony. See Olsen Test., Tr. Vol. V, 53:16-54:10. It may also extend to discussions about prison rape or safe sexual practices, artistic images that include nude subjects, and arguably the card catalogue of the Carnegie Library.

For the purposes of our decision, we need neither accept nor reject the Government's submission that the First Amendment does not forbid a blanket prohibition on all "indecent" and "patently offensive" messages communicated to a 17 year old—no matter how much value the message may contain and regardless of parental approval. It is at least clear that the strength of the Government's interest in protecting minors is not equally strong throughout the coverage of this broad statute. Under the CDA, a parent allowing her 17 year old to use the family computer to obtain information on the Internet that she, in her parental judgment, deems appropriate could face a lengthy prison term. See 47 U. S. C. A. §223(a)(2) (Supp. 1997). Similarly, a parent who sent his 17 year old college freshman information on birth control via email could be incarcerated even though neither he, his child, nor anyone in their home community, found the material "indecent" or "patently offensive," if the college town's community thought otherwise.

The breadth of this content-based restriction of speech imposes an especially heavy burden on the Government to explain why a less restrictive provision would not be as effective as the CDA. It has not done so. The arguments in this Court have referred to possible alternatives such as requiring that indecent material be "tagged" in a way that facilitates parental control of material coming into their homes, making exceptions for messages with artistic or educational value, providing some tolerance for parental choice, and regulating some portions of the Internet—such as commercial Web sites—differently than others, such as chat rooms. Particularly in the light of the absence of any detailed findings by the Congress, or even hearings addressing the special problems of the CDA, we are persuaded that the CDA is not narrowly tailored if that requirement has any meaning at all.

In an attempt to curtail the CDA's facial overbreadth, the Government advances three additional arguments for sustaining the Act's affirmative prohibitions: (1) that the CDA is constitutional because it leaves open ample "alternative channels" of communication; (2) that the plain meaning of the Act's "knowledge" and "specific person" requirement significantly restricts its permissible applications; and (3) that the Act's prohibitions are "almost always" limited to material lacking redeeming social value.

The Government first contends that, even though the CDA effectively censors discourse on many of the Internet's modalities—such as chat groups, newsgroups, and mail exploders—it is nonetheless constitutional because it provides a "reasonable opportunity" for speakers to engage in the restricted speech on the World Wide Web. Brief for Appellants 39. This argument is unpersuasive because the CDA regulates speech on the basis of its content. A "time, place, and manner" analysis is therefore inapplicable. See Consolidated Edison Co. of N. Y. v. Public Serv. Comm'n of N. Y., 447 U.S. 530, 536 (1980). It is thus immaterial whether such speech would be feasible on the Web (which, as the Government's own expert acknowledged, would cost up to $10,000 if the speaker's interests were not accommodated by an existing Web site, not including costs for database management and age verification). The Government's position is equivalent to arguing that a statute could ban leaflets on certain subjects as long as individuals are free to publish books. In invalidating a number of laws that banned leafletting on the streets regardless of their content—we explained that "one is not to have the exercise of his liberty of expression in appropriate places abridged on the plea that it may be exercised in some other place." Schneider v. State (Town of Irvington), 308 U.S. 147, 163 (1939).

The Government also asserts that the "knowledge" requirement of both §§223(a) and (d), especially when coupled with the "specific child" element found in §223(d), saves the CDA from overbreadth. Because both sections prohibit the dissemination of indecent messages only to persons known to be under 18, the Government argues, it does not require transmitters to "refrain from communicating indecent material to adults; they need only refrain from disseminating such materials to persons they know to be under 18." Brief for Appellants 24. This argument ignores the fact that most Internet fora—including chat rooms, newsgroups, mail exploders, and the Web—are open to all comers. The Government's assertion that the knowledge requirement somehow protects the communications of adults is therefore untenable. Even the strongest reading of the "specific person" requirement of §223(d) cannot save the statute. It would confer broad powers of censorship, in the form of a "heckler's veto," upon any opponent of indecent speech who might simply log on and inform the would be discoursers that his 17 year old child—a "specific person . . . under 18 years of age," 47 U. S. C. A. §223(d)(1)(A) (Supp. 1997)—would be present.

Finally, we find no textual support for the Government's submission that material having scientific, educational, or other redeeming social value will necessarily fall outside the CDA's "patently offensive" and "indecent" prohibitions. See also n. 37, supra.

The Government's three remaining arguments focus on the defenses provided in §223(e)(5).[46] First, relying on the "good faith, reasonable, effective, and appropriate actions" provision, the Government suggests that "tagging" provides a defense that saves the constitutionality of the Act. The suggestion assumes that transmitters may encode their indecent communications in a way that would indicate their contents, thus permitting recipients to block their reception with appropriate software. It is the requirement that the good faith action must be "effective" that makes this defense illusory. The Government recognizes that its proposed screening software does not currently exist. Even if it did, there is no way to know whether a potential recipient will actually block the encoded material. Without the impossible knowledge that every guardian in America is screening for the "tag," the transmitter could not reasonably rely on its action to be "effective."

For its second and third arguments concerning defenses—which we can consider together—the Government relies on the latter half of §223(e)(5), which applies when the transmitter has restricted access by requiring use of a verified credit card or adult identification. Such verification is not only technologically available but actually is used by commercial providers of sexually explicit material. These providers, therefore, would be protected by the defense. Under the findings of the District Court, however, it is not economically feasible for most noncommercial speakers to employ such verification. Accordingly, this defense would not significantly narrow the statute's burden on noncommercial speech. Even with respect to the commercial pornographers that would be protected by the defense, the Government failed to adduce any evidence that these verification techniques actually preclude minors from posing as adults.[47] Given

that the risk of criminal sanctions "hovers over each content provider, like the proverbial sword of Damocles,"[48] the District Court correctly refused to rely on unproven future technology to save the statute. The Government thus failed to prove that the proffered defense would significantly reduce the 'heavy burden on adult speech produced by the prohibition on offensive displays.

We agree with the District Court's conclusion that the CDA places an unacceptably heavy burden on protected speech, and that the defenses do not constitute the sort of "narrow tailoring" that will save an otherwise patently invalid unconstitutional provision. In Sable, 492 U.S., at 127, we remarked that the speech restriction at issue there amounted to "'burn[ing] the house to roast the pig.'" The CDA, casting a far darker shadow over free speech, threatens to torch a large segment of the Internet community.

At oral argument, the Government relied heavily on its ultimate fall back position: If this Court should conclude that the CDA is insufficiently tailored, it urged, we should save the statute's constitutionality by honoring the severability clause, see 47 U.S.C. § 608 and construing nonseverable terms narrowly. In only one respect is this argument acceptable.

A severability clause requires textual provisions that can be severed. We will follow §608's guidance by leaving constitutional textual elements of the statute intact in the one place where they are, in fact, severable. The "indecency" provision, 47 U. S. C. A. §223(a) (Supp. 1997), applies to "any comment, request, suggestion, proposal, image, or other communication which is *obscene or indecent*." (Emphasis added.) Appellees do not challenge the application of the statute to obscene speech, which, they acknowledge, can be banned totally because it enjoys no First Amendment protection. See Miller, 413 U.S., at 18. As set forth by the statute, the restriction of "obscene" material enjoys a textual manifestation separate from that for "indecent" material, which we have held unconstitutional. Therefore, we will sever the term "or indecent" from the statute, leaving the rest of §223(a) standing. In no other respect, however, can §223(a) or §223(d) be saved by such a textual surgery.

The Government also draws on an additional, less traditional aspect of the CDA's severability clause, 47 U. S. C., §608, which asks any reviewing court that holds the statute facially unconstitutional not to invalidate the CDA in application to "other persons or circumstances" that might be constitutionally permissible. It further invokes this Court's admonition that, absent "countervailing considerations," a statute should "be declared invalid to the extent it reaches too far, but otherwise left intact." Brockett v. Spokane Arcades, Inc., 472 U.S. 491, 503-504 (1985). There are two flaws in this argument.

First, the statute that grants our jurisdiction for this expedited review, 47 U. S. C. A. §561 (Supp. 1997), limits that jurisdictional grant to actions challenging the CDA "on its face." Consistent with §561, the plaintiffs who brought this suit and the three judge panel that decided it treated it as a facial challenge. We have no authority, in this particular posture, to convert this litigation into an "as applied" challenge. Nor, given the vast array of plaintiffs, the range of their expressive activities, and the vagueness of the statute, would it be practicable to limit our holding to a judicially defined set of specific applications.

Second, one of the "countervailing considerations" mentioned in Brockett is present here. In considering a facial challenge, this Court may impose a limiting construction on a statute only if it is "readily susceptible" to such a construction. Virginia v. American Bookseller's Assn., Inc., 484 U.S. 383, 397 (1988). See also Erznoznik, v. Jacksonville, 422 U.S. 205, 216 (1975) ("readily subject" to narrowing construction). The open ended character of the CDA provides no guidance whatever for limiting its coverage.

This case is therefore unlike those in which we have construed a statute narrowly because the text or other source of congressional intent identified a clear line that this Court could draw. Cf., e.g., Brockett, 472 U.S., at 504-505 (invalidating obscenity statute only to the extent that word "lust" was actually or effectively excised from statute); United States v. Grace, 461 U.S. 171, 180-183 (1983) (invalidating federal statute banning expressive displays only insofar as it extended to public sidewalks when clear line could be drawn between sidewalks and other grounds that comported with congressional purpose of protecting the building, grounds, and people therein). Rather, our decision in United States v. Treasury Employees, 513 U.S. 454, 479, n. 26 (1995), is applicable. In that case, we declined to "dra[w] one or more lines

between categories of speech covered by an overly broad statute, when Congress has sent inconsistent signals as to where the new line or lines should be drawn" because doing so "involves a far more serious invasion of the legislative domain."[49] This Court "will not rewrite a . . . law to conform it to constitutional requirements." American Booksellers, 484 U.S., at 397.[50]

In this Court, though not in the District Court, the Government asserts that—in addition to its interest in protecting children—its "[e]qually significant" interest in fostering the growth of the Internet provides an independent basis for upholding the constitutionality of the CDA. Brief for Appellants 19. The Government apparently assumes that the unregulated availability of "indecent" and "patently offensive" material on the Internet is driving countless citizens away from the medium because of the risk of exposing themselves or their children to harmful material.

We find this argument singularly unpersuasive. The dramatic expansion of this new marketplace of ideas contradicts the factual basis of this contention. The record demonstrates that the growth of the Internet has been and continues to be phenomenal. As a matter of constitutional tradition, in the absence of evidence to the contrary, we presume that governmental regulation of the content of speech is more likely to interfere with the free exchange of ideas than to encourage it. The interest in encouraging freedom of expression in a democratic society outweighs any theoretical but unproven benefit of censorship.

For the foregoing reasons, the judgment of the district court is affirmed.

It is so ordered.

Section II Introduction

American media organizations have worn the mantle of public watchdog throughout the country's history. Journalists of every type are charged with the task of constantly scrutinizing those in power, political or otherwise, and the ways in which they wield influence. Inevitably the question arises about who is watching the watchdogs and what guidelines exist for the way their power gets used. Despite the voluminous amount of law enacted in this area over the years (as documented in the previous section), the journalism establishment has substantially policed its own day-to-day reporting via codes of ethics and newsroom policy statements.

A series of high-profile indiscretions dating from the late 1990s prompted a large number of new, more comprehensive ethical documents and the demand for regular updates in certain areas. Many of these scandals involved outrageous deceptions perpetrated by journalists with distinguished news organizations. Patricia Smith of *The Boston Globe* was a finalist for the Pulitzer Prize in 1998 when she confessed to placing four fictitious characters into her columns. Jayson Blair, a *New York Times* staff reporter in 2003, shook the credibility of the paper by inventing all or part of dozens of articles that made it through the editing process. And *Los Angeles Times* photographer Brian Walski was fired that same year for digitally meshing two different photos into one more desirable picture.

Although rarely using the term "deception," most recent documents on ethics and standards concentrate in part on vetting the acceptability of journalism practices based on various levels of deception. Is it permissible for journalists to go undercover to deceive news subjects? Television reporters might argue that hidden cameras and microphones are required to get certain stories. News organizations must draw the line between honest, creative reporting practices and unacceptable misrepresentations in myriad circumstances during the daily pursuit of the news.

It should not be surprising that the basic tenets of just about all journalism documents begin with telling the truth. Journalists are universally instructed to value accuracy, fair play and transparency as well. The public must also know that journalists are free from undue influences. This demands a close watch on the conflicts in interest that may sway a reporter's perspective on a story.

Innovations in technology and news delivery methods have also played a key role in spurring new areas of journalism ethics. Bloggers and other "citizen journalists" have vastly expanded who gets to create news coverage and editorial opinion for public consumption. They have considerably sped up how quickly news gets disseminated too. As a result, news organizations have struggled to come up with guidelines that will nurture the independence of new wave journalists while trying to hold them to more careful, professional standards.

The representative entries for Section II were chosen based on the reputation of the organizations that created them, and the demands of the six major categories under consideration. Introductions in this section tend to cover multiple documents within a medium or reporting specialty. The goal is to first broach the changes and ethical challenges unique to each category. Then the introduction gives a sense of how each organization has addressed those concerns in its document.

General Professional Associations

Society of Professional Journalists (SPJ)—Code of Ethics
National Association of Black Journalists (NABJ)—Code of Ethics
National Association of Hispanic Journalists (NAHJ)—Code of Ethics
Coalition of Journalists for Open Government—Principles
National Lesbian and Gay Journalists Association (NLGJA)—Fourteen Steps to Fairness

Introduction

The general professional associations contributing statements of principles to this category boast far-ranging memberships of working journalists that transcend affiliations with any specific communications medium, news organization, or journalism job description. As a result, these groups chose to pen documents calling for a variety of ethical behavior that all journalists could embrace. In every instance, the goal was to encourage those in journalism to be seriously concerned with fairness, honesty, professional integrity, and the public good.

The Society of Professional Journalists (SPJ), the National Association of Black Journalists (NABJ) and the National Association of Hispanic Journalists (NAHJ) each offers a formal Code of Ethics that serves as a guideline for proper journalism practices throughout the industry. The depth and breadth of the codes vary, but all three emphasize a number of common traits. They push journalists to seek and report the truth, clearly identify sources where necessary, protect sources promised anonymity, refrain from doing harm where possible, and to treat all news subjects with respect and dignity. The documents also reflect a mutual desire for journalists to avoid conflicts of interest—real or perceived—while refusing to accept gifts, favors or other remunerations that might compromise news coverage.

SPJ, the nation's most broad-based journalism organization, also joined NABJ and NAHJ in urging journalists to boldly tell the story of diversity. In addition, the groups all admonish members to refuse to stereotype people by race, gender, ethnicity, age, religion, et cetera. The NAHJ Code of Ethics goes even further by condemning the promoting of "prejudicial or racial slurs." The group makes note as well of the advantages of fostering cultural pluralism.

The National Lesbian and Gay Journalists Association (NLGJA) opted to publish "Fourteen Steps to Fairness: A Model of Parity in the Journalism Workplace" rather than another code of ethics. The document outlines the steps necessary to ensure the equitable treatment of lesbian, gay, bisexual, and transgender (LGBT) journalists in the workplace. This addresses issues associated with hiring, promotion, benefits and comfort on the job, among others. It also asks news organizations to advocate for fair and balanced news coverage that considers LGBT angles.

The Coalition of Journalists for Open Government, true to its name, elected to focus on one enormous issue of concern to all journalists in lieu of advocating for a particular segment of the industry or high standards in general. This statement of principles makes a case for the importance of the free flow of government information to the people. It stipulates the limitations to be placed on exceptions to open government laws. It also suggests proper guidelines for access, inspection, and copying of any government record. The document finishes off with arguments supporting access to government meetings for journalists and others.

Society of Professional Journalists—Code of Ethics

Preamble

Members of the Society of Professional Journalists believe that public enlightenment is the forerunner of justice and the foundation of democracy. The duty of the journalist is to further those ends by seeking truth and providing a fair and comprehensive account of events and issues. Conscientious journalists from all media and specialties strive to serve the public with thoroughness and honesty. Professional integrity is the cornerstone of a journalist's credibility. Members of the Society share a dedication to ethical behavior and adopt this code to declare the Society's principles and standards of practice.

Seek Truth and Report It

Journalists should be honest, fair and courageous in gathering, reporting and interpreting information.

Journalists should:

- Test the accuracy of information from all sources and exercise care to avoid inadvertent error. Deliberate distortion is never permissible.
- Diligently seek out subjects of news stories to give them the opportunity to respond to allegations of wrongdoing.
- Identify sources whenever feasible. The public is entitled to as much information as possible on sources' reliability.
- Always question sources' motives before promising anonymity. Clarify conditions attached to any promise made in exchange for information. Keep promises.
- Make certain that headlines, news teases and promotional material, photos, video, audio, graphics, sound bites and quotations do not misrepresent. They should not oversimplify or highlight incidents out of context.
- Never distort the content of news photos or video. Image enhancement for technical clarity is always permissible. Label montages and photo illustrations.
- Avoid misleading re-enactments or staged news events. If re-enactment is necessary to tell a story, label it.
- Avoid undercover or other surreptitious methods of gathering information except when traditional open methods will not yield information vital to the public. Use of such methods should be explained as part of the story.
- Never plagiarize.
- Tell the story of the diversity and magnitude of the human experience boldly, even when it is unpopular to do so.
- Examine their own cultural values and avoid imposing those values on others.
- Avoid stereotyping by race, gender, age, religion, ethnicity, geography, sexual orientation, disability, physical appearance or social status.
- Support the open exchange of views, even views they find repugnant.
- Give voice to the voiceless; official and unofficial sources of information can be equally valid.
- Distinguish between advocacy and news reporting. Analysis and commentary should be labeled and not misrepresent fact or context.
- Distinguish news from advertising and shun hybrids that blur the lines between the two.
- Recognize a special obligation to ensure that the public's business is conducted in the open and that government records are open to inspection.

Minimize Harm

Ethical journalists treat sources, subjects and colleagues as human beings deserving of respect.

Journalists should:

- Show compassion for those who may be affected adversely by news coverage. Use special sensitivity when dealing with children and inexperienced sources or subjects.
- Be sensitive when seeking or using interviews or photographs of those affected by tragedy or grief.
- Recognize that gathering and reporting information may cause harm or discomfort. Pursuit of the news is not a license for arrogance.
- Recognize that private people have a greater right to control information about themselves than do public officials and others who seek power, influence or attention. Only an overriding public need can justify intrusion into anyone's privacy.
- Show good taste. Avoid pandering to lurid curiosity.
- Be cautious about identifying juvenile suspects or victims of sex crimes.
- Be judicious about naming criminal suspects before the formal filing of charges.
- Balance a criminal suspect's fair trial rights with the public's right to be informed.

Act Independently

Journalists should be free of obligation to any interest other than the public's right to know.

Journalists should:

- Avoid conflicts of interest, real or perceived.
- Remain free of associations and activities that may compromise integrity or damage credibility.
- Refuse gifts, favors, fees, free travel and special treatment, and shun secondary employment, political involvement, public office and service in community organizations if they compromise journalistic integrity.
- Disclose unavoidable conflicts.
- Be vigilant and courageous about holding those with power accountable.
- Deny favored treatment to advertisers and special interests and resist their pressure to influence news coverage.
- Be wary of sources offering information for favors or money; avoid bidding for news.

Be Accountable

Journalists are accountable to their readers, listeners, viewers and each other.

Journalists should:

- Clarify and explain news coverage and invite dialogue with the public over journalistic conduct.
- Encourage the public to voice grievances against the news media.
- Admit mistakes and correct them promptly.
- Expose unethical practices of journalists and the news media.
- Abide by the same high standards to which they hold others.

The SPJ Code of Ethics is voluntarily embraced by thousands of writers, editors and other news professionals. The present version of the code was adopted by the 1996 SPJ National Convention, after months of study and debate among the Society's members.

Sigma Delta Chi's first Code of Ethics was borrowed from the American Society of Newspaper Editors in 1926. In 1973, Sigma Delta Chi wrote its own code, which was revised in 1984, 1987 and 1996.

NABJ Code of Ethics

Updated: Friday, April 29, 2005
Published: Friday, April 29, 2005
Adopted by the NABJ Board of Directors
April 24, 2005

Overview

NABJ recognizes that credibility, integrity and truthfulness are building blocks of excellence in all forms of journalism. In order to earn and sustain the public's trust, news organizations and individual journalists must reflect the highest of ethical standards in their work.

NABJ's guidelines for newsroom conduct are part of this organization's renewed emphasis on ethical behavior. This is one response to the many signs of discontent directed at the news media. If the news media is to overcome doubts about the believability of editorial content, denials of bias, the motives of media owners and the First Amendment rights of journalists, then the case for credibility must be made more convincingly and more consistently.

NABJ is convinced that the news media's vast potential for informing the public becomes more possible with diverse staffing and diverse content anchored on a foundation of public trust. If connections to skeptical and sometimes hostile consumers of news are to be strengthened, daily vigilance in the pursuit of credibility, integrity, and truthfulness is essential. While NABJ has an abiding interest in the full range of activities and issues that affect its many goals, it is focusing this statement on one area deserving urgent attention: guidelines for the ethical work of journalists.

NABJ Code of Ethics

Whereas

- public opinion with respect to the credibility of journalism is at a low point and that there is a need to make our organization a shining example of professional journalism;
- and whereas the highest journalistic ethical standards are cardinal in guaranteeing the independence and the integrity of our profession;
- and whereas NABJ members and chapters would benefit from a written Code of Ethics to help guide and inform sound professional conduct;

Therefore, be it resolved that NABJ members must adhere to its Constitution by being dedicated to truth and excellence in the news and holding high ethical standards, and that NABJ offers this Code of Ethics as a set of guidelines for ethical conduct by its members and affiliate chapters. These guidelines apply to news workers, at all levels of the operation, in all types of print, broadcast, new media and online operations.

Under these guidelines:

- NABJ members are encouraged to become involved in community activities but are expected to disclose their employment or other relationships with those entities that influence or seek to influence the news.
- NABJ members are encouraged to disclose or refrain from investments or business relationships that actually bring or may appear to bring into question the integrity of their journalistic works. Members are expected to avoid conflicts of interest, real or perceived.
- NABJ members should disclose their political contributions to candidates and refrain from making such contributions in areas in which they cover or have journalistic contact.
- NABJ members should not accept free services or payments from news sources or public officials. In the same regard, NABJ members should not pay news sources, offer gifts to, or accept favors from those who seek to influence news coverage.
- NABJ members are urged to strive for words, images, graphics and sound that report truthfully, honestly and objectively.
- NABJ members should not alter words, images, graphics or sound in a manner that deceives the public. This includes fabricating, or plagiarizing quotations and facts or electronically altering images or sound.
- NABJ members should disclose the origin of information and label all material provided by outside agencies, such as those provided in the form of news releases, public relations statements or audio or video releases.
- NABJ members should treat all subjects of news coverage with respect and dignity, particularly victims of crime and tragedy and their families.
- NABJ members should examine freelance opportunities and honoraria for speeches carefully to assure that they are not disguised as gratuities.
- NABJ members should refrain from surreptitious methods of gathering information or methods that misrepresent their standing except when traditional open methods have been exhausted or will not yield central information vital to the public.

- As an organization that represents members of a racial minority who understand the pain of discrimination, NABJ members should avoid stereotyping by race, gender, age, religion, ethnicity, geography, sexual orientation, disability, physical appearance or social status.
- NABJ affiliate chapters should avoid association with organizations and activities that may compromise the integrity or damage credibility of its members.
- NABJ affiliate chapters should refuse gifts, favors, fees, free travel and special treatment, political involvement, public office and service in community organizations if they compromise the journalistic integrity of members or could be perceived as doing so.

Ethics Training

NABJ seeks to encourage the best of ethical practices already in place among its membership and throughout the industry. No mere collection of rules and recommendations will serve the aims of quality journalism. On matters large and small, individuals with professional commitments to credibility, integrity and truthfulness will make the biggest difference. To this end, NABJ will:

- Create an ethics model. This will be in a multimedia format and accessible to all members via the Web site and the printed form.
- Include ethics seminars at regional and national conferences, as well as at NABJ Media Institute programs.
- Expand NABJ outreach to colleges and high schools by insisting that ethics be included in journalism classes.
- Create an ethics discussion forum online for members to seek answers or to have discussions of ethics issues. Respectfully submitted,

NAHJ Code of Ethics

Code of Ethics

Adopted by the members of the National Association of Hispanic Journalists on April 27, 1985.

Preamble

The First Amendment, protecting freedom of expression from abridgment by any law, guarantees to the people through their press a constitutional right, and thereby places on journalists a particular responsibility.

The right of people to receive truthful information about events of public interest and to exercise freedom of expression are two of the pillars of a democratic way of life. Journalists, within our daily tasks in the various media, are depositories and guardians of this right and this freedom which belongs to all.

Thus journalism demands of its practitioners not only industry and knowledge, but also the pursuit of a standard of integrity proportionate to the journalist's singular obligation.

A free press has responsibilities to all segments of society. We must recognize that society can best be served by media outlets that represent all those segments. Therefore, we must encourage opportunities for all media to have equal access to news sources regardless of style, orientation, language and/or audience.

Hispanic journalism tradition, of which we are heirs, is in fact one of the main contributions which Hispanics give toward the betterment of society in the United States of America. With the goal of guaranteeing the right of expression and the right of the people to be informed, we the members of the Hispanic Journalists, proud of our heritage, adopt the following Code of Ethics.

Article 1

The abilities and values of news professionals are enhanced by diversity of expertise interests and backgrounds. As Hispanics, we are blessed with the opportunity to live and appreciate more than one language and culture. We should be especially aware of the advantages cultural pluralism presents and encourage it.

Article 2

The journalist will make every effort to present a proper and just image of those groups which make up society. Thus, he/she will not promote prejudicial or ethnic slurs nor attacks upon a person's honesty.

Article 3

The news organization should serve as a constructive critic of all segments of society. It should vigorously expose wrongdoing or misuse of power, public or private. Editorially, it should advocate needed reform or innovation in the public interest.

Article 4

The journalist will endeavor to present an honest version of the news coverage assigned to him/her and should avoid practices that would conflict with the ability to report and present news in a fair and unbiased manner. He/she will show all sides of every valid controversy. This also includes the reporting of background news and the clarification, with facts, of any allegations which the journalist deems false or misleading.

Article 5

The journalist will not accept remunerations from outside sources to cover or alter news or editorials.

Article 6

Pledges of confidentiality to news sources must be honored at all costs. Whenever possible, the journalist will endeavor to obtain information from identifiable sources and will not abuse anonymous sources.

Article 7

The journalist will not serve as an auxiliary or agent to a police force, nor surrender voluntarily material which he/she receives or produces as part of his/her professional duties, nor as a journalist will he/she be available to judge those accused in a court of law.

Article 8

The journalist has the constitutional right to participate in public life and the tradition to express his/her opinions as a journalist through the appropriate medium. However, in order to maintain public trust in his/her honesty and to prevent situations which might create reasonable doubts about his/her integrity, the journalist must not accept renumerations from sources he/she covers, nor use his/her professional status as a representative of the public for selfish or other unworthy motives.

Article 9

Journalists must respect the rights of people involved in the news, observe the common standards of decency and stand accountable to the public for the fairness and accuracy of their news reports. Persons publicly accused must be given the earliest opportunity to respond. Substantive errors must be admitted and corrected promptly and prominently.

Article 10

We as the National Association of Hispanic Journalists uphold this Code of Ethics and will actively promote it. Any violations brought to the attention of NAHJ will be promptly considered and, if necessary, acted upon.

Coalition of Journalists for Open Government

Our Principles

Preamble

Information empowers and energizes a democracy. The free flow of information serves to keep the process of government honest and robust. To ensure and maintain that integrity and vitality, the public's need to know must be recognized and the individual's right to know must be held paramount.

Actions of the government at any level which limit or prevent access to information must serve a clear and compelling public purpose. Even then, those actions should be the exception, and must be limited in scope.

Within that broad conceptual framework, these are open government principles that guide us:

In General

The definition of government information should be as broad as possible and include information regardless of the form in which it was created or obtained.

The definition of those entities subject to open government laws should include both individuals and agencies, and anyone acting on behalf of a government agency.

Information that relates to the performance of a public function, the qualifications of public servants to properly perform their public duties, and the expenditure of public funds, should be exempted from the public record only if a two-thirds majority of the respective Legislature or of the Congress finds as a matter of fact that there is an overriding public necessity to do so.

Bills creating new exceptions to open government laws should contain only the specific exception and should relate to only one subject. Notice that the proposed law will create an open government exception should be prominently stated in the title of the bill. An impact assessment should accompany the legislation at introduction.

In granting an exemption, the Congress or the Legislature must find that there is a compelling public necessity for closure, and that the public necessity is of sufficient magnitude to override the people's need to know, their right of access and the public policy primacy of openness in a democratic society. Any exemption granted should be no broader than necessary to meet that stated, compelling need for closure.

No exemption should continue beyond the time required to meet the stated need. Lawmakers should recognize that the immediacy and specificity of an exemption request often creates a false sense of weight, an illusion that often fades with time. Exemptions should be for fixed, and brief, periods of time, after which they should expire. Upon expiration, they may be reconsidered, and reenacted if lawmakers believe there is still an overriding public necessity.

The minimum standard for an exemption based on either personal safety or national security should be that the release of the information would pose both an "immediate" and a "significant" risk to an individual or group of individuals or to the nation as a whole.

The minimum standard for a personal privacy exemption should be that the information shielded from public view is of an intensely personal and sensitive nature, that its release would be unreasonably intrusive, and that the information is not otherwise in the public domain.

The minimum standard for a proprietary interest exemption should be that the information is not otherwise in the public domain, is of a sensitive business nature, could not otherwise be legally obtained, and that the release would create a clearly unfair advantage to a competitive enterprise.

The private outsourcing of governmental responsibilities must not be a basis for denial of public access to meetings or records that would otherwise be public.

There should be a method by which any person can make an expedited challenge for administrative review or to a court, or both, to appeal the closure of a record or of a meeting. A person should be allowed to recover legal expenses if court action is required to obtain a public record or open a meeting.

No agency should require the name or address of a person seeking a public record, or attending a public meeting. Nor should any agency be permitted to select the members of the public who will attend a meeting.

Records

Records created or received by any agency of government, or by an entity acting on its behalf, are presumed to be public. Every person has an inherent right to inspect and copy any record that is not specifically exempted by the Congress or by the appropriate state legislature.

Government should collect no data that it considers exempt without first showing that there is a compelling governmental need for the information, a need sufficient to override personal privacy rights or the safety, proprietary or other interests involved.

No information should be exempted from public inspection if the information being shielded is otherwise in the public domain.

An exemption shields specific information, not the document. Portions of a document that do not contain sensitive information should continue to be part of the public record. Documents should not be withheld from the public because redaction of the shielded information is inconvenient or expensive.

Wherever possible, agencies should create documents in a manner that facilitates redaction of potentially exempt information. Redaction should be limited to those instances where absolutely necessary to protect against a particularized, actual harm that would ensue from the release of information.

Public records are presumed to be available for inspection and copying, regardless of form, during normal business hours and without unreasonable delay.

Records should be provided in a timely fashion. Delay in making records available for inspection and copying often constitutes denial.

Agencies and departments should strive to make entire categories of records available without the need for a formal FOI request. Formal requests should be required only when release of the information is discretionary and a prior review by the records custodian is necessary to ensure that exempt information is not disclosed. Agencies should seek ways to fast track most records requests.

The copying of public records must be affordable for the average citizen. High cost is a form of denial. Citizens should never be charged more than the actual cost of reproduction, in whatever form. Overhead, production and administration charges must not be factored in.

Where there is a charge for electronic access, it should not exceed the actual cost of making the record available. This does not include labor and overhead.

Technology should be used to enhance public access, not to limit it. All records/information not exempt or subject to discretionary review should be immediately available electronically. Agencies should create online reading rooms, where all records that are not exempt or subject to discretionary review are immediately available.

Records should be made available in the form requested if the agency has the capability to provide them in that form. If records are maintained only in an electronic database, adequate means to view and copy such records should be made available without cost for members of the public.

No record that is not readily available at reasonable cost to an individual member of the general public should be sold to a commercial information source.

Public officials should be prohibited from discarding or destroying public records, regardless of the medium, except in accordance with procedures established by law, and never while a request for such a record is pending.

Information, once it is public and posted, should remain public and posted, or remain accessible electronically if archived. Prior to removal of publicly posted information, the government agency in possession of that information should provide notice of its impending action and the opportunity for public comment.

The office e-mail of a public official is a public record.

Meetings

Discussion leading to decision-making is as critical a part of the governance process as the final decision and should be open to the public. Any meetings held by any agency at any level of government to discuss or decide public policy is presumed to be public unless exempted by the respective state legislature or the Congress upon a finding of overriding public necessity and after a vote of a two-thirds majority.

A meeting is a gathering of more than two members of a policy-making board or entity, unless two represents a quorum.

Any meeting or portion of a meeting closed under statutory exemption should be recorded in its entirety, with no portion off the record. The recording or transcript should be retained and available for review when the stated-need for secrecy has passed, or if the closure is legally challenged.

A closed meeting of a public agency should be book-ended by a public meeting.

National Lesbian and Gay Journalists Association—Fourteen Steps to Fairness: A Model of Parity in the Journalism Workplace

Climate

1. Adopt, publicize and enforce a written policy prohibiting discrimination on the basis of sexual orientation, marital status, and gender identity and expression in recruitment, hiring, evaluation, advancement and compensation.
2. Train managers, interviewers and employees to be sensitive to LGBT issues. Make a clear distinction between these and AIDS issues.
3. Avoid double standards. Apply policies dealing with sexual harassment, nepotism, spousal listings in directories, etc., equally to opposite-sex and same-sex situations.
4. Combat invisibility and isolation. Allow LGBT employees to form workplace networks, and treat them the same as other employee support groups.
5. Promote fair and balanced news coverage. Consider LGBT angles important elements of complete coverage.

Compensation

Any of the following offered to employees and their spouses or children should be available to employees and their domestic partners and their children.

6. Health, dental and vision insurance and COBRA coverage.
7. Employee assistance program services such as substance abuse counseling.
8. Financial counseling.
9. Flexible spending accounts such as funds for health or child care expenses.
10. Funeral or bereavement leave.
11. Parenting leave, child care services, adoption assistance and dependent-child scholarships.
12. Beneficiary designations for pensions and other income benefits.
13. Family and medical leave.
14. Travel and relocation benefits for interviews or moving.

General Broadcast Organizations

Radio-Television News Directors Association (RTNDA)—Code of Ethics and Professional Conduct
National Public Radio (NPR) News—Code of Ethics and Practices
International Association of Broadcast Monitors (IABM)—Code of Ethics
Association of Independents in Radio (AIR)—Code of Fair Practices

Introduction

The landscape of free electronic media has expanded over the years to embrace radio and television networks, local commercial television and radio stations, public broadcasting entities, web radio, and other audio/video news formats online. Despite the proliferation of delivery methods, quality news coverage remains a prime component of the mission for each of these areas of communications. In all instances, electronic news outlets are perceived to operate as de facto trustees of the people with an obligation to scrupulously service the information needs of every sector of the American public.

Four prominent broadcast organizations have formally weighed in on a range of ethical issues electronic journalism must address. Two of these groups, the Radio-Television News Directors Association (RTNDA) and National Public Radio (NPR) News, scrutinize in-depth the way stories should get reported either on-air or online. They often comment on the same kind of reporting concerns that worry print journalists—truth, honesty, fairness, independence, accountability, and balance. But, in addition, the documents offered by these organizations pick up on production and presentation concerns unique to the electronic world that directly impact the integrity of news coverage.

RTNDA, with an eye on radio and television news, warns against manipulating sounds or images—including reenactments—in a misleading fashion. The organization's Code of Ethics frowns as well on the use of covert newsgathering tools, like hidden cameras or microphones, unless essential to securing an important story. However, even when the reporter must rely on these surreptitious devices, the public has to be let in on the secret when the piece airs. RTNDA also finds fault with radio or television broadcasting private transmissions of others without permission.

The NPR News Code of Ethics and Practices recognizes the significance of relying on firsthand news gathering and confirmation of facts as opposed to material from other sources. It emphasizes that no material from another source should be reported verbatim or in-depth without attribution. The code also prohibits sources from dictating how a topic gets covered or what other voices or ideas will be heard. In addition, hosts or interviewers must make it clear when interviews start or end, archival audio must be identified as such for a new piece, and the names of sexual assault victims do not make it on-air unless the victim first goes public with his or her identity.

The International Association of Broadcast Monitors (IABM) understands that the broadcast media, unlike print, offers the public no permanent record of ongoing reporting. IABM also acknowledges that the on-air stories tend to allow for much more limited access to material for subjects featured in these reports. The subjects essentially have no way of knowing about the on-air reports or how to gauge the impact of such stories on their reputations. Monitors therefore must attempt to ensure that broadcasters fulfill their obligation to correctly disseminate public information, while granting news subjects their right to know how they were treated.

The IABM Code of Ethics compels broadcast monitors to, among other things, record material as received without alteration and to place on each piece a notice to prevent inappropriate use of the contents. Monitors are also charged with providing to clients only the portions of a broadcast that he or she has legitimate interest in obtaining. The material must also identify the original broadcaster and the monitor providing the information. The material provided by the monitor should amount to an accurate record of the initial broadcast.

The Association of Independents in Radio (AIR) turns to the business side of broadcast news with a Code of Fair Practices for Working with Freelance Radio Producers. It suggests guidelines for handling everything from determining fair payment for stories and proper kill fees to fixing appropriate expenses and assessing ownership of story ideas. AIR also weighs in on the responsibilities of freelance reporters, editors, or producers.

—Glenn Lewis
Volume Editor

Radio-Television News Directors Association—Code of Ethics and Professional Conduct

Preamble

Professional electronic journalists should operate as trustees of the public, seek the truth, report it fairly and with integrity and independence, and stand accountable for their actions.

PUBLIC TRUST: Professional electronic journalists should recognize that their first obligation is to the public.

Professional electronic journalists should:

- Understand that any commitment other than service to the public undermines trust and credibility.
- Recognize that service in the public interest creates an obligation to reflect the diversity of the community and guard against oversimplification of issues or events.
- Provide a full range of information to enable the public to make enlightened decisions.
- Fight to ensure that the public's business is conducted in public.

TRUTH: Professional electronic journalists should pursue truth aggressively and present the news accurately, in context, and as completely as possible.

Professional electronic journalists should:

- Continuously seek the truth.
- Resist distortions that obscure the importance of events.
- Clearly disclose the origin of information and label all material provided by outsiders.

Professional electronic journalists should not:

- Report anything known to be false.
- Manipulate images or sounds in any way that is misleading.
- Plagiarize.
- Present images or sounds that are reenacted without informing the public.

FAIRNESS: Professional electronic journalists should present the news fairly and impartially, placing primary value on significance and relevance.

Professional electronic journalists should:

- Treat all subjects of news coverage with respect and dignity, showing particular compassion to victims of crime or tragedy.
- Exercise special care when children are involved in a story and give children greater privacy protection than adults.

- Seek to understand the diversity of their community and inform the public without bias or stereotype.
- Present a diversity of expressions, opinions, and ideas in context.
- Present analytical reporting based on professional perspective, not personal bias.
- Respect the right to a fair trial.

INTEGRITY: Professional electronic journalists should present the news with integrity and decency, avoiding real or perceived conflicts of interest, and respect the dignity and intelligence of the audience as well as the subjects of news.

Professional electronic journalists should:

- Identify sources whenever possible. Confidential sources should be used only when it is clearly in the public interest to gather or convey important information or when a person providing information might be harmed. Journalists should keep all commitments to protect a confidential source.
- Clearly label opinion and commentary.
- Guard against extended coverage of events or individuals that fail to significantly advance a story, place the event in context, or add to the public knowledge.
- Refrain from contacting participants in violent situations while the situation is in progress.
- Use technological tools with skill and thoughtfulness, avoiding techniques that skew facts, distort reality, or sensationalize events.
- Use surreptitious newsgathering techniques, including hidden cameras or microphones, only if there is no other way to obtain stories of significant public importance and only if the technique is explained to the audience.
- Disseminate the private transmissions of other news organizations only with permission.

Professional electronic journalists should not:

- Pay news sources who have a vested interest in a story.
- Accept gifts, favors, or compensation from those who might seek to influence coverage.
- Engage in activities that may compromise their integrity or independence.

INDEPENDENCE: Professional electronic journalists should defend the independence of all journalists from those seeking influence or control over news content.

Professional electronic journalists should:

- Gather and report news without fear or favor, and vigorously resist undue influence from any outside forces, including advertisers, sources, story subjects, powerful individuals, and special interest groups.
- Resist those who would seek to buy or politically influence news content or who would seek to intimidate those who gather and disseminate the news.
- Determine news content solely through editorial judgment and not as the result of outside influence.
- Resist any self-interest or peer pressure that might erode journalistic duty and service to the public.
- Recognize that sponsorship of the news will not be used in any way to determine, restrict, or manipulate content.
- Refuse to allow the interests of ownership or management to influence news judgment and content inappropriately.
- Defend the rights of the free press for all journalists, recognizing that any professional or government licensing of journalists is a violation of that freedom.

ACCOUNTABILITY: Professional electronic journalists should recognize that they are accountable for their actions to the public, the profession, and themselves.

Professional electronic journalists should:

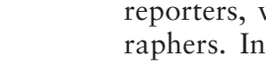
- Actively encourage adherence to these standards by all journalists and their employers.
- Respond to public concerns. Investigate complaints and correct errors promptly and with as much prominence as the original report.
- Explain journalistic processes to the public, especially when practices spark questions or controversy.
- Recognize that professional electronic journalists are duty-bound to conduct themselves ethically.
- Refrain from ordering or encouraging courses of action that would force employees to commit an unethical act.

- Carefully listen to employees who raise ethical objections and create environments in which such objections and discussions are encouraged.
- Seek support for and provide opportunities to train employees in ethical decision-making.

In meeting its responsibility to the profession of electronic journalism, RTNDA has created this code to identify important issues, to serve as a guide for its members, to facilitate self-scrutiny, and to shape future debate.

Adopted at RTNDA2000 in Minneapolis September 14, 2000.

Radio-Television News Directors Association. "Code of Ethics and Professional Conduct." Radio-Television News Directors Association. http://www.rtnda.org/pages/media_items/code-of-ethics-and-professional-conduct48.php (accessed October 31, 2008). Reprinted with permission.



National Public Radio (NPR) News—Code of Ethics and Practices

I. Statement of purpose

Credibility.

NPR is primarily a news organization. We are always testing and questioning the credibility of others. We have to stand that test ourselves. Whether we are functioning as reporters, hosts, newscasters, writers, editors, directors, photographers or producers of news, music or other content, we have to stand that test ourselves. Our news content must meet the highest standards of credibility.

The purpose of this code is to protect the credibility of NPR's programming by ensuring high standards of honesty, integrity, impartiality and staff conduct. We accomplish this by (a) articulating the ethical standards we observe in pursuing and presenting material through our various distribution channels, (b) setting rules and policies that prevent conflicts of interest, (c) establishing guidelines for outside work and activities that may reflect on NPR, and (d) establishing policies and procedures to ensure that the activities of NPR that fall outside journalism and daily production—corporate underwriting, foundation funding, marketing and promotional activities—do not jeopardize our journalistic independence or involve NPR journalists in activities inappropriate to their roles.

II. Who is covered

This code covers all NPR journalists—which for the purposes of this code includes all persons functioning in the News, Programming and Online Divisions as reporters, hosts, newscasters, writers, editors, directors, photographers and producers of news, music or other NPR programming. It also covers all senior News, Programming and Online content managers. It does not cover administrative or technical staff from News, Programming or Online.

The code also applies to material provided to NPR by independent producers, member station contributors and/or reporters and freelance reporters, writers, news contributors or photographers. In cases where essayists or commentators make statements of fact those statements must meet this Code's requirements of accuracy. NPR expects its outside contributors to be free of conflicts of interest on content they submit, to be fair and accurate in creating that material, and to pursue coverage in a manner consistent with the ethical principles stated in this code. There will be instances where provisions of this code are not applicable to an outside contributor. For example, a freelancer who primarily does arts coverage, for example, may not in some situations be subject to the prohibition on making contributions to political campaigns. Such contributions, however, might limit the range of topics or individuals the outside contributor could cover. Supervisors will make these judgments on a case-by-case basis and, if necessary, in consultation with the appropriate programming Vice President or their designee.

Because contributors in this category are not NPR employees, the remedy for dealing with a conflict of interest or other violation of the principles of this code is rejection of the offered material, or of any future programming proposals similarly affected by the conflict or other violation of the ethical principles. NPR may also terminate

any ongoing contract with the freelancer. As with NPR employees who produce content, outside contributors must disclose potential conflicts of interest or other issues under this Code when they accept an assignment or make a story pitch, and NPR editors and producers must make sufficient inquiries of those persons to satisfy themselves that the outside contributors have complied with this code.

Producers of standalone programs acquired by NPR should also apply these ethical principles and procedures to the production of that programming. There may be instances in which the type of programming may not demand the application of a particular principle in this code. In such case, the program producer should confer with the person at NPR who is responsible for managing the program acquisition and determine that NPR agrees that the principle need not be applied. Otherwise, producers of acquired standalone programming should take seriously the requirements of this code.

III. Statement of principles

Our coverage must be fair, unbiased, accurate, complete and honest. At NPR we are expected to conduct ourselves in a manner that leaves no question about our independence and fairness. We must treat the people we cover and our audience with respect.

"Fair" means that we present all important views on a subject. This range of views may be encompassed in a single story on a controversial topic, or it may play out over a body of coverage or series of commentaries. But at all times the commitment to presenting all important views must be conscious and affirmative, and it must be timely if it is being accomplished over the course of more than one story. We also assure that every possible effort is made to reach an individual (or a spokesperson for an entity) that is the subject of criticism, unfavorable allegations or other negative assertions in a story in order to allow them to respond to those assertions.

"Unbiased" means that we separate our personal opinions—such as an individual's religious beliefs or political ideology—from the subjects we are covering. We do not approach any coverage with overt or hidden agendas.

"Accurate" means that each day we make rigorous efforts at all levels of the newsgathering and programming process to ensure our facts are not only accurate but also presented in the correct context. We make every possible effort to ensure assertions of fact in commentaries, including facts implied as the basis for an opinion, are correct. We attempt to verify what our sources and the officials we interview tell us when the material involved is argumentative or open to different interpretations. We are skeptical of all facts gathered and report them only when we are reasonably satisfied of their accuracy. We guard against errors of omission that cause a story to misinform our listeners by failing to be complete. We make sure that our language accurately describes the facts and does not imply a fact we have not confirmed, and quotations are both accurate and placed properly in context.

"Honest" means we do not deceive the people or institutions we cover about our identity or intentions, and we do not deceive our listeners. We do not deceive our listeners by presenting the work of others as our own (plagiarism), by cutting interviews in ways that distort their meaning, or by manipulating audio in a way that distorts its meaning, how it was obtained or when it was obtained. The same applies to text and photographs or other visual material used on NPR Online. Honesty also means owning up publicly and quickly to mistakes we make on air or online.

"Respect" means treating the people we cover and our audience with respect by approaching subjects in an open-minded, sensitive and civil way and by recognizing the diversity of the country and world on which we report, and the diversity of interests, attitudes and experiences of our audience.

IV. Conflicts of interest

1. Conducting ourselves in a manner that inspires confidence in us as independent and fair means avoiding actual and apparent conflicts of interest or engaging in outside activities, public

comment or writing that calls into question our ability to report fairly on a subject.

2. A conflict of interest in its simplest dictionary term is a conflict between the private interests and the professional responsibilities of a person in a position of trust. An operative word in this sentence is "trust." All of us are in positions of trust with our audience. To maintain that trust requires that there be no real or perceived overlap between the private interests and opinions of NPR journalists and their professional responsibilities.

3. An employee covered by this code has the responsibility to disclose potential conflicts of interest. Revealing a conflict of interest after an individual has already participated in coverage where such a conflict exists or appears to exist can be extremely damaging to the reputation of NPR. NPR journalists must, at the time they are first assigned to cover or work on a matter, disclose to their immediate supervisor any business, commercial, financial or personal interests where such interests might reasonably be construed as being in actual, apparent or potential conflict with their duties. This would include situations in which a spouse, family member or companion is an active participant in a subject area that the NPR journalists covers. In the financial category, this does not include an investment by an NPR journalist or their spouse, family member or companion in mutual funds or pension funds that are invested by fund managers in a broad range of companies. The supervisor will decide whether the interests create an actual conflict of interest or the appearance of a conflict. In making these decisions, supervisors should feel free to consult with senior managers of their Division and/or the Office of General Counsel.

V. Outside work, freelancing, speaking engagements

1. The primary professional responsibility of NPR journalists is to NPR. They should never work in direct competition with NPR. An example of competing with NPR would be breaking a story or contributing a feature for another broadcast outlet or Web site before offering the work to NPR.

2. NPR journalists must get written permission for all outside freelance and journalistic work, including written articles and self-publishing in blogs or other electronic media, whether or not compensated. Requests should be submitted in writing to the employee's immediate supervisor. Approval will not be unreasonably denied if the proposed work will not discredit NPR, conflict with NPR's interests, create a conflict of interest for the employee or interfere with the employee's ability to perform NPR duties. Supervisors must respond within seven days of receiving a request.

3. NPR journalists may not engage in public relations work, paid or unpaid. Exceptions may be made for certain volunteer nonprofit, nonpartisan activities, such as participating in the work of a church, synagogue or other institution of worship, or a charitable organization, so long as this would not conflict with the interests of NPR in reporting on activities related to that institution or organization. When in doubt, employees should consult their supervisor.

4. In general, NPR journalists may not without prior permission from their supervisor do outside work for government or agencies principally funded by government, or for private organizations that are regularly covered by NPR. This includes work that would be done on leaves of absence.

5. NPR journalists may not ghostwrite or coauthor articles or books or write reports—such as annual reports—for government agencies, institutions or businesses that we cover or are likely to cover.

6. NPR journalists must get approval from the Vice President for their Division or that person's designee before speaking to groups that might have a relationship to a subject that NPR may cover. Generally, NPR journalists may not speak at corporation or industry functions. NPR journalists also may not speak in settings where their appearance is being used by an organization to market its services or products, unless it is marketing NPR or its member stations' interests, and then only as permitted in Section IX, Item 5. NPR journalists are permitted to engage in promotional activities for books they have written (such as a book tour), although they are expected to get approval from their supervisors on scheduling.

7. NPR journalists may only accept speaking fees from educational or nonprofit groups not engaged in significant lobbying or political activity. Determining whether a group engages in significant lobbying or political activity is the responsibility of the NPR journalist seeking permission, and all information must be fully disclosed to the journalist's supervisor.

8. NPR journalists may not speak to groups where the appearance might put in question NPR's impartiality. Such instances include situations where the employee's appearance may appear to endorse the agenda of a group or organization. This would include participation in some political debates and forums where the sponsoring group(s) or other participants are identified with a particular perspective on an issue or issues and NPR journalist's participation might put into question NPR's impartiality.

9. NPR journalists must get permission from the Vice President for their Division or their designee to appear on TV or other media. It is not necessary to get permission in each instance when the employee is a regular participant on an approved show. Permission for such appearances may be revoked if NPR determines such appearances are harmful to the reputation of NPR or the NPR participant.

10. In appearing on TV or other media including electronic Web-based forums, NPR journalists should not express views they would not air in their role as an NPR journalist. They should not participate in shows, electronic forums, or blogs that encourage punditry and speculation rather than fact-based analysis.

11. Any NPR journalist intending to write a non-fiction book or TV or movie script or other guiding documents for non-radio productions based in whole or substantial part on assignments they did for NPR must notify NPR in writing of such plans before entering into any agreement with respect to that work. NPR will respond within 14 days as to whether it has any objections to the project.

12. NPR journalists considering book projects or TV or movie productions based on stories that they have covered must be careful not to give any impression they might benefit financially from the outcome of news or program events. They should before taking any actions with respect to such matters seek guidance from the Vice President for their Division.

VI. Personal gain, gifts, freebies, loaned equipment or merchandise, etc.

1. NPR journalists may not accept compensation, including property or benefits of any kind, from people or institutions they cover or put on the air. NPR journalists may accept gifts of token value (hats, mugs, t-shirts, etc.). Unsolicited items of significant value will be returned with a letter thanking the sender but stating our policy on gifts. NPR journalists pick up the check for themselves when they can (i.e., they are not wined and dined by sources). NPR journalists pay for their own travel in accordance with NPR's travel policy. There are certain instances—such as conferences and conventions—where food is provided as a convenience for the press as a whole, and in such instances it is acceptable to take advantage of this. In addition, NPR journalists may accept paid travel and meals for speaking engagements and awards ceremonies that are approved under the standards in Section V of this document.

2. NPR journalists must conduct themselves at all times in a manner that leaves no grounds for belief, or even the appearance, that information they have gathered on the job has been used for personal gain, financial or otherwise.

3. NPR journalists may not use any nonpublic information acquired at work for personal gain, or use their association with NPR for personal gain. No NPR journalist may disclose information acquired by NPR to anyone inside or outside of NPR if the intent is to use that information for personal or institutional gain. This prohibition does not apply to accepted journalistic practices, such as sharing information as a member of a news "pool."

4. NPR journalists pay their own way in newsgathering, except in unusual circumstances (like going into battle with the military). The Vice President for the involved Division must approve all exceptions to this or, in the case of News, a

Managing Editor. NPR journalists may accept free passes to movie screenings, performances or similar activities that are attended for the purpose of doing reviews or stories for the air.

5. NPR journalists and other program staff cannot sell items that are received at NPR for review, such as books, CDs, etc. They belong to NPR. They may be distributed to staff for their personal use (which may include donations to charities) after they are no longer needed.

6. NPR journalists cannot keep any equipment or items of value provided by a company for test-use for story purposes. Such items must be disclosed to the journalist's supervisor and are to be disposed of in accordance with the ethical practices stated in this document, which usually means returning such items to the provider.

VII. Ethical conduct in coverage of news and production of programming

1. Plagiarism is an unforgivable offense. NPR journalists do not take other peoples' work and present it as our own.

2. In newsgathering NPR puts its highest value on firsthand newsgathering and confirmation of facts, as opposed to relying on material from other sources (AP, other newspapers and networks, etc.). Wire service material may be more appropriately used in online and other specialized content presentations where firsthand newsgathering is significantly more difficult. In such instances, NPR journalists shall adhere to the practices described in the following item.

3. NPR journalists must take special care in the use they make of information from wire service stories, reports by other broadcast news organizations, newspaper clips or articles in other publications. No material from another source should ever be included verbatim, or substantially so, without attribution.

Wire services: There is one category of quotation from wire services where it is acceptable to use quotes without attribution. That is where an AP or Reuters story is about some public event—like a press conference, speech by a public official in a public setting, an official statement of a government agency, a congressional hearing, and the like. In those cases, we reasonably expect that AP and Reuters are reliable conveyors of those quotes in the same way we regard the transcript services we use for these events. However, journalists must use caution and check source material if there is reason to believe that a quote has been inaccurately reported or has been taken out of its proper context.

When using material from newspaper stories, NPR journalists must double-check "facts" and other material gleaned from those stories. Too often, incorrect information is passed down from one news story to another because of the failure of one news organization to get it right. NPR should never pass on errors in this way.

4. Photographs associated with NPR content must, individually or collectively, show the events they depict truthfully, honestly and without bias. This requirement applies whether they are taken by NPR journalists or come from other sources (such as freelancers or photo agencies). To assure our photos do not deceive our audience we apply the following rules:

> We do not manipulate circumstances of photographs for purposes of enhancing the story the photograph portrays. An exception may be made for studio photography (such as portraits, fashion, food, etc.) where the nature of the studio photograph is either obvious or explained in accompanying verbal content.
>
> We may enhance photographic images for technical clarity—including minimal amounts of dodging and burning or digital manipulation, such as color correction or contrast enhancement—so long as a photo is not deceptive as to the original setting and scene being photographed.
>
> We do not create fictional images or designs from photographs using computer and laboratory techniques unless the accompanying explanation makes clear that the image is fictional or the design is associated with content related to art or creative activity. We do not use composite photographs.
>
> We assure that captions and labels of photos accurately describe the events in the photograph.
>
> We do not use outdated photographs to portray a current story unless we make clear the date the photograph was taken.

5. NPR journalists are generous in giving credit to other media organizations for stories that demonstrate enterprise or contain exclusive information. If their story inspires us to replicate it, we should give credit even if we use different sources and materials. If there is any doubt about whether to credit another news organization, they should ask a senior manager in their Division.

6. NPR journalists must treat the people they cover fairly and with respect. They always keep in mind that gathering and reporting information may cause harm or discomfort, and they weigh that against the importance of the story. NPR journalists show sensitivity when seeking or using interviews of those affected by tragedy or grief. They show special sensitivity when dealing with children and inexperienced or unsophisticated sources or subjects, or individuals who have difficulty understanding the language in which they are being interviewed.

7. Dealing with minors (generally defined as anyone under the age of 18) always invokes legal issues. An interview of a minor about a sensitive subject requires an NPR journalist to secure permission from the minor's parent or legal guardian. (Permission forms can be found in the "Style and Usage" subfolder of the MANAGING EDITOR location in ENPS). Examples of sensitive subjects include cheating, sexual activity, involvement in gangs or crime, difficult family relationships, probation violation, out-of-wedlock pregnancy or parenthood, victims' sexual abuse and similar topics that could have legal ramifications or lead to embarrassment. An interview of a minor in a special custodial situation, such as foster care, juvenile detention, or holding facilities for illegal immigrants, requires the consent of the person who has custody of the minor. Utah also requires the consent of both the custodian of the juvenile facility and the minor's parent.

An interview on a non-sensitive topic (normal childhood activities, sports, book, movies, trips to the zoo, baseball and the like) does not require consent. Generally however, any interview on school premises will require the consent of the school authorities. If a minor is a witness to a crime, the NPR journalist must weigh carefully whether we are exposing the minor to physical risk by identifying him or her by name as a potential witness, and whether there is potential for the minor to be accused as a participant.

Situations like school shootings require special care when interviewing visibly distressed minors who may have witnessed horrific scenes. Witnesses such as teachers or students over 18 are preferable interviewees. If continued interviewing substantially increases the distress of a minor who is a witness, the NPR journalist should carefully balance the importance and quality of the information being obtained with the interviewee's emotional state and decide whether respect for the witness requires the interview to be ended. The NPR journalist must also discuss with the editor whether that interview should be aired.

In cases where there is even a hint of doubt about whether to get consent, the NPR journalist or supervisor should call the Office of the General Counsel.

8. NPR journalists think carefully about the boundaries between legitimate journalistic pursuit and an individual's right to privacy. We recognize that private people have a greater right to control information about themselves than do public officials and others who seek power, influence or attention. Only an overriding public need to know can justify intrusion into anyone's privacy.

9. NPR journalists make sure actualities, quotes or paraphrases of those we interview are accurate and are used in the proper context. An actuality from an interviewee or speaker should reflect accurately what that person was asked or was responding to. If we use tape or material from an earlier story, we clearly identify it as such. We tell listeners about the circumstances of an interview if that information is pertinent (such as the time the interview took place, the fact that an interviewee was speaking to us while on the fly, etc.). Whenever it's not clear how an interview was obtained, we should make it clear. The audience deserves more information, not less. The burden is on NPR journalists to ensure that our use of such material is true to the meaning the interviewee or speaker intended.

10. Journalism should be conducted in the open. NPR journalists do not misrepresent themselves: NPR journalists disclose who they are and don't pose as cops, investigators or other such

officials. There will be occasions not to declare our profession but rather to seek information as a member of the public working in places to which the general public has access, such as stores, public buildings, etc.

11. NPR journalists do not use hidden microphones, recorders or cameras except where information that serves an important journalistic purpose, such as in reporting on illegal, antisocial or fraudulent activities, cannot be obtained by more open means. In such circumstances, approval must be obtained from both a senior News supervisor and the General Counsel's office before any taping or photographing takes place. NPR journalists do not record phone calls without permission.

12. If there is any question of legality in pursuit of a story, NPR journalists should consult their supervisors and the Office of General Counsel. NPR has lawyers available 24 hours a day, seven days a week, to assist NPR journalists. If you have any question about the legality of your conduct, contact your supervisor, who will contact a lawyer. If you cannot reach a supervisor, you may contact a lawyer directly. News Operations has the home and cell phone numbers of NPR legal staff. The numbers also can be found in the NPR Phone List in ENPS (go to the "Managing Editor" location; the list is in the "NPR Phones" subfolder).

13. NPR journalists do not pay for information from sources or newsmakers. They do not allow sources or interviewees to dictate how a topic will be covered, or which other voices or ideas will be included. They do not agree to submit questions in advance unless the Vice President for their Division or their designee approves a specific instance. If questions are submitted in advance, this will be disclosed in our coverage.

14. NPR journalists do not sign non-disclosure agreements, except in the rarest of circumstances. The Vice President for their Division or their designee and the General Counsel must approve exceptions to this rule. NPR journalists respect embargoes on news unless the circumstances surrounding the embargo make adherence to it inappropriate, such as where the information has already surfaced elsewhere or a strong public interest requires the disclosure to place other news in the proper context.

15. Although NPR journalists do agree to talk to sources on background when necessary, NPR's strong preference is to have people on the record. Before any information is accepted without full attribution, reporters must make every reasonable effort to get it on the record. If that is not possible, reporters should consider seeking the information elsewhere.

16. The grant of anonymity should be a last resort. When NPR journalists use anonymous sources to obtain information necessary for a story, the editor or producer of that story has an obligation to satisfy him/herself that the source is credible and reliable, and there is a substantial journalistic justification for using the source's information without attribution. This obligation also pertains to situations where individuals ask that their real names be withheld. The editor or producer has a twofold responsibility to (1) make a judgment about whether it is editorially justified to let the person speak anonymously, and (2) satisfy him/herself that this person is who the piece says s/he is. An editor should never be in the position of having to verify these things after a story has aired and a question is raised about it. We should not grant anonymity if a person makes pejorative comments about the character, reputation, or personal qualities of another individual, or derogatory statements about an institution. When anonymity is granted, pseudonyms should not be used. A more detailed description of NPR policy on anonymity can be found in the memo on "Granting Anonymity" in the "Style and Usage" subfolder at the MANAGING EDITOR location in ENPS.

17. When NPR journalists attribute information in a story to a "source" or "sources," it is assumed that these are the journalists' sources and that they have obtained the information firsthand from them. If this is not the case, and the sources are ones quoted by other news organizations, then those sources must be attributed to those other news organizations.

18. NPR journalists do not show subjects or other third parties scripts of stories in advance of their broadcast or posting or preview pieces with any person not affiliated with NPR. An NPR journalist may review portions of a script or read back a quotation to assure accuracy. An NPR journalist may also play audio or read transcripts

of an interview to a third party if the purpose is to get that party's reaction to what another person has said.

19. Our corrections policy is to correct substantive errors of fact in a timely way. If an NPR journalist believes NPR got something wrong—or that there was a serious defect in a piece—s/he has an affirmative responsibility to get that on the table immediately for investigation and possible correction. Many times NPR learns these things when someone outside brings an error to its attention. That is one natural way of finding out. But if NPR journalists have reason to believe there was a significant error, they should not wait for it to be pointed out. NPR journalists should in such cases also check language of any corrections, clarifications or retractions with the General Counsel before they are broadcast or posted. NPR News, Programming or Online personnel learning of material errors in stories shall inform the affected division, as well as the Office of the General Counsel, as soon as they are discovered.

20. A host or interviewer should make clear when an interview has begun or has ended so there is no question about what is or isn't for broadcast, or what is on the record or not.

21. Archival audio or audio that was obtained from a past story must be identified as such if it is used in a new piece. The listener should not be left to think that any archival or previously obtained audio was gathered in the context of the current piece. As an example, a story updating a controversy surrounding an individual would be misleading if it included new assertions of fact but only used past statements by that individual and failed to identify them as such.

22. NPR's SOC policy is either to SOC out from the place where the reporter is filing or, if the reporter is no longer there, to SOC out generically ("For NPR, I'm Joe Smith") and establish the "place" of the story in the intro and body of the story itself.

23. NPR does not name victims of sexual assaults. There will at times be exceptions—such as certain instances when a victim goes public with his/her identity—and NPR editors will judge these instances on a case-by-case basis.

VIII. Politics, community and outside activities

1. NPR journalists may not run for office, endorse candidates or otherwise engage in politics. Since contributions to candidates are part of the public record, NPR journalists may not contribute to political campaigns, as doing so would call into question a journalist's impartiality.

2. NPR journalists may not participate in marches and rallies involving causes or issues that NPR covers, nor should they sign petitions or otherwise lend their name to such causes, or contribute money to them.

3. NPR journalists may not serve on government boards or commissions.

4. NPR journalists may sit on community advisory boards, educational institution trustee boards, boards of religious organizations or boards of nonprofit organizations so long as NPR does not normally cover them and they are not engaged in significant lobbying or political activity. Such activities should be disclosed to the Vice President for their Division or designee, and NPR may revoke approval if it believes continued service will create an actual or appearance of a conflict of interest.

5. When a spouse, family member or companion of an NPR journalist is involved in political activity, the journalist should be sensitive to the fact that this could create real or apparent conflicts of interest. In such instances the NPR journalist should advise his or her supervisor to determine whether s/he should recuse him or herself from a certain story or certain coverage.

IX. Underwriting; foundation grants; advertising, marketing and promotion

1. A firewall will be maintained between NPR journalists and funders. While staff may end up talking to experts and officials who work at foundations that fund us (and their grantees), we may not discuss coverage planning with grant-making officials.

2. The Vice Presidents for News, Online or Programming or their designee will designate individuals who will serve as contacts for their respective departments with funders for grant-making purposes or other communications.

3. NPR journalists may not read funding credits on air or online.

4. If NPR reports on an organization or individual who funds us, we will disclose that relationship on air if the subject of the report is directly related to the thrust of the grant we received.

5. When authorized by the Vice President for their Division or their designee, NPR journalists may take part or be asked to take part in promotional activities or events involving supporters of NPR, such as our coordinated fund drives and public radio audience-building initiatives.

X. Application and enforcement of this Code

1. Application and enforcement of this Code is the responsibility in the first instance of every NPR journalist. This responsibility extends to both him/herself and to every other NPR journalist with whom he/she works. We should feel free to guide ourselves by offering suggestions to our peers to help them comply with their obligations under this Code, and NPR journalists should welcome any such suggestions and discuss the issues with professionalism and respect.

2. Editors and producers have special responsibility for application of this Code to matters they are editing or producing. For each story that is produced, they should be satisfied that the standards of this Code have been met.

3. NPR journalists who do not comply with the Code may be subject to disciplinary action up to and including termination. Disciplinary action against those journalists covered by the AFTRA contract will be consistent with the contract.

XI. Miscellaneous

1. We do not enter journalism contests or competitions when groups that have an interest in influencing our coverage sponsor them. All entries for contests or competitions must be approved by the Vice President for the NPR journalist's division or his or her designee

2. NPR journalists should not speak on behalf of NPR, or its activities, policies and practices, unless authorized to do so by appropriate company officials. All press inquiries about NPR activities, policies and practices received by journalists must be redirected to NPR's Communications Department.

3. Generally, NPR journalists may not endorse products or provide blurbs for books, movies or performances using their NPR identification. The Vice President for each respective programming division may make exceptions to this rule, such as when the author of a book is a colleague of the blurb-writer. However, permission will be denied in other circumstances. Blurbs drawn accurately and in context from material that has been on our air are permissible.

4. NPR journalists must not turn over any notes, audio or working materials from their stories or productions, nor provide information they have observed in the course of their production activities to government officials or parties involved in or considering litigation. If such materials or information are requested pursuant to governmental, administrative or other legal process, NPR journalists should immediately consult their supervisors and the General Counsel.

5. NPR owns material that has been collected or produced by NPR journalists in the course of their duties, irrespective of whether it has been distributed on our air outright or included on our Web site, and it may not be reproduced elsewhere without the permission of NPR. Such permission is granted through the Rights and Reuse Office (currently located in Online, Ext. 3622) and requests should be forwarded accordingly.

6. The provisions of this code are subject to the employment and other policies made generally applicable to all NPR employees.

International Association of Broadcast Monitors (IABM)—Code of Ethics

Broadcasting, both by radio and television, is one of the most important media of the day for the dissemination of public information. Presented ephemerally in a rigid time framework, broadcast information nevertheless daily influences the beliefs and opinions and affects the attitudes and actions of citizens and public officials, both because of the vast numbers of its audiences and because of its unique facility for transmitting visual as well as oral reports.

Unlike the printed media, whose reports are presented in published form, the broadcast media present the public with no permanent record of their presentations and, therefore, with only limited access. Individuals and other entities who have a special interest in, or are the subject of the reports, have no practical means of knowing about them and, therefore, no opportunity of learning from them or of gauging the impact on their reputation and their subsequent actions.

The purpose of broadcast monitoring is to alleviate the imbalance between widespread dissemination and limited access to broadcast reports. To this end, broadcast monitors seek to serve both broadcasters in the fulfillment of their responsibilities to disseminate public information, and individuals and other entities in securing their need or right to know. Broadcast monitoring provides a service which narrows the gap between dissemination and access to broadcast reports. To ensure that broadcast monitors provide this service in a responsible manner fair to all, the members of the International Association of Broadcast Monitors subscribe to this Code of Ethics.

Broadcast monitors shall record material as it is received without any alteration of the material as presented.

Broadcast monitors shall not knowingly assist anyone in the violation of the copyright law or any other rights. Broadcast monitors shall provide to clients only those portions of broadcast reports, which the client indicates he/she has a legitimate interest in obtaining. The information so provided shall constitute portions of the broadcast which are complete in themselves and shall identify the original broadcaster and the monitor providing the information, and except for legends imposed thereon, shall be an accurate record of the material as broadcast.

Broadcast monitors shall place on each container a notice that meets the guidelines of the Association designed to prevent inappropriate or improper use of the material provided.

Broadcast monitors shall maintain accurate records of all transactions in which they provide information, including names and addresses of clients to whom the information is provided.

Broadcast monitors shall not knowingly provide information on programs presented solely for the entertainment of the viewing audience, except that material presented on any type program may be provided for clients known to have a legitimate archival or research interest in having that material. Broadcast monitors wish to foster the widest availability of monitoring services to the community they serve. For this reason, broadcast monitors shall not enter into licensing agreements with broadcasters, which would limit or preclude another monitoring company from pursuing their business by recording, monitoring or selling coverage of that broadcaster.

Any monitor who violates any of the above provisions shall be subject to expulsion from the International Association of Broadcast Monitors.

The Association of Independents in Radio—Code of Fair Practices for Working With Freelance Radio Producers

Issued by Association of Independents in Radio (AIR) and the Producers' Advocacy Group (PAG)

June 1999

INTRODUCTION: The Association of Independents in Radio* (AIR) and the Producers Advocacy Group** (PAG) present the following

code in an effort to clarify and standardize rates and practices for working with freelancers in the public radio industry. In recognition of the central role freelancers and independent radio producers play in enriching the content of almost all the important programs on public radio, AIR and PAG recommend the following guidelines when public radio networks, stations or shows use the work of freelance radio producers:

LIVING WAGE: Freelance producers should be paid at a rate which allows a decent living. At minimum we urge acquirers to match the prevailing rate scale, including benefits, paid to staff reporters and producers doing comparable work in comparable markets. Prevailing rate scales for national acquirers should match those of national staff reporters/producers who are members of the American Federation of Television and Radio Artists (AFTRA). We also recommend that acquirers keep in mind the additional cost of overhead borne by freelancers and set rates accordingly. We encourage freelancers to negotiate, and regularly renegotiate, for the highest possible rate for themselves.

HOW STORIES ARE PAID: Whether paid by minute or by day, stories should be acquired at rates which reflect the amount of work that goes into making them, rather than simply the length of the final product. A fair and flexible fee structure should be agreed upon in advance. In cases where a very quick turn around is required a higher rate should be negotiated.

COST OF LIVING ALLOWANCE: Freelance producers should receive cost of living increases. This should be reflected in the annual budgets of acquiring organizations.

CONSISTENCY WITHIN ACQUIRING ORGANIZATIONS: Freelancers should reasonably expect to be paid at the same rate (or progressively more) for each story that they complete for an acquirer, regardless of changes of editor.

TRANSPARENCY: Acquiring organizations should make rate structures and practices easily understood and available to freelancers. Guidelines covering rates and policies should be published, posted on websites, and sent to all freelancers yearly. Freelancers and editors should be kept current of all changes in policies and practices. Public radio shows, networks and stations should have clear and consistent policies of advancement for freelancers which describe how freelancers progress within the organizations and what they must accomplish in order to receive higher rates.

PAYMENT PERIOD: All freelance work should be paid within 30 days of receipt of the finished product, prompted by an invoice from the reporter.

EXPENSES: Expenses for a piece should be agreed upon before a freelance producer begins work on a story. Networks, shows or stations should cover all expenses, including long distance phone calls, accommodation, travel, meals, admission fees and other costs which may be incurred in order to produce the story. Mileage is to be reimbursed at the current rate allowed by the Internal Revenue Service for mileage deductions. Expenses are to be paid within 30 days of receipt of a documented expense invoice.

KILL FEES: The story should be paid in full as long as the work agreed to is submitted on time, even in situations where the story is ultimately not aired. An exception to this would be if there are significant problems with tape quality which prevent the story from airing. If a story is killed mid-stream, the producer should be paid a fee which reflects the amount of work already expended on the story.

IDEAS AND PITCHES: An idea or pitch refers to both a subject and an angle or approach. A producer should be considered to have a proprietary right to ideas or pitches discussed with editors, and such ideas should be held in confidence. We highly discourage poaching and reassignment of ideas.

RESPONSIBILITIES OF REPORTERS: Freelancers have the responsibility to strive at all times for fairness and accuracy, and should be prepared to back up the "facts" asserted in a story with evidence.

Editors, however, must respect any and all promises of confidentiality made by the producer in obtaining information. Before accepting any assignment, it is the responsibility of the freelancer to reveal to the editor any actual or potential conflict of interest. This includes, but is not limited to, any financial interest relating to the subject matter of the story.

INDEMNITY: While it is the reporter's responsibility to back up the facts, no producer or reporter should be obliged to broadly indemnify a network or show against any claims or legal actions resulting from a radio story. Once a story is accepted and aired the broadcaster should stand by the producer if the story gives rise to legal action, except where a reporter has plagiarized or violated copyright law.

ADDITIONAL RESEARCH: If, during the course of work, the editor and freelance producer agree that a story requires time for research or tape gathering beyond the original expectation, the initial agreement on rates should be renegotiated.

EDITS: Except for an initial training period for inexperienced freelancers, we recommend that there be a maximum of three edits per story at the agreed upon rate. If a piece exceeds three edits, both the acquirer and the reporter should renegotiate the payment for that piece.

RIGHT OF REVIEW: After the final edit, any changes to a story that substantially alter meaning should only be made in consultation with the producer.

ON-THE-SHELF: First broadcast rights agreements are only guaranteed for 30 days following submission unless otherwise arranged. If a story hasn't been aired after 30 days, acquirers lose the right to first radio broadcast, and producers become free to resell the story elsewhere. The acquirer should state an anticipated broadcast date at the time of acceptance.

NOTIFICATION and ARCHIVAL COPIES: Whenever possible, freelance producers should receive advance notice of air dates and times. Producers should receive a courtesy copy of all pieces which are mixed by the acquiring organization.

CORRESPONDENCE: Acquirers' listener correspondence departments should make a best effort to maintain a database of all correspondence concerning work produced by freelancers, and should provide producers with copies of all mail and email correspondence received in response to the airing of their pieces. Freelancers should also hear about all feedback given by phone.

RECORDS: We recommend that acquiring organizations keep consistent records containing work and payment history for each producer. Records should detail agreements made with each producer concerning rates, rights, and conditions. Such records should be readily available to each editor who works with the producer.

RIGHTS: In general, rights agreements with freelance producers are for non-exclusive, one-time, United States radio broadcast only. All other rights, including webcast, electronic reproduction, transmission, or distribution of all, or part, of the story, are fully reserved by the producer unless negotiated separately. If additional rights are negotiated, they should be clearly stated in a contract and fees adjusted upwards.

WORK-FOR-HIRE: Freelancers, typically, should retain all rights to their work, except as in rights agreements negotiated separately. However, under some circumstances, freelancers may agree to "work-for-hire," in which case all rights are purchased by the acquirer; in these cases, fees should be negotiated upward to reflect the rights purchased.

USE OF CONTRACTS: Freelancers and acquiring institutions should sign a standard contract on a yearly basis which may be initiated either by the producer or the acquirer. The contract should specify payment schedule, expense and kill fee policies, payment for rewrites, and what rights are being purchased. In addition, we

recommend that freelancers and editors exchange a memo or confirmation letter for each assignment. This should describe the nature of the story, the rate to be paid for this story, expenses covered, due date, length of story, and any additional special circumstances which apply to that story only.

*AIR is a not-for-profit national membership organization offering information, networking, and other services to public radio producers.

**PAG is an ad-hoc collective of national producers organized to support producer's rights.

It is our intention to update this document on a periodic basis. We invite input from acquiring organizations.

Print Organizations

American Society of News Editors (ASNE)—Statement of Principles
American Society of Magazine Editors (ASME)—Guidelines for Editors and Publishers
New York Times Company—Policy on Ethics in Journalism
Hearst Newspapers—Statement of Professional Principles
The Washington Post—Standards and Ethics

Introduction

The world of print journalism has been in transition, and under attack from all sides, in recent years. Daily newspapers and consumer magazines in particular have felt the pinch of losing advertising and audience share to newer media alternatives. The pressure to prevail in this more competitive environment may have prompted a small minority of print journalists to take some ethical shortcuts in reporting and business practices. In response, the most prominent print organizations have updated and/or reaffirmed conduct guidelines to assure the integrity of their endeavors.

American Society of News Editors (ASNE) Statement of Principles, updated in 2006, fixes broad standards of professional ethics for all newspaper journalists in the United States. Six articles in the document spell out the basic underpinnings of trustworthy newspaper journalism. These articles address issues of responsibility (especially the effort to bring independent scrutiny to the use of power), freedom of the press (a warning to protect against exploitation of the press), independence, truth and accuracy, impartiality, and fair play (with an eye on rights of those in the news accused of wrongdoing or providing confidential information).

American Society of Magazine Editors (ASME), in the thirteenth edition of its Guidelines for Editors and Publishers put out in 2008, focuses exclusively on a single, pervasive challenge that faces all periodicals. ASME mandates that there should be no "influence or pressure" asserted on editorial content by magazine advertisers. The document examines ten areas—from design, covers, and logos to sponsorship, product placement, and editorial review—where the business and journalism sides might clash. The goal is to establish clear, transparent boundaries between the realm of editorial copy and the space designated for commercial advertisements.

Individual newspaper companies—The New York Times, Hearst, and The Washington Post—each concentrate on self-policing documents that govern the way their own newsrooms should function and gather the news. Most of the same on-the-job reporting principles put forth by ASME, with somewhat more detailed objectives and rules, find their way into the guidelines for these organizations. The New York Times goes a step further than the rest by prescribing a code of behavior for journalism-related personnel to follow *away* from the job as well. The section titled "On Our Time" weighs in on matters like

correct political activities, avoiding conflicts of interest caused by family members, financial conflicts of interest, and freelance writing activities, among others.

American Society of News Editors—Statement of Principles

Published: August 20, 1996
Last Updated: November 29, 2006

ASNE Statement of Principles

ASNE's Statement of Principles was originally adopted in 1922 as the "Canons of Journalism." The document was revised and renamed "Statement of Principles" in 1975.

PREAMBLE. The First Amendment, protecting freedom of expression from abridgment by any law, guarantees to the people through their press a constitutional right, and thereby places on newspaper people a particular responsibility. Thus journalism demands of its practitioners not only industry and knowledge but also the pursuit of a standard of integrity proportionate to the journalist's singular obligation. To this end the American Society of Newspaper Editors sets forth this Statement of Principles as a standard encouraging the highest ethical and professional performance.

ARTICLE I—Responsibility. The primary purpose of gathering and distributing news and opinion is to serve the general welfare by informing the people and enabling them to make judgments on the issues of the time. Newspapermen and women who abuse the power of their professional role for selfish motives or unworthy purposes are faithless to that public trust. The American press was made free not just to inform or just to serve as a forum for debate but also to bring an independent scrutiny to bear on the forces of power in the society, including the conduct of official power at all levels of government.

ARTICLE II—Freedom of the Press. Freedom of the press belongs to the people. It must be defended against encroachment or assault from any quarter, public or private. Journalists must be constantly alert to see that the public's business is conducted in public. They must be vigilant against all who would exploit the press for selfish purposes.

ARTICLE III—Independence. Journalists must avoid impropriety and the appearance of impropriety as well as any conflict of interest or the appearance of conflict. They should neither accept anything nor pursue any activity that might compromise or seem to compromise their integrity.

ARTICLE IV—Truth and Accuracy. Good faith with the reader is the foundation of good journalism. Every effort must be made to assure that the news content is accurate, free from bias and in context, and that all sides are presented fairly. Editorials, analytical articles and commentary should be held to the same standards of accuracy with respect to facts as news reports. Significant errors of fact, as well as errors of omission, should be corrected promptly and prominently.

ARTICLE V—Impartiality. To be impartial does not require the press to be unquestioning or to refrain from editorial expression. Sound practice, however, demands a clear distinction for the reader between news reports and opinion. Articles that contain opinion or personal interpretation should be clearly identified.

ARTICLE VI—Fair Play. Journalists should respect the rights of people involved in the news, observe the common standards of decency and stand accountable to the public for the fairness and accuracy of their news reports. Persons publicly accused should be given the earliest opportunity to respond. Pledges of confidentiality to news sources must be honored at all costs, and therefore should not be given lightly. Unless there is clear and pressing need to maintain confidences, sources of information should be identified.

These principles are intended to preserve, protect and strengthen the bond of trust and respect between American journalists and the American people, a bond that is essential to sustain the grant of freedom entrusted to both by the nation's founders.

American Society of Magazine Editors—Guidelines for Editors and Publishers

June 30, 2008

ASME Guidelines for Editors and Publishers

Thirteenth Edition

For magazines to be trusted by consumers and to endure as brands, readers must be assured of their editorial integrity. With that core conviction in mind—and the overwhelming support of its members—the American Society of Magazine Editors for over two decades has issued guidelines to make sure that the difference between advertising and editorial content is transparent to readers and that there is no advertiser influence or pressure on editorial independence. In this latest edition, we have aimed to make the guidelines easier to understand and to distill them into ten basic statements of principle and practice. ASME will continue to advise editors and publishers about how to interpret the guidelines. Repeated and willful violations will result in public sanction and disqualification from the National Magazine Awards.

Design

Advertisements should look different enough from editorial pages that readers can tell the difference. To avoid confusion, any ad that looks enough like an editorial story or feature that it could be mistaken for one should be slugged Advertisement or Promotion at the top of each page in type as prominent as the magazine's normal body type.

Covers

The front cover and spine are editorial space. Companies and products should appear on covers only in an editorial context and not in a way that suggests advertisement. (This includes use of cover stickers.)

Adjacencies

Advertisements should not be placed or sold for placement immediately before or after editorial pages that discuss, show or promote the advertised products.

Logos

Advertiser logos should not appear on editorial pages except in a journalistic context. A magazine's logo should appear on advertising pages only in a connection with advertisements for the magazine and its promotions or when an advertised product is touting editorial awards that it has won.

Sponsorship

Sponsorship language (i.e., sponsored by, presented by, etc.) should not appear in connection with regularly occurring editorial features. Such language may be used in connection with editorial extras (special issues, inserts, onserts and contests) as long as the editorial content does not endorse the sponsor's products and any page announcing the sponsorship is clearly an ad or is labeled Advertisement or Promotion in a type size as prominent as the magazine's normal body type. Single-advertiser issues that don't include sponsorship language do not have to be labeled, but should include an editor's or publisher's note disclosing the special arrangement to readers. Advertisers may sponsor out of book events such as awards shows and conferences, and that sponsorship may be acknowledged without labeling on either advertising or editorial pages.

Advertising Sections

Editorial-looking sections or pages that are not produced by a magazine's editors are not editorial content. They should be labeled Advertisement, Special Advertising Section or Promotion at the top of every page in type as prominent as the magazine's normal body type.

Product Placement/Integration

Advertisers should not pay to place their products in editorial pages nor should they demand placement in return for advertising. Editorial pages may display and credit products and tell readers

where to buy them, as long as those pages are solely under editorial control.

Editorial Staffing and Titles

A magazine's editorial staff member should not be involved in producing advertising in that magazine. Advertising and marketing staff should not use titles that imply editorial involvement (e.g., merchandising editor).

Editorial Review

In order for a publication's chief editor to be able to monitor compliance with these guidelines, every effort must be made to show all advertising pages, sections and their placement to the editor far enough in advance to allow for necessary changes.

Advertising Review

While editors or publishers at their discretion may share the general topic matter of upcoming editorial content with advertisers, specific stories, layouts or tables of contents should not be submitted for advertiser review.

The New York Times Company—Policy on Ethics in Journalism

Introduction and Purpose

1. The Core Purpose of The New York Times Company is to "enhance society by creating, collecting and distributing high-quality news, information and entertainment." The central place of our news and editorial units in fulfilling that promise is underscored by the No. 1 statement in our Core Values: "Content of the highest quality and integrity: This is the basis for our reputation and the means by which we fulfill the public trust and our customers' expectations."

2. Companywide, our goal is to cover the news impartially and to treat readers, news sources, advertisers and all parts of our society fairly and openly, and to be seen as doing so. The reputation of our company rests upon that perception, and so do the professional reputations of its staff members. Thus the company, its separate business units and members of its newsrooms and editorial pages share an interest in avoiding conflicts of interest or any appearance of conflict.

3. Conflicts of interest, real or apparent, may arise in many areas. They may involve tensions between journalists' professional obligations to our audience and their relationships with news sources, advocacy groups, advertisers, or competitors; with one another; or with the company or one of its units. And at a time when two-career families are the norm, the civic and professional activities of spouses, household members and other relatives can create conflicts or the appearance of them.

4. In keeping with its solemn responsibilities under the First Amendment, our company strives to maintain the highest standard of journalistic ethics. It is confident that its staff members share that goal. The company and its units also recognize that staff members should be free to do creative, civic and personal work and to earn extra income in ways separate from their work in our organization. Before engaging in such outside activities, though, staff members should exercise mature professional judgment and consider the stake we all have in the irreplaceable good name of our company and its newsrooms.

The Scope of This Policy

5. These guidelines generally apply to all members of our news and editorial departments whose work directly affects our content and its reputation, including those on leaves of absence. They include writers, reporters, columnists, editors, producers, editorial writers, photographers, picture editors, art directors, artists, designers, graphics editors and researchers. This group also includes News Service and syndication personnel and the shared technical staffs of broadcast and online operations to the extent that those staffs plan, create, transmit or oversee news or editorial content. This entire group

of professional journalists is what this document means by "staff" or "staff members."

6. These guidelines are intended to shield the integrity not just of our journalists but of our journalism over all. For that reason, the provisions limiting political activity or partisanship apply also to publishers and to their counterparts in online and broadcast operations—that is, the executives to whom the chief editors of news and editorial staffs directly report. These specific provisions are detailed in Paragraph 88 below.

7. At the discretion of management in each of our news or editorial departments, the professional journalist guidelines may also be applied to news clerks, administrative assistants, secretaries and other support staff members whose work influences our content. Whether or not a newsroom's management applies these guidelines to the support staff, however, support people are always governed by two important provisions:

- First, no newsroom or editorial page employee may exploit for personal gain any nonpublic information acquired at work, or use an association with our news organization to gain favor or advantage.
- And second, no one may do anything that damages our news staffs' reputation for strict neutrality in reporting on politics and government; in particular, no one may wear campaign buttons or display any other form of political partisanship while on the job.

8. Our contracts with freelance contributors require them to avoid conflicts of interest, real or apparent. In keeping with that provision, they must honor these guidelines in their Times Company assignments, as set forth in Section C below. Similarly, the makers of television or online productions intended to bear our name or to be distributed through our outlets must comply with the policies in this document while working on those projects.

9. At each site in our company, newsroom management will obtain legal opinions on any statutes that may constrain the enforcement of these guidelines. In those units covered by collective bargaining agreements with the Newspaper Guild, management will obtain legal opinions on any limitation arising from those agreements.

The Nature of This Policy

10. Our fundamental purpose is to protect the impartiality and neutrality of the company's newsrooms and the integrity of their news reports. In many instances, merely applying that purpose with common sense will point to the ethical course. Sometimes the answer is self-evident: simply wondering whether a course of action might damage the reputation of our journalism is often enough to gauge whether the action is appropriate.

11. Every staff member is expected to read these rules carefully and to think about how they might apply to his or her duties. A lack of familiarity with their provisions cannot excuse a violation; to the contrary, it aggravates the violation. The provisions presented here can offer only broad principles and some examples. No written document could anticipate every possibility. Thus we expect staff members to consult their local newsroom management if they have doubts about any particular situation or opportunity covered by this set of rules. In most cases an exchange of e mail should suffice.

12. The company and its units believe beyond question that our staff shares the values these guidelines are intended to protect. Ordinarily, past differences of view over applying these values have been resolved amiably through discussion. The company has every reason to believe that such a pattern will continue. Nevertheless, the company views any intentional violation of these rules as a serious offense that may lead to disciplinary action, potentially including dismissal, subject to the terms of any applicable collective bargaining agreement.

13. This document is not an exhaustive compilation of all situations that may give rise to an actual or perceived conflict of interest. It does not exclude situations or issues giving rise to such conflicts simply because they are not explicitly covered within this document, nor does the document or any of its particular provisions create an implied or express contract of employment with any individual to whom the guidelines apply. The company reserves the right to modify and expand the guidelines from time to time, as it deems appropriate.

14. The authority to interpret and apply these guidelines is vested in the head of each news or editorial department in the company. That duty may be delegated to their ranking assistants, but

the senior news executives remain responsible for decisions made in their name.

Other Standards of Behavior

15. This document embodies basic standards of journalistic conduct applicable across our company. Our operating units are free to adopt further or more detailed policies, such as the specialized standards and practices of the networks with which our broadcast stations are affiliated, or the rules of certain newspapers for reporters' use of unidentified sources. In case of conflict, the policy with the higher standard shall apply.

16. As employees of the Times Company and its units, we observe the Rules of the Road, which are the axiomatic standards of behavior governing our dealing with colleagues and going about our work. Copies are available from management offices in all units. Together with a statement of supporting principles, the rules are online at our Mission & Values page. We also observe the company's policies against harassment and on the use of computers and digital communications, which appear on the business ethics page of this site.

A. On the Job

A1. Our Duty to Our Audience

17. As journalists we treat our readers, viewers, listeners and online users as fairly and openly as possible. Whatever the medium, we tell our audiences the complete, unvarnished truth as best we can learn it. We correct our errors explicitly as soon as we become aware of them. We do not wait for someone to request a correction. We publish corrections in a prominent and consistent location or broadcast time slot.

18. We treat audience members no less fairly in private than in public. Anyone who deals with our public is expected to honor that principle, knowing that ultimately our readers and viewers are our employers. Civility applies whether an exchange takes place in person, by telephone, by letter or by e-mail.

19. We gather information for the benefit of our audience. Journalists at the Times Company, or on assignment for one of its newsrooms, may not use their position to make inquiries for any other purpose.

20. Staff members or outside contributors who plagiarize betray our fundamental pact with our public. So does anyone who knowingly or recklessly provides false information or doctored images for publication. We will not tolerate such behavior.

A2. How We Gather the News

21. We treat news sources fairly and professionally. We do not inquire pointlessly into someone's personal life. We do not threaten to damage uncooperative sources, nor do we promise favorable coverage in return for cooperation. We do not pay for interviews or unpublished documents: to do so would create an incentive for sources to falsify material and would cast into doubt the genuineness of much that we publish.

22. Staff members and others on assignment for us should disclose their identity to people they cover, though they need not always announce their occupation when seeking information normally available to the public. Those working for us as journalists may not pose as anyone they are not—for example, police officers or lawyers.

23. Critics and other writers who review performances or goods and services offered to the public may conceal their press identity, but they may not normally assert a false identity or affiliation. As an exception, restaurant critics may make reservations in false names to avoid special treatment. For that same reason, restaurant critics and travel writers should conceal their affiliation.

