Preface

ORGANIZATION OF THIS BOOK

This book is organized in an accessible A-Z format with hundreds of entries discussing civil liberties in the United States that should be useful to high school students and teachers, college students and professors, and members of the general public. Professors David Bradley of the College of William and Mary, Williamsburg, Virginia, and Shelley Fisher Fishkin of the University of Texas at Austin previously compiled *The Encyclopedia of Civil Rights in America* in 1998, and this work is designed to complement that set.

Scholars of the subject know that attempts to distinguish civil rights from civil liberties are illusory objectives at best. We take a largely functional approach. Typically, civil rights issues center chiefly on rights related to the Equal Protection Clause of the Fourteenth Amendment and its application to issues of race, gender, and related classifications, whereas civil liberties issues center on rights found within the Bill of Rights (the first ten amendments to the Constitution) and elsewhere in the Constitution. Recognizing that some overlap would be necessary, we followed this basic division in compiling this book. We have thus omitted many civil rights issues, not because they are unimportant but because they are covered fully in *The Encyclopedia of Civil Rights in America*. Similarly, these volumes focus chiefly on the American experience and some of its English roots, simply because one set of volumes can address only so much.

ENTRIES

This book contains essays on terms, historical documents and events, constitutional provisions, individuals and associations that have been important in the struggle for civil liberties, legal terms and procedures, U.S. Supreme Court decisions, contemporary issues, and the like. Each entry contains one or more references for further research or reading, and all three volumes are indexed.

We have been humbled by the efforts of scores of practitioners and scholars in a variety of disciplines and occupations who have so generously contributed to these volumes. Although we originally developed a headword list for this project, this encyclopedia is vastly enriched by the ideas of many contributors who suggested numerous additional terms and essays. Many are friends, but many others are simply scholars who have seen our requests for help on the Internet and elsewhere and who have, by responding, demonstrated their interest in the subject of these volumes. We thank all the contributors, apologizing in advance for often having to impose word limits that gave many of them far less space than they would have wanted or even than they might have thought was necessary. In a few instances, we inadvertently assigned the same topic to more than one individual. In such cases, we combined them, crediting both authors, again with apologies to each.

We also thank our editors at M.E. Sharpe for formulating the idea of this work, for contacting us about it, for helping us to publicize it, and for seeing the project to completion. We especially want to thank Todd Hallman, Cathy Prisco, and Wendy Muto, who have all had a part in this project.

We recognize that no list of entries can be complete. Each year brings new events, new judicial decisions, and new legislative and executive actions. Although the protection of civil liberties may, as Thomas Jefferson asserted in the Declaration of Independence, involve the application of universal principles, or "inalienable rights," human understandings and application of these rights must be tailored to unique times and circumstances.

The editors of these volumes approach the subject from somewhat different perspectives, but both of us are strongly committed to the perpetuation of civil liberties in America. We fervently hope that these volumes will serve as useful reference material to enhance both knowledge and appreciation of America's unique heritage. We further hope that the United States will continue to serve its historical role as a beacon of liberty throughout the world.

When asked what kind of government the framers

of the nation had created, Benjamin Franklin was reputed to have responded, "A republic, if you can keep it." The editors of these volumes believe that civil liberties continue to be a vital part of republican government. Defense and preservation of civil liberties are less threatening to the nation's security than is the abandonment of these goals. In keeping with America's founding fathers, we continue to believe that American liberties are ultimately American "blessings."

Introduction

Alexis de Tocqueville wrote of the United States in his famous *Democracy in America* (1835) that the character of America could be understood, in part, by the spirit of liberty that pervaded its institutions and people. From the vantage point of the early twenty-first century, the history of the United States, from its founding to the present, can be described more appropriately as a continuing battle between efforts by groups and individuals demanding civil liberties and freedoms for themselves and others, on the one hand, versus the unfortunate reality that these liberties often have been suppressed and denied, on the other. Our goal in *The Encyclopedia of Civil Liberties in America* is to tell these stories, providing comprehensive documentation and discussion of the major people, groups, institutions, events, cases, and issues that have defined the battle for individual liberty in the United States.

When the delegates to the U.S. Constitutional Convention of 1787 composed a preamble to summarize why they wrote the Constitution, they stated they hoped to "secure the blessings of liberty for ourselves and our posterity." We are proud to be editing these volumes because we believe this is still a worthy objective. We further realize that such security is never final but demands recurring commitment from each generation of Americans, and that widespread civic knowledge of the blessings of liberty is essential to the perpetuation of freedom.

ROOTS OF CIVIL LIBERTIES

The idea of personal liberty was not born on the North American continent. Ancient philosophers of the Greek city-states had passed the torch of liberty to statesmen who defended the Roman republic, to early Christians who asserted the right to follow their conscience, to English barons who refused to be bullied by a tyrannical king, to Protestant leaders of the Reformation, and to Englishmen who ousted kings and established the Parliament and other representative institutions. These wellsprings of liberty in turn fed the streams of freedom in the New World.

Great Britain was the primary source of settlers in America, and the nation continues to be indebted to England for many of its ideas of freedom. Although Britain had a monarch, this monarch was limited and subject to law. The Magna Carta and the English Bill of Rights were among the documents to proclaim that individuals were entitled to certain liberties, and that government was restrained. In developing the common law, English courts in turn cobbled out basic freedoms, such as the individual's right to be free from unwarranted governmental intrusions at home and the right to jury trials. These were, in turn, transplanted to the New World.

LIBERTIES IN THE NEW WORLD SETTING

If ever a place was destined for liberty, it was the New World. Although the motives of settlers were mixed, many came to America specifically because they thought they would be able to exercise their freedoms here. This was particularly true of America's favorite founding fathers, the Pilgrims, who drafted a compact of self-government even before they disembarked from their ships. However, it was also true for Quakers who settled in Pennsylvania, for Catholics who settled in Maryland, and for settlers everywhere who were hoping for greater opportunities that would be available in a society lacking deeply entrenched institutions or a hereditary aristocracy. In truth, settlers who came to America to exercise their own freedom were not always anxious to extend it to others; thus the Pilgrims tried to establish a theocracy excluding those individuals they believed to be heretical. Moreover, as richly told by Arthur Miller in *The Crucible* (one of many books once banned by schools or libraries in America), fear and prejudice took their toll upon many people during the Salem witch-hunts, when over twenty individuals were hanged or crushed to death because they were different from the rest. Such events, however, often were illumined by vocal dissenters, as when John Peter Zenger in 1735 dared to publish writings critical of British rule over the American colonies, and over time Americans began to connect the idea of exercising personal freedom with the parallel notion of extending it to others.

An ocean removed from would-be European masters, American settlers quickly found they had to be resourceful simply to survive on the vast continent. Distance precluded taking everyday matters to a foreign king, and the colonists quickly set up legislative

assemblies to take care of most such business themselves. Occasionally, a royal governor or king would disapprove a measure that the legislature enacted. But especially up to the end of the French and Indian War in 1763, after which the English thought they should recoup some of their expenditures in defending the colonists, the English exercised a policy of "salutary neglect" over the colonies that allowed them to gain experience and self-confidence in self-government—all of which served them well when they declared their complete independence from Great Britain.

THE AMERICAN REVOLUTION AND THE DECLARATION OF INDEPENDENCE

The period from 1763 through the end of the Revolutionary War is often considered to be the "seed time" of civil liberties in America; certainly, the rhetoric of liberty blossomed during this time. Significantly, the colonists did not profess to be inventing new rights. Rather, most asserted they were simply claiming their rights as Englishmen. As they dumped tea into Boston Harbor, the colonists gave symbolic meaning to the cherished right of "no taxation without representation," but, as the Declaration of Independence would later delineate, the colonists claimed other freedoms as well. They objected to general warrants whereby British agents descended on American ports and ransacked personal belongings. They objected to holding trials of American citizens abroad where they would not receive a trial by their peers. They objected when governors dismissed the colonists' representative assemblies. In fact, the Declaration of Independence reveals not only a political philosophy about personal liberties but also a bill of particulars against King George III and the abuses the colonists had endured from him.

Initially, the colonists limited their resistance chiefly to claims of parliamentary sovereignty and appealed to the English king, who had issued the charters the colonists so valued, to come to their aid. After the king rebuffed petition after petition, the colonists recognized that, on this issue, the king was going to side with Parliament rather than fight it. Drawing from a vast well of opposition Whig literature in England, such as was evident in John Trenchard and Thomas Gordon's *Cato's Letters* and John Locke's *Two Treatises on Government,* the colonists eventually disclaimed the authority of both king and Parliament in America.

After fighting broke out at Lexington and Concord and the colonists abandoned the idea of reconciliation with the mother country, Thomas Jefferson took the lead on a five-man committee and drafted the Declaration of Independence, which the Second Continental Congress subsequently revised and approved in July 1776. If Americans were to declare their independence from Britain, they realized they could no longer base their claims simply on the rights of Englishmen. Drawing chiefly from the natural-rights and social-contract theories of his day, Jefferson thus proclaimed that "all men are created equal" and were endowed by their Creator with certain "inalienable rights," among which he listed "life, liberty, and the pursuit of happiness." He further asserted that the people had the right to overthrow a government that did not secure such rights and replace it with one that would.

Such rhetoric inspired Americans to wage and ultimately win a long and arduous contest for liberty against what was then the world's greatest military power. As if to put feet to their rhetoric, states began the process of replacing their royal charters with their own more democratic constitutions. During the drafting of the Virginia Constitution, George Mason wrote a historic declaration of rights that was subsequently copied in many other states.

Unfortunately, the rhetoric of freedom did not always match reality. The most glaring mismatch was that of slavery. It was hypocritical for Americans to be fighting for their liberties even as they were subjugating other individuals, but the institution existed. The treatment of Native Americans also did little to recognize their equality, and they and slaves were relegated to be "other persons," counted in the Constitution as merely three-fifths of white males. Despite Abigail Adams's pleas to her husband, John, to "remember the ladies" as the framers declared their independence in 1776, women gained faint recognition when the Constitution was written in 1787. Finally, the property of Tories was not always respected, more evidence that those who disagreed about the need for revolution did not always win favor for their views.

As jarring as the disconnect between the language of freedom and equality and the reality often was, words once spoken and written sometimes acquired their own momentum. Some states freed their slaves as they began to apply the doctrines of liberty they had proclaimed, and states widened voting rights and other constitutional protections.

THE ARTICLES OF CONFEDERATION, THE CONSTITUTION, AND THE BILL OF RIGHTS

The end of the Revolutionary War ushered in a new stage in American history, and the initial road was rocky. Prizing the colonies' histories as thirteen separate entities, the creators of the Articles of Confederation (1781–1789) emphasized the freedom and independence of the states over those rights of individuals. They withheld vital powers from Congress, and the resulting weakness eventually threatened American security both at home and abroad.

By 1787, key leaders recognized that the powers of the national government needed to be strengthened. They realized the people would not be comfortable with entrusting such powers to the national government unless those powers could be restricted. The delegates to the Constitutional Convention that met May-September 1787 did all they could to create a democratic republican government that would protect civil rights and liberties. They divided the new government into three branches that would mutually check one another. They split Congress into two branches, an upper and a lower house. They continued to parcel out powers between state and national authorities. They relied on representatives with varied terms of office to refine the public view. They also relied on the idea, best explained and defended by James Madison in *Federalist No.10,* that extending republican government over a large land area like that of the United States would encompass such a diversity of factions, or interests, that no one of them would be likely to dominate.

Believing that the entire Constitution thus served to protect individual rights and liberties, its framers were stung by critiques of the Antifederalist opponents of the Constitution that the document was inadequate because it failed to include a bill of rights. In events that are spelled out in greater detail in the introduction to *The Encyclopedia of Civil Rights in America* that these volumes complement, Federalist supporters of the Constitution countered with a number of arguments: that the new government would be exercising limited powers; that the text of the Constitution already contained some guarantees for liberties—guarantees, for example, against ex post facto laws and bills of attainder; that lists of liberties could prove dangerous by becoming the basis for the argument that all rights not reserved had been entrusted to the government; and that those in power sometimes ignored guarantees that were listed in bills of rights.

As Thomas Jefferson pointed out in letters to his friend James Madison, however, these arguments were not persuasive. The fact that the Constitution already contained some such guarantees indicated that guarantees were not in and of themselves harmful. A list of guarantees would help educate the public by keeping essential liberties in the public view. In prophetic words that Madison later repeated in the first Congress, Jefferson further argued that specific constitutional prohibitions would grant courts a basis to invalidate unconstitutional legislation that trammeled on such liberties.

In time, Federalists agreed to support a bill of rights once the Constitution was adopted. True to this pledge, James Madison, who had done so much to write and secure the adoption of the Constitution, successfully led the battle for such a bill in the first Congress.

The eventual result was the first ten amendments to the U.S. Constitution—the Bill of Rights—in which the framers articulated more than twenty-five rights. The requisite number of states ratified these amendments in December 1791. These amendments continue to serve both as an enduring symbol of American ideals and as protections that individuals can evoke in court when their liberties have been suppressed. This volume contains many entries related to these amendments, but a brief summary is appropriate here.

PROVISIONS OF THE BILL OF RIGHTS

The First Amendment contains one of the most cherished lists of rights (five in all) within the Constitution. Two provisions relate to religious freedom—one guaranteeing "free exercise" of religion, the other pre-

venting the "establishment" of religion. The amendment also protects freedom of speech and press, of petition, and of peaceable assembly. Each clause has provided a fertile field for application and dispute.

The Second and Third Amendments have not to date proved as ripe for judicial decision-making, but each continues to be debated and discussed. The central Second Amendment debate swirls around whether the amendment is designed chiefly to protect a personal right to bear arms or is tied more directly to the maintenance of a militia. The Third Amendment, which grew out of specific British abuses of the colonies, prohibits the billeting of troops in a private home without the owner's consent or without the guidance of law.

The colonists used the Fourth Amendment to secure themselves against the abuses of general warrants that the British had inflicted upon them. As a means of securing "persons, houses, papers, and effects against unreasonable searches and seizures," the amendment provides that warrants cannot be issued except "upon probable cause, supported by oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized."

The Fifth Amendment contains a laundry list of guarantees, most related to protections for individuals who are accused of crimes. It provides for indictments by grand juries, prohibits double jeopardy, forbids extortion of confessions, and prohibits the deprivation of "life, liberty, or property, without due process of law." In a separate provision indicating the founders' belief that property rights were also important—a notion that has received increased attention in recent years—the Fifth Amendment also prohibits government from taking private property for public use without providing the owner "just" compensation.

The primary focus of the Sixth Amendment is on the rights of individuals who are on trial for criminal offenses. It provides the following guarantees: Criminal trials shall be both speedy and public; they shall be conducted before an impartial jury from the district; individuals shall be informed of the charges against them; defendants shall have the subpoena power of government to obtain witnesses; and defendants shall be entitled to be represented by attorneys. The Seventh Amendment further extends the guarantee of jury trials to civil cases.

The Eighth Amendment prohibits excessive bail and excessive fines. With a view toward the cruelty that was often common in the criminal justice system of its day, this amendment also prohibits "cruel and unusual punishments."

The Ninth and Tenth Amendments are somewhat more elusive. The Ninth, designed to respond to earlier Federalist arguments that an unintentionally incomplete list of rights might be interpreted as excluding others, refers to other rights "retained by the people." The Tenth Amendment further reminds readers that powers not delegated to the United States remain with the states and their people.

RIGHTS IN THE EARLY REPUBLIC

Although the national government was strong, it exercised relatively few powers over individual liberties in America's early years under the Constitution, and courts rarely adjudicated issues involving the Bill of Rights during this period. In one of the few such cases, *Barron v. City of Baltimore,* 32 U.S. 243 (1833), the U.S. Supreme Court ruled that the Bill of Rights did not apply to the states. Not until the end of the nineteenth century would the Court argue that states must respect the Bill of Rights guarantees—at first in terms of property rights—and it was not until the twentieth century that the Bill of Rights would be selectively incorporated through the Due Process Clause of the Fourteenth Amendment to limit the power of states to infringe upon individual liberties.

In the early days of the republic, courts were much more concerned with adjudicating disputes among the branches of the national government and between the national government and the states, and establishing the power, known as "judicial review," to invalidate legislation that judges considered to be unconstitutional.

The one liberty to receive the Court's attention in the early republic was the right of property. Under Chief Justice John Marshall, the Court invalidated numerous state acts that were thought to interfere with the Contracts Clause in Article I, Section 10 of the Constitution, which prohibits states from passing any laws "impairing the obligation of contracts." Marshall combined such protections with strong assertions of

national authority, as in his decision in *McCulloch v. Maryland,* 17 U.S. 316 (1819), upholding the constitutionality of the national bank.

Then as now, it was often difficult to honor rights and liberties when the nation faced crises, and the early republic was awash in them. America was torn by conflict between individuals (usually associated with the Federalist Party) who were more closely attached to Great Britain and those (usually associated with the Democratic-Republican Party) who were more closely aligned with France and its revolution. At times, war threatened. On one of these occasions, the Federalists used their position of congressional dominance to pass the Alien and Sedition Acts (1798) making it more difficult for foreigners to be naturalized and making it a punishable offense to criticize the president of the United States. Because Federalists controlled the judiciary, Democratic-Republican leaders James Madison and Thomas Jefferson attempted to protest chiefly by asserting state authority in the Virginia and Kentucky resolutions, and thus in part resurrecting the theory of government on which the Articles of Confederation had rested. Jeffersonian Republicans, in turn, arguably threatened liberty when they later came to power and pursued prosecution of Aaron Burr and sought to undermine judicial independence through use of the impeachment process.

Of all the issues in early American history, however, none was to become more important than the future of slavery. Northerners became increasingly convinced that this institution was incompatible with American ideals. Southerners began to replace earlier protestations that slavery was a necessary evil with new claims, based on assumptions of African American inferiority, that slavery was actually a positive good. As citizens and politicians debated whether slavery should extend into the American West, the Whig Party (successor to the Federalist Party) disintegrated, and the Democratic Party split into Northern and Southern wings. In this milieu, the Republican Party was born, with Abraham Lincoln at its helm, in opposition to the further expansion of slavery. Lincoln forcefully questioned the Supreme Court's holding in *Scott v. Sandford,* 60 U.S. 393 (1857), that blacks were not and could not be citizens of the United States and that the national government had no right to exclude slavery from the western territories.

THE CIVIL WAR

Compromise after compromise proved unavailing, and the nation ultimately divided with Lincoln's election to the presidency in 1860. The new president refused to allow the Southern states to secede without a fight. Initially determined to preserve the Union at any price, sometimes including restrictions of individual rights during wartime (such rights were even less respected in the South), Lincoln realized as the bloody war progressed that its sacrifices demanded a nobler goal. He thus used his war powers to issue the Emancipation Proclamation (1863) freeing slaves behind enemy lines. He subsequently pressed for the Thirteenth Amendment, which ended slavery. Lincoln anticipated that the war could serve as the crucible for "a new birth of freedom."

Lincoln was assassinated before the Thirteenth Amendment was adopted, but its ratification in 1865 seemed to bring an end to America's most obvious departure from its ideals. As Southern states attempted to replace legal bondage with other, subtler forms of discrimination, such as were embodied in the so-called Black Codes (Jim Crow laws), however, Congress realized that it would need to extend other rights to the newly freed slaves. It proposed, and the states subsequently ratified, the Fourteenth and Fifteenth Amendments.

The Fourteenth Amendment, adopted in 1868, is most notable for its recognition of citizenship for all persons born or naturalized in the United States and for its extension of privileges and immunities, right to due process, and right of equal protection to all such citizens. The Fifteenth Amendment (1870), the first of a number of amendments that would be adopted expanding voting rights, prohibited discrimination in suffrage on the basis of race. These amendments were initially enforced during the Reconstruction period (1865–1877) by federal troops. Although the amendments were aimed chiefly at protecting former slaves, they were worded broadly and subsequently were used by women and other individuals to secure their rights. Due to twentieth-century Supreme Court decisions, over time, the Due Process Clause of the Fourteenth Amendment became the means, in a process generally called "incorporation," by which these guarantees that

once applied only to the national government were also applied to the states.

Many women had been stalwart supporters of emancipation. As early as 1848, delegates to the Seneca Falls (New York) Convention to promote women's rights had rewritten the Declaration of Independence to assert that all men and women were created equal and to claim the right of suffrage for women. The postwar amendments did not move in this direction, however, and cases such as *Bradwell v. Illinois,* 83 U.S. 130 (1873), and *Minor v. Happersett,* 88 U.S. 162 (1875), in which the Court denied women the right to practice law and to vote, suggested that whatever further movement there was toward respecting the rights and liberties of former slaves would not be extended to women. Not until 1920, with the adoption of the Nineteenth Amendment, were governments prohibited from discriminating by denying voting rights to women.

POST-RECONSTRUCTION

When federal troops were withdrawn from the South at the end of Reconstruction, many Americans wanted to put memories of the Civil War behind them, and the rights of African Americans suffered as a consequence. The Supreme Court interpreted the Privileges or Immunities Clause narrowly; confined the application of the Equal Protection Clause to cases of state (and not private) discriminatory action; used the Due Process Clause chiefly to protect the rights of emerging corporations; and eventually even sanctioned racial segregation in *Plessy v. Ferguson,* 163 U.S. 537 (1896). Procedures at the state level were often woefully inadequate in protecting individual rights.

Liberties were trampled in particular with the rise of organized labor and labor unions. Even as the Supreme Court began to fashion and then apply in cases such as *Lochner v. New York,* 198 U.S. 45 (1905), legal doctrines such as substantive due process and liberty of contract to protect economic liberties and place limits on the ability of the state and federal government to regulate businesses, workers and unions organized protests to redress and respond to the growing power of trusts and corporations in America. For example, on May 4, 1886, several striking workers were killed in their protests against the McCormick Reaper Works Company, and several more were indicted. In addition, Eugene Debs, a Socialist and union organizer critical of capitalism, eventually was jailed for his views. Along with Debs, others were also jailed for speaking up for labor, and the government increasingly used injunctions to break strikes and the rights of unions to organize and speak freely. Not until Congress in the 1930s passed the National Labor Relations Act, better known as the Wagner Act, did unions begin to have their liberties respected.

World Wars I and II put added pressure on rights, as did the fear of communism. Sedition acts tested the limits of freedom of speech. Fears over German influences during World War I and over possible Japanese invasion during World War II resulted in repressive policies. A "red scare" followed World War I, and World War II had barely ended before the Cold War between democracy and communism put further pressures on civil liberties and pushed individuals toward conformity.

Despite such setbacks, this period brought the beginning of the process of "incorporation" by which the Supreme Court used the Due Process Clause of the Fourteenth Amendment to apply provisions of the Bill of Rights—initially those protecting property and First Amendment rights—to the states. Although rarely setting forth absolute rules, the Court began to look at individual cases involving criminal justice—as, for example, in the famous mid-1930s "Scottsboro boys" cases (young Alabama black men charged with rape of white women) in which it invalidated both discriminatory juries and the failure to appoint counsel—to require state governments to deal fairly with their citizens.

POST-1937 DEVELOPMENTS

Franklin D. Roosevelt was elected to the U.S. presidency in 1932 during the Great Depression on his New Deal promise of increasing the powers of the national government to deal with the economy. Through the early New Deal, the Supreme Court regarded itself as a protector of "liberty of contract" and other doctrines that it had developed over the preceding decades to protect laissez-faire individualism and property rights. After President Roosevelt threatened to pack the Court in 1937, however, the justices took

a turn—sometimes called "the switch in time that saved nine"—toward giving far more deference to governmental economic controls, most exercised under the authority of the interstate Commerce Clause.

The following year, in the justly famous footnote four of *United States v. Carolene Products Co.*, 304 U.S. 144 (1938), Justice Harlan Fiske Stone indicated that the Court henceforth would be less deferential in three areas: enforcement of specific provisions of the Bill of Rights and of the post–Civil War amendments; protection for democratic processes, as in the case of voting rights; and protection of racial, religious, and other minorities that could not protect themselves simply through force of numbers. Although the process of incorporation already had begun, the Court subsequently turned increasing attention to the Bill of Rights. In a striking decision, the Court overturned an earlier decision to declare in *West Virginia Board of Education v. Barnette,* 319 U.S. 624 (1943), that compulsory saluting of the American flag in school was unconstitutional.

THE WARREN COURT

The years during which Chief Justice Earl Warren sat on the U.S. Supreme Court (1953–1969) proved to be among the most active in its history. This era was epitomized by the Court's decision in *Brown v. Board of Education,* 347 U.S. 483 (1954), to reverse the *Plessy* precedent (1896) and declare that racial segregation would no longer be tolerated. Within ten years, the Supreme Court had also declared in *Baker v. Carr,* 369 U.S. 186 (1962), that it would no longer regard matters of state legislative apportionment to be "political questions" immune from judicial review. The Court went on in dozens of cases to strike down malapportioned state legislative and congressional districts.

The Court increasingly took on matters of church and state, as in its decision in *Engel v. Vitale,* 370 U.S. 421 (1962), outlawing public prayer in public schools, and in *Abington School District v. Schempp,* 374 U.S. 203 (1963), outlawing Bible-reading in the same venue. It turned greater attention to protections for freedom of speech, widening this freedom to include materials previously regulated as pornographic, and ultimately providing greater safeguards against the abuse of libel suits. The Court further ruled in *Brandenburg v. Ohio,* 395 U.S. 444 (1969), that provocative political speech could be suppressed only when it posed an imminent threat of lawless action and not, as held in previous Court decisions, when it was thought to have a "bad tendency" or to pose "a clear and present danger."

The Warren Court also became increasingly concerned about state administration of criminal justice. It applied provisions to state police that had once applied only to the national government. In *Gideon v. Wainwright,* 372 U.S. 335 (1963), the Court extended the right to counsel to indigents in felony cases; in *Mapp v. Ohio,* 367 U.S. 643 (1961), it applied the exclusionary rule to prohibit the state's use of illegally gathered evidence at trial; and in *Miranda v. Arizona,* 384 U.S. 436 (1966), it provided that police officers must warn suspects of their rights before beginning custodial interrogation. Over time, there were few provisions in the Bill of Rights that the Court had not applied to both state and national governments. Often these rights were significantly widened. By the end of Chief Justice Warren's tenure, the Court was venturing into new areas, as in *Griswold v. Connecticut,* 381 U.S. 479 (1965), in which the Court either created, or recognized, depending on one's viewpoint, a right to privacy in striking down state laws restricting the use of contraception.

On the flip side, the Warren Court years were accompanied by the Cold War, McCarthyism, and the Communist witch-hunts of the 1950s. Rooted in fears and prejudices not much different from those that animated the Salem witch trials of the seventeenth century, Senator Joseph McCarthy (R-WI), Senator Richard Nixon (R-CA), and the House Un-American Activities Committee investigated scores of individuals suspected of being Communists or subversives, and these inquiries led to the dismissal or blacklisting of many individuals based simply upon their political views. Later in the 1960s, J. Edgar Hoover, head of the Federal Bureau of Investigation, aided those efforts by spying on individuals suspected as being Communists, such as Martin Luther King Jr. The Department of Justice, through its Attorney General's List of Subversive Organizations, also kept tabs on civil rights and eventually Vietnam War protesters. Yet in cases such as *Watkins v. United States,* 354 U.S. 178 (1957),

Barenblatt v. United States, 360 U.S. 109 (1959), and *Brandenburg v. Ohio,* 395 U.S. 444 (1969), the Warren Court engaged in a checkered but eventually successful battle to protect free speech rights of dissidents and demonstrators.

THE BURGER AND REHNQUIST YEARS

President Richard M. Nixon's appointment of Warren E. Burger as chief justice in 1969 was supposed to signal a retreat from many of the Warren Court's more controversial decisions, but neither Burger's tenure (until 1986) nor the service of his successor, Chief Justice William H. Rehnquist (1986–present) put an end to judicial activism. Generally, the Court took only baby steps backward—for example, recognizing the "inevitable-discovery" exception to the exclusionary rule and the "plain-view" exception to the warrant requirement—rather than sounding a full retreat.

Moreover, in some areas the Court appeared to be carried by the momentum of previous years. The Court asserted its power and arguably struck a blow for liberty when it invalidated President Nixon's assertion of executive privilege in *United States v. Nixon,* 418 U.S. 683 (1974). In *Roe v. Wade,* 410 U.S. 113 (1973), the Court extended the right to privacy to cover most abortions, especially those in the first two trimesters. In 2003 in *Lawrence v. Texas*, 539 U.S. 558, the Court further ruled that this privacy right covered private consensual homosexual conduct.

Similarly, the Court increasingly accepted arguments that the Equal Protection Clause should apply not only to racial minorities but also to women, aliens, and other minorities. Beginning with its decision in *Furman v. Georgia,* 408 U.S. 238 (1972), the Court actively applied the Eighth Amendment provision prohibiting cruel and unusual punishments to cases involving capital punishment.

The Court issued increasingly liberal decisions related to freedom of speech, striking down a government injunction in *New York Times Co. v. United States,* 403 U.S. 713 (1971), against publication of the *Pentagon Papers,* and gradually widening protections for symbolic and commercial speech. The Court continued to qualify but did not abandon earlier landmarks in Fourth and Fifth Amendment law.

Another important trend during the Burger years was a movement in which state courts became increasingly more aggressive toward using their own constitutions to protect individual rights. Spurred on by Justice William J. Brennan Jr. in a 1975 article urging state courts to protect civil liberties, state courts in New Jersey, New York, California, and elsewhere articulated important decisions in the areas of free speech, privacy, and abortion rights.

THE TWENTY-FIRST CENTURY

As the nation entered a new century, Americans continued to express pride in their form of government and in the liberties that it guarantees. The threat of terrorism supplanted the threat of communism, especially after the attacks on Washington, D.C., and New York City on September 11, 2001, after which the national government asked for increased powers to detain and try those who have attacked, or are thought to pose threats to, the United States. Today, this is the central focus of the Patriot Act, which President George W. Bush and his first attorney general, John Ashcroft, had advanced as a means of combating the terrorist threat. The federal courts initially seemed to be unsympathetic to efforts to curtail criminal due process rights, and librarians around the country became heroes to many readers in declining to disclose to the government who has been reading what books, a requirement in the Patriot Act. Whatever the ultimate judgment on the constitutionality of this law, it will not be the last law that poses questions about the relationship between liberty and national security.

The American people must continue to recognize that balance needs to be maintained between government power and personal liberty. Justice Robert H. Jackson once observed that those who attempt to eliminate dissent may end up with the "unanimity of the graveyard." As long as the Constitution, the Bill of Rights, and subsequent amendments are honored and enforced, the United States will avoid such enforced unanimity.

Abington School District v. Schempp (1963)

Abington School District v. Schempp, 374 U.S. 203 (1963), represented the U.S. Supreme Court's attempt to clarify its past First Amendment rulings dealing with religion and to establish guidelines as to permissible and impermissible practices in the public schools. Although not the first major case dealing with Establishment Clause doctrine, *Abington* also sought to resolve the tension between the two constitutional components of religious freedom contained in the First Amendment, which mandates that "Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof" (thus termed the Establishment Clause and the Free Exercise Clause). This prohibition extends to state legislatures through incorporation into the Due Process Clause of the Fourteenth Amendment. In *Abington*, the justices struggled with the claim that an absolute insistence on government "neutrality" toward religion might, in fact, promote what Justice Arthur J. Goldberg termed a "brooding and pervasive devotion to the secular and a passive, or even active, hostility to the religious." In short, a too rigorous application of the Establishment Clause might well result in a violation of the Free Exercise Clause.

In *Abington*, the Court assessed the constitutionality of Pennsylvania and Maryland statutes requiring public schools to engage in a Bible reading and the recitation of the Lord's Prayer at the beginning of each day. The Edward Lewis Schempp family, Unitarians in Pennsylvania, and Madalyn Murray, an atheist whose son (then also an atheist) attended public school in Baltimore, challenged the statutes. The Court heard the cases together because the two statutes were nearly identical in their requirements and impact. In the Pennsylvania case, the lower courts struck down the statute, holding that the morning exercises impermissibly promoted religion. In the Maryland case, the lower courts held that the exercises did not violate the Establishment Clause and were permissible. The Supreme Court's task was to resolve the contradiction among the lower federal courts and to provide guidance to them in interpreting the Establishment Clause.

Justice Tom C. Clark, who wrote the Court's opinion, reviewed prior rulings related to the Establishment Clause and suggested a test: The Court should inquire as to the purpose of the statute and to its primary effect. If either the statute's purpose or effect advanced or inhibited religion, then the statute violated the Establishment Clause. This test was the precursor to the three-pronged test that later would be developed in *Lemon v. Kurtzman,* 403 U.S. 602 (1971).

Both states claimed that the statutes advanced the *secular* (versus *religious*) purpose of promoting moral values. Furthermore, the exercises were strictly voluntary—parents could excuse their children from the exercises by submitting a written request. Because the exercises were voluntary, the states contended, they could not be said to promote religion. Justice Clark, along with all of his fellow justices except Justice Potter Stewart, was unconvinced by the states' claim. The use of the Holy Bible (with the King James version preferred), combined with the recitation of the Lord's Prayer, gave a specifically Christian, even Protestant, cast to the exercises. The states' purpose in promoting moral values could be accomplished without incorporating Christian theology and prayers. Justice William O. Douglas, in a concurring opinion, identified a second Establishment Clause violation: The statutes required the schools to use their facilities and funds to support the exercises, thus devoting resources to activities with religious content. Douglas considered this violation as serious as the one emphasized by the majority. The opinion by Justice Clark and the

concurrences by Justices Douglas, Goldberg, and William J. Brennan Jr. all recognized the tension between limiting the state's ability to encourage religion and yet allowing individuals who wished to participate an opportunity to exercise their beliefs at the beginning of the day. However, eight of the nine justices agreed that the statutes in question involved the state so directly in sectarian activities so as effectively to represent an "establishment" of religion.

Justice Stewart was the sole dissenter in the case. He expressed discomfort with the newly articulated test of "purpose and primary effect," arguing that mechanistic definitions would be insensitive to the vital role religion plays in the lives of many Americans. He was not willing to declare the statutes in question constitutional but rather wanted the cases remanded to the lower courts so that further evidence could be taken. Stewart's primary concern was that the Court's ruling, by forbidding religious exercises in the public schools, might place religion at a disadvantage. To prohibit religious practice would also violate the Constitution by restricting the "free exercise thereof."

Abington v. Schempp provided a much-needed clarification of Establishment Clause doctrine. Although all but one justice concurred with the result, the number of separate opinions filed served as evidence of the conflict among the justices over the proper relationship between the state and religious practice.

Abood v. Detroit Board of Education (1977)

In *Abood v. Detroit Board of Education*, 431 U.S. 209 (1977), the U.S. Supreme Court considered whether the Detroit Board of Education could require teachers to pay a union fee as a condition of employment. The Court held that the mandatory fee was constitutional to the extent it funded union activities relating to collective bargaining, but that the fee system violated the teachers' First and Fourteenth Amendment rights to freedom of expression and association to the extent it forced nonunion teachers to fund the union's political and ideological activities.

At issue in *Abood* was an "agency shop" clause contained in the 1971 collective bargaining agreement between the Detroit Board of Education and the Detroit Federation of Teachers, the union that represented teachers employed by Detroit. The agency-shop clause required teachers either to join the union and pay union dues, or if the teachers did not become union members, to pay the union a service charge equal to the normal union dues. Several teachers sued the board of education and the union in state court, claiming that requiring them to pay the union a service fee violated their First and Fourteenth Amendment rights to freedom of expression and association. The state trial and appellate courts held that the agency-shop clause was not per se unconstitutional. The plaintiffs appealed to the U.S. Supreme Court.

The Court in *Abood* initially recognized that "[t]o compel employees financially to support their collective-bargaining representative has an impact upon their First Amendment interests." However, relying on precedent, the Court concluded that the government's strong interest in supporting labor relations permitted some interference with the teachers' freedom of association caused by the agency-shop agreement; thus, the board could force teachers to pay a fee for union expenses related to collective bargaining, contract administration, and the handling of grievances. However, the Court concluded that the union's use of fees to pay for political or ideological speech or activities unrelated to union representation violated the teachers' First and Fourteenth Amendment rights to freedom of expression and association. The plain-

tiffs were entitled to an appropriate remedy, the Court concluded, such as a refund of the portion of fees used for political expenditures and a reduction in the future fees charged, based on the amount of funds the union used for political and ideological activities.

Abood made clear that forcing nonunion members to fund a union's ideological and political activities violates the dissenting employees' rights to freedom of expression and association. Still, in cases since *Abood,* the courts have struggled to draw the line between those impermissible activities and other activities legitimately related to collective bargaining and contract negotiations.

Abortion

See Birth Control and Contraception; *Roe v. Wade*

Abrams v. United States (1919)

Abrams v. United States, 250 U.S. 616 (1919), is one of a number of cases in which the U.S. Supreme Court upheld the conviction of individuals who criticized the U.S. government and its policies during World War I against challenges that these convictions violated the freedom of speech and press protected by the First Amendment to the Constitution. Jacob Abrams and fellow defendants were anarchists and/or socialists who had immigrated to the United States from Russia. After printing and distributing materials that were especially critical of U.S. military intervention in Russia, they were convicted in a U.S. district court of violating an amended provision of the Espionage Act of 1917 that punished conspiracy to print abusive language about the form of the U.S. government, to bring it into scorn or contempt, or to interfere with its recruiting service.

Justice John H. Clarke wrote the seven–two opinion upholding the convictions. He relied on *Schenck v. United States,* 249 U.S. 47 (1919), and other Court rulings holding that Congress could suppress speech that presented a "clear and present danger." Such threats were especially likely to be posed during times of war.

The dissenting opinion by Oliver Wendell Holmes Jr. has received far more attention. Although Holmes authored the *Schenck* decision, he dissented from *Abrams,* indicating a shift to an even more libertarian approach to the subject. He did not believe Abrams and other defendants had specifically targeted the government of the United States or its recruiting services, but more important, he did not think the defendants' criticisms had posed an "imminent danger" to the nation. Fearing that the defendants were being prosecuted for holding to a "creed of ignorance and immaturity" rather than for specific actions, Justice Holmes argued that "fighting faiths" should be protected. In his view, the best way to ensure progress was through "free trade in ideas," and "the best test of truth is the power of the thought to get itself accepted in the competition of the market." Holmes portrayed democracy, like life, as an "experiment" and contended that the First Amendment prohibited prosecutions, permitted in England at the time of the American founding, for seditious libel. Justice Louis D. Brandeis joined Justice Holmes's dissent.

Holmes's more liberal view of speech was reflected in the Supreme Court's later opinion in *Brandenburg v. Ohio,* 395 U.S. 444 (1969): In overturning a conviction for a speech calling for "revengence" [*sic*] delivered at a Ku Klux Klan rally, the Court declared that Clarence Brandenburg's speech did not pose the threat of "imminent lawless action."

Academic Freedom

Academic freedom is commonly perceived as the right of college and university professors to teach and to engage in research and publication without undue restrictions placed on these activities. Yet academic freedom is more far-reaching: It protects not only professors but also teachers in elementary and secondary schools and students at all educational levels, in both public and private educational settings. The modern concept of academic freedom derives from the principles of *Lehrfreiheit* (freedom to teach) and *Lernfreiheit* (freedom to learn), which were formulated and practiced by the University of Berlin in the early nineteenth century. According to the German philosopher Johann Gottlieb Fichte, a university can achieve its intellectual goals only if it is free from outside pressures. Nevertheless, academic freedom has been threatened by social constraints, advances in scientific knowledge, government regulation, and religious, social, and political movements.

In the United States, academic freedom is associated with the First Amendment's protection of freedom of expression. Although the amendment does not protect academic freedom per se, it protects the expression of ideas within public colleges and universities from government regulation. Some courts have recognized a relationship between academic freedom and First Amendment rights, but the U.S. Supreme Court did not associate the two until relatively recently, and it has yet to define the scope of those rights. In the 1950s and 1960s, academic-freedom cases involved protecting faculty and educational institutions from external pressures, such as might be involved in overly intrusive governmental investigations. Since the 1970s, court cases have focused mainly on the conflict between the academic-freedom rights of faculty versus institutional freedom.

The roots of academic freedom can be traced to ancient Greece, when Socrates defended himself against charges of corrupting the youth of Athens by his teachings. The seeds of the modern concept of academic freedom were sown in the twelfth century with the establishment of the first universities in Europe. They were founded by the Catholic Church, and the scope of their curricula was narrowly tailored to meet the demands of both religious and governmental authority. Teachers and students had limited academic freedom and were expected to affirm essential Christian doctrines. The sixteenth-century Protestant Reformation resulted in even greater restrictions on the scope of academic freedom.

The principle of academic freedom grew and developed during the Enlightenment. In the eighteenth and nineteenth centuries, scholars working outside of universities, such as philosophers Thomas Hobbes, John Locke, Jeremy Bentham, and Herbert Spencer, biologist Thomas Huxley, economist David Ricardo, writer François Voltaire, and naturalist Charles Darwin, developed the scientific method. Their ideas filtered into the universities and helped to secularize them, but not without controversy. For example, Charles Darwin's *Origin of Species* (1859), which articulated his theory of evolution, led to the harassment and dismissal of some professors who attempted to teach it in the classroom.

In colonial America, the first universities also were established by religious groups and were dedicated to training ministers. Harvard College was founded in 1636 as an institution for teaching the faith to its members and for training ministers. Most other early American colleges had similar missions. These institutions were headed by boards of trustees and presidents who exerted a heavy measure of control over what was taught. Yet despite their religious origins, these colleges provided the young men of the day with a liberal education and instilled the notion of serving the public. Faculty members sometimes also offered public lectures. When former U.S. president Thomas Jefferson founded the University of Virginia in 1819, he pledged that it would be based "upon the illimit-

Academic freedom protects college and university professors, teachers in elementary and secondary schools, and students at all educational levels, in both public and private educational settings. *(© Nita Winter/The Image Works)*

able freedom of the human mind to explore and expose every subject susceptible of its contemplation."

Religiously affiliated colleges dominated American higher education until the Civil War. Their teachers suffered serious challenges to their freedom to teach from a variety of sources, including advances in science and technology and the issue of slavery. After the Civil War, the environment of higher education changed, as scholars and professors began to teach and research more secular subjects. Yet their activities were still subject to severe scrutiny. In 1894, Richard T. Ely, a proponent of the Social Gospel movement, was dismissed from his position at the University of Wisconsin, allegedly for teaching socialism. He was later vindicated, but his ordeal led to the founding of the American Association of University Professors

(AAUP) by philosophers John Dewey and Arthur Lovejoy in 1915. The AAUP codified the concept of academic freedom around the premises that freedom was a necessary condition for a university's existence and that tenure for faculty would ensure job security.

Threats to academic freedom continued throughout the twentieth century. During World War I, some university professors were accused of holding pro-German sentiments. Toward the end of World War II, the Servicemen's Readjustment Act of 1944 (the GI Bill) provided financial assistance to enable war veterans to earn college degrees. The role of the university in society and government expanded, but with this expansion came further threats to academic freedom. The Cold War and the "red scare" of the late 1940s and 1950s led to congressional investigations of citizens' loyalty to the United States. Loyalty oaths were required of federal employees, and many states enacted similar laws for state employees, including teachers. During this time, the courts began to define the parameters of academic freedom.

In *Sweezy v. New Hampshire*, 354 U.S. 234 (1957), the Court ruled that government inquiry into the content of a University of New Hampshire professor's lecture invaded the professor's liberties "in the areas of academic freedom and political expression—areas in which government should be extremely reticent to tread." In *Keyishian v. Board of Regents*, 385 U.S. 589 (1967), the Court upheld faculty members' First Amendment rights against a state law requiring them to sign loyalty oaths. The Court declared that "Our nation is deeply committed to safeguarding academic freedom, which is of transcendent value to all of us and not merely to the teachers concerned. That freedom is therefore a special concern of the First Amendment, which does not tolerate laws that cast a pall of orthodoxy over the classroom."

The 1960s saw waves of student and faculty protests over U.S. intervention in Vietnam. The civil rights movement transformed the complexion of colleges and universities and led to demands for social justice on the part of many students and professors. Congress passed the Civil Rights Act of 1964 prohibiting, among other things, discrimination in education and employment. This and other federal legislation of the 1960s through the 1990s mandating equality were accompanied by a plethora of government regulations that applied to public schools and public institutions of higher learning. They exacerbated the conflicts over faculty hiring and promotion, course development and content, and student admissions, on the one hand, and academic freedom of faculty and educational institutions, on the other. Charges of sexual harassment and sexual and racial discrimination sometimes pitted freedom of expression against equal rights under the Fourteenth Amendment. Some of these controversies found their way into the courts. Compliance with federally mandated affirmative action programs led to charges of reverse discrimination on some campuses and mandatory sexual harassment and sensitivity training sessions for faculty and staff. Debates about political correctness on campus, disputes over campus speech codes, hate speech, and the development of gay and lesbian studies, black studies, and women's studies programs led to friction and factionalism within some universities. In addition, a new movement across the country to initiate post-tenure review of tenured faculty threatened further to undermine academic freedom.

The new millennium ushered in yet more risks. The ubiquitous presence and utility of the Internet as a means of communication and learning, including distance education, e-mail as a form of communication, and the creation of faculty and student Web pages, pose several threats to academic freedom. Congressional attempts to prevent children from accessing pornography and indecent material on the Internet involve serious First Amendment issues and could negatively affect academic freedom by restricting access to material over the Internet.

International and domestic terrorism, particularly the intentional crashing of airplanes into the World Trade Center in New York City and the Pentagon in Washington, D.C., on September 11, 2001, and additional terrorist actions against U.S. interests at home and abroad led to more restrictive federal laws to protect national security. In particular, the USA Patriot Act passed in 2001 grants federal law enforcement agencies increased authority over surveillance, including electronic surveillance of university computer facilities, e-mail, and library resources. These new threats pose both a challenge and an opportunity for educational institutions and those who work and learn in them. The challenge is to maintain free and open

discourse in educational institutions; the opportunity is to instill in new generations a healthy respect for freedom of inquiry and freedom of expression.

Actual Malice

The term “actual malice” is a technical concept. It derives from case law dealing with defamation (libel and slander) of an individual in the “public eye,” also called a “public figure,” who claims damage to reputation from false, published material. To prove actual malice, a public figure must meet a tough test devised by the U.S. Supreme Court. The test requires an individual claiming injury from publication to show that the statement was made “with knowledge that it was false or with reckless disregard of whether it was false or not.”

The First Amendment to the U.S. Constitution guarantees that persons may speak and write freely and without fear of reprisal. This freedom is not without limitation. The law of libel imposes certain duties on a speaker not knowingly or carelessly to speak or write falsehoods that damage reputation. In the case of an ordinary citizen, the words do not necessarily have to cause economic or emotional harm. The requirements generally are that the speaker or writer has (1) published a (2) false statement of fact accusing (3) an identifiable plaintiff (the complaining party) of (4) a crime, professional or business ineptness, lack of chastity, or contagion with a loathsome disease, publishing (5) with the requisite level of fault and (6) unprotected by any privilege.

The level of fault differs for public figures versus ordinary private citizens. A public official is subject to the higher standard of “actual malice” because the courts wish to encourage “uninhibited, robust and wide-open debate” on the actions of the holders of public office. This is typically accomplished in published media accounts about such actions.

The standard for a legal action against a public figure is embodied in *New York Times Co. v. Sullivan*, 376 U.S. 254 (1964), which was decided by the U.S. Supreme Court during the turmoil of the civil rights struggles. The case arose out of an advertisement placed in the *New York Times* in March 1960 by an

advocacy group named Committee to Defend Martin Luther King and the Struggle for Freedom in the South. The advertisement was titled "Heed Their Rising Voices" and was signed by committee officers and by prominent people who were well known for their support of the civil rights movement. The broadside solicited funds for legal fees and expenses to defend Dr. Martin Luther King Jr. from a variety of charges in Montgomery, Alabama.

The *New York Times* had distributed 394 copies of the newspaper containing the offending statements in the state of Alabama, thirty-five of which were distributed in Montgomery County. The publication recited facts, protested various state actions and repression, and sought funds. No individual was named in the ad, but it used exaggeration and contained a number of factual errors in regard to police conduct. Thirteen individuals filed libel suits against the newspaper. All of the plaintiffs in the various suits were city and county officials in Montgomery. One of the county commissioners, L.B. Sullivan, obtained the first judgment, which was for $500,000. By the time the case reached the U.S. Supreme Court, after having been upheld by the Alabama Supreme Court, a second libel judgment in the same amount had been awarded to another of the complaining officials.

The U.S. Supreme Court reversed the state court on the basis that it had inadequately protected First Amendment rights, and it established the actual-malice standard to govern future cases involving public figures. Justice Hugo L. Black said he wanted to maintain "an American press virile enough to publish unpopular views on public affairs and bold enough to criticize the conduct of public officials." The Court did not think the advertisement should go unprotected simply because it had been paid for, and thus opened up protections for commercial speech.

The *News Reporter's Handbook on Law and Courts* provides this guidance for reporting on public officials and public figures: "Persons who become involved in public controversies or thrust themselves into the forefront of public issues, even if only for brief periods, may be considered 'public figures' for purposes of news reports regarding those controversies or issues." This publication further states, "The burden is on the public official or public figure to show that the media printed the allegedly libelous statement with actual malice."

Thus, public figures who would have solid cases where advocacy or negligence has tarred a reputation through falsehoods have a difficult burden of proof, and the courts are more concerned about intent than about truth or falsity. Because of *Sullivan,* the courts try to discern the mind of the author or broadcaster. This problem became reality when the Court decided *Herbert v. Lando,* 441 U.S. 153 (1979), in which it upheld the right of a plaintiff alleging libel to inquire into the editorial processes that had gone into the production of a television documentary. Although the Court claimed its decision rested on common law, wherein malice was always actionable, the practical effect merely intensified the search for notes, memoranda, and other indications of the author's thought process.

The consequences of the rules become especially troubling when the party claiming injury is not necessarily a public figure. An example might be when the parents of a murdered child are alleged to be the murderers by a sensation-seeking tabloid. They are not in the public eye willingly but instead find themselves hurled into the limelight. Which standard is to apply, negligence or actual malice? If they are not public figures, they merely have to prove that the tabloid did little or no investigation. If they must prove actual malice, the tabloid has reason to destroy notes and internal memoranda as a regular office practice, making the process of vindication doubly difficult.

The consequence in either situation is that citizens may be discouraged from entering public life because of the problem of protecting a good name. As Shakespeare wrote in the third act of *Othello:* "But he that filches from me my good name; Robs me of that which not enriches him; And makes me poor indeed."

The problem was revisited in later cases, such as *Coughlin v. Westinghouse Broadcasting and Cable, Inc.,* 476 U.S. 1187 (1986), in which the Court majority refused to review lower-court decisions dismissing a police officer's libel suit. Dissenting from this denial of certiorari, Justice William H. Rehnquist and Chief Justice Warren Burger called for a reexamination of *Sullivan.* Absent such a reappraisal, the actual-malice test will continue to serve as the standard in cases involving alleged libel of public figures. The test does

not make it easy for public figures who are seeking to prove damages, but its difficulty stems from the Court's desire that the standard will preserve robust debate.

Adamson v. California (1947)

In *Adamson v. California,* 332 U.S. 46 (1947), the U.S. Supreme Court upheld a murder conviction despite claims by the defendant that the prosecutor's comments about his refusal to testify at trial violated his due process rights. The defendant, Admiral Dewey Adamson, was accused of breaking into the Los Angeles home of a sixty-four-year-old widow and subsequently murdering her. During the trial, Adamson refused to testify in his own defense, and the prosecutor suggested that the jury could take the defendant's silence as evidence of guilt. The underlying issue in the case was the degree to which the right against self-incrimination provided in the Fifth Amendment was to be applied, if at all, to the states via the Due Process Clause of the Fourteenth Amendment under the doctrine of incorporation.

Adamson had refused to testify in his own behalf because of a prior criminal history. He believed his testimony would open the door for the prosecution to impeach his credibility based on that prior record and thus would violate his right against self-incrimination.

California law at the time did not permit the prosecution to force Adamson to testify, but, unlike federal law at the time, the state did allow the prosecution to comment on his refusal to do so. At the trial, the prosecutor told the jury that Adamson's refusal to testify had stripped him of his presumption of innocence. In his closing argument, the prosecutor urged the jurors to consider the defendant's silence as evidence in reaching their decision: "Counsel [for the defense] asked you to find the defendant not guilty. But does the defendant get on the stand and say under oath, 'I am not guilty'? Not one word from him. . . . I leave the case in your hands."

After a short deliberation, the jury convicted Adamson of burglary and murder. Sentenced as a habitual criminal, he was given life in prison for the burglary and was sentenced to death in the gas chamber for the murder. Adamson's attorney appealed unsuccessfully to the state supreme court and then to the U.S. Supreme Court.

Adamson asked the Court to strike down the California law that permitted prosecutorial comment on a defendant's decision not to testify. He argued that the law violated his Fifth Amendment protections that had been made applicable against state power through the Fourteenth Amendment's Privileges or Immunities Clause or its Due Process Clause.

By a narrow five–four majority, the Court upheld Adamson's conviction. The majority opinion, written by Justice Stanley F. Reed, ignored almost entirely the privileges and immunities claim and focused on the defendant's due process arguments. The majority reasoned, based on the decision in *Palko v. Connecticut,* 302 U.S. 319 (1937), that the California law did not result in an unfair trial. The majority did not regard the right against self-incrimination as a fundamental right that the writers of the Fourteenth Amendment had intended to apply to the states.

Although Justice Hugo L. Black was in the minority, the dissent he wrote, in which Justice William O. Douglas joined, proved an important harbinger of change to come. In *Adamson,* Justice Black lost the

immediate fight for his position that the Fourteenth Amendment incorporated all of the first eight amendments as applicable to the states—a view designated as "total incorporation"—but his dissent in the case eventually helped to win the war. It was not until 1964 in *Malloy v. Hogan,* 378 U.S. 1 (1964), that the Court adopted his reasoning on the right against self-incrimination, but that holding had significant ramifications. The shift required the Court to define when the right against self-incrimination had been violated. This line of reasoning built to its climax in the now famous case of *Miranda v. Arizona,* 384 U.S. 436 (1966).

Adderley v. Florida (1966)

In *Adderley v. Florida,* 385 U.S. 39 (1966), a five-justice majority of the U.S. Supreme Court articulated limitations on the First Amendment rights of freedom of speech, assembly, and petition, as applied to the states under the Fourteenth Amendment, when the activity is conducted on publicly owned property such as a jail facility. In upholding a Florida criminal trespass conviction, the Court held that the state has the same right as private landowners to preserve its property for the use to which it is dedicated. Though the opinion favored the state of Florida, the Court, as in previous cases such as *Brown v. Louisiana,* 383 U.S. 131 (1966), continued to be sharply divided over the constitutional protections afforded protesters on publicly owned property.

The case arose when the petitioners, Harriett Louise Adderley and thirty-one other students from Florida A&M University in Tallahassee, began a demonstration on a nonpublic jail driveway and on the adjacent county jail premises to protest the arrest the previous day of their fellow classmates who had been demonstrating. The protest was lively and included singing, dancing, and clapping and may have been organized in part to protest state policies of racial segregation. The sheriff's department ordered the protesters to leave the site and subsequently arrested 107 of the approximately 200 protesters when they refused to depart. The petitioners were charged and convicted by a jury under Florida law for trespass with a malicious or mischievous intent (821.18 of the Florida statutes). Florida's lower appellate courts affirmed the convictions.

The U.S. Supreme Court was split over the case. Justice Hugo L. Black, writing for the majority (Justices Byron R. White, Tom C. Clark, John M. Harlan, and Potter Stewart), argued that previous decisions favoring protesters were not applicable to the instant case because those individuals were not protesting on property open to the public. Black noted that the sheriff, as custodian of the jail, had the power to direct the protesters to leave the property The majority dismissed additional arguments concerning the breadth and scope of the trespass statute. Black wrote that the Florida law was not unconstitutionally broad, and that the trespass statute was narrowly tailored and aimed at conduct of a limited kind. This allowed Black to distinguish previous Supreme Court decisions in *Edwards v. South Carolina,* 372 U.S. 229 (1963), and *Cox v. Louisiana,* 379 U.S. 536 (1965).

Justice William O. Douglas, joined by Chief Justice Earl Warren and Justices William J. Brennan Jr. and Abe Fortas, authored a dissenting opinion. Douglas argued that a jail was a public forum that constituted a seat of government and was therefore a legitimate target of protests. Douglas noted that the protest was peaceful and did not prevent the normal operation of the jail. He further contended that in previous cases the Court had restricted the applicability of state statutes in public-forum cases. Douglas also made a more pragmatic contention when he pointed out that the restriction of these types of protests would lead to frustration from the aggrieved. He concluded that a trespass law should not be used to thwart citizens attempting to protest to the government.

The *Adderley* decision constituted a limited reversal in free speech jurisprudence. The limitations on the scope and locations of protests would be litigated again later with a more successful outcome for the protesters, as in *Grayned v. City of Rockford,* 408 U.S. 104 (1972), and *Carey v. Brown,* 447 U.S. 455 (1980). Nonetheless, *Adderley* continues to be an important precedent for the limitation of free speech rights on publicly owned property, as seen in *Geer v. Spock,* 424 U.S. 828 (1976), and *United States v. Grace,* 457 U.S. 393 (1983).

Administrative Searches

Most people imagine the protection against unreasonable searches and seizures provided by the Fourth Amendment to the Constitution as being applicable in the context of criminal investigations, but the Fourth Amendment also comes into play when administrative agencies seek to conduct health and safety inspections. The U.S. Supreme Court, however, initially treated these and other administrative searches as outside the purview of the Fourth Amendment.

The Court first explicitly considered the constitutionality of warrantless administrative searches in *Frank v. Maryland,* 359 U.S. 360 (1959). In this case, a health inspector for Baltimore, Maryland, as part of an inspection of area houses in response to a complaint regarding a rat infestation, sought permission from the appellant to inspect the basement of his house after an external inspection uncovered large quantities of rodent feces at the rear of the house. The appellant declined to grant permission, and the health inspector returned the next day, again seeking permission to inspect the basement but this time in the company of two police officers. The appellant refused entry again, whereupon the health inspector swore out a warrant for his arrest in accordance with city health codes that required compliance with requests for entry when a public nuisance was suspected. In a five–four decision, the Court affirmed the appellant's conviction, holding that such searches did not constitute a violation of due process nor did they encroach in any meaningful way on an individual's right to privacy. In arriving at this decision, the Court focused on the fact that the purpose of the inspection was not to seek out evidence of criminal wrongdoing but rather only to ensure compliance with community health standards.

The Court signaled a reversal of sorts eight years later in its ruling in *Camara v. Municipal Court,* 387 U.S. 523 (1967). At issue was a tenant's use of the rear portion of commercial space he leased as residential quarters in violation of the housing code of the city of San Francisco. After refusing entrance to inspectors three times, the tenant was arrested despite his argument that the housing code authorizing such an inspection in the absence of a warrant was a violation of the Fourth Amendment. In ruling in the tenant's favor, the Court asserted that no matter how carefully a statutory scheme was drawn to ensure safeguards against Fourth Amendment violations, probable cause was an element that must be determined by a neutral magistrate in the issuance of a search warrant rather than by an agency or inspector.

In *See v. City of Seattle,* 387 U.S. 541 (1967), decided the same day as *Camara*, the Court likewise found the warrant requirement to apply to the inspection of commercial premises. In *See,* fire inspectors had sought to search a locked commercial warehouse. In its decision, the Court said, "The businessman, like the occupant of a residence, has a constitutional right to go about his business free from

unreasonable official entries upon his private commercial property. The businessman, too, has that right placed in jeopardy if the decision to enter and inspect for violation of regulatory laws can be made and enforced by the inspector in the field without official authority evidenced by a warrant." The only two exceptions to the warrant requirement recognized by the Court were inspections with permission of the occupant and inspections of areas open to the public.

The Court's subsequent decisions affirmed the applicability of the Fourth Amendment's warrant requirement to administrative searches but simultaneously carved out permissible exceptions, the most notable being the licensing exception, which the Court first addressed in *Colonnade Catering Corp. v. United States,* 397 U.S. 72 (1970). An employee of the Bureau of Alcohol, Tobacco, and Firearms (BATF), the agency responsible for federal regulation of the liquor industry, attended a party (as a guest) held on Colonnade's property and observed what appeared to be a violation of federal excise tax law. When BATF agents arrived later, however, they were denied access to a locked storeroom because, according to the defendant, they did not have a search warrant. The agents subsequently broke into the locked storeroom and seized the bottles of liquor at the heart of the controversy. In rendering its decision, the Court found in favor of the catering company, relying on the statutory language, which authorized fines but did not specifically authorize forced entry in the event that permission to enter was not granted. Despite finding in favor of the catering company, the Court emphasized that Congress did indeed have broad regulatory authority, including the authority to authorize administrative searches, for certain industries with a history of governmental regulation.

In subsequent cases, the Court extended this exception to cover firearms dealers in *United States v. Biswell,* 406 U.S. 311 (1972). The Court made clear that the exception applied only to industries that historically were pervasively regulated, as it reaffirmed in *Marshall v. Barlow's, Inc.,* 436 U.S. 307 (1978), in limiting a warrantless search of an electrical and plumbing supply business, or to industries with established histories of unsafe working conditions such as mines, as was the case in *Donovan v. Dewey,* 452 U.S. 594 (1981).

The Court distinguished between criminal searches pursuant to penal law versus administrative inspections pursuant to regulatory statutes on the basis of their consequences. In *Wyman v. James,* 400 U.S. 309 (1971), a recipient of Aid to Families with Dependent Children (AFDC) declined to grant permission to a social worker for a home visit; accordingly, her AFDC benefits were terminated. Five justices led by Harry A. Blackmun declined to find the social worker's visit akin to a search that would fall under the Fourth Amendment. In a concurring opinion, Justice Byron R. White disagreed with that finding but nonetheless found the visit constitutionally permissible, since it served a valid administrative purpose without constituting an invasive violation of personal privacy. The justices in the majority highlighted the fact that the refusal to allow a home visit did not and would not result in a criminal prosecution of any sort, merely the termination of AFDC benefits. However, as the Court asserted in *New York v. Burger,* 482 U.S. 691 (1987), even if a search undertaken as an administrative inspection did uncover evidence of criminal activity and prosecution ensued, that search would remain constitutionally valid.

Adversarial Versus Inquisitorial Legal Systems

Modern democratic states use one of two forms of trial procedure. Countries that follow the common law, including the United States, England, and most former British colonies, use adversarial procedures in which the prosecution and defense gather evidence and then question witnesses in front of a lay jury. To make sure the jury reaches a proper verdict, most adversarial systems rely on complex evidentiary rules that restrict the information the jury can hear; an example is the rule against hearsay, which generally prohibits a witness from repeating at trial utterances another person made to that witness in an out-of-court setting—utterances that thus would not be subject to cross-examination. The judge's primary role is to enforce these evidentiary rules.

By contrast, the civil law world, which comprises continental Europe and Latin America, uses inquisitorial procedures, in which the trial judge determines the evidence to present, questions witnesses, and (sometimes with lay jurors) reaches a verdict, which is often in writing. The prosecution and defense are limited to making closing speeches. Inquisitorial legal systems also have fewer restrictive evidentiary rules.

The adversarial system traces its origins to the early Middle Ages, a time when legal questions were settled by judicial combats and ordeals, events whose validity rested on the idea that the results reflected God's will. The impetus for the inquisitorial system came later, with the rise of canon law in the eleventh century. Canon lawyers replaced the combat and ordeal with testimony of witnesses and the accused. At the center of the new system stood the inquisitor, who sought truth by interviewing witnesses (including the accused) and applying rigid standards of proof that restricted the use of circumstantial evidence. But the very rigidity of these rules posed a problem—it was often impossible to establish guilt without a confession. The solution was the widespread use of torture, especially upon unpopular defendants such as accused heretics and witches.

These abuses tainted inquisitorial methods in the eyes of Enlightenment thinkers. The result was a widespread abandonment of judicial torture, the loosening of rules of proof, and the rise of the prison as an alternative sanction. These changes helped the inquisitorial system survive the reforms brought about by the French Revolution of 1789. Although the rules of evidence were relaxed, judges continued to play a central role in presenting evidence, questioning witnesses, and rendering the verdict.

Supporters of inquisitorial justice, some from the United States, charge the adversarial system with favoring fairness to the accused over the search for truth. They also question the reliance on juries and the rigid evidentiary rules juries require. Defenders of the adversarial system argue that conflict between the parties is best designed to bring out the truth, and they point out the dangers posed by the concentration of power in the hands of the judge, a state official. They see juries and evidentiary rules as safeguards against unjust verdicts.

Greater global interdependence has increased the confrontation between the two legal systems. This tension was evident at the post–World War II Nuremberg trials of war criminals, during which the accused complained about the power of prosecutors to cross-examine witnesses. Such conflicts will continue to grow with time. War crimes trials, the creation of the International Criminal Court, and proposals for a uniform European code of criminal procedure will force legal drafters to develop a set of common trial procedures to facilitate legal participation by parties accustomed to both systems.

Aggravating and Mitigating Factors in Death Penalty Cases

Aggravating and mitigating factors are elements in addition to facts of the crime to be considered when a jury decides whether a defendant receives the death penalty or a lesser sentence of life imprisonment. For a defendant to be eligible for the death penalty, the jury must find at least one aggravating factor—some circumstance that calls for heightened punishment. Similarly, the consideration of mitigating evidence (circumstances justifying lesser punishment) by the judge or jury sentencing a person to death is required by the Eighth and Fourteenth Amendments of the U.S. Constitution.

Mitigating factors are information about a defendant or the circumstances of a crime that might tend to lessen the sentence or the crime with which a person is charged. A statute cannot automatically mandate the death penalty for a defendant convicted of a specific crime. In *Buchanan v. Angelone,* 522 U.S. 269 (1998), the Supreme Court ruled there was a "need for a broad inquiry into all relevant mitigating evidence to allow for individualized determination." The judge or jury must consider the offender's character and record and the circumstances of the offense.

Further, a state cannot prohibit the presentation of mitigating evidence or limit it so severely that it cannot be part of the sentencing decision. But states can guide the sentencer's consideration of the mitigating evidence. A federal statute (*U.S. Code,* Vol. 21, §848(M)) provides that "in determining whether a sentence of death is to be imposed on a defendant, the finder of fact shall consider mitigating factors." Enumerated factors under section 848(M) (1) through (9) address impaired capacity, substantial duress, minor participation, reasonable foreseeability, relative youth, prior criminal record, mental disturbance, codefendant sentences, and victim consent. The statutory mitigating factors are consistent with constitutional requirements as interpreted and applied by the Supreme Court. Section 848(M) is not intended as an exclusive list of mitigating factors; section (M)(10) requires consideration of any "other factors in the defendant's background or character that mitigate against imposition of the death sentence."

For a convicted defendant to be qualified for the death penalty, the jury must find one aggravating factor. Aggravating factors that are essential to any death penalty scheme must "genuinely narrow the class of death eligible persons" in a way that reasonably "justifies the imposition of a more severe sentence on the defendant compared to others found guilty of murder," the Court explained in *Zant v. Stephens,* 462 U.S. 862 (1983). The Constitution requires that the class of defendants eligible for the death penalty be narrowed by means of statutory aggravating factors that furnish principled guidance for the choice between death and a lesser penalty. These factors can be in the definition of the crime, in separate sentencing elements, or in both. Most states follow the *Model Penal Code,* adopted by the American Law Institute in 1962, and define murder broadly. This system requires the sentencer to consider aggravating factors and mitigating evidence at the sentencing phase. However, Oregon, Texas, Utah, and Washington do not use aggravating factors at sentencing. Washington's statutory scheme, for instance, involves the consideration of aggravating factors at the guilt-determination phase, whereas Georgia follows the *Model Penal Code* in requiring consideration of aggravating factors at the sentencing phase.