Keeping Our Detachment

24. Relationships with sources require sound judgment and self-awareness to prevent the fact or appearance of partiality. Cultivating sources is an essential skill, often practiced most effectively in informal settings outside of normal business hours. Yet staff members, especially those assigned to beats, must be aware that personal relationships with news sources can erode into favoritism, in fact or appearance. Editors, who normally have a wide range of relationships, must be especially wary of showing partiality. Where friends and neighbors are also newsmakers, journalists must guard against giving them extra access or a more sympathetic ear. When practical, the best solution is to have someone else deal with them.

25. Though this topic defies firm rules, it is essential that we preserve professional detachment, free of any hint of bias. Staff members may see sources informally over a meal or drinks, but they must keep in mind the difference between legitimate business and personal friendship. A city editor who enjoys a weekly round of golf with a city council member, for example, risks creating an appearance of coziness. So does a television news producer who spends weekends in the company of people we cover. Scrupulous practice requires that periodically we step back and look at whether we have drifted too close to sources with whom we deal regularly. The test of freedom from favoritism is the ability to maintain good working relationships with all parties to a dispute.

26. Romantic involvement with a news source would create the appearance and probably the reality of partiality. Staff members who develop close relationships with people who are likely to figure in coverage they prepare or oversee must disclose those relationships privately to a responsible newsroom manager. In some cases, no further action may be needed. But in other instances staff members may have to recuse themselves from certain coverage. Sometimes assignments may have to be modified or beats changed.

Obeying the Law

27. Staff members and others on assignment for us must obey the law in the gathering of news. They may not break into buildings, homes, apartments or offices. They may not purloin data, documents or other property, including such electronic property as databases and e-mail or voice-mail messages. They may not tap telephones, invade computer files or otherwise eavesdrop electronically on news sources. In the case of government orders or court directives to disclose a confidential source, journalists will consult with the newsroom management and the legal department on the application of this paragraph.

28. Journalists who obtain press cards, press license plates, parking permits or other identification from police or other official agencies may use those credentials only to do their jobs. Those whose duties do not require special credentials must return them.

29. Staff members may not record private conversations without the prior consent of all parties to the conversations. In jurisdictions where recordings made secretly are legal, only the top manager of a news department may make an exception to this rule, and only after consultation with our legal department. Except in limited circumstances, we do not use hidden cameras; any exceptions should first be discussed with the top newsroom manager and the legal department.

Paying Our Own Way

30. When we as journalists entertain news sources (including government officials) or travel to cover them, our company pays the expenses. In some business situations and in some cultures, it may be unavoidable to accept a meal or a drink paid for by a news source (for example, at an official's residence or in a company's private dining room). Whenever practical, however, we should avoid those circumstances and suggest dining where we can pay our share (or, better, meeting in a setting that does not include a meal). Routine refreshments at an event like a news conference are acceptable, but a staff member should not attend recurring breakfast or lunch meetings unless our company pays for the journalist's meals. Whether the setting is an exclusive club or a service lodge's weekly luncheon, we should pay our way.

31. Staff members may not accept free or discounted transportation and lodging except where special circumstances give little or no choice. Such special cases include certain military or scientific expeditions and other trips for which alternative arrangements would be impractical — for example, an interview aboard a corporate jet where there is no benefit other than the interview. Journalists should consult responsible newsroom managers in advance when special circumstances arise.

32. If permitted by the local newsroom policy, staff members may accept press passes or free tickets when explicitly assigned to review artistic performances or cover athletic and similar events (for example, auto shows, agricultural fairs or flower shows). But no staff member except the assigned one — not even an editor in the arts, feature or sports department — may accept free tickets. And even when paying the box office price, a journalist may not use membership on our staff to obtain scarce seats unless the performance has a clear bearing on his or her job.

Dealing With Competitors

33. We compete zealously but deal with competitors openly and honestly. We do not invent obstacles to hamstring their efforts. When we first use facts originally reported by another news organization, we attribute them.

34. With the exception of press pool arrangements imposed by news sources, staff members may not join teams covering news events for other organizations (unless their work is part of a duly authorized joint venture), and they may not accept payment from competitors for news tips. They may not be listed on the masthead of any publication or Web site outside our company (except for a nonprofessional publication such as a religious congregation's newsletter, an alumni magazine or a club bulletin).

A3. Protecting Our Neutrality

35. Staff members and those on assignment for us may not accept anything that could be construed as a payment for favorable coverage or for avoiding unfavorable coverage. They may not accept gifts, tickets, discounts, reimbursements or other benefits from individuals or organizations covered (or likely to be covered) by their newsroom. Gifts should be returned with a polite explanation; perishable gifts may instead be given to charity, also with a note to the donor. In either case the objective of the note is, in all politeness, to discourage future gifts.

36. Staff members and those on assignment for us may not accept employment or compensation of any sort from individuals or organizations who figure in coverage they are likely to provide, prepare or supervise. The senior executive of each newsroom may authorize reasonable exceptions (for example, to let a teacher work part time as a copy editor).

37. If local policies permit journalists to share in fees for re-use of certain content, a cap must be set on any payment for advertising or promotional re-use, to avoid the appearance of an incentive for favorable coverage. The journalist's share of such fees may not exceed $200 an article.

38. Staff members may normally accept those gifts or discounts available to the general public. Normally they are also free to take advantage of conventional corporate discounts that our company shares with all employees (for example, corporate car rental rates). Journalists may accept free museum admissions or other benefits that are offered to all employees as a result of the company's charitable activities. Overseas, our staff may accept museum admissions and similar modest benefits customarily extended to journalists nationally or regionally as an occupational class rather than as individuals.

39. Unless the special terms are offered by The New York Times Company or its subsidiaries or affiliates, staff members may not buy stock in initial public offerings through "friends and family" plans where any plausible appearance of conflict of interest exists. Staff members may not accept allocations from brokerage firms.

Steering Clear of Advice Roles

40. It is an inherent conflict for a journalist to perform public relations work, paid or unpaid. Staff members may not counsel individuals or organizations on how to deal successfully with the news media. They may not, for example, advise candidates for public office, write or edit annual reports, or contribute to the programs of sports teams.

41. They may, of course, explain the newsroom's normal workings and steer outsiders to the appropriate editor or reporter. They may offer basic advice to community or neighborhood institutions such as their child's school, a small museum, a local charity or their house of worship.

42. They should not take part in public relations workshops that charge admission or imply privileged access to the press, or participate in surveys asking their opinion of an organization's media relations or public image. But on occasion they may describe our procedures to public relations groups with the goal of improving the flow of pertinent information.

43. Staff members may not serve as ghostwriters or co-authors for people or groups who figure in coverage they are likely to provide, prepare or supervise. They may not undertake such assignments for organizations that espouse a cause.

44. Staff members may not engage in financial counseling (except through the articles they write). They may not manage money for others, offer

investment advice, or help operate an investment company of any sort, with or without pay. They may, however, help family members with ordinary financial planning and serve as executors or administrators of estates of relatives and friends and as court-appointed conservators and guardians.

Entering Competitions and Contests

45. Staff members may not enter local, national or international competitions sponsored by individuals or groups who have a direct interest in the tenor of our coverage. They may not act as judges for these competitions or accept their awards. Common examples are contests sponsored by commercial, political or professional associations to judge coverage of their own affairs. Senior newsroom managers may make exceptions for competitions underwritten by corporate sponsors if those are broad in scope and independently judged by journalists or disinterested public figures.

46. Staff members may compete in competitions sponsored by groups whose members are all journalists or whose members demonstrably have no direct interest in the tenor of coverage of the field being judged. Staff members may act as judges for such competitions and accept their awards. For example, a staff member may enter a university-sponsored competition for coverage of foreign affairs but not accept an advocacy group's prize for environmental coverage.

47. Each newsroom's management should maintain a current list of competitions it has approved. Staff members who would like to enter others should consult the responsible news executive. A critical factor in approving a competition, whatever the sponsorship, is a record of arm's-length decisions, including a willingness to honor unfavorable reporting. Staff members who win unsought awards from groups that do not meet the criteria established here should decline, politely explaining our policy.

48. Normally staff members are free to accept honorary degrees, medals and other awards from colleges, universities and other educational institutions. Those who cover higher education or supervise that coverage should be sensitive to any appearance of coziness or favoritism. Those in any doubt should consult their newsroom management before accepting such an award.

Barring Collaboration and Testimonials

49. Staff members and others on assignment for us may not collaborate in ventures with individuals or organizations that are likely to figure in their coverage. Among other things, this prohibition applies to writing books, pamphlets, reports, scripts, scores or any other material and to making photographs or creating artwork of any sort.

50. Staff members may not offer endorsements or testimonials for books, films, television programs or any other programs, products or ventures. They may not accept endorsements or testimonials from anyone who is likely to figure in their coverage. Newsroom management may authorize rare exceptions (for instance, when a staff member has become expert in a field remote from his or her duties).

A4. Cautions on Public Speaking

51. Speaking before community audiences or educational groups can benefit our company by helping the public understand what we do. But before appearing before an outside group, we must be sure we are not likely to create an actual or apparent conflict of interest or undermine public trust in the impartiality of our journalism.

52. Staff members should be sensitive to the appearance of partiality when they address groups that might figure in their coverage, especially if the setting might suggest a close relationship to the sponsoring group. Before accepting such an invitation, a staff member must consult with newsroom management. Generally, for example, an editor who deals with political campaigns might comfortably address a library gathering but not appear before a civic group that endorses issues or candidates. An environmental reporter can appropriately speak to a horticultural society but not to conservation groups known for their efforts to influence public policy.

53. To avoid an appearance of undue closeness, staff members may not accept invitations to speak before a single company (for example, at a corporate executive retreat) or an industry assembly (such as organized baseball's winter meeting) unless newsroom management agrees that the

appearance is useful and does not undermine our reputation for impartiality. In such a case, our company should pay any expenses; no speaker's fee should be accepted.

54. Staff members should not accept invitations from outside our company to speak where their function is to attract customers to an event primarily intended as profit-making.

Restricting Speaker's Fees

55. Where permitted by local policy, staff members who deliver speeches may accept fees, honorariums, expense reimbursement and free transportation, but only from educational or other nonprofit groups for which lobbying and political activity are not a major focus. A staff member must consult with newsroom management before accepting a substantial speaking fee. Threshold amounts will be determined by local management.

56. Any staff member who accepts fees, honorariums or expenses for speaking engagements must file an annual accounting with newsroom management. (In the case of the top newsroom executive, the accounting is filed with the chief executive of the business unit.) Each unit may set a threshold below which annual accounting is not required. Fees earned under our company's auspices need not be included.

57. A staff member who writes a book and wishes to promote it on personal time must make every effort to ensure that public appearances conform to the spirit of these guidelines and do not interfere with normal job responsibilities. If the staff member has doubts about an appearance, he or she must consult with newsroom management. Routine expenses and fees may be accepted for such promotional appearances. Speeches and other outside activities by staff members, paid or unpaid, should not imply that they carry the endorsement of our company or any of its units (unless they do). On each such occasion, the staff member should gracefully remind the audience that the views expressed are his or her own. Outside commitments should not interfere with the speaker's normal responsibilities. Thus no staff member should set an extensive speaking schedule without approval from newsroom management.

A5. Rules for Specialized Departments

Sports

58. No member of a sports staff in our company may gamble on any sports event, except for occasional recreational wagering in a legal setting.

59. Except for properly issued press passes for event coverage, members of the sports staff may not accept tickets, travel expenses, meals, gifts or any other benefit from teams or promoters. (At their discretion, unit newsroom managements may permit journalists to accept the light refreshments routinely offered in press boxes during games.)

60. Sports reporters assigned to cover games may not serve as scorers.

Entertainment and the Arts

61. Staff members covering entertainment and the arts have a special duty to guard against conflicts of interest, real or apparent. Arts coverage, whether national or local, can often make or break reputations and commercial success. In theater, movies, music, art, dance, publishing, fashion and restaurants, critics and reviewers have an obligation to exert our newsrooms' influence ethically and prudently.

62. Except in their published writing, reporters, reviewers, critics and their editors in the arts may not help others to develop, market or promote artistic, literary or other creative ventures. They may not introduce artists to agents, publishers, producers or galleries; chefs to restaurant owners; or designers to clothing manufacturers. They should refrain from unpublished commentary, even informal, on works in progress. They may not offer ideas or proposals to people who figure in their coverage or make investments in productions in their field. (Food writers and editors may not invest in restaurants.) They may not serve on advisory boards, awards juries or other panels organized by people who figure in coverage they provide, prepare or supervise. They may not accept awards from such panels.

63. An arts writer or editor who owns a work of exhibition quality (and thus has a financial stake in the artist's reputation) may arouse questions about the impartiality of critical judgments or editing decisions. Thus members of the feature staff

who collect valuable art objects (paintings, photographs, sculpture, crafts and the like) must annually submit a list of their acquisitions and sales to newsroom management. If the top news executive falls under this provision, the list should be provided to the chief executive of the business unit.

64. Our company recognizes that its staffs include talented members who write books, music and plays; create sculpture and paintings; and give recitals. It also recognizes that a writer requires a publisher, a playwright a production company, an artist a gallery. Such relationships, however, can give rise to the fact or perception of favoritism. Staff members who enter into such arrangements must disclose them to newsroom management, and when appropriate the staff members may be disqualified from covering those with whom they have dealings.

Travel Journalism

65. No staff member of our company who prepares a travel article or broadcast — whether on assignment or freelance, and whether for us or for others—may accept free or discounted services or preferential treatment from any element of the travel industry. This rule covers hotels, resorts, restaurants, tour operators, airlines, railways, cruise lines, rental car companies and tourist attractions. This prohibition does not rule out routinely awarded frequent-flier points.

66. Editors or producers who accept travel coverage from nonstaff contributors have an obligation to guard against real or perceived conflicts of interest. They should exercise care in assigning or editing freelancers who have accepted free services while working for other news organizations; such a reputation can embarrass us. We do not give travel assignments to anyone who represents travel suppliers or who works for a government tourist office or as a publicist of any sort. A newsroom manager may make rare exceptions for special purposes—for example, to assign a writer widely recognized as an expert in a particular culture. In such a case, the journalist's connections must be disclosed in the published or broadcast coverage.

67. Writers of travel articles must conceal their identity as journalists during the reporting, so that they will experience the same conditions as an ordinary consumer. If the affiliation becomes known, the writer must discuss with a newsroom manager whether the assignment can be salvaged. In special cases, the affiliation may be disclosed—for example, when a permit is required to enter a closed area.

68. No journalist may report for us about any travel service or product offered by a family member or close friend.

A6. Obligations to Our Company

69. The good name of our company and of our business unit or publication does not belong to any of us. No one has a right to exploit it for private purposes.

70. Staff members may not use their company identification cards for purposes not connected with their work. ID cards may not be used to obtain special treatment or advantage from governmental, commercial or other organizations.

71. Staff members may not use company stationery, business cards, forms or other materials for any purpose except official business.

Speaking for the Company

72. Staff members must not disclose confidential information about the operations, policies or plans of our company or any of its divisions.

73. Senior news executives may authorize other staff members to comment publicly on policies or plans within the staff members' own areas of responsibility and expertise. If staff members are approached by outsiders or other media to discuss editorial content or policy more widely, our company policy requires that the caller be referred to the Corporate Communications department. Similarly, any inquiry addressed to a journalist about the company's advertising or other business activities should be referred to Corporate Communications.

74. Staff members are free to discuss their own activities in public, provided their comments do not create an impression that they lack journalistic impartiality or speak for the company.

75. Any staff member may respond openly and honestly to a reasonable inquiry from a reader about the staff member's work. If a reader asks for a correction, that request must be passed promptly to a supervisor. If the request threatens legal action

or appears to be from a lawyer, the complaint should be promptly referred to the legal department through a responsible newsroom manager.

Returning Borrowed Equipment

76. Staff members who borrow equipment, vehicles or other goods for evaluation or review must return them as soon as possible. Similarly, items borrowed to be photographed, such as fashion apparel or home furnishings, should be returned promptly.

77. Automobile reviewers should carry out their testing expeditiously and return the vehicle promptly. Any period longer than two or three days must be approved by a responsible newsroom manager. A reasonable amount of personal use is permissible if that use contributes to the review.

78. Staff members may keep for their own collections—but may not sell or copy — books, recordings, tapes, compact discs and computer programs sent to them for review. Such submissions are considered press releases. But no one may request extra copies of review materials for personal use. Local management may impose a ceiling on the value of review copies that journalists may retain. If not retained by the reviewer, recorded or digital media, such as tapes or disks, must be destroyed or returned to the provider; they may not be given away or left where they could be carried off for illicit copying.

79. Photographers, camera operators, picture editors, film editors, art directors, lab personnel and technology editors and reporters may not accept gifts of equipment, programs or materials from manufacturers or vendors. They may not endorse equipment, programs or materials, or offer advice on product design. (This guideline is not meant to restrict our technical staff from working with vendors to improve our systems or equipment.)

A7. Advertisers and the Business Side

80. Our company and our local units treat advertisers as fairly and openly as they treat our audiences and news sources. The relationship between the company and advertisers rests on the understanding that news and advertising are separate—that those who deal with either one have distinct obligations and interests, and each group respects the other's professional responsibilities.

81. Journalists should maintain their independence by avoiding discussions of advertising needs, goals and problems except where those are directly related to the business of the newsroom. The news and advertising departments may properly confer on the layout and configuration of a newspaper (though not on specific content) or the timing of special sections, and on the timing and placement of commercials or Web advertising. The departments may also work together in designing new print, broadcast or Web offerings to make sure that the result is viable both journalistically and economically.

82. Advertising and "advertorials" (paid text or paid broadcast content) must not resemble news content. To the maximum extent permitted by local resources, advertorials should be prepared and produced by the business departments, outside the newsroom.

83. When authorized by top newsroom management, members of the news staff may take part in interdepartmental committees on problems that affect several departments, including news. As far as possible, the news representatives should leave advertising issues to colleagues from the business side.

84. From time to time, when authorized by top news executives, journalists may take part in events organized by the company for marketing or promotion or investor presentations. But they should confine their role to discussion of our journalism and avoid the appearance or reality of making a sales presentation.

85. No one in our news departments (except when authorized by top news executives) may exchange information with the advertising department or with advertisers about the timing or content of advertising, the timing or content of news coverage or the assignment of staff or freelance news people.

B. On Our Own Time

B1. Participation in Public Life

86. The people of our company are family members and responsible citizens as well as journalists. Nothing in this policy is intended to

abridge their right to live private lives—to educate their children, to worship and to take part in community affairs. But like other dedicated professionals, we knowingly accept disciplines—in our case, with the goal of ethical and impartial journalism.

87. As noted in Paragraph 7, some of these requirements apply to all newsroom and editorial page employees, journalists and support staff alike. No newsroom or editorial employee may do anything that damages our reputation for strict neutrality in reporting on politics and government. In particular, no one may wear campaign buttons or display any other sign of political partisanship while on the job while working for our company inside or outside the office. For all other purposes, "staff members" in this section refers only to those who prepare or accept news content, as defined in Paragraph 5.

88. While the provisions of this document apply principally to journalists and some apply more widely to newsroom staffs (as explained in Paragraphs 5 through 8), the company recognizes that the activities of publishers and of their counterparts in broadcast and online operations—those senior executives to whom news and editorial department heads directly report—can also affect the appearance and reality of neutrality in reporting on politics and government. For that reason, Paragraphs 89 through 94 below will apply additionally to those executives.

Voting, Campaigns and Public Issues

89. Journalists do not take part in politics. While staff members are entitled to vote and to register in party primaries, they must do nothing that might raise questions about their professional neutrality or that of our news operations. In particular, they may not campaign for, demonstrate for, or endorse candidates, ballot causes or efforts to enact legislation. They may not wear campaign buttons or themselves display any other insignia of partisan politics.

90. Staff members may not themselves give money to any political candidate or election cause or raise money for one. Given the ease of Internet access to public records of campaign contributions, any political giving by a staff member would risk feeding a false impression that we are taking sides.

91. No staff member may seek public office anywhere. Seeking or serving in public office violates the professional detachment expected of a journalist. Active participation by one of our staff can sow a suspicion of favoritism in political coverage.

92. Staff members may not march or rally in support of public causes or movements or sign advertisements or petitions taking a position on public issues. They may not lend their names to campaigns, benefit dinners or similar events if doing so might reasonably raise doubts about their ability or their newsroom's ability to remain neutral in covering the news. Neighbors and other outsiders commonly see us as representatives of our institution.

93. Staff members may appear from time to time on local or national radio and television programs devoted to public affairs, but they should avoid expressing views that go beyond the news and analysis that could properly appear under their regular bylines. Op-Ed columnists and editorial writers enjoy more leeway than others in speaking publicly, because their business is expressing opinions. They should nevertheless choose carefully the forums in which they appear and protect the impartiality of our journalism.

94. A staff member with doubts about a proposed political activity should consult a responsible manager. These guidelines protect the heart of our mission as journalists. Where the conflict with our impartiality seems minimal, top news executives may consider matters case by case, but they should be exceedingly cautious before permitting an exception.

Serving the Community

95. Journalists should stand apart from institutions that make news. Staff members may not serve on government boards or commissions, paid or unpaid. They may not join boards of trustees, advisory committees or similar groups except those serving journalistic organizations or otherwise promoting journalism education. Depending on circumstances, newsroom heads may permit staff members to serve on a board of trustees or visitors for a school, college or university, especially one with a family connection. Upon request, newsroom heads may also authorize a staff member to appear

before a local school board to advocate decisions that may directly affect the journalist's children, but only if the issue falls outside the staff member's coverage responsibilities.

96. Our company respects community citizenship. Normally the restriction on joining trustee boards or advisory committees will not apply to local or neighborhood organizations that are unlikely to generate news of broader interest and those that do not generally seek to shape public policy. These typically include houses of worship, community charities, civic clubs, local libraries, fine arts groups, hobby groups, youth athletic leagues, country clubs and alumni groups. But news is unpredictable. Even neighborhood institutions sometimes find themselves in the spotlight. In that event, a staff member with ties to the institution must stand aside from any controversy and not take part in the coverage. In no case may a staff member's affiliation with our company be used to further the goals of such a nonprofit or volunteer organization.

97. Staff members may not solicit funds for social, political, religious or other philanthropic causes. Soliciting can create an expectation of a favor in return. Within reason staff members may help the groups described in Paragraph 96 with relatively modest fund-raising. They should never solicit anyone with whom they or their newsroom has professional dealings or invoke the name of our company or any of its units.

B2. Avoiding Conflicts Over Family

98. In a day when most families balance two careers, the legitimate activities of household members and other relatives can sometimes create journalistic conflicts of interest or the appearance of conflicts. These can arise in civic or political life, professional work and financial activity. A spouse's or companion's campaign for public office would obviously create the appearance of conflict for a political reporter or television producer involved in election coverage. A brother or a daughter in a high-profile job on Wall Street might produce the appearance of conflict for a business reporter or editor.

99. Our company has no wish to intrude upon family members who are not its employees. Nothing in this document prohibits a spouse, companion or other relative of a staff member from taking part in any political, financial, commercial, religious or civic activity. Where restrictions are necessary, they fall on the company employee alone. But any attempt to conceal a staff member's activity by using a relative's name (or any other alias) would constitute a violation.

100. Staff members must be sensitive that direct political activity by their spouses, family or household members, such as running for office or managing a campaign—even while proper—may well create conflicts of interest or the appearance of conflicts. Even limited participation, like giving money or ringing doorbells, may stir suspicions of political bias if it becomes conspicuous. Staff members and their families should be wary of ambiguity. A bumper sticker on the family car or a campaign sign on the lawn may be misread as the journalist's, no manner who in the household actually placed it. When a spouse or companion makes a campaign contribution, it is wise to avoid writing the check on a joint account.

101. To avoid conflicts, staff members may not furnish, prepare or supervise news content about relatives, spouses or others with whom they have close personal relationships. For the same reasons, staff members should not recruit or directly supervise family members or close friends. Some exceptions are permissible—in a foreign bureau, for instance, where a married couple form a team, or in a small news department, with the approval of top newsroom management.

102. The company and its units depend on staff members to disclose potential problems in a timely fashion, with an eye to working together to head off embarrassment to all concerned. Any staff member who sees a potential for a conflict of interest in the activities of spouse, relatives or friends must discuss the situation with newsroom management. In many or even most cases, disclosure will suffice. But if newsroom management considers the problem serious, the staff member may have to withdraw from certain coverage. Sometimes an assignment may have to be modified or a beat changed.

B3. Protections Against Financial Conflicts

103. Every member of the company must be vigilant against any appearance of abusing non-

public information for financial gain. That requirement applies to all departments.

104. No staff member may own stock or have any other financial interest, including a board membership, in a company, enterprise or industry about which she or he regularly furnishes, prepares or supervises coverage. This restriction extends beyond the business beat. A book editor may not invest in a publishing house, a health writer in a pharmaceutical company or a Pentagon reporter in a mutual fund specializing in defense stocks. "Stock," as used here, means not just individual issues but also futures, options, rights, and speculative debt, as well as "sector" mutual funds (those focused on one industry).

105. In any region or locality where one company or industry is dominant, no news staff member likely to influence coverage of that business may own its shares. That description applies to top newsroom managers who are broadly responsible for coverage (including editorial-page editors); the head of each news or editorial department should decide to which rank-and-file journalists and middle-level editors it properly applies.

106. Staff members may not buy or sell securities or make other investments in anticipation of coming news coverage. Before trading, they must wait for a reasonable period, to give the public time to absorb the news. (Our legal department can advise on the timing.) This restriction does not apply to spot news reports that first appear on news agency wires or originate outside our organization.

Affirming Compliance

107. Staff members in each of our newsrooms should be asked, when hired, to affirm that they have no investments that would violate Paragraph 104 with respect to their proposed assignment. If a new staff member is unable to give that assurance, she or he must either dispose of the conflicting investment or accept an assignment where no such conflict exists. Similarly staff members should be asked, when hired, to affirm that to the best of their knowledge no household member or close relative has financial holdings that might reasonably raise doubts about the staff member's impartiality in the proposed assignment. Here, too, the answer could require recusal or an alternative assignment.

108. From time to time, management may ask staff members in any news or editorial department to affirm that they have no investments in violation of Paragraph 104. Such a request might be expected, for example, when a staff member is about to begin a new assignment or work on a particularly sensitive article. Similarly the journalist may be asked to affirm that to the best of his or her knowledge no household member or close relative has financial holdings that might reasonably raise doubts about the journalist's impartiality. If such conditions arise, the staff member must alert newsroom management.

109. If a journalist in any medium is assigned to provide or prepare coverage outside his or her own beat, about a company or industry in which she or he owns stock, the journalist must discuss the investment with the assigning editor or producer before beginning the work. Similarly, editors or producers assigned to extensive news coverage about companies or industries in which they have investments must advise their supervisors of potential conflicts before proceeding. In many instances it will be permissible for the work to go on, but a journalist who works on such an assignment may not buy or sell stock in the company or industry until two weeks after publication or broadcast.

Avoiding Market Conflicts

110. Journalists who regularly cover business and financial news may not play the market: that is, they may not conduct in-and-out trading, speculate in options or futures or sell securities short. Any of these actions could create an appearance of exploiting information not available to the public. Staff members who regularly cover business aspects of technology or other subjects are also subject to this rule.

111. Each newsroom is responsible for giving the public complete confidence that editors' choices are not biased by their personal finances. Depending on the editors' duties and on the volume, visibility and influence of each newsroom's business coverage, this assurance can be accomplished through periodic recusal, disclosure or an outright ban on owning stocks. Editors who regularly assign or supervise business or financial coverage would be well advised to avoid owning stocks in individual companies or sectors.

112. To avoid an appearance of conflict, business editors and their superiors in each news operation must affirm annually to their unit's chief financial officer that they have no financial holdings in violation of this set of rules. This requirement applies to editorial-page editors as well.

113. A staff member who owns stock and moves into an assignment where such holdings are not permitted must sell the stock. Each unit should devise a reasonable transition plan.

114. Whenever these rules require the sale of stockholdings, a staff member can satisfy the requirement by putting the holdings into a blind trust or the equivalent.

115. Though this document imposes some necessary limits on freedom to invest, it leaves a broad range of personal finance opportunities open to our journalists. Any staff member is free to own diversified mutual funds, money market funds and other diversified investments outside the staff member's day-to-day control. Any member may also own treasury bills, investment-grade municipal bonds, debt securities other than speculative bonds, and securities issued by The New York Times Company. And rank-and-file staff members are free to own stocks unrelated to their assignment.

B4. Freelance Writing and Broadcast Appearances

116. With approval of senior newsroom managers, staff members may accept freelance assignments that do not directly compete with our own offerings. Normally, work for competitors will not be permitted. In rare instances, permission may be granted when supervisory editors are not interested in the article or project offered by a staff member. Staff members are encouraged to offer their freelance work to their own news unit before trying to place it elsewhere.

117. Also with approval, staff members may participate in radio, television or online interviews or discussions, local or national, that deal with articles they have written or subjects that figure in coverage they provide, prepare or supervise. Such occasional appearances must not imply that the journalist speaks for our organization (unless that is officially the case). Staff members should ensure that the use of their names and their company affiliation, in materials promoting the appearances, is consistent with the newspaper's impartiality.

118. The senior executive of each news operation in the company, in consultation with that operation's top business manager, should maintain a list of the present and likely competitors in its journalistic arena. These might include any newspaper, magazine, television venture, online service or other medium, regardless of form, that has a similar editorial focus, either for a general audience or with particular segments of ours. If the competitive status of a freelance outlet is unclear, the staff member should consult with newsroom management.

119. Staff members may not appear on broadcasts that compete directly with our company's own offerings on television or online. Otherwise they may make occasional broadcast or online appearances as outlined elsewhere in this document. But they must seek management's approval before accepting full-fledged assignments for reporting, anchoring, editing or production from any outside broadcast venture, even one that sells programming to us, buys it from us or makes it in partnership with us.

Governing Freelance Work

120. Staff members must ensure that their freelance work does not interfere with their normal responsibilities and that it is consistent with the policies and guidelines of this document and any standards adopted locally by our newsrooms.

121. Before accepting a freelance assignment, a staff member should make sure that the tone and content of the outlet are consistent with the standards of the local news department and our company. A staff member should place nothing elsewhere that implies sponsorship or endorsement by our company or its units.

122. In a radio, television, telephonic or online appearance, or any other public forum, we should avoid strident, theatrical vehicles that emphasize punditry or reckless opinion mongering. Our contributions should be marked by thoughtful and retrospective analysis. Generally a staff member should not say anything on the air or online that goes beyond the news and analysis that could properly appear under his or her regular byline.

123. Because outside work unavoidably reflects on our company, staff members who accept freelance assignments or make broadcast or online appearances should adhere to these guidelines in

carrying out that work. For example, they may not accept compensation, expenses, discounts, gifts or other inducements from a news source. Similarly, any staff member who establishes a personal site on the Web must insure that his or her online conduct conforms to these guidelines.

124. Frequency matters. Freelance work, whether in print or in electronic media, can create a conflict of interest if it is pursued with such regularity that it interferes with normal assignments or compromises the integrity or independence of the news report. Freelancing can also create a conflict if it identifies a staff member as closely with another publication, program or Web site as with his or her regular job. Writing under a pseudonym does not alter the obligation to comply with this provision.

125. A regular contribution to an outside enterprise may be permissible if it does not flow from the journalist's regular responsibilities or interfere with them, and if it does not involve content owed to our company and its audiences. Examples of acceptable affiliations might be a city editor who writes a monthly column on fishing or a news photographer who has a modest studio business. Staff members considering such continuing ventures should confer with newsroom management.

B5. Web Pages and Web Logs

126. Web pages and Web logs (the online personal journals known as blogs) present imaginative opportunities for personal expression and exciting new journalism. When created by our staff or published on our Web sites, they also require cautions, magnified by the Web's unlimited reach.

127. Personal journals that appear on our official Web sites are subject to the newsroom's standards of fairness, taste and legal propriety. Nothing may be published under the name of our company or any of our units unless it has gone through an editing or moderating process.

128. If a staff member publishes a personal Web page or blog on a site outside our company's control, the staff member has a duty to make sure that the content is purely that: personal. Staff members who write blogs should generally avoid topics they cover professionally; failure to do so would invite a confusion of roles. No personal Web activity should imply the participation or endorsement of the Times Company or any of its units. No one may post text, audio or video created for a Times Company unit without obtaining appropriate permission.

129. Given the ease of Web searching, even a private journal by a staff member is likely to become associated in the audience's mind with the company's reputation. Thus blogs and Web pages created outside our facilities must nevertheless be temperate in tone, reflecting taste, decency and respect for the dignity and privacy of others. In such a forum, our staff members may chronicle their daily lives and may be irreverent, but should not defame or humiliate others. Their prose may be highly informal, even daring, but not shrill or intolerant. They may include photos or video but not offensive images. They may incorporate reflections on journalism, but they should not divulge private or confidential information obtained through their inside access to our newsroom or our Company.

130. Bloggers may write lively commentary on their preferences in food, music, sports or other avocations, but as journalists they must avoid taking stands on divisive public issues. A staff member's Web page that was outspoken on the abortion issue would violate our policy in exactly the same way as participation in a march or rally on the subject. A blog that takes a political stand is as far out of bounds as a letter to the editor supporting or opposing a candidate. The definition of a divisive public issue will vary from one community to another; in case of doubt, staff members should consult local newsroom management.

131. A staff member's private Web page or blog must be independently produced. It should be free of advertising or sponsorship support from individuals or organizations whose coverage the staff member is likely to provide, prepare or supervise during working hours. Care should be taken in linking to any subject matter that would be off limits on the Web page itself.

B6. Books, and Rights to Our Materials

132. Any staff member intending to write a nonfiction book based on material that derives from his or her assignment or beat must notify

newsroom management in advance. If the plan is to reproduce content created for any of our media, the Times Company owns that material outright. It may not be reproduced elsewhere without the prior written permission of the company. And it cannot be rewritten, updated or otherwise altered and then republished without the company's prior written permission. If a staff member is approached by someone seeking rights to Times Company material, the inquiry must be forwarded promptly to newsroom management.

133. Staff members who plan outside writing or other outside creative work must never permit an impression that they might benefit financially from the outcome of news events. Thus a staff member may not negotiate about rights to an article or story idea before the article has appeared. Staff members involved in covering a running story may not negotiate over creative works of any sort based on that coverage until the news has played out.

134. At no time may a staff member turn over notes, interviews, documents, outtakes or other working materials to any third party, including agents, producers, studios or outside production agencies, or share those materials with them unless legally compelled to do so. In case of such a request, the Times Company's legal department will provide assistance (consistent with collective bargaining agreements). As a matter of policy, the Times Company will not give commercial producers or publishers access to working materials any more than it would turn them over to government prosecutors for use in court.

135. Staff members offered consulting agreements in television or film by agents, producers, studios or others must consult a responsible newsroom manager before accepting. No staff member may serve as a consultant to a film or program that he or she knows in advance is tendentious or clearly distorts the underlying facts. In no case should a consulting role be described in a way that invokes our company or its local units, or implies our endorsement or participation.

C. Outside Contributors

136. Our audience applies exacting standards to all of our journalism. It does not normally distinguish between the work of staff members and that of outside freelancers. Thus as far as possible, freelance contributors to the Times Company's journalism, while not its employees, should accept the same ethical standards as staff members as a condition of their assignments for us. If they violate these standards, they should be denied further assignments.

137. Before being given an assignment, freelance contributors must sign a contract with the Times Company or one of its units. Such a contract obliges them to take care to avoid conflicts of interests or the appearance of conflict. Specifically, in connection with their work for us, freelancers will not accept free transportation, free lodging, gifts, junkets, commissions or assignments from current or potential news sources. Independent broadcast producers, similarly, must comply with our ethical standards during their preparation of any news production that will bear the name of the Times Company or one of its units.

138. Assigning editors and producers who deal with non-staff contributors should be aware that a freelancer's previous involvements and professional behavior can prove an embarrassment. They should make every effort to insure that a freelancer has no history or ties that would raise a real or apparent conflict of interest on a particular assignment.

139. The concise provisions of our freelance contracts cannot cover every circumstance that might arise. Assigning editors and producers should ensure that contributors are aware of this set of rules and to the greatest extent possible honor its provisions while on assignment for us. Any disagreement over whether a specific provision applies to outside contributors should be resolved before the assignment proceeds.

Hearst Newspapers—Statement of Professional Principles

Published: May 2002
Last Updated: May 20, 2002

Statement of Professional Principles

It is our singular mission to be the most trusted, most respected and most accurate source of news and information in the Hearst Newspapers communities that we serve.

We place our readers' interests above all others, and dedicate ourselves to the principles of truthfulness, fairness and independence. We understand that the free flow of accurate information is vital to our system of government and the foundations of our economy.

It is not to introduce new standards but in fact to reinforce the principles on which this company and these newspapers were founded that we set forth the following Statement of Professional Principles. While the primary form in which we serve our readers is through the pages of our editorial product, it is no less incumbent upon all of our employees, in every department, to hold themselves to the highest standard of ethical and legal principles both in the conduct of our business and in our participation in the communities in which we live and work.

The trust that our communities place in us is our most valuable asset. All of us are guardians of this trust, and to do so faithfully requires the avoiding even the perception of conflict of interest, and encouraging colleagues to act in a similar manner.

Newsgathering

The deliberate introduction of false information into our newspapers will not be tolerated. Legitimate mistakes do occur, and when they do, we have the responsibility to correct those errors in a timely and complete fashion. While the editor, the managing editor and the reader representative have the final responsibility for corrections, reporters should not hesitate to bring errors in their own work to the attention of their supervisor.

Reporters, editors and other news professionals should in no way misrepresent their identity in order to gather information for a story. Likewise, fictional identities shall not be used in the newspapers and photographs shall not be materially altered unless clearly labeled as such.

In our news columns as well as in our reporting, we will treat people with dignity and respect. Recognizing that there are multiple points of view in most stories, we will make every effort to include all sides relevant to a story. We must make a particular effort to seek comment from those portrayed in a critical manner.

Information used in our newspapers that was gathered by another organization should be attributed or labeled as such. Plagiarism is never acceptable.

Conflict of Interest

All employees should make a special effort to avoid both actual conflicts and the appearance of them. Thus, with the exception of nominal courtesies and traditional practices such as business meals, we should accept no gifts, trips or other things of significant value from those we cover.

We shouldn't use our position or affiliation to seek special personal benefit.

While we encourage all of our employees to be good public as well as private citizens, employees should avoid any active involvement in partisan politics. Employees should also avoid active involvement in community issues or organizations to the extent that their participation might cause the paper's objectivity to come into question.

Family members can't be held to these standards. However, any family business or political or community affiliation that might reasonably cause an employee's objectivity to be questioned should be brought to the attention of a supervisor.

Confidentiality

Any information gathered by a Hearst Newspaper in the conduct of official duties is the property of the newspaper. No one shall provide any such information to any persons or organization for any purpose until that information is made public. Similarly, no one shall use such nonpublic information to make securities transactions prior to such information being made public.

Business Practices

All business of the newspaper should be conducted in an honest manner and in compliance with the law. Transactions should be in the best interest of our customers as well as Hearst Newspapers.

Just as with those we cover, no employee shall accept any gift or other significant value from any customer or supplier to the newspaper, with the exception of the aforementioned courtesies and traditional practices, such as business meals.

No employee should serve as an officer or director of another company unless he or she has the explicit approval of the newspaper's publisher.

All books and records must be accurately and truthfully kept.

All written communications, including email, must be carefully written, keeping in mind that they may have to be disclosed in litigation or will otherwise become public.

Workplace

Hearst Newspapers seeks to maintain a safe and supportive workplace where employees are treated with respect, where diversity is valued and where decisions on employment and career advancement are based on equal opportunity. Employees are expected to support and uphold these principals.

Adherence to the Principles

Hearst Newspapers always has and will continue to expect employees to practice the above Statement of Principles. It is also important to understand that this Statement of Principles is not the sole guideline by which employees' actions may be governed. Individual newspapers and departments within them may have additional principles that employees will be expected to follow.

The Washington Post—Standards and Ethics

Published: February 16, 1999
Last Updated: February 17, 1999

The Washington Post is pledged to an aggressive, responsible and fair pursuit of the truth without fear of any special interest, and with favor to none.

Washington Post reporters and editors are pledged to approach every assignment with the fairness of open minds and without prior judgment. The search for opposing views must be routine. Comment from persons accused or challenged in stories must be included. The motives of those who press their views upon us must routinely be examined, and it must be recognized that those motives can be noble or ignoble, obvious or ulterior.

We fully recognize that the power we have inherited as the dominant morning newspaper in the capital of the free world carries with it special responsibilities:

to listen to the voiceless

to avoid any and all acts of arrogance

to face the public politely and candidly.

A. Conflict of Interest

This newspaper is pledged to avoid conflict of interest or the appearance of conflict of interest, wherever and whenever possible. We have adopted stringent policies on these issues, conscious that they may be more restrictive than is customary in the world of private business. In particular:

We pay our own way.

We accept no gifts from news sources. We accept no free trips. We neither seek nor accept preferential treatment that might be rendered because of the positions we hold. Exceptions to the no-gift rule are few and obvious-invitation to meals, for example, may be accepted when they are occasional and innocent but not when they are repeated and their purpose is deliberately calculating. Free admissions to any event that is not free to the public are prohibited. The only exception is for seats not sold to the public, as in a press box. Whenever possible arrangements will be made to pay for such seats.

We work for no one except The Washington Post without permission from supervisors. Many outside

activities and jobs are incompatible with the proper performance of work on an independent newspaper. Connections with government are among the most objectionable. To avoid real or apparent conflicts of interest in the coverage of business and the financial markets, all members of the Business and Financial staff are required to disclose to their department head any financial interest that might be in conflict or give the appearance of a conflict in their reporting or editing duties. Department heads will make their own financial disclosures to the managing editor.

We freelance for no one and accept no speaking engagements without permission from department heads. Permission to freelance will be granted only if The Post has no interest in the story and only if it is to appear in a medium that does not compete with The Post. It is important that no freelance assignments and no honoraria be accepted that might in any way be interpreted as disguised gratuities.

We make every reasonable effort to be free of obligation to news sources and to special interests. We must be wary of entanglement with those whose positions render them likely to be subjects of journalistic interest and examination. Our private behavior as well as our professional behavior must not bring discredit to our profession or to The Post.

We avoid active involvement in any partisan causes—politics, community affairs, social action, demonstrations—that could compromise or seem to compromise our ability to report and edit fairly. Relatives cannot fairly be made subject to Post rules, but it should be recognized that their employment or their involvement in causes can at least appear to compromise our integrity. The business and professional ties of traditional family members or other members of your household must be disclosed to department heads.

B. The Reporter's Role

Although it has become increasingly difficult for this newspaper and for the press generally to do so since Watergate, reporters should make every effort to remain in the audience, to be the stagehand rather than the star, to report the news, not to make the news.

In gathering news, reporters will not misrepresent their identity. They will not identify themselves as police officers, physicians or anything other than journalists.

C. Errors

This newspaper is pledged to minimize the number of errors we make and to correct those that occur. Accuracy is our goal; candor is our defense. Persons who call errors to our attention must be accorded a respectful hearing.

D. Attribution of Sources

The Washington Post is pledged to disclose the source of all information when at all possible. When we agree to protect a source's identity, that identity will not be made known to anyone outside The Post.

Before any information is accepted without full attribution, reporters must make every reasonable effort to get it on the record. If that is not possible, reporters should consider seeking the information elsewhere. If that in turn is not possible, reporters should request an on-the-record reason for concealing the source's identity and should include the reason in the story.

In any case, some kind of identification is almost always possible – by department or by position, for example – and should be reported.

No pseudonyms are to be used.

However, The Washington Post will not knowingly disclose the identities of U.S. intelligence agents, except under highly unusual circumstances which must be weighed by the senior editors.

E. Plagiarism and Credit

Attribution of material from other newspapers and other media must be total. Plagiarism is one of journalism's unforgivable sins. It is the policy of this newspaper to give credit to other publications that develop exclusive stories worthy of coverage by The Post.

F. Fairness

Reporters and editors of The Post are committed to fairness. While arguments about objectivity are endless, the concept of fairness is something that editors and reporters can easily understand and pursue. Fairness results from a few simple practices:

No story is fair if it omits facts of major importance or significance. Fairness includes completeness.

No story is fair if it includes essentially irrelevant information at the expense of significant facts. Fairness includes relevance.

No story is fair if it consciously or unconsciously misleads or even deceives the reader. Fairness includes honesty-leveling with the reader.

No story is fair if reporters hide their biases or emotions behind such subtly pejorative words as "refused," "despite," "quietly," "admit" and "massive." Fairness requires straightforwardness ahead of flashiness.

G. Opinion

On this newspaper, the separation of news columns from the editorial and opposite-editorial pages is solemn and complete. This separation is intended to serve the reader, who is entitled to the facts in the news columns and to opinions on the editorial and "op-ed" pages. But nothing in this separation of functions is intended to eliminate from the news columns honest, in-depth reporting, or analysis or commentary when plainly labeled.

H. The National and Community Interest

The Washington Post is vitally concerned with the national interest and with the community interest. We believe these interests are best served by the widest possible dissemination of information. The claim of national interest by a federal official does not automatically equate with the national interest. The claim of the community interest by a local official does not automatically equate with the community interest.

I. Taste

The Washington Post as a newspaper respects taste and decency, understanding that society's concepts of taste and decency are constantly changing. A word offensive to the last generation can be part of the next generation's common vocabulary. But we shall avoid prurience. We shall avoid profanities and obscenities unless their use is so essential to a story of significance that its meaning is lost without them. In no case shall obscenities be used without the approval of the executive editor or the managing editor or his deputy.

J. The Post's Principles

After Eugene Meyer bought The Washington Post in 1933 and began the family ownership that continues today, he published "These Principles":

> THE FIRST MISSION OF A NEWSPAPER IS TO TELL THE TRUTH AS NEARLY AS THE TRUTH MAY BE ASCERTAINED.
>
> THE NEWSPAPER SHALL TELL ALL THE TRUTH SO FAR AS IT CAN LEARN IT, CONCERNING THE IMPORTANT AFFAIRS OF AMERICA AND THE WORLD.
>
> AS A DISSEMINATOR OF THE NEWS, THE PAPER SHALL OBSERVE THE DECENCIES THAT ARE OBLIGATORY UPON A PRIVATE GENTLEMAN.
>
> WHAT IT PRINTS SHALL BE FIT READING FOR THE YOUNG AS WELL AS FOR THE OLD.
>
> THE NEWSPAPER'S DUTY IS TO ITS READERS AND TO THE PUBLIC AT LARGE, AND NOT TO THE PRIVATE INTERESTS OF THE OWNER.
>
> IN THE PURSUIT OF TRUTH, THE NEWSPAPER SHALL BE PREPARED TO MAKE SACRIFICES OF ITS MATERIAL FORTUNES, IF SUCH COURSE BE NECESSARY FOR THE PUBLIC GOOD. THE NEWSPAPER SHALL NOT BE THE ALLY OF ANY SPECIAL INTEREST, BUT SHALL BE FAIR AND FREE AND WHOLESOME IN ITS OUTLOOK ON PUBLIC AFFAIRS AND PUBLIC MEN.
>
> "These Principles" are re-endorsed herewith.

News Wire Services

The Associated Press—Statement of News Values and Principles
Dow Jones—Code of Ethics
Thomson Reuters—Editorial Policy

Introduction

It has become progressively more difficult in recent years for daily newspapers and other news organizations to sustain a viable chain of news bureaus around the world. As a result, the role of news wire services in international and national reporting has become decidedly more ubiquitous. The decrease in news bureaus run by individual news outlets—and the loss of the varied perspectives these bureaus brought to reporting international stories—has left news wire services in a much more powerful position to shape public perception of world events.

The Associated Press (AP) transmits an enormous number of news stories daily for print, online and on-air use. It put out a Statement of News Values and Principles that reaffirms its moral and professional responsibilities in providing "more people in more places" with news than any other source. Besides the typical ethical concerns with matters like truth, accuracy, conflict of interest and anonymous sources, AP also addresses issues more special to their vast field reporting efforts. For instance, the document covers in great detail the rules governing both datelines and bylines for stories done in a variety of forms.

Dow Jones Newswires is the leader in delivering "real-time" business news from around the world. The Code of Ethics issued by Dow Jones highlights the organization's acute awareness of how profoundly their reports can impact the business strategies and financial health of a myriad of other companies. In this context, the rules dealing with the use of confidential information and the business relationships/activities of employees take on a much greater significance. There is also a strict, detailed policy on security transactions made by employees who might be privy to nonpublic or "inside" information.

The Editorial Policy of Thomson Reuters focuses almost exclusively on the need for independent, balanced reporting. Reuters, a huge multimedia news service covering global events, makes a particular point of reporters, photographers, and cameramen not appearing to take sides in wars or other conflicts they cover. With the exception of directly or indirectly quoting a source, the document admonishes reporters about the use of "emotive terms" that might compromise an objective stance.

—Glenn Lewis
Volume Editor

The Associated Press—Statement of News Values and Principles

02/16/2006

For more than a century and a half, men and women of The Associated Press have had the privilege of bringing truth to the world. They have gone to great lengths, overcome great obstacles—and, too often, made great and horrific sacrifices—to ensure that the news was reported quickly, accurately and honestly. Our efforts have been rewarded with trust: More people in more places

get their news from the AP than from any other source.

In the 21st century, that news is transmitted in more ways than ever before—in print, on the air and on the Web, with words, images, graphics, sounds and video. But always and in all media, we insist on the highest standards of integrity and ethical behavior when we gather and deliver the news.

That means we abhor inaccuracies, carelessness, bias or distortions.

It means we will not knowingly introduce false information into material intended for publication or broadcast; nor will we alter photo or image content. Quotations must be accurate, and precise.

It means we always strive to identify all the sources of our information, shielding them with anonymity only when they insist upon it and when they provide vital information—not opinion or speculation; when there is no other way to obtain that information; and when we know the source is knowledgeable and reliable.

It means we don't plagiarize.

It means we avoid behavior or activities that create a conflict of interest and compromise our ability to report the news fairly and accurately, uninfluenced by any person or action.

It means we don't misidentify or misrepresent ourselves to get a story. When we seek an interview, we identify ourselves as AP journalists.

It means we don't pay newsmakers for interviews, to take their photographs or to film or record them.

It means we must be fair. Whenever we portray someone in a negative light, we must make a real effort to obtain a response from that person. When mistakes are made, they must be corrected—fully, quickly and ungrudgingly.

And ultimately, it means it is the responsibility of every one of us to ensure that these standards are upheld. Any time a question is raised about any aspect of our work, it should be taken seriously.

"I have no thought of saying The Associated Press is perfect. The frailties of human nature attach to it," wrote Melville Stone, the great general manager of the AP. But he went on to say that "the thing it is striving for is a truthful, unbiased report of the world's happenings…ethical in the highest degree."

He wrote those words in 1914. They are true today.

The policies set forth in these pages are central to the AP's mission; any failure to abide by them is subject to review, and could result in disciplinary action, ranging from admonishment to dismissal, depending on the gravity of the infraction.

Standards and Practices Anonymous Sources:

Transparency is critical to our credibility with the public and our subscribers. Whenever possible, we pursue information on the record. When a newsmaker insists on background or off-the-record ground rules, we must adhere to a strict set of guidelines, enforced by AP news managers.

Under AP's rules, material from anonymous sources may be used only if:

1. The material is information and not opinion or speculation, and is vital to the news report.
2. The information is not available except under the conditions of anonymity imposed by the source.
3. The source is reliable, and in a position to have accurate information.

Reporters who intend to use material from anonymous sources must get approval from their news manager before sending the story to the desk. The manager is responsible for vetting the material and making sure it meets AP guidelines. The manager must know the identity of the source, and is obligated, like the reporter, to keep the source's identity confidential. Only after they are assured that the source material has been vetted should editors allow it to be transmitted.

Reporters should proceed with interviews on the assumption they are on the record. If the source wants to set conditions, these should be negotiated at the start of the interview. At the end of the interview, the reporter should try once again to move some or all of the information back on the record.

Before agreeing to use anonymous source material, the reporter should ask how the source knows

the information is accurate, ensuring that the source has direct knowledge. Reporters may not agree to a source's request that AP not pursue additional comment or information.

The AP routinely seeks and requires more than one source. Stories should be held while attempts are made to reach additional sources for confirmation or elaboration. In rare cases, one source will be sufficient—when material comes from an authoritative figure who provides information so detailed that there is no question of its accuracy.

We must explain in the story why the source requested anonymity. And, when it's relevant, we must describe the source's motive for disclosing the information. If the story hinges on documents, as opposed to interviews, the reporter must describe how the documents were obtained, at least to the extent possible.

The story also must provide attribution that establishes the source's credibility; simply quoting "a source" is not allowed. We should be as descriptive as possible: "according to top White House aides" or "a senior official in the British Foreign Office." The description of a source must never be altered without consulting the reporter.

We must not say that a person declined comment when he or she is already quoted anonymously. And we should not attribute information to anonymous sources when it is obvious or well known. We should just state the information as fact.

Stories that use anonymous sources must carry a reporter's byline. If a reporter other than the bylined staffer contributes anonymous material to a story, that reporter should be given credit as a contributor to the story.

And all complaints and questions about the authenticity or veracity of anonymous material—from inside or outside the AP—must be promptly brought to the news manager's attention.

Not everyone understands "off the record" or "on background" to mean the same things. Before any interview in which any degree of anonymity is expected, there should be a discussion in which the ground rules are set explicitly.

These are the AP's definitions:

On the record. The information can be used with no caveats, quoting the source by name.

Off the record. The information cannot be used for publication.

Background. The information can be published but only under conditions negotiated with the source. Generally, the sources do not want their names published but will agree to a description of their position. AP reporters should object vigorously when a source wants to brief a group of reporters on background and try to persuade the source to put the briefing on the record. These background briefings have become routine in many venues, especially with government officials.

Deep background. The information can be used but without attribution. The source does not want to be identified in any way, even on condition of anonymity.

In general, information obtained under any of these circumstances can be pursued with other sources to be placed on the record.

Anonymous Sources in Material from Other News Sources:

Reports from other news organizations based on anonymous sources require the most careful scrutiny when we consider them for our report.

AP's basic rules for anonymous-source material apply to pickups as they do in our own reporting: The material must be factual and obtainable no other way. The story must be truly significant and newsworthy. Use of sourced material must be authorized by a manager. The story must be balanced, and comment must be sought.

Further, before picking up such a story we must make a bona fide effort to get it on the record, or, at a minimum, confirm it through our own sources. We shouldn't hesitate to hold the story if we have any doubts. If the source material is ultimately used, it must be attributed to the originating member and note their description of their sources.

Audio:

AP's audio actualities must always tell the truth. We do not alter or manipulate the content of a newsmaker actuality in any way. Voice reports by AP correspondents may be edited to remove pauses or stumbles.

The AP does permit the use of the subtle, standard audio processing methods of normalization of levels, general volume adjustments, equalization to make the sound clearer, noise reduction to reduce extraneous sounds such as telephone line

noise, and fading in and out of the start and end of sound bites, provided the use of these methods does not conceal, obscure, remove or otherwise alter the content, or any portion of the content, of the audio. When an employee has questions about the use of such methods or the AP's requirements and limitations on audio editing, he or she should contact the desk supervisor prior to the transmission of any audio.

Bylines:

Bylines may be used only if the journalist was in the datelined location to gather the information reported. If a reporter in the field provides information to a staffer who writes the story, the reporter in the field gets the byline, unless the editor in charge determines that the byline should more properly go to the writer.

We give bylines to photographers, broadcast reporters and TV crew members who provide information without which there would be no story.

If multiple staffers report the story, the byline is the editor's judgment call. In general, the byline should go to the staffer who reported the key facts. Or, one staffer can take the byline for one cycle, and another for the following cycle.

A double byline or editor's note also can be used when more than one staffer makes a substantial contribution to the reporting or writing of a story. Credit lines recognize reporting contributions that are notable but don't call for a double byline.

If either of the staffers with a double byline was not in the datelined location, we should say who was where in a note at the story's end.

For roundups, the byline goes to the writer, with credit in an editor's note to the reporters who contributed substantial information.

Regarding credits for staffers who do voice or on-camera work: We do not use pseudonyms or "air names." Any exceptions—for instance, if a staffer has been known professionally by an air name for some time—must be approved by a manager.

Corrections/Correctives:

Staffers must notify supervisory editors as soon as possible of errors or potential errors, whether in their work or that of a colleague. Every effort should be made to contact the staffer and his or her supervisor before a correction is moved.

When we're wrong, we must say so as soon as possible. When we make a correction in the current cycle, we point out the error and its fix in the editor's note. A correction must always be labeled a correction in the editor's note. We do not use euphemisms such as "recasts," "fixes," "clarifies" or "changes" when correcting a factual error.

A corrective corrects a mistake from a previous cycle. The AP asks papers or broadcasters that used the erroneous information to use the corrective, too.

For corrections on live, online stories, we overwrite the previous version. We send separate corrective stories online as warranted.

For graphics, we clearly label a correction with a FIX logo or bug, and clearly identify the material that has been corrected.

For photos, we move a caption correction and retransmit the photo with a corrected caption, clearly labeled as a retransmission to correct an error.

For video, corrections in scripts and/or shotlists are sent to clients as an advisory and are labeled as such.

For live broadcasts, we correct errors in the same newscast if at all possible. If not, we make sure the corrected information is used in the next appropriate live segment. Audio correspondent reports that contain factual errors are eliminated and, when possible, replaced with corrected reports.

Datelines:

A dateline tells the reader where we obtained the basic information for a story. In contrast, a byline tells the reader that a reporter was at the site of the dateline.

When a datelined story contains supplementary information obtained in another location—say, when an official in Washington comments on a disaster elsewhere—we should note it in the story.

The dateline for video or audio must be the location where the events depicted actually occurred. For voice work, the dateline must be the location from which the reporter is speaking. If a reporter covers a story in one location but does a live report from a filing point in another location, the dateline is the filing point.

Fabrications:

Nothing in our news report—words, photos, graphics, sound or video—may be fabricated. We

don't use pseudonyms, composite characters or fictional names, ages, places or dates. We don't stage or re-enact events for the camera or microphone, and we don't use sound effects or substitute video or audio from one event to another. We do not "cheat" sound by adding audio to embellish or fabricate an event. A senior editor must be consulted prior to the introduction of any neutral sound (ambient sound that does not affect the editorial meaning but corrects a technical fault).

We do not ask people to pose for photos unless we are making a portrait and then we clearly state that in the caption. We explain in the caption the circumstances under which photographs are made. If someone is asked to pose for photographs by third parties and that is reflected in AP-produced images, we say so in the caption. Such wording would be: "XXX poses for photos."

Graphics:

We use only authoritative sources. We do not project, surmise or estimate in a graphic. We create work only from what we know.

We post or move a locator map only when we can confirm the location ourselves.

We create charts at visually proper perspectives to give an accurate representation of data. The information must be clear and concise. We do not skew or alter data to fit a visual need.

We credit our sources on every graphic, including graphics for which AP journalists have created the data set or database.

Images:

AP pictures must always tell the truth. We do not alter or manipulate the content of a photograph in any way.

The content of a photograph must not be altered in PhotoShop or by any other means. No element should be digitally added to or subtracted from any photograph. The faces or identities of individuals must not be obscured by PhotoShop or any other editing tool. Only retouching or the use of the cloning tool to eliminate dust and scratches are acceptable.

Minor adjustments in PhotoShop are acceptable. These include cropping, dodging and burning, conversion into grayscale, and normal toning and color adjustments that should be limited to those minimally necessary for clear and accurate reproduction (analogous to the burning and dodging often used in darkroom processing of images) and that restore the authentic nature of the photograph. Changes in density, contrast, color and saturation levels that substantially alter the original scene are not acceptable. Backgrounds should not be digitally blurred or eliminated by burning down or by aggressive toning.

When an employee has questions about the use of such methods or the AP's requirements and limitations on photo editing, he or she should contact a senior photo editor prior to the transmission of any image.

On those occasions when we transmit images that have been provided and altered by a source—the faces obscured, for example—the caption must clearly explain it. Transmitting such images must be approved by a senior photo editor.

For video, the AP permits the use of subtle, standard methods of improving technical quality, such as adjusting video and audio levels, color correcting due to white balance or other technical faults, and equalization of audio to make the sound clearer, provided the use of these methods does not conceal, obscure, remove or otherwise alter the content, or any portion of the content, of the image. The AP also allows digitally obscuring faces to protect a subject's identity under certain circumstances. Such video must not be distributed without approval of the Editor of the Day or senior manager. In addition, video for online use and for domestic broadcast stations can be fonted with titles and logos.

Graphics, including those for television, often involve combining various photographic elements, which necessarily means altering portions of each photograph. The background of a photograph, for example, may be removed to leave the headshot of the newsmaker. This may then be combined with a logo representing the person's company or industry, and the two elements may be layered over a neutral background.

Such compositions must not misrepresent the facts and must not result in an image that looks like a photograph—it must clearly be a graphic.

Similarly, when we alter photos to use as graphics online, we retain the integrity of the image, limiting the changes to cropping, masking and adding elements like logos. Videos for use online

can be altered to add graphical information such as titles and logos, to tone the image and to improve audio quality. It is permissible to display photos online using techniques such as 360-degree panoramas or dissolves as long as they do not alter the original images.

Obscenities, Profanities, Vulgarities:

We do not use obscenities, racial epithets or other offensive slurs in stories unless they are part of direct quotations and there is a compelling reason for them.

If a story cannot be told without reference to them, we must first try to find a way to give the reader a sense of what was said without using the specific word or phrase. If a profanity, obscenity or vulgarity is used, the story must be flagged at the top, advising editors to note the contents.

A photo containing something that could be deemed offensive must carry an editor's note flagging it.

When a piece of video or audio contains something that might be deemed offensive, we flag it in the written description (rundown, billboard and/or script) so clients know what they are getting. Recognizing that standards differ around the world, we tailor our advisories and selection of video and audio according to customer needs.

We take great care not to refer readers to Web sites that are obscene, racist or otherwise offensive, and we must not directly link our stories to such sites.

In our online service, we link the least offensive image necessary to tell the story. For photo galleries and interactive presentations we alert readers to the nature of the material in the link and on the opening page of the gallery or interactive. If an obscene image is necessary to tell the story, we blur the portion of the image considered offensive after approval of the department manager, and flag the video.

Privacy:

We do not generally identify those who say they have been sexually assaulted or pre-teenage children who are accused of crimes or who are witnesses to them, except in unusual circumstances. Nor do we transmit photos or video that identify such persons. An exception would occur when an adult victim publicly identifies him/herself.

Senior editors/managers must be consulted about exceptions.

Providing Attribution:

We should give the full name of a source and as much information as needed to identify the source and explain why he or she is credible. Where appropriate, include a source's age; title; name of company, organization or government department; and hometown.

If we quote someone from a written document—a report, e-mail or news release—we should say so. Information taken from the Internet must be vetted according to our standards of accuracy and attributed to the original source. File, library or archive photos, audio or videos must be identified as such.

For lengthy stories, attribution can be contained in an extended editor's note, usually at the end, detailing interviews, research and methodology. The goal is to provide a reader with enough information to have full confidence in the story's veracity.

Quotations:

The same care that is used to ensure that quotes are accurate should also be used to ensure that quotes are not taken out of context.

We do not alter quotations, even to correct grammatical errors or word usage. If a quotation is flawed because of grammar or lack of clarity, the writer must be able to paraphrase in a way that is completely true to the original quote. If a quote's meaning is too murky to be paraphrased accurately, it should not be used.

Ellipses should be used rarely.

When relevant, stories should provide information about the setting in which a quotation was obtained—for example, a press conference, phone interview or hallway conversation with the reporter. The source's affect and body language—perhaps a smile or deprecatory gesture—is sometimes as important as the quotation itself.

Use of regional dialects with nonstandard spellings should generally be limited to a writer's effort to convey a special tone or sense of place. In this case, as in any interview with a person not speaking his or her native language, it is especially important that their ideas be accurately conveyed. Always, we must be careful not to mock the people we quote.

Quotes from one language to another must be translated faithfully. If appropriate, we should note the language spoken.

The video or audio editing of quotations or soundbites must not alter the speaker's meaning. Internal editing of audio soundbites of newsmakers is not permitted. Shortened soundbites by cutaway or other video transition are permitted as long as the speaker's meaning is not altered or misconstrued. Sound edits on videotape are permitted under certain circumstances, such as a technical failure. They must be done only after approval by a senior editorial manager.

Responses:

We must make significant efforts to reach anyone who may be portrayed in a negative way in our stories, and we must give them a reasonable amount of time to get back to us before we move the story. What is "reasonable" may depend on the urgency and competitiveness of the story. If we don't reach the parties involved, we must explain in the story what efforts were made to do so.

Use of Others' Material:

An AP staffer who reports and writes a story must use original content, language and phrasing. We do not plagiarize, meaning that we do not take the work of others and pass it off as our own.

But in some respects, AP staffers must deal with gray areas.

It is common for an AP staffer to include in his or her work passages from a previous AP story by another writer—generally background, or boilerplate. This is acceptable if the passages are short. Regardless, the reporter writing the story is responsible for the factual and contextual accuracy of the material.

Also, the AP often has the right to use material from its members and subscribers; we sometimes take the work of newspapers, broadcasters and other outlets, rewrite it and transmit it without credit.

There are rules, however. When the material is exclusive, controversial or sensitive, we always credit it. And we do not transmit the stories in their original form; we rewrite them, so that the approach, content, structure and length meet our requirements and reflect the broader audience we serve.

Similar rules apply when we use material from news releases. Under no circumstances can releases reach the wire in their original form; we can use information and quotes from releases, but we must check the material, augment it with information from other sources, and then write our own stories.

We apply the same judgment in picking up material from members or from news releases that we use when considering information we receive from other sources. We must satisfy ourselves, by our own reporting, that the material is credible. If it does not meet AP standards, we don't use it.

For video, if another broadcaster's material is required and distributed, the name of that broadcaster shall be advised on the accompanying shotlist.

Pickups of audio and of television graphics are credited in billboards/captions when the member requests it.

Conflicts of Interest

The AP respects and encourages the rights of its employees to participate actively in civic, charitable, religious, public, social or residential organizations.

However, AP employees must avoid behavior or activities—political, social or financial—that create a conflict of interest or compromise our ability to report the news fairly and accurately, uninfluenced by any person or action. Nothing in this policy is intended to abridge any rights provided by the National Labor Relations Act.

Here is a sampler of AP practices on questions involving possible conflict of interest. It is not all-inclusive; if you are unsure whether an activity may constitute a conflict or the appearance of a conflict, consult your manager at the onset.

Expressions of Opinion:

Anyone who works for the AP must be mindful that opinions they express may damage the AP's reputation as an unbiased source of news. They must refrain from declaring their views on contentious public issues in any public forum, whether in Web logs, chat rooms, letters to the editor, petitions, bumper stickers or lapel buttons, and must not take part in demonstrations in support of causes or movements.

Favors:

Employees should not ask news sources or others they meet in a professional capacity to extend jobs or other benefits to anyone. They also should not offer jobs, internships or any benefits of being an AP employee to news sources.

Financial Interests:

Associated Press employees who regularly write or edit business or financial news must always avoid any conflict of interest or the appearance of any conflict of interest in connection with the performance of these duties. For these reasons, these employees must abide by the following rules and guidelines when making personal investment and financial decisions.

These employees must not own stock, equities or have any personal financial investment or involvement with any company, enterprise or industry that they regularly cover for the AP. A technology writer, for example, must not own any technology equities; a retail industry writer must not own the stock of any department store or corporate enterprise that includes department stores. Staff members who are temporarily assigned to such coverage or editorial duties must immediately notify a manager of possible conflicts to determine whether the assignment is appropriate. If necessary, employees might be asked either to divest or to suspend any activity involving their holdings.

Editors and writers who regularly cover the financial markets may not own stock in any company. They may invest in equity index-related products and publicly available diversified mutual funds or commodity pools.

Financial news employees must also avoid investment activities that are speculative or driven by day-trading or short-term profit goals because such activities may create the impression that the employee is seeking to drive market factors or is acting upon information that is not available to the public. Instead, the personal financial activities and investments of these employees must be based upon the longer term and retirement savings. For these reasons, an employee covered by this policy should not buy and sell the same financial product within 60 days, unless he/she gains the permission of the department manager and is able to demonstrate financial need that is unrelated to information discussed or gained in the course of his/her employment. This trading limitation does not apply to equity-index funds, broadly diversified and publicly available mutual funds and commodity pools.

All employees must comply with federal and local laws concerning securities and financial transactions, including statutes, regulations and guidelines prohibiting actions based upon "inside information." All employees are reminded that they may not act upon, or inform any other person of, information gained in the course of AP employment, unless and until that information becomes known to the general public.

Employees should avoid any conflict of interest or the appearance of a conflict of interest in the investments and business interests of their spouses or other members of their household with whom they share finances. They are expected to make every effort to assure that no spouse or other member of their household has investment or business interests that could pose such a conflict.

Employees should be aware that the investment activities and/or financial interests of their spouses or other individuals with whom they share financial interests may make it inappropriate for them to accept certain assignments. Employees must consult with their managers before accepting any such assignment.

Employees who are asked to divest holdings will be given one year from the date of the request to do so, in order to give them the opportunity to avoid market fluctuations.

When this document requires the sale of stock holdings, an employee can satisfy this requirement by putting the shares into a blind trust (or into an equivalent financial arrangement) that meets the same goal: preventing an individual from knowing, at any given time, the specific holdings in the account and blocking an individual from controlling the timing of transactions in such holdings. If AP assigns a staff member to a new job where mandatory divestiture would impose a financial hardship even after the one-year grace period, AP will reimburse the staff member up to a maximum of $500 for the reasonable costs of setting up a blind trust.)

Freelance Work:

Individuals who seek to engage in non-AP work are subject to the following restrictions:

- Freelance work must not represent a conflict of interest for either the employee or the AP.
- Such activities may not interfere with the employees' job responsibilities, including availability for newsgathering.
- Such activities may not exploit the name of The Associated Press or the employee's position with the AP without permission of the AP.
- Inevitably, some employees will use material they accumulated in their AP work—notes, stories (either written or broadcast), images, videotape, graphics—for other-than-AP uses. The resulting product must be presented to the AP for its approval prior to submission to any outside publisher, purchaser or broadcaster. And under no circumstances should the AP incur expenses for research material that is not used for AP purposes.

Free Tickets:

We do not accept free tickets to sports, entertainment or other events for anything other than coverage purposes. If we obtain tickets for a member or subscriber as a courtesy, they must be paid for, and the member should reimburse the AP.

Gifts:

Employees should politely refuse and return gifts from sources, public relations agencies, corporations and others hoping to encourage or influence AP news coverage or business. They may accept trinkets (like caps or mugs) of nominal value, $25 or less.

Books, tapes, recordings, CDs and other items received for review or provided as promotional material for an event may not be sold for personal gain. Items of more than nominal value, such as computer gear, must be returned. If appropriate, items can be donated to charities.

AP and its employees may accept discounts from companies only if those discounts are standard and offered to other customers.

We do not accept unsolicited contest awards from any organization that has a partisan or financial interest in our coverage; nor do we enter such contests.

Official Scorers:

Employees may not serve as official scorers at sports events.

Outside Appearances:

Employees frequently appear on radio and TV news programs as panelists asking questions of newsmakers; such appearances are encouraged.

However, there is potential for conflict if staffers are asked to give their opinions on issues or personalities of the day. Advance discussion and clearance from a staffer's supervisor are required.

Employees must inform a news manager before accepting honoraria and/or reimbursement of expenses for giving speeches or participating in seminars at colleges and universities or at other educational events if such appearance makes use of AP's name or the employee represents himself or herself as an AP employee. No fees should be accepted from governmental bodies; trade, lobbying or special interest groups; businesses, or labor groups; or any group that would pose a conflict of interest. All appearances must receive prior approval from a staffer's supervisor.

Political Activities:

Editorial employees are expected to be scrupulous in avoiding any political activity, whether they cover politics regularly or not. They may not run for political office or accept political appointment; nor may they perform public relations work for politicians or their groups. Under no circumstances should they donate money to political organizations or political campaigns. They should use great discretion in joining or making contributions to other organizations that may take political stands.

Non-editorial employees must refrain from political activity unless they obtain approval from a manager.

When in doubt, staffers are encouraged to discuss any such concerns with their supervisors.

And a supervisor must be informed when a spouse—or other members of an employee's household—has any ongoing involvement in political causes, either professionally or personally.

Trips:

If a trip is organized, and we think the trip is newsworthy, we go and pay our way. If we have a chance to interview a newsmaker on a charter or private jet, we reimburse the news source for the reasonable rate of the costs incurred—for example, standard airfare. There may be exceptional circumstances, such as a military trip, where it is difficult to make other travel arrangements or calculate the costs. Consult a manager for exceptions.

Dow Jones—Code of Ethics

This code is designed to provide all employees of Dow Jones with guidelines for appropriate professional conduct. It supersedes our long-time Conflicts of Interest Policy and also incorporates other long-standing Dow Jones policies. It is intended not as a statement of new beliefs or a codification of new rules of conduct, but as a reaffirmation of enduring values and practices.

The central premise of this code is that Dow Jones' reputation for quality products and services, for business integrity, and for the independence and integrity of our publications, services and products is the heart and soul of our enterprise. Put another way, it is an essential prerequisite for success in the news and information business that our customers believe us to be telling them the truth. If we are not telling them the truth—or even if they, for any valid reason, believe that we are not—then Dow Jones cannot prosper. The company will suffer, for example, if our customers cannot assume that:

Our facts are accurate and fairly presented; Our analyses represent our best independent judgments rather than our preferences, or those of our sources, advertisers or information providers; Our opinions represent only our own editorial philosophies; or There are no hidden agendas in any of our journalistic undertakings.

All companies profess business integrity. But the impact of our work on the work of others, and on their lives and fortunes, places special responsibilities upon all Dow Jones employees.

The clear implication of these beliefs is that the responsibility for safeguarding and growing a company that lives up to this code lies with each and every one of us. Every Dow Jones employee holds a position of trust. Acceptance of a position at any level or in any part of Dow Jones includes acceptance of individual responsibility to uphold Dow Jones policies governing legal and ethical business practices. It also includes acceptance of individual responsibility for following all legal requirements and ethical business practices, as well as the responsibility to stress proper ethical behavior among colleagues and subordinates.

Moreover, it must be clear to each of us that business integrity is necessary in every business decision—and that it is not the special province of news employees, or members of the legal department, or anyone else. Business integrity requires that we make all of our business decisions, and approach all business questions, objectively and realistically, and in the long-term best interests of all of our shareholders.

Managers, by virtue of their positions of authority, must be ethical role models for all employees. An important part of a manager's leadership responsibility is to exhibit the highest standards of integrity in all dealings with employees, customers and the world at large. Managers must avoid even implicit or unspoken approval of any actions that may be damaging to the reputation of Dow Jones, and must always exercise sound business judgment in the performance of their duties.

An equally important leadership responsibility is to develop employees' commitment to our principles and ability to make sound ethical judgments. Managers must communicate the seriousness of the company's expectations of ethical conduct, as well as their own personal support for these guidelines. Ethical leadership includes fostering a working environment that encourages employees to voice concerns or otherwise seek assistance or counsel if faced with potentially compromising situations, and also supporting those who raise such concerns.

Finally, what follows is not intended to be an exclusive or inclusive list of all laws, regulations and other norms applicable to Dow Jones and

with which compliance is expected. In our rapidly evolving businesses, each of us is challenged by a complex environment that often requires quick response under pressure. No written policy can definitively set forth the appropriate action for all business situations. Accordingly, this code emphasizes and clarifies a standard of ethical conduct that must govern all of our business dealings and relationships. In addition, more detailed guidelines for managers are now available for some of the topics covered by this code, and others will be promulgated from time to time; some departments also issue specialized guidelines of their own.

Confidential Information

Any and all information and other material obtained by a Dow Jones employee in connection with his or her employment is strictly the property of Dow Jones. Such information includes not only our own work and that of our colleagues, but also information relating to future activities, including as-yet-unpublished news, information and advertising, as well as schedules for publishing the same. Such material must never be disclosed to anyone outside Dow Jones, including friends and relatives. In no event should any information obtained in connection with Dow Jones employment be disclosed privately to anyone until such information has been made available to the public.

Similarly, the use of Dow Jones property of this sort—i.e. forthcoming news, information or advertising—as a basis for any investment decision is strictly prohibited. No employee with knowledge of any such forthcoming material may, prior to publication, buy or sell securities or in any way encourage or assist any other person in buying or selling securities, directly or indirectly, based on that information. These strictures should continue in force until the third trading day after the article or advertisement appears in a Dow Jones publication or news service.

These rules also apply, of course, to confidential information about our own company. Dow Jones employees may not disclose to others any confidential information belonging to the company, nor may they use such information for their personal benefit or that of others. Each of us who possesses or has access to confidential information has an important responsibility to keep that information confidential and to prevent it from being disclosed to others outside or inside Dow Jones, either purposefully or otherwise. This obligation applies not only during Dow Jones employment, but thereafter as well.

In addition, it is important to take care not to discuss such confidential matters with family members or business or social acquaintances or in places where one can be overheard. Within Dow Jones, confidential business information should be divulged only to other employees who need to know the information in order to carry out their business responsibilities.

Business Relationships and Activities

Just as all of the intellectual fruits of our labors as employees belong to Dow Jones, so the company is entitled to our undivided business loyalty, our single-minded professional attention and our undistracted focus on our businesses and our customers. Dow Jones employees must not use the company's assets, talents, information, technology, name or influence for their personal benefit or gain except as authorized by and in connection with their employment.

We recognize that Dow Jones cannot succeed if our customers do not succeed. It is our obligation to deliver our products and services in as timely a manner as possible, and with the highest possible levels of quality. Business dealings should be open and honest and transactions should be in the best interests of both Dow Jones and the customer.

To ensure this, Dow Jones employees should not offer or provide, to customers or prospective customers, directly or indirectly, any gift, entertainment or reimbursement of expenses of more than nominal value or that exceeds customary courtesies for that time and place. Nor should employees offer or provide, directly or indirectly, any material, equipment or services to any individual in a position to make or influence any business or governmental decision affecting Dow Jones.

Conversely, Dow Jones employees should not solicit or accept, directly or indirectly, any payment, loan, services, equipment or any other benefit or thing of value, or any gift, entertainment or reimbursement of expenses of more than nominal value or that exceeds customary courtesies for that time and place from suppliers or customers, or from any company, individual or institution that furnishes or seeks to furnish news, information, material, equipment, supplies or services to Dow

Jones, or from anyone else with an actual or prospective business relationship with Dow Jones.

Dow Jones employees must remain scrupulously free from obligation to suppliers and vendors. Accordingly, employees should not requisition, order, approve or otherwise participate in the purchase of goods or services on behalf of Dow Jones from any person or entity if the employee or any member of the employee's family or household has a substantial financial interest in the supplier or vendor.

Employees of Dow Jones engaged in business outside of the United States must obey the laws of countries in which they do business, and respect local culture and values while operating within the strictures of this code. All applicable trade agreements, including U.S. trade laws, must be honored and observed, including the U.S. Foreign Corrupt Practices Act, which generally makes it illegal to offer or give a bribe to a foreign official or candidate for foreign office, whether directly or through third parties such as consultants or agents.

Dow Jones employees may not serve as directors or officers of any other company devoted to profit-making, with the following exceptions:

Where the employee is appointed to represent Dow Jones; Companies which are owned by an employee's family, where the employee has obtained the written consent of the chief executive officer of Dow Jones; Otherwise as approved in writing by the chief executive officer of Dow Jones.

The unauthorized duplication of computer software developed internally or obtained from outside suppliers is prohibited, regardless of whether such unauthorized duplication is for business or personal use. Additionally, all Dow Jones employees must adhere to the company's standards and policies regarding the use of its technology and computer equipment.

Securities Transactions

Dow Jones has always had a strict policy on securities transactions by employees who have access to non-public information, including information concerning Dow Jones itself. All Dow Jones employees are expected to conduct themselves at all times in a manner that leaves no grounds for belief, or even suspicion, that:

An employee, an employee's family, or anyone else connected to an employee made financial gains by acting on the basis of "inside" information obtained through Dow Jones employment before that information was available to the general public; such information includes hold-for-release material or publishing plans with respect to news, advertising or other information, as well as any other items that might affect movements in the prices of any securities; The creation or dissemination, or non-dissemination, of any news or other information was influenced by a desire to affect the price of any security; An employee's personal financial situation with respect to investments is such that it creates a temptation to violate these rules; or An employee is beholden to newsmakers, information providers, advertisers or market participants, creating a temptation to violate these rules.

In making personal investments, all employees must avoid speculation or the appearance of speculation. No employee of Dow Jones may engage in short selling of securities.

In addition, all senior managers and all news and advertising personnel must not engage in short-term trading of equity securities or of non-investment grade fixed-income securities; such employees must hold such securities for a minimum of six months unless, in order to meet some special need, they get prior permission for an earlier sale from the head of the company's legal department. The six-month rule does not apply to publicly available diversified open end and closed end mutual funds.

News and advertising personnel and members of senior management with any responsibility for news or advertising also must not buy or sell futures or options. However, these employees may invest in equity index-related products and publicly available mutual funds or commodity pools that invest in futures or options. No news or advertising personnel assigned to report or call on a specific industry may buy or sell securities in any company engaged, in whole or significant part, in that industry, nor may any member of the immediate family of any such employee do so.

Employees are encouraged to be long-term investors in Dow Jones & Company stock, whether directly or through the company's compensation and benefits plans (other than its retirement plans). The rule above on holding equities for six months does not apply, however, to certain acquisitions of Dow Jones stock through employee benefit plans

and other plans sponsored by the company. For example, shares acquired through payroll deduction or through automatic reinvestment of dividends may be sold immediately. But the six-month holding requirement does apply to shares of Dow Jones stock purchased in the open market by senior management and all news and advertising personnel. And purchases of stock through employee plans by lump-sum payments or voluntary one-time contributions by such employees would be considered open-market purchases.

Political and Civic Activities

Many companies, for a variety of reasons, participate in the partisan political process, at various levels of government. As a publisher, Dow Jones has a different tradition. Dow Jones does not contribute, directly or indirectly, to political campaigns or to political parties or groups seeking to raise money for political campaigns or parties, and Dow Jones does not and will not reimburse any employee for any political contribution made by an employee. All news employees and members of senior management with any responsibility for news should refrain from partisan political activity judged newsworthy by their senior editor or in the case of senior management, the Chief Executive Officer. Other political activities (including "issue oriented" activity) are permitted, but should not be inconsistent with this code.

On the other hand, it is not the intention of Dow Jones, or of this code, to dissuade employees from participating actively in civic, charitable, religious, public, social or residential organizations. Such activities are permitted, and even encouraged, to the extent that they:

Do not detract from performance or effectiveness at work;

Do not, by their extensiveness, cause the company to subsidize or appear to subsidize the activity; and

Do not otherwise violate this code. In the event that a conflict arises or may arise between an outside organization with which an employee is affiliated and the interests of Dow Jones, the employee should refrain from participating in the conflicting or potentially conflicting activity.

No Dow Jones employee should permit his or her Dow Jones affiliation to be noted in any outside organization's materials or activities without the express written approval of a member of senior management or unless of course the employee serves as a representative of Dow Jones or unless the affiliation is noted as part of a broader description of the employee's identity.

Books and Records

It is essential to the successful operation of Dow Jones as a business, and to the preservation of investor confidence in the company, that the integrity of our books and records be resolutely maintained. The responsibility for this does not rest exclusively with accounting or other financial personnel—it is shared by us all.

Accordingly,

No Dow Jones fund, asset or liability which is not fully and properly recorded on the company's books and records shall be created or permitted to exist;

No transaction shall be effected and no payment shall be made on behalf of Dow Jones with the intention or understanding that the transaction or payment is other than as described in the documentation evidencing the transaction or supporting the payment;

All employees shall comply with Dow Jones' accounting principles, procedures and controls, and no false, artificial or misleading entries in any books or records of the company shall be made for any reason whatsoever;

No employee will issue or authorize anyone else to issue any company document that is false or misleading;

No employee will knowingly accept and treat as accurate any false or misleading document prepared by a person not employed by Dow Jones; and

No employee will knowingly make any false or misleading statements to our external or internal auditors. Indeed, when questioned by any auditor, all employees should be fully forthcoming.

Employment

Dow Jones strives to ensure that all employees are treated with dignity and respect. Among our goals are to make benefits and services available to employees to promote their well-being, to communicate effectively with employees, to ensure equal

employment treatment, to maintain a safe work environment, to observe the terms of collective bargaining agreements where applicable, to assist employees in realizing their potential and maximizing their productivity, and to fairly evaluate and recognize performance.

For its part, the company expects employees to perform excellent work in a cost-effective manner, to strive for quality and productivity, to follow directions and instructions, to properly care for facilities and equipment, to anticipate problems and suggest improvements, to treat other employees and clients and customers with honesty and courtesy, and to be energetic in the performance of tasks and fulfillment of goals.

Dow Jones values the talents and contributions of its employees. The company also seeks and values diversity among employees, recognizing that a mix of people enriches the company and encourages creativity and business growth. Dow Jones' policy is to provide equal employment opportunities and advancement consideration to all individuals based on job-related qualifications and ability to perform the job, without regard to race, color, ancestry, national origin, religious creed, sex, disability, veteran status, sexual orientation, age or marital status. It is also Dow Jones' policy to provide a working environment that is free of intimidation or harassment based on any of these factors.

Complete statements of policies setting forth the company's standards regarding personnel matters, and other matters relating to employment with Dow Jones, are published by the employee relations department. These policies meet legal and regulatory requirements of various jurisdictions in which Dow Jones does business, and employees are required to comply with these policies.

Environmental Concerns

Dow Jones is committed to maintaining a safe work environment by eliminating all significant recognized hazards in the workplace, and to conducting business in an environmentally sound manner based on scientific understanding, customer needs and local requirements. Employees are required to comply with all applicable health, safety and environmental laws and regulations, and all related company policies.

Compliance with this Code

Dow Jones takes this code of conduct very seriously. All employees of Dow Jones are responsible for compliance with all aspects of this code. All new employees shall be required to read this code at the outset of their employment, and to attest in writing that they have done so; all Dow Jones employees shall be required, at the time this code is first promulgated, to read it and so attest. In the case of all members of senior management, and all news and advertising personnel, such written attestations shall be required once each year.

The matters addressed by this code are sufficiently important that any lapse in judgment within the areas covered here may be considered serious enough to warrant discipline up to and including dismissal.

Any employee having a question about a possible violation of this code by that person or any other person, or in connection with any practice, should discuss it with his or her supervisor, or an employee relations department representative, or a member of the legal department. Every effort will be made to maintain the confidentiality of such discussions. Indeed, the most important wisdom about dealing with these questions is: When in doubt, ask.

Thomson Reuters—Editorial Policy

Reuters news operations are based on the company's Trust Principles which stipulate that the integrity, independence and freedom from bias of Reuters must be upheld at all times.

Reuters has strict policies in place to ensure adherence to these principles. We are committed to accurate and balanced reporting. Errors of fact are always promptly corrected and clearly published.

Reuters is the largest international multi-media news agency, reporting extensively from around the world on topics ranging from financial markets to general and political news.

Some Reuters coverage, including pictures and video, is of wars or conflicts during which all sides are actively promoting their positions and arguments.

We are committed to reporting the facts and in all situations avoid the use of emotive terms. The only exception is when we are quoting someone directly or in indirect speech. We aim to report objectively actions, identity and background and pay particular attention to all our coverage in extremely sensitive regions.

We do not take sides and attempt to reflect in our stories, pictures and video the views of all sides. We are not in the business of glorifying one side or another or of disseminating propaganda. Reuters journalists do not offer their own opinions or views.

The world relies on Reuters journalists to provide accurate, clearly sourced accounts of events as they occur, wherever they occur, so that individuals, organisations and governments can make their own decisions based on the facts.

Feedback

We receive many hundreds of e-mails each week and it is not possible to send individual replies. But we do welcome views on how we could improve our news coverage and all correspondence is read by a senior editor. In fact we often spot and correct errors faster with the help of sharp-eyed readers. Other e-mails have made us question and sometimes change the way we describe people, countries, concepts and controversies.

Interactive Media Organizations

CyberJournalist.net—A Bloggers' Code of Ethics
Poynter Institute—Online Journalism Ethics: Guidelines from the Conference

Introduction

Just about anyone can write commentary and report news situations on the web. The mantle of "citizen journalism" goes a long way toward democratizing and expanding the occupation of publishing material for mass consumption. But not everyone who takes advantage of this public forum wants to be seen as a traditional journalist or recognizes the need to ascribe to the same ethical standards and practices. The result can be wildly disparate levels of consistency, professionalism, and accountability for journalistic endeavors online—especially for the huge cadre of free-spirited bloggers posting on a regular basis.

CyberJournalist.net, edited by award-winning journalist Jonathan Dube and his partners at the Online News Association, put together a set of ethical rules they hoped all responsible bloggers would embrace. The document uses The Code of Ethics from the Society of Professional Journalists as a jumping-off point, which means mandating fairness and honesty, the desire to minimize harm, and the need to be accountable to both news subjects and readers. Bloggers are specifically urged to "identify and link to sources" where possible, avoid weblog entries or graphics that misrepresent incidents, explain the mission of the weblog and invite feedback, and shed light on the ethical lapses of others in the blogging community.

The respected Poynter Institute, a school for cutting-edge journalism techniques, invited online journalists to a 2006 conference and the group produced a basic framework for practicing ethical web reporting. The attendees asserted that the bedrock principles and values of journalism should transcend delivery platforms, commentary and reporting on blogs or in other online formats had to be clearly labeled, and emerging technologies must continue to be harnessed to "deepen the news experience through multimedia and interactivity." The conference guidelines also recommended policies for monitoring the relationship between editorial content and advertising, balancing demand for speed online versus thorough reporting, and evaluating the relative worth of various kinds of user-generated content.

Linking, considered essential to all web journalism, received its own section within the guidelines. Journalists involved were particularly concerned that media companies could link to sites without taking responsibility for their authenticity, veracity or way of gathering information. As a result, the document encourages media sites to let readers know that a link does not constitute an endorsement of the other sites' views and that there might be a difference in standards between the media and linked site.

—Glenn Lewis
Volume Editor

A Bloggers' Code of Ethics

Be Honest and Fair

Bloggers should be honest and fair in gathering, reporting and interpreting information.

Bloggers should:

- Never plagiarize.
- Identify and link to sources whenever feasible. The public is entitled to as much information as possible on sources' reliability.
- Make certain that Weblog entries, quotations, headlines, photos and all other content do not misrepresent. They should not oversimplify or highlight incidents out of context.
- Never distort the content of photos without disclosing what has been changed. Image enhancement is only acceptable for technical clarity. Label montages and photo illustrations.
- Never publish information they know is inaccurate—and if publishing questionable information, make it clear it's in doubt.
- Distinguish between advocacy, commentary and factual information. Even advocacy writing and commentary should not misrepresent fact or context.
- Distinguish factual information and commentary from advertising and shun hybrids that blur the lines between the two.

Minimize Harm

Ethical bloggers treat sources and subjects as human beings deserving of respect.

Bloggers should:

- Show compassion for those who may be affected adversely by Weblog content. Use special sensitivity when dealing with children and inexperienced sources or subjects.
- Be sensitive when seeking or using interviews or photographs of those affected by tragedy or grief.
- Recognize that gathering and reporting information may cause harm or discomfort. Pursuit of information is not a license for arrogance.
- Recognize that private people have a greater right to control information about themselves than do public officials and others who seek power, influence or attention. Only an overriding public need can justify intrusion into anyone's privacy.
- Show good taste. Avoid pandering to lurid curiosity.
- Be cautious about identifying juvenile suspects, victims of sex crimes and criminal suspects before the formal filing of charges.

Be Accountable

Bloggers should:

- Admit mistakes and correct them promptly.
- Explain each Weblog's mission and invite dialogue with the public over its content and the bloggers' conduct.
- Disclose conflicts of interest, affiliations, activities and personal agendas.
- Deny favored treatment to advertisers and special interests and resist their pressure to influence content. When exceptions are made, disclose them fully to readers.
- Be wary of sources offering information for favors. When accepting such information, disclose the favors.
- Expose unethical practices of other bloggers.
- Abide by the same high standards to which they hold others.

Poynter Institute—Online Journalism Ethics: Guidelines from the Conference

Poynter Online
Posted January 31, 2007
Updated February 11, 2007

Assertions of Ethical Decision-Making in Digital Media

1. Online publishing has the opportunity to serve audiences in new and meaningful ways. Journalists have an important responsibility to explore that potential as part of their constitutionally

protected responsibilities to hold the powerful accountable and to serve as a public watchdog.

2. Journalism values in such areas as truth, community and democracy will endure only if we embrace dramatic changes in the pressures and competition we face and the products we publish. Journalists should accept the challenge and embrace the opportunity to build new business models that will flourish in an era of digital media. Journalism's highest values can endure only if they stand on a sound economic foundation. It is essential that the journalists who adhere to those values be proactive—not just reactive—participants in the process of innovation.

3. Written ethics guidelines based on those values are an essential ingredient in the decision-making required in various forms of emerging media. Such guidelines will be most useful if framed as aspirations as opposed to rules and if compiled or revised with the active participation of the audience. Ethics guidelines should not be considered the exclusive province of those who describe themselves as journalists. Their utility is tied to the act of journalism as opposed to the résumé of its creator.

4. Transparency is a necessary dimension of the relationship that journalists and news organizations maintain with their audiences. Transparency must be linked with accountability—institutional as well as individual.

5. Limited resources, the novelty of online publishing or a lack of protocols cannot become an excuse for shoddy work or causing harm.

Web Reporting, Commentary, Voice and Tone

Principles & Values

- Journalists should honor the principle of independence. They should avoid conflicts of interest or the appearance of conflicts that could imperil their ability to report or the credibility of their reporting or commentary. They should not accept gifts or favors from people or entities they cover or over whom they might influence coverage.
- In addressing an issue or question of independence, the resolution might come through a strategy of transparency or disclosure.
- Journalists and news organizations should understand the necessity of defining, and clearly labeling, news and opinion. In an open environment like the Web, consistency in presentation can help the reader see clearly where the lines are drawn between news and opinion.
- Whenever journalists or organizations blur or blend those roles, they need to recognize the peril and weigh the consequences.
- Variations of tone and presentation in storytelling are appropriate for reaching new audiences, but those variations should be consistent with the bedrock editorial principles of the brand. Be clear on what you stand for, and honor it.
- These principles apply across all content and all platforms.

The Role of Journalism in the Digital Age

Principles & Values

- Editorial integrity is crucial in maintaining the trust of the public and the credibility of the brand.
- The editorial and business sides of the operation need to communicate openly about how best to capitalize on the growing economic opportunities online.
- Market research and metrics are important tools to help guide content decisions but shouldn't be the only criteria. There must be a balance between revenue-driven content and public service work.
- The consumer's experience is paramount. Advertising models and sponsorships should be evaluated closely to determine their impact on consumer experience. The consumer should be clear about content produced by editorial or commercial interests. Advertising and sponsorships should be labeled.

Credibility & Accuracy, Transparency and Multimedia

Principles & Values

We commit to presenting as accurate and as complete a picture of our world as possible. This means taking full advantage of emerging media and technology. In order to do that, we will:

- Use multimedia to show dimensions of our world that words alone cannot convey.
- Be clear about the nature of the content presented, its sourcing and the extent of verification.

- Correct what we get wrong as promptly and as clearly as possible. Establish systems to enable readers to alert us to mistakes and hold us accountable.
- Explain our decision making in terms of our process and our relationships, both institutional and personal.
- Maintain open channels of communication with our audience.

Workplace Issues: Speed, Thoroughness & Capacity

Principles & Values

- Online platforms should be valued by the institution as much as any other platform.
- There is a role for editing in producing online content. If areas of the online environment receive less editing or vetting, it should be by design, not as a result of accident, reflex or lack of resources.
- The distinction between levels of editing and vetting across different areas of the online product should be made clear to users.
- The obligation to correct mistakes and be transparent about the error is not diminished in the online environment.
- Links can provide thoroughness, which adds to good journalism. Online platforms should strive to communicate the nature of linked material as thoroughly as possible, while acknowledging that such material can change quickly and substantially.
- Speed is a core advantage of the medium, but should not compromise accuracy, fairness or other journalism values.
- Online platforms should value contributions from users and create practical, efficient systems for enabling submission. But such submissions should be clearly labeled and evaluated to help safeguard the institution's journalistic credibility.

User-Generated Content

Principles & Values

Publishers who adopt clear standards for the publication of user-generated content help ensure that such content will enhance their organization's journalism. Consider the following:

1. Terms and conditions for the publication of user-generated content, spelling out the rules of engagement, must be publicized and consistently enforced in order to be effective.
2. The standards should make clear the publisher's policy on user-generated content and issues such as:
   - Taste and judgment
   - Anonymous posting
   - Linking from user-generated content to external sources
   - Moderating
3. Publishers of user-generated content must establish and clearly communicate the consequences for members of the user community whose actions violate the publisher's terms and conditions. Such consequences must be enforced consistently in order to be fair.
4. Those who choose to publish user-generated content should identify and reconcile any deviations between the standards developed for user-generated content and those which exist for the journalists inside the organization. For example:
   - Do the benefits associated with permitting anonymously posted user-generated content justify a departure from the internal policies that govern my organization's use of anonymous sourcing?
   - Will my existing guidelines on the use of profanity apply to user-generated content, or does a different standard exist online?

Linking

Principles & Values

- A link to an external site does not signify an endorsement of that site or its point of view. It is merely a signal to the reader that there may be content of interest on the destination site.
- Despite this, media sites should make it clear to their readers—in the user agreement, site guidelines or via some other method—that there's a difference in standards between the content that resides on their own site and the content they link to.

- Because of the spider-like nature of the Web, media sites can't be expected to apply even these relaxed standards to the content of sites that are linked to from sites we link to (the two-click rule).
- When readers put their own links to content in message boards, blog posts, etc., those links should be considered user-generated content and subject to the same controls.
- We encourage all media sites to link to external sites. Linking off-site is an extension of your site's user experience and fosters a feeling of openness that's conducive to repeat visits. Trying to keep readers within just your site is a losing proposition.
- When linking, sites should not be forced into including links that support all sides of an issue. While news articles themselves should adhere to the traditional standards of fairness and accuracy, assuring balance in links run counters to the concept of providing only useful links to the reader.

Reporting Specializations

Business Reporting

American Business Media (ABM)—Editorial Code of Ethics
Society of American Business Editors and Writers, Inc. (SABEW)—Code of Ethics

Introduction

The power of the business press is a mighty force to behold. In these fragile economic times, business stories from reputable news sources can impact the fortunes of individuals, companies, major industries, whole nations, and even the global marketplace. But business reporters, maybe more than any other journalists, must have the news consumer's trust and confidence to be effective. There can be no hint of an agenda influenced by personal gain or special interest groups.

American Business Media (ABM) is an association of media companies that produce more than 6,000 print and online publications. These business-to-business journalism organizations serve an enormous audience of professionals but often remain overlooked and unappreciated by the general public. Their job is to cover the commercial news, trends, and practices of a multitude of industries ranging from advertising, athletics, and publishing to agriculture, marketing, and health care.

ABM's regularly updated Editorial Code of Ethics naturally puts a great emphasis on avoiding conflicts of interest, maintaining accuracy and fair reporting policies, and selecting editorial content that best serves the business audience in question. The document closely examines the relationship of editors and reporters with advertisers. It also pays a lot of attention to the outside activities of staff journalists, like freelance work or personal appearances for companies on their beat, which can compromise news coverage. The final section on electronic media, adapted from the American Society of Magazine Editors guidelines, takes a close look at editorial control over site content, branding, hypertext links, and the way user privacy or data gets handled.

Society of American Business Editors and Writers, Inc. (SABEW) is an organization of accredited business journalists who write for business sections of newspapers, business magazines and newspapers, and business websites. The SABEW Code of Ethics sets tight guidelines on the personal investments of member journalists and their families. It pushes for the confidentiality of sensitive information while pursuing a story and the need to keep others from profiting before material becomes public. The code also warns against journalists making concessions to any government agencies in relation to news content.

American Business Media—Editorial Code of Ethics

Revised March 2005

Business-to-business editors have earned the highest level of trust among their readers. Many surveys have shown that executives and managers believe business-to-business publications provide the most accurate and credible information available.

That trust is both a high compliment and a challenge for those who plan, write and edit publications. It sets a high standard they must maintain. American Business Media has always held its editors to such high standards. Indeed, the annual Jesse H. Neal Awards, named for the Association's first president, were established in the mid-1950s to encourage editorial excellence and have become the highest honors granted for business-to-business journalism. ABM's Code of Publishing Practice, a part of ABM's Constitution And By-Laws, has been in place for more than 33 years, and requires that ABM member companies maintain strict standards of journalistic ethics.

The Editorial Committee works with its members to maintain editorial quality at member publications. As part of that mission, the Editorial Committee regularly reviews and updates this Editorial Code of Ethics and Guide to Preferred Practices, which has been approved by the American Business Media Executive Committee. This revision has two parts. The first part is a code of ethics primarily for print editions of publications, and the second covers online versions.

I General Editorial Code of Ethics:

Editors, reporters and writers employed by American Business Media publications adhere to the highest standards of journalistic practice. In doing so, they pledge to:

a. Maintain honesty, integrity, accuracy, thoroughness and fairness in the reporting and editing of articles, headlines, and graphics.

b. Avoid all conflicts of interest as well as any appearances of such conflicts.

c. Maintain an appropriate professional distance from the direct preparation of special advertising sections or other advertisements.

d. Show the distinction between news stories and editorials, columns and other opinion pieces.

e. Accept as their primary responsibility the selection of editorial content based on readers' needs and interests.

II American Business Media Guide to Preferred Practices:

II-1 Conflicts of Interest

a. Editors should not invest in companies and/or industries they personally cover (this does not preclude investments in mutual funds, pensions or 401(k) plans that hold shares in a manner not directly controlled by the editor). Their spouses and other immediate family members should also avoid personal investments that might reflect unfavorably upon the editor. Investing on the basis of "insider information" is, of course, a violation of securities laws.

b. If a conflict arises in an investment held by an editor before his/her employment, or because of a merger or acquisition, he/she should immediately bring the conflict to the attention of his/her editorial management.

II-2 Gifts

a. Editors should not accept any gifts or favors, except those of nominal value, from companies or associations they cover, their public relations representatives or any other person or organization related to companies they cover. The editor's supervisor should determine what is of "nominal value."

b. Editors may accept occasional meals and refreshments in the course of business dealings.

II-3 Outside Activities

a. Editors should not accept freelance work from companies, associations or any other entity they cover.

b. Because editors are expected to speak as authorities within their markets, they may accept invitations to appear on television, radio and other electronic media and may accept

payment upon approval of editorial management.

c. Editors should not accept payment of any kind for making speeches, judging contests or making appearances at functions held by companies or associations they cover.

d. Reimbursement of reasonable expenses incurred in connection with such speeches may be accepted.

e. Editors may also accept speaker gifts of nominal value for participating in such events.

II-4 Travel

a. Editors should not accept payment of travel and hotel expenses incurred in the course of performing editorial duties from any source other than their employers.

b. In cases of group press affairs, presentations and other events involving representatives from several publications, editors should reimburse information sources for these expenses.

II-5 Relationship with Advertisers

a. Selection of editorial topics, treatment of issues, interpretation and other editorial decisions must not be determined by advertisers, advertising agencies or the advertising departments of publications.

b. Editors must never permit advertisers to review articles prior to publication.

c. Advertisers and potential advertisers must never receive favorable editorial treatment because of their economic value to the publication. Similarly, non-advertisers should not receive unfavorable editorial treatment or be excluded from articles because they do not advertise. This provision applies not only to stories and articles but to all products of the editorial group, including lists, rankings, product or company of the year awards and other such special features and events.

d. Editors must have the right to review, prior to publication, all sponsored content and other advertiser-supplied content.

II-6 Separation of Advertising and Editorial

a. Editors must make a clear distinction between editorial and advertising. Editors have an obligation to readers to make clear which content has been paid for, which is sponsored and which is independent editorial material. All paid content that may be confused with independent editorial material must be labeled as advertiser-sponsored.

b. With respect to special advertising supplements or advertorials: The words advertising, advertisement, special advertising supplement or similar labeling must appear horizontally at or near the center of the top of every page of such sections containing text, in type at least equal in size and weight to the publication's standard body typeface [adapted from American Society of Magazine Editors Editorial Guidelines, Nov. 2004].

c. The layout, design, typeface and style of special advertising sections or custom publishing products must be distinctly different from those of the publication [adapted from ASME, Nov. 2004].

d. Special advertising sections must not be slugged in the publication's cover (including stickers) nor included in the table of contents. In general, the publication's name or logo may not appear as any part of the headlines or text of such sections, except in connection with the magazine's own products or services [adapted from ASME Nov. 2004].

e. Editorial staff members and freelancers used by editorial should not participate in the preparation of custom publishing or advertising sections, except that the chief editor may review contents of such sections before they appear.

III Editorial Code of Ethics and Guide to Preferred Practices for Electronic Media

November 2004

Credibility is the key to the success of digital media offerings, just as it is for print publications; users must trust the advice and information presented. In order to build and maintain that trust, the distinction between independent editorial content and paid promotional information must remain clear. American Business Media believes it is possible to keep that clear distinction while still

taking advantage of linking and other technologies that make digital media the unique and robust experience it has come to be for the user.

With that goal in mind, ABM recommends the following standards, adapted from those of the American Society of Magazine Editors for the express needs of business media:

a. The publication's Web site should display the publication's name and logo prominently, in order to clarify who controls the content of the site. All editorial content must be under the sole control of the editorial staff.

b. All online pages must clearly distinguish between editorial and advertising or sponsored content. Non-editorial must be clearly labeled. The publication's name or logo should not be used in any way that suggests editorial endorsement of an advertiser. The site's sponsorship policies must be clearly noted, either in text accompanying the article or on a disclosure page to clarify that the sponsor had no input regarding the content.

c. Hypertext links that appear within the editorial content of a site, including those within graphics, must be solely at the discretion of the editors. Links within editorial should never be paid for by advertisers.

d. Special advertising or "advertorial" features should conform to the same guidelines in section II that apply to print.

e. Special advertising sections or features must be displayed in such a way that users will not confuse them with editorial content.

f. To protect the brand, editors/producers should not permit their content to be used on an advertiser's site without an explanation of the relationship (e.g. "Reprinted with permission").

g. Advertisers or e-commerce partners must not receive preferential treatment in search engines, price comparisons, and other applications presented under the content provider's brand unless this is clearly disclosed. An editorial site should not vouch for others' tools that it may offer.

h. A Web site should respect the privacy of its users. If a site intends to collect information about its visitors—whether the data will be disseminated to third parties or not—it must offer users a chance to decline if they choose, through an "opt-out" option. As part of its privacy policy, the site should explain its use of cookies and other data collection methods and tell what it intends to do with the information it gleans. Potential benefits to the user—broader site access, better personalization features, etc.—should be presented as well.

i. Advertisements should not be intentionally placed next to editorial coverage of the specific product advertised. This does not preclude ads on search results pages, topic index pages, channel pages and the like, as long as selection criteria for those pages are not weighted in favor of advertisers and are free of other commercial consideration.

Society of American Business Editors and Writers, Inc.—Code of Ethics

Statement of Purpose:

As business and financial journalists, we recognize we are guardians of the public trust and must do nothing to abuse this obligation.

It is not enough that we act with honest intent; as journalists, we must conduct our professional lives in a manner that avoids even the suggestion of personal gain, or any misuse of the power of the press.

It is with this acknowledgment that we offer these guidelines for those who work in business and financial journalism:

Personal investments and relationships:

- Avoid any practice that might compromise or appear to compromise objectivity or fairness.
- Never let personal investments influence content. Disclose investment positions to your superior or directly to the public.
- Disclose personal or family relationships that might pose conflicts of interest.

- Avoid active trading and other short-term profit-seeking opportunities, as such activities are not compatible with the independent role of the business journalist.
- Do not take advantage of inside information for personal gain.

Sources:

- Insure confidentiality of information during the reporting process, and make every effort to keep information from finding its way to those who might use it for gain before it is disseminated to the public.
- Do not alter information, delay or withhold publication or make concessions relating to news content to any government.

Gifts and favors:

- In the course of professional activity, accept no gift or special treatment worth more than token value.
- Accept no out-of-town travel paid for by outside sources.
- Carefully examine offers of free-lance work or speech honoraria to assure such offers are not attempts to influence content.
- Disclose to a supervisor any offer of future employment or outside income that springs from the journalist's professional activities or contacts.
- Accept food or refreshments of ordinary value only if absolutely necessary, and only during the normal course of business.

Editorial Integrity:

- Publishers, owners and newsroom managers should establish policies and guidelines to protect the integrity of business news coverage.
- Regardless of news platform, there should be a clear delineation between advertising and editorial content.
- Material produced by editorial staff should be used only in sections, programming or pages controlled by editorial departments.
- Content, sections or programming controlled by advertising departments should be distinctly different from news sections in typeface, layout and design. Advertising content should be identified as such.
- Promising a story in exchange for advertising or other considerations is unethical.

Using outside material:

- Using articles or columns from non-journalists is potentially deceptive and poses inherent conflicts of interest. This does not apply to content that is clearly labeled opinion or viewpoint, or to submissions identified as coming directly from the public, such as citizen blogs or letters to the editor.
- Submissions should be accepted only from freelancers who abide by the same ethical policies as staff members.

Technology:

- Business journalists should take the lead in adapting professional standards to new forms of journalism as technologies emerge and change.
- The business journalist should encourage fellow journalists to abide by these standards and principles.

Society of American Business Editors and Writers, Inc. and Huber & Associates, Inc. "Code of Ethics." Society of American Business Editors and Writers, Inc. http://www.sabew.org/ethics/RevisedCodeofEthics.htm (accessed October 31, 2008). Reprinted with permission.

Health, Medical, and Science Reporting

Association of Health Care Journalists (AHCJ)—Statement of Principles
National Association of Medical Communicators (NAMC)—Code of Ethics
National Association of Science Writers (NASW)—Code of Ethics

Introduction

There is clearly a David versus Goliath relationship at the core of both the health care and medical industries. The journalists that cover the areas in question seem acutely aware of the obligation to speak up for the relatively powerless health consumers in their audience. By contrast, they seem equally predisposed to closely monitor the activities of powerful institutions like drug and insurance companies, hospitals and HMOs. The professional organizations that represent these writers also encourage their members to provide the kind of reliable information that makes for better health care and medical decisions by the public.

Association of Health Care Journalists (AHCJ), with over 1,000 members worldwide, uses the Society of Professional Journalists Code of Ethics as a foundation for dealing with general reporting concerns such as truth, fairness, conflict of interest, accountability, and independence in its Statement of Principles. But the document's most extensive section on Professionalism, Content and Accuracy touches on a number of mandates intrinsically tied to the work of health care journalists. AHCJ members are urged to report links between sources of health or medical information, like studies or industry experts, and, for example, the manufacturers who promote a new remedy or therapy. Member journalists are also admonished to fully understand the process of medical research, show respect for the ill and disabled, be careful in labeling subjects as victims or even patients if unwarranted, and avoid misleading language like "cure" or "breakthrough." In addition, journalists must attempt to communicate all benefits or risks attached to treatments or products and an accurate measure of just how beneficial or risky they might be.

National Association of Medical Communicators (NAMC), composed of medical broadcasters, writers and webcasters, offers a Code of Ethics that emphasizes accuracy, content, independence, professionalism, and the personal rights of a story's subjects or audience. The code more specifically suggests choosing content based on positive health benefits and sound medical knowledge rather than sensational appeal. It also warns against journalists substituting their own medical information for the diagnosis or treatment of a health care provider. NAMC expects journalists to portray the possible outcomes to various treatments as well—including the dangers of not seeking medical care.

The Charter of the National Association of Science Writers (NASW), dating back to 1934, advocates for the "dissemination of accurate information regarding science" and the free flow of science news. The organization's Code of Ethics helps guide members in the pursuit of these goals. The document widely recognizes the political machinations that often surround major science projects or stories. As a result, NASW members are asked not to support specific candidates, policies, or legislation tied to the subjects

of their work. There are also stipulations about taking funding that might create conflicts of interest or promoting scientific products and company.

—Glenn Lewis
Volume Editor

Association of Health Care Journalists—Statement of Principles

Preamble

Members of the Association of Health Care Journalists believe journalists have a special responsibility in covering health and medical news. This responsibility is inherent in journalists' role as watchdogs, holding the powerful accountable and giving voice to the voiceless.

Association members know that readers and viewers may make important health care decisions based on the information provided in our stories.

We embrace the Society of Professional Journalists' code of ethics with its emphasis on seeking truth, providing fair and comprehensive accounts of events and issues, minimizing harm, acting independently and being accountable.

In this statement, we identify some unique challenges that health care reporters face and suggest how to meet those challenges. This effort is one sign of our organization's commitment to help its members improve health journalism, to help them scrutinize their own efforts and to encourage open discussion and debate on how health care news is reported and disseminated.

We further believe that well balanced and thorough news coverage of health encompasses the determinants of health and not merely medical science or the provision of medical services. We suggest that news organizations scrutinize their role as providers of health care news and information, commit to coverage of health care issues and develop a strategy that meets the needs of their audiences.

Professionalism, Content, Accuracy

Because our objectivity and credibility is paramount, health care journalists are bound by professional standards of truth, accuracy, and context in every report. To achieve this, health care journalists should:

- **Be vigilant in selecting sources,** asking about, weighing and disclosing relevant financial, advocacy, personal or other interests of those we interview as a routine part of story research and interviews.
- **Investigate and report possible links** between sources of information (studies or experts) and those (such as the manufacturers) who promote a new idea or therapy. Investigate and report the possible links between researchers and private companies, researchers and public institutions, patient advocacy groups and their sponsors, celebrity spokespersons and their sponsors, nonprofit health and professional organizations and their sponsors.
- **Recognize that most stories involve a degree of nuance** and complexity that no single source could provide. Journalists have a responsibility to present diverse viewpoints in context. In addition, anyone with knowledge of the health care industry, of medicine, and of the scientific community knows that many vested interests reside among government health spokespersons, researchers, universities, drug companies, device manufacturers, providers, insurers and so on. To reflect only one perspective of only one source is not wise. Most one-source stories lack depth and meaning. Avoid single-source stories.
- **Understand the process of medical research** in order to report accurately. Realize, for example, the distinction between Phases I, II and III drug trials. It is misleading to report bold or conclusive statements about efficacy in Phase I trials since the primary goal of Phase I trials is to evaluate safety, not efficacy. (The National Cancer Institute offers a simple guide.) Be cautious in reporting results of preliminary studies, in vitro or animal studies. Give accurate portrayals of the status of investigational drugs, devices and procedures, including significant caveats and explanations of hurdles, unknowns and potential problems.

- **Preserve journalistic independence** by avoiding the use of video news releases or the use of quotes from printed news releases. Label and credit the source whenever a portion of a video or printed news release is used.
- **Be judicious in the use of television library or file footage.** The use of footage from the past may be inappropriate, misrepresentative, or embarrassing to individuals if used today. It may not even fit the topic of the day. Strive to ensure that your television station has policies on the use of health-related file footage by all news personnel.
- **Recognize that gathering and reporting information may cause harm** or discomfort. Use special sensitivity and understand legal limits when dealing with children, mentally handicapped people and inexperienced sources or subjects. Always consider alternatives that minimize harm while making accurate reporting possible.
- **Show respect.** Illness, disability and other health challenges facing individuals must not be exploited merely for dramatic effect.
- **Remember that some sick people don't like to be called "victims."** Be careful with the use of the term "patients." This can contribute to the medicalization of normal states of health. Calling people in an experimental trial "patients" or referring to an experimental intervention as a "therapy" may contribute to the notion of therapeutic misconception, the implication that subjects in a research trial will certainly derive direct therapeutic benefit from what is actually an experiment with uncertain benefits and harms.
- **Avoid vague, sensational language** (cure, miracle, breakthrough, promising, dramatic, etc.)
- **Make sure anecdotes are appropriately chosen** to serve the interests of fairness and balance. Avoid the "tyranny of the anecdote." Personal stories used as examples must be consistent with the larger body of evidence. Whenever possible, individuals who had both positive and negative outcomes should be included.
- **Quantify the magnitude of the benefit or the risk** in the story. Explain absolute risk or benefit, along with relative risk or benefit whenever possible. A 50 percent increase in relative risk may not mean much if the absolute numbers are small. Consider explaining the "number needed to treat"—the number of people you would have to treat with the experimental intervention (compared with the control) to prevent one event. (See information from the Cochrane Collaboration.)
- **Report the complete risks and benefits of any treatment,** along with the possible outcomes of alternative approaches, including the choices of "watchful waiting."
- **Clearly identify and explain the meaning of results** that indicate an association, rather than a causal link, between factors in a study. Remember: association is not cause.
- **Clearly define and communicate areas of doubt and uncertainty.** Explain what doctors don't know as well as what they do know.
- **Seek out independent experts** to scrutinize claims and evaluate the quality of evidence presented by sources. Apply the same scrutiny and skepticism that would be applied in any other news story. Avoid uncritical acceptance of official or expert pronouncements. Be skeptical about all emphatic claims, particularly about claims that an intervention has few or no adverse side effects.
- **Strive to include information about cost and insurance coverage** in any reporting of new ideas in medicine.
- **Ensure that the total news package (headlines, teases, graphics, promotional material) does not oversimplify or misrepresent.** Coach editors, photographers, producers, writers, graphic artists and copy editors to embrace these values in their work.
- **Consider public interest the primary criterion when choosing which stories to report.** Follow up on those stories that serve a wider public interest. In particular, follow up stories on subsequent failures, negative findings or other reversals of fortune for investigational drugs, devices or procedures should receive coverage comparable to that given initial positive reports.
- **Distinguish between advocacy and reporting.** There are many sides in a health care story. It is not the job of the journalist to take sides, but to present an accurate, balanced and complete report.
- **Be original.** Plagiarism is untruthful and unacceptable.

Independence

We should strive to be independent from the agendas and timetables of journals, advocates, industry and government agencies. We should nourish and encourage original and analytical reporting that provides audiences/readers with context. Given that thousands of journal articles and conference presentations appear each year, and that relatively few are immediately relevant to our audiences/readers, health journalists have a responsibility to be selective so that significant news is not overwhelmed by a blizzard of trivial reports. We are the eyes and ears of our audiences/readers; we must not be mere mouthpieces for industry, government agencies, researchers or health care providers.

Integrity

Those who cover health care will encounter many different interest groups including government, academic medicine and research, medical centers, providers, purchasers, advocacy groups, pharmaceutical companies and device manufacturers. Health care journalists should remember that their loyalties reside with the truth and with the needs of the community.

We must:

- **Preserve a dispassionate relationship** with sources, avoiding conflicts of interest, real or perceived.
- **Avoid any personal or financial interest** in any company in any field related to what is being covered. This includes actual and potential competitors of subjects about whom we report. It is not wise to own stock in health care companies. We must not profit from, nor allow others to profit from, non-public information, including, but not limited to, results in embargoed journal articles and meeting abstracts.
- **Remember that journalists face other potential conflicts of interest.** Think about questions such as: Were you a patient at a particular hospital? Do you have a relative with a specific disease that could unduly influence your handling of a story? Does this insurance company cover employees in your newsroom? It is the journalist's responsibility to recognize these conflicts and prevent them from influencing stories or story choices. The best way to do this is by constant, open and honest discussion with other reporters, editors or producers.
- **Deny favored treatment to advertisers and special interests** and resist their pressure to influence news coverage.
- **Refuse gifts, favors, and special treatment.** Refuse meals from drug companies and device manufacturers and refuse to accept unsolicited product samples sent in the mail.
- **Weigh the potential benefits involved in accepting fees, honoraria, free travel,** paid expenses from organizers of conferences or events against the desire to preserve our credibility with the audience and the need to avoid even the appearance of a conflict of interest.
- **Also weigh the potential benefits of accepting awards** from organizations sponsored by an entity with a vested interest in health care against our need for credibility.
- **Weigh the potential conflict in accepting support** from public, private, or foundation sources.

Responsibility

We must improve our coverage of the structural, institutional, political, financial and ethical issues in health, medicine and health care.

We have a responsibility to encourage editors to pay as much attention to health stories as to medical stories. It is our responsibility to understand the difference between the two types of stories and to help our editors maintain an appropriate balance.

We know stories on health policy and public health are significant and contribute greatly to public debate. We know they are relevant and important for our readers and viewers.

We must work harder to make them interesting.

We must work harder within our newsrooms to keep health care coverage comprehensive and proportional.

While brevity and immediacy are touchstones of news reporting, health and medical reporting must include sufficient context, background and perspective to be understandable and useful to audiences/readers. Stories that fail to explain how new results or other announcements fit within the

broader body of evidence do not serve the interests of the public. Finally, it is our responsibility to lobby our editors to raise the standards of health reporting. Our beats can be viewed as health, medicine, business, health policy, research, science, finance, politics and other specialized areas of news. We must ensure that our beats don't become so super-specialized that we let important health issues fall through the gaps of our finely defined beats. We must work with editors to ensure that our specialized knowledge, training, expertise and instincts have a voice in the broader editorial decision-making of our publication or broadcast or Web site.

National Association of Medical Communicators—Code of Ethics

Members of the National Association of Medical Communicators endorse a standard of professionalism exemplified by the best practices of Medicine and Journalism. As communicators, we acknowledge our responsibility in practicing our profession to its highest standards. Medical information is the foundation for public health, and through our efforts we endeavor to enhance the well being of our audiences.

I. ACCURACY: We believe our highest responsibility is to provide clear, current, and accurate health information.
   a. We will always provide complete, truthful, and well-substantiated information.
   b. We will fairly represent conflicting points of view.
   c. We will label editorial comments and personal opinion as such.
   d. We will disclose, where appropriate, our sources of information.

II. CONTENT: We will responsibly gather and communicate information that best serves the needs of the public.
   a. We will strive to select content based on its positive health benefit.
   b. We will endeavor to avoid content based on its sensational appeal.
   c. We will strive to include the cost and quality of care in order to ensure comprehensiveness.

III. INDEPENDENCE: In pursuit of accuracy and truth, we recognize the need to function in a [sic] independent and credible manner.
   a. We believe in freedom of the press and public's right to know.
   b. We will avoid participating in organizations that would compromise our personal and professional integrity.
   c. We will not accept gifts or special privileges that would compromise our independence or integrity.
   d. We will disclose any and all financial arrangements that might be viewed as affecting our independence or integrity.

IV. PERSONAL RIGHTS: We support the inalienable rights of people in a free society.
   a. We acknowledge the right of each individual to privacy, dignity, and confidentiality.
   b. We acknowledge the rights of people to questions and challenge actions and ideas of other individuals and organizations.
   c. We acknowledge our special responsibility to protect individuals from any behavior or practice that might be viewed as exploitative.
   d. We acknowledge the right of our audiences to have an interaction that is respectful, courteous, and consistent with the ideals of medicine and journalism.

V. PROFESSIONALISM: We believe in a sound public health policy for all people with full individual autonomy.
   a. We believe that medical information based on sound knowledge and supporting healthful behaviors is helpful and appropriate.
   b. We believe that health care providers have special relationships with their patients, and we will not substitute our medical information for proper diagnosis and treatment.

c. We believe it is essential to portray the risks and benefits or any behavior, regiment, or treatment.
d. We believe it is important to delineate the possible outcomes to different approaches to care, including the repercussions of the absence of care.

National Association of Science Writers—Code of Ethics

One of the principal aims of the National Association of Science Writers, according to its constitution, is to "foster the dissemination of accurate information regarding science and technology in keeping with the highest standards of journalism." This code of ethics is intended to guide the behavior of NASW's officers and members in meeting that aim.

NASW or its members, when invoking their NASW membership, must act in accordance with the organization's aims, in keeping with the highest standards of journalism.

NASW does not take political positions, endorse candidates, support specific legislation, or allow the use of its name in connection with any political events. NASW officers and members may not invoke NASW's name, or their membership, in the course of personal political activities.

NASW may, however, take a position on issues related to journalism, freedom of information, and other public policy debates that relate to the members' ability to act in keeping with the highest standards of journalism. Such actions will be determined by the president, upon consultation with the other officers.

NASW may not undertake fundraising activities without the explicit permission of the president. Members may not use NASW's name in connection with any personal fundraising activities.

NASW members may not identify themselves as members of the organization in connection with any writing that takes a political position, endorses a candidate, supports specific legislation, or is related to fundraising activities or the promotion of a product, policy, or company or other organization.

NASW members may not speak for the organization without the authority of the president, the officers, or the members-at-large.

NASW may not accept funding from organizations or individuals whose aims might conflict with NASW's aims, unless specifically authorized to do so by the officers, with the exception of:

- Money paid to NASW for posting job opportunities on the NASW job board. The president or the officers reserve the right to reject ads deemed unacceptable.
- Other situations approved on a case-by-case basis by the NASW officers.

NASW's officers may choose to censure or expel members who violate this code of ethics.

Any disputes that arise concerning this code of ethics will be resolved by a decision of the NASW officers.

Education Reporting

Education Writers Association (EWA)—Standards for Education Reporters

Introduction

Some of the members of the Education Writers Association (EWA) bristled awhile back over the broad misconception among educators that reporters see the education beat as merely a steppingstone to more worthwhile positions. In an effort to set the record straight, the organization put together Standards for Education Reporters that carefully outline the complexities, impact and importance of this segment of journalism. The document recommends standards for competent education journalists that fall into the areas of requisite skills, knowledge and ethical practices needed to do the job right.

Successful education reporters, like all professional journalists, must have strong research, reporting, writing and editing skills. But the EWA singles out certain skill sets that seem particularly in tune with their mission. The group expects education writers to be able to quickly size up a school's positive or negative qualities, understand school politics, and properly interview students of all ages. In a more technical vein, these journalists should also be adept at reading an educational budget, analyzing statistics or test scores, and using electronic spreadsheets or appropriate databases.

The education beat obviously covers a vast landscape of public and private schools and a huge compendium of complex issues. As a result, the EWA recommends its reporters gain enough knowledge over time to be familiar with a number of education related subjects. The Standards for Education Reporters encourages journalists to be conversant about the history of education, the teaching profession, separation of church and state, racial and poverty issues, curriculum and textbook battles, and much more. It also expects journalists to know a certain amount about every level of education from early childhood through graduate school.

Ethical standards for EWA members begin with the basics—like balanced reporting, accuracy, and fairness—expected of all journalists. However, the association notes that education journalists also have the moral obligation to alert parents and children to the negative aspects of media coverage in certain instances and what can be done to minimize harm. Journalists are told to carefully consider when the identity of a child should be protected or a child should be offered an opportunity to opt out of an interview. In essence, the Education Writers Association expects education reporters to treat students in their stories as though they were members of their own family.

Education Writers Association—Standards for Education Reporters

By Bill Graves

The Oregonian

Experienced school reporters know plenty about standards. The struggle to set standards that define what students should know and be able to do at various stages of their education has been at the heart of school reform since the late 1980s.

So if journalists are going to understand the value of standards, it will be those covering schools. It is appropriate, then, that the Education Writers Association, the professional organization

for the nation's education reporters, would write standards for the school beat.

As schools use standards to define what students should learn, EWA is writing standards to define what education reporters should strive to know. The aim here, however, differs from that of education in that these standards are not for the purpose of evaluating reporters, but to help them do good work. Reporters new to the education beat should be able to use these standards to gauge what they need to learn. EWA's standards are organized in three broad areas: skills, knowledge and ethics.

Skills

In most cases, journalists use the same skills to cover education that they use for any other beat or assignment, and we can assume anyone hired for professional work will have them. But there are some skills that are either peculiar to education or so essential to covering schools that they are worth singling out.

Education reporters need to be able to:

Size Up a School

Reporters need to be able to assess the quality of schools quickly, but with care, much as a home inspector determines whether a house stands on a solid foundation and is free of dry rot. Reporters need to gauge whether students are orderly and engaged in their work, teachers are focused on teaching, and administrators articulate clear goals. They should know how to spot signs of school quality, such as the merits of student work posted on hallway and classroom walls. They also must know when, where and how to check their subjective judgments against more objective measures such as test scores, attendance, teacher turnover and other indicators that reflect school value. News reports on school quality can profoundly affect the reputation of schools, so it is of course crucial that reporters get it right. The stakes are high.

Use Computer Spreadsheet and Database Programs, Such as Excel and Access

State department, school district and university and college data now typically are available on computer spreadsheets, often online. News organizations now routinely use spreadsheet and database programs to sort, summarize, analyze and publish test scores, dropout rates and other information on the morning after release day.

Cultivate Extensive Sources

Perhaps more than many beats, education writers need to have a wide variety of sources available to them to cover the broad range of topics and constituencies that fall within their beat's expansive borders. They should, for example, be able to quickly call on students, parents, teachers, professors, administrators, board members, business and political leaders and ordinary people in the community to comment on topics as diverse as making condoms available in school health clinics, methods of teaching math or the reasons college tuition outpaces inflation. Reporters also need to be able to find expert sources, often quickly, on a vast range of topics that affect schools and universities, such as school law, construction, finance, textbooks or governance. EWA offers two valuable aids here: *Covering the Education Beat*, a resource guide with sources on scores of topics, and the EWA listserv, which allows reporters to immediately tap the collective knowledge of more than 300 colleagues.

Read a Budget

At every level of education—the district, university or state—education writers must be able to read and decipher budgets, spotting trends, gaps or aberrations in the intake and outflow of money for schools. One useful way of analyzing a budget is to look at the relationship between money and quality. Classroom quality is surely affected, for example, when schools convert teacher posts into assistant principal jobs that they call "teachers on special assignment." Questions of quality also arise when reporters show that only 50 cents of every dollar reaches the classroom. Higher education reporters must know how to probe the budgets of both private and public institutions.

Interview Students

This is a skill that comes with practice. Generally, reporters will find they will get nowhere with students, particularly young children, unless they take time to make them feel at ease and ask open-ended questions. We say more under ethics about how to interview students about sensitive issues.

Analyze Statistics, Especially Test Scores

Education reporters will find themselves awash in numbers, and they must be comfortable with them. They need to know, for example, how to work percentages, grasp the difference between median, mean and mode and know when they see significant changes and trends in test scores. They need to be able to do basic statistical analyses of numbers on test scores and a variety of other indicators such as attendance, dropout rates and racial and ethnic demographics. Ideally, they will also know how to do regression analysis, valuable in making adjustments for various social factors such as poverty when comparing students, schools, colleges, universities, school districts, states, even countries.

Understand School Politics

Schools are political organizations as well as learning institutions. School board members, teacher unions and administrators all engage in political tugs and pulls for control and power. So reporters need to be skillful in detecting when school initiatives are launched more for political rather than educational ends.

Knowledge

The knowledge that would benefit reporters in their work is nearly without limits, stretching over a breadth that ranges from methods of teaching to school law and encompassing the curricula of the nation's schools and universities. Professors spend their lives researching the best ways to teach children to read, yet that topic occupies only one small corner of the vast territory encompassed by the education beat. Education reporters may be called upon to write about topics as varied as a recall election on the school board, an analysis of high school dropouts, the economic implications of a university's attempts to expand bioscience research or the best methods to teach algebra.

Despite the broad landscape of topics on the education beat, Richard Clark, director of the Institute for Educational Inquiry at the University of Washington in Seattle, notes: "four general issues prevail across geographic locations, ethnic groupings, political persuasions and school grade levels. They are arguments about (1) purposes of schooling (which include debates over curriculum and instruction), (2) equity and access to schooling, (3) control and accountability, and (4) money and resources." With those issues in mind, there are some areas of knowledge that are essential to anyone covering education with authority.

Following is some of the terrain that education reporters can expect to travel. Though the scope of knowledge outlined below may seem daunting, education reporters can expect to learn much of this over time through their daily work, by reading *Education Week*, the *Chronicle of Higher Education, Phi Delta Kappan* and other education news and by attending regional and national seminars for education reporters.

Education reporters should strive to know:

The Big Picture

Good education reporters have a solid grasp of what has happened in U.S. education from the nation's earliest days. They know, for example, about apprenticeships and kitchen schools in the 1600s; Horace Mann and the common school movement of the early 1800s; the one-room school house and academies that developed into high schools later in the 19th century; the Committee of Ten that designed the modern high school in the 1890s; the emergence of IQ testing and sorting in the 1920s; the progressive school movement launched by John Dewey in the early 20th century; the consolidations pushed by former Harvard University president James Conant that led to the comprehensive high school after World War II; the struggles for desegregation marked by the U.S. Supreme Court 1954 decision in *Brown v. Board of Education of Topeka*; the civil rights movement that followed and the recent trend toward resegregating schools.

Accountability and Reform

The nation's schools are in the middle of a reform movement that began in 1983 after a presidential commission released *A Nation at Risk*, a small report that jarred the nation out of complacency by declaring its schools were suffocating under a "rising tide of mediocrity" that threatened the nation's economy and security. Reform is an important part of the big picture. Most of the initiatives we see today—charter schools, vouchers, an end to social promotion,

performance standards and so forth—all are part of the unfolding reform movement. This era may well mark one of the most dramatic shifts in public education in American history. Reporters need to understand that education is in the midst of this great change, which is one reason educators are so stressed. This is as much an economic movement as it is an educational one. The conventional wisdom argues that we need the world's top schools to sustain a prosperous economy in a knowledge-based global market. Reporters should understand that this effort to build a healthy economy with higher education standards is the larger narrative unfolding behind their educational stories much as the war on terrorism is the larger narrative behind many if not most international stories.

Choice and Privatization of Schools

Reporters should understand that giving parents more choices in where their children learn is one of the most visible and political fallouts from the reform movement, yet still peripheral in terms of affecting student achievement. Fifteen years ago, home schooling was considered radical, charter schools were nonexistent and choice among public schools was rare. Today, conservative and libertarian groups want to use market forces to improve schools by giving parents more choices. Most of these groups support giving parents government vouchers, upheld by the U.S. Supreme Court in 2002, so they can also shop among private and parochial schools, a proposal firmly resisted by teacher unions and the education establishment. Private companies, such as Edison Schools Inc., are emerging to run public schools for profit. Again, while new choices in schools are dramatic, so far they have had mixed results and affected only a fraction of the nation's 47 million public school students.

Standards and Testing

At the core of reform since 1983 is the drive to set standards that define what students should know and be able to do at various levels of education and then measure whether they meet standards with tests or work samples. Reporters need to understand that implicit in the move to standards is a dramatic shift in school structure from a focus on credits, or the time students spend in school, to standards, or the results of their schooling. Most schools, however, are still holding on to credits, creating an incompatible dual system. Reporters should know how standards in their districts and states compare to those elsewhere. They will be writing in the coming years about whether standards or the old credit-based system prevail.

Because most states are using tests to measure whether students meet standards, testing has become a major issue in education. Many educators complain there already is too much emphasis and time spent on testing at the expense of good instruction, and these debates will only get hotter as President George W. Bush's administration carries out federal mandates for testing. But tests vary widely in their quality and purposes and some are better and more sensible than others. Reporters should know, for example, the difference between norm-referenced and criterion-based tests. The fact is, reporters and the public can now much more quickly identify the proportion of students who are failing to meet standards in a given school, district or state, thanks to testing. This means schools can no longer hide behind schoolwide test averages.

Racial and Ethnic Dynamics

Education reporters already know that most of the nation's social tensions are reflected in the schools. Nowhere is this more evident than in issues of race and ethnic diversity. Reporters need to have a good grasp of how schools served as the battleground for desegregation, beginning with the landmark 1954 U.S. Supreme Court ruling in *Brown v. Board of Education of Topeka*, followed by the civil rights movement, desegregation, busing, bilingual education and, most recently, resegregation and the achievement gap that still leaves many minority groups learning less than their white peers. At the university level, affirmative action to give minority groups more access to higher education has been challenged in Florida, Georgia, Michigan and Washington, though courts have supported the use of racial preferences in admission decisions. These are among the most complex and sensitive issues in education, and reporters must know them well.

Poverty and Achievement

American schools have never been very good at teaching poor children. Now, when they are under pressure to ensure that all children, not just some, reach high standards, educating the poor and giving them access to universities has become perhaps the single biggest challenge for American schools. There's a complex set of reasons why poor children as a group fare poorly in schools, such as low expectations, low-quality teachers, tracking, old textbooks and home problems. Educators often will say or act as though poor children cannot be expected to learn as much as their more affluent peers because of their difficult home lives. But this is like doctors saying they cannot help people who are too sick. Reporters need to understand why poor children often fall behind in schools, and they should become familiar with schools that successfully teach poor kids. The nation will never reach its education goals until all schools learn how to help disadvantaged children succeed.

Curriculum and Textbook Debates

Ongoing battles over how best to teach reading, writing, science, history and other subjects ebb and flow in the nation's schools. They often reflect political divisions between conservative and liberal, traditional and progressive. Textbooks, being market-driven, try to find compromises, which often results in books that are dull and unfocused and that mention some topics to make sales but omit others to avoid controversy. Reporters need to cover these debates, but also remind readers how these battles distort educational content and undermine the quality of education.

The Teaching Profession

As with everything else in education, the way teachers are trained, the way they work and the unions they belong to are all being questioned and changed. Education reporters are expected to keep on top of these changes and write about them as they unfold. Schools of education, under fire for being irrelevant and out of touch with modern reforms, are revamping the way they train teachers as states change the way they certify them. Unions are becoming more involved in reform and other professional issues to retain their credibility as political leaders look for ways to quickly fire bad teachers. A variety of groups, such as the National Center for Teacher Quality, have emerged to improve teaching. The National Board of Professional Teaching Standards, still in its infancy, has developed a rigorous national certification process designed to identify top teachers and eventually raise the status of the profession. Researchers continue to debate whether there truly is a teacher shortage or just a problem with teacher turnover.

Higher education reporters need to follow ongoing debates at the university level about the second-class status of schools of education, the time professors should devote to research, the merits of tenure, the representation of women and minorities on faculty, the use of graduate assistants and faculty productivity.

School Leadership

School board members and administrators at every level are feeling the heat of the accountability movement, which partly explains the high turnover of superintendents and a growing shortage of qualified principals or school board candidates. This is another volatile front that education reporters need to follow without becoming consumed or misled. While school leaders, for example, insist there is a principal shortage, the fact is there are plenty of trained principals. The question is whether they have been trained for today's schools. The shortage is in principals trained to be instructional leaders, which schools now demand, as opposed to managers of facilities, buses and order. At the university level, higher education reporters will need to follow college presidents, boards and faculties, which wield more power than public school teachers in creating curriculum and academic rules.

High and Middle Schools

Education reporters should know the American high school has never worked very well for a large proportion of students. Before World War II, less than half of all students finished high school. But the world has changed, and students who drop out of high school can expect a life of poverty. So high schools must change if they are going to serve all students, and so far, most are resisting. For example, a growing body of research shows that smaller, more personal high schools work better for more teens, yet school leaders keep building large,

impersonal high schools that are sure to fail, on average, one in four kids. Middle schools also tend to be too big and alienating for too many students. Education reporters need to understand these failures as well as the successes of the rare small, innovative middle and high schools, many of which make school more relevant by connecting learning to careers.

Separation of Church and State and School Law

Education reporters frequently are called upon to write about controversies over the role of religion in the schools. These will include, for example, debates about textbooks, school prayer, religious holidays, Boy Scout recruiting and religious classes. Reporters should be familiar with the basic First Amendment rulings by the U.S. Supreme Court that draw a clear line between talking about religion in school and promoting it. Reporters also will be called upon to write about other legal issues in schools, such as mandatory drug testing, school dress codes, school discipline and other Fourth Amendment privacy issues. They need to have legal sources, both conservative and liberal, to call upon when controversies erupt along the boundaries separating church and state or public institutions and private lives.

School Finance

Reporters cannot write about public education without understanding how schools get and spend their money. Nearly all are supported by some combination of local property taxes, state taxes and federal grants. Reporters can expect to write about financial inequities among districts or even schools. Education writers need to know what studies show about the complex relationships between money and student achievement, the proportion of money spent on teacher salaries and administration, and other details on the flow of money through the complex corridors of education. They also need to know how to keep money issues in perspective. Budgets and spending stories can consume reporters and distract them from what is happening in the classroom. Money is a primary concern for administrators and teacher unions, but it usually is not as important as issues of quality to readers, parents and students. And reporters need to remember that most readers do not have children in public schools. Money takes on new dimensions at the university level, where the costs of tuition and fees and financial aid are major forces affecting student access and equity.

The Federal Role

Education historically has been a local issue, governed by local school boards and supported by local property taxes, and local reporters could largely ignore most of what happened at the federal level. But that began to change in the 1980s, when the U.S. Department of Education became a cabinet-level agency. By the end of that decade, the nation was showing more concern for national outcomes than local school control—a development the late Ernest L. Boyer, president of the Carnegie Foundation for the Advancement of Teaching, called "an absolute, historic watershed in the history of American education." The federal role has continued to grow since, most recently with the George W. Bush administration's successful push for annual testing. The federal government is now spending more than $44.4 billion a year, mostly on remedial programs for disadvantaged children and for special education. No more can local reporters ignore its influence. At the university level, the federal government plays important roles in sponsoring research and providing low-income students access to higher education through grants and loans.

Special Education

Special education is probably the least reported or understood area of education by journalists, yet it is becoming increasingly hard to ignore. Special education, which receives heavy federal support, affects more than 10 percent of the nation's public school children and commands as much as 25 to 30 percent of some district budgets. New federal test requirements will require inclusion of special education students. Reporters need to know about special education, and they need to write about it.

Technology and Education

Education reporters should know how the computer, the Internet and other technologies are shaping the curriculum and the way students learn. So far, technology has had a peripheral role in most

public schools, with studies showing it has little effect on student achievement. Still, many educators see technology as a potentially powerful teaching tool that is still denied many poor children who often attend schools that are not wired for the Internet. What's more, the modern business world expects young people to graduate from our schools knowing how to use computers. Technology has become even more important at the university level, where courses are increasingly available online.

Learning Theory and Instructional Practices

Education writers should have some basic knowledge about major thinkers on learning, such as Swiss developmental psychologist Jean Piaget, who identified stages of the child's mental growth; Italian physician and educator Maria Montessori, who developed a teaching method that stresses child initiative and self-reliance; and John Dewey, the American philosopher and psychologist who emphasized learning through activities rather than formal curricula, later called progressive education. Writers also should know how the teaching of these educators have influenced leading modern theorists. These include Theodore Sizer, who organized the Coalition of Essential Schools, with its emphasis on learning for understanding and cultivating habits of mind; E.D. Hirsch, the founder of the Core Knowledge curriculum, focused on the goal of ensuring all students learn a common body of knowledge; and Howard Gardner, the Harvard professor who argues that humans have multiple intelligences, such as mathematical, musical or interpersonal. Educators continue to debate the validity of all of these theories.

Early Childhood Education

Education reporters must understand that much of what happens in schools begins before children ever reach school. They should know that studies show that children who show up for kindergarten ready—that is with adequate exposure at home to language and books—have much brighter prospects of thriving in school. They should also know about brain research, which increasingly shows that children have a heightened capacity to absorb knowledge in their early years. Preschool education remains a window of opportunity largely lost among American children. Surveys show that most American kids continue to get poor to mediocre preschool care, if any care at all, an issue education writers need to keep in the public light.

Higher Education

While higher education is a beat unto itself at many newspapers, all education reporters should know what is happening in their colleges and universities. Increasingly, the lines are blurring between the final years of high school and the first years of college. A growing number of high school juniors and seniors are taking courses at community colleges for dual credit. Higher education reporters will need to become familiar with the rules of the NCAA, trends in campus life, the mysteries of college costs, debates over the curriculum, the complexities of financial aid, and the small, but rapidly growing for-profit higher education companies such as the University of Phoenix, which caters to working adults and is the largest private university in the nation. They also can expect to write about debates over the university's role in the transfer of its research findings into practical applications in industries such as biotechnology, and whether universities should, for example, get royalties.

Ethics

As with skills, journalists are going to embrace the same body of ethics—such as fairness, accuracy and balance—whether they're covering education or any other beat. But again, there are some ethical circumstances that are peculiar to covering schools, most related to writing about children. Here's an example:

Deborah, a 16-year-old freshman at Marshall High School in Portland, Oregon, and her mother, Joanna, were unusually frank in telling a reporter about their problems. Deborah described how she was held back a year in kindergarten, had learning disabilities and was struggling to survive her first year of high school. Her mother talked about being a recovering alcoholic and drug addict who had married a tattoo artist. She revealed tattoos of roses climbing up her long legs. She also disclosed that Deborah was once raped. Both Deborah and her mother said they were comfortable having all of these details included in a profile of Deborah in *The Oregonian* as part of a series on the Class of 2000 at Marshall High. While the story did not mention the rape, most of the details were included

in the profile as was a description of Deborah skipping classes and finally dropping out of school. The photos of Deborah also were unflattering, showing her in a tight, low-cut sleeveless blouse blowing a big bubble of gum. The reporter described to Deborah and her mother what they could expect in the story. Still, both were devastated when it appeared on the front page. Neither was prepared for the calls and comments from shocked friends and relatives.

It is hard to say how much harm Deborah suffered from this story, but it is safe to say that she was hurt and embarrassed. How can we write about young people, particularly those in trouble, in vivid ways without hurting them?

Here are some guidelines on how to deal with children, particularly on sensitive topics such as violence, sex, drugs, crime, homosexuality, death, poverty school failure, profanity and pornography:

1. Young people, and sometimes their parents, are naïve about what it means to have personal details of their lives revealed in the newspaper or through broadcast. We need to ask if a child we are writing about will be targeted for discrimination, harassment or teasing if we reveal certain details. We need to consider keeping some personal details out of the media to protect children, even if they and their parents consent to having such details published. We should explain clearly to children we write about what they can expect to see in the newspaper or television before their stories are published or broadcasted. Deborah in the example above probably would have been more comfortable with the story if she knew in detail what was going to be in it and had a chance to voice her concerns.

2. We need to be respectful of children. We should deal with young people in interviews and stories as though they were our own children, siblings or members of our own family.

3. We should give children a way to opt out of an interview if they become uncomfortable, even after they've agreed to be interviewed. One way to do this is to interview them in small groups. This proved a good technique during interviews of children after a school shooting in the spring of 1998 at Thurston High School in Springfield, Oregon.

4. We should inform the parents of any child 16 and under that we are going to feature their child or his or her comments in a story on a controversial or sensitive topic. This is not necessary for quick-hit light and uncontroversial stories or features.

5. We should consider concealing the identity of a child or adolescent when we describe very personal, unflattering and negative details about their lives, such as sexual abuse or school failure. It is difficult to imagine, for example, how we could identify a teenager and write about his or her sexual activity without causing harm.

Reporters wield great power in the impact they can have on the lives of children and schools; that power demands responsibility. It is important to consider the possible unintended consequences of the stories we cover about the most vulnerable in our society.

Conclusion

News organizations that have been reflective about the role of education in today's world know it ranks among their most important beats and requires skilled, knowledgeable reporters capable of covering it with the insight it demands. The days when education was a beginning beat for cub reporters and a stepping stone to more important news died in the early 1980s. That's when the world economy began to change and education was no longer optional for individual and national prosperity. Some news organizations still give education short shrift at their own peril. But most major newspapers and broadcasting networks recognize the need for change and devote far more resources to education than a decade ago.

Even after the terrorist attacks on September 11, 2001, education has remained at the top of local and national political and economic agendas. Those values are reflected in the relentless pressure on schools to change and improve. Schools have adopted standards to adjust to this new world order, and news organizations should consider doing the same. What better place to start than the education beat.

Photojournalism

Committee of Concerned Journalists (CCJ)—Photojournalism Ethics Guidelines
National Press Photographers Association (NPPA)—Code of Ethics

Introduction

One key tenet of photojournalism is that every news consumer should be able to believe his or her own eyes. However, the enhanced competition for newsworthy photographs, combined with technological advances in cameras and editing equipment, has sometimes turned that basic belief into a precarious leap of faith. So it is reasonable that recent ethical policies for photojournalists substantially address both the artistic and business maneuvers that can impact the authenticity of an image. Of course, other important concerns are covered as well.

The Photojournalism Ethics Guidelines put out by the Committee of Concerned Journalists (CCJ) in 2006 pulls together policies for handling photographs from six different newspapers across the country. The *Sarasota Herald-Tribune* (Florida) tackles the issue of physically altering photos in the most extensive entry in the collection. It contends that "content alteration of photographs is unacceptable" no matter what technology might be available, but the rare exception must identify the extent of change to the photo and the technique applied in the caption or credit. The Sarasota paper then spells out several levels of considerations to address if an employee sees reasons for an exception to the rule. For example, discussions should explore alternatives to photo alteration, the news value of the particular image, legal and ethical concerns raised, and who might be offended by the change.

Half of the newspapers in the CCJ document warn against the use of re-created, staged, or posed scenes sometimes referred to as "set-up" photographs. They worry that these constructed or reconstructed scenes might be dishonestly passed off as genuine "found" moments in the news. A couple of the newspapers, like the *Texarkana* (Texas) *Gazette,* have policies based on good taste that forbid the gratuitous use of dead body photographs or images of those likely to die. And the *Sioux Falls* (South Dakota) *Argus Leader* normally refuses to use photographs specifically designated for news columns in any advertisements.

The Code of Ethics of the National Press Photographers Association (NPPA) lays out a detailed standard of behavior for journalists working with both photographic and video images. Beyond the CCJ stipulations mentioned, the NPPA code urges photojournalists to provide "context" when photographing or recording subjects, avoid stereotyping or bias, strive to capture unpopular or ignored viewpoints, and be as unobtrusive as possible with subjects. It also makes a case to push for total access subjects in an effort to get the best news shots and for not purposely sabotaging the work of competing journalists. And the photojournalists are told not to materially reward sources or subjects and to refuse any kind of compensation that might influence their coverage of the news.

Volume Editor

Committee of Concerned Journalists—Photojournalism Ethics Guidelines

Society for Professionals in Journalism,
July 30, 2006

A sample of some newspaper's photo guidelines:

Texarkana (TX) Gazette Dead Body Policy (editorial memo, *Oct. 9, 1989)*

Effective today, we will initiate a kinder, gentler photo policy that precludes dead bodies in photos. There may be some exceptions to this, if there is compelling news value. But as the norm, we will cease to show bodies under sheets, or in bags, or on stretchers, or in any other state of demise. I can't rationalize to myself how body photographs add anything to the value of our newspaper. Instead, I think many of our readers would find them offensive.

I would also extend this policy to people who are severely injured and likely to die. This of course is a judgment call, but in such cases we need take both with-victim and without-victim photographs.

The guiding philosophy behind the policy is one of compassion for the victim's friends and family and an empathy for the sensibilities of our readers. Instead of being an exploitative, shocking newspaper, I want the Texarkana Gazette to be known as a sensitive paper.

I realize this doesn't make for gripping, high-profile photos, but I think it does make for a newspaper more in step with this community.

Sioux Falls (SD) Argus Leader

News photos in advertisements: Photographs taken specifically for news columns shall not be used in advertisements unless approved by the executive editor or managing editor.

Sarasota (FL) Herald-Tribune

The introduction of electronic photo editing technology to the Herald-Tribune brings with it concerns about the use of the image manipulation capabilities of the tools in our daily production.

The technology gives us the ability to easily alter the content or create new photograph that could deceive the reader and ultimately damage the credibility of the Herald-Tribune.

IT HAS ALWAYS BEEN THE POLICY OF THE HERALD-TRIBUNE THAT CONTENT ALTERATION OF PHOTOGRAPHS IS UNACCEPTABLE USING PAST OR PRESENT TECHNOLOGY.

If significant reason exists to challenge this policy it will be addressed in the following manner:

No discussion needed:

- Dodging or burning of areas in the photograph that do not change the content, for instance, lightening or darkening areas of the photograph to make them reproducible in the newspaper.
- Correction of technical defects in a photo, for instance, repairing line hits in a photo or erasing line noise.

Discussion required:

- Photographs with the potential to breach community standards, including accidental inclusion of genitals, obscene gestures, offensive cultural elements.
- Photographs that may offend community standards, including gruesome or emotionally distressing photographs.
- Discussion is also required to use the electronic image manipulation capabilities to create an illustration using photographic elements. It should be noted that this protocol does not preclude the use of the technology to create illustrations using the particular advantages of the tools, but does require that the resulting illustration not closely resemble a real life scene and requires that the resulting illustration be labeled as to its creative elements.

The discussion group should include:

- Photographer, top newsroom executive, photo editor, section editor, and anyone who might lend an enlightened argument for or against the usage.

Some of the questions that should come up in the discussion should include:

- What are the alternatives: Can another photo convey the same message and eliminate the concerns?

- Is possession of the technical capability to alter a photograph justifying the proposed manipulation?
- Is all of the necessary information available for discussion: Story and photo readily available?
- Is there any missing information from the photograph?
- What is the news value of the particular photograph?
- Are there legal or ethical concerns about running the photo?
- Who might be offended and why?
- What are the possible consequences of publishing the photo?
- Will we be able to justify our decision?

Photo credits and labeling:

- Any time the content of a photograph has been altered, the extent of the alteration and the technique should be clearly explained in the cutline or credit, adhering to the style of the Herald-Tribune.
- The emphasis should be on adding as much detailed information as possible.

Rochester (NY) Times-Union and Democrat and Chronicle

All photographs are accurate representations of the situations they portray. Nothing recreated, staged or posed is represented as a candid situation. Previously shot photographs are not represented as fresh and new. Photographers are alert to situations in which straightforward photography might create an impression contrary to the facts. They avoid cropping a photograph in a way that would misrepresent the situation. They point out questionable photographs or situations and discuss proper treatment of them with editors.

San Jose (CA) Mercury News

In the interest of integrity and fairness, photographers and editors should exercise caution in the use of "set-up" photographs. In the same way that reporters do not make up quotes, photographers do not reconstruct scenes or events with the purpose of making them appear as if they were "found" moments.

However, photographers are often called upon to make environmental portraits or do illustrative photography. In no way should such photographs be approached or treated as anything but what they are. They are either portraits or are demonstrative of a situation. Both should be clearly labeled.

That means that care should be taken in writing captions so they do not suggest the picture is something it is not. For example, is Clark Kent working in his study or is he simply in his study (for purposes of a portrait)? Is Lois Lane actually practicing her technique of boomerang tossing or is she demonstrating her technique of boomerang tossing (for purposes of a photograph)? Such distinctions make a difference.

…Ordinarily, consent is implied if a photographer approaches a subject, indicates that he/she is a newspaper photographer and asks for names and other facts. In some circumstances, written releases may be required (at mental health institutions or orphanages, for example).

St. Paul (MN) Pioneer Press and Dispatch

Dead bodies—Avoid use of photos of dead bodies (especially local) unless covered. Of course, there will be exceptions that must be cleared with the managing editor.

General Policy—Do NOT run photos of the governor, mayor, etc. signing proclamations, receiving plaques, looking at a check or piece of paper, etc. Avoid posed news photos of politicians immediately prior to elections.

Added on July 27, 1989:

Under no circumstances shall documentary photographs be manipulated, changed, or altered to any degree, by any method or medium, including electronic manipulation.

Documentary photographs shall not be set up, i.e., manufactured by the photographer.

Any manipulation of feature photos can be done only under the supervision of the director of photography in conjunction with the managing editor and the associate editor of features.

National Press Photographers Association—Code of Ethics

Preamble

The National Press Photographers Association, a professional society that promotes the highest standards in photojournalism, acknowledges concern for every person's need both to be fully informed about public events and to be recognized as part of the world in which we live.

Visual journalists operate as trustees of the public. Our primary role is to report visually on the significant events and on the varied viewpoints in our common world. Our primary goal is the faithful and comprehensive depiction of the subject at hand. As photojournalists, we have the responsibility to document society and to preserve its history through images.

Photographic and video images can reveal great truths, expose wrongdoing and neglect, inspire hope and understanding and connect people around the globe through the language of visual understanding. Photographs can also cause great harm if they are callously intrusive or are manipulated.

This code is intended to promote the highest quality in all forms of visual journalism and to strengthen public confidence in the profession. It is also meant to serve as an educational tool both for those who practice and for those who appreciate photojournalism. To that end, The National Press Photographers Association sets forth the following Code of Ethics:

Code of Ethics

Visual journalists and those who manage visual news productions are accountable for upholding the following standards in their daily work:

1. Be accurate and comprehensive in the representation of subjects.
2. Resist being manipulated by staged photo opportunities.
3. Be complete and provide context when photographing or recording subjects. Avoid stereotyping individuals and groups. Recognize and work to avoid presenting one's own biases in the work.
4. Treat all subjects with respect and dignity. Give special consideration to vulnerable subjects and compassion to victims of crime or tragedy. Intrude on private moments of grief only when the public has an overriding and justifiable need to see.
5. While photographing subjects do not intentionally contribute to, alter, or seek to alter or influence events.
6. Editing should maintain the integrity of the photographic images' content and context. Do not manipulate images or add or alter sound in any way that can mislead viewers or misrepresent subjects.
7. Do not pay sources or subjects or reward them materially for information or participation.
8. Do not accept gifts, favors, or compensation from those who might seek to influence coverage.
9. Do not intentionally sabotage the efforts of other journalists.

Ideally, visual journalists should:

1. Strive to ensure that the public's business is conducted in public. Defend the rights of access for all journalists.
2. Think proactively, as a student of psychology, sociology, politics and art to develop a unique vision and presentation. Work with a voracious appetite for current events and contemporary visual media.
3. Strive for total and unrestricted access to subjects, recommend alternatives to shallow or rushed opportunities, seek a diversity of viewpoints, and work to show unpopular or unnoticed points of view.
4. Avoid political, civic and business involvements or other employment that compromise or give the appearance of compromising one's own journalistic independence.
5. Strive to be unobtrusive and humble in dealing with subjects.
6. Respect the integrity of the photographic moment.

7. Strive by example and influence to maintain the spirit and high standards expressed in this code. When confronted with situations in which the proper action is not clear, seek the counsel of those who exhibit the highest standards of the profession. Visual journalists should continuously study their craft and the ethics that guide it.

Sports Reporting

Associated Press Sports Editors (APSE)—Ethics Guidelines

Introduction

It can be intoxicating as well as downright disorienting for any journalist, especially a relatively new one, to cover the world of sports. Suddenly the working reporter is spending time on a regular basis with sports celebrities and their wealthy business associates, eating in lavish restaurants, and traveling on private jets to more or less exotic destinations. In such an environment, the reporter could easily get too cozy with a subject and hazy about the allegiance owed to an audience. It is not surprising that occasionally a reporter forgets exactly who pays his/her salary.

The Ethics Guidelines of the Associated Press Sports Editors (APSE) predictably begins with the proviso that all travel, food, and accommodations for reporters must be paid by the newspaper. This means the publication even picks up the bill for airfare on a chartered team flight or a meal on the road. Sportswriters cannot take anything of value from those they cover.

APSE similarly warns against conflicts of interest that can arise from outside, journalism-related activities. Sports reporters often get called upon to write for a team or league media guide, serve as an official scorer, and perhaps vote for awards or all-star teams. Sports journalists are also encouraged to adhere to the ethical rules of their own newspapers. These rules should discourage the use of anonymous sources and the pooling of quotes with competing writers on an assignment.

—Glenn Lewis
Volume Editor

Association Press Sports Editors (APSE)—Ethics Guidelines

1. The newspaper pays its staffer's way for travel, accommodations, food and drink.
   (a) If a staffer travels on a chartered team plane, the newspaper should insist on bring billed. If the team cannot issue a bill, the amount can be calculated by estimating the cost of a similar flight on a commercial airline.
   (b) When services are provided to a newspaper by a pro or college team, those teams should be reimbursed by the newspaper. This includes providing telephone, typewriter or fax service.
2. Editors and reporters should avoid taking part in outside activities or employment that might create conflict of interest or even appearance of a conflict.
   (a) They should not serve as an official scorer at baseball games.
   (b) They should not write for team or league media guides or other team or league publications. This has the potential of compromising a reporter's disinterested observations.
   (c) Staffers who appear on radio or television should understand that their first loyalty is to the paper.
3. Writers and writers' groups should adhere to APME [Associated Press Managing Editors] and APSE standards: No deals, discounts or gifts except those of insignificant value or those available to the public.

   (a) If a gift is impossible or impractical to return, donate a gift to charity.
   (b) Do not accept free memberships or reduced fees for memberships. Do not accept gratis use of facilities, such as golf courses or tennis courts, unless it is used as part of doing a story for the newspaper.
   (c) Sports editors should be aware of standards of conduct of groups and professional associations to which their writers belong and the ethical standards to which those groups adhere, including areas such as corporate sponsorship from news sources it covers.

4. A newspaper should not accept free tickets, although press credentials needed for coverage and coordination are acceptable.

5. A newspaper should carefully consider the implications of voting for all awards and all-star teams and decide if such voting creates a conflict of interest.

6. A newspaper's own ethical guidelines should be followed, and editors and reporters should be aware of standards acceptable for use of unnamed sources and verification of information obtained other than from primary news sources.
   (a) Sharing and pooling of notes and quotes should be discouraged. If a reporter uses quotes gained secondhand, that should be made known to the readers. A quote could be attributed to a newspaper or to another reporter.

7. Assignments should be made on merit, without regard for race or gender.

Guidelines can't cover everything. Use common sense and good judgment in applying these guidelines in adopting local codes.

Food Reporting

Association of Food Journalists (AFJ)—Code of Ethics

Introduction

The Association of Food Journalists (AFJ) worries about a lot of the same things that concern Associated Press Sports Editors—and reputable journalists of all stripes. The AFJ's Code of Ethics observes that free travel, special treatment and gifts can "diminish the credibility of food journalists." The Code of Ethics also warns that secondary employment within the food industry, as well as certain political pursuits, might have a similar effect.

Other provisions of the AFJ Code of Ethics focus more on keeping the sources of reporting clear and transparent. The code stipulates how food writers should vet and judiciously use industry press releases. It also encourages food writers to scrupulously credit material taken from another source for a story.

The AFJ document pays careful attention as well to the very separate endeavors of food reporting and criticism. It reminds food writers to indicate where news reports on a subject end and their personal opinions start. In deference to the contentious nature of food writing, the AFJ code also comments on the obligation of members to acknowledge opposing views on controversial issues.

—Glenn Lewis
Volume Editor

Association of Food Journalists—Code of Ethics

The Association of Food Journalists recognizes that its members, like all journalists, should meet accepted standards of professional responsibility.

The Association subscribes to the traditional Canons of Journalism of the American Society of Newspaper Editors and to the Code of Ethics of the Society of Professional Journalists, Sigma Delta Chi.

The Association believes that the primary responsibility of food journalists is to serve the public interest by reporting the news accurately and as objectively as possible.

The Association further believes that essential to this commitment is the absolute separation of editorial responsibilities from the influence of a media's advertising departments.

To assure their integrity and preserve their credibility, members therefore accept the following standards:

(1) Gifts, favors, free travel or lodging, special treatment or privileges can compromise the integrity and diminish the credibility of food journalists, as well as that of their employers. This includes commercially sponsored contests. Such offers should be avoided. An example is a contest promoting specific food products that is open to food journalists only.

(2) Similarly, food journalists should not use their positions to win favors for themselves or for others.

(3) Secondary employment, political involvement, holding public office or serving in organizations should be avoided if it compromises the integrity of a food journalist.

(4) Because the editorial space allotted to food journalism is not an extension of advertising, brand names or names of specific companies or interest groups should be used only in a newsworthy context or for purposes of clarification.

(5) Food journalists should use their bylines only in conjunction with material that they have written. Material from other sources incorporated in a story should be credited.

(6) To assure accuracy, so-called news communications or press releases should be substantiated.

(7) Expression of opinions, editorials or special articles devoted to the writer's own views should be clearly labeled as such and thus easily distinguished from the news reports.

(8) Because of the controversial nature of many food-related topics, food journalists accept the obligation to acknowledge opposing views on such issues.

PLEDGE: The Association of Food Journalists encourages observation of these standards by all news people. The Association further urges news media managements to support the decision by food journalists to uphold this code.

Section III Introduction

The field of journalism is undergoing a prolonged transformation akin to what might happen to a city in the throes of gentrification. New avenues and areas of media are under construction, while older sections slowly crumble and fear demolition. The mission for journalism education first involves envisioning the map and ambiance of the terrain to come. Then it must decide how to best acclimate existing inhabitants to that environment before recruiting the next generation of residents.

Journalism educators, by necessity, have become part of the effort to assess emerging trends in the media industry. In studies, like the one sponsored by the Annenberg Public Policy Center at the University of Pennsylvania (see the category Journalism White Papers on Changes in Education and Media), they join with others in the field to pinpoint daunting problems on the horizon and inherent failures that persist from the past. The members of the study also outline steps that should be taken to remedy these situations. Many of the solutions imply adjustments to the way journalism should be taught and the mindset new journalists must bring to their careers.

Another study in this section picks up where the Annenberg group leaves off. Improving the Education of Tomorrow's Journalists, funded by the Carnegie Corporation of New York, asks leaders in the industry to identify specifically what journalism schools should teach and how curriculum has to be amended. Despite all the changes to the profession, they place the highest priorities on traditional reporting and writing skills, and on the ethics of journalism.

A 1904 article by Joseph Pulitzer reinforces the notion that old journalism education priorities can still be relevant in the years to come. In "The College of Journalism," he defends the efficacy of graduate journalism education at a time before it existed. Ironically, some of the subjects he proposes journalism schools embrace—statistics, economics, journalism law—show up as cornerstones of newly revised curriculums around the country (see the category Schools of Journalism: Values and Curriculum). He also makes a strong case for the principles that underlie the current push for internships on all levels.

Of course, rapidly evolving technology has drastically changed both news reporting and delivery methods. This, in turn, has prompted even the most venerable journalism programs to tweak or revamp their curriculum on the fly. For these established schools, it becomes a balancing act between preserving the older elements of journalism that helped establish their reputations and the new wave innovations necessary to keep their graduates in the mix. In the meantime, a rash of completely new journalism programs have launched with concepts like conversion and beat specialization at the core of their curriculum. However, for all of journalism education, the real goal now is to help reinvent and energize all media and reporting. It is no longer enough to just try to keep up.

Volume Editor

Accreditation Standards in Journalism Education

Accrediting Council on Education in Journalism and Mass Communications (ACEJMC)—Accrediting Standards

Introduction

Accreditation is a process used across the United States for weighing academic quality in higher education. Instead of one national regulating entity, there are numerous accrediting agencies charged with assessing a wide range of institutions and programs—including those that concentrate on a single discipline or profession. The Accrediting Council on Education in Journalism and Mass Communications (ACEJMC) is the only organization specifically responsible for evaluating higher education in journalism that is focused on professional (pre-career) education. The council accredits about 100 of the roughly 400 journalism and mass communication degree programs in the country, many of the latter not seeking accreditation as they are rooted in broader liberal arts concerns and do not focus on pre-professional work.

In devising its latest Accrediting Standards for professional journalism and mass communications programs, the ACEJMC pushed certain key values and priorities. The organization has a stated mission for journalism education that includes preparing students with a definable body of knowledge, a clear system of inquiry, and appropriate scholarship and career training. The ACEJMC also puts great emphasis on journalism's commitment to diversity and inclusiveness in reporting and the educating of prospective journalists. As a result, programs are asked to document efforts to include women and representatives from diverse ethnic and racial groups in both the faculty and student body—and to expand the professional opportunities for these particular students.

The Accrediting Standards, however, do not mandate a specific curriculum or list of courses for all schools to adopt. There is also no single method of instruction prescribed for programs to follow. The ACEJMC Council puts great stock in protecting the "unique situation, mission and resources" that each program takes on. The council merely judges the program's efforts against the broad framework and standards it embraces for preparing students in the field.

The council openly supports the value of a liberal arts and sciences curriculum, as well as journalism-specific training courses, in its Accrediting Standards. The ACEJMC governing body also pays close attention to student services, professional and public service, assessment of learning outcomes, and resources, facilities and use of equipment. Yet, given the enormous technical advances in the general journalism and media environment, the Accrediting Standards for training students on new technology is not as rigorous as might be expected. This could be traced to mass communications programs placing less of an emphasis on the role of technology than journalism schools.

—Glenn Lewis
Volume Editor

ACEJMC Accrediting Standards

Preamble

Institutional uniqueness

The Accrediting Council does not define specific curricula, courses or methods of instruction. It recognizes that each institution has its unique situation, mission and resources, and this uniqueness is an asset to be safeguarded. The Council judges programs against the objectives that units and institutions set for themselves and against the standards that the Council sets forth for preparing students for professional careers in journalism and mass communications.

Format for each standard

Each begins with a statement of the basic principle of the standard.

Indicators

Units should demonstrate that they meet the expectations defined for each of the indicators. However, the site team may recommend a waiver of the expectations for any indicator if the unit provides a compelling reason for the waiver. In such cases, the team must provide justification in the site report for its decision as part of its discussion of the standard. Units requesting evaluation of their professional master's program(s) are expected to demonstrate how those graduate programs meet all appropriate indicators.

Visit teams will not specify compliance/non-compliance for each individual indicator, but will state judgments of compliance/non-compliance for each standard as is currently done.

Evidence

Each standard concludes with a list of various forms of documentation and evidence that the unit should include in its self-study report to demonstrate that it meets the expectations defined for indicators. The site team will supplement this evidence by inspection of the facilities and equipment, by observation of the activities of the unit, by meetings and interviews with university administrators and faculty from other units and with unit faculty, staff and students, and by calls to professionals who hire the unit's students as interns and full-time employees.

The list of evidence for each standard is only a guide to possible forms of evidence.

1. Mission, Governance and Administration

The policies and practices of the unit ensure that it has an effectively and fairly administered working and learning environment.

Indicators:

(a) The unit has a mission statement and engages in strategic or long-range planning that provides vision and direction for its future, identifies needs and resources for its mission and goals and is supported by university administration outside the unit. A professional graduate program must have a separate mission statement and designated administrative oversight for that program.

(b) The unit has policies and procedures for substantive faculty governance that ensure faculty oversight of educational policy and curriculum.

(c) The unit's administration provides effective leadership within the unit and effectively represents it in dealings with university administration outside the unit and constituencies external to the university.

(d) The institution and/or the unit defines and uses a process for selecting and evaluating its administrators.

(e) Faculty, staff and students have avenues to express concerns and have them addressed.

Evidence:

A mission statement

A strategic or long-range plan

Documents demonstrating administrative oversight for the professional graduate program

A faculty policy manual, handbook or other document specifying the roles of faculty in governance and the development of educational policy

Minutes of faculty meetings, committee meetings and reports

Assessment of unit administrator by faculty and by administration outside the unit

Files on searches and hiring decisions

Files on concerns and complaints

2. Curriculum and Instruction

The unit provides a curriculum and instruction that enable students to learn the knowledge, competencies and values the Council defines for preparing students to work in a diverse global and domestic society.

Professional Values and Competencies:

The Accrediting Council on Education in Journalism and Mass Communications requires that, irrespective of their particular specialization, all graduates should be aware of certain core values and competencies and be able to:

- understand and apply the principles and laws of freedom of speech and press, including the right to dissent, to monitor and criticize power, and to assemble and petition for redress of grievances;
- demonstrate an understanding of the history and role of professionals and institutions in shaping communications;
- demonstrate an understanding of the diversity of groups in a global society in relationship to communications;
- understand concepts and apply theories in the use and presentation of images and information;
- demonstrate an understanding of professional ethical principles and work ethically in pursuit of truth, accuracy, fairness and diversity;
- think critically, creatively and independently;
- conduct research and evaluate information by methods appropriate to the communications professions in which they work;
- write correctly and clearly in forms and styles appropriate for the communications professions, audiences and purposes they serve;
- critically evaluate their own work and that of others for accuracy and fairness, clarity, appropriate style and grammatical correctness;
- apply basic numerical and statistical concepts;
- apply tools and technologies appropriate for the communications professions in which they work.

Units requesting evaluation of a graduate program must also demonstrate how their master's graduates attain this additional core competency:

- contribute to knowledge appropriate to the communications professions in which they work.

Indicators:

(a) The unit requires that students take a minimum of 80 semester credit hours or 116 quarter credit hours outside of the unit and a minimum of 65 semester credit hours or 94 quarter credit hours in the liberal arts and sciences (as defined by the institution) outside of the unit. ACEJMC expects at least 95 percent of the graduating classes in the two academic years preceding an accreditation visit to meet this requirement.

ACEJMC requires each unit seeking initial accreditation to include in its self-study report the number of semester or quarter hours taken in non-journalism and mass communications and in liberal arts, sciences and social sciences by all members of each graduating class in the two academic years before an initial accreditation visit.

Units seeking re-accreditation must determine the percentage of students meeting the 80/65 or 116/94 requirement, but they are not required to provide a full census of classes.

(b) The unit provides a balance between theoretical and conceptual courses and professional skills courses to achieve the range of student competencies listed by the Council.

(c) Instruction is demanding and current; achievements in teaching and learning are recognized and valued.

(d) Student-faculty classroom ratios facilitate effective teaching and learning in all courses; a student-teacher ratio of 15–1 in skills and laboratory sections is strongly recommended and the ratio in each section should not exceed 20–1.

(e) The unit advocates and encourages opportunities for internship and other professional experiences outside the classroom and supervises and evaluates them when it awards academic credit.

Schools may award academic credit for internships in fields related to journalism and mass communications, but credit should not exceed one semester course (or its equivalent) if the internship is away from the institution, and, for the most part, supervised by media professionals rather than academics. Students may take up to two semester courses (or their equivalent) at an appropriate professional organization where the unit can show ongoing and extensive dual supervision by the unit's faculty and professionals. Students may take up to three semester courses (or their equivalent) at

a professional media outlet owned and operated by the institution where full-time faculty are in charge and where the primary function of the media outlet is to instruct students.

Evidence:

Student records and transcripts

Unit bulletins and brochures

Syllabi and other course materials

Records of teaching awards and citations, curricular and course development grants, attendance at teaching workshops, and publications and papers on teaching

Class rosters

Records and statistics on and evaluations of internships, with and without academic credit

For units requesting evaluation of a professional graduate program:

Indicator:

At least half of the required credit hours must be in professional skills courses that are appropriate to professional communication careers.

Evidence:

Course syllabi and other documents demonstrating that the unit has a professional graduate curriculum that prepares master's degree graduates for significant professional careers that provide leadership and influence.

Undergraduate student records and transcripts demonstrating student experience equivalent to liberal arts education.

3. Diversity and Inclusiveness

The unit has a diverse and inclusive program that serves and reflects society.

Indicators:

(a) The unit has a written plan for achieving an inclusive curriculum, a diverse faculty and student population, and a supportive climate for working and learning and for assessing progress toward achievement of the plan.

(b) The unit's curriculum fosters understanding of issues and perspectives that are inclusive in terms of gender, race, ethnicity and sexual orientation.

(c) The unit demonstrates effective efforts to recruit women and minority faculty and professional staff and provides an environment that supports their retention, progress and success.

(d) The unit demonstrates effective efforts to help recruit and retain a student population reflecting the diversity of the population eligible to enroll in institutions of higher education in the region or population it serves, with special attention to recruiting under-represented groups.

(e) The unit has a climate that is free of harassment and discrimination, accommodates the needs of those with disabilities, and values the contributions of all forms of diversity.

Accreditation site visit teams will apply this standard in compliance with applicable federal and state laws and regulations.

Evidence:

A written plan

Syllabi and other course materials

Records and statistics on faculty and staff hiring and on promotion and tenure decisions

Records and statistics on student recruitment, retention and graduation

Records on part-time and visiting faculty and speakers

4. Full-Time and Part-Time Faculty

The unit hires, supports and evaluates a capable faculty with a balance of academic and professional credentials appropriate for the unit's mission.

Indicators:

(a) The unit has written criteria for selecting and evaluating the performance of all full-time and part-time faculty and instructional staff.

(b) Full-time faculty have primary responsibility for teaching, research/creative activity and service.

(c) Credentials of the unit's faculty represent a balance of professional and scholarly experience and expertise kept current through faculty development opportunities, relationships with professional and scholarly associations, and appropriate supplementation of part-time and visiting faculty. Faculty teaching in the graduate program must meet

the criteria for graduate instruction at that university.

(d) The unit regularly evaluates instruction, using multiple measures that include student input.

(e) The faculty has respect on campus for its university citizenship and the quality of education that the unit provides.

Evidence:

Faculty and staff manuals or relevant policy procedural documents

Vitae for full-time and part-time faculty

Course evaluations and other methods of determining teaching effectiveness

Evaluation process for annual review of faculty contributions and performance

Search and hiring records

For units requesting evaluation of a professional graduate program:

Faculty vitae that demonstrate a clearly defined graduate faculty who meet the criteria for graduate instruction at that university.

5. Scholarship: Research, Creative and Professional Activity

With unit support, faculty members contribute to the advancement of scholarly and professional knowledge and engage in scholarship (research, creative and professional activity) that contributes to their development.

Indicators:

(a) The unit requires, supports and rewards faculty research, creative activity and/or professional activity.

(b) The unit specifies expectations for research, creative activity and/or professional activity in criteria for hiring, promotion and tenure.

(c) Evaluation criteria for promotion, tenure and merit recognition account for and acknowledge activities appropriate to faculty members' professional as well as scholarly specializations.

(d) Faculty members communicate the results of research, creative and/or professional activity to other scholars, educators and practitioners through presentations, productions, exhibitions, workshops and publications appropriate to the activity and to the mission of the unit and institution.

(e) The unit fosters a climate that supports intellectual curiosity, critical analysis and the expression of differing points of view.

Evidence:

Faculty guides or manuals on tenure and promotion

Records of sabbatical and other leaves, travel funds and grant support

Records on faculty promotion, tenure and other forms of recognition

Faculty vitae and unit reports on research and creative and professional activities

6. Student Services

The unit provides students with the support and services that promote learning and ensure timely completion of their program of study.

Indicators:

(a) Faculty and/or professional advising staff ensure that students are aware of unit and institutional requirements for graduation and receive career and academic advising.

(b) Faculty are available and accessible to students.

(c) The unit keeps students informed about the activities, requirements and policies of the unit.

(d) The unit and the institution provide students with extra-curricular activities and opportunities that are relevant to the curriculum and develop their professional as well as intellectual abilities and interests.

(e) The unit gathers, maintains and analyzes enrollment, retention, graduation rates and other aggregate information for improving student services and reducing barriers to student success.

Evidence:

Student records, transcripts and files

Advising guides, manuals, newsletters and internal communication

Statistics on enrollment, scholarships, retention and graduation

Examples of student media and information about student professional organizations

For units requesting evaluation of a professional graduate program:

Documents and records demonstrating that the graduate program has appropriate admissions and retention policies.

7. Resources, Facilities and Equipment

The unit plans for, seeks and receives adequate resources to fulfill and sustain its mission.

Indicators:

(a) The unit has a detailed annual budget for the allocation of its resources that is related to its long-range, strategic plan.

(b) The resources that the institution provides are fair in relation to those provided other units.

(c) The facilities of the unit enable and promote effective scholarship, teaching and learning.

(d) The institution and the unit provide faculty and students with equipment or access to equipment to support its curriculum and the research, creative and professional activities of the faculty.

(e) The institution and the unit provide sufficient library and information resources to support faculty and student research and professional development.

Evidence:

A detailed budget

Inspection tour of the library, facilities and equipment

8. Professional and Public Service

The unit advances journalism and mass communication professions and fulfills its obligations to its community, alumni and the greater public.

Indicators:

(a) The unit is actively engaged with alumni, professionals and professional associations to keep curriculum and teaching current and to promote the exchange of ideas.

(b) The unit provides leadership in the development of high standards of professional practice through such activities as offering continuing education, promoting professional ethics, evaluating professional performance and addressing communication issues of public consequence and concern.

(c) The unit contributes to the improvement of journalism and mass communication as academic disciplines by supporting the faculty's involvement in academic associations and related activities.

(d) The unit contributes to its communities through service projects, internship and job placements, and faculty involvement in civic activities related to journalism and mass communication.

(e) The unit supports scholastic journalism through such activities as faculty workshops, visiting lectures and critiques of student work.

Evidence:

Faculty vitae

Unit records, brochures and publications of public service activities related to its mission and strategic plan

Alumni newsletters, surveys, reunions and other activities

Travel and other support for faculty involvement in academic and professional organizations

Information about courses and services available to professionals and the public

9. Assessment of Learning Outcomes

The unit regularly assesses student learning and uses results to improve curriculum and instruction.

Indicators:

(a) The unit defines the goals for learning that students must achieve, including the "Professional Values and Competencies" of this Council. (See 2. Curriculum and Instruction.)

(b) The unit has a written assessment plan that uses multiple direct and indirect measures to assess student learning.

(c) The unit maintains contact with its alumni to assess their experiences in the professions and to gain feedback for improving curriculum and instruction.

(d) The unit includes members of journalism and mass communication professions in its assessment process.

(e) The unit collects and reports data from its assessment activities and uses the data to improve curriculum and instruction.

Evidence:

A written statement on competencies

A written assessment plan

Alumni newsletters, surveys, reunions and other activities

Records on information collected from multiple measures of assessment and on the application of this information to course development and improvement of teaching

For units requesting evaluation of a professional graduate program:

Outcomes appropriate to a professional graduate program could include: a professional project, thesis or comprehensive exam that demonstrates that graduate students have developed analytical and critical thinking abilities appropriate to the profession.

Schools of Journalism: Values and Curriculum

University of California, Berkeley, Graduate School of Journalism

Columbia University, The Journalism School

University of Georgia, The Grady College

University of Kansas, William Allen White School of Journalism and Mass Communications

University of Missouri–Columbia, Missouri School of Journalism

Northwestern University, Medill School of Journalism

Ohio University, E. W. Scripps School of Journalism

University of Oregon, School of Journalism and Communication

University of Southern California, Annenberg School for Communication

Introduction

There are more than 400 journalism-based degree programs around the country, undergraduate and graduate. The nine selected here fit a particular set of criteria designed to identify a representative group of the institutions offering master's programs in the field. These are the only schools of journalism—as opposed to departments or isolated programs—currently offering pre-professional masters programs accredited by the Accrediting Council on Education Journalism and Mass Communications (ACEJMC) under the latest standards put into play in 2005. (See the ACEJMC Accrediting Standards document in this section for specific accreditation requirements.)

All of these pre-professional programs set the tone for their efforts with a formal statement of mission, goals or coveted values. Some of these are just brief references to a school's broader purpose, beliefs or intent. For instance, Columbia emphasizes upholding "standards of excellence," Oregon promises to "prepare students for professional and leadership roles" throughout the industry, and the William Allen

White School at Kansas singles out the need to get students to "think critically and creatively." Other schools give more elaborate mission statements that spell out priorities related to teaching, service, ethical practices, diversity issues, and developing certain skill sets. The Grady College at Georgia is unique in making basic and applied research, related to "the media and their roles in and influence on society," a sizable component of its mission.

The curricula for the selected schools primarily reflect the need to respond to three pressing concerns. They all strive to address current ACEJMC Accrediting Standards, the perceived changes in the business of journalism and related practices, and the obligation to teach and sustain traditional reporting and writing techniques. Of course, in many instances the Accrediting Standards already pick up on the most recent innovations or issues in the field. As a result, most schools satisfy ACEJMC curriculum mandates and industry demands by providing coursework in areas like new research tools or "information literacy," online or interactive reporting, and ethics and legal issues, among others. And all put great emphasis on nuts-and-bolts courses in turning out quality hard news and feature pieces.

Most of these schools have also picked up the tendency for journalists to eventually specialize in some way. So students can often opt for coursework tied to a particular medium (like broadcast journalism), form of writing (say investigative or literary nonfiction), or subject area (such as business/economics or international reporting). Some schools offer two or more totally separate kinds of master's degrees related to journalism or media. The Missouri School of Journalism, known widely for excellence in photojournalism graduate work, takes the whole process a step further. It offers a number of masters options based on desired subject or form, level of experience, and willingness to work in converged media.

Finally, it should be emphasized that these schools represent but one small part of the journalism education scene. There are a host of graduate programs (both masters and doctoral—the latter being research based and thus not formally accredited) that focus on larger liberal arts and research emphases and thus do not seek accreditation. And there are literally hundreds of undergraduate programs—easily 300 of them—offering quality education despite their lack of formal field-specific accreditation.

—Glenn Lewis
Volume Editor

University of California, Berkeley, Graduate School of Journalism

Goals Statement:

The goal of the Graduate School of Journalism is to produce professional print, broadcast, and new media journalists who move on to positions of leadership and influence. The two-year Master of Journalism (M.J.) program provides intensive training in journalism skills and teaches the traditions and principles of the field.

Berkeley Graduate School of Journalism. "Program." http://journalism.berkeley.edu/program/overview.html (accessed December 21, 2008).

Degree Requirements

J200 / Reporting the News

J211 / Reporting the News Lab

Journalism 200, Reporting the News, is a foundation course that meets for six hours each week and demands at least 15 hours of news reporting outside of the classroom. The heavy workload indicates the importance attached to the class. J200 is the boot camp prerequisite to all advanced reporting and broadcast courses. It is the core of the journalism school curriculum and immerses students in the basics of reporting fundamental to every journalism medium—print, broadcast or digital. Each J200 instructor tailors his or her section of 10–14 students to a particular style or emphasis, but the goal is that all first-year students master basic elements of the reporting and writing craft and obtain published clips of work from their J200 section. The course runs concurrently with Reporting the News Lab (J211), which instructs students in the use of electronic reporting resources from Web, database, and public records—skills they apply to their J200 and other assignments.