In *Jurek v. Texas,* 428 U.S. 262 (1976), the Supreme Court ruled that death penalty statutes must be tailored narrowly, thus ostensibly reducing the class of people eligible for the death penalty. This was accomplished by (1) narrowing the definition of capital offenses by including a list of specific aggravating circumstances as elements of the crime that makes a person eligible for the death penalty or (2) defining capital offenses broadly and requiring the sentencing judge or jury to consider during the sentencing phase whether specified aggravating circumstances exist. In *Ring v. Arizona,* 536 U.S. 584 (2002), the U.S. Supreme Court held that the U.S. Constitution guarantees a jury trial and that juries, not judges, must decide if aggravating circumstances exist in the crime to merit the death penalty.

Since 1976 the Court has in dicta (comments in written court opinions that are not necessary to case decisions) and holdings spoken of the belief that "Respect for human dignity underlying the Eighth Amendment requires consideration of aspects of the

character of the individual offender and the circumstances of that particular offense as a constitutionally indispensable part of the process of imposing the ultimate punishment of death," as Justice Potter Stewart stated in *Woodson v. North Carolina,* 428 U.S. 280 (1976). The statutory requirement of considering aggravating and mitigating factors in the determination of death is one step in this process.

Agostini v. Felton (1997)

Title I of the Elementary and Secondary Education Act of 1965 was intended to provide remedial instruction to academically "at risk" students. Congress directed that students eligible under Title I could be enrolled in either public or nonpublic schools. The legislation raised a First Amendment issue involving the Establishment Clause, which prohibits the state from engaging in the establishment of religion. The Supreme Court ruled in *Aguilar v. Felton,* 473 U.S. 402 (1985), and *School District of Grand Rapids v. Ball,* 473 U.S. 373 (1985), that services funded under Title I could not be provided to students on religious school premises. A permanent injunction barred the Board of Education of New York City from sending public school teachers into parochial schools to provide Title I instruction.

The board subsequently provided Title I services by transporting some eligible parochial school students to public schools, while others received services at leased sites or in vans parked near the parochial schools. In the seven years following the *Aguilar* and *Ball* decisions, the New York City school district spent more than $100 million to transport Title I students or provide the vans. The school district and parents of parochial school students eligible for Title I sought release from the injunction by pointing to the unreasonable expense of compliance. They further contended that Establishment Clause rulings since 1985 had largely abandoned the *Aguilar* and *Ball* decisions. The Rehnquist Court (so named for Chief Justice William H. Rehnquist) agreed in a five–four decision in *Agostini v. Felton,* 521 U.S. 203 (1997).

In *Aguilar,* the Court had concluded that church and state were excessively entangled because Title I required "pervasive monitoring" to ensure that school employees did not inculcate religion; necessitated ongoing administrative cooperation between the public school district and nonpublic schools; and increased the danger of "political divisiveness." Twelve years later, Justice Sandra Day O'Connor wrote in *Agostini* that the Court's rulings following *Aguilar* modified the approach the Court used to assess "indoctrination." She suggested the Court had "abandoned the presumption" that the placement of public school employees on parochial school grounds "invariably results in the impermissible effect of state-sponsored indoctrination or constitutes a symbolic union between government and religion." Further, she said the Court had departed from the rule relied on in *Aguilar* that "all government aid that directly aids the educational function of religious schools is invalid."

O'Connor concluded that from the Court's post-*Aguilar* perspective, New York City's Title I program would "not be deemed to have the effect of advancing religion through indoctrination." Rather, the city's program was religion-neutral and did not "run afoul" of any of the criteria used to evaluate whether government aid has the effect of advancing religion. It did not result in "governmental indoctrination," define its recipients "by reference to religion," or "create an excessive entanglement" of church and state. This conclusion was incompatible with *Aguilar* and *Ball,* which resulted in both cases being overruled because they were "no longer good law."

The dissenters (Justices Stephen G. Breyer, Ruth Bader Ginsburg, David H. Souter, and John Paul Stevens) contended that *Aguilar* was a "correct and sensible decision." Under the Establishment Clause of the

First Amendment, the state cannot subsidize religion and is "forbidden to act in any way that could reasonably be viewed as religious endorsement." Justice Souter said that no line could be drawn between "instruction paid for at taxpayers' expense and the instruction in any subject that is not identified as formally religious."

The Court's ruling in *Agostini* permitted New York to resume its on-premises Title I program and allowed other school districts greater latitude in delivering Title I and other educational services to nonpublic school students. Implicit in *Agostini* is the view that the three-prong standard formulated in *Lemon v. Kurtzman,* 403 U.S. 602 (1971), to assess violations of the Establishment Clause may no longer be viable. Although O'Connor's opinion in *Agostini* was narrowly written, her reasoning provided foundation for the Court's later decision in *Zelman v. Simmons-Harris,* 536 U.S. 639 (2002), which upheld school vouchers.

Aguilar v. Texas (1964)

In *Aguilar v. Texas,* 378 U.S. 108 (1964), the U.S. Supreme Court set forth a standard to assist magistrate judges responsible for issuing search warrants in determining whether "probable cause" exists as required by the Fourth Amendment. A warrant is obtained by filing a sworn statement (affidavit) stating sufficient information that gives reasonable ground for suspicion that specified evidence is likely to be found at a designated place. In *Aguilar,* the Court held that the affidavit accompanying the application for the warrant must contain information to enable the magistrate not only to understand the facts and circumstances that form the basis of the informant's knowledge, but also to make a determination as to the informant's credibility or reliability. The *Aguilar* case set the probable-cause standard until 1983.

Nick Aguilar was charged with heroin possession after police executing a search warrant at his apartment found him attempting to dispose of a package of drugs. The police officer's affidavit supporting the issuance of the warrant merely stated the officer's belief that illegal narcotics were kept at Aguilar's apartment. According to the affidavit, this belief was based on " 'reliable information from a credible person.' " At trial, Aguilar objected to the introduction of the evidence seized in the execution of the warrant, arguing that there had not been sufficient probable cause to support issuance of the warrant. The trial court overruled Aguilar's objection and sentenced him to twenty years in prison.

The Supreme Court reversed Aguilar's conviction. A finding of probable cause, the Court argued, must be based on " 'the informed and deliberate determination of [judges] empowered to issue warrants,' " quoting from *United States v. Lefkowitz,* 282 U.S. 452 (1932). In order to perform this function, the Court reasoned, police must give judges enough facts so that they can make an informed and independent decision as to the existence of probable cause. Thus, the Court held, the affidavit accompanying the application for the warrant must contain information to enable the magistrate both to understand the facts and circumstances that form the basis of the informant's knowledge and to make a determination as to the informant's credibility or reliability.

In *Spinelli v. United States,* 393 U.S. 410 (1969), the Court developed more fully the standard announced in *Aguilar*. The *Aguilar-Spinelli* test, as the probable-cause standard was then called, was the standard for probable-cause determinations until the early 1980s. In the 1983 case of *Illinois v. Gates*, 462 U.S. 213, the Court rejected the *Aguilar-Spinelli* test in favor of a "totality-of-the-circumstances" approach to probable-cause determinations.

Aid to Parochial Schools

Controversy over aid to religiously affiliated schools has a long, complicated history, riddled as it is with issues dealing with the Establishment Clause of the First Amendment. The pertinent clause, as now applied to the states via the Due Process Clause of the Fourteenth Amendment, is often summed up in the phrase "separation of church and state." It prohibits government from engaging in action that would constitute establishment of religion.

Tension began when states raised taxes to fund and build public school systems in the 1840s. In addition to teaching reading, writing, and arithmetic, a major goal of public education was to provide citizenship training for the waves of immigrants arriving in the United States. Most schools used books saturated with Protestant ideas and examples. Passages from the King James Bible were read daily. Prayers began and ended the day.

Catholics became alarmed, with good reason, that the public schools were being used to convert their children to Protestantism. Requests to end the proselytizing were met with refusal, and Catholics reacted by building their own schools. When school attendance became mandatory, Catholics requested that their schools be funded along with public schools. That too was refused.

The stubbornness of public school officials is understandable. Most immigrants who arrived between the Civil War and World War I came from Catholic countries such as Ireland, Italy, and Poland. Most were poor and spoke no English. They had no experience with democracy. Indeed, they belonged to a hierarchical church that at the time viewed democracy with suspicion. Many public school advocates believed that democratic government and Catholicism were incompatible. In their view, immersion in the Protestant culture, if not outright conversion, was essential for a healthy republic.

The Court first addressed the question of aid to parochial schools in the 1947 case of *Everson v. Board of Education,* 330 U.S. 1 (1947). Ewing Township, New Jersey, had no public school but did pay to transport its children to schools in surrounding towns. These schools included both public and parochial institutions. A taxpayer sued, arguing that it was unconstitutional to use tax money to fund Catholic education. The Court issued a controversial decision: It gave a definition of the Establishment Clause that forbade any tax money being given to any religious organization for any reason, but then upheld the constitutionality of the Ewing Township program. Justice Hugo L. Black, writing for a five–four majority, reasoned that the aid went to the children being bused and aided religious schools only indirectly. This "child-benefit theory" set the stage for more than fifty years of constitutional litigation to determine what is or is not allowable aid. A few examples show the complexity of this issue.

In *Board of Education v. Allen,* 392 U.S. 236 (1968), a six–three majority of the Court upheld as constitutional the "loan" of secular textbooks by public schools to students in parochial schools on the grounds that the loans promoted secular, not religious, education. In *Lemon v. Kurtzman,* 403 U.S. 602 (1971), and *Early v. DiCenso*, 411 U.S. 192 (1971), the Court, by eight–zero and eight–one majorities, struck down programs that reimbursed religious schools for the purchase of textbooks and other instructional materials and provided salary supplements to teachers of secular subjects. However, on the same day in *Tilton v. Richardson,* 403 U.S. 672 (1971), the Court upheld a program to construct new buildings to be used to teach secular subjects at religious universities and colleges. In *Wolman v. Walter,* 433 U.S. 229 (1977), a six–three Court upheld government funding of diagnostic, health, therapeutic, and testing services, but struck down purchase of instructional materials, such as maps, classroom equipment, and field trips. In *Mueller v. Allen,* 463 U.S. 388 (1983), a five–four Court majority upheld a state

law that allowed tax deductions for tuition, textbooks, and transportation to all schools, including religious ones.

Apparently a heightened consciousness of the needs of handicapped students has had a major impact on the Court's thinking. In *Witters v. Washington Department of Services for the Blind,* 474 U.S. 481 (1986), a unanimous Court agreed that handicapped students at a Christian college could not be denied state vocational rehabilitation funding. In *Zobrest v. Catalina Foothills School District,* 509 U.S. 1 (1983), a five–four majority ruled that a disabled student at a Catholic high school could receive the services of a state-paid sign-language interpreter. Then in *Agostini v. Felton,* 521 U.S. 203 (1997), a five–four majority upheld a program that funded special education classes taught in parochial schools. In this case the Court overruled several previous decisions that had declared a variety of aids unconstitutional.

The pattern of approving state-funded support continued in *Mitchell v. Helms,* 530 U.S. 793 (2000), in which a six–three majority upheld provision of library services and the purchase of computer hardware and software for religious schools. Finally, setting a very important precedent in *Zelman v. Simmons-Harris,* 536 U.S. 639 (2002), a sharply divided Court voted five–four to uphold a voucher plan for the Cleveland, Ohio, school district. The majority argued that vouchers were given to the parents of school-age children from poor families who then chose to have their children attend either public or religious schools. Since parents also had to pay additional tuition for

their children to attend the religious schools, there was no incentive to choose the religious over the public schools. Therefore, because of the elements of parental choice and nonpreferential treatment, vouchers were held constitutional.

In recent years the Court has held many forms of support for religious schools to be constitutional. However, the future of aid to parochial schools remains uncertain for several reasons. First, many Court decisions supporting aid have been by five–four margins, an indication of deep division among the justices; the retirement and replacement of one or two justices on the court could reverse that trend. Second, Protestant Christian schools are the fastest-growing segment of private schooling, a factor that blunts much of the early sectarian criticism of Catholic schools. Third, Catholics have proved to be loyal citizens, and the virulent anti-Catholicism of the nineteenth century has largely disappeared from American culture. Fourth, many state legislators have realized that giving small amounts of aid to children attending religious schools is far less expensive than educating the children in public schools if the religious schools are forced to close. Finally, there is a belief among a number of politicians and educators, disputed by other experts, that religious schools do a better job of educating poor children than do public schools and therefore should be encouraged.

Airport Searches

The right to travel is a liberty long preserved to Americans and was specifically identified as a fundamental right by the U.S. Supreme Court in 1958 in *Kent v. Dulles,* 357 U.S. 116. Although it is fundamental to liberty, the right to travel is not without restraints, particularly when national security interests are at issue. Predictably, air travel often raises such issues, and Americans' right to travel is limited by security precautions taken by commercial airlines. Their security measures include searches of passengers and their baggage, a procedure governed by the requirements of the Fourth Amendment.

The Fourth Amendment guarantees the people the right "to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures." Generally, a search requires a warrant that will be issued only upon a showing of probable cause that a crime has occurred, but this rule has exceptions.

One such exception is the administrative search. In *United States v. Davis,* 482 F.2d 893 (9th Cir. 1973), the Ninth Circuit Court of Appeals held that a search conducted in furtherance of a narrow and compelling administrative purpose could be permissible without warrant or probable cause, provided the search was limited to only what is necessary to achieve that purpose. Accordingly, the *Davis* court concluded that a preboarding screening of all passengers and the items they carry is reasonable as long as it is limited in scope to only what is necessary to detect weapons and explosives and if a person is able to avoid the search by electing not to board an aircraft. This means that only weapons, explosives, or other items related to passenger safety are relevant in a preboarding screening. Evidence of any other kind of crime, such as drugs, cannot be used against the passenger.

These searches are permissible as part of a regulatory scheme because their primary purpose is not to find evidence of a crime but rather to deter passengers from carrying weapons and explosives aboard and to protect air travelers. Although administrative searches can take place absent probable cause, they still must be reasonable under the Fourth Amendment. This requires balancing the need to search against the privacy

A state trooper and his Chesapeake Bay retriever conduct a bomb search at Logan Airport in Boston, Massachusetts. Since the terrorist attacks on September 11, 2001, airport security has increased, but some critics contend that personal liberties are being sacrificed.

interest of the individual. In *United States v. Edwards,* 498 F.2d 496 2d Cir. (1974), the Second Circuit Court of Appeals held that airport searches were valid under this balancing test because the risk of danger to persons and property justifies the search so long as the search is actually made in good faith to prevent hijacking or similar incidents. The search must also be limited in scope to what is reasonable to search for weapons and explosives, and the passenger must be able to avoid the search by choosing not to fly.

In 2001 a passenger flying from Miami to Paris boarded the plane with explosives hidden in his sneakers. As a result, it is now policy for most airlines to ask passengers to remove their shoes if they cause a metal detector to sound. Before the incident in Miami, courts and passengers alike would likely have considered it unreasonable to remove their shoes for security purposes. However, because the risk is real and proven, this is now a commonplace part of airport screening. As terrorists become more innovative, Americans may find that more and more procedures for airport searches emerge and are held to be reasonable by courts.

Another issue with regard to airport searches is whether a physical frisk by a security officer is permissible. In *Terry v. Ohio,* 392 U.S. 1 (1968), the U.S. Supreme Court allowed a limited frisk for weapons without requiring a search warrant if a police officer reasonably and objectively believes criminal activity has occurred or is about to take place. This "stop-and-frisk" is limited to the outer clothing of the individual and is valid only as a search for weapons. Can *Terry v. Ohio* be used as the basis for frisking airline passengers if a metal detector or magnetometer indicates that a passenger is carrying a metal object? In *United States v. Albarado,* 495 F.2d 799 (2d Cir. 1974), the Second Circuit Court of Appeals concluded that a frisk is appropriate only when there is no lesser available means (such as a hand-held metal detector) of determining what metal object a person may be carrying. In other words, security officers should use a *Terry* frisk only as a last resort.

The consent exception has also helped airport screening officials to escape the Fourth Amendment requirements of warrant and probable cause. To satisfy the requirements of the consent exception, an individual must both knowingly and voluntarily give consent to the search. The doctrine of implied consent, which had developed over the years in other contexts, such as police requests to search vehicles, was adopted for airport searches by the *Edwards* court. The nature of airport searches makes this a logical step for the courts to take: It is reasonable to assume that airline passengers traveling in the United States know through common knowledge or signs posted in the airport that their person and baggage are subject to search, and that they can avoid this search by leaving the airport instead of boarding a flight. Therefore, the passenger who remains in the line to be searched has given implied consent to the search, knowingly and voluntarily submitting to it.

As new technology emerges, new issues arise as to what constitutes a reasonable search. With each new security procedure, if and when it is challenged, courts will have to ask if the measure constituted a search and, if so, if the search was reasonable. The CTX-5000 bomb and explosive detector that has recently been introduced into airports, for instance, can be likened to x-ray and hand searches of carry-on luggage in terms of how much the device compromises the privacy interest of the passenger. The BodySearch, which is x-ray technology that reveals what is under a person's clothing, and biometric face-recognition technology, two emerging technologies that will soon be introduced in many airports, likely will be challenged as being more intrusive than existing procedures.

For existing as well as potential procedures, airport security measures that include searching passengers and their baggage without a warrant are constitutionally justified under the Fourth Amendment by exceptions for administrative searches and searches to which an individual consents. Even under these exceptions, however, security measures must be reasonable under the Fourth Amendment when balanced against the harm they are designed to prevent.

Alabama v. Shelton (2002)

In *Alabama* v. *Shelton,* 535 U.S. 654 (2002), a divided U.S. Supreme Court significantly expanded the Sixth Amendment right to counsel. In the five–four decision, the Court ruled that suspended sentences cannot be imposed upon a defendant if the state did not provide the defendant with counsel at trial.

The Sixth Amendment to the U.S. Constitution states that "in all criminal prosecutions, the accused shall enjoy the right to have . . . the assistance of counsel for his defense." In *Johnson* v. *Zerbst,* 304 U.S. 458 (1938), the U.S. Supreme Court reaffirmed a defendant's right to counsel in federal proceedings. The landmark decision of *Gideon* v. *Wainwright,* 372 U.S. 335 (1963), extended that right to state proceedings, holding that indigent defendants accused of felonies were entitled to state-appointed counsel. The ruling in *Shelton* was a further attempt by the Court to define the parameters of the Sixth Amendment right to counsel.

LeReed Shelton represented himself in an Alabama criminal trial. The court warned Shelton several times about the difficulties associated with self-representation, but at no time did the court offer Shelton state-appointed counsel. Shelton was convicted of a misdemeanor and sentenced to thirty days in jail. The sentence was subsequently suspended, and Shelton was placed on two years' probation. Justice Ruth Bader Ginsburg delivered the Court's opinion in which Justices John Paul Stevens, Sandra Day O'Connor, David H. Souter, and Stephen G. Breyer joined. The Court found that a suspended sentence that may ultimately result in imprisonment cannot be imposed upon a defendant if the state did not provide the defendant with counsel at trial.

The *Shelton* ruling significantly expanded the Court's previous decisions. The Court relied heavily on *Argersinger v. Hamilton,* 407 U.S. 25 (1972), and *Scott v. Illinois,* 440 U.S. 367 (1979). In *Argersinger,* the Court found that the right to counsel extended to all proceedings, misdemeanor and felony, that could lead to imprisonment. In *Scott,* the Court ruled that counsel is not required when a defendant's punishment is only a fine but is required when the defendant's sentence is imprisonment. Accordingly, the Court held in *Shelton* that the Sixth Amendment does not allow the later activation of a suspended sentence when the defendant was not provided counsel at the trial where the sentence was imposed. If the suspended sentence were activated (for example, for a defendant's violation of the terms of probation), the defendant would ultimately be incarcerated for the original offense notwithstanding lack of a lawyer at trial.

The dissenting justices believed the Court's ruling placed an undue burden on the states. Writing for the dissent, Justice Antonin Scalia did not think that the threat of imprisonment should entitle a defendant to counsel. Several states were affected by the Court's ruling in *Shelton*. At the time of the decision, sixteen states did not provide counsel for a defendant facing the threat of imprisonment.

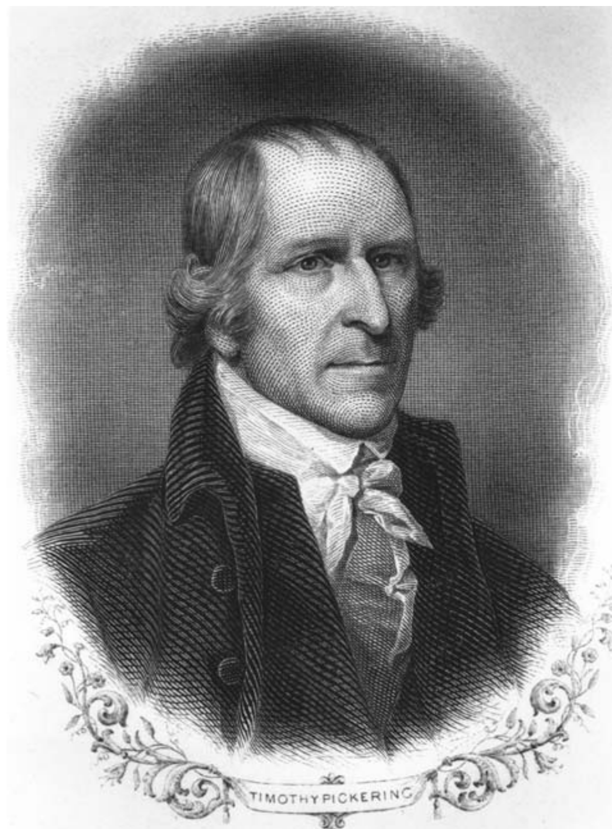
Alien and Sedition Acts (1798)

During an undeclared war with France over violations against American shipping, the Federalists passed four laws in 1798 to weaken and silence the Republican opposition party. Had the first governing party of the United States been successful in using these Alien and Sedition Acts against its opponents, the experiment of self-government in the United States, so eloquently advocated by Thomas Jefferson, might have disintegrated into tyranny by a minority.

In the late 1790s, the Federalists regarded the Jeffersonian Republicans as a subversive faction, likely to betray the republic to the French. At the time, Europe was under French hegemony, with Britain in danger of defeat. A wave of paranoia regarding possible subversives spread through America, centering particularly on immigrants, who gravitated to the Republicans. At the same time, some Federalists calculated that they could use the hysteria to eradicate their political enemies.

Secretary of State Timothy Pickering and President John Adams were among the leading champions of the proposed legislation, although Adams never advocated the use of the laws for partisan purposes. The Federalists did not distinguish between liberal democrats and subversive radicals; some Federalists even advocated burning the seditious writings of Tom Paine.

The fledgling Congress passed these four acts: (1) The Naturalization Act extended to fourteen years (from five) the period of residence required before an individual could obtain citizenship; it was repealed in 1802. (2) The Alien Enemies Act was never in effect, since Congress did not declare war against France. However, some apprehensive aliens left the United States or declined to immigrate to it. (3) The Alien Friends Act was a temporary peacetime act (in effect two years, it expired at the end of Adams's presidency) that capitalized on the fear of Jacobins (radicals who supported the 1789 French Revolution), spies, foreign agents, vagabonds, stereotypical and hated "wild Irish," and so on. The chief executive could order the deportation of any foreigner whom he judged was dangerous to the peace and safety of the United States. (4) The Sedition Act ("An Act for the Punishment of Certain Crimes") was aimed at "domestic traitors" and "internal enemies" and mandated fines or imprisonment for anyone who slandered the government, the Congress, or the president. Its more outrageous provisions, however, were struck out; deleted, for example, was a provision that any American citizen convicted of giving aid and comfort to the enemy would incur the penalty of death. (After the 1800 election, the lame-duck Federalists tried unsuccessfully to reenact it.)



Secretary of State Timothy Pickering and President John Adams were among the leading champions of the proposed legislation that became the Alien and Sedition Acts of 1798. *(Library of Congress)*

Jeffersonian Senator Albert Gallatin of Pennsylvania asked: "What is a false, scandalous, and malicious libel?" In none of the sedition trials was truth suc-

President John Adams was accused of supporting the Alien and Sedition Acts in order to silence his political opponents. *(Library of Congress)*

cessfully presented as a defense. Jefferson, the country's vice president, and James Madison, cofounder of the Republican Party but not at the time in public office, ghostwrote the Kentucky and Virginia Resolutions declaring the four laws unconstitutional and urging states to "interpose" themselves against them.

Selective prosecution on the basis of party and ideology was the norm. In Philadelphia, for example, the Republican *Aurora* was investigated but not the Federalist *Gazette of the United States*, which had also abused its political enemies. Adams protected scientist Joseph Priestley from deportation by his zealous secretary of state, Pickering, but Adams was willing to crack down on another scientist, Pierre Dupont de Nemours. The law was used to punish attacks on the president's reputation but not to punish verbal and written abuse of Vice President Jefferson. When the Hamiltonian Federalists attacked President Adams in 1800, they were committing the very offense they had prohibited, and they did so with at least as much vindictiveness as had resulted in prosecution of Republicans. (Hamilton complained about Adams's "disgusting egotism," "distempered jealousy," and "ungovernable indiscretion.")

About twenty-five persons were indicted under the Sedition Act, and of these about a dozen were brought to trial (including journalists William Duane, Thomas Cooper, and James T. Callender). Benjamin Franklin Bache, publisher of the *Aurora,* was accused of being a hireling and in correspondence with the despots of France. He had printed embarrassing documents and defamed Federalists, but yellow fever took his life before he could be prosecuted for sedition. His assistant, William Duane, continued the *Aurora* and was charged.

One of the first victims of the Sedition Act was congressman Matthew Lyon of Vermont. His imprisonment made him a martyr of freedom of the press. Lyon had attacked the Federalists as Tories and aristocrats, but he had not attacked the president, either house of Congress, or the government. Some of his alleged libels had occurred before the passage of the Sedition Act. Lyon was prosecuted during his reelection campaign. In fact, he conducted his campaign from a federal prison after being convicted.

In Dedham, Massachusetts, men were charged with erecting a "liberty pole" (a flagstaff, often topped with a liberty cap) in protest against government actions thought to be tyrannical. Crackpots and drunkards were among those charged with sedition.

U.S. Supreme Court Justice Samuel Chase displayed highly partisan conduct in impaneling juries, in interfering with defense attorneys, and in his charges to the juries in several cases, including those involving Thomas Cooper, the Massachusetts liberty pole, and James Callender.

There resulted what some in the late twentieth century termed "blowback": The attempt to suppress seditious criticism of the authorities instead served to facilitate its spread. As propagandists, the Federalists were no match for the Republicans. (One reason for the unpopularity of the Alien Act in the South was a strange belief that the president had been given authority to deport slaves.)

Hamilton was prescient. He feared that the sedition legislation threatened to strengthen, rather than weaken, the Republican "faction." John Marshall, who was elected to the House of Representatives in 1798

(and thus did not begin service until after the laws were adopted), also announced that he would have opposed as unwise the Alien and Sedition Acts had he been in Congress. (For this act of party disloyalty, he was censured by the New England extremists.)

Alien Tort Claims Act (1789)

Passed by the first U.S. Congress in 1789, the Alien Tort Claims Act (ATCA) fell quietly into disuse for almost 200 years. Today it is the basis for some of the most important international human rights litigation in the United States, allowing aliens to file lawsuits for violations such as genocide, disappearance, and torture, regardless of where the acts were committed.

The ATCA reads, "The [federal] district courts shall have original jurisdiction of any civil action by an alien for a tort only, committed in violation of the law of nations or a treaty of the United States." Its original purpose was to give aliens access to federal rather than state courts as they sought compensation for violations of international law.

The ATCA went mostly unnoticed until 1978, when the Filártiga family discovered that a Paraguayan officer who had tortured and unlawfully killed Joelito Filártiga in Asunción was living in eastern New York. The family filed an unprecedented civil suit under the ATCA and in 1980 won damages of over $10 million, which was upheld in *Filártiga v. Peña-Irala,* 630 F.2d 876 (2d Cir. 1980).

The *Filártiga* victory spawned an entire line of international human rights litigation in domestic courts, with federal judges regularly hearing cases that spanned the globe in reach. As critic M.O. Chibundu put it, surveys of such lawsuits resemble "a current affairs topics primer of the trouble-spots of the non-Western world." From Latin America alone, cases have been brought against former officers of repressive regimes in Argentina, Bolivia, Chile, Guatemala, Haiti, Nicaragua, Paraguay, and El Salvador. Cases have addressed the Rwandan genocide, the Bosnian genocide, and mass killings in East Timor, and defendants served have included Jean-Bertrand Aristide, president of Haiti; Li Peng, former Chinese premier; Ferdinand Marcos, former dictator of the Philippines; and Robert Mugabe, president of Zimbabwe. The cases have reached back in time as well, with recent suits filed for slave-labor practices in Japan and Germany during World War II. Defendants are not always individuals: Plaintiffs have sued multinational companies, such as Unocal, Exxon Mobil, and Rio Tinto, for alleged human rights violations committed abroad.

A 1984 judgment temporarily slowed the *Filártiga* momentum. In *Tel-Oren v. Libyan Arab Republic*, 726 F.2d 744 (D.C. Cir. 1984), a court dismissed a case brought by Israeli citizens against defendants that included the Palestinian Liberation Organization (PLO). But the judges could not reach a consensus; the case was dismissed by three contradictory concurring opinions, and the judges called both for the Supreme Court to take the case and for Congress to pronounce its will. The U.S. Supreme Court declined the case, but Congress passed the Torture Victims Protection Act (TVPA) in 1992, which provides in part: "An individual who, under actual or apparent authority or under color of law of a foreign nation, subjects another individual to torture or extrajudicial killing shall be liable for damages in a civil action to that individual.

The TVPA complements the ATCA in several ways. First, it seems to voice congressional political approval of the *Filártiga* line of cases. Second, it expands "standing" (the right to bring a lawsuit) to encompass aliens. However, its reach is less broad: Suits under the TVPA can be brought only for torture and extrajudicial killing, and it limits the category of defendants to individuals acting under color of law.

ATCA-based litigation has been subject to a great

deal of critical examination and debate. Critics argue that the cases encroach on executive prerogative in the realm of foreign policy, and that such suits risk overcrowding the dockets of U.S. courts with claims rooted in foreign political conflicts. Indeed, the State and Justice Departments of the Bush administration have interceded on behalf of several ATCA corporate defendants; the Justice Department's brief in *Doe v. Unocal,* 2002 U.S. App. Lexis 19263 (9th Cir. 2000), went so far as to call for an end to ATCA-based human rights litigation. Scholarly debate also has turned on the issues of whether the actions arise from international customary law, U.S. law, or foreign domestic law and whether it is proper for U.S. courts single-handedly to fashion international customary law. Another controversial aspect of these suits is that victorious plaintiffs rarely collect damages. Defendants often default, neither defending themselves in court nor paying out judgments.

Human rights activists argue that ATCA-based litigation prevents the United States from becoming a safe haven for individuals who commit human rights abuses abroad and then avoid justice in their own countries by immigrating. Further, the ATCA provides a forum through which victims can gain compensation and a sense of vindication. Without ATCA, many plaintiffs would have no legal recourse, as foreign courts are often reluctant to try such crimes, and U.S. courts are reluctant to claim universal jurisdiction under international law. Finally, the threat of litigation has made some multinational corporations more amenable to working with human rights groups to modify their practices.

In a sense, ATCA-based litigation has filled the same gap in human rights law that the International Criminal Court (ICC) aims to fill: It has provided access to justice for victims of heinous human rights abuses who cannot gain redress in their own countries. However, the ICC will not make ATCA-based litigation redundant, as its jurisdiction is limited to war crimes and crimes against humanity, and its focus is criminal rather than civil liability.

Allgeyer v. Louisiana (1897)

In *Allgeyer v. Louisiana,* 165 U.S. 578 (1897), a unanimous U.S. Supreme Court established the doctrine of "liberty of contract." Like most constitutional doctrines, liberty of contract—or the *Allgeyer* doctrine, as it became known—had a lineage predating its formal articulation. And like all landmark rulings, *Allgeyer* continued to echo in subsequent constitutional rulings.

Around the middle of the nineteenth century, American judges amplified the concept of due process beyond only procedural matters to include a substantive limitation against arbitrary government action. In addition to limiting government by requiring that acts of power conformed to established rules of law—a conception of due process dating back beyond Magna Carta (1215) to a pre-Norman (1066) understanding that even the sovereign must obey a higher law—the principle of substantive due process held that certain governmental deprivations of life, liberty, and property were inherently arbitrary. The U.S. antecedents of a substantive reading of due process appeared as early as 1798, in *Calder v. Bull,* 3 U.S. 386, in which Justice Samuel Chase wrote: "There are acts which the Federal, or State, Legislature cannot do, without exceeding their authority." Over the next half century,

the specific sources of such substantive limitations remained vague, with U.S. courts referring variously to the character of legislatures, to natural-law principles, or to the common law, primarily to insulate the private ordering of economic relations—contracts and property rights—from government regulation.

In 1856 the New York Court of Appeals overturned a statute prohibiting alcohol as being a substantive deprivation of property in violation of the New York constitution's due process clause. The Court reasoned in *Wynehamer v. People,* 13 N.Y. 378 (1856), that if "the legislature [can] make the mere existence of the rights secured the occasion of depriving a person of any of them . . . by the forms which belong to 'due process of law[,]' [then] . . . the legislative power is absolute." One year later, in *Scott v. Sandford,* 60 U.S. 393 (1857), the U.S. Supreme Court overturned the Missouri Compromise (which prohibited slavery in certain new U.S. territories), holding that the Due Process Clause of the Fifth Amendment gave substantive protection for a slaveholder's right to take such "property" (slaves) into the territories. After 1868 the focal point of substantive due process jurisprudence in the economic realm became the newly adopted Fourteenth Amendment.

Two dissenting opinions by Justice Stephen J. Field were immediate precursors to Justice Rufus Peckham's *Allgeyer* opinion. In the *Slaughterhouse Cases,* 83 U.S. 36 (1873), and *Munn v. Illinois,* 94 U.S. 113 (1877), Justice Field articulated the core notion of economic substantive due process. As he put it in *Munn,* "[L]iberty . . . means . . . freedom [of the individual] . . . to pursue such callings and avocations as may be most suitable to develop his capacities, and to give them their highest enjoyment." Twenty years later, Justice Peckham couched Field's view in terms of contracts, this time for the unanimous *Allgeyer* majority: " '[L]iberty' . . . is . . . the right . . . to be free in the enjoyment of all [a citizen's] faculties . . . and for that purpose to enter into all contracts which may be proper, necessary, and essential to his carrying out to a successful conclusion the purposes above mentioned."

Justice Peckham deployed the *Allgeyer* doctrine notably—in some circles, infamously—in *Lochner v. New York,* 198 U.S. 45 (1905), to overturn a statute requiring that bakers work no longer "than sixty hours in any one week, or more than ten hours in any one day on the last day of the week." *Allgeyer* also figured in the Court's voiding of the federal Erdman Act prohibiting discrimination against union members in *Adair v. United States,* 208 U.S. 161 (1908). The specific liberty-of-contract doctrine articulated in the *Allgeyer-Lochner-Adair* decisions ultimately was rejected by the Supreme Court in 1937. Nevertheless, the underlying notion that due process imposed substantive as well as formal limitations on government remained viable. A line of cases stretching from *Meyer v. Nebraska,* 262 U.S. 390 (1923), to *Roe v. Wade,* 410 U.S. 113 (1973), and beyond were grounded in "liberty" understood as personal autonomy, government deprivations of which the Court deemed arbitrary.

American Bar Association

The American Bar Association (ABA) is a voluntary membership association of attorneys. With over 400,000 members, the ABA is the largest professional association of its type in the world.

The ABA was founded August 21, 1878, by a group of 100 lawyers, judges, and law teachers out of a concern for the existing state of the profession. The populist movement of the time displayed a significant distrust toward groups such as lawyers, because they were perceived to wield class power and enjoy special privileges. This distrust resulted in minimal standards for admittance to the legal profession, with only nine states having any educational requirements at all. Bar examinations were considered meaningless. The pro-

fession had no national code of ethics. There was no national organization to serve as a forum for debate about the challenges to the profession and as a resource for information about the increasingly complex nature of legal practice.

At the initial organizational meeting in Saratoga Springs, New York, these 100 representatives of twenty-one states adopted a constitution and identified these goals: "To advance the science of jurisprudence, promote the administration of justice and uniformity of legislation throughout the nation, uphold the honor of the profession of the law, and encourage cordial intercourse among the members of the American Bar." Today the ABA's recommended role is to be "the national representative of the legal profession, serving the public and the profession by promoting justice, professional excellence, and respect for the law."

The ABA House of Delegates, composed of over 500 elected representatives from every state, is the policy-making organ of the ABA. The House of Delegates meets annually and has numerous committees. Between annual meetings a thirty-seven-member Board of Governors, elected by the House of Delegates, has the authority to act and speak for the ABA.

ABA activities include providing continuing legal education for attorneys, disseminating information about law and the legal system, and sponsoring initiatives to improve the legal system. For example, the U.S. Department of Education authorizes the ABA to accredit American law schools; it is the only organization that performs this task. A number of states condition admission to the bar on graduation from an ABA-accredited law school. In addition, for almost a century the ABA has adopted suggested standards of

President Herbert Hoover receiving applause before the opening session of the American Bar Association in Washington, D.C., 1932. *(Library of Congress)*

professional conduct, or codes of ethics, that serve as models for the regulatory law governing the legal profession. The current version of these standards is the *Model Rules of Professional Conduct* (2002); more than two-thirds of the states have adopted professional conduct codes based on these model rules.

One of the ABA's controversial activities has been the evaluation of the professional qualifications of persons nominated for appointment to the U.S. Supreme Court and other federal judicial positions, a task performed by the ABA's Standing Committee on Federal Judiciary. For over fifty years every U.S. president, Democrat or Republican, had consulted the committee about potential judicial nominees prior to their nomination. On March 22, 2001, the White House announced that it would no longer submit names to the committee in advance of a nomination. Nevertheless, the committee continues to evaluate judicial candidates after their names are public and provides its conclusions to the Senate Judiciary Committee, the Office of the Attorney General, and the White House.

American Booksellers Association, Inc. v. Hudnut (1985)

In *American Booksellers Association, Inc. v. Hudnut,* 771 F.2d 323 (7th Cir. 1985), a federal appeals court invalidated an Indianapolis antipornography ordinance. The U.S. Supreme Court has ruled that obscenity is a category of expression not protected by the First Amendment. To determine if a pornographic work is obscene, courts have used guidelines articulated by the Supreme Court in *Miller v. California,* 413 U.S. 15 (1973): (1) whether the "average person applying contemporary community standards" would find that the work, taken as a whole, appeals to the prurient interest; (2) whether the work depicts or describes, in a patently offensive way, sexual conduct specifically defined by the applicable state law; and (3) whether the work, taken as a whole, lacks serious literary, artistic, political, or scientific value. If a pornographic work is not obscene, it is protected speech.

Some feminists, notably Andrea Dworkin and Catharine MacKinnon, have argued that pornography should be banned because it violates women's civil rights. It degrades women by depicting them as sexual objects. It increases the tendency of men who view it to develop unacceptable attitudes toward women, to discriminate against women in the workplace, and to engage in acts of violence against women. In 1983 Dworkin and MacKinnon drafted an antipornography ordinance based on this argument.

In 1984 the Indianapolis–Marion County City-County Council passed an ordinance that outlawed pornography based on the Dworkin-MacKinnon definition, as the graphic, sexually explicit subordination of women, presenting women as sex objects or as enjoying pain, humiliation, or servility. The ordinance did not outlaw pornography that depicted women in sexual encounters premised on equality. This ordinance was far removed from the standards articulated in the *Miller* test.

The American Booksellers Association and other book, magazine, and film distributors and readers challenged the ordinance in U.S. District Court for the Southern District of Indiana on the basis that it violated their First Amendment rights. Indianapolis justified the ordinance on the theory that pornography affects men's thoughts and harms women.

The district court declared the ordinance unconstitutional because it regulated the content of speech. Such regulation can be justified only by demonstrating a compelling state interest in reducing sex discrimination, and Indianapolis did not demonstrate such a compelling interest. In 1985 the U.S. Court of Appeals for the Seventh Circuit upheld the decision of the district court. Writing for the court, Judge Frank Easterbrook called the ordinance "thought control," because it established an "approved" view of women, of how they may react to sexual encounters, and of how the sexes may relate to each other. Only those who espouse the so-called approved view may use sexual images. The appellate court said the ordinance discriminated on the basis of the content of the speech. Speech treating women in the approved way is lawful

under the ordinance, no matter how sexually explicit the work. Speech treating women in the unapproved way is illegal no matter how significant the literary, artistic, or political qualities of the work taken as a whole. The state (including local government) may not declare one perspective correct and all others invalid. In 1986 the U.S. Supreme Court declined to accept the case for review, and the standards in *Miller v. California* continue to govern in this area.

American Civil Liberties Union

The American Civil Liberties Union (ACLU) is a private, nonpartisan organization that litigates cases and lobbies for the defense of civil liberties throughout the United States. As either an amicus curiae (friend of the court) or in its capacity as directly representing litigants, the ACLU has been one of the most successful and influential groups in America defending First Amendment, criminal due process, and equal protection rights.

Founded in 1920 by Roger Baldwin, Crystal Eastman, Albert DeSilver, and others to protest against the government's crackdown on dissenters during World War I, the ACLU defines itself as the guardian of American liberty and individual rights. In its eighty-plus years of existence, the ACLU has sought to defend the Constitution and the Bill of Rights (the first ten amendments to the Constitution) primarily through litigation, but it has also employed lobbying at the state and federal level and used educational programs to further its mission.

Throughout its history, the ACLU has been involved in some of the politically and constitutionally most important cases in America. In 1925 it employed attorney Clarence Darrow to defend a Tennessee high school teacher who defied state law and taught the theory of evolution. In what became known as the "Scopes monkey trial," Darrow and the ACLU squared off against famous orator-lawyer William Jennings Bryan in one of the most dramatic trials in history. Although losing at the trial level, eventually the defendant John Scopes was acquitted of violating the law.

In the 1940s, the ACLU challenged the government's relocation and internment of Japanese Americans in *Korematsu v. United States*, 323 U.S. 214 (1944); in 1954 it joined the challenge to school desegregation that led to the decision in *Brown v. Board of Education*, 347 U.S. 484 (1954) declaring that type of segregation unconstitutional; and in the 1950s it litigated on behalf of the political rights of individuals, challenging efforts to persecute Communists. Over time, the ACLU has been involved in defending abortion rights, as in *Roe v. Wade,* 410 U.S. 113 (1973); privacy and gay rights, as in *Romer v. Evans,* 517 U.S. 620 (1996); and free speech rights, as in *Texas v. Johnson,* 491 U.S. 397 (1989) (the right to burn a flag). Finally, the ACLU has brought many cases defending criminal due process rights while also opposing the death penalty.

Currently, the ACLU has over 300,000 members, with 150 affiliates in all fifty states, as well as national offices in Washington, D.C., and New York City. The organization handles more than 6,000 cases per year.

American Nazi Party

The American Nazi Party (ANP) was significant both historically and politically. It was best known in the late 1950s and into the 1960s for arguing against extending civil rights and liberties to nonwhites and Jewish persons in the United States. Although most Americans view the acts committed under Nazi Germany's regime as among the most reprehensible ever recorded, many are unaware of activities that supported Nazi objectives in the United States.

The ANP existed from 1958 to 1967, but its roots were evident as early as the 1920s, and its progeny, groups identified as neo-Nazi, are still very active today. The ANP contended that Jews seek world domination and the social, economic, political, and biological destruction of white persons. Consequently, whites must take drastic measures to defeat the Jewish threat. A brief review of the earlier Bund movement provides background for understanding the development, growth, and demise of the ANP.

From 1924 to 1941, the Bund movement became the initial Nazi movement in the United States and disseminated Adolf Hitler's National Socialist ideology to America. The movement received financial support from Germany once Hitler (pictured) was named chancellor in 1933.
(Library of Congress)

THE EARLY NAZI MOVEMENT IN AMERICA

The United States received nearly 430,000 German immigrants between 1919 and 1932, according to Sander Diamond, and during the 1920s, many of them formed organizations in their new country that supported the views and political objectives of an ascendant Adolf Hitler in Germany. In 1920, Hitler founded the National Socialist German Workers Party, which became known as the Nazi Party.

After World War I, Germany faced significant economic pressures in part due to the reparations demanded by the Treaty of Versailles. Hitler argued that conspiring Jews and Communists caused Germany's problems, and he attracted supporters because of the chaotic and uncertain conditions that prevailed. As a result of Hitler's effort to gain control of the German government in 1923, however, the Nazi Party was banned; Hitler was subsequently convicted of treason and incarcerated briefly, before being released in 1924.

Some Germans who came to America during this period were Nazi sympathizers. They formed pro-Nazi organizations—for example, the Teutonia Association, the Friends of the New Germany, or the American German Bund—known collectively as the Bund movement (a federation or union). The Bund movement subsequently received financial support from Germany once Hitler was named chancellor in 1933. From 1924 to 1941, it became the initial Nazi movement in the United States and disseminated Hitler's National Socialist ideology to America. With some modifications in ideology, the Bund movement was able to exploit America's racial problems. Its tenets included (1) Aryan persons (Caucasians of "pure" blood) are superior to non-Caucasians; (2) world Jewry is the archenemy of Aryan peoples; (3) Jews are inherently evil and seek to install communism globally; (4) Jews will destroy all other groups to ensure their political objectives and world domination; (5) Jews use blacks and other racial minorities to decimate America—particularly Aryan society; thus (6) Jews and racial minorities are responsible for all of the social and economic problems in America.

The Bund movement failed because it never drew significant numbers of native-born Americans; participants reportedly never exceeded 25,000. It fell under suspicion and was identified as an un-American organization as interwar relations between the United

States and Nazi Germany became increasingly strained.

THE AMERICAN NAZI PARTY

As the Bund movement languished, Nazism fell dormant until U.S.-born George Lincoln Rockwell reintroduced it. In an ironic twist, Rockwell fought against Germany in World War II, then subsequently established the first postwar neo-Nazi organization in America in 1958.

Rockwell's childhood included early exposure to anti-Semitic and other intolerant attitudes. After his discharge from military service and several failed attempts at various occupations, Rockwell became more involved in right-wing political causes. He contributed to the formation of the National States Rights Party in Georgia, which propagated an anti-Semitic and racist platform. By 1958 he identified himself as a Nazi and formed the American Nazi Party in Arlington, Virginia. The ANP, not unlike the Bund movement, adhered to Hitler's National Socialist ideology.

National Socialism contends that race determines an individual's natural abilities and that natural law identifies a racial hierarchy. National Socialists thus believe that Aryans have greater abilities than non-Aryans. Also, the well-being of one's racial group must be a greater priority than one's individual aspirations.

Based on this premise, the ANP promoted the following concepts: racialism, white power, anti-Semitism, and the necessity of eliminating Jews, homosexuals, "race-traitors," and nonwhites. This elimination must occur politically—if not physically through genocide—because the Jewish race conspires to subjugate whites worldwide by using nonwhite races. In 1967, Rockwell changed the name of the ANP to the National Socialist White People's Party (NSWPP) in order to "Americanize" its image. Rockwell also introduced the term "white power" in a book posthumously published in 1972.

The Nazi movement in the United States under the banner of the NSWPP best articulated its position regarding civil liberties in its twelve-point program. It included the demand that citizenship and its attendant rights be limited to non-Jewish whites "who prove themselves worthy of it."

Rockwell employed a simple formula to attempt to build the ANP: Agitate a targeted group; provoke an aggressive response; draw media attention; and see some growth in membership. However, as with its predecessor Bund groups, the ANP failed to thrive due to its inability to make its ideology attractive to mainstream American politics. ANP membership never exceeded 200 persons.

Rockwell was eventually assassinated by one of his own lieutenants in August 1967. Nevertheless, the NSWPP continues to be active more than thirty years after Rockwell's death. Nazis sometimes become embroiled in controversies relating to the First Amendment, as when they attempt to march without permits or display Nazi symbols like the swastika in public.

Americans for Democratic Action

The founding of Americans for Democratic Action (ADA) in 1947 nearly coincides with the advent of civil liberties as an issue that can be clearly demarcated with respect to voting in Congress. Aage Clausen, who pioneered the study of issues that have produced cleavages in Congress, pegged 1949 as the first year that such cleavages could be identified.

Among the ADA's founders were Chester Bowles, Eleanor Roosevelt, and Joseph L. Rauh Jr., the famed

civil rights lawyer. Many of the founders were attacked for their so-called liberalism. Bowles, who nonetheless went on to be elected governor of Connecticut, was attacked for allegedly aiding Henry Wallace of the Progressive Party and being soft on Communists. Eleanor Roosevelt's husband, President Franklin D. Roosevelt, had nominated such First Amendment absolutists as William O. Douglas and Hugo Black to the U.S. Supreme Court. She chaired the panel that promulgated the Declaration of Human Rights (1948) for adoption by the United Nations, and she was frequently vilified for her friendship with African Americans and her advocacy of civil rights.

The late 1940s was an inauspicious time for civil liberties in light of the advent of the Cold War. President Harry S Truman had established an Employee Loyalty Program in response to attacks that his administration contained "subversives." Moreover, the successful Republican national campaign in 1952 highlighted fears of communism both at home and abroad. Complaints abounded of injustices in the Employee Loyalty Program with its plethora of security boards passing judgment on the loyalty of federal employees and reinforcing the concept of "guilt by association" in the United States. Joseph L. Rauh Jr., who chaired the executive committee of the ADA, decried that people accused of disloyalty were not allowed to confront their accusers.

Francis Biddle, who had served as one of Franklin D. Roosevelt's attorneys general, sent a memorandum to President Truman stating that an executive order he had issued April 21, 1951, exacerbated the situation by allowing the dismissal of federal employees if there was "reasonable doubt" as to the person's loyalty. Despite President Truman's empathy for the workers, Biddle believed that a "witch-hunt" would likely ensue.

Over the years, the ADA became tantamount to a faction of the Democratic Party, historically the more heterogeneous of the two major parties, that promotes implementation of the party platform. The group develops measures of liberalism for votes in Congress and grades members accordingly. The organization continues to voice concern for the maintenance of civil liberties and to support candidates who favor such freedoms.

Americans United for Separation of Church and State

Originally called Protestants and Other Americans United for Separation of Church and State, the organization Americans United for Separation of Church and State was founded in 1947 in response to the decline of Protestant power in the United States as the Catholic Church pushed for greater aid to parochial schools and American ties, formal or informal, to the Vatican. The organization dropped the "Protestant and Other" portion of its original name in 1972, reflecting its expansion into all issues concerning church and state, not just those affecting Protestantism. This group blended a number of distinct religious, fraternal, and educational groups, as well as liberal, conservative, and fundamentalist leaders. Often called simply Americans United (AU), it maintains close ties with various groups to this day and provides a network between important individuals and

groups interested in church-state separation. It has expanded to include local chapters in twenty-nine states.

Its only founding principle, as set forth in its manifesto, is to ensure the maintenance of the constitutional guarantee of the separation of church and state, which the courts have found is mandated by the First Amendment. This separation is considered to be a safeguard of religious liberty to all people and all churches. The group's objective is to ensure that the provision forbidding Congress from making a law "respecting an establishment of religion" remains clear and strictly enforced by the U.S. Supreme Court. Members take a strictly separationist viewpoint, in that they believe that both political and religious institutions function better the less they are entangled with each other. In that belief, they have fought the funding of faith-based initiatives, prayer in public schools, school vouchers, the public display of religious symbols, and the teaching of creationism or "intelligent design" in public schools.

The AU pursues a number of strategies of advancing strict separation. It is a major player in the state and federal courts on the church-state issue as it initiates lawsuits; provides legal counsel and support, including legal briefs; and partners in joint lawsuits. Also, through grassroots local, state, and regional chapters, the group monitors church-state interactions throughout the country. It addition, it advocates its separation philosophy to the public through numerous media outlets, lobbies on the issue in state legislatures and the U.S. Congress, and publishes a monthly journal on the issue called *Church and State*.

The organization may be best known for its participation in major church-state cases such as *Lemon v. Kurtzman,* 403 U.S. 602 (1971), among others, but members also collect information and advocate the constitutional rights of individuals outside of the courtrooms through nonadversarial means. To this end, its legal department identifies potential constitutional violations and engages in letter writing, phone calling, and informal advocacy. Aside from playing an advocacy role in the many court battles that shape church-state law, Americans United also ensures that where a strong constitutional precedent for separation exists, it is respected on the local, state, and national level. This nonadversarial program represents a novel way of ensuring the protection of rights and is but one example of how Americans United fights for the strict separation of church and state on all levels, including courts, legislatures, and public opinion venues.

Amicus Curiae

Amicus curiae (Latin, meaning "friend of the court") is a term used for written legal arguments (called briefs) filed by persons and organizations not a party to a case before the U.S. Supreme Court but who nonetheless seek to influence the justices' decisions. The dramatic growth in the past several decades of the number of amicus curiae briefs filed with the Court is among the most remarkable historical changes the justices have encountered in the decision-making environment. Although Supreme Court rules place some restrictions on the submission of amicus briefs, these documents are filed in approximately 90 percent of all cases granted plenary (full) review by the justices. Not surprisingly, landmark civil liberties

cases that trigger intense ideological debate—such as *Webster v. Reproductive Health Services,* 492 U.S. 490 (1989), involving abortion restrictions, and *Adarand Constructors, Inc. v. Peña,* 515 U.S. 200 (1995), dealing with minority contracting—also generate disproportionate numbers of amicus filings. Moreover, judicial scholars report that amicus curiae briefs, especially those submitted by the U.S. solicitor general on behalf of the federal government, are an important source of information for the Court and may inform the justices' decision-making practices.

What, then, might a "friend of the court" wish to accomplish in submitting written arguments in a case to which that "friend" is not a party? Persons or organizations submitting amicus curiae briefs hope to impact the business of the Supreme Court in one of two ways. First, a party filing an amicus curiae brief may seek to influence the justices' decisions concerning whether to grant or deny a request for issuance of the writ of certiorari, the document requiring that the record of lower-court actions in a case be sent to the Court for complete review on the merits. In this sense, parties seek to influence which cases the Court ultimately decides. Second, an amicus curiae brief may be filed by a party seeking to shape the justices' final decision in a case and the content of the written opinion(s) the Court issues following that final decision. In short, parties often seek to shape the content of the law by providing the justices not only written legal arguments but also sociological data, technical information, or scientific insight. Legal scholars Joseph Kearney and Thomas Merrill have noted that amicus filings are significant factors shaping the decisions of Supreme Court justices, and parties submitting briefs encounter success in patterned, predictable ways.

Court rules specify the circumstances under which amici (plural "friends") briefs are permitted. Supreme Court Rule 37 provides that amicus curiae briefs may be submitted when all parties to the suit consent. Absent the consent of one or more parties to the suit, an organization wishing to submit an amicus curiae brief may petition the Court for permission to submit despite objections from the litigants. According to political scientists Gregory Caldeira and John Wright, on only rare occasions does the Court deny amicus participation to a petitioning organization.

Rule 37 recognizes the special place of government organizations in the life of the Supreme Court. The rule allows the U.S. solicitor general to submit an amicus brief in any case before the Court even in the absence of the litigants' consent and without going through the process of obtaining the justices' permission. The same principle holds for all federal agencies, each of the fifty states, and all municipalities within the political boundaries of the United States. Frequently, the Court invites amicus participation from the U.S. government. The effect of Rule 37 and the solicitor general's amicus participation is that the federal government's interests are a consistent element of the information available to the justices in selecting cases for review and deciding cases on the merits.

Considering the Court's heavy caseload and the demands of writing opinions, what motivates justices to spend the additional time and effort required to weigh the information presented in amicus briefs? Political scientists Lee Epstein and Jack Knight researched the motivational factor and found that the justices seek to render decisions that will endure the scrutiny of the president, other members of the executive branch, and Congress. Further, the justices know that their decisions, like all instances of policy making, must survive in an interinstitutional environment where officials who oppose a Court decision may attempt, either legislatively or via executive action, to undo the Court's work. Thus, according to Epstein and Knight, the justices act strategically, using the information presented in amicus curiae briefs to effectuate decisions that will endure the rigors of the American system of separation of powers (legislative, executive, judicial). In short, the justices see amicus curiae briefs as a source of information useful in advancing their desired policy outcomes. In this sense, the arguments and information contained in amicus curiae briefs may be important factors shaping the content of substantive policy debate among Supreme Court justices.

Because amicus curiae briefs are so influential, consistently high amicus participation rates reflect that the business of the Court, often regarded as the province of the legal and political elite, is today a policy-making arena markedly open to interest-group participation. The effect of this openness, however, is to generate significant competition among the thousands of organized amicus participants, a system that likely favors groups possessing the most highly

regarded resources for appellate advocacy—expertise and experience.

Questions regarding the influence of amicus curiae briefs on Court behavior are important targets of scholarly activity. Furthermore, the impact of amicus participation on case outcomes is, and will likely remain, a point of contention for Court observers. What is certain, however, is that the sheer volume of amicus filings with the Court is consistent with the view that the justices occupy a principal station in American politics and that amicus curiae briefs comprise a key pathway for interest-group participation in the public policy process.

Amish

The Amish are an ultraorthodox Protestant religious group that has been involved in several important U.S. Supreme Court cases regarding the religious freedom guaranteed by the First Amendment to the Constitution. The Amish are an agrarian and devoutly religious sect who have sought the Court's protection when their unique religious beliefs have conflicted with majority-imposed laws.

In 1938, in footnote four of the decision in *United States v. Carolene Products Co.,* 304 U.S. 144 (1938), Justice Harlan F. Stone urged a shift in the Court's focus from social and economic policy to, among other things, the special protection of "discrete and insular minorities" against the majority-led political process. The Amish epitomize this notion of a "discrete and insular minority."

The Amish first arrived in America in colonial times, as they fled religious persecution in Europe. They lead an insular lifestyle by attempting to remain separate from society at large and rejecting modern technology, and religion defines all aspects of their way of life. A very close-knit sense of community is another trademark. To become a member of the Amish church, one must choose to be baptized at age eighteen. Before this crucial decision, children are under parental control. Parents inculcate offspring from an early age with the social ways of the Amish to preserve and perpetuate their unique heritage.

A governmental threat to this parental power led to *Wisconsin v. Yoder,* 406 U.S. 205 (1972). Wisconsin enacted a law requiring that children attend school until age sixteen, a provision that clashed with the Amish practice of providing education only up to eighth grade and then enrolling children in apprenticeship programs. The question facing the Supreme

Amish children reading their lesson in a one-room schoolhouse. Amish religious beliefs have caused the group to be involved in several important Supreme Court cases, most notably one involving state-imposed educational laws. *(Mel Horst Photography)*

Court in *Yoder* was whether a minority should be exempted from a law of general applicability when the law violated their religious beliefs. The court sided with the Amish, since the state law was effectively asking them "to perform acts undeniably at odds with the fundamental tenets of their religious beliefs," and so violated the Free Exercise Clause of the First Amendment. The Court seemed to side with the parents on the threats of compulsory school attendance, since it "carries with it a very real threat of undermining the Amish community and religious practice. . . . [T]hey must either abandon belief and be assimilated into society at large, or be forced to migrate to some other and more tolerant region." In short, the Court employed a balancing test, weighing the state interest in compulsory education against the nature of the violation of the Amish faith. The state did not have a compelling argument that compulsory education was necessary, whereas the threat to the Amish religion was large. In short, the Amish, as a "discrete and insular minority," merited the Court's protection of their free exercise of religion.

Later, in *United States v. Lee,* 455 U.S. 252 (1982), the Court indicated that the protections afforded in *Yoder* had limits. Influenced by their deeply felt religious obligation to care for their own elders, Amish individuals refused to pay into the Social Security system or accept its benefits. The Court again employed a balancing test, this time denying the faith-based exemption, noting that such an exemption could lead to other claims of religious exemption to Social Security taxes and thus threaten the entire system. The federal government's overriding interest in maintaining the integrity of the Social Security system likely tipped the scales in its favor. The Court concluded that any hindrance to the free exercise of their religion was a justified hardship for the Amish.

Anonymous Political Speech

The ability to speak anonymously about or on behalf of political issues or candidates is protected by the First Amendment to the U.S. Constitution. Under the First Amendment, Congress cannot make laws that infringe on the exercise of free speech. This right has been extended to include the freedom to express opinions and the freedom of content. The right to speak anonymously does not automatically prevent the subsequent determination of the identity of the speaker or writer. A speaker cannot hide behind the protection of anonymity to commit a fraud, engage in false advertising, violate copyright laws, or libel another person. Anonymity is often motivated by fear of reprisal, such as economic or social retaliation. Whistleblowing is sometimes referred to as political speech and is generally protected by state or federal statute. Anonymous political speech has been supported by the courts since the Constitutional Convention of 1787 and remains an issue today with the advent of communications by most citizens through the Internet.

One of the first examples of anonymous political speech in the United States was *The Federalist Papers,* a series of articles published shortly after the conclusion of the Constitutional Convention of 1787. These eighty-five essays, written by Alexander Hamilton, James Madison, and John Jay under the name "Publius," appeared in newspapers in New York state. Published anonymously, the essays sought to encourage the state's delegates to ratify the Constitution. Since Hamilton and Madison attended the Constitutional Convention, *The Federalist Papers* offered a unique insight into the history of the language of the Constitution.

The Supreme Court of the United States has consistently extended First Amendment protection to anonymous political speech. For example, in *National Association for the Advancement of Colored People* [NAACP] *ex rel. Patterson v. Alabama,* 357 U.S. 449 (1958), the Court struck down a law requiring the

NAACP to make its membership list public. Furthermore, laws cannot prohibit the anonymous distribution of political literature. In *McIntyre v. Ohio Elections Commission,* 514 U.S. 334 (1995), the Court struck down an Ohio law requiring that a name and business address be included on all literature distributed in an electoral context. In this case, the Court upheld the right of an individual to distribute political leaflets anonymously.

Laws or policies cannot constitutionally require advance permission from government for the distribution of political material. Requiring the distributor of political material to register unconstitutionally impedes speech. Likewise unconstitutional are laws that call for the names and addresses of the person preparing and distributing the literature. Courts recognize that fear of punishment may discourage the distribution and this in turn restricts political expression. The Court, without fail, has held unconstitutional the restriction of the freedom of expression through mechanisms such as registration.

In campaign finance matters, however, the Supreme Court has upheld disclosure laws. In *Buckley v. Valeo,* 424 U.S. 1 (1976), the Court upheld laws requiring the disclosure of political contributions and expenditures as necessary to eliminate corruption or its appearance. Similarly, the Bipartisan Campaign Reform Act, signed into law by President George W. Bush in 2002, contained new limitations on the use of unattributed political speech. The legislation regulates the political speech of nonprofit issue-advocacy groups and provides that under certain circumstances, the names of contributors to issue campaigns must be disclosed. Groups that purchase broadcast advertising containing the name of a federal candidate in the media market where the candidate is running must also be disclosed. The disclosure requirements of this law have been upheld.

The government cannot restrict expression because of subject matter or content, a principle that especially protects political text. Protections extend to the Internet, since most people exchange ideas and obtain information online. Computer-generated images are included and thereby are considered protected speech. The content of speech, virtual or written, cannot be suppressed unless laws regulating the limits are narrowly tailored and are the least restrictive means of accomplishing a compelling governmental purpose. Compelling purposes include safety and welfare of citizens.

Whistle-blowing is speech that involves a current or former employee of a company or governmental agency providing information about its wrongdoing, typically to a regulatory agency or congressional oversight committee. These people often provide information about fraudulent acts, abuse, or misdeeds by company or governmental officials. Some states have enacted statutes to protect the reporting individual from retribution, retaliation, or reprisals. Often, these statutes allow for the continued anonymity of the whistle-blower.

Finally, the Patriot Act of 2001 allows the FBI to obtain library and bookstore records and monitor e-mail transactions without the approval of a judge. The increased use of the Internet to express political opinions, participate in polls, and comment online may cause such legislation to collide with the consistent constitutional protection of anonymous political speech.

Anti-Dial-a-Porn Measures

The pornography industry relies on the right of free speech that is protected under the First Amendment, but the government has tried to curb this right in the

context of these businesses. During the 1980s several firms began offering, for a fee, sexually oriented, prerecorded telephone messages popularly known as "dial-a-porn." Other firms soon offered interactive sexual discussions with an employee; these were popularly known as "phone sex." When Federal Communications Commission (FCC) regulations failed to curb such activity, in April 1988 Congress amended the Federal Communications Act of 1934, *U.S. Code,* vol. 47, sec. 223(b). The new section 223(b) stated that whoever knowingly used a telephone to make directly or by recording device "obscene or indecent communication for commercial purposes to any person," regardless of who placed the call, could be fined up to $50,000 and imprisoned for not more than six months, or both. After parties filed litigation challenging the amendment, Congress in November 1988 enacted provisions in the Child Protection and Obscenity Enforcement Act that further amended section 223(b). The additional amendment extended the penalties of fines and up to two years' imprisonment to include proprietors and others "in control" of the firm offering the sexual messages as well as the employees responding to calls or involved in making and transmitting the prerecorded messages.

In *Sable Communications of California, Inc. v. Federal Communications Commission,* 492 U.S. 115 (1989), the U.S. Supreme Court, in an opinion by Justice Byron R. White, held that provisions of the amendments that prohibited obscene communication, as defined in *Miller v. California,* 413 U.S. 15 (1973), were constitutional. However, the Court held that the government had not shown a compelling interest sufficient to allow it to penalize all indecent commercial communications. Because the statute was not narrowly tailored to separate constitutionally protected indecent communications with adults from communications with minor children that could be regulated, in this respect the statute was unconstitutional. Dissenting in part, Justices William J. Brennan Jr., Thurgood Marshall, and John Paul Stevens argued that the provision prohibiting obscene communications was also unconstitutional because "obscenity" could not be defined with adequate specificity to prevent erosion of freedom of speech.

Subsequently, Congress again amended section 223(b) in 1989 and 1996 so that whoever knowingly used a telephone to make directly or by recording device "obscene or indecent communication for commercial purposes to any person under 18 years of age or to any other person without that person's consent" could be fined, imprisoned, and subject to civil fines. The effectiveness of this standard as a control on children's access to sexual material remains uncertain.

Argersinger v. Hamlin (1972)

In *Argersinger v. Hamlin,* 407 U.S. 25 (1972), the U.S. Supreme Court determined the circumstances in which the Sixth Amendment to the U.S. Constitution required that a court-appointed attorney be provided for a criminal defendant. The case was important for its holding that even a misdemeanor offense, provided it could result in imprisonment, warranted application of the right to counsel.

Jon Argersinger was convicted of carrying a concealed weapon and was sentenced to ninety days in jail. Argersinger was indigent and unrepresented by counsel at his trial. The Florida Supreme Court upheld his conviction, concluding that the right to court-appointed counsel extended only to offenses punishable by more than six months' imprisonment. In a unanimous decision, the U.S. Supreme Court reversed and found that Argersinger was entitled to appointed counsel at his trial.