J255 / Law and Ethics

This course is an introduction to legal and ethical conflicts faced by working reporters.

Using case studies, in-class argument, readings and guest lectures, the course examines some of the murkier conflicts that don't necessarily make it to court but nevertheless force difficult newsroom decision-making. The course is co-taught by a practicing lawyer who specializes in First Amendment law and a regular faculty member.

J215 / Introduction to Multimedia Reporting

This class teaches the fundamentals of using digital audio, video and photo equipment, editing digital video, audio and photographs and creating multimedia Web sites. The class is designed to expose students to what it's like to report in an environment where stories can be reported and told using a variety of different media. While primarily for students interested in new media and online publishing, the class will be valuable to any student who wants to better prepare for the growing convergence of broadcast, print and Web media. Instruction includes using digital video cameras; editing digital video with iMovie and FinalCut Pro; doing voiceovers and stand-ups for video and understanding professional standards in broadcast journalism; using minidisc digital audio recorders; editing digital audio with ProTools; using digital photo cameras; editing digital photos with PhotoShop; using Flash to create photo slide shows with audio, and creating multimedia Web sites using Dreamweaver. An instructor who specializes in each particular form of media will teach that segment of the class. Students work as teams reporting on local feature story projects throughout the class and then produce multimedia Web sites on their projects by the end of the semester.

J294 / Master's Project Seminar

J-School culminates in a final master's project, a capstone of each student's experience at Berkeley. Students submit an in-depth reporting project of professional quality prior to graduation. Newspaper series, magazine articles, long-form pieces for radio, TV, new media, or photography or a documentary film can meet the requirement. During the second year, students meet regularly with a faculty advisor to discuss their progress. Many of our students publish or broadcast their projects in major media outlets.

J297 / Internship

A cornerstone of our program is ensuring that students gain professional experience. In J297, students receive two units of credit for a summer internship between their first and second year, or during the academic year. Students in our program have interned at major newspapers, TV and radio stations and new media outlets, including the The Washington Post, The New York Times, The Sacramento Bee, the San Jose Mercury News, the Anchorage Daily News, NPR, MarketWatch.com, ABC and WIRED magazine. Our career services director and permanent and visiting faculty assist students in finding a challenging internship in print, broadcast or new media. News organizations provide written evaluations of all student interns, providing useful feedback. Students also write reports on their internship experiences and share this information with their colleagues.

Additional Requirements

The master of journalism degree requires 36 semester units of graduate or upper-division courses and submission of a master's project. A minimum of 24 units must be earned in the Graduate School of Journalism. One upper-division course is required in another department, and up to 12 units of credit may be earned in graduate or upper-division courses in other departments on campus. In the spring of the first year, and in both semesters of the second year, each student must enroll in at least one advanced reporting course. To satisfy our cross-media requirement, all students must take at least one course in a medium outside of the primary area of interest. All students must enroll full-time (at least twelve units each semester in most cases) and must fulfill the four-semester residency requirement.

Berkeley Graduate School of Journalism. "Program Degree Requirements." http://journalism.berkeley.edu/program/curriculum.html (accessed December 21, 2008).

Columbia University, The Journalism School

Mission Statement:

Educating new generations of journalists and upholding the standards of journalistic excellence has been our mission since we opened nearly a century ago.

❖ ❖ ❖

University of Georgia, The Grady College

Mission Statement:

The mission of the Grady College:

The Grady College serves the state, nation and world by: 1) developing and disseminating knowledge about communication institutions and the processes and role of mass communication in society; 2) preparing students to be critical thinkers and outstanding communication professionals; and 3) creating and transferring knowledge about mass communication that informs and serves the public, communication professionals, academics, and policy makers.

1. Teaching

The College provides instruction at undergraduate and graduate levels to prepare students for careers in advertising, broadcast news, magazines, newspapers, news services, photojournalism, publication management, public relations, telecommunications, and new media. Teachers help students to think critically about the media and understand the roles and impact they have in society, the history of mass media, and how to deal with ethical and legal questions as well as help them learn how to gather, analyze, and present information in a clear, concise way through various media. The role of a free and responsible press in a democracy characterized by diversity is emphasized.

Degrees offered

- bachelor of arts (ABJ)
- master of arts (MA)
- doctorate in mass communication (Ph.D.)

The ABJ degree is intended primarily to prepare practitioners for employment in the mass media. The MA and Ph.D. degrees also help students prepare for positions in mass media research and teaching.

2. Research

Through basic and applied research, the College seeks to raise and answer questions related to the media and their roles in and influence on society. This research is facilitated by these Grady College units;

- James M. Cox Jr. Center for International Mass Communication Training and Research
- James M. Cox Jr. Institute for Newspaper Management Studies
- Dowden Center for New Media
- Michael J. Faherty Broadcast Management Lab

3. Service

This College provides myriad services for the mass media and the public through its...

- Office of Public Service and Outreach
- Centers and Institutes
- Faculty working on individual projects

Beneficiaries of service programs include the public, the mass media, and students from elementary grades through college.

Grady College, The University of Georgia. "Mission." http://www.grady.uga.edu/about_grady.php?al1=About+Grady&al2=Mission&page=Mission.inc.php (accessed December 21, 2008). Reprinted with permission.

Curriculum:

MA Program Requirements

The precise requirements for the MA thesis or MA non-thesis vary according to the student's area of concentration. A minimum of 30 semester credits (9 courses plus thesis) are required to complete the MA thesis program. A minimum of 33 semester credits (11 courses) are required to complete the MA non-thesis program. In addition, department-specific requirements for the areas of professional concentration must be successfully completed for the MA non-thesis.

If a student has not taken and passed a statistics course prior to Grady graduate study, they must successfully complete an approved statistics course (with a grade of C or better) by the end of the first year of study. Otherwise, the student will not be permitted to take any more course work until the statistic requirement is fulfilled.

General Requirements

All students are subject to the following general degree requirements.

To receive the MA thesis degree, a student must:

… complete an integrated program of study of at least 27 semester hours (9 courses) of graduate study.

… write and defend a thesis for a minimum of 3 semester hours (1 course) of graduate credit.

… complete at least 5 courses (15 hours) numbered 8000 or higher, including JRMC 8000 (Proseminar in Mass Communication) and JRMC 8010 (Research Methodology in Mass Communication).

… complete 2 or 3 graduate courses (6/9 hours) outside the Grady College related to the area of concentration.

… achieve a 3.0 GPA (B) in all graduate studies.

… complete all degree requirements within six years of registering for courses approved for the program of study, including those transferred from another institution.

… enroll for 3 hours of credit in JRMC 7300 the semester in which the thesis is defended and submitted.

To receive the MA non-thesis degree, a student must:

… complete an integrated program of study of at least 33 semester hours (11 courses) of graduate study.

… complete at least 5 courses (15 hours) numbered 8000 or higher, including JRMC 8000 (Proseminar in Mass Communication) and JRMC 8010 (Research Methodology in Mass Communicaiton).

… complete 2 or 3 graduate courses (6/9 hours) outside the Grady college related to the area of concentration.

… achieve a 3.0 GPA (B) in all graduate studies.

… pass a comprehensive exam covering the program of study; not to be taken before the final semester of a student's program.

… complete all degree requirements within six years of registering for courses approved for the program of study, including those transferred from another institution.

Course Requirements

Core Course Requirements (6 semester hours). All entering MA students are required to take JRMC 8000 (Proseminar in Mass Communication) and JRMC 8010 (Research Methodology in Mass Communication).

Area of Concentration. MA thesis students are required to complete 4 or 5 courses in their area of concentration (12 or 15 semester hours) and at least 3 hours of thesis credit. MA non-thesis students are required to complete 6 or 7 area courses (18 to 21 semester hours).

Cognate Area (6 or 9 semester hours). All MA students must complete 2 or 3 courses from graduate courses offered outside of the Grady

College. The courses must complement the designated area of concentration.

There is no foreign language requirement for the MA degree. Additional Graduate School requirements are outlined in the *Graduate Bulletin*.

Requirements of the Areas of Concentration

MA thesis and non-thesis students with an advertising concentration must complete:

… JRMC 8100 Advertising and Communication Management, JRMC 8110 Advertising Media Planning, and JRMC 8120 Advertising and Public Relations Research.

… Download a MA thesis option Program Planning Form: Advertising Concentration *

… Download a MA non-thesis option Program Planning Form: Advertising Concentration *

MA thesis students with a journalism concentration must complete:

… one course from among, JRMC 9020 Quantitative Research in Mass Communication, JRMC 9030 Critical, Cultural & Naturalistic Approaches to Mass Communication, and JRMC 9040 Historical Research in Mass Communication.

… two courses from among JRMC 8020 Public Opinion, JRMC 8030 Mass Communication and Society, JRMC 8040 International Mass Communication, JRMC 8050 Research and Directed Readings in Mass Communication, JRMC 8350 Special Topics in Journalism, and JRMC 9050 Mass Communication Law.

… two courses from among the split-level graduate courses offered by the Department of Journalism.

… Download a MA thesis Program Planning Form: Journalism Concentration *

MA non-thesis students with a journalism concentration must complete:

… three or four courses from among, JRMC 8020 Public Opinion, JRMC 8030 Mass Communication and Society, JRMC 8040 International Mass Communication, JRMC 8050 Research and Directed Readings in Mass Communication, JRMC 8350 Special Topics in Journalism, JRMC 8365 Media Economics, and JRMC 9050 Mass Communication Law.

… three or four courses from among the split-level graduate courses offered by the Department of Journalism.

… pass a comprehensive examination. The comprehensive exam is not to be taken before the final semester of the student's program. At least one member of the comprehensive exam committee must be a member of the graduate faculty.

… Download a MA non-thesis Program Planning Form: Journalism Concentration *

MA thesis students with a public relations concentration must complete:

… JRMC 8140 Public Relations Management, JRMC 8150 Public Relations Theory, and ADPR 7950 Public Relations Campaigns.

… Download a MA thesis Program Planning Form: Public Relations Concentration *

MA non-thesis students with a public relations concentration must complete:

JRMC 8140 Public Relations Management, JRMC 8150 Public Relations Theory, JRMC 8020 Public Opinion, and ADPR 7950 Public Relations Campaigns.

… Download a MA non-thesis Program Planning Form: Public Relations Concentration *

MA thesis students with a telecommunications concentration must complete:

… three courses from among, JRMC 8200 Telecommunications Management, JRMC 8210 Telecommunications Policy, JRMC 8220 Telecommunications Programming and Criticism, JRMC 8230 Emerging Telecommunications Technologies, and JRMC 8240 Special Topics in Telecommunications.

… Download a MA thesis Program Planning Form: Telecommunications Concentration *

MA non-thesis students with a telecommunications concentration must complete:

… three JRMC seminars from among those listed above in the MA concentration.

… three JRMC or TELE graduate level electives.

… 3 hours of graduate credit in telecommunications internships or projects.

… Download a MA non-thesis Program Planning Form: Telecommunications Concentration *

The MA non-thesis concentration in telecommunications is designed for students who are seeking to prepare themselves for a higher level of responsibility in the field. The goal of the concentrations is to develop critical thinking and professional problem-solving skills, while enhancing understanding of the forces that shape media industries and the effects of media on society. The focus is on the development of advanced professional skills in project planning and development management, new technologies, and industry research analysis.

MA thesis students with a mass media studies concentration must complete:

… 12 to 15 hours of relevant Grady College graduate courses

… Download a MA thesis Program Planning Form: Mass Media Studies Concentration *

* All Planning Forms are in Adobe .PDF format. While most computers will read this format, if needed you can download a free .PDF reader from www.adobe.com.

Statistics Requirement

A basic statistics course is required of all graduate students in the Grady College. If the entering MA student has not completed the statistics requirement, an undergraduate or graduate course in statistics must be taken prior to the completion of more than 6 hours of graduate-level courses.

Statistics 6210 may be taken to fulfill the requirement and can be counted as 3 hours of course credit required outside of the Grady College.

Prerequisite Requirements

Students without sufficient background in their areas of concentration are required to take the following undergraduate prerequisite courses:

Advertising Concentration (6 hours)

ADPR 3100 Principles of Advertising

ADPR 3110 Advertising Message Strategy

Journalism Concentration (12 hours)

JOUR 3410 News Writing and Reporting

JOUR 3510 Editing and Makeup

JOUR 5040 Law of Mass Communication

and either JOUR 5300 Public Affairs Reporting

or JOUR 5580 Magazine Article Writing

Public Relations Concentration (9 hours)

ADPR 3520 Graphic Communication

JRMC 7940 Public Relations Foundations (if student has not had courses equivalent to ADPR 3850 and ADPR 5920)

Telecommunications Concentration (9 hours)

... three of the following courses:

TELE 3010 Introduction to Telecommunications

TELE 3210 Introduction to Production Basics

TELE 3310 Media Programming and Management

TELE 3410 Media Research and Theory

Mass Media Studies Concentration (9 hours)

... 9 semester hours of relevant Grady College undergraduate courses

Prerequisite requirements are determined by the student's graduate advisor/major professor upon evaluation of transcripts. Prerequisite requirements must be satisfied prior to the completion of more than 6 hours of graduate courses. A minimum GPA of 3.0 in all required prerequisite courses taken at UGA must be maintained, including an undergraduate course taken to satisfy the statistics requirement.

The Grady College, University of Georgia. "Master's Program." http://www.grady.uga.edu/graduate_studies.php?al1=Graduate+Studies&al2=Degrees&al3=Masters+Program&page=grad_degrees_masters.inc.php (accessed December 21, 2008). Reprinted with permission.

❖ ❖ ❖

University of Kansas, William Allen White School of Journalism and Mass Communications

Mission Statement:

The mission of the William Allen White School of Journalism and Mass Communications is to teach students to think critically and creatively while preparing them for careers in journalism, mass communications and related fields and for graduate study.

Our Commitments:

Graduates of the School will:

- Appreciate the value of freedom of expression and its importance in society.
- Be able to critically analyze mass media.
- Have an ethical framework for the practice of journalism and mass communication.
- Demonstrate an understanding of the value of a diverse society, a diverse work place and the importance of reflecting that diversity in mass media.
- Demonstrate an understanding of the impact of changing media technologies on society.
- Demonstrate effective production and presentation skills for the media.
- Demonstrate an understanding of the importance of research for adding new knowledge and an ability to employ research techniques for analysis and interpretation.
- Demonstrate an understanding of how communications organizations function and the important management issues they face.

Adopted by a unanimous vote of the faculty on Sept. 3, 1998.

William Allen White School of Journalism and Mass Communications, University of Kansas. "Mission & Values Statements, Plagiarism Policy." http://www.journalism.ku.edu/school/msnvalues.shtml (accessed December 21, 2008). Reprinted with permission.

Curriculum:

Graduate Program at a Glance:

* Note: Individual courses may have additional prerequisites.

News and Information (36 hrs), Strategic Communications (36 hrs) and Joint Degree in Journalism and Law (info.)	*Marketing Communications (36 hrs)*
Basic Skills (unless waived) *These course credits do not count toward the 36-hour requirement.* -445 MM Writing & Production -419 MM Editing	Marketing or media-related experience: 2 years
Core Courses (12 hrs) -801 Res I: Theory (Fall) -802 Res II: Methods (Spg) -803 Survey of Mass Media & Pop Cult. -618 First Amendment and Society	Core Courses (9 hrs) -820 Marketing Fundamentals (Fall) -828 Financial Fundamentals -829 Marketing Communications Research (Spring)
Professional Courses (15 hrs) JOUR 500 to JOUR 797	Professional Courses (18 hrs) 6 hrs minimum in each area

(Continued)

Students in News and Information must include at least one course designated as advanced media.* Students in Strategic Communications must include JOUR 676 Strategic Campaigns.* All students are strongly advised to take courses in media management. Optional: A second seminar will fulfill one of the professional course requirements	Management -822 Database Management -826 Innovation in Mgmt of Comms Marketing -821 Integrated Marketing -823 Branding -825 Relationship Marketing Development -819 Writing for Mrktg Comms -824 Creative Process -827 Marketing Ethics Optional: A second seminar will fulfill a second course requirement in an appropriate area above.
Advanced Courses (09 hrs) -840 Seminar in _____ (available at KUEC or Lawrence) -898 Master's Research * 24 hrs -899 Project/Thesis * sat. comp. 898	Advanced Courses (09 hrs) -840 Seminar in _____ (available at KUEC or Lawrence) -898 Master's Research * 24 hrs -899 Project/Thesis * sat. comp. 898
* Indicates a prerequisite	* Indicates a prerequisite

Graduate Degree Requirements (All Courses of Study):

All Journalism master's candidates must complete 36 graduate credit hours with at least a B (3.0) average. In addition, students must complete Core Course requirements, Professional Course requirements and Advanced Course requirements.

Core Course Requirements: The core graduate courses help student develop research and critical thinking skills.

Professional Course Requirements: Those who hold the master's degree from KU are expected to be proficient as professionals. This block of courses prepares students for these tasks.

Advanced Course Requirements: A student must elect to complete a project or thesis. Seminars (at least one is required) on topics of current research or professional practice help students explore and learn to present research findings.

Final General Examination: The student's thesis or project committee administers the Master's final general examination during the semester of the student's final enrollment in course work and when the project or thesis has been substantially completed. A defense of the thesis or project does not take the place of the required general examination in the major field.

Enrollment Requirements after Completing Course Requirements: A student must enroll for at least 2 hours of credit each semester, excluding summer session, while working on the thesis or project. A student completing a project or thesis must be continuously enrolled, excluding summer session, until the project or thesis has been completed and approved. A maximum of 6 credit hours for Jour 898 and Jour 899 may be applied toward the 36 credit hours required for graduation. A student must complete the master's degree program within seven years of admission.

Enrollment in Elective Courses Outside the School: Up to 6 credit hours of course work may be completed outside the School, with the approval of the graduate director or graduate committee. Students who wish to take a course or courses outside the School must have permission from both the instructor of the course and from the School. The student should submit a written proposal to the Graduate Director and should indicate how the course contributes to her/his master's program.

University of Missouri–Columbia, Missouri School of Journalism

Mission Statement:

The missions of the Missouri School of Journalism, as defined by the faculty, are:

1. To teach students the principles and techniques of journalism, which we define as a current, reasoned reflection, in print or telecommunications, of society's events, needs and values. Our teaching emphasis will be on clear thinking, good writing and effective presentation, which will help students attain the standards of excellence articulated in Walter Williams' Journalist's Creed - especially "that the supreme test of good journalism is the measure of its public service." We must be leaders in teaching not only what the profession of journalism is, but also what it should be. We must prepare students not only for careers but also contribute to their development as ethical and productive citizens. We must educate the heart as well as the mind.
2. To serve, improve and provide leadership to both university and the journalism, telecommunications and advertising professions through a variety of activities and service such as workshops, publications, industry service units, award competitions, consulting, research plus university and professional committee work. We must be leaders in helping journalism professionals redefine their missions, goals and responsibilities so they can serve their ever-changing communities more effectively. We must be leaders in helping educators to expand their definition of journalism to include a wide range of academic subjects from political science to psychology, from literature to computer science, and from aesthetics to business, so that journalism can be recognized and appreciated for its breadth, richness and inextricable relationship to the liberal arts.
3. To create for the students, faculty, administration and staff of the School of Journalism a challenging, intellectually stimulating, professionally rewarding, cooperative, participative, secure, supportive and collegial environment that encourages risk taking and the creation of new knowledge through research and creative activity. Also, to create and maintain an environment in which academic freedom is protected with the same vigor as truth.
4. To be sensitive and responsive to the needs, concerns and interest of our multiple stakeholders: students, parents, faculty administrators, the curators, staff, alumni, professionals, media, potential employers of students, supporters, suppliers, government, educators and community.
5. To maintain, enhance and promote the reputation of the School of Journalism. Fundamental to the School's character and its heritage as the world's first School of Journalism is its professional orientation. We believe students learn best by doing, whether in the practice of a craft, the conduct of research or the creation of new ideas. Thus the school's media, laboratories and research operations are an integral part of the school's curriculum and the student's learning process. Our media must be at the forefront of change and excellence if we expect our students to be the same.

Curriculum:

Curricular Models

These are suggested curricula for specialization in the various areas of journalism. It should be noted that although 37 credits are required for graduation, some of the models suggest one or two additional credits. These are not requirements but suggestions. The University requires at least half of a graduate student's course work to be in 8000-level courses. Courses 4000-level and below DO NOT carry graduate cred it.

Advertising/Strategic Communication Models

Advertising Model

Cr. Hrs.

Program Core 12
_____ 7200 Principles of Strategic Communication (3)
_____ 8000 Mass Media Seminar (3)
_____ 8006 Quantitative Research Methods or 8008 Qualitative Research Methods I (3)

One of the following four courses:
_____ 8026 Philosophy of Journalism (3)
_____ 8030 History of Mass Media (3)
_____ 8038 Seminar in Communications Law (3)
_____ 8080 Media Ethics (3)

Advertising Core 15

_____ 7206 Strategic Writing I (3)
_____ 7226 Strategic Design and Visuals I (3)
_____ 7236 Psychology of Advertising (3)
_____ 7248 Media Strategy and Planning (3)
_____ 7970 Strategic Campaigns (3)

Electives 6
Suggested Courses:
7208 Strategic Writing II (3)
7218 Advanced Media Sales (3)
7228 Strategic Design and Visuals II (3)
7238 Broadcasting Advertising (3)
7240 Direct and Mail Order Advertising (2)
7250 Strategic Communication Management (3)
7256 Public Relations (3)
7706 The Community Newspaper (3)
7952 Strategic Communication Research (3)

Capstone Level 10
_____ *Thesis*: 8100 MA Thesis Seminar (1) and 8090 Research (9)
_____ *Professional Project*: 8098 MA Project Seminar (1) and 8190 Area Problem (9)

Total Suggested for Graduation 42–43

The University requires at least half of a graduate student's course work to be in 8000-level courses. Courses 4000-level and below DO NOT carry graduate credit.

Strategic Communication Model

Cr. Hrs.

Program Core 11–12
_____ 7200 Principles of Strategic Communication (3)
_____ 8000 Mass Media Seminar (3)
_____ 8008 Qualitative Research Methods I or an advanced quantitative methods course (3)
One of the following four courses:
_____ 8026 Philosophy of Journalism (3)
_____ 8030 History of Mass Media (3)
_____ 8038 Seminar in Communications Law (3)
_____ 8080 Media Ethics (3)

Strategic Communication Core 6
_____ 8020 Principles & Tools in Strategic Communication Planning (3)
_____ 8018 Strategic Communication Research II (3)

Electives 12
Suggested elective areas:
Audience or consumer behavior
Management
Internship

Capstone Level 10
_____ *Thesis*: 8100 MA Thesis Seminar (1) and 8090 Research (9)
_____ *Professional Project*: 8098 MA Project Seminar (1) and 8190 Area Problem (9)

Total Suggested for Graduation 39–40

Convergence Models

The University requires at least half of a graduate student's course work to be in 8000-level courses. Courses 4000-level and below DO NOT carry graduate credit.

Convergence Model for Students with No Significant Media Experience

Cr. Hrs.

Program Core 9
_____ 8000 Mass Media Seminar (3)
_____ 8006 Quantitative Research Methods OR 8008 Qualitative Research Methods (3)

One of the following four courses:
_____ 8026 Philosophy of Journalism (3)
_____ 8030 History of Mass Media (3)
_____ 8038 Seminar in Communications Law (3)
_____ 8080 Media Ethics (3)

Convergence Core 12
_____ 0900 News Practicum (3) (no graduate credit)
_____ 7802 Fundamentals of TV, Radio and Photojournalism (3)
_____ 7804 Convergence Reporting (3)
_____ 7806 Convergence Editing & Producing (3)

*In addition, students must demonstrate basic competency in web design and publishing through an assessment or a not-for-credit boot camp.

Concentration 6

Available concentrations as of January 2006 include Information Graphics, International Journalism, Investigative Reporting, Online Journalism, Photojournalism, Print Reporting, Print Editing, Print Design, Television-Radio Reporting, and Television News Producing. See the Concentrations List for details. Or you may create a customized Concentration with faculty advisor's and Assoc. Dean's signature

Capstone Level 10
_____ *Thesis*: 8100 MA Thesis Seminar (1) and 8090 Research (9)
_____ *Professional Project*: 8098 MA Project Seminar (1) and 8190 Area Problem (9)

Total Suggested for Graduation 37

The University requires at least half of a graduate student's course work to be in 8000-level courses. Courses 4000-level and below DO NOT carry graduate credit.

Convergence Model for Students with Significant Experience in Strategic Communications

Cr. Hrs.

Program Core 9
_____ 8000 Mass Media Seminar (3)
_____ 8006 Quantitative Research Methods OR 8008 Qualitative Research Methods (3)
One of the following four courses:
_____ 8026 Philosophy of Journalism (3)
_____ 8030 History of Mass Media (3)
_____ 8038 Seminar in Communications Law (3)
_____ 8080 Media Ethics (3)

Convergence Core..... 12
_____ 0900 News Practicum (3) (no graduate credit)
_____ 7802 Fundamentals of TV, Radio and Photojournalism (3)
_____ 7804 Convergence Reporting (3)
_____ 7806 Convergence Editing & Producing (3)
*In addition, students must demonstrate basic competency in web design and publishing through an assessment or a not-for-credit boot camp.

Concentration 6

Should be in area outside their prior field
Available concentrations as of January 2006 include Information Graphics, International Journalism, Investigative Reporting, Online Journalism, Photojournalism, Print Reporting, Print Editing, Print Design, Television-Radio Reporting, and Television News Producing. See the Concentrations List for details.

Capstone Level 10
_____ *Thesis*: 8100 MA Thesis Seminar (1) and 8090 Research (9)
_____ *Professional Project*: 8098 MA Project Seminar (1) and 8190 Area Problem (9)

Total Suggested for Graduation.....37

The University requires at least half of a graduate student's course work to be in 8000-level courses. Courses 4000-level and below DO NOT carry graduate credit.

Convergence Model for Students with Significant Experience as a Broadcast Journalist

Cr. Hrs.

Program Core **9**
_____ 8000 Mass Media Seminar (3)
_____ 8006 Quantitative Research Methods OR 8008 Qualitative Research Methods I (3)
One of the following four courses:
_____ 8026 Philosophy of Journalism (3)
_____ 8030 History of Mass Media (3)
_____ 8038 Seminar in Communications Law (3)
_____ 8080 Media Ethics (3)

Convergence Core **10**
_____ 0900 News Practicum (3) (no graduate credit)
_____ 7802 Fundamentals of TV, Radio and Photojournalism (1) photo lectures/assignments only
_____ 7804 Convergence Reporting (3)
_____ 7806 Convergence Editing & Producing (3)
*In addition, students must demonstrate basic competency in web design and publishing through an assessment or a not-for-credit boot camp.

Concentration **6**
Should be in area outside their prior field
Available concentrations as of January 2006 include Information Graphics, International Journalism, Investigative Reporting, Online Journalism, Photojournalism, Print Reporting, Print Editing, Print Design, Television-Radio Reporting, and Television News Producing. See the Concentrations List for details.

Electives **2**

Capstone Level **10**
_____ *Thesis*: 8100 MA Thesis Seminar (1) and 8090 Research (9)
_____ *Professional Project*: 8098 MA Project Seminar (1) and 8190 Area Problem (9)

Total Suggested for Graduation **37**

The University requires at least half of a graduate student's course work to be in 8000-level courses. Courses 4000-level and below DO NOT carry graduate credit.

Convergence Model for Students With Significant Experience as a Print Reporter/Editor

Cr. Hrs.

Program Core **9**
_____ 8000 Mass Media Seminar (3)
_____ 8006 Quantitative Research Methods OR 8008 Qualitative Research Methods I (3)
One of the following four courses:
_____ 8026 Philosophy of Journalism (3)
_____ 8030 History of Mass Media (3)
_____ 8038 Seminar in Communications Law (3)
_____ 8080 Media Ethics (3)

Convergence Core 12
_____ 7802 Fundamentals of TV, Radio and Photojournalism (3)
_____ 7804 Convergence Reporting (3)
_____ 7806 Convergence Editing & Producing (3)
*In addition, students must demonstrate basic competency in web design and publishing through an assessment or a not-for-credit boot camp.

Concentration 6
Should be in area outside their prior field
Available concentrations as of January 2006 include Information Graphics, International Journalism, Investigative Reporting, Online Journalism, Photojournalism, Print Reporting, Print Editing, Print Design, Television-Radio Reporting, and Television News Producing. See the Concentrations List for details.

Capstone Level 10
_____ *Thesis*: 8100 MA Thesis Seminar (1) and 8090 Research (9)
_____ *Professional Project*: 8098 MA Project Seminar (1) and 8190 Area Problem (9)

Total Suggested for Graduation.....37

The University requires at least half of a graduate student's course work to be in 8000-level courses. Courses 4000-level and below DO NOT carry graduate credit.

Convergence Model for Students with Significant Experience as a Photojournalist

Cr. Hrs.

Program Core..... 9
_____ 8000 Mass Media Seminar (3)
_____ 8006 Quantitative Research Methods OR 8008 Qualitative Research Methods (3)
One of the following four courses:
_____ 8026 Philosophy of Journalism (3)
_____ 8030 History of Mass Media (3)
_____ 8038 Seminar in Communications Law (3)
_____ 8080 Media Ethics (3)

Convergence Core 11
_____ 0900 News Practicum (3) (no graduate credit)
_____ 7802 Fundamentals of TV, Radio and Photojournalism (2) broadcast lectures/assignments only
_____ 7804 Convergence Reporting (3)
_____ 7806 Convergence Editing & Producing (3)
_____ 7992 Reporting, Editing and Marketing Converged Media (3)
*In addition, students must demonstrate basic competency in web design and publishing through an assessment or a not-for-credit boot camp.

Concentration..... 6
Should be in area outside their prior field
Available concentrations as of January 2006 include Information Graphics, International Journalism, Investigative Reporting, Online Journalism, Photojournalism, Print Reporting, Print Editing, Print Design, Television-Radio Reporting, and Television News Producing. See the Concentrations List for details.

Capstone Level 10
_____ *Thesis*: 8100 MA Thesis Seminar (1) and 8090 Research (9)
_____ *Professional Project*: 8098 MA Project Seminar (1) and 8190 Area Problem (9)

Total Suggested for Graduation..... 36

Convergence Concentrations

The prerequisite for each concentration is Convergence Reporting or advisor's consent.

Information Graphics
_____ 7430 Computer Assisted Reporting
_____ 7508 Information Graphics

International Journalism
_____ 7650 International Issues Reporting
And one of the following:
_____ 7656 International News Media Systems
_____ 7658 International Journalism
_____ 7660 Media Forces Shaping the European Union
_____ 7050 Communications Practice with an advisor-approved international focus

Investigative Reporting
_____ 7430 Computer Assisted Reporting
_____ 7436 Investigative Reporting

Online Journalism
_____ 7700 Online Journalism OR 7974 Advanced Internet Applications for Radio-TV News
And one of the following:
_____ 7430 Computer Assisted Reporting OR 7436 Investigative Reporting
_____ 7566 Electronic Photojournalism
_____ 7508 Information Graphics

Photojournalism
_____ 7550 Basic Press Photography & Picture Editing
_____ 7566 Electronic Photojournalism

Print Reporting Track
_____ 7410 Intermediate Writing
And one of the following:
_____ 7106 Media & Art Criticism
_____ 7416 Science and Environmental Writing
_____ 7418 Critical Reviewing
_____ 7420 Editorial Writing
_____ 7426 Religion Reporting and Writing
_____ 7430 Computer assisted Reporting
_____ 7436 Investigative Reporting
_____ 7438 Business Reporting
_____ 7460 Advanced Newspaper Reporting
_____ 7650 International Issues Reporting

Print Editing Track
_____ 7400 Editing
_____ 7406 Newspaper Editing

Print Design
_____ 7506 Magazine Design
_____ 7500 Advanced Newspaper Editing and Design

Television-Radio Reporting
_____ 7306 Broadcast II
_____ 7308 Broadcast III

Television News Producing
_____ 7306 Broadcast News II
_____ 7310 News Producing

Print Models

Magazine

The University requires at least half of a graduate student's course work to be in 8000-level courses. Courses 4000-level and below DO NOT carry graduate credit.

Magazine Design

This model is for students who want to focus on designing magazines, from small newsletters to consumer magazines. The model is designed to provide the skills, theoretical framework and decision-making/management techniques important to a successful designer/art director. The model provides the necessary insights into writing and editing but focuses on the design and art direction of contemporary magazines. Students have the opportunity for hands-on work at a variety of magazines, including *Vox* magazine and *The Global Journalist*.

Cr. Hrs.

Program Core.....8–9
_____ 0900 News Practicum (3) (no graduate credit)
_____ 8000 Mass Media Seminar (3)
_____ 8006 Quantitative Research Methods or 8008 Qualitative Research Methods I (3)
One of the following four courses:
_____ 8026 Philosophy of Journalism (3)
_____ 8030 History of Mass Media (3)
_____ 8038 Seminar in Communications Law (3)
_____ 8080 Media Ethics (3)

Magazine Design Core..... 13
_____ 7120 New Media Basics (or equivalent) (1)
_____ 7408 Magazine Editing (3)
_____ 7500 Newspaper Design and Editing (3) OR 7508 Information Graphics (3)
_____ 7506 Magazine Design (3)
_____ 7988 Advanced Magazine Design (3)

Electives 6
Suggested courses:
7226 Strategic Design and Visual I (3) (highly recommended)
7416 Science Writing (3)
7418 Critical Reviewing (3)
7420 Editorial Writing (3)
7430 Computer Assisted Reporting (3)
7436 Investigative Journalism (3)
7556 Fundamentals of Photojour. (3)
7566 Electronic Photojournalism (3)
7568 History of Photojournalism (3)
7606 Magazine Publishing (3) (highly recommended)
7700 Online Journalism (3)
7738 General Semantics in Jour. (3)
7982 Photography in Society (3)
7986 Advanced Writing (3)
8026 Philosophy of Journalism (3)
8028 Literature of Journalism (2)
8030 History of Mass Media (3)
8036 Seminar in History and Principles of Journalism (3)
8038 Seminar in Communications Law (3)
8080 Media Ethics (3)
8086 Critical Analysis of the Mass Media (3)
8106 The Magazine, Then & Now (3) (highly recommended)

Capstone Level 10
_____ *Thesis*: 8100 MA Thesis Seminar (1) and 8090 Research (9)
_____ *Professional Project*: 8098 MA Project Seminar (1) and 8190 Area Problem (9)

Total Suggested for Graduation.....39–40

The University requires at least half of a graduate student's course work to be in 8000-level courses. Courses 4000-level and below DO NOT carry graduate credit.

Magazine Editing Model

This model is for students who want to focus on editing magazines, from small newsletters to consumer magazines. The model is designed to provide the skills, theoretical framework and decision-making/management techniques important to a successful editor. The model provides the necessary insights into writing and design but focuses on both micro and macro issues of editing contemporary magazines. Students have the opportunity for hands-on work at a variety of magazines, including *Vox* magazine and *The Global Journalist*.

Cr. Hrs.

Program Core 8–9
_____ 0900 News Practicum (3) (no graduate credit)
_____ 8000 Mass Media Seminar (3)
_____ 8006 Quantitative Research Methods or 8008 Qualitative Research Methods I (3)
One of the following four courses:
_____ 8026 Philosophy of Journalism (3)
_____ 8030 History of Mass Media (3)

_____ 8038 Seminar in Communications Law (3)
_____ 8080 Media Ethics (3)

Magazine Editing Core 13
_____ 7120 New Media Basics (or equivalent) (1)
_____ 7408 Magazine Editing (3)
_____ 7450 Reporting (3)
_____ 7506 Magazine Design (3)
_____ 7984 Magazine Staff (3)

Electives 6
Suggested electives:
7410 Intermediate Writing (3) (highly recommended)
7418 Critical Reviewing (3)
7416 Science Writing (3)
7420 Editorial Writing (3)
7430 Computer Assisted Reporting (3)
7436 Investigative Journalism (3)
7460 Advanced Reporting (3)
7500 Newspaper Design and Editing (3)
7508 Information Graphics (3)
7556 Fundamentals of Photojour. (3)
7566 Electronic Photojournalism (3)
7568 History of Photojournalism (3)
7606 Magazine Publishing (3)
7700 Online Journalism (3)
7738 General Semantics in Jour. (3)
7982 Photography in Society (3)
7986 Advanced Writing (3)
7988 Advanced Magazine Design (3)
8026 Philosophy of Journalism (3)
8028 Literature of Journalism (2)
8030 History of Mass Media (3)
8036 Seminar in History and Principles of Journalism (3)
8080 Media Ethics (3)
8086 Critical Analysis of the Mass Media (3)
8106 The Magazine, Then & Now (3) (highly recommended)

Capstone Level 10
_____ *Thesis*: 8100 MA Thesis Seminar (1) and 8090 Research (9)
_____ *Professional Project*: 8098 MA Project Seminar (1) and 8190 Area Problem (9)

Total Suggested for Graduation 39–40

The University requires at least half of a graduate student's course work to be in 8000-level courses. Courses 4000-level and below DO NOT carry graduate credit.

Magazine Writing Model

This model is for students who want to focus on writing for magazines, from small newsletters to consumer magazines. The model is designed to provide writing skills, reporting techniques and theoretical

frameworks important to a successful writer. The model provides the necessary insights into design and editing but focuses on the variety of kinds of writing a student must learn to work at contemporary magazines. Students have the opportunity for hands-on work at a variety of magazines, including *Vox* magazine and *The Global Journalist*.

Cr. Hrs.

Program Core 8–9
_____ 0900 News Practicum (3) (no graduate credit)
_____ 8000 Mass Media Seminar (3)
_____ 8006 Quantitative Research Methods or 8008 Qualitative Research Methods (3)
One of the following four courses:
_____ 8026 Philosophy of Journalism (3)
_____ 8030 History of Mass Media (3)
_____ 8038 Seminar in Communications Law (3)
_____ 8080 Media Ethics (3)

Magazine Writing Core 13
_____ 7120 New Media Basics (or equivalent)(1)
_____ 7408 Magazine Editing (3)
_____ 7410 Intermediate Writing (3)
_____ 7450 Reporting (3)
_____ 7986 Advanced Writing (3)

Electives 6
Suggested electives:
7418 Critical Reviewing (3) (highly recommended)
7416 Science Writing (3)
7420 Editorial Writing (3)
7430 Computer Assisted Reporting (3) (highly recommended)
7436 Investigative Journalism (3) (highly recommended)
7438 Business and Economic Rep. (3)
7460 Advanced Reporting (3) (highly recommended)
7500 Newspaper Design and Editing (3)
7506 Magazine Design (3)
7508 Information Graphics (3)
7556 Fundamentals of Photojour. (3)
7566 Electronic Photojournalism (3)
7568 History of Photojournalism (3)
7606 Magazine Publishing (3) (highly recommended)

7982 Photography in Society (3)
7988 Advanced Magazine Design (3)
8026 Philosophy of Journalism (3)
8028 Literature of Journalism (3)
8030 History of Mass Media (3)
8036 Sem. in History and Prin. of Jour. (3)
8080 Media Ethics (3)
8086 Critical Analysis of the Mass Media (3)

8106 The Magazine, Then & Now (3) (highly recommended)

Capstone Level..... 10
_____ *Thesis*: 8100 MA Thesis Seminar (1) and 8090 Research (9)
_____ *Professional Project*: 8098 MA Project Seminar (1) and 8190 Area Problem (9)

Total Suggested for Graduation.....
39–40

Newspaper

The University requires at least half of a graduate student's course work to be in 8000-level courses. Courses 4000-level and below DO NOT carry graduate credit.

News Design Model

Cr. Hrs.

Program Core..... 9
_____ 0900 News Practicum (3) (no graduate credit)
_____ 8000 Mass Media Seminar (3)
_____ 8006 Quantitative Research Methods or 8008 Qualitative Research Methods I (3)
One of the following four courses:
_____ 8026 Philosophy of Journalism (3)
_____ 8030 History of Mass Media (3)
_____ 8038 Seminar in Communications Law (3)
_____ 8080 Media Ethics (3)

Design Core 9
_____ 7508 Information Graphics (3)
_____ 7406 Newspaper Editing
_____ 7500 Advanced Newspaper Editing & Design (3)

Electives 9
Suggested courses:
7408 Magazine Editing (3)
7506 Magazine Design (3)
7510 Visual Communications (3)
7556 Fundamentals of Photojournalism (3)
7670 Newspaper Photo Desk Management (3)
8085 Problems in Journalism (13)
8092 Photography in Society (3)

Capstone Level 10
_____ *Thesis*: 8100 MA Thesis Seminar (1) and 8090 Research (9)
_____ *Professional Project*: 8098 MA Project Seminar (1) and 8190 Area Problem (9)

Total Suggested for Graduation..... 37

The University requires at least half of a graduate student's course work to be in 8000-level courses. Courses 4000-level and below DO NOT carry graduate credit.

News Editing Model

Cr. Hrs.

Program Core..... 9
_____ 0900 News Practicum (3) (no graduate credit)

One of the following four courses:
_____ 8026 Philosophy of Journalism (3)
_____ 8030 History of Mass Media (3)
_____ 8038 Seminar in Communications Law (3)
_____ 8080 Media Ethics (3)

Editing Core..... 9
_____ 7406 Newspaper Editing (3)
_____ 7450 Reporting (3)
_____ 7500 Advanced Newspaper Editing & Design (3)

Electives 9
Suggested courses:
7408 Magazine Editing (3)
7508 Information Graphics (3)
7510 Visual Communications (3)
7556 Fundamentals of Photojournalism (3)
7600 Structure of American English (English Dept.) (3)
7670 Newspaper Photo Desk Management (3)
7738 General Semantics (3)
8085 Problems in Journalism (13)
8092 Photography in Society (3)

Capstone Level 10
_____ *Thesis*: 8100 MA Thesis Seminar (1) and 8090 Research (9)
_____ *Professional Project*: 8098 MA Project Seminar (1) and 8190 Area Problem (9)

Total Suggested for Graduation..... 37

The University requires at least half of a graduate student's course work to be in 8000-level courses. Courses 4000-level and below DO NOT carry graduate credit.

News Reporting/Writing Model

Cr. Hrs.

Program Core..... 9
_____ 0900 News Practicum (3) (no graduate credit)
_____ 8000 Mass Media Seminar (3)
_____ 8006 Quantitative Research Methods or 8008 Qualitative Research Methods I (3)
One of the following four courses:
_____ 8026 Philosophy of Journalism (3)
_____ 8030 History of Mass Media (3)
_____ 8038 Seminar in Communications Law (3)
_____ 8080 Media Ethics (3)

Reporting/Writing Core..... 12
_____ 7406 Newspaper Editing (3)
_____ 7450 Reporting (3)
_____ 7460 Advanced Reporting (3)
One of the following courses:
_____ 7410 Intermediate Writing (3)
_____ 7436 Investigative Reporting (3)
_____ 7986 Advanced Writing (3)

Electives 6
Suggested courses:
7106 Media and Art Criticism: The Role of the Critic (1)
7148 Interviewing Essentials (1)
7412 Lifestyle Journalism (3)
7416 Science Health and Environmental Writing (3)
7418 Critical Reviewing (3)
7420 Religion Writing and Reporting (3)
7430 Computer-Assisted Reporting (3)
7438 Business & Economics Reporting (3)
7650 International Issues Reporting (3)

Capstone Level 10
_____ *Thesis*: 8100 MA Thesis Seminar (1) and 8090 Research (9)
_____ *Professional Project*: 8098 MA Project Seminar (1) and 8190 Area Problem (9)

Total Suggested for Graduation..... 37

Photojournalism

The University requires at least half of a graduate student's course work to be in 8000-level courses. Courses 4000-level and below DO NOT carry graduate credit.

Photojournalism

The Photojournalism model educates students in the theory and skills of photojournalism.

Cr. Hrs.

Program Core..... 9
_____ 0900 News Practicum (3) (no graduate credit)
_____ 8000 Mass Media Seminar (3)
_____ 8006 Quantitative Research Methods or 8008 Qualitative Research Methods (3)
One of the following four courses:
_____ 8026 Philosophy of Journalism (3)
_____ 8030 History of Mass Media (3)
_____ 8038 Communications Law (3) (recommended)
_____ 8080 Media Ethics (3) (recommended)

Photojournalism Core..... 15
_____ 7556 Fundamentals of Photojournalism (3)
_____ 7558 Advanced Techniques in Photojournalism (3)
_____ 7560 Staff Photojournalism (3)

_____ 7980 Picture Story and Photographic Essay (3)
_____ 8092 Photography in Society (3)

Electives 6
Suggested courses:
7450 Reporting
7500 Advanced Newspaper Design and Editing (3)
7506 Magazine Design (3)
7566 Electronic Photojournalism (3)
7568 History of Photojournalism (3)
7670 Newspaper Photo Desk Management (3)
7730 Journalism and Conflict (3)

Capstone Level 10
_____ *Thesis*: 8100 MA Thesis Seminar (1) and 8090 Research (9)
_____ *Professional Project*: 8098 MA Project Seminar (1) and 8190 Area Problem (9)

Total Suggested for Graduation..... 40

The University requires at least half of a graduate student's course work to be in 8000-level courses. Courses 4000-level and below DO NOT carry graduate credit.

Visual Editing & Management

The Visual Editing and Management model educates students in the theory and skills of picture editing, visual presentation in print and online publications and is best suited to those with substantive journalism experience as photographer or designer OR those who have had an undergraduate major in relevant journalism areas.

Cr. Hrs.

Program Core..... 9
_____ 0900 News Practicum (3) (no graduate credit)
_____ 8000 Mass Media Seminar (3)
_____ 8006 Quantitative Research Methods or 8008 Qualitative Research Methods (3)
One of the following four courses:
_____ 8026 Philosophy of Journalism (3)
_____ 8030 History of Mass Media (3)
_____ 8038 Seminar in Communications Law (3) (recommended)
_____ 8080 Media Ethics (3) (recommended)

7110 Media Management and Leadership (3)
7226 Strategic Design and Visuals (3)

7506 Magazine Design (3)
7508 Information Graphics (3)
7560 Staff Photojournalism (3)
7568 History of Photojournalism (3)
7710 Newspaper Management (3)
7980 Picture Story and Photographic Essay (3)
7730 Journalism and Conflict (3)

Capstone Level 10
_____ *Thesis*: 8100 MA Thesis Seminar (1) and 8090 Research (9)
_____ *Professional Project*: 8098 MA Project Seminar (1) and 8190 Area Problem (9)

Total Suggested for Graduation..... 40

Radio/Television Models

The University requires at least half of a graduate student's course work to be in 8000-level courses. Courses 4000-level and below DO NOT carry graduate credit.

Radio/television Reporting Model (television emphasis; no prior broadcast experience)

Students enrolled in this model have the opportunity to gain the skills they need to earn a position in a television or radio newsroom. Depending on your previous work background, you can choose from models that are for novices or experienced broadcast journalists. These models will provide the practical and intellectual skills needed to advance in your field by thinking creatively and critically about your role and the profession.

Cr. Hrs.

Program Core..... 9
_____ 8000 Mass Media Seminar (3)
_____ 8006 Quantitative Research Methods or 8008 Qualitative Research Methods I (3)
One of the following four courses:
_____ 8026 Philosophy of Journalism (3)
_____ 8030 History of Mass Media (3)
_____ 8038 Seminar in Communications Law (3)
_____ 8080 Media Ethics (3)

Broadcast News Core 12
_____ 7300 Broadcast News I (3)
_____ 7306 Broadcast News II (3)
_____ 7308 Broadcast News III (3)
_____ An advanced journalism course (3)
The Broadcast News Department suggests one of the following courses:
7320 Advanced Broadcast Reporting (3)
7974 Advanced Internet Applications for Radio/TV News (3)
7976 Seminar in Radio/TV News (3)

Suggested Electives 9
**Strongly suggested electives include the following journalism classes: investigative reporting, computer assisted reporting, covering the courts, international issues reporting; controls of information; advanced convergence classes; television producing

**Strongly suggested non-journalism classes: public policy analysis (Truman School of Public Affairs); any advanced political science class that deals with American government, the US court systems, US legislative systems; television criticism—Department of Communication

Capstone Level 10
_____ *Thesis*: 8100 MA Thesis Seminar (1) and 8090 Research (9)
_____ *Professional Project*: 8098 MA Project Seminar (1) and 8190 Area Problem (9)

Total Suggested for Graduation..... 40

The University requires at least half of a graduate student's course work to be in 8000-level courses. Courses 4000-level and below DO NOT carry graduate credit.

Radio/television Reporting (radio emphasis; no prior broadcast experience)

Students enrolled in this model have the opportunity to gain the skills they need to earn a position in a television or radio newsroom. Depending on your previous work background, you can choose from models that are for novices or experienced broadcast journalists. These models will provide the practical and intellectual skills needed to advance in your field by thinking creatively and critically about your role and the profession.

Cr. Hrs.

Program Core..... 9
_____ 8000 Mass Media Seminar (3)
_____ 8006 Quantitative Research Methods or 8008 Qualitative Research Methods I (3)

Natural Resources Core 12
_____ Nat. Res. 1070 Ecology & Renewable Resource Management (3) — no CR
_____ Nat. Res. & Jour. 8060 Environmental Research for Journalists (3)
_____ Nine hours chosen from graduate classes in: (One three hour class must be in a field or laboratory course.)
General Natural Resources
Wildlife Conservation
Aquatic Resource Conservation

Capstone Level 10
_____ *Thesis*: 8100 MA Thesis Seminar (1) and 8090 Research (9)
_____ *Professional Project*: 8098 MA Project Seminar (1) and 8190 Area Problem (9)

Total Suggested for Graduation..... 42–46

The University requires at least half of a graduate student's course work to be in 8000-level courses. Courses 4000-level and below DO NOT carry graduate credit.

Law and Conflict Resolution Model

The Masters Model in Law and Conflict Resolution is designed for students anticipating careers as reporters and editors who want to develop particular expertise in the coverage of legal issues. The Model promotes this interest by providing students with a Model that includes the opportunity to take several courses at the Law School. It will also be helpful for M.A. students in media management or strategic communications who are interested in a greater understanding of the legal environment of the media.

Cr. Hrs.

Program Core..... 6–9

_____ 0900 News Practicum (3) (no graduate credit) or 7200 Prin. of Strategic Comm. (3) or 7300 Broadcast News I (3)
_____ 8000 Mass Media (3)
_____ 8006 Quantitative Research Methods (3) or 8008 Qualitative Research Methods I (3)

Law & Conflict Resolution Core..... 9

_____ J8038 Seminar in Communications Law (3) or 5760L Mass Media Law (3)
_____ 5510L Dispute Resolution (3)
Choose one of the following four courses:
_____ 7718 Law & the Courts (3)
_____ 7720 Internet Law (3)
_____ 7730 Journalism & Conflict (3)
_____ 8046 Controls of Information (3)

Law Electives 6

The Law School elective courses are organized by three tracks—Civil Rights and International Law, Business Law, General Law—to help students more quickly identify areas of specific interest, and to develop deeper concentrations in desired areas. However, students may take any available course in satisfying this requirement. Course offering and availability varies by semester, and enrollment is subject to professor approval. See the academic advisor for available courses and further information.

Journalism Electives 8–9

May be selected from one or more of the core programs for other Masters models:
Advertising
Broadcast News
Editing
Environmental Reporting
International
Magazine
Media Management
New Media
News Media & Society
Photojournalism
Public Policy Journalism
Reporting/Writing
Strategic Communications
Any Law & Conflict Resolution "core option" not already taken.

Capstone Level 10

_____ *Thesis*: 8100 MA Thesis Seminar (1) and 8090 Research (9) (Note: One member of Thesis Committee must be on Law faculty.)
_____ *Professional Project*: 8098 MA Project Seminar (1) and 8190 Area Problem (9)

Total Suggested for Graduation..... 40–43

The University requires at least half of a graduate student's course work to be in 8000-level courses. Courses 4000-level and below DO NOT carry graduate credit.

New Media Model

Total Suggested for Graduation	**37–41**

The University requires at least half of a graduate student's course work to be in 8000-level courses. Courses 4000-level and below DO NOT carry graduate credit.

News Media and Society Model

This area is intended for professionally prepared students who seek the M.A. with thesis. The expected prerequisites for enrollment in this option are two years professional media experience. Should a student pursuing this option later decide to pursue a professional project rather than a thesis, the six hours of electives in the M.A. program must be used to prepare appropriately for the project. This model is intended primarily for students who intend to pursue a doctorate.

Cr. Hrs.

Program Core..... 9

_____ 8026 Philosophy of Journalism (3)
_____ 8038 Seminar in Communications Law (3)
_____ 8080 Media Ethics (3)

News Media and Society Core..... 12
_____ One advanced news reporting class (3)
_____ 8028 Literature of Journalism (3)
_____ 8030 History of Mass Media (3)
One of the following two courses:
_____ 8046 Controls of Information (3)
_____ 8056 Theory of Mass Communication (3)

Electives 6

Capstone Level 10
_____ *Thesis*: 8100 MA Thesis Seminar (1) and 8090 Research (9)
(*option of Professional Project is deleted*)

Total Suggested for Graduation..... 37

The University requires at least half of a graduate student's course work to be in 8000-level courses. Courses 4000-level and below DO NOT carry graduate credit.

Public Policy Journalism Model

The program is designed for journalists wishing to specialize in government reporting at a local, state, national or international level. The program also is open to international students seeking to study the governmental process in the United States and relationships between government officials and journalists.

This option combines actual reporting experience in city and local government; state government; and federal government, backed up with academic courses on all three levels of government. The outside coursework provides the necessary strong background in politics and economics. Students following the Convergence Model may take the public policy concentration.

The option is highlighted by experience covering Missouri state government in Jefferson City and a semester in the School's Washington Program.

Cr. Hrs.

Program Core..... 9

Public Policy Core..... 6
_____ PA 8150 Foundations of New Governance
_____ PA 8170 Public Policy Processes and Strategy

Electives 3
Suggested courses:
7436 Investigative Reporting (3)
7650 International Issues Reporting (3)
8046 Controls of Information (3)
PA 8710 The Nonprofit and Voluntary Sector
PA 8620 Organizational Analysis and Change
PA 8610 Group Dynamics and Conflict Resolution
PA 8630 Organizational Change in a Community and Global Context

Capstone Level 10
_____ *Thesis*: 8100 MA Thesis Seminar (1) and 8090 Research (9)
_____ *Professional Project*: 8098 MA Project Seminar (1), 8190 Area Problem (Washington) (9), and 8185 Area Seminar in Journalism (3)

Total Suggested for Graduation..... 40–43

The University requires at least half of a graduate student's course work to be in 8000-level courses. Courses 4000-level and below DO NOT carry graduate credit.

Individually Structured Model

To structure an individual program, the student must meet with an advisor to map out the specialized program. Once that has been accomplished, the student prepares a document that resembles this example. The advisor signs the program as outlined with the student and forwards it to the Associate Dean of Graduate Studies for approval. An individually structured program must include at least 37 graduate hours, at least half of which must be at the 8000 level.

Cr. Hrs.

Program Core..... 8–12
_____ 0900 News Practicum (no CR), 7200 Principles of Strategic Communication or 7300 Broadcast News I (3)
_____ 8000 Mass Media Seminar (3)

Curriculum:

Graduate Journalism—Degree Requirements Overview

The Master of Science in Journalism carries the following credit requirements:

Four-Quarter Students

Students pursuing a typical four-quarter curriculum will be required to earn 13 credits to graduate:

- 4 credits in Q1
- 3 credits in Q2
- 3 credits in Q3
- 3 credits in Q4

Three-Quarter Students

Students who have, upon admission, been waived from all four courses in the Journalism Methods quarter and are therefore pursuing a three-quarter curriculum will be required to earn 9 credits to graduate:

- 3 credits in Q1
- 3 credits in Q2
- 3 credits in Q3

Accelerated Master's Program

Students who are pursuing the MSJ as part of their BSJ work will be required to earn 9 credits to

graduate. Based upon prior academic work in the BSJ, they are waived from the entire Methods quarter (4 credits) and therefore pursue the following 3 quarters of the curriculum:

- 3 credits in Q1
- 3 credits in Q2
- 3 credits in Q3

Medill at Northwestern University. "Graduate Journalism." http://www.medill.northwestern.edu/students/students.aspx?id=61965&ekmensel=c580fa7b_23_37_61965_3 (accessed December 21, 2008).

❖ ❖ ❖

Ohio University, E.W. Scripps School of Journalism

Mission Statement:

The E. W. Scripps School of Journalism is dedicated to the needs of its students; to excellence in teaching, advising, service, and research; and to leadership in journalism education. The school provides a liberal arts foundation combined with a professional education and practical experience for its students. The goals are to search for truth; to develop critical analysis, thinking, writing, and speaking abilities; to enhance free, responsible, and effective expression of ideas. To that end, the E. W. Scripps School of Journalism:

- stresses the importance of the First Amendment;
- fosters the highest standards of journalism ethics;
- prepares students to enter the journalism professions;
- provides a liaison between students and professionals;
- involves students and faculty in an extended University;
- values an international presence and perspective;
- attracts, nurtures, and retains a diverse group of outstanding students;
- expands scholarly activity to enhance the body of knowledge within journalism;
- supports a diverse faculty offering an array of contributions;
- offers an environment that equips students to live in a diverse world; and
- upholds the University mission of commitment to educational excellence through focus on the individual student.

Curriculum:

Core Courses:

Journalism 501 Introduction to Graduate Study (1 hour)

Journalism 511 Communication Law (3 hours)

Journalism 512 Ethics, Mass Media and Society (3 hours) or Journalism 813 Media Ethics and Internet (4 hours)

Journalism 803 Seminar in Mass Communication Theory (5 hours)

Journalism 806 Mass Communication Research (5 hours)

Advanced Research Techniques:

Choose 1 of the following:

Journalism 808 Legal Research (4 hours)

Journalism 811 Historical Research in Journalism (5 hours)

Journalism 816 Seminar in Research Methods (5 hours)

Journalism 821 Seminar in Content Analysis (4 hours)

Topics Seminar:

Choose 1 of the following:

Journalism 513 Gender, Race, and Class in the Mass Media (4 hours)

Journalism 635 Seminar in Visual Communications (5 hours)

Journalism 812 Government and Mass Communication (4 hours)

Journalism 813 Media Ethics and Internet (4 hours)

Journalism 814 Literature in Journalism (4 hours)

Journalism 815 Seminar in Freedom of the Press (4 hours)

Journalism 850 Seminar in Advertising Copy Writing (4 hours)

Journalism 866 Seminar in International Mass Media (5 hours)

Journalism 871 Public Relations Problems and Programs (4 hours)

Research:

Choose 1 of the following:

Journalism 665 Professional project (6 hours)

Journalism 695 Thesis (6 hours)

Journalism 665 Reading option

Other:

Depending on which courses are chosen from the required list, each student also must take a minimum of 16 hours of electives to reach the necessary number of hours to graduate. Two of the required core courses, Journalism 511 (Communication Law) and Journalism 512 (Ethics, Mass Media and Society), may be waived if equivalent courses have been taken as an undergraduate or graduate student at Ohio University or elsewhere. If they are waived, additional elective hours must be taken to replace them.

Curriculum:

Literary Nonfiction Professional Program

Description

The master's degree program in Literary Nonfiction offers a unique blend of learning experiences in literary writing. The program is for those who seek to:

- Advance their careers in literary journalism, feature writing, book-length nonfiction, and other forms of literary nonfiction.
- Hone professional writing skills in an environment that encourages trust, risk-taking, and innovative approaches to writing.
- Learn from award-winning professionals who give hands-on guidance.
- Focus on writing publishable books.
- Read and analyze significant works of literary nonfiction.

The program offers the intensive, practical study that poets and fiction writers have traditionally found in graduate school, but that has not been widely available for nonfiction writers.

Course Requirements

The Literary Nonfiction program offers an innovative graduate curriculum for students with previous professional writing experience. Students electing this program must earn at least 46 graduate credits (24 of which must be graded) and have a cumulative GPA of 3.00 or higher. Courses that do not carry graduate credit (400-level and lower) are not considered in determining the graduate GPA. Students typically take six terms to complete the program, which consists of:

1. Two intensive writing seminars (J635 Literary I Nonfiction I, J636 Literary Nonfiction II) that

focus on conceptualization, structuring and writing nonfiction in a workshop setting.

2. Mass Communication & Society (J611) and Introduction to the Faculty (J625).
3. Literature of Literary Journalism (J631), an exploration of the literary and ethical issues related to the genre of literary journalism or creative nonfiction.
4. At least three "Writing about..." courses (J633), three-credit workshops taught by visiting instructors.
5. One 600-level conceptual course selected from a short list. The student and faculty adviser will select from a list of appropriate courses such as Communication Ethics or Philosophy of Communication. A 500-level conceptual course may be considered for this requirement by petition to the Graduate Affairs Committee.
6. Writing the Nonfiction Book (J638), a seminar that deals with the publishing industry, agents, contracts, and creating a meaningful book proposal.
7. Non-SOJC electives. Students work with their adviser to identify relevant courses in other units of the University.
8. Terminal Project. The project (J609) is a work of creative nonfiction that is noteworthy for its substance and artistic quality. The topic is approved by an adviser before work begins. A faculty committee oversees the project.
9. The Graduate School requires that all master's candidates complete a minimum of 30 credits (24 of which must be graded) over two or more terms at the Eugene campus, and that all work for the master's degree be completed within seven years.

(Continued)

Literary Nonfiction Checklist

You must have at least 46 graduate (500 or 600 level) credits (at least 24 graded) with a cumulative GPA of 3.00 or higher.

First Year:

_____ J625 Introduction to the Faculty (1) Fall quarter
_____ J611 Mass Communication and Society (4) Fall quarter
_____ J631 Literature of Literary Journalism (4)
_____ J635 Literary Nonfiction I (6)
_____ J636 Literary Nonfiction II (6)

Further Requirements:

_____ J638 Writing the Nonfiction Book (1–4)

At least three J633 Writing About…. courses

_____ J633 Writing About… (3)
_____ J633 Writing About… (3)
_____ J633 Writing About… (3)

One conceptual course

_____ 600 level (or approved 500-level)

At least 6 graduate credits outside SOJC

_____ *5*/600
_____ *5*/600
_____ *5*/600

SOJC Electives:

_____ J609 Terminal Project (minimum 6 credits)
_____ J600 (At least one 600-level conceptual course)
_____ J*5*/600
_____ J*5*/600

Terminal Project Checklist – Should be completed in order

_____ Adviser selected
_____ Committee selected
_____ Project proposal approved and completed, and filed with SOJC
_____ Enrolled for at least 3 graduate credits during graduating term
_____ Foreign language requirement completed (MA students only)
_____ Applied for graduation on Grad Web by second week of term in which you plan to graduate
_____ Oral defense completed
_____ One copy of terminal project submitted to SOJC printed on bond paper and unbound

Literary Nonfiction Master's Flow Chart

Admission

Coursework

The bulk of students' coursework is ideally completed during their first year of graduate study and finished during the second year. Students are required to complete some courses during their first year, and some courses are only offered during certain terms.

Choose adviser/chair, project committee and write project proposal

This step is ideally completed during fall quarter of students' second year of graduate study. Proposals for a project must be in writing and approved by adviser and committee.

Project research and writing

Students usually take 2-3 terms to complete this step, ideally during their second year of graduate study. Students should register for J609 while working on their project.

Project oral defense

Students complete this step during the term they graduate. They must be registered for three graduate credits during this term, one of which should be J609.

Diploma

News-Editorial and Magazine Professional Master's Program

Description

This program is designed for those holding bachelor's degrees who have little or no academic or professional media background and who want to acquire professional skills within an intellectual context. Areas of specialization are: news-editorial journalism and magazine journalism.

The Graduate Affairs Committee carefully considers each applicant and determines their readiness for the advanced graduate curriculum. The program begins with a summer of background and preparatory work and is followed by at least three quarters of course work and a quarter devoted to the creation of a professional project. In addition, a quarter devoted to a professional internship is strongly recommended.

Course Requirements

News-Editorial and magazine areas of specialization emphasize different skills, but have the following in common:

- 46 credit graduation requirement, 24 of which must be graded 15-18 month program
- a summer preparatory experience including J561 News Editing
- Reporting II (J562)
- Journalistic Interview J583
- two 600-level core courses: J611 and J625
- Story Development (J563) and Advanced Story Development (J563)
- one additional 500 or 600 level ethics course or other conceptual course
- a final professional project

News-Editorial Program Requirements

1. Summer background and preparatory work (no 1. graduate credit awarded): Readings in Mass Media & Society, Reporting and Information Strategies (J408), Photojournalism Workshop (J408) and Newspaper Editing (J561). Introduction to the Faculty (J625), Mass Communication & Society (J611), Journalistic Interview (J583), and Reporting II.
2. Story Development and Advanced Story Development (J563) in winter and spring terms.
3. 500- or 600-level ethics course, or other conceptual course approved by adviser.
4. At least four graduate level craft courses in news-editorial or a directly related area selected by the student and adviser based on the student's professional objectives: Advanced Photojournalism, Specialized Reporting, Advanced Editing, Newspaper Design, Journalistic Interview, Newspaper Editing. 500- and 600-level electives within the SOJC, including any graduate seminars and craft courses the student and adviser deem pertinent. Essential courses outside the SOJC may be included with adviser's endorsement.

Magazine Program Requirements

1. Summer background and preparatory work (no 1. graduate credit awarded): Readings in Mass Media & Society, Reporting and Information Strategies (J408), Photojournalism Workshop (J408) and News Editing (J561).
2. Introduction to the Faculty (J625), Mass Communication & Society (J611), and Reporting II (J562).
3. Story Development and Advanced Story Development (J563) in Winter and Spring terms. At least four 500-level craft courses in magazine journalism or a directly related area selected by the student and adviser based on the student's professional objectives: Magazine Writing II, Writing the Nonfiction Book, Magazine Feature Editing, The Magazine Editor, Magazine Design, Advanced Photojournalism, and Production. 500- and 600-level electives within the SOJC, including any graduate seminars and craft courses the student and adviser deem pertinent. Essential courses outside the SOJC may be included, with adviser's endorsement.

News-Editorial and Magazine Professional Master's Checklist

At least 46 graduate (500 or 600 level) credits (at least 24 graded) with a cumulative GPA of 3.00 or higher.

Summer Preparatory Courses. No graduate credit earned (except for J561)

_____ Readings in Mass Media and Society
_____ Reporting and Information Strategies (J408)
_____ Photojournalism Workshop (J408)
_____ News Editing (J561)

Conceptual Core:

_____ J625 Introduction to the Faculty (1)
_____ J611 Mass Communication & Society (4)
_____ J5/600 Additional conceptual course

Core craft courses

_____ J563 Story Development
_____ J563 Advanced Story Development
_____ J583 Journalistic Interview (1st fall term)
_____ J562 Reporting II (1st fall term)

Elective graduate level credits (must be approved by adviser and may include courses outside SOJC)

_____ 500/600
_____ 500/600
_____ 500/600

Terminal Project

_____ J609 Terminal Project (minimum 6 credits)

Terminal Project Checklist – Should be completed in order

_____ Adviser selected
_____ Second reader selected (Note: two second readers may be desirable.)
_____ Terminal project proposal approved, completed, defended, and filed with SOJC
_____ Enrolled for at least 3 graduate credits during graduating term (at least 1 of J609)
_____ Foreign language requirement completed (MA students only)
_____ Applied for graduation on Grad Web by second week of term in which you plan to graduate
_____ Oral defense completed
_____ One copy of terminal project submitted to SOJC

News-Editorial and Magazine Professional Master's Flow Chart

Admission

Coursework

Choose adviser/chair, second reader and write project proposal

Proposals for a thesis or project must be in writing and approved by adviser and second reader.

Project research and writing

Students complete this step during the quarter in which they plan to graduate. Students register for J609 while working on their project. A final copy of the project must be submitted to the SOJC Graduate Secretary before the Grad School will approve graduation.

Project oral defense

Students complete this step during the term they graduate. They must be registered for three graduate credits during this term, at least one of which should be J609.

Submit Project

A final copy of the project must be submitted in pdf format to the SOJC Graduate Secretary before the Graduate School will approve graduation.

Strategic Communication Master's Degree

The Professional Master's Degree in Strategic Communication is designed for working professionals in the Portland area. This program is based at the SOJC's George S. Turnbull Center at UO Portland, located at the White Stag Block.

The program consists of a core of required four-credit Journalism and Communication courses complemented by two-credit, shorter-term workshop classes. The required coursework falls into four programmatic categories, which were established in consultation with the intended audiences and following an examination of the curricula of successful programs nationally. This focus also is consistent with a recently released report from the Public Relations Society of America's Commission on Public Relations Education and with PRSA guidelines for accreditation.

- Strategic communication core
- Business core with emphasis on marketing and management
- Mass communication core
- Professional specialization elective core (choice of three two-credit workshops)
- The course composition will be as follows:

Strategic Communication Core (12 credits total)

- J622 Strategic Communication Research and Planning – 4 credits
- J623 Creativity in Strategic Communication – 4 credits

One of the following:

- J543 Advertising Media Planning – 4 credits
- J552 Advanced Public Relations Writing – 4 credits
- J544 Agency Account Management—4 credits

Business Core (12 credits total)

- J610 Introduction to Marketing – 4 credits
- J610 Introduction to Management – 4 credits
- J610 Advanced Marketing Communications – 4 credits
- J610 Topics in Finance for Communication Professionals – 2 credits

Journalism/Mass Communication Core (18 credits total)

- J611 Mass Communication and Society – 4 credits
- J621 Foundations of Strategic Communication – 4 credits
- J660 Communication Research Methods – 4 credits
- J609 Terminal Project – 6 credits (capstone course requiring applied research to develop a strategic communications plan).

Professional Specialization Elective Core—Select three, two-credit workshops (6 credits total; Corporate Social Responsibility is strongly recommended)

- J624 Strategic Communication Workshops:
- Corporate social responsibility
- Advanced issues in advertising and marketing
- Advanced issues in public relations and organizational development
- Crisis communication
- Creativity in business
- Global communication operations
- Financial and investor relations
- Political communication
- International Public Relations
- Managing political communication
- Marketing communication in health care industries
- Marketing for technology companies
- Media relations
- Professional presentations
- Online communities and consumer generated media (CGM)

Typical Course of Study Sequence for the Professional Master's in Strategic Communication

Fall (Term 1)

Required	Required	Required
J611 Mass Media and Society (Mon. evenings–10 weeks)	J621 Foundations of Strategic Comm. (Thurs. evenings–10 weeks)	J624 Strategic Comm. Topics (Sat.–3 weeks)

Checkpoints in the Professional Master's Degree in Strategic Communication

The School of Journalism and Communication seeks to create a rigorous, yet supportive, setting for our graduate students, one that maximizes opportunity for learning and timely matriculation. To support this goal, we will conduct a series of checkpoints for all of our strategic communication master's students.

1. Each student will be assigned a provisional adviser who can address concerns about coursework in relation to student goals. The adviser can also provide guidance in instances where a student is not able to complete the program in two years.
2. After completion of 24 credits, each student should select a faculty member for terminal project advising.
3. After completion of 41 credits, each student should sign up for two credits of terminal project, J609, in order to write the project proposal, select a second reader, and begin the project.
4. The final term is devoted to completing and defending the terminal project, typically a portfolio or applied research project. Students sign up for four credits this term, for a total of six credits of terminal project. Students are encouraged to complete their projects spring term to take advantage of the terminal project seminar offered in spring.

For more information, see: jcomm.uoregon.edu/turnbullportlandcenter/index

Communication and Society Master's Degree Program

Description

While our professional master's programs aim primarily to teach advanced skills in preparation for employment and leadership in the media and communication industries, our Communication and Society M.A./M.S. program is aligned with our doctoral program in exposing students to a wide range of ideas concerning the structure, function and role of communication in society. Areas of overlapping faculty and program strength that students may study include: media institutions; ethics, law and policy; and international and multicultural diversity. (See Appendix, PhD program strengths.) Goals for individual students vary. Some may seek to return to the professions as leaders and innovators who actively contribute to improving the quality of media and communications. Others may seek preparation for doctoral work either in the SOJC Communication and Society program or elsewhere.

Course Requirements for the Communication and Society Program

Candidates for the Communication & Society Master's degree must earn at least 46 graduate credits (24 of which must be graded) with a cumulative GPA of 3.00 or higher. The Graduate School requires that all master's candidates complete a minimum of 30 credits (24 of which must be graded) taken at the Eugene campus and that all work for the master's degree be completed within seven years. Courses that do not carry graduate credit (400-level and lower) are not considered in determining the graduate GPA. The program concludes with either a thesis or a professional project. Students typically take five or six terms to complete the program. Specific requirements follow:

1. Four required graduate-level courses taken in the first year of graduate studies: Introduction to the Faculty (J625), Mass Communication & Society (J611), Mass Communication Theories (J613) and either Qualitative Research Methods (J641) or Quantitative Research Methods (J642).
2. Three additional conceptual courses in the School of Journalism and Communication. Graduate seminars (J607) count toward this requirement. Courses numbered J601–J610 do not count toward this requirement, except by petition to the student's adviser and chair of the Graduate Affairs Committee. Certain 500-level courses may be considered for this requirement.
   - J633 courses, including "Writing About..." courses do not fulfill this requirement.
   - Media/Communications courses offered at the 600-level in other schools or departments may count toward this requirement and must be reviewed by the Graduate Affairs Committee.
   - The additional methods course (see below) may count toward this requirement if taken within the School.
3. One additional methods course. This course may be taken within or outside of the SOJC. If taken within the School, it may count toward the three additional 600-level courses (see above). If taken outside of the School, it may count toward the outside credit.
4. At least eight, but no more than sixteen graduate credits (500- or 600-level) outside the SOJC. The courses chosen must be part of a consistent, related, educationally enhancing plan that has been approved by the student's adviser prior to enrollment.
5. A graduate thesis (nine credits in J503) or professional project (six credits in J609) approved and supervised by a faculty committee. Your adviser and two other committee members supervise the research and writing of the thesis or project. A written proposal must be approved by the committee before work begins. Proposal Approval Forms (see appendix) are available on-line. A student should register for Thesis (J503) or Terminal Project (J609) during the terms in which they are researching and writing their thesis or project.

Foreign Language Requirement

Students pursuing an M.A. degree must demonstrate competence in one foreign language.

Language competence must be demonstrated within the overall seven-year limitation for completion of a master's degree. Foreign language proficiency can be demonstrated by: 1) completion of at least the third term, second year of a foreign language course taught in the language, with a grade of "C-" or "P" or better taken within seven years of the awarding of the master's degree, or 2) satisfactory completion of an examination administered by the University Testing Center, showing language proficiency equivalent to that attained at the end of two years of college study. There is no language requirement for the M.S. degree.

Conditional Master's Students

Students are evaluated at the end of their second term of coursework. If they have maintained a 3.25 GPA or better for their first two terms of full time graduate coursework, they will be upgraded to full major status. A change of graduate major/classification form must be filled out by the student and approved by the department. The form is available on line in PDF format at: http://gradschool.uoregon.edu/?page=forms. Conditional master's students must have their status upgraded at least one quarter prior to graduation.

Project or Thesis Options (see also Project and Thesis information)

Master's students may complete either a project or a thesis. A thesis is a research effort; a project is a piece of professional work.

A project is an option if you plan to be a working journalist or media professional. Remember, a project is much more than a class assignment and requires as much research as a thesis. Final projects have included magazine or newspaper article series, video productions, practical guides for working journalists or media professionals and applied research projects.

You should choose a thesis if you plan to pursue doctoral study. This is a viable option if you plan to work as a media consultant or manager.

A written proposal is required for both a thesis and a project, and you must be approved in writing by your committee before beginning work/research. Proposal Approval forms are available on-line. Sample proposals are on file in 101 Allen.

Reclassification from Master's to Doctoral Program

On rare occasions, a master's student admitted to the SOJC Communication and Society master's program may request a change of classification to the doctoral program in Communication and Society. Such a request should be made no sooner than spring term of the first year in the program and must have strong support of the student's adviser and other SOJC faculty. See Appendix for details on reclassification request requirements.

Communication & Society M.A./M.S. Checklist

At least 46 graduate (500 or 600 level) credits (at least 24 graded) with a cumulative GPA of 3.00 or higher.

Fall quarter

_____ J625 Introduction to the Faculty (1)
_____ J611 Mass Communication & Society (4)
_____ J613 Mass Communication Theories (4)

Two methodology courses

_____ J641 Qualitative Research Methods (4) or J642 Quantitative Research Methods (4)
_____ One additional methods course, either inside or outside SOJC

Three additional 600-level, or approved 500 level, SOJC Courses

_____ J5/600
_____ J5/600
_____ J5/600

At least eight, but no more than sixteen graduate level credits outside the SOJC (two courses minimum)

_____ 5/600 _____ 5/600
_____ 5/600 _____ 5/600

Elective graduate level credits

_____ J503 Thesis (minimum total 9) OR J609 Terminal Project (minimum total 6)
_____ 5/600
_____ 5/600
_____ 5/600

Thesis or Terminal Project Checklist – Should be completed in order

_____ Advisor selected
_____ Committee and chair selected
_____ Thesis or project proposal approved and completed, and filed with SOJC
_____ Human Subjects Research Compliance Approval (if needed)
_____ Enrolled for at least 3 graduate credits during graduating term, (at least 1 of J503 or J609)
_____ Foreign language requirement completed (MA students only)
_____ Applied for graduation on Grad Web by second week of term in which you plan to graduate
_____ Oral defense completed
_____ One copy of terminal project submitted to SOJC OR two copies of thesis to Grad School
_____ Thesis abstract submitted to SOJC (if applicable)

Communication and Society Master's Flow Chart
Admission
Coursework The bulk of students' coursework is ideally completed during their first year of graduate study and finished during the second year. Students are required to complete some courses during their first year, and some courses are only offered during certain terms
Choose adviser/chair, thesis/project committee and write thesis/project proposal This step is ideally completed during fall quarter of students' second year of graduate study. Proposals for a thesis or project must be in writing and approved by adviser and committee.
Thesis/project research and writing Students usually take 2–3 terms to complete this step, ideally during their second year of graduate study. Students should register for J503 or J609 while working on their thesis or project.
Thesis/project oral defense Students complete this step during the term they graduate. They must be registered for three graduate credits during this term, one of which should be J503 or J609.
Diploma

Project and Thesis Information for Eugene-based Master's Programs

Thesis vs. Project

Students in the Communication and Society master's program typically complete a master's thesis (9 credits of J503), though some choose to do a project. A thesis requires original research to address questions about mass media and society. A review of relevant literature, mastery and use of an appropriate research method, and analysis of findings typically are involved.

Students in the Literary Nonfiction and Professional Master's programs typically do a project (6 credits of J609). A project involves the completion of a professional creative product; examples are listed below. Applied research to address practical questions (such as how to carry out an advertising campaign) may be involved.

A project differs from a thesis in one major way: A thesis presents original research that contributes to the scholarly literature of journalism and communication studies. A project, in contrast, contributes to the communications professions via applied research and/or creative accomplishment. As one faculty member puts it, a professional project is a work of journalism; a thesis is a study of journalism. The project is the culmination of your studies here and should reflect what you have learned in the program.

A project may take many forms, though all projects must be noteworthy for substance and artistic or professional quality. Literary Non-Fiction students typically write works of literary non-fiction. Projects completed by students in other options have included: documentary films and videos, slide programs, photo essays, feature or investigative article series, handbooks for professionals (e.g., the result of synthesizing and translating scholarly research), or magazine design & layout projects.

The project could be a well conceptualized magazine article series (for example, three 2,500-word stories) targeted to a specific publication. Such projects must show both greater depth and breadth (conceptually, stylistically and in terms of quality of research) than any single assignment completed in Magazine I or Magazine II.

Professional master's students are encouraged to devise their own projects, and to seek advice and counsel from faculty during the process. Any project must consider editorial, design, circulation, and (if appropriate) advertising trends in the contemporary magazine marketplace. Past narrative magazine projects include a documentation of the extinction of species in the Pacific Northwest, and a series of three profiles about the courage of people who have overcome tremendous difficulties such as cancer.

More examples: Those who come to the program to jump-start a career in magazine editing or publishing could follow the guidelines pertaining to an article series, or choose a project more directly related to editing or publishing, such as an editorial make-over of an existing publication or a business plan for a start-up magazine. One student prepared a guidebook for a nationwide audience of people who wish to self-publish magazines addressed to gay and lesbian audiences. Another drew upon his experience as an editor-in-chief to prepare a manual for environmental and other activist groups who wish to start their own magazines.

While projects do not constitute original research, they nonetheless require research — i.e., research that contributes to content substance and delineates the project's unique contribution to the professions. This research, as well as the project work itself, certainly involves methodologies — e.g., of interviewing, of library research, of examining similar projects, and of carrying out the project. Therefore, each project must be accompanied by a paper that describes or documents the research involved, the methodological procedures used, and lessons learned in the process.

Reminder: Project students sign up for a minimum of six credits in J609. Thesis students sign up for a minimum of nine credits in J503. Students usually sign up with their advisers for project or thesis credits.

The Proposal

Students preparing a project or a thesis must write a proposal and gain approval from three committee members (two for the professional master's project) via signatures on the SOJC Proposal Approval Form, which are available online at jcomm.uoregon.edu/graduate. Your proposal and committee must be approved before work on your project or thesis begins and before you can earn credits for the thesis or project. Most students have approval by the start of Spring term.

All committee members (see also Thesis and Project Committee below) receive and approve your written proposal, using the Proposal Approval Form. This protects you from having a person on your committee who does not fully understand or support your work. Examples of past proposals are available for check-out with the graduate secretary. You are encouraged to review them. Don't forget to obtain human subjects compliance approval if you are planning a thesis or project involving human subjects.

Proposal Guidelines

Generally, you will include what you want to study or the problem to be addressed, how you plan to approach it, and why it should be studied. State your hypothesis, questions, and/or goals, review relevant literature and contextual information, explain methodologies or procedures to be followed, and describe what the final product will look like.

Proposals vary in length and can contribute to the content of your finished thesis or project. Reminder: your written proposal must be approved by your committee, using the Proposal Approval Form.

Guidelines for Theses

The Graduate School has guidelines pertaining to style, margins, footnotes, etc. You may find a copy of these guidelines, called the Style Manual for Theses and Dissertations, on-line from the Graduate School home page. It is very important that your finished work adheres to these guidelines; otherwise it will not be accepted by the Graduate School and you will not graduate on time. Theses and projects completed by former students can be checked out in Student Services, 101 Allen Hall. Theses are also kept in the Knight Library.

Thesis Proposal Structure

Typically, a thesis proposal includes a number of sections, described below. Of course, the content and subheads under each section will vary depending on the problem you are researching, your theoretical framework and the methodology you envision.

I. Introduction. This should consist of a brief summary of the problem you are proposing to investigate, what question(s)/hypothesis(es) you intend to address, and how you envision doing it. While this section is the first presented, it is advisable to write this after you have completed the rest of the proposal.

II. Review of Literature. Here you review relevant literature that will enable you to make a case for the significance of your research. This is an interdisciplinary field. It is likely you will review more than one area of literature. If so, you will probably begin with a statement similar to this: "This research draws on four areas of literature: feminist media theory; scholarship on women's changing roles in India; prior studies of gender and media in India and South Asia; and global studies examining women's representations in newspapers." You should then proceed to summarize pertinent scholarship in each category (and their interconnections). It's acceptable to use subtitles to organize this review. Following this review, you should summarize the rationale for your research question(s) or hypothesis(es) drawn from all the area(s) of literature you have reviewed. Finally, you should clearly state your main research question(s) or hypothesis(es).

III. Methodology. Here you describe your methodological plans as specifically as you can. Of course, the considerations you discuss here will vary depending on the nature of your research, e.g., whether quantitative or qualitative. The following are considerations you may need to discuss in a quantitative thesis: unit of analysis; population; sampling procedures; research instruments (questionnaire, coding categories); and reliability and validity. Everyone — regardless of method — will need to discuss the resources to be drawn upon and how they will be analyzed or interpreted. Some discussion of the limitations of your chosen approach(es) also may be appropriate.

IV. Outline of Completed Thesis. Outline the chapters you anticipate will comprise your completed thesis with a sentence or two describing each chapter. Typical chapters in a qualitative thesis are: Introduction; Review of Literature; Methodology; Results; Discussion; Conclusions. Often a chapter on Historical (or other) Context of the Problem

also is included and precedes (or sometimes follows) the Review of the Literature. In a qualitative thesis the organization is often similar up through the methods chapter. Presentation and discussion of results should be organized in consultation with the committee.

Project Proposal: Structure

The organization of a project proposal typically parallels that of a thesis proposal, including the following:

I. Introduction. A brief summary of what problem, topic(s) or issues you intend to address, and how you envision doing it. A couple paragraphs to a page should be sufficient. Even though this section is the first presented, it is best to write this after you have completed the rest of the proposal.

II. Background research. Report any research that helps make a case for the significance of your project and provides professional context. At least two types of background Research are relevant here: research that contributes to content substance, and research to delineate the project's unique contribution to the professions.

III. Methodology or Procedures. Describe the procedural decisions and plans that will enable you to carry out the project. Obviously, different types of projects will require very different kinds of procedures. A student doing applied research (e.g., for an advertising or public relations campaign) may use essentially the same methods as a student carrying out a social scientific thesis. Creative projects will involve completely different types of procedures and methodologies, depending on the project. The methodological decisions involved in planning and writing a work of literary nonfiction, for instance, will usually be very different than for making a video documentary or a press kit.

IV. Description of Completed Project. Describe what you anticipate your completed project will look like.

Your Adviser

When you arrive at the SOJC, you will be assigned an adviser by the Director of Graduate Studies, based on your expressed research, professional, or academic interests. Your adviser is a tenure-line faculty member. You should meet with him or her soon after beginning the program, and he or she will help you get started. Throughout your studies, your adviser helps develop your academic schedule, gives advice about when you should take certain classes and about classes outside the SOJC that might be relevant to your program, and provides support for your decisions concerning course choices. See your adviser at least once per term.

Changing advisers: Within two terms (or three at the most), you should decide whether to stick with your original adviser through completion of your thesis or project, or to change advisers. You might have found someone more compatible, or whose research interests more closely parallel your own, or perhaps your own research interests may have evolved. You are free to change your adviser at any time. Be sure that the faculty member you choose to work with agrees to be your new adviser, and that the original adviser is notified of any changes.

Your adviser is the chair of your thesis/project committee and will help guide your proposal and see you through completion of your work. Select someone with whom you have a mutually respectful relationship, someone who is interested in your area of study and can contribute to your work. Your adviser does not have to be experienced in every aspect of your work; other committee members can contribute experience in some areas.

Thesis or Project Committee for CNS & LNF

The master's committee is made up of a minimum of three members, including the adviser/chair. At least two members must be regular SOJC faculty. Your chair is a tenure-line faculty member; other SOJC faculty on your committee may or may not be tenure-line. Aside from the minimum of two SOJC faculty, the third member may be someone from outside the SOJC — faculty from another department, or a professional, an expert, etc.

Project Committee Composition for Professional Master's Students in the professional master's programs (news-editorial, magazine, campaign

strategy and planning) are NOT required to form a three-person committee. Instead you will work with your adviser and a second reader to write a project proposal (follow same process required for other master's students, but with two instead of three readers/committee members approving the proposal). The second reader may be anyone who your adviser approves as appropriate. He or she may be another member of the SOJC faculty, a faculty member outside of the SOJC, a professional in the community, or a subject matter expert.

The thesis/project committee is student-chosen and based on faculty expertise. Members should be selected for their ability to contribute to your work. You should also make sure committee members will be available to serve on your committee during the terms you intend to do your work; be sure to ask potential committee members about future plans (fellowships, sabbaticals, Fulbrights, etc.). This is especially important if you plan to graduate during the summer quarter, as many faculty hold a nine-month appointment and are not available summer term. Because of this, the Graduate School does not guarantee graduation summer term.

Students generally choose committee members after the adviser is chosen but before the proposal is written. Your adviser — the committee chair — can be involved in selecting other committee members.

Beyond approving your project proposal, the role of members varies from committee to committee. You may have one who was selected for his or her expertise in your method or another outside area; you can then rely on that person for help in that area. Others may be general readers who read your chapters as you complete them. Based on discussions with your committee, you may submit draft chapters to all members, or you may submit them only to your chair and have other members read only your revised chapters.

In any case, the role of your committee members should be discussed early in the process between the student and adviser; your adviser should help you determine a way to make the committee function smoothly. Additionally, committee members should be told up front what you expect from them. Your entire committee reads your finished work and gathers for your oral defense to approve your thesis or project.

How to Begin Your Thesis or Project

The topic is your choice. You may come up with it through courses, conversations with faculty, your own interests, etc. Talk with faculty and other students to determine whether your idea is feasible. You should have a working idea by the start of your second year of graduate school (or at least by the term preceding the term you intend to write your project). Then, working with your adviser, write the proposal; see above.

Oral Defense

All students must hold an oral defense. The oral defense takes place after you've completed your thesis or project. If you've completed all appropriate steps, a defense is a conversation between you and your committee about your work. The key is to make sure your committee supports your work prior to your oral defense. Your committee members must not agree to the defense if major revisions will be necessary. Expect your committee to find minor problems and make suggestions at the oral defense. At the end of the defense, your committee must either approve or disapprove your work; approval is necessary before you can graduate. It is common for committees to approve with changes and list changes that need to be made.

Consistent with School of Journalism and Communication policy, the oral defense is intended to be a public discourse and, as such, will be announced prior to the event. Please keep the Graduate Secretary informed of the official title of your project or thesis and the time and place of your defense.

Thesis or Project Approval; Graduation

An Application for Advanced Degree form must be filed online with the Graduate School by the second week of the term you plan to graduate. You can locate the application on the Graduate School web site. For master's students, your application for degree generates the rest of the necessary paperwork. Specific dates and deadlines are listed on the Graduate School web page.

Projects are not subject to Graduate School approval; theses are. Therefore, theses require more paperwork. Overall, the SOJC Graduate Secretary tries to work with your committee chair

to ensure all appropriate forms are submitted on time, but it is advisable to keep in close contact with her to make sure your file is kept up to date.

Remember that students completing theses do not have the entire term they intend to graduate to complete their work. In order to meet deadlines for scheduling oral defenses and obtaining Graduate School approval, students should plan to dedicate only one-half to two-thirds of the term they intend to graduate to completing their thesis. The student must also allow time for the committee to review the thesis before the oral defense (a minimum of 10 working days recommended) and time for corrections to be made after the oral defense (a minimum of five days recommended).

Projects: Submit one electronic copy of your final project, in pdf format, to the SOJC Graduate Coordinator. You do not need to submit a copy to the Graduate School.

Theses and Dissertations: Submit one electronic copy of your final project, in pdf format, to the SOJC Graduate Coordinator. You must also submit two copies of your thesis to the Graduate School by the stated deadline. The Graduate School binds the two copies submitted, sends one to the library and one to the SOJC. A completed checklist for writers of master's theses must also be submitted to the Graduate School with your thesis, and you must pay a microfilm fee when you submit your thesis. A copy of your final project or thesis must be received by the stated deadline (check Graduate School website for dates) in order for you to graduate.

Master's of Arts (M.A.) Requirements

The M.A. degree requires proficiency in a second language. The second-language requirement may be met in one of the following ways:

1. Completion of at least the third term, second year of a second-language course taught in language, with a grade of C- or P or better taken within seven years of earning the master's degree. 2. Satisfactory completion of an examination administered by the UO Testing Center with at least a 25th percentile score. 3. For students whose native language is not English, this requirement is automatically met.

The Master of Science degree has no individual requirement.

University of Southern California, Annenberg School for Communication

Mission Statement:

…Every human advancement or reversal can be understood through communication.

The right to free communication carries with it the responsibility to respect the dignity of others, and this must be recognized as irreversible.

Educating students to communicate this message effectively and to be of service to all people is the enduring mission of this school…

Curriculum:

Degree Requirements

The M.A. in Journalism requires the completion of 40 units, 18 of which must be completed by all students:

- **JOUR 500—Media and Society** (3) Analysis of major theories on the role of communication media and society with special emphasis on the role and responsibility of the news media.
- **JOUR 501—Newswriting: Print, Broadcast, Online** (3) Basic newswriting and news judgment in print, broadcast and online journalism. Social responsibility and ethical framework for new media journalists. Typing ability required.
- **JOUR 502—Production: Print, Broadcast, Online** (3) Basic broadcast studio and field production, copyediting and newspaper production, database creation and management, online production. Social responsibility and ethical framework involving new media production.
- **JOUR 503—Reporting: Print, Broadcast, Online** (3) Basic print reporting techniques, broadcast field reporting, computer assisted reporting and statistics. Social responsibility and ethical framework for new media journalists.
- **JOUR 505—American Media History Seminar** (3) A seminar surveying the history of the news media in the United States, and their sociopolitical impact, with emphasis on the 20th century.
- **JOUR 560—Seminar in Mass Communication Law** (3) Analysis of major elements of mass communication law, legal issues in contemporary mass communication, and the impact of legal trends on professional journalists.

Broadcast Journalism students must also complete:

- **JOUR 517—Advanced Investigative Reporting** (3) Advanced reportorial and analytical skills and techniques required for evaluating newsworthy events. Group research and publication of stories on important current topics.
- **JOUR 521—Broadcast Documentary** (3) Preproduction of the television documentary; ethical problems, research, reporting, interviewing, writing, legal issues, economics, aesthetics. Problems of balanced presentation, selection of topics.

OR

- **JOUR 526—Advanced Broadcast News Production** (3) Production of television news programs; preparation and treatment of form and content; procedures, problems and practice in planning and producing broadcast news materials.

Broadcast students electing the Comprehensive Examination Option must also complete 16 units of approved elective courses. Students electing the Thesis Option are required to enroll in JOUR 594ab (2–2 units) and must complete 12 units of approved elective courses.

Print Journalism students must also complete:

- **JOUR 517—Advanced Investigative Reporting** (3) Advanced reportorial and analytical skills and techniques required for evaluating newsworthy events. Group research and publication of stories on important current topics.

Print students electing the Comprehensive Examination Option must also complete 19 units of approved elective courses. Students electing the Thesis Option are required to enroll in JOUR 594ab (2–2 units) and must complete 15 units of approved elective courses.

Online Journalism students must also complete:

- **JOUR 551—Intermediate Online Publishing** (3) Advanced concepts in online publishing; focus on databases, editing, scripting and authoring applications for news Web sites.
- **JOUR 555—Multimedia and Graphics in Online Publishing** (3) Focuses on the process of creating multimedia, images and graphics for news storytelling on the Web; integration of interactive content, animation and video.
- **JOUR 556—Online Journalism Seminar** (3) Writing and reporting for the Internet and other technology platforms; computer-assisted reporting; multimedia storytelling.

Online students electing the Comprehensive Examination Option must also complete 13 units of approved elective courses. Students electing the Thesis Option are required to enroll in JOUR 594ab (2–2 units) and must complete 9 units of approved elective courses.

Journalism White Papers on Changes in Education and Media

Joseph Pulitzer—"The College of Journalism" (North American Review, *May 1904)*

Introduction

Joseph Pulitzer, a respected newspaper publisher, gave the founding gift for The Journalism School at Columbia University in 1903. At the time, there were no graduate schools of journalism anywhere in the United States, and many in the field could not see the educational merit of such an endeavor. Horace White, a prominent editor, soon wrote a mocking article in *North American Review* that made the case against the need for Columbia's Journalism School or any other that might follow. Pulitzer's May 1904 rebuttal in the same publication became what Columbia's current dean, Nicholas Lemann, called "an eloquent and heartfelt manifesto" for the school and journalism schools in general.

Pulitzer's reply begins by countering White's notion that great journalists are products, for the most part, of *nature* rather than *nurture*—"born, not made." The writer systematically refutes White's claim that fine journalism stems primarily from fortunate gifts obtained at birth. He argues that the aptitude to sniff out the news, a heightened social conscience, and the moral courage to go after the dangerous or unpopular story can more readily be gained through specialized journalism classes and experience than simply via good genes. He also responds to the belief, still alive today, that journalism is best learned in the newspaper office or through undergraduate coursework in subjects like composition, political science, and history.

Pulitzer eventually takes a prescient look at what kinds of classes the graduate journalism schools might offer and who should teach them. In the article, he envisions a faculty of experienced, still-active journalists of high moral character with a love of teaching. They teach journalistic style and principles, ethics, relevant literature, statistics and economics, the power of ideas, the law as it applies to journalism, and much more. Above all they preach the concept that this work in journalism is geared to serve the community, the public good, and not just for the sake of commerce.

—Glenn Lewis
Volume Editor

Joseph Pulitzer—"The College of Journalism"

NORTH AMERICAN REVIEW No. DLXX.
MAY, 1904.
THE COLLEGE OF JOURNALISM.

A Review of Criticisms and Objections—Reflections Upon the Power, the Progress and the Prejudices of the Press—Why Specialized Concentration and Education at College Would Improve the Character and Work of Journalists and So Promote the Welfare of the Republic.

"*The man who writes, the man who month in and month out, week in and week out, day in and day out, furnishes the material which is to shape the thoughts of our people, is essentially the man*

who more than any other determines the character of the people and the kind of government this people shall possess." —PRESIDENT ROOSEVELT, *April 7, 1904.*

BY JOSEPH PULITZER.

The editor of the *North American Review* has asked me to reply to an article recently printed in its pages criticising the College of Journalism which it has been my pleasure to found and permanently to endow in Columbia University. In complying with his request I have enlarged the scope of the reply to include all other criticisms and misgivings, many honest, some shallow, some based on misunderstanding, but the most representing only prejudice and ignorance. If my comment upon these criticisms shall seem to be diffuse and perhaps repetitious, my apology is that—alas!—I am compelled to write by voice, not by pen, and to revise the proofs by ear, not by eye—a somewhat difficult task. Some of my critics have called my scheme "visionary." If it be so I can at least plead that it is a vision I have cherished long, thought upon deeply and followed persistently. Twelve years ago I submitted the idea to President Low of Columbia, when it was declined. I have ever since continued to perfect and organize the scheme in my mind, until it is now accepted. In examining the criticisms and misgivings I have endeavored to do so without prejudice, anxious only to find the truth. I admit that the difficulties are many, but after weighing them all impartially I am more firmly convinced than ever of the ultimate success of the idea. Before the century closes schools of journalism will be generally accepted as a feature of specialized higher education, like schools of law or of medicine.

And now for our critics and objectors:

Must a Journalist Be "Born?"

They object, the critics and cavillers, that a "newspaper man" must depend solely upon natural aptitude, or, in the common phrase, that he must be "born, not made."

Perhaps the critics can name some great editor, born full-winged like Mercury, the messenger of the gods? I know of none The only position that occurs to me which a man in our Republic can successfully fill by the simple fact of birth is that of an idiot. Is there any other position for which a man does not demand and receive training—training at home, training in schools and colleges, training by master craftsmen, or training through bitter experience—through the burns that make the child dread the fire, through blunders costly to the aspirant?

This last is the process by which the profession of journalism at present obtains its recruits. It works by natural selection and the survival of the fittest, and its failures are strewn along the wayside.

The "born editor" who has succeeded greatly without special preparation is simply a man with unusual ability and aptitude for his chosen profession, with great power of concentration and sustained effort. He is one who loves his work and puts his whole heart and mind into it. He is in the strictest sense an educated man, but he has merely substituted *self*-education for education by others, making up for any deficiencies in his training by the unreserved sacrifice of strength, energy and pleasure. Even in his case might it not be an advantage to have a system of instruction that would give him the same results at a saving of much time and labor?

Education begins in the cradle, at home, with a mother's teaching, and is continued by other influences through life. A college is one of those influences—useful, but with no magical power. A fool trailing an alphabet of degrees after his name is still a fool, and a genius, if necessary, will make his own college, although with a painful waste of effort which might be better reserved for productive work. I seem to remember that Lincoln, whose academy was a borrowed book read by the light of a pine-knot on the hearth, studied Euclid in Congress when nearly forty. But would it not have been better if that work had been done at fourteen?

All intelligence requires development. The highest profits by it; the lowest is helpless without it. Shakespeare's best play, "Hamlet," was not his first, but his nineteenth, written after growth and maturity—after the hard work, the experience, the exercise of faculties and the accumulation of knowledge gained by writing eighteen plays. As Shakespeare was a "born" genius why did he not write "Hamlet" first?

John Stuart Mill had natural talents, but they were strained to the last possible limit of accomplishment by a course of early training that was

not only thorough but inhuman. His father was his college—a great college, better than any in England. Like Mill, Herbert Spencer, Buckle, Huxley, Tyndall, and Lewes were without college education, but their mental discipline was most severe. Cobden was undoubtedly a genius born, but if we compare his original style—turgid, clumsy—with the masterly clearness and force of his trained maturity, can we doubt that his brain was developed by the hardest work, just as Sandow's muscles were developed?

Of course in every field natural aptitude is the key to success. When the experiment was tried of turning Whistler into a disciplined soldier, even West Point had to lay down its arms. Your sawmill may have all the modern improvements, but it will not make a pine board out of a basswood log. No college can create a good lawyer without a legal mind to work on, nor make a successful doctor of a young man whom nature designed to sell tape. Talleyrand took holy orders, but they did not turn him into a holy man.

The great general, even more than the great editor, is supposed to be born, not made. The picturesque historian tells us that he "fell like a thunderbolt upon the enemy," and we imagine a miracle-working magician. But the truth is, that the brilliant general is simply a man who has learned how to apply skilfully the natural laws of force, and who has the nerve to act on his knowledge. Hannibal, the greatest of all in my opinion, is called a typical example of native military genius. But can we forget that he was the son and pupil of Hamilcar, the ablest soldier of his generation, born in the camp, never outside the military atmosphere, sworn in earliest boyhood to war and hatred of Rome and endowed by his father with all the military knowledge that the experience of antiquity could give? He was educated. In his father he had a military college to himself. Can we think of Napoleon without remembering that he had the best military education of his time at the college of Brienne, and that he was always an eager student of the great campaigns of history? Frederick the Great lost his head in his first battle. It took him years to learn his trade and finally to surpass his instructors. There is not a cadet at any military school who is not expected as a necessary part of his professional preparation to study every important battle on record — to learn how it was found what mistakes were committed on each side, and how it was won.

Every issue of a newspaper represents a battle—a battle for excellence. When the editor reads it and compares it with his rivals he knows that he has scored a victory or suffered a defeat. Might not the study of the most notable of these battles of the press be as useful to the student of journalism as is the study in military battles to the student of war?

News Instinct—Natural or Cultivated.

They object that news instinct must he born.

Certainly. But however great a gift, if news instinct as born were turned loose in any newspaper office in New York without the control of sound judgment bred by considerable experience and training, the results would be much more pleasing to the lawyers than to the editor. One of the chief difficulties in journalism now is to keep the news instinct from running rampant over the restraints of accuracy and conscience. And if "a nose for news" is born in the cradle, does not the instinct, like other great qualities, need development by teaching, by training, by practical object-lessons illustrating the good and the bad, the Right and the Wrong, the popular and the unpopular, the things that succeed and the things that fail, and above all the things that deserve to succeed, and the things that do not—not the things only that make circulation for to-day, but the things that make character and influence and public confidence?

Can Conscience Be Developed?

"Of the ends to be kept in view by the legislator, all are unimportant compared to the end of 'character - making.' This alone is national education."

—Herbert Spencer.

They object that moral character, like news instinct, cannot be made, but must be born. This is a very serious objection, for to me an editor without moral character has nothing. But is it entirely true? Have not the critics themselves reached their present moral altitude by degrees? Training cannot create temperament, I admit, nor

perhaps radically change it; but is not conscience different from temperament? Is it not largely a question of education? May it not be considered more an acquired than an inherited or inherent quality? Is there not some reason to believe that conscience is largely a question of climate and geography? As Macaulay said: "Child murder in London leads to the scaffold; on the Ganges it is an honored religious sacrifice." A Hindu widow who burned herself to death on her husband's funeral pyre was performing the highest duty imposed by her moral sense. The English regarded her sacrifice as not only a crime, but the act of an incredible fool, and suppressed it in callous disregard of the protests of her shocked conscience.

Many an English or American married woman not only regards widowhood without any of those feelings of honor that led her Hindu sister to cut it short on the funeral pile—she often anticipates it by the help of the divorce courts, and enjoys the pleasing sensation of being the legal widow of more than one man at the same time. The missionary feels no profounder complacency in converting the cannibal than the cannibal feels in eating the missionary. A Kentucky mountaineer will commit murder, but he will not steal; a ward politician will often steal, but he will not, as a rule, commit murder. In Turkey a man may with a clear conscience have several wives; in Tibet a woman may have several husbands; in America nobody may have more than one husband or wife in good legal standing at a time. If George Washington had been kidnapped in infancy and reared by thieves in a slum, with a thief for his only instructor, instead of the devout mother who trained him in morals and religion, is it likely that he would have grown up the Washington whom we love and revere as the father of his country?

Can Moral Courage Be Taught?

They object that moral courage cannot be taught. Very true. I admit that it is the hardest thing in the world to teach. But may we not be encouraged by the reflection that physical courage is taught? It is not to be supposed that every young man who enters West Point or Annapolis, Brienne, St. Cyr or Sandhurst is a born hero. Yet the student at any of these schools is so drilled, hammered and braced in the direction of courage that by the time he graduates it is morally certain that when he takes his men under fire for the first time he will not flinch. Pride and the spirit of emulation can make masses of men do, what even a hero would not venture to do alone. Is it likely that Napoleon himself would have charged in solitary grandeur across the bridge at Lodi if there had been no one to see him do it? Or would Pickett's brigade at Gettysburg have gone forward to destruction if every man in it had not been lifted out of himself by the feeling that he and his comrades were all doing a heroic thing together—a thing in which he simply could not do less than the rest?

If such things can be done for physical courage, why not for moral courage? If the mind can be taught to expose the body fearlessly to wounds and death, cannot the soul be taught to cling to its convictions against temptation, prejudice, obloquy and persecution? Moral courage is developed by experience and by teaching. Every successful exercise of it makes the next easier. The editor is often confronted by an apparent dilemma—either to yield to a popular passion that he feels to be wrong or to risk the consequences of unpopularity. Adherence to convictions can and should be taught by precept and example as not only high principle but sound policy. Might not a hundred concrete examples of inflexible devotion to the right serve as a moral tonic to the student?

Must Journalism Be Learned in the Office?

They object that such making as a newspaper man needs after he has been successfully born can be done only in the actual practice of the office, or "shop."

What is the actual practice of the office? It is not intentional, but only incidental training—it is not apprenticeship—it is work, in which every participant is supposed to know his business. Nobody in a newspaper office has the time or the inclination to teach a raw reporter the things he ought to know before taking up even the humblest work of the journalist. That is not what editors are doing. One of the learned critics remarks that Greeley took young Raymond in hand and hammered him into a great editor. True. But was it not an expensive process, as well as an unusual one—the most distinguished newspaper-maker of his time turning

himself into a College of Journalism for the benefit of a single pupil? Suppose a man of half Greeley's capacity, set free from the exhausting labors and the harassing perplexities of creating a newspaper every day—relieved from the necessity of correcting the blunders of subordinates, of watching to prevent the perpetration of more blunders and able to concentrate his whole heart and soul upon training his pupils—might he not be able to turn out, not one Raymond, but forty?

Incidentally, I venture to mention that in my own experience as a newspaper reporter and editor I never had one single lesson from anybody.

The "shop" idea is the one that used to prevail in the law and in medicine. Legal studies began by copying bills of costs for the country lawyer; medical training by sweeping out a doctor's office. Now it is recognized that better results are obtained by starting with a systematic equipment in a professional school. The lawyer learns nothing at college except the theory of the law, its principles and some precedents. When he receives his diploma he is quite unprepared to practise. Nor does the doctor learn to practise at the medical school. He learns only principles, theories, rules, the experience of others—the foundation of his profession. After leaving college he must work in the hospitals to acquire the art of practically applying his knowledge.

In journalism at present the newspaper offices are the hospitals, but the students come to them knowing nothing of principles or theories. The newspaper hospital is extremely accommodating. It furnishes the patients for its young men to practise on, puts dissecting-knives into the hands of beginners who do not know an artery from a vermiform appendix, and pays them for the blunders by which they gradually teach themselves their profession. We may sympathize with the students in their industrious efforts at self-education, but may we not also sympathize with the unfortunate editor who has to work with such incompetent instruments?

Is a New College Superfluous?

"To rear up minds with aspirations and faculties above the herd, capable of leading on their countrymen to greater achievement in virtue, intelligence and general well-being, these are the ends for which endowed universities are desirable; they are those which all endowed universities profess to aim at, and great is their disgrace if, having undertaken this task and claiming credit for fulfilling it, they leave it unfulfilled."

—John Stuart Mill.

They object that even if a college education be desirable, everything needed is already provided in the existing colleges and no special department is required.

This criticism appears to have some force. It is possible that it may be advanced with sincerity by intelligent newspaper men who know nothing of colleges, or by intelligent college men who know nothing of newspapers. But it is superficial. It is true that many of the subjects needed for the general education of a journalist are already covered in college. But they are too much covered. The student of journalism may find one course in a law school, another in a graduate school of political science, another, at the same hour, in an undergraduate class at college, and another in a department of literature.

A young man of very remarkable gifts—enough to enable him to educate himself without the help of a college—might be able to make from the catalogue a selection of courses which would appear on paper to be a very fair curriculum. It would perhaps be adequate if he could keep the studies from conflicting in hours, which he could not, and if at twenty years of age he already possessed that knowledge of the requirements of his chosen profession which I feel that twice twenty years' experience and hard work in my profession have not given me.

But after this wonderful young man has made out his list of studies he will be doomed to disappointment. The courses in history, in law, in political science and the rest will not be what he really needs as a specialist in journalism. They will give him only a fraction of the knowledge he requires on those subjects, and they will swamp that fraction in a flood of details of which he can make no use. To fit these courses to his purpose they must be remodelled and specialized. Modern industry looks sharply after its by-products. In silver-mining, gold is sometimes found as a by-product exceeding the value of the silver. So in general university courses we may find by-products

that would meet the needs of the journalist. Why not divert, deflect, extract, concentrate, *specialize them for the journalist as a specialist*?

The spirit of specialization is everywhere. The lawyer is a real-estate lawyer, or a criminal lawyer, or a corporation lawyer, or possibly a criminal-corporation lawyer. Formerly the family physician treated every ailment; now there are specialists for the eye, the ear, the throat, the teeth; for men, for women, for children; even for imaginary diseases; for every possible variety of practice. And there is specialization in the newspaper offices themselves. The editor of a New York paper confined to the editorial page is as much surprised as the reader when in the morning he reads the news columns. The news editor does not know what editorials there will be; the musical critic could not write of sporting events; the man with the priceless sense of humor could not record and interpret the movements of the stock-market. The men in all these fields are specialists. The object of the College of Journalism will be to dig through this general scheme intended to cover every possible career or work in life, every profession, to select and concentrate only upon the things which the journalist wants, and not to waste time on things that he does not want.

Class Distinctions—Why Not?

They object that a College of Journalism would establish class distinctions in the profession—an invidious distinction of the few who had received the benefits of a collegiate training against the many who had not enjoyed this advantage. I sincerely hope it will create a class distinction between the fit and the unfit. We need a class feeling among journalists—one based not upon money, but upon morals, education and character.

There are still a few places in which money is not everything, and they are those in which men are joined by a bond of honorable association. The cadet at West Point is taught honor and pride in his profession. He knows that none of his comrades will lie or cheat or do anything unworthy of a gentleman, and the pleasure he feels in such associations fully compensates for his ridiculously small income. He sees thousands of vulgar people, much more prosperous than himself, living in much greater luxury, yet he would not change his life and his social circle for theirs. May we not hope that a similar education will in the future create a similar corps feeling among journalists—the same pride in the profession, the same determination to do nothing "unbecoming an officer and a gentleman"? Why not?

The journalist has a position that is all his own, He alone has the privilege of moulding the opinion, touching the hearts and appealing to the reason of hundreds of thousands every day. Here is the most fascinating of all professions. The soldier may wait forty years for his opportunity. Most lawyers, most physicians, most clergymen die in obscurity, but every single day opens new doors for the journalist who holds the confidence of the community and has the capacity to address it.

But as yet the journalist works alone. If he is a college graduate he goes to his college club as a graduate, not as a journalist. He never speaks of another journalist as "my colleague," as the lawyer or the physician does of his professional brother. He hardly ever meets other journalists socially, in any numbers. But if the future editors of the city were in large proportion graduates of the same college and had a recognized professional meeting-place in which they could come together informally and discuss matters of common interest, would they not eventually develop a professional pride that would enable them to work in concert for the public good and that would put any black sheep of the profession in a very uncomfortable position? Such a spirit would be the surest guaranty against the control of the press by powerful financial interests—not an imaginary danger by any means.

If such a class spirit existed, no editor who had degraded himself by becoming the hireling of any Wall Street king or ring would dare to face his colleagues. He would be too conscious of having been false to his better nature, and equally false to the traditions of his college and of his profession. It would be impossible then for any Huntington or Gould of the next generation to buy up newspapers—a thing easily feasible where hundreds of millions are at stake, unless there is a strong feeling of class pride and principle to prevent it. The knowledge that a reputable journalist would refuse to edit any paper that represented private interest against the public good would be enough of itself to discourage such an enterprise. Such a refusal would be as severe a blow to public confidence in the newspaper as the rejection of a brief by a high-minded lawyer is to the standing of a case in court.

No, there is nothing to fear in class distinctions founded on moral and mental superiority—on education and knowledge. We need more such classes, in the presence of the prevailing mania for mere money-making. The million of teachers form a class of this kind, with small pay, but with the consciousness of pursuing a noble profession. Such distinctions are especially necessary in a republic which has discarded everything in the way of rank and title and left personal merit the only thing that can dispute the worship of wealth.

Has the Experiment Been Tried?

They object that schools of journalism have been tried and have failed. This is very shallow, and while technically true is practically untrue. There are persons occupying desk room in grimy offices who advertise to make journalists to order. There are more pretentious "correspondence schools" which tell, no doubt correctly, how to read proof and prepare copy for the press. And there have even been certain courses of lectures in colleges and universities of standing, in which gentlemen of more or less experience in journalism have expressed some general ideas about the requirements of the profession. This thus far has been the Lilliputian limit of effort in the direction of a university training for journalism.

So far as these could have any effect at all it would be in the direction of convincing the student that he would do better to choose some other profession. One lecturer, who is an exceedingly successful and able magazine editor, devoted his time to explaining the value of fiction and the "market" for short stories. He treated newspapers solely from the commercial point of view, and never once referred to their ethical side. Another gentleman, whose ability I greatly admire and who ought to understand his subject, alleged that a young man could make more money in the law than in journalism, and ventured the surprising assertion that a reporter earns only $20 a week. Thus at the very start he chilled the enthusiasm of young men of talent who would have been attracted if they had known that they could win more prompt and more substantial pay as beginners in journalism than in any other profession.

Something has been said of a so-called school of journalism in London, which is compared with the proposed institution at Columbia. I do not wish to disparage the London school, but it has about ten boys—not college students, just schoolboys—and its whole endowment is one travelling scholarship. I may mention incidentally that there will be five travelling scholarships at Columbia. To compare a boys' school or a few desultory courses of lectures with a college amply and permanently endowed and equipped in a great university is preposterous. Instruction in journalism has never yet had a fair chance to show what it can do. The new institution will be the first experiment of its kind.

How Will Teachers Be Found?

They object that competent teachers, without whom the most ingenious plans of instruction must fail, are not to be found. I confess that this is the greatest, gravest, difficulty and danger. Like any college, we must have in the first place a combination of the highest character and capacity, with love of and aptitude for teaching. Even this is no small thing to ask, as the difficulty of the colleges in finding suitable professors may warn us. But we need something beyond and much rarer than this. Teachers of journalism should also be experienced editors. But how are we to lure a truly able editor from the active work of the profession in which there is such splendid scope for his powers and such eager competition for his services while he is in the prime of life?

The difficulty of drawing the right men from active service suggests the possibility that it may be necessary to fall back upon retired editors, who can no longer take part in the strenuous newspaper life. But my hope is that the whole profession will see in this situation an appeal to its honor and its pride. I hope that the very difficulty of the problem will prove its own solution, by enlisting the sympathetic interest and aid of the men of power and of energy who would not waste their time on work that others could do. These men could not shirk the responsibilities of leadership if they would, nor do I believe they would if they could.

The greatest painters of Paris visit the art schools and criticise the work of the pupils. The masters of the New York bar give lectures in the law schools. The most famous physicians teach in the medical colleges. Why should the greatest editors not have an equally unselfish pride in and love

of their own profession? Upon their generous sympathy and aid will depend the success of the experiment.

Nor need we confine our search to journalists. Historians like McMaster, Wilson and Rhodes; college presidents like Eliot, Hadley and Angell; judges like Fuller, Brewer and Gray—could help the work with lectures and suggestions. It is nothing new for a justice of the Supreme Court to lecture in college. Justice Story did it at Harvard, Justice Field did it at the University of California, Justices Harlan and Brewer do it now at the Columbian University at Washington. Even ex-Presidents have not thought such work belittling. Harrison lectured at Stanford and Cleveland at Princeton. And surely the greatest minds of the nation must realize how indissolubly a pure republic is linked with an upright press. National pride will, I fully trust, constrain them to do what they can for the elevation of an agency by which the destinies of the Union are so profoundly affected for good or for evil.

Things Unteachable.

"Our task is improved exactly as we improve our judgment by extending our knowledge, by a steady attention to one object, and by frequent exercise."

—BURKE *on "The Sublime and Beautiful."*

They object that there are some things that a College of Journalism cannot teach. I admit it. No college can give imagination, initiative, impulses, enthusiasm, a sense of humor or irony. These things must be inborn. But would not such inborn qualities be developed and strengthened in the atmosphere of the proposed college? Is not the development of such inborn qualities seen everywhere in intellectual life? The poet, it is true, is born, not made. That is also true of a great orator and a great painter.

But does not the great poet indicate and cultivate his inborn genius by instinctively devouring, even as a child, all the poetry he can procure? Keats wrote: "I long to feast upon old Homer as we have upon Shakespeare and as I have lately upon Milton." Did not such orators as Demosthenes, Cicero, Burke and Webster declaim the masterpieces of oratory and rhetoric? Did not Van Dyck and every other great painter benefit by the careful study of the work of their great predecessors in art? And with these facts in mind may we not hope that the student at Columbia, living in an atmosphere of journalism, with the highest examples and ideals of journalism constantly before him, will bring to the highest efficiency whatever dormant or inborn faculty he may possess? It seems to me that the more conclusively the critics prove certain things to be unteachable the more they prove the necessity of teaching everything possible that *is* teachable.

This is all that any education can do, and it is enough. Education is development, not creation. If its value depended upon its ability to bring mental qualities into existence from nothing, every educational institution from the kindergarten to the university would have to close its doors, and every educator would be out of employment.

In short, does not every mental worker, whether creative or imitative, try to steep himself in the atmosphere of his work? And is it not reasonable to suppose that our student would gain some advantage from living and working for some years in the atmosphere of journalistic training?

Does It Come From the Wrong Source?

Finally, as if all these criticisms were not crushing enough, they object that even if this endowment be needed I am not the right man to give it. I fully realize the force of this argument, and I am ready cheerfully to retire in favor of any critic who will relieve me. I volunteered in the first place simply because there was a need which nobody else appeared anxious to meet. No pride of priority will deter me from giving way to a more suitable candidate. They also object that I have proved a college course in journalism to be unnecessary by succeeding without one. Perhaps I may be permitted to judge of that. It is ingenious to use me as a club against my own plan. If I have had any success it has been because I never, so far as my individual work and pleasure are concerned, regarded journalism as a business. From my first hour's work, through a period of nearly forty years, I have regarded journalism not only as a profession, but as the noblest of all professions. I have always felt that I was in touch with the public mind and

ought to do some good every day. Perhaps I have failed, but it has not been for lack of effort.

What Should *Not* Be Taught.

"The journalist's opportunity is beyond estimate. To him are given the keys of every study, the entry to every family, the ear of every citizen when at ease and in his most receptive moods—powers of approach and of persuasion beyond those of the Protestant pastor or the Catholic confessor. He is by no means a prophet, but, reverently be it said; he is a voice in the wilderness preparing the way. He is by no means a priest, but his words carry wider and further than the priest's, and he preaches the gospel of humanity. He is not a king, but he nurtures and trains the king, and the land is ruled by the public opinion he evokes and shapes. If you value this good land the Lord has given us, if you would have a soul in this marvellous civilization and lifting power of humanity, look well to the nurture and training of your king."

—Hon. Whitelaw Reid.

Not to teach typesetting, not to explain the methods of business management, not to reproduce with trivial variations the course of a commercial college. This is not university work. It needs no endowment. It is the idea of work for the community, not commerce, not for one's self, but primarily for the public, that needs to be taught. The School of Journalism is to be, in my conception, not only not commercial, but anti-commercial. It is to exalt principle, knowledge, culture, at the expense of business if need be. It is to set up ideals, to keep the counting-room in its proper place, and to make the soul of the editor the soul of the paper. Incidentally I may say that I have never spent an hour in any publication office either of the St. Louis *Post-Dispatch* or the *World*, though I managed to establish both these journals and still own them.

In the proposed course of study, drawn up with admirable quickness by President Eliot and widely discussed as if it had been definitely adopted, Dr. Eliot included instruction in the business administration of a newspaper. He mentioned specifically circulation, advertising, manufacture and finance.

My own ideas upon many parts of the course of study are still uncertain, but upon this one point they are very decided. I am sure that, if my wishes are to be considered, business instruction of any sort should not, would not and must not form any part of the work of the College of Journalism.

The course of instruction will be decided by the Advisory Board, which is not yet appointed, acting in conjunction with the authorities of the university.

The course outlined was made in a private letter of President Eliot, and was stated when published to be merely tentative. In spite of this explanation many newspapers based their comment and criticism upon it as an accepted fact. I have the greatest admiration for the extraordinary genius and character of the president of Harvard, but nothing was further from my mind—nothing, in fact, is more inconsistent and incompatible with my intentions or repugnant to my feelings—than to include any of the business or commercial elements of a newspaper in what is to be taught in this department of Columbia College.

What is a College of Journalism? It is an institution to train journalists. What is a journalist? Not any business manager or publisher, or even proprietor. A journalist is the lookout on the bridge of the ship of state. He notes the passing sail, the little things of interest that dot the horizon in fine weather. He reports the drifting castaway whom the ship can save. He peers through fog and storm to give warning of dangers ahead. He is not thinking of his wages, or of the profits of his owners. He is there to watch over the safety and the welfare of the people who trust him.

Few men in the business office of a newspaper know anything about the principles of journalism. The proprietor himself is not necessarily a journalist. He may be, if he is capable of understanding public questions, of weighing public interests, of carrying out public tasks; if he is in touch with public feeling, realizes public duties, is in sympathy with the public welfare, and is capable of presenting his ideas to the people, either by his own pen or by the pens of others. But it is quite conceivable that some proprietors are deficient in these points.

My hope is that this College of Journalism will raise the standard of the editorial profession. But to do this it must mark the distinction between real journalists and men who do a kind of newspaper work that requires neither culture nor conviction, but merely business training. I wish to begin a movement that will raise journalism to the rank of

a learned profession, growing in the respect of the community as other professions far less important to the public interests have grown.

There is an obvious difference between a business and a profession. An editor, an editorial writer or a correspondent is not in business. Nor is even a capable reporter. These men are already in a profession, though they may not admit it, or even realize it, as many of them unhappily do not. Ill or well, they represent authorship, and authorship is a profession.

The man in the counting-room of a newspaper is in the newspaper business. He concentrates his brain (quite legitimately) upon the commercial aspects of things, upon the margin of profit, upon the reduction of expenses, upon buying white paper and selling it printed—and that is business. But a man who has the advantage, honor and pleasure of addressing the public every day as a writer or thinker is a professional man. So, of course, is he who directs these writers and reporters, who tells them what to say and how to say it, who shows them how to think—who inspires them, though he may never write a line himself, and decides what the principles of the paper shall be. For example, the greatest editor in the whole history of European journalism, John Delane, never wrote any articles of his own, although for thirty-six years he was the head, the heart, the brain of the *London Times*. But he directed every writer, he furnished the thought, the policy, the initiative; he bore the responsibility, and he corrected both manuscript and proofs.

In this relation perhaps it may be interesting to note that Delane studied law and was admitted to the bar before he became its editor at the age of twenty-four. But it was without any intention of practising. His father, who was a lawyer for the *Times,* destined him for its service from his boyhood, and he joined its staff as a reporter soon after passing his legal examinations. Delane, with his editorial revision, elimination and substitution, was like some of the great old painters, who seem to have much of their work, measured by mere bulk, done for them by pupils. Rubens, or Van Dyck, or Raphael furnished the idea, the design, the composition, in an original drawing; the pupils did the drudgery of execution. Then the artist added the finishing touches that lifted the picture to the rank of a masterpiece. Only in that way could the enormous output ascribed to those masters have been produced. So it was with Delane, and so it is with every editor who knows how to make the most of his powers.

That a newspaper, however great as a public institution and a public teacher, must also be a business is not to be denied, but there is nothing exceptional in this. Elements of business, of economy, of income and outgo, are in the government of the city, the State, the nation, in art, in every school, in every college, in every university, indeed, in every church. But a bishop, even though he receives pay for his work, is not regarded as a business man; nor is a great artist, though he charges the highest possible price for his paintings and dies as rich as Meissonier or Rubens. Many distinguished lawyers, such as Mr. Tilden—one of the greatest—were shrewd business men, able probably to outwit the majority of publishers, yet they were rightly considered members of a learned profession.

George Washington had extraordinary business capacity. By intelligent economy, method, sound judgment and the closest attention to details he accumulated the greatest American fortune of his time. Yet when he was called to serve the country in the field he did it without a salary. At Mount Vernon he was a business man; in history he is a soldier, a statesman and the father of his country.

To sum up, the banker or broker, the baker or the candlestick-maker is in business—in trade. But the artist, the statesman, the thinker, the writer—all who are in touch with the public taste and mind, whose thoughts reach beyond their own livelihood to some common interest—are in professions.

Dangers of Plutocracy and Demagogy.

"*Our improvement is in proportion to our purpose.*"

—Marcus Aurelius.

Nothing less than the highest ideals, the most scrupulous anxiety to do right, the most accurate knowledge of the problems it has to meet, and a sincere sense of its moral responsibility will save journalism from subservience to business interests, seeking selfish ends, antagonistic to the public welfare. For instance, Jay Gould once owned the

principal Democratic newspaper of America. He had obtained it from Col. "Tom" Scott in a trade for the Texas Pacific Railroad, and I was fortunate enough to be able to relieve him of his unprofitable burden. C. P. Huntington bought a New York newspaper and turned it into a Democratic organ, he himself, like Gould, being an ardent Republican. He hoped in this way to influence Mr. Cleveland's administration and the Democrats in Congress against making the Pacific railroads pay their debts of about $120,000,000 to the Government. Incidentally he testified under oath that his journalistic experiment cost him over a million dollars, although his newspaper was so obscure that its utterances were hardly more than soliloquies. Mr. Huntington did somehow succeed in delaying for a number of years the enforcement of the Treasury's claims. More dangerous, however, than the plutocratic control of newspapers for sordid private ends is their control by demagogues nor ambitious, selfish ends. The people know, with unerring instinct, when a newspaper is devoted to private rather than to public interests; and their refusal to buy it limits its capacity for harm. But when a demagogic agitator appeals to "the masses" against "the classes" and poses as the ardent friend of the people against their "oppressors," assailing law and order and property as a means of gaining followers among the discontented and unthinking, the newspaper becomes a dangerous power for evil. Especially is this true when money is freely used to mislead the people.

Commercialism has a legitimate place in a newspaper, namely, in the business office. The more successful a newspaper is commercially, the better for its moral side. The more prosperous it is, the more independent it can afford to be, the higher salaries it can pay to editors and reporters, the less subject it will be to temptation, the better it can stand losses for the sake of principle and conviction. But commercialism, which is proper and necessary in the business office, becomes a degradation and a danger when it invades the editorial rooms. Once let the public come to regard the press as exclusively a commercial business and there is an end of its moral power. Influence cannot exist without public confidence. And that confidence must have a human basis. It must rest in the end on the character of the journalist. The editor, the real "journalist" of the future, must be a man of such known integrity that he will be above the suspicion of writing or editing against his convictions. He must be known as one who would resign rather than sacrifice his principles to any business interest. It would be well if the editor of every newspaper were also its proprietor, but every editor can be at least the proprietor of himself. If he cannot keep the paper from degrading itself, he can refuse to be a party to the degradation.

By far the larger part of the American press is honest, although partisan. It means to do right; it would like to know how. To strengthen its resolution and give to its wisdom the indispensable basis of knowledge and independence is the object of training in journalism.

The March of Progress.

"I know but two ways by which society can be governed: the one is by Public Opinion, the other by the Sword."

—MACAULAY.

In an interesting review of its seventy years of life, the New York *Sun* estimated the total circulation of the six morning papers existing in New York at its birth at 18,000 copies a day. Since then four of these six journals have died, and the *Tribune, Times, Herald* and *World* have been born.

To-day the New York morning papers alone print more than a million copies of every issue. At least 1,500,000 copies more are added every working-day by the evening papers which seventy years ago did not exist. In other words, for every New York newspaper sold in 1833, 140 are sold now to fourteen times as many people. Where there used to be nearly three families to every newspaper, there are now over three newspapers to every family.

There are men now living whose memories can bridge that gap of seventy years. In 1833 Andrew Jackson was President. The entire United States had less than the present population of the States of New York and Pennsylvania, and far less wealth than is concentrated to-day within half a mile of Trinity Church. There was not an American settlement west of the Missouri, and the few cabins were the only marks of civilization on the site of Chicago. New York City was smaller than Detroit is now. Washington was a swamp in which coaches were

mired down and abandoned on Pennsylvania Avenue, and cows grazed on the site of the British Embassy. A generation had passed since Jackson had resigned his seat in the Senate because it took him nearly six weeks to make the journey between Philadelphia, then the capital, and his home—a longer time than it has taken within the past year to girdle the globe—but there were yet Senators who found the trip to Washington not much shorter. Still there were steamboats on the navigable rivers, and stage-coaches drawn over rails by steam-engines had just begun to astonish the inhabitants of a few favored localities. The horse was still the usual motor for high-speed traffic, and the ox or the mule the customary freight-engine. "Do Witt Clinton's ditch" across the State of New York was the commercial marvel of the age. The people of Virginia were strangers to the people of Pennsylvania, and the journey from Philadelphia to Pittsburg was longer and vastly more arduous than the journey now from Boston to the City of Mexico. The farmer reaped his grain with a scythe and cradle, and threshed it with a flail or under the feet of horses. Whale-oil lamps glimmered feebly through the darkness of the city streets. Nails were made by hand on the blacksmith's forge. In the country a calico gown was a luxury, to be worn on state occasions. Colleges were few and puny. Harvard, the most ambitious of them all, was a high school in which a few professors taught Latin, Greek, moral philosophy and a little mathematics, leading in most cases to a course in theology. There was not a single real university in America. There were no great libraries.

In the best presses of that day, and for many years after, it was necessary to feed the paper by hand, one sheet at a time, print it on one side and then feed it again and print it on the other. All the presses then in existence would not have been able to print a single edition of a leading New York newspaper of our time, such as whirls between the cylinders of a Hoe machine from endless rolls of paper at the speed of the Niagara rapids. All the paper-mills then in the country could not have met the demands of such a journal for white paper. All the news-gathering agencies in the world would have hopelessly broken down in the attempt to provide even a fraction of its present daily supply of information. Had any one suggested then that children were already born who would be still living and reading when news would be flashed from Tokyo to New York by lightning and printed before it happened—who would see on the same page despatches of the same date from India, from Siberia, from Australia, from Corea and from the sources of the Nile; that one of them in Boston could talk with his own voice to another in Omaha; that they would see newspapers printed on ships on the Atlantic containing news shot on invisible waves over a thousand miles of ocean, and that they could take breakfast in New York and dine in London a week later, he would have been treated as an eccentric "visionary."

So much for the seventy years upon which the old man can look back—what of the seventy years to which the boy can look forward?

The population of the Republic is still increasing at a rate that is more than equivalent to annexing a Canada every four years. New York promises to displace London in twenty or thirty years as the first city of the world. Nearly a million immigrants landed last year—the greatest human flood in all modern history. Electric trains have already been driven at a hundred and fifty miles an hour—as great an advance on the ordinary express train of 1904 as that has been on the stage-coach of 1833. Wireless telegraphy is in its feeble infancy, and radium is hinting of things unsuspected. The nations are drawing together. The International Postal Union and international conventions on copyrights, tariffs, arbitration and other matters of common concern are teaching them that it is as easy to cooperate as to quarrel. At the smallest rate of increase we have ever known in any census period the population of the United States would not be less than 290,000,000 in seventy years from now. Even allowing for any reasonable decline in the rate of growth it can hardly fall below 200,000,000.

We are embarked, whether we like it or not, upon a revolution in thought and life. Progress is sweeping forward with accelerating force, outstripping in decades the advance of former centuries and millenniums. All professions, all occupations but one, are keeping step with that majestic march. Its inspiration has fired all ranks of the marching army, or must we except the standard-bearers? The self-constituted leaders and enlighteners of the people—what are they doing? Standing still, lost in self-admiration, while the hosts march by? Are they even doing as well as that? Is it not a fact that the editors of seventy

years ago were, as a rule, better informed in law, politics, government and history than those of to-day? The statesmen and lawyers and political students who used to do editorial work for ambition or intellectual pleasure have ceased to frequent the newspaper offices. There is no trade so humble that it is not developing a standard of competence based on thorough training. For the more intellectual professions—law, medicine, art, architecture, music, engineering in all its varied branches—the years of preparation are stretching over ever-lengthening periods.

Is the most exacting profession of all—the one that requires the widest and the deepest knowledge and the firmest foundations of character—to be left entirely to the chances of self-education? Is the man who is everybody's critic and teacher the only one who does not need to be taught himself?

What Should Be Taught—and How?

"He (Gladstone) was never very ready to talk about himself, but when asked what he regarded as his master secret, he always said, concentration. Steady practice of instant, fixed, effectual, attention. . . ."

—JOHN MORLEY.

Style.—Everybody says that a College of Journalism must teach good English style. But what is a good style and how shall it be taught?

The importance and the rarity of a really good English style are so great that, to my own mind, this college will be worth all its cost if it shall succeed only in teaching the future generations of journalists what a wonderful art Style is and how to perfect themselves in it.

"The style is the man," said Buffon; by which he obviously meant that the best thing in any man's writing is that which is individual—giving his own thought in his own way. But the important thing is to develop the style that is the man in a manner to make it conform to the requisites of the best newspaper writing, namely, accuracy, clearness, terseness and forcefulness.

The literary art is in general very inadequately taught and very little appreciated in this country. No artist aspires to fame without a knowledge of form and color and drawing. But one has only to read the newspapers and the books without number issued from the press to perceive that many authors audaciously begin their careers without having learned to write.

In no profession is the art of writing more important than in journalism, which is daily turning out a literature—ephemeral, it is true, and in great part bad, but still the literature of the millions. Yet one style will not answer the manifold requirements of a newspaper. There must be a different style for each kind of work—polemical, descriptive, analytical, literary, satirical, expository, critical, narrative—and the mind of the editor like a trained musical ear, must be able to detect every note out of place. An argumentative editorial on the tariff must not be written in the vein that would be appropriate to a pathetic description of a mother's search for a lost child, nor must a satirical dissection of a politician resemble a report of a bankruptcy case.

But, through all the varied styles fit for use in a newspaper there runs one common feature—public interest. Whether the subject he touches be profound or trivial, the journalist must not be dull nor involved, nor hard to understand. He must know exactly what he wants to say, how to say it and—when to stop. He must have a Gallic lucidity and precision.

He must have the critical faculty, for all newspaper work involves criticism and analysis. The journalist criticises everything under the sun; his eye is always at the mental microscope and his hand on the dissecting-knife.

Acute journalists gradually fashion their own styles through observation and practice. They can never be relieved of that necessity by any attempt to fit a ready-made style to them; but may they not be helped by a course of instruction systematically explaining what journalism requires, with illustrations of good and bad work?

The Law.

"Honest and independent journalism is the mightiest force evolved by modern civilization. With all its faults—and what human institution is faultless?—it is indispensable to the life of a free people. The frontiers of the constitutional privilege of the press are as wide as human thought, and it is one of the glories of our country that its journalism, as a whole, is incorrupt, fearless and patriotic. It is the never-sleeping enemy of bigotry, sectionalism,

ignorance and crime. It deserves the freedom which our fathers gave it: It has justified itself."

—ALTON B. PARKER, *Chief Judge of the New York Court of Appeals.*

Everybody says that Law must be taught. Assuredly!—but how?

There are manifold branches of the law. International law, constitutional interpretation, the law of corporations, of contracts, of real estate, wills, patents, divorce, the criminal law and a score of other important subjects each command the almost undivided attention of legal experts who have practically become specialists.

To attempt the mastery of all phases of the law as taught in a law school would be impossible for a student of journalism. Nor is it necessary. Here again the fundamental idea underlying the entire scheme of this college, of specializing the instruction, is seen to be essential. The regular student of law must learn not merely the principles, but the practice and precedents, of his profession. But the journalist needs to know only the principles and theories of law and so much of their application as relates directly to the rights and the welfare of the public. The art of selection must be employed in separating the essential and the practical from the non-essential and the impractical.

Take the question of franchises, which has become so important to municipalities and to the country at large. Would not a series of special lectures, prepared by a competent jurist, instruct those who aim to become teachers and guardians of the people as to the nature and proper limitations of public franchises? A clear definition of the nature and responsibilities of a "common carrier" and of the reservations and conditions which it is right to impose upon corporations that seek the use of public property, like the streets of a city, for private gain, would be of great advantage to those who will be called upon to protect the public interests in the future.

There is much in the papers—and a good deal, it must be confessed, that is either ignorant or demagogic, or both—in denunciation of monopolies. How many know the fundamental fact that oppressive monopolies are abhorrent to the common law, which we inherited from England? How many know the difference between common law and statute law? President Cleveland, President Roosevelt, and even the astute Mr. Olney, thought a constitutional amendment necessary to enable Congress to forbid and punish "trusts, monopolies or other conspiracies in restraint of trade." But the Supreme Court has frequently decided, and has just reaffirmed the truth that for twelve years I maintained in my newspaper, that under the common law all these combinations are unlawful and subject to the restraint of Congress under the Constitution.

The relations of capital and labor, which present one of the greatest problems before us as a nation and one filled with potentialities of the gravest danger, and the ownership or regulation of public utilities by municipalities or by the nation, both involve many strictly legal or constitutional points. The discussion of these questions in the press is too commonly partisan, superficial or demagogic. Would it not be of great advantage to the press and the public if journalists were instructed in the basic principles of law and equity in these matters? Is it not entirely practicable to teach them the legal meaning of such phrases as "eminent domain," "vested rights," "the public welfare" (as used in the Constitution), "corporate privileges" and the like?

The writ of injunction—or "government by injunction" as it has been mischievously called—would it not be enlightening and useful if a great jurist like Justice Brewer or James C. Carter or Joseph Choate were to give to the students in the College of Journalism a history of this writ, and a dispassionate account of its uses and necessity and possible limitations in a free government?

And so of divorce—the press teems with scandals arising from the too easy sundering of marriage ties. Clergymen deplore its evils, moralists suggest impossible remedies, legislators meddle only to muddle. Would it not conduce to the enactment of a national divorce law, uniform and stringent, if the journalists of the future were impressed with the anomaly of forty-five separate and often conflicting laws of marriage and divorce in this indissoluble Union?

The fundamental things—the settled principles of law—that touch closely the life and the welfare of the people, can surely be taught in a series of lectures by eminent lawyers, aided by the standard text-books. Nearly forty years ago, preparatory to my admission to the bar in St. Louis, I not only read but *studied* Blackstone; and I have never seen the day in my whole journalistic experience when

I did not feel thankful for what I then learned of the *principles* of law.

A carefully specialized course of study, adapted to teach the student of journalism what he needs to know, and omitting the things that are not required by one who has no intention of practising law, will, it seems to me, prove to be not only wholly practicable, but in the highest degree useful. No subject is more important, for Law is the basis of Civilization, the regulator of Liberty, the safeguard of Order, the groundwork of Government, the formal expression of a nation's ideas of Justice—and Justice is the supreme test of any and all government.

Ethics.

Everybody says that ethics should be taught. But how?

I have expressed myself poorly indeed if I have not made it clear that hero is the heart of the whole matter.

Without high, ethical ideals a newspaper not only is stripped of its splendid possibilities of public service, but may become a positive danger to the community. There will naturally be a course in ethics, but training in ethical principles must not be confined to that. It must pervade all the courses. Ideals, character, professional standards not to be infringed without shame, a sense of honor which, as Burke said of the totally undeserving French noblesse, feels a stain like a wound: these will be the motif of the whole institution, never forgotten even in its most practical work.

News is important—it is the very life of a paper. But what is life without character? What is the life of a nation or of an individual without honor, without heart and soul?

Above knowledge, above news, above intelligence, the heart and soul of a paper lie in its moral sense, in its courage, its integrity, its humanity, its sympathy for the oppressed, its independence, its devotion to the public welfare, its anxiety to render public service.

Without these there may be smart journalists, but never a truly great or honorable one.

Literature.

Everybody says a journalist must study literature. True—but how? A college course is too short to allow even the barest introduction to all the great works with which a newspaper writer ought to be familiar. But it can make a beginning, which can be intelligent and thorough as far as it goes. The student would have time enough to become intimately acquainted with a few of the masterpieces whose web of imagery and allusion has become part of the texture of English style.

Perhaps I may take it for granted that in this course particular attention will be paid to the literature of politics, from Plato to Burke, from the letters of Junius to Hamilton's famous Federalist letters, and from Jefferson to Lincoln.

Truth and Accuracy.

Everybody says that a journalist ought to be taught the importance of truth and accuracy. But how?

Journalism implies the duty and art of omniscience. A newspaper never admits that there is anything it does not know. But, while the newspaper may know everything, the man who helps to make it does not, and owing to the limited capacity of the human brain he never can.

More important, therefore, than filling him up with facts that can never reach the measure of his needs is his instruction in the art of finding things when they are required. Does a reader ask how many national bank-notes were outstanding in 1867? The editor may not know, but by turning to the report of the Comptroller of the Currency he can find out, and then the paper knows.

The library of reference is the editor's best friend, and the art of going at once to the proper source for any needed piece of information is one of the most useful arts a journalist can possibly acquire. And is not this something that could easily be taught in a class-room?

The bibliography of books of reference, with instruction in the art of finding data with speed and precision, would make a well-defined college course. There is always some best source for every kind of information—some original source from which the facts trickle through all sorts of media, and finally reach the public at second, third or fourth hand.

To know these sources of exact knowledge, to be able to put one's hand on them instantly, and so to be able to state facts with absolute confidence in their accuracy—could there be any more useful accomplishments for a journalist?

History.

"He alone reads history aright who, observing how powerfully circumstances influence the feelings and opinions of men, how often virtues pass into vices and paradoxes into axioms, learns to distinguish what is accidental and transitory in human nature from what is essential and immutable."

—MACAULAY.

Everybody says that a School of Journalism must teach history. But how?

The world's historical records fill thousands of volumes. The utmost that any scholar can do in a whole lifetime is to dip into this mass of material here and there, and take out something that he particularly wants.

But the average college class is composed of young men with all kinds of purposes, and therefore with all kinds of wants, and these young men must all be taught together. Therefore the professor, perforce, prepares for them a neutral course.

Now, let us suppose that instead of lecturing for the general student in a general way, a professor of history should concentrate sharply upon the special object of the journalist, upon the special, separate needs of his training. Might he not then find time to throw light upon such subjects as these:

The history of politics. ("History," said Seeley, "is past politics and politics is present history.")

The growth and development of free institutions and the causes of their decay.

Revolutions, reforms and changes of government.

The influence of public opinion upon all progress.

Legislation.

Taxation.

Moral movements.

Slavery and war.

Conflicts between capital and labor.

The history of colonization, illuminating American policy at European experience.

The history of journalism.

Of course in this review general history would be lightly touched, English history more thoroughly, and American history would have several times as much attention as all the rest combined. And through all its phases would run the idea of progress, especially the progress of justice, of civilization, of humanity, of public opinion, and of the democratic idea and ideal.

Sociology.

Everybody says that a College of Journalism should teach sociology. But how?

Vague and almost formless as this science is, it is full of the raw material of the newspaper. Charles Booth's monumental seventeen volumes on the life and labor of the people of London, with its maps showing block by block where the thrifty workers congregate and where live the submerged tenth—where dens of vice elbow schools and where the saloon crowds upon the tenement—are the last condensation of a hundred years of reporting. Sociology, the science of the life of man in society, is the systematization of facts which it is the daily business of the journalist to collect.

The chief difficulty in teaching this science is that it is so very broad—like a river in flood, without any definite channel. But a professor who knows what to leave out can frame a course, theoretical and practical, that will be one of the best possible introductions to newspaper work.

Economics.

Everybody says that a College of Journalism should teach economics. But how?

May I not say with confidence that it should not confine itself to the old, arid, abstract, political economy, but should deal with the new play of industrial and commercial forces that is transforming modern society?

The relations between capital and labor, for instance. Can a journalist be too well informed about that? There are things here of which the old economists, with their "haggling of the market" and their "natural laws of wages," never dreamed.

The Enemies of the Republic.

There are dangers ahead for the Republic. The demagogue is in the land. He is trying to array society into two camps. There is a new irrepressible conflict which it is folly to ignore. The stupendous growth of corporate power; the enormous increase in individual fortunes, combined to control railroad systems and industries, defiant of law and destructive of competition; the growing inequalities in life, in station and in opportunity; the practical disfranchisement of many millions of citizens equal

under the Constitution; the enormous, mass of illiteracy and political unfitness in the Southern States; the intensified antagonism of labor against corporate capital, of employees against employers—are problems which will tax the wisdom of our statesmen and the serene self-confidence of our people.

This confidence would be sublime, if it were not blind! What reason have we for thinking that our Government is exempt from the mutations of history? Is not, in fact, our Republic liable to popular passion, sitting as it does in a glass house, subject to the conflicts, the disturbances and the possible reactions of elections every two and four years?

A change of 25,000 votes in certain close States in 1896 would have put Mr. Bryan into the White House and have given him the appointment of three Supreme Court justices. With growing discontent, with appeals to ignorance by some newspapers, powerfully assisted by the proceedings of some financiers who act on the principle, "after us the deluge," who can be so dense as not to see the certainty of popular reaction against the money power, the rich, especially in hard times? Is it inconceivable that an element that could command over six million votes in 1896 might, under other conditions, secure twenty-five thousand more? Who can be so over-confident of the future as not to see that the very fire of liberty, maintained by universal suffrage, brings danger every two years or every four years, unless that liberty be regulated by law, order, intelligence and self-control?

And can we ignore the growing power and intelligence of organized labor in any course of ecomomic study? Not only do the labor-unions represent organized antagonism against organized capital, but they now display this very remarkable development—that they do not represent poor labor, destitute labor, as they formerly did and are supposed by some still to do, but what may fairly be called semi-capitalistic labor. Is it not most significant that after a six months' strike in the anthracite regions, during which the idle miners were reported to have drawn a million dollars from the funds of their union, that union now has, on the authority of Mr. John Mitchell, approximately another million dollars in its treasury? The laborers, in fact, have become semi-capitalists through organization. When they are armed with such a weapon, with the power of cooperation, with a strong leader, and with at least a million of votes for which the politicians of both parties are bidding, are there not sufficient possibilities to make the situation worth the study of men who assume to be popular teachers?

And Socialism!—a new economics in itself—treated as beyond the pale of respectable discussion a few years ago and now in principle actually triumphant in Germany, France, and even in so conservative a country as England—whose bill for the purchase and distribution of landed estates in Ireland is the essence of state Socialism—what of that? The German socialists openly refuse to be considered simply as a political party, accepting the present situation and trying to improve existing institutions from within. They proclaim their purpose as distinctly revolutionary.

We have socialistic beginnings in America, such as demands for the Government ownership of mines and railroads and a pension roll on which we have spent three thousand million dollars since the civil war, and to which, already containing a million names, 300,000 new names have just been added by an act of Executive usurpation. But our Socialism has no leaders like Jaurès and Bebel—two of the greatest intellects in Europe.

How soon shall we have two such men in America?—not gifted merely with Mr. Bryan's talent for oratory, but with sound judgment, with stable character and with sincerity of purpose that would give them a hold on the people, not to be obtained except through that confidence which only such sincerity of character and soundness of judgment breed?

Arbitration.

And what are we to say of arbitration, that great engine of civilization, belonging equally to economics and to politics, and perhaps to ethics, which is daily proving its value as a substitute for disturbances, disorder, riot and war? The very act of submitting a dispute to arbitration proves that there is something to be said on both sides. The men who arrogantly issue demands for which they offer no reason but simple power have "nothing to arbitrate." Before an arbitration tribunal questions are discussed on their merits. Appeals to prejudice, to class or national animosities, to cynical self-interest, are dropped. Every such hearing is a lesson in order and civilization.

There is always a tendency on the part of the weaker side to ask for arbitration and on that of the stronger to refuse it. Here is the opportunity of the press to bring its moral force into the dispute and overcome the obstinacy of brute strength by the pressure of public opinion.

The literature of arbitration is already immense. The workings of experiments in compulsory arbitration, of boards of conciliation, of permanent State arbitration tribunals, of standing arbitration agreements between labor-unions and employers, and of the long line of international settlements leading up to the establishment of the world's court of arbitration at The Hague, would furnish material in themselves for a full and most valuable course of study for a journalist.

Statistics.

Everybody says that statistics should be taught. But how?

Statistics are not simply figures. It is said that nothing lies like figures—except facts. You want statistics to, tell you the truth. You can find truth there if you know how to get at it, and romance, human interest, humor and fascinating revelations as well. The journalist must know how to find all these things—truth, of course, first. His figures must bear examination. It is much better to understate than to overstate his case, so that his critics and not himself may be put to confusion when they challenge him to verify his comparisons.

He must not read his statistics blindly; he must be able to test them by knowledge and by common sense. He must always be on the alert to discover how far they can actually be trusted—and what they really mean. The analysis of statistics to get at the essential truth of them has become a well-developed science, whose principles are systematically taught. And what a fascinating science it is! What romance can equal the facts of our national growth?

Is it not a stupendous fact that there are 204,000 miles of railroad in the United States (more than in the whole of Europe) owned by companies having a total capitalization of more than $14,000,000,000, par value, affording livelihood to 5,000,000 of persons (employees and their families) and distributing $178,000,000 in dividends to owners and $610,713,701 in wages?

The flow of our exports—over three thousand millions above imports in seven years—does not the imagination see, in these figures, the whole story of the recent forward rush of American industry—the "American Invasion" of Europe, and the homeward flight of securities? And then, are there not interesting reflections in the fact that we have spent almost exactly the same amount in pensions in the past thirty years? What a tribute to our institutions—what hope for the future—in the fact that 18,000,000 pupils are attending school or college! And immigration—more than 20,000,000 since 1820—nearly a million arrivals last year—a New Zealand swallowed in a year; an Australia in four years;—surely it looks as if Europe were being transplanted bodily to America. But when we remember that the natural increase of the population of Europe is about four millions a year, we may feel reasonably sure that the old continent will always have a few people left.

Modern Languages.

Everybody says a School of Journalism should teach modern languages. But which?

It cannot treat them as a luxurious culture subject, or as a mental discipline. It must regard each foreign language as a tool—a key with which to unlock the life, the literature, the morals and the manners of the people that use it. "He who knows no other tongue," said Goethe, "knows little of his own." And every additional tongue he can master is a new asset for the journalist. The special advantage of French is on the side of style. Order, precision, lucidity, the sense of form, are all French characteristics of especial value to the journalist.

An advantage of German is that it is, above all others, the language of translations. With that you have a key to everything else. Everything of importance in every other language, ancient or modern, has been translated into German, and translated wonderfully well. How much can be done in two or three years in the teaching of one or more modern languages as a part of that special course is a matter for the Advisory Board and the college authorities to consider.

Physical Science.

Everybody says that physical science should be taught. But how?

Even when Pope said: "The proper study of mankind is man"—there were some things outside of himself that were worth a little of a philosopher's attention. But, in this age, it is impossible to make even a pretence of intelligence, not to speak of filling the post of a public teacher without, at least, a little scientific knowledge.

The journalist need not be a specialist in science; he need not even follow the ordinary scientific courses at college which are too choked with small details to answer his needs. But ought he not to have some bold outlines of the principles of physics, chemistry, biology and astronomy, in the light of the latest discoveries, with such an introduction to the best authorities on these subjects as would enable him to follow them out to any further extent by himself?

The Study of Newspapers.

Everybody says that in the training of a journalist the current newspapers must be studied. But how?

Suppose the managing or chief editor of a great daily, moved by a generous zeal for his profession, should give several hours to a thorough study of the newspapers of the current day. Then let us imagine him saying to a class: "Here is the best and here is the worst story of the day"—and telling why. "Here is the wrong of the day; here is the injustice that needs to be righted; here is the best editorial; here is a brilliant paragraph; here is a bit of sentimental trash; here is a superb 'beat'; here is a scandalous 'fake,' for which the perpetrator ought to go to Sing Sing; here is a grossly inaccurate and misleading headline; here is an example of crass ingorance of foreign politics; here is something 'crammed' from an almanac by a man who does not know the meaning of figures when he sees them."

If the editors of twenty of the foremost journals in the country should deliver such lectures in turn, "demonstrating" from the day's paper as the lecturer in a medical college does from the object of his clinic, could a young man worth his room in a newspaper office go through a year of their training without learning to see and to think? Would not that course alone be a liberal education?

The Power of Ideas

"Public opinion is at once the guide and the monitor of statesmen."

—Erskine May.

Everybody says that journalistic ideas should be taught. But how?—and by whom?

Goethe said: "Everything has been thought of before, but the difficulty is to think of it again." If everything has been thought of before, it can all be recalled and set down in order. You can make a list of all the important ideas that brought honor and success in journalism in the last twenty years. Would it be possible for anybody, unless he were a fool, to survey for three hundred days in the year a procession of ideas on which successful and respectable newspapers had been founded and maintained without absorbing, digesting, assimilating and unconsciously taking into his brain thought material which he could apply to his own needs?

Fools have had no place in my plans for a College of Journalism. They belong with the journalists who are "born, not made."

To think rightly, to think instantly, to think incessantly, to think intensely, to seize opportunities when others let them go by—this is the secret of success in journalism. To teach this is twenty times more important than to teach Latin or Greek.

Napoleon said that every battle depended upon one thought, but that one thought, though seeming to be a sudden inspiration, was the result of a whole life of thinking and experience.

Thought is the only power that has no limits. You may say of a steam boiler: "This will develop a thousand horse-power," but who can say where the influence of a thought will stop?

The French Revolution sprang from the thought of a few men. Voltaire, Rousseau and the Encyclopædists said that the idea of the people belonging to the King by divine right was preposterous; that the people belonged to themselves. This thought-germ floated in the air; the American revolution stimulated it and suddenly the awakened people made the thought a deed.

An old thought applied to a new situation is new. Robespierre spoke of "Government of the people, by the people, for the people" long before Lincoln was born. Yet who remembers Robespierre in connection with that phrase which Lincoln, recreated and immortalized?

Before the days of railroads, of telegraphs or of great industrial and commercial combinations a thinker in France attacked corporations as a danger to the State, because; having no souls, they were destitute of that sense of pride and personal

responsibility, of individual shame and honor, without which good citizenship is impossible. It was the idea of Helvetius that devotion to the State is the first duty of patriotism. In his day that idea seemed purely theoretical—corporations were not then really formidable. But the thought was sound and the time has come when it is practical.

"There is nothing new under the sun." Mr. Bryan's idea of scaling down debts by law is as old as social discontent. If he had read history attentively he would not have taken himself so seriously as an agitator. His scheme was tried by Lycurgus, by Solon, by the Gracchi; it was part of the programme of Catiline. Even the method of doing it, by depreciating the value of the coinage, was applied repeatedly by European Kings in the Middle Ages, and later.

None of us can hope to be original. We simply take from the great stock of old thoughts what suits our purpose, and it depends upon ourselves and our training whether we select the good or the bad.

Principles of Journalism.

Everybody says that we should teach the principles and methods of journalism. But how?

Well, it seems impossible to do so, without lectures explaining the subject in a systematic way. But would not still more be gained from the actual preparation by the students of a newspaper to be printed, perhaps, once a week at first, by means of a press and plant, for which I have provided, in the college building?

Such a paper would give practice in all branches of newspaper work—editing, reporting, criticising, copy-reading, proof-reading, making-up—everything, in short, that a young man ought to be able to do before he ventures to undertake the work of a journalist. It would be under the supervision of a professor who would not only wield the pencil as ruthlessly as a real editor does, but would also do what the real editor has no time to do—tell why he did it. Sometimes all the students might be asked to write editorials on the same subject and the best one could be printed, with an explanation of the reasons for its selection.

If the ablest twenty editors in the country or in the East, or in New York, were to consent to take turns once or twice a year in analyzing and criticising the paper so produced, and the New York dailies, putting their best thought and experience into the task, the students would have the benefit, not of one mind, but of twenty, and these the best in the profession. Would not editors in sympathy with the plan do this much as a matter of pride, of honor? By such practice, under such expert criticism, the journalist would be trained for work, as the young officer is trained for war by military manœuvres.

But the object of the course would be always to make real editors, to develop right thinking—to teach the student that what makes a newspaper is not type, nor presses, nor advertising, but brains, conscience, character working out into public service.

Finale—the News.

But I must stop—and should perhaps apologize for the interminable length of this paper, which has exceeded all reasonable bounds. The writing of it has convinced me that the two years' course of study suggested for the College of Journalism would be altogether too short—for, after all, we have not yet said anything about news.

It is not that I underestimate its value. News is the life of a paper. It is perennially changing—more varied than any kaleidoscope, bringing every day some new surprise, some new sensation—always the unexpected.

But I have no time to treat the subject adequately, and ought to confess that the editorial discussion of politics and public questions has ever been the matter of deepest personal interest to me.

News is very interesting, but there are others who no doubt will take care of it better than I. Give me a news editor who has been well grounded, who has the foundations of accuracy, love of truth and an instinct for the public service, and there will be no trouble about his gathering the news.

Public Service the Supreme End.

"What are great gifts but the correlative of great work? We are not born for ourselves but for our kind, for our neighbors, for our country."

—Cardinal Newman.

It has been said by some that my object in founding the College of Journalism was to help young men who wish to make this their vocation. Others have commended it as an effort to raise journalism

to its real rank as one of the learned professions. This is true. But while it is a great pleasure to feel that a large number of young men will be helped to a better start in life by means of this college, this is not my primary object. Neither is the elevation of the profession which I love so much and regard so highly. In all my planning the chief end I had in view was the welfare of the Republic. It will be the object of the college to make better journalists, who will make better newspapers, which will better serve the public. It will impart knowledge—not for its own sake, but to be used for the public service. It will try to develop character, but even that will be only a means to the one supreme end—the public good. We are facing that hitherto-unheard-of portent—an innumerable, world-wide, educated, and self-conscious democracy. The little revolutions of the past have been effected by a few leaders working upon an ignorant populace, conscious only of vague feelings of discontent. Now the masses read. They know their grievances and their power. They discuss in New York the position of labor in Berlin and in Sydney. Capital, too, is developing a world-wide class feeling. It likewise has learned the power of cooperation.

What will be the state of society and of politics in this Republic seventy years hence, when some of the children now in school will be still living? Shall we preserve the government of the Constitution, the equality of all citizens before the law and the purity of justice—or shall we have the government of either money or the mob?

The answers to these questions will depend largely upon the kind of instruction the people of that day draw from their newspapers—the textbooks, the orators, the preachers of the masses.

I have said so much of the need for improvement in journalism that to avoid misconception I must put on record my appreciation of the really admirable work so many newspaper men are doing already. The competent editorial writer, for instance—how much sound information he furnishes every day! How generally just his judgments are, and how prompt his decisions! Unknown to the people he serves, he is in close sympathy with their feelings and aspirations, and, when left to himself and unhampered by party prejudices, he generally interprets their thought as they would wish to express it themselves.

It is not too much to say that the press is the only great organized force which is actively and as a body upholding the standard of civic righteousness. There are many political reformers among the clergy, but the pulpit as an institution is concerned with the Kingdom of Heaven, not with the Republic of America. There are many public-spirited lawyers, but the bar as a profession works for its retainers, and no law-defying trust ever came to grief from a dearth of legal talent to serve it. Physicians work for their patients and architects for their patrons. The press alone makes the public interests its own. "What is everybody's business is nobody's business"—except the journalist's; it is his by adoption. But for his care almost every reform would fall stillborn. He holds officials to their duty. He exposes secret schemes of plunder. He promotes every hopeful plan of progress. Without him public opinion would be shapeless and dumb. He brings all classes, all professions together, and teaches them to act in concert on the basis of their common citizenship.

The Greeks thought that no republic could be successfully governed if it were too large for all the citizens to come together in one place. The Athenian democracy could all meet in the popular assembly. There public opinion was made, and accordingly as the people listened to a Pericles or to a Cleon the state flourished or declined. The orator that reaches the American democracy is the newspaper. It alone makes it possible to keep the political blood in healthful circulation in the veins of a continental republic. We have—it is unfortunately true—a few newspapers which advocate dangerous fallacies and falsehoods, appealing to ignorance, to partisanship, to passion, to popular prejudice, to poverty, to hatred of the rich, to socialism, sowing the seeds of discontent—eventually sure, if unchecked, to produce lawlessness and bloodshed. Virtue, said Montesquieu, is the principle of a republic, and therefore a republic, which in its purity is the most desirable of all forms of government, is the hardest of all to preserve. For there is nothing more subject to decay than virtue.

Our Republic and its press will rise or fall together. An able, disinterested, public-spirited press, with trained intelligence to know the right and courage to do it, can preserve that public virtue without which popular government is a

sham and a mockery. A cynical, mercenary, demagogic press will produce in time a people as base as itself. The power to mould the future of the Republic will be in the hands of the journalists of future generations. This is why I urge my colleagues to aid the important experiment which I have ventured to endow. Upon their generous aid and cooperation the ultimate success of the project must depend.

Carnegie Corporation of New York—Improving the Education of Tomorrow's Journalists

Introduction

Forty leaders of the journalism industry—ranging from television anchors, magazine editors, and newspaper reporters to presidents, chairmen, and publishers of major news organizations—were interviewed by a leading consulting firm to discern what had to be done to better educate future journalists. It was hoped that the resulting 2005 report would help deans put together the kind of curriculum needed to advance "an independent press that assures an informed public" in a rapidly changing media landscape. Although there was no consensus on how successful journalism schools would be in this grand effort, all those interviewed had solid suggestions about what had to be addressed.

The report deemed it paramount for journalism schools to teach key reporting and writing skills, and to attract the most talented writers and reporters to the industry. It advised schools to make analytical thinking a prime component in all course assignments. The leaders interviewed wanted student journalists to be prepared to cover the ever more intricate stories that arise without sacrificing objectivity or news value. They worried that quality journalism might be harder to produce in a highly competitive, profit-driven environment that put a premium on speed and entertainment. In essence, the students had to learn to function and demand attention in an around-the-clock news cycle where news consumers have more alternatives than ever before.

The emphasis placed on the ability of journalists to handle complex stories that require an instant understanding raised the question of specialization. Most of the experts thought the schools should offer courses that allowed students to achieve "mastery" in covering technical beats such as medicine, economics or government. They felt these special subject courses would allow new journalists to truly explain the relevance and nuances of a story rather than just report the facts. Those interviewed also saw the need for students to fully master all the emerging reporting and delivery technologies.

Interviewees saw the ethics of journalism as another top teaching priority for schools. They recommended both specific ethics courses and the infusion of ethics into every aspect of the curriculum. This was partly in reaction to a Pew Research Center poll, and other sources, that said only a small minority of the public believed news reported on television or in newspapers. Many of the leaders also suggested that continuing education courses be made part of the curriculum so journalists of all type and rank could expand their knowledge and come up to speed on new innovations in the field.

IMPROVING the Education of TOMORROW'S Journalists

Our liberty cannot be guarded but by the freedom of the press, nor that be limited without danger of losing it.
—Thomas Jefferson to John Jay, 1786

Understood as central to the strength and vitality of American democracy, the press—an institution outside government—was included among the civic organizations and activities to be protected by the Bill of Rights. A free press, the founders believed, was essential to keeping watch on the affairs of government and creating an active, politically informed public.

The role of the U.S. news media, however, has never been simple. In the early days of the Republic, when press outlets were openly owned by or affiliated with competing political interests, the field of journalism was rife with contest. Many newspapers of that era, instead of being exemplars of truth and fair play, were replete with vitriol and distortion. Indeed, there was little expectation that an objective truth be reported; it was in the variety and multiplicity of voices that the facts could emerge.

As our nation goes forward into its third century, it has become increasingly difficult for journalists and journalism to carry out the responsibilities of the profession implicit in the language of the First Amendment while meeting the inexorable demands of a competitive marketplace. In a recent poll by the Pew Research Center for the People & the Press, fewer than one in four individuals said they believe all or most of what they read or see on television news shows, which, along with newspapers—both pillars of the industry—have suffered damaging blows to the credibility of their reports. This unimpressive view of journalism is reflected in the academic world, where schools of journalism have never achieved the stature long enjoyed by schools that prepare students for medicine, law, architecture, business and other careers.

Preserving the critical relationship between democracy and the press depends, in large part, on the quality of America's journalists. What our nation needs and expects is a profession comprising educated, informed, ethical and skilled individuals.

Troubled by recent trends, Carnegie Corporation of New York invited journalism deans from five leading research universities to consider the role of the academy in a national effort to revitalize journalism education and strengthen the capacity of the profession to fulfill its obligations to our citizenry and our democracy. Vartan Gregorian, president of the Corporation, enlisted the consulting firm McKinsey & Co., on a pro bono basis, to explore the views of news industry leaders—publishers, presidents, chairmen, editors, anchors, senior correspondents and producers—about the state of journalism education and what journalism schools might do to elevate the profession's standards and status. The purpose of the interviews, President Gregorian explained, was to "give a baseline foundation for America's leading deans to craft a curriculum that will advance what we all hold dear: a free and independent press that ensures an informed public and a vital democracy."

Geoffrey Sands, director, McKinsey & Co., led a team that conducted 40 one-on-one interviews during summer 2004 and prepared a report for the Corporation on improving the education of tomorrow's journalists. The interviews were conducted in confidence; the names of the individuals interviewed appear at the end of this summary.

While the McKinsey team discovered some disagreement among news executives and journalists about the nature and causes of current trends in the field, there was broad agreement that the implications of those trends are profound and the current skill requirements for journalists very different from when the participants began their own careers. Where journalism schools (J schools) fit into the new environment, according to the interviewees, is uncertain. Some news leaders responded with indifference when asked about the value of J schools, while others felt that J schools are the surest and most reliable path of entry into the profession. All participants, regardless of their attitude toward J schools, had suggestions for how schools can respond to today's challenges. The following summary encapsulates the McKinsey findings.

Start with the Basics—and a Strong Sense of Ethics

News industry leaders agreed that profound changes are taking place in the news business that pose challenges for journalists and the news organizations for which they work. The interviewees

spoke with passion and conviction about the skills that colleges and universities should impart to future journalists. Their advice can be grouped into three broad prescriptions:

- Emphasize the basics of the journalism craft, along with analytical thinking and a strong sense of ethics;
- Help reporters build specialized expertise to enhance their coverage of complex beats from medicine to economics, and help them to acquire first-hand knowledge of the societies, languages, religions and cultures of other parts of the world;
- Channel the best writers, the most curious reporters and the most analytical thinkers into the profession of journalism.

Some of the participants were convinced that the quality of journalism is losing ground in the drive for profit, diminished objectivity and the spread of the "entertainment virus." Print reporters and business executives were more sanguine about the quality of today's reporting than their broadcast counterparts.

Most of the news leaders interviewed concurred that future journalists will face more obstacles to high-quality reporting, be asked to adapt to more immediate, yet longer (24/7) news cycles and need to find ways to reach audiences that have more options than ever before for accessing news and information. The next generation of journalists must be prepared to cover more complex subjects and master new technologies.

The quest for profits and audience. The majority of interviewees agreed that the most critical responsibility of journalists is to serve the public interest and protect our democracy. They parted company on the issue of whether profit pressure and the pursuit of larger audiences have affected their news operations. Some are convinced that the focus on profits drives down standards, while others believe that it is possible to maximize profits and serve the public interest.

Many said the current emphasis on celebrities, trials and other superficial news detracts from serious television news coverage. Others noted, however, that the success of media outlets has always relied on how many readers or viewers a publication or network can attract. The challenge for journalism and journalists is to find ways to interest readers and viewers in news that is vital to a functioning democracy.

Objectivity. The concern over the perceived loss of objectivity was described by many of the news industry leaders as nothing new—and a circumstance that exists as a mere shadow of the inflammatory pamphlets and newspaper smear campaigns of the first days of U.S. democracy. Others think much of the news has too much "edge," particularly from "talking head" shows on cable news. The Internet is a megaphone for many voices, and allows for the creation of more partisan outlets. Some interviewees were concerned that this "cacophony of voices," as one newspaper editor put it, may cloud the public's understanding of what constitutes good journalism.

Engaging distracted, fickle audiences. Interviewees said that competition from hundreds of TV stations, satellite radio and the Internet makes it tougher to win audiences. A shorter attention span among the public forces reporters to make the news fast and exciting. This pressure extends to print media: even great newspapers are struggling to keep readers. Some participants said that reporters drive readers away with long-winded stories that fail to grab readers' attention or convey why it is important for a citizen to grasp the issue at hand. One newspaper executive said, "People have less time. We have to be compelling to the person who has 20 minutes and to the person with one hour without 'dumbing down' the newspaper."

The need for mastery. Reporters need to know even more about complex beats if they are to deliver stories that are both shorter and more interesting. Whether reporting on the economy, medical advances or the government, reporters need to provide not just facts but context. "Explaining the debate over whether we should have a director of national intelligence is much more important than just reporting the debate," said one participant.

In a progressively more interconnected world, the complexity of stories reporters must cover will only increase, most interviewees believed. As examples, they pointed to the Middle East, China's burgeoning economic might, difficult questions of medical ethics, scientific breakthroughs and changing global demographics.

Some of the news leaders bewailed what they consider "a crisis of confidence" within journalism. Many said that when they became journalists, they viewed the profession as a vocation and public service, not a business, but the business pressures today are inescapable. Others worry that young people aspire to become on-air television reporters and anchors without first mastering the skills of hard news reporting. Several said the next generation will need even more motivation and "fire in the belly" to become good journalists.

Today's Journalism Schools

The news executives and journalists who were interviewed were uncertain where journalism schools fit into this new environment. Some believe a degree in journalism is unnecessary. One suggested that working on the student newspaper is sufficient preparation. Some editors and executives responsible for hiring expressed indifference about a student's major in college. Many news organizations depend on their own intern or desk assistant programs, not college curricula, to cultivate talent. Some promising newcomers "have journalism degrees, but others do not," a newspaper editor said. Still, some interviewees saw promise in both the academic preparation of J schools and the credential they offer. One called it "the only way" to break into the television news business. Another praised J schools for teaching students how to work in teams to finish a story. The journalism curriculum. Many of those interviewed credited journalism schools with doing a good job of teaching basic reporting skills, particularly when classes are taught by seasoned journalists. Others think schools need to do a better job of imparting values, building critical thinking and analytical skills and developing specialized expertise. They cautioned that schools ought not to become too narrowly focused, by teaching, for example, only broadcast skills at the expense of core writing or reporting skills.

News leaders strongly support the idea that journalism schools should be creative in developing new curricula to better meet the needs of a rapidly changing profession. Online newspaper web sites require newspaper reporters to hit the kind of around-the-clock news cycles once faced only by wire service reporters. Among the key items on the "to do" list that the news leaders prescribed for J schools were these:

- Teaching basic reporting and writing skills, as well as the paramount importance of getting the facts right.
- Developing news judgment and analytical skills, including the ability to separate fact from opinion and use statistics correctly. As one interviewee put it, "An astonishing amount of journalism requires strategic thinking and planning."
- Mastering specialized expertise and critical language skills (e.g. economics, medical research, Chinese, Arabic, Farsi).
- Raising admission standards and helping the best and brightest land challenging jobs.

The ethics of journalism. Many interviewees suggested that journalism schools cannot overemphasize the importance of upholding the ethics of journalism. They believe that the ethical ramifications of journalism must be infused throughout the curriculum, not just taught in ethics classes.

There were also suggestions that J schools take on a larger role in providing continuing education for the profession, much like business schools do, in which they would regularly bring in top editors and executives and rank-and-file journalists for seminars or longer programs designed to allow them to broaden their knowledge and take time to reflect on important issues.

Many leaders said they also look to journalism schools to help bring more diversity to their news rooms. They cited a need for newsroom staffs to be more representative of America if news organizations are to improve their ability to cover stories and engage new audiences.

Participants expressed the belief that J schools should focus on turning out top-quality journalists, rather than on critiquing the news industry and developing new reporting techniques, which have less impact on good journalism than do high-quality teaching and improved curricula.

To better prepare students for the fast paced, around-the-clock news business, some thought that journalism schools should look at the medical school model of grueling internships and residencies. They also encouraged journalism educators to consider dual-degree programs with other professional schools and academic departments on their campuses.

The McKinsey report, which captures the insights of many of the best and brightest of the current generation of news executives, editors and correspondents, has bolstered the case for

and strengthened the resolve of Vartan Gregorian and the journalism deans to undertake a bold effort to reshape and reinvigorate the quality of education that journalism schools offer. With their guidance and the support of Carnegie Corporation of New York and John S. and James L. Knight Foundation, the deans who comprise the Carnegie-Knight Initiative on the Future of Journalism Education will share with fellow educators and the general public their blueprint for curricular reforms and other changes. In so doing, they hope to ensure that tomorrow's journalists possess the skills needed to continue the legacy of playing an essential and honorable role in keeping America "the land of the free."

Annenberg Public Policy Center of the University of Pennsylvania/Geneva Overholser—"On Behalf of Journalism: A Manifesto for Change"

Introduction

Most people recognize that the world of journalism and media is in the midst of an all-consuming, protracted period of transition. New, more effective methods and models of journalism should emerge, but old troublesome concerns still loom large. The Annenberg Public Policy Center brought 40 journalists, academics and news executives together in 2005 to identify the pressing problems and questions that needed to be addressed. The group was asked to devise a comprehensive list of actions to be taken by the industry to assure the future of journalism. The report and bulleted "action steps" they produced should serve as guide for journalism educators as well.

A major part of the deliberations, and ultimate recommendations, of the Annenberg Center invitees focused on the roles various constituencies must play for journalism to successfully evolve. For instance, corporate news entities were charged with finding ways to balance the quest for profits with their obligation to enlighten the public. The public in turn was pushed to become more news savvy through efforts like news literacy courses and expanded news media in schools. Even the government, long seen as a check on unbridled media, was encouraged to help via initiatives such as tax breaks for ethnic or alternative news outlets and tax legislation that enables news companies to be organized as nonprofit, tax-exempt corporations.

The greatest responsibility for the future health of journalism obviously fell on journalists. They were urged to become more objective, accountable, and professional. The group expected them to speak out for freedom of information and the protection of the industry in general. Journalists were also cast as prime movers in establishing new forms of media.

Annenberg Public Policy Center of the University of Pennsylvania/Geneva Overholser—"On Behalf of Journalism: A Manifesto for Change"

Action Steps

I. Corporate realities:

Enable corporate managers to focus on longer-term goals

- elect board members for longer terms
- change incentives for investors
- impose punitive taxes on short-term stock trading
- provide tax forgiveness on long-term holding

Bring a greater sense of responsibility to corporate governance of media companies

- appoint directors with journalism experience
- assign responsibility to board members to monitor editorial performance
- tie incentive compensation for corporate officers to journalistic quality
- discontinue stock options for newsroom staff and outside directors

Enable shareholders to exert pressure for corporate responsibility

- bring concept of socially responsible investing to media companies

Conduct research showing links between good journalism and good business

- make corporate officers aware of findings

Consider units within media companies dedicated to public interest journalism

- sheltered from normal profit pressures
- portion of online revenues devoted to this purpose

Establish partnership for quality journalism

- supported by funds from media companies
- supported by foundations, nonprofits

Take public companies private

- interest local citizens in these still highly profitable media enterprises
- get nonprofits involved

II. Not-for-profit media

Establish "Marshall Plan" by foundations and philanthropists

- increase support for nonprofit media organizations
- foster new nonprofit media models

III. Journalists' responsibilities

A. Objectivity

- replace with process of verification

B. Accountability

- strengthen through collaboration
- create networks to enhance effectiveness
- enhance transparency through use of e-mails, editors' columns, etc.
- media outlets conduct annual self-audits and make results public

C. Professionalization

- institutionalize apprenticeships
- news organizations collaborate to support standards for journalists
- establish independent council to track, promote, define independent news function in U.S.
- emulate national board for teacher certification to provide credential
- work to ensure that journalism graduate degrees achieve cachet of MBA

IV. Speaking out for journalism

- journalists should assume a responsibility for speaking out on behalf of viable and independent media as individuals and through organizations
- focus on freedom of information not as media privilege but as public right
- produce radio/television shows whose segments focus on reporting
- consider advertising/public-relations campaigns on behalf of journalism
- journalism educators join forces to speak out for journalism (gather leaders of journalism organizations, foundations, universities and other institutions to form a coalition in support of public service journalism and freedom of the press)

V. The role of government

- pass tax legislation to enable news companies to be organized as nonprofit, tax-exempt corporations
- devote funds to be gained from government auction of publicly owned telecommunications spectrum to the provision of educational material in digital media
- provide tax breaks for ethnic media and other under-heard voices
- consider government-sponsored search engine

VI. The role of the public

- pressure colleges to require civics education
- push for more courses in news literacy, First Amendment
- support news media in schools
- expand Sunshine Week activities, move from annual to greater frequency
- create and distribute field guides for news consumers

VII. New forms of media

- encourage entrepreneurialism among journalists
- train traditional journalists in new delivery platforms

- train new media practitioners in old media principles
- provide tutorials for citizens in gathering and shaping news
- create wire service of ethnic media to strengthen disparate voices

Section IV Introduction

Working journalists look to ferret out, report on, and write about meaningful change, and the agents of change, in society. They also determine the impact of that change, for better or worse, and what countermoves might occur as a result. Journalism industry researchers in the United States do just about the same thing within the confines of their beat. They use surveys, studies, and reports to gauge the type and degree of change nationwide within specific segments of the profession—or the newsworthy lack of change in, say, the presence of minorities in the newsroom. Then they report on the key trends afoot in the status and practice of journalism and what that portends for the future.

This section focuses on six high-impact categories—audience research, public opinion, Internet impact on media, newsroom diversity, journalism employment/careers, and key trends in journalism—that tell a good deal about the state of the profession today and where it is going. Although the data in all these areas change rapidly and stay fluid, the patterns discerned remain relatively reliable and useful for quite some time. By contrast, reports on media ownership and investments are purposely omitted at this juncture. The financial turmoil that hit the news business and world economy in 2008 makes this kind of information or statistics obsolete quicker than most.

The Pew Research Center (PRC) Biennial News Consumption Survey (2008) breaks the American audience into four distinct groups: Traditionalists, Integrators, Net-Newsers, and the Disengaged. The survey reveals that audiences for traditional news sources—network television and newspapers—still comprise nearly half the public but cannot keep newspapers from falling into a steady decline. Traditionalists are the oldest segment of the news-consuming audience and show a more heavy reliance on television news and pictures rather than reading or listening.

Youthful Net-Newsers and middle-aged Integrators, 13 percent and 23 percent of the public, respectively, tend to be better educated and more affluent than Traditionalists. These groups feed the burgeoning trend toward people getting a larger portion of their news online. Tech-savvy Net-Newsers often read political blogs and *view* online news. Integrators split their time primarily between television and online news. They spend the most time following the news and demonstrate the greatest interest in political news and sports. The Disengaged make up a sizable 14 percent of the public and display little interest in the news or news consumption.

The Radio-Television News Directors Foundation (RTNDF)/Ford Foundation—2006 Future of the News Survey confirmed in its Executive Summary that people still overwhelmingly get most of their news from local television—followed by newspapers as a distant second, network TV news, local radio, and then the Internet. The survey found that online news, blogs, and other relatively new options were steadily "nibbling away" at the audience for traditional mass media. More than 60 percent of those surveyed say they would like to interact with television news in the future. *The Magazine Handbook 2009–2010,* put out by The Magazine Publishers of America (MPA), offers audience research that shows top-tier magazines tend to draw comparably better among teens and young adults than the most popular television programs, and those magazine readers test out as more innovative. MPA studies in Magazine Reach and Reader Characteristics also indicate a particularly high magazine readership among diverse readers like African American, Asian American, and Hispanic/Latino adults.

The State of the News Media 2008, by The Project for Excellence in Journalism (PEJ), offers a take on the way Americans view the news industry in a special Public Attitudes section. The PEJ says most Americans believe the news media to be politically biased, often inaccurate, and uncaring toward the subjects of its stories. The PEJ ominously points to growing skepticism of the mainstream media, particularly among the younger online audience. There is also a trend toward political affiliation or ideology influencing attitudes toward the press—with Republicans showing somewhat less confidence in the news media than Democrats.

The impact of the Internet on media comes across as a double-edged sword in the research collected here. The Pew Research Center 2008 Journalist Survey notes that many journalists link the financial concerns in the news business with the rise of the Internet. In fact, 16 percent of national journalists see the challenge of making a profit from online journalism as the "most important problem facing journalism." Yet, most journalists surveyed take a positive view of the way the Internet has transformed the practice of journalism. *The Magazine Handbook 2009–2010* of the MPA notes that magazine website initiatives rose 78 percent since 2005, greatly extending the reach of magazine advertisers. The publication also attests to the particularly rapid growth in magazine website traffic as compared to web usage overall.

The American Society of Newspaper Editors (ASNE), in The Newsroom Employment Census (2008), gives some bad news for the progress of newsroom diversity. The portion of minority journalists working at daily newspapers grew only a small fraction of a percent from the previous year to 13.52 percent. This placed ASNE far short of where it should be in its quest to have parity by 2025 between the percent of minorities in the newsroom and in the nation's population. A surprising 423 of the newspapers that took part in the survey, all with under a 10,000 circulation, had no minorities on their full-time staff. The 2008 Annual Women and Minorities Survey, by the Radio-Television News Directors Association (RTNDA), reports some positive signs, with more women and minority news directors in television news than ever before. The number of minorities in radio newsrooms went up too after years of shrinkage.

The RTNDA also weighed in on journalism employment and careers with its look at radio and television staffing and profitability in 2008. Overall, there was an expectation of employee growth in the near future by most surveyed. Three quarters of the more than 300 television stations polled in 2008 reported either no staff cuts or staff increases despite the poor economy, according to their TV news directors. Local television news nationwide lost only about 360 people out of 24,500 full-time employees.

The U.S. Department of Labor/Bureau of Labor Statistics gives additional insights into the plight of news analysts, reporters and correspondents in its *Occupational Outlook Handbook, 2008–09 Edition*. In general, little or no change in the employment outlook is expected through 2016. The competition will remain intense for jobs on large national and metropolitan newspapers, television stations, and magazines. However, smaller venues in those areas, and online publications, should offer the best opportunities for full-time positions. Skilled writers who can handle specialized technical or science subjects will be in greater demand.

Finally, major trends developing in journalism are examined by PEJ in The State of the News Media 2008. The report notes, among other things, that news consumption is becoming continual and more effort goes into creating "incremental updates" than finished reports. In the process, journalism is seen as more service oriented, with a responsibility of helping consumers find, make sense of, and use the news they seek. The emphasis on user-created content, once thought key to the future of journalism, seems more limited lately. In addition, the breadth and depth of consequential news coverage appears to be getting narrower instead of broader.

Audience Research

The Pew Research Center Biennial News Consumption Survey: Overview (2008)

Key News Audiences Now Blend Online and Traditional Sources; Audience Segments in a Changing News Environment

Overview

For more than a decade, the audiences for most traditional news sources have steadily declined, as the number of people getting news online has surged. However, today it is not a choice between traditional sources and the internet for the core elements of today's news audiences.

A sizable minority of Americans find themselves at the intersection of these two long-standing trends in news consumption. Integrators, who get the news from both traditional sources and the internet, are a more engaged, sophisticated and demographically sought-after audience segment than those who mostly rely on traditional news sources. Integrators share some characteristics with a smaller, younger, more internet savvy audience segment—Net-Newsers—who principally turn to the web for news, and largely eschew traditional sources.

Audience Segment: Integrators

Who they are: 23% of the public. Well-educated and affluent, middle aged.