Argersinger extended the rule in *Gideon v. Wainwright,* 372 U.S. 335 (1963), to apply to indigent misdemeanor defendants, not just those facing felony charges or more than a six-month imprisonment. Justice William O. Douglas, who wrote the Court's majority opinion, stressed that there was no historical

evidence suggesting that Sixth Amendment rights should be "retractable" in petty-offense cases. A defendant's right to be heard would be "of little avail if it did not comprehend the right to be heard by counsel." Douglas suggested that although *Gideon* involved felonies, its rationale "has relevance to any criminal trial, where an accused is deprived of liberty." The Court believed that the legal issues of a case should be the criteria for assessing necessity of counsel, pointing out that misdemeanor cases carrying lesser terms of imprisonment "may not be any less complex than cases in which lengthy sentences may be imposed." The assembly-line character of most misdemeanor proceedings also made assistance of counsel especially valuable. Beyond trial representation, Douglas saw representation for the plea process as "looming large in misdemeanor as well as in felony cases." Counsel was necessary so that the accused would "know precisely what he is doing, so that he is fully aware of the prospect of going to jail or prison, and so that he is treated fairly by the prosecution." Accordingly, the Court concluded that absent a "knowing and intelligent waiver," no defendant may receive jail or prison time unless represented by counsel at trial.

The *Argersinger* Court wished to extend *Gideon* as far as possible, but such expansion raised substantial implementation issues because misdemeanor cases cause the most court congestion and "assembly-line justice" often results. *Argersinger* provided a safety valve, however, by giving trial judges the choice of appointing counsel and keeping sentencing options open or not appointing counsel and forfeiting the possibility of imprisonment. Several justices expressed concerns in concurring opinions about implementing *Argersinger*. Justice Lewis F. Powell Jr. agreed that an indigent defendant's need for counsel did not "mysteriously evaporate" when the charge was an offense punishable by six months or less. Powell would have preferred a flexible rule that did not automatically apply to all misdemeanors, and he feared that the decision could have a "seriously adverse impact upon the day-to-day functioning of the criminal justice system."

Argersinger fundamentally altered the process of justice in misdemeanor courts. Despite the implementation problems, it also prompted policy responses at the local level. Localities now provide legal services for indigent misdemeanor defendants, and many state and local governments decriminalized some traffic and other offenses in order to avoid the consequences of *Argersinger.* The Supreme Court clarified *Argersinger* in *Scott v. Illinois,* 440 U.S. 367 (1979), by ruling that state courts did not have to appoint counsel when imprisonment was authorized for a particular offense but not actually imposed.

Arizona v. Evans (1995)

In *Arizona v. Evans,* 514 U.S. 1 (1995), the U.S. Supreme Court established a "good faith" exception to the "exclusionary rule," a rule designed to enforce the Fourth Amendment by prohibiting the use in court of evidence obtained by unlawful searches or seizures. This rule is intended to keep police within constitutional boundaries as they conduct their activities. The case began in January 1991 when Isaac Evans was arrested in Phoenix, Arizona, for driving the wrong way down a one-way street in front of a police station. When the arresting officer asked to see his driver's license, Evans explained that it was suspended. A computer check from the officer's car confirmed the suspension and also revealed an outstanding misdemeanor warrant for his arrest. In the process of being handcuffed, Evans dropped a hand-rolled cigarette that the officer determined contained marijuana. A search of Evans's car turned up a bag of the substance. Evans was charged with possession of marijuana.

When Evans was brought to the police station, the Justice Court explained that the misdemeanor warrant had been quashed seventeen days prior, and due to a clerical error, this had not been noted in the police

computer system. Evans argued that the possession charge should be dropped because the evidence was the “fruit” (product) of an unlawful arrest. (This principle is often referred to as the “fruit of the poisonous tree”: If the initial search is illegal [the poisonous tree], any evidence derived as a product [fruit] of the illegal search must be excluded.) The district court agreed but was reversed on appeal on grounds that the exclusionary rule did not apply to errors caused by employees not directly associated with the arresting officers or their police department. The Arizona Supreme Court rejected the distinction, and the case reached the U.S. Supreme Court, which issued its opinion March 1, 1995.

Two questions were before the Court. First, when a state-court decision fairly appears to rest primarily on federal law or to be interwoven with federal law, and when the adequacy and independence of any possible state-law grounds are not clear from the opinion’s face, does the U.S. Supreme Court have jurisdiction to hear the case? Second, does the exclusionary rule require suppression of evidence seized in violation of the Fourth Amendment when the erroneous information resulted from clerical errors of court employees? The Court ruled seven–two that it did have jurisdiction, and that because the purpose of the exclusionary rule would not be furthered by excluding evidence in this instance, the evidence could be used against Evans.

Writing for the majority, Chief Justice William H. Rehnquist explained that the Court accepted cases based on state law when the state courts acted as they did with the understanding that federal law required them to do so. This freed the state courts to act as they thought best, without having constantly to turn to the federal courts for guidance. State courts could act as laboratories for exploring the boundaries of their own constitutions, but they were not free from the final authority of the federal system when dealing with issues of U.S. constitutional interpretation.

Second, the exclusionary rule was intended to deter police officers from acting illegally in their efforts to collect evidence. In this case, the officers were acting in good faith that the information provided to them by the court was correct; excluding the evidence would not have a deterrent effect on them in future activities. Since the employees who made the error were clerical staff of the court system, they also lacked an incentive to make similar errors in the future. Because excluding this evidence would not have a deterrent effect, and the officers had collected the evidence in good faith, the Court determined that it could be used at trial against Evans.

Arkansas Educational Television Commission v. Forbes (1998)

In *Arkansas Educational Television Commission v. Forbes,* 523 U.S. 666 (1998), the U.S. Supreme Court held six–three that a public television station did not violate the First Amendment when it decided to exclude a minor-party candidate from a televised debate in a race for the U.S. House of Representatives from Arkansas’s third congressional district. The U.S. District Court had rejected Ralph Forbes’s plea for injunctive relieve, but had been overturned by the U.S. Eighth Circuit Court of Appeals, which had remanded the case. On rehearing, the district court again upheld Forbes’s exclusion, concluding that the debate was a nonpublic forum and that the decision to exclude Forbes had not been influenced by disagreement with his views. Again, the Eighth Circuit remanded, finding that the debate was a public forum and that the assessment of Forbes’s viability as a candidate had not established a sufficiently compelling or narrowly tailored governmental interest that would justify infringing on his right of free speech under the First Amendment. This decision put the Eighth Circuit in conflict with an earlier decision of the Eleventh Circuit Court of Appeals.

In assessing Forbes’s claims, Justice Anthony M. Kennedy rejected the idea that the public-forum doc-

trine—which required that speech in such public settings must be available equally for all—should be mechanically applied to cases involving public television. Broad requirements for access would interfere with journalistic discretion. Congressional debates, Kennedy noted, were not like other forums both because the views expressed were those of the candidates and because debates were "of exceptional significance in the electoral process." This was clearly not a public forum open to all, nor was it a designated public forum. Given the number of minor-party candidates in both congressional and presidential races, requiring that such forums be open to all candidates would be onerous and could influence broadcasters to air no debates rather than to provide a forum for all. Although it was not a public forum, the station did not have "unfettered power to exclude any candidate it wished." Here, however, evidence indicated that the television station had not excluded the speaker on the basis of his views but in the belief that he had not established himself as a candidate with significant public support: "His own objective lack of support, not his platform, was the criterion." In such circumstances, his exclusion was constitutional.

Justice John Paul Stevens's dissent focused on what he considered to be the "ad hoc" and "standardless" character of the decision that the station made to exclude Forbes. Stevens also argued that because the station in question was publicly owned, the majority decision created unacceptable risks of governmental censorship. Stevens likened the powers being exercised by the station to that of a governmental official deciding whether to issue permits. Such discretion should have been curbed by written objective criteria.

The reasoning of this decision also has been applied to presidential debates. Thus, Ross Perot was excluded from the 1996 presidential debates, and Ralph Nader was excluded from the 2000 presidential debates.

Arraignment

The first appearance of an accused individual either in court or before a judge is typically in an arraignment, a hearing where the defendant is officially notified of the criminal charges filed by the prosecution. If the accused is arrested and incarcerated, and depending on the circumstances surrounding the case, the individual has the right to be arraigned without unnecessary delay within forty-eight hours after the arrest so that the judge can ascertain if there was probable cause for an arrest, as required by the Fourth Amendment. Whether the person is incarcerated or released on bail, the accused has the right to be arraigned.

At an arraignment, the defendant is advised of his or her constitutional rights and given the opportunity to make some very important choices. The judge may read these rights orally to the defendant or may give the accused a written form that delineates these rights. The most important rights that a defendant must consider and decide upon are the right to an attorney, the right to plead guilty or not guilty, and the right to a speedy trial by jury. If the defendant has insufficient funds to hire an attorney, the court may appoint an attorney for the accused person.

During an arraignment, an indictment is read, and the defendant is asked to plead either guilty or not guilty to the charges. The accused can also plead no contest to the charges, which is legally the same as a guilty plea. If for some reason the accused person is not represented by an attorney, the defendant should enter a plea of not guilty. It is also the right of the accused person to refuse to enter a plea at an arraignment and ask for more time to consult with an attorney. If this is done, the judge will typically enter a not-guilty plea on behalf of the accused. In most cases when defendants waive their right to an attorney and enter a guilty plea at an arraignment, they typically do so without fully knowing their rights and without full knowledge of the consequences of a conviction. If the defendant enters a guilty plea, it is the responsibility of the judge to make certain that the person has done so knowingly and voluntarily. In that case, the judge should also be certain that there is substantial evidence supporting a conviction. When an ar-

"Images Removed Due to Copyright Issues"

raignment is concluded, the judge should set a future court date for the defendant to return for a hearing, trial, or other court proceeding, unless the defendant has expressly waived that right.

For some first-time offenses, such as drug possession in small amounts for personal use, the accused should determine if there are drug diversion programs available to attend before entering a guilty plea at an arraignment. If these programs are available in the area where the legal proceedings take place, the court can order that the accused attend and receive counseling instead of being fined or incarcerated. If a program is completed and the counsel followed, the charges may be dismissed. If the charges are not dropped, the defendant retains the right to a preliminary hearing or a trial by jury.

Arrest

"Arrest" is the governmental seizure of a person. The legal concept of "arrest" is governed primarily by the Fourth Amendment to the U.S. Constitution, to some extent by the Fifth and Fourteenth Amendments, and by certain decisions of the U.S. Supreme Court. The relevant portion of the Fourth Amendment states: The right of the people to be "secure in their persons, . . . against unreasonable . . . seizures, shall not be violated, and no warrants shall issue, but upon probable cause."

In other words, a person may not be seized or arrested by the government unless the state establishes probable cause that the arrestee committed a crime or offense. For the government to establish probable cause to arrest a suspect, either law enforcement officials must make their case to a judge that the state has probable cause to arrest an individual and get an arrest warrant from the judge, or law enforcement officers can make probable-cause determinations on their own if exigent circumstances are present—such as a crime being committed in an officer's presence. It is always better that law enforcement obtain an arrest warrant if the situation allows, as the warrant amounts to prior judicial approval of the arrest.

"Arrest" may or may not be accompanied by a statement by police that an individual is under arrest. People often associate the action of being placed in handcuffs with the action of arrest; sometimes that is the case but not always. The Supreme Court established a test for determining whether an individual is under "arrest" in *Florida v. Bostick,* 501 U.S. 429 (1991). Terrance Bostick was a passenger on a bus traveling from Miami, Florida, to Atlanta, Georgia. Police officers looking for drug couriers boarded the bus and confronted Bostick, asking to see his ticket and identification. The officers then sought consent

Street arrest for a drinking complaint. Individuals arrested for such crimes have many rights, including a right to an attorney if they cannot afford one. *(National Archives)*

to search his luggage. When officers searched his luggage, they found cocaine. Bostick was then "arrested" and charged with trafficking in cocaine.

But when exactly was Bostick arrested? Was he arrested at an earlier point in the encounter? That is exactly what Bostick argued. He claimed that the police trapped him on the bus and he had no choice but to comply with their demands; hence he was under arrest and the police did not have probable cause for the arrest and custodial interrogation. The Supreme Court announced the test to determine whether a person is under arrest as follows: "[T]he appropriate inquiry is whether a reasonable person would feel free to decline the officers' requests or otherwise terminate the encounter." The majority held that under facts like those in Bostick, reasonable individuals could not believe they were under arrest (Bostick could have terminated the encounter but did not) and remanded the case to the Florida courts for them to determine the facts and apply the legal test quoted here.

Both the Fifth and Fourteenth Amendments require "due process" before individuals can be deprived of their life, liberty, or property. The Constitution requires both "substantive" due process and "procedural" due process. This means that the probable-cause determinations and arrests and all hearings and proceedings by the state must be actually and procedurally fair. Individuals can consent to arrest if they do so knowingly, intelligently, and voluntarily.

Tribe, Laurence H. *American Constitutional Law.* Mineola, NY: Foundation, 1988.

Articles of Confederation

The Articles of Confederation was the first constitution adopted by the United States. The Second Continental Congress drafted the Articles of Confederation over several weeks after the 1776 signing of the Declaration of Independence. The articles served as the de facto constitution until full ratification in 1781. The government formed by the articles was notable for its decentralization—that is, the national government was given limited authority by the states. The states not only chose the representatives and other officials of the national government, but they also had the authority to override decisions made by the national government.

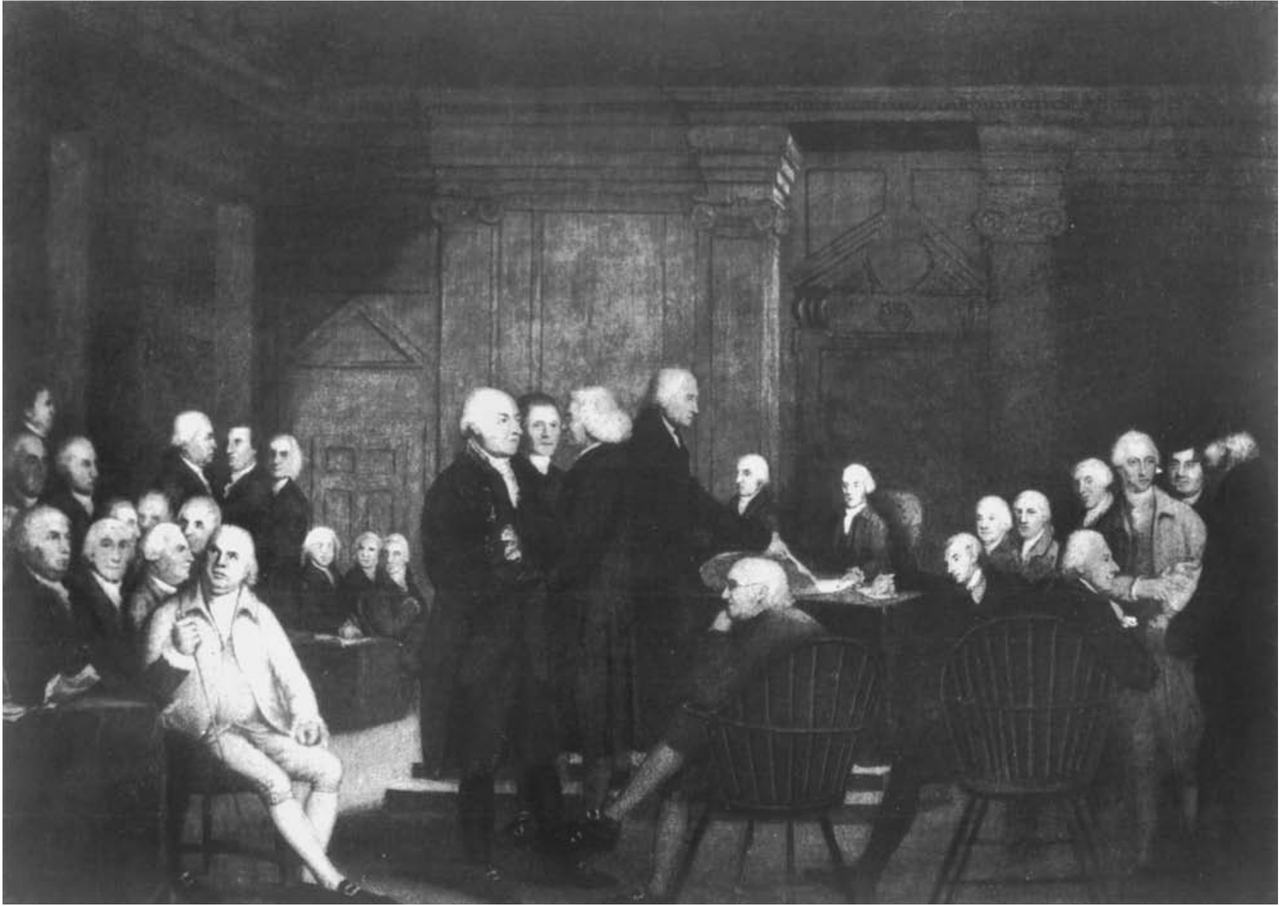
Through the articles, the duties of the revolutionary Continental Congress were transferred to the new and permanent Congress. The new Congress also assumed the form of the Continental Congress. Each state had one vote on any matter before the Congress. To be enacted, any major legislation needed nine of thirteen state delegations to vote for it. Fundamental changes to the form or function of the national government needed unanimous support from the state delegations. For example, the national government had no authority to tax citizens directly. Any change that would have enabled direct taxation could occur only through unanimous support of the delegations. The articles did not provide for either an executive or judicial branch. Rather, committees conducted almost all business of the national government with the occasional appointment of special administrators to carry out some specific tasks.

The long history of colonial home-rule, under which local government rather than the king made most decisions, and a suspicion of strong national authority led the delegates to prefer this decentralized system. As the delegates expected, independence led to war with Great Britain, but they did not expect the difficulties that arose in fighting the war as a result of the form of government they chose. Indeed, the insistence on a weak national government almost cost the new nation its independence.

The Articles of Confederation did not grant the national government authority to raise an army or levy direct taxes. Accordingly, the national government was forced to rely upon the states to recruit and prepare any troops to defend the new country against Great Britain. The military command of the national government was charged with coordinating the war effort and answered to Congress. Congress identified military needs of the country, and the military command sought to fill those needs through the states. Since the national government had no authority to compel state compliance, any state contribution, whether troops or supplies, was provided on a strictly voluntary basis. This resulted in a poorly supplied and understaffed military. Although Congress was empowered to borrow money through bonds, its inability to levy taxes made bonds risky to investors and costly to the national government; because of the uncertainty arising out of the inability to tax, the national government was forced to pay a higher yield to attract investors.

The war effort was thus hampered by two problems arising out of the structure of the Articles of Confederation. First, Congress proved to be an inept manager of the war, and there was no administrative structure in place to address the problem. Second, because the national government could not compel compliance from the states, some states withheld troops and supplies, content to "free ride" on the efforts of the other states. Other states held back full support because of the perception of and concern about this free riding.

Congress had no authority under the articles to respond in any meaningful way to the structural problems of prosecuting the war. Instead, it decentralized even more in an effort to create incentives for each state to do its fair share. Specifically, among other acts, it passed a resolution requiring states to supply and outfit their own troops directly. By summer 1780, the military situation had deteriorated so badly that even many state officials were demanding the national government take a firmer hand in managing the war. Despite the growing chorus in favor of centralization of authority, the structural design of the articles continued to impair the efforts of those who sought a more powerful national government. In 1781 a bill that gave Congress the power to tax was vetoed by Rhode Island, home to fewer than 2 percent of the population. The widespread support for reform of the articles that developed as a result of the wartime problems dissipated once France loaned the United States the hard currency necessary to mount an effective war.



The Second Continental Congress voting on independence. Delegates drafted the Articles of Confederation over several weeks after the signing of the Declaration of Independence. *(National Archives)*

France formally recognized American independence in 1778 but did not fund the war effort until late in 1781. The defeat of the British troops under General Charles Cornwallis meant the United States was indeed independent, but it also marked the abatement of reform sentiments.

As the country entered the post–Revolutionary War period, the Articles of Confederation again presented a structural impediment to development. In particular, Congress assumed a tremendous amount of debt to pay for the war. The national government owed the debt, but only the states could tax. In a manner similar to its efforts during the war, Congress assigned annual assessments to the states for the purpose of paying the war debt. The states' compliance with payment of the tax assessments was similar to their compliance with the provision of the necessities of war. States that did pay generally paid less than was assessed, and many states simply paid nothing, again content to free ride. The unanimity rule again subverted congressional efforts to pass a bill to allow the national government to tax directly when New York vetoed the bill in order to protect its lucrative port revenue.

Moreover, the articles expressly reserved to the states all powers over commerce. This meant that the national government could not negotiate trade agreements with foreign countries without approval from each and every state legislature. The states competed with each other for foreign investment; each had its own currency and could tax any commercial interest passing through its borders. As the economy continued to struggle under these structural constraints, many leaders again began to push for reform. In January 1787, Shays's Rebellion, involving strong protests by Massachusetts farmers against tax collection,

revealed how the weak national government was unable to help Massachusetts keep the peace. These events proved that the Articles of Confederation had to be reformed if the country was to persevere. When the Constitutional Convention was convened in May 1787, all the state legislatures except Rhode Island sent a delegation. The purpose of the convention was nominally to amend the articles and to resolve some commercial disputes between states, but some of the delegates, including James Madison, planned to drop the Articles of Confederation and begin anew. Madison was particularly concerned about injustices that he believed were being perpetuated in the states without adequate national supervision, and he envisioned that government spread out over all thirteen colonies would be less likely to fall prey to such violations of civil liberties. By the end of the convention, the Articles of Confederation had been relegated to the scrap heap of history, and the new Constitution was sent to the states for ratification.

Arts and Humanities Funding

Public funding of the arts raises many constitutional issues regarding whether the government is violating the First Amendment to the U.S. Constitution in its decisions about the type of projects it chooses to fund or not to fund. At the heart of the problem is the artist's right to freedom of expression, which the First Amendment generally protects even though the expression may be offensive to some individuals. Still, critics charge that for government to fund such work inevitably pits free expression against censorship.

In 1989 and 1990, a fierce political battle raged over whether the National Foundation for the Arts and the Humanities Act of 1965 should be amended to prohibit the National Endowment for the Arts (NEA) from providing federal grants for obscene or sacrilegious artwork. The dispute emerged during spring 1989 when the American Family Association and others drew public and congressional attention to the fact that NEA funding had helped support Andres Serrano's work *Piss Christ* and an exhibit of Robert Mapplethorpe's photographs, considered by some to be obscene and homoerotic. In Congress, the chief proponent of restricting funds was Senator Jesse Helms (R-NC); he was joined by others who wanted to restrict the NEA tightly or even abolish it altogether. Defenders of the NEA argued that the vast majority of grants were unquestioned and that artists should be allowed freedom of expression in their work.

In 1989, Helms succeeded in attaching an amendment to the Interior Department's appropriations bill that would prohibit the NEA from funding obscene work. In the conference committee reconciling House and Senate versions of the bill, however, the language was watered down to say that the NEA could not fund work that, "in the judgment" of the endowment, was obscene and, when taken as a whole, did "not have serious literary, artistic, political, or scientific value." Although the bill included the first restrictions of this type on NEA funding, the compromise largely pleased the arts community. In 1990, political debate on the issue became even more intense. Despite Helms's efforts to keep or tighten the ban, the 1990 Interior appropriations bill removed the 1989 restriction and replaced it with language that shifted the burden for determining obscenity to the courts. The NEA could fund works without restriction, but if the works were later judged obscene, the artist had to return the federal grant. The two-year debate forced many people to deal with the issues of when the government should support the arts and when art crossed the line into obscenity.

The NEA was established in 1965 to supplement private support for the arts. By the late 1980s, it had awarded over 80,000 grants. The endowment's annual budget was approximately $170 million. Although not insignificant, NEA funds were less important to the overall arts community than were ticket sales, state and local government grants, and corporate donations. Still, the NEA was seen as important for its support of more controversial and less publicly successful projects and because NEA approval often led artists to receive significantly more state and corporate assistance. The NEA was not without its critics. Some saw it as an example of excessive government power in society. Other critics argued that government support for the arts was an unnecessary and unwise luxury in a time of rising government deficits. These critics became important forces when focus was put on particular controversial NEA grants.

The 1989 controversies began when Reverend Donald Wildmon, executive director of the conservative religious American Family Association, sent letters to congressional offices complaining about Serrano's *Piss Christ*. This work, showing a crucifix submerged in a container of urine, had been funded by a $15,000 grant given to the Southeastern Center for Contemporary Art in Winston-Salem, North Carolina. Soon after, attention shifted to a $30,000 grant given to the Institute for Contemporary Art at the University of Pennsylvania to help underwrite an exhibit of Mapplethorpe's homoerotic photographs. Days after focus shifted to Mapplethorpe, the Corcoran Gallery of Art in Washington, D.C., hoping to avoid controversy, canceled its scheduled showing of his work. This action created the opposite of the intended effect. It put the Corcoran at the center of the controversy and led both sides to become more vehement in their statements. Helms and others sought to capitalize on the public focus to impose restrictions. Defenders of the NEA realized that few in Congress wanted to risk a vote that could later be construed as supporting obscenity, so they tried to find compromise language that would appeal to moderates demanding some restrictions but still give the NEA flexibility.

The ensuing legislative battle was complicated by three factors. First, because the U.S. budget process includes both appropriations bills and authorization bills for the same money, frequently several separate informal groups and congressional committees were working on parallel issues and competing language simultaneously. Second, both the House and Senate ultimately had to support the new legislation but again often worked simultaneously and produced differing language. Third, because conflicts between House and Senate language are resolved in conference committees, supporters of the NEA made compromises or even tactically accepted tougher language to move the bills to the conference stage where they hoped decisions favoring moderate language would be made.

In 1989 the House took the first floor action on the issue. After hours of heated debate, the House rejected an amendment that would have significantly cut NEA funding. They settled on a carefully crafted compromise that cut $45,000, equal to the amount of the Serrano and Mapplethorpe grants, from the NEA's budget. The Senate saw less debate before voting to go further than the House by barring funding for five years to the two local groups that had sponsored the controversial work. Then, with few members in the chamber, Helms offered an amendment to prohibit any NEA funding of obscene work. The amendment was adopted by voice. In conference, Helms's tough language, as expected, was dropped and replaced with language that gave the NEA the responsibility to determine what was obscene and what had artistic merit, especially with respect to depictions of sadomasochism, homoeroticism, exploitation of children, or other sexual acts. The conference language also established a twelve-member commission to study the NEA and review grant procedures. The overall bill, including the NEA compromise, easily passed both houses and was signed by President George H.W. Bush in October 1989.

Almost as soon as the legislation of one year was enacted, debate began on wording for the next year. The controversy was kept in the headlines by public focus on more projects critics saw as offensive and by the NEA's decision to have grant applicants sign a statement that their art would be in line with the 1989 standards. In 1990 supporters of the NEA sought to avoid bruising battles by quietly working

out proposals before the debates and by shifting the burden of decision-making to the courts. Senator Orrin Hatch (R-UT) first formulated the court-centered proposal during committee work on the authorization bill. The Hatch language would have removed the 1989 guidelines and again let the NEA fund most projects. If a work was later found obscene by a court, then the artist would have to repay the grant. Hatch's ideas had some support, but the authorization bill was slow to move forward. The House therefore took the next action. After rejecting efforts to cut all NEA funding or keep tight restrictions, the House included wording similar to Hatch's in the authorization bill, but also added wording that supported artwork had to meet "general standards of decency." The authorization bill was then added to the appropriation bill. In Senate floor action, language that would have continued the 1989 policy was replaced with the Hatch language. As NEA supporters celebrated their victory, Helms again used a voice vote in an almost empty chamber to add a restriction on works that denigrated religion. This amendment was stripped out at conference. Differences between the House and Senate versions were ironed out, and the Hatch language became law on November 5, 1990. Ultimately, the NEA had almost the same discretion as before the controversy, but the two-year battle left major scars at the NEA and in the arts community.

Ashcroft, John D. (b. 1942)

John D. Ashcroft was appointed to serve as attorney general of the United States in the first George W. Bush administration, beginning in 2001. A Republican with close ties to the Christian conservative movement, Ashcroft has played a key role in the expansion of government investigative and prosecutorial powers in the wake of the September 11, 2001, terrorist attacks in New York City and Washington, D.C., and the failed attempt in Pennsylvania.

Ashcroft held numerous elected offices before his appointment as attorney general, including the posts of attorney general of Missouri (1977–1985) and governor of Missouri (1985–1993). He served one term in the U.S. Senate (1995–2001).

Ashcroft's nomination as attorney general proved controversial, with his long-standing opposition to abortion generating particular opposition. As attorney general of Missouri, Ashcroft argued for the constitutionality of Missouri's restrictions on abortion in *Planned Parenthood Association of Kansas City* v. *Ashcroft,* 462 U.S. 476 (1983). The U.S. Supreme Court struck down the state's prohibition against obtaining second-trimester abortions outside of a hospital, but it upheld several other restrictions on abortion care, including a consent requirement for minors. In 1986, Governor Ashcroft signed into law a statute containing a declaration that human life begins at conception; this declaration remains in place in Missouri today. While in the Senate, Ashcroft cosponsored a proposed amendment to the U.S. Constitution containing the same declaration and permitting abortion only when the life of the mother is at stake.

As a senator, Ashcroft also proposed eliminating the National Endowment for the Arts (NEA) and cosponsored a proposed constitutional amendment to prohibit the burning of the American flag. In addition, he served as cosponsor for the 1996 Defense of Marriage Act, which denies all federal recognition of same-sex marriages.

Since the September 11, 2001, attacks, Attorney General Ashcroft has played a key role in developing and implementing the George W. Bush administration's "war on terror." For example, he was a key player in the writing and passage of the USA Patriot

In January 2001, a coalition of civil rights, women's rights, community, and labor groups held a rally outside the JFK Federal Building in Boston to oppose John Ashcroft's nomination for U.S. attorney general. Speakers cited Ashcroft's negative record on women's rights and civil rights.

Act of 2001, which significantly broadens the government's surveillance authority.

Much of this war on terror has focused on the rights accorded to prisoners, including those who are American citizens. Shortly after the attacks, Ashcroft approved a Department of Justice policy allowing the surveillance of some federal prisoners' discussions with their attorneys. Also under Ashcroft's leadership, the federal government detained at least several hundred individuals in connection with possible terrorist activities, but delayed filing charges against or even releasing the names of many of the individuals in custody. For proponents of civil liberties, these policies raised troubling issues under the Fourth, Fifth, and Sixth Amendments to the Constitution.

As the United States tries to come to grips with terrorism, the attorney general will continue to face strong opposition from civil liberties advocates. Legal challenges to many of the Justice Department's new policies and activities continue to work their way through the federal courts, and the U.S. Supreme Court will certainly be asked to decide several of these pressing issues.

Ashcroft v. American Civil Liberties Union (2002)

In *Ashcroft v. American Civil Liberties Union,* 535 U.S. 564 (2002), the U.S. Supreme Court sustained an injunction against enforcement of the Child Online Protection Act of 1998, Congress's second attempt to protect children from exposure to indecent material on the Internet and the World Wide Web. U.S. citizens cherish their First Amendment right of freedom of expression. Government cannot infringe on this right unless the restriction is narrowly tailored to achieve a compelling government interest and is the least restrictive means of securing that compelling interest. This is called the "strict-scrutiny test." Government has an interest in protecting children from pornographic and indecent material, but unless the material is defined as "obscene," adults have a First Amendment right to view it. The emergence of the Internet and the World Wide Web as vehicles for providing information and entertainment makes access to pornographic and indecent material easy and anonymous for adults and children. How can government keep children from accessing pornographic and indecent material over the Internet and the Web while still allowing access by adults?

Congress's first attempt to protect children from exposure to such material online was the Communications Decency Act of 1996. The U.S. Supreme Court struck it down in *Reno v. American Civil Liberties Union,* 521 U.S. 844 (1997), and declared that Internet speech is entitled to the same First Amendment protection as are other forms of speech.

The *Ashcroft* case addressed Congress's second attempt, the Child Online Protection Act of 1998 (COPA). This law prohibited communication of "ma-

terial that is harmful to minors," and it applied to commercial material accessible to the public posted on the Web. It drew on the standards set forth in *Miller v. California,* 413 U.S. 15 (1973), to define "material harmful to minors" as determined by contemporary community standards.

The day after COPA was signed into law, the American Civil Liberties Union (ACLU) and fifteen other groups challenged its constitutionality. In February 1999, the U.S. District Court for the Eastern District of Pennsylvania granted the ACLU a preliminary injunction preventing enforcement of COPA until the case could be tried, concluding that the ACLU was likely to win at trial. On appeal, a three-judge panel of the Third Circuit Court of Appeals sustained the injunction and concluded that COPA's use of contemporary community standards rendered it unconstitutionally overbroad, because it restricted access to material adults have a right to view. The government appealed to the U.S. Supreme Court.

The question before the Court was whether COPA's use of "community standards" to identify "material that is harmful to minors" violated the First Amendment. Eight of the nine justices agreed that reliance on "community standards" to define material harmful to minors did not by itself make the law unconstitutional, but that it might be unconstitutional for other reasons. The Court sustained the injunction and remanded the case to the Third Circuit Court of Appeals. The Third Circuit also sustained the injunction, concluding that COPA was likely to be declared unconstitutional at trial because it was overbroad and failed the strict-scrutiny test. It remanded the case to the district court. In an unpublished opinion, the district court granted the injunction. On March 6, 2003, the Third Circuit affirmed the judgment of the district court, and on October 14, 2003, the U.S. Supreme Court once again accepted the case for review.

Ashcroft v. Free Speech Coalition (2002)

The U.S. Supreme Court upheld the Child Pornography Prevention Act of 1996 in *Ashcroft v. Free Speech Coalition,* 535 U.S. 234 (2002). Sexual abuse of children is a serious crime. Some people sexually desire children and molest them to gratify their impulses. Other people do not physically molest children but enjoy looking at and trading child pornography. There is a constitutional distinction between child pornography and adult pornography. Adult pornography can be prohibited only if it is obscene under standards established in *Miller v. California,* 413 U.S. 15 (1973). Child pornography using real children can be prohibited whether or not the images are obscene, because the government has an interest in protecting children from being exploited by the production process and in prosecuting those who promote the sexual exploitation of children. In *New York v. Ferber,* 458 U.S. 747 (1982), the Court defined child pornography as material "that *visually* depict[s] sexual conduct by children below a specified age." In *Ferber,* the Court ruled that the First Amendment does not protect such material even when it is not obscene, because it is intrinsically related to the sexual abuse of children.

In 1996, Congress enacted the Child Pornography Prevention Act (CPPA). It prevented the production or distribution of pornographic material pandered as child pornography. It redefined child pornography to include not only pornographic images made using real children but also "any visual depiction, including any photographic, film, video, picture, or computer or

computer-generated image or picture" that "conveys the impression" that it "is, or appears to be, of a minor engaging in sexually explicit conduct." It banned sexually explicit images, sometimes called "virtual-child pornography," that appeared to depict minors but, by using youthful-looking adults or computer-imaging technology, were not produced using real children. Thus, the CPPA prohibited speech that is not a crime and did not victimize children in its production.

An adult entertainment trade association and others filed suit in U.S. District Court for the Northern District of California alleging that the "appears to be" and "conveys the impression" provisions of the CPPA were overbroad and vague, thus chilling production of works protected by the First Amendment. The district court disagreed and upheld the constitutionality of the CPPA. Plaintiffs appealed to the Ninth Circuit Court of Appeals, which held that the CPPA was unconstitutional because it was overbroad. It banned materials that are neither obscene under *Miller* nor are produced by the exploitation of real children as prohibited by *Ferber*. In similar litigation in other states, four other federal courts of appeals sustained the constitutionality of the CPPA.

On appeal, the U.S. Supreme Court held in a five–four decision written by Justice Anthony M. Kennedy that the parts of the CPPA that cover materials beyond the categories recognized in *Ferber* and *Miller* and the reasons the government offered for limiting freedom of speech could not be justified by the Court's precedents or by First Amendment law. Thus, the *Ferber* and *Miller* tests remain the governing parameters for determining constitutionally protected speech in the context of pornographic and indecent material.

Atkins v. Virginia (2002)

In *Atkins v. Virginia,* 536 U.S. 304 (2002), the U.S. Supreme Court held that the execution of mentally retarded persons violated the Eighth Amendment's prohibition of cruel and unusual punishment. This provision is made applicable to the states through the Due Process Clause of the Fourteenth Amendment.

A Virginia jury had sentenced Darryl Atkins to death for abduction, armed robbery, and murder after he and codefendant William James robbed Eric Nesbitt at gunpoint and forced him to drive them to an automatic teller machine (ATM). After Nesbitt withdrew money from his account, the defendants took the victim to an isolated spot where he was shot eight times. Cameras at the ATM had recorded the transaction, and the video assisted in identifying the offenders.

At trial, both Jones and Atkins testified that the other had shot Nesbitt. Jones, who made a more coherent and believable witness, was offered a life sentence in exchange for a guilty plea and his testimony against Atkins. The jury then convicted Atkins of capital murder. During the sentencing phase, the defense called upon a forensic psychologist who testified that Atkins was mildly mentally retarded with an IQ of 59. (An IQ below 70 is the usual criterion for retardation.) The state convinced the jurors that on the basis of future dangerousness and the vileness of the crime, Atkins deserved to be put to death. A divided Virginia Supreme Court agreed.

By a six–three majority, the U.S. Supreme Court reversed the sentence. Justice John Paul Stevens wrote the Court's opinion holding that executing the mentally retarded violated contemporary standards of

decency and was therefore cruel and unusual punishment in violation of the Eighth Amendment to the Constitution. Although the Court looked to several sources to determine prevailing standards of decency, it tended to rely heavily on the actions of state legislatures. Since the last time the justices had considered the constitutionality of executing the mentally retarded in 1989, in *Penry v. Lynaugh,* 492 U.S. 302, a total of sixteen states had prohibited such sentences. Adding those plus the two states that had previously enacted such prohibitions and the twelve states that did not have capital punishment, the Court determined that a clear majority of thirty states had laws forbidding the execution of retarded persons. In the Court's view, the direction of the trend was consistent, even though, the justices noted, it ran contrary to the general popularity of anticrime laws with state legislators. They concluded that contemporary society considered retarded criminals less blameworthy than ordinary offenders.

The Court agreed with emerging public opinion that although retarded criminals should be punished, their diminished capacities—to process information, to communicate, to think abstractly, to learn from mistakes, and so on—resulted in diminished culpability. In addition, the Court considered that because retarded persons may unwittingly confess to crimes they did not commit, because they may not be able to assist defense counsel, because they may make poor witnesses, and because their demeanor may lead a jury to conclude that they lack remorse, such individuals are at a greater risk of wrongful conviction.

Having decided that the execution of the mentally retarded was unconstitutional, the Court left it to the states to develop appropriate ways of determining who would fall within that category.

Three justices—William H. Rehnquist, Antonin Scalia, and Clarence Thomas—disagreed with the majority. The dissenters disputed that there was a clear consensus against executing the retarded. They also criticized the majority justices for considering the views of professional organizations, such as the American Psychological Association, and international human rights standards in reaching their opinion.

Attainder, Bill of

See Bill of Attainder

Attorney General

The individual who heads the Office of the Attorney General (AG) is the chief lawyer and law enforcement officer of the United States. The AG runs the largest legal office in the world in the service of a single client, the U.S. government. The office was created by act of Congress in 1789 and has grown enormously in power, scope, and prestige ever since.

The AG's office and those who occupy it exist in an awkward place, with overlap into the executive, legislative, and judicial departments of government. As a cabinet-level position, the AG is part of the executive branch of government, serving at the pleasure of the president and subject to removal by the president. As part of the federal bureaucracy and lacking independent constitutional authority, the AG derives basic authority from an act of Congress, and the position is filled only with the advice and consent of the U.S. Senate. To cloud matters even further, the AG is primarily a judicial officer, performing functions that most clearly are part of the judicial function. In short, the Office of the Attorney General has at least three masters in government.

The first attorney general of the United States was Edmund Randolph of Virginia. When he assumed the position in 1789, the office was lacking in prestige, power, and budget. Randolph was responsible for paying for rent, postage, and heat out of his own funds and was not provided any assistants to help with his

Edmund Randolph of Virginia became the first attorney general of the United States in 1789. *(Library of Congress)*

duties, a situation that did not change until 1853. For his relatively meager annual salary of $1,500, at least Randolph was not required to provide any records of his activities, but he had only to be available to offer legal opinions to the government when asked. No records of opinions issued by the AG's office were compiled until 1840, a half century after it began operations.

On June 22, 1870, President Ulysses S. Grant signed a bill creating the Department of Justice (DOJ), an executive agency to be overseen by the AG. This legislation created not only an administrative agency but also unified governmental legal administration under the control of a single individual, the U.S. attorney general. The newly created office was put in control of all governmental litigation and was empowered to argue any case in which the government had an interest in any court of the United States.

From only four officers in 1870, the Department of Justice has grown enormously, as has the power wielded by the AG. The AG now oversees the functioning of more than 80,000 employees. The original simple office with a broad mandate has grown to more than thirty divisions, bureaus, and offices. Its budget has ballooned from nothing when the office was created—most attorneys were paid on a part-time or contract basis through the nineteenth century—to almost $8 billion annually.

The transformation of the AG from a relatively minor bureaucrat charged simply with providing legal advice and litigating in the name of the United States to a major player in the federal bureaucracy mirrors the growth of government more generally. This transformation has its roots in the transition from a national government of limited powers to one that exercises strong positive regulatory functions. As the government has attempted to regulate additional aspects of American life, it has fallen to the DOJ and the AG to enforce those new laws.

The AG oversees some of the most recognizable and important components of the U.S. legal bureaucracy. The Federal Bureau of Investigation (FBI) was added to the DOJ in 1924 and remains one of the largest and most powerful of its subunits, operating largely independently as the country's national investigative service. The Bureau of Prisons, which operates and oversees the entire federal prison system, has been part of the DOJ since 1930. The Immigration and Naturalization Service (INS), responsible for all immigration and naturalization law enforcement, was under DOJ control from 1940 until it was shifted to the newly created Department of Homeland Security in 2003. The Civil Rights Division of the DOJ, created in 1957, is responsible for enforcing the provisions of the 1957, 1960, and 1964 civil rights legislation as well as the Voting Rights Act of 1965 and its subsequent amendments. The Drug Enforcement Administration (DEA) was added to the DOJ in 1973 to enforce narcotics and controlled-substances law.

Attorney General's List of Subversive Organizations

The Office of the Attorney General maintained a document called the "List of Subversive Organizations" for use by federal and state government agencies in determining the loyalty of employees during the late 1940s. At the time, political tensions in the United States were running high amid Communist advances in Eastern Europe and China and accusations that Communist spies and traitors and other left-leaning individuals and organizations were infiltrating the country. As the Cold War deepened, these suspicions increased. Originally created in 1943, the attorney general's list was first made public in 1947, when it became an important part of President Harry S Truman's loyalty program implemented to dismiss federal employees associated with subversive organizations. Attorney General Tom C. Clark later asserted that organizations were contacted and provided the opportunity for a hearing, and that he, as attorney general (AG), personally made the final decision of whether to list each group after considering confidential material not provided to the organizations, including reports from the Federal Bureau of Investigation (FBI).

The U.S. Supreme Court reviewed the AG's list in *Joint Anti-Fascist Refugee Committee v. McGrath,* 341 U.S. 123 (1951), in which the Court was asked to rule on the AG's determination that several Communist-front groups met the criteria of Executive Order No. 9835, issued by President Truman. In that order, Truman empowered the AG to inform a Loyalty Review Board of groups he determined to be "communist or subversive," and the Loyalty Review Board transmitted that same list to other government agencies for their use in determining employee disloyalty. One criterion for making this determination was whether the individuals were members of AG-listed organizations. The three groups that sued to remove their listing faced loss of membership and additional investigations of their business dealings by state agencies because of the publicity the AG's list generated.

The three challenging groups were, in fact, significantly controlled by the American Communist Party. The Joint Anti-Fascist Refugee Committee was composed of Communist activists who supported the defeated Republican forces after General Francisco Franco's victory in Spain, and the National Council of American-Soviet Friendship distributed propaganda friendly to the Soviet Union. The third group, the International Workers Order (IWO), was the largest Communist front in the 1940s; it sold insurance policies, provided cultural programming for broadcast, and financially subsidized activities by other front organizations.

The case was relatively easy for the Court to resolve, because the AG had failed to hold hearings or provide factual determinations to justify his listing of the organizations as "communist." Thus, the listings were, on their face, arbitrary. Despite this, the five justices in the majority wrote five separate opinions. Justice Harold H. Burton, joined by Justice William O. Douglas, focused on the lack of justifications provided by the AG, whereas Justice Felix Frankfurter noted that the Fifth Amendment required some form of hearing to provide due process. Justice Hugo L. Black added the objection that the list constituted an unconstitutional bill of attainder, which specifically punished individuals or groups. Justice Robert H. Jackson focused on how the AG's determination made it virtually impossible for members who were public employees to challenge their dismissals because it created a strong presumption of disloyalty. The dissent, written by Justice Stanley F. Reed and joined by Chief Justice Frederick M. Vinson and Justice Sherman Minton, did not argue the arbitrary nature of the listing, but instead asserted that the list could not be challenged because it had no legal force on its own. Despite the Court's decision that the process used to create the list was arbitrary, the IWO lost its license to sell insurance, although it had received very high ratings from an independent reporting service, and the New York State Insurance Department liquidated the IWO's assets.

The AG's list was also used by many states and private employers as a way of determining employee

Gathering of the Venetia Giulia fraternity, an International Workers Order (IWO) section composed of members of Italian heritage from the southern section of Austria, in New York City, 1943. The largest Communist front in the 1940s, the IWO sold insurance policies, provided cultural programming, and financially subsidized activities by other front organizations. *(Library of Congress)*

loyalty. Among the states, New York developed the most sophisticated program for discharging employees with subversive affiliations. New York afforded full notice and hearing before listing an organization and also provided for judicial review in the state courts. Moreover, although the state's Board of Regents, which controlled the state's public schools, adopted a rule that membership in a listed organization constituted prima facie evidence of disloyalty, employees facing termination were provided with a full hearing, including representation by counsel and judicial review. New York's process was upheld by the Supreme Court in *Adler v. Board of Education,* 342 U.S. 485 (1952).

The federal government resumed its effort to register subversive organizations with the passage of the Internal Security Act (McCarran Act) of 1950. However, the lengthy process required to prove an organization's subversive nature meant that few were ever ordered to register. Even those few who were ordered to do so fought in the courts for so long that the orders became archaic.

Atwater v. City of Lago Vista (2001)

In *Atwater v. City of Lago Vista,* 532 U.S. 318 (2001), the U.S. Supreme Court upheld the custodial arrest and jailing of a woman for a seat-belt violation that was punishable with only a $50 fine. Such offenders are normally released with merely a citation, and there was no apparent reason not to do so in this case. The Court's five–four decision has been widely criticized because it gives police complete discretion to make unnecessary and disproportionate arrests. Critics charge that such full discretion is an affront to the requirement of reasonableness guaranteed by the Fourth Amendment. Broad arrest powers also create a grave potential for discriminatory enforcement in light of the breadth of modern traffic laws (almost every driver violates some minor traffic rule); the search powers that accompany an arrest but are not based on reasonable suspicion; the documented tendency for some officers to engage in pretense-based investigations or racial profiling; and the absence of effective legal limits on use of pretense and profiling.

Justice David H. Souter's majority opinion admitted that the seat-belt offender's arrest was "pointless," and critics have found his reasons for upholding her arrest unpersuasive. Two-thirds of Souter's opinion dealt with history, particularly arrest rules at the time the Fourth Amendment was adopted. Scholars have seriously questioned the accuracy of Souter's history as well as its relevance—in 1791 there were no cars, detailed traffic laws, computerized driver records, or organized police departments. Moreover, the Court has not bothered before to consult history when approving major expansions of modern police powers.

In rejecting the "reasonableness balancing" argument (that the intrusiveness of the woman's arrest far outweighed the nonexistent state interests supporting arrest), Souter claimed that police officers need broad arrest powers. Yet as noted in Justice Sandra Day O'Connor's dissent, a workable rule limiting such arrests in minor traffic cases could easily be devised (and already exists in many states). Souter was also worried about civil liability of police officers. This problem, if it exists, was solved in a case decided six weeks later, *Saucier v. Katz,* 533 U.S. 194 (2001), in which the Court dismissed a suit against two military police officers for roughly handling an animal rights protester who appeared at an event where the vice president was speaking. Next, Souter asserted that arrests of the type in *Atwater* are rare. Evidence on this point is hard to find; in any case, such arrests will certainly become more common after *Atwater.*

Finally, Justice Souter implied (and other recent cases clearly demonstrate) that the Court wishes to limit further applications of case-specific "reasonableness balancing," in order to keep the law clear and maintain traditional police powers and citizens' rights. However, given the strong balance in the seat-belt offender's favor, and the serious potential for abuse of unfettered arrest powers, the Court could have ruled in her favor with little or no extension of the scope of balancing analysis. Nor would such a ruling require police and lower courts to engage in complex interest balancing. As it has done in other cases—for example, in *Terry v. Ohio,* 392 U.S. 1 (1968), approving "stop-and-frisk"—the Court could have used balancing to identify the need to reexamine police powers in a particular context, and then could have formulated a simple set of standards to govern the exercise of such powers.

Some scholars and justices have argued that cases should generally be decided narrowly, avoiding rules and principles extending far beyond the facts of the current case. *Atwater* provides a clear example of the virtues of this approach: The facts and case-specific policy arguments were compelling, and the Court's broad grant of arrest power risks many unintended adverse consequences. The Court needed only to hold that for nonjailable traffic violations, the police must show a legitimate need to arrest rather than issue a citation. Such legitimate needs (for example, to verify the driver's identity) are already well defined in model codes and in many state statutes and rules.

The problems of the Court's reasoning in *Atwater*, and the serious potential for abuse of broad arrest powers, may encourage more states to limit minor traffic arrests by statute or by criminal rule. If such limitations are not adopted, courts may be persuaded to recognize them under state constitutions.

Austin v. Michigan Chamber of Commerce (1990)

In *Austin v. Michigan Chamber of Commerce,* 494 U.S. 652 (1990), the U.S. Supreme Court upheld a provision of the Michigan Campaign Finance Act requiring corporations to draw from segregated (as opposed to general treasury) funds for contributions to political candidates. The state argued that such a restriction was necessary to prevent advantages accrued in the economic marketplace from overwhelming the political marketplace. Because it desired to use its general funds to purchase local media advertisements for a state candidate, the Chamber of Commerce alleged a violation of its First Amendment right to free political expression and association.

Departing from the sentiments expressed in *First National Bank v. Bellotti,* 435 U.S. 765 (1978), in which the Court resisted the supervision of corporate speech—and distinguishing the chamber's claims from those considered more recently in *Federal Election Commission v. Massachusetts Citizens for Life,* 479 U.S. 238 (1986), in which a federal expenditure restriction on voluntary political associations was found to be unconstitutional as applied—Justice Thurgood Marshall, writing for the majority, reasoned that the state-conferred advantages bestowed upon corporations, and especially the composition and organization of the chamber's corporate form, justified such restrictions. That is, as opposed to the concerns expressed by the Massachusetts Citizens organization, an entirely voluntary group existing for exclusively political purposes, the chamber, Marshall explained, was not assembled merely to exert political influence; to the contrary, it engaged in a variety of nonpolitical activities, its members were not able to disassociate easily if they disagreed with the organization's allocation of resources, and thus it was more like a traditional business corporation. Moreover, the majority concluded, where vast amounts of money could tend to distort or corrupt the political system, the state had the prerogative to enact such regulations to preserve the integrity of its electoral process.

With customary vitriol, Justices Antonin Scalia and Anthony M. Kennedy, in separate dissents, chastised the majority for its "illiberal" approach to freedom of speech. For one thing, many individuals and groups receive some form of financial support or incentive from the state. What made corporations any different? Of greater concern, however, was the state's (and the Court's) apparent desire to maintain some degree of "fairness" in political debate—implying that too much speech, of a certain kind or from a certain type of speaker, justifies state intervention in the free exchange of ideas. Why or how could the government assume that its proprietary responsibilities extended to such normative determinations? Displaying a laissez-faire attitude toward speech regulations, the dissenters argued that citizens alone were qualified to evaluate the nature, scope, and degree of such speech.

Austin presents a series of interesting questions for understanding concerns about freedom of speech in campaign finance law. Most striking is the majority's rhetorical sleight of hand—resuscitating the concern for "equalization" declared dead in *Buckley v. Valeo,* 424 U.S. 1 (1976) yet justifying it with "anticorruption" rationale. As opposed to the *Bellotti* Court's expressed indifference toward speaker identity, the *Austin* Court fixed on the particular nature of the group involved, determining that the chamber's unregulated expression would overwhelm other "voices" and create a disjunction between the degree or volume

of expressed sentiment and the actual amount of public support for certain candidates and issues. Under such circumstances, then, to prevent domination by certain groups and to preserve the integrity of the process itself, the state had a compelling interest in maintaining such expenditure restrictions.

Automobile Searches

Automobile searches do not merit the same level of protection under the Fourth Amendment as do searches of persons, homes, or businesses. The seminal case with regard to automobile searches is *Carroll v. United States,* 267 U.S. 132 (1925), in which the U.S. Supreme Court articulated an exception to the warrant requirement of the Fourth Amendment for automobile searches. In this Prohibition-era case, law enforcement agents stopped the car in which George Carroll and John Kiro were driving based on their belief that the two were transporting liquor in violation of the National Prohibition Act. The agents did find evidence of bootlegging, and that evidence was used to secure their convictions. In dismissing the defendants' arguments that the search of their car ran afoul of the Fourth Amendment, the Court focused on the mobility of automobiles, which makes it easy for evidence to be moved and, accordingly, makes it impractical for law enforcement to secure a warrant. The Court subsequently further justified this automobile exception in *California v. Carney,* 471 U.S. 386 (1985), based on the reduced expectation of privacy individuals enjoy when they or their belongings are in a car.

This automobile exception does not mean, however, that police have carte blanche to conduct warrantless searches simply because the search is of a car or a person in a car. Under most circumstances, there must be probable cause to believe that the automobile in question has been involved in illegal activity, as noted by the Court in *Brinegar v. United States,* 338 U.S. 160 (1949). Accordingly, random traffic stops for license and registration checks are not permissible, the Court held in *Delaware v. Prouse,* 440 U.S. 648 (1979). Sobriety checkpoints, on the other hand, are, as the Court ruled in *Michigan Department of State Police v. Sitz,* 496 U.S. 444 (1990). Under a pilot program initiated by the Michigan state police, temporary checkpoints were set up along certain roadways. When these checkpoints were in operation, all cars passing through them were briefly stopped to ascertain whether the drivers were intoxicated. Those who demonstrated signs of intoxication were detained and given a field sobriety test. In upholding the validity of this program, the Court focused on the strong interest states have in deterring drunk driving and the limited nature of the intrusion. The Court also distinguished this case from *Prouse* by noting that the sobriety checkpoints involved stopping all cars, whereas the practice challenged in *Prouse* involved stops of cars solely at the unrestrained discretion of law enforcement officers.

Although people enjoy greater protections under the Fourth Amendment than automobiles, drivers are subject to search, without a search warrant, when arrested for a traffic offense, as the Court ruled in *United States v. Robinson,* 414 U.S. 218 (1973). Further, drivers may be arrested for even minor traffic offenses, an issue in *Atwater v. City of Lago Vista,* 532 U.S. 318 (2001). Even in the absence of an arrest, however, an officer may ask the driver of a vehicle stopped for a traffic infraction to step out of the car. In its ruling on this issue in *Pennsylvania v. Mimms,*

Police officers in action in south San Antonio, Texas, searching a car for drugs in 2003. Police have broad powers to search cars, so long as the search is incident to a valid stop or arrest. *(© Bob Daemmrich/The Image Works)*

434 U.S. 106 (1977), the Court emphasized that the intrusion entailed in such a case is minimal because the individual has already been lawfully stopped. The Court reiterated the slight nature of the intrusion, especially in comparison with the enhanced safety it affords to the law enforcement officer, and extended the permissibility of the practice to include passengers of cars stopped for traffic offenses in *Rakas v. Illinois,* 439 U.S. 128 (1978).

The Court has likewise enhanced the scope of law enforcement discretion to search containers in automobiles, though the line of precedent on this point has been confusing at times. Initially, the Court curtailed law enforcement's ability to search containers in automobiles. In *United States v. Chadwick,* 433 U.S. 1 (1977), the Court found the search of a locked footlocker discovered in a defendant's car after his lawful arrest to be inconsistent with the Fourth Amendment. In doing so, the Court said it saw no reason that a search warrant could not have been obtained, since the defendant was already under arrest and the footlocker itself was being held by federal officials. In other words, the Court declined to find exigent circumstances for the search of the footlocker that would be consistent with the rationale underlying the automobile exception in the first place. The Court went on to say in *Arkansas v. Sanders,* 442 U.S. 753 (1979), that luggage or other containers found in automobiles cannot be searched without a warrant solely on the basis of the automobile exception to the warrant requirement, and in *Robbins v. California,* 453 U.S. 420 (1981), the Court reiterated the necessity for a search warrant to search closed luggage.

Subsequently, the Court appeared to reverse course, granting law enforcement greater and greater latitude. In the 1982 case of *United States v. Ross,* 456 U.S. 798, police had been tipped off that an individual known as "Bandit," later identified as Albert Ross, was selling drugs in a specific area from a specific car, with additional narcotics in the trunk of the vehicle. After

having spotted the car in the area the informant had said it would be and finding the driver to match the informant's description, officers ordered Ross out of the car and proceeded to search both the passenger compartment and the trunk. In the glove compartment they found a gun, at which point Ross was placed under arrest. The search of the trunk at the scene turned up a closed paper bag that contained narcotics. Writing for the majority, Justice John Paul Stevens asserted that the search was permissible, saying, "If probable cause justifies the search of a lawfully stopped vehicle, it justifies the search of every part of the vehicle and its contents that may conceal the object of the search."

This ruling did not explicitly overrule either the *Chambers* or the *Sanders* cases and left the standard for container searches in automobiles unclear. The Court clarified the matter in *California v. Acevedo,* 500 U.S. 565 (1991), holding permissible the search of any containers found in an automobile when law enforcement agents have probable cause to believe contraband or other evidence will be found. Recently, the Court reiterated this position in *Wyoming v. Houghton,* 526 U.S. 295 (1999), making it clear that the permissibility of such a search extends to all containers regardless of whether the owner of such containers is the driver of or merely a passenger in the car.

B

Bad-Tendency Test

In the context of the right to free speech guaranteed under the First Amendment to the Constitution, the U.S. Supreme Court used the "bad-tendency test" from the late nineteenth century through the 1930s. This test determined the constitutionality of laws punishing individuals for advocating unpopular political change or publishing obscene material.

The bad-tendency test permitted the government to prohibit speech before it could create a real danger. The rationale was that the natural and reasonable tendency of the words or publication to result in an illegal act justified suppression of speech and publishing. The offender must have intent to bring about the illegal act, but intent could be determined by the common law principle that individuals intend the natural consequences of their actions.

England's highest court adopted a rule in 1868 banning a publication if the tendency of the publication was to deprave and corrupt the mind of the reader. U.S. state and federal courts quickly adopted the same rule.

The bad-tendency test afforded little protection to individuals publicly opposing government policies. The courts would presume the state action to be constitutional unless the state acted in an arbitrary or unreasonable fashion. Even a merely remote or conjectural danger was sufficient to meet the state's burden of proof.

Debs v. United States, 249 U.S. 211 (1919), is the classic example of the bad-tendency test at work. Eugene Debs, the leader of the American Socialist Party, was convicted for allegedly obstructing the drafting of men for service in the U.S. military during World War I. A unanimous Supreme Court ruled that Debs's antiwar speech "was so expressed that its natural and intended effect was to obstruct recruiting." Other individuals were jailed for circulating copies of the Declaration of Independence because their actions could create opposition to the war.

Justice Oliver Wendell Holmes's dissent in *Abrams v. United States,* 250 U.S. 616 (1919), was the first clear challenge to the test. The majority of the Court had upheld Congress's power to make antiwar discussion a felony, relying upon the bad-tendency test. Joined by Justice Louis D. Brandeis, Justice Holmes offered his alternative test of "clear and present danger." The clear-and-present-danger test requires a showing that the danger of speech or writing is clear and may cause damage to the country in the relatively near future.

Despite Justice Holmes's efforts to replace the bad-tendency test in *Abrams* and in the accompanying case of *Schenck v. United States,* 249 U.S. 47 (1919), courts continued to apply the more cautious bad-tendency test in cases such as *Gitlow v. New York,* 268 U.S. 652 (1925). However, the Supreme Court later adopted the clear-and-present-danger test in cases such as *Herndon v. Lowry,* 301 U.S. 242 (1937). The Court rejected the bad-tendency test when dealing with allegedly obscene publication in *Roth v. United States,* 354 U.S. 476 (1957), replacing it with a narrower test that declared a work of art obscene if, "to the average person, applying contemporary community standards, the dominant theme taken as a whole appeals to the prurient interest."

The Supreme Court specifically overruled the bad-tendency test for free speech cases in *Brandenburg v. Ohio,* 395 U.S. 444 (1969). In a per curiam (unsigned) decision, it unanimously overturned the conviction of Clarence Brandenburg for making threats against the president, the Congress, and the Supreme Court at a Ku Klux Klan rally. The *Brandenburg* test of "incitement to imminent lawless action" requires a showing that the speech can and has incited lawless behavior.

Bail, Right to

The Eighth Amendment to the Constitution states that “excessive bail shall not be required, nor excessive fines imposed, nor cruel and unusual punishments inflicted.” The term “bail” refers to the money or bond put up to secure the release of a person who has been charged with a crime and faces pretrial incarceration. For minor crimes, bail is usually set on the basis of a predetermined schedule. For more serious crimes, bail is set by the judge at the defendant’s first court appearance. A judge may also forgo setting bail and release a defendant on his or her own recognizance (akin to an unsecured, personal promise to appear at the next court session). If bail is set, however, the defendant may post the amount in cash, post a property bond, or, in some states, use the services of a bail bondsman. A bail bondsman posts the set amount with the court on behalf of the defendant in exchange for the payment of a nonrefundable fee.

There is no absolute right to bail granted by the U.S. Constitution. The U.S. Supreme Court has ruled that although the Eighth Amendment bars excessive bail, a court may deny bail altogether in cases involving murder or treason or when there is a danger that the defendant will flee or cause harm to others. In

Members of the media snap photos of former Tyco executive Dennis Kozlowski as he leaves federal court in New York City after posting bail, 2002. He was charged with stealing millions from the famous toy maker.
(© Monika Graff/The Image Works)

other words, “no bail” is not the same thing as “excessive bail,” as held in *United States v. Salerno,* 481 U.S. 739 (1987). On the surface, it may seem that bail is used as a form of punishment, but that is definitely not the case. Even when a defendant is convicted, the bail amount is refunded in full provided the individual has appeared for all required court sessions.

The Supreme Court addressed the issue of right to bail in *Harris v. United States,* 404 U.S. 1232 (1971). This case involved a defendant’s application for bail pending appeal from a narcotics conviction. The Court held that although “there is no automatic right to bail after convictions, . . . the [c]ommand of the Eighth Amendment that ‘Excessive bail shall not be required . . . ’ *at the very least* obligates judges passing upon the right to bail to deny such relief only for the strongest of reasons.” The Court cited the Bail Reform Act of 1966, which sets out the only circumstances for denial of bail, including the risk of flight and posing a danger to any other person or to the community. In *Harris,* the Court found that the government did not meet its burden of showing that compelling circumstances existed that required denial of bail. This decision represented an expansive interpretation of defendants’ rights to bail and provided guidelines for courts to follow in making their determination.

The Supreme Court specifically considered the evaluation of a defendant’s risk of fleeing in *Truong Dinh Hung v. United States,* 439 U.S. 1326 (1978). In this case, the defendant was convicted on espionage charges in the federal district court, after which the court revoked his bail because of the seriousness of the crimes and the flight risk of the defendant, who did not maintain permanent residence in the United States. The Supreme Court held that although risk of flight certainly does permit the denial of bail, the risk must be apparent, and in this case, the defendant did not show any inclination that he would flee the country. On the contrary, “applicant faithfully complied with the terms of his pretrial bail and affirmed at sentencing his faith in his eventual vindication and his intention not to flee if released on bail.” The Court once again recognized the fundamental right of defendants to bail and mandated that extreme circumstances, such as flight risk and danger to society, must be supported by evidence and not implication.

The Court further addressed the issue in *Murphy v. Hunt,* 455 U.S. 478 (1982). In this case, an individual charged with several counts of sexual assault was denied bail by the lower state courts, which relied on a provision in the Nebraska constitution that entitled all persons to bail, except those being charged with violent sexual offenses. On appeal, the U.S. Court of Appeals for the Eighth Circuit reversed the lower court, but that decision subsequently was vacated by the U.S. Supreme Court. The Court asserted that the defendant had already been convicted on three charges by the time the Court of Appeals rendered its decision, thereby making the issue of pretrial bail moot (no longer relevant). Although the Court failed to side with the defendant in this case, it is clear from the Court of Appeals decision that the Eighth Amendment imposes stringent guidelines that must be followed in considering bail applications.

Clearly, the Court views the right to bail as a fundamental guarantee that must be protected. That guarantee, however, does not mean that bail must always be set. The decisions about whether bail is set and the amount of bail set are consequential in that defendants subject to pretrial detention may be more likely to face conviction as well as stiffer prison sentences.

Bailey, F. Lee (b. 1933)

Francis Lee Bailey is one of America’s best-known criminal defense attorneys. He was born in Waltham, Massachusetts, and was admitted to the bar in 1960 after attending Harvard College and Boston Univer-

"Images Removed Due to Copyright Issues"

sity Law School. Within fifteen years he had served as defense counsel in several high-profile cases, including the Torso Murder, the retrial of Dr. Sam Sheppard, the Boston Strangler, the Great Plymouth Mail Robbery, and the trial of Captain Ernest Medina for his part in the My Lai incident in Vietnam. Characteristically, he accepted cases that attracted him by their professional challenge, public notoriety, or fat fee.

As Bailey was finishing law school in spring 1960, Boston newspapers were carrying headlines about a woman's body that had been dismembered and the head never recovered. Her husband was indicted for what became known as the "Torso Murder." Bailey, who was in the process of using the polygraph test to defend an alleged rapist, was invited to cross-examine a witness to demonstrate the unreliability of the test. His line of questioning showed the polygraph examiner had not followed procedures recommended in the machine's manual, such as not testing when the subject was suffering from a hangover and physically tired. Bailey's challenge played a major role in the acquittal.

Bailey successfully argued before the U.S. Supreme Court in *Sheppard v. Maxwell,* 384 U.S. 333 (1966), for a new trial for his client, Dr. Sam Sheppard, who was accused of his wife's murder. (Dr. Sheppard's circumstances were later made famous by the movie and television series *The Fugitive.*) In granting a new trial, the Court gave portions of the Sixth Amendment heightened importance by warning trial judges to take specific measures, such as jury sequestration, when there was a reasonable likelihood that publicity would prevent a fair trial. The original trial judge—who pur-

portedly told a reporter Sheppard was "guilty as hell"—let the media have virtually unfettered access to the jury and attorneys, giving the trial a carnival-like atmosphere. Despite the dangers of prejudicial publicity pointed out in *Sheppard,* the Supreme Court has continued to give great latitude to the press in its reporting.

The following year Bailey appeared before the Supreme Court representing Albert H. DeSalvo, dubbed "the Boston Strangler." Bailey's objective was to convince the jury—using the thirteen murders his client claimed to have committed as substantiation—his client was not guilty by reason of insanity. Experts for both sides agreed DeSalvo was mentally ill, but they differed on whether he could control his impulses. He was convicted on eight counts of a variety of charges—including assault and battery by means of a dangerous weapon and commission of unnatural acts—and sentenced to life in prison.

Three men who were suspects in an August 14, 1962, robbery of $1.5 million from a mail truck traveling from Cape Cod to Boston turned to Bailey in December 1962 to end harassment by federal officials during the investigation. The harassment included searches without warrants of homes as well as legal searches that left the homes in shambles. By the time the case came to trial in 1968, Bailey had successfully influenced public opinion with his usual polygraph tests, press conferences, and leaks to the media. Toward the end of the government's case, Bailey displayed his skill in cross-examination and essentially ended the government's case by discrediting the prosecution's "identification" witnesses. The jury deliberated less than an hour and delivered a not-guilty verdict.

Bailey ventured into the unfamiliar environment of military court-martial when he defended Captain Ernest Medina in 1971 for his role in the slaughter of women and children at My Lai, Vietnam. The polygraph test he ordered, although never introduced in court, offered mixed results. Medina had neither ordered nor implied his men should kill children and women, but he knew random killing was happening and failed to end it. Bailey earned credit for having conducted a stellar defense, which included obtaining the admission from a witness that he had told the prosecution he was willing to lie under oath. Medina was declared not guilty on all counts.

Patty Hearst, granddaughter of newspaper publishing magnate William Randolph Hearst, was kidnapped from her Berkeley, California, apartment in February 1974 by the Symbionese Liberation Army (SLA), a group of young antiestablishment and antiwar radicals suspected in several violent crimes. She participated with the group in a San Francisco bank robbery and was arrested nineteen months later by the Federal Bureau of Investigation (FBI).

With Bailey as her defense counsel, she stood trial in a federal court in 1976 for possession of automatic weapons as well as the robbery. Bailey used a "coercive persuasion" (brainwash) defense, not previously used in a civilian criminal trial. He attempted to convince the jury that the trial was not about bank robbery but, rather, dying and surviving. His inability to rattle and discredit prosecution witnesses hurt his efforts. After twelve hours of deliberation, the jury found Hearst guilty, sentencing her to thirty-five years in prison. The verdict surprised and embarrassed Bailey who, according to news accounts, acted with great arrogance throughout the trial. Twenty-two months into Hearst's prison term, the sentence was commuted by President Jimmy Carter.

Bailey had considerable success defending clients such as those described here as a result of several factors. He undertook careful investigation, prepared extensively, and often pursued a strategy of manipulating the media—a strategy frowned upon by more conservative, established lawyers. His approach, however, at times proved vital to protecting his clients from encroachment on their right to a fair trial (Sam Sheppard, the Torso Murder, Medina) and from unreasonable search and seizure (Great Plymouth Mail Robbery).

Baker v. Carr (1962)

Baker v. Carr, 369 U.S. 186 (1962), represents a landmark on the path to the enforcement of one of the guiding principles in American democracy: the doctrine that people have a right to substantially equal representation in state and local government. In practice, that principle has usually played out in the requirement that single-member political districts have approximately an equal number of people.

As the United States became an urban, industrial society, tension arose between rural interests and the interests of growing urban populations. A coalition of conservative rural lawmakers and the urban upper class conspired to prevent a substantial change of state legislative districts from decade to decade. To protect rural interests, state legislatures simply refused to draw new legislative districts to account for changes in population. Urban areas were growing rapidly, but rural areas were stagnant or losing population. As a result, over time lawmakers in urban areas were representing up to ten times as many people as lawmakers in rural areas.

As a population moves around, representatives in growing areas represent more people than representatives from areas where population is stagnant or decreasing. Under normal circumstances (decadal, or once a decade, redistricting), such disparity is not large enough to be a problem, but if this misrepresentation is not corrected over a number of decades, shifting population patterns can cause a significant bias in a legislature.

At a local level, this was often used as a way to deny representation to minorities, particularly urban blacks. As blacks migrated from the rural South to the urban North, black districts in minority areas swelled with population, whereas during the 1950s urban white populations were beginning a migration to the suburbs. Failure to redistrict often became a de facto means of creating underrepresentation of minorities on local city councils.

Courts were reluctant to become involved in these cases, as they were considered substantially "political" questions. By 1960, however, the U.S. Supreme Court was beginning to take an interest in overturning previous decisions in which it had denied federal jurisdiction, as, for example, in *Colegrove v. Green,* 328 U.S. 549 (1946). In 1960 a Tennessee voter named Charles Baker appealed a lawsuit against the board governing Tennessee state elections and its chair, Joe Carr. He claimed his right to equal representation was substantially violated by the failure of the Tennessee legislature to redistrict as required by the Tennessee constitution. Tennessee had failed to reapportion its legislative districts since 1900, and as a result there were substantial inequalities in the number of persons in each legislative district.

The federal appeals decision had held that Baker's argument was entirely valid, but it was not for the courts to decide political questions. Not surprisingly, the debate that ensued on the Supreme Court took on precisely this issue. Some justices, led by Felix Frankfurter, felt the subject matter was too political and best left to the Congress. Other justices, led by Potter Stewart (a former city councilman), felt that the time was long past for the problem of unequal representation to be addressed. Justice William J. Brennan Jr., backed by Chief Justice Earl Warren, successfully depoliticized the issue by applying statistical tests to the question of whether apportionment laws were constitutional.

Baker established that federal courts could take on questions of representation as they applied to the substantial equality of legislative districts. In conjunction with *Reynolds v. Sims,* 377 U.S. 533 (1964), *Baker* required state legislatures to adopt new legislative districts following the decennial census and to ensure these districts were substantially equal in population. This was applied to civic redistricting as well, forcing city councils to change their election districts to reflect population changes. Ironically, by the time the decision was enforced, the balance of power was already shifting away from the cities to the suburbs.

At the time, *Baker* was viewed by many states' rights advocates as political intervention by an activist Supreme Court. Today, it and follow-up cases are more usually seen as the Court's imposing a classic democratic concept on the political system: one-person, one-vote. To ensure that people have an equal voice in the political arena and that each voter's rights have equal protection, substantially equal legislative districts are required.

The precedent set by *Baker* would lead to a stream

of legislative apportionment cases related to minority representation, including *Thornburg v. Gingles,* 478 U.S. 30 (1986), involving one single-member and six multimember districts in North Carolina that, it was alleged, discriminated against African Americans; and *Davis v. Brandemer,* 478 U.S. 109 (1986), involving partisan gerrymandering in Indiana state legislative districts. Similarly, *Shaw v. Reno,* 509 U.S. 630 (1993), dealt with whether North Carolina's congressional districts were sufficiently compact and contiguous. *Baker* was the Court's first substantial intervention into the matter of legislative redistricting and the political process, ensuring that a key democratic ideal (substantially equal representation in the lower house) was upheld.

Balancing Test

The balancing test is a doctrine developed by U.S. and state courts to settle conflicts between the First Amendment right to free expression and association, on the one hand, and other constitutional rights and social interests, on the other. Courts have used the Due Process Clause of the Fourteenth Amendment to apply the test to state governments.

Those advocating a balance among competing interests argue that other important individual rights and social interests may outweigh the right to free expression. Protecting national security, preventing the defamation of an individual's reputation, banning the open display of obscene materials, and punishing unfair advertising are among those offsetting interests and values. As Justice Louis D. Brandeis argued in his concurring opinion in *Whitney v. California,* 274 U.S. 357 (1927), "although the rights of free speech and assembly are fundamental, they are not in their nature absolute" and thus may validly be regulated.

The balancing test was developed in the 1950s and 1960s to replace the clear-and-present-danger test. Justice Felix Frankfurter in a concurring opinion in *Dennis v. United States,* 341 U.S. 494 (1951), offered a description of the new test: "The demands of free speech in a democratic society as well as the interest in national security" are best served by the "weighing of the competing interests." The Court should weigh "the interest of government in self-preservation" against "the interest of defendants in advocating action." Justice Frankfurter asserted that the ordinary political process, not the judicial process, best protects free expression. Congress has rejected thousands of proposed bills restricting free expression, but the Supreme Court has ruled only a handful of laws unconstitutional. The Court should overrule Congress only if the balance struck by the legislature is "outside the pale of fair judgment."

Balancing was used in the 1950s to sustain congressional and state investigations into the associations and activities of individuals suspected of subversion and to sustain proceedings against the Communist Party and its members. The Court used the test to uphold speech and associational rights in cases where hostile southern states sought to intimidate civil rights groups by demanding they make their membership lists public. Similarly, balancing was applied in the late 1960s to protect the speech rights of a public employee who had criticized his employers. On the other hand, balancing was not used when the Court struck down restrictions on receiving mail from Communist countries, and it was not used in cases involving picketing, pamphleteering, and demonstrating in public places.

Justices Hugo L. Black and William O. Douglas became the best-known opponents to the balancing test. They championed an "absolutist" position, denying the government any power whatsoever to abridge speech. Absolutists feared that never knowing whether expression was protected until after a court balanced the competing interests would create such uncertainty as to have a "chilling effect" on the political activities of citizens. In the absolutists' view, the Court should create a clear-cut distinction between expression that is constitutionally protected and ex-

pression that is not. Anything labeled protected expression should have an absolute shield from government regulation.

Supporters of the balancing test argue that if courts provide absolute protection for some categories of speech, they will be weakened as political institutions. Federal courts are unelected institutions. They are deliberately insulated from the normal political means of accountability. As such they must walk a fine line: If they resist too often the efforts of electoral majorities for social change or stability, the courts' power—the power of persuasion—will dissipate. Judicial authority is a fragile one, dependent upon an audience open to reason. Should that audience perceive the courts to speak unreasonably, or if judicial solutions fail to meet pressing needs, the audience may turn away.

Balancing continues to be invoked by some Supreme Court justices. Cases such as *Brandenburg v. Ohio,* 395 U.S. 444 (1969), with its test of "incitement to imminent unlawful action," and the flag-salute cases suggest, however, that the Court is willing to place greater weight on individual expressive and associative rights than on the government interest in protecting public order.

Baldwin, Roger Nash (1884–1991)

Roger Nash Baldwin, once described by Justice William O. Douglas of the U.S. Supreme Court as "the conscience of America," gave birth to the modern civil liberties movement in the United States. Throughout virtually the entire twentieth century, Baldwin was one of the most persistent and successful advocates for

Mr. and Mrs. Leonard Bernstein, right, present tributes from all around the world to Roger Nash Baldwin, founder of the American Civil Liberties Union, on the occasion of his eightieth birthday at a party in their home in 1964. *(Library of Congress)*

civil liberties, especially freedom of speech and other rights governed by the First Amendment to the Constitution. In the process he helped to rewrite U.S. constitutional law.

Baldwin was born in 1884 and died in 1991. His entire adult life was a testament to social justice, fundamental fairness, egalitarian politics, and an unflagging belief in the inestimable, inherent dignity of each person. An "unhappy optimist" by his own admission, Baldwin was tireless in his efforts at political organizing, as when he helped to create the American Civil Liberties Union (ACLU) in 1920 in the context of World War I. His work reflected a deep faith in American democracy and popular sovereignty, along with an abiding, healthy distrust of the structures of government and "officialdom."

A graduate of Harvard, Baldwin left Boston on the advice of Louis D. Brandeis for Saint Louis, Missouri, where he engaged in social work and liberal reform politics reflective of the progressivism of the late nineteenth and early twentieth centuries. His pacifist con-

victions were put to the test during World War I when he took part in the founding of Americans United Against Militarism (AUAM) and served time in federal prison for refusing to submit to the new selective service system.

Most of all, Roger Baldwin was devoted to American democracy, the Declaration of Independence, and an expansive reading of the Bill of Rights (the first ten amendments to the Constitution), most notably the First Amendment. A reformer with radical impulses, Baldwin played a central role in the development of First Amendment jurisprudence and helped to bring, through his political and legal advocacy, the First Amendment from paper to reality, thereby giving life to James Madison's hope that the Bill of Rights would become more than merely a "parchment barrier" to governmental misdeeds.

Baldwin retired from the ACLU in 1950 and, over the course of the next two decades, sought to expand his civil liberties work internationally by directing the International League for the Rights of Man through the auspices of the United Nations. In 1981 he received the Presidential Medal of Freedom, the nation's highest civilian award, a fitting acknowledgment of and crowning achievement for a life devoted to fulfilling the American promise of participatory democracy and freedom from oppression and exploitation.

Arguably the lone or major low point of Baldwin's career came during World War II, when the national ACLU office chose not to challenge aggressively President Franklin D. Roosevelt's decision to intern Japanese Americans after the December 1941 attack on Pearl Harbor (by Executive Order No. 9066, February 1942). Baldwin both distrusted governmental power and sought to lobby the corridors of power effectively, and like any political operative, he often made compromises in the pursuit of fundamental interests. Nonetheless, this patriarch of the civil liberties movement never wavered in his commitment to the rule of law and the principles enshrined in the Constitution.

Barenblatt v. United States (1959)

Barenblatt v. United States, 360 U.S. 109 (1959), is a leading case involving the balance between the congressional power of investigation and the First Amendment protections of free expression and assembly. After witnessing the horrors effectuated by totalitarian regimes during World War II, America embarked on a crusade to promote democracy and end communism. As America waged the Cold War with the former Soviet Union, it fought the threat of communism on its own soil with the House Un-American Activities Committee (HUAC).

The House of Representatives created HUAC in 1938 to investigate the scope of Communist infiltration in America. Although the power of congressional investigation is not specifically listed in the U.S. Constitution, courts have decided that this authority furthers congressional law-making powers. The committee led numerous investigations into the private affairs of individuals suspected of being Communists, blacklisting many witnesses that it called. In 1954, HUAC subpoenaed two witnesses whose cases shaped U.S. Supreme Court doctrine concerning witness rights during congressional hearings.

John Watkins, a former labor union president, admitted his Communist affiliations when HUAC questioned him, but he refused to answer questions concerning the political affiliations of his past acquaintances. Lloyd Barenblatt, professor of psychology at Vassar College and former graduate student at the University of Michigan, refused to answer the committee's questions concerning his past political associations. Both Watkins and Barenblatt asserted that HUAC had no power to compel answers, and Congress cited both men for contempt. Only Watkins succeeded in his claims.

In *Watkins v. United States,* 354 U.S. 178 (1957), the Court, speaking through Chief Justice Earl War-

ren, limited the committee's power to investigate in favor of Watkins's First Amendment freedoms, his right to privacy, and his right to due process. The Court held that the committee failed to inform Watkins adequately about the subject of inquiry and the pertinence of its questions to that subject. Two years later, after intense public and congressional criticism of the Court's decision, it decided *Barenblatt* on First Amendment grounds. The Court, in a five–four decision written by Justice John Marshall Harlan, chose to uphold Barenblatt's conviction. It narrowly interpreted *Watkins* to determine that HUAC had fully apprised Barenblatt of the subject and pertinence of his questioning. The Court announced a new balancing test for First Amendment claims: The Court would weigh the government's security interests against the individual's rights. In this case, as in most contemporary cases challenging HUAC's investigative powers, the Court's balancing test favored the government.

Justice Hugo L. Black wrote a sharp dissent in *Barenblatt*, joined by Chief Justice Warren and Justice William O. Douglas; Justice William J. Brennan Jr. also wrote a one-paragraph dissent. Focusing on the "chilling effect" of being called before a legislative committee, Black supported Barenblatt's right to make political mistakes. Significantly, Black attacked HUAC at a time when few spoke against it for fear of being labeled Communist. Justice Black accused the government of adopting the very methods of the totalitarian regimes that it sought to combat.

Although the Court has been increasingly willing to recognize First Amendment rights, its balancing test continues to be applied to congressional investigations. Justice Black's opinion, however, stands as a testament to the value of an individual's rights to speak and to associate freely without being publicly shamed and castigated for professing beliefs that others deem unpopular.

Barnes v. Glen Theatre, Inc. (1991)

In *Barnes v. Glen Theatre, Inc.,* 501 U.S. 560 (1991), the U.S. Supreme Court was called upon to determine whether Indiana's public indecency statute violated the First Amendment's guarantee of freedom of expression. Two adult entertainment establishments located in South Bend, Indiana, challenged the law. Their proprietors argued that the law ran afoul of the First Amendment because it prohibited them from presenting "totally nude dancing" and required their dancers to wear pasties and G-strings.

By a narrow majority, the Court held that the pasties and G-string restriction on nude dancing did not violate the First Amendment. The five justices in the majority, however, could not agree on a single rationale for the Court's holding. A plurality—Chief Justice William H. Rehnquist and Justices Sandra Day O'Connor and Anthony M. Kennedy—concluded that the Indiana statute should be analyzed and upheld under the four-part test enunciated in *United States v. O'Brien,* 391 U.S. 367 (1968), for evaluating regulations of expressive conduct. In reaching this determination, the plurality noted that (1) the statute was clearly within the constitutional power of Indiana and furthered the state's substantial interest in protecting morals and public order; (2) the state's decision to protect societal order and morality by prohibiting totally nude dancing was "unrelated to the suppression of free expression" because "the requirement that the dancers don pasties and G-strings does not deprive the dance of whatever erotic message it conveys; it simply makes the message slightly less graphic [and] [t]he perceived evil that Indiana seeks to address is not erotic dancing, but public nudity"; (3) the pasties and G-string restriction was no greater

than essential to the furtherance of the state's interest because the "prohibition is not a means to some greater end, but an end in itself"; and (4) the statute was "narrowly tailored" because "Indiana's requirement that the dancers wear pasties and G-strings is modest, and the bare minimum necessary to achieve the State's purpose."

Justice Antonin Scalia concurred in the judgment of the Court but wrote separately to emphasize his belief that "the challenged regulation must be upheld not because it survives some lower level of First Amendment scrutiny, but because, as a general law regulating conduct and not specifically directed at expression, it is not subject to First Amendment scrutiny at all." Justice David H. Souter concurred as well. He agreed with the plurality that "the appropriate analysis to determine the actual protection required by the First Amendment is the four-part inquiry described in *O'Brien,*" but he rested his concurrence (which, as the most narrow opinion joining the judgment of the Court, is the controlling opinion) "not on the possible sufficiency of society's moral views to justify the limitations at issue, but on the State's substantial interest in combating the secondary effects of adult entertainment establishments." Justice Byron R. White, joined by Justices Thurgood Marshall, Harry A. Blackmun, and John Paul Stevens, dissented from the holding of the Court. In their opinion, the pasties and G-strings restriction on nude dancing was a content-based regulation of expressive conduct that failed to pass constitutional muster because "even if there were compelling [state] interests [involved], the Indiana statute is not narrowly drawn."

Barron v. City of Baltimore (1833)

In *Barron v. City of Baltimore,* 32 U.S. 243 (1833), the U.S. Supreme Court had to decide if the Bill of Rights (the first ten amendments to the U.S. Constitution), which the federal government was bound to honor, applied to the individual states as well.

The facts in *Barron* involved Baltimore's diversion of streams in the course of road construction that had resulted in the deposit of silt in a private wharf, making it unusable. The wharf owner sued the city under the just-compensation wording of the Takings Clause of the Fifth Amendment, claiming that he should be reimbursed for the city's damage. Although he won a judgment of $4,500 at the trial court, the Maryland State Court of Appeals reversed this decision before it reached the U.S. Supreme Court.

In a unanimous decision, Chief Justice John Marshall also rejected the wharf owner's plea. He argued that the Fifth Amendment and other provisions in the Bill of Rights had been designed to regulate the general government and not those of the individual states. He pointed out that in those relatively few cases where the framers limited the states—for example, Article I, Section 10 prohibited states from exercising powers granted exclusively to the general government—they specifically said so. Not only did the language of the Bill of Rights not address the states, but the purpose of these amendments, which had grown out of the Federalist/Antifederalist debate over the new Constitution, was to limit the powers of the newly formed government. If individuals wanted to incorporate protections against their own states, they could do so by changing these state constitutions rather than by involving the entire nation in the process.

Barron v. Baltimore remains the generally accepted interpretation of the original intention of the Bill of Rights. However, there is evidence that some of the proponents of the Fourteenth Amendment, ratified in 1868, intended not only to eliminate discriminatory state actions but also to overturn the decision in *Bar-*

ron and see that states were bound by the same constitutional guarantees as was the national government. In a development, the beginnings of which are often traced to *Gitlow v. New York,* 268 U.S. 652 (1925), the U.S. Supreme Court began using the Due Process Clause of this amendment to absorb, or incorporate, fundamental provisions of the Bill of Rights and to apply them to the states as well as to the national government. Scholars call this process "selective incorporation." Over the course of the twentieth century, the Court held that almost all provisions of the Bill of Rights were fundamental and thus applied not only to the national government but also to the states.

Bates v. State Bar of Arizona (1977)

In *Bates v. State Bar of Arizona,* 433 U.S. 350 (1977), the U.S. Supreme Court interpreted the First Amendment's free speech and press guarantees to protect commercial speech (advertising) by lawyers, thereby extending the reach of the Court's earlier decision in *Virginia State Board of Pharmacy v. Virginia Citizens Consumer Council, Inc.,* 425 U.S. 748 (1976), which had protected the rights of pharmacists to advertise prices and credit terms for prescription drugs.

Bates involved the case of two Arizona lawyers, John Bates and Van O'Steen, who operated a legal clinic in Phoenix providing moderately priced legal services. In order to make their business more visible to the public, they placed an advertisement in the newspaper, an act that violated policies of the State Bar of Arizona prohibiting advertising. In its enforcement of these policies, the bar disciplined the two lawyers with a one-week suspension. Bates and O'Steen argued that their commercial speech was protected by the First Amendment under the precedent the Court had established in *Board of Pharmacy* one year earlier.

Although the state had legitimate interests in protecting the professionalism of the bar, in prohibiting misleading advertisements by lawyers, and in not encouraging additional litigation through such advertisements, the Court, in an opinion by Justice Harry A. Blackmun, held five–four that these interests were not only outweighed by the U.S. Constitution's protection of commercial speech but that they could be achieved in ways less damaging to the First Amendment.

As in *Board of Pharmacy,* the majority in *Bates* noted that the First Amendment's protection of commercial speech was not as extensive as its protection of political speech and that advertisements that were false or misleading or advertised an illegal product or service could be prohibited. In addition, the Court thought it possible that some restrictions regarding attorneys' claims of quality would be permissible. In this case, however, there were no such contested claims, and the Court held that "truthful advertisement concerning the availability and terms of routine legal services" was protected by the First Amendment's free speech and press guarantees.

In cases after *Bates,* the Court has been required to define the boundaries of commercial speech protection in the context of other types of lawyer advertising. In *Ohralik v. Ohio State Bar,* 436 U.S. 447 (1978), the Court held that a state bar may prohibit in-person solicitation of clients, commonly known as "ambulance chasing," because such regulation was economic rather than speech-related. In *Zauderer v. Office of Disciplinary Counsel,* 471 U.S. 626 (1985), the Supreme Court upheld an Ohio State Bar requirement that lawyers advertising their availability on a contingency-fee basis must disclose in their advertisements that clients might be required to pay costs if their lawsuit proved unsuccessful. And in *Florida State Bar v. Went For It,* 515 U.S. 618 (1995), a majority of the Court held that it was permissible under the First Amendment for the state bar to prohibit

lawyers from making written solicitations to victims or their relatives within thirty days of an accident.

Batson v. Kentucky (1986)

During the "voir dire," the process through which members of petit (trial) juries are chosen, lawyers are typically granted the power to exercise challenges to dismiss prospective jurors. Challenges for cause are based on clear indications of conflicts of interest—for example, family or employment relationships or clear biases. By contrast, peremptory challenges are exercised on the basis of gut feelings about individual jurors. In *Batson v. Kentucky,* 476 U.S. 79 (1986), the U.S. Supreme Court decided that the Sixth Amendment right to a jury, as applied to the states by the Due Process Clause of the Fourteenth Amendment, was further limited by the Equal Protection Clause of that amendment so as to prevent racial bias in seating a jury.

In *Batson,* the African American defendant was tried and convicted for second-degree burglary and receipt of stolen goods. The prosecutor used his peremptory challenges to dismiss all four African Americans in the jury pool, and the Kentucky Supreme Court upheld the action. The defendant appealed to the Supreme Court.

The Court previously had considered the factor of racial exclusion from juries. In *Strauder v. West Virginia,* 100 U.S. 303 (1880), the Court struck down a conviction of a black defendant when African Americans were completely excluded from the jury pool. In *Swain v. Alabama,* 380 U.S. 202 (1965), the Court unanimously decided that defendants could challenge exclusion of members of their race from hearing their case, but defendants had the task of showing that the prosecutor had exhibited a pattern of such exclusions in other cases as well, a threshold that made proof almost impossible.

Batson made such proof easier. Citing its belief that discriminatory jury selection undermined public confidence in the justice system, the Court in a seven-two decision authored by Justice Lewis F. Powell Jr. held that defendants who were members of a cognizable racial group could object on equal protection grounds when all members of their race were excluded from the jury through prosecutorial use of peremptory challenges. To survive equal protection challenge, the prosecutor must then offer a "neutral explanation" for excluding the prospective jurors in question.

In a concurring opinion, Justice Byron R. White sought to limit the retroactive application of the *Batson* decision. Justice Thurgood Marshall advocated eliminating peremptory challenges altogether. Chief Justice Warren E. Burger and Justice William H. Rehnquist authored dissents suggesting that the Court had addressed an issue not raised in the lower courts, distinguishing the exclusion of jurors from the general jury pool and from individual cases, and arguing that requiring justification of peremptory challenges defeated the purpose of this mechanism.

In *Edmonson v. Leesville Concrete Co.,* 500 U.S. 614 (1991), the Court subsequently extended the *Batson* precedent to civil cases. *Powers v. Ohio,* 499 U.S. 400 (1991), applied the precedent to cases in which whites were convicted after blacks were excluded from their juries. *Georgia v. McCollum,* 505 U.S. 42 (1992), extended the ban on race-based peremptory challenges to counsel for the defendant as well as to prosecutors, with the ironic result that such actions were regarded as unconstitutional state action. *J.E.B. v. Alabama ex rel. T.B.,* 511 U.S. 127 (1994), further extended a similar ban to use of peremptory challenges to exclude jurors on the basis of gender.

Brown, Cheryl A.C. "Challenging the Challenge: Twelve Years After *Batson,* Courts Are Still Struggling to Fill in the Gaps Left by the Supreme Court." *University of Baltimore Law Review* 28 (Spring 1999): 379–422.

Beauharnais v. Illinois (1952)

In a five–four decision in *Beauharnais v. Illinois,* 343 U.S. 250 (1952), the U.S. Supreme Court upheld a conviction under an Illinois statute criminalizing group libel, despite the defendant's claims that his speech was protected under the First Amendment. The statute made it a crime to sell or distribute material that "portrays depravity, criminality, unchastity, or lack of virtue of a class of citizens of any race, color, creed or religion" when the material may expose that group to "contempt, derision or obloquy or which is productive of breach of the peace or riots." The statute dated from 1917, but a number of states had written similar group-libel statutes in reaction to both the rise of European fascism and organized domestic racism.

Joseph Beauharnais was arrested in 1950 for publishing and distributing a pamphlet calling on white citizens to petition the mayor and city council of Chicago against racial integration. In a significant part of the pamphlet Beauharnais stated: "If persuasion and the need to prevent the white race from becoming mongrelized by the negro will not unite us, then the aggressions . . . rapes, robberies, knives, guns and marijuana of the negro, surely will."

Justice Felix Frankfurter, writing for the Court, defended the law along two doctrinal lines. First, relying upon the two-tiered system of speech announced in *Chaplinsky v. New Hampshire,* 315 U.S. 568 (1942), he argued that libel was outside the protection of the First Amendment. As a result, the statute had only to pass a minimal-rationality (versus compelling state interest) test. Second, Frankfurter accepted the analogy of group libel to personal libel. Without extensive elaboration, Frankfurter stated that any utterance that the state could hold criminally libelous when directed at an individual could also be prohibited when directed at well-defined groups within society. He pointed to the recent history of racial violence in Illinois and cited studies showing the reputation and social standing of individuals were directly tied to core group identities such as race and ethnicity.

The four dissenting opinions offered nothing resembling a uniform explanation for why the law was unconstitutional. Justice Hugo L. Black made the strongest attack on group-libel laws in general, analogizing them to seditious libel. He complained that the state had improperly extended the criminal-libel standard to groups rather than limiting it to individuals. He also reminded the Court that Beauharnais's defamatory utterance was in the form of a petition for government policy changes. Justice Stanley F. Reed's concern was with what he took to be the unconstitutional vagueness of the language, especially key words like "virtue" and "derision." Justice Robert H. Jackson argued that the trial court did not produce evidence of the dangerous tendency of the words or allow Beauharnais to show either the truth of his statements or good faith. Justice William O. Douglas prophesied that group-libel laws could in turn be used to silence racial minorities protesting discrimination.

The Supreme Court has never formally overturned *Beauharnais,* but it is highly questionable whether the case may be considered good law. Frankfurter's identification of libel as outside First Amendment protection is no longer correct after the 1964 case of *New York Times Co. v. Sullivan,* 376 U.S. 254, in which the Court extended constitutional protection to many forms of libel. In subsequent decisions, the Court also granted extended protection to offensive speech in *Cohen v. California,* 403 U.S. 15 (1971), and created a heightened test for speech that may disrupt the peace in *Brandenburg v. Ohio,* 395 U.S. 444 (1969). The state of Illinois itself removed the criminal group-libel law from its books in 1961, thus making it unavailable for the prosecution of Nazis marching through Skokie in 1977. The Court had an opportunity to clarify the status of *Beauharnais* in the early 1990s when it addressed the problem of hate-speech laws in *R.A.V. v. City of St. Paul,* 505 U.S. 377 (1992). In striking down a Minnesota hate-speech ordinance as unconstitutionally content-specific, the Court neither overturned nor reaffirmed *Beauharnais*. Nevertheless, the *R.A.V.* ruling further weakened the constitutional basis for group-libel laws.

Berman v. Parker (1954)

In *Berman v. Parker,* 348 U.S. 26 (1954), the U.S. Supreme Court upheld an urban-development statute that authorized the government to condemn privately owned land through the power of eminent domain in order to resell it to new owners interested in redeveloping the property for private use. The issue was whether the Takings Clause of the Fifth Amendment, which prohibits the taking of private property for public use without compensation, permitted such action.

In order to improve poor housing and slum conditions in the nation's capital, Congress passed the District of Columbia Redevelopment Act of 1945. The statute established a land agency that could acquire, through the power of eminent domain, private property in areas targeted for urban renewal. After taking the property, the agency was authorized to sell it to new private owners who agreed to develop the land in accordance with the agency's plan. The owner of a department store in a neighborhood slated for redevelopment claimed the law violated the Takings Clause of the Fifth Amendment because the government did not intend to condemn his property "for public use." He argued that the transfer of his property to another owner for redevelopment would result not in public but rather private use. The store owner also claimed no public use could be found in the plan to take his property, since the statute's stated goal was simply to make the neighborhood more attractive.

In an opinion written by Justice William O. Douglas, the U.S. Supreme Court unanimously upheld the redevelopment statute. The Court found the Takings Clause of the Fifth Amendment allowed the government to condemn property in order to promote a "public purpose" or public goal and did not require the government to develop it for strictly "public use." This interpretation meant the government did not need to retain ownership over condemned property and open it for some kind of use by the public; instead, the government could also sell the property to private owners for private use if the government decided such an action would help advance a public purpose.

In addition, the Court found nothing in the Fifth Amendment that restricted the government from defining the scope of a public purpose. Once the government decided to pursue a public purpose (including, as in this case, the eradication and redevelopment of slums to promote the public's well-being), the Takings Clause became a means to achieve that end. As a result, *Berman* legitimized beautification as a reason to exercise the power of eminent domain. Finally, although the owner had kept his building well-maintained, the Court found the agency's decision to condemn the department store acceptable as part of the agency's comprehensive neighborhood improvement plan.

Bethel School District v. Fraser (1986)

In *Bethel School District v. Fraser,* 478 U.S. 675 (1986), the U.S. Supreme Court held that disciplining a student for making lewd remarks in a speech at a school assembly did not violate that student's right to free speech under the First Amendment. This right

and others have been made applicable to the states through the Due Process Clause of the Fourteenth Amendment.

Matthew Fraser was a student at a public high school and presented a speech in a school assembly nominating a friend for a position in student government. He presented the theme of the speech using "elaborate, graphic, and explicit sexual metaphor." Teachers noted that the reaction of the nearly 600 students in the assembly ranged from "hooting and hollering" to bewilderment. Fraser was suspended for three days and eliminated from the list of potential speakers for his high school graduation. His father brought a lawsuit on his behalf challenging the school's disciplinary action, claiming violation of Fraser's rights to free speech and due process of the law and challenging the school rule as unconstitutionally vague and overbroad. Both the U.S. District Court and the Ninth Circuit Court of Appeals held that Fraser's rights had been violated. The school district then successfully applied to the U.S. Supreme Court for a writ of certiorari (request for full appellate review). The high court reversed the Ninth Circuit's decision, holding that Fraser could be disciplined under the school's disciplinary rule that stated, "Conduct which materially and substantially interferes with the educational process is prohibited, including the use of obscene, profane language or gestures."

As for freedom of speech, the Court distinguished Fraser's case from *Tinker v. Des Moines Independent Community School District,* 393 U.S. 503 (1969), the landmark case holding that students did not "shed their constitutional rights to freedom of speech or expression at the schoolhouse gate." In *Tinker,* the students wore black armbands to school in protest of the Vietnam War and U.S. involvement in it (1964–1975). The Court found the armbands in *Tinker* distinguishable from Fraser's speech because the armbands did not concern speech or action that intruded upon the work of the school or the rights of other students. The Court explained the school's responsibility to prepare students for citizenship and civility, noting the importance of acceptance of divergent points of view but making clear that vulgarity or foul or abusive language is not accepted in many settings of public discourse. For example, the early House of Representatives adopted Thomas Jefferson's "Manual of Parliamentary Practice," which prohibits the use of "impertinent" speech during debate. Chief Justice Warren E. Burger wrote in *Fraser,* "[C]an it be that what is proscribed in the halls of Congress is beyond the reach of school officials to regulate?" The Court thought not, and reversed the Ninth Circuit's holding that Fraser's right to free speech had been violated.

In support of this position, the Court noted instances in which minors' rights are not coexistent with those afforded to adults. In *New Jersey v. T.L.O.,* 469 U.S. 325 (1985), the Court held that minors in the public school setting did not enjoy Fourth Amendment protections against search and seizure that were commensurate with those enjoyed by adults. In *Federal Communications Commission v. Pacifica Foundation,* 438 U.S. 726 (1978), the Court held that a radio station could be cited for broadcasting obscene material during a time of day when children would undoubtedly be in the audience. As for the right of minors to purchase pornographic material, the Court marked the distinction between minors and adults in *Ginsberg v. New York,* 390 U.S. 629 (1968), holding that a New York statute banning the sale of the materials to minors was constitutional.

Fraser asserted that the disciplinary action taken by the school was unconstitutional as a violation of his right to due process, because he did not have notice of potential discipline he could face. The Court held that the school needed the flexibility to discipline in light of the wide range of unanticipated conduct disruptive to the educational process, conduct that school officials face daily. The two-day suspension Fraser served did not, in the Court's view, amount to a "penal" sanction; hence it did not require the procedural due process protections applicable in a criminal proceeding, as outlined in *Goss v. Lopez,* 419 U.S. 565 (1975).

Fraser stands for an important principle that is still fundamental to American jurisprudence in relationship to minors: The state has a compelling interest in protecting minors. The public schools, acting "in loco parentis" (in the place of a parent), have the responsibility to protect minors on a daily basis while children are entrusted to them by parents. This

responsibility is the foundation for the holding in *Fraser*.

Betts v. Brady (1942)

In *Powell v. Alabama,* 287 U.S. 45 (1932), the U.S. Supreme Court held that the Fourteenth Amendment to the U.S. Constitution required state-appointed defense counsel if a defendant in a capital case (a "capital defendant") could not afford a lawyer or could not conduct his own defense. Six years later, the Court ruled in *Johnson v. Zerbst,* 304 U.S. 458 (1938), that the Sixth Amendment entitled indigent federal-felony defendants to appointed counsel. The rulings in *Powell* and *Zerbst* suggested that the Court might require the states to appoint counsel in state-felony cases as well, but in *Betts v. Brady,* 316 U.S. 455 (1942), the Court ruled that states did not need to appoint counsel for defendants in state-felony cases absent such "special circumstances" as mental disability or a capital charge.

The justices deciding *Betts* were deeply divided about whether assistance of counsel was indispensable to fair trials in noncapital cases. Six justices preferred a flexible fundamental-fairness approach, permitting the Court to review questions about legal representation on a case-by-case basis. Their view, shared by most states in 1942, was that state criminal trials were not inherently unfair if defendants were unrepresented. Although states had to allow defense counsel to appear, they were under no constitutional obligation to provide counsel to indigent felony defendants. Justice Owen J. Roberts wrote for the Court in *Betts* that the issue was better resolved by state legislatures but said state judges could appoint defense counsel if they deemed it necessary in the "interest of fairness." He categorically rejected an all-purpose rule requiring states to provide counsel for all felonies, saying the states "should not be straight-jacketed in this respect." Roberts concluded that although the Fourteenth Amendment prohibited convictions in which fundamental ideas of fairness were absent, it did not "embod[y] an inexorable command that no trial for any offense, or in any court, can be fairly conducted and justice accorded a defendant who is not represented by counsel." Betts was "not helpless," Roberts indicated, but was instead a man in his forties, of ordinary intelligence, and had the ability to represent himself at a trial. Nonetheless, the Court recognized exceptions: Counsel must always be supplied in state trials that presented "special circumstances."

Justices Hugo L. Black, William O. Douglas, and Frank Murphy dissented. They viewed assistance of counsel as imperative to fair trials and advocated a categorical rule providing for counsel in all felony cases. Black argued that the constitutional mandate requiring appointment of counsel in federal trials should apply to the states. Absence of counsel created doubt that a defendant's case was adequately presented. Black declared that not providing counsel for indigent defendants "cannot be reconciled with common and fundamental ideas of fairness and right"; the practice "subjects innocent men to increased dangers of conviction merely because of their poverty."

During the twenty years following *Betts,* the Court heard several cases involving "special circumstances" and determined that counsel should have been appointed in virtually all of them. Although the special-circumstances proviso was broadened following *Betts,* the basic holding in *Betts* governed the jurisprudence pertaining to assistance of counsel until the Court under Chief Justice Earl Warren formally overruled it in

Gideon v. Wainwright, 372 U.S. 335 (1963). *Gideon* applied only to felonies. A decade later, the Court expanded the right to misdemeanors as well.

Beyond a Reasonable Doubt

The phrase "proof beyond a reasonable doubt" describes the prosecution's high burden of proof in a criminal trial. Proof beyond a reasonable doubt is a far higher standard than the "preponderance of the evidence" standard used in civil proceedings. Each element of the criminal offense charged must be proved "beyond a reasonable doubt" for the jury to return a guilty verdict. If the prosecution fails to meet this burden, the jury must return a not-guilty verdict. "Not guilty" is a legal finding that the prosecution has failed to meet its burden of proof; it is not necessarily a factual description of reality. Furthermore, deciding that the prosecution has failed to meet its burden of proof is not necessarily the same as deciding that the defendant is innocent. That is why the verdict delivered is "not guilty" rather than "innocent."

Every state has a statutory provision requiring the establishment of guilt beyond a reasonable doubt in criminal cases, and the U.S. Supreme Court, in *In re Winship,* 397 U.S. 357 (1970), held that due process requires this high level of proof. There are varying definitions of "proof beyond a reasonable doubt." Most individuals have a general understanding of what the phrase means to them, but studies of juror comprehension of legal terms indicate that jurors are sometimes confused by the various definitions. One study found that half of the jurors who were given an instruction on the presumption of innocence and the burden of proof erroneously believed a defendant was required to prove his innocence.

The requirement that the state meet a high burden of proof in a criminal trial has existed, in some form, since the twelfth century. Exactly how that burden of proof was described changed over time, however. Twelfth- and thirteenth-century writings reveal that courts then used the concept of "moral certainty." The phrase "moral certainty" has been equated with "reasonable doubt" or almost absolute certainty. By the seventeenth century, the standard of persuasion was often referred to as the "satisfied conscience test," meaning that jurors should vote to convict only if in their conscience they were sure the defendant was guilty. A judgment based on conscience was supposedly based on rational decision-making and intellect rather than the will or impulse. The most frequent charge used for the burden of proof during the eighteenth century was that a juror should acquit if "any doubt" existed. The "any doubt" test did not require that the doubt had to be reasonable; jurors could acquit a defendant if they had any doubt whatsoever.

By the early nineteenth century, American courts commonly required proof of guilt "beyond a reasonable doubt" in criminal trials. There were few attempts to define the term precisely. The most famous attempt at defining it came in *Commonwealth v. Webster,* 59 Mass. 295 (1850), in which a Massachusetts court used the phrases "moral certainty" and "abiding conviction" in its definition. Courts since have relied on these phrases and others to define the phrase.

The U.S. Supreme Court has approved a variety of definitions of reasonable doubt. In only one case, *Cage v. Louisiana,* 498 U.S. 39 (1990), has the Court held that a particular definition of reasonable doubt violated due process standards. Justice Sandra Day O'Connor acknowledged in *Victor v. Nebraska,* 511 U.S. 1 (1994), that "[a]lthough this standard is an ancient and honored aspect of our criminal justice system, it defies easy explication." She also noted that the Constitution did not require that any particular definition of reasonable doubt be used.

Most states have case law (appellate-level decisions that become "precedent," or binding on lower courts) that provides some definition of reasonable doubt.

Some states adhere to only one definition; other states accept multiple definitions. Among the commonly used definitions of reasonable doubt are "a doubt that would cause one to hesitate to act" (used in some form in twenty states); "a doubt based on reason" (seventeen states), and "an actual and substantial doubt" (ten states). Other less popular definitions include "a doubt that can be articulated" and "moral certainty."

Not every state requires that reasonable doubt be defined for the jury. Two states forbid any attempt at definition, and ten others suggest the better practice is not to define. Twelve states neither require nor oppose the giving of a definition. Several states permit the giving of a definition only in certain types of cases. Other states leave the decision to the trial court.

Proof beyond a reasonable doubt is a crucial component of the criminal trial. It imposes a difficult burden on the prosecution as a means of ensuring that no innocent person is convicted. Like many legal concepts, however, it is difficult to define precisely and is subject to misunderstanding.

Bifurcation

Bifurcation of issues in criminal trials, especially in capital cases (cases in which the death penalty may apply), has become an effective procedural device that states use to avoid violating the Eighth Amendment's prohibition against cruel and unusual punishments. Bifurcation divides a criminal trial into two parts: one in which the court or jury determines guilt, the other in which the court or jury sentences a convicted defendant. The rationale for a bifurcated trial is that many issues that are appropriate for determining whether to convict may not be so for sentencing a defendant. For example, although evidence of a defendant's prior convictions as well as potential future behavior may be appropriate for sentencing, courts have generally not permitted these factors to be presented as evidence of guilt. Thus, a proceeding that combines the two phases can deprive sentencing juries of critical information.

Since accurate sentencing information is an indispensable prerequisite to a reasoned determination of whether a defendant shall live or die, a process that does not furnish such information is deemed to be arbitrary and capricious and violative of defendants' rights under the Eighth Amendment's prohibition against cruel and unusual punishments, the U.S. Supreme Court held in *Furman v. Georgia,* 408 U.S. 238 (1972). In later implementing *Furman,* the Court held in *Gregg v. Georgia,* 428 U.S. 153 (1976), that the sentencing authority's need for adequate information can "best [be] met by a system that provides for a bifurcated proceeding at which the sentencing authority is apprised of the information relevant to the imposition of a sentence and provided with standards to guide its use of that information." Notwithstanding the intended effect of *Gregg* to curtail arbitrary and capricious death-penalty decisions, some empirical studies indicate that the effort has not been successful.

Bifurcated trials are not limited to criminal cases.

In fact, they are increasingly employed in civil trials, particularly those involving tort cases (noncriminal private injury or wrong not arising from a contract, such as negligence and product liability cases), which may have punitive damages issues in addition to the standard claims for compensatory damages (such as for lost income and pain and suffering). The rationale for use of bifurcated trials in civil trials is essentially the same as in criminal cases. In tort law, the purpose of punitive damages is to punish defendants who are found guilty of gross negligence. To punish such defendants properly and adequately, evidence of their financial condition is relevant, but such evidence if presented alongside evidence of liability may be highly prejudicial to defendants. Cases involving punitive damages often analyze the amount awarded in terms of its ratio to any compensatory damages awarded.

A case in point is *Pacific Mutual Life Insurance Co. v. Haslip,* 499 U.S. 1 (1991). Although the Court in *Haslip* refused to find Alabama's system of awarding punitive damages invalid, Justice Harry A. Blackmun, writing for the Court, opined that "unlimited jury discretion—or unlimited judicial discretion for that matter—in the fixing of punitive damages may invite extreme results that jar one's constitutional sensibilities." Justice Sandra Day O'Connor's dissent is noteworthy in view of the Court's position requiring bifurcation in capital cases:

> Punitive damages are a powerful weapon. Imposed wisely and with restraint, they have the potential to advance legitimate state interests. Imposed indiscriminately, however, they have a devastating potential for harm. Regrettably, common-law procedures for awarding punitive damages fall into the latter category. States routinely authorize civil juries to impose punitive damages without providing them any meaningful instructions on how to do so.

An example of how states sought to implement the procedural implications of Justice Blackmun's concern in *Haslip* and Justice O'Connor's critique is the Texas Supreme Court's decision in *Transportation Insurance Co. v. Moriel,* 879 S.W.2d 10 (1994). In that case, the Texas court opined that the "broad jury discretion that is the hallmark of the common law punitive damages system must be complemented by procedural safeguards that will ensure against excessive or otherwise inappropriate awards." The Texas court joined several other states requiring bifurcated trials in tort cases in which plaintiffs seek punitive damages. Similar procedurally to the bifurcated trial in capital cases, in the two-phase procedure,

> the jury first hears evidence relevant to liability for actual damages, the amount of actual damages, and liability for punitive damages (e.g., gross negligence), and then returns a verdict on these issues. If the jury answers the punitive damage liability question in the plaintiff's favor, the same jury is then presented evidence relevant only to the amount of punitive damages, and determines the proper amount of punitive damages, considering the totality of the evidence presented at both phases of the trial.

In *BMW of North America, Inc. v. Gore,* 517 U.S. 559 (1996), another Alabama case, the U.S. Supreme Court took a turn from procedural considerations to substantive concerns and held that a state court's punitive damages award—the case involved fraud—of $2 million to a customer who purchased a "new" car for $40,750.88 without knowing that the car had been partially repainted at a cost of $601.37 was grossly excessive and thus violated federal due process. In *Gore*, although Alabama procedural law required a bifurcated trial when plaintiffs sought punitive damages, the Court held as a matter of substantive law that the $2 million punitive damages award was grossly excessive and violated the defendant's right of due process. Thus, the Court has been content to accept bifurcated jury decisions in capital cases on procedural (Eighth Amendment) grounds, but it is equally willing to tackle corporate exposure to large punitive damages suits in state courts on substantive due process grounds.

In *State Farm Mutual Automobile Insurance Co. v. Campbell,* 538 U.S. 408 (2003), the Court extended the *Gore* holding in two major respects: First, *State Farm* elevated the amount of punitive damages that state courts may assess to the level of constitutional inquiry. Second, it changed the time-honored practice of using the defendant's wealth as one measure for determining the amount of punitive damages to assess a defendant found to have been grossly negligent. Al-

though the Court in *State Farm*, quoting *TXO Production Corp. v. Alliance Resources Corp.,* 509 U.S. 443 (1993), paid homage to previous Court holdings that have "consistently rejected the notion that the constitutional line [for the ratio of compensatory to punitive damages] is marked by a simple mathematical formula," and declaring that it would not "impose a bright-line ratio which a punitive damage award cannot exceed," it did just that. Writing for the majority in *State Farm*, Justice Anthony M. Kennedy stated: "Our jurisprudence and the principles it has now established demonstrate, however, that, in practice, few awards exceeding a single-digit ratio between punitive and compensatory damages, to a significant degree, will satisfy due process." Justice Kennedy's statement that "The wealth of a defendant cannot justify an otherwise unconstitutional punitive damages award" may herald the end of a need for bifurcated hearings in punitive damages cases.

Bigelow v. Virginia (1975)

Bigelow v. Virginia, 421 U.S. 809 (1975), is one in a series of significant U.S. Supreme Court rulings granting limited First Amendment protections to commercial speech. Such speech, which usually involves commercial advertising, has been granted varying degrees of First Amendment protection, ranging from none to somewhat less than 100 percent. In *Bigelow*, the Court, by a seven–two margin, reversed its prevailing tendency to limit protections of commercial speech, ruling that speech is not stripped of protections simply because it is a commercial advertisement. In this case, the language in the ad did not involve obscenity, libel, or incitement and therefore did not fall into other preexisting categories that are also denied First Amendment protections.

The facts in *Bigelow* involved the conviction of Jeffrey C. Bigelow (managing editor of *Virginia Weekly* in Charleston, Virginia) on the charge of publishing an advertisement from a New York–based referral service that provided women with access to abortions. At the time, abortion was illegal in Virginia, and advertising abortion services was a misdemeanor. The Virginia Supreme Court upheld the conviction because Bigelow was engaging in what it viewed as purely commercial speech that the state could regulate.

Earlier cases involving commercial speech aid in understanding and interpreting the significance of *Bigelow*. In *Valentine v. Chrestensen,* 316 U.S. 52 (1942), the Court made a clear distinction between the freedom to express political views and the freedom to do commercial advertising, offering government full regulatory authority over such commercial speech. Several years later, in *Pittsburgh Press Co. v. Pittsburgh Commission on Human Relations,* 413 U.S. 376 (1973), the Court ruled along the same lines; however in this five–four decision, the dissenting opinions made it clear that the *Chrestensen* doctrine was unraveling.

Finally, in *Bigelow,* the Court afforded certain protections to commercial speech. Because the advertisement pertained to a clear "public interest" and because it was completely factual, the Court extended such commercial speech First Amendment protection, though it was not clear on where the balance between public interest and purely commercial speech existed. Indeed, the conclusion in *Bigelow* did not stipulate that all truthful commercial speech was to be protected, but it moved the Court in that direction. The following year in *Virginia State Board of Pharmacy v. Virginia Citizens Consumer Council, Inc.,* 425 U.S. 748 (1976), the Court took the next step, ruling that truthful commercial speech falls under the protections of the First Amendment. Some limits on commercial speech remain, including time, place, and manner re-

strictions (applicable also to other forms of speech), illegal activities, and false advertising.

Bill of Attainder

A bill of attainder, which was used in England but is prohibited in the United States, is a legislative act that inflicts punishment on an individual or group without benefit of a judicial trial. If an act inflicted a milder degree of punishment than death, it was called "a bill of pains and penalties." When the punishment is for an offense that was not illegal when it was committed, the law is also ex post facto (literally, "made after the occurrence").

In medieval England, attainder resulted in death and forfeiture of all civil rights and property after condemnation for treason or a felony, and it applied to the heirs of the condemned as well ("attaint or corruption of blood"). During the Wars of the Roses (1455–1485), bills of attainder were used by rival factions to rid themselves of each other's leaders. In the reign of Charles I, an act of Parliament attaindered his chief adviser, the Earl of Strafford.

Article I, Section 9, and Article III, Section 3, of the U.S. Constitution prohibit such means of punishment by the federal government, and Article I, Section 10, outlaws use of attainder by the states.

During the Civil War, there were efforts to punish Confederate sympathizers. Missouri's constitution required oaths for certain professionals (teachers, ministers, lawyers) attesting that they had not in any manner aided the cause of the Confederacy. The U.S. Supreme Court in *Cummings v. Missouri,* 71 U.S. 277 (1867), struck down the requirement as constituting a bill of attainder. In *Ex parte Garland,* 71 U.S. 333 (1867), the Court voided the Test Oath Act of 1862, an act of Congress requiring a similar oath of attorneys. (In 1868, Augustus H. Garland, the subject of *Ex parte Garland,* became attorney general of the United States.)

During World War II, Congress passed a rider to an appropriations bill that forbade payment of salaries to three named federal government employees who had been charged with subversive activities by the House Un-American Activities Committee unless they were renominated by the president and confirmed by the Senate. The Court in *United States v. Lovett,* 328 U.S. 303 (1946), declared the measure unconstitutional as being a bill of attainder.

In *Communist Party v. Subversive Activities Control Board,* 367 U.S. 1 (1961), Justice Hugo L. Black in dissent contended that the Internal Security Act of 1950 was a "classical bill of attainder." His colleagues disagreed. In 1965, however, the Court struck down a portion of the Taft-Hartley Act of 1947 requiring non-Communist affidavits from union leaders, holding in *United States v. Brown,* 381 U.S. 437 (1965), that the requirement was a legislative punishment of members of the Communist Party without affording them a trial.

In *De Veau v. Braisted,* 363 U.S. 144 (1960), the Supreme Court held it was not a bill of attainder for a state to bar ex-convicts from holding office in a union; similarly, in *Flemming v. Nestor,* 363 U.S. 603 (1960), the Court held it was not considered punishment (and a bill of attainder) to deprive a deported alien of his Social Security check. In *Nixon v. Administrator of General Services,* 433 U.S. 425 (1977), the Court rejected former President Richard M. Nixon's claim that the statute placing control of his presidential papers and recordings in the hands of the General Services Administration amounted to a bill of attain-

der. The Court ruled that Congress's purpose was not punitive.

Bill of Rights

The first ten amendments to the U.S. Constitution are typically referred to as the Bill of Rights. Their addition to the Constitution in 1791 was a concession to the Antifederalists, who worried that the new American government would not respect individual rights unless specifically bound to do so, and who threatened to block ratification of the new Constitution unless a Bill of Rights was added.

The Federalists objected to a Bill of Rights, but not because they opposed the liberties at issue. Rather, they argued that because the Constitution created a government of delegated, enumerated powers, and no power had been conferred upon the government that would allow it to infringe upon citizens' rights, a Bill of Rights was unnecessary. Furthermore, they shared the concern voiced by Alexander Hamilton, who argued in *The Federalist No. 84* that a detailed Bill of Rights "would contain various exceptions to powers which are not granted; and, on this very account, would afford a colorable pretext to claim more than were granted."

It is true, as the Antifederalists claimed, that the body of the Constitution included structural elements designed to prevent government tyranny: Separation of powers, a bicameral (two-chamber) legislature, federalism, the right of habeas corpus (a writ, or petition, by an individual to require the government to specify a legal basis for confinement of that person or to release the individual), and a variety of other checks and balances were intended to prevent overreaching by the government. Nevertheless, the Antifederalists' arguments prevailed, and a Bill of Rights was subsequently appended to the Constitution. James Madison was the individual most responsible for formulating the provisions of the Bill of Rights and getting Congress to approve the document and send it to the states for ratification.

THE AMENDMENTS

The first eight amendments address substantive rights. The First Amendment, with admirable economy of language (forty-five words), protects freedom of speech, freedom of religion, freedom of the press, and the right of citizens to assemble and petition their government for redress of grievances. The Second Amendment protects a right to bear arms, but this right remains the subject of much academic and political debate: Some claim the language protects a personal right to own weapons, whereas others believe it was intended to protect the right of states to form militias. The Third Amendment, which forbids the government from quartering soldiers in citizens' homes, is cited today primarily as evidence of the founders' concern for a right to privacy and belief that "a man's home is his castle." The Fourth Amendment protects citizens against unreasonable searches and seizures and requires that warrants cannot be issued without "probable cause." These provisions have generated a substantial body of case law regarding what state behaviors should be considered unreasonable and what citizen behaviors are sufficient to meet the requirement of "probable cause."

The Fifth Amendment prescribes certain rights of the accused in criminal cases: indictment by grand jury, the prohibition against double jeopardy, and protection against self-incrimination. It also protects citizens' right to due process of law and concludes with the much-debated Takings Clause, which prohibits the taking of private property by government without payment of just compensation. The Sixth Amendment spells out the elements of a fair trial. Such trials must be speedy and public and have an impartial jury. Those accused of a crime must be informed of the

charges against them and must have the right to confront the witnesses against them, the right to assistance of counsel, and the right to subpoena witnesses on their own behalf. The Seventh Amendment extends the right of trial by jury to civil actions and makes the jury the sole trier of fact. That means that appeals from jury verdicts must allege an error of law and cannot be based on the argument that the jury got the facts wrong. The Eighth Amendment forbids cruel and unusual punishments, excessive fines, and excessive bail.

The Ninth and Tenth Amendments were intended as a response to those who, like Alexander Hamilton, had argued that an enumeration of citizens' rights in a Bill of Rights would eventually be interpreted as all-inclusive; that is, if a right were not explicitly listed, it could be argued that it was not protected. The Ninth Amendment addressed this concern directly: "The enumeration, in the Constitution, of certain rights, shall not be construed to deny or disparage others retained by the people." The Tenth Amendment spoke to powers: If a power was not explicitly delegated to the federal government, or was explicitly forbidden to the states, that power is deemed to be retained by the states or the people.

THE FOURTEENTH AMENDMENT

When the Bill of Rights was ratified, it applied only to the federal government. States remained free to act in ways that the national government could not, and although some state constitutions included safeguards for civil liberties, such protections were anything but uniform. The Thirteenth Amendment, passed in 1865 during the closing months of the Civil War, abolished slavery. Almost immediately thereafter, in 1866, the Fourteenth Amendment was drafted, containing the following language: "No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws."

Ohio congressman John Bingham, who authored the language, made clear that his intent was to apply the Bill of Rights to the states. Thaddeus Stevens, a senator from Pennsylvania who assisted with the amendment's passage, explained the intent of the language to his colleagues: "[T]he Constitution limits only the action of Congress, and is not a limitation on the States. This Amendment supplies that defect."

Despite such statements from those who drafted and subsequently ratified the Fourteenth Amendment in 1868, the U.S. Supreme Court did not immediately use it to apply the Bill of Rights to state governments. Instead, in the *Slaughterhouse Cases,* 83 U.S. 36 (1873), brought shortly after ratification of the amendment, the Court by a five–four vote held that the Privileges or Immunities Clause should be narrowly interpreted as ensuring only the rights of recently freed slaves. It was not until 1925, in *Gitlow*

v. New York, 268 U.S. 652 (1925), that the Court began the process known as "selective incorporation"—using the Fourteenth Amendment to apply to the states those elements of the first eight amendments determined to be "essential to ordered liberty" and "fundamental." The proper approach to incorporation was the subject of significant disagreement among Court justices, with Hugo L. Black (1886–1971) at one extreme arguing for total incorporation, and Felix Frankfurter (1882–1965) at the other arguing for a case-by-case fundamental-rights approach. The view that emerged fell somewhere between these extremes, and today most, but not all, of the guarantees of the Bill of Rights limit state and local governmental units as well as the federal government.

PHILOSOPHIC UNDERPINNINGS

The drafters of the new American Constitution and Bill of Rights were profoundly influenced by Enlightenment philosophers such as Charles-Louis de Secondat Montesquieu and Thomas Hobbes. These and other Enlightenment theorists held the then-radical notion that the primary role of government was to protect the liberties of its citizens. The Bill of Rights is a clear outgrowth of their belief that rights are *negative;* that is, liberty is the right to be free of state interference. Unlike the Universal Declaration of Human Rights, adopted in 1948 by the United Nations, or the constitutions of many other countries, the U.S. Constitution and Bill of Rights do not encompass positive entitlements to food, housing, medical care, or education. Instead, the Bill of Rights forbids specific government actions. Only government (federal, state, local) can violate the Bill of Rights, because the Bill of Rights constrains only government.

The great debates between the Federalists and Antifederalists were about the proper role of government and the nature of the rights that all citizens should enjoy. Americans have enlarged their notion of citizenship since the Constitutional Convention (women, former slaves, and nonlandowners are now included), but the original framework remains. The overarching issue raised by the Bill of Rights is the proper balance between state power and individual autonomy. Who decides what books may be read, what prayers may be said? Who decides who may marry and procreate? What are the conditions under which the state may deprive someone of liberty? How are the government's right to exercise authority and duty to enforce order balanced against citizens' rights to be secure in their person and free in their conscience? How would the country avoid the "tyranny of the majority" that the founders so feared?

The Bill of Rights is often referred to as "antimajoritarian" because it reflects the high value that its drafters accorded to *individual* liberties. Its provisions were intended as a libertarian brake on the power of the majority, just as the various structures of the Constitution were intended to privilege deliberation and thoughtful debate over hasty action taken in response to the passions of the moment.

Unlike statutes and ordinances, constitutions are statements of principles that must be applied over time to changing circumstances and new technologies. Courts today must decide how the First Amendment principle of free expression applies to motion pictures, radio and television, and the Internet. They must decide whether the Fourth Amendment allows use of technologies that enable police to search a residence without entering it. Because it is a timeless statement of liberal democratic values, the Bill of Rights continues to provide a workable framework within which these and similar questions can be answered.

Billboards

Billboards are outdoor signs that have been used to communicate political, social, and commercial messages throughout American history. Billboards can foster a healthy marketplace, not only of goods and services but also of ideas. Still, the positive aspects of increasing the dissemination of ideas must be weighed against legitimate public interests in safety and physical appearance.

BILLBOARD REGULATION UNDER THE POLICE POWER

Under the police power, reserved to the states under the Tenth Amendment to the Constitution, local governments may pass regulations protecting public health, safety, welfare, and morals. Using this power, local governments have sought to control or even ban billboards due to their adverse effects on public safety and aesthetics. In *Thomas Cusack Co. v. City of Chicago,* 242 U.S. 526 (1917), a local government adopted an ordinance prohibiting the placement of billboards on a residential block without the written consent of a majority of the homeowners. In upholding the ordinance, Justice John H. Clarke explained the justification for the police power with regard to the ill effects of billboards: "[F]ires had been started in the accumulation of combustible material which gathered about such billboards; . . . offensive and [un]sanitary accumulations are habitually found about them; and . . . they afford a convenient concealment and shield for immoral practices, and for loiterers and criminals."

Because this ordinance was not unreasonable and arbitrary, it was a permissible exercise of the police power. Michael Litka might have had Justice Clarke's reasoning in *Cusack* in mind in a 1969 item he wrote discussing aesthetics as an objective of legislation: "The future of any legislation involving the regulation of outdoor advertising depends to a large extent upon the court's view of aesthetics. Most of the health, safety, and morals objections to billboards can be overcome in their manner of construction. They can be elevated so as not to collect rubbish or to provide a lurking place for people with evil intent, fireproof structures can be provided, and traffic distractions can be minimized."

This combination of concern for public safety and aesthetic quality had led Congress to enact, four years earlier, the Highway Beautification Act of 1965. It provides that "the erection and maintenance of outdoor advertising signs, displays, and devices in areas adjacent to the Interstate [Highway] System and the primary system should be controlled in order to protect the public investment in such highways, to promote the safety and recreational value of public travel, and to preserve natural beauty." The legislation sought to achieve these goals by providing financial incentives to any state that effectively regulated billboards along its roadways, although lack of funding has largely frustrated these measures. Yet the act stands as a testament to the continuing concern over the aesthetic harm caused by distasteful and misplaced billboards, even as it reemphasized traditional goals for exercise of the police power.

BILLBOARDS AS PROTECTED SPEECH: *METROMEDIA* AND THE MODERN DEBATE

Local and state laws regulating billboards were generally considered to be a valid exercise of the police power until the early 1980s, when the U.S. Supreme Court found that the free speech concerns arising from billboard regulations merited First Amendment analysis. In the case that introduced free speech concerns into the billboard debate, *Metromedia v. San Diego,* 453 U.S. 490 (1981), the Court was unable to agree on a controlling majority opinion, although seven justices ultimately held that a city's "interest in avoiding visual clutter" was sufficient to uphold a ban on commercial billboards. They arrived at this conclusion under different theories on the role of billboards and what the First Amendment required in assessing outdoor signage regulations. A San Diego ordinance forbade off-site commercial and all noncommercial billboard advertising unless the noncommercial advertising fell under one of twelve specific exceptions; on-site commercial advertising was per-

missible. The ordinance sought "to eliminate hazards to pedestrians and motorists brought about by distracting sign displays . . . [and] to preserve and improve the appearance of the City."

The plurality opinion, penned by Justice Byron R. White, differentiated between commercial and noncommercial signage. Although both implicated the free speech guarantees of the First Amendment, the Court would subject prohibitions on noncommercial speech to a stricter constitutional test. The part of the statute that restricted commercial speech to on-site signage was valid, but the noncommercial prohibitions were unconstitutional because they limited protected speech. The plurality argued that by providing specific exceptions for noncommercial speech, San Diego had gone too far in defining the public discourse. Justice William J. Brennan Jr. concurred, arguing that the portion of the statute pertaining to noncommercial speech equated to an outright ban. He believed, though, that it would be permissible if the city could show that it had a substantial governmental interest in enacting such regulation, which it had.

Finally, Chief Justice Warren E. Burger dissented, arguing that the noncommercial regulation was permissible. He called the plurality's action "bizarre" because precedent (on-point cases previously decided by the Court) dictated that laws infringing on protected speech would be valid as long as they "served a significant government interest and . . . [left] ample alternative channels for communication," both of which, in his estimation, San Diego's ordinance accomplished. His conclusion drew on the aesthetic and psychological effects of billboards: "[E]very large billboard adversely affects the environment, for each destroys a unique perspective on the landscape and adds to the visual pollution of the city. Pollution is not limited to the air we breathe and the water we drink; it can equally offend the eye and the ear."

Billboards raise numerous concerns, since they represent a form of protected speech, although there are valid governmental reasons for their control. These two interests (both of which find protection under the Constitution, speech by the First Amendment and control under the police power) are at times opposed, as was the case in *Metromedia*. Courts must weigh these important interests and strike a balance that best follows the Constitution and Supreme Court precedents, regulating the placement and content of billboards for the public good but minimally treading on protected speech. Billboard regulations can range from simple physical standards to total bans of certain forms, provided the government is protecting a substantial interest, including aesthetic quality, and the controls outweigh the infringement of free speech.

Birth Control and Contraception

Government regulation of birth control has created a tension between the civil liberties of the individual and the power of the state to regulate quality of medical services. The ability of American women to control when and if to reproduce has been the key to their political and economic equality. Without this ability, women are dependent on the financial support of men and the political recognition of their offspring. In the United States, although contraceptive technology has long been available, albeit at variable reliability rates, the right to contraception was not recognized as a constitutional right until 1965.

Congress passed the Act for the Suppression of

Trade in, and Circulation of, Obscene Literature and Articles of Immoral Use in 1873. Known popularly as the Comstock Act, this law made it a criminal offense to send birth control information or contraceptives through the U.S. mail or to engage in the selling of contraceptives through interstate commerce. Although many states also passed their own laws restricting sale or use of birth control devices, courts frequently limited application of these statutes.

Against this legal background, the American birth control movement was born. Women such as Emma Goldman and Margaret Sanger worked to pass state and federal laws that would make birth control legal and protect the civil liberties of citizens. By the 1930s, contraception was frequently used by the middle classes and was generally legal, but its purpose was to prevent the birth of children that families could not afford. Fertility rates declined rapidly, reaching an all-time low in 1932 that would not be seen again until the 1960s.

FORCED AND VOLUNTARY STERILIZATION

The U.S. Supreme Court initially examined reproductive rights in *Buck v. Bell,* 274 U.S. 200 (1927), in which it upheld the constitutionality of the forced sterilization of a woman who had been committed to a mental hospital for "feeblemindedness." This decision allowed states to continue passing and enforcing laws that authorized the nonconsensual sterilization of those deemed mentally impaired, habitually criminal, or poor. Although the Supreme Court has never overturned *Buck v. Bell,* it narrowed the holding in *Skinner v. Oklahoma,* 316 U.S. 535 (1942), when it found the forced sterilization of a petty criminal unconstitutional on the basis of equal protection. The Court found that the deprivation of the right to have children, "one of the basic civil rights of man," was too immense to be justified by minor crimes.