What they do:

- Television is their main news source, but most a get news online on a typical day.
- Spend the most time with the news on a typical day.
- Greater interest in political news—and sports—than other audience segments.

Like web-oriented news consumers, Integrators are affluent and highly educated. However, they are older, on average, than those who consider the internet their main source of news. Overall, Integrators spend more time with the news on a typical day than do those who rely more on either traditional or internet sources; far more enjoy keeping up with the news a lot than in any other news segment.

Integrators also are heavier consumers of national news—especially news about politics and Washington—and are avid sports news consumers. Television is their main news source, but more than a third cite the internet as their primary source of news during the day. This reflects the fact that a relatively large proportion of Integrators log on to the internet from work (45%).

The 2008 biennial news consumption survey by the Pew Research Center for the People & the Press was conducted by telephone—including both landline phones and cell phones—from April 30 to June 1 among 3,612 adults nationwide. It finds four distinct segments in today's news audience: Integrators, who comprise 23% of the public; the less populous Net-Newsers (13%); Traditionalists—the oldest (median age: 52) and largest news segment (46% of the public); and the Disengaged (14%) who stand out for their low levels of interest in the news and news consumption.

Net-Newsers are the youngest of the news user segments (median age: 35). They are affluent and even better educated than the News Integrators:

More than eight-in-ten have at least attended college. Net-Newsers not only rely primarily on the internet for news, they are leading the way in using new web features and other technologies. Nearly twice as many regularly watch news clips on the internet as regularly watch nightly network news broadcasts (30% vs. 18%).

Audience Segment: Net-Newsers

Who they are: 13% of the public, Affluent, well-educated and relatively young, 58% are men

What they do:

- More regularly read political blogs than watch network news.
- Web news use soars during the day.
- Frequent online news *viewers*.
- Heavy tech usage and strong interest in tech news.

This web-oriented news segment, perhaps more than the others, underscores the challenges facing traditional news outlets. Fewer than half (47%) watch television news on a typical day. Twice as many read an online newspaper than a printed newspaper on a typical day (17% vs. 8%), while 10% read both.

However, Net-Newsers do rely on some well known traditional media outlets. They are at least as likely as Integrators and Traditionalists to read magazines such as The New Yorker and The Atlantic, and somewhat more likely to get news from the BBC.

Audience Segment: Traditionalists

Who they are: 46% of the public. Older, less-educated and less affluent.

What they do:

- Heavy reliance on TV news - morning, daytime, evening, and at night.
- Most have a computer, but few get news online on a typical day.
- Understand news better by seeing pictures, rather than reading or hearing.
- Strong interest in the weather; relatively little interest in science and tech news.

Fully 82% of Net-Newsers get news during the course of the day, far more than the Traditionalists and the Disengaged, and slightly more than the Integrators. Nearly all who get news at this time go online for information (92%). Yet they do tap traditional sources at other times of the day; nearly two-thirds get news late in the evening and of these, more rely on television news than the internet.

Despite sweeping changes in the news landscape, Traditionalists remain the largest segment of the overall news audience. Compared with the Integrators and Net-Newsers, Traditionalists are downscale economically—43% are not employed and 60% have no more than a high school education.

Newspaper Readership Declines; Internet News Increase

	1993	*1996*	*1998*	*2000*	*2002*	*2004*	*2006*	*2008*
Listened/read yesterday...	%	%	%	%	%	%	%	%
Newspaper	58*	50	48	47	41	42	40	34
Radio news	47*	44	49	43	41	40	36	35
Regularly watch...								
Cable TV news	–	–	–	–	33	38	34	39
Local TV news	77	65	64	56	57	59	54	52
Nightly network news	60	42	38	30	32	34	28	29
Network morning news	–	–	23	20	22	22	23	22
Online for news three or more days week	–	2**	13	23	25	29	31	37

*From 1994; **From 1995.

Television dominates as the favored news source among Traditionalists. And at each time of the day—whether morning, daytime, dinner hour, or late at night—overwhelming majorities who get news at these times cite television as their main source. Unlike the news Integrators, or those who mostly get news from the web, most Traditionalists say that seeing pictures and video, rather than reading or hearing the facts, gives them the best understanding of events.

Most Americans fall into the three core news audiences—Integrators, Traditionalists, or Net-Newsers. The fourth group—the Disengaged—are very much bystanders when it comes to news consumption. They are less educated on average than even the Traditionalists and exhibit extremely low interest in—and knowledge of—current events. Just 55% of the Disengaged get any news on a typical day, and just 20% know that the Democrats have a majority in the House of Representatives.

Trends in News Consumption

The diversity of news audience segments identified reflects the long-term changes in news consumption observed in the biennial survey, conducted April 30–June 1 among 3,615 Americans.

Decline in Print Readership Outpaces Online Gains

	2006 %	2008 %
Read newspaper yesterday*	**40**	**34**
Print only	34	27
Both print and web	4	3
Web only	2	4
Additional web readers**	3	6
Total	43	40

* "Did you get a chance to read a daily newspaper yesterday, or not?"
**Online news users who separately said they read anything on a newspaper's website yesterday.

Since the early 1990s, the proportion of Americans saying they read a newspaper on a typical day has declined by about 40%; the proportion that regularly watches nightly network news has fallen by half.

These trends have been more stable in recent years, but the percentage saying they read a newspaper yesterday has fallen from 40% to 34% in the last two years alone. Newspapers would have suffered even greater losses without their online versions. Most of the loss in readership since 2006 has come among those who read the print newspaper; just 27% say they read only the print version of a daily newspaper yesterday, down from 34% in 2006.

The television news audience, by contrast, has generally remained stable since 2006, and the proportion regularly watching cable news in particular has increased (from 34% to 39%). The appeal of television news is seen in the large percentages of the news segments—particularly Integrators—that continue to watch: A majority of Integrators (56%) get news online on a typical day while an even larger share (66%) got news from television.

Cable news draws substantial numbers of viewers among Integrators and Net-Newsers. More than four-in-ten Net-Newsers (43%) regularly watch cable news, far more than the proportion that regularly watches network or local news. A majority of Integrators also regularly tunes in to cable news (53%); by comparison, just 37% say they regularly watch one of the nightly network news broadcasts.

Notably, radio news also is an important element in Integrators' news diet. Nearly half of Integrators (46%) listen to news on the radio during a typical day. While the internet is the main news source for Integrators during the course of the day, about as many in this segment rely on radio news as TV news during the day (32% radio vs. 36% TV news).

Online News Still Growing

Since 2006, the proportion of Americans who say they get news online at least three days a week has increased from 31% to 37%. About as many people now say they go online for news regularly (at least three days a week) as say they regularly watch cable news (39%); substantially more people regularly get news online than regularly watch one of the nightly network news broadcasts (37% vs. 29%).

Since 2006, daily online news use has increased by about a third, from 18% to 25%. However, as the online news audience grows, the educational divide in online news use—evident since the internet's early days in the mid-1990s—also is increasing. Currently, 44% of college graduates say they get news online every day, compared with just 11% of those with a high school education or less.

Net-Newsers and Integrators take advantage of a range of web features to get the news. Roughly four-in-ten (39%) Net-Newsers—and about a third of Integrators (32%)—have gotten a news story emailed to them in the past week. And while 30% of Net-Newsers regularly watch news online, 19% regularly listen to news on the web.

Net-Newsers and Integrators also rely on news and political blogs as a part of their news diet. Roughly a quarter of Net-Newsers (26%) and somewhat fewer Integrators (19%) say they regularly read blogs on politics or current events. Overall, only 10% of the public regularly reads political and news blogs.

Other Key Findings

Going Newsless

No news yesterday...	1998 %	2008 %	Change
Total	14	19	+5
18–24	25	34	+9
25–29	17	21	+4
30–34	15	22	+7
35–49	14	17	+3
50–64	14	14	0
65+	6	13	+7

- In spite of the increasing variety of ways to get the news, the proportion of young people getting no news on a typical day has increased substantially over the past decade. About a third of those younger than 25 (34%) say they get no news on a typical day, up from 25% in 1998.
- A slim majority of Americans (51%) now say they check in on the news from time to time during the day, rather than get the news at regular times. This marks the first time since the question was first asked in 2002 that most Americans consider themselves "news grazers."
- Social networking sites are very popular with young people, but they have not become a major source of news. Just 10% of those with social networking profiles say they regularly get news from these sites.
- As in past news consumption surveys, the audiences for specific cable news outlets remain divided along political lines. Currently 51% of regular CNN viewers are Democrats, up from 45% two years ago. Nearly four-in-ten regular Fox News viewers are Republicans (39%), about the same as in 2006.
- Regular readers of magazines such as The New Yorker, The Atlantic and Harper's Magazine stand out for their high level of political knowledge. Nearly half (47%) answered three political knowledge questions correctly—the highest percentage of any news audience.
- Overall, 15% of Americans say they have a smart phone, such as an iPhone or a Blackberry. More than a third of smart phone owners (37%) say they get news from these devices.
- Believability ratings for national news organizations remain very low. If anything, believability ratings for major online news outlets—including news aggregators such as Google News and AOL News—are lower than for major print, cable and broadcast outlets.
- Though the audience for nightly network news broadcasts are smaller than they were a decade ago, regular viewers of these broadcasts are loyal. Nearly seven-in-ten (69%) say they would miss these broadcasts a lot if they were no longer available.

(Continued)

About the Survey

This study is based on telephone interviews conducted April 30 to June 1, 2008 among a nationwide Sample of 3,615 adults, 18 years of age or older. Interviews were conducted by landline telephone (2,802 respondents) as well as cell phone (813 respondents, including 269 who had no landline telephone). The margin of error for the total sample is plus or minus 2 percentage points.

Ratings of the believability of news sources discussed in Section 7 are from a separate survey of 1,505 adults surveyed by telephone May 21–25, 2005.

More information about the methods of the study can be found on page 75 [of the survey].

The Pew Research Center for the People & the Press. "Key News Audiences Now Blend Online and Traditional Sources": Overview, August 17, 2008. http://people-press.org/report/444/news-media (accessed January 6, 2009). Reprinted with permission of the Pew Research Center.

The Radio-Television News Directors Foundation (RTNDF)/Ford Foundation—Future of the News Survey (2006): Executive Summary

Section 1: Executive Summary

Overwhelmingly, people say they get most of their news from local TV: 65.5 percent. That's more than double second-place newspapers (28.4 percent) and almost six times the figure for the Internet (11.2 percent). The Internet came in below national network TV news (28.3 percent) and local radio news (14.7 percent).

When asked if they could get the same news whenever they wanted—on TV, radio, newspaper, online or a handheld electronic device—almost two-thirds (63.3 percent) said TV. Only 17.8 percent chose newspapers and just 11.1 percent chose online. People like traditional media. They know it, and they're comfortable with it. But while people expressed support for traditional media in this study, they also made clear they want a whole range of new media type options. In particular, they want news and information on demand, and many want to interact with that news.

The challenge for the industry isn't mass defection—it's the nibbling away at the edges and the splintering of traditional mass medium into fragments whose total is mass but whose parts are not.

While blogs are clearly a niche medium, and the daily readership of 3.1 percent poses no threat to the mass media, the 7.1 percent who read them several times a week or more nibbles at the edges. Less than 5 percent of the general public has ever seen small screen news, and only about 10 percent say they even have any interest in it. But that may well be enough for a meaningful niche business, especially given the comparatively high income of those most interested. More nibbling away at the edges. The message in the data is not to abandon efforts in small screens or blogs or anything else. This research does raise questions whether either has a mass media future, but the research also suggests that the news departments that survive into the future will have to operate on many technological platforms at the same time.

The concern in the industry is a loss of advertising dollars as that mass market continues to fragment. This research also suggests that stations looking at new revenue streams need to tread carefully when attempting to link news and business through such devices as product placement or product endorsement. Overwhelmingly, people are concerned about the links between businesses/advertisers and news. Those who are the most concerned about that relationship are the people advertisers want the most—the affluent, educated and young.

The data in this report make clear that predictions of the imminent demise of traditional news media are premature. That is especially true for local television. But people do not want the status quo either. They want new technology that offers them more convenience, utility and responsiveness. It is, in the end, all about value. Even though people don't pay directly for local TV news, it does involve an investment in time, and if the audience doesn't feel that it is getting value for the time investment, then the audience will surely drift away.

Findings and implications:

Where do people get news . . . and how?

- Local TV news dominates the landscape as people's major source of news at 65.5 percent. That's followed by local newspaper at 28.4 percent, national network TV news at 28.3 percent, local radio news programs at 14.7 percent, the

Internet at 11.2 percent, national newspaper at 3.8 percent and someplace else at 1.3 percent. People could name up to three sources, which is why the figures add up to more than 100 percent. Young people are the most likely to say the Internet, but they're also the most likely to say local TV news. They're the least likely to say local or national newspaper.

What is news?

• Varying people have a surprisingly consistent view of what news is. The general public draws sharp distinctions among programs that they see as news and those they see as not news. And among all the broadcast options, local TV news is at the top of the list. At the bottom of the list (for all demographics): The Daily Show with Jon Stewart, talk shows like Oprah and Ellen DeGeneres and blogs.

• More than 80 percent of the general public drew some distinction between news and information, and while a plurality said they seek out both, there's quite a split. Young people and those with the most education are the most likely to distinguish between the two.

What news do people want?

• These are serious times, and this research suggests that the audience is looking for that seriousness in both content and presentation. Weather is at the top of the list of subjects people want to know about, but it just barely edges out (in order): information on what's going on around the country, what's going on around the world, and information about politics, education, health care and the environment. At the bottom of the 11-item list: restaurant, movie or entertainment reviews, as well as information about entertainment and sports.

• The general public is most interested in urgent, breaking news, but there were complaints about the mislabeling of news that was neither urgent nor breaking. In comparatively distant second place: live, going on right now. Young people, ages 18–44, are particularly interested in live reporting—but only if it really relates to something happening right then. Regular news about the community, investigative reporting and features followed, in that order.

• People want their news to be right up to the minute. More than 90 percent of those surveyed say it's very or somewhat important, and the figure is even higher for young adults.

The role of the anchor

• People say TV news is better with anchors, and younger people are even more likely to say that than older people.

• People who say newscasts look different are most likely to say it's because of the anchors, but more than 60 percent of the general public think all TV newscasts look pretty much the same; that figure rises to 72 percent for those ages 18–24.

When do they watch news?

• People want to be able to watch TV when it's convenient for them—not simply when it's convenient for the station or network. Almost three-quarters (73.4 percent) say it's very or somewhat important to be able to watch TV news when they want.

• Most people say they watch TV news when they can—rather than watching for something specific they heard about. Younger people are more likely to say they watch because of something specific that they heard about.

News and new technology

• More than two-thirds of the general public say they have never read a blog or don't know what they are.

• Less than 5 percent of the general public has ever watched news or information on a small screen—like a mobile phone. And only about 10 percent say they have any interest in it.

• Given a choice of watching TV news on a TV, a computer or a handheld electronic device, more than three-quarters chose TV. In fact, when given a choice of continuing to do what they now do on a computer or doing it on a TV instead, over 60 percent chose TV.

• More than three-quarters of the general public say they'd rather read a newspaper printed on paper than online on a computer. Even 18–24 year olds said that, although at a lower percentage.

• The vast preponderance of the general public says it will not pay for information online. If an online site charges, they say they'll go elsewhere. If all online sites charged, they say they'll seek out information offline.

• When asked if they could get exactly the same news—whenever they wanted—in a traditional newspaper, on the television, on the radio, online or on a handheld electronic device . . . TV news was the overwhelming first choice at 63.3 percent, followed by newspaper at 17.8 percent, computer online at 11.1 percent, radio news at 5.8 percent and handheld electronic device at 2 percent.

What changes in news do people want to see in the future?

• More than 40 percent of the general public would like to assemble their own newscasts. But the key variable wasn't age, it was education. People with college degrees or higher were the most interested in assembling their own news.

• More than 60 percent of the general public would like to interact with TV news, something we defined in the question as pressing a button to get more information on something that you see in a newscast. That figure rose to more than 70 percent of those aged 18–34.

The business and promotion side of news

• People think that business influences TV news. They care, and stations should tread carefully with anything that blurs the line between business and news. The demographic groups most concerned about the issue are higher income, better educated, young men. In other words, the people stations and advertisers most want to attract to the news are those who feel the strongest about maintaining a clear separation between business and news.

• Less than 10 percent of the general public said they had noticed any promotional efforts to get them to watch the news more on the part of the station they most often watch for news. Most of those who did notice said the effort was content-related.

• By far, the number one general public suggestion to make TV news better: fewer commercials. After that, the suggestions were mostly content-related: create more and better news.

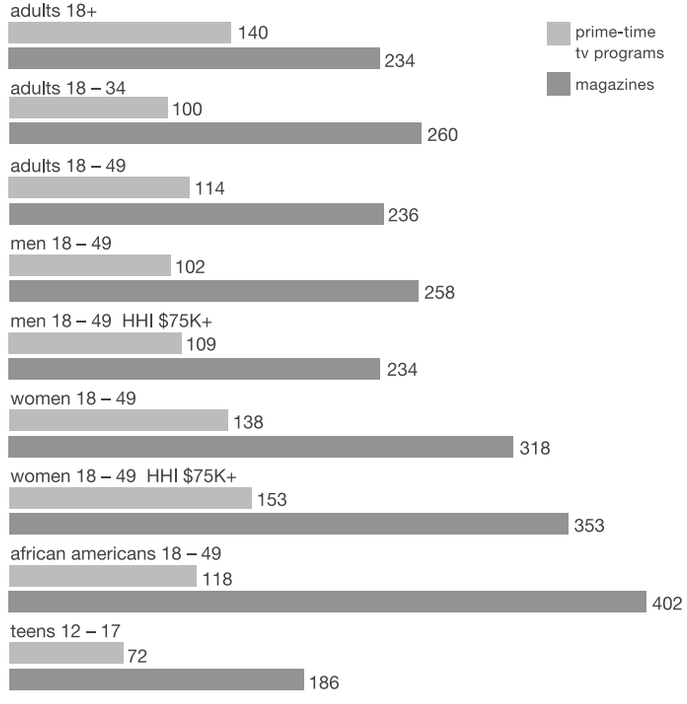
Magazine Reach

Top 25 Magazines Outperform Top 25 Prime-Time TV Programs in Reaching Adults and Teens

Magazines provide superior reach compared to TV programs for major target audiences, including adults 18–49, women 18–49, African Americans 18–49 and teens 12–17, when Carat's cross-media research compared the top 25 prime-time TV programs and top 25 magazines.

Note: Total GRPs equal the rating of each of the top 25 vehicles of each medium added together.

Gross Rating Points of Top 25 Magazines and Prime-Time TV Programs



Sources: Carat Insight; Nielsen September 2007 – May 2008 (Prime regularly scheduled programs); MRI Fall 2008; MRI Twelveplus 2008

Reader Characteristics

Magazine Readers Are Innovators

Consumer Innovators are the consumers who are most open and most active in trying new products across a range of categories. According to MRI, **above-average readers of magazines along with above-average users of the Internet are more likely than average consumers to be innovators overall** and in all six product categories studied—the only two media with this distinction.

Early Adopters and Media Use heavy media users (index=100)

product category	**magazines**	tv	newspapers	radio	**internet**
Leisure	**127**	31	93	104	**181**

Reader Characteristics

Magazines Appeal to Younger Adults

An analysis of MRI data demonstrates that:

- **Adults under 35 years old read more issues per month than adults who are over 35**
- **As a consequence, younger adults are more likely to be in the top quintile of magazine readership—the most avid or "heaviest" readers overall**

Readership by Age

MRI	Total	18–24	25–34	35–44	45–54	55–64	65+

Reader Characteristics

Magazines Appeal to Diverse Readers

The MPA Market Profiles offer an in-depth look at the African-American/ Black, Asian American, Hispanic/Latino and Teen markets. Each group is an important, growing segment of the U.S. population that uniquely redefines the culture of the United States in areas such as food, apparel and music. Not surprisingly, each group displays specific magazine readership patterns.

For more on Market Profiles, visit www.magazine.org/marketprofiles.

Source: MRI, Fall 2008; ABC; National Directory of Magazines; Oxbridge Communications, 2009; MRI Teenmark, 2008; Carat Insight, 2008

- More than eight out of ten **African-American/Black** adults (84%) are magazine readers. They read an average of 13.6 issues per month, compared to 9.7 issues per month for all U.S. adults.
- More than two out of three **African-American/Black** adults (69%) who read magazines are between the ages of 18 to 49, compared to only 62% of the U.S. adult population.
- There were on average over 100 titles targeting **Asian-Americans** in the five-year period from 2004 to 2008.
- **Asian-American** magazine readers are younger, more affluent, and better educated than magazine readers overall.
- More than 75% of adult **Hispanic/Latinos** read magazines. They read an average of 10.0 issues per month, slightly higher than the U.S. average.
- From 2004 to 2008, the total paid and verified circulation for ABC-measured **Hispanic/Latinos** magazine titles grew by 22.6%.
- Three-quarters of **teens,** 75%, read magazines.
- A cross-media comparison conducted by Carat Insight found that the top 25 magazines lead the top 25 primetime TV shows in reaching **teens** age 12 to 17.

Reader Characteristics

Public Opinion

Project for Excellence in Journalism— State of the News Media 2008: Public Attitudes

By Robert Ruby and the Project for Excellence in Journalism

Ask the public for its opinion of the press, and the responses are chastening.

Most Americans believe the news media are politically biased, that their stories are often inaccurate and that journalists do not care about the people they report on.

And in 2007, the public's overall view of the press remained by many measures as negative as in the recent past and notably worse than in the mid-1980s.

There are nuances to the public's skepticism. People continue to like what they actually watch, read and know best. They dislike and distrust the hypothetical monolith—the behemoth called the news media.

What is growing is the extent to which partisanship is creating distinct audiences. It has reached the point where ideology is now as strong an indicator of an individual's likes and dislikes about the press as any other basic demographic measure. Increasingly, there are Republican views of the news media and Democratic views, and they differ sharply. Political independents have their own distinct attitudes about the media—and they grew more negative in 2007.

This divide was evident in views of coverage of the war in Iraq. Democrats express greater confidence in the media's performance there than do Republicans.

But the partisan divide is not as sharp when it comes to coverage of the presidential campaign. Nearly everyone tended to think there was too much early handicapping of the race, too little coverage of so-called minor candidates and too little coverage of what the candidates were saying. And those views could deepen given that so much of the press' early handicapping proved wrong—the writing off of John McCain and Mike Huckabee, the love affair with Fred Thompson and the advance anointing of Hillary Clinton and Rudolph Giuliani.

Another worry is that the Internet news audience is particularly skeptical—and this is a group that is growing, is younger and is better educated than the general population. It is the press' future base. This audience is especially critical of the mainstream media's fairness and accuracy.

And the rise of blogging has added to this perception. Bloggers on both the right and left acidly criticized mainstream news outlets for their coverage of politics in 2007 and the war in Iraq. Newspapers, magazines and television duly reported the bloggers' criticisms. (One wire service headline declared, "The blogs flunk the media again."[1] Online editors meanwhile apologized for instances of inaccurate reporting on their Web sites.

One other factor probably added to the mix: the host of growing problems in newsrooms.

In every part of the industry, journalists themselves experienced the turmoil generated by another year of reorganizations and cutbacks. New owners took control of several major news organizations, including Dow Jones & Co. (publisher of the Wall Street Journal) and the Tribune Company (publisher of the Los Angeles Times,

the Chicago Tribune, Newsday and other major newspapers). Anyone paying attention to what the press reported about itself could have detected the insecurity. As the industry is buffeted by new technology and as audiences fragment further, some critics portray the turbulence as confirmation of what they see as the press' failings.

Nearly every news organization seemed anxious to revise its playbook. The press—the fragmented, challenged industry that regularly repor ted on threats to its own prosperity—wanted to expand here, contract there, master social networking, become a community bulletin board, serve as a national forum, list the financial contributors to every presidential campaign, shrink stock tables, expand a broadcast, close a news bureau, expand a Web team, merge copy desks, reorganize the ad sales team.

An important question for the coming year is whether that turmoil is seen by an already skeptical public as panic or openness to change. The news media may risk seeming like just another industry anxious about its products, its customers and its future.

General Trust

The 20-year trend of public dissatisfaction with the press showed few signs of reversing course in 2007.

Majorities of Americans continued to say that journalists are often inaccurate (55%), do not care about the people they report on (53%), are biased (55%), one-sided (66%) and try to cover up their mistakes (63%). Those sentiments, all more prevalent than in the 1980s, have become entrenched.[2]

There was similarly no real movement in the slim pluralities who believe the press is moral (46%) or protects democracy (44%), again lower figures than a two decades ago.[3]

Source: Pew Research Center for the People & the Press, "Views of Press Values and Performance: 1985–2007," August 9, 2007.

There may be some comfort for the press in knowing that even fewer people think favorably of other organizations. More people have positive opinions of their daily newspaper than of the Supreme Court. Substantially more people think well of network news programs (71%) than of Congress (45%), the Democratic Party (55%) or the Republican Party (42%).[4]

And some of the declining trust is associated with views of the institution rather than of a single news media company or journalist.

Most people say they dislike Congress, yet most individual members of that body consistently win re-election. Similarly, people dislike the media but like the media they pay attention to.

But these criticisms of the press have become part of a larger suspicion of the press, and believability of the press is lower than in the 1990s.

No major category was exempt from the public's broad criticism in 2007, but cable television news and network television news have suffered the greatest recent loss of good will. From 2005 to 2007, the percentage of people who held a favorable opinion about cable and network television news dropped 4 percentage points (down to 75% for cable, 71% for the networks).[5]

At first glance, major national newspapers such as the New York Times fare worse than television. Only 60% of the public has a favorable opinion of national papers, but the erosion of support has slowed; the latest figure is a drop of only 1 percentage point in the last two years.[6] And survey data leaves unclear how many of the people offering opinions actually see those newspapers.

There are a few bright spots in the data in 2007, and these seem to offer hints of the media's value—and perhaps to how the press might work to rebuild its bond with the public.

More Americans than in the five previous years regard the press as highly professional. In a 2007 Pew Research Center survey, the figure rose to 66%, up from 59% in 2005.[7]

By nearly 2 to 1, Americans still believe in the watchdog role of the press in keeping leaders from doing things they shouldn't.

And a larger percentage than was the case five years earlier believes the press is careful to avoid political bias.

But a majority still considers the press biased (55% in 2007; 59% in 2002).[8]

And the press has done nothing to regain the momentary surge in confidence it enjoyed in the weeks following the September 11 attacks on the U.S.[9]

The data suggest the public most trusted the press—believed it professional, accurate, generally unbiased, even moral—when the public depended on it most for information and perhaps reassurance.

Liking the Familiar

Despite their general distrust, however, people like the news media that they seem to know best, although even these numbers are falling. About 80% of Americans have a positive opinion of their local television news and of their local daily newspaper. The public also does not always endorse the story choices made by editors. In particular, a substantial part of the public (40%) believes celebrity news gets too much attention. No other topic is cited by even half as many people as getting too much play.[10]

Many people also say they want a different kind of reporting on presidential politics, at least based on what they saw and read during the early months of the current campaign. A Pew Research Center survey found that about 8 in 10 people wanted more coverage of the candidates' positions on issues. Our analysis of campaign coverage during the first five months of 2007 found that most stories focused, instead, on political fundraising, tactics and polling.

People were well aware they were not finding the coverage they wanted. A majority rated campaign coverage as only fair or poor.[11]

Television

In general, news programs on network, cable and local broadcast television retain an enviable position in terms of public trust.

For national and international news, most Americans turn on their televisions. About 6 out of 10 people say television is their main source for that information. For this type of news, the public by a small margin favors the networks over cable.[12]

But usage patterns are changing, and they bring changes in attitudes about news organizations. Consider, for instance, differences between adults and school-age children in their news habits. Most

children, like most of their parents, turn to television as the main source of national and foreign news, although the children do not watch as much of it. Among that younger generation, the percentage that relies on television is 55% for the children and 60% for adults.[13]

In second place—for adults as well as children—is the Internet. One survey found newspapers tied with the Internet, while others place newspapers third. We do not know how many of those Internet users are, in fact, clicking on Web sites maintained by television news organizations or by newspapers.

Among young people, the Internet also is gaining over television as a source of presidential campaign news. Six in 10 of those 18 to 29 years old cite television as one of their two main sources for election news, down from 75% in 2004. Over that time, the proportion citing the Internet has more than doubled—from 21% to 46%.[14]

For all parts of the television news industry, another possible warning sign is the diminished star power of on-air journalists. That may seem counter-intuitive, since many anchors, correspondents and talk show hosts surely qualify as celebrities; their employers advertise them as brand names. But none have as much prominence in the role of a journalist as did some of their counterparts in the mid-1980s. Compared to then, a smaller part of the public can name the journalist they admire most. None are named by more than 5% of the public.

In 1987, Dan Rather as anchor of the CBS Evening News was named by 11% of the public as their favorite journalist. In 2007, CBS anchor Katie Couric topped the list, but with only 5%. She was closely followed by Fox's talk show host Bill O'Reilly and ABC news anchor Charles Gibson. The top 10 also included Jon Stewart, host of Comedy Central's satiric news-related Daily Show.[15]

Attitudes of Internet Users

Roughly a quarter of all Americans now get news on a daily basis from the Internet, a figure bolstered by half the U.S. population now having broadband at home.[16]

This audience is more critical of traditional news sources than other Americans. About 4 out of 10 have unfavorable opinions of national newspapers (43%), network television news (39%) and cable television news (38%).

Source: Pew Research Center for the People & the Press, "Today's Journalists Less Prominent," March 8, 2007.

Note: 2007 figures add to 104% because respondents could offer more than one name.

Three out of 10 in the Internet news audience have a low opinion of their local television news (32%) and their local newspaper (29%). Those, too, are higher percentages than among people who depend on traditional media.[17]

For traditional news organizations, the problem may not be as ominous as it seems. At least some Internet users rely for news on Web sites maintained by the news organizations that the users say they otherwise dislike.

For example, one out of four Americans (26%) mention the Internet either first or second as their main source of presidential campaign news. Of those, more than half (54%) cite at least one of these three Web sites—MSNBC.com, CNN.com and Yahoo News. Both MSNBC and CNN are divisions of mainstream news organizations; many headlines and stories on Yahoo News, too, come from traditional news organizations.[18] That points to a finding, long seen in the data and often not well understood: trust in the press does not correlate necessarily to usage. Often some of those most distrustful of media are its heaviest consumers.

And the findings about Internet users raise an intriguing question: what if some of the concerns people have with traditional journalism are ameliorated by the Web technology?

The public values the Internet in part because of its convenience. People like the ease with which they can find what they want, when they want. And some Internet users clearly prefer the Web as their news source for those reasons. It is less important to them that the Web sites may largely replicate the coverage being broadcast on television or published on newsprint—same content, different format, apparently different levels of satisfaction.

Partisan Gap among the Public

Then there is the question of partisan divide. With growing intensity, Republicans express more skepticism than Democrats about the fairness and accuracy of the media, and in 2007 some of those gaps grew to record size.

A far larger percentage of Republicans than Democrats regard the press as too critical of the United States, 63% vs. 23%, a gap of 40 percentage points.

The polarization is nearly as sharp in opinions about different news outlets. A smaller percentage of Republicans than Democrats express positive views about their daily newspaper (68% of Republicans, 86% of Democrats). Fewer like the national papers (41% vs. 79%). The same goes for network television news (56% vs. 84%).[19]

The partisan divide changes, however, depending on which party holds the White House. During Democratic administrations, Republicans are more supportive than Democrats of the press' watchdog role over government. When the GOP controls the White House, more Democrats than Republicans endorse that function.

Thus in 2007, a majority of the public (58%) believed press criticism did more good than harm, but there were significant differences among Democrats (71%), Republicans (44%) and Independents (60%).[20]

View of Watchdog Press Varies by President: Percent Saying Press Criticism Does More Good than Harm

	1985	1989	1994	1997	1999	2001	2003	2005	2007

Fewer See Pro-Republican Bias in Campaign Coverage: Percent of Survey Respondents

	Jan 1988	*Apr 1996*	*Jan 2000*	*Jan 2004*	*Late Dec 2007*
In campaign coverage, more . . .	%	%	%	%	%
Pro-Democratic Bias	9	20	19	22	25
Pro-Republican Bias	10	14	13	17	9
No bias	58	53	48	38	41
Don't know	23	13	20	23	25

Source: Pew Research Center for the People & the Press, "Views of Press Values and Performance: 1985–2007," August 9, 2007.

The ideological differences extend to perceptions of political bias. Sharply higher numbers of Republicans than Democrats consider the press biased in its reporting (70% of Republicans vs. 29% of Democrats).[21]

But while the partisan divide over bias exists when it comes to the coverage of politics itself, here it is much less pronounced. In 2007, 41% of Americans saw no bias in the election coverage, but that figure included a significantly smaller percentage of all Republicans (28%) than Democrats (47%) or independents (43%).

Where did people think the bias tilted? Here the public is not so split. If there is a bias, more people think it is liberal. Fully 50% of all Republicans say they detect Democratic bias. But only 16% of Democrats (and 8% of independents) saw a tilt toward the GOP.[22]

Despite the growing divide, people have not lost faith in the idea of an independent press. Fully 67% of Americans say they prefer to get news that has no particular point of view, and the balance of opinion has not changed on this since 2004.

What is more, there are no significant differences on this by party. About two-thirds of Democrats (65%), Republicans (66%) and Independents (70%) say they like getting news that has no point of view, rather than news that reflects their own political outlook, although they might disagree as to which news reports are neutral.[23]

Iraq

Partisanship extends to opinions about press coverage of Iraq. Even if the public sometimes seemed to argue about the press' role as a surrogate for arguing over the war itself, the debate still hints at the concern about press bias and the media's role in a democracy.

A series of Pew surveys in 2007 consistently found that about 4 out of 10 Americans believed the press was providing an accurate picture of events in Iraq, and results from other polling organizations were about the same.

More people have confidence in the military (55%) to give an accurate picture of the war than the press (42%).[24]

Journalists themselves give their coverage higher marks, a difference that is a reminder of the contrast between how the public views the media and how journalists view their own work. In a PEJ survey of journalists with recent experience in Iraq, 70% believed their coverage over all gave an accurate picture of events there. About one in six (15%) believed the coverage made the situation look better than it was. Hardly any (3%) believed it was too negative.[25]

Conclusion

Nothing occurred in 2007 to change the now deep impression that Americans have formed that the press is an institution of immense power that should be viewed with suspicion. And looking ahead, the even more skeptical view of the Internet audience, and the problems and cutbacks facing the profession, offer a grim forecast that this might somehow quickly change.

But one impression that people may have is false: Since the new millennia, and as the media began to undergo an extraordinary revolution, those views have not changed or gotten more negative.

Despite what some might think, the view of the press heading into 2008 has in many ways become stable.

The Pew Research Center 2008 Journalist Survey: Summary of Findings

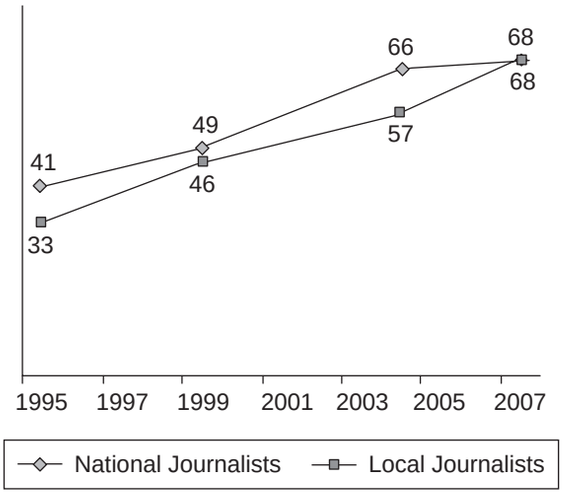
Financial Woes Now Overshadow All Other Concerns for Journalists; The Web: Alarming, Appealing and a Challenge to Journalistic Values

The financial crisis facing news organizations is so grave that it is now overshadowing concerns about the quality of news coverage, the flagging credibility of the news media, and other problems that have been very much on the minds of journalists over the past decade.

An ever larger majority of journalists at national media outlets—62%—says that journalism is going in the wrong direction, an increase from the 51% who expressed this view in 2004. Half of internet journalists and about the same proportion of local journalists (49%) also take a negative view of the state of their profession.

Soaring economic worries underlie these sour assessments. In an open-ended format, 55% of journalists at national news organizations cite a financial or economic concern as the most important problem facing journalism, up from just 30% in 2004. The proportion of local journalists citing an economic problem also has increased sharply since 2004 (from 35% to 52%). In addition, about half of internet journalists (48%)—those who work for web-only news organizations or the websites of print, broadcast or cable news outlets—point to a financial concern as the greatest problem facing the profession.

Bottom Line Pressure Hurting Journalism



Large Majorities See Increasing Financial Pressure

	100	100	101	100	101

As financial concerns have risen, fewer journalists cite the quality of coverage and the loss of credibility with the public as the most important problems facing journalism. Among national journalists, just 22% mention the quality of coverage as the biggest problem facing the profession, down from 41% in 2004. The proportion of local journalists citing the quality of coverage also has declined since 2004, from 33% to 21%.

For many, the financial problems confronting journalism are directly tied to the rise of journalism on the internet. Overall, 16% of national journalists—including 26% of those working in print—cite the current business model for journalism, or the specific challenge of making a profit from web journalism, as the most important problem facing journalism.

However, the national and local journalists surveyed make clear distinctions between the internet's impact on the news business, which they view with alarm, and the ways that the Web has transformed journalism, many of which the journalists view quite positively.

The survey of journalists was conducted Sept. 17–Dec. 3, 2007 among 585 reporters, editors and news executives by the Pew Research Center for the People & the Press and the Project for Excellence in Journalism.

Large majorities of national, local and internet journalists say it is good thing that citizens are able to post comments on news organizations' websites. In addition, majorities in all three groups say that video-streaming websites, with YouTube by far the most well-known, have been a good thing for journalism.

Perhaps more surprising is that most national and local journalists also express positive opinions about news aggregating websites, such as Google News and Yahoo News, which have been blamed for contributing to audience declines for traditional news organizations. Notably, fewer local print journalists (53%) view news aggregating sites as a good thing for journalism than do local TV journalists (71%) or national journalists (67%).

Overall, internet journalists have more positive impressions of internet-driven innovations than do journalists who work for national and local print, TV and radio news organizations. For instance, only about a third of national (35%) and local journalists (36%) have a positive view of citizens posting news content on news organizations' websites; by contrast, 54% of internet journalists say this is a good thing for journalism.

There is an even bigger gap in how national, local and internet journalists view the impact of news ranking sites such as reddit.com and digg.com. Nearly two-thirds of internet journalists (65%) say that reddit, digg and other sites that rank the popularity of news stories are a good thing for journalism. Only about a third of national journalists (34%) and even fewer local journalists (24%) agree.

Staff Reductions Widespread in Print, Internet Journalists Not Exempt

Main Reason for Declining Audiences? More News Choices

Major reasons for lost audience/readership:	National %	Local %	Internet %
Wider range of news choices	81	84	82
Specialized news outlets	57	55	53
Americans are too busy	47	51	44
News orgs. focus too much on scandal	42	34	39
Public not interested in serious news	35	24	31
Stories not meaningful to average people	33	41	36
Coverage is too boring and static	18	25	19

The survey finds that while journalists welcome many of the new technologies that have revolutionized journalism, they are divided about the internet's overall impact on the traditional values of their profession. National journalists are evenly split about whether the internet's rise will strengthen or weaken traditional journalistic values. On balance, more local journalists say the internet will weaken (45%), rather than strengthen (34%), those values. Even among internet journalists themselves, only about half (49%) say the Web will enhance journalistic values.

Older journalists generally see the internet weakening journalistic values. About half of journalists ages 55 and older (52%) express this view. By comparison, a 49% plurality of younger journalists (ages 22–34) says the internet's rise will strengthen journalistic values.

Those who believe that the internet will strengthen journalistic values cite several factors for this. They assert that the Web increases journalistic transparency and enables journalists to provide more detailed coverage. People who say that the internet weakens the traditional values of journalists most often cite increasing time pressures and diminished quality control in online journalism as the internet's biggest negatives.

The surveyed journalists give the highest performance ratings to major national newspapers—92% of national journalists, and 82% of local and internet journalists, give national newspapers grades of A or B. The grades for the websites of national news organizations are nearly as positive. Roughly eight-in-ten national journalists (82%), and nearly as many internet (78%) and local journalists (74%), give grades of A or B to these sites.

Online-only news sites, such as the magazines Slate and Salon, also are highly regarded, at least among internet and national journalists; 76% of internet journalists give these sites an A or B, as do

Internet Journalists More Likely To See Commercial Influences

How much influence?	National %	Local %	Internet %
Corporate owners			
Great deal/fair amount	26	25	48
Not very much/at all	72	72	50
Don't know	2	2	2
	100	99	100
Advertising concerns			
Great deal/fair amount	25	23	46
Not very much/not at all	74	77	53
Don't know	1	0	1
	100	100	100

68% of national journalists. However, just 47% of local journalists give high marks to online-only news sites. Local journalists, especially those working in print, also give lower grades to news aggregator sites, such as Google News and Yahoo News, than do national or internet journalists.

In addition, while half of internet journalists give high marks to bloggers who write about current events, just a third of national journalists and 21% of local journalists do so. Nonetheless, the proportion of national journalists giving high marks to bloggers is twice the number giving similar ratings to local TV news (33% vs. 17%).

Most of the news professionals surveyed say that even in this era of online news, journalists still fulfill their traditional role as the "gatekeepers" of news and information. Majorities of national (64%), local (63%) and internet journalists (58%) believe that journalists still serve as information gatekeepers—and those who express this opinion overwhelmingly see this as a good thing.

The survey also finds:

- Large majorities of local print journalists (82%) and national print journalists (69%) say staffs at their news organizations have decreased over the past three years. Internet journalists are not exempt from downsizing; 52% say staffs at their newsrooms have decreased over the past three years.
- About half of internet journalists say that corporate owners and advertising concerns exert at least a fair amount of influence over news coverage decisions. Perceptions of commercial pressure are less common among print and TV/radio journalists.
- The journalists surveyed are less optimistic about the future of nightly network news than of printed newspapers. About four-in-ten national journalists (42%) say they expect nightly network broadcasts to survive for only another 10 years or less; just 17% say printed newspapers will disappear that quickly.

Newsroom Diversity

American Society of News Editors— The Newsroom Employment Census (2008)

Newsrooms shrink; minority percentage increases slightly

The number of full-time journalists working at America's daily newspapers shrank by 4.4 percent in the past year, the largest decrease in the past 30 years according to the annual census conducted by the American Society of News Editors.

The percent of minority journalists working at daily newspapers grew minimally to 13.52 percent from 13.43 percent of all journalists, according to ASNE.

ASNE marks the 30th anniversary of the survey in 2008. The annual survey was a direct outgrowth of the March 1, 1968, findings of the Kerner Commission report. The commission, created to study the causes of devastating riots in Newark and Detroit, was highly critical of the lack of coverage of black communities and the lack of minority journalists at mainstream newspapers and broadcast stations. The commission said that newspapers and TV stations shared some of the responsibility for the civil unrest because of their failure to adequately and fairly cover black communities over the years.

ASNE created the annual Newsroom Employment Census in 1978 as a tool to measure the industry's success toward its goal of having the percentage of minorities working in newsrooms nationwide equal to the percentage of minorities in the nation's population. America's newspaper editors have been industry leaders in helping newspapers better reflect their communities to achieve greater accuracy and credibility.

The 1978 census found an estimated 43,000 full-time journalists working as editors, reporters, copy editors and photographers of which 3.95 percent were minorities. The 2008 census found 52,600 full-time journalists of which 13.52 are minorities.

ASNE President Gilbert Bailon said, "The numbers represent a dual reality: It's mildly encouraging that the minority percentage held steady despite difficult economic times that are causing many cutbacks. On the other hand, the total number of minority journalists employed at daily newspapers declined by nearly 300 people, which follows the pattern for the overall newsroom workforce. Such a trend will not help newspapers in their quest to reach parity with the minority population by 2025."

ASNE Diversity Chair Caesar Andrews said, "Certainly the slight percentage increase is better than the alternative, especially during another tough year with overall staff reductions. But if we're not able to accelerate diversity inside newsrooms, and if we miss opportunities to produce more compelling news coverage, then the challenge of connecting with changing communities becomes that much more difficult."

In 1980, the U.S. was 80 percent white not Hispanic and about 20 percent minority, according to the U.S. Census Bureau. By 2006, the U.S. was 66 percent white who are not Hispanic and minorities were 34 percent, according to the census bureau.

"ASNE still gets credit for focusing intensely each year on diversity hiring. Too many newsrooms still fall short.

But there's no denying the progress since the census was started 30 years ago," Andrews said. This year ASNE counted full-time journalists working online for the second time to reflect the industry emphasis on expanding its Web presence. This year's annual census found nearly 1,700 full-time journalists working only on their newspapers' Web sites. Of those, 17.79 percent are minorities.

An estimated 2,400 journalists left newsrooms in 2007 through a combination of buyouts and layoffs. Since 2001, newsrooms have lost an estimated 3,800 professionals, a 6.7 percent decline. But the largest loss came last year.

Highlights of the 2008 survey

- **Supervisors:** Minorities account for 11.4 percent of all supervisors in newsrooms, which brings this percentage to its level two years ago. Of all minorities, 22 percent are supervisors.
- **Newspapers with no minorities:** 423 of the newspapers responding to the survey had no minorities on their full-time staff. This number has been growing since 2006. The majority of these newspapers have circulations of 10,000 or less. All newspapers with circulations of 50,000 or more that responded to the census had at least one minority staffer.
- **Where do minorities work:** Two-thirds of minorities work at newspapers with circulations exceeding 100,000. The percentage of minorities working at newspapers with more than 500,000 circulation is 16 percent; 250,001 to 500,000 circulation, 19 percent; 100,001 to 250,000 circulation now account for 30 percent.

Other findings:

- **Internships:** The percentage of minority interns stands at 28 percent, a slight increase from 26.6 percent last year.
- **First time hires:** Minorities represented nearly 18 percent of the journalists hired for their first full-time newsroom job. That number has fluctuated over the decade. In 2001, it stood at 18.8 percent and rose to a high of 22.5 percent in 2004. It has declined since.
- **Women:** Women working full-time in daily newspapers now total 19,700. The percentage of women decreased slightly from 37.58 to 37.36 percent. Minority women accounted for 17.16 of female newsroom staffers.
- **Men:** Men total more than 32,900, down from nearly 34,400. Minority men continued to accounted for 11.35 percent of male newsroom staffers in 2007.

Clarification of 2006 and 2007 figures

We added free daily newspapers to the ASNE Census in 2006 to enhance the accuracy of our count of full-time journalists working at newspapers. We realized this year that we had used an incorrect system to include them in the totals. This year we put them in their own circulation category. With that change, we recalculated the total estimated newsroom staff to 53,600 in 2006, of which 7,400 were minorities, and 55,000 in 2007, including 7,400 minorities. The percentage of minorities changed to 13.73 for 2006 and 13.43 for 2007.

ASNE's Diversity Mission

Increasing diversity in U.S. newspaper newsrooms has been a primary ASNE mission since 1978. ASNE is an industry leader in helping newspapers better reflect their communities. It provides career information to aspiring journalists. ASNE sponsors and coordinates a variety of initiatives and projects, including job fairs directed at young journalists of color and seminars for editors on the changing demographics of the U.S. It is the only major mainstream journalism organization with a full-time diversity director.

The survey is a tool ASNE uses to measure the success of its goal of having the percentage of minorities working in newsrooms nationwide equal to the percentage of minorities in the nation's population by 2025.

Census procedures

For the 2008 ASNE newsroom employment census, 924 of the 1,411 daily newspapers responded to the survey, representing 65.49 percent of all U.S. dailies. The census is based on employment data reported by daily newspapers.

The survey data are projected to reflect all daily newspapers in the country. Editors participating in

the survey agree to publish the percentage of newsroom employees who are minorities. A list of newspapers with their percentages follows the summary and tables.

The data from newspapers that returned the survey are used to project the numbers for non-responding newspapers in the same circulation range. An ASNE follow-up test of non-responding newspapers found their employment of minorities closely resembles newspapers in their circulation categories that respond to the survey. The survey figures reported above are weighted in this way to reflect all daily newspapers. ASNE has implemented internal monitoring procedures to ensure the consistency and credibility of the employment data. Moreover, because the survey procedures remain constant each year, the ASNE census provides highly reliable year-to-year comparisons.

ASNE is an organization of the main editors of daily newspapers throughout the Americas. Founded in 1922, ASNE is active in a number of areas of interest to top editors with priorities on improving freedom of information, diversity, readership and credibility of newspapers.

Radio-Television News Directors Association (RTNDA)/ Hofstra University—Annual Women and Minorities Survey 2008 (RTNDA Communicator)

By Bob Papper

Results from the latest RTNDA/Hofstra University Annual Survey show increases in the number of women and minorities working in—and leading—TV and radio newsrooms.

By most measures, this year has been good for women and minorities in both TV and radio news, according to the latest RTNDA/Hofstra University Annual Survey. In fact, it's been better than good.

At 28.3 percent, there are more women news directors in television than ever before eclipsing the old record set in 2003 by almost 2 percent. The percentage of minority news directors in TV also reached an all-time high of 15.5 percent. That's a percent and a half above the previous high in 2000. Overall, minorities in TV news at 23.6 percent reached the second-highest level ever, not far behind the peak reached in 2001. The percentage of minorities at non-Hispanic stations also rose, but more modestly, coming in third behind 2001 and 2006. And at 9.1, the percentage of minority TV news directors at non-Hispanic stations reached the highest level in the eight years we've tracked that statistic.

Minority numbers in radio rose as well. After years of steady shrinkage, the percentage of minorities rose to 11.8 percent. That's nowhere near a record, but it's far better than the last several years.

Not all the numbers were on the plus side. The number of minority radio news directors, which had spiked last year, fell back down to where it had been.

The bigger picture appears more mixed. In the past 18 years, the minority population in the United States has risen 8.1 percent; but the minority workforce in TV news is up 5.8 percent, and the minority workforce in radio is up by just 1 percent. Still, TV news diversity is far ahead of newspaper diversity (see sidebar).

Minority Population v. Minority Broadcast Workforce

	2008	*2007*	*2006*	*2005*	*2000*	*1995*	*1990*
U.S. Minority Population	34.0%	33.6%	33.2%	32.8%	28.6%	27.9%	25.9%
Minority TV Workforce	23.6	21.5	22.2	21.2	21.0	17.1	17.8
Minority Radio Workforce	11.8	6.2	6.4	7.9	10.0	14.7	10.8

Broadcast News Work Force—Television

	2008	*2007*	*2006*	*2005*	*2000*	*1995*
Caucasian	76.3%	78.5%	77.8%	78.8%	79.0%	82.9%
African American	10.1	10.1	9.5	10.3	11.0	10.1
Hispanic	10.3	8.7	9.6	8.7	7.0	4.2
Asian American	2.7	2.3	2.7	1.9	3.0	2.2
Native American	0.5	0.4	0.5	0.3	<1.0	0.6

Broadcast News Work Force—Radio

	2008	*2007*	*2006*	*2005*	*2000*	*1995*
Caucasian	88.2%	93.8%	93.6%	92.1%	90%	85.3%
African American	7.8	3.3	2.5	0.7	5	5.7
Hispanic	3.6	0.7	1.9	6.0	3	7.5
Asian American	0.4	1.1	1.8	0.7	1	0.6
Native American	0	1.1	0.2	0.5	1	1.0

Television: The number of African Americans held steady; the number of Hispanics rose 1.6 percent; the number of Asian Americans rose 0.4 percent; and Native Americans increased by 0.1 percent. Among non-Hispanic stations, the minority workforce rose to 20.1 percent. That's up from 19.4 percent last year, but it's still below the figure from two years ago (20.4 percent). At non-Hispanic stations, the minority break down is: 10.5 percent African American; 6.2 percent Hispanic; 2.9 percent Asian American; and 0.5 percent Native American. At non-Hispanic stations, the number of Asian Americans rose 0.6 percent; African Americans increased by 0.1 percent; while the number of Hispanics and Native Americans went unchanged.

Overall, 82.1 percent of the TV news workforce at Hispanic stations are Hispanic. Another 15.4 percent are white, 1.8 percent are African American, 0.3 percent Asian American and 0.4 percent Native American.

Men outnumber women for all ethnic groups except Asian Americans and Native Americans. There are 10 percent more African American men than women; 21.4 percent more Hispanic men than women; and 65.1 percent more Caucasian men than women. In contrast, there are 50 percent more Asian American women as men, and 50 percent more Native American women as men.

Radio: The picture was mixed. The percentage of African Americans and Hispanics shot up while the percentage of Asian Americans and Native Americans dropped.

Broadcast News Directors—Television—2008

	2008	*2007*	*2006*	*2005*	*2000*	*1995*
Caucasian	84.5%	89.1%	86.8%	88.0%	86%	92.1%
African American	3.7	2.0	4.2	3.9	3	1.6
Hispanic	9.3	7.2	6.0	5.8	9	3.8
Asian American	1.7	1.0	1.2	1.3	2	1.5
Native American	0.8	0.7	1.8	1.0	<1	1.0

Broadcast News Directors—Radio—2008

	2008	*2007*	*2006*	*2005*	*2000*	*1995*
Caucasian	94.1%	88.0%	95.6%	89.0%	94%	91.4%
African American	1.7	4.4	1.9	0.0	3	5.4
Hispanic	3.4	3.8	1.3	8.8	2	2.4
Asian American	0.8	1.9	0.6	0	0	0
Native American	0	1.9	0.6	2.2	1	0.8

Television: At 15.5, the percentage of minority TV news directors set a new record, eclipsing the old one of 14 percent set back in 2000. In TV, all minority news director groups rose. Minority news directors are most commonly found in the biggest markets (at 25.8 percent) and least often in the smallest markets (at 10.3 percent). But minority news directors are also most likely to be in the smallest news departments (at 36.0 percent). Minority news directors are most commonly found in the West (25.4 percent) and the South (15.1 percent) as opposed to the Midwest (7.1 percent) or Northeast (6.7 percent).

At non-Hispanic stations, the percentage of minority TV news directors rose to an all-time high of 9.1 percent, up from last year's 6.5 percent and the previous all-time high of 8.6 percent the year before. The number of Hispanic news directors at non-Hispanic stations rose from last year's 2.5 percent to this year's 3.0 percent. The number of African American news directors rose from 2.2 percent last year to 3.3 percent. The number of Asian Americans went from 1.1 percent to 1.8 percent, and Native Americans edged up from 0.7 percent to 0.9 percent.

Radio: In contrast, every minority group of radio news directors fell back from last year's increases. There were no consistent and meaningful patterns based on ownership, market size or geography.

Women in Local TV News—2008

	News Staffs With Women	*Women News Directors*	*Women as Percentage of Work Force*	*Average Number of Women on Staff*
All Television	97.0%	28.3%	40.2%	14.5
Network Affiliates	97.2	27.7	40.2	15.3
Independents	94.4	38.9	41.7	10.0
DMA 1–25	91.2	43.3	40.9	20.6
DMA 25–50	98.0	20.8	37.8	19.5
DMA 51–100	97.9	26.0	39.3	16.2
DMA 101–150	100.0	26.7	41.4	10.9
DMA 151+	96.7	23.0	43.0	8.0
Staff 51+	100.0	28.1	39.3	28.8
Staff 31–50	100.0	18.1	38.8	15.4
Staff 21–30	100.0	28.4	42.7	10.9
Staff 11–20	100.0	31.8	44.0	7.2
Staff 1–10	100.0	24.0	36.4	2.6

Television: At 28.3 percent, the number of women TV news directors has set a new record by almost 2 percent. And it's worth emphasizing that the percentage of women TV news directors in this survey is based on a complete station census not projected from a smaller sample. So 28.3 percent isn't a rough figure, it's an exact one. And unlike previous years, women TV news directors are just as likely to be found in the biggest newsrooms and in the largest markets. That wasn't the case even a year ago. There's no meaningful difference geographically, but women are a little less likely to be news directors at Fox affiliates (21.4 percent) than the other network affiliates (28.7 percent).

Otherwise, the percentages are little changed. Women have been around 40 percent of the TV news workforce for a decade. Those of you with a sharp eye for numbers may wonder about the first column above. How is it possible to have some market sizes and network affiliates under 100 percent women if all staff sizes are at 100 percent? That's because the numbers come from different questions on the survey form. All surveys include market size, but not all surveys have staff size. That's how they can report seemingly contradictory results when, based on survey research, they're both accurate.

Women in Local Radio News—2008

	News Staffs With Women	*Women News Directors*	*Women as Percentage of Work Force*	*Average Number of Women on Staff*
All Radio	27.5%	20.0%	22.7%	1.0
Major Market	45.5	10.0	36.0	0.8
Large Market	44.4	27.8	21.4	1.5
Medium Market	25.0	22.2	23.6	1.0
Small Market	20.4	15.2	14.8	0.8

Radio: The percentages for women in the radio news workforce are down a bit from what they've been. The percentage of women radio news directors retrenched from last year's 23.5 percent to this year's 20.0 percent close to the 20.4 percent of two years ago. Most market sizes fell except large markets. There were no consistent patterns as far as women news directors, although they were slightly more common in the Northeast.

Major markets are those with 1 million or more listeners. Large markets are from 250,000 to 1 million. Medium markets are 50,000 to 250,000. Small markets are fewer than 50,000.

Minorities in Local TV News—2008

	News Staffs With Women	*Women News Directors*	*Women as Percentage of Work Force*	*Average Number of Women on Staff*
All Television	82.5%	15.5%	23.6%	7.3
Network Affiliates	83.9	11.4	21.5	7.1
Independents	80.6	54.3	58.4	11.3
DMA 1–25	75.8	25.8	34.4	13.0
DMA 25–50	76.6	17.0	22.6	8.9
DMA 51–100	90.4	10.6	20.8	7.7

	News Staffs With Women	*Women News Directors*	*Women as Percentage of Work Force*	*Average Number of Women on Staff*
DMA 101–150	81.3	15.6	20.8	4.7
DMA 151+	83.6	10.3	15.5	2.8
Staff 51+	93.2	7.8	24.8	15.6
Staff 31–50	96.3	6.2	19.5	7.2
Staff 21–30	90.9	18.4	23.3	5.8
Staff 11–20	81.8	9.5	17.9	2.7
Staff 1–10	68.0	36.0	39.7	2.6

Television: There was little difference among network affiliates. Independents were the most diverse at 58.4 percent minority. Stations in the West (32.7 percent minority) and South (27.1 percent) were more diverse than stations in the Northeast (13.0 percent) or Midwest (11.5 percent). That's been the case for quite a few years.

Overall, the concentration of blacks was highest in the South (17.9 percent) and lowest in the West (6.4 percent). Hispanics were highest in the West (20.2 percent), with the South at 7.6 percent and the Northeast (3.1 percent) and Midwest (2.3 percent) well behind. Asian Americans were most heavily concentrated in the West (5.1 percent) as were Native Americans (0.9 percent).

Minorities in Local Radio News—2008

	News Staffs With Women	*Women News Directors*	*Women as Percentage of Work Force*	*Average Number of Women on Staff*
All Radio	10.1%	5.9%	11.8%	0.3
Major Market	9.1	0	26.7	1.8
Large Market	22.2	13.3	10.0	0.3
Medium Market	10.7	3.9	8.1	0.2
Small Market	4.1	4.9	4.4	0.1

Radio: As with last year, there were more minorities at independent stations than group owned (15.0 percent versus 8.5 percent), and more in the West (19.1 percent) and least in the Northeast (2.1 percent).

TV General Managers—2008

	News Staffs With Women	*Women News Directors*	*Women as Percentage of Work Force*	*Average Number of Women on Staff*
All Television	90.2%	9.8%	83.7%	16.3%
Network Affiliates	92.0	8.0	84.0	16.0

(Continued)

(Continued)

	News Staffs With Women	*Women News Directors*	*Women as Percentage of Work Force*	*Average Number of Women on Staff*
Independents	69.2	30.8	84.6	15.4
DMA 1–25	81.0	19.0	81.4	18.6
DMA 25–50	88.6	11.4	81.8	18.2
DMA 51–100	92.9	7.1	82.4	17.6
DMA 101–150	91.7	8.3	86.0	14.0
DMA 151+	94.4	5.6	86.0	14.0

Television: The percentage of women GMs at stations that run local news edged up again from 15.8 to 16.3 percent. Women GMs were least likely to be found in the smallest (101+) markets, and there were about half as many women GMs in the Northeast as any other part of the country. The only difference by network affiliation was that CBS stations, at 9.6 percent, were half as likely to have women GMs as the other network affiliates (18.5 percent).

The percentage of minority general managers at TV stations that run local news rose from last year (6.4 percent to 9.8 percent). All told, 6.3 percent of non-Hispanic stations (that run news) had minority general managers. That's up from 3.6 percent a year ago. African Americans were 2.7 percent; Asian Americans were 1.6 percent; Hispanic/Latino 1.3 percent; and Native American 0.6 percent.

ABC affiliates were the most likely to have minority GMs. Minority GMs were also most often found in the largest markets but at the smallest stations—and most often in the West. Most of that is the prevalence of Hispanic GMs at Hispanic stations.

Radio General Managers—2008

	Percent Caucasian	*Percent Minority*	*Percent Men*	*Percent Women*
All Radio	94.9%	5.1%	74.6%	25.4%

Radio: At radio stations that run local news, female general managers jumped from 20.3 percent to 25.4 percent, most often at group-owned and less often in markets of 1 million and more.

Minority general managers were little changed from last year's 5.5 percent and least likely in markets of 1 million and more.

News Assistant	25.0	75.0	70.5	29.5	11.7	13.2	1.5	<0.1

We ask about gender and ethnicity by position every three years. Having started in 1996, we can see trends going back a dozen years. If there's a surprise, it's how few consistent trends have emerged over that time. But there are some.

News directors are more likely to be female and people of color than a dozen years ago. African American assistant news directors have doubled in that time. Executive producers have moved from a majority male to a majority female.

Among news anchors, the percentage of minorities has been slowly but steadily rising, but the percentage of women has leveled off at about 57 percent.

Weathercasters have remained mostly male and mostly white. So are sports anchors, but a little less so these days with both women and minorities making modest inroads.

Women news reporters have also leveled off around the 57 percent mark, and there are more minority reporters than there used to be. Women and minorities have both made gains as sports reporters in the last 12 years.

There are also more minorities on the assignment desk. Women remain almost two-thirds of all TV news producers, but they were there by the time we started asking in 1996, and it hasn't changed since. There are more African American producers than there used to be.

The percentage of women photographers has dropped over the years (although not in the last three). Women and minorities have both made gains among internet specialists.

Newspapers v. Broadcast

	Daily Newspapers	*TV News*
Minority population	13.5%	23.6%
African American	5.3	10.1
Hispanic/Latino	4.5	10.3
Asian American	3.2	2.7
Native American	0.5	0.5
Women	37.4	40.2

	Daily Newspapers	*TV News (non-Hispanic only)*
Minority population	13.5%	20.1%
African American	5.3	10.5
Hispanic/Latino	4.5	6.2
Asian American	3.2	2.9
Native American	0.5	0.5
Women	37.4	40.2

The 2008 survey by the American Society of Newspaper Editors found that minority journalists make up 13.5 percent of newsroom employees at daily newspapers. African Americans were 5.3 percent of the total, Hispanics 4.5 percent, Asian Americans 3.2 percent, and Native Americans 0.5 percent. Women were 37.4 percent of the total.

The percentages for women in the radio news workforce are down a bit from what they've been. The percentage of women radio news directors retrenched from last year's 23.5 percent to this year's 20.0 percent close to the 20.4 percent of two years ago. Most market sizes fell except large markets. There were no consistent patterns as far as women news directors, although they were slightly more common in the Northeast.

Major markets are those with 1 million or more listeners. Large markets are from 250,000 to 1 million. Medium markets are 50,000 to 250,000. Small markets are fewer than 50,000.

Bob Papper is professor and chair of the Department of Journalism, Media Studies and Public Relations at Hofstra University and has worked extensively in radio and TV news. *This research was supported by the School of Communications at Hofstra University and RTNDA.*

About the Survey

The RTNDA/Hofstra University Survey was conducted in the fourth quarter of 2007 among all 1,647 operating, non-satellite television stations and a random sample of 2,000 radio stations. Valid responses came from 1,241 television stations (75.3 percent) and 138 radio news directors and general managers representing 271 radio stations. Data for women TV news directors are from a complete census and are not projected from a smaller sample.

Radio-Television News Directors Association/Hofstra University Survey—The Real Story of TV News Staffing and Other Numbers for TV and Radio in 2008

The Real Story of TV News Staffing and Other Numbers for TV and Radio in 2008 RTNDA/ Hofstra University Survey - 2008

By Bob Papper

I spoke to a number of local TV news directors in July and August who said that they were among the "lucky ones" that haven't had to cut staff or leave positions unfilled this year. Actually, I think their experience has been typical. In a follow-up to the RTNDA/Hofstra University Survey of more than 300 stations, almost three-quarters have reported either no staff cuts or staff increases. Unfilled positions were counted as staff reductions, and news directors were quick to point out that most of those TV news staff reductions happened through attrition, or by hiring freezes, rather than letting people go. TV news' itinerant nature makes that easier to accomplish.

TV News Staff Changes Since January 1, 2008

	Staff Increase	*Staff Decrease*	*Same*
All TV news	22.1%	28.6%	49.4%

In an era of generally increasing TV news staff, those figures are comparatively depressing. Most years, the percentage of stations with increases would be 10 percent higher, and the percentage of stations with decreases would be at least 10 percent lower. This year, there were more layoffs than additions, far more people were cut than added, and some of those layoffs involved dozens of people at one time. In a number of cases, station cuts outside of news meant that the spared newspeople had to pick up the slack.

Stations that increased staff added an average of 2.9 people (median 2); stations that cut dropped by an average 3.8 people (median 2). Subtracting gains from losses and projecting across all stations, local TV news, nationwide, has lost about 360 people since the first of the year. There are about 24,500 people who work full-time in local TV news.

Recession aside, news directors expect the remainder of the year to be far better.

TV News Staff Changes Expected Over the Next Few Months

	Staff Increase	*Staff Decrease*	*Same*
All TV news	17.9%	9.1%	72.7%

While nearly three-quarters of the news directors expect no change in staff size, almost twice as many expect to add people as cut them. The industry-wide projection would be a net increase in TV

newspeople of 151 through the remainder of the year. That would result in a 2008 net loss of 209 jobs. I'll know in more detail after the next full RTNDA/Hofstra University Annual Survey, but TV news staffing appears to have slipped to its fourth highest level ever—behind 2007, earlier this year and 2001.

The pain of this year's layoffs has not been spread evenly across all stations. The biggest markets, 1–25, and markets 101–150 have been hit the hardest. In both cases, just over a third of the stations have cut staff. Not surprisingly, the smallest markets, 151+, already on the lean side, were the least likely to see staff reductions (16.7 percent) and the most likely to remain unchanged (70.8 percent).

Stations in the South and Midwest were also hit harder than stations in the Northeast or West. While almost half the stations for every region remained the same, more than 30 percent of the stations in the Midwest and South had cutbacks. That is seven to 10 points higher than stations in the Northeast or West.

CBS affiliates suffered far more than others. Almost 40 percent of CBS stations had cutbacks. That compares with 28.2 percent of NBC affiliates, 25.9 percent of ABC affiliates, 18.2 percent of all other and just 11.1 percent of Fox stations. In fact, more than 40 percent of Fox affiliates reported staff increases.

Outlook For the Rest of the Year

Most stations appear to be done with most of their cuts. There are still some big layoffs on the horizon, but they're likely to be the exception, and few—if any—will come in markets smaller than 50. Overall, stations will be hiring more than letting people go, although many if not most of those hired will simply fill replacement spots left vacant because of hiring freezes.

Jobs are a little more likely to open up in the West and South, and Fox affiliates are likely to continue leading the way. But also look for modest rehiring at CBS affiliates as well. ABC and NBC stations are more likely to sit tight.

But hasn't it been widely reported that the cuts in TV news reflect the beginning of the end? That does seem to be the assumption, but the evidence doesn't support it. Virtually no one is cutting back on news. The latest figures put 2008 even with 2007's all-time record for highest amount of local TV news. A total of 774 stations are originating local news. That's down three stations from a year ago and four from the all-time record of 778. There are also 196 local stations that get news from one of those 774.

Hours of Local TV News Per Day

	Average weekday	*Weekday maximum*	*Average Saturday*	*Saturday maximum*	*Average Sunday*	*Sunday maximum*
All TV news	4.1	10.0	1.8	7.0	1.7	6.0
Big four affiliates	4.3	10.0	1.8	7.0	1.8	6.0
Other commercial	3.1	10.0	1.4	4.0	1.2	3.0
Market size:						
1–25	4.0	9.0	2.5	7.0	2.4	6.0
26–50	4.3	7.0	2.6	6.0	2.5	6.0
51–100	4.7	10.0	1.9	5.0	1.8	5.0
101-150	4.1	10.0	1.4	3.0	1.3	5.0
151+	3.3	10.0	1.1	2.0	1.0	2.0
Staff size:						
Staff 51+	5.7	9.5	3.0	6.0	2.8	6.0

(Continued)

(Continued)

	Average weekday	*Weekday maximum*	*Average Saturday*	*Saturday maximum*	*Average Sunday*	*Sunday maximum*
Staff 31-50	4.5	8.0	1.8	5.0	1.8	5.0
Staff 21-30	4.0	10.0	1.2	3.0	1.1	3.0
Staff 11-20	2.8	10.0	1.0	2.0	0.9	2.0
Staff 1-10	1.8	5.0	1.0	1.5	1.0	1.5
Affiliation:						
ABC	4.2	9.5	1.8	5.0	1.8	5.0
CBS	4.4	10.0	1.8	6.0	1.7	6.0
Fox	3.9	10.0	1.3	5.0	1.4	5.0
NBC	4.6	8.0	2.1	7.0	2.0	6.0
PBS	1.1	2.5	0	0	1.2	1.5

The average amount of local TV news is virtually unchanged from last year's record high. Some market sizes or staff sizes rose a little, and some fell a little, but there were no meaningful changes, and the bottom line was that the weekday average remained exactly the same at 4.1 hours of local news. The Saturday average rose by 18 minutes, and the Sunday average fell by 6 minutes.

Fox affiliates run a little less news than other affiliates. Stations in the South and Northeast continue to run the most news, but this year their edge over the Midwest and West has gotten smaller.

Amount of News Changes… The Past Year

	Increase	*Decrease*	*Same*	*Not sure*
All TV news	42.7%	2.1%	54.6%	0.6%
Big four affiliates	44.1	1.0	54.2	0.7
Other commerical	40.7	11.1	48.1	
Market size:				
1–25	**35.0**	**1.7**	**63.3**	
26–50	26.7	0	73.3	
51–100	48.3	3.4	47.1	1.1
101–150	45.5	3.4	50.01	1.1
151+	50.9	0	49.1	

The figures here look a lot like last year's. A majority of stations a year ago said they ran the same amount of news, and a slightly larger majority this year said the same thing. Stations reporting an increase in news fell by almost 4 percent; stations saying they decreased the amount of local news rose by half a percent. As with a year ago, growth was more likely in smaller markets. Stations in the South and West were more likely to add news than stations in the Midwest or Northeast. At 16.7 percent, stations with the smallest staffs (1–10 people) were the most likely to decrease the amount of news they run.

Amount of News Planned… The Next Year

	Increase	*Decrease*	*Same*	*Not sure*
All TV news	39.4%	3.6%	49.9%	7.2%
Big four affiliates	39.5	3.7	49.0	7.8

(Continued)

	Increase	*Decrease*	*Same*	*Not sure*
Other commercial	37.0	0	59.3	3.7
Market size:				
1–25	30.0	6.7	58.3	5.0
26–50	40.0	4.4	51.1	4.4
51–100	37.2	2.3	52.3	8.1
101–150	47.1	4.6	40.2	8.0
151+	40.4	0	50.9	8.8

Stations in the West were more likely to expect an increase in the amount of news (45.2 percent versus 36.4 percent). CBS and Fox affiliates were a bit more likely to expect to increase news than ABC or NBC stations.

TV Staff Size – 2008

	Avg full-time	*Median full-time*	*Maximum full-time*	*Avg part-time*	*Median part-time*	*Maximum part-time*	*Avg total staff*	*Median total*	*Maximum total staff*
All TV	37.3	30.0	152	8.7	6.0	130	41.3	33.5	153
Big four affiliates	39.3	32.0	152	8.6	6.0	130	43.2	36.0	153
Other commercial	25.5	21.5	92	9.9	8.0	27	31.3	27.5	114
Market size:									
1–25	57.5	58.0	152	14.2	8.5	47	65.6	66.0	153
26–50	54.6	54.0	102	7.3	6.0	22	58.4	55.0	109
51–100	40.7	40.5	112	6.1	5.0	15	43.7	43.0	112
101–150	25.8	26.0	51	9.8	5.0	130	30.2	29.0	148
151+	19.0	19.5	46	5.9	5.0	13	20.7	21.0	51

The above employment figures were gathered in the fourth quarter of 2007. Last year, the average staff size fell but the median went up. This year, it was just the opposite. At 37.3, the average full-time staff size is the highest ever. But I view the median size as a better indicator of what's happening, overall, in the industry, and the median fell from its all time high by 2 to 30. Both average and median part-time numbers rose substantially this year, suggesting that stations may be economizing by "filling" full-time vacancies with part-timers. For full-time staff, overall, larger markets (1–50) tended to grow; the middle group (51–150) tended to slip back a bit; and the smallest group (markets 151+) stayed largely the same. But the increase in part-timers was across the board.

There were relatively small staff size differences among affiliate stations—which was also true last year. Regional differences were small.

Staff Size Changes…The Past Year

	Increase	*Decrease*	*Same*	*Don't know*
All TV news	34.5%	19.9%	45.2%	0.3%
Big four affiliates	35.7	19.2	44.8	0.3
Other commercial	33.3	25.9	40.7	

A plurality of stations said their staff size remained the same: around 45 percent—which was the same as a year ago. But the percentage of stations reporting increases fell by almost 7 points, and stations reporting a decrease rose by almost 6. About a quarter of the newsrooms with 31 or more newspeople reported decreases, and almost a third of the smallest newsrooms (1–10 people) reported a staff decrease—although only the latter group actually had more stations reporting decreases than increases. Fox affiliates were the most likely to report increasing staff—as were stations in the West.

Planned Staff Changes…The Next Year

	Increase	*Decrease*	*Same*	*Not sure*
All TV news	32.9%	4.2%	58.7%	4.2%
Big four affiliates	33.2	4.1	59.0	3.7
Other commercial	40.7	3.7	44.4	11.1

As usual, most news directors expect no changes in staff size in the next year, but only about 4 percent expect a decrease. Fox affiliates and stations in the South and West are a little more likely to expect staff increases.

TV News Budget…The Past Year

	Increase	*Decrease*	*Same*	*Don't know*
All TV news	45.9%	13.4%	33.7%	7.0%
Big four affiliates	47.4	12.4	33.0	7.2
Other commercial	44.4	22.2	25.9	7.4
Market size:				
1–25	32.8	20.7	37.9	8.6
26–50	51.1	15.6	28.9	4.4
51–100	53.6	11.9	27.4	7.1
101-150	41.2	12.9	41.2	4.7
151+	50.9	7.0	31.6	10.5

After a pretty good budget year last time, budgets slipped a bit this reporting period. A plurality still rose, but the percentage reporting an increase was down almost 8 from a year ago. And 5 percent more said their budgets fell with 2 percent more saying they stayed the same. The biggest drop came in markets 101–150, followed by 151+ and 1–25. Changes were smaller in markets 26–100. There were no consistent patterns based on staff size, affiliation or geography.

TV News Profitability…1999 to 2008

	2008	*2007*	*2006*	*2005*	*2004*	*2003*	*2002*	*2001*	*2000*	*1999*
Showing pofit	55.4%	56.2%	57.4%	44.5%	58.4%	55.3%	54.9%	56%	58%	57%
Breaking even	11.5	11.5	8.1	24.2	10.4	13.6	11.6	13	11	9
Showing loss	10.5	6.4	10.0	12.1	9.2	9.2	11.2	10	11	11
Don't know	22.6	26.0	24.4	19.2	22.0	21.9	22.3	21	20	23

TV newsroom profitability remained in the mid 50 percentile range—where it has almost always been over the last decade. The percentage showing a loss rose to 10.5 percent, but that actually put it back to where it's been most of the last 10 years.

TV News Profitability…by Size and Affiliation – 2008

	Showing profit	*Breaking even*	*Showing loss*	*Don't know*
Market size:				
1–25	53.4%	10.3%	15.5%	20.7%
26–50	59.5	7.1	11.9	21.4
51–100	62.2	8.5	8.5	20.7
101-150	59.5	10.7	8.3	21.4
151+	38.6	21.1	10.5	29.8
Staff size:				
51+	71.0	8.1	4.8	16.1
31–50	67.9	6.2	8.6	17.3
21–30	54.7	14.0	9.3	22.1
11–20	41.9	14.0	16.3	27.9
1–10	20.8	12.5	25.0	41.7
Affiliation:				
ABC	53.8	8.8	7.5	30.0
CBS	62.2	12.2	6.7	18.9
Fox	60.0	12.5	15.0	12.5
NBC	59.2	10.5	10.5	19.7
Big four affiliates	58.7	10.8	9.1	21.3
Other commercial	37.0	11.1	22.2	29.6

The profitability level of stations in the biggest markets would be much higher were it not for downward pull from the smallest stations (staff size 1–10) that drag it down. The most significant change from a year ago is the drop in profitability among stations in markets 151+, where profitability plunged from 61.5 percent to 38.6 percent. Breaking even in those markets rose by almost 9 points and showing a loss doubled to 10.5.

Percentage of TV Station Revenue Produced by News – 2008

	Average	*Median*	*Minimum*	*Maximum*	*Not sure*
All TV news	44.6%	42.5%	9.0%	89.0%	63.9%
Market size:					
1–25	40.2	40.0	9.0	89.0	51.5
26–50	43.7	46.0	20.0	80.0	58.0
51–100	50.2	50.0	20.0	75.0	60.8
101–150	44.9	40.0	30.0	65.0	73.9
151+	44.4	45.0	10.0	75.0	72.1
Staff size:					
51+	46.8	46.0	20.0	89.0	62.5
31–50	47.3	50.0	22.0	75.0	70.2
21–30	43.1	40.0	9.0	75.0	69.3
11–20	40.0	30.0	20.0	60.0	84.1
1–10	12.5	12.5	10.0	15.0	76.0
Affiliation:					
ABC	46.1	50.0	20.0	70.0	68.6
CBS	44.2	40.0	10.0	70.0	66.7
Fox	36.3	30.0	22.0	60.0	64.3
NBC	53.5	50.0	20.0	89.0	64.5
Big four affiliates	46.2	45.0	10.0	89.0	66.3
Other commercial	37.3	35.0	9.0	80.0	44.4

Both the average and median revenue percentages are up slightly from a year ago—the average is up by about two and a half percent and the median up by half a percent. Almost all the categories are up slightly as well. These numbers are right in line with the revenue percentages we've seen for the last decade. Note that two-thirds of TV news directors do not know the percentage of station revenue that news brings in, but that's actually less than last year's 78 percent.

Radio

Almost three-quarters (71.6 percent) of radio news directors said there was a centralized newsroom for all or most of their stations that air local news. That's the first drop—albeit a small one—since radio consolidation took hold. The average centralized newsroom supplied news to 2.9 stations within the local market (the median was 2) and 1.4 stations somewhere else (the median figure was 0). Those figures present a mixed picture compared to a year ago. The average number of stations within the market is down by half a station compared to a year ago, and the median dropped from 3 to 2. But the average number outside the market rose by a full station. We'll have to wait for at least another year to know whether we're starting to see a trend develop.

Average Minutes of Locally-Produced Radio News – 2008

	All radio	*Major market*	*Large market*	*Medium market*	*Small market*
Weekdays:					
AM drive	24.3	24.0	28.7	23.8	19.1
Midday	12.2	19.8	8.1	9.7	10.9
PM drive	14.5	20.8	13.3	13.6	11.3
Night	15.1	19.3	5.7	6.1	8.6
Total weekday	66.1	83.9	55.8	53.2	49.9
Saturday:					
AM drive	16.8	15.3	11.6	16.4	7.3
Midday	9.5	8.3	8.0	8.4	8.8
PM drive	1.7	6.0	0	4.1	5.8
Night	8.6	9.0	0	4.0	5.8
Total Saturday	36.6	38.6	19.6	32.9	29.8
Sunday:					
AM drive	14.4	5.3	6.0	7.4	9.3
Midday	10.0	8.3	8.0	9.7	8.1
PM drive	10.8	6.0	8.0	2.8	6.7
Night	9.3	9.0	0	4.0	6.3
Total Sunday	44.5	28.6	22.0	23.9	30.4

Fueled by a jump in the amount of news reported in afternoon drive and the evening, the average amount of radio news per day—both weekday and weekend—rose from a year ago. The biggest growth came in major and medium markets with smaller increases in large and small markets. Generally, the bigger the staff, the more news produced, but there was no relationship between how much news was run and the number of stations in a market. Independent stations tended to produce more news than group-owned stations.

Radio Staff Size – 2008

	Avg. full-time	*Median full-time*	*Max full-time*	*Avg part-time*	*Med part-time*	*Max part-time*	*Avg total staff*	*Med total staff*	*Max total staff*
All radio news	2.1	1.0	9	2.4	2.0	12	3.1	2.0	16
Market size:									
Major	4.0	3.5	9	2.4	2.0	7	5.4	5.0	16
Large	2.9	3.0	7	2.7	2.0	5	4.1	3.0	10
Medium	1.9	1.0	5	2.5	1.5	12	3.1	2.0	13
Small	1.6	1.0	5	2.1	2.0	8	2.3	1.0	8

The average staff size fell back down this year. Two years ago, it was 2.0; last year 2.5; this year back down to 2.1. The median staff size remained at 1.0—as it has for a number of years. Both average and median part time numbers rose by about 1 from a year ago. Generally, the bigger the market, the more newspeople a station had. Group-owned stations tended to employ slightly more newspeople than independent stations.

Changes in Radio News, Staff and Budget in the Last 12 Months and Planned for the Future – 2008

	Increase	*Decrease*	*Same*	*Not sure*
Amount of news the past year	34.8%	4.5%	60.6%	0
Plan to change amount of news next year	25.0	0	68.9	6.1
Total news staff the past year	12.9	12.1	74.2	0.8
Plan to change amount of staff next year	12.9	0.8	75.8	10.6
Change in news budget from the year before	11.3	4.0	66.9	17.7

As usual, most stations voted for "same" in the amount of news, plans for more news, current and planned staff and news budget. On the other hand, the percentage saying that they ran more news last year or plan to this year both doubled. In contrast, the percentage of news directors reporting that their staff rose last year or they expect it to this year dropped in half compared to a year ago. The budget figures are little changed. There were no consistent patterns to any of these numbers based on staff size, number of stations, market size, ownership or geography.

Radio News Profitability . . . 1999 to 2008

	2008	*2007*	*2006*	*2005*	*2004*	*2003*	*2002*	*2001*	*2000*	*1999*
Showing profit	21.0%	29.1%	18.1%	19.6%	22.5%	25.2%	15.2%	17%	25%	19%
Breaking even	13.7	13.1	17.6	14.4	17.1	13.8	13.9	17	15	18
Showing loss	10.5	8.6	6.4	3.1	7.2	2.4	7.3	0	7	6
Don't know	54.8	49.1	58.0	62.9	53.2	58.6	63.6	66	53	57

Last year I suggested that the jump in profitability might well be just a statistical anomaly, and this year's retreat to the past indicates that that was probably the case. There were no consistent patterns based on staff size, station number, market size or ownership. Note that, as usual, most radio news directors do not know whether the station makes a profit on news.

Radio News Profitability by Market Size – 2008

	Showing profit	*Breaking even*	*Showing loss*	*Don't know*
Major market	0	22.2%	11.1%	66.7%
Large market	27.8	27.8	5.6	38.9
Medium market	18.4	14.3	12.2	55.1
Small market	23.9	6.5	10.9	58.7

Major markets are those with 1 million or more potential listeners. Large markets are from 250,000 to 1 million. Medium markets are 50,000 to 250,000. Small markets are fewer than 50,000.

Number of Stations Where the Radio News Director Oversees the News – 2008

No. of Stations	*Percentage*
One	21.0%
Two–three	18.5
Four	8.6
Five–Six	11.1
Seven–Eight	40.7
Overall	Number
Average	2.9 (Locally) + 1.4 Elsewhere
Median	2.0
Maximum	14

These numbers are virtually unchanged from a year ago.

What Else Radio News Directors Do – 2008

After dropping last year, the percentage of radio news directors saying they have responsibilities other than news rose to a record high 83.1 percent. There were no meaningful differences in that percentage based on staff size, number of stations, market size, ownership or geography. The only meaningful variation was that news directors at non-commercial stations were a little less likely to have other responsibilities than their commercial counterparts.

Other job	*Percentage*
Talk show host	23.2%
Announcing (including sports and weather)	17.1
Program Director	11.0
General Manager	9.8
Operations	7.3
Sales	7.3
Public Afffairs	7.3
Production	4.9
Owner	2.4
Other	9.8

Most of these numbers are generally in line with the last few years.

Miscellaneous

Percentage of TV News Departments Providing Content to Other Media – 2008

	Another local TV station	*TV in another market*	*Cable TV channel*	*Local radio*	*Station website*	*Other website*	*Other*
All TV news	23.8%	10.6%	15.6%	39.4%	80.6%	3.2%	3.5
Big four affiliates	24.9	10.3	15.9	41.2	83.4	3.3	3.3

(Continued)

(Continued)

	Another local TV station	*TV in another market*	*Cable TV channel*	*Local radio*	*Station website*	*Other website*	*Other*
Other commercial	11.1	14.8	14.8	18.5	51.9	3.7	3.7
Market size:							
1–25	26.2	6.6	6.6	29.5	63.9	8.2	4.9
26–50	26.1	13.0	23.9	37.0	89.1	2.2	4.3
51–100	23.9	6.8	20.5	35.2	78.4	2.3	3.4
101-150	22.7	13.6	15.9	48.9	85.2	3.4	3.4
151+	21.1	14.0	10.5	43.9	87.7	0	1.8

Most of these numbers are little changed from a year ago. Note that for every market size, 21 to 26 percent of the stations supply news to another local TV station. Even the smallest markets. Another 10 percent are supplying news to a TV station outside the local market; and 15 percent are supplying news to a cable channel.

Convergence

After three years at around 40 percent, the percentage of news directors saying that they're doing something that they consider to be convergence rose to 47 percent this year. Not a big increase, but an increase nonetheless. But that increase came despite a steady drop in the percentage of TV stations saying that they're working with a newspaper. In the last three years, the percentage has fallen from 59.8 percent to 50 percent to this year's 38 percent.

Type of Convergence Partner	*Percent of the stations of those involved in convergence*
Newspaper(s)	38.0%
Website(s)	31.7
Radio station(s)	20.4
Other television	8.5
Cell phone	4.9
Magazines	3.5
Podcasting	2.1
Other languages	1.4
Other	14.1

News Director Age and Tenure … 2008

TV news directors ranged in age from 23 to 68 … with an average age of 44.7 and a median age of 44. That's virtually identical to a year ago—and the year before that, and so on. Apparently, TV news directors do not age. As usual, there was no meaningful variation based on market size, staff size, network affiliation or geography.

The number of years a TV news director had been news director at that station ranged from just over 2 months to 34 years. The average was 4.9 and the median was 3. The old adage that TV news directors are at their station for two years and then out hasn't been true for years. There's no consistent

pattern by market size, staff size or region, but news directors at Fox stations are a year under the averages and medians.

Radio news directors ranged in age from 16 (is that legal?) to 75 . . . with an average of 46.6 and a median of 49. That's about a half-year older than a year ago, and as with TV, there were no differences based on any station grouping.

We didn't ask radio news directors about time on the job this year, but last year we reported that they averaged 11.5 years with that station, with a median tenure of 8 years.

Bob Papper is professor and chair of the Department of Journalism, Media Studies, and Public Relations at Hofstra University and has worked extensively in radio and TV news. *This research was supported by the School of Communications at Hofstra University and the Radio Television News Directors Association.*

About the Survey

The RTNDA/Hofstra University Survey was conducted in the fourth quarter of 2007 among all 1,647 operating, non-satellite television stations and a random sample of 2,000 radio stations. Valid responses came from 1,241 television stations (75.3 percent) and 138 radio news directors and general managers representing 271 radio stations. Data for the number of TV stations originating local news and getting it from others is based on a complete census and is not projected from a smaller sample.

Bureau of Labor Statistics, U.S. Department of Labor— Occupational Outlook Handbook, 2008–09 Edition: *News Analysts, Reporters, and Correspondents*

Significant Points

- Competition will be keen for jobs at large metropolitan and national newspapers, broadcast stations, and magazines; small publications and broadcast stations and online newspapers and magazines should provide the best opportunities.
- Most employers prefer individuals with a bachelors degree in journalism or mass communications and experience gained at school newspapers or broadcasting stations or through internships with news organizations.
- Jobs often involve long, irregular hours and pressure to meet deadlines.

Nature of the Work

News analysts, reporters, and correspondents gather information, prepare stories, and make broadcasts that inform us about local, State, national, and international events; present points of view on current issues; and report on the actions of public officials, corporate executives, interest groups, and others who exercise power.

News analysts—also called newscasters or news anchors—examine, interpret, and broadcast news received from various sources. News anchors present news stories and introduce videotaped news or live transmissions from on-the-scene reporters. News correspondents report on news occurring in the large U.S. and foreign cities where they are stationed.

In covering a story, reporters investigate leads and news tips, look at documents, observe events at the scene, and interview people. Reporters take notes and also may take photographs or shoot videos. At their office, they organize the material, determine the focus or emphasis, write their stories, and edit accompanying video material. Many reporters enter information or write stories using laptop computers and electronically submit the material to their offices from remote locations. In some cases, newswriters write a story from information collected and submitted by reporters. Radio and television reporters often compose stories and report "live" from the scene. At times, they later tape an introduction to or commentary on their story in the studio. Some journalists also interpret the news or offer opinions to readers, viewers, or listeners. In this role, they are called commentators or columnists.

Newscasters at large stations and networks usually specialize in a particular type of news, such as sports or weather. Weathercasters, also called weather reporters, report current and forecasted weather conditions. They gather information from national satellite weather services, wire services, and local and regional weather bureaus. Some weathercasters are trained meteorologists and can develop their own weather forecasts. (See the statement on atmospheric scientists elsewhere in the Handbook.) Sportscasters select, write, and deliver sports news. This may include interviews with sports personalities and coverage of games and other sporting events.

General-assignment reporters write about newsworthy occurrences—such as accidents, political rallies, visits of celebrities, or business closings—as assigned. Large newspapers and radio and television stations assign reporters to gather news about specific topics, such as crime or education. Some reporters specialize in fields such as health, politics, foreign affairs, sports, theater, consumer affairs, social events, science, business, or religion.

Investigative reporters cover stories that may take many days or weeks of information gathering.

Some publications use teams of reporters instead of assigning each reporter one specific topic, allowing reporters to cover a greater variety of stories. News teams may include reporters, editors, graphic artists, and photographers working together to complete a story.

Reporters on small publications cover all aspects of the news. They take photographs, write headlines, lay out pages, edit wire-service stories, and write editorials. Some also solicit advertisements, sell subscriptions, and perform general office work.

Work environment. The work of news analysts, reporters, and correspondents is usually hectic. They are under great pressure to meet deadlines. Broadcasts sometimes are aired with little or no time for preparation. Some news analysts, reporters, and correspondents work in comfortable, private offices; others work in large rooms filled with the sound of keyboards and computer printers, as well as the voices of other reporters. Curious onlookers, police, or other emergency workers can distract those reporting from the scene for radio and television. Covering wars, political uprisings, fires, floods, and similar events is often dangerous.

Working hours vary. Reporters on morning papers often work from late afternoon until midnight. Radio and television reporters usually are assigned to a day or evening shift. Magazine reporters usually work during the day.

Reporters sometimes have to change their work hours to meet a deadline or to follow late-breaking developments. Their work demands long hours, irregular schedules, and some travel. Because many stations and networks are on the air 24 hours a day, newscasters can expect to work unusual hours.

Training, Other Qualifications, and Advancement

Most employers prefer individuals with a bachelor's degree in journalism or mass communications, but some hire graduates with other majors. They look for experience at school newspapers or broadcasting stations, and internships with news organizations. Large-city newspapers and stations also may prefer candidates with a degree in a subject-matter specialty such as economics, political science, or business. Some large newspapers and broadcasters may hire only experienced reporters.