The ethical issues attending "eugenic sterilization"—the use of involuntary sterilization to eliminate mental illness or retardation, poverty, and criminal tendencies in the population—have been debated since the turn of the twentieth century. Primarily as a result of the development of safer, more effective, reversible sterilization procedures, there were efforts in the 1960s and 1970s to legalize voluntary sterilization (such as vasectomies and tubal ligations). All fifty states repealed their bans on contraceptive sterilization by the early 1970s; federal court cases through the next two decades invalidated the majority of stringent limitations on voluntary sterilization. Today, public hospitals cannot refuse to perform sterilization, but in most states hospitals may create their own policies regarding spousal consent, waiting periods, and physician consultations. As sterilization becomes increasingly reversible, these governmental limitations on personal choice are becoming fewer.

Margaret Sanger, president of the National Committee on Federal Legislation for Birth Control. Sanger was arrested in 1916 for opening the nation's first birth control clinic in Brooklyn, New York. *(Library of Congress)*

PRIVACY RIGHTS AND CONTRACEPTION

To many people, the right to privacy has been connected to the issue of abortion; this right, recognized in *Roe v. Wade,* 410 U.S. 113 (1973), is based upon earlier decisions related to contraception and sterilization. In both abortion and contraception, the courts

are asked to balance the right of the individual's access to safe and effective fertility control (or the individual's right not to have children) against the power of the state to limit the individual's access and right to such treatment. Whereas women want a reliable contraceptive that is convenient and affordable, the state has multiple goals, including limiting extramarital sexual involvement, protecting prenatal life, increasing reproduction, protecting the health of its citizens, and preserving the financial interests of pharmaceutical companies and medical professionals. Both contraception and abortion have generated much legislative activity and litigation with the goal of balancing these interests.

In *Tileston v. Ullman,* 318 U.S. 44 (1943), and in *Poe v. Ullman,* 367 U.S. 497 (1961), the Supreme Court rejected challenges to state laws banning contraceptives on the basis that the parties lacked standing or a case did not present a "ripe" issue (one suitable for adjudication). In 1965, however, the Court commenced consideration of the constitutional protections granted to individuals in the area of reproductive rights. In the seminal case of *Griswold v. Connecticut,* 381 U.S. 479 (1965), the Court overturned a Connecticut law that banned the use of contraceptives by married couples, finding that there was a right of privacy inherent within the penumbras, or shadows, of a number of provisions within the Bill of Rights and the Fourteenth Amendment to the Constitution. Privacy extends to the marital relationship, and governmental involvement in forbidding contraception would have a "maximum destructive impact" on that relationship. In the 1972 case of *Eisenstadt v. Baird,* 405 U.S. 438 (1972), a Massachusetts statute outlawing the prescription or distribution of contraceptives to nonmarried persons was also found unconstitutional. The Court argued that the right to make reproductive decisions was an individual right, not limited to the marital state. Justice William J. Brennan Jr. found the Massachusetts statute unconstitutional because "the statute's distinction between married and unmarried people was an unconstitutional denial of equal protection of the laws." The right of privacy is rooted in the individual, not inherent in the marital state (as in *Griswold*). Massachusetts had no legitimate state interest to defend.

The Supreme Court extended the right of privacy to include abortions in its seminal decision in *Roe v. Wade,* 410 U.S. 113 (1973). In effect, this decision allowed for widespread access to abortion, especially during the first two trimesters of pregnancy, prior to fetal "viability" outside the womb. Subsequent Court decisions have approved waiting periods and other measures designed to encourage considered reflection about this choice, but have not eliminated it.

In 1977 the Court further extended this right to privacy when it struck down a New York state ban on the distribution of contraceptives to minors under the age of sixteen. In this case, *Carey v. Population Services International*, 431 U.S. 678 (1977), the Court also found unconstitutional portions of the New York law that banned the advertisement of contraceptives and prohibited anyone other than a doctor from distributing over-the-counter birth control.

Another case involving contraception and the First Amendment soon followed. In *Bolger v. Youngs Drug Products Corp.,* 463 U.S. 60 (1983), the Court overturned a federal law against unsolicited mail advertisements for contraceptives. Although the mailings in question were commercial, they also included public health information on venereal disease and family planning, opening up arguments for even higher levels of constitutional protection. Although the Court opted to rule based on the qualified protections afforded commercial speech, a majority still found that the mailings warranted First Amendment protection.

NEW TECHNOLOGY AND NEW LIBERTY CONCERNS

When the birth control pill was approved by the Food and Drug Administration (FDA) in 1960, it became clear that a reliable, convenient form of birth control not only would be used by women but also could be a very successful business investment. Since that time, many forms of birth control have been tested and approved, and with these have come new conflicts for the courts to address. As new technologies are tested and implemented, the potential health complications for women using these contraceptives become more complex. Early concerns about the side effects of the birth control pill, a lack of governmental oversight, and the personal rights of women resulted in televised

congressional hearings and mobilized young women to take a more vocal role in their own health care.

In the 1960s, a birth control device called the IUD, or intrauterine device, became popular. The small device fits inside the uterus of a woman and prevents pregnancy. The Dalkon Shield was introduced in the United States in 1971, and 2.2 million women were using it by 1974. However, side effects quickly manifested: More than 10,000 users had pelvic inflammatory disease (PID), resulting in reproductive problems or sterility for many of these women. The Dalkon device had a pregnancy rate of 5 percent, and many of these women miscarried or had children with birth defects. Lawsuits against the manufacturer of the Dalkon Shield lasted more than a decade and resulted in massive legal settlements. In the late 1990s, similar lawsuits were filed about the Norplant product, a contraceptive device that is implanted in the upper arm under the skin and releases hormones into the woman's body to prevent pregnancy, and the Today sponge. The Norplant and Today products caused less dramatic harm than the Dalkon Shield, but this mass litigation has made pharmaceutical companies less willing to test and provide additional birth control options.

New technology has also resulted in new conflicts involving governmental interests, property interests, and the personal liberty interests of individuals. The invention of Viagra, a medication for impotent men, has raised a different series of lawsuits against insurance companies that provided coverage for men's prescription Viagra but not for women's prescription contraception. As these cases have worked their way through lower courts, the central question has been whether the two prescriptions are comparable or if one is a "medical necessity" and the other is merely "life-enhancing." The courts have come to contradictory conclusions. Norplant technology allowed several states to consider requiring individuals on welfare, with multiple children, to accept the insertion of this device as a prerequisite to receiving government aid. During the late 1980s, several local judges received national press for requiring mothers convicted of minor crimes to choose between serving jail time and having Norplant insertions. This tension continues as many criminal justice and public health professionals argue that this technology is ideal for poor women because it is a long-term, yet reversible form of birth control. Women's advocates, however, claim that this forced decision has a direct coercive effect on poor women and women of color, limits their reproductive choices, and violates the personal right to reproduce.

Finally, as technology evolves, the line between abortion and contraception becomes narrower. The "morning-after pill" is designed to prevent contraception if it is taken within twenty-four hours after unprotected sex; initially challenged by antiabortion activists, by 2003 this medication was legal and widely available in the United States, although only by prescription. Efforts during 2002 and 2003 to make the morning-after pill available over the counter were halted by the FDA as a result of pressure by antiabortion groups.

The RU-486 medication, on the other hand, is still banned by many states. This synthetic hormone, approved for use in Europe in 1988, was finally approved by the U.S. Food and Drug Administration in 1997 but was not available on the market until 1999. This pill causes shedding of the lining of the uterus, inducing menstruation and in pregnant women resulting in abortion. Because this drug is taken only after pregnancy has occurred, it has faced legal barriers that have not accompanied use of the morning-after pill.

In sum, the personal liberty to control reproduction is closely tied to technology. The combination promises to continue generating controversies that ultimately will be resolved by legislatures or litigation.

Bivens and Section 1983 Actions

Violation of individual rights by government officials was a concern for the framers of the Constitution, but they did not include in it any direct tool permitting citizens to sue the federal or state governments for damages. Creation of this right was left to Congress and the courts. In 1871, Congress passed a law allowing individuals to sue state governments in federal courts; such lawsuits became known as "section 1983 actions" under the *United States Code.* The right to sue the federal government for damages was created by the U.S. Supreme Court in *Bivens v. Six Unknown Federal Narcotics Agents,* 403 U.S. 388 (1971).

After the end of the Civil War, the federal government embarked on what became known as Reconstruction (1865–1877), reconstructing disaffected southern governments that were being granted renewed congressional representation. Part of Reconstruction was congressional passage of the Fourteenth Amendment, which prohibited states from denying their citizens due process of the laws and gave Congress the power to enforce the amendment.

Congress enforced the amendment using the Civil Rights Act of 1871, better known as the Ku Klux Klan Act. Section 1983 of the law prohibited state officials from denying citizens of the state due process of the law. Officials who acted in an unconstitutional manner could be charged in federal court and assessed monetary damages. Because the law was passed after the Civil War and during the reaction against states' rights, section 1983 did not apply to federal officials. Not until a century later did the Supreme Court act to place federal officials under the same constraints as state officials.

In *Bivens,* the Court expanded protections for individuals whose constitutional rights were violated by federal employees. The petitioner in *Bivens* sued six FBI agents who arrested him without a warrant. When the arrest was thrown out of court, he sought damages from the agents. The main obstacle for him was the lack of any federal law allowing him to sue the federal government.

The U.S. Supreme Court ruled for the petitioner. Speaking for six members, Justice William J. Brennan Jr. found that citizens could sue for damages when a federal officer violated their Fourth Amendment rights. Citing a list of cases in which the Court had allowed damage suits against government officials, Brennan extended that right to sue to include Fourth Amendment violations.

The *Bivens* decision opened an opportunity for defendants and convicted prisoners to sue prosecutors, police officers, and prison officials, charging them with violating their due process rights. These suits included complaints about everything from food to living conditions to the method of determining good-behavior credits for early release. Federal judges were soon faced with a backlog of cases that forced them to make minutiae-driven decisions about the operations of prisons and the conduct of prosecutors. William H. Rehnquist's appointment as chief justice in 1986 marked a turn in the Court's treatment of *Bivens.* The case thereafter would no longer be an avenue for creating new rights.

LIMITING *BIVENS* AND 1983

The Court under Chief Justice Rehnquist treated section 1983 actions in much the same way as it did *Bivens* claims. Section 1983 became the main tool for convicted state prisoners to sue prison officials seeking damages either for improper treatment or wrongful imprisonment. In *Monroe v. Pape,* 365 U.S. 167 (1961), the Court had allowed citizens to hold public officials personally liable for violating the Constitution. The *Monroe* decision was followed by a swelling number of claims by prisoners under section 1983. By the 1980s, however, the new Court began constructing obstacles to those suits.

One such obstacle, used in both section 1983 and *Bivens* claims, was the concept of qualified immunity. Under qualified immunity, government officials cannot be sued for violating constitutional rights if they

were not aware that their actions constituted such a violation. In a case involving an illegal search, *Anderson v. Creighton,* 483 U.S. 635 (1987), the Court defined qualified immunity as extending protection from suit to an officer who believed his actions were lawful based on the law at that time. This definition was expanded during the 1990s as qualified immunity became a frequent defense for officials who claimed that although their actions may have been unconstitutional, the officials had acted with the belief that their actions were legal at the time.

In *Wilson v. Layne,* 526 U.S. 603 (1999), the Court considered the constitutionality of allowing members of the media to ride along with police and take pictures during arrests. Federal marshals (sued under a *Bivens* claim) and local police (sued under section 1983) searched Charles Wilson's house. During the search, a local newspaper photographer who had ridden with officers to the scene snapped pictures of the home's interior. Wilson sued, claiming that the presence of the photographer violated his Fourth Amendment rights against unreasonable searches.

The Court unanimously agreed that the ride-alongs violated the Fourth Amendment, but the justices split over whether the federal marshals and local police had qualified immunity from being sued. Five justices ruled that the police could not have known that including the media was a violation of the Fourth Amendment. Because the officers had believed the ride-alongs were permissible, they had not knowingly violated Wilson's rights and could not be sued for damages for that violation.

Yet the Court has not accepted every argument for qualified immunity. In *Hope v. Pelzer,* 536 U.S. 730 (2002), the Court considered the constitutionality of the "hitching post" that the state of Alabama used as a punishment for state prisoners. Larry Hope was such a prisoner, and as a punishment for a rules infraction, he was handcuffed to a hitching post, forced to stand in a sun-exposed position, and given little water and no access to bathroom facilities. He sued under section 1983, claiming the prison guards, as state officials, had violated the Eighth Amendment's ban on cruel and unusual punishment. The prison guards claimed qualified immunity, stating that they were not aware the hitching post could be considered unconstitutional punishment.

The Court denied the claim of immunity and allowed Hope to sue under section 1983. In his opinion, Justice John Paul Stevens stated that the hitching post clearly violated the prohibition against cruel and unusual punishment and that any reasonable state officer would have known not to impose such a punishment on anyone. But *Hope* represented one of the few times the Court refused a claim of qualified immunity. Instead, the Court has focused mainly on reining in abusive lawsuits that have clogged the federal courts.

To limit the number of lawsuits, the Court has refused to extend *Bivens* to new areas. One recent case involved private prisons. These prisons, run by corporations, took in nonviolent offenders when public prisons became overcrowded. In *Correctional Services v. Malesko,* 534 U.S. 61 (2001), the Court considered whether officials in a private prison could be sued under *Bivens.*

John Malesko, a prisoner in a privately run facility, was forced to climb six flights of stairs despite a heart condition. After suffering a heart attack, he sued the company that ran the prison, claiming his rights had been violated. Speaking for a majority of five, Chief Justice Rehnquist rejected Malesko's claim, noting that *Bivens* was intended to prevent unconstitutional actions by federal officials. Suing corporations would have little effect on these officials but would punish the business for the actions of their employees. With its *Malesko* decision, the Court stated plainly that it was unlikely to expand on the number of issues prisoners could use to sue under *Bivens*.

The Court has also limited section 1983 suits using the due process requirement of the law. Under section 1983, state officials can be sued only if they violate rights while denying due process to a citizen. In *Lujan v. G&G Sprinklers,* 532 U.S. 189 (2001), the Court considered whether a company could use section 1983 to sue a state official who refused to pay a bill owed to the company. In *Lujan,* the state refused to pay G&G Sprinklers because the company did not abide by requirements for hiring minorities. G&G sued, claiming its property had been taken by the state without the benefit of due process or a hearing.

In a unanimous decision, the Court ruled that the state had not denied the company due process. Under state law, G&G could have sued the state for breach

of contract and received the payment due it. Because there was an opportunity at the state level for G&G to recover its property, it could not sue in federal court under section 1983.

Lujan represents a major limitation on the right to bring section 1983 actions. Because most states have laws governing breach of contract or allow people to sue in tort law for injuries caused by the state, there will be few opportunities for citizens to claim their rights have been denied under section 1983. In most cases involving disputes between citizens and state governments, those disputes will be settled in state court.

Since the *Bivens* decision in 1971, both it and section 1983 have been limited in their scope. The Supreme Court has created several exceptions to when individuals can sue state officials in federal courts. By doing this, they have heightened the importance of state courts and lessened the workload of federal courts.

Black, Hugo L. (1886–1971)

Hugo L. Black served as an associate justice of the U.S. Supreme Court from 1937 to 1971. He became known as one of the greatest "liberals" to serve on the Court during the twentieth century. Black supported civil liberties and political equality in numerous opinions over thirty-four years. He endorsed a "literalist" interpretation of the Constitution in matters regarding the Bill of Rights. Despite many contractions and reversals during his tenure on the Court, Black remains an important figure in American legal history.

Black was born in Clay County, Alabama, on February 22, 1886. Although he never finished an undergraduate degree, he received a law degree in 1906. Black became a well-known plaintiff's attorney in Alabama and became a police court judge in 1911. He was elected prosecutor for Birmingham, Alabama, and fought for penal reform throughout his career. Black's career as a lawyer and prosecutor would have an influence on his career as a Supreme Court justice. During the early 1920s, he briefly joined the Ku Klux Klan.

In 1925 he was elected to the U.S. Senate, where he served until 1937. During his time in the Senate, Black supported the New Deal legislation of President Franklin D. Roosevelt and conducted congressional investigations of the utilities industry and lobbyists. Throughout his time as a senator, Black generally backed the prosegregation policies of other southern politicians. He attacked Supreme Court decisions of the early 1930s that struck down New Deal legislation under the guise of substantive due process.

In 1937, President Roosevelt nominated Black to the Supreme Court. He won Senate confirmation even after the public disclosure of his past Klan membership. Black immediately began to work on reversing the Court's anti–New Deal rulings and voting to support the constitutionality of administration legislation. By the early 1940s, Black began to develop his reputation as a civil libertarian and free speech advocate. After voting with the majority to uphold suppression of unpopular views in *Chaplinsky v. New Hampshire,* 315 U.S. 568 (1942), and *Minersville School District v. Gobitis,* 310 U.S. 586 (1940), Black switched course to become the Court's leading advocate of absolute protection for First Amendment freedoms. In *Bridges v. California,* 314 U.S. 252 (1941), he laid out a strong free speech argument in the majority opinion.

Black's change of heart in the mid-1940s and his

Hugo L. Black served as associate justice of the Supreme Court from 1937 to 1971. During that time, he supported civil liberties and political equality in numerous opinions. *(Library of Congress)*

defense of the doctrine known as "total incorporation"—that all the provisions of the Bill of Rights should apply equally to the state and national governments, a position he explained in his dissent in *Adamson v. California,* 332 U.S. 46 (1947)—led to intellectual and personal feuds with some of his Supreme Court brethren, especially Justices Felix Frankfurter and Robert H. Jackson. During the 1941–1953 period of conservative, progovernment Court decisions, Black was usually in dissent, often accompanied by Justices William O. Douglas, Frank Murphy, or Wiley B. Rutledge. In 1952 he was able to express himself when he wrote the majority opinion in *Youngstown Sheet and Tube Co. v. Sawyer,* 343 U.S. 579 (1952), overturning President Harry S Truman's seizure of the private steel industry during a time of war. According to Black, "The Founders of this Nation entrusted the lawmaking power to the Congress alone in both good and bad times."

Black was instrumental in the civil rights revolution, supporting all of the major civil rights cases throughout the 1950s and 1960s. As a southerner, he had a particular interest in civil rights and supported the legal aspirations of African Americans. By the late 1960s, Black had lost patience with southern obstructionism and demanded that the Court's desegregation rulings in *Brown v. Board of Education,* 347 U.S. 483 (1954), and subsequent cases be enforced.

Black applied his staunch libertarian doctrines to all aspects of the Constitution. In 1944 he authored a majority opinion in *Korematsu v. United States,* 323 U.S. 214 (1944), that upheld the government's policy of interning Japanese Americans during World War II. Throughout his career, Black was never passionate about the Fourth Amendment and seldom mentioned it in his writings. By the 1960s, Black was frequently critical of Court opinions that he considered to be lenient on crime, yet he wrote the opinion in *Gideon v. Wainwright,* 372 U.S. 335 (1963), the 1963 decision that applied the right to counsel to the states and for all crimes having potential for imprisonment.

During the years of Chief Justice Earl Warren, Black authored majority opinions supporting the rights of minorities, freedom of speech, and the rights of the accused. He was particularly forceful in arguing for an "absolutist" position for First Amendment rights. Dissenting in *Roth v. United States,* 354 U.S. 476 (1957), he stated, "But I believe this nation's security and tranquility can best be served by giving the First Amendment the same broad construction that all Bill of Rights guarantees deserve." In one of his last cases, Black authored the per curiam (by the Court) opinion in the *Pentagon Papers* case, *New York Times Co. v. United States,* 403 U.S. 713 (1971), involving the publication of government documents in the *New York Times.*

During his final years of tenure on the Court, some observers argued that Black moved toward a more conservative position. Black's absolutist position on the First Amendment never wavered, but he occasionally was very limited in what he considered "speech." Black dissented from protecting the vulgar expression on Paul Cohen's jacket in *Cohen v. California,* 403 U.S. 15 (1971). He disagreed with the holding in *Griswold v. Connecticut,* 381 U.S. 479 (1965), which overturned Connecticut's ban on sale of contracep-

tives to married couples, stating in his dissent, "[The] Court talks about a constitutional 'right of privacy' as though there is some constitutional [provision] forbidding any law ever to be passed which might abridge the 'privacy' of individuals. But there is not." Black was relentless during this period as an opponent of the idea that the Constitution protected a general right to privacy.

Black entered his final year on the Supreme Court in declining health. He resigned on September 17, 1971, and died eight days later. Black ranks as one of the most important justices of the twentieth century, and his support for First Amendment rights has been heralded by scholars as the most devoted and articulate of any Supreme Court justice.

Blacklisting

Blacklisting consists of placing an individual's name on a circulated list of persons who are disapproved of or who are to be punished for or prevented from associating with or gaining economic advantage from a particular favored group or gaining access to the privileges bestowed upon individuals holding a perceived favored status. Synonyms for *blacklist* include *ban, ostracize, blackball, exclude, reject, boycott, debar, banish, shun,* and *shut out*. Blacklisting is generally discriminatory and illegal when used to single out a particular individual on the basis of race, religion, gender, national origin, or beliefs.

Some exclusionary practices are legal and permissible, such as when groups seek to affiliate and exclude others on the basis of association with a declared public cause, on the basis of espousing certain religious beliefs, or on the basis of a physical attribute that might otherwise be discriminatory. For example, a private divinity school may insist upon commitment to the teachings and precepts of a specific religion. Gender may create a valid basis for private inclusion versus exclusion. The Ladies Professional Golf Association (LPGA) is open to professional women golfers only, and the Women's Tennis Association (WTA) specifically excludes male tennis athletes. Both organizations sponsor professional competition tours and events open to qualifying women athletes. Even in such cases, however, the excluded group may seek legal action to force inclusion on the basis of constitutional equal protection, such as when public money or state funding supports the group. For example, in *United States v. Virginia,* 518 U.S. 515 (1996), women who were denied entry to the Virginia Military Institute successfully challenged its admissions policy on grounds that they had been denied equal protection of the law, which is guaranteed by the Fourteenth Amendment to the Constitution.

HISTORICAL INCIDENTS OF BLACKLISTING

In 1947 the House Un-American Activities Committee (HUAC) began its investigation of suspected Communists in the film industry. The committee, which included Rep. Richard M. Nixon (R-CA), later to become U.S. president, called various celebrities to testify in Washington, D.C. Senator Joseph McCarthy of Wisconsin led another investigative committee, and the period was dubbed the "McCarthy era." The "witch hunt" against Communists in America in the late 1940s and 1950s wielded two weapons, namely imprisonment and the economic boycott. Ultimately, a list was circulated naming alleged pro-Communist screenwriters and actors. Robert Taylor, Robert Montgomery, Gary Cooper, and future U.S. president Ronald Reagan were among those called to testify. The "Hollywood Ten"—seven screenwriters, two directors, and one producer—challenged the committee's right to probe their personal beliefs as a violation of the Constitution. Despite invoking their Fifth Amendment right against self-incrimination and their First Amendment right of freedom of association, their protest led to one-year federal prison terms.

In 1951 over 100 people were called to testify. A year later more than 300 people were unable to work in the motion picture industry because their names were placed on the blacklist. They were accused of all forms of subversive activities, including conspiracy to build new weapons with Russia. Many blacklisted writers used pseudonyms. Hollywood producers refused to create any films that questioned or highlighted the teachings of communism and instead marketed a bevy of anti-Communist films in order to curry favor with the political leaders of the U.S. government.

The congressional inquiries into Communist affiliations expanded to include academic colleges and educational institutions. In response to government inquiry, the dean of Columbia University in New York City drafted and issued special written policy guidelines for use on campus, emphasizing the importance of academic freedom under the First Amendment to the Constitution.

Today, U.S. government intelligence officials maintain lists of groups and individuals believed to be potential dangerous criminals, ranging from white Aryan neo-Nazi fascist groups to al-Qaeda Muslim terrorist groups. In spite of this intense government scrutiny, the courts have granted neo-Nazi groups permission to exercise First Amendment rights to demonstrate in support of their beliefs and teachings. In October 2002, United Press International reported that U.S. officials were contemplating the dissemination of an expanded blacklist of "countries of particular concern" that restrict religious freedoms.

DEFINING ILLEGAL CONDUCT

Intentional blacklisting violates federal and state statutes in numerous areas of the law. In the labor law field, a union negotiating under a collective bargaining agreement may not use secondary boycotts in order to put undue pressure on the employer to succumb to the union's demands. A "secondary boycott" is one in which a union refuses to deal with a secondary employer with whom the union has no dispute, for the purpose of forcing that employer to stop doing business with the primary employer, with whom the union has a labor dispute.

Many states have enacted laws to encourage employees to report employer wrongdoing such as fraud. The federal Whistleblower Protection Act of 1989 shields federal employees who report employer illegal activity. Under the federal False Claims Reform Act of 1986, employees may be entitled to monetary awards for undertaking the risk of blacklisting, retaliatory employment termination, and other loss of compensation and benefits. Federal and state statutes empower officials to prosecute such employment-related blacklisting and retaliatory conduct.

Horizontal restraints in antitrust law are any agreements that in some way restrain competition between rival firms competing in the same market. The refusal to deal with a particular person or firm by a group of competitors is prohibited by the Sherman Antitrust Act, first adopted in 1890. This conduct is called a "group boycott."

In *Summit Health, Ltd. v. Pinhas,* 500 U.S. 322 (1991), an ophthalmologist claimed that he was blacklisted for refusing to employ an unnecessarily costly surgical procedure by a group of conspiring Los Angeles medical service departments. His hospital privileges were terminated, and a false peer-review report was compiled in contemplation of his civil action under section one of the Sherman Act. The evidence demonstrated that the doctor's rate of speed for performing eye surgery was six times that of his competitors, which greatly benefited the patients whose risk of incurring damaged eye tissue was greatly reduced. The Supreme Court ruled that he was entitled to relief under the Sherman Act.

ILLUSTRATIONS OF PERMISSIBLE BOYCOTTS

Some boycotts orchestrated by consumer groups or public interest groups may be permissible under the First Amendment right to freedom of expression. For example, consumer groups may publicly organize consumers to boycott or refrain from buying goods from companies doing business with political regimes that promote racism, such as the case of South Africa before it banned apartheid as a formal governmental policy. Other public interest groups have boycotted companies and their products based upon poor do-

mestic compliance with regulations passed by the Occupational Safety and Health Administration (OSHA); the mistreatment of laboratory animals in experimental studies; and abuse and exploitation of labor in poor countries, such as in Southeast Asia.

The Department of Defense has adopted a federal acquisition regulation that clarifies the criteria for blacklisting of contractors and companies that have an unsatisfactory record of integrity and business ethics. As a means of government regulation, blacklisting prohibits the award of federal procurement contracts to companies that are listed for unsatisfactory compliance with labor, antitrust, environmental, tax, and consumer protection laws.

A lawsuit by Michael Italie against Goodwill Industries of South Florida in 2001 further clarifies the debate over proper versus improper blacklisting. Goodwill terminated Italie's employment because of his affiliation with the Socialist Workers Party (SWP) and his communistic rejection of the principles, foundations, and market mechanisms associated with capitalism. Italie ran for mayor in South Florida as the SWP candidate and declared his support for the Cuban Revolution. His leftist supporters argued that Goodwill's decision to discharge him from employment violated his civil liberties as guaranteed under the First Amendment. A court disagreed, holding that in a free democratic society even corporate employers are tax-paying citizens of the state and have a legitimate protected right to refuse to employ those with whom they disagree politically.

Blackmun, Harry A. (1908–1999)

Born in Nashville, Illinois, in 1908, Harry A. Blackmun was raised in Saint Paul, Minnesota, and subsequently earned his bachelor's and law degrees from Harvard University. He returned to Minnesota where he engaged in private practice and served as resident counsel at the Mayo Clinic before President Dwight D. Eisenhower appointed him to the U.S. Court of Appeals for the Eighth Circuit in 1959. President Richard M. Nixon nominated Blackmun to the U.S. Supreme Court in 1980, and he served on the high court until 1995.

Blackmun is best known for writing the Court's decision in *Roe v. Wade,* 410 U.S. 113 (1973), in which he articulated women's constitutional right to abortion. Balancing the constitutional right to privacy, including the privacy of the child-bearing decision, with the interest of the state in a woman's health, he said in *Roe* that the right to abortion varied with the stages of pregnancy. The state could impose tighter restrictions on the right in the later stages, when the dangers to a woman from abortion became greater. In subsequent abortion-rights cases, he voted to strike down spousal or parental consent requirements and waiting periods as well as limits on government funding of abortions.

He was not always that consistent throughout all his opinions, however; his judicial philosophy was a work in progress. He abhorred capital punishment but voted to uphold it as within the powers of the state, and he declared only as he was about to leave the Court that it was unconstitutional in *Callins v. Collins,* 510 U.S. 1141 (1994). He had a mixed record in speech and press cases, voting in *New York Times Co. v. United States,* 403 U.S. 713 (1971), to prevent the *New York Times* from publishing the *Pentagon Papers,* and in *Smith v. Goguen,* 415 U.S. 566 (1974), to penalize the asserted speech rights of a young man who wore the flag "affixed to the seat of his pants." In contrast, he joined the Court in striking down a flag desecration law in *Texas v. Johnson,* 491 U.S. 397 (1989), and a "hate-speech" law in *R.A.V. v. City of St. Paul,* 505 U.S. 377 (1992). He was a key figure in the development of the law of commercial speech, giving constitutional protection to advertisers in the

Associate Justice Harry A. Blackmun is best known for writing the Supreme Court's decision in *Roe v. Wade* (1973), in which he enunciated the constitutional right to abortion. *(Library of Congress)*

name of providing consumers with all relevant information, as the Court held in *Virginia State Board of Pharmacy v. Virginia Citizens Consumer Council, Inc.,* 425 U.S. 748 (1976), and thereby putting commercial speech more on a par with political speech.

Although Blackmun tended to be dismissive of the rights of accused criminals, he was generally supportive of the rights of people he considered disadvantaged. He wrote opinions upholding school desegregation in *Columbus v. Penick,* 443 U.S. 499 (1979), and statutory employment preferences for Native Americans in the Bureau of Indian Affairs in *Morton v. Mancari,* 417 U.S. 535 (1974), and he dissented from decisions that limited affirmative action plans, as in *Ward's Cove Packing Co. v. Atonio,* 490 U.S. 642 (1989). He was particularly protective of aliens, announcing in *Graham v. Richardson,* 403 U.S. 365 (1971), that the Court would view classifications based on alienage with suspicion, and arguing that states could not prohibit aliens from employment in the civil service, an issue in *Sugarman v. Dougall,* 413 U.S. 634 (1973), or in public schools, as in *Ambach v. Norwick,* 441 U.S. 68 (1979). Further, states could not exclude children of illegal aliens from public schools, he wrote in *Plyler v. Doe,* 457 U.S. 202 (1982), and he dissented angrily in *Sale v. Haitian Centers Council,* 509 U.S. 155 (1993), when the Court held that the United States could intercept Haitian refugees at sea and return them to Haiti.

For the most part, Blackmun's record reflected his promise, made when he was nominated to the Court, that he would "show . . . in the treatment of little people . . . a sensitivity to their problems."

Blackstone, William (1723–1780)

William Blackstone was the most influential British legal scholar of the eighteenth century, and his consolidation of English common law had a profound influence upon American legal thought. He was born in 1723, four months after his father's death, and an uncle provided for him after his mother died when he was twelve. Educated at Oxford, he occupied the Vinerian Chair of English Law there and was the first professor at an English university to lecture on the indigenous unwritten, or common, law (*lex non scripta*), as opposed to Roman or canon law. From these lectures emerged his monumental four-volume treatise, *Commentaries on the Laws of England* (1765–1769), in which he gave shape and structure to the

complex developments of judicial precedents, legislative acts, and legal traditions. Blackstone's greatest skills lay in writing clearly and with organizational coherence on legal subjects that were often turgid, technical, and dry. Nevertheless, Blackstone was no innovator, and the *Commentaries* often resemble a grab-bag of different contemporary schools of law, including natural law, ancient constitutionalism, and social-contract theory.

The work exerted a great and immediate influence on both sides of the Atlantic. Blackstone aimed to educate law students, but his intended audience also included the British landed gentry who he believed needed to understand their duty to sustain and protect the system of civil liberty enshrined in the common law heritage. Blackstone therefore designed the *Commentaries* to be appreciated without previous legal knowledge. As a result, in Britain, and especially in the United States, his *Commentaries* became a cornerstone of legal education, both as a ubiquitous reference guide and as the first (and often only) book aspiring lawyers would read before practicing law. The volumes were often updated to keep abreast of legal changes, and in 1803 an American lawyer and scholar named St. George Tucker (1752–1828) came out with the first U.S. annotation of the *Commentaries.*

Despite its popularity, his treatise proved an ambivalent authority for many members of America's founding generation. The trouble was in the framework of the *Commentaries.* On the one hand, Blackstone conceptualized English common law in the idiom of natural law, arguing that human beings were free agents and the law existed to assist all individuals in the realization of their natural freedom. On the other hand, Blackstone believed that the English system of common law had reached a state of near perfection with the Glorious Revolution of 1688, which had ousted James II and brought William and Mary to power. This historical satisfaction generated a deep conservatism in his thought, and rarely did he take the opportunity to use natural law as a tool for critiquing the state of law in his own time.

For example, despite his natural law foundations, Blackstone was at pains to deny the right of revolution. He argued that John Locke's defense of revolution might be justifiable in theory, but in practice it remained impossible. To suggest revolution or even to challenge the absolute power of Parliament—known as parliamentary sovereignty—would be to risk the absolute collapse of all governing authority, including the ancient protections of the common law itself, upon which, Blackstone asserted, freedom was dependent. Indeed, at the heart of the *Commentaries* was a strong defense of the principle that the Parliament, not the people themselves, was the supreme sovereign. Neither persons nor particular causes could be allowed to diminish or limit the absolute jurisdiction of the legislature.

As a result, Blackstone not surprisingly was unsympathetic to the cause of the American Revolution. Some of its leaders, such as major constitutional draftsman James Wilson of Pennsylvania, explicitly challenged Blackstone's principle of legislative supremacy; others, including Alexander Hamilton, focused upon the support in the *Commentaries* for natural rights and ignored the more controversial issues. Despite his antirevolutionary character, Black-

Sir William Blackstone's *Commentaries* strongly influenced the framers of the Constitution and the Bill of Rights. *(Library of Congress)*

stone presented an overall conservative message, and he supported private property and separation of powers; for these reasons, his thinking was well received, especially after the Revolution. He was one of the authorities most often cited during the writing and ratification of the Constitution.

In the context of U.S. constitutional doctrine, Blackstone's most enduring influence concerned the interpretation of the First Amendment's protection of free speech and freedom of the press. Blackstone famously argued that English freedom of the press prohibited restraint prior to publication but permitted punishments after publication for offenses such as libel, sedition, or blasphemy. This standard of freedom was quite inadequate, since the writer could be severely punished after publication. Much of the controversy in America in the wake of both the Sedition Act of 1798 and the Espionage Act during World War I concerned whether the First Amendment was meant to incorporate or broaden Blackstone's doctrine.

Blackstone entered Parliament in 1761, became the Queen's solicitor general in 1763, and was appointed as a judge of the King's Bench in 1770. Later that year he moved to the Court of Common Pleas, where he served until his death in 1780.

Blue Laws, or Sunday-Closing Laws

Sunday-closing laws, perhaps better known as "blue laws," which generally prohibit labor, business, and other commercial activities on Sunday, have been prevalent throughout American history. In fact, they have been part of Anglo-Saxon tradition since 1237, when Henry III prohibited his subjects from going to markets on Sunday. The British statute in effect when the American colonies gained independence provided in part:

> For the better observation and keeping holy the Lord's day, commonly called Sunday: be it enacted . . . that no tradesman, artificer, workman, laborer, or other person whatsoever, shall do or exercise any worldly labor or business or work of their ordinary callings upon the Lord's day, or any part thereof (works of necessity and charity only excepted); . . . and that no person or persons whatsoever shall publicly cry, show forth, or expose for sale any wares, merchandise, fruit, herbs, goods, or chattels, whatsoever, upon the Lord's day.

Blue laws appeared in the American colonies as early as 1650 when Plymouth Colony restricted Sunday work and traveling. In fact, each colony enacted similar laws restraining Sunday activities. A typical example is the preface to a 1695 New York blue law, cited in *McGowan v. Maryland,* 366 U.S. 420 (1961), stating that

> the true and sincere worship of God according to his holy will and commandments, is often profaned and neglected by many of the inhabitants and in this province, who do not keep holy the Lord's day, but in a disorderly manner accustom themselves to travel, laboring, working, shooting, fishing, sporting, playing, horse-racing, frequenting of tippling houses and the using many other unlawful exercises and pastimes, upon the Lord's day, to the great scandal of the holy Christian faith, be it enacted . . .

It might appear on the surface that blue laws would have difficulty passing constitutional examination on grounds not only of equal protection (they apply unevenly to different businesses and activities) but also of establishment of religion (prohibited by the Establishment Clause of the First Amendment). Yet these constitutional provisions aside, the validity and continued existence of blue laws are generally secure. A few state courts invalidated such laws for a variety of reasons in the late twentieth century, but during the nineteenth century, only one court, in *Ex parte New-*

A Reginald Marsh cartoon showing a crowd of angry clergymen gathered at the base of the Statue of Liberty, exclaiming "Hey, take your arm down. Don't you know this is Sunday?" Marsh's cartoon, which appeared in the left-wing journal *Good Morning* in 1921, possibly was meant to satirize "blue" laws that prohibited all labor and business activities on the Christian Sabbath. *(Library of Congress)*

man, 9 Cal. 502 (1858), found a blue law unconstitutional, and that decision was overruled three years later in *Ex parte Andrews,* 18 Cal. 678 (1861).

On the federal level, the U.S. Supreme Court in *McGowan v. Maryland,* 366 U.S. 420 (1961), upheld a Maryland blue law against a claim that it violated the Establishment Clause on the ground that the purpose and effect of the statutes were not to aid religion but to set aside Sunday as a day of rest and recreation. The *McGowan* court also refused to invalidate the statute on equal protection grounds even though it had many exceptions, such as permitting retail sale of certain products, including tobacco, food, and gasoline. On the issue of equal protection, Chief Justice Earl Warren, writing for the Court, stated that

> a legislature could reasonably find that the Sunday sale of the exempted commodities was necessary either for the health of the populace or for the enhancement of the recreational atmosphere of the day—that a family which takes a Sunday ride into the country will need gasoline for the automobile and may find pleasant a soft drink or fresh fruit; that those who go to the beach may wish ice cream or some other item normally sold there; that some people will prefer alcoholic beverages or games of chance to add to their relaxation; that newspapers and drug products should always be available to the public.

At least two reasons can be offered to explain the safe position of blue laws under the Constitution. One is that constitutional challenges on libertarian grounds were uncommon in the nineteenth and early twentieth centuries, as witnessed by the fact that the judiciary did not apply the Establishment Clause of the First Amendment to the states, through the Fourteenth Amendment, until 1947 with *Everson v. Board of Education,* 330 U.S. 1 (1947). The other and more important reason is that over time the justification for blue laws changed from sectarian to secular grounds. As Justice Stephen J. Field stated in *Soon Hing v. Crowley,* 113 U.S. 703 (1885):

> Laws setting aside Sunday as a day of rest are upheld, not from any right of the government to legislate for the promotion of religious observances, but from its right to protect all persons from the physical and moral debasement which comes from uninterrupted labor. Such laws have always been deemed beneficent and merciful laws, especially to the poor and dependent, to the laborers in our factories and workshops and in the heated rooms of our cities; and their validity has been sustained by the highest courts of the States.

The evolution of attitudes toward blue laws began long before the twentieth century. Sir William Blackstone wrote in the middle of the eighteenth century: "The keeping one day in the seven holy, as a time of relaxation and refreshment as well as for public worship, is of admirable service to a state considered merely as a civil institution. It humanizes, by the help of conversation and society, the manners of the lower classes; which would otherwise degenerate into a sor-

did ferocity and savage selfishness of spirit; it enables the industrious workman to pursue his occupation in the ensuing week with health and cheerfulness." A corollary of the attitudinal change was the widespread habit of ignoring blue laws. As nineteenth-century commentators like A.H. Lewis were pointing out, "these laws are 'dead letter.' Whoever wishes to disobey them, does so. Many of them which seem to be stringent, are open enough to 'drive a coach and four horses through without touching.' "

Approximately one-half of the states currently have some form of statutory restriction on Sunday activities. Many state governments permit counties and municipalities to enact restrictions as well. Contemporary blue laws span a wide spectrum, ranging from one in Alabama providing that "Any person who opens, or causes to be opened, for the purpose of selling or trading, any public market or place on Sunday, or opens, or causes to be opened, any stall or shop therein, or connected therewith, or brings anything for sale or barter to such market or place, or offers the same for sale therein on that day, or buys or sells therein on that day, including livestock or cattle, shall, on conviction, be punished . . ." (Ala. Code § 13A-12–2 [2002]), to one in Louisiana providing that "No store or business that is opposed to being open on Sunday shall be required to open on Sunday unless it is agreed to in the lease agreement" (La. R.S. § 51:192 [2003]).

Although the U.S. Supreme Court appears to have insulated blue laws from a successful First Amendment challenge, it is a different story in state courts where decisions are based on state law. Blue laws have been invalidated by state tribunals on a variety of grounds, including the lack of a rational basis to support the law, as in *Pacesetter Homes, Inc. v. Village of South Holland,* 18 Ill. 2d 247, 163 N.E.2d 464 (1958); the failure to apply the law uniformly throughout the state, as in *People v. Abrahams,* 40 N.Y.2d 277, 353 N.E.2d 574 (1976); and the failure to achieve legislative purpose by including so many exceptions, as in *Spartan's Industries, Inc. v. Oklahoma City,* 498 P.2d 399 (Okla.1972).

Board of Education v. Earls (2002)

In *Board of Education v. Earls,* 536 U.S. 822 (2002), the U.S. Supreme Court upheld a policy of requiring drug tests for middle and high school students engaged in any extracurricular activity. The general legal principle under the Fourth Amendment is that search and seizure require a warrant, but there are several exceptions, one of which is called the "administrative search." The five–four decision in *Earls* represented a significant extension of the "special needs" exception for administrative searches and expanded the scope of warrantless, suspicionless, random drug testing in public schools beyond the factually narrow holding in *Vernonia School District v. Acton,* 515 U.S. 646 (1995).

In 1998, the Tecumseh, Oklahoma, public school district adopted a policy mandating random, suspicionless drug testing of high school students participating in extracurricular activities such as band and choir, the Future Farmers of America and Future Homemakers of America, and athletic and academic teams. Students who refused to submit to testing were banned from extracurricular activities.

Lindsay Earls, a member of the show choir, marching band, and academic team, challenged the drug testing in federal court. The district court ruled for the school, but the Tenth Circuit Court of Appeals reversed, and, relying on *Vernonia,* held that the school would have to show a "special need" for such testing. Unlike the school in *Vernonia,* the schools in the small town of Tecumseh had little evidence of a drug problem. Furthermore, in contrast to the sports teams at issue in *Vernonia,* no special risk of physical harm was posed by drug use by Tecumseh students in the nonathletic activities, and there was no parallel

to the reduced expectation of privacy student athletes have, given the need for physical examinations and use of common showers and locker rooms. The Tenth Circuit decision conflicted with decisions by the Seventh and Eighth Circuits upholding broad testing of students, setting up a "circuit split" that invited Supreme Court review.

Writing for a five-justice majority upholding the school's policy, Justice Clarence Thomas concluded that random drug testing of all those who participated in extracurricular activities was reasonable in light of the school's interest in detecting and preventing drug use and furthering schools' "custodial and tutelary responsibility for children."

The Court noted that the drug tests were administered without an undue invasion of students' privacy, and that the results were confidential and were not turned over to law enforcement, thus ameliorating any lessening of students' privacy interests. The majority also pointed out the seriousness of student drug use as a national problem and noted there was some evidence in the record suggesting the possibility of some drug use at or near the Tecumseh school.

Writing for the four dissenters, Justice Ruth Bader Ginsburg labeled the policy "capricious, even perverse." The dissent noted that the health risks cited by the majority were present for all students, not just those involved in extracurricular activities, and that the students in the activities at issue shared the same privacy expectations of students in general. The dissenters also pointed out that the evidence of a drug problem was so thin that any school in the country would be able to make out a similar claim. They also agreed with Earls that participation in extracurricular activities, though nominally voluntary, was actually essential for students seeking admission to competitive colleges, and that students involved in such programs were less likely to be involved in drug use and thus less in need of testing. As such, the dissenters complained, the Court was opening the door to testing of all public school students.

Board of Education v. Grumet (1994)

In *Board of Education v. Grumet,* 512 U.S. 687 (1994), the U.S. Supreme Court enunciated the neutrality principle the government must apply when dealing with religious groups: It cannot prefer one religion to another. The government violates the Establishment Clause of the First Amendment to the U.S. Constitution when it discriminates among religious groups. Such discrimination is permissible only if it meets the Court's highest level of scrutiny, called "strict scrutiny."

The village of Kiryas Joel was created by a group of Satmar Hasidic Jews (Satmars), practitioners of a particularly strict form of Orthodox Judaism, who drew the village lines carefully to exclude all but Satmars. With few exceptions, the Satmar children attended the local religious schools; the exceptions consisted of those who, because of physical, mental, or emotional handicaps, required special education under the Individuals with Disabilities Education Act, which the parochial school could not provide. Originally, the Monroe Woodbury School District provided special education services in an annex to one of the parochial schools, but following several court decisions disfavoring the provision of public services in religious institutions, the district discontinued the practice and required Satmar children in need of special education to attend pubic schools outside the community. After some litigation in state courts over whether the district was barred from providing separate schools in Kiryas Joel (with the state courts ruling that it was permissible if the complaint were framed as one of religious incompatibility rather than emotional trauma, as al-

leged by the Satmar parents), all but one child were removed from the district schools.

In 1989, in what Governor Mario Cuomo described as a "good faith effort to solve this unique problem," the New York Assembly passed a law constituting Kiryas Joel as a separate school district and created a local board to preside over the new district. The Kiryas Joel district ran only a special education program for the village's handicapped children, as the other Satmar children continued to attend their parochial schools. Suit was brought to invalidate the school district by two officials of the New York State School Boards Association.

The New York Appellate Division found that the law had the primary effect of advancing religion in violation of both state and federal constitutions. The New York Court of Appeals affirmed on the federal question, stating that the law "created a symbolic union of church and state." The U.S. Supreme Court granted certiorari.

In a six–three decision, the Court held that the law creating the Kiryas Joel Village School District violated the Establishment Clause of the First Amendment because the district followed the village boundary line, which excluded all but practitioners of one religion. Although states have considerable latitude in drawing school district lines to achieve various public policies, the state may not "deliberately delegate discretionary power to an individual, institution, or community on the ground of religious identity," even though religious persons cannot per se be excluded from political office.

Even though the form of the delegation in this matter was to a village regularly constituted under the laws of New York and not expressly identified with a religious community, the Court did not stop at an analysis of the mere form but viewed the delegation along with the attendant circumstances. In this case, the village was specifically created and the boundaries carefully drawn to create a religious enclave for the members of one specific sect. The act creating the school district resulted in a "fusion of governmental and religious functions" that was the result of impermissible employment of a religious criterion for the delegation of political power. The Court also noted that the extraordinary nature of the enabling act made it very unlikely that similar remedies would be available to other religious bodies, another factor that compromised government neutrality in religious matters.

Board of Education v. Pico (1982)

In *Board of Education v. Pico,* 457 U.S. 853 (1982), the U.S. Supreme Court invalidated the removal of books from a school library. The principal issue underlying the case involved the rights of free speech, including the right to receive information, as set forth in the First Amendment to the Constitution.

The dispute arose from a September 1975 meeting in which three members of the Board of Education of the Island Trees Union Free School District No. 26 in Long Island, New York, attended a conference sponsored by a politically conservative parents organization. After being provided with a list of books that were allegedly unfit for school students to read, board members later discovered that nine of the books were in their high school library, and one was in the junior high library. Labeling the books "anti-American, anti-Christian, anti-Sem[i]tic, and just plain filthy," the board appointed a committee to evaluate them and recommend whether they should be removed. The committee could not agree on whether the books—which included Kurt Vonnegut Jr.'s *Slaughterhouse Five,* Desmond Morris's *The Naked Ape,* and Richard Wright's *Black Boy*—should remain on the shelves. Nevertheless, the board demanded that they be removed.

Steven Pico and three other students filed suit, claiming that the board's actions denied them their rights under the First Amendment. The U.S. District Court for the Eastern District of New York rejected their claim, but they won on appeal to the Second Circuit Court of Appeals, which concluded that the school board must demonstrate a reasonable basis for interfering with the students' First Amendment rights. The school board appealed to the U.S. Supreme Court. The question before the Court was whether the First Amendment imposed limitations on the exercise by a local school board of its discretion to remove library books from high school and junior high school libraries.

By a five–four majority, the Court ruled that under the First Amendment school boards cannot remove books from school libraries in order to deny access to ideas with which it disagrees for political reasons. Local school boards have broad discretion in the management of school affairs, but the First Amendment limits its exercise of that discretion. Students' rights under the First Amendment include a right to receive information and ideas. They should have wide access to information and ideas to prepare them for active and effective participation in society. A school board cannot remove books from high school and junior high libraries because of the books' content.

Five of the justices agreed that the school board did not have the power to remove the books, but they differed as to why. Justice William J. Brennan Jr. wrote the opinion of the Court, joined by Justices Thurgood Marshall and John Paul Stevens. Justices Harry A. Blackmun and Byron R. White wrote concurring opinions. Chief Justice Warren E. Burger and Justices Lewis F. Powell Jr., William H. Rehnquist, and Sandra Day O'Connor wrote dissenting opinions. The dissenters rejected the argument that the First Amendment includes a right of school children to receive information and ideas. They thought the proper role of education was to inculcate the community's values, a function into which the federal courts should rarely intrude. Justice Powell's dissent is notable for its appendix containing excerpts of questionable material from the nine books.

The case was settled in 1983, and the school board voted to keep the books on the library shelves. The students involved in the lawsuit graduated. Steven Pico became a lobbyist who fought against censorship.

Board of Regents v. Southworth (2000)

In *Wisconsin Board of Regents v. Southworth,* 520 U.S. 217 (2000), the U.S. Supreme Court refined its First Amendment jurisprudence about governmentally subsidized expression, one of the most nettlesome subsets of the Court's work on the intersection of money and speech. Previously, in *Rosenberger v. University of Virginia,* 515 U.S. 819 (1995), the Court had ruled that a student publication providing "a Christian perspective" could not be excluded from receiving its share of student activities fees because of its explicitly religious content. Five years later, the Court again confronted this issue but from the opposite direction.

The University of Wisconsin likewise had a generally assessed student activities fee that was used to fund extracurricular groups and activities. The objection lodged by Scott Southworth and several of his fellow law students at the university was that the school was requiring them to pay a student activity fee to support a cause they did not support. For Southworth, this was problematic because he found the agendas of some of the groups that received money from the fee to be personally distasteful. A self-described born-again Christian, Southworth specifically objected to the funding of programs on abortion and gay rights and contended that his mandatory con-

tribution to the general student activities fund was tantamount to compelled speech. The case was one in a series of lawsuits filed by conservative groups in the late 1990s in an effort to "defund the left" on college campuses nationwide.

Southworth's complaint was not without merit. Ever since its leading campaign finance decision, *Buckley v. Valeo,* 424 U.S. 1 (1976), the Court had regarded money spent on speech as a form of pure speech itself and thus subject to the free speech rights protected by the First Amendment to the Constitution. Extracting money from someone to support expression was thus functionally identical to commanding someone to make the actual utterances.

Nevertheless, the Court unanimously ruled against Southworth. Justice Anthony M. Kennedy's opinion reaffirmed the rule laid out in *Rosenberger* that a university must adopt a posture of "viewpoint neutrality" with respect to funding student expression. In *Rosenberger,* this principle was violated by the blanket exclusion of religious speech from receiving student activities fees (an action the University of Virginia had deemed necessary to avoid violating the Establishment Clause of the First Amendment, which prohibits government from engaging in activity that would constitute "establishment of religion"). In *Southworth,* by contrast, viewpoint neutrality was preserved by placing all mandatory contributions into a general fund. As long as a student's contribution was not earmarked for a specific group, there was no basis for conclusively suggesting that an individual student was supporting an agenda with which the student disagreed. Although this may have been true in a general sense, the Court felt that the problem was outweighed by a university's mission. Kennedy's opinion tepidly referenced this balance, but Justice David H. Souter's concurrence provided a thumping reaffirmation of academic freedom: "[T]he weakness of Southworth's claim is underscored by its setting within a university, whose students are inevitably required to support the expression of personally offensive viewpoints in ways that cannot be thought constitutionally objectionable unless one is prepared to deny the University its choice over what to teach."

The Court struck down one minor feature of the Wisconsin system: A method of awarding or stripping a group's financing through a student referendum was an alternative that threatened viewpoint neutrality, because a vote could be colored by support or hostility to a group's agenda.

Book Banning

Book banning has a long history, both in the United States and elsewhere, and is usually motivated by the conviction that public access to certain materials might be harmful to the public's common interest and morals. Of course, the mere attempt to ban information immediately raises issues involving the right to free speech found in the First Amendment to the Constitution. That right and other fundamental rights have been applied to the states through the Due Process Clause of the Fourteenth Amendment.

The most obvious form of politically motivated book banning involves the prohibition of works that undermine respect for the established government or for powerful religious authorities. For example, Thomas Paine's writings supporting American independence and his works defending the French Revolution were branded as treasonous and banned in eighteenth-century England. In the United States, the Supreme Court upheld bans on the distribution of antidraft publications because of the dangers such subversive writings posed in the context of World War I; one case addressing the issue was *Schenck v. United States,* 249 U.S. 47 (1919). During that same period, the

Ryan Honda, age eleven, reads to his seven-year-old brother Gavin from *Harry Potter and the Goblet of Fire,* on the back porch of their parents' home. *(© Norbert von der Groeben/The Image Works)*

War Department ordered that pacifist (antiwar) writings be removed from U.S. libraries, lest they undermine the war effort. During the "red scare" of the 1950s, classic works on communism by Karl Marx and V.I. Lenin came under fire.

Attempts to ban materials because of sexual content have been even more common—and more successful—than efforts to limit works deemed subversive. In the late nineteenth and early twentieth centuries, laws under the Comstock Act of 1873 effectively halted interstate distribution of "lewd" and "indecent" books such as *The Arabian Nights* and *The Canterbury Tales*. The same legislation also banned Margaret Sanger's *Family Limitation,* which provided clear and explicit instructions on using contraception. Under current laws, materials deemed "obscene" under the standards established in *Miller v. California,* 413 U.S. 15 (1973), are not considered protected speech and may be restricted. In some instances, courts have even permitted prior restraint (banning even before publication or distribution) of materials that a community considered obscene, as in *Kingsley Books, Inc. v. Brown,* 354 U.S. 436 (1957). Although the First Amendment right to free speech, including the written word, has been deemed fundamental, the courts have recognized limitations on that right if the limitations serve "compelling governmental interests."

Between 1990 and 2000, most challenges seeking the removal of books from libraries involved school districts. Parents instigated the majority of these challenges. The most frequently cited justification for a challenge was that the book contained sexually explicit material. In second place was the objection that the book used offensive language. The "offensive language" category encompasses both sexually explicit and racially charged language. The advent of R.L.

Stine's *Scary Stories* and J.K. Rowling's *Harry Potter* series has produced increases in challenges based on the contention that the work includes occult themes or promotes Satanism. Parents and community leaders also make frequent objections to books with homosexual themes, such as Leslea Newman's *Heather Has Two Mommies* and Michael Willhoite's *Daddy's Roommate*. Opponents of such books argue that their use in the classroom and presence in the library promote homosexuality and undermine the moral values parents seek to teach their children—objections similar to those waged against works with sexual themes. At times, school boards have sought to ban books over the objections of school administrators, faculty, and parents and to purge objectionable materials from both the curricula and the libraries. Parents have responded by lawsuit, contending that the school boards' bans promote their political agendas rather than educational interests. The Court has acknowledged, in many cases, the school's broad discretion over activities in the school ranging from curricula to activities to student attire. However, the Court ruled that the discretion enjoyed by officials does not permit them to ban books simply because they object to the political message the books contain. The decision to remove books from school libraries or from curricula must be grounded in educational concerns. Although educational considerations may be sufficient to justify restricting student access to controversial materials, the preferences of the school board do not outweigh the students' First Amendment rights, as the Court ruled in *Board of Education v. Pico,* 457 U.S. 853 (1982).

Parents have also pursued challenges against some classic works that confront difficult themes of racism and slavery. Mark Twain's celebrated work, *The Adventures of Huckleberry Finn,* is fifth on the American Library Association's list of frequently challenged books. Although Twain's message may not be racist, his portrayal of subservient African Americans and his characters' use of racist language can offend. An African American parent in Tempe, Arizona, launched a challenge to the inclusion of *Huckleberry Finn* on her daughter's freshman English reading list, arguing that it violated the girl's equal protection right to a nondiscriminatory education. In *Monteiro v. Tempe Union High School District,* 158 F.3d 1022 (1998), the Third Circuit Court of Appeals acknowledged that Twain's work contained racially sensitive themes and even suggested that if the instruction were insufficiently sensitive to those themes, a discrimination claim might exist. However, the court reiterated its position in favor of access to books and in favor of supporting school officials when their decisions were motivated by a desire to advance the school's educational mission.

Under current law, those who would ban books must offer compelling justifications to support the ban. In most instances, the courts favor access over prohibition and will not tolerate curtailment of First Amendment rights simply because community leaders, parents, or government authorities wish to promote a political, religious, or moral agenda through book banning. There are exceptions, of course, and Supreme Court opinions on book banning do recognize the community's right to create and enforce minimal standards of decency. Some bans have been and will be upheld. That said, most book banning probably occurs in subtle ways rather than through legislation and policy. A lawsuit creates unfavorable publicity and consumes the time, energy, and resources of school districts, even if the districts ultimately win. It is likely that books are banned behind the scenes, that officials and faculty choosing between a controversial work and an inoffensive one may be tempted to select the inoffensive work when both books meet curricular needs. The simple desire to focus on teaching rather than on defending curricular decisions to parents may lead to book banning in effect, if not in name.

Border Searches

The authority of the executive branch to conduct searches at the international borders of the United States has its roots in the very beginnings of the nation. Two months before the first Congress proposed the Bill of Rights—which included the Fourth Amendment with its famous protections against unreasonable search and seizure and its requirements for a search warrant—to the states for ratification, it enacted a statute that permitted searches of vessels arriving from international waters for the purpose of collecting import duties (Act of July 31, 1789, ch. 5, § 24, 1 Stat. 29).

In part because the first Congress thus appeared to distinguish border searches from more limited domestic searches, routine border searches have always been exempt from certain Fourth Amendment protections, as the U.S. Supreme Court acknowledged in *United States v. Ramsey,* 431 U.S. 606 (1977). The Fourth Amendment gives people the right to be secure against unreasonable searches and seizures and ensures that no warrants will be issued without probable cause. However, the preratification statute authorizing the collection of revenue on dutiable goods permitted searches of incoming ships and vessels for contraband based upon only a "reason to suspect." At the same time, the statute required a warrant based upon probable cause for subsequent searches of any dwellings, stores, or buildings. Thus, searches of persons or packages at an international border rest on considerations and rules of constitutional law quite different from those that apply to other domestic regulations. As a result, routine searches occurring at an international border are considered reasonable and therefore outside of the protections of the Fourth Amendment, simply because the searches occur at the border.

The de facto reasonableness of a border search has also been justified by the power of a sovereign to protect its territory and to defend itself from outside threats. In addition, courts have also cited practical considerations involving the difficulty of controlling smuggling into the country, specifically noting the ease of concealment of drugs, as a secondary consideration justifying the exception to the Fourth Amendment's probable-cause and warrant requirements.

Since the first customs law was enacted, the border-search exception to the Fourth Amendment has been expanded significantly. The exception, as it is currently understood, applies to searches designed to enforce both customs laws, which apply to goods, and immigration laws, which apply to people. Under the exception, customs officials may conduct a routine search of any person, vehicle, or container entering the country on only the suspicion that dutiable merchandise is being concealed or that contraband is being shipped. Similarly, first-class mail from foreign destinations may be opened without a warrant on less than probable cause. Automotive travelers may be stopped at fixed checkpoints near the border without individualized reasonable suspicion, even if the stop is based partly on the ethnicity of the traveler, the Court held in *United States v. Martinez-Fuerte,* 428 U.S. 543 (1976). And boats on inland waters with ready access to the sea may be hailed and boarded with no suspicion whatever.

However, not all searches that occur at a border are "routine." Routine border searches are those types of inspections that do not embarrass the average traveler or otherwise pose substantial breaches of privacy. Routine border searches usually subject a person to only a minimal amount of intrusion or indignity. For example, searches of a border entrant's personal effects, including suitcases, purses, and wallets, are deemed routine. Similarly, detentions of individuals while their effects are searched, as well as x-ray examination of items, have been upheld as routine.

If a search or detention of a traveler at the border goes beyond a routine customs stop, it becomes "nonroutine" and requires that the customs official have at least a "reasonable suspicion" of smuggling or other illegal activity. The reasonable-suspicion standard requires the agent to have "a particularized and objective basis for suspecting the particular person" of smuggling contraband. A strip search, for example, must be supported by reasonable suspicion. These types of searches have become much more commonplace due to the significant, but largely undetected, flow of narcotics across the borders. Indeed, because of the frequency of cases of drug smugglers transporting narcotics inside their bodies, very intrusive searches, including x-rays and body-cavity searches, are becoming more commonplace. However, courts require cus-

toms officials to have an articulable suspicion, reasonable under the circumstances, that a person may be carrying drugs internally before such a search may be conducted. Courts will continually have to revisit this issue in the future due to the changing technology available to border agents. For example, international airline passengers may soon become subject to a new sensory-enhancing imaging device known as Body Scan Imaging Technology that permits a viewer to see through people's clothes. Even though this type of search is not as physically invasive as a body-cavity search or even a pat-down search, it is significantly revealing and intrusive and may require reasonable suspicion before it is used at a border.

Routine border searches may also be conducted at areas deemed to be the "functional equivalent" of an international border. Given the impossibility of conducting searches at the true physical border, the place where an international flight lands, such as O'Hare International Airport in Chicago, is consistently considered the "functional equivalent" of the international border. As such, routine searches conducted upon the arrival of an international flight are justified on mere suspicion alone.

The border-search exception has even been extended to apply to international travelers who have already crossed the border into the country but who have yet to reassimilate into the mainstream of domestic activities. These searches, which frequently occur near an international border, are deemed nonroutine border searches but are constitutionally permissible if reasonable under the Fourth Amendment. To determine whether an extended-border search is reasonable, courts consider whether (1) there is a reasonable certainty that a border crossing has occurred; (2) there is a reasonable certainty that no change in condition of the luggage has occurred since the border crossing; and (3) there is a reasonable suspicion that criminal activity has occurred. These three factors were articulated in *United States v. Espinoza-Seanez,* 862 F.2d 526 (5th Cir. 1988). The constitutional concern of extending the border in this manner is that it potentially permits searches, with less than probable cause, at significant distances from U.S. national borders. For example, in *United States v. Caicedo-Guarnizo,* 723 F.2d 1420 (9th Cir. 1984), a suspect was searched in Los Angeles after he had passed through customs without being searched in New Orleans and changed flights en route in Houston. The court allowed a no-probable-cause search under the extended-border doctrine, despite the fact that several hours and over a thousand miles had passed since his border crossing.

Customs officials have also justified searches of exports under the border-search doctrine, citing the need to protect national security given the possibility of the export of sensitive technology. This type of expansion of the doctrine has been widely called for, especially in light of the scale of the terrorist attacks on September 11, 2001, in New York City and Washington, D.C., and the ease with which the terrorists entered and remained in the United States. In light of those factors, there has been broad-based support for a reexamination of the country's immigration laws and border-security measures in order to increase citizens' safety without treading too severely on their liberties.

Bowers v. Hardwick (1986)

In *Bowers v. Hardwick,* 478 U.S. 186 (1986), the U.S. Supreme Court held that there was no fundamental right to engage in homosexual sodomy, a decision that therefore limited the right to privacy. The case deeply divided the justices, who had widely divergent notions of the constitutional privacy right, the extent to which it should be broadened, and the contexts in which

such a right existed. The five–four holding eventually was overturned in 2003.

Michael Hardwick was charged with violating the Georgia statute criminalizing sodomy by engaging in oral sex with another man in the bedroom of his home. The police were in his home to serve a summons for failing to appear at a hearing for violating an open-container (liquor) ordinance and were directed by another houseguest to Hardwick's bedroom. Because the bedroom door was open, the police were able to view Hardwick's activities. The district attorney decided not to bring charges, but Hardwick sued Georgia's attorney general, Michael Bowers, challenging the constitutionality of the statute.

Hardwick alleged that the law violated his fundamental right to privacy comparable to a heterosexual couple's desire to use birth control or a woman's right to terminate an early pregnancy. His legal brief described the right to privacy as protecting "values of intimate association" and "individual autonomy" and characterized his activity as "the consensual intimacies of private adult life."

Justice Byron R. White authored the majority opinion, joined by Chief Justice Warren E. Burger and Justices Lewis F. Powell Jr., William H. Rehnquist, and Sandra Day O'Connor. The majority considered whether there was "a fundamental right [of] homosexuals to engage in acts of consensual sodomy" but held that the right to privacy was limited to areas of family, marriage, and procreation. The Court also emphasized the need to resist expanding the substantive reach of the Due Process Clause of the Fourteenth Amendment to the Constitution and concluded that the constitutional right to privacy did not extend to homosexual sexuality.

The majority opinion cited historical evidence to indicate that bans against homosexuality had "ancient roots." Chief Justice Burger in his concurring opinion concluded, "To hold that the act of homosexual sodomy is somehow protected as a fundamental right would be to cast aside millennia of moral teaching." Because there was no fundamental right involved, the Court looked for a rational basis for the statute and found it in the "presumed belief of a majority of the electorate in Georgia that homosexual sodomy is immoral and unacceptable."

Writing for the four dissenters (Justices Harry A. Blackmun, William J. Brennan Jr., Thurgood Marshall, and John Paul Stevens), Justice Blackmun argued that Hardwick's sexual activity was within that private sphere of individual liberty kept largely beyond the reach of the state. In rejecting the majority's framing of the issue as a right to homosexual sodomy, Blackmun said the case involved "the fundamental interest all individuals have in controlling the nature of their intimate associations with others" and more generally the "right to be let alone," quoting *Olmstead v. United States,* 277 U.S. 438 (1928). The language of the Georgia statute made gender and marital status irrelevant, thus requiring unconstitutional selective enforcement absent at least a rational state interest. Justice Blackmun scolded, "Only the most willful blindness could obscure the fact that sexual intimacy is a sensitive, key relationship of human experience, central to family life, community welfare, and the development of human personality." Sexual intimacy, in his view, was as central a part of an individual's life as the activities already protected by the constitutional right to privacy. He argued that although the right to privacy perhaps was not sufficiently clarified, "the right of an individual to conduct intimate relationships in the intimacy of his or her own home seems to be at the heart of the Constitution's protection of privacy."

Justice Stevens objected to the selective application of the statute against homosexuals only, since the law applied to all couples, married and unmarried, heterosexual and homosexual. When the Georgia attorney general conceded that the law would be unconstitutional if married couples were prosecuted, Justice Stevens concluded that the state's asserted interest amounted to nothing more than "habitual dislike for, or ignorance about, the disfavored group." He countered the majority's reliance on history and tradition by stating that such rationale had not saved laws prohibiting miscegenation or other types of behavior condemned in earlier times.

Bowers was considered a landmark for its ramifications on the right to privacy. The case indicated that the Court was not receptive to expanding substantive due process protections such as the right to privacy. Supporters of the decision applauded the Court's affirmation of traditional family values and community standards of morality. Critics suggested that the ma-

jority's negative view of homosexuality was an important factor affecting the outcome of the case. After retiring from the bench, Justice Powell stated that he probably had made a mistake in his analysis. Since the decision was five–four, a switch in his vote would have led to the opposite result. In fact, the Court overturned *Bowers* seventeen years later in *Lawrence v. Texas,* 539 U.S. 558 (2003).

Boy Scouts of America v. Dale (2000)

Boy Scouts of America v. Dale, 530 U.S. 640 (2000), raised issues of how the Constitution's First Amendment, protecting freedom of association, could be balanced against a state's effort to legislate nondiscrimination. The U.S. Supreme Court agreed, five–four, that Boy Scouts of America (BSA) had a First Amendment right to exclude from its organization an openly gay scoutmaster. In doing so, it reversed the New Jersey Supreme Court and its application of a statute covering sexual orientation that required nondiscrimination in public accommodations (N.J. Stat. Ann., section 10: 5–4). Chief Justice William H. Rehnquist, who wrote the Court's majority opinion, cited *Hurley v. Irish-American Gay, Lesbian, and Bisexual Group of Boston, Inc.*, 515 U.S. 557 (1995), a unanimous decision, as its controlling legal authority (precedent). Justice John Paul Stevens wrote an independent opinion, in part dissenting from the application of *Hurley* on the facts, and in part asserting that the controlling precedent was *Roberts v. U.S. Jaycees,* 468 U.S. 609 (1984).

According to the majority opinion in *Dale,* New Jersey erred by failing to properly balance a private association's First Amendment free speech right to condemn homosexuality among its members as inconsistent with BSA's creed that a Boy Scout must be "morally straight" and "clean." The evidence that BSA's creed had an antihomosexual meaning, accepted by the Court majority, was the executive board's sincere word to that effect and BSA's litigation policy since the 1980s.

In *Hurley,* a unanimous Court held that the Allied Veterans of Boston, private organizers of a Saint Patrick's Day street parade, had a First Amendment right to exclude individual homosexual and bisexual members who wanted to participate in the march by carrying a banner announcing their sexuality. In so doing, it reversed the highest court of Massachusetts, which had denied this right by applying a public-accommodations statute similar to the one in New Jersey.

Justice Stevens distinguished the facts in *Dale* from *Hurley.* James Dale did not ask BSA to include him by letting him announce his gay identity as part of its message. His sexuality became a public matter when a newspaper article covered a college gay organization that included Dale as a student member. Justice Stevens asked if BSA must approve all of its members' non-Scouting activities. He argued that being a Scout was not symbolic speech. In addition, because BSA had no explicit teaching against homosexuality, and because liberal theology allowed tolerance for homosexuality, BSA's exclusion of homosexuality and commitment to God connoted a fundamentalist theology, contrary to its professed religious neutrality. Furthermore, Justice Stevens noted that since the Court first rendered a landmark antigay opinion, in *Bowers v. Hardwick,* 478 U.S. 186 (1986), and despite continuing discrimination, society had evolved to moderate public bias against gays. Nothing prevented BSA

from lobbying to amend the state's law against discrimination.

Justice Stevens found *U.S. Jaycees* relevant because in it the Court held that Minnesota's human rights policy prohibiting sex discrimination was applicable against a private association that excluded women from full membership and that alleged infringement of its First Amendment rights if it were required to include them. In his view, the Court should affirm New Jersey's effort to control discrimination with its public-accommodations statute.

From a political science perspective, *Dale* illustrates that relevant precedents can exist for both sides of a case. Further, an element of subjectivity exists in how each justice reads the facts and constitutional-law principles in a set of cases, even when the Court's composition has not changed. From the viewpoint of critical legal scholars, the Court's doctrinal analysis perhaps stressed the wrong legal points. One critic of *Dale* wrote that the Court's jurisprudence should have focused more on the state's purpose in prohibiting discrimination rather than elevating the private organization's interest in discriminating as a First Amendment right. Another wrote that antidiscrimination policies should permit an exemption for organizations who request it, thus giving notice to potential members who might prefer to boycott that organization.

Boycott

A boycott is the systematic refusal to purchase goods from, use the services of, or otherwise deal with a merchant company or public accommodation in order to force the party to change its policies or practices. Boycotts are usually planned and concerted actions to isolate their objects—such as persons, companies, or products—socially or economically. The purpose of the boycott is to force its object to succumb to the desires of the boycotters. The term takes its name from Charles Boycott, an Irish estate manager in the early 1880s, whose rent collection tactics so outraged tenants that they refused to work for him. The development of the boycott actually occurred prior to its naming. American farmers frequently refused to use certain railroads in the early 1800s unless prices were lowered. By the late 1800s, there were close to 200 recognized boycotts by American labor groups. The boycott is also a commonly used practice in international affairs. In an embargo, a government prohibits the departure of commercial ships from its ports.

In the United States, boycotts are primarily used either in labor disputes or in cases of perceived social injustices. In labor and social disputes, a boycott does not exist alone but is usually combined with other activities. For instance, a sit-in or a strike, which are called *primary boycotts,* may be combined with picketing or a campaign informing the public that products are made by strikebreakers. Moreover, a primary boycott also can be combined with the *secondary boycott,* which involves the refusal to deal with or patronize anyone who deals with the first employer with whom there is a dispute. The Taft-Hartley Act of 1947 and the Landrum-Griffin Act of 1959 have outlawed secondary boycotts. A section of the Taft-Hartley Act as amended by the Landrum-Griffin Act forbade anybody from inducing or encouraging a person to engage in a strike, to refuse to handle or work on any goods, or to refuse to perform any services, if the purpose of the strike was to force any person to cease doing business with any other person.

Primary boycotts are lawful but often ineffective, especially for unions. People may continue to cross a picket line to patronize a strikebound store and, in the case of large industrial plants, suppliers may continue to sell to the plant and dealers may continue to sell its products. Labor usually prefers the secondary boycott, which enables it to bring pressure upon others whose continued dealing with the strikebound plant hinders the successful conclusion of the strike.

Citizens of Woodstock, New York, demonstrate in September 2002 against a CVS drug store, urging a boycott. The site had been the home of Woodstock's only supermarket. When the Grand Union Supermarket went bankrupt earlier in 2002, CVS opportunistically took over the building before another supermarket could open there. This left Woodstock with two drug stores and only limited grocery facilities. *(© ANA/The Image Works)*

The most commonly used boycott by American labor began in the late nineteenth century and is referred to as the *product boycott.* Typically, the union attempts to discourage other union members and the public at large from purchasing the employer's product by making them aware of the employer's position in the dispute.

Labor unions have not been the only organizations to use boycotts. During the modern civil rights movement in the United States, the boycotting of segregated buses was one of the most successful tactics used to combat Jim Crow segregation and the system of apartheid in the American South. On December 1, 1955, Rosa Parks, a black seamstress, was arrested for refusing to obey a Montgomery, Alabama, bus driver's order to give up her seat for a boarding white passenger, as required by law. Outrage in Montgomery's black community over the arrest of Parks sparked a boycott against the city's bus line, led by twenty-six-year-old Rev. Martin Luther King Jr., that lasted 381 days. The boycott successfully ended with the U.S. Supreme Court's ruling in *Gayle v. Browder,* 352 U.S. 903 (1956), that Montgomery's segregated bus system was unconstitutional. This boycott has been considered the beginning of the modern era of the civil rights movement. Boycotts challenging segregation subsequently began in other cities throughout the South.

Brady Rule

In *Brady v. Maryland,* 373 U.S. 83 (1963), the U.S. Supreme Court set forth the government's duty to disclose exculpatory evidence to a criminal defendant, a holding that thus became known as the *Brady* rule. In *Brady,* the defendant had been convicted of complicity in a murder, which had occurred during the course of a robbery, and was sentenced to death. During trial, the defendant conceded his involvement in the robbery, but he maintained he had not participated in the actual killing and asked the jury to return a guilty verdict "without capital punishment." Unbeknown to the defendant, his codefendant had confessed to the killing. Because the prosecutor had withheld this information, the Court found that the petitioner was entitled to a new trial on the issue of punishment. It held that "the suppression by the prosecution of evidence favorable to an accused upon request violates due process where the evidence is material either to guilt or punishment, irrespective of the good faith or bad faith of the prosecution."

In the years following *Brady,* the Supreme Court clarified the parameters of the disclosure rule. Specifically, in *Giglio v. United States,* 405 U.S. 150 (1972), the Court expanded the definition of "favorable evidence" to include evidence that could be used to attack the credibility of a witness against the accused (impeachment evidence). Later, in *United States v. Bagley,* 473 U.S. 667 (1985), the Court explained that undisclosed evidence was "material" only "if there is a reasonable probability that, had the evidence been disclosed to the defense, the result of the proceeding would have been different." Finally, in *Kyles v. Whitley,* 514 U.S. 419 (1995), the Court held that materiality should be determined by the cumulative effect of the nondisclosure rather than by an item-by-item examination of the evidence and the potential significance of each piece to the trial's outcome. The Court further held that the prosecutor had a duty to disclose all favorable evidence known to any person working on the government's behalf.

Although noting the importance that exculpatory and impeachment evidence plays in a defendant's constitutional right to a fair trial, several lower courts have found that the disclosure of evidence favorable to an accused *during trial* is sufficient to meet the government's duty under *Brady.* Accordingly, to comply fully with the *Brady* rule, the prosecution often need only disclose available impeachment evidence immediately prior to the testimony of the relevant witness, and need only provide exculpatory evidence in time for the defendant to make some beneficial use of it at trial.

In addition to disclosure at trial, a few lower courts have found that so-called *Brady* evidence must be divulged prior to a defendant's entry of a guilty plea. In this context, however, a defendant may withdraw his guilty plea only if he is able to show, by a reasonable probability, that, but for the *Brady* violation, he would not have chosen to plead guilty but would have instead demanded a trial. The application of *Brady* to the context of plea negations is significantly unsettled, and the U.S. Supreme Court has yet to address the issue.

Brandeis, Louis Dembitz (1856–1941)

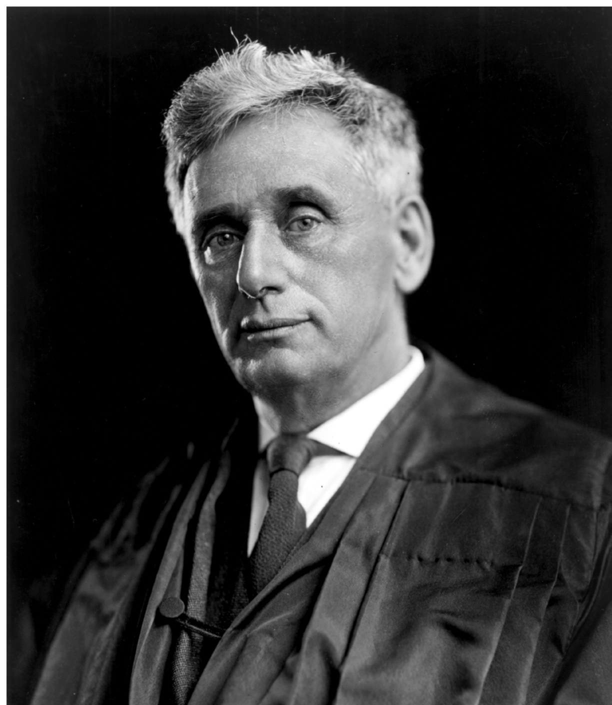
Louis D. Brandeis was an innovator in the law who articulated the basis for the U.S. Constitution's protection of privacy and speech.

Born in Louisville, Kentucky, Brandeis enrolled at Harvard Law School at age eighteen. Shortly after graduating from Harvard in 1878, he and classmate Samuel D. Warren Jr. opened a law partnership in Boston. Responding to his new role as an attorney for small businessmen, Brandeis developed an original conception of the role of both the lawyer and the law.

He quickly recognized that to assess his clients' needs he had to understand not only their immediate problems but also the economic context in which they arose—to familiarize himself with legal precepts as well as the fact situations to which such rules would be applied. That realization illuminated his emerging legal philosophy, which assumed that law had to be consistent with societal needs and that societal needs could be assessed only through an accumulation of facts. Law, he decided, was and should be based on history rather than abstract logic.

When Brandeis was asked to defend Oregon's maximum-hours law for women before a skeptical U.S. Supreme Court, he submitted a brief that contained only two pages of legal precedents but more than 100 pages of factual support for his argument that society would benefit from that kind of protection for women workers. His strategy worked; the Court upheld the law in *Muller v. Oregon,* 208 U.S. 412 (1908). The fact-filled "Brandeis brief" became the model for American constitutional litigation. It would prove particularly important in leading civil liberties and civil rights cases such as *Brown v. Board of Education,* 347 U.S. 483 (1954), in which fact-based briefs about the impact of segregated education on young children helped persuade the Supreme Court to strike down the "separate but equal" standard.

Brandeis also believed that law must be moral in order to be valid, and that attorneys had an obligation to work on behalf of the people rather than only as employees for wealthy corporations. This conviction led him to involve himself in public causes, beginning with a ten-year fight against Boston Elevated Railway's attempt to acquire a monopoly over Boston's transportation system. He redesigned Massachusetts' utilities laws; invented Savings Bank Life Insurance so that workers could provide for their families; designed much of President Woodrow Wilson's antitrust policy; advised President Franklin D. Roosevelt to enact unemployment insurance; and advocated legalization of unions, minimum-wage and maximum-hours laws, public ownership of Alaska's natural resources, and public works projects during the depression of the 1930s. His decision not to accept fees for his efforts on behalf of the public helped create the American pro bono ("for the public good") tradition in the law and led to the media's dubbing him the "people's attorney."



Louis Dembitz Brandeis was an innovator in the law who articulated the basis for the Supreme Court's strong protection of privacy and speech. *(Library of Congress)*

In the early days of their partnership, Brandeis and Warren had been incensed at the way journalists violated socialite Warren's privacy. In reaction, they wrote an article arguing that the law had to protect individual privacy and the right "to be let alone." Their article is generally credited with being one of the most influential law review articles ever published, and it is still cited today in cases involving issues from abortion and gay rights to wiretapping and the right against unreasonable searches and seizures.

Brandeis carried his fact-based jurisprudence to the U.S. Supreme Court when Woodrow Wilson appointed him to that tribunal in 1916. There he repeatedly voted against "bigness" in government, for

example in *Myers v. United States,* 272 U.S. 52 (1927), and *Louisville v. Radford,* 295 U.S. 590 (1935); and in business, for example in *Bedford Cut Stone Co. v. Journeymen Stone Cutters Association,* 274 U.S. 37 (1927), and *Quaker City Cab v. Pennsylvania,* 277 U.S. 389 (1928). Yet he maintained in *Liggett Co. v. Lee,* 288 U.S. 517 (1933), that state governments needed the freedom to experiment with solutions to contemporary societal problems. He favored judicial restraint and, in *Ashwander v. Tennessee Valley Authority,* 297 U.S. 288 (1936), established tightly self-limiting criteria for Supreme Court involvement in constitutional litigation.

Brandeis also continued to emphasize privacy. When the Court upheld what it saw as the government's constitutional power to wiretap at will, he dissented, writing in *Olmstead v. United States,* 277 U.S. 438 (1928), that the founding fathers had included the "right to be let alone" in the Constitution even though the word privacy was not mentioned in that document. The right to privacy, he insisted, had to be interpreted broadly. "Beliefs, thoughts, emotions and sensations" had to be protected from government intrusion because the free flow of ideas was crucial to a democratic nation.

His approach to privacy reflected Brandeis's democratic ideal. One colleague described him as an "implacable democrat"; another commented that to Brandeis, "democracy is not a political program. It is a religion." His formulation of democracy emphasized the rights of the individual, particularly as they affected human dignity and the ability to participate in the democratic process. Convinced that free speech was an absolute necessity if citizens were to have access to ideas and be able to make intelligent choices among them, he dissented in a number of 1920 cases and argued that unpopular and even potentially dangerous views had to be permitted in order to preserve democracy; examples of these cases include *Schaefer v. United States,* 251 U.S. 466 (1920); *Pierce v. United States,* 252 U.S. 239 (1920); and *Gilbert v. Minnesota,* 254 U.S. 325 (1920). The culmination of his writing about speech came in his opinion in *Whitney v. California,* 274 U.S. 357 (1927), in which he eloquently asserted that the expression of obnoxious ideas did not constitute a "clear and present danger" to society unless it included a call to immediate illegal action. The Court did not adopt his reasoning until 1969, in *Brandenburg v. Ohio,* 395 U.S. 444, but the Brandeis approach then became the philosophical basis for today's uniquely permissive American speech jurisprudence.

When Brandeis resigned from the Court in 1939, he left behind a tradition of lawyers contributing their efforts to public service; a jurisprudence based on interpreting the Constitution in light of societal facts; views of privacy and free speech that gradually became the law of the land; an emphasis on individual dignity; and a certainty that given the efforts of active democrats, liberty would indeed prevail.

Brandenburg v. Ohio (1969)

Brandenburg v. Ohio, 395 U.S. 444 (1969), established the current judicial standard for assessing whether specific speech constitutes a societal danger so as to lose its protection under the First Amendment to the Constitution.

"If our President, our Congress, our Supreme Court, continues to suppress the white, Caucasian race, it's possible that there might have to be some revengeance taken," Clarence Brandenburg declared at a Ku Klux Klan rally held on an Ohio farm. "We are marching on Congress July the Fourth." The twelve other hooded figures at the demonstration, some of them armed, proceeded to burn a large wooden cross. "Bury the niggers," someone called out. "Send the Jews back to Israel." Brandenburg was subsequently convicted by Ohio for advocating violent or otherwise unlawful means of accomplishing political or economic reform.

The question before the U.S. Supreme Court, when Brandenburg appealed his conviction, was whether the law violated the right to free speech provided by the Constitution's First Amendment. Under that provision, "Congress shall make no law . . . abridging the freedom of speech, or of the press; or the right of the people peaceably to assemble," and the Supreme Court had held in *Gitlow v. New York,* 268 U.S. 652 (1925), that its prohibitions were applicable via the Fourteenth Amendment to the states as well as to the federal government. Six years earlier, Justice Oliver Wendell Holmes had written for the Court in *Schenck v. United States,* 249 U.S. 47 (1919), that words could be punished if they were "of such a nature as to create a clear and present danger that they will bring about the substantive evils that Congress has a right to prevent." He did not, however, define how "clear" or how "present" the danger had to be. In 1927, in *Whitney v. California,* 274 U.S. 357, the Court stated that the First Amendment did not prohibit the states from punishing those whose utterances were "inimical to the public welfare" or "tending to incite to crime" or to overthrow of the government, and it upheld a California law similar to the one in Ohio.

In using the words "tending to incite to crime," the majority in *Whitney* emphasized the tendency that speech might have to encourage impermissible acts, thereby maximizing the power of the government to limit speech. In a concurring opinion that read much like a dissent, Justice Louis D. Brandeis argued that speech had to be permitted unless it "would produce, or is intended to produce, a clear and imminent danger of some substantive evil." He in effect changed the "present" of the "clear and present danger" test to "imminent," substituting an emphasis on the immediacy of the danger of criminal or subversive activity for a possible tendency to create a danger at some time in the future. By the time of *Whitney*, Justice Holmes had rethought his approach to speech articulated in *Schenck,* and he joined Brandeis's opinion. It was nonetheless the majority's opinion in *Whitney* and the "bad-tendency" test that Ohio argued should control when *Brandenburg* reached the Supreme Court.

In *Brandenburg,* however, the Court endorsed Justice Brandeis's view and overruled *Whitney*. The First Amendment does not permit a state to criminalize advocacy "except where such advocacy is directed to inciting or producing imminent lawless action and is likely to incite or produce such action," the Court wrote. It pointed out that films of the rally, made by a local television station at the invitation of the demonstrators, showed that the only people present were the Klansmen themselves and the journalists; no one else was there to be influenced. No immediate action was discussed, so it could not be successfully argued that the speech constituted an incitement to immediate criminal activity. Assembling with others for the purpose merely of advocating political and economic change, the Court said, did not meet the test of imminent danger.

The Court's opinion was handed down per curiam (for the entire Court), which is a procedure the justices normally use only for noncontentious holdings. They thereby signaled their belief that *Whitney* and the bad-tendency test had been, in the Court's words, "thoroughly discredited" although not specifically overruled in the preceding years. There had been good reason for Brandenburg to believe that the justices would overturn his conviction, in spite of *Whitney*. The Court had upheld severe limitations on speech in the early years of the Cold War, but by the late 1950s and 1960s, it had begun striking such restrictions down, for example in *Yates v. United States,* 354 U.S. 298 (1957); *Noto v. United States,* 367 U.S. 290 (1961); *Aptheker v. Secretary of State,* 378 U.S. 500 (1964); and *Keyishian v. Board of Regents,* 385 U.S. 589 (1967). The Court had come to believe that democracy was best served by the free flow of ideas, however obnoxious, and that the electorate possessed the ability to sort out the good ones from the bad.

Since *Brandenburg,* the Court has adhered to the imminent-danger test as the criterion to be used when allegedly dangerous speech is at issue.

Branzburg v. Hayes (1972)

Branzburg v. Hayes, 408 U.S. 665 (1972), combined three similar controversies that pitted state interests in the enforcement of criminal law against First Amendment protections extended to the press. In all three cases, reporters were summoned to testify in grand jury proceedings and to disclose information obtained while gathering information for stories. Paul Branzburg, a reporter for the *Louisville Courier-Journal,* had witnessed other individuals using marijuana and making hashish from marijuana. Paul Pappas, a television reporter assigned to cover civil disturbances in New Bedford, Massachusetts, gained access to a meeting of the Black Panthers, a political party that seeks to fight oppression and discrimination, particularly oppression based upon race. A *New York Times* reporter, Earl Caldwell, had also gained access to meetings of the Black Panthers.

During the 1960s and 1970s, many considered the Black Panthers to be militant and viewed the party as a potential instigator of civil disturbance and rioting. Some chapters of the Black Panthers were suspected of targeting high-level political officials, including the president. In all three cases dealt with in *Branzburg,* state authorities believed the reporters possessed information that could assist in criminal investigation, thus forwarding the public interest.

In its five–four decision, the Court held that news reporters enjoy no constitutional immunity from being compelled to testify in criminal proceedings, unless the state legislatures choose to afford them such immunity by statute. In short, if the state has no law protecting reporters and their sources, they may not look to the Constitution to avoid testifying.

Justice Byron R. White authored the opinion of the Court, which was joined by Chief Justice Warren E. Burger and Justices Harry A. Blackmun, Lewis F. Powell Jr., and William H. Rehnquist. Justice White noted that when the state limits speech or curtails freedom of the press, the fundamental right of the individual or the press must be balanced against the state's interest that requires the restriction. There were two questions to be answered. First, was the state actually limiting the freedom of the press? Second, was the state's interest in doing so sufficiently compelling to justify a restriction?

The majority opinion held that requiring reporters to respond to grand jury subpoenas did reach the level of endangering the ability of the press to gather news, inform the public, and criticize government officials. After reviewing prior decisions regarding freedom of the press, Justice White concluded that no precedent suggested that reporters should be immune from the general laws, which would compel any other citizen to appear in like circumstances. The state imposed no direct burden upon news reporting, and, if it did, the state's interests in curtailing drug use, preventing civil disturbance, and protecting public safety were too important to yield to a vague claim that informant disclosures might be chilled by the reporters' appearance. In fact, Justice White contended, to employ a "balancing" test weighing the state's interests against the burden imposed on the press would be to usurp the rightful power of the legislature. The legislature, the branch charged with making the laws, made no distinction among criminal laws and did not deem some less significant than others. For the Court, whose role is to interpret the law, to weigh the importance of a particular law would be an impermissible intrusion into the jurisdiction of the legislature. All three reporters would be required to respond to the subpoenas and appear before the grand jury.

Four justices—William O. Douglas, Potter Stewart, Thurgood Marshall, and William J. Brennan Jr.—dissented, with Justices Douglas and Stewart authoring opinions. Justice Douglas noted that the First Amendment was presented in the most absolute of terms and should not be "balanced" against mere interests. Because of the preferred position of the press in the Constitution, the Court should protect it against government actions that could limit its ability to inform the public and criticize the government.

Justice Stewart's opinion, joined by Justices Marshall and Brennan, attacked the majority position on similar grounds, accusing the Court of insensitivity to the critical role of the press. A number of states agreed with the dissenters, enacting shield laws that provided journalists with statutory protection against being subpoenaed to testify.

The *Branzburg* holding, with its articulated deference to the legislature, reflects the beginning of a shift from the decisions of the Court in the 1960s. Prior Court holdings had preferred the rights of the individual over law enforcement needs, regardless of whether the individual in question was the accused or a reporter with information. This Court deferred to the legislative judgment and considered the needs of law enforcement to be a public interest that could not yield to speculative claims regarding the ruling's potential effect on the news-gathering function of the press.

Bray v. Alexandria Women's Health Clinic (1993)

In *Bray v. Alexandria Women's Health Clinic,* 506 U.S. 263 (1993), the U.S. Supreme Court ruled that antiabortion protesters could not have their activities enjoined as illegal conspiracies to deny the civil rights of women seeking abortions. Two main civil liberty issues underlie *Bray*. The first is the concern for women's ability to access the right to abortion first guaranteed by the Court in *Roe v. Wade,* 410 U.S. 113 (1973). Second is the concern for the First Amendment rights to free speech for antiabortion protesters.

The National Organization for Women (NOW) and various abortion clinics in the Washington, D.C., area originally brought *Bray* to enjoin the antiabortion organization Operation Rescue (OR) and six of its members from blocking the entrances to abortion clinics. Operation Rescue appealed the injunction on the grounds that the federal Civil Rights Act of 1871, commonly referred to as the Ku Klux Klan Act (Klan Act), under which the injunction was granted was improperly applied to their activities. In addition, OR claimed that any regulation of their activities should be conducted under state law, not federal law.

The Klan Act prohibits private parties from conspiring to deprive any persons or class of people of their civil rights. NOW argued that the clinic blockades performed by OR were similar to conspiracies and acts of intimidation used by the Ku Klux Klan to deprive blacks of their civil rights. In addition, NOW argued that state law was insufficient to protect the rights of the abortion clinics' potential clients, and that states needed the help of the federal government in handling the large-scale disruptions caused by OR protests.

Obtaining injunctions was part of the abortion-rights movement's efforts to defend against the increasingly aggressive tactics of antiabortion protest groups such as OR. If the injunction in *Bray* were overturned due to the inapplicability of the Klan Act, the abortion-rights movement would lose a weapon against antiabortion protest groups in its fight to protect the right to abortion. Conversely, if the injunction were upheld, OR, which was already experiencing internal organizational conflict, and other antiabortion groups would be faced with increasing legal and financial barriers to continuing their protests against abortion.

The Supreme Court first heard oral argument for *Bray* in October 1991 but announced in June 1992 that it would rehear the case in the next term. This unusual step prompted some to speculate that the conservative Court was protecting the George H.W. Bush administration from the impact of the decision until after the 1992 presidential election. It is more likely that since only eight of the usual nine justices heard the argument, due to Justice Thurgood Mar-

shall's October 1991 retirement, the Court was evenly split after the first round of arguments and wanted to rehear the case with a full panel of justices.

In its majority opinion decided January 13, 1993, the Court announced that the Klan Act was inapplicable to OR. First, the Court determined that neither women seeking abortions, nor women in general, qualified as a protected class of people in the terms intended by the Klan Act. Second, even if one assumed that women seeking abortions, or women in general, qualified as a protected class, the Court declared that OR was not conspiring to deny them of civil rights intended to be protected against interference by private citizens.

Operation Rescue heralded the victory as forwarding its cause, but the celebration was short-lived. In 1994, Congress passed the Freedom of Access to Clinic Entrances Act, which limited *Bray*'s impact by creating federal regulations for protests at abortion clinics.

Brennan, William J., Jr. (1906–1997)

William J. Brennan Jr. was appointed to the U.S. Supreme Court in 1956 by President Dwight D. Eisenhower and served until 1990. Justice Brennan is considered to be one of the most influential and liberal justices ever to sit on the Court. He was author of numerous opinions that brought major transformation to American law in the second half of the twentieth century.

Born to Irish Catholic immigrants in Newark, New Jersey, William Brennan attended a parochial grammar school and graduated from a public high school. His upbringing in a family of modest means would leave a mark upon the future Court justice in two ways. First, he developed the discipline of having to work and hold jobs while attending school. Second, the lessons of working-class struggles shaped his view on the law, leading him to emphasize that it and legal institutions needed to protect the rights and liberties of people.

Upon graduation from high school, Brennan attended the Wharton School of Business at the University of Pennsylvania. After graduation, he married Marjorie Leonard and then attended Harvard Law School on a scholarship in 1930. Although a good student—graduating in the top 10 percent of his class—he was not the star of his class, and one of his professors, Felix Frankfurter, also a future Supreme Court justice, initially was skeptical when Brennan joined the Court.

After graduation Brennan practiced labor law with a New Jersey firm until World War II. During the war he assisted Secretary of War Robert Patterson with procurement and labor matters, and he was eventually discharged as a colonel. When the war ended he rejoined his firm and became involved with efforts to reform the New Jersey court system. This work gained him notice by the governor, who appointed him to be a state superior court judge in 1949. In 1950 he was elevated to the appellate division and then in 1952 made a justice on the New Jersey Supreme Court.

Brennan's elevation to the U.S. Supreme Court is an often-told story of how President Eisenhower, facing a possible tough reelection to a second term in 1956, stated that he wanted to get a Catholic from the Northeast on the Court to shore up political support among key constituencies. Senate approval was nearly unanimous, except for Senator Joseph McCarthy (of House Un-American Activities Committee fame), and Brennan replaced retiring Justice Sherman Minton. Little of the record Brennan made on the New Jersey Supreme Court portended that he would become one of the most liberal justices on the Court during the 1950s and 1960s when Earl Warren was chief justice. Indeed, "the Warren Court" became a battle cry for conservatives who were trying to stem the tide of so-called liberal causes, such as civil rights, due process, and equal protection. Years later when Eisenhower was asked if he had made any mistakes as

president, he replied two, and both of them (Brennan and Warren) were on the Supreme Court.

During Justice Brennan's thirty-four years on the Court, he articulated a judicial philosophy that placed respect for human freedom and dignity at the center of his jurisprudence. Brennan felt that interpretation of the Constitution must respect the concept of dignity and freedom that individual liberties and rights were meant to protect, and his opinions demonstrate that commitment.

Over the course of his career, Justice Brennan participated in nearly 1,400 opinions. He wrote 425 majority opinions for the Court, as well as 220 concurring, and 492 partial or full dissents. His greatest skill resided not so much in his intellectual brilliance (which was nonetheless still significant) but in his ability to forge coalitions and convince other justices to go along with him. Reputedly, every year he would welcome his new law clerks with a talk during which he held up five fingers—telling them that the rule of five (a majority vote of the nine justices) was what it took to get things done on the Court. His skills at majority building were so good that many analysts consider him the real leader of the Warren Court in terms of forging the coalitions that articulated many of its most famous decisions. Further, many credit Brennan's skills in preventing the Court under Chief Justice Warren E. Burger from reversing these opinions as the Court became more conservative. Even late in his tenure as justice when the Court under Chief Justice William H. Rehnquist had become decidedly more conservative, Brennan managed to forge liberal rulings in cases such as *Texas v. Johnson,* 491 U.S. 397 (1989) (striking down on First Amendment grounds a state law that made it illegal to burn flags as a form of political protest), and *Metro Broadcasting Co. v. Federal Communications Commission,* 497 U.S. 547 (1990) (upholding a federal policy to favor minority ownership of broadcast licenses).

Justice Brennan's majority opinions read like a greatest-hits collection of recent Supreme Court rulings. In *Baker v. Carr,* 369 U.S. 186 (1962), he led the Supreme Court to reverse precedent and rule that legislative redistricting and reapportionment were justiciable matters that the Court could hear. In *New York Times Co. v. Sullivan,* 376 U.S. 254 (1964), he wrote for the Court in placing First Amendment limits on libel, making it easier for newspapers and the media to print news and criticize public officials.

Other significant majority opinions Justice Brennan wrote include *Katzenbach v. Morgan,* 384 U.S. 641 (1966) (upholding the 1965 Voting Rights Act); *Penn Central Transportation Co. v. City of New York,* 438 U.S. 104 (1978) (upholding historic preservation laws); *Goldberg v. Kelly,* 397 U.S. 254 (1970) (mandating due process procedures for persons being denied government welfare payments); *Shapiro v. Thompson,* 394 U.S. 618 (1969) (upholding the right of interstate travel and striking down state durational residency requirements for welfare); and *Eisenstadt v. Baird,* 405 U.S. 438 (1972) (striking down state laws that made it illegal to sell birth control devices to unmarried couples, as being a violation of their privacy rights). Justice Brennan, joined by his long-term colleague Justice Thurgood Marshall, also frequently dissented against the death penalty, stating in both *Furman v. Georgia,* 408 U.S. 238 (1972), and *Gregg v. Georgia,* 428 U.S. 153 (1976), that capital punishment was cruel and unusual punishment and therefore unconstitutional.

Beyond the influence Justice Brennan had on the Court, he was also instrumental, by way of a 1976 law review article, in urging state courts to use their constitutions to preserve the legacy of protection for individual rights that the Court started during the tenure of Chief Justice Warren but that began slipping under Chief Justice Burger. Brennan also was the focal point of many conservatives who attacked the Supreme Court as being too activist. During the 1980s, Justice Brennan and Ed Meese, U.S. attorney general in President Ronald Reagan's administration, were embroiled in battles over how to interpret the Constitution, with Meese seeking to place limits on what the Court could do and how it should read rights in a very limited fashion. Needless to say, Brennan did not yield to Meese or other conservative critics, fighting for his views until he left the Court in 1990.

Overall, Justice Brennan's legacy on the Court and law is immense. He helped redefine the law in areas such as privacy, defendants' rights, procedural due process, land use, and many others. Even now, many years after his Court service, his opinions form the basis of much of contemporary constitutional law. On most lists, Justice Brennan is included as one of the

ten best individuals ever to sit on the U.S. Supreme Court.

Breyer, Stephen G. (b. 1938)

On August 3, 1994, Stephen Breyer became the 108th justice to sit on the U.S. Supreme Court. Born August 15, 1938, the California native earned bachelor's degrees at Stanford University and Oxford University and his law degree at Harvard Law School, where he also later taught. Before he joined the Court, Breyer was chief counsel for the Senate Judiciary Committee, served on the U.S. Sentencing Commission, and sat on the U.S. Court of Appeals for the First Circuit. Justice Breyer has written books focusing on administrative law and regulatory policy.

Justice Breyer's holdings on civil liberties reflect pragmatic centrism. His support of civil liberties is driven by his desire for balance and proportionality. In two recent Fourth Amendment cases, Justice Breyer authored opinions rejecting civil libertarian arguments. Regarding the privacy of public school students, *Board of Education v. Earls,* 536 U.S. 822 (2002), the Supreme Court upheld mandatory drug testing of students participating in extracurricular activities. Justice Breyer concurred, observing that the policy represented a reasonable effort by the school to respond to the drug epidemic among teens.

Bond v. United States, 529 U.S. 334 (2000), presented a search and seizure question involving police conduct. The Court held that police officers were prohibited from manipulating bus passengers' soft-sided carry-on luggage to determine its contents. Justice Breyer dissented, arguing that such activity was permissible because a public transportation passenger could not reasonably expect that he could store such luggage physically undisturbed in a shared compartment.

Justice Breyer was more sympathetic to civil libertarians on issues involving the Sixth Amendment's Confrontation Clause, which protects the right of defendants to confront their accusers. In *Gray v. Maryland,* 523 U.S. 185 (1998), he wrote for a majority holding that merely substituting blank spaces for the names of criminal codefendants renders an otherwise unimpeachable confession inadmissible unless the confessor is subject to cross-examination. He deemed the blank spaces directly accusatory, just as incriminating as pointing to the defendant in open court. Therefore, the implicated codefendant had the constitutional right to confront his accuser.

Justice Breyer spoke for a Court majority in *Easley v. Cromartie,* 532 U.S. 234 (2001), a recent case involving voting rights and race-conscious political redistricting. The Court concluded that although race may serve as a consideration in drawing district lines to create a majority-minority district, it cannot function as the preponderant consideration. However, because the relationship between race and party identification is strong, challengers of districting plans must satisfy a demanding burden in order to demonstrate that race was an impermissibly persuasive factor.

The Bill of Rights preserves individual liberties by imposing specific restrictions on governmental action. Justice Breyer recognizes that courts do not adjudicate in a vacuum; consequently, he strives to balance those restrictions against societal interests. In Justice Breyer's view, complex societal questions are appropriately resolved by citizen participation in the democratic process rather than by having governmental institutions impose solutions on society. Premature intrusion by courts risks preemption of the democratic process; judicial restraint promotes democratic principles.

Bryan, William Jennings (1860–1925)

The leader of the Democratic Party for a generation in the late nineteenth and early twentieth centuries, William Jennings Bryan ran for president three times and served as secretary of state in the administration of President Woodrow Wilson (1913–1921). Bryan was a champion of the rights of ordinary Americans and was a vocal conservative Christian. His public life spanned the era from the populist movement of the 1890s to the *Scopes* monkey trial of 1925 in Tennessee. His admirers saw him as a true "man of the people."

Bryan was born in Illinois and became an attorney in the early 1880s. Soon thereafter, he moved to Lincoln, Nebraska, where he won election to the U.S. House of Representatives in 1890 and 1892. After his congressional tenure ended, Bryan published a newspaper and continued to speak out on issues of importance to his readers in the Great Plains region. Meanwhile, hard economic times led western farmers to create the Populist (or People's) Party in the early 1890s as an alternative to the Democrats and Republicans. The Populists wanted the U.S. government to

William Jennings Bryan is most noted for his participation in the "monkey trial" of John Scopes, in which Bryan defended a Tennessee law that made the teaching of evolution illegal. *(Library of Congress)*

address economic issues affecting the American West, which they thought was being hindered by adherence to a gold standard. They believed that this valuation standard made it difficult for farmers to obtain credit from banks.

Bryan thought the Democratic Party should adopt policies supported by the Populists. The majority of Democrats, however, lived in the eastern United States and ignored—as did Republicans—the "political prairie fire" that populism was spawning. Leaders of both parties argued that western farmers had received all the help they deserved from the U.S. government, including free land and railroads. In 1896, however, delegates to the Democratic National Convention defied their party's leaders; they adopted a platform supporting many aspects of the Populist agenda, and after Bryan delivered his famous Cross of Gold speech advocating the coining of silver (an inflationary measure), they nominated him as the party's presidential candidate. The Populists decided to join forces with the Democrats by nominating Bryan as well.

Bryan lost the 1896 election, in part because many eastern Democrats refused to support him. His campaign, however, along with those of 1900 and 1908 (when he was also the Democratic nominee) helped convert the Democratic Party into the reform organization it continued to be throughout the twentieth century. Bryan supported the 1912 presidential nomination of New Jersey governor Woodrow Wilson; once elected, Wilson rewarded Bryan, who had opposed U.S. imperialism in the Spanish-American War, by appointing him secretary of state. Bryan resigned his cabinet position in 1915 in a dispute with Wilson over how to respond to Germany's sinking of the *Lusitania,* a British ship on which many American vacationers were passengers.

Bryan's final appearance on the stage of U.S. history occurred in 1925 when he went to Tennessee to help prosecute John Thomas Scopes for violating a law prohibiting the teaching of evolution in that state's public schools. A conservative Protestant, Bryan believed in the literal, fundamentalist interpretation of the Bible. Many observers believed that the man who had been such an eloquent spokesman for western farmers was trampling on Scopes's right to free speech and academic freedom. The national media representatives covering the trial universally ridiculed Bryan. Perhaps exhausted from the pressures of the case, which had featured a grueling cross-examination of Bryan by attorney Clarence Darrow, Bryan died in Knoxville, Tennessee, five days after the trial ended.

Buchanan v. Warley (1917)

The U.S. Supreme Court's decision in *Buchanan v. Warley,* 245 U.S. 60 (1917), marked one of the first successful attacks on segregationist policies in the United States. Its outcome, however, was based on libertarian respect for property rights rather than on a desire to ensure that all citizens received the equal protection of the laws, a right protected by the Equal Protection Clause of the Fourteenth Amendment to the Constitution. That line of thinking ultimately would become the basis for most of the later successful attacks on segregation.

William Warley, the president of the Louisville, Kentucky, chapter of the National Association for the Advancement of Colored People (NAACP), contracted with Charles Buchanan, a white real estate agent, to buy a residential lot. The block on which the lot was located contained residences of eight white families and two black families. The city of Louisville, however, refused to grant the deed under a city ordinance preventing blacks from moving into neigh-

borhoods in which whites owned a majority of the residences (and vice versa). Warley claimed the contract was thus invalid, and Buchanan then sued for breach of contract. The Kentucky Court of Appeals upheld the ordinance and ruled the contract unenforceable, but the U.S. Supreme Court struck it down as the deprivation of a property right without due process of law as required by the Fourteenth Amendment.

The city attempted to justify the ordinance as a valid exercise of the government's police power in order to prevent racial strife, which might occur if blacks and whites lived together in the same neighborhoods. It also argued that the "separate but equal" holding of *Plessy v. Ferguson,* 163 U.S. 537 (1896), controlled the disposition of the case. A unanimous Supreme Court, however, rejected both arguments and declared that racial zoning was unconstitutional. First, Justice William R. Day rejected the argument that the decision in *Plessy* was controlling by noting that *Plessy* had dealt only with the reasonable accommodation of separating races and not with the outright denial of a right, especially a property right, which was at issue in this case. Then, Justice Day stated that the police power rationale could not serve to deny fundamental property rights protected by the Constitution, namely the right to alienate (transfer) property freely. Although he noted in the opinion that promoting the public peace by preventing potential racial conflicts was a desirable goal, he ultimately concluded that such a goal could not be accomplished by infringing upon rights guaranteed by the Constitution. Moreover, he openly called into question the validity of the ordinance's rationale by pointing out an exception in the ordinance allowing black servants to live in white homes and by noting that the ordinance did not prohibit nearby residences owned by different races as long as they were on different blocks.

In the wake of the *Buchanan* decision, the NAACP successfully used the Supreme Court's libertarian "defense of property rights" argument to overturn similar segregationist housing ordinances in other cities, though some cities continued to pass racial zoning ordinances until the 1940s. The *Buchanan* decision did not end legal residential segregation, however, because it did not apply to private racially restrictive covenants in land sales, which were not ruled illegal until 1953. By that time, the Supreme Court had also relaxed its scrutiny of limitations on property rights and was becoming more concerned with the protection of civil rights and the overall assurance of equal protection under the laws. Nonetheless, the Court's *Buchanan*-era view of property rights as fundamental and substantively protected by due process allowed the NAACP and other groups to help end government-mandated residential segregation in the United States.

Buck v. Bell (1927)

In 1924, Virginia passed a law that legalized the practice of sterilizing persons in mental institutions, and three years later, in *Buck v. Bell,* 272 U.S. 200 (1927), the U.S. Supreme Court upheld the law. Its opinion promoted views closely akin to social Darwinism, the extension of Charles Darwin's theory of natural selection, or "survival of the fittest," to the social arena. The state's legislative intent was to prevent the mentally disadvantaged from reproducing and passing their mental disabilities to future generations.

Under the law, mental institutions followed specific procedures for the sterilization of patients. The superintendent recommended sterilization of a patient to the board of directors and then informed the patient and the patient's guardian of the decision. The patient had an opportunity to be heard by the board of directors. If the board concluded that the patient should be sterilized, the patient had thirty days to appeal the decision to the state courts. If the patient was sterilized, the institution released the patient, since that individual no longer posed a genetic threat to society.

The year Virginia passed the law, an eighteen-year-old institutionalized woman brought her case to the Virginia Circuit Court, challenging its constitutionality. Carrie Buck's guardians had placed her in the Virginia State Colony for Epileptics and Feeble-Minded after she was raped. Carrie gave birth to a daughter while living in the institution, where her mother also resided. Although recent information suggests that Carrie was not mentally deficient, doctors characterized both women as having the mental capabilities of a young child. The superintendent, Dr. Albert Priddy, replaced by John H. Bell in 1925, determined that Carrie Buck's child would be mentally impaired, so he asked the board to approve Carrie's sterilization.

Irving Whitehead, a retired board member, represented Carrie. Whitehead argued that forced sterilization could never be constitutional and that the law violated equal protection since it did not forcibly sterilize mentally unstable persons not confined to institutions. The Supreme Court dismissed Whitehead's arguments, choosing to focus on procedural due process.

The Court, in an eight–one opinion written by Justice Oliver Wendell Holmes Jr., affirmed the law. The Court held that Carrie Buck had been afforded due process and reasoned that society's future benefit from Carrie's sterilization outweighed her right to bear children. Holmes's decision promoted genetic selection, and approximately twenty-five states enacted similar laws for the sterilization of persons in mental institutions within the next three years. Carrie Buck was one of 60,000 people sterilized in the United States after the Court's decision. Nazi Germany also relied on the Court's decision in forming and defending its genetic laws designed to produce a master race. Although the practice was continued in America until the 1970s, the eugenics movement largely lost its appeal after World War II.

The Court has never officially overturned this infamous case; however, the 1942 decision of *Skinner v. Oklahoma,* 316 U.S. 535, that declared forced sterilization of repeat criminal offenders unconstitutional has been subsequently applied to other forced sterilizations. In *Skinner*, the Court accepted the equal protection argument that it had previously rejected and declared the right to bear children fundamental, subject to strict scrutiny by the courts. Today, *Buck* remains at odds with the development toward privacy rights and personal liberties not only in *Skinner* but also in cases involving birth control and abortion.

Buckley v. Valeo (1976)

In *Buckley v. Valeo,* 424 U.S. 1 (1976), the U.S. Supreme Court, with varying votes on a range of issues, upheld provisions of the Federal Election Campaign Act (FECA) of 1971 as amended in 1974 but invalidated several other provisions. The case posed important questions under the First Amendment to the Constitution, particularly that amendment's protections for freedom of speech and freedom of association.

As a result of the Watergate affair (the bungled 1972 burglary of Democratic National Committee headquarters in the Washington, D.C., Watergate apartment complex by individuals who had ties to President Richard M. Nixon, plus the subsequent attempted cover-up of White House involvement, all of which led to Nixon's resignation in 1973), and in an attempt to rid political campaigns of corruption by restricting financial contributions to candidates, Congress amended FECA in 1974 and passed the Presidential Election Campaign Fund Act (PECFA). PECFA set limits on the amount of money an individual could contribute to a single campaign, and it required the reporting of contributions above a certain

amount. In addition, the Federal Election Commission (FEC) was established to enforce the statute.

In January 1975, Senator James L. Buckley (R-NY) filed suit in U.S. District Court for the District of Columbia charging that FECA and PECFA were unconstitutional on several grounds. The defendants included Francis R. Valeo, who as secretary of the U.S. Senate was an FEC member, and the newly created FEC itself.

The district court, in accordance with FECA provisions, certified the constitutional questions in the case to the U.S. Court of Appeals for the D.C. Circuit. In August 1975 that court ruled to uphold the great majority of FECA's substantive provisions with respect to contributions, expenditures, and disclosure. On appeal to the U.S. Supreme Court, among the questions presented was whether limits placed on electoral expenditures by the FECA violated the rights to freedom of speech and freedom of association as provided under the First Amendment.

The Court upheld the constitutionality of provisions setting limitations on contributions by individuals to candidates for federal office, the disclosure and recordkeeping requirements, and the public financing of presidential elections. The Court struck down provisions setting limits on expenditures by candidates and their committees, except for presidential candidates who accepted matching public funds.

With respect to the contribution limits, the Court held they constituted one of the law's primary weapons against the reality or appearance of improper influence stemming from the dependence of candidates on large campaign contributions. In contrast to the ruling on contribution limits, the Court found that the FECA expenditure limit imposed substantial restraints on political speech and therefore was a violation of First Amendment protections.

The appellants had claimed the reporting and disclosure requirements constituted a violation of their rights to free association under the First Amendment. The Court recognized that disclosure could seriously infringe on freedom of association, but concluded the government had a compelling interest in helping voters evaluate candidates by informing them of the sources and uses of campaign funds as well as deterring corruption or the appearance of corruption by making public the names of significant donors.

In upholding the public financing of presidential campaigns through the voluntary checkoff system, the Court ruled that it was constitutionally valid to require that a presidential candidate agree to an expenditure limit as a condition for receiving public funding.

The holdings of the Court with respect to contributions and expenditures were controversial for the next quarter century, and debate culminated in the Bipartisan Campaign Reform Act of 2002, a challenge to which also reached the Supreme Court in *McConnell v. Federal Election Commission,* 124 S. Ct. 619 (2003). This decision upheld most parts of the new law, including restrictions on "soft money" expenditures made by individuals not officially associated with political candidates.

Burger, Warren Earl (1907–1995)

President Richard M. Nixon replaced Earl Warren with Warren E. Burger as chief justice in 1969. Burger was born in Saint Paul, Minnesota, September 17, 1907, and he worked his way through the University of Minnesota and Saint Paul College of Law, graduating magna cum laude from law school in 1931. He joined a firm in Saint Paul, where he maintained a general private practice until 1953. He was extensively involved in Republican politics, managing the presidential bids of Minnesota Governor Harold Stassen in 1948 and 1952. At the 1948 Republican nominating convention, he met Herbert Brownell, then

campaign manager for New York Governor Thomas Dewey. In 1952, Burger was instrumental in securing the presidential nomination for Gen. Dwight D. Eisenhower when Stassen's candidacy was no longer viable. Brownell became Eisenhower's attorney general and named Burger to head of the Civil Division of the Justice Department. In 1955, Eisenhower nominated Burger to a seat on the U.S. Court of Appeals for the District of Columbia, where he served until his elevation to the Supreme Court.

An articulated priority of Richard M. Nixon was to neutralize the Warren Court's (1953–1969) expansion of rights afforded criminal defendants. He wanted Warren Burger to lead the Court to decisions different from those in the Warren era. Burger performed as expected on criminal rights issues, supporting capital punishment, criticizing the exclusionary rule (disallowing evidence obtained through police misconduct), and seeking to limit the scope of the *Miranda* doctrine (requiring defendants to be informed of their constitutional rights). He also had substantial impact on First Amendment issues, leading his Court to an accommodationist position in cases dealing with establishment of religion. Burger fashioned the three-prong *Lemon* test pertaining to establishment of religion in *Lemon v. Kurtzman,* 403 U.S. 602 (1971), which still remains in effect. He also wrote the Court's opinion in the case that permitted the Amish exemption from a state compulsory education law in *Wisconsin v. Yoder,* 406 U.S. 205 (1972). Burger crafted new definitional standards for obscenity in *Miller v. California,* 413 U.S. 15 (1973), encouraging more aggressive state and local regulation of obscenity. His record on a free press was somewhat mixed; he dissented in the *Pentagon Papers* case, *New York Times Co. v. United States,* 403 U.S. 713 (1971), but struck down a court order restricting coverage of a criminal trial in *Nebraska Press Association v. Stuart,* 427 U.S. 539 (1976). He supported press access to criminal trials in *Richmond Newspapers, Inc. v. Virginia,* 448 U.S. 555 (1980), while rejecting a claimed privilege of source confidentiality in *Branzburg v. Hayes,* 408 U.S. 665 (1972).

Burger's record on equal protection is often presumed to be unsympathetic. In *Alexander v. Holmes County Board of Education,* 396 U.S. 19 (1969), however, he was part of a unanimous Court that ordered immediate desegregation of a number of Mississippi school districts, thus closing the open-ended "all deliberate speed" language of *Brown v. Board of Education,* 347 U.S. 483 (1954). He authored the first important busing opinion in *Swann v. Charlotte-Mecklenburg Board of Education,* 402 U.S. 1 (1971), upholding the authority of lower federal courts to remedy constitutional violations in public education. Although generally opposed to affirmative action programs, Burger acknowledged broad congressional authority to remedy discrimination in his majority opinion in *Fullilove v. Klutznick,* 448 U.S. 448 (1980). Burger resisted extension of the Equal Protection Clause to classifications other than race. Although he occasionally supported claims of impermissible gender discrimination, as in *Reed v. Reed,* 404 U.S. 71 (1971), he rejected the view that gender is a "suspect" classification that should be subjected to more demanding standards than other legislative enactments. Finally, it was the Burger Court that handed down the historic decision in *Roe v. Wade,* 410 U.S. 113 (1973), which established constitutional protection for abortion rights.

Burger was a highly visible chief justice. He tended to assign to himself the task of writing the majority opinion in major cases, such as the decision on executive privilege in *United States v. Nixon,* 418 U.S. 683 (1974). He also had a distinguished record in the area of judicial management and court reform. He retired from the Court in July 1986 and served as chairman of the Commission on the Bicentennial of the United States Constitution. Burger died June 25, 1995.

Burson v. Freeman (1992)

In *Burson v. Freeman,* 504 U.S. 191 (1992), the U.S. Supreme Court upheld a provision of Tennessee's Electoral Code prohibiting the solicitation of votes and the distribution or display of campaign materials within a 100-foot radius from the door of the polling place on election day. "Campaign-free zones" such as this—in effect in forty-seven states and varying in distance from twenty-five feet (Missouri) to 1,000 feet (Hawaii)—ostensibly deter fraud and intimidation by insulating individuals from encounters with campaign workers. And yet, as longtime political activist and campaign worker Mary Rebecca Freeman contended, they also prevent advocates from interacting with and persuading undecided voters as they proceed into the polling place. They raise issues of First Amendment freedoms such as the right of free speech.

American elections, originally conducted in public, were altered dramatically by the widespread adoption of the Australian ballot, a system designed to offer voters the increased secrecy of a standard, official ballot and the privacy of individual polling booths. During a period of national electoral reform at the end of the nineteenth century, and in an effort to preserve the "purity" of its elections, Tennessee switched to the Australian system and, in 1972, enacted a comprehensive code to regulate the conduct of elections—the code that included the statute in question.

Inspired by rumors that the state was going to begin *entirely* prohibiting campaign workers from the grounds of the polling place, Freeman and her attorney challenged the statute as facially unconstitutional—an example of pure content discrimination—singling out political speech, purportedly the most protected form of speech, for restriction in this environment. Furthermore, Freeman explained, the point where she could legally interact with voters at her local polling place (the 101st foot) was in the middle of the street. Still, the state alleged, such zones were necessary to prevent the harassment and intimidation of voters—problems perhaps most pronounced in the American South.

In one of the rare instances when a statute satisfied the requirements of "strict scrutiny" review, Justice Harry A. Blackmun, writing for the Court, reasoned that restrictions on speech and advocacy of this sort were constitutional because they were enacted and enforced to preserve voting rights. Significantly, Justice Blackmun's reasoning traced the history of electoral reform efforts in the United States (and abroad) and concentrated on the intimidation and fraud that have plagued elections in the past.

Yet, this emphasis on historical evidence is what troubled the dissenters. Past practice, Justice John Paul Stevens argued, does not imply present necessity. Certainly "reforms" of this sort were a wise idea at some point, but the state already had laws on the books prohibiting voter fraud and intimidation. Further, by singling out political speech—and prohibiting it within the 30,000 square feet around each polling place—the state, ironically, disfavored the form of expression it was *most* obliged to preserve. *Burson* presents, then, the difficult balancing of competing rights and concerns often seen in cases about freedom of speech. In a literal and figurative sense, where should the line be drawn that preserves both the right to vote and the right to engage in political discourse?

Burton, Harold H. (1888–1964)

As mayor of Cleveland, U.S. senator, and an associate justice of the U.S. Supreme Court, Harold H. Burton

made a number of important contributions in the area of civil rights and liberties. He was born in Jamaica Plain, Massachusetts, where his father was a civil engineering professor and dean of the faculty at the Massachusetts Institute of Technology. Burton graduated summa cum laude from Bowdoin College in Brunswick, Maine, in 1909 and from Harvard Law School in 1912. He married his childhood friend Selma Florence Smith and moved to Cleveland, Ohio, to begin practicing law.

In Cleveland, Burton set his sights on a career in politics. He began working with his wife's uncle, not only in Cleveland but also in Salt Lake City, Utah, and Boise, Idaho, where he became a successful attorney for power companies. Burton volunteered for the infantry during World War I and entered the conflict in 1917 as an army lieutenant. The following year he rose in rank to captain and received the Purple Heart and Belgium's Croix de Guerre. After the war, he returned to his corporate law practice in Cleveland, taught at Western Reserve University Law School from 1923 to 1925, and ultimately set up his own law firm, Cull, Burton, and Laughlin.

Burton was elected to the Board of Education of East Cleveland in 1927. He served in the Ohio House of Representatives the following year and as Cleveland's director of law from 1929 to 1932. After returning to private practice for three years, Burton ran for mayor. Not only did he win, but he was reelected twice and remained in that position until his election to the U.S. Senate in 1940. As mayor, Burton helped restore economic prosperity to the city by combating organized crime and developing employment programs. In the Senate, he was generally liberal on international affairs and conservative in the domestic realm. He pressed for U.S. participation in the United Nations after World War II.

In 1945, President Harry S Truman appointed Burton to the U.S. Supreme Court. Truman had served with Burton on the Senate Special Committee to Investigate the National Defense and remembered his former colleague when it was suggested that he nominate a Republican. Burton's moderate conservatism made him an ideal choice, and the Senate easily confirmed him. On the Court, Burton took a methodical approach to his work. He labored for long hours, often staying at his desk until well after midnight. Burton's opinions were generally consistent with his moderate conservative philosophy. In the controversial area of racial discrimination, however, Burton was a liberal. He joined the Court's opinion in *Shelley v. Kraemer,* 344 U.S. 1 (1948), striking down racially restrictive covenants in housing. He called it a "privilege" to join the unanimous Court in striking down racial segregation in public schools in *Brown v. Board of Education,* 347 U.S. 483 (1954).

Still, in the Cold War era, he often voted to uphold government authority over individual rights. For example, in *Bute v. Illinois,* 333 U.S. 640 (1948), he wrote the majority opinion holding that the Due Process Clause of the Fourteenth Amendment did not require states to provide counsel for defendants. *Gideon v. Wainwright,* 372 U.S. 335 (1963), later overturned this decision. In 1957, Burton was diagnosed with Parkinson's disease, and he retired the following year. He then served in "senior status" for four years on the D.C. Circuit Court of Appeals until his death on October 28, 1964.

Bus Searches

Bus searches have become a common tactic employed by law enforcement officials in their efforts to combat drug trafficking. These searches, or sweeps, are typically of intercity buses traveling on known drug routes and are conducted at normally scheduled bus stops. Such searches require the courts to balance law

enforcement's interests in effective drug interdiction with bus passengers' expectations of privacy. Central to the determination of whether these searches are permissible under the Fourth Amendment is an evaluation of the consensual nature of the police-passenger encounter and the voluntariness of a passenger's consent.

The Court explicitly considered whether bus sweeps are by their nature nonconsensual in *Florida v. Bostick,* 501 U.S. 429 (1991). Terrance Bostick sought to suppress as evidence in his trial cocaine that was found in his luggage when law enforcement officers searched it during a bus trip from Miami, Florida, to Atlanta, Georgia. The officers had boarded the bus during a layover in Fort Lauderdale, Florida, and approached Bostick, asking to see his identification and his ticket and subsequently asking to search his luggage, after advising him that they were narcotics officers searching for drugs. The Florida Supreme Court ruled in Bostick's favor, and the state of Florida appealed to the U.S. Supreme Court. In issuing its ruling, the Court acknowledged that there was no reasonable suspicion for the search of Bostick's person or luggage. It went on to assert, however, that an encounter like that between the police and Bostick did not necessarily rise to the occasion of being a seizure as understood under the Fourth Amendment. The majority further stated that although the conditions of a cramped bus should be taken into account in ascertaining whether a reasonable person would feel free to terminate the encounter with the police, the fact that the encounter occurs on a bus is not by itself enough to invoke the Fourth Amendment.

Whereas law enforcement agents are free to pose questions to individuals such as bus passengers in the absence of reasonable suspicion, absence of it obligates law enforcement to abide by the Supreme Court's rulings with regard to permission to conduct a search. The Court recognized consent as an exception to the Fourth Amendment's warrant requirement—consent by the party to be searched or by the owner of the items to be searched—in *Schneckloth v. Bustamonte,* 412 U.S. 218 (1973). The key to a consent search is the voluntary nature of that consent. If consent has been coerced, then the exception to the warrant requirement based on consent does not apply, and any evidence obtained cannot be used against the accused. In the *Bostick* case, the officers who boarded the bus advised Bostick that he had the right to refuse to consent to the search of his luggage. Further, though it was clear to the passengers on the bus that at least one of the officers was armed, there was no evidence that the officer used the presence of his gun to coerce Bostick into providing consent. These two factors led the Court to conclude that consent was voluntary on Bostick's part.

It is clear that overt threats, whether through the use of a gun or otherwise, would render consent involuntary, but the ruling in *Bostick* was unclear as to how important it was for the officers to have advised Bostick of his right to decline to give consent. The Court addressed this issue squarely in its 2002 ruling in *United States v. Drayton,* 536 U.S. 194. Christopher Drayton and Clifton Brown Jr. were passengers on a bus traveling from Fort Lauderdale, Florida, to Detroit, Michigan. During a layover in Tallahassee, Florida, three police officers boarded the bus. While one kneeled in the driver's seat, facing the passenger compartment, the other two officers made their way to the rear of the bus. One of them then made his way forward up the aisle, stopping to ask passengers about their travel plans and to match passengers with their luggage in the overhead rack.

When the officer came to Drayton and Brown, they gave him permission to search their joint bag in the luggage rack, which did not contain any contraband. The officer, noting their baggy clothing despite the hot weather, first asked Brown if he could search his person. Brown agreed, whereupon the officer found suspicious packages in his groin area. After Brown's arrest, the officer asked Drayton for permission to search him as well. That search also uncovered drug packages. Drayton and Brown sought to have those drugs excluded at trial, based in part on the fact that the officer had not advised them of their right to refuse to consent to the search. The Court was unpersuaded and declined to find that such notification was mandatory to ensure that consent for a search was voluntary: "While knowledge of the right to refuse consent is one factor to be taken into account, the government need not establish such knowledge as the sine qua non of an effective consent."

In Otay Mesa, California, a border patrol officer searches a Greyhound bus bound for Los Angeles from Mexico. The officer is looking for a man who slipped under a fence into the United States, then entered the bus. Individuals have a right to refuse to consent to such searches or police questioning. *(© S. Rubin/The Image Works)*

In *Bond v. United States,* 529 U.S. 334 (2000), the Court considered the expectation of privacy that bus passengers reasonably enjoy with regard to their luggage. Steven Dewayne Bond was a passenger on a bus traveling from California to Arkansas. The route the bus took required it to stop at a border patrol station located at Sierra Blanca, Texas. At the station, a border patrol agent boarded the bus to ascertain the immigration status of its passengers. He did so as he made his way from the front to the back of the bus and then back toward the front of the bus, feeling and squeezing any soft luggage in the overheard rack. Feeling a hard object in a bricklike shape such as that commonly used for smuggling drugs, the agent asked Bond for permission to open the bag, which Bond gave. Bond sought to have the discovered brick of methamphetamine excluded at his trial. Unsuccessful in the lower courts, Bond appealed to the Supreme Court, which ruled in his favor. The Court acknowledged that bus passengers have at least some expectation that their luggage will be handled by others. The kind of manipulation in this case, however, which was intended specifically to identify drugs or other illegal paraphernalia, far exceeded what a passenger would normally expect. On this basis, the Court found the search to be unconstitutional, thereby invalidating what some legal scholars have referred to as a "plain feel" exception to the warrant requirement analogous to the "plain view" principle (permitting admission of evidence that is in plain sight of police as they are engaged in legitimate investigative activities).

Bush, George H.W. (b. 1924)

Promising "a kinder, gentler nation" during his inaugural address in 1989, George H.W. Bush (U.S. president, 1989–1993) initially appeared to offer a more moderate agenda than had Ronald Reagan. However, those expecting a significant departure from the Reagan era were to be disappointed. Bush had not received a mandate for change from Reagan's policies in the 1988 election. He received 53.3 percent of the vote, and both houses of Congress were controlled by the Democrats. In addition, much of Bush's background before he was elected vice president and then president was in foreign affairs. He had served as ambassador to the United Nations, special envoy to China, and Central Intelligence Agency director. Under such circumstances, it was no surprise that the Bush administration increasingly turned to foreign policy issues over domestic issues as a way to make its political mark. The culmination of the administration's foreign policy actions was, of course, the 1990–1991 Gulf War to repel Iraq's invasion of Kuwait. Still, the question remains: Was the promise of a "kinder and gentler nation" kept during the administration of George Bush?

Much of Bush's activity in the area of civil rights dealt with employment. He vetoed the 1990 civil rights bill intended to reverse a series of Supreme Court decisions that had made it more difficult to prove job discrimination. It was the first defeat of major civil rights legislation in a quarter century. A somewhat modified version of the vetoed bill was passed in 1991 and signed by President Bush. Its passage was partly a response to political fallout from the congressional hearings for the nomination of Clarence Thomas to the U.S. Supreme Court.

Those hearings were among the most memorable events in the Bush years. Nominated by President Bush to replace retiring Justice Thurgood Marshall, Thomas was young, Republican, very conservative, and African American, with a compelling story of personal success under difficult circumstances. However, charges were brought that Thomas had sexually harassed a female employee. In a circuslike atmosphere, the hearings were conducted before an all-male Senate Judiciary Committee. The hearings and the vote on Thomas's nomination proved a major polarizing event. Thomas was confirmed by the Senate in a close vote in a process that ultimately involved partisanship, ideology, race, and sex. And, to little surprise, Thomas quickly proved a consistently conservative vote on the Supreme Court. By contrast, President Bush's first nominee, David H. Souter, developed a moderate-to-liberal voting record.

Although the Bush administration was far from supportive of traditional civil rights legislation, in one area it made a major impact. The administration supported, and President Bush signed, the Americans with Disabilities Act of 1990, the most important federal law protecting the rights of the disabled.

With the exception of the disabled, Bush's promise of "a kinder, gentler nation" was not met. His administration was generally unsympathetic to civil rights and civil liberties policies. Economic downturn coupled with an increase in taxes that was contrary to his "no new taxes" pledge led to his political downfall. Even though he had in the previous year seemed unbeatable in the aftermath of his success in the Gulf War, the 1992 election left George H.W. Bush a one-term president.

C

Calder v. Bull (1798)

During the first decade of the U.S. Supreme Court (1790–1800), the justices decided few cases. One decision, however, *Calder v. Bull,* 3 U.S. 386 (1798), had a long-term effect in one critical legal area, the prohibition against ex post facto laws, or "after the fact" laws. The first clause of Article 1, Section 10 of the Constitution, the Ex Post Facto Clause, forbids states from passing laws making previously legal acts illegal and punishing individuals for them. This ensures that citizens cannot be punished retroactively for an act that was legal when they did it but that later was made illegal.

Calder began when the Connecticut state probate court rejected the will of Normand Morrison in 1793. The beneficiaries of that will, the Caleb Bull family, did not appeal and let a Morrison grandson inherit the estate. In 1795 the Connecticut legislature passed a law overturning the probate court's ruling and allowing Morrison's original will to be enforced and the Bulls to inherit. The grandson challenged the Connecticut law as a violation of the Ex Post Facto Clause.

Justice Samuel Chase took the opportunity in the case not only to define the relevant clause but also to compose an extended opinion on the proper role of the courts in interpreting the Constitution. Chase first decided the case in favor of the Bulls by ruling that the Ex Post Facto Clause applied only to criminal and not civil cases. Chase noted the existence of the Fifth Amendment's Takings Clause, which prohibited government from taking private property without paying compensation. Applying the Ex Post Facto Clause to civil cases would have the same effect as the Takings Clause, thus making it redundant. According to Chase, this required the justices to limit the clause.

Chase went further in his opinion in stating that there were limits on government power not found in the Constitution. He listed several examples of when government acted unjustly and beyond the grant of power to act in the general welfare of citizens. He supported a natural-law view of the Constitution, meaning justices should find natural rights and enforce them even when they did not appear in the Constitution.

In a separate opinion, Justice James Iredell disagreed with Chase's approach, arguing that his idea of natural law gave judges too much power and allowed them to invade the proper powers of the other branches of government. The Chase-Iredell debate has continued throughout the Court's history, with some justices favoring the use of natural law to strike down laws considered unjust, and other justices believing in deferring to the government and striking down laws only when they were clearly unconstitutional.

While that debate has continued, Chase's original ruling that the Ex Post Facto Clause applied only to criminal cases has seemed settled law. But two major legal figures, Robert Bork in *The Tempting of America* (1990) and Justice Clarence Thomas in his concurring opinion in *Eastern Enterprises v. Apfel,* 524 U.S. 498 (1998), have questioned the correctness of *Calder,* with both men suggesting that it might have wider scope.

Cantwell v. Connecticut (1940)

Cantwell v. Connecticut, 310 U.S. 296 (1940), was a landmark case in which the U.S. Supreme Court addressed the meaning and reach of the Free Exercise Clause of the First Amendment to the Constitution. Under that clause, Congress is prohibited from en-

gaging in activity that would interfere with the individual's right to free exercise of a chosen religion. In *Cantwell,* the Court considered whether the same prohibition should extend to state activity as well. This analysis rested on the "incorporation" doctrine. A unanimous Court, through the opinion of Justice Owen J. Roberts, incorporated (absorbed) the Free Exercise Clause into the Fourteenth Amendment's Due Process Clause and thus applied the Free Exercise Clause to state behavior for the first time.

Newton Cantwell and his two sons were arrested in New Haven, Connecticut, for distributing books and pamphlets and playing records on a portable phonograph in an overwhelmingly Catholic neighborhood; all the material distributed or played was strongly anti-Catholic. The three were charged with violating a city ordinance that required obtaining a permit from the secretary of the Public Works Council, who was to determine if the material was religious in nature as opposed to charitable or philanthropic. The Cantwells, all of whom were adherents of the Jehovah's Witnesses faith, were convicted, but the Supreme Court overturned their conviction, ruling that the city law violated the Due Process Clause of the Fourteenth Amendment because its stated concept of "liberty," according to Justice Roberts, included the Free Exercise Clause.

Justice Roberts wrote that the two religion clauses of the First Amendment (the Establishment Clause being the second) included two key concepts: "freedom to believe and freedom to act. The first is absolute but, in the nature of things, the second cannot be. Conduct remains subject to regulation for the protection of society." In essence, Roberts wrote into U.S. constitutional law the notion expressed by Thomas Jefferson in the late eighteenth century in the debate over religious freedom in Virginia: The right of free exercise of religion was indeed fundamental, but its exercise could not be not absolute; if religiously motivated action harmed the public good in some substantive manner, such action was subject to state regulation.

As the Court strongly emphasized in *Cantwell,* however, such state regulation "must be so exercised as not, in attaining a permissible end, unduly to infringe the protected freedom." The Court upheld neutral, nondiscriminatory legislation (time, place, and manner restrictions) in *Cantwell,* but regulations such as the New Haven ordinance, which allowed a governmental official to rule on religious matters, were held to violate the First Amendment's guarantee of free exercise of religion.

The unanimous ruling in *Cantwell* served to usher in a new era of constitutional jurisprudence in which the Court entertained cases involving nonmainstream religious groups whose practices conflicted with state regulations. *Cantwell* was the first major, modern Court ruling to address the meaning and application of the Free Exercise Clause of the First Amendment.

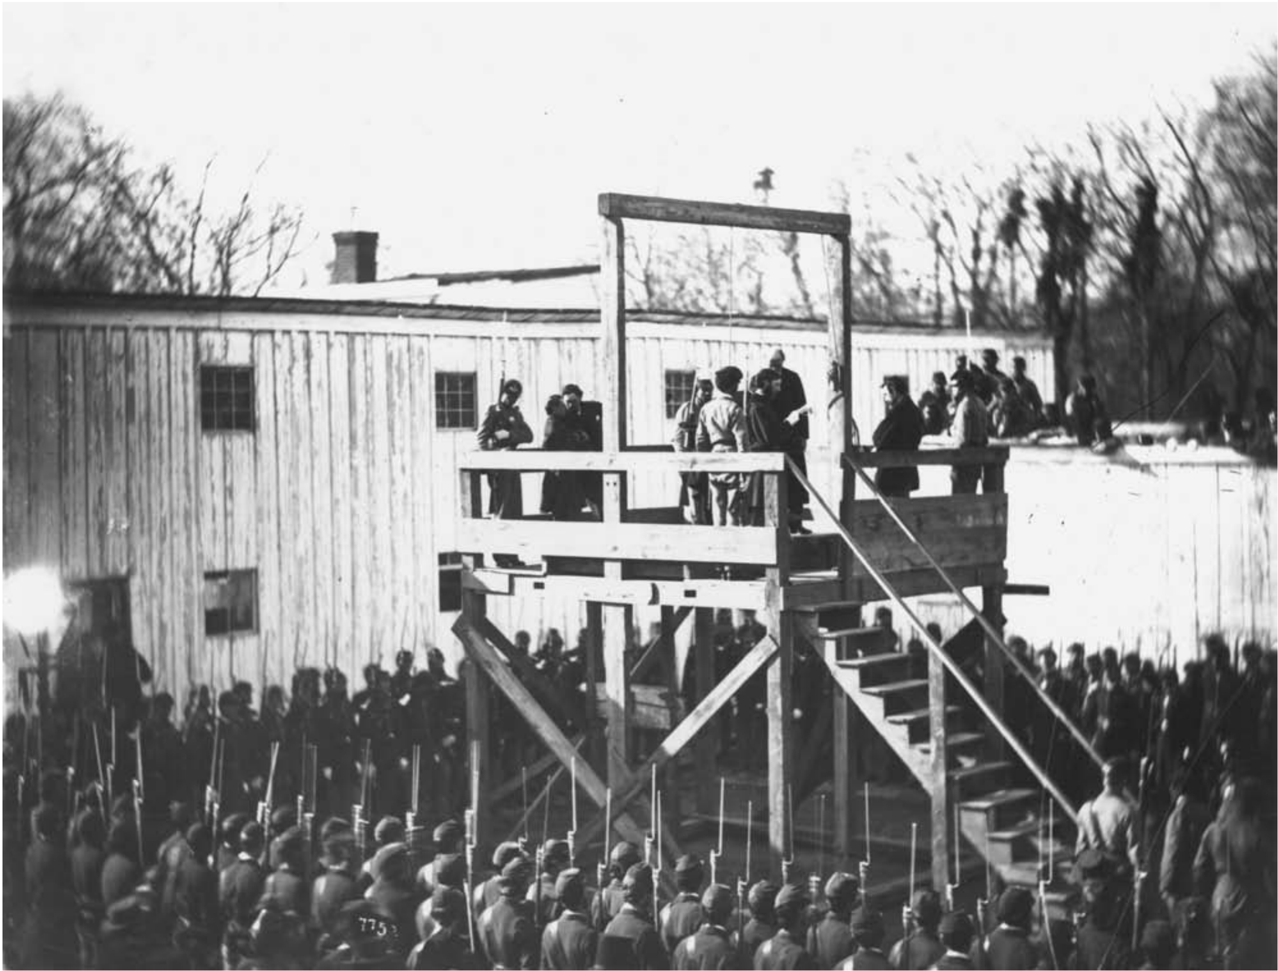
Capital Punishment

Most countries that sanction the use of the death penalty in capital crimes also have an active cadre of opponents who continually argue that it should be discarded. In the United States, the argument against capital punishment has centered on the issue of whether the death penalty under any or all circumstances violates the protection against "cruel and unusual punishments" provided in the Eighth Amendment to the U.S. Constitution. Capital punishment in the United States has, indeed, sometimes included what would be considered barbaric under contemporary interpretations of "cruel and unusual." For example, in Salem, Massachusetts, during the notorious witch trials of the late seventeenth century, the Massachusetts courts allowed accused witches to be burned or buried alive. In some parts of the country, being beaten to death was not unusual, and hangings were so popular they were considered social events. By the twentieth century, the only forms of capital



Death by hanging, a form of execution used during the colonial period and later, has not been regarded as a cruel and unusual punishment that violates the Eighth Amendment, though it was replaced by other forms of capital punishment. Here the death warrant is read to Captain Henry Wirz in Washington, D.C., November 1865, prior to his execution. *(Library of Congress)*

punishments accepted in the United States were electrocution, the gas chamber, lethal injection, and firing squad, the latter deemed acceptable in only a few states and the military.

In an early attempt to determine whether the death penalty was indeed cruel and unusual punishment, the U.S. Supreme Court held in *Wilkerson v. Utah,* 99 U.S. 130 (1879), that "it is safe to affirm that punishments of torture . . . and all others in the same line of unnecessary cruelty are forbidden by [the Eighth Amendment to] the Constitution." Some twenty years later, the Court again examined the issue in *Weems v. United States,* 217 U.S. 349 (1910), overturning a Philippines statute that allowed accused criminals to be imprisoned in irons for periods between twelve and twenty years for supplying fraudulent information on public records; at the time, the Philippines was under the protection of the United States. Almost three decades later, in *Louisiana ex rel. Francis v. Resweber,* 329 U.S. 459 (1947), the Court declined to find that a botched electrocution prohibited the state from attempting to execute someone again.

During the 1930–1967 period, 3,859 individuals were executed in the United States under sentences handed down by civilian courts. Approximately 86 percent of the executions were due to murder convictions, and some 12 percent were a result of rape convictions. Ninety percent of all those executed for rape during this period were African Americans. Kidnapping, burglary, robbery, sabotage, aggravated assault,

and espionage convictions made up the remainder of executions. A full 60 percent of all executions took place in the South. By 1972, forty-two of the fifty states retained the death penalty, but thirty-one of them had not carried out executions for a number of years.

In 1972 when the Supreme Court agreed to determine the constitutionality of the death penalty in *Furman v. Georgia,* 408 U.S. 238 (1972), there were 600 people awaiting execution throughout the United States. After the decision, all of these death sentences were reduced to life imprisonment. Since *Furman,* however, more than 2,000 other defendants have received death sentences. In *Furman,* the Court decided that Georgia's death penalty *as written* violated both the Eighth and Fourteenth Amendments because the state had "arbitrarily and discriminately" imposed the death penalty. The Court's holding effectively overturned death penalty statutes in forty-two states.

The Court was so divided over the constitutionality of the death penalty in *Furman* that each justice in the majority wrote a separate opinion. Justices William O. Douglas, Potter Stewart, and Byron R. White argued that Georgia's statute was unconstitutional because the state did not make the death penalty mandatory for certain crimes, thus giving judges excessive authority over sentencing. Too much discretion, in the opinion of the Court, allowed the "penalty to be selectively applied, feeding prejudices against the accused if he is poor and despised, and lacking political clout, or if he is a member of a suspect or unpopular minority, and saving those who by social position may be in a more protected position."

In *Furman,* the Supreme Court provided states with one of two ways to create constitutional death penalty statutes: States either could limit a jury's discretion to make arbitrary sentences by mandating the death penalty only for certain crimes, or states could set up separate proceedings for criminal trials and sentencing hearings (called bifurcation). Following the Court's advice, ten states passed mandatory sentencing laws, and twenty-five established a two-stage process for death penalty cases.

Four years later, the Supreme Court considered the revised death penalty statutes of five southern states. In *Gregg v. Georgia,* 428 U.S. 153, *Proffitt v. Florida,* 428 U.S. 242, and *Jurek v. Texas,* 428 U.S. 262, all three decided in 1976, the Court held that Georgia, Florida, and Texas, which had instituted bifurcated trials in which the sentencing juries considered aggravating and mitigating factors, had met the standards established in *Furman.* In *Woodson v. North Carolina,* 428 U.S. 280, and *Roberts v. Louisiana,* 428 U.S. 325, also decided in 1976, the Court determined that North Carolina and Louisiana, which had established mandatory penalties for certain designated crimes, had not. The Court concluded that the Eighth Amendment prohibited only "barbaric" forms of punishment and not the death penalty when constitutionally applied.

Subsequently, in *Coker v. Georgia,* 433 U.S. 584 (1977), the Court held that imposing the death penalty for rape cases involving adult women violated the "cruel and unusual punishment" element of the Eighth Amendment, and reiterated this position three years later in *Beck v. Alabama,* 447 U.S. 625 (1980). The following year, in *Lockett v. Ohio,* 438 U.S. 586 (1978), the Court overturned Ohio's death penalty law by determining that the state was too strict in establishing mitigating factors in death penalty sentencing guidelines.

In *Enmund v. Florida,* 458 U.S. 782 (1982), the Court overturned the death sentence of an individual who had driven a getaway car away from a murder scene but who had not been a party to the crime. Five years later, in *Tison v. Arizona,* 481 U.S. 137 (1987), the Court held that accomplices could be executed but only if they were major participants in the crimes or if they had shown "reckless indifference to the value of human life." In *Wainwright v. Witt,* 469 U.S. 412 (1985), the Court overturned the 1968 decision in *Witherspoon v. Illinois,* 391 U.S. 510, in which it had determined that opposition to the death penalty did not necessarily exclude a juror from a capital case, deciding in *Wainwright* that potential jurors could be excluded from death penalty cases if their views would substantially impair carrying out their role as jurors.

A little over a decade after Georgia reinstated its death penalty, the Supreme Court agreed to examine the issue of whether the state applied it discriminatorily. In *McCleskey v. Kemp,* 481 U.S. 279 (1987), the Court determined that even though studies conducted by David Baldus of the University of Iowa law school revealed that blacks were significantly more

likely than whites to be sentenced to death in Georgia, the state's death penalty was not unconstitutional. In *Stanford v. Kentucky,* 492 U.S. 361 (1989), the Court reexamined the issue of death penalties for minors, upholding the death sentence of a defendant who had been tried and convicted as an adult, although he was just past seventeen when the murder occurred.

Over the past few decades, the Supreme Court has had some difficulty in determining its position on whether capital punishment as applied to the mentally challenged violates the Eighth Amendment. In *Atkins v. Virginia,* 536 U.S. 304 (2002), the Court rejected its decision in *Penry v. Lynaugh,* 492 U.S. 302 (1989), in which it had declared that "[t]he Eighth Amendment does not categorically prohibit the execution of mentally retarded capital murderers of petitioner's reasoning ability."

In *Atkins,* the Court referred to its decision in *Trop v. Dulles,* 356 U.S. 86 (1958), in which it attempted to solidify its interpretation of what constituted "cruel and unusual punishments." In the *Atkins* decision, the Court admitted that it had not been able to identify the exact scope of the phrase, recognizing that the "scope is not static" because the Eighth Amendment must necessarily "draw its meaning from the evolving standards of decency that mark the progress of a maturing society." According to *Harmelin v. Michigan,* 501 U.S. 957 (1991), these evolving standards "should be informed by objective factors to the maximum possible extent."

Death penalty opponents have been particularly critical of the decision in *Payne v. Tennessee,* 501 U.S. 808 (1991), in which the Court upheld the use of victim-impact statements that enabled families and friends of murder victims to add an emotional element to sentencing proceedings by describing the impact the crime had inflicted on family members and its victims. Critics of the death penalty also abhorred the Court's holding in *Arizona v. Fulminante,* 499 U.S. 279 (1991), which allowed a confession made by a prisoner to a cellmate to stand, even though the cellmate was an informant paid by the Federal Bureau of Investigation (FBI).

The role of judges in sentencing in death penalty cases has also been a volatile issue. In *Ring v. Arizona,* 536 U.S. 584 (2002), the Court held that the responsibility for identifying "aggravating factors" that would determine eligibility for the death penalty lay with juries rather than with judges.

The U.S. Congress also entered the death penalty debate in late 2003 when the Innocence Protection Act passed the House of Representatives with bipartisan support. The purpose of the bill was to require all criminal courts to preserve physical evidence permanently in federal crimes and to support postconviction DNA testing to reduce the number of occasions of accused criminals being found innocent through new technology after death sentences have been carried out.

Captive Audience

A captive audience is one that is unable to escape from an unwelcome speaker or message. The captive-audience doctrine is a court-developed means for balancing an unwelcome speaker's First Amendment right to free speech with the individual interests and

rights of unwilling audiences. The doctrine is rooted in the idea that the right to free speech is not absolute. In order for citizens to exercise their right to free speech, that right must be limited by other rights, such as the rights to privacy, safety, and property. In brief, the captive-audience doctrine states that when an audience is unable to escape from an unwelcome speaker or message, the state may intervene and limit the speaker's speech rights.

In deciding whether an audience is being held captive, the court applies two different standards: one for when the audience is in public, another for when the audience is at home. Traditionally, speakers have greater First Amendment protection when both they and the audiences are in a public place. The Supreme Court, in *Cohen v. California,* 403 U.S. 15 (1971)—which involved an individual wearing a jacket bearing vulgar language—announced that an audience in a public place was not held captive if the audience members could easily avoid the unwelcome speech. Wary of the slippery slope that could be created by allowing the state to regulate speech on behalf of offended audiences, the Court opted to err on the side of creating broad speech protection for speakers by limiting the applicability of the captive-audience doctrine in public places.

In spite of this, the Court has not completely banned application of the doctrine to speech in public places. The Court has elsewhere held that the captive-audience doctrine can be used to regulate advertising in some public transit settings and to limit the activities of antiabortion protesters outside abortion clinics.

Speech receives less protection when it is directed at an audience at home. The Court has depended upon the idea that when an audience is at home, it can claim a right to privacy that limits a speaker's First Amendment right to free speech. The home has been viewed as a sanctuary away from public places, and this premise enables the state to use the captive-audience doctrine to regulate speech that penetrates the home from the outside. This reasoning has been used to regulate indecent radio broadcasts during daylight hours, the volume on sound trucks in residential areas, and targeted-home picketing by protesters. The doctrine is limited, however, and cannot be used to regulate mail sent to the home unless the residents have notified the post office of their desire not to receive certain material.

Critics of the captive-audience doctrine have claimed that the Court applies it inconsistently and allows the state to regulate speech because of its content—traditionally an unconstitutional reason for speech regulation. Defenders of the doctrine, however, claim that it is necessary to balance the rights of the speaker against the various rights of the audience.

Cardozo, Benjamin N. (1870–1938)

Benjamin Cardozo of New York served as an associate justice on the U.S. Supreme Court for the brief span 1932–1938. He had suffered a heart attack before he was appointed to the Court, and his tenure was cut short by his untimely death in the summer preceding the Court's 1938–1939 term.

Cardozo was admitted to the New York bar in 1891 while still a student at Columbia University, and he was in private practice with his brother for twenty-three years before serving on the New York Court of Appeals, the state's highest court. President Herbert Hoover appointed him to the federal bench in 1932 to replace legendary jurist Oliver Wendell Holmes.

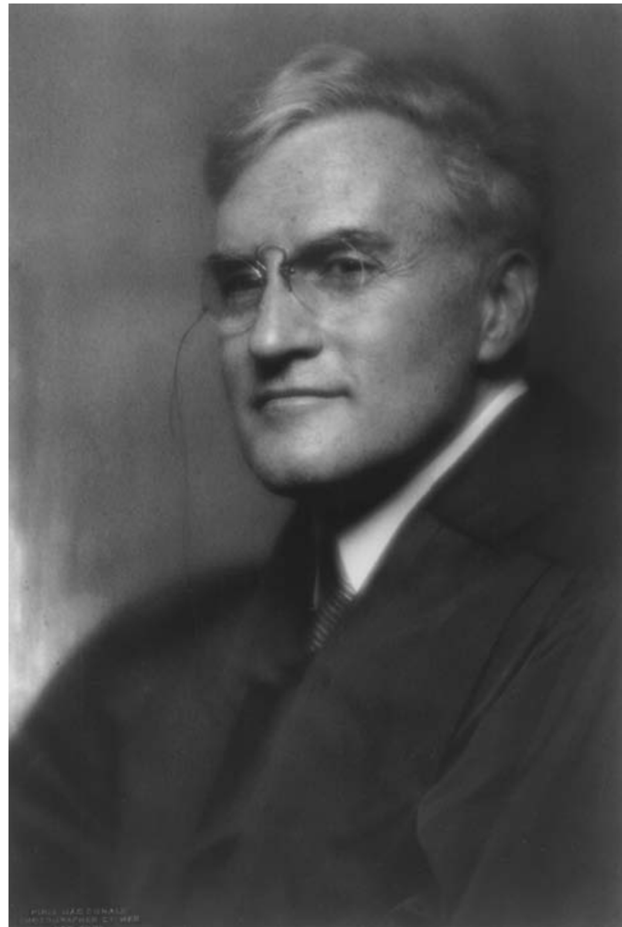
Cardozo's entry into judicial politics was as notable as the impact he made throughout his legal career. It is widely thought that President Hoover selected Cardozo to counter a recent defeat the president had suffered in Congress over the failed nomination of John J. Parker, a U.S. Court of Appeals judge. Parker's brand of conservatism enraged the likes of national

labor unions and the National Association for the Advancement of Colored People (NAACP), and Hoover wanted to distance himself from the public backlash and congressional ill-will that had accompanied the nomination. Cardozo, in contrast, was generally regarded as the most able candidate to fill the vacant post, based on his exemplary eighteen-year service on New York's highest court. The Republican president heeded the advice of congressional members in nominating Cardozo, even though he was a Democrat. The appointment was a boon to Hoover's political profile, with Senator Clarence Dill (D-WA) describing Cardozo's appointment as Hoover's "finest act of his career as President."

Justice Cardozo's service on the Court was marked by a penchant for opinion writing, at which Cardozo flourished. He had an uncanny ability to turn dense legal concepts into symbolic, meaningful prose. He relished the chance to write opinions for the Court, but was often shielded from the task by Chief Justice Charles E. Hughes, who worried about Cardozo's lingering health problems. When Justice James C. McReynolds was the senior justice in the majority and responsible for assigning opinions, his unabashed anti-Semitism toward Cardozo resulted in even fewer chances for Cardozo to voice opinions. His views often did not comport with the majority of the Court justices, who were loyal mostly to Republican ideals. Still, Cardozo made an impact on the nation's legal history with the opinions and dissents he authored. In fact, he once described the often ignored dissent as the "best inspiration of the time."

Although Cardozo is best known for his work on judicial process, he was also instrumental in deciding key constitutional questions that arose during his time on the bench. During Cardozo's tenure, President Franklin D. Roosevelt's New Deal was coming under attack, and the courts were deeply divided over the controversies being brought before them. Critics argued that the president's social welfare and regulatory legislation, for all its popularity, lacked constitutional legitimacy. Cardozo, among others, disagreed with this view and voiced this belief in several key Social Security cases while on the New York Court of Appeals. Consistent with the legal realism that formed the basis for his legal philosophy, Cardozo thought it was not the role of the judiciary role to stand in the way of the nation's needs, as expressed through the state and national legislatures.

As associate justice, Cardozo echoed this philosophy in *Palko v. Connecticut,* 302 U.S. 319 (1937), in which the Court held that the Due Process Clause of the Fourteenth Amendment did not apply the double jeopardy provision of the Fifth Amendment to the states but that it did apply those guarantees in the Bill of Rights that were "implicit in the concept of ordered liberty," a doctrine that became known as "selective incorporation." The Court continued to incorporate new rights under this doctrine, eventually applying to the states the protection against double jeopardy in *Benton v. Maryland,* 395 U.S. 784 (1969). In another notable concurring opinion in *A.L.A. Schechter Poultry Corp. v. United States,* 295 U.S. 495 (1935), Justice



Benjamin N. Cardozo, associate justice of the U.S. Supreme Court, authored several opinions that eventually led to much of the Bill of Rights being applied to the states. *(Library of Congress)*

Cardozo agreed that Congress in the National Industrial Recovery Act had delegated excessive power to industries to regulate themselves.

The debate over whether the courts should have the power of judicial review dates back at least to the time of Thomas Jefferson, who believed this power, when exercised by federal courts to void congressional legislation, violated the will of democratic rule and the concept of separation of powers. Cardozo was a staunch supporter of judicial review, citing it as a necessary check on the improper exercise of government power. Nevertheless, he did not favor having the courts intervene in political life as a matter of course. He saw judicial review as a shadow overhanging the political arena that served to remind legislatures that their actions were not above the law. In his typically elegant writing style, Cardozo remarked that review was proper only when "the power is exercised with insight into social values, and with suppleness of adaptation to changing social needs."

Cardozo was at heart a traditionalist who felt that a jurist should not "innovate at pleasure" but "draw his inspiration from consecrated principles . . . informed by tradition, methodized by analogy [and] disciplined by system." Still, he realized that judges, like others, were not immune to emotion or prejudice. In a lecture later published (Cardozo 1921), he said that "Deep below consciousness are . . . the likes and dislikes, the predilections and the prejudices, the complexes of instincts and emotions, habits and convictions, which make the man, whether he be litigant or judge. . . . The great tides and currents which engulf the rest of men, do not turn aside in their course, and pass judges by."

Cardozo's influence on judicial decision-making has been profound, with his collection of Yale University lectures becoming a cornerstone of legal education since their publication. Benjamin Cardozo's thoughtful and deliberative opinions and his extensive writing on legal philosophy have garnered him a place in history as one of America's greatest jurists.

Carolene Products, Footnote 4 (1938)

Footnote 4 of *United States v. Carolene Products Co.,* 304 U.S. 144 (1938), is the most famous footnote in U.S. constitutional history. It heralded the U.S. Supreme Court's shift from judicial activism in defense of economic rights to judicial activism on behalf of civil rights and liberties and the integrity of the political process. Footnote 4 provided the rationale for advances in civil rights, privacy rights, the due process rights of criminal defendants, and free expression.

Carolene Products was one of several cases in which the Court repudiated its earlier defense of corporate and individual economic rights. The case involved a federal regulation of milk content, and Justice Harlan F. Stone held that if Congress chose to set minimal standards for milk quality, that was the legislature's business, not the judicial branch's. But Justice Stone added in footnote 4 that the Court might adopt a higher level of scrutiny in cases dealing with fundamental personal rights. A more searching judicial review of state and national governmental action might be appropriate when such rights were threatened.

Stone suggested that the Court might also need to step in when the ordinary political process was not adequate to ensure justice. This may occur because either the legislation interfered with rights that were central to the political process, or it discriminated against "discrete and insular minorities." Such minorities were likely to be victims of prejudice and lacked sufficient power to protect their rights in the political arena. In these situations, the legislation may be subject to "more exacting judicial scrutiny."

Footnote 4 was transformed into a "two-tier" system for evaluating claims based on equal protection and due process during the 1960s. The Court reviews

challenges to social and economic legislation under its low-level "rationality" test, under which legislation is designed to further a legitimate governmental objective. But "strict scrutiny" is applied when legislation infringes on a fundamental right, such as the right to vote, the right to interstate travel, or the right to appeal in a criminal case. It is also applied when legislation creates a "suspect classification," such as segregation laws excluding African Americans from public life. A classification is "suspect" if it is based on a group's race, ethnicity, or religion. Such discrimination is so unlikely to be related to a legitimate state objective that it is presumed to be the product of prejudice. A law must be "narrowly tailored" to achieve a "compelling state interest" in order to pass the strict-scrutiny test.

Later Supreme Court decisions expanded the range of closely reviewed classifications beyond race and ethnicity to include illegitimacy and gender. The Court devised an intermediate-level test for equal protection claims. Legislation that discriminated against women or those of illegitimate birth must be "substantially related" to achieving "an important governmental objective." Thus, in *Reed v. Reed,* 404 U.S. 71 (1971), the Court invalidated a state law that gave an automatic preference to males over females in deciding who should administer the estate of an individual who died without a will.

In recent holdings, the Court has been reluctant to expand civil liberties and rights. Indeed, some specialists fear that some rights like abortion have been curtailed. There has also been a reassertion of judicial scrutiny of government regulation of economic rights in cases dealing with zoning restrictions on private property, as in *Lucas v. South Carolina Coastal Council,* 505 U.S. 1003 (1992). These recent cases have narrowed footnote 4's gap between economic and noneconomic rights.

Carroll v. United States (1925)

Carroll v. United States, 267 U.S. 132 (1925), is a seminal case dealing with constitutional parameters for the search of vehicles in contrast to dwellings. The argument is specific to the needs of law enforcement officials to carry out their duties permissibly under the Fourth Amendment protection against unlawful search and seizure. The Supreme Court held in *Carroll* that probable cause was sufficient for the search of vehicles and that no search warrant was required.

In this case, George Carroll and John Kiro, bootleggers who were well known to agents charged with enforcing prohibition, were seen driving en route from Detroit to Grand Rapids in Michigan. The police gave chase and stopped and searched the vehicle. In it they discovered and seized a cache of liquor and arrested the two men.

The two primary issues of conflict in the case involved the limitation of Fourth Amendment protections regarding vehicle searches and the scope of probable cause in those searches. The U.S. Supreme Court determined that only probable cause was required for the search of vehicles because they could be moved if officers took time to obtain a routine search warrant. The search of vehicles clearly includes vessels and aircraft as well as land vehicles. Regarding probable cause, the Court reaffirmed the "reasonable person" standard—that a prudent individual with the same facts would come to the same conclusion as the officer. The defense focused on the fact that the prohibition officers were not actively looking for Carroll and Kiro. The Court, however, declared that fact unrelated to the probable cause that existed for the vehicle search. The officers were well aware that Carroll and Kiro participated in the illegal liquor system in the Grand Rapids area.

Later cases drew significantly on the logic used in *Carroll* and expanded the scope of that decision. *United States v. Ross,* 456 U.S. 798 (1982), was fully

dependent upon *Carroll* in that probable cause and the subsequent search of a vehicle resulted in an arrest. Probable cause was satisfied through a reliable informant's description that Albert Ross was selling drugs from his vehicle. The search uncovered heroin and cash in the trunk of the vehicle. The Court found not only that the search of the vehicle without a warrant was satisfactory but also that the search of containers within the vehicle was covered by the same logic. Ross had heroin in a brown paper bag and money in a leather pouch.

The use of probable cause and subsequent search was expanded further in *United States v. Johns,* 469 U.S. 478 (1985), in which the Court found that the odor of marijuana satisfied the practical matter of probable cause for a search. In this case customs officers were investigating a smuggling operation in which planes carrying drugs flew into a remote airstrip in Arizona. The officers were unable to observe the landing and subsequent off-loading of material from the aircraft. The officer stopped trucks that were leaving the area and detected the odor of marijuana. That led to the search of the vehicles, discovery of marijuana, and the arrests.

Carter, Jimmy (b. 1924)

Jimmy Carter in and out of the presidency has been an advocate of civil liberties and human rights. A onetime farmer and Georgia governor before defeating Gerald Ford for the presidency in 1976, Carter arguably has been a greater advocate of civil liberties than many presidents who were lawyers. The recipient of the 2003 Nobel Peace Prize, who as president (1977–1981) emphasized the importance of advancing human rights as a foreign policy goal, he has worked tirelessly to see to it that not only Americans but citizens of other nations as well can exercise the fundamental right of voting.

Jimmy Carter is a man with the tolerance imparted by the New Testament. Although he eliminated the serving of alcohol at White House functions in line with his beliefs, he favored the decriminalization of marijuana. A Sunday School teacher, he saw to it that religious services were not held at the White House in accordance with the tradition of the separation of church and state and the Establishment Clause of the First Amendment. Before his presidency, Jimmy Carter had availed himself of the First Amendment rights of free speech and free exercise of religion in serving as a door-to-door missionary in northern cities and towns. As former president, he strongly supported his daughter, Amy, when she protested covert activities conducted by the Central Intelligence Agency (CIA) in Central America. Carter selected as his running mate in 1976 a man who shared his strong religious background and commitment to civil liberties. U.S. Senator Walter F. Mondale (D-MI) was the son of a Methodist minister, and during his service on what became known as the Church Committee, he strongly advocated the curtailment of CIA activities that intruded on the private lives of U.S. citizens.

For civil liberties to flourish, government must be open, and Carter pursued such openness even when his actions were not popular, such as his successful efforts to secure ratification of the Panama Canal treaties in 1978. He announced in a 1976 campaign address before the Seattle, Washington, American Legion that he would pardon draft resisters. In January 1977 he did so as his first act in office. Despite his dedication to civil liberties and to tolerance, Carter sometimes demonstrated an inability to deal well with members of Congress on a personal level. Rather than attempting to persuade members to adopt his substantial number of policy initiatives, he simply expected Congress to see the wisdom of his position and enact appropriate legislation.

A major piece of legislation that President Jimmy Carter signed was the Omnibus Judgeship Act of 1978 that greatly expanded the federal judiciary and made possible the implementation of the criminal justice procedural guarantees that the U.S. Supreme

President Jimmy Carter abolished the Attorney General's List of Subversive Organizations. This list was often used to persecute Communists and civil rights groups. *(Courtesy Jimmy Carter Library)*

Court had developed during the tenure of Chief Justice Earl Warren. Jimmy Carter never had the opportunity to nominate someone for a berth on the Supreme Court. Carter's domestic policy adviser, Stuart Eizenstadt, reportedly irritated Associate Justice Thurgood Marshall by phoning him and urging him to resign while President Carter still could name his replacement. Marshall served for a decade after the Carter presidency and was eventually replaced by Clarence Thomas.

The National Organization for Women criticized President Carter and Secretary of Health, Education, and Welfare Joseph Califano for opposing government funding of abortion. Still, although he personally opposed abortion, President Carter did not favor the overturning of *Roe v. Wade,* 410 U.S. 113 (1973), the decision that struck down numerous state laws restricting legal access to abortion. Ironically, his two successors, Ronald Reagan (who beat Carter in the 1980 election) and George H.W. Bush, favored overturning it, although Reagan had signed legislation as governor of California that greatly expanded access to legal abortion, and Bush had served in a prominent position with Planned Parenthood. Carter in 1987 opposed the nomination of Robert Bork, who had been a critic of *Roe v. Wade* and many of the Court's civil liberties decisions during the tenure of Chief Justice Earl Warren.

Censorship

Censorship involves an authoritative decision that seeks to block expression in its various forms on the basis that it violates standards imposed by the censoring authority. Censorship in the Western world is as old as recorded history. Although Socrates epitomizes freedom of expression, his student Plato advocated a strict censorship regime. As a means for deciding what was and was not permissible, Plato proposed the position of Guardian, a class of educated-elite who would safeguard the philosopher-king's values. Greeks like Anaxagoras, who was fined, and Protagoras, who was banished for blasphemy, are illustrious victims of Greek censorship. Later, Roman poets like Ovid and

Juvenal, whom Roman officials banished, illustrate the effects of censorship in Rome. Censorship in the Roman Christian Church was extensive and began as early as 150 C.E. when the Council of Ephesus prohibited publication of *Acta Pauli*, an unauthorized biography of Saint Paul.

The desire for censorship by authorities took on a special urgency following the mid-fifteenth-century development of printing with movable type by Johann Gutenberg. As Jillette Penn once put it, "Censorship was Gutenberg's toxic byproduct." Fifty years after Gutenberg's feat, the Roman Church began what was to become one of the most elaborate systems of censorship in history. The Church's system of "indexes," beginning as early as 1510, developed into the famous *Index Liborum Prohibitorum* (Guide to Prohibited Books) initiated by Pope Paul IV in 1557, which the Church did not abandon until 1966. The Church's index included religious reformers such as Martin Luther, John (Jan) Hus, Ulrich Zwingli, and Desiderius Erasmus, along with the scientific works of astronomers Nicolaus Copernicus and Galileo Galilei.

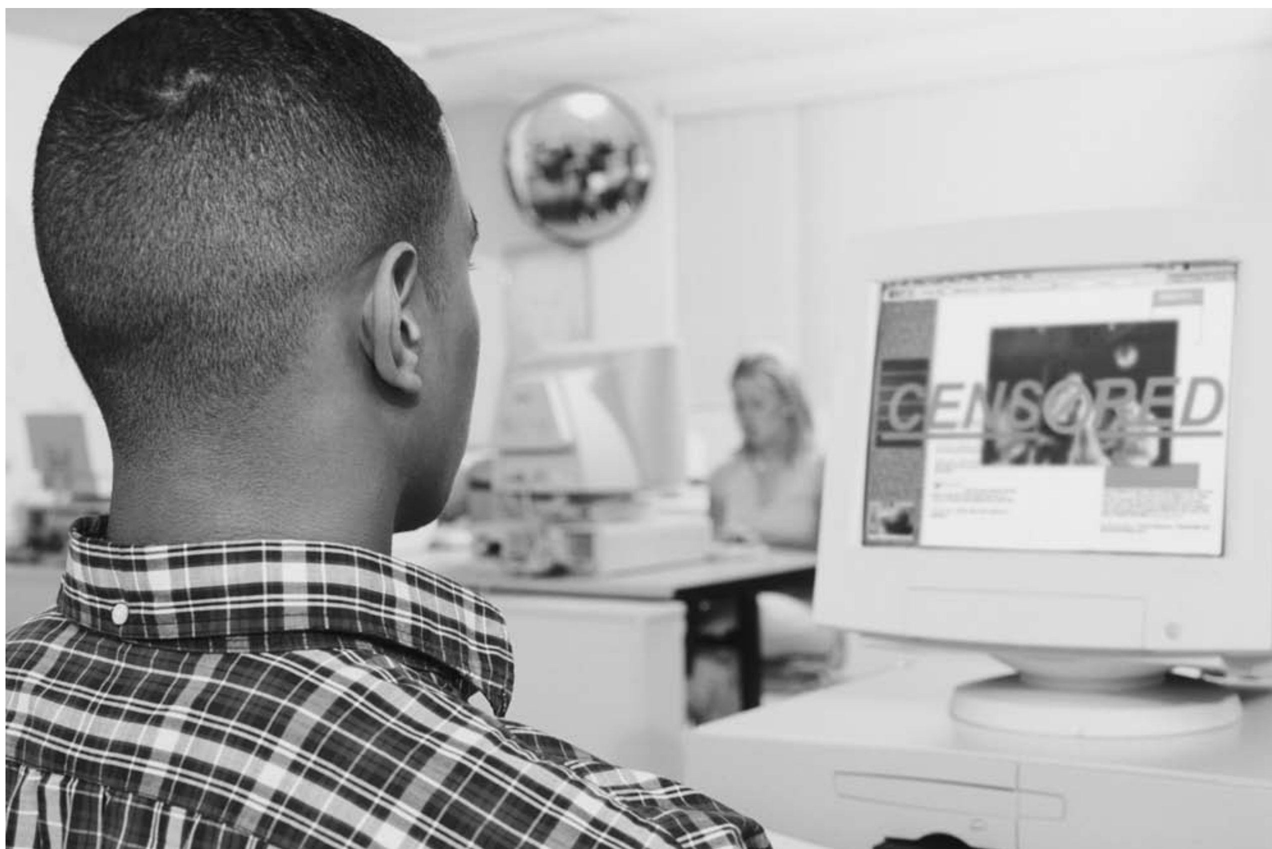
Censorship in England began well before Gutenberg during the rule of the Plantagenets with a 1414 parliamentary enactment that confirmed the archbishop's declaration that no book shall be "henceforth read . . . except the same be first examined . . . and . . . expressly approved and allowed by us." The Tudor kings (1485–1603) continued the practice of censorship and perfected the licensing of stationers (booksellers and printers) so that authors could print or sell nothing without crown approval. Following Henry VIII's excommunication, royal censorship of politics and religion merged when the crown extended stationers' licensure in 1538 to all written expression and transferred censorship authority from the church to the Privy Council (the sovereign's advisers) and the Star Chamber (judges appointed by the crown who met in private on matters of state security).

The Star Chamber became the sole instrument of censorship in England. As the English jurist John Selden put it, "there is [now] no Law to prevent the printing of any book in England, only a Decree in Star-Chamber." Thus, although the abolition of the Star Chamber by Parliament in 1641 left a huge void and led many to hope for more freedom of expression, the loyalties of the small group of royally sanctioned stationers soon turned to Parliament, ever as willing as the crown to assume duties of censorship. On June 14, 1643, Parliament enacted the Ordinance for Printing that reestablished controls over printed expression that included licensing, import control, search and seizure, arrest, imprisonment by order of parliamentary committees, and recognition of the Stationers Guild as the act's official administrator. This action of Parliament substituting Parliament and its committee for the crown and its Star Chamber led the poet John Milton to lament, "What advantage is it to be a man over it is to be a boy at school, if we have only scapt [escaped] the ferular [rod], to come under the fescu [pointer] of an *Imprimatur*?"

The 1643 Ordinance for Printing expired by its terms in 1694, never to be renewed. An early decision of the U.S. Supreme Court, *Republica v. Oswald,* 1 U.S. 319 (1788), hailed the year as the "dawn of freedom." England's North American colonies had their share of restriction on freedom of expression. Roger Williams, whom the General Court banished from Salem, Massachusetts, in 1636 for preaching freedom of conscience, is a notable example of the effects of censorship in the New World. Following passage of the First Amendment, however, censorship in the United States became an extremely disfavored practice. As Alexis de Tocqueville observed in his description of democracy in America, "[T]he influence of the liberty of the press does not affect political opinions alone, but extends to all the opinions of men and modifies customs as well as laws."

Nonetheless, various limited forms of censorship have remained. The Supreme Court noted in *Times Film Corp. v. City of Chicago,* 365 U.S. 43 (1961), that there are "certain well-defined and narrowly limited classes of speech, the prevention and punishment of which have never been thought to raise any Constitutional problem"—the First Amendment notwithstanding. Moreover, courts have "distinguished between laws establishing sundry systems of previous restraint on the right of free speech and penal laws imposing subsequent punishment on utterances and activities not within the ambit of the First Amendment's protection."

Two principal areas—national security and obscenity—are currently subject to some form of censorship. Chief Justice Charles E. Hughes elaborated on the



Congress has made efforts to protect children from certain content on the Internet and the Web by censoring some material or by mandating that public libraries install filters, but these efforts have raised First Amendment problems. *(Corbis)*

principle of "prior restraint" (banning expression before it is even published) in *Near v. Minnesota,* 283 U.S. 697 (1931):

> [First Amendment] protection even as to previous restraint is not absolutely unlimited. But the limitation has been recognized only in exceptional cases. . . . No one would question but that a government might prevent actual obstruction to its recruiting service or the publication of the sailing dates of transports or the number and location of troops. On similar grounds, the primary requirements of decency may be enforced against obscene publications. The security of the community life may be protected against incitements to acts of violence and the overthrow by force of orderly government.

An example of permissible prior restraint is the Espionage Act that Congress originally enacted in 1917. The act authorizes federal agencies to label information and material as "classified" and prevent its disclosure if it is considered to involve reasons of national security (*U.S. Code*, Vol. 18, § 798 (2003)).

Despite the brief and general definition of classifiable information in the Classified Information Procedures Act of 1980 (CIPA), courts have upheld the statute against the charge that the terms "classified information" and "national security" are unconstitutionally vague, as in *United States v. Wilson,* 571 F. Supp. 1422 (S.D.N.Y. 1983), *affirmed* 750 F.2d 7 (2d Cir. 1984), *certiorari denied* 479 U.S. 839 (1986). CIPA leaves the details to the president, who has defined the classified categories as military plans, weapon systems, foreign relations, intelligence-gathering activities, governmental programs safeguarding material or facilities, scientific or economic information related to national security, and any information regarding the

vulnerabilities or capabilities of facilities used for national security (Executive Order No. 12,958, Part IV, Sec. 1.5(a–g), April 17, 1995, 60 *Federal Register* 19,825). National security regulations restrict the availability of classified materials and information to certain officials and employees, and they require anyone with access to the material or information to execute a nondisclosure agreement. Not only is classified material and information subject to prior restraint, but violating the regulations subjects the violator to criminal penalties as well.

Beginning with *Near v. Minnesota,* 283 U.S. 697 (1931), the U.S. Supreme Court has held that censorship is constitutional under extreme circumstances. As previously noted, Chief Justice Hughes emphasized that prior restraint applied only in exceptional cases, including obscene publications. In *Miller v. California,* 413 U.S. 15 (1973), the Court formulated the following definition of obscenity:

> [S]tatutes designed to regulate obscene materials must be carefully limited. As a result, we now confine the permissible scope of such regulation to works which depict or describe sexual conduct. That conduct must be specifically defined by the applicable state law, as written or authoritatively construed. A state offense must also be limited to works which, taken as a whole, appeal to the prurient interest in sex, which portray sexual conduct in a patently offensive way, and which, taken as a whole, do not have serious literary, artistic, political, or scientific value.

Following the injunction in *Miller* and its progeny, courts have upheld statutes and ordinances that lawmakers write with a sufficient focus to avoid bringing otherwise protected speech into its purview. As the Supreme Court stated in *Sable Communications of California, Inc. v. Federal Communications Commission,* 492 U.S. 115 (1989), the "Government may, however, regulate the content of constitutionally protected speech in order to promote a compelling interest if it chooses the least restrictive means to further the articulated interest." For example, the Court has approved laws that may establish boards of censors charged with prohibiting the dissemination of obscene material if they provide certain safeguards that are calculated to prevent abuse, as was held in *Freedman v. Maryland,* 380 U.S. 51 (1965).

Central Hudson Gas and Electric Corp. v. Public Service Commission of New York (1980)

Central Hudson Gas and Electric Corp. v. Public Service Commission of New York, 447 U.S. 557 (1980), for the first time established a test for the courts to use in commercial speech (advertising) cases. In the 1970s, the U.S. Supreme Court in a series of cases had interpreted the First Amendment speech and press clauses to protect commercial speech. In each of these cases, the Court consistently noted, however, that commercial speech received less protection than did political speech. For example, false or misleading commercial speech and speech that advertised products or services that were themselves illegal were not protected by the First Amendment. However, in none of these earlier cases—such as *Bigelow v. Virginia,* 421 U.S. 809 (1975); *Virginia State Board of Pharmacy v. Virginia Citizens Consumer Council, Inc.,* 425 U.S. 748 (1976); or *Bates v. State Bar of Arizona,* 433 U.S. 350 (1977)—did the Court enunciate a clear test that lower courts could use in deciding when commercial speech was protected and when it was not.

Central Hudson Gas involved a rule by the Public

Service Commission of New York (PSC) that banned all advertising promoting the use of electricity. The PSC argued that the regulation was necessary in order to conserve energy supplies, whereas Central Hudson Gas and Electric claimed First Amendment protection for its commercial speech on the basis of the precedents set in *Bigelow, Board of Pharmacy*, and *Bates.* In an opinion by Justice Lewis F. Powell Jr., the U.S. Supreme Court, in an eight-one decision, developed a constitutional test for commercial speech.

The test posed four questions, the answers to which would determine whether the commercial speech at issue was protected. First, did the speech concern a lawful activity and was it not misleading? Second, was the asserted governmental interest in regulating this speech a substantial one? Third, did the regulation at issue directly advance this government interest? Fourth, was this regulation no more extensive than necessary to serve that interest?

The first question is a threshold inquiry in that if the answer is in the negative (e.g., the speech is of an illegal activity or is misleading), the speech is clearly not protected by the First Amendment, and there is no need to continue the analysis. However, if the answer to the first question is positive, then the courts must determine the answers to the remaining three questions. Under this test, the government may regulate commercial speech only if the answer to the first question is "no" or if the answer to all four questions is "yes." A negative answer to any one of the second, third, or fourth questions would mean that the government's interest in regulating the speech is not substantial enough or that the regulatory means the government is using are either ineffective or too broad to pass First Amendment muster, and thus the speech is protected.

In *Posadas de Puerto Rico Associates v. Tourism Company of Puerto Rico,* 478 U.S. 328 (1986), upholding limitations on the advertising of legal casinos, the justices threw into doubt the continued vitality and usefulness of the *Central Hudson Gas* test. However, by the time of *44 Liquormart, Inc. v. Rhode Island,* 517 U.S. 484 (1996), striking down the state regulation of the advertising of alcohol prices, the Court once again found itself firmly supporting the four-part test.

Central Intelligence Agency

The Central Intelligence Agency (CIA) is the main foreign intelligence agency of the United States. The CIA was created in 1947 to be a defender of the civil liberties and rights of the American people. However, the CIA is a powerful two-edged sword. Its practice of secrecy can as easily protect or do harm to civil liberties.

EARLY HISTORY

In 1947, President Harry S Truman felt compelled to establish a permanent intelligence agency in order to meet the challenge to democracy posed by communism. The legal authority, or charter, of the CIA is the National Security Act of 1947. It charges the CIA with gathering foreign intelligence and forbids spying on Americans.

Many of the CIA's first personnel were former members of the World War II Office of Strategic Services (OSS) who had conducted many special operations. The side of the CIA's work that deals with special operations, often called "black operations" or "dirty tricks," is hidden from public view. This is usually the most controversial part of its work. The Central Intelligence Agency Act of 1949 authorized the director of central intelligence (DCI) to spend agency allocations "without regard to the provisions of law and regulation." This provision gave the CIA the legal basis for covert operations.

Most of the time the CIA works to gather and analyze information about all the foreign countries of the world or emerging revolutionary groups. In the competition for power among nations, the CIA seeks to provide the consumers of its intelligence products with information about the intentions and capabilities

of all enemies, current or potential. Such capabilities must be assessed in weighing the powers that each country has.

Almost all of the information the CIA gathers is public. It comes from open sources, such as newspapers, books, reports, radio, television, visits, tourist photographs, conversations, observations, the Internet, and many other public resources. This information is then organized, evaluated, and distributed. Usually the CIA is charged with developing intelligence reports on specific questions asked by the president or by other government officials.

To the intelligence gathered from open sources is added information gathered by clandestine means. Some of this may be legal, such as listening to signals (SIGINT) or copying coded messages that are then decoded. The smallest amount of intelligence—but some of the most valuable—is that gathered by human agents (HUMINT). These are the spies who engage in espionage, which is illegal. Espionage violates the laws guarding the secrets of a country. However, all nations engage in the practice and strive to protect their own secrets from others.

THE CIA AND CIVIL LIBERTIES

The CIA has on several occasions violated its charter by gathering intelligence on Americans in the United States. In the early decades of the CIA, congressional oversight consisted more of turning a blind eye to overlook what the agency did than in exercising supervision. Following the Vietnam War and Watergate (the 1972 break-in at Democratic National Committee headquarters in the Watergate complex in Washington, D.C., orchestrated by some of President Richard M. Nixon's close aides), attitudes toward the CIA changed. Oversight of the CIA began to be conducted with an eye to true supervision.

Deputy Director of the Central Intelligence Agency Richard Helms (left) and President Lyndon B. Johnson in April 1965. In Senate hearings during the 1970s, it was revealed that the CIA engaged in many illegal spying activities against U.S. citizens. *(LBJ Library, photo by Yoichi Okamoto)*

On January 5, 1975, President Gerald R. Ford empaneled a presidential commission (Rockefeller Commission) headed by Vice President Nelson Rockefeller to investigate all illegal activities of the CIA. In addition, a Senate select committee (1975–1976) was formed on January 27, 1975, chaired by Senator Frank Church (D-ID) to investigate the CIA. Numerous revelations followed. The public learned that the CIA had organized regime changes in Guatemala (1954) and Iran (1953); had plotted to assassinate Patrice Lumumba in the Congo (1960) and Fidel Castro in Cuba (1961–1964); and had engaged in domestic spying, developing files on more than 10,000 Americans involved in the Vietnam antiwar movement. The investigation of Americans internally, in violation of the CIA's charter, had begun as an attempt to locate a link between the antiwar movement and communist countries. No significant link was found.

Despite the revelations of spy tools, poisons, and attempts to use the Mafia to assassinate Castro, the CIA was not found to be a "rogue elephant." Instead, investigation revealed that the CIA had resisted the attempts by Presidents Lyndon B. Johnson and Richard M. Nixon to manipulate its intelligence work for political purposes.

On February 7, 1976, President Ford issued an executive order banning American involvement in assassinations. On January 24, 1978, President Jimmy Carter issued an executive order placing supervision and coordination of all intelligence activity by the United States under the oversight of the Special Coordinating Committee of the National Security Council.

President William J. Clinton issued executive orders banning the CIA from using people with criminal records for intelligence gathering. This forced the CIA to depend more on signal intelligence and less on developing human intelligence assets. It also turned to protecting the country from industrial espionage by foreign powers.

The terrorist attacks of September 11, 2001, radically changed conditions. Critics charged the CIA with incompetence, saying the terrorist attacks were an intelligence failure. President George W. Bush, whose father had been a CIA director before his presidency, began a new and extensive use of the CIA.

The passage of the USA Patriot Act in 2001 and the creation of the Department of Homeland Security have legalized the sharing of information gathered by the CIA in intelligence work and the FBI in its investigative work. Some critics view this type of agency cooperation as a new threat to civil liberties.

In a world of electronic connections, gathering informational links between people in the United States and people abroad who may be linked to terrorism is likely to continue to generate controversy about civil liberties, whether such activities are conducted by the CIA or some other agency of the government. Being free of casual government supervision on the one hand, and instituting programs of government surveillance by the CIA or other agencies to protect against deadly terrorist attacks on the other, will be a balancing act that draws a boundary between order and liberty, a decision that is unlikely to please everyone.

Chafee, Zechariah, Jr. (1885–1957)

A legal scholar and earnest defender of civil liberties, Zechariah Chafee Jr. was educated at Brown University. He graduated in 1907. After working in his father's foundry for three years, he determined he was not suited to be an industrialist. He entered Harvard Law School in 1910, graduating at the top of his class in 1913. After practicing law at a firm in Providence, Rhode Island, for three years, Chafee joined the Harvard Law School faculty in 1916. He became a full professor in 1919 and occupied the Christopher Co-

lumbus Langdell chair in law later in his career. In 1950 he was named a University Professor, a position that released him from teaching duties and gave him more time to write.

Chafee is most famous for his writings in the area of free speech. His interest in this issue was spurred by the repressions of dissent he witnessed during World War I. Realizing that the freedoms of speech and press were significantly unexamined as constitutional doctrine, he published a law review article and later developed it into a book. Chafee argued that the authors of the American Bill of Rights intended to abolish the English law of seditious libel, which prohibited restraints on speech prior to publication but allowed punishment of seditious speech after it had been published. He believed the First Amendment provided for a vigorous pursuit of the truth through unlimited discussion. The professor did not promote absolute protection for all speech, instead relying on balancing tests. He argued that speech could be limited when free speech was inconsistent with other valid governmental interests, such as peaceful order, protection against external aggression, and instruction of youth. Chafee's ideas became the law of the land through numerous Supreme Court rulings, especially Justice Oliver Wendell Holmes's opinion in *Abrams v. United States,* 250 U. S. 616 (1919), and Justice William J. Brennan's ruling in *New York Times Co. v. Sullivan,* 376 U.S. 254 (1964).

Despite the eventual popularity of his constitutional vision, Chafee's perspectives were criticized. In 1920 alumni of the Harvard Law School charged that he was a radical for publishing the 1919 article. Harvard's president defended him, and the board of overseers eventually dismissed the charges. At a U.S. Senate hearing July 2, 1952, Senator Joseph McCarthy (R-WI), on a crusade against subversives in the nation, named Chafee one of seven persons most dangerous to the existence of the United States.

Famous for his contributions to First Amendment jurisprudence, Chafee spent the bulk of his time on questions of equity and the rules that govern litigation among multiple parties in federal courts. He was the author of the Federal Interpleader Act of 1936, allowing expeditious handling of millions of dollars of claims against insurance companies and other corporations. He also helped draft an international convention governing freedom of information. The convention was never ratified because of the diverse views of the different nations to be covered by the convention.

In 1956, Chafee brought his legal theories to television, appearing on a special series broadcast by WGBH-TV in Boston. Shortly after completing the series, he suffered a heart attack in early February 1957. He died at Massachusetts General Hospital in Boston less than a week later.

Chaplinsky v. New Hampshire (1942)

Chaplinsky v. New Hampshire, 315 U.S. 568 (1942), carved out the "fighting words" exception to First Amendment free speech rights. A Jehovah's Witness (Chaplinsky) was distributing some of his sect's religious literature on the streets of Rochester, New Hampshire, when citizens complained to the city marshal that Chaplinsky was denouncing other religions as a "racket." The marshal initially told the complainants that Chaplinsky had the right to distribute his literature; he then warned Chaplinsky that the crowd "was getting restless." The parties had somewhat different versions of what happened next, but, with the exception of the reference to God, which Chaplinsky denied saying, both agreed that when the marshal attempted to arrest Chaplinsky, the latter yelled, "You are a God damned racketeer and a damned Fascist

and the whole government of Rochester are Fascists or agents of Fascists."

Chaplinsky was convicted of violating a municipal ordinance that prohibited the use of "offensive, derisive or annoying" language "in any street or other public place." The trial court refused to take into account Chaplinsky's religious "mission" or the unruly behavior of the crowd. The appellate court subsequently agreed that these factors would not constitute a defense and upheld the conviction.

In 1942, the U.S. Supreme Court refused to overturn the lower-courts' decisions. In an opinion by Justice Frank Murphy, the Court characterized Chaplinsky's speech as "fighting words" and held that "the right of free speech is not absolute at all times and under all circumstances. There are certain well-defined and narrowly limited classes of speech, the prevention and punishment of which have never been thought to raise any Constitutional problem." The Court held that "resort to epithets or personal abuse is not in any proper sense communication of information or opinion safeguarded by the Constitution."

Chaplinsky is an example of a much-debated two-level theory of speech, in which the courts will determine the "value" of the speech at issue and only then determine whether it should be protected. Under the two-level theory, speech that is lewd, obscene, or libelous may not warrant First Amendment protection. Fighting words are unprotected because, as "epithets or personal abuse," they are thought to have more in common with assaults than with the exchange of ideas or information. Fighting words are also likely to provoke a heated response and to lead to a breach of the peace.

The exclusion of so-called fighting words from the protection of the First Amendment rests in large part on the belief, enunciated in *Chaplinsky,* that such language does not form "any essential part of any exposition of ideas." Although decisions based upon the fighting-words doctrine are rare today, hot debate continues on the issue of whether any particular expression conveys an idea. Antipornography crusaders justify the suppression of material they deem obscene on the grounds that such materials do not convey ideas and are thus not entitled to First Amendment protection. Civil libertarians respond that it is precisely because an offensive idea is being transmitted that suppression is desired, and that it subverts the First Amendment to allow government to decide whether an utterance qualifies as an idea.

Charles River Bridge v. Warren Bridge (1837)

Charles River Bridge v. Warren Bridge, 36 U.S. 420 (1837), marked a turning point in the constitutional law of contracts. The change was significant but not fundamental. Chief Justice John Marshall had died nineteen months before *Charles River* was decided, and his successor, Roger Brooke Taney, appointed by President Andrew Jackson, sought to chart a different constitutional course. That course did modify aspects of Contracts Clause jurisprudence but in a way that late Marshall Court decisions had foreshadowed, and it did not overturn the primary impulse of nineteenth-century constitutional law to protect property rights and economic affairs.

In *Federalist No. 10,* James Madison famously wrote that the "protection of different and unequal faculties of acquiring property" was "the first object of government." The delegates to the 1787 Constitutional Convention shared Madison's concern to insulate the private ordering of economic relationships, via contracts, from government alteration. Article I, Section 10 of the Philadelphia Constitution—the Contracts Clause—imported the language of the 1787 Northwest Ordinance: "[N]o law ought ever to be made, or have force in the said territory, that shall, in any manner whatever, interfere with or affect private contracts or engagements, *bona fide,* and without fraud, previously formed." The Contracts Clause declares, "No State shall . . . pass any . . . law impairing the obligation of contracts."

The Supreme Court during John Marshall's tenure

generally interpreted the Contracts Clause expansively (some would argue untenably) as an absolute bar against state infringement upon vested property rights. *Fletcher v. Peck,* 10 U.S. 87 (1810), and *Trustees of Dartmouth College v. Woodward,* 17 U.S. 518 (1819), notably rested on this reading. Between these two landmark decisions, the Court handed down *Terrett v. Taylor,* 13 U.S. 43 (1815), in which Justice Joseph Story articulated the Marshall Court's core notions of Contracts Clause jurisprudence, which regarded existing contracts as sacrosanct from state alteration. This conception of the Contracts Clause shielded private entrepreneurs from public control at a time in U.S. economic history when venture capitalists needed assurance that they would receive returns on their investments in infrastructure and services.

As the nineteenth century wore on, rapid economic growth generated mounting pressures for improvements in transportation, finance, and industry. Consequently, Contracts Clause strictures on state modification of contracts that originally facilitated capitalist development became a straitjacket. Language in Marshall's *Dartmouth College* opinion suggested that state legislatures might reserve the right to modify corporate charters they granted. In *Providence Bank v. Billings,* 29 U.S. 514 (1830), Marshall explicitly marked the outer limits of constitutional restraints on legislative modification of contracts: "The power of legislation . . . is granted by all, for the benefit of all. It . . . need not be reserved where property of any description, or the right to use it in any manner, is granted to individuals or corporate bodies. However absolute the right of an individual may be, it is still in the nature of that right that it must bear a portion of the public burthens [burdens]."

Seven years later, the Taney Court built on this foundation in *Charles River Bridge v. Warren Bridge,* revising Contracts Clause jurisprudence in the process. The state of Massachusetts had granted the Charles River Bridge Company the right to build a toll bridge over the Charles River in 1785. This grant had superseded a previous grant of exclusive ferry rights to Harvard College, and the Charles River Bridge Company contended that a subsequent grant by Massachusetts allowing the Warren River Bridge Company to build a nearby bridge violated this implicit grant. Taney decided that when contracts involved grants from a state, they should be strictly interpreted so as only to include promises explicitly made. Taney thus shifted the emphasis from conceiving of property as a fixed right to viewing it pragmatically as an instrument of capital. In addition, Taney's decision cast states in the role of active promoters of economic development. Citing Marshall's *Providence Bank* opinion, Chief Justice Taney captured these two aspects: "[T]he object and end of all government is to promote the happiness and prosperity of the community by which it is established[.] . . . The continued existence of a government would be of no great value, if . . . it was disarmed of the powers necessary to accomplish the ends of its creation, and the functions it was designed to perform, [were] transferred to the hands of privileged corporations." Taney's reading marked a permanent shift in judicial readings of the Contracts Clause, later epitomized by *Home Building and Loan Association v. Blaisdell,* 290 U.S. 398 (1934), in which the Court upheld a provision of 1933 Minnesota mortgage moratorium law extending debt repayments against accusations that it violated the Contracts Clause.

Chavez v. Martinez (2003)

Chavez v. Martinez, 538 U.S. 760 (2003), restricted the application of the self-incrimination clause of the Fifth Amendment and the *Miranda* rules to actual criminal cases. Oliverio Martinez had sued Officer Ben Chavez under section 1983 of the *U.S. Code,* a provision that gives citizens a way to sue state officials in federal court for alleged violation of citizens' con-

stitutional rights. Chavez had questioned Martinez over a forty-five-minute period after Martinez, who had been shot in a scuffle with police officers and believed he was dying, was being treated by medical personnel. The injuries left Martinez blind in one eye and paralyzed from the waist down. Officer Chavez had not issued *Miranda* warnings (informing prisoners of their right to remain silent, to have an attorney, and so on), and the U.S. District Court and the Ninth Circuit Court of Appeals had accordingly ruled that Martinez could sue him.

The plurality decision written for the U.S. Supreme Court by Justice Clarence Thomas, joined by Chief Justice William H. Rehnquist and Justices Sandra Day O'Connor and Antonin Scalia, disputed the Fifth Amendment claim. Using the language of the amendment to restrict the right against self-incrimination to only criminal cases, Thomas decided that Martinez's rights had not been violated because no criminal case had been initiated against him. Thomas argued that Martinez had no more been compelled to testify in a criminal case "than an immunized witness forced to testify on pain of contempt." Although *Miranda* rules sometimes serve a prophylactic function, such rules "do not extend the scope of the constitutional right itself." Thomas likewise denied that the interrogation in question violated the Due Process Clause of the Fourteenth Amendment, since there was no evidence that the interrogation "shocked the conscience." The interrogation did not exacerbate Martinez's injuries or prolong his hospital stay and was justified by the need to ascertain whether police had been involved in improper conduct. Officer Chavez was therefore entitled to qualified immunity.

Justice David H. Souter, joined fully by Justice Stephen G. Breyer and partly by Justices John Paul Stevens, Anthony M. Kennedy, and Ruth Bader Ginsburg, agreed that there was no Fifth Amendment violation but remanded the case (returned it to the lower court for further proceedings) to ascertain whether there was a violation of substantive due process. Justice Scalia believed that Martinez had forfeited that claim by not raising it in the lower courts. Justice Stevens believed that the police conduct at issue constituted "an immediate deprivation of the prisoner's constitutionally protected interest in liberty" that was shocking and unconstitutional. Justice Kennedy believed that a violation of the self-incrimination clause could occur even in cases where interrogations were not introduced at trial. He viewed the clause as "a substantive constraint on the conduct of the government, not merely an evidentiary rule governing the work of the courts," and essential to preventing torture. In this case, he believed the police had taken advantage both of Martinez's suffering and of his belief that he would not be treated unless he cooperated. Kennedy joined Souter's call for a remand in order to preserve a plurality opinion in the case. Justice Ginsburg would have applied the self-incrimination clause "at the time and place police use severe compulsion to extract a statement from a suspect" and would thus have affirmed the lower-court decisions.

Although the Supreme Court ruled in *Dickerson v. United States,* 530 U.S. 428 (2000), that the *Miranda* rulings were constitutionally grounded, *Chavez* indicates that these rulings are to be enforced primarily, if not exclusively, in the context of criminal trials. Unless the Court gives a broad independent meaning to the Due Process Clause, the *Chavez* decision could undermine pressures against coercive police interrogations in situations where the individuals questioned are not subsequently brought to trial.

Checks and Balances

The framers of the U.S. Constitution formalized "checks and balances" because they feared the concentration of power in the hands of one governmental group or institution. Checks and balances, or the idea to provide each of the three national branches of government—executive, legislative, judicial—with the

powers to prevent the centralization of power in one branch, should be understood as related to but distinct from the separation of powers, which is the idea that the branches are equal and independent. To that end, each of the three branches was empowered to limit the actions of the other two branches.

For example, although Congress initiates legislation, the president can veto it. Whereas the president nominates members of the federal courts, Congress must approve them. The president may recommend a budget, but the Congress must finalize it. Moreover, Congress can override a presidential veto by a supermajority vote of both houses, and it can impeach and convict the president. The Senate alone can ratify treaties, confirm executive and judicial appointments, and try impeachments that the House initiates. Congress can also impeach federal judges, change the budgets and jurisdiction of the federal courts (except the jurisdictions specifically assigned to the Supreme Court in Article III of the Constitution), and set the size of the Supreme Court. In turn, the Supreme Court and the rest of the federal judiciary have the power of statutory construction, by which to interpret laws, and the power of judicial review, with which the Court can declare laws and executive powers unconstitutional. Judicial review, though not in the Constitution, has been the judiciary's primary check on the executive and legislative branches since the Supreme Court recognized this power in *Marbury v. Madison,* 5 U.S. 137 (1803).