Education and training. More than 1,500 institutions offer programs in communications, journalism, and related programs. In 2007, 109 of these were accredited by the Accrediting Council on Education in Journalism and Mass Communications. Most of the courses in a typical curriculum are in liberal arts; the remaining courses are in journalism. Examples of journalism courses are introductory mass media, basic reporting and copy editing, history of journalism, and press law and ethics. Students planning a career in broadcasting take courses in radio and television news and production. Those planning newspaper or magazine careers usually specialize in news-editorial journalism. To create stories for online media, they need to learn to use computer software to combine online story text with audio and video elements and graphics.

Some schools also offer a master's or Ph.D. degree in journalism. Some graduate programs are intended primarily as preparation for news careers, while others prepare journalism teachers, researchers and theorists, and advertising and public relations workers. A graduate degree may help those looking to advance more quickly.

High school courses in English, journalism, and social studies provide a good foundation for college programs. Useful college liberal arts courses include English with an emphasis on writing, sociology, political science, economics, history, and psychology. Courses in computer science, business, and speech are useful as well. Fluency in a foreign language is necessary in some jobs.

Employers report that practical experience is the most important part of education and training. Upon graduation many students already have gained much practical experience through part-time or summer jobs or through internships with news organizations. Most newspapers, magazines, and broadcast news organizations offer reporting and editing internships. Work on high school and college newspapers, at broadcasting stations, or on community papers or U.S. Armed Forces publications also provides practical training. In addition, journalism scholarships, fellowships, and assistantships awarded to college journalism students by universities, newspapers, foundations, and professional organizations are helpful. Experience as a

stringer or freelancer—a part-time reporter who is paid only for stories printed—is advantageous.

Other qualifications. Reporters typically need more than good word-processing skills. Computer graphics and desktop-publishing skills also are useful. Computer-assisted reporting involves the use of computers to analyze data in search of a story. This technique and the interpretation of the results require computer skills and familiarity with databases. Knowledge of news photography also is valuable for entry-level positions, which sometimes combine the responsibilities of a reporter with those of a camera operator or photographer.

Reporters should be dedicated to providing accurate and impartial news. Accuracy is important, both to serve the public and because untrue or libelous statements can lead to lawsuits. A nose for news, persistence, initiative, poise, resourcefulness, a good memory, and physical stamina are important, as is the emotional stability to deal with pressing deadlines, irregular hours, and dangerous assignments. Broadcast reporters and news analysts must be comfortable on camera. All reporters must be at ease in unfamiliar places and with a variety of people. Positions involving on-air work require a pleasant voice and appearance.

Advancement. Most reporters start at small publications or broadcast stations as general-assignment reporters or copy editors. They are usually assigned to cover court proceedings and civic and club meetings, summarize speeches, and write obituaries. With experience, they report more difficult assignments or specialize in a particular field. Large publications and stations hire few recent graduates; as a rule, they require new reporters to have several years of experience.

Some news analysts and reporters can advance by moving to larger newspapers or stations. A few experienced reporters become columnists, correspondents, writers, announcers, or public relations specialists. Others become editors in print journalism or program managers in broadcast journalism, who supervise reporters. Some eventually become broadcasting or publishing industry managers.

Employment

News analysts, reporters, and correspondents held about 67,000 jobs in 2006. About 59 percent worked for newspaper, periodical, book, and directory publishers. Another 23 percent worked in radio and television broadcasting. About 11 percent of news analysts, reporters, and correspondents were self-employed (freelancers or stringers).

Job Outlook

There is expected to be little or no change in employment through 2016. Competition will continue to be keen for jobs on large metropolitan and national newspapers, broadcast stations and networks, and magazines. Small broadcast stations and publications and online newspapers and magazines should provide the best opportunities. Talented writers who can handle highly specialized scientific or technical subjects will have an advantage.

Employment change. Employment of news analysts, reporters, and correspondents is expected to grow 2 percent between 2006 and 2016, which is considered to be little or no change in employment. Many factors will contribute to the limited job growth in this occupation. Consolidation and convergence should continue in the publishing and broadcasting industries. As a result, companies will be better able to allocate their news analysts, reporters, and correspondents to cover news stories. Constantly improving technology also is allowing workers to do their jobs more efficiently, another factor that will limit the number of workers needed to cover a story or certain type of news. However, the continued demand for news will create some job opportunities. Job openings also will result from the need to replace workers who leave their occupations permanently; some news analysts, reporters, and correspondents find the work too stressful and hectic or do not like the lifestyle, and transfer to other occupations.

Job prospects. Competition will continue to be keen for jobs on large metropolitan and national newspapers, broadcast stations and networks, and magazines. Job opportunities will be best for applicants in the expanding world of new media, such as online newspapers or magazines. Small, local papers and news stations also will provide greater job prospects for potential reporters and news analysts. For beginning newspaper reporters,

freelancing will supply more opportunities for employment as well. Students with a background in journalism as well as another specific subject matter, such as politics, economics, or biology, will have an advantage over those without additional background knowledge.

Journalism graduates have the background for work in closely related fields such as advertising and public relations, and many take jobs in these fields. Other graduates accept sales, managerial, or other nonmedia positions.

The number of job openings in the newspaper and broadcasting industries—in which news analysts, reporters, and correspondents are employed—is sensitive to economic upswings and downturns because these industries depend on advertising revenue.

Projections Data

Projections data from the National Employment Matrix

Occupational title	*SOC Code*	*Employment, 2006*	*Projected employment, 2016*	*Change, 2006–16*	
				Number	Percent
News analysts, reporters and correspondents	27–3020	67,000	68,000	1,200	2
Broadcast news analysts	27–3021	7,700	8,200	500	6
Reporters and correspondents	27–3022	59,000	60,000	700	1

NOTE: Data in this table are rounded. See the discussion of the employment projections table in the *Handbook* introductory chapter on *Occupational Information Included in the Handbook*.

Earnings

Salaries for news analysts, reporters, and correspondents vary widely. Median annual earnings of reporters and correspondents were $33,470 in May 2006. The middle 50 percent earned between $24,370 and $51,700. The lowest 10 percent earned less than $19,180, and the highest 10 percent earned more than $73,880. Median annual earnings of reporters and correspondents were $31,690 in newspaper, periodical, book, and directory publishing, and $38,050 in radio and television broadcasting.

Median annual earnings of broadcast news analysts were $46,710 in May 2006. The middle 50 percent earned between $30,080 and $83,370. The lowest 10 percent earned less than $22,430, and the highest 10 percent earned more than $145,600. Median annual earnings of broadcast news analysts were $48,790 in radio and television broadcasting.

For the latest wage information:

The above wage data are from the Occupational Employment Statistics (OES) survey program, unless otherwise noted. For the latest National, State, and local earnings data, visit the following pages:

- Broadcast news analysts
- Reporters and correspondents

[See source line at end of document for website to link you to these documents.]

Related Occupations

News analysts, reporters, and correspondents must write clearly and effectively to succeed in

their profession. Others for whom good writing ability is essential include writers and editors and public relations specialists. Many news analysts, reporters, and correspondents also must communicate information orally. Others for whom oral communication skills are important are announcers, interpreters and translators, those in sales and related occupations, and teachers.

Key Trends in Journalism

Project for Excellence in Journalism— State of the News Media 2008: Overview of Major Trends

By the Project for Excellence in Journalism

In this, the fifth edition of our annual report tracing the revolution of news, several trends bear particular notice heading into 2008.

• **News is shifting from being a product—today's newspaper, Web site or newscast—to becoming a service—how can you help me, even empower me?** There is no single or finished news product anymore. As news consumption becomes continual, more new effort is put into producing incremental updates, as brief as 40-character e-mails sent from reporters directly to consumers without editing. (The afternoon newspaper is also being reborn online.) Service also broadens the definition of what journalists must supply. Story telling and agenda setting—still important—are now insufficient. Journalism also must help citizens find what they are looking for, react to it, sort it, shape news coverage, and—probably most important and least developed—give them tools to make sense of and use the information for themselves. News people are uncertain how the core values of accuracy and verification will hold up. Some of the experiments, even the experimenters think, are questionable. And people are being stretched thinner, posing hard questions about how to manage time and where to concentrate. But the hope is that service, more than storytelling, could prove a key to unlocking new economics.

• **A news organization and a news Web site are no longer final destinations.** Now they must move toward also being stops along the way, gateways to other places, and a means to drill deeper, all ideas that connect to service rather than product. "The walled garden is over," the editor of one of the most popular news sites in the country told us. A site restricted to its own content takes on the character of a cul de sac street with yellow "No Outlet" sign, reducing its value to the user. "Search has become the predominant . . . paradigm," an influential market research report circulating throughout the industry reads. That means every page of a Web site—even one containing a single story—is its own front page. And each piece of content competes on its own with all other information on that topic linked to by blogs, "digged" by user news sites, sent in e-mails, or appearing in searches. As much as half of every Web page, designers advise, should be devoted to helping people find what they want on the rest of the site or the Web. That change is already occurring. A year ago, our study of news Web sites found that only three of 24 major Web sites from traditional news organizations offered links to outside content. Eleven of those sites now offer them. Some of this may simply be automated, which may be a service of limited value.

• **The prospects for user-created content, once thought possibly central to the next era of journalism, for now appear more limited, even among "citizen" sites and blogs.** News people report the most promising parts of citizen input currently are new ideas, sources, comments and to some extent pictures and video. But citizens posting news content has proven less valuable, with too little that is

new or verifiable. (It may thrive at smaller outlets with fewer resources.) And the skepticism is not restricted to the traditional mainstream media or "MSM." The array of citizen-produced news and blog sites is reaching a meaningful level. But a study of citizen media contained in this report finds most of these sites do not let outsiders do more than comment on the site's own material, the same as most traditional news sites. Few allow the posting of news, information, community events or even letters to the editors. And blog sites are even more restricted. In short, rather than rejecting the "gatekeeper" role of traditional journalism, for now citizen journalists and bloggers appear to be recreating it in other places.

• **Increasingly, the newsroom is perceived as the more innovative and experimental part of the news industry.** This appears truer in newspapers and Web sites than elsewhere. But still it represents a significant shift in the conversation. A decade ago, the newsroom was often regarded as the root of journalism's disconnection from the public and its sagging reputation. "I think we may need to just blow up the culture of the newsroom," one of the country's more respected editors told a private gathering of industry leaders in 1997. Now the business side has begun to be identified as the problem area, the place where people are having the most difficulty changing. "My middle management in advertising and distribution is where I see the deer-in-the-headlights look," one publisher recently told us. "Advertising doesn't know how to start to cope," said a major industry trade association leader. A survey of journalists from different media (being released with this year's report) reinforces this sense. Majorities think such things as journalists writing blogs, the ranking of stories on their Web sites, citizens posting comments or ranking stories, even citizen news sites, are making journalism better—a perspective hard to imagine even a few years ago. These new technologies are seen as less a threat to values or a demand on time than a way to reconnect with audiences. News people also are less anxious about credibility, the focus of concern a few years ago. Their worries now are about money.

• **The agenda of the American news media continues to narrow, not broaden.** A firm grip on this is difficult but the trends seem inescapable. A comprehensive audit of coverage shows that in 2007, two overriding stories—the war in Iraq and the 2008 presidential campaign—filled more than a quarter of the newshole and seemed to consume much of the media's energy and resources. And what wasn't covered was in many ways as notable as what was. Other than Iraq—and to a lesser degree Pakistan and Iran—there was minimal coverage of events overseas, some of which directly involved U.S. interests, blood and treasure. At the same time, consider the list of the domestic issues that each filled less than a single percent of the newshole: education, race, religion, transportation, the legal system, housing, drug trafficking, gun control, welfare, Social Security, aging, labor, abortion and more. A related trait is a tendency to move on from stories quickly. On breaking news events—the Virginia Tech massacre or the Minneapolis bridge collapse were among the biggest—the media flooded the zone but then quickly dropped underlying story lines about school safety and infrastructure. And newer media seem to have an even narrower peripheral vision than older media. Cable news, talk radio (and also blogs) tend to seize on top stories (often polarizing ones) and amplify them. The Internet offers the promise of aggregating ever more sources, but its value still depends on what those originating sources are providing. Even as the media world has fragmented into more outlets and options, reporting resources have shrunk.

• **Madison Avenue, rather than pushing change, appears to be having trouble keeping up with it.** Like legacy media, advertising agencies have their own history, mores and cultures that keep them from adapting to new technology and new consumer behavior. The people who run these agencies know the old-media methods and have old-media contacts. New media offer the promise of more detailed knowledge of consumer behavior, but the metrics are still evolving and empirical data have not yet delivered a clear path. Advertising executives, in other words, do not have answers any more than the news professionals. In the short run, this may be helping traditional media hold onto share of advertising revenue. For now, the future seems to point to more confusion and fragmentation before new models emerge. But the

losses could begin to accelerate when answers come. The question of whether, and how, advertising and news will remain partners is unresolved.

These trends add to those we have discussed in earlier years of this report. In the inaugural State of the News Media report in 2004, we outlined the broad contours of the revolution in news. Journalism is not disappearing, we concluded, but it is changing. Consumers trust and rely on journalists less, and expect more of them, because they have alternative sources of information. In subsequent years we have tracked the splintering of journalism into new norms, including the rise of a new commercially driven Journalism of Affirmation, the shift at many traditional news outlets toward becoming niche products, the emergence of what we call the new Answer Culture in news, and growing doubts about the ultimate potential of advertising online. We have also outlined ways in which newsrooms of the future probably need to change.

The study, which we believe is unique in depth and scope, breaks the news industry into eight sectors (newspapers, magazines, network, cable and local television, the Internet, radio and ethnic media) and builds off many of the findings from a year ago.

This year, we have a special report on the future of advertising, a survey of journalists, and a new comprehensive study of the content of the press.

Appendix A

Journalism Awards and Prizes

Introduction

As with most mass media, journalism gives a wide variety of awards and prizes for superior work. Countless organizations (some directly related to journalism, others emphasizing other fields) offer one or more annual honors for work in just about every journalism specialty and format.

This appendix briefly describes some of the more important awards and prizes for print or electronic journalism, though by no means all of them, as new ones are appearing all the time. Not included are awards given for very subject-specific reporting, fellowships and internships, or awards granted outside the United States. The honors included here are awarded for excellent work, whether over the previous year or through lifetime achievements. Virtually all these award programs are designed to both encourage and recognize high quality output by regularly acknowledging the best work.

Journalism award programs vary in many ways. A few are given but not applied for (e.g., the Benjamin Bradlee award), though most are conducted as active contests where applications are encouraged and form the universe from which winners are chosen. Some bestow only one or two awards each year, while others (e.g., Sigma Delta Chi) award a substantial list of winners in different categories. Awards overlap in many cases, and it's not unusual to apply for more than one. How awards are judged varies as well, usually relying on the judgment of peers in any given area. Some prizes carry monetary awards (which can be substantial), but many provide only a plaque or some other indicator of status. Many award programs provide just that—quite extensive and ongoing processes that lead to prizes given for a host of sometimes quite-specific categories. Most are named either in honor of key figures in the field, or those who provided the initial award funding.

Awards included in this appendix are listed alphabetically by their name under five broad categories—(1) the Pulitzer Prizes, for which we provide considerable detail, and then (2) general journalism awards, (3) specialized journalism awards and prize programs, (4) awards for the electronic media, and (5) prizes for photography and political cartoons.

The Pulitzer Prizes

Based on an endowment to Columbia University given by New York publisher Joseph Pulitzer early in the twentieth century, these prizes, first awarded in 1917, hold unique status as the most prestigious awards in journalism. They are not open to printed magazines or broadcast media or their respective websites. (Pulitzer Prizes are also awarded in numerous other categories not detailed here, such as music, drama, poetry, and for books of biography, history, fiction, and nonfiction.) Most of the prize categories carry a $10,000 award. The coveted public service award earns the winning newspaper a gold medal.

In 2009, Internet-only writing was first recognized across all 14 Pulitzer journalism categories. Online-only content had been initially allowed starting in 2006, but only for the breaking news and breaking-news photography categories. The broadening of online prize acceptability is surely another indicator of the growing importance of online journalism generally.

The New York Times and its staff have won more Pulitzers than any other paper—101 by 2009. Sadly, a number of the traditional newspapers found on these prize lists are no more (in considerable part because of competition from that same online source), having succumbed during the economic collapse of newspapers late in the twenty-first century's first decade. Many others are in a perilous state and may not survive.

As with any prize, the Pulitzers have raised controversy from time to time. Perhaps the best known concerned a prize category not included here, though it did concern journalism. W. A. Swanberg's *Citizen Hearst* (Scribner 1961) was nominated for the biography award, but—later news reports indicated—the evaluation team for the award could not see clear to giving their prize to a study, no matter how good, of Joseph Pulitzer's chief rival. The story reverberated for weeks.

This appendix lists the most recent three decades of the prizes. The Pulitzers have been arranged into four categories—the important public service prize (given to a publication rather than individuals), the many reporting awards, prizes for comment and criticism, and the prizes given for photography and editorial cartoons. Over the years, the number and categories of the Prizes have changed (and slowly increased). Where possible, the listings below show how former categories relate to current ones. For prizes currently given out annually, we include the words describing what the honor is designed to recognize. We also provide the gist of the award citation for awards since 1980 (since 1960 for the public service prize) to offer a sense of just what sort of writing, photography, or cartooning is being honored. And we provide the online source for older (pre-1980) award information. The Pulitzer website offers more details (and often the actual winning story, photos, or cartoons), and the runner-ups for the prizes given since 1995.

Public Service Prize (1917 to Present)

One of the handful of awards dating back to the origin of the Pulitzer program, this is the single most prestigious prize. It honors "a distinguished example of meritorious public service by a newspaper or eligible news organization through the use of its journalistic resources which, as well as reporting, may include editorials, cartoons, photographs and online material, presented in print or online or both." The prizes granted since 1960 include:

> *2009 Las Vegas Sun,* "and notably courageous reporting by Alexandra Berzon, for exposure of the high death rate among construction workers on the Las Vegas Strip amid lax enforcement of regulations, leading to changes in policy and improved safety conditions."

2008 *The Washington Post* "for the work of Dana Priest, Anne Hull and photographer Michel du Cille in exposing mistreatment of wounded veterans at Walter Reed Hospital, evoking a national outcry and producing reforms by federal officials."

2007 *The Wall Street Journal* "for its creative and comprehensive probe into backdated stock options for business executives that triggered investigations, the ouster of top officials and widespread change in corporate America."

2006 *The Times-Picayune* [New Orleans] "for its heroic, multi-faceted coverage of Hurricane Katrina and its aftermath, making exceptional use of the newspaper's resources to serve an inundated city even after evacuation of the newspaper plant."

and to

Sun Herald [Biloxi-Gulfport, MS] "for its valorous and comprehensive coverage of Hurricane Katrina, providing a lifeline for devastated readers, in print and online, during their time of greatest need."

2005 *Los Angeles Times* "for its courageous, exhaustively researched series exposing deadly medical problems and racial injustice at a major public hospital."

2004 *The New York Times* "for the work of David Barstow and Lowell Bergman that relentlessly examined death and injury among American workers and exposed employers who break basic safety rules."

2003 *The Boston Globe* "for its courageous, comprehensive coverage of sexual abuse by priests, an effort that pierced secrecy, stirred local, national and international reaction and produced changes in the Roman Catholic Church."

2002 *The New York Times* "for 'A Nation Challenged,' a special section published regularly after the September 11th terrorist attacks on America, which coherently and comprehensively covered the tragic events, profiled the victims, and tracked the developing story, locally and globally."

2001 *The Oregonian* [Portland] "for its detailed and unflinching examination of systematic problems within the U.S. Immigration and Naturalization Service, including harsh treatment of foreign nationals and other widespread abuses, which prompted various reforms."

2000 *The Washington Post,* "notably for the work of Katherine Boo that disclosed wretched neglect and abuse in the city's group homes for the mentally retarded, which forced officials to acknowledge the conditions and begin reforms."

1999 *The Washington Post* "for its series that identified and analyzed patterns of reckless gunplay by city police officers who had little training or supervision."

1998 *Grand Forks* [ND] *Herald* "for its sustained and informative coverage, vividly illustrated with photographs, that helped hold its community together in the wake of flooding, a blizzard and a fire that devastated much of the city, including the newspaper plant itself."

1997 *The Times-Picayune* [New Orleans] "for its comprehensive series analyzing the conditions that threaten the world's supply of fish."

1996 *The News & Observer* [Raleigh, NC] "for the work of Melanie Sill, Pat Stith and Joby Warrick on the environmental and health risks of waste disposal systems used in North Carolina's growing hog industry."

1995 *The Virgin Islands Daily News* [St. Thomas, VI] "for its disclosure of the links between the region's rampant crime rate and corruption in the local criminal justice system. The reporting, largely the work of Melvin Claxton, initiated political reforms."

1994 *Akron Beacon Journal* "for its broad examination of local racial attitudes and its subsequent effort to promote improved communication in the community."

1993 *The Miami Herald* "for coverage that not only helped readers cope with Hurricane Andrew's devastation but also showed how lax zoning, inspection and building codes had contributed to the destruction."

1992 *The Sacramento* [CA] *Bee* "for 'The Sierra in Peril,' reporting by Tom Knudson that examined environmental threats and damage to the Sierra Nevada mountain range in California."

1991 *Des Moines Register* "for reporting by Jane Schorer that, with the victim's consent, named a woman who had been raped—which prompted

widespread reconsideration of the traditional media practice of concealing the identity of rape victims."

1990 *Washington* [NC] *Daily News* "for revealing that the city's water supply was contaminated with carcinogens, a problem that the local government had neither disclosed nor corrected over a period of eight years."

and to

The Philadelphia Inquirer "for reporting by Gilbert M. Gaul that disclosed how the American blood industry operates with little government regulation or supervision."

1989 Anchorage Daily News "for reporting about the high incidence of alcoholism and suicide among native Alaskans in a series that focused attention on their despair and resulted in various reforms."

1988 *The Charlotte* [NC] *Observer* "for revealing misuse of funds by the PTL television ministry through persistent coverage conducted in the face of a massive campaign by PTL to discredit the newspaper."

1987 *The Pittsburgh Press* "for reporting by Andrew Schneider and Matthew Brelis, which revealed the inadequacy of the FAA's medical screening of airline pilots and led to significant reforms."

1986 *The Denver Post* "for its in-depth study of 'missing children,' which revealed that most are involved in custody disputes or are runaways, and which helped mitigate national fears stirred by exaggerated statistics."

1985 *Fort Worth* [TX] *Star-Telegram* "for reporting by Mark J. Thompson which revealed that nearly 250 U.S. servicemen had lost their lives as a result of a design problem in helicopters built by Bell Helicopter—a revelation which ultimately led the Army to ground almost 600 Huey helicopters pending their modification."

1984 *Los Angeles Times* "for an in-depth examination of southern California's growing Latino community by a team of editors and reporters."

1983 *Jackson* [MS] *Clarion-Ledger* "for its successful campaign supporting Governor Winter in his legislative battle for reform of Mississippi's public education system."

1982 *The Detroit News* "for a series by Sydney P. Freedberg and David Ashenfelter which exposed the U.S. Navy's cover-up of circumstances surrounding the deaths of seamen aboard ship and which led to significant reforms in naval procedures."

1981 *Charlotte* [NC] *Observer* "for its series on 'Brown Lung: A Case of Deadly Neglect.'"

1980 Gannett News Service "for its series on financial contributions to the Pauline Fathers."

1979 *Point Reyes Light* "a California weekly, for its investigation of Synanon."

1978 *The Philadelphia Inquirer* "for a series of articles showing abuses of power by the police in its home city."

1977 *Lufkin* [TX] *News* "for an obituary of a local man who died in Marine training camp, which grew into an investigation of that death and a fundamental reform in the recruiting and training practices of the United States Marine Corps."

1976 *Anchorage Daily News* "for its disclosures of the impact and influence of the Teamsters Union on Alaska's economy and politics."

1975 *The Boston Globe* "for its massive and balanced coverage of the Boston school desegregation crisis."

1974 *Newsday* [Garden City, NY] "for its definitive report on the illicit narcotic traffic in the United States and abroad, entitled, 'The Heroin Trail.'"

1973 *The Washington Post* "for its investigation of the Watergate case."

1972 *The New York Times* "for the publication of the Pentagon Papers."

1971 *Winston-Salem* [NC] *Journal and Sentinel* "for coverage of environmental problems, as exemplified by a successful campaign to block a strip mining operation that would have caused irreparable damage to the hill country of northwest North Carolina."

1970 *Newsday* [Garden City, NY] "for its three-year investigation and exposure of secret land deals in eastern Long Island, which led to a series of criminal convictions, discharges and resignations among public and political officeholders in the area."

1969 *Los Angeles Times* "for its exposé of wrongdoing within the Los Angeles City Government Commissions, resulting in resignations or criminal convictions of certain members, as well as widespread reforms."

1968 *Riverside* [CA] *Press-Enterprise* "for its exposé of corruption in the courts in connection with the handling of the property and estates of an Indian tribe in California, and its successful efforts to punish the culprits."

1967 Milwaukee Journal "for its successful campaign to stiffen the law against water pollution in Wisconsin, a notable advance in the national effort for the conservation of natural resources."

and to

Louisville Courier-Journal "for its successful campaign to control the Kentucky strip mining industry, a notable advance in the national effort for the conservation of natural resources."

1966 *The Boston Globe* "for its campaign to prevent confirmation of Francis X. Morrissey as a Federal District Judge in Massachusetts."

1965 *Hutchinson* [KS] *News* "for its courageous and constructive campaign, culminating in 1964, to bring about more equitable reapportionment of the Kansas Legislature, despite powerful opposition in its own community."

1964 *St. Petersburg* [FL] *Times* "for its aggressive investigation of the Florida Turnpike Authority which disclosed widespread illegal acts and resulted in a major reorganization of the State's road construction program."

1963 *Chicago Daily News* "for calling public attention to the issue of providing birth control services in the public health programs in its area."

1962 *Panama City* [FL] *News-Herald* "for its three-year campaign against entrenched power and corruption, with resultant reforms in Panama City and Bay County."

1961 *Amarillo* [TX] *Globe-Times* "for exposing a breakdown in local law enforcement with resultant punitive action that swept lax officials from their posts and brought about the election of a reform slate. The newspaper thus exerted its civic leadership in the finest tradition of journalism."

1960 *Los Angeles Times* "for its thorough, sustained and well-conceived attack on narcotics traffic and the enterprising reporting of Gene Sherman, which led to the opening of negotiations between the United States and Mexico to halt the flow of illegal drugs into southern California and other border states."

(For earlier awards, see http://www.pulitzer.org/bycat/Public-Service.)

Reporting Prizes

This changing series forms the core of the Pulitzer journalism prize program—awards granted to individual reporters for superior work in specific kinds of reporting. For the 2009 awards, the competition was expanded to include online-only news organizations "primarily dedicated to original news reporting and coverage of ongoing stories."

Beat Reporting (1991 to 2006); was Specialized Reporting (1985 to 1990)

2006 Dana Priest of *The Washington Post* "for her persistent, painstaking reports on secret 'black site' prisons and other controversial features of the government's counterterrorism campaign."

2005 Amy Dockser Marcus of *The Wall Street Journal* "for her masterful stories about patients, families and physicians that illuminated the often unseen world of cancer survivors."

2004 Daniel Golden of *The Wall Street Journal* "for his compelling and meticulously documented stories on admission preferences given to the children of alumni and donors at American universities."

2003 Diana K. Sugg of *The Baltimore Sun* "for her absorbing, often poignant stories that illuminated complex medical issues through the lives of people."

2002 Gretchen Morgenson of *The New York Times* "for her trenchant and incisive Wall Street coverage."

2001 David Cay Johnston of *The New York Times* "for his penetrating and enterprising reporting that exposed loopholes and inequities in the U.S. tax code, which was instrumental in bringing about reforms."

2000 George Dohrmann of *St. Paul* [MN] *Pioneer Press* "for his determined reporting, despite negative reader reaction, that revealed academic fraud in the men's basketball program at the University of Minnesota."

1999 Chuck Philips and Michael A. Hiltzik of *Los Angeles Times* "for their stories on corruption in the entertainment industry, including a charity sham sponsored by the National Academy of Recording Arts and Sciences, illegal detoxification programs for wealthy celebrities, and a resurgence of radio payola."

1998 Linda Greenhouse of *The New York Times* "for her consistently illuminating coverage of the United States Supreme Court."

1997 Byron Acohido of *The Seattle Times* "for his coverage of the aerospace industry, notably an exhaustive investigation of rudder control problems on the Boeing 737, which contributed to new FAA requirements for major improvements."

1996 Bob Keeler of *Newsday* [Long Island, NY] "for his detailed portrait of a progressive local Catholic parish and its parishioners."

1995 David Shribman of *The Boston Globe* "for his analytical reporting on Washington developments and the national scene."

1994 Eric Freedman and Jim Mitzelfeld of *The Detroit News* "for dogged reporting that disclosed flagrant spending abuses at Michigan's House Fiscal Agency."

1993 Paul Ingrassia and Joseph B. White of *The Wall Street Journal* "for often exclusive coverage of General Motors' management turmoil."

1992 Deborah Blum of *The Sacramento* [CA] *Bee* "for her series, 'The Monkey Wars,' which explored the complex ethical and moral questions surrounding primate research."

1991 Natalie Angier of *The New York Times* "for her compelling and illuminating reports on a variety of scientific topics."

1990 Tamar Stieber of *Albuquerque Journal* "for persistent reporting that linked a rare blood disorder to an over-the-counter dietary supplement, L-Tryptophan, and led to a national recall of the product."

1989 Edward Humes of *Orange County Register* "for his in-depth reporting on the military establishment in Southern California."

1988 Walt Bogdanich of *The Wall Street Journal* "for his chilling series of reports on faulty testing by American medical laboratories."

1987 Alex S. Jones of *The New York Times* "for 'The Fall of the House of Bingham,' a skillful and sensitive report of a powerful newspaper family's bickering and how it led to the sale of a famed media empire."

1986 Andrew Schneider and Mary Pat Flaherty of *Pittsburgh Press* "for their investigation of violations and failures in the organ transplantation system in the United States."

1985 Randall Savage and Jackie Crosby of *Macon* [GA] *Telegraph and News* "for their in-depth examination of academics and athletics at the University of Georgia and the Georgia Institute of Technology."

Breaking News Reporting (1998 to present); was Spot News Reporting (1991 to 1997)

"For a distinguished example of local reporting of breaking news, with special emphasis on the speed and accuracy of the initial coverage, presented in print or online or both."

2009 Staff of *The New York Times* "for its swift and sweeping coverage of a sex scandal that resulted in the resignation of Gov. Eliot Spitzer, breaking the story on its Web site and then developing it with authoritative, rapid-fire reports."

2008 Staff of *The Washington Post* "for its exceptional, multi-faceted coverage of the deadly shooting rampage at Virginia Tech, telling the developing story in print and online."

2007 Staff of *The Oregonian* [Portland] "for its skillful and tenacious coverage of a family missing in the Oregon mountains, telling the tragic story both in print and online."

2006 Staff of *The Times-Picayune* [New Orleans] "for its courageous and aggressive coverage of Hurricane Katrina, overcoming desperate conditions facing the city and the newspaper."

2005 Staff of *The Star-Ledger* [Newark, NJ] "for its comprehensive, clear-headed coverage of the resignation of New Jersey's governor after he announced he was gay and confessed to adultery with a male lover."

2004 Staff of *Los Angeles Times* "for its compelling and comprehensive coverage of the massive wildfires that imperiled a populated region of southern California."

2003 Staff of *The Eagle-Tribune* [Lawrence, MA] "for its detailed, well-crafted stories on the accidental drowning of four boys in the Merrimack River."

2002 Staff of *The Wall Street Journal* "for its comprehensive and insightful coverage, executed under the most difficult circumstances, of the terrorist attack on New York City, which recounted the day's events and their implications for the future."

2001 Staff of *The Miami Herald* "for its balanced and gripping on-the-scene coverage of the pre-dawn raid by federal agents that took the Cuban boy Elián Gonzalez from his Miami relatives and reunited him with his Cuban father."

2000 Staff of *The Denver Post* "for its clear and balanced coverage of the student massacre at Columbine High School."

1999 Staff of *Hartford* [CT] *Courant* "for its clear and detailed coverage of a shooting rampage in which a state lottery worker killed four supervisors then himself."

1998 Staff of *Los Angeles Times* "for its comprehensive coverage of a botched bank robbery and subsequent police shoot-out in North Hollywood."

1997 Staff of *Newsday* [Long Island, NY] "for its enterprising coverage of the crash of TWA Flight 800 and its aftermath."

1996 Robert D. McFadden of *The New York Times* "for his highly skilled writing and reporting on deadline during the year."

1995 Staff of *Los Angeles Times* "for its reporting on January 17, 1994, of the chaos and devastation in the aftermath of the Northridge earthquake."

1994 Staff of *The New York Times* "for its comprehensive coverage of the bombing of Manhattan's World Trade Center."

1993 Staff of *Los Angeles Times* "for balanced, comprehensive, penetrating coverage under deadline pressure of the second, most destructive day of the Los Angeles riots."

1992 Staff of *Newsday* [Long Island, NY] "for coverage of a midnight subway derailment in Manhattan that left five passengers dead and more than 200 injured."

1991 Staff of *The Miami Herald* "for stories profiling a local cult leader, his followers, and their links to several area murders."

Correspondence (1929 to 1947)

(For details on these early awards, see http://www.pulitzer.org/bycat/Correspondence.)

Explanatory Reporting (1998 to present); was Explanatory Journalism (1985 to 1997)

"For a distinguished example of explanatory reporting that illuminates a significant and complex subject, demonstrating mastery of the subject, lucid writing and clear presentation, in print or online or both."

2009 Bettina Boxall and Julie Cart of *Los Angeles Times* "for their fresh and painstaking exploration into the cost and effectiveness of attempts to combat the growing menace of wildfires across the western United States."

2008 Amy Harmon of *The New York Times* "for her striking examination of the dilemmas and ethical issues that accompany DNA testing, using human stories to sharpen her reports."

2007 Kenneth R. Weiss, Usha Lee McFarling, reporters, and Rick Loomis, photographer, of the *Los Angeles Times* "for their richly portrayed reports on the world's distressed oceans, telling the story in print and online, and stirring reaction among readers and officials."

2006 David Finkel of *The Washington Post* "for his ambitious, clear-eyed case study of the United

States government's attempt to bring democracy to Yemen."

2005 Gareth Cook of *The Boston Globe* "for explaining, with clarity and humanity, the complex scientific and ethical dimensions of stem cell research."

2004 Kevin Helliker and Thomas M. Burton of *The Wall Street Journal* "for their groundbreaking examination of aneurysms, an often overlooked medical condition that kills thousands of Americans each year."

2003 Staff of *The Wall Street Journal* "for its clear, concise and comprehensive stories that illuminated the roots, significance and impact of corporate scandals in America."

2002 Staff of *The New York Times* "for its informed and detailed reporting, before and after the September 11th attacks on America, that profiled the global terrorism network and the threats it posed."

2001 Staff of *Chicago Tribune* "for 'Gateway to Gridlock,' its clear and compelling profile of the chaotic American air traffic system."

2000 Eric Newhouse of *Great Falls* [MT] *Tribune* "for his vivid examination of alcohol abuse and the problems it creates in the community."

1999 Richard Read of *The Oregonian* [Portland] "for vividly illustrating the domestic impact of the Asian economic crisis by profiling the local industry that exports frozen french fries."

1998 Paul F. Salopek of *Chicago Tribune* "for his enlightening profile of the Human Genome Diversity Project, which seeks to chart the genetic relationship among all people."

1997 Michael Vitez, reporter, and April Saul and Ron Cortes, photographers, of *The Philadelphia Inquirer* "for a series on the choices that confronted critically-ill patients who sought to die with dignity."

1996 Laurie Garrett of *Newsday* [Long Island, NY] "for her courageous reporting from Zaire on the Ebola virus outbreak there."

1995 Leon Dash, staff writer, and Lucian Perkins, photographer, of *The Washington Post* "for their profile of a District of Columbia family's struggle with destructive cycles of poverty, illiteracy, crime and drug abuse."

1994 Ronald Kotulak of *Chicago Tribune* "for his lucid coverage of current developments in neurological science."

1993 Mike Toner of *The Atlanta Journal-Constitution* "for 'When Bugs Fight Back,' a series that explored the diminishing effectiveness of antibiotics and pesticides."

1992 Robert S. Capers and Eric Lipton of *Hartford* [CT] *Courant* "for a series about the flawed Hubble Space Telescope that illustrated many of the problems plaguing America's space program."

1991 Susan C. Faludi of *The Wall Street Journal* "for a report on the leveraged buy-out of Safeway Stores, Inc., that revealed the human costs of high finance."

1990 David A. Vise and Steve Coll of *The Washington Post* "for stories scrutinizing the Securities and Exchange Commission and the way it has been affected by the policies of its former chairman, John Shad."

1989 David Hanners, reporter, William Snyder, photographer, and Karen Blessen, artist [no newspaper cited] "for their special report on a 1985 airplane crash, the follow-up investigation, and the implications for air safety."

1988 Daniel Hertzberg and James B. Stewart of *The Wall Street Journal* "for their stories about an investment banker charged with insider trading and the critical day that followed the October 19, 1987, stock market crash."

1987 Jeff Lyon and Peter Gorner of *Chicago Tribune* "for their series on the promises of gene therapy, which examined the implications of this revolutionary medical treatment."

1986 Staff of *The New York Times* "for a six-part comprehensive series on the Strategic Defense Initiative, which explored the scientific, political and foreign policy issues involved in 'Star Wars.'"

1985 Jon Franklin of *The Baltimore Evening Sun* "for his seven-part series 'The Mind Fixers,' about the new science of molecular psychiatry."

General News Reporting (1985 to 1990)

1990 Staff of *San Jose* [CA] *Mercury News* "for its detailed coverage of the October 17, 1989, Bay Area earthquake and its aftermath."

1989 Staff of *Louisville Courier-Journal* "for its exemplary initial coverage of a bus crash that claimed 27 lives and its subsequent thorough and effective examination of the causes and implications of the tragedy."

1988 Staff of *Lawrence* [MA] *Eagle-Tribune* "for an investigation that revealed serious flaws in the Massachusetts prison furlough system and led to significant statewide reforms."

and to

Staff of *The Alabama Journal* [Montgomery, AL] "for its compelling investigation of the state's unusually high infant-mortality rate, which prompted legislation to combat the problem."

1987 Staff of *Akron Beacon Journal* "for its coverage, under deadline pressure, of the attempted takeover of Goodyear Tire and Rubber Co. by a European financier."

1986 Edna Buchanan of *The Miami Herald* "for her versatile and consistently excellent police beat reporting."

1985 Thomas Turcol of *Virginian-Pilot and Ledger-Star* [Norfolk, VA] "for City Hall coverage which exposed the corruption of a local economic development official."

International Reporting (1948 to present)

"For a distinguished example of reporting on international affairs, in print or online or both."

2009 Staff of *The New York Times* "for its masterful, groundbreaking coverage of America's deepening military and political challenges in Afghanistan and Pakistan, reporting frequently done under perilous conditions."

2008 Steve Fainaru of *The Washington Post* "for his heavily reported series on private security contractors in Iraq that operate outside most of the laws governing American forces."

2007 Staff of *The Wall Street Journal* "for its sharply edged reports on the adverse impact of China's booming capitalism on conditions ranging from inequality to pollution."

2006 Joseph Kahn and Jim Yardley of *The New York Times* "for their ambitious stories on ragged justice in China as the booming nation's legal system evolves."

2005 Kim Murphy of *Los Angeles Times* "for her eloquent, wide ranging coverage of Russia's struggle to cope with terrorism, improve the economy and make democracy work."

and to

Dele Olojede of *Newsday* [Long Island, NY] "for his fresh, haunting look at Rwanda a decade after rape and genocidal slaughter had ravaged the Tutsi tribe."

2004 Anthony Shadid of *The Washington Post* "for his extraordinary ability to capture, at personal peril, the voices and emotions of Iraqis as their country was invaded, their leader toppled and their way of life upended."

2003 Kevin Sullivan and Mary Jordan of *The Washington Post* "for their exposure of horrific conditions in Mexico's criminal justice system and how they affect the daily lives of people."

2002 Barry Bearak of *The New York Times* "for his deeply affecting and illuminating coverage of daily life in war-torn Afghanistan."

2001 Ian Johnson of *The Wall Street Journal* "for his revealing stories from China about victims of the government's often brutal suppression of the Falun Gong movement and the implications of that campaign for the future."

and to

Paul Salopek of *Chicago Tribune* "for his reporting on the political strife and disease epidemics ravaging Africa, witnessed firsthand as he traveled, sometimes by canoe, through rebel-controlled regions of the Congo."

2000 Mark Schoofs of *The Village Voice* "for his provocative and enlightening series on the AIDS crisis in Africa."

1999 Staff of *The Wall Street Journal* "for its in-depth, analytical coverage of the Russian financial crisis."

1998 Staff of *The New York Times* "for its revealing series that profiled the corrosive effects of drug corruption in Mexico."

1997 John F. Burns of *The New York Times* "for his courageous and insightful coverage of the harrowing regime imposed on Afghanistan by the Taliban."

1996 David Rohde of *The Christian Science Monitor* "for his persistent on-site reporting of the massacre of thousands of Bosnian Muslims in Srebrenica."

1995 Mark Fritz of Associated Press "for his reporting on the ethnic violence and slaughter in Rwanda."

1994 Dallas Morning News Team of *The Dallas Morning News* "for its series examining the epidemic of violence against women in many nations."

1993 Roy Gutman of *Newsday* [Long Island, NY] "for his courageous and persistent reporting that disclosed atrocities and other human rights violations in Croatia and Bosnia-Herzegovina."

and to

John F. Burns of *The New York Times* "for his courageous and thorough coverage of the destruction of Sarajevo and the barbarous killings in the war in Bosnia-Herzegovina."

1992 Patrick J. Sloyan of *Newsday* [Long Island, NY] "for his reporting on the Persian Gulf War, conducted after the war was over, which revealed new details of American battlefield tactics and 'friendly fire' incidents."

1991 Serge Schmemann of *The New York Times* "for his coverage of the reunification of Germany."

and to

Caryle Murphy of *The Washington Post* "for her dispatches from occupied Kuwait, some of which she filed while in hiding from Iraqi authorities."

1990 Nicholas D. Kristof and Sheryl Wu Dunn of *The New York Times* "for knowledgeable reporting from China on the mass movement for democracy and its subsequent suppression."

1989 Bill Keller of *The New York Times* "for resourceful and detailed coverage of events in the U.S.S.R."

and to

Glenn Frankel of *The Washington Post* "for sensitive and balanced reporting from Israel and the Middle East."

1988 Thomas L. Friedman of *The New York Times* "for balanced and informed coverage of Israel."

1987 Michael Parks of *Los Angeles Times* "for his balanced and comprehensive coverage of South Africa."

1986 Lewis M. Simons, Pete Carey, and Katherine Ellison of *San Jose* [CA] *Mercury News* "for their June 1985 series that documented massive transfers of wealth abroad by President Marcos and his associates and had a direct impact on subsequent political developments in the Philippines and the United States."

1985 Josh Friedman and Dennis Bell, reporters, and Ozier Muhammad, photographer of *Newsday* [Long Island, NY] "for their series on the plight of the hungry in Africa."

1984 Karen Elliott House of *The Wall Street Journal* "for her extraordinary series of interviews with Jordan's King Hussein which correctly anticipated the problems that would confront the Reagan administration's Middle East peace plan."

1983 Thomas L. Friedman and Loren Jenkins of *The New York Times* and *The Washington Post,* (respectively) "for their individual reporting of the Israeli invasion of Beirut and its tragic aftermath."

1982 John Darnton of *The New York Times* "for his reporting from Poland."

1981 Shirley Christian of *The Miami Herald* "for her dispatches from Central America."

1980 Joel Brinkley, reporter, and Jay Mather, photographer, of the *Louisville Courier-Journal* "for stories from Cambodia."

(For earlier prizes, see http://www.pulitzer.org/bycat/International-Reporting.)

Investigative Reporting (1985 to present)

"For a distinguished example of investigative reporting by an individual or team, presented as a single article or series, in print or online or both."

2009 David Barstow of *The New York Times* "for his tenacious reporting that revealed how some retired generals, working as radio and television analysts, had been co-opted by the Pentagon to make its case for the war in Iraq, and how many of them also had undisclosed ties to companies that benefited from policies they defended."

2008 Walt Bogdanich and Jake Hooker of *The New York Times* "for their stories on toxic ingredients in medicine and other everyday products imported from China, leading to crackdowns by American and Chinese officials."

and to

Staff of *Chicago Tribune* "for its exposure of faulty governmental regulation of toys, car seats and cribs, resulting in the extensive recall of hazardous products and congressional action to tighten supervision."

2007 Brett Blackledge of *The Birmingham* [AL] *News* "for his exposure of cronyism and corruption in the state's two-year college system, resulting in the dismissal of the chancellor and other corrective action."

2006 Susan Schmidt, James V. Grimaldi, and R. Jeffrey Smith of *The Washington Post* "for their indefatigable probe of Washington lobbyist Jack Abramoff that exposed congressional corruption and produced reform efforts."

2005 Nigel Jaquiss of *Willamette Week* [Portland, OR] "for his investigation exposing a former governor's long concealed sexual misconduct with a 14-year-old girl."

2004 Michael D. Sallah, Mitch Weiss, and Joe Mahr of *The Blade* [Toledo, OH] "for their powerful series on atrocities by Tiger Force, an elite U.S. Army platoon, during the Vietnam War."

2003 Clifford J. Levy of *The New York Times* "for his vivid, brilliantly written series 'Broken Homes' that exposed the abuse of mentally ill adults in state-regulated homes."

2002 Sari Horwitz, Scott Higham, and Sarah Cohen of *The Washington Post* "for a series that exposed the District of Columbia's role in the neglect and death of 229 children placed in protective care between 1993 and 2000, which prompted an overhaul of the city's child welfare system."

2001 David Willman of *Los Angeles Times* "for his pioneering exposé of seven unsafe prescription drugs that had been approved by the Food and Drug Administration, and an analysis of the policy reforms that had reduced the agency's effectiveness."

2000 Sang-Hun Choe, Charles J. Hanley, and Martha Mendoza of Associated Press "for revealing, with extensive documentation, the decades-old secret of how American soldiers early in the Korean War killed hundreds of Korean civilians in a massacre at the No Gun Ri Bridge."

1999 Staff of *The Miami Herald* "for its detailed reporting that revealed pervasive voter fraud in a city mayoral election, that was subsequently overturned."

1998 Gary Cohn and Will Englund of *The Baltimore Sun* "for their compelling series on the international shipbreaking industry, that revealed the dangers posed to workers and the environment when discarded ships are dismantled."

1997 Eric Nalder, Deborah Nelson, and Alex Tizon of *The Seattle Times* "for their investigation of widespread corruption and inequities in the federally-sponsored housing program for Native Americans, which inspired much-needed reforms."

1996 Staff of *The Orange County Register* [Santa Ana, CA] "for reporting that uncovered fraudulent and unethical fertility practices at a leading research university hospital and prompted key regulatory reforms."

1995 Brian Donovan and Stephanie Saul of *Newsday* [Long Island, NY] "for their stories that revealed disability pension abuses by local police."

1994 Staff of *Providence Journal-Bulletin* "for thorough reporting that disclosed pervasive corruption within the Rhode Island court system."

1993 Jeff Brazil and Steve Berry of *Orlando* [FL] *Sentinel* "for exposing the unjust seizure of millions of dollars from motorists—most of them minorities—by a sheriff's drug squad."

1992 Lorraine Adams and Dan Malone of *Dallas Morning News* "for reporting that charged Texas police with extensive misconduct and abuses of power."

1991 Joseph T. Hallinan and Susan M. Headden of *The Indianapolis Star* "for their shocking series on medical malpractice in the state."

1990 Lou Kilzer and Chris Ison of *Star Tribune* [Minneapolis–St. Paul] "for reporting that exposed a network of local citizens who had links to members of the St. Paul fire department and who profited from fires, including some described by the fire department itself as being of suspicious origin."

1989 Bill Dedman of *The Atlanta Journal and Constitution* "for his investigation of the racial discrimination practiced by lending institutions in Atlanta, reporting which led to significant reforms in those policies."

1988 Dean Baquet, William Gaines, and Ann Marie Lipinski of *Chicago Tribune* "for their detailed reporting on the self-interest and waste that plague Chicago's City Council."

1987 John Woestendiek of *The Philadelphia Inquirer* "for outstanding prison beat reporting, which included proving the innocence of a man convicted of murder."

and to

Daniel R. Biddle, H. G. Bissinger, and Fredric N. Tulsky of *The Philadelphia Inquirer* "for their series 'Disorder in the Court,' which revealed transgressions of justice in the Philadelphia court system and led to federal and state investigations."

1986 Jeffrey A. Marx and Michael M. York of *Lexington* [KY] *Herald Leader* "for their series 'Playing Above the Rules,' which exposed cash payoffs to University of Kentucky basketball players in violation of NCAA regulations and led to significant reforms."

1985 William K. Marimow of *The Philadelphia Inquirer* "for his revelation that city police dogs had attacked more than 350 people—an exposé that led to investigations of the K-9 unit and the removal of a dozen officers from it."

and to

Lucy Morgan and Jack Reed of *St. Petersburg* [FL] *Times* "for their thorough reporting on Pasco County Sheriff John Short, which revealed his department's corruption and led to his removal from office by voters."

National Reporting (1948 to present)

"For a distinguished example of reporting on national affairs, in print or online or both."

2009 Staff of *St. Petersburg Times* "for 'PolitiFact,' its fact-checking initiative during the 2008 presidential campaign that used probing reporters and the power of the World Wide Web to examine more than 750 political claims, separating rhetoric from truth to enlighten voters."

2008 Jo Becker and Barton Gellman of *The Washington Post* "for their lucid exploration of Vice President Dick Cheney and his powerful yet sometimes disguised influence on national policy."

2007 Charlie Savage of *The Boston Globe* "for his revelations that President Bush often used 'signing statements' to assert his controversial right to bypass provisions of new laws."

2006 James Risen and Eric Lichtblau of *The New York Times* "for their carefully sourced stories on secret domestic eavesdropping that stirred a national debate on the boundary line between fighting terrorism and protecting civil liberty."

and to

The San Diego Union-Tribune and Copley News Service with notable work by Marcus Stern and Jerry Kammer "for their disclosure of bribe-taking that sent former Rep. Randy Cunningham to prison in disgrace."

2005 Walt Bogdanich of *The New York Times* "for his heavily documented stories about the corporate cover-up of responsibility for fatal accidents at railway crossings."

2004 Staff of *Los Angeles Times* "for its engrossing examination of the tactics that have made Wal-Mart the largest company in the world with cascading effects across American towns and developing countries."

2003 Alan Miller and Kevin Sack of *Los Angeles Times* "for their revelatory and moving examination of a military aircraft, nicknamed 'The Widow Maker,' that was linked to the deaths of 45 pilots."

2002 Staff of *The Washington Post* "for its comprehensive coverage of America's war on terrorism, which regularly brought forth new information together with skilled analysis of unfolding developments."

2001 Staff of *The New York Times* "for its compelling and memorable series exploring racial experiences and attitudes across contemporary America."

2000 Staff of *The Wall Street Journal* "for its revealing stories that question U.S. defense spending and military deployment in the post-Cold War era and offer alternatives for the future."

1999 *The New York Times* staff, and notably Jeff Gerth "for a series of articles that disclosed the corporate sale of American technology to China, with U.S. government approval despite national security risks, prompting investigations and significant changes in policy."

1998 Russell Carollo and Jeff Nesmith of *Dayton* [OH] *Daily News* "for their reporting that disclosed dangerous flaws and mismanagement in the military health care system and prompted reforms."

1997 Staff of *The Wall Street Journal* "for its coverage of the struggle against AIDS in all of its aspects, the human, the scientific and the business, in light of promising treatments for the disease."

1996 Alix M. Freedman of *The Wall Street Journal* "for her coverage of the tobacco industry, including a report that exposed how ammonia additives heighten nicotine potency."

1995 Tony Horwitz of *The Wall Street Journal* "for stories about working conditions in low-wage America."

1994 Eileen Welsome of *Albuquerque Tribune* "for stories that related the experiences of Americans who had been used unknowingly in government radiation experiments nearly 50 years ago."

1993 David Maraniss of *The Washington Post* "for his revealing articles on the life and political record of [presidential] candidate Bill Clinton."

1992 Jeff Taylor and Mike McGraw of *Kansas City Star* "for their critical examination of the U.S. Department of Agriculture."

1991 Marjie Lundstrom and Rochelle Sharpe of Gannett News Service "for reporting that disclosed hundreds of child abuse-related deaths go undetected each year as a result of errors by medical examiners."

1990 Ross Anderson, Bill Dietrich, Mary Ann Gwinn, and Eric Nalder of *The Seattle Times* "for coverage of the *Exxon Valdez* oil spill and its aftermath."

1989 Donald L. Barlett and James B. Steele of *The Philadelphia Inquirer* "for their 15-month investigation of 'rifle shot' provisions in the Tax Reform Act of 1986, a series that aroused such widespread public indignation that Congress subsequently rejected proposals giving special tax breaks to many politically connected individuals and businesses."

1988 Tim Weiner of *The Philadelphia Inquirer* "for his series of reports on a secret Pentagon budget used by the government to sponsor defense research and an arms buildup."

1987 Staff of *Miami Herald* "for its exclusive reporting and persistent coverage of the U.S.–Iran-Contra connection."

and to

Staff of *The New York Times* "for coverage of the aftermath of the Challenger explosion, which included stories that identified serious flaws in the shuttle's design and in the administration of America's space program."

1986 Craig Flournoy and George Rodrigue of *The Dallas Morning News* "for their investigation into subsidized housing in East Texas, which uncovered patterns of racial discrimination and segregation in public housing across the United States and led to significant reforms."

and to

Arthur Howe of *The Philadelphia Inquirer* "for his enterprising and indefatigable reporting on massive deficiencies in IRS processing of tax returns—reporting that eventually inspired major changes in IRS procedures and prompted the agency to make a public apology to U.S. taxpayers."

1985 Thomas J. Knudson of *Des Moines* [IA] *Register* "for his series of articles that examined the dangers of farming as an occupation."

1984 John Noble Wilford of *The New York Times* "for reporting on a wide variety of scientific topics of national import."

1983 Staff of *The Boston Globe* "for its balanced and informative special report on the nuclear arms race."

1982 Rick Atkinson of *The Kansas City Times* "for the uniform excellence of his reporting and writing on stories of national import."

1981 John M. Crewdson of *The New York Times* "for his coverage of illegal aliens and immigration."

1980 Bette Swenson Orsini and Charles Stafford of *St. Petersburg* [FL] *Times* "for their investigation of the Church of Scientology."

(For the earlier awards, see http://www.pulitzer.org/bycat/National-Reporting.)

Reporting (1917 to 1947)

Telegraphic Reporting—International (1942 to 1947)

Telegraphic Reporting—National (1942 to 1947)

Prizes incorporated into other award category.

Local Reporting

The Pulitzer organization has struggled with just how to best recognize excellent local reporting. It began with—and has returned to—a single award in this category, after experimenting first with whether or not the local reporting was done for a timed edition, and then with two kinds of reporting—general or spot, and investigative and specialized. From 1985 to 2006, there were no local reporting prizes (as such) granted, though as is evident in these listings, many "local" reporting prizes were granted under other categories.

Local Reporting (1948 to 1952, 2007 to present)

"For a distinguished example of reporting on significant issues of local concern, demonstrating originality and community expertise, in print or online or both."

2009 *Detroit Free Press* staff, and notably Jim Schaefer and M.L. Elrick "for their uncovering of a pattern of lies by Mayor Kwame Kilpatrick that included denial of a sexual relationship with his female chief of staff, prompting an investigation of perjury that eventually led to jail terms for the two officials."

and to

Ryan Gabrielson and Paul Giblin of *East Valley Tribune* [Mesa, AZ] "for their adroit use of limited resources to reveal, in print and online, how a popular sheriff's focus on immigration enforcement endangered investigation of violent crime and other aspects of public safety."

2008 David Umhoefer of *Milwaukee Journal Sentinel* "for his stories on the skirting of tax laws to pad pensions of county employees, prompting change and possible prosecution of key figures."

2007 Debbie Cenziper of *The Miami Herald* "for reports on waste, favoritism and lack of oversight at the Miami housing agency that resulted in dismissals, investigations and prosecutions."

(For earlier awards, see http://www.pulitzer.org/bycat/Local-Reporting.)

Local General or Spot News Reporting (1964 to 1984)

1984 *Newsday* [Long Island, NY] team of reporters "for their enterprising and comprehensive coverage of the Baby Jane Doe case and its far-reaching social and political implications."

1983 Editorial staff of *Fort Wayne* [IN] *News-Sentinel* "for its courageous and resourceful coverage of a devastating flood in March 1982."

1982 Staffs of *Kansas City Star* and *Kansas City Times* "for coverage of the Hyatt Regency Hotel disaster and identification of its causes."

1981 Staff of *Longview* [WA] *Daily News* "for its coverage of the Mt. St. Helens story, including the photographs by Roger A. Werth."

1980 Staff of *The Philadelphia Inquirer* "for coverage of the nuclear accident at Three Mile Island."

(For earlier awards, see http://www.pulitzer.org/bycat/Local-General-or-Spot-News-Reporting.)

Local Investigative Specialized Reporting (1964 to 1984)

1984 Kenneth Cooper, Joan Fitz Gerald, Jonathan Kaufman, Norman Lockman, Gary McMillan, Kirk Scharfenberg, and David Wessel of *The Boston Globe* "for their series examining race relations in Boston, a notable exercise in public service that turned a searching gaze on some the city's most honored institutions including *The Globe* itself."

1983 Loretta Tofani of *The Washington Post* "for her investigation of rape and sexual assault in the Prince George's County, Maryland, Detention Center."

1982 Paul Henderson of *The Seattle Times* "for reporting which proved the innocence of a man convicted of rape."

1981 Clark Hallas and Robert B. Lowe of *The Arizona Daily Star* "for their investigation of the University of Arizona Athletic Department."

1980 Stephen A. Kurkjian, Alexander B. Hawes Jr., Nils Bruzelius, Joan Vennochi, and Robert M. Porterfield of *The Boston Globe,* Spotlight Team "for articles on Boston's transit system."

(For earlier awards, see http://www.pulitzer.org/bycat/Local-Investigative-Specialized-Reporting.)

Local Reporting—Edition Time

Local Reporting—No Edition Time (1953 to 1963)

Prizes incorporated into other award category.

Photography and Cartooning Prizes

Editorial cartooning has been honored since 1922 while photography had to wait two more decades. The latter is now honored in two categories—feature, and breaking news. The winning photographs and cartoons are available for the winners since 1995 on the Pulitzer website.

Breaking News Photography (2000 to present); was Spot News Photography (1968 to 1999)

"For a distinguished example of breaking news photography in black and white or color, which may consist of a photograph or photographs, a sequence or an album, in print or online or both."

2009 Patrick Farrell of *The Miami Herald* "for his provocative, impeccably composed images of despair after Hurricane Ike and other lethal storms caused a humanitarian disaster in Haiti."

2008 Adrees Latif of Reuters "for his dramatic photograph of a Japanese videographer, sprawled on the pavement, fatally wounded during a street demonstration in Myanmar."

2007 Oded Balilty of Associated Press "for his powerful photograph of a lone Jewish woman defying Israeli security forces as they remove illegal settlers in the West Bank."

2006 Staff of *The Dallas Morning News* "for its vivid photographs depicting the chaos and pain after Hurricane Katrina engulfed New Orleans."

2005 Staff of Associated Press "for its stunning series of photographs of bloody yearlong *[sic]* combat inside Iraqi cities."

2004 David Leeson and Cheryl Diaz Meyer of *The Dallas Morning News* "for their eloquent photographs depicting both the violence and poignancy of the war with Iraq."

2003 Photography staff of *Rocky Mountain News* [Denver] "for its powerful, imaginative coverage of Colorado's raging forest fires."

2002 Staff of *The New York Times* "for its consistently outstanding photographic coverage of the terrorist attack on New York City and its aftermath."

2001 Alan Diaz of Associated Press "for his photograph of armed U.S. federal agents seizing the Cuban boy Elián Gonzalez from his relatives' Miami home."

2000 Photo staff of *Rocky Mountain News* [Denver] "for its powerful collection of emotional images taken after the student shootings at Columbine High School."

1999 Photo Staff of Associated Press "for its portfolio of images following the embassy bombings in Kenya and Tanzania that illustrates both the horror and the humanity triggered by the event."

1998 Martha Rial of *Pittsburgh Post-Gazette* "for her life-affirming portraits of survivors of the conflicts in Rwanda and Burundi."

1997 Annie Wells of *The Press Democrat* [Santa Rosa, CA] "for her dramatic photograph of a local firefighter rescuing a teenager from raging floodwaters *[sic]*."

1996 Charles Porter IV, a freelancer, "for his haunting photographs, taken after the Oklahoma City bombing and distributed by the Associated Press, showing a one-year-old victim handed to and then cradled by a local fireman."

1995 Carol Guzy of *The Washington Post* "for her series of photographs illustrating the crisis in Haiti and its aftermath."

1994 Paul Watson of *The Toronto Star* "for his photograph, published in many American

newspapers, of a U.S. soldier's body being dragged through the streets of Mogadishu by a mob of jeering Somalis."

1993 Ken Geiger and William Snyder of *The Dallas Morning News* "for their dramatic photographs of the 1992 Summer Olympics in Barcelona."

1992 Staff of Associated Press "for photographs of the attempted coup in Russia and the subsequent collapse of the Communist regime."

1991 Greg Marinovich of Associated Press "for a series of photographs of supporters of South Africa's African National Congress brutally murdering a man they believed to be a Zulu spy."

1990 Photo Staff of *The Tribune* [Oakland, CA] "for photographs of devastation caused by the Bay Area earthquake of October 17, 1989."

1989 Ron Olshwanger, freelance photographer, "for a picture published in the *St. Louis Post-Dispatch* of a firefighter giving mouth-to-mouth resuscitation to a child pulled from a burning building."

1988 Scott Shaw of *Odessa* [TX] *American* "for his photograph of the child Jessica McClure being rescued from the well into which she had fallen."

1987 Kim Komenich of *San Francisco Examiner* "for his photographic coverage of the fall of Ferdinand Marcos."

1986 Carol Guzy and Michel duCille of *The Miami Herald* "for their photographs of the devastation caused by the eruption of the Nevado del Ruiz volcano in Colombia."

1985 Photography staff of *The Register* [Santa Ana, CA] "for their exceptional coverage of the Olympic games."

1984 Stan Grossfeld of *The Boston Globe* "for his series of unusual photographs which reveal the effects of war on the people of Lebanon."

1983 Bill Foley of Associated Press "for his moving series of pictures of victims and survivors of the massacre in the Sabra Camp in Beirut."

1982 Ron Edmonds of Associated Press "for his coverage of the Reagan assassination attempt."

1981 Larry C. Price of *Fort Worth* [TX] *Star-Telegram* "for his photographs from Liberia."

1980 Jahangir Razmi of Ettela'at, Iran "for the photograph 'Firing Squad in Iran' that was distributed by United Press International. The photographer remained anonymous until his identity was revealed, with his consent, by Josh Prager of *The Wall Street Journal* in 2006."

(For earlier awards, see http://www.pulitzer.org/bycat/Spot-News-Photography.)

Editorial Cartooning (1922 to present)

"For a distinguished cartoon or portfolio of cartoons published during the year, characterized by originality, editorial effectiveness, quality of drawing, and pictorial effect, in print or online or both."

2009 Steve Breen of *The San Diego Union-Tribune* "for his agile use of a classic style to produce wide ranging cartoons that engage readers with power, clarity and humor."

2008 Michael Ramirez of *Investor's Business Daily* "for his provocative cartoons that rely on originality, humor and detailed artistry."

2007 Walt Handelsman of *Newsday* [Long Island, NY] "for his stark, sophisticated cartoons and his impressive use of zany animation."

2006 Mike Luckovich of *The Atlanta Journal-Constitution* "for his powerful cartoons on an array of issues, drawn with a simple but piercing style."

2005 Nick Anderson of *The Courier-Journal* [Louisville, KY] "for his unusual graphic style that produced extraordinarily thoughtful and powerful messages."

2004 Matt Davies of *The Journal News* [city not specified] "for his piercing cartoons on an array of topics, drawn with a fresh, original style."

2003 David Horsey of *The Seattle Post-Intelligencer* "for his perceptive cartoons executed with a distinctive style and sense of humor."

2002 Clay Bennett of *The Christian Science Monitor.*

2001 Ann Telnaes of *Tribune Media Services.*

2000 Joel Pett of *Lexington* [KY] *Herald-Leader.*

1999 David Horsey of *The Seattle Post-Intelligencer.*

1998 Stephen P. Breen of *Asbury Park Press* [Neptune, NJ].

1997 Walt Handelsman of *Times-Picayune* [New Orleans].

1996 Jim Morin of *The Miami Herald*.

1995 Mike Luckovich of *The Atlanta Constitution*.

1994 Michael P. Ramirez of *Commercial Appeal* [Memphis, TN] "for his trenchant cartoons on contemporary issues."

1993 Stephen R. Benson of *The Arizona Republic*.

1992 Signe Wilkinson of *The Philadelphia Daily News*.

1991 Jim Borgman of *The Cincinnati Enquirer*.

1990 Tom Toles of *The Buffalo News* "for his work during the year as exemplified by the cartoon 'First Amendment.'"

1989 Jack Higgins of *Chicago Sun-Times*.

1988 Doug Marlette of *The Atlanta Constitution* and *Charlotte Observer*.

1987 Berke Breathed of The Washington Post Writers Group.

1986 Jules Feiffer of *The Village Voice* [New York City].

1985 Jeff MacNelly of *Chicago Tribune*.

1984 Paul Conrad of *Los Angeles Times*.

1983 Richard Locher of *Chicago Tribune*.

1982 Ben Sargent of *Austin* [TX] *American-Statesman*.

1981 Mike Peters of *Dayton* [OH] *Daily News*.

1980 Don Wright of *The Miami News*.

(For earlier awards, see http://www.pulitzer.org/bycat/Editorial-Cartooning.)

Feature Photography (1968 to present)

"For a distinguished example of feature photography in black and white or color, which may consist of a photograph or photographs, a sequence or an album in print or online or both."

2009 Damon Winter of *The New York Times* "for his memorable array of pictures deftly capturing multiple facets of Barack Obama's presidential campaign."

2008 Preston Gannaway of *Concord* [NH] *Monitor* "for her intimate chronicle of a family coping with a parent's terminal illness."

2007 Renée C. Byer of *The Sacramento Bee* "for her intimate portrayal of a single mother and her young son as he loses his battle with cancer."

2006 Todd Heisler of *Rocky Mountain News* [Denver] "for his haunting, behind-the-scenes look at funerals for Colorado Marines who return from Iraq in caskets."

2005 Deanne Fitzmaurice of *San Francisco Chronicle* "for her sensitive photo essay on an Oakland hospital's effort to mend an Iraqi boy nearly killed by an explosion."

2004 Carolyn Cole of *Los Angeles Times* "for her cohesive, behind-the-scenes look at the effects of civil war in Liberia, with special attention to innocent citizens caught in the conflict."

2003 Don Bartletti of *Los Angeles Times* "for his memorable portrayal of how undocumented Central American youths, often facing deadly danger, travel north to the United States."

2002 Staff of *The New York Times* "for its photographs chronicling the pain and the perseverance of people enduring protracted conflict in Afghanistan and Pakistan."

2001 Matt Rainey of *The Star-Ledger* [Newark, NJ] "for his emotional photographs that illustrate the care and recovery of two students critically burned in a dormitory fire at Seton Hall University."

2000 Carol Guzy, Michael Williamson, and Lucian Perkins of *The Washington Post* "for their intimate and poignant images depicting the plight of the Kosovo refugees."

1999 Photo Staff of Associated Press "for its striking collection of photographs of the key players and events stemming from President Clinton's affair with Monica Lewinsky and the ensuing impeachment hearings."

1998 Clarence Williams of *Los Angeles Times* "for his powerful images documenting the plight of young children with parents addicted to alcohol and drugs."

1997 Alexander Zemlianichenko of Associated Press "for his photograph of Russian President Boris Yeltsin dancing at a rock concert during his campaign for re-election."

1996 Stephanie Welsh, a freelancer, "for her shocking sequence of photos, published by Newhouse News Service, of a female circumcision rite in Kenya."

1995 Staff of Associated Press "for its portfolio of photographs chronicling the horror and devastation in Rwanda."

1994 Kevin Carter, a freelance photographer, "for a picture first published in *The New York Times* of a starving Sudanese girl who collapsed on her way to a feeding center while a vulture waited nearby."

1993 Staff of Associated Press "for its portfolio of images drawn from the 1992 presidential campaign."

1992 John Kaplan of Block Newspapers, Toledo, Ohio, "for his photographs depicting the diverse lifestyles of seven 21-year-olds across the United States."

1991 William Snyder of *The Dallas Morning News* "for his photographs of ill and orphaned children living in subhuman conditions in Romania."

1990 David C. Turnley of *Detroit Free Press* "for photographs of the political uprisings in China and Eastern Europe."

1989 Manny Crisostomo of *Detroit Free Press* "for his series of photographs depicting student life at Southwestern High School in Detroit."

1988 Michel duCille of *The Miami Herald* "for photographs portraying the decay and subsequent rehabilitation of a housing project overrun by the drug crack."

1987 David Peterson of *Des Moines Register* "for his photographs depicting the shattered dreams of American farmers."

1986 Tom Gralish of *The Philadelphia Inquirer* "for his series of photographs of Philadelphia's homeless."

1985 Larry C. Price of *The Philadelphia Inquirer* "for his series of photographs from Angola and El Salvador depicting their war-torn inhabitants."

and to

Stan Grossfeld of *The Boston Globe* "for his series of photographs of the famine in Ethiopia and for his pictures of illegal aliens on the Mexican border."

1984 Anthony Suau of *The Denver Post* "for a series of photographs which depict the tragic effects of starvation in Ethiopia and for a single photograph of a woman at her husband's gravesite on Memorial Day."

1983 James B. Dickman of *Dallas Times Herald* "for his telling photographs of life and death in El Salvador."

1982 John H. White of *Chicago Sun-Times* "for consistently excellent work on a variety of subjects."

1981 Taro M. Yamasaki of *Detroit Free Press* "for his photographs of Jackson (Mich.) State Prison."

1980 Erwin H. Hagler of *Dallas Times Herald* "for a series on the Western cowboy."

(For earlier awards, see http://www.pulitzer.org/bycat/Feature-Photography.)

Photography (1942 to 1967)

Prize incorporated into other award category.

Comment, Criticism, and Features Prizes

Editorial writing has been a part of the Pulitzer program from the beginning while other types of "nonreporting" have only been honored since the 1970s.

Commentary (1970 to present)

"For distinguished commentary, in print or online or both."

2009 Eugene Robinson of *The Washington Post* "for his eloquent columns on the 2008 presidential campaign that focus on the election of the first African-American president, showcasing graceful writing and grasp of the larger historic picture."

2008 Steven Pearlstein of *The Washington Post* "for his insightful columns that explore the nation's complex economic ills with masterful clarity."

2007 Cynthia Tucker of *The Atlanta Journal-Constitution* "for her courageous, clear-headed columns that evince a strong sense of morality and persuasive knowledge of the community."

2006 Nicholas D. Kristof of *The New York Times* "for his graphic, deeply reported columns that, at personal risk, focused attention on genocide in Darfur and that gave voice to the voiceless in other parts of the world."

2005 Connie Schultz of *The Plain Dealer* [Cleveland] "for her pungent columns that provided a voice for the underdog and underprivileged."

2004 Leonard Pitts Jr. of *The Miami Herald* "for his fresh, vibrant columns that spoke, with both passion and compassion, to ordinary people on often divisive issues."

2003 Colbert I. King of *The Washington Post* "for his against-the-grain columns that speak to people in power with ferocity and wisdom."

2002 Thomas Friedman of *The New York Times* "for his clarity of vision, based on extensive reporting, in commenting on the worldwide impact of the terrorist threat."

2001 Dorothy Rabinowitz of *The Wall Street Journal* "for her articles on American society and culture."

2000 Paul A. Gigot of *The Wall Street Journal* "for his informative and insightful columns on politics and government."

1999 Maureen Dowd of *The New York Times* "for her fresh and insightful columns on the impact of President Clinton's affair with Monica Lewinsky."

1998 Mike McAlary of *New York Daily News* "for his coverage of the brutalization of a Haitian immigrant by police officers at a Brooklyn stationhouse."

1997 Eileen McNamara of *The Boston Globe* "for her many-sided columns on Massachusetts people and issues."

1996 E.R. Shipp of *New York Daily News* "for her penetrating columns on race, welfare and other social issues."

1995 Jim Dwyer of *Newsday* [Long Island, NY] "for his compelling and compassionate columns about New York City."

1994 William Raspberry of *The Washington Post* "for his compelling commentaries on a variety of social and political topics."

1993 Liz Balmaseda of *The Miami Herald* "for her commentary from Haiti about deteriorating political and social conditions and her columns about Cuban-Americans in Miami."

1992 Anna Quindlen of *The New York Times* "for her compelling columns on a wide range of personal and political topics."

1991 Jim Hoagland of *The Washington Post* "for searching and prescient columns on events leading up to the Gulf War and on the political problems of Mikhail Gorbachev."

1990 Jim Murray of *Los Angeles Times* "for his sports columns."

1989 Clarence Page of *Chicago Tribune* "for his provocative columns on local and national affairs."

1988 Dave Barry of *The Miami Herald* "for his consistently effective use of humor as a device for presenting fresh insights into serious concerns."

1987 Charles Krauthammer of The Washington Post Writers Group "for his witty and insightful columns on national issues."

1986 Jimmy Breslin of *New York Daily News* "for columns which consistently champion ordinary citizens."

1985 Murray Kempton of *Newsday* [Long Island, NY] "for witty and insightful reflection on public issues in 1984 and throughout a distinguished career."

1984 Vermont Royster of *The Wall Street Journal.*

1983 Claude Sitton of *Raleigh* [NC] *News & Observer.*

1982 Art Buchwald of Los Angeles Times Syndicate.

1981 Dave Anderson of *The New York Times* "for his commentary on sports."

1980 Ellen H. Goodman of *The Boston Globe.*

(For earlier awards, see http://www.pulitzer.org/bycat/Commentary.)

Criticism (1970 to present)

"For distinguished criticism, in print or online or both."

2009 Holland Cotter of *The New York Times* "for his wide ranging reviews of art, from Manhattan to China, marked by acute observation, luminous writing and dramatic storytelling."

2008 Mark Feeney of *The Boston Globe* "for his penetrating and versatile command of the visual arts, from film and photography to painting."

2007 Jonathan Gold of *LA Weekly* "for his zestful, wide ranging restaurant reviews, expressing the delight of an erudite eater."

2006 Robin Givhan of *The Washington Post* "for her witty, closely observed essays that transform fashion criticism into cultural criticism."

2005 Joe Morgenstern of *The Wall Street Journal* "for his reviews that elucidated the strengths and weaknesses of film with rare insight, authority and wit."

2004 Dan Neil of *Los Angeles Times* "for his one-of-a-kind reviews of automobiles, blending technical expertise with offbeat humor and astute cultural observations."

2003 Stephen Hunter of *The Washington Post* "for his authoritative film criticism that is both intellectually rewarding and a pleasure to read."

2002 Justin Davidson of *Newsday* [Long Island, NY] "for his crisp coverage of classical music that captures its essence."

2001 Gail Caldwell of *The Boston Globe* "for her insightful observations on contemporary life and literature."

2000 Henry Allen of *The Washington Post* "for his fresh and authoritative writing on photography."

1999 Blair Kamin of *Chicago Tribune* "for his lucid coverage of city architecture, including an influential series supporting the development of Chicago's lakefront area."

1998 Michiko Kakutani of *The New York Times* "for her passionate, intelligent writing on books and contemporary literature."

1997 Tim Page of *The Washington Post* "for his lucid and illuminating music criticism."

1996 Robert Campbell of *The Boston Globe* "for his knowledgeable writing on architecture."

1995 Margo Jefferson of *The New York Times* "for her book reviews and other cultural criticism."

1994 Lloyd Schwartz of *The Boston Phoenix* "for his skillful and resonant classical music criticism."

1993 Michael Dirda of *The Washington Post* "for his book reviews."

1992 (No prize awarded.)

1991 David Shaw of *Los Angeles Times* "for his critiques of the way in which the media, including his own paper, reported the McMartin Pre-School child molestation case."

1990 Allan Temko of *San Francisco Chronicle* "for his architecture criticism."

1989 Michael Skube of *News and Observer* [Raleigh, NC] "for his writing about books and other literary topics."

1988 Tom Shales of *The Washington Post* "for his television criticism."

1987 Richard Eder of *Los Angeles Times* "for his book reviews."

1986 Donal Henahan of *The New York Times* "for his music criticism."

1985 Howard Rosenberg of *Los Angeles Times* "for his television criticism."

1984 Paul Goldberger of *The New York Times* "for architectural criticism."

1983 Manuela Hoelterhoff of *The Wall Street Journal* "for her wide-ranging criticism on the arts and other subjects."

1982 Martin Bernheimer of *Los Angeles Times* "for classical music criticism."

1981 Jonathan Yardley of *The Washington Star* "for his book reviews."

1980 William A. Henry III of *The Boston Globe* "for critical writing about television."

(For earlier awards, see http://www.pulitzer.org/bycat/Criticism.)

Editorial Writing (1917 to present)

"For distinguished editorial writing, the test of excellence being clearness of style, moral purpose, sound reasoning, and power to influence public opinion in what the writer conceives to be the right direction, in print or online or both."

2009 Mark Mahoney of *The Post-Star* [Glens Falls, NY] "for his relentless, down-to-earth editorials on the perils of local government secrecy, effectively admonishing citizens to uphold their right to know."

2008 (No prize awarded.)

2007 Arthur Browne, Beverly Weintraub, and Heidi Evans of *New York Daily News* "for their compassionate and compelling editorials on behalf of Ground Zero workers whose health problems were neglected by the city and the nation."

2006 Rick Attig and Doug Bates of *The Oregonian* [Portland] "for their persuasive, richly reported editorials on abuses inside a forgotten Oregon mental hospital."

2005 Tom Philp of *The Sacramento Bee* "for his deeply researched editorials on reclaiming California's flooded Hetch Hetchy Valley that stirred action."

2004 William R. Stall of *Los Angeles Times* "for his incisive editorials that analyzed California's troubled state government, prescribed remedies and served as a model for addressing complex state issues."

2003 Cornelia Grumman of *Chicago Tribune* "for her powerful, freshly challenging editorials on reform of the death penalty."

2002 Alex Raksin and Bob Sipchen of *Los Angeles Times* "for their comprehensive and powerfully written editorials exploring the issues and dilemmas provoked by mentally ill people dwelling on the streets."

2001 David Moats of *Rutland* [VT] *Herald* "for his even-handed and influential series of editorials commenting on the divisive issues arising from civil unions for same-sex couples."

2000 John C. Bersia of *The Orlando Sentinel* "for his passionate editorial campaign attacking predatory lending practices in the state, which prompted changes in local lending regulations."

1999 Editorial Board of *New York Daily News* "for its effective campaign to rescue Harlem's Apollo Theatre from the financial mismanagement that threatened the landmark's survival."

1998 Bernard L. Stein of *The Riverdale* [NY] *Press* "for his gracefully-written editorials on politics and other issues affecting New York City residents."

1997 Michael Gartner of *The Daily Tribune* [Ames, IA] "for his common sense editorials about issues deeply affecting the lives of people in his community."

1996 Robert B. Semple of *The New York Times* "for his editorials on environmental issues."

1995 Jeffrey Good of *The St. Petersburg* [FL] *Times* "for his editorial campaign urging reform of Florida's probate system for settling estates."

1994 R. Bruce Dold of *Chicago Tribune* "for his series of editorials deploring the murder of a 3-year-old boy by his abusive mother and decrying the Illinois child welfare system."

1993 (No prize awarded.)

1992 Maria Henson of *Lexington* [KY] *Herald-Leader* "for her editorials about battered women in Kentucky, which focused statewide attention on the problem and prompted significant reforms."

1991 Ron Casey, Harold Jackson, and Joey Kennedy of *The Birmingham* [AL] *News* "for their editorial campaign analyzing inequities in Alabama's tax system and proposing needed reforms."

1990 Thomas J. Hylton of *The Pottstown* [PA] *Mercury* "for his editorials about a local bond issue for the preservation of farmland and other open space in rural Pennsylvania."

1989 Lois Wille of *Chicago Tribune* "for her editorials on a variety of local issues."

1988 Jane Healy of *Orlando Sentinel* "for her series of editorials protesting overdevelopment of Florida's Orange County."

1987 Jonathan Freedman of *The Tribune* [San Diego, CA] "for his editorials urging passage of the first major immigration reform act in 34 years."

1986 Jack Fuller of *Chicago Tribune* "for his editorials on constitutional issues."

1985 Richard Aregood of *The Philadelphia Daily News* "for his editorials on a variety of subjects."

1984 Albert Scardino of *Georgia Gazette* [Savannah, GA] "for his series of editorials on various local and state matters."

1983 Editorial Board of *The Miami Herald* "for its campaign against the detention of illegal Haitian immigrants by federal officials."

1982 Jack Rosenthal of *The New York Times.*

1981 (No prize awarded.)

1980 Robert L. Bartley of *The Wall Street Journal.*

(For earlier awards, see http://www.pulitzer.org/bycat/Editorial-Writing.)

Feature Writing (1979 to present)

"For a distinguished example of feature writing giving prime consideration to quality of writing, originality and concision, in print or online or both."

2009 Lane DeGregory of *St. Petersburg Times* "for her moving, richly detailed story of a neglected little girl, found in a roach-infested room, unable to talk or feed herself, who was adopted by a new family committed to her nurturing."

2008 Gene Weingarten of *The Washington Post* "for his chronicling of a world-class violinist who, as an experiment, played beautiful music in a subway station filled with unheeding commuters."

2007 Andrea Elliott of *The New York Times* "for her intimate, richly textured portrait of an immigrant imam striving to find his way and serve his faithful in America."

2006 Jim Sheeler of *Rocky Mountain News* [Denver] "for his poignant story on a Marine major who helps the families of comrades killed in Iraq cope with their loss and honor their sacrifice."

2005 Julia Keller of *Chicago Tribune* "for her gripping, meticulously reconstructed account of a deadly 10-second tornado that ripped through Utica, Illinois."

2004 (No prize awarded.)

2003 Sonia Nazario of *Los Angeles Times* "for 'Enrique's Journey,' her touching, exhaustively reported story of a Honduran boy's perilous search for his mother who had migrated to the United States."

2002 Barry Siegel of *Los Angeles Times* "for his humane and haunting portrait of a man tried for negligence in the death of his son, and the judge who heard the case."

2001 Tom Hallman Jr. of *The Oregonian* [Portland] "for his poignant profile of a disfigured 14-year-old boy who elects to have life-threatening surgery in an effort to improve his appearance."

2000 J.R. Moehringer of *Los Angeles Times* "for his portrait of Gee's Bend, an isolated river community in Alabama where many descendants of slaves live, and how a proposed ferry to the mainland might change it."

1999 Angelo B. Henderson of *The Wall Street Journal* "for his portrait of a druggist who is driven to violence by his encounters with armed robbery, illustrating the lasting effects of crime."

1998 Thomas French of *St. Petersburg Times* "for his detailed and compassionate narrative portrait of a mother and two daughters slain on a Florida vacation, and the three-year investigation into their murders."

1997 Lisa Pollak of *The Baltimore Sun* "for her compelling portrait of a baseball umpire who endured the death of a son while knowing that another son suffers from the same deadly genetic disease."

1996 Rick Bragg of *The New York Times* "for his elegantly written stories about contemporary America."

1995 Ron Suskind of *The Wall Street Journal* "for his stories about inner-city honor students in Washington, D.C., and their determination to survive and prosper."

1994 Isabel Wilkerson of *The New York Times* "for her profile of a fourth-grader from Chicago's South Side and for two stories reporting on the Midwestern flood of 1993."

1993 George Lardner Jr. of *The Washington Post* "for his unflinching examination of his daughter's murder by a violent man who had slipped through the criminal justice system."

1992 Howell Raines of *The New York Times* "for 'Grady's Gift,' an account of the author's childhood friendship with his family's black housekeeper and the lasting lessons of their relationship."

1991 Sheryl James of *St. Petersburg* [FL] *Times* "for a compelling series about a mother who abandoned her newborn child and how it affected her life and those of others."

1990 Dave Curtin of *Colorado Springs Gazette Telegraph* "for a gripping account of a family's struggle to recover after its members were severely burned in an explosion that devastated their home."

1989 David Zucchino of *The Philadelphia Inquirer* "for his richly compelling series, 'Being Black in South Africa.'"

1988 Jacqui Banaszynski of *St. Paul Pioneer Press Dispatch* "for her moving series about the life and death of an AIDS victim in a rural farm community."

1987 Steve Twomey of *The Philadelphia Inquirer* "for his illuminating profile of life aboard an aircraft carrier."

1986 John Camp of *St. Paul Pioneer Press and Dispatch* "for his five-part series examining the life of an American farm family faced with the worst U.S. agricultural crisis since the Depression."

1985 Alice Steinbach of *The Baltimore Sun* "for her account of a blind boy's world, 'A Boy of Unusual Vision.'"

1984 Peter Mark Rinearson of *The Seattle Times* "for 'Making It Fly,' his account of the new Boeing 757 jetliner."

1983 Nan Robertson of *The New York Times* "for her memorable and medically detailed account of her struggle with toxic shock syndrome."

1982 Saul Pett of Associated Press "for an article profiling the federal bureaucracy."

1981 Teresa Carpenter of *The Village Voice* [New York City]. The prize was first awarded to Janet Cooke of *The Washington Post*, but it was returned two days later after *The Post* learned that the winning story was fabricated.

1980 Madeleine Blais of *The Miami Herald* "for 'Zepp's Last Stand.'"

General Journalism Awards

These can cover any medium, sometimes with different awards for national or local work. Most are named in honor of historically important figures from journalism or other fields.

CPJ International Press Freedom Awards

These honor journalists around the world who show courage in defending press freedom in the face of attacks, threats, or imprisonment. Created in 1991, they are administered by the Committee to Protect Journalists. Awards are usually given to four individuals and are intended to focus media coverage on countries where press freedom violations are particularly serious.

Past winners: http://cpj.org/awards/2008

Heywood Broun Award

Named in honor of the New York reporter and columnist (1888–1939), and administered by the Newspaper Guild (which he helped found in 1933), this award, first given in 1941, "is intended to encourage and recognize individual journalistic achievement by members of the working media, particularly if it helps right a wrong or correct an injustice." Employees of newspapers, news services, magazines, and radio and TV stations in the United States, Canada, and Puerto Rico are eligible.

Past winners: http://www.newsguild.org/index.php?ID=906

Kiplinger Distinguished Contributions to Journalism

The National Press Foundation created the W. M. Kiplinger Distinguished Contributions to Journalism Award to honor persons who have, through their vision and leadership, strengthened American journalism and furthered the efforts to establish quality in American journalism. Kiplinger (1891–1967) founded (in 1920) a newsletter and magazine publishing firm in Washington, D.C., that still carries his name. This is not an honor one applies for—winners are selected by the NPF board.

Past winners: http://www.nationalpress.org/info-url3520/info-url_show.htm?doc_id=118477

Livingston Awards

The Livingston Awards have been given since 1980 to media professionals under the age of 35 for local, national, and international reporting. The awards are administered by a New York City–based foundation run by Mollie Parnis Livingston, who was an important dress designer from the 1960s into the 1980s. Named for Livingston's son Robert, publisher of the journalism magazine *More,* the Livingston awards are the largest, all media, general reporting prizes in America. They pit print, broadcast, and online entries against one another for awards in local, national, and international reporting.

Past winners: http://www.livawards.org/winners/past_winners.html

Sidney Hillman Foundation Journalism Awards

Since 1950, the Sidney Hillman Foundation has recognized journalists and writers whose work promotes social and economic justice. Hillman (1887–1946) was the long-time head of the International Ladies Garment Workers Union and key political figure during the Roosevelt New Deal of the 1930s. Annual awards were, by 2009, given in six categories:

Books (nonfiction)

Newspaper Reporting

Magazine Reporting

Broadcast Journalism

Photojournalism

Blogs

Past winners: http://www.hillmanfoundation.org/pages/honorees/past_honorees.html

Specialized Journalism Awards

This is the most common category of awards—those given in honor of a specific kind of reporting or other activity. They show the variety of journalism media as well as many reporting specialties.

Benjamin Bradlee Editor of the Year Award

The National Press Foundation established this award in 1984 (and named it after the former *Washington Post* editor some two decades later) to recognize significant achievements that enhance the quality of journalism in the United States. The award, open to an editor at any level, is made in recognition of imagination, professional skill, ethics, and an ability to motivate staff—qualities that produce excellence in media. This is one award that one does not apply for.

Past winners: http://www.nationalpress.org/info-url3520/info-url_show.htm?doc_id=118426

Everett McKinley Dirksen Awards for Distinguished Reporting of Congress

Created in 1980 in honor of the Republican Senator from Illinois (served 1951–69), the award is intended to recognize individuals whose work shows thoughtful appraisal and insight into the workings of the U.S. Congress. Two awards are given annually by the National Press Foundation to print and broadcast journalists.

Past winners: http://www.nationalpress.org/info-url3520/info-url_show.htm?doc_id=118438

Excellence in Online Journalism Award

In 2000 the Board of the National Press Foundation authorized this award to recognize achievement in the rapidly changing field of Internet journalism, and encourage others through the winner's example. The award can be made to a site, or an individual, or a specific project.

Past winners: http://www.nationalpress.org/info-url3520/info-url_show.htm?doc_id=263665

Goldsmith Prize for Investigative Reporting

Given by the Shorenstein Center of the Press, Politics, and Public Policy at Harvard University, the Goldsmith awards have been given since 1993. They honor journalists whose investigative reporting in a story or series of related stories best promotes more effective and ethical conduct of government, the making of public policy, or the practice of politics. The award is named for Berda Marks Goldsmith (1892–1989), a Philadelphia-based follower of both news and politics.

Past winners: http://www.hks.harvard.edu/presspol/prizes_lectures/goldsmith_awards/investigative_reporting.html

Investigative Reporters and Editors Awards

Presented by the Investigative Reporters and Editors organization, these awards are given in multiple categories, each focusing on the quality of investigative reporting.

Maria Moors Cabot Prize

These are the oldest international awards in journalism and recognize distinguished journalistic contributions to inter-American understanding. The endowment was founded in 1938 by Godfrey Lowell Cabot of Boston as a memorial to his wife. They have been awarded annually since 1939 by the Trustees of Columbia University on recommendation of the dean of their Graduate School of Journalism and the Cabot Prize Board, composed of journalists and educators concerned with hemisphere affairs. Three to four medalists from the United States, Canada, and Latin American nations are selected each year.

Martha Gellhorn Prize for Journalism

Named for the war correspondent and novelist (1908–98), the award was established in 1999 by the Martha Gellhorn Trust. It rewards "the kind of reporting that distinguished Martha: in her own words 'the view from the ground.'" This is defined as "essentially a human story that penetrates the established version of events and illuminates an urgent issue buried by prevailing fashions of what makes news." It has been awarded annually to journalists in the United States or abroad, writing in English, whose work has appeared in print or a reputable web publication.

National Headliner Awards

The National Headliner Awards have been given out by the Press Club of Atlantic City since 1935. Since then, more than 2,000 Headliner medallions have been presented to outstanding writers, photographers, daily newspapers, magazines, graphic artists, radio and television stations and networks, and news syndicates. The three main divisions (print, broadcast, and online) are each further divided into types of reporting, and sometimes market size as well.

National Journalism Awards

Since 1953 the Scripps Howard Foundation has recognized the best work in journalism through the National Journalism Awards. As of 2008, the awards were granted in the following categories.