Both the executive and legislative branches have a great deal of power over the exercise of civil liberties. However, because they are popularly elected to limited terms, the normative view of these branches is that both are swayed by majority opinion and thus have not strictly protected civil liberties. For example, the president suspended the right to trial during the Civil War and allowed the Federal Bureau of Investigation (FBI) during the 1940s and 1950s to monitor and prosecute accused Communists and other individuals who spoke out against the government or associated with subversive organizations. Similarly, Congress passed laws making it a crime to speak out against the government or its officials, held inquiries about known or suspected subversives in Hollywood, and passed laws that limit access to the Internet.

The federal judiciary is generally seen as the protector of individual liberties from incursion by the elected branches, but this was not always the case. Apart from cases dealing with property rights, the early U.S. Supreme Court rarely heard cases that dealt with individual liberties. On the few occasions that freedoms were at stake, the Court tended to favor the state or propertied interests, as in *Scott v. Sandford,* 60 U.S. 393 (1857), in which it decided that African Americans were not and could not become U.S. citizens and that Dred Scott, a slave who had resided for a time in free territory, could not sue for his freedom in federal courts. This began to change with the Supreme Court's decision in *Gitlow v. New York,* 268 U.S. 652 (1925), to apply the First Amendment freedom of speech to the states. In a process of "incorporation," the Court has subsequently applied most other provisions of the Bill of Rights to the states via the Due Process Clause of the Fourteenth Amendment. The watershed moment for the protection of individual liberties was in Justice Harlan Fiske Stone's fourth footnote in *United States v. Carolene Products Co.*, 304 U.S. 144 (1938), in which he advanced the "preferred freedoms" doctrine. That is, he argued that the Supreme Court should begin to decide cases dealing with the civil rights and liberties of individuals rather than continue to limit itself to economic cases. Following this decision, the Court began to focus on cases in which individual liberties were the primary issue.

This does not mean that the Court has protected the rights of individuals against all incursions made by the elected branches. Indeed, some of the most controversial Court decisions were made in the wake of *Carolene*. For example, the Court during World War II offered the president a great deal of wartime powers that during peacetime would never have been allowed. Specifically, Japanese Americans were detained in internment camps without any right to trial, the federal government seized their property without compensation, and their right to association was compromised in the name of national security.

Deference to the president and Congress would not always remain the norm. The Court under Chief Justice Earl Warren was particularly known for its protection of individual liberties, though even this seemed to depend on the political environment. During the post–World War II "red scare" (led by Senator

Joseph McCarthy), the Court often upheld restrictions on the liberties of Communist Party members. After the McCarthy era, the Court was quick to assert that Communists did have the liberties of speech and association. The Court cannot be accused of absolute deference to the executive or legislative branches, even in time of war or unrest. Perhaps the most famous example of protection of liberties during a time of national crisis is *New York Times Co. v. United States*, 403 U.S. 713 (1971). The case involved publication of the *Pentagon Papers,* which described the history of U.S. involvement in Indochina, and the government moved in federal court to prevent further publication of them. The Court ruled that preventing the publication amounted to prior restraint of the freedom of press and was therefore unconstitutional.

The Supreme Court has protected individual liberties in several areas, with the Warren Court particularly active in criminal cases. The Court protected individuals from excessive executive power by limiting the admissibility into trial of evidence gathered in a questionable manner; strengthened the procedure police must use to get a search warrant; and required law enforcement officials to read to individuals their *Miranda* rights, from *Miranda v. Arizona,* 384 U.S. 436 (1966), upon being charged with a crime. The Court has also limited the power of Congress to regulate access to material on the Internet, holding that the Communications Decency Act of 1996 was unconstitutionally vague in that it attempted to apply the standards that would be appropriate to juveniles to all who accessed the medium.

Overall, the judiciary has lived up to the normative view that it is a protector of individual liberties, at least compared with the elected branches. However, questions remain about how effective the Court is at enforcing its decisions. The Supreme Court famously lacks the "purse" and the "sword"—the powers of funding (held by the legislature) and an official enforcement mechanism (held by the executive). Thus, critics charge that the judiciary is an ineffective guardian of liberty despite claims to the contrary. In the end, however, most observers concede that the judiciary is the best, and possibly only, branch that protects the liberties of the powerless and those with minority views. Indeed, as Justice Stone's preferred-freedoms doctrine explains, the Court not only lends a sympathetic ear to individual liberties but even finds that some liberties are so fundamental that the Court assumes the liberties have been violated and it is up to the government to prove otherwise. Although the system of checks and balances has not provided perfect protections of civil liberties, the judiciary, especially the Supreme Court, has been generally effective in defending them.

Child-Benefit Theory

The First Amendment to the U.S. Constitution provides that Congress shall make no law "respecting an establishment of religion." Current doctrine under the Establishment Clause directs that government must be neutral about religion, aiding neither a particular religion nor all religions. Under the test to determine establishment as set forth in *Lemon v. Kurtzman,* 403 U.S. 602 (1971), a government initiative is permissible if it (1) has a secular purpose, (2) has a primary effect that neither advances nor inhibits religion, and (3) does not foster an excessive government entanglement with religion. Various government-sponsored programs provide public school students with free textbooks, transportation, lunches, and other services. A frequent Establishment Clause issue is whether benefits may also go to students attending parochial schools. The child-benefit theory is an approach to these questions that typically allows government programs to reach parochial school students by finding that individual students are the primary aid recipients and not the church or denomination.

In upholding a federal law subsidizing a Roman Catholic hospital in Washington, D.C., the Supreme

Court established a precursor to the child-benefit theory in *Bradfield v. Roberts,* 175 U.S. 291 (1899). The Court ruled that government support of free medical care pursued a secular objective available to all. In *Cochran v. Louisiana State Board of Education,* 281 U.S. 379 (1930), the Court upheld a state law authorizing the use of public funds to supply textbooks to both public and parochial school students of the state. The child-benefit approach led the Court to conclude that the "school children and the state alone are beneficiaries" of the appropriations, and not religious schools.

The child-benefit theory was decisive in the landmark Establishment Clause ruling in *Everson v. Board of Education,* 330 U.S. 1 (1947). *Everson* involved a New Jersey statute authorizing local boards of education to reimburse parents, including those whose children went to parochial schools, for the cost of bus transportation to and from school. Justice Hugo L. Black urged in *Everson* that a "high and impregnable" wall be maintained between church and state. Provision of certain "general governmental services," such as police and fire protection, sewer and water services, and transportation, however, were seen as services "indisputably marked off from the religious function." The state reimbursement for transporting schoolchildren was clearly within its police power—it sought only to ensure students' safe transport, and any aid to church schools was indirect. Black observed that although the First Amendment requires neutrality in the state's relations with religious groups and nonbelievers, it does not require the state to be their adversary. He argued that some expenditure of public funds may incidentally aid church schools, but that the First Amendment was not intended to discriminate against citizens who elect to send their children to church-affiliated schools.

The child-benefit theory allows religious institutions to benefit indirectly from religiously neutral governmental programs; the religious institution must not itself be the principal or primary beneficiary. Those advocating a strict separation of church and state, however, are critical of the child-benefit theory. They believe the Establishment Clause requires strict separation of church and state and prohibits *any* aid, indirect or otherwise, to *any* religious institution. In their view, once government subsidies are rationalized as primarily aid to students, there is virtually no limit to aid flowing to parochial schools through their students.

The child-benefit theory has been frequently used in school-aid cases since *Everson*. In *Board of Education v. Allen,* 392 U.S. 236 (1968), for example, the Court upheld a New York program to loan textbooks to nonpublic school students. The Court concluded that the program's purpose was the "furtherance of the educational opportunities available to the young" irrespective of religion. Similarly, all children who attend sectarian schools were made eligible for meals through the National School Lunch Act of 1946. Likewise, federal statutes such as the Higher Education Facilities Act of 1963 have provided for loans or grants to colleges and universities for buildings or educational programs. During the 1970s, the Court under Chief Justice Warren E. Burger folded much of the child-benefit concept into the more comprehensive *Lemon* test, but the concept continues to contribute to Establishment Clause jurisprudence, as seen in the ruling to uphold school vouchers in *Zelman v. Simmons-Harris,* 536 U.S. 639 (2002).

Child Pornography

Child pornography is a category of expression that depicts or portrays children engaged in sexual activity. Congress began proscribing child pornography in

1977 with the enactment of the Protection of Children Against Sexual Exploitation Act, which prohibited the production, distribution, and sale of material depicting obscene conduct by minors.

In 1982 the U.S. Supreme Court held in a case involving child pornography, *New York v. Ferber,* 458 U.S. 747 (1982), that the government could prohibit the production and distribution of pornographic depictions of children without having to meet the more stringent standard for obscene expression formulated in *Miller v. California,* 413 U.S. 15 (1973). The *Ferber* court focused on the exploitation aspect of children rather than the expressive aspect of the producers and distributors or the ultimate viewer's point of view. According to the *Ferber* Court,

> [The] *Miller* standard, like all general definitions of what may be banned as obscene, does not reflect the State's particular and more compelling interest in prosecuting those who promote the sexual exploitation of children. Thus, the question under the *Miller* test, of whether a work, taken as a whole, appeals to prurient interests of the average person, bears no connection to the issue of whether a child has been physically or psychologically harmed in the production of the work. Similarly, sexually explicit depiction need not be "patently offensive" in order to have required the sexual exploitation of a child for its production. In addition, a work which, taken on the whole, contains serious literary, artistic, political, or scientific value may nevertheless embody the hardest core of child pornography. "It is irrelevant to the child [who has been abused] whether or not the material . . . has a literary, artistic, political or social value."

Congress subsequently enacted the Child Protection Act of 1984, a broad revision of the 1977 law, which, among other things, criminalized the knowledgeable receipt of a "visual depiction [through the mails that] involves the use of a minor engaging in sexually explicit conduct" and eliminated a requirement that child pornography be obscene according to the *Miller* standard before its production, distribution, sale, mailing, trafficking, and receipt could be found criminal. In *Osborne v. Ohio,* 495 U.S. 103 (1990), the Supreme Court upheld an Ohio conviction under a statute that criminalized the private possession and viewing of child pornography in one's own home.

Emboldened by the *Ferber* and *Osborne* decisions, Congress passed several enactments that strengthened laws prohibiting child pornography. One was the Child Pornography Prevention Act of 1996 (CPPA) (*U.S. Code,* vol. 18, sec. 2256), which expanded the federal prohibition on child pornography by including not only pornographic images made using actual children but also "any visual depiction, including any photograph, film, video, picture, or computer or computer-generated image or picture" that "is, or appears to be, of a minor engaging in sexually explicit conduct" (sec. 2256[8][B]). The act also banned any sexually explicit image that is "advertised, promoted, presented, described, or distributed in such a manner that conveys the impression" that it depicts "a minor engaging in sexually explicit conduct" (sec. 2256[8][D]). The 1996 act banned sexually explicit images created by what came to be called "virtual-child pornography," because they are produced by techniques such as computer-imaging and use of adults that appear to be minors.

Despite the Court's previous rulings that exempted child pornography from the obscenity test enunciated in *Miller,* a majority of the Court refused to go as far as legitimating the CPPA's new definition of child pornography that included virtual-child pornography. The Court declared sections 2256(8)(B) and (D) of CPPA unconstitutional in *Ashcroft v. Free Speech Coalition,* 535 U.S. 234 (2002). Justice Anthony M. Kennedy, writing for the Court, declared that the CPPA was overly broad because it included protected expression by proscribing a "significant universe of speech that is neither obscene under *Miller* nor child pornography under *Ferber*." Distinguishing *Ferber,* the Court declared that "in contrast to the speech in *Ferber,* speech that is itself the record of [actual] sexual abuse, the CPPA prohibits speech that records no [actual] crime and creates no [actual] victims by its production. Virtual child pornography is not 'intrinsically related' to the [actual] sexual abuse of children." The court went on to find that the CPPA fell short of the *Miller* standard by including within its breadth pornographic material that was not obscene under the *Miller* standard.

Disturbed by the Court's decision in *Ashcroft,* leg-

islators have sought widespread congressional support for proposed legislation designed to overcome the impediments imposed by the Court's decision.

Chilling Effect

A law (or, more broadly, any governmental sanction) is said to produce a "chilling effect" when it discourages individuals from exercising their legally or constitutionally protected rights because they are fearful that the law or sanction will be applied to them and that they might be prosecuted, even though they might ultimately be vindicated. In other words, the concern is that individuals might balance their desire to exercise a protected right (freedom of speech, for example) against the possibility that they will be prosecuted for what they say, and that they will choose to remain silent rather than face the many burdens attendant on prosecution, even a prosecution that courts might eventually declare improper.

The preceding example is an apt one, because the reality of U.S. Constitutional development is that the chilling-effect concept was first developed in the context of First Amendment cases involving political speech and publication, particularly unpopular, dissident, or unorthodox political ideas. One of the earliest cases was *Near v. Minnesota,* 283 U.S. 697 (1931), in which the U.S. Supreme Court for the first time held that freedom of the press, protected against national governmental infringement by the First Amendment, was also protected against state governmental infringement by the Due Process Clause of the Fourteenth Amendment (via the "incorporation" doctrine, under which certain fundamental rights in the Bill of Rights are brought under the umbrella of due process and applied against the states through the Fourteenth Amendment). The case was also an affirmation of one of the oldest understandings of freedom of the press: that at the minimum, the concept precluded "prior restraint"—that is, there could be no system whereby someone must submit to governmental approval before publication. Still, that understanding of freedom of the press, which had origins several centuries earlier in English common law, did allow for punishment after publication (if, for example, the publication was obscene or libelous). What was striking in *Near* was that the Court further refined this aspect of the common law tradition (as most famously expressed by William Blackstone in the nineteenth century in his *Commentaries*) and recognized some limits on subsequent sanctions, since the prospect of severe sanctions might deter publication and act as a kind of indirect prior restraint—that is, fear of postpublication punishment could produce a "chilling effect" (though the Court did not use the phrase).

The concept came into its own during the tenure of Earl Warren as chief justice (1953–1969), and nowhere did it appear more dramatically than in the Warren Court's elaboration of the doctrines of "overbreadth" and "vagueness." Both concepts were developed in connection with First Amendment cases, and both concepts had the chilling-effect notion as their most fundamental premise. For the Court, a statute was overbroad if its terms were so sweeping that it could be applied not only to conduct that could legitimately be proscribed but also to conduct that was constitutionally protected. A statute was vague if it used terms not readily understandable by persons of ordinary intelligence. (Many of the cases involved laws that were both overbroad and vague.) The Warren Court was extremely solicitous of free speech and free-

dom of press, believing that these were among the freedoms most basic to the proper functioning of democratic government, and laws that either punished or deterred the exercise of these freedoms should be subject to particularly close scrutiny.

As the overbreadth doctrine developed, it spawned an exception to one of the fundamental rules of adjudication, namely, that individuals could challenge a law only as applied to them (that is, the individual must have "standing"). But when an overbroad law impinged on First Amendment freedoms, the Court allowed parties to challenge the law on the basis of its possible application to individuals not before the Court whose protected speech might be punished under the law, without even addressing the issue of whether the law could legitimately be applied to the party actually before the Court. In other words, the party was permitted to argue the rights of others who might be "chilled" by the existence of the overbroad statute.

An illustration of this exception appeared in *Board of Airport Commissioners v. Jews for Jesus, Inc.,* 482 U.S. 569 (1987). The Los Angeles Board of Airport Commissioners banned all "First Amendment activities" within the central terminal area of the Los Angeles Airport. A member of the religious group Jews for Jesus was told by an airport officer to stop distributing religious literature in that area. Using overbreadth analysis, the Court found the rule unconstitutional. The law not only regulated conduct that might cause obstructions or congestion—for example, passing out leaflets as the plaintiff was doing—but it also prohibited even talking and reading or merely wearing campaign buttons or symbolic clothing (all classic examples of "First Amendment activity"). Thus, the Court invalidated the regulation without even addressing the question of whether leafleting in airports was constitutionally protected.

Perhaps one of the most dramatic First Amendment initiatives taken by the Warren Court, starting with *New York Times Co. v. Sullivan,* 376 U.S. 254 (1964), involved applying First Amendment standards to libel actions brought by public officials (and, later, public figures) against critics of their public conduct. The underlying premise of *Sullivan* and subsequent cases was that robust, uninhibited public discussions—including especially criticisms of official conduct—were essential to the workings of democracy and might be "chilled" by fear of excessive libel judgments. (In *Sullivan,* the local jury demanded the *New York Times* pay $500,000 in damages—a great deal of money in 1964.)

Many types of governmental actions may produce a chilling effect. In *Laird v. Tatum,* 408 U.S. 1 (1972), the litigants argued that the U.S. Army's domestic surveillance system created a subjective "chilling effect" that might cause opponents of the Vietnam War to be reluctant to take part in antiwar rallies for fear they would be identified by Army intelligence and the information in Army files subsequently used against war critics. (The Court declined to accept that argument as establishing sufficient injury to allow the litigants to challenge the surveillance system on First Amendment grounds.) More recently, reports surfaced that the Federal Bureau of Investigation (FBI) was authorized to gather intelligence on anti–Iraq War groups, as well as groups opposed to aspects of globalization, because of concerns about infiltration by terrorists. The subjects of such surveillance in turn charged that the intention and result would be a chilling of legitimate protest activity. In November 2003 the American Civil Liberties Union (ACLU) filed a lawsuit charging that certain provisions of the Patriot Act had a chilling effect on the First Amendment rights of several nonprofit organizations providing a wide range of religious, medical, social, and educational services to communities around the country. The ACLU's brief compared the FBI activities in question to efforts in earlier eras to shut down dissent by investigating groups such as the National Association for the Advancement of Colored People (NAACP) and the Japanese American Citizens League.

Today, the term "chilling effect" has moved beyond its First Amendment origins and has become commonplace in a variety of areas where governmental actions may discourage people from exercising protected rights. A recent Internet search using the terms "chilling effect" and "civil liberties" produced 31,000 responses. The first of these reported on a 1999 decision by a judge in Puerto Rico holding that an ACLU lawsuit against the Commonwealth's sodomy statute could go forward because the law's existence, and threats by government officials to enforce it, had a "chilling effect" on sexual expression and relation-

ships. That law was nullified by the U.S. Supreme Court's 2003 decision in *Lawrence v. Texas,* 539 U.S. 558, but the larger point remains—the notion of "chilling effect" as a basis for legal challenges to a wide variety of laws and other governmental actions has become firmly embedded in the U.S. constitutional system.

Christian Roots of Civil Liberties

Civil liberties are those individual freedoms that in the United States are guaranteed primarily in the Bill of Rights (the first ten amendments to the U.S. Constitution), especially the First Amendment, and the Fourteenth Amendment. They are derived from ideas about the value of the individual, freedom of conscience, equality of all before God and thus before government, the right of unpopular and minority views to be heard, and a need to place limits on government. The prominent role of civil liberties in American political thought and action derives from several sources. One of these is Christianity.

The contributions of Christianity to the U.S. concept of civil liberties come from biblical teachings, the historical development of Christianity, and Christian thought and experiences in colonial America and the early United States.

BIBLICAL ROOTS

The earliest roots of U.S. civil liberties can be traced to the Bible. Unlike other ancient religions, Christianity was not linked to a specific nation, race, or country but rather preached a message of equality of all believers. The notion that individuals were created in God's image, biblical messages of peace and social justice, and even the doctrine of original sin would provide Americans with a Christian frame of reference for the concept of self-worth, human dignity, and equality underlying a respect for civil liberties. The very word "freedom" often appears in biblical passages, and although its use in this context is open to varying interpretations, such passages were the texts for many politically themed sermons in defense of civil liberties in late-eighteenth-century America.

HISTORY OF CHRISTIANITY

Because Christianity started as a religion that stood apart from the state, it was perceived in its earliest history as a challenge or threat to the state, the rationale for the persecution of early Christians. This view changed dramatically when Christianity became the state religion of the Roman Empire in the fourth century. In the centuries that followed, Christianity was dominant, and dissent and freethinking were not welcomed. With the fall of the Roman Empire and the eventual rise of the nation-state in Europe, various conflicts arose concerning the proper relationship of state and church and which should be dominant, but the idea of a religion that functioned apart from the state and the individualistic, egalitarian, and social justice elements of Christianity had become largely overwhelmed by the institutional Roman Catholic Church.

This began to change in the sixteenth century with the Protestant Reformation in Europe, which proclaimed the "priesthood of believers" and the "authority of the Bible," thus freeing believers, at least theoretically, from a dependency on the Church as their intercessor and scriptural interpreter. However, the Reformation also led to the emergence of new state religions in Europe, as countries either remained Roman Catholic or assumed the brand of Protestantism espoused by their rulers. This in turn led to the appearance of radical thinkers who rejected the idea of any established church.

AMERICAN ROOTS

The colonization of America included various groups of Christians fleeing religious persecution by other

Christians in Europe, and America became a haven for many dissenting interpretations of Christianity. In analyzing their impact on civil liberties, one scholar has divided them into two broad categories—Puritans and Evangelicals.

No group left its mark upon the American psyche in a more profound or more complex way than the Puritans. They, like many of the other early groups of religious settlers, did not themselves tolerate those who believed differently. However, they created an environment that spawned further waves of dissidents and gave birth to several early American role models for freedom of conscience.

The contribution of the Puritans to the growth of civil liberties, however, extended beyond their hostility toward dissident voices. They preached a "covenant theology" in which they viewed themselves as a new chosen people making a covenant with God, a notion that helped pave the way for American understanding and acceptance of John Locke's vision of a "social contract" between citizens and government. This contract included the protection by government of unalienable rights of individuals, including "life, liberty, and the pursuit of happiness" as stated by Thomas Jefferson in the Declaration of Independence. Not only was this phrase echoed in the Fifth and later the Fourteenth Amendments to the Constitution (with "property" substituted for "happiness"), it also provided a philosophical underpinning for the specific guarantees in the First Amendment.

Original sin and human depravity were prominent themes in Puritan theology, and these led to an inherent skepticism about human government. If all people were sinners, then rulers, too, were sinful and needed restraints on their power over others. This helped point the way toward the concept of limited

Landing of Roger Williams at Providence, Rhode Island, 1636. Williams established the colony of Rhode Island to demonstrate that people could live together peacefully in a civil society without a government-supported church or church-backed government. *(© North Wind Picture Archives)*

government and need for protections against the danger of governments elected by majorities exercising tyranny against minorities.

The second major category of early American religious groupings, the Evangelicals, included a whole spectrum of dissenters from Baptists and Anabaptists to Methodists and Moravians. Some groups came from Europe; others originated in America. They differed widely in their theological beliefs, yet they were generally united in "their insistence on liberty of conscience, disestablishment of religion, and separation of church and state."

The towering figure who gave shape to Evangelical ideas on religious liberty and freedom of conscience was Roger Williams (1603–1683). From earlier strands of Christian thought going back as far as the Epistles of Paul, Williams expounded the doctrine of freedom of conscience as an integral part of God-created humanity. He rejected the notion that the state should or could determine religious truth, and he pointed to the history of Christianity as proof that state-imposed religion did more harm than good. He not only supported the right of Christian freedom but extended this right to non-Christians as well.

Driven out of Puritan New England because of his unpopular views about church and state, he set up the colony of Rhode Island as an experiment in religious tolerance and an effort to demonstrate that people could live together peacefully in a civil society without need of a government-supported church or church-backed government. Among others, he welcomed Quakers, with whom he had strong disagreements, to Rhode Island, and he often debated theology with them—thus demonstrating his commitment to free exchange of ideas.

Williams's writings are considered to have been a major influence on the English political thinker John Locke, who in turn had a profound influence on Thomas Jefferson, one of the major architects of American civil liberties. A less circuitous line of influence was through the Baptist theologian Isaac Backus, a contemporary of the framers of the Constitution. Backus was a powerful voice for freedom of conscience as well as a vocal defender of Williams's contributions to America against others who depicted Williams as a fanatic and troublemaker.

A distinctive fact about American Christianity even in the colonial era was its pluralistic nature. Most colonies had established churches, but several others, like Rhode Island, welcomed believers of various religious persuasions. No single denomination could claim a majority of the population of the thirteen colonies. This fact in itself helped fuel the struggle against established churches and laid the groundwork for religious toleration as a prerequisite for the broader development of civil liberties. Moreover, as the country developed, it grew also in its religious diversity. New types of Christianity gave rise to even more new types, differing sometimes over minutiae and sometimes over profundities of teaching and practice.

Dissent in early America was by no means limited to dissent against government but also included dissent by upstart religions against established churches; dissent within religious denominations; and movements by laity against clergy, uneducated against scholarly, and common men and women against elites—all in the name of religion. According to one scholar, there was no "authoritative center" against which all dissident religious sects were rebelling. Instead there was a "cacophony of ideas" competing in the arena of public opinion. A thriving popular religious press developed early and served to promote one brand of religion against another. By the early nineteenth century, satirical religious verses were being published and circulated to engage the public in religious debate. Formal sermons by well-educated clergy had to compete with the zeal of "vernacular" preachers. Thus there developed a colorful and variegated marketplace of religious ideas that provided an experiential testing ground for free competition of speech, press, and religion, all within the framework of American Christianity.

It was not always an easy step from this marketplace of Christian ideas to the marketplace of all ideas, or from the concept of freedom of conscience for believers to freedom of conscience for all thinkers. But Roger Williams paved the way, and others, including Isaac Backus, followed. By the time of the drafting of the Bill of Rights in 1789, these Christian roots had become intermingled with other schools of thought. The theological views of Puritans and Evangelicals were two of the "four corners of a wide canopy of

opinion about religious liberty." The other two corners were the political views of the Enlightenment thinkers such as Thomas Jefferson and those of the civic-minded Republicans such as George Washington. (The latter group shared the commitment to religious liberty but superimposed it upon the desire to build a society based on a common religious ethos.) All four of these views found advocates among state or federal political leaders, whether in pamphlets, correspondence, or formal debates on the Constitution. Three of these views directly reflected Christian roots. The fourth reflected the Enlightenment thinkers, who were the indirect beneficiaries of Roger Williams's thought via John Locke. This canopy of interacting viewpoints protected free exercise of religion, religious pluralism and equality, separation of church and state, and, more broadly, freedom of conscience.

Many of America's early dissident minorities emerged as America's Protestant majority in the nineteenth and twentieth centuries and became resistant to the idea that civil liberties should be valued and broadly defined. Contemporary studies of public opinion indicate that Christians often rank low on scales measuring tolerance and support for civil liberties. In this respect, however, they are ignoring their own history, for no one can accurately trace the developmental path of civil liberties in America without taking note of their Christian origins.

Christian Science

Christian Science is an indigenous religious organization founded by Mary Baker Eddy (1821–1910) that has figured in numerous legal cases involving spiritual healing not only because of the First Amendment's protection for religious beliefs but also because religious organizations enjoy special tax status. Thus the Christian Science group has been involved in cases involving freedom of religion, taxation, insurance coverage, and other matters.

Eddy claimed she discovered "Christ Science" in 1866, and she later called it Christian Science in her book *Science and Health with Key to the Scriptures* (1875). The intellectual background of her religion, however, is wide-ranging and includes New England transcendentalism, the teachings of Swedish philosopher Emanuel Swedenborg (who believed he had engaged in conversations with the spirit world), spiritualism, mesmerism, faith healing, and the thinking of charismatic mental healer Phineas Parkhurst Quimby.

DEVELOPMENT OF CHRISTIAN SCIENCE

For many years, Eddy had experienced numerous health problems while seeking relief through various cures and treatments. In 1862 she experienced healing from Phineas Quimby, a faith healer in Portland, Maine. She thereafter spent several months studying his techniques.

In 1881, Eddy opened the Massachusetts Metaphysical College for the instruction of Christian Science practitioners. In 1882, Eddy founded the First Church of Christ, Scientist, of Boston, which is known as "the Mother Church." All other Christian Science churches and reading rooms throughout the world are regarded as branches of the Mother Church.

A self-perpetuating board of five directors, originally named by Eddy, directs the church. This board oversees the publication and distribution of literature, including Eddy's writings and the politically influen-

Christian Science founder Mary Baker Eddy praying over the bed of an elderly lady, 1893. Christian Science practitioners have benefited from legislative action and court decisions putting them on a par with the medical community for purposes of medical insurance and taxation. The most controversial part of Christian Science healing practices centers on the right of parents to withhold medical care from their children for religious reasons. *(Library of Congress)*

tial *Christian Science Monitor,* founded by Eddy in 1908. It also supervises Christian Science practitioners, lecturers, religious education, and the orthodoxy of teaching throughout the movement.

Christian Science does not have ordained clergy. Instead, there are readers and teachers of the Bible and of Christian Science literature, and there are practitioners. The practitioners are professionals who devote themselves full-time to the healing ministry. Practitioners do not give advice or provide personal counseling but treat the patient through religious resources.

THOUGHT AND PRACTICE

Philosophically, Christian Science is a form of monistic idealism in which "all is mind." Christian Scientists deny the reality of the material world, including the physical nature of Christ, which orthodox Christians accept.

Healing through correct thinking or prayer is central to Christian Scientists. Disease is seen as mental misunderstanding that is best treated by reading Christian Science literature, praying, or consulting with a practitioner. Because Christian Science denies the reality of evil, sickness, and death, the *Christian Science Monitor* does not print medical stories or obituaries. In some situations Christian Scientists may submit to materialistic medical aid for vaccinations, surgery, broken bones, dental work, correctable eye problems, or help for childbirth.

Christian Scientists have lobbied aggressively to secure religious exemptions for their health care system. Practitioners have benefited from legislative action and court decisions putting them on a par with the medical community for purposes of medical insurance and taxation. Legal acceptance has occurred despite opposition from the medical community. In addition,

the courts have allowed nonmedical treatment centers to receive Medicaid and Medicare payments for care.

Many Christian Science parents request that school authorities provide accommodations for their children on grounds of religious liberty. Requests are for exemptions from physical examinations, health studies, medical instruction, immunizations, treatments, or even first aid. The 1996 federal Child Abuse Prevention and Treatment Act (CAPTA) permits the withholding of medical treatment from children for religious reasons.

Christian Scientist parents or practitioners are expected to report to a health department what appear to be infectious or contagious diseases. The requirement is often ignored because Christian Science's self-imposed medical blackout makes diagnosis unlikely. Instead, decisions about health care are left to Christian Scientists as individuals.

The most controversial part of Christian Science healing practices centers on the right of parents to withhold medical care from children for religious reasons. There are testimonials of complete cures by the church, but there are also several cases of children who suffered and died from treatable conditions but who received only the treatment from religious resources provided by Christian Science. In some such cases, charges of child neglect have been brought, but these have usually not been successfully prosecuted.

In 1997 the Supreme Court refused to hear *Children's Healthcare Is a Legal Duty, Inc. v. Deters,* 92 F.3d 1412 (6th Cir. 1996). In this case, the Sixth Circuit Court of Appeals had decided that the Eleventh Amendment provided immunity to a prosecutor who was upholding an Ohio law that accepted parental use of religiously inspired treatments for their children. The case raised the issue of religious exemption despite the decisions of courts beginning as early as 1903 that religious liberty does not include the right to withhold medical care from a child.

Church of the Lukumi Babalu Aye, Inc. v. City of Hialeah (1993)

Santeria is a religion that combines elements of Roman Catholicism with the traditional African religion that was brought to the United States by slaves. Some Santerian rituals include sacrifice of animals. In 1987 a group of Santerians announced plans to open a house of worship in Hialeah, Florida. In response, the city council in an emergency meeting adopted a set of ordinances that forbade the ritual killing of animals and specified certain exceptions to that rule. These exceptions substantially narrowed the persons affected by the legislation to the Santerians. Both the U.S. District Court and the Eleventh Circuit Court of Appeals found no violation of the Free Exercise Clause of the First Amendment, which prohibits restrictions on the free exercise of religion.

In *Church of the Lukumi Babalu Aye, Inc. v. City of Hialeah,* 508 U.S. 520 (1993), the U.S. Supreme Court disagreed with the lower courts in a unanimous holding, though there were several opinions. Justice Anthony M. Kennedy wrote the majority opinion; Justices Antonin Scalia, David H. Souter, and Harry A. Blackmun wrote concurring opinions. Justice Kennedy applied the neutrality test established in *Employment Division, Department of Human Resources of Oregon v. Smith,* 494 U.S. 872 (1990) (*Smith*), and found that the Hialeah legislation was not neutral or of general applicability because its object was the suppression of ritual animal sacrifice only as practiced in Santeria. Thus, the ordinances were required to meet the test of strict scrutiny. That is, they must have been enacted in response to a compelling governmental interest and be narrowly tailored to advance that interest. In examining the ordinances, Justice Kennedy rejected Hialeah's claim that the ordinances had the secular purpose of preventing cruelty to animals, finding that they were carefully tailored to forbid the ritual

killing of animals only by the Santerians. They failed to prohibit analogous nonreligious animal killing, and thus Hialeah did not demonstrate a compelling governmental interest that might have justified their adoption. Furthermore, the ordinances were found to be overbroad, violating the second prong of the strict-scrutiny test, because they forbade Santerians from sacrificing animals even when the sacrifice would not threaten Hialeah's interest in humane methods of slaughter.

Justice Scalia in a concurring opinion took issue with the way Justice Kennedy used the terms "neutrality" and "general applicability." He also thought the Court should not have considered the subjective motivation of the city council members. Justice Souter explained why he did not think *Smith* was applicable to this case and why he thought the Court should reconsider the *Smith* rule. Justice Blackmun argued for a return to the strict-scrutiny test of *Sherbert v. Verner,* 374 U.S. 398 (1963), and expressed the view that any law that negatively targets religiously motivated behavior should automatically fail that test.

This case is important in Free Exercise Clause jurisprudence, because it identifies the only type of situation in which a law can be found to violate the clause when the controlling test is one of neutrality. That is, any law that clearly targets a particular religion is unconstitutional even if it appears to be facially neutral. Otherwise, a law must also violate some other constitutional provision.

Cipollone v. Liggett Group (1992)

The First Amendment gives wide scope to freedom of speech and press, and the Supreme Court has applied these rights to the states through incorporation of the guarantees of the First Amendment and most other provisions of the first ten amendments (the Bill of Rights) via the Due Process Clause of the Fourteenth Amendment. Still, these rights are not unlimited. The First Amendment has been held not to protect deceptive advertising against regulations by the Federal Communications Commission. *Cipollone v. Liggett Group,* 505 U.S. 504 (1992), a controversial ruling involving the liability of cigarette companies for deceptive advertising and marketing, indicates that such companies may be liable to sanctions under state law as well.

In addition to its implications for the First Amendment, this case is noteworthy for the controversy it generated in the lower courts. This involved the eventual removal of the trial judge for the appearance of bias in the case as well as the discovery of significant information about tobacco and the activities of tobacco companies in suppressing information about the dangers of smoking. These included a 1961 document in possession of Philip Morris reporting that carcinogens "are found in practically every class of compounds in smoke" and a 1972 study revealing an understanding of smoking as drug addiction that described a cigarette "as a dispenser for a dose unit of nicotine."

The husband of Rose Cipollone initiated this case in a trial court on behalf of his wife, who began smoking in 1942 and died of lung cancer in 1984. Their son, Thomas, continued the suit after his father died. The case focused less on issues of First Amendment law than on the issue of federal preemption, that is, the degree to which federal regulation of an area precludes similar regulation by states under the clause in Article VI of the Constitution (designated as the Supremacy Clause) indicating that the federal Constitution and laws made under it are supreme over those of the states.

Cipollone was decided against the background of two congressional laws, the Federal Cigarette Labeling and Advertising Act of 1965 and the Public Health

Cigarette Smoking Act of 1969. Both had required warning labels of the public health dangers of cigarettes. The first act specified that “No statement . . . shall be required in the advertising of any cigarettes.” The second act amended this statement to indicate that “No requirement or prohibition based on smoking and health shall be imposed under State law with respect to the advertising or promotion of any cigarettes” if the packages had the specified warning. After the adoption of the second law, the Federal Communications Commission had further banned cigarette advertising through the electronic media.

Finding that Rose Cipollone had contributed to her own health problems by about 80 percent, a trial jury had still awarded her $400,000 in damages based on evidence of deceptive cigarette advertising prior to adoption of the federal laws; significantly, this was the first jury award of damages in such a tobacco case. The Supreme Court had to decide if the family might be entitled to additional damages from the time period after adoption of federal legislation under state common law actions designed to prohibit deceptive advertising, breach of warranty, and the like.

The lead decision, written by Justice John Paul Stevens on behalf of himself and Justices Byron R. White, Sandra Day O’Connor, and Chief Justice William H. Rehnquist, attempted to interpret both federal statutes according to their specific language. Justice Stevens found that these statutes had been designed to provide uniform warnings on all cigarette packaging and thus precluded further damages based on lack of such warnings. He found, however, that the acts had not been designed to preempt state common law claims for breach of express warranties, concealment of material facts, the duty not to commit fraud, and the like. It accordingly allowed actions based upon such claims to proceed. Justices Harry A. Blackmun, joined by Justices Anthony M. Kennedy and David H. Souter, found no preemption of any of the state remedies; Justice Antonin Scalia, joined by Justice Clarence Thomas, believed that most state action before 1969, and all state action after 1969, had been preempted by federal legislation.

From a civil liberties perspective, perhaps the most interesting feature of *Cipollone* is that the Court not only took it for granted that freedom of the press did not exempt advertisers from all governmental regulation, but, much as in cases that had articulated a strong presumption against prior restraint of publication—for example, *Near v. Minnesota,* 283 U.S. 697 (1931), and *New York Times Co. v. United States,* 403 U.S. 713 (1971)—the Court also clarified that the First Amendment did not necessarily absolve individuals of liability for damages that might result from consumption of their products. Faced with a phalanx of cigarette-company attorneys, however, the Cipollone family decided not to pursue the case further.

Citizenship

Citizenship has been the linchpin of the modern nation-state. Through citizenship, the individual acquires a status in the state that ensures certain rights and defines responsibilities. The status of citizenship presumes a singular loyalty to the nation. Only the citizen is granted an active participation in the process of government. Membership, rights, and territory are the three interlocking dimensions of citizenship. In recent decades the significance of the traditional notion of citizenship has been challenged. Rights have increasingly come to be predicated on place of residence rather than on citizenship status. Few rights other than the rights to vote and to hold political office have been exclusively reserved for citizens. In the view of both ancient and modern liberal political theorists, the relationship between the individual and the state was defined by the concept of citizenship. Whether citizenship will continue to play this central role remains in question.

As a component in political theory, citizenship is a function of consent. In a constitutional democracy based on republicanism, the compact between the in-

dividual and the state is established through the constitution that outlines the terms of government and protections for the citizenry. Although the U.S. Constitution of 1787 does not define citizenship or include language or rules regarding who should be a citizen, Article I, Section 8, clause 4 granted Congress the power to "establish [a] uniform rule of naturalization." Through this power, Congress has passed numerous laws regarding the acquisition of citizenship. Congress enacted the first federal nationality and citizenship law in 1790, but national citizenship was not firmly established until after the Civil War. The legislative history of which individuals could acquire citizenship, and how they could do so, reflects a more restrictive view of membership than is suggested by the traditional notion of the United States as a land of immigrants.

The first affirmative mention of citizenship in the Constitution came in the Fourteenth Amendment, a response to the U.S. Supreme Court decision in *Scott v. Sandford,* 60 U.S. 393 (1857), in which the Court had denied that blacks could be citizens. The Fourteenth Amendment defined citizenship for the first time in the text as belonging to "all persons born or naturalized in the United States and subject to the jurisdiction thereof" and provided a set of rights to which all citizens were entitled. Although the main purpose of the amendment was to establish the citizenship of blacks, it also established national over state citizenship in the country.

In the United States, citizenship has been based on a combination of birth on the soil of the sovereign's territory (the principle of territory, *jus soli*) and by descent according to blood kinship (the principle of

A class in citizenship and English for Italians given free of charge in 1943 at the Hudson Park Library on Seventh Avenue near Bleeker Street, New York City. *(Library of Congress)*

blood, *jus sanguinis*). The children of U.S. citizens born outside of its territory, for example, receive their parents' citizenship by virtue of descent. Those who acquire U.S. citizenship in this manner cannot transmit it to their children through *jus sanguinis* unless such children have previously established residence in the United States. Stipulating residence as a criterion for the acquisition of citizenship reflects a larger issue over the degree and substance of the connections that should be necessary between a polity and its citizenry. The residence requirement is a connections test designed to prevent the transmission of citizenship across generations to descendants who have no substantial tie with the United States.

The vision of what citizenship means in terms of a national ideology has shifted historically in the United States. The requirement of assimilation and the metaphor of the "melting pot" dominant in the first half of the twentieth century have been transformed into a "mixed salad" understanding that accepts ethnic diversity and multiculturalism. Although citizenship in the United States implies great rights and freedoms, there is an overarching principle that being an American presupposes certain political values and characteristics. In times of crisis there have been tragic restrictions placed on who may be a citizen. The Japanese internment during World War II, the Communist hunts of the 1950s, and the war on terrorism targeted against Muslims in the aftermath of the terrorist attacks on September 11, 2001, all highlight the connection of citizenship to patriotism, values, and particular notions of what it means to be an American.

Still, qualifications that seek to pour ideological and political meaning into the concept of citizenship have met with judicial resistance. The Supreme Court has rejected congressional attempts at defining the allegiance of those who are already citizens. A citizen cannot be involuntarily expatriated—involuntarily be stripped of citizenship—upon commission of acts inconsistent with allegiance. Whereas Congress sought to expatriate citizens who voted in a foreign political election, deserted the armed forces in a time of war, or (in the case of naturalized citizens) took up residence in the country of their birth, the Supreme Court has held all such legislation unconstitutional. Such acts by citizens, and even by noncitizens, may be punished, but loss of citizenship cannot be predicated on them. The Supreme Court has safeguarded citizenship as "man's basic right," stating that it is "nothing less than the right to have rights." In *Perez v. Brownell,* 356 U.S. 44 (1958), Chief Justice Earl Warren heralded citizenship as a "priceless possession" and argued that if removed "there remains a stateless person, disgraced and degraded in the eyes of his countrymen."

In addition to rejecting congressional attempts to equate citizenship with ideology, the Supreme Court has also diminished the connection between citizenship and rights by tying many constitutional protections to "persons" instead. The disconnection of rights from citizenship status has generated a concern that citizenship no longer matters. In comparison to most other countries, citizenship in the United States has gradually evolved into a status that is easy to obtain, is difficult to lose, and, of most concern, offers few legal or economic advantages over the status of permanent resident alien. Since the late 1980s, citizenship has become a salient issue for policy makers, scholars, immigrants, and the public at large. It has been central to the controversy surrounding access to welfare benefits, criteria for naturalization, the legitimacy of plural nationality, and the accommodation of multicultural diversity. The increasing scale and pace of international migration have further heightened concerns over a "devalued" citizenship.

Dual citizenship has been increasingly recognized along with the understanding that multiple attachments do not compromise loyalty to the United States. In addition, the practice of citizenship has changed. Integration into "mainstream" organizations and associations (as opposed to ethnically or nationally segmented groups) and participation in civic politics have declined (voting, political parties, and the like), whereas participation in global or transnational organizations and issues has grown. At the same time, U.S. citizenship continues to be the major objective of many aliens who come to American shores in pursuit of the age-old dream of a new life and freedom.

City of Boerne v. Flores (1997)

In 1925, Catholics in Boerne, Texas, built Saint Peter the Apostle Church in the architectural style of the old Spanish missions. The parish outgrew the modest structure and in 1991 decided to replace it with a building that would hold three times as many parishioners. When the pastor applied for building permits, city officials rejected the project, citing the city's desire to preserve a historic district in order to attract tourists. Archbishop P.F. Flores sued on behalf of Saint Peter's, arguing that the city's refusal to issue permits violated the parish's First Amendment rights of free exercise of religion. By the time the case reached the U.S. Supreme Court in 1996, lawyers for the church also cited the Religious Freedom Restoration Act passed by Congress in 1993. This law prohibited both state and federal governments from burdening religious exercise unless government officials could show that they had a compelling state interest and were using the least restrictive means to further that interest. Clearly, the lawyers argued, preservation of a rather ordinary-looking sixty-year-old building could hardly qualify as a compelling interest.

Lawyers for the city of Boerne responded that the Religious Freedom Restoration Act was itself unconstitutional because Congress had passed the law specifically to overrule the Supreme Court's decision in *Employment Division, Department of Human Resources of Oregon v. Smith,* 494 U.S. 872 (1990). In *Smith,* Justice Scalia wrote for a six-three majority of the justices that "the right of free exercise does not relieve an individual of the obligation to comply with a valid and neutral law of general applicability." Although the church was not an individual, the lawyers argued, it must abide by the same limits on exercise of religion. The city's preservation law was one of general applicability and therefore covered Saint Peter's.

In *City of Boerne v. Flores,* 521 U.S. 507 (1997), the Supreme Court, by a six-three vote, overturned a U.S. circuit court decision and decided in favor of the city. The Court's reasoning was as important as its holding. Justice Anthony M. Kennedy wrote that in passing the Religious Freedom Restoration Act, Congress explicitly rejected the Court's ruling in *Smith* and attempted to reinstate the compelling-state-interest rule that the Court had used in the earlier case of *Sherbert v. Verner,* 374 U.S. 398 (1963). In passing the 1993 law, Congress had exceeded its power. It is the responsibility of the judicial authority, not the legislature, to determine the constitutionality of laws in cases and controversies. The powers of the legislature are defined and limited, and the Constitution was written to ensure that those limits are not mistaken or forgotten. Justice Kennedy also said that legislation that alters the meaning of the Free Exercise Clause (as determined by the Supreme Court) is beyond the power of Congress. The case thus was decided chiefly as a question of separation of powers between branches of government rather than simply on First Amendment grounds.

Understandably, members of Congress and a variety of religious lobbyists reacted with anger to the Court's ruling. A new piece of legislation, the Religious Liberty Protection Act, passed the House of Representatives in 1999 by a 306 to 118 vote. But as it was being considered in the Senate, several troubling questions were raised about the numbers and kinds of religious liberty claims that would be protected. Even religious leaders began to have second thoughts, and the Senate never voted on the proposed bill.

Meanwhile, once the Court ruled, the city of Boerne reached a compromise with the church and Archbishop Flores whereby the church agreed to preserve 80 percent of the building, including the facade,

in return for permits to expand its seating to serve the growing community.

City of Erie v. Pap's A.M. (2000)

In *City of Erie v. Pap's A.M.,* 529 U.S. 277 (2000), the Supreme Court held, as it had in *Barnes v. Glen Theatre,* 501 U.S. 560 (1991), that states and municipalities could place restrictions on nude dancing without violating the protection for free expression provided by the First Amendment to the Constitution. Unlike in *Barnes*, however, five of the justices in *Pap's A.M.* agreed that the proper framework for analyzing such restrictions was the four-part test enunciated by the Court in *United States v. O'Brien,* 391 U.S. 367 (1968). A majority of the justices also agreed that combating the adverse secondary effects of nude dancing was within the city's constitutional powers and unrelated to the suppression of free expression, thus satisfying the first and third prongs of the *O'Brien* test.

A majority of the justices in *Pap's A.M.* could not agree, however, on whether an ordinance adopted by Erie, Pennsylvania, requiring dancers to wear pasties and G-strings furthered an important or substantial interest of the city, and, if so, whether the incidental restriction on nude dancing was no greater than essential to further this interest (the second and fourth prongs of *O'Brien*). The plurality—Chief Justice William H. Rehnquist and Justices Sandra Day O'Connor, Anthony M. Kennedy, and Stephen G. Breyer—held that Erie's public indecency ordinance furthered an important or substantial government interest under *O'Brien* because "[t]he asserted interests of regulating conduct through a public nudity ban and of combating the harmful secondary effects associated with nude dancing [e.g., increase in crime, decrease in property values] are undeniably important." The plurality's reliance on the secondary-effects doctrine, taken from *City of Renton v. Playtime Theatres, Inc.,* 475 U.S. 41 (1986), was significant because it marked a clear departure from the *Barnes* plurality's determination that nude dancing restrictions could be justified under *O'Brien* by a government's interest in protecting societal order and morality. Further, the plurality's opinion constituted an adoption of the approach advocated by Justice David H. Souter in his *Barnes* concurrence. The *Pap's A.M.* plurality also concluded that Erie's ordinance was no greater than essential to furthering the city's interest in combating the harmful secondary effects of nude dancing, noting that "[t]he requirement that dancers wear pasties and G-strings is a minimal restriction in furtherance of the asserted government interests, and the restriction leaves ample capacity to convey the dancer's erotic message."

Justice Antonin Scalia, joined by Justice Clarence Thomas, concurred in the judgment of the Court, noting that "I do not feel the need, as the [plurality] does, to identify some 'secondary effects' associated with nude dancing that the city could properly seek to eliminate. . . . The traditional power of government to foster good morals (*bonos mores*), and the acceptability of the traditional judgment (if Erie wishes to endorse it) that nude public dancing *itself* is immoral, have not been repealed by the First Amendment." Justice Souter concurred in part and dissented in part, expressing his opinion that "the current record [does not] allow us to say that the city has made a sufficient evidentiary showing to sustain its regulation." Justice John Paul Stevens, joined by Justice Ruth Bader Ginsburg, dissented, asserting that the ordinance was a

"patently invalid" content-based ban on nude dancing that censored protected speech.

City of Indianapolis v. Edmond (2000)

In *City of Indianapolis v. Edmond,* 531 U.S. 32 (2000), the U.S. Supreme Court considered whether a city procedure under which cars were stopped at checkpoints to enable law enforcement officials to screen for drugs violated the protection against unreasonable search and seizure provided by the Fourth Amendment to the U.S. Constitution. A major issue was whether the city's policy fell within an exception to the requirement that police have "individualized suspicion" of criminal activity before making a seizure. In addition, the Court considered whether the practice was sufficiently distinguishable from standard police functions to justify such seizures without having the requisite suspicion.

Indianapolis, Indiana, police instituted a procedure to stop drivers, check licenses and registrations, and inform the drivers they had been stopped at a drug checkpoint. Officers would visually inspect vehicles and check drivers for obvious signs of impairment. Drug-detection dogs then walked around every stopped vehicle. If the dogs indicated the presence of drugs, officers had probable cause to search the car. The drug checkpoint policy was challenged by a number of drivers, and the Court held six-three that it violated the Fourth Amendment.

The Court had previously upheld immigration checkpoints in *United States v. Martinez-Fuerte,* 428 U.S. 543 (1976), and sobriety-check lanes in *Michigan Department of State Police v. Sitz,* 496 U.S. 444 (1990), on a "special needs" basis because they addressed objectives distinct from typical law enforcement functions. As a result, these practices did not require the individualized suspicion mandated for virtually all other seizures by the Fourth Amendment. Indianapolis offered the same "special needs" argument, but the Court was unpersuaded. In her opinion for the majority, Justice Sandra Day O'Connor said the "primary purpose" of the Indianapolis checkpoint program was "ultimately indistinguishable from the general interest in crime control"; thus the roadblock seizures were unreasonable. Although sympathetic to the city's goals, the Court was worried about the consequences of validating the checkpoints. If the Indianapolis program could be justified by its secondary purposes of keeping impaired motorists off the road and verifying licenses and registrations, law enforcement authorities would be able to establish checkpoints for virtually any purpose as long as the stops included license or sobriety checks. O'Connor said there would be "little check on the ability of the authorities to construct roadblocks for almost any conceivable law enforcement purpose." Exceptions to the individualized-suspicion requirement were rare, O'Connor said, and the Court had "never approved a checkpoint whose primary purpose was to detect evidence of ordinary wrongdoing."

The Court also rejected the argument that the checkpoint program was justified by the "severe and intractable" nature of the drug problem. The gravity of the drug threat was not itself sufficient to justify the checkpoints. The Court did not dispute that illegal drug trafficking created "social harms of the first magnitude" and "daunting and complex" problems for law enforcement. The same could be said for a number of other illegal activities, however, "if only to a lesser degree." In determining whether individualized suspicion was a prerequisite for seizure, the Court had to consider the "nature of the interests threatened and their connection to the particular law enforcement practices at issue." The Court concluded the Indianapolis drug checkpoint program was indistinguishable from its general crime control function and thus required individualized suspicion.

Chief Justice William H. Rehnquist and Justices Clarence Thomas and Antonin Scalia dissented. Since the Indianapolis roadblocks were objectively reason-

able methods of preventing drunken driving and checking for drivers' licenses, it was constitutionally irrelevant that the police acknowledged its goal of interdicting drugs. The addition of the drug-sniffing dogs did not lengthen the stops and thus did not render these otherwise reasonable stops unlawful. The dissenters saw the stops as brief, standardized, discretionless, roadblock seizures of automobiles, which effectively served a substantial state interest with only minimal intrusion on privacy interests.

City of Ladue v. Gilleo (1994)

In *City of Ladue v. Gilleo,* 512 U.S. 43 (1994), the U.S. Supreme Court considered a First Amendment challenge to a local ban on residential signs. The case pitted an individual's right to free political speech against the city government's interest in fostering pleasing aesthetics in the community.

Margaret Gilleo, a homeowner, had erected a yard sign protesting the 1991 Gulf War. Notified that such signs were prohibited in Ladue, she applied for and was denied a variance. Claiming free speech protection, Gilleo won a preliminary injunction in federal district court and subsequently posted another pro-peace sign in a window of her home. Responding to the injunction, the city enacted a replacement ordinance that again banned all residential signs with limited exceptions for residential identification markers, "for-sale" notifications, and safety warnings. Also exempt were "on-site" advertising and commercial signs in properly zoned areas. The new law included a detailed statement asserting as its purpose the minimization of "visual blight and clutter." Gilleo amended her claim and again filed suit. Both the district and appellate courts declared the revised ordinance unconstitutional, finding that it was content-based discrimination and unsupported by any compelling state interests. A unanimous Supreme Court affirmed under a different rationale.

Deviating from traditional First Amendment analysis, the Supreme Court addressed the constitutionality of the "near-total" prohibition on residential signs without assessing whether the various exemptions rendered the ban content-based. Writing for the majority, Justice John Paul Stevens reasoned that determining whether the ban was underinclusive did not necessarily resolve Gilleo's claimed right to display a political message on her property. Therefore, the justices opted to proceed to the question of whether the ban prohibited "too much" speech.

The Court agreed that the city had a valid interest in "minimizing visual clutter" but found that interest unpersuasive when weighed against the right of private political expression. Stevens explained that it was the blanket prohibition on "a venerable means of communication that is both unique and important" that rendered the ordinance problematic. Relying on precedent that repudiated total medium bans, the majority particularly noted that residential signs were an inexpensive yet effective mode of communication, imbued with special meaning by virtue of location. Moreover, the Court acknowledged that recognized liberty and privacy interests supported the right to express political beliefs from the home.

The Court rejected the argument that alternative avenues of speech were not foreclosed by the ban. Given the importance of residential displays, the majority was not convinced that "adequate substitutes" or other equally effective means of expression existed. Conversely, the justices believed that the city had numerous and viable options for addressing the incidental evils associated with residential signs. The Court thus declared the ordinance unconstitutional under the First Amendment, accepting for the sake of argument that it was content-neutral.

Writing in concurrence, Justice Sandra Day O'Connor indicated a preference for a more traditional approach that would have focused on the content-based nature of the ban. However, since she agreed that the ordinance would be invalid even if it

were ruled content-neutral, she was willing to join the Court's holding.

Willis, Clyde E. *Student's Guide to Landmark Congressional Laws on the First Amendment.* Westport, CT: Greenwood, 2002.

City of Los Angeles v. Alameda Books, Inc. (2002)

In *City of Los Angeles v. Alameda Books, Inc.,* 535 U.S. 425 (2002), the U.S. Supreme Court upheld the constitutionality of a zoning ordinance prohibiting multiple adult entertainment businesses from operating in the same building. The primary issue on appeal was whether the city had enacted the ordinance in accordance with a "substantial government interest," as defined by the Court in *City of Renton v. Playtime Theatres, Inc.,* 475 U.S. 41 (1986).

A plurality of the Court—Chief Justice William H. Rehnquist and Justices Sandra Day O'Connor, Antonin Scalia, and Clarence Thomas—concluded that the city's stated reason for enacting the zoning restriction (the reduction of crime) was a substantial government interest, and that the city's comprehensive study of the adverse secondary effects arising from the operation of adult entertainment establishments could reasonably be relied upon to substantiate the interest. In reaching this conclusion, the plurality emphasized that although a municipality bears the burden of providing evidence to support a nexus between the zoning restriction imposed and the secondary effects alleged, a municipality is not required to provide "evidence that rules out every theory . . . inconsistent with its own." According to the plurality, a party challenging an adult entertainment zoning ordinance must "cast direct doubt" on the municipality's rationale for its ordinance "by demonstrating that the municipality's evidence does not support its rationale or by furnishing evidence that disputes the municipality's factual findings" in order to "shift the burden back to the municipality to supplement the record with evidence renewing support for a theory that justifies its ordinance."

Justice Scalia, in addition to joining the plurality opinion, wrote a separate concurrence to express his view that "First Amendment traditions make 'secondary effects' analysis quite unnecessary," and that "[t]he Constitution does not prevent those communities that wish to do so from regulating, or indeed entirely suppressing, the business of pandering sex."

Justice Anthony M. Kennedy also concurred in the judgment of the Court, but wrote separately to note that "the plurality's application of *Renton* might constitute a subtle expansion, with which I do not concur." In his view, the fundamental flaw in the plurality's analysis was that it did not "address how speech will fare under the city's ordinance." According to Justice Kennedy, a municipality's rationale for enacting an adult entertainment zoning ordinance must be premised upon the theory that it "may reduce the costs of secondary effects without substantially reducing speech." Nevertheless, he agreed with the plurality that a municipality's initial evidentiary burden of demonstrating a substantial government interest is light, and that it was up to the plaintiffs at trial to call into question the legitimacy of a municipality's stated rationale for enacting such ordinances.

Justice David H. Souter, joined by Justices John Paul Stevens, Ruth Bader Ginsburg (in full), and Stephen G. Breyer (in part), dissented from the Court's judgment, asserting that the ordinance should be struck down as a content-based restriction on protected First Amendment expression.

Shwayri, Rebecca. "Sex Meets the City: Lowering a City's Evidentiary Burden on Zoning Ordinances: *City of Los Angeles v. Alameda Books, Inc.*" *Florida Law Review* 55 (July 2003): 927.

City of Renton v. Playtime Theatres, Inc. (1986)

In *City of Renton v. Playtime Theatres, Inc.,* 475 U.S. 41 (1986), the U.S. Supreme Court considered the constitutional validity of a municipal zoning ordinance that prohibited adult entertainment theaters from locating within 1,000 feet of any residential zone, single- or multiple-family dwelling, church, park, or within one mile of any school. *Renton* was another in a line of cases that raised issues of the right to free expression under the First Amendment to the Constitution. The Court had previously upheld the constitutionality of a virtually indistinguishable ordinance in *Young v. American Mini Theatres, Inc.,* 427 U.S. 50 (1976), but a majority of the justices in that case were unable to agree on a single rationale for the holding. This changed with the Court's landmark decision in *Renton,* which established an analytical framework for evaluating the constitutionality of adult entertainment zoning ordinances under the First Amendment.

As an initial matter, the *Renton* Court noted that the city's zoning ordinance did not constitute a complete prohibition of adult theaters, but merely required that such theaters be distanced from certain sensitive locations (such as churches and residential areas). For this reason, the Court concluded that the ordinance was "properly analyzed as a form of time, place, and manner regulation." In reaching this conclusion, however, the Court stressed that "[d]escribing the ordinance as a time, place, and manner regulation is, of course, only the first step in our inquiry," and that this type of "content-neutral" regulation is constitutionally permissible only if it "is designed to serve a substantial governmental interest and [does] not unreasonably limit alternative avenues of communication." The *Renton* Court found that the zoning ordinance's restrictions on the location of adult entertainment theaters satisfied this test, concluding that although "the ordinance treats theaters that specialize in adult films differently from other kinds of theaters. . . . [it] is aimed not at the *content* of the films shown . . . but rather at the *secondary effects* of such theaters on the surrounding community [e.g., increased crime, lowered property values]." In this respect, the Court reasoned that the ordinance was "*justified* without reference to the content of the regulated speech," because (1) the city had a substantial interest in preserving "the quality of urban life"; (2) the means chosen to effectuate the city's interest was narrowly tailored "to affect only that category of theaters shown to produce the unwanted secondary effects"; and (3) the ordinance allowed for reasonable alternative avenues of communication by leaving "more than five percent of the entire land area of Renton open to use as adult theater sites."

The *Renton* decision is also notable because of the Court's pronouncement that the First Amendment does not require municipalities, prior to enacting adult entertainment zoning ordinances, to conduct new studies or produce evidence independent of that already produced by other state or local governments, so long as "whatever evidence [a] city relies upon is reasonably believed to be relevant to the problem that the city addresses."

Justice Harry A. Blackmun concurred in the judgment of the Court without writing a separate opinion, thus declining to elaborate on the aspects of the majority's reasoning with which he disagreed. Justices William J. Brennan Jr., joined by Justice Thurgood Marshall, dissented, expressing his opinion that Renton's zoning ordinance was "patently unconstitutional."

Civil Disobedience

To engage in civil disobedience means to break a law deliberately, for moral reasons, in order to dramatize its unjust character in a peaceful way.

CHARACTERISTICS OF CIVIL DISOBEDIENCE

Social movements use many techniques in their efforts to stimulate changes in society. One technique is demonstrating. Under the First Amendment to the Constitution, demonstrators can publicly assemble, speak, and petition to have grievances redressed. Demonstrating is usually legal and may include actions such as peaceful picketing. Civil disobedience, however, goes beyond demonstrating to deliberate breaking of the law believed to be unjust. Those who engage in civil disobedience are attempting to secure civil liberties or rights they believe are being wrongfully denied.

Most scholars regard civil disobedience as an act of more than one person. By this standard, the American writer Henry David Thoreau (1817–1862), who spent a night in jail for refusing to pay taxes in opposition to the Mexican-American War, was not engaged in civil disobedience but rather in individual "conscientious objection." In the same category would be individuals in the 1960s and 1970s who refused to be drafted to serve in the Vietnam War or those who fled to Canada to escape the draft. Civil disobedience is a collective act of conscientious objection. Those who plan to engage in civil disobedience will often form "affinity groups" for mutual support during a campaign of civil disobedience.

Civil disobedience is the public breaking of a law to dramatize its alleged injustice. The anonymous commission of destructive acts, such as the "Indians" at the 1773 Boston Tea Party who tossed chests of tea into Boston harbor or the animal rights activists who secretly "liberated" animals from research centers in the 1990s, does not fit that definition. These acts were not done publicly to mold the conscience of the community. Also, many people believe that civil disobedience must be nonviolent because it is an act performed for moral reasons.

A purposeful act that breaks a specific law deemed unjust is direct civil disobedience. However, it often is not practical to break a law connected with a policy opposed by a movement. For example, peace movements opposed to a war cannot usually directly stop the conflict. To dramatize their cause, they may engage in sit-ins, lie down in the streets, or block entrances to public buildings. In these situations the laws broken usually pertain to trespassing or disturbing the peace. This type of activity is called indirect civil disobedience.

People who engage in civil disobedience expect to be punished by the law. Some proponents of such acts have suggested that there is a legal right to break a law as an act of civil disobedience and that there thus should be no punishment. Courts in the United States have not accepted this oxymoronic claim.

The courts have imposed a variety of punishments for engaging in civil disobedience. Most acts of civil disobedience violate state laws, which may be more lenient than federal laws. Since the adoption of the federal Racketeer Influenced and Corrupt Organizations Act of 1970 (RICO), there have been attempts to use it to prosecute groups of people engaged in civil disobedience. To date the U.S. Supreme Court has refused to apply the RICO statute in this way.

Civil disobedience places burdens on police forces, who must divert personnel, time, and other resources to manage and process groups of people engaged in illegal activity. One intention of those engaged in civil disobedience is to overload the criminal justice system in order to effect policy change.

HISTORICAL PRACTICE

Many groups have used civil disobedience in American history as a means of seeking change in public policy. In the nineteenth century, the suffragettes used public marches to protest the denial of the right to vote to women, a right not recognized until adoption of the Nineteenth Amendment in 1920. In the 1960s, the civil rights movement attacked state segregation laws by engaging in such direct activities as "freedom rides," in which groups of civil rights supporters rode buses through the South testing local segregation laws and practices. Cases were dismissed against the African Americans who engaged in sit-ins in Greensboro, North Carolina. Rosa Parks was arrested for refusing to give up her seat on a Montgomery, Alabama, bus to a white passenger as required by local law; charges against her also were ultimately dismissed. The courts found the segregation laws unconstitutional, and thus prosecutions were unenforceable. In the 1980s, civil disobedience was used to oppose apartheid in South

Police use pepper spray on locked-out workers at the A.E. Staley Company in Decatur, Illinois, June 1994. The workers and their supporters were peacefully sitting in the driveway at the Staley plant as an act of civil disobedience to protest the lockout. *(© Tatsuyuki Tayama/Fujifotos/The Image Works)*

Africa and to force U.S. universities to divest endowments that were based on investment in that country.

During the Vietnam War, antiwar activists engaged in a variety of acts of civil disobedience, including blocking military trains and induction centers, burning draft cards, and disrupting shipments of military supplies. Various peace groups, often allied with new immigrant groups, have used civil disobedience since then to try to stop other wars, including the Gulf War of 1991, the conflict in Afghanistan (2001), and the war in Iraq (2003).

Protesters opposed to the U.S. Army's School of the Americas at Fort Benning, near Columbus, Georgia, have used civil disobedience to try to force its closure. Numerous activists have spent months in jail for trespassing there.

Groups associated with the environmental movement, including the antinuclear movement, have used civil disobedience to protest the nuclear arms race, the nuclear power industry, and nuclear test sites and laboratories. The animal rights movement has attempted to disrupt hunting or to stop the use of animals in research. Groups opposed to globalization have used civil disobedience to try to disrupt World Trade Organization meetings and to prevent other meetings that would spread "undesirable economics."

Most of the groups engaged in civil disobedience, such as ACTUP (AIDS Coalition to Unleash Power),

fall on the left end of the political spectrum. After the Supreme Court's decision in *Roe v. Wade,* 410 U.S. 113 (1973), however, numerous Christian groups, collectively called the Christian Right, turned to civil disobedience to block entrances to abortion clinics.

A new and growing form of activity is called electronic civil disobedience. Hackers and computer protesters try to disrupt government Web sites in order to protest the alleged denial of civil liberties or government spying.

"Civil Disobedience" (1849)

Ralph Waldo Emerson is said to have remarked that "no truer American existed than Thoreau," who introduced and defended a citizen's right to refuse to obey the law, an action not ordinarily taken to signify good citizenship in the young America of his time. Henry David Thoreau's (1817–1862) essay "Civil Disobedience" has become the canonical, classical American essay for the idea of civil disobedience, especially as a form of individual protest against governmental injustice. The essay, first published in 1849 and entitled "Resistance to Civil Government," began its life as a spoken address in which Thoreau defended his refusal to pay his tax bill, an act that landed him in the Concord, Massachusetts, jail for one night and thus proved to be a deed of rebellion that otherwise

Henry David Thoreau, author of the essay "Civil Disobedience." *(Library of Congress)*

may well have gone unnoticed. Prior to