Print

- Business/Economics Reporting
- Commentary
- Editorial Cartooning
- Editorial Writing
- Environmental Reporting
- Human Interest Writing
- Investigative Reporting
- Photojournalism
- Public Service Reporting
- Washington Reporting

Electronic Media

- TV/Cable Excellence
- Radio Excellence
- Web Reporting

Distinguished Service

- First Amendment

Collegiate

- College Cartoonist
- Journalism Administrator of the Year
- Journalism Teacher of the Year

Past winners: http://foundation.scripps.com/foundation/programs/nja/nja.html

National Magazine Awards

Granted by the American Society of Magazine Editors and the Columbia University Graduate School of Journalism, these have been presented in multiple categories since 1966. By 2009, the award categories included:

General

- General Excellence
- General Excellence online
- Magazine Section
- Magazine Single-Topic Issue

Specific Types

- Personal Service
- Personal Service online
- Leisure Interests
- Reporting
- Public Interest
- Feature Writing
- Profile Writing
- Essays, Columns and Commentary
- Reviews and Criticism

Technical

- Design
- Photography
- Photojournalism
- Interactive Feature

National Pacemaker Awards

Despite their name, these awards have nothing to do with medical journalism—the National Pacemaker Awards honor high school and college level journalism. First given in 1927, suspended during the 1950s and revived in 1961, the awards are administered by the National Scholastic Press Association for high school-level work, and the Associated Collegiate Press for college and university contests, along with the Newspaper Association

of America Foundation. For the newspapers, for example, judges select Pacemakers based on coverage and content, quality of writing and reporting, leadership on the opinion page, evidence of in-depth reporting, design, photography, art, and graphics. By 2008, Pacemakers were given in categories that included:

College-University Level

Newspapers

Magazines

Online

High School Level

Newspapers

Magazines

Online

Broadcast operations

Yearbooks

Past winners at the high school level: http://www.studentpress.org/nspa/contests.html

Online News Association Awards

The Online Journalism Awards (OJAs), given by the Online News Association in cooperation with the University of Miami (Florida) School of Communication, are awarded in more than a dozen categories for different types of online work. One or two in each category are awarded annually—and most carry a cash award as well. The OJAs are the only comprehensive set of journalism prizes honoring excellence in digital journalism. Past winners have included major media, international and independent sites, and individuals producing innovative work in multimedia storytelling.

Phillip Mayer Journalism Award

The Philip Mayer Journalism Award is a project of the National Institute for Computer-Assisted Reporting, which is a joint program of Investigative Reporters and Editors, the Missouri School of Journalism, and the Knight Chair in Journalism at Arizona State University. It honors the best journalism done using social science research methods. First given in 2005, the award is named for the author (now emeritus professor) of the seminal book on how to undertake such research-based journalism.

Past winners: http://ire.org/resourcecenter/contest/meyeraward.html

Robert F. Kennedy Journalism Award

This award honors outstanding reporting about the lives of disadvantaged people throughout the world. Often dubbed the "Poor People's Pulitzers" in the press, these award recipients have covered issues spanning from child abuse and juvenile crime to discriminatory banking practices and prejudice against AIDS victims. A group of reporters established the award in honor of New York Senator Robert Kennedy after his assassination in 1968. The awards are judged by more than 50 journalists each year.

Past winners: http://www.rfkmemorial.org/legacyinaction/journalismawards

Sigma Delta Chi Awards

Begun in 1932 and revised in 1939, these are given annually by the Society of Professional Journalists. The more than 50 categories are divided among different types of media (those marked with an asterisk are subdivided by circulation or market size).

Electronic Journalism Awards

There are many awards given specifically to those active in radio, television, or cable news—and some of them are listed earlier in this appendix, as a part of broader award programs. Those shown here focus on broadcasting—usually television. At least three are named after famed CBS journalist Edward R. Murrow (1908–65), though the awards are granted by different organizations for different things.

Alfred I. duPont–Columbia University Awards

Given by the Graduate School of Journalism at Columbia University since 1968, these awards were established in 1942. They are named for the industrialist and philanthropist Alfred I. duPont (1864–1935) in whose name his family donated the original endowment. For several years in the late 1960s and into the early 1970s, the awards and related essays were published in book form. There are no categories by subject or format. All entries are judged for overall excellence in reporting and production against submissions from peer markets or news organizations in the following media or market-type categories:

Television Programs

Broadcast and Cable Networks

Major Market Stations (top ten markets)

Medium Market Stations (markets 11–50)

Small Market Stations (remaining markets)

Radio Programs

National

Local

Other Productions

Independent

Web-based

Edward R. Murrow Award (CPB)

Given since 1977 by the Corporation for Public Broadcasting for "outstanding contributions to public radio, the award (also named for the CBS journalist) recognizes winners' contributions or achievements in any facet of public radio over many years or during a short period of time. Individuals need not be professionals in public radio but should be active in promoting this unique informational and cultural resource."

Past winners: http://www.cpb.org/aboutpb/awards/murrow

Edward Murrow Award (OPC)

Given annually by the Overseas Press Club of America since 1978, for "the best television interpretation or documentary on international affairs," this is named in honor of the CBS journalist.

Past winners: http://www.opcofamerica.org/archive/opc_awards/archive/byaward/body_award_murrow.php

George Foster Peabody Awards

The Peabody Awards have been given since 1941 for excellence in radio and television broadcasting, and are one of the oldest honors in electronic media. Television was added in 1948, and web categories a half century later. The awards are named for banker and philanthropist George Foster Peabody (1852–1938), who donated the funds that made the awards possible. They are administered by the University of Georgia's College of Journalism and Mass Communication. The Peabody Awards honor "achievement within broadcast journalism, documentary film making, educational and children's programming, and entertainment."

Categories (which include others that do not concern journalism) are used for administrative purposes as all entries are in open competition with all other entries for the awards given each year. Among those types of programming sought are:

News

- Spot Coverage (aired in real time without significant editing)
- Reporting
- Investigation
- Interpretation and commentary on news events

Documentary

Public Service

Past winners: http://www.peabody.uga.edu/winners/search.php and (a clearer presentation) at http://en.wikipedia.org/wiki/Peabody_Award

George Polk Awards

The George Polk Awards in Journalism have been presented by Long Island University in New York annually since 1948. They are named in honor of a CBS radio correspondent (1913–48) killed while reporting the Greek Civil War. As of 2009, these honors were given in these categories:

By Level of Reporting

Foreign

National

State

Local

By Subject

Economics

Business

Labor

Education

Legal

By Medium

Internet

Magazine

Radio-Television News Directors Association

The Radio-Television News Directors Association (RTNDA) has three major awards.

Edward R. Murrow Awards

Given by the RTNDA, since 1971, these come in numerous categories, and honor the CBS journalist (1908–65). The RTNDA Murrow awards are further subdivided into six separate competitions based on their reach. Two are national: TV and radio networks; and four are regional: large and small TV markets, and large and small radio markets. Thus each category gives six awards annually.

General categories

Overall Excellence: for the best journalism

Newscast: honoring single whole newscasts

By type of news

Spot News Coverage: for immediate coverage of breaking stories

Continuing Coverage: recognizing long-term coverage of developing major stories

Investigative Reporting

Feature Reporting

Hard News

Sports Reporting

John F. Hogan Distinguished Service Award

The John F. Hogan Distinguished Service Award is named for the Portland, Maine, broadcaster who founded RTNDA in 1946 and was its first president. This award, given by the RTNDA since 1959, recognizes an individual's contributions to the journalism profession and freedom of the press.

Past winners: http://www.rtnda.org/pages/media_items/john-f.-hogan-distinguished-service-award222.php?g=71?id=222

Paul White Award

This is presented annually by RTNDA and is named for the man (1902–55) who first organized CBS News and directed it through World War II. It is RTNDA's highest honor and recognizes an individual's lifetime contributions to electronic journalism.

Past winners: http://www.rtnda.org/pages/media_items/paul-white-award122.php?g=69?id=122

Sol Taishoff Award for Excellence in Broadcast Journalism

The Taishoff Award has been given since 1983 by the National Press Foundation to reward an active broadcaster's body of work over many years. Sol Taishoff (1904–82) co-founded and published the weekly *Broadcasting* trade magazine for a half century. The award may recognize an individual's accomplishment in field reporting, producing, writing, or work at an anchor desk. One does not apply for this award.

Past winners: http://www.nationalpress.org/info-url3520/info-url_show.htm?doc_id=118488

Photography and Editorial Cartooning Awards

These awards tend to be less known to the general public, but are widely recognized within their specialized fields.

Best of Photojournalism

Awards are given by the National Press Photographers Association and fall into five broad categories (and a host of specific ones):

Still photography

Photo editing

Websites

News video photography

Video editing

Past winners: http://bop.nppa.org/archive.html

Clifford K. & James T. Berryman Award for Editorial Cartoons

Florence Berryman, former art critic of the now defunct *Washington Star,* endowed an annual award in memory of her father and brother, both of whom were Pulitzer Prize–winning political cartoonists. The Berryman Award, administered since 1989 by the National Press Foundation, is open to editorial cartoonists of newspapers and magazines for work that exhibits "power to influence public opinion," plus good drawing and striking effect.

Past winners: http://www.nationalpress.org/info-url3520/info-url_show.htm?doc_id=118567

Ranan Lurie Political Cartoon Award

The United Nations Correspondents Association and the United Nations Society of Writers & Artists established this annual political cartoon award given in the international field, and named after political cartoonist Ranan Lurie (1932–) who edited *Cartoon News.*

Past winners: http://www.lurieunaward.com

The Robert Capa Gold Medal

This award for "best published photographic reporting from abroad requiring exceptional courage and enterprise" is given annually by the Overseas Press Club of America (OPC). Created in honor of the wartime photojournalist Robert Capa (1913–54), the first medal was awarded in 1955.

Past winners: http://en.wikipedia.org/wiki/Robert_Capa_Gold_Medal

Appendix B

Journalism Freedom: 1980–2008
(Country Ratings From Freedom House)

Introduction

Since 1980, Freedom House has issued annual reports on the state of journalistic freedom in countries around the world. Based on reports from regional and country authorities—often those in the country in question—the summary analyses allow readers to trace the ups and downs of tensions between media and government, as well as key issues and conflicts, over the period of a generation.

This appendix summarizes that information for all the countries that have been tracked by Freedom House; the total number of countries has varied over the years, as has the amount and type of information reported. The aim is to allow the reader to track the growth or decline in freedom of news media over time by individual nation, or regions of the world.

Beyond the individual country information, the ratings also show broader trends in different regions of the world. We summarize these trends in the tables that precede the country pages. Major political and social trends, such as the end of the Soviet Union and its dominance of Eastern Europe in 1989–91, can show up very quickly in the data on both country and regional levels. Summary maps make vividly clear global trends in the rise or fall of news media freedom.

Rating Press Freedom

In developing its annual assessment of news media (or "press") freedom, Freedom House has used a variety of sources, increasingly including reports from "people on the ground" in many of the countries about which they report. Freedom House has developed and steadily fine-tuned what is meant by "press freedom," as well as refining the sources of information and what and how much is reported for each year.

Data Gathering

The process of ranking press freedom begins with assembling information about news media freedom in each country. This is a multilayered process making use of in-country experts and scholars, staff and consultant visits, the findings of other press and human rights organizations, regional specialists, reports from governments and international bodies (such as UNESCO), and numerous domestic and international news media reports. Draft reports and rankings for each nation are developed.

These drafts are reviewed individually and comparatively at six regional meetings covering Asia-Pacific, Central and Eastern Europe and the nations of the former Soviet Union, Latin America and the Caribbean, the Middle East and North Africa, sub-Saharan Africa, and Western Europe.

These meetings involve country experts, ratings advisors with expertise in that region, other invited participants, and Freedom House staff. The draft ratings are compared with the previous year; any projected major shifts or category changes (e.g., free to partially free) are more intensively reviewed. These reviews are followed by cross-regional assessments to assure comparability and consistency in the findings. Many of the key country reports are further reviewed by academic advisors.

Data Analysis

Into the early 1990s, Freedom House analyzed its data on a country's press freedom status using a simple system of three categories: free, partly free, or not free. But these categories were offered with little or no quantitative information to back up the category assigned. Instead, the descriptive text for each nation provided something of a rationale for the category, describing events over the past year to provide a sense of where the ranking had come from.

Since 1994, however, more than half of the total time the reports have been issued, the three categories have been supported by a numerical score ranging from zero (free) to 100 (not free). The lower the total, the more freedom news media in any given country enjoy. The categories are as follows:

Free (up to 30 points);

Partly Free (from 31 to 60 points);

Not Free (from 61 to 100 points).

The number of assigned points, in turn, are based on three overall factors—laws and regulations, politics, and economics. (From 1994 through 2001, a fourth was included—the level of attacks on the press, including physical violence.)

Since 2002, these three factors have been calculated by assigning points to each of more than 20 (23 in 2007) questions. Collectively, these three cover all elements that define just how free a country's journalism is—or is not—and can total as many as 100 points for countries rated as not free.

Legal Environment (up to 30 points) includes such things as whether the country's constitution and basic laws include provisions protecting press freedom; whether there are laws restricting reporting; whether there are penalties for criticizing government officials and organizations (and are they enforced); whether the judiciary is independent; the ability of reporters to readily access government information; can media outlets be established and operated without undue interference; are any media regulatory bodies able to operate freely and independently; and whether there is freedom to become and operate as a journalist.

Political Influence (up to 40 points) includes the extent to which a country's media news and information content is determined either by government or partisan interest; whether access to government official or unofficial sources is controlled; whether there is official censorship and/or do journalists practice self-censorship; is media news coverage robust and does it include a variety of points of view; are both local and foreign journalists able to cover news freely; and whether or not journalists are subjected to extralegal intimidation or physical violence by government or other actors.

Economic Pressures (up to 30 points) reviews the extent to which a nation's media are owned or controlled by government and whether this influences diversity of views; whether private media ownership is transparent, so consumers can judge the impartiality of news; is ownership concentrated and does ownership influence diversity of content; whether there are restrictions on news production or distribution; does the state place prohibitively high costs on establishment and operation of media outlets; do the state or others control media through allocation of advertising revenues or subsidies; are journalists paid by private or public sources to influence the content of what they write; and whether the country's economic situation accentuates media dependency on the state, political parties, big business, or other influential political actors for funding.

Data Reporting

Over the more than a quarter century that Freedom House has reported this information, the amount and labeling of the data provided have gone through four iterations. The number of countries reported on has also increased—to almost 200 by 2009.

1980–88. In this period the reports provided two ratings for each nation—one for print media and one for broadcasting. Each medium was determined to be free, partially free, or not free, as further explained in the annual text discussions for each country which discussed events, trends, and policy issues of the previous year. There were no quantitative measures offered.

1989–93. For this period, the country information was honed down to a single score for these years—an overall summation of media freedom expressed as free, partially free, or not free. Again, text discussion helped provide more details to back up the ratings. For this period, however, print and broadcast media were not separately treated.

1994–2001. For this period, Freedom House reported more detailed information than at any other time. Not only were print and broadcast

media scores separately reported for each country, but those scores were now formally based on four different topics—laws and regulation, political pressures and control, economic influence, and whether or not violent acts had taken place against journalists or news media generally.

2002–08. The most recent (and ongoing) data once again merges print and broadcast information into a single score, expressed along three overall topics—laws and regulations, political pressures and control, and economic influence (a score for violence against journalists is no longer treated separately, but is included in the political category). Text discussion expanded such that the annual published reports grew from 161 to nearly 340 pages in just five years.

Data Publication

Until very recently, Freedom House has published its annual press freedom findings in book form, adding a parallel online element late in the 1990s. The books were not cumulative—that is, they detailed the previous year (e.g., the 2008 volume covered calendar year 2007), but generally did not provide data from previous years (the 2007 and 2008 volumes did include a five-year timeline of ratings for each nation). Full historical data are made available on the Freedom House website, which is the source for most of the information provided here.

The 2008 information was released just as this volume was going to press but was not published in printed book form due to Freedom House budget cuts. It can be found electronically at http://www.freedomhouse.org/template.cfm?page=362. It appears that future reports will also be limited to online distribution. The website also includes global maps showing the rise and fall of press freedom from 1984 to the present.

The brief summary text on each nation in the pages that follow was developed by the Encyclopedia editorial team, based on Freedom House information. To the historical time series information provided for each country, the team has added several things. Most evident is a locator map for each nation. We have also added a brief set of overview statistics for each country—population, gross national income per capita, date of independence, and date of the latest constitution. These additional information points are intended to provide some context—demographic, political, and economic—for each country. The information has been drawn from the United Nations Population Division, the World Development Indicators (a World Bank database), and for the last two, the annual Central Intelligence Agency *CIA Factbook*.

Volume Editor

About Freedom House

Freedom House, the source of most of the information provided in this appendix, is an independent private organization with offices in New York and Washington. It was founded in 1941 by Eleanor Roosevelt, Wendell Wilkie, and others to support and promote the expansion of freedom throughout the world. As the organization puts it:

> Freedom is possible only in democratic political systems in which governments are accountable to their own people, the rule of law prevails, and freedoms of expression, association and belief are guaranteed. Working directly with courageous men and women around the world to support nonviolence civic initiatives in societies where freedom is threatened, Freedom House functions as a catalyst for change through its unique mix of analysis, advocacy and action.

Among its analytical functions, in 1972 Freedom House began to annually publish what is now called *Freedom in the World: The Annual Survey of Political Rights and Civil Liberties*, surveying those rights and liberties as they exist (or do not) in each nation. Eight years later, the *Freedom of the Press* series began to appear. The organization actively advocates for greater freedom among national and international organizations. It also provides training, exchanges, and technical assistance to human rights, civil society, and media organizations.

The lack of press freedom in Afghanistan clearly reflects the fighting that has consumed the country for a generation. Continued fighting between the Taliban and U.S.-backed government forces, as well as warlord control over many parts of the nation, has limited media freedom in areas outside of the capital city of Kabul. However, the number of print and broadcast outlets is increasing, adding some diversity in content.

ALBANIA

Population (2010, proj.): 3,169,000

Gross National Income per Capita (current, 2007): $3,300

Date of Independence: November 28, 1912 (from the Ottoman Empire)

Date of Last Constitution: November 28, 1998 (promulgated)

From what was once a firmly Stalinist state lacking any media freedom whatever, Albania has made huge progress since the end of Soviet control in 1990. Since that time, its news media have achieved partially free status, although defamation laws remain a chief impediment to critical reporting about the government and its officials.

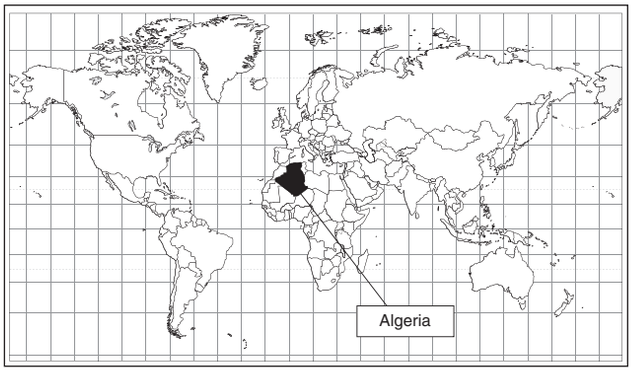
ALGERIA

Population (2010, proj.): 35,423,000

Gross National Income per Capita (current, 2007): $3,620

Date of Independence: July 5, 1962 (from France)

Date of Last Constitution: November 12, 2008 (revised)



As with most countries in the Middle East and North Africa, the news media in Algeria have been closely controlled by the government. Libel of government officials and agencies is forbidden, making criticism difficult. There has been a pattern of harassment against journalists seen as partisan (i.e., not agreeing with those in power).

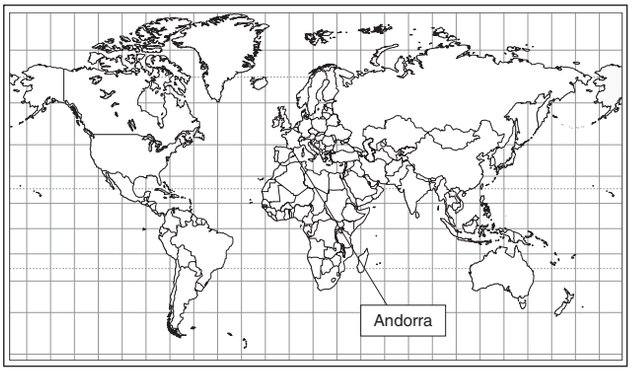
ANDORRA

Population (2010, proj.): 87,000

Gross National Income per Capita: N/A

Date of Independence: 1278

Date of Last Constitution: April 28, 1993 (effective)



A tiny principality lodged in a valley of the Pyrenees between Spain and France, this city/country has long been a business center attracting investors to its low-regulation environment. Its news media thus enjoy one of the world's freest news markets.

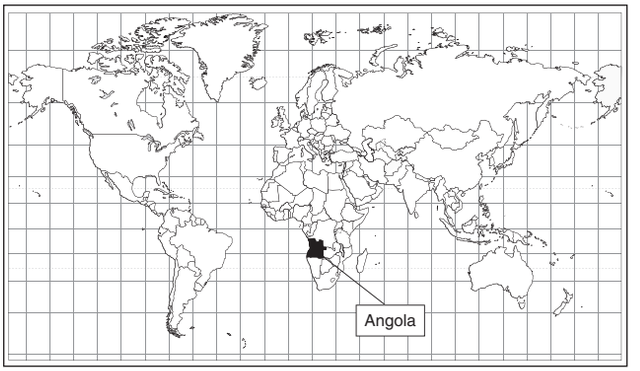
ANGOLA

Population (2010, proj.): 18,993,000

Gross National Income per Capita (current, 2007): $2,540

Date of Independence: November 11, 1975 (from Portugal)

Date of Last Constitution: August 25, 1992 (adopted by People's Assembly)



Site of almost continuous fighting in the generation since it gained independence, Angola keeps a fairly tight rein on its news media, though political controls (if not laws and regulation) have declined somewhat in recent years. Broadcasting—important in a nation with high illiteracy—is closely controlled by the government. Attacks on journalists remain a serious problem.

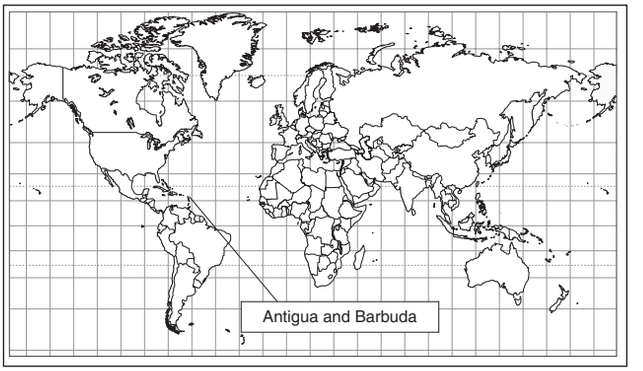
Antigua and Barbuda

Population (2010, proj.): 89,000

Gross National Income per Capita (current, 2006): $11,650

Date of Independence: November 1, 1981 (from the UK)

Date of Last Constitution: November 1, 1981



These Caribbean islands have not followed the free news market philosophy of their former British rulers, but rather have constrained media with numerous rules and regulations. The handful of print and broadcast outlets operate under libel laws that make relations with the government one of continuing tension.

ARGENTINA

Population (2010, proj.): 40,666,000

Gross National Income per Capita (current, 2007): $6,040

Date of Independence: July 9, 1816 (from Spain)

Date of Last Constitution: May 1, 1853 (amended many times starting in 1860)

In Argentina—one of the most important South American countries in terms of population and economy—most media outlets are privately owned, though some are dependent on government advertising. Attacks on journalists deemed critical of the government remain a problem. Internet use is growing and remains unrestricted.

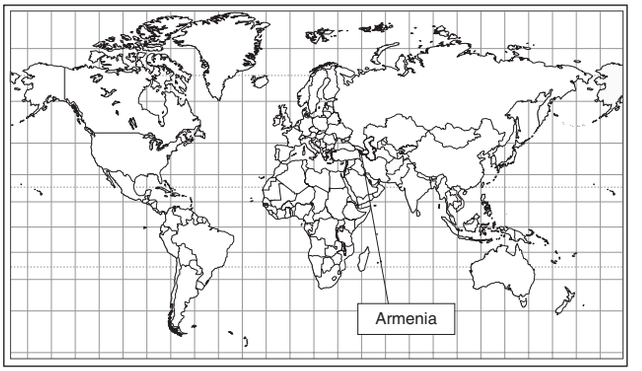
ARMENIA

Population (2010, proj.): 3,090,000

Gross National Income per Capita (current, 2007): $2,630

Date of Independence: September 21, 1991 (from the Soviet Union)

Date of Last Constitution: July 5, 1995



As in many nations, libel laws are a prime deterrent to criticizing government and its officials. Print media, though privately owned, have low circulations and are thus freer than broadcasters, which are often indirectly pressured by government to hew to the official line.

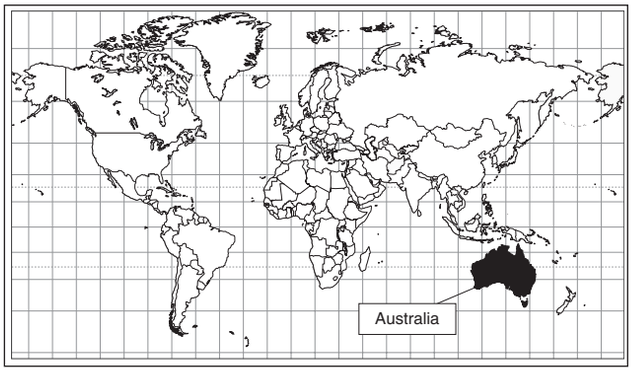
AUSTRALIA

Population (2010, proj.): 21,512,000

Gross National Income per Capita (current, 2007): $35,760

Date of Independence: January 1, 1901 (federation of UK colonies)

Date of Last Constitution: January 1, 1901



Generally enjoying a free and open market, Australian news media remain subject to strong sedition laws limiting criticism of government and officials. Public service broadcasting has suffered severe budget cuts, while Rupert Murdoch is the largest private owner of print and broadcast media in the country.

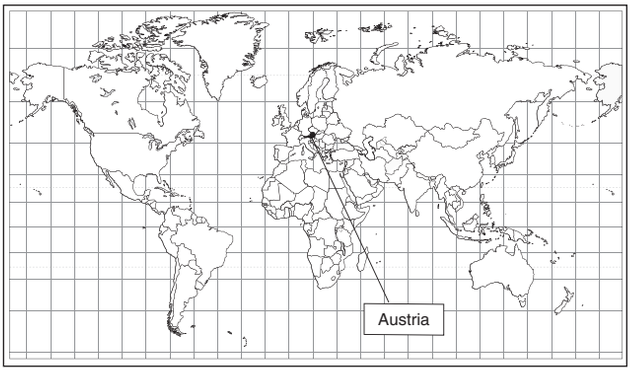
AUSTRIA

Population (2010, proj.): 8,387,000

Gross National Income per Capita (current, 2007): $41,960

Date of Independence: November 12, 1918 (establishment of republic)

Date of Last Constitution: 1920; revised 1929; reinstated May 1, 1945



Though libel laws serve to protect government and its officials, news media are otherwise largely free of controls. Inspired by Austrian involvement in World War II, advocating Holocaust denial or anti-Semitism are illegal. Media ownership is private (but also concentrated), newspaper circulation wars are common, and many German media also serve Austria.

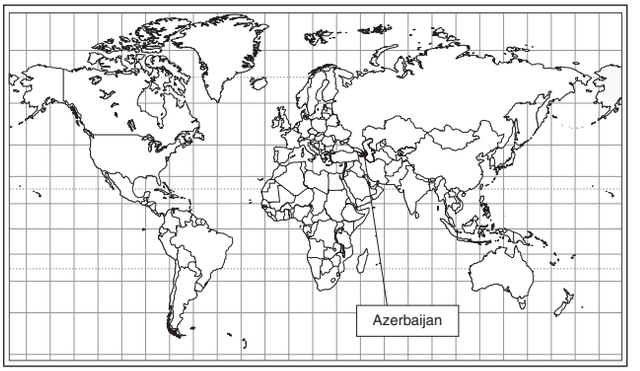
AZERBAIJAN

Population (2010, proj.): 8,934,000

Gross National Income per Capita (current, 2007): $2,640

Date of Independence: August 30, 1991 (from the Soviet Union)

Date of Last Constitution: November 12, 1995; modified August 24, 2002



Despite constitutional and legal guarantees, there is little news media freedom in the country. Attacks on journalists are common, and reporters are limited in their ability to access, let alone critique, government and its officials. The ruling political party controls or subsidizes many media outlets, and independent media lack government advertising—making their competition very limited.

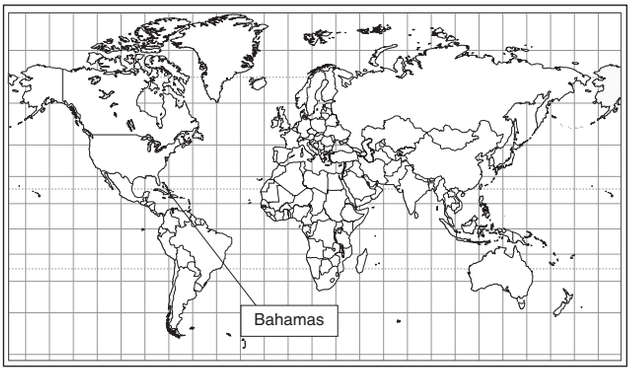
Bahamas

Population (2010, proj.): 346,000

Gross National Income per Capita (current, 2000): $15,300

Date of Independence: July 10, 1973 (from the UK)

Date of Last Constitution: July 10, 1973



These Caribbean islands, long a British colony and tourist destination, generally enjoy news media freedom, though there has been a worrisome rise in political pressure on critical reports about government and its officials.

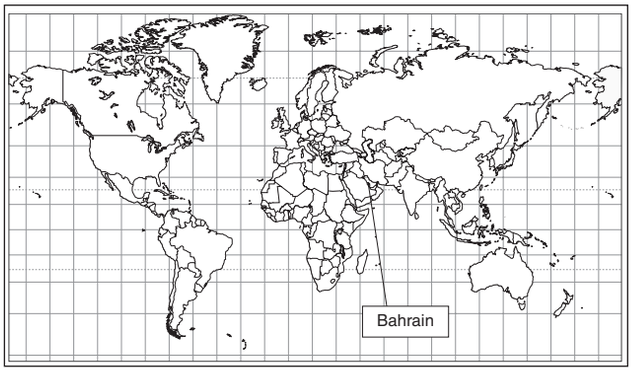
Bahrain

Population (2010, proj.): 807,000

Gross National Income per Capita (current, 2005): $17,390

Date of Independence: August 15, 1971 (from the UK)

Date of Last Constitution: February 14, 2002



As with most nations in the Middle East, there is little press freedom in this tiny Gulf country. The law often says one thing while government actions suggest another—usually tight control on what can be reported in print, broadcast, and even online sources. News about the royal family is especially controlled and criticism of government or its officials is rare.

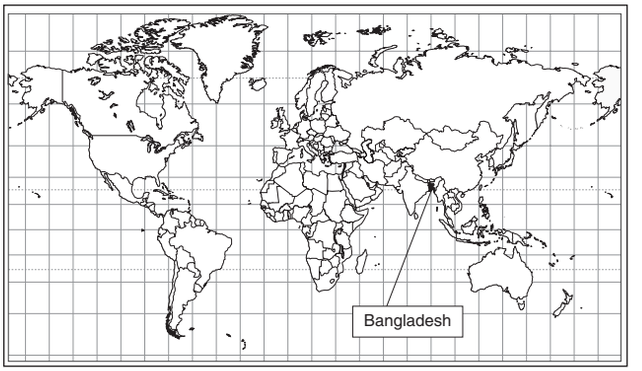
BANGLADESH

Population (2010, proj.): 164,425,000

Gross National Income per Capita (current, 2007): $470

Date of Independence: December 16, 1971 (from West Pakistan)

Date of Last Constitution: November 10, 1986



The former East Pakistan is one of the world's most densely populated regions and suffers a large number of attacks on journalists. Laws, including libel, are widely applied against news media, which are highly partisan in their coverage. Foreign media often have difficulty operating within the country.

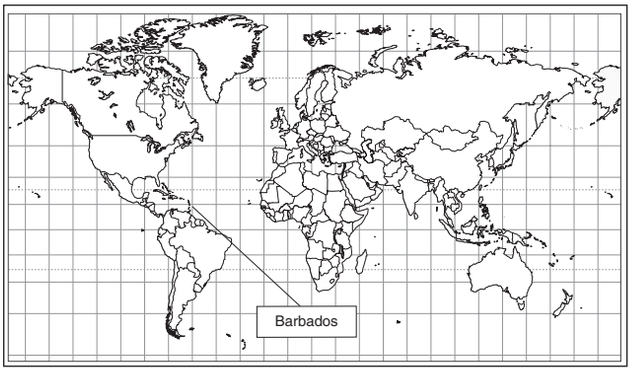
BARBADOS

Population (2010, proj.): 257,000

Gross National Income per Capita (current, 2000): $8,480

Date of Independence: November 30, 1966 (from the UK)

Date of Last Constitution: November 30, 1966



This Caribbean island nation enjoys strong press freedom among both its privately owned services and the government-operated Caribbean Broadcasting Corporation, which is loosely modeled on the BBC. Internet service is widely used and unregulated.

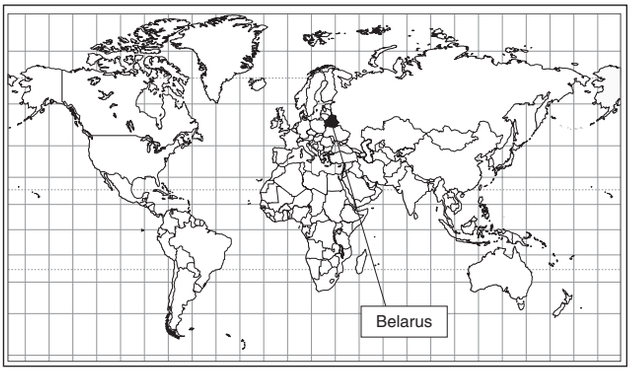
BELARUS

Population (2010, proj.): 9,588,000

Gross National Income per Capita (current, 2007): $4,220

Date of Independence: August 25, 1991 (from the Soviet Union)

Date of Last Constitution: March 15, 1994 (revised October 17, 2004)



This one-time Soviet republic retains a tradition of tight press control. Indeed, criticism of top leaders is considered a criminal offense. Government controls broadcast media, and print outlets are subject to strong political intimidation. The Internet is widely used, but the country's government-run telecommunications service can and does block access to some services.

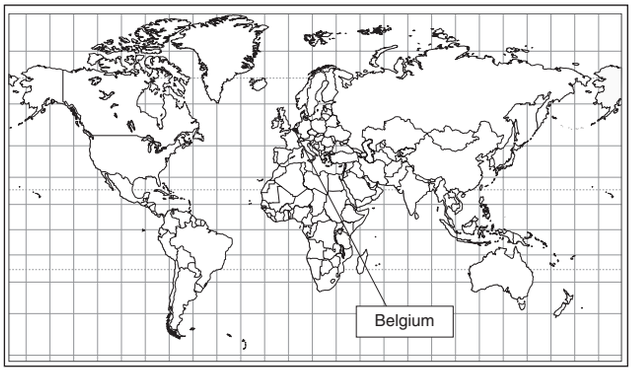
BELGIUM

Population (2010, proj.): 10,698,000

Gross National Income per Capita (current, 2007): $41,110

Date of Independence: October 4, 1830 (from the Netherlands); July 21, 1831 (King Leopold I ascension to the throne)

Date of Last Constitution: February 7, 1831; revised July 14, 1993



Belgian news media enjoy one of the freest markets in the world, although newspaper ownership is increasingly concentrated. Government-run broadcasting serves Flemish and French-speaking sectors of society with their own networks. The Internet is widely used and free of limitations.

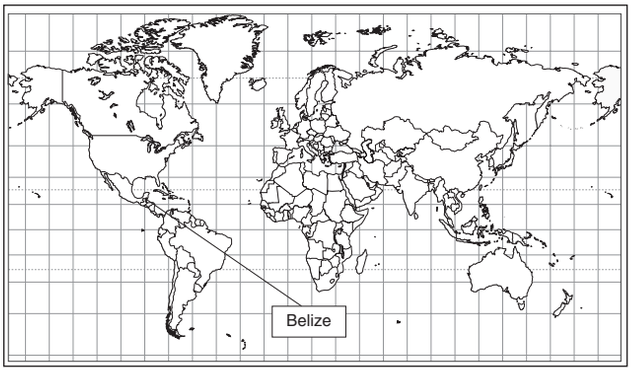
Belize

Population (2010, proj.): 313,000

Gross National Income per Capita (current, 2007): $3,760

Date of Independence: September 21, 1981 (from the UK)

Date of Last Constitution: September 21, 1981



This Central American nation, once home to a pre-Columbian Mayan empire, generally enjoys news media freedom. Libel laws remain a concern, weekly newspapers and broadcast stations are the primary news outlets, and growing Internet use is not restricted.

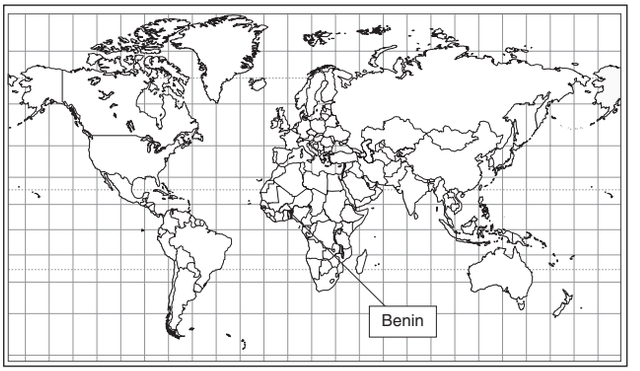
BENIN

Population (2010, proj.): 9,212,000

Gross National Income per Capita (current, 2007): $570

Date of Independence: August 1, 1960 (from France)

Date of Last Constitution: December 2, 1990



Generally enjoying a freer news media than most sub-Saharan African nations, Benin does suffer from libel laws limiting criticism of public officials and the government. Journalists must register to work in the country and conditions to do so are fairly strict. Internet access is low but expanding and is not controlled.

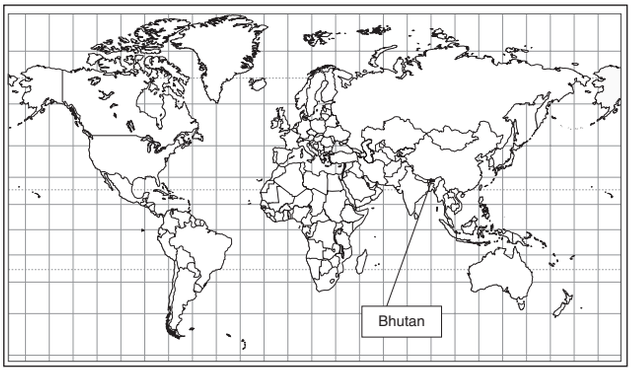
Bhutan

Population (2010, proj.): 708,000

Gross National Income per Capita (current, 2007): $1,770

Date of Independence: 1949 (from India)

Date of Last Constitution: July 18, 2008



This tiny kingdom high in the Himalayan mountains does not allow media to criticize the king or political system. The handful of broadcast stations are operated by and support the government. Cable service limits foreign channels and Internet service is used by only a few, though it is not regulated.

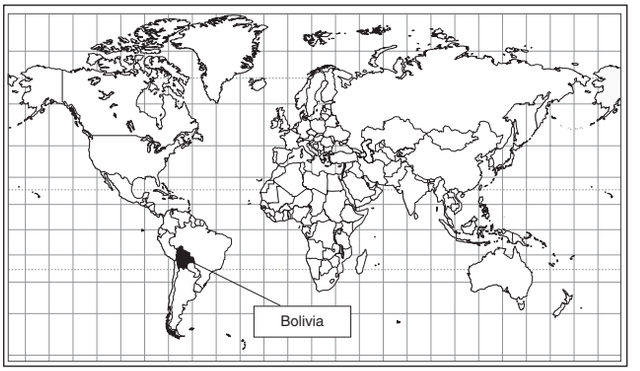
BOLIVIA

Population (2010, proj.): 10,031,000

Gross National Income per Capita (current, 2007): $1,260

Date of Independence: August 6, 1825 (from Spain)

Date of Last Constitution: January 25, 2009 (approved by voters)



This land-locked nation high in the Andes has experienced considerable tension between journalists and government, which reflects internal divisions between eastern and western parts of the country. Though most print and broadcast media are privately owned, libel against public officials is illegal. Hundreds of radio stations provide most news to the countryside. The Internet remains a tiny factor, though it is not controlled.

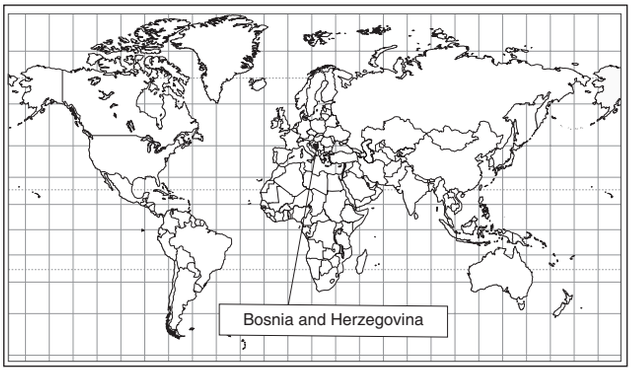
Bosnia and Herzegovina

Population (2010, proj.): 3,760,000

Gross National Income per Capita (current, 2007): $3,790

Date of Independence: March 3, 1992 (from Yugoslavia)

Date of Last Constitution: December 14, 1995 (contained within Dayton Peace Accords)



Since the end of the 1992–95 civil war, Bosnia and Herzegovina has established a very liberal legal environment for media, though enforcement of the laws varies and the courts are overloaded. Threats as well as attacks against journalists are common. There are many independent media, most allied with political parties or economic interests. Most media serve narrow ethnic groups. Internet use is rapidly expanding.

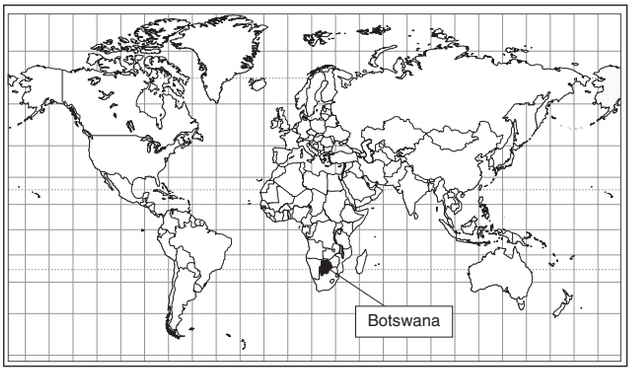
BOTSWANA

Population (2010, proj.): 1,978,000

Gross National Income per Capita (current, 2007): $6,120

Date of Independence: September 30, 1966 (from the UK)

Date of Last Constitution: September 30, 1966



While generally free, especially in the context of sub-Saharan Africa, the threat of libel actions for criticizing government officials remains a serious problem. Overall, media freedom is in decline. Government-operated media (including the only television service) dominate the independent services. Internet access is very limited, though not controlled.

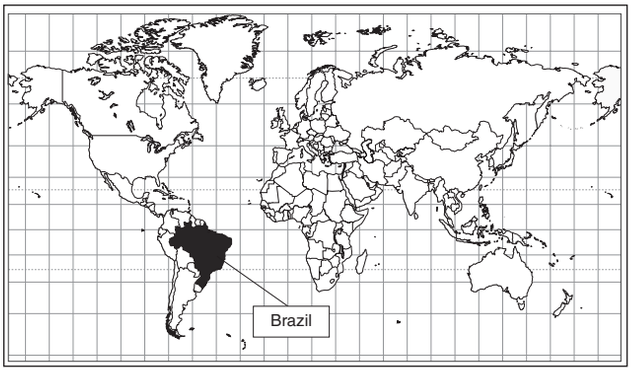
Brazil

Population (2010, proj.): 195,423,000

Gross National Income per Capita (current, 2007): $5,860

Date of Independence: September 7, 1822 (from Portugal)

Date of Last Constitution: October 5, 1988



Brazil, the largest South American nation, is South America's biggest media market. Brazil's media are privately held and generally free, though subject to defamation law (especially concerning government officials), and the pressures of drug cartels. Courts sometimes limit press ability to report on elections and candidates. Brazil has a large and growing Internet presence (the largest on the continent), which remains free of government controls.

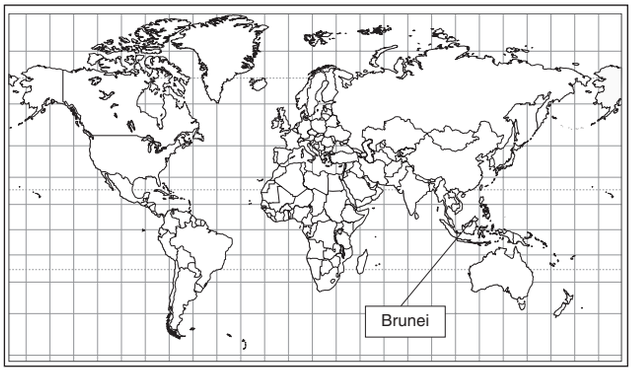
Brunei Darussalam

Population (2010, proj.): 407,000

Gross National Income per Capita (current, 2006): $26,740

Date of Independence: January 1, 1984 (from the UK)

Date of Last Constitution: September 29, 1959



The nation's sultan tightly controls all news media through "emergency" laws that have been in force for a half century. Media can be shut down and journalists jailed for a variety of offences. Internet use is widespread, though the government service provider limits access to many sites judged critical or subversive to government or Islam, and e-mail may be monitored.

Bulgaria

Population (2010, proj.): 7,497,000

Gross National Income per Capita (current, 2007): $4,580

Date of Independence: September 22, 1908 (from the Ottoman Empire)

Date of Last Constitution: July 12, 1991

This one-time Soviet satellite nation suffers from defamation laws that make it hard to critique government officials or agencies. There are many independent media, though government broadcasters dominate that sector. Internet access is unrestricted and expanding.

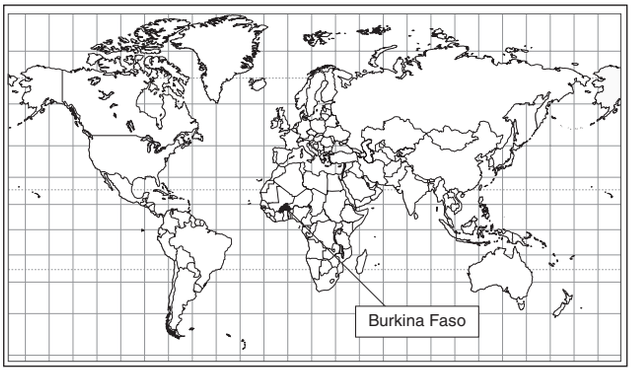
Burkina Faso

Population (2010, proj.): 16,287,000

Gross National Income per Capita (current, 2007): $430

Date of Independence: August 5, 1960 (from France)

Date of Last Constitution: June 11, 1991



While constitutionally free, news media in Burkina Faso can be banned for false information or endangering national security. Yet criticism of the government by the generally privately owned press is common. The government-run broadcast service is progovernment in tone. Access to international media is limited and Internet access almost nonexistent.

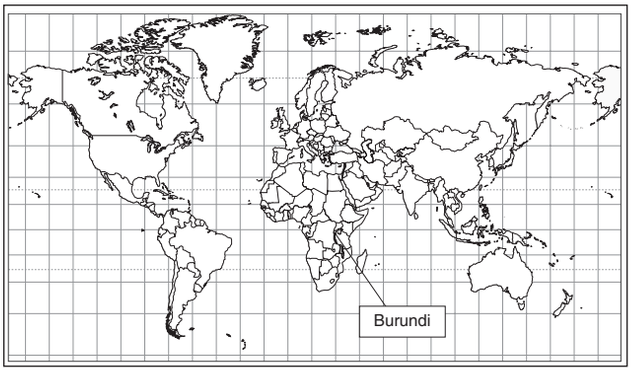
BURUNDI

Population (2010, proj.): 8,519,000

Gross National Income per Capita (current, 2007): $110

Date of Independence: July 1, 1962 (from UN trusteeship under Belgian administration)

Date of Last Constitution: February 28, 2005



Various laws serve to restrict what can be reported in the news media, which reflects tensions between Hutu and Tutsi ethnic groups. The government controls the only daily paper and the national television and radio service. There is a handful of private media but they play a minor part in the country. Internet usage is minor, though not directly controlled.

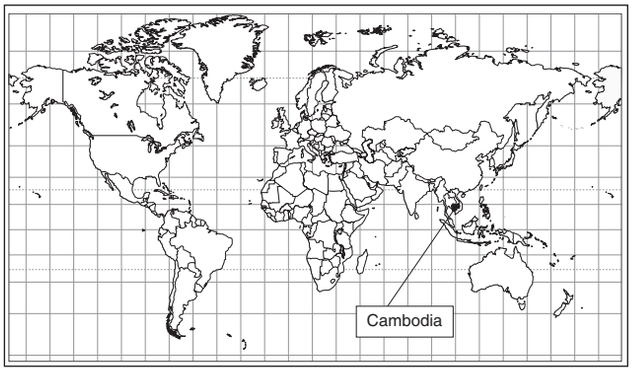
CAMBODIA

Population (2010, proj.): 15,053,000

Gross National Income per Capita (current, 2007): $550

Date of Independence: November 9, 1953 (from France)

Date of Last Constitution: September 21, 1993



Despite constitutional and legal press freedom guarantees, Cambodia's press is just barely in the "partially free" category due to continued government actions against news media that criticize government officials or policies (though many still do). Harassment of journalists is also on the rise. Internet access is almost nonexistent.

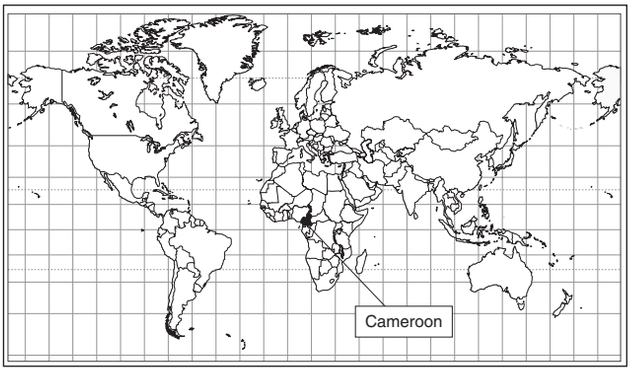
Cameroon

Population (2010, proj.): 19,958,000

Gross National Income per Capita (current, 2007): $1,050

Date of Independence: January 1, 1960 (from UN trusteeship administered by France)

Date of Last Constitution: June 2, 1972 (revised January 1996)



Legal guarantees of press freedom are regularly flouted by the government, and sedition laws continue to dampen criticism of officials or policies. Harassment of and sometimes attacks on journalists are widespread. Private broadcasting was introduced in 2007 to compete with the government-run system that is largely restricted to urban areas. Internet connections are few and expensive.

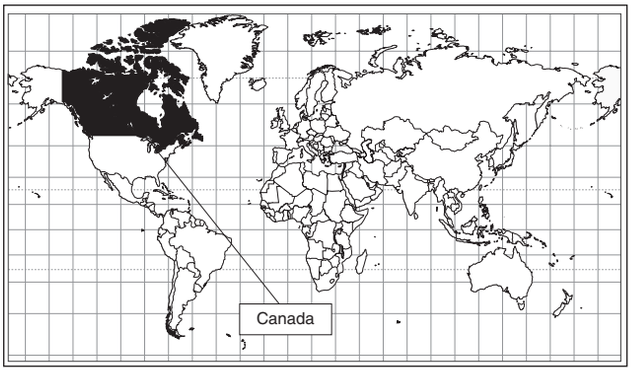
CANADA

Population (2010, proj.): 33,890,000

Gross National Income per Capita (current, 2007): $39,650

Date of Independence: July 1, 1867 (union of British North American colonies)

Date of Last Constitution: March 29, 1867 (Constitution Act); April 17, 1982 (Constitution Act)



Canada enjoys press freedom, though both the government-supported CBC and commercial broadcasters are subject to requirements that they provide substantial amounts of Canadian-made fare. Print and broadcast news media tend to focus on English or (especially in Quebec) French-language service. Media ownership is concentrated, which can limit diversity of views. Internet service is widely available and used.

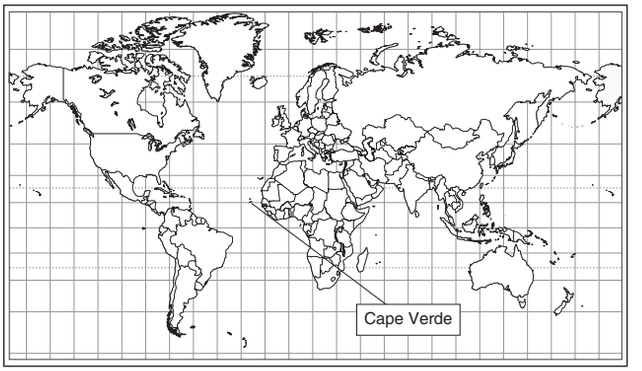
Cape Verde

Population (2010, proj.): 513,000

Gross National Income per Capita (current, 2007): $2,430

Date of Independence: July 5, 1975 (from Portugal)

Date of Last Constitution: September 25, 1992 (major revision on November 23, 1995)



The country enjoys one of the freest news media systems in all of Africa. Libel cases are few as is harassment of journalists—though self-censorship is widespread. Most media are state-owned, though private outlets are slowly increasing. There is no restriction on Internet access; however, the Internet is thus far used by few.

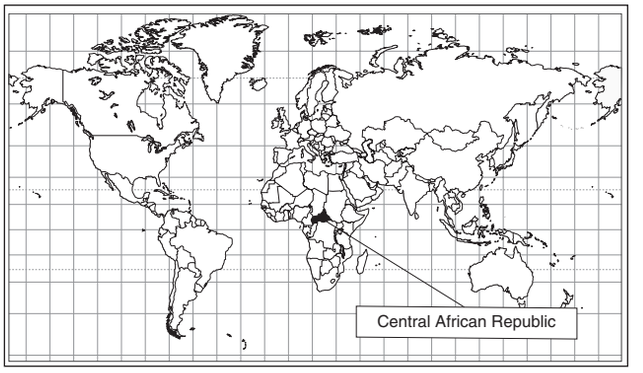
Date of Independence: August 13, 1960 (from France)

Date of Last Constitution: December 27, 2004



Legally news media are free, but there is considerable political pressure that limits journalists' access to or criticism of government activities. Continued political unrest in the north underlies concerns about allowing too much press freedom to comment or criticize. Private newspapers are limited to the capital city and practice self-censorship to avoid trouble. Government broadcasting dominates that sector. Internet access is rare.

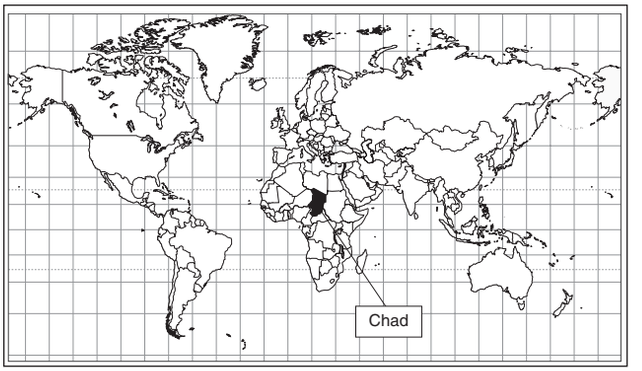
Chad

Population (2010, proj.): 11,506,000

Gross National Income per Capita (current, 2007): $540

Date of Independence: August 11, 1960 (from France)

Date of Last Constitution: March 31, 1996



Criticism of government or much discussion of social issues is frowned upon in this conservative nation. Harassment of journalists is fairly common. Radio is the prime means of communication with both government and some private stations, all of which are closely monitored by the government. Internet access is limited.

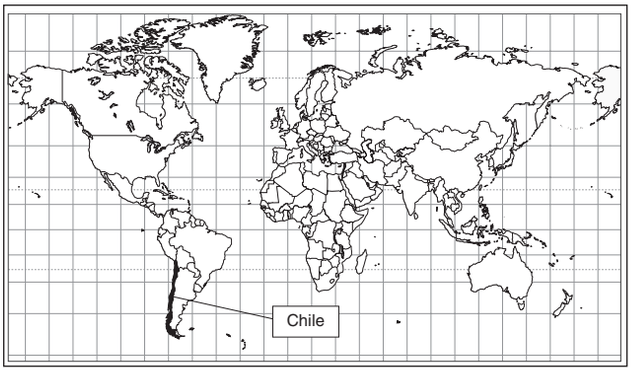
CHILE

Population (2010, proj.): 17,135,000

Gross National Income per Capita (current, 2007): $8,190

Date of Independence: September 18, 1810 (from Spain)

Date of Last Constitution: March 11, 1981 (amended 1989, 1991, 1997, 1999, 2000, 2003, and 2005)



An important economic player in South America, Chile enjoys considerable freedom of expression, though media ownership is concentrated. Discussion of the military dictatorship that ended in 1989 remains a touchy subject. There are far more journalists than news media positions to employ them and many work in other fields. Internet access is widespread.

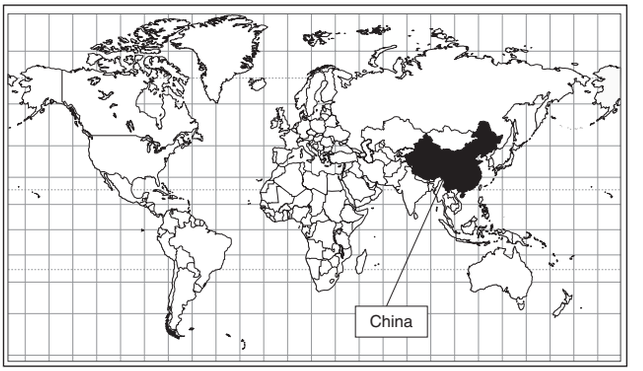
China

Population (2010, proj.): 1,354,146,000

Gross National Income per Capita (current, 2007): $2,370

Date of Independence: October 1, 1949 (People's Republic of China established)

Date of Last Constitution: December 4, 1982 (amended in 1988 and 1993)



China is the world's most populous nation and a fast-rising economic and political power. All media (including the Internet) are closely controlled by the government. Media reports on earthquake and flood events and their aftermath are monitored, though reports of official corruption and misconduct are often allowed. Journalists who push too far, however, risk imprisonment. Despite official pledges to the contrary, news media restrictions continued during and after the 2008 Olympic Games. Internet use—despite content restrictions—is second only to the United States.

While press freedom is guaranteed by law, continued political unrest and battles against drug cartels serve to limit news media coverage. The country is the most dangerous in South America for journalists, who are subject to a variety of attacks and are often seen as the enemies of political figures. Most media are privately owned and radio is expanding. Government advertising is an important revenue source—and means of limiting the freedom to comment or criticize. Journalists are widely suspected of taking bribes. Internet access is not controlled and expanding.

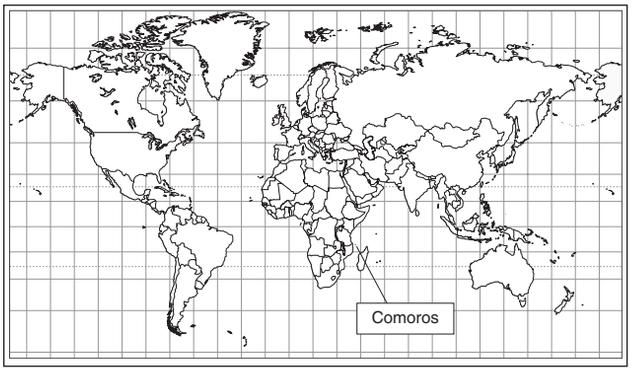
Comoros

Population (2010, proj.): 691,000

Gross National Income per Capita (current, 2007): $680

Date of Independence: July 6, 1975 (from France)

Date of Last Constitution: December 23, 2001



Despite constitutional guarantees of press freedom, in reality there is a high degree of government harassment of journalists and ready use of defamation laws to limit criticism. Government-operated broadcasting faces growing competition from private outlets. Internet service is used by only a few.

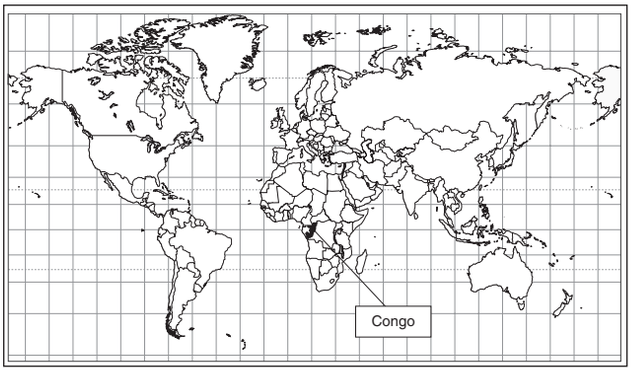
Congo, Republic of

Population (2010, proj.): 3,759,000

Gross National Income per Capita (current, 2007): $1,540

Date of Independence: August 15, 1960 (from France)

Date of Last Constitution: January 20, 2002



Press laws have reduced most jailable offenses to fines, though these can be for publishing "false" news and other hard-to-define crimes. Privately owned weekly papers circulate in the capital city and criticize government, but they have little presence in rural regions. Government controls broadcasting, and Internet access is rare.

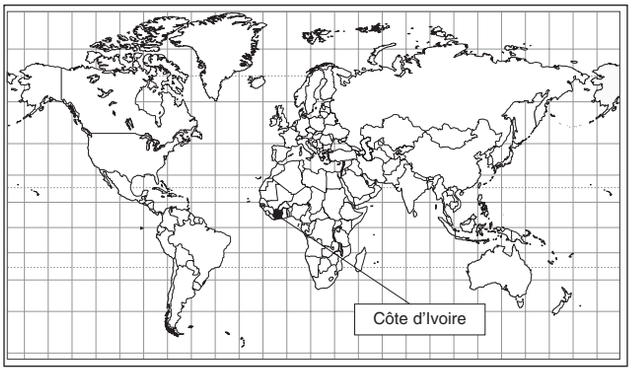
Côte d'Ivoire

Population (2010, proj.): 21,571,000

Gross National Income per Capita (current, 2007): $920

Date of Independence: August 7, 1960 (from France)

Date of Last Constitution: July 23, 2000



This West African nation has suffered press repression due to continued internal fighting. "Student" groups are active as arms of one political group or another and often harass news media and journalists. The government-controlled newspaper and radio station are the most widely circulated media. Internet access is unrestricted but expensive and thus little used.

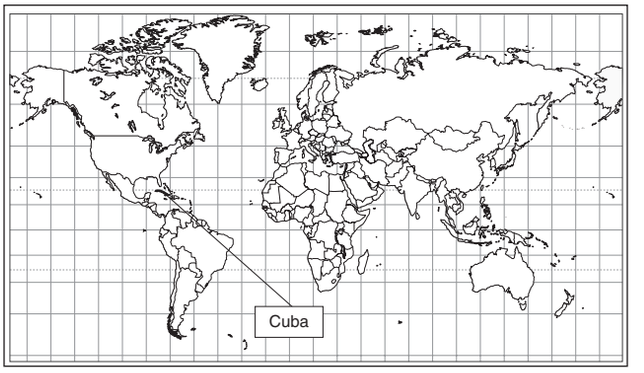
Population (2010, proj.): 11,204,000

Gross National Income per Capita: N/A

Date of Independence: December 10, 1902 (from Spain); May 20, 1902 (from U.S. administration)

Date of Last Constitution: February 24, 1976 (amended July 1992 and June 2002)



Despite the passing of Fidel Castro from power, Cuban media remain the most closely controlled by government in the western hemisphere. Virtually all media (save for some underground papers) are government operated. Internet access is tightly controlled as well.

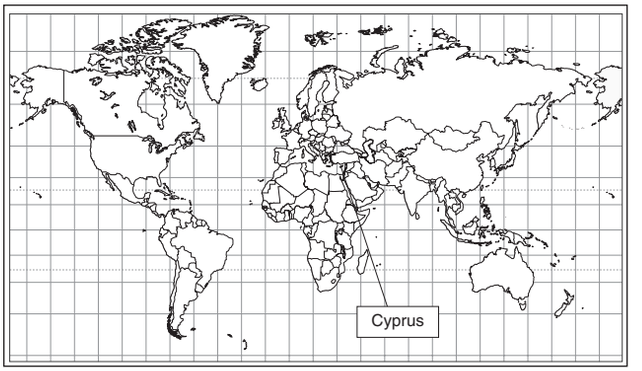
Cyprus

Population (2010, proj.): 880,000

Gross National Income per Capita (current, 2007): $24,940

Date of Independence: August 16, 1960 (from the UK)

Date of Last Constitution: August 16, 1960



This island remains divided into often hostile Greek and Turkish sectors, with greater press freedom in the former (indeed, the numbers below refer to the Greek portion). Newspapers are closely linked to political parties, and broadcasts are widely received from both Turkish and Greek stations. Internet access is widespread and expanding.

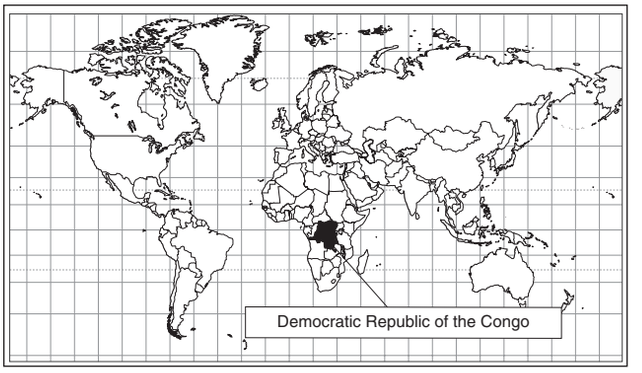
Democratic Republic of the Congo

Population (2010, proj.): 67,827,000

Gross National Income per Capita (current, 2007): $140

Date of Independence: June 30, 1960 (from Belgium)

Date of Last Constitution: February 18, 2006



Despite the appearance of legal protections, press freedom is constrained by the government and other political groups. Licensing, criminal defamation, and jailing without charges are widely used to keep journalists in check. Attacks on news people are common. While there are hundreds of privately owned news outlets, only radio circulates widely and that is state controlled save for one UN-operated and Swiss-funded network. Internet access is rare, though not restricted.

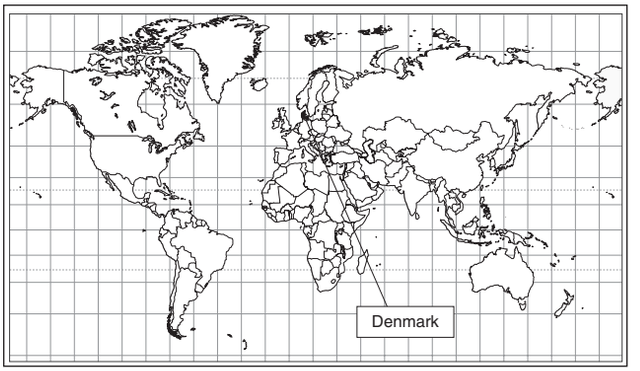
Denmark

Population (2010, proj.): 5,481,000

Gross National Income per Capita (current, 2007): $55,440

Date of Independence: 1849 (becomes constitutional monarchy)

Date of Last Constitution: June 5, 1953



Danish news media are among the freest in the world. Newspapers are privately owned, many by political parties, and government subsidies are available as well. Public service broadcasting is supported by license fees on receivers as is common across Europe, though budget cuts are trimming programming. Satellite, cable, and Internet services are all widely available.

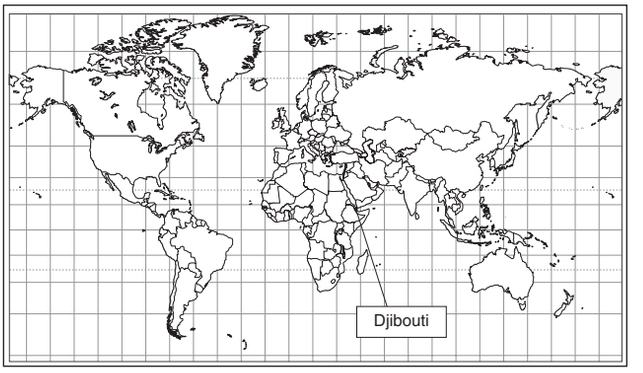
DJIBOUTI

Population (2010, proj.): 879,000

Gross National Income per Capita (current, 2007): $1,090

Date of Independence: June 27, 1977 (from France)

Date of Last Constitution: September 4, 1992



Despite constitutional protections, the press in this tiny African nation is closely monitored or otherwise limited by the government. Libel actions are a widely used threat against reporters who stray too far from government opinion. Government runs the only radio (the most important news medium) and television services as well as the thrice-weekly newspaper. The Internet is a minor factor.

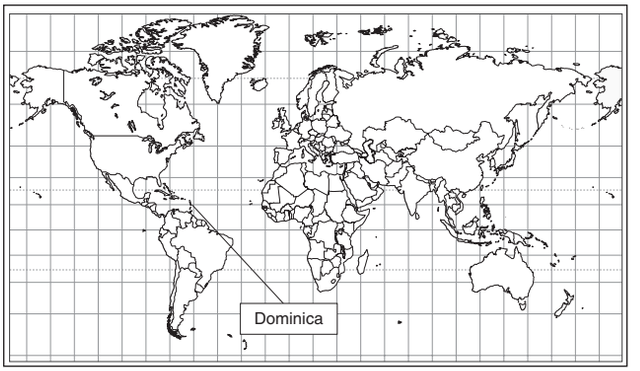
DOMINICA

Population (2010, proj.): 67,000

Gross National Income per Capita (current, 2006): $4,030

Date of Independence: November 3, 1978 (from the UK)

Date of Last Constitution: November 3, 1978



This Caribbean island has few media—-several weekly papers, four radio stations, and a cable network. There is generally little tension between reporters and government. Internet use is common and continues to expand.

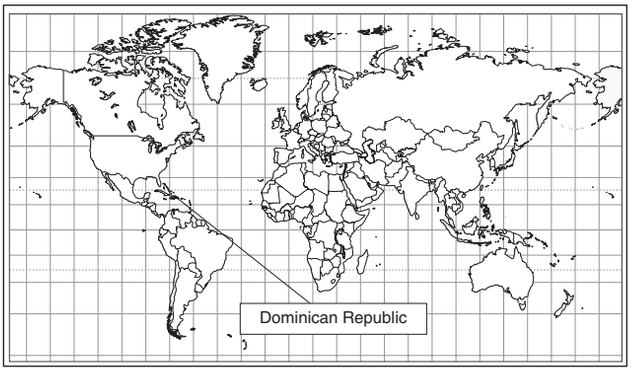
Dominican Republic

Population (2010, proj.): 10,225,000

Gross National Income per Capita (current, 2007): $3,560

Date of Independence: February 27, 1844 (from Haiti)

Date of Last Constitution: November 28, 1966 (amended July 25, 2002)



While protected under law, press freedom has been slowly eroding as government shows less tolerance for critical reporting. Attacks on journalists—often not prosecuted by the police or courts—are relatively common. There are many daily papers, a government-operated radio-television service, some 300 private radio, and 40 television stations. Internet access is costly but not otherwise regulated.

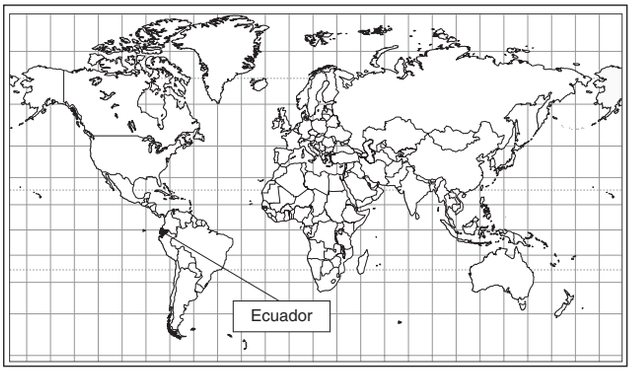
ECUADOR

Population (2010, proj.): 13,775,000

Gross National Income per Capita (current, 2007): $3,110

Date of Independence: May 24, 1822 (from Spain)

Date of Last Constitution: October 20, 2008



This Andean nation enjoys constitutional freedom of the press, though criminal libel laws, in practice, considerably reduce news media freedom of action and encourage self-censorship. Most media are privately owned, though the state runs a newspaper and broadcast stations as well. A new constitution with free press provisions is pending. Internet access, while unrestricted, is not widespread.

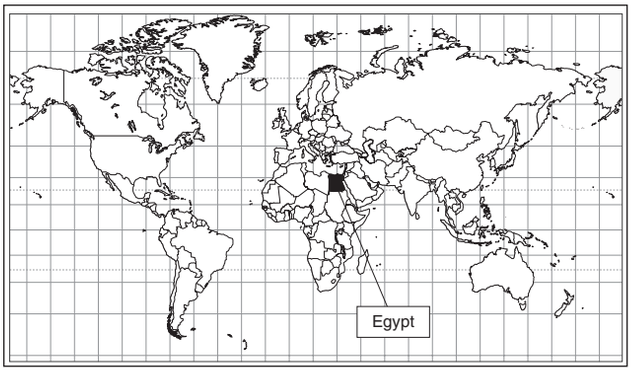
Egypt

Population (2010, proj.): 84,474,000
Gross National Income per Capita (current, 2007): $1,580
Date of Independence: February 28, 1922 (from the UK)
Date of Last Constitution: September 11, 1971 (amended May 22, 1980; May 25, 2005; and March 26, 2007)



This most populous Arab nation, a key player in Middle East matters, has seen widespread press pressure and repression by the Mubarak government. Criminal defamation and laws against "false" news or that which impugns the honor of the country or Islam generally are widely used tools of control. There are hundreds of news publications and both state-owned and private broadcasters, the latter becoming slowly more outspoken. Internet use is expanding with some government blocking of channels thought too critical of government or Islam.

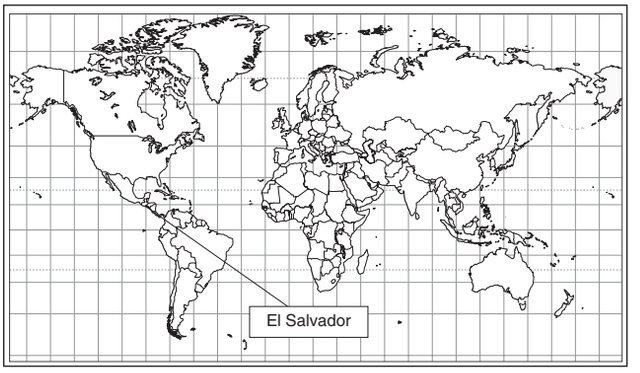
El Salvador

Population (2010, proj.): 6,194,000

Gross National Income per Capita (current, 2007): $2,850

Date of Independence: September 15, 1821 (from Spain)

Date of Last Constitution: December 20, 1983



Freedom of the press is a part of the constitution and is generally observed, though courts can and do limit access to government information. Self-censorship is common; attacks on journalists are not. While there are several large daily newspapers, most of the nation relies on private radio and television stations for news. Internet access continues to expand.

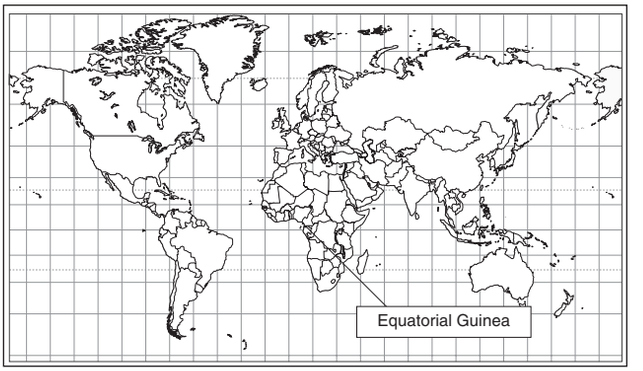
Equatorial Guinea

Population (2010, proj.): 693,000

Gross National Income per Capita (current, 2007): $12,860

Date of Independence: October 12, 1968 (from Spain)

Date of Last Constitution: November 17, 1991 (amended January 1995)



Though press and speech freedoms are legally guaranteed, actual practice is otherwise. Censorship is allowed and exercised, and access to government information is difficult (and not guaranteed in any case). Journalists are monitored and practice self-censorship. There are no independent media—all broadcast outlets, for example, are controlled by government or the President's family—nor are foreign publications available. Internet access is limited due to high cost.

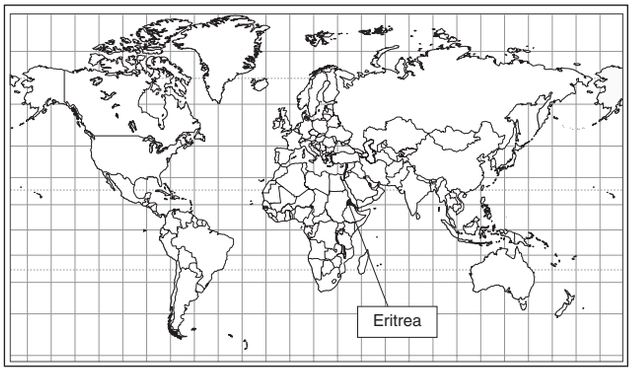
ERITREA

Population (2010, proj.): 5,224,000

Gross National Income per Capita (current, 2007): $270

Date of Independence: May 24, 1993 (from Ethiopia)

Date of Last Constitution: May 23, 1997 (adopted, not yet implemented)



This East African nation suffers severe news media repression, underlined by widespread attacks on journalists. There are no privately owned media—the government operates the handful of newspapers and broadcast stations. Few foreign journalists are admitted and all journalists are licensed. Likewise, Internet access is tightly controlled.

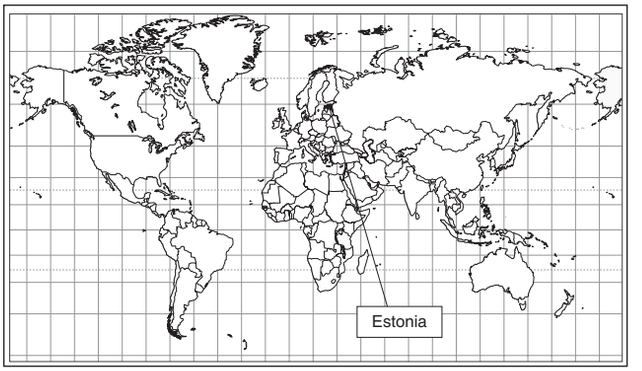
ESTONIA

Population (2010, proj.): 1,339,000

Gross National Income per Capita (current, 2007): $12,830

Date of Independence: August 20, 1991 (from the Soviet Union)

Date of Last Constitution: June 28, 1992



This one-time Soviet satellite nation now enjoys broad news media freedom paralleling elsewhere in Europe. There are numerous media outlets that operate free of government interference. Both government and private broadcasters operate freely. Internet access is widespread.

Despite constitutional guarantees of press freedom, the reality in Ethiopia is quite different. A 1992 press law allows use of libel, as well as bans on "false" news and incitement of ethnic hatred, as means of government control. Harassment and jailing of dissident journalists is common. The government controls all radio and the only television station. Access by foreign journalists is limited and international radio services from other countries are often jammed. Internet access is also severely limited.

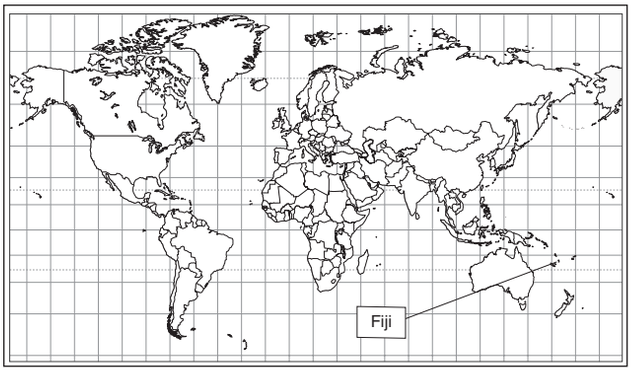
Fiji

Population (2010, proj.): 854,000

Gross National Income per Capita (current, 2007): $3,750

Date of Independence: October 10, 1970 (from the UK)

Date of Last Constitution: July 28, 1998



This Pacific island has suffered numerous political coups, which have often been reflected in ramped up press controls. State and privately owned media compete in both press and broadcasting. Internet access and use appears to be closely monitored—and is not widespread in any case.

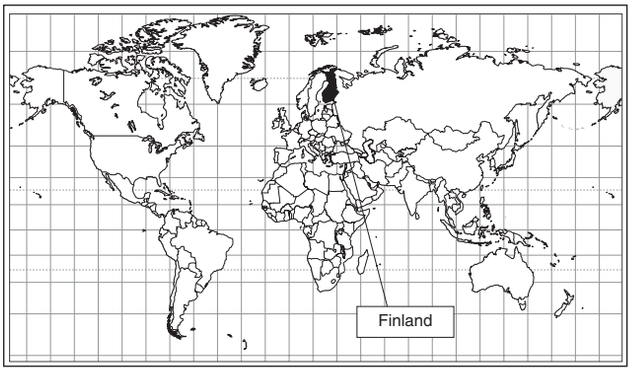
FINLAND

Population (2010, proj.): 5,346,000

Gross National Income per Capita (current, 2007): $44,300

Date of Independence: December 6, 1917 (from Russia)

Date of Last Constitution: March 1, 2000



Finnish media are among the freest and most open in the world. Some 200 newspapers are published (31 are dailies), though ownership is highly concentrated. Government and private radio and television stations compete, and Internet access is among the highest in the world.

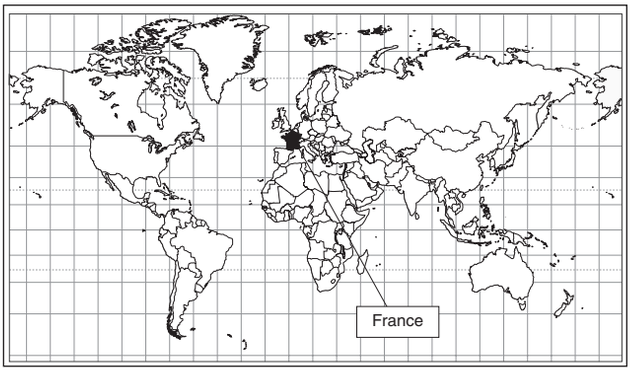
France

Population (2010, proj.): 62,637,000

Gross National Income per Capita (current, 2007): $38,810

Date of Independence: 843 (established from the division of the Carolingian Empire)

Date of Last Constitution: October 4, 1958



French print and broadcast media are generally free and very vocal on political and social matters. Government advertising and other support can be used to ensure favorable news reports. There is some government pressure on journalists concerning confidential sources. Newspapers are privately owned though circulation is declining. As elsewhere in the European Union, some 60 percent of broadcast content must be of European origin. Internet access is widespread.

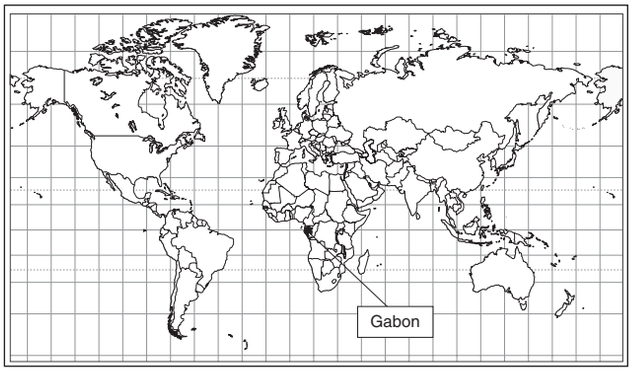
Gabon

Population (2010, proj.): 1,501,000

Gross National Income per Capita (current, 2007): $7,020

Date of Independence: August 17, 1960 (from France)

Date of Last Constitution: March 14, 1991



Though freedom of expression and the press is guaranteed by the constitution, journalists find the environment constrained by de facto government censorship. Limited financial resources also constrain the media environment. In fact, many private newspapers in Gabon must use printing facilities in neighboring Cameroon, given the high cost of manufacturing at the one printing plant operating in Gabon. Internet access is not restricted, though less than 6 percent had access in 2007.

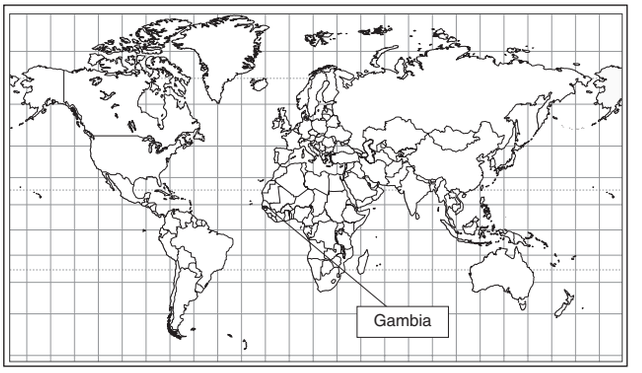
GAMBIA

Population (2010, proj.): 1,751,000

Gross National Income per Capita (current, 2007): $320

Date of Independence: February 18, 1965 (from the UK)

Date of Last Constitution: January 16, 1997



Constitutional guarantees of freedom of expression are weakened by legislative regulation that imposes harsh penalties for libel and sedition. This long history of censorship—dating back to the early 1990s—was strengthened by two pieces of legislation passed in 2004: the Newspaper Amendment Act and the amendment of the criminal code. Extralegal intimidation and violence, or the threat thereof, continues to restrict journalistic activity in the country in 2007. Internet usage is close to 5 percent.

Journalists in Georgia enjoy constitutional freedoms and laws upholding those freedoms. However, government has been resistant to implementing these legal guarantees. Also, the government cracked down on several news outlets following the November 2007 antigovernment protests. The country has a large number of independent media outlets, especially considering its size: there are 200 independent newspapers and at least 8 independent or privately owned television stations. While growing, the rate of Internet usage in 2007 was about 7 percent of the population.

Characterized by diversity and independence, Germany's 16 individual state governments operate public radio and television stations; the country also enjoys several private radio and TV stations, along with many local/regional and a few national newspapers. Germany's constitution guarantees freedom of expression and the press, but exceptions—for hate speech, Holocaust denial, and Nazi propaganda—exist and are enforced, sometimes in high-profile cases. A freedom of information law exists to regulate access to sensitive information, though court appeal has been successfully used to open access to requested information. Over 64 percent of the population accessed the Internet in 2007.

Freedom of the press is legally guaranteed in Ghana, as well as enjoyed de facto throughout the country. While plagued by lack of financial resources in many cases, media outlets are numerous: for instance, over 135 newspapers (of them, 2 are state-owned dailies) operated in Ghana in 2007. The de-criminalization of libel has also helped expand freedom of the press. Occasional breaches of open access policies—such as the restriction of journalists in covering the African Union meeting in Accra in 2006—have sullied the government's generally supportive policy of press freedom. Internet access, in 2007, was at 2.7 percent.

Freedom of speech and the press are constitutionally guaranteed in Greece, with some exceptions, including for inciting fear, violence, and disharmony among the population. The country enjoys numerous media outlets. Many independent newspapers and magazines, some of which can be highly critical of the government, are in operation; many broadcast stations operate independently, some without official licenses. The reporting by the state-run broadcast stations often reflects a government bias. Internet access is low relative to the rest of Europe, with only a 33 percent access rate in 2007.

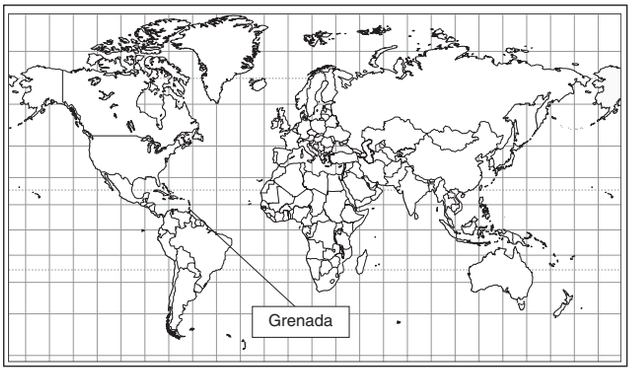
GRENADA

Population (2010, proj.): 104,000

Gross National Income per Capita (current, 2007): $3,920

Date of Independence: February 7, 1974 (from the UK)

Date of Last Constitution: December 19, 1973



Freedom of the press is legally guaranteed in Grenada; however, the government has been known to use the threat of libel suits to attempt to intimidate and control news outlets. As small as it is, Grenada has a considerable number of active media outlets, including 5 television stations, 11 radio stations, and 4 newspapers as of 2007.

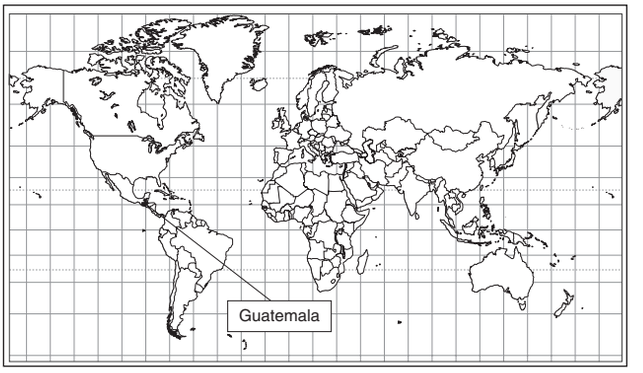
GUATEMALA

Population (2010, proj.): 14,377,000

Gross National Income per Capita (current, 2007): $2,450

Date of Independence: September 15, 1821 (from Spain)

Date of Last Constitution: May 31, 1985



While press freedom is guaranteed constitutionally in Guatemala, sporadic violence against journalists by nonstate actors has created an intimidating and sometimes dangerous environment for the media. The government generally upholds the freedom of the press. News and media outlets are relatively centralized in the hands of financial elites. While there are four national daily newspapers, for instance, ownership is concentrated in one company, Prensa Libre. About 7 percent of the population accessed the Internet in 2007.

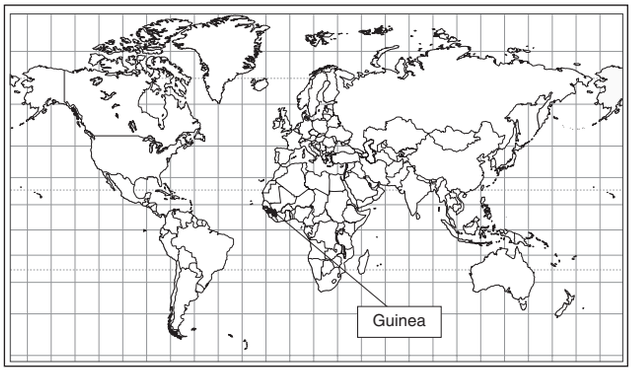
GUINEA

Population (2010, proj.): 10,324,000

Gross National Income per Capita (current, 2007): $400

Date of Independence: October 2, 1958 (from France)

Date of Last Constitution: December 23, 1990



While Guinea's constitution guarantees freedom of the press, the long-ruling government of Lansana Conte is known for bullying and sometimes direct control of news outlets, particularly in times of civil protest. The use of defamation and slander as criminal offenses is still used to intimidate the press, despite a decline in the prosecution of such cases in 2007. Print outlets are more numerous relative to broadcast media, but all private media outlets are hamstrung by financial constraints. Less than 1 percent had access to the Internet in 2007.

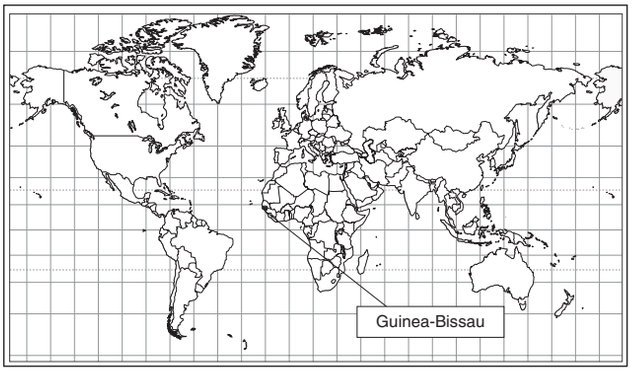
GUINEA-BISSAU

Population (2010, proj.): 1,647,000

Gross National Income per Capita (current, 2007): $200

Date of Independence: September 10, 1974 (from Portugal)

Date of Last Constitution: May 16, 1984 (last amended in 1996)



While recent efforts to liberalize press freedoms have occurred in Guinea-Bissau, notably in 2006, there are troubling signs of intimidation largely by non-state actors, particularly those related to the drug trade. The number of media outlets is limited. For instance, only one television station, a state-run enterprise, operates. In 2007, only 2.4 percent of the population had Internet access.
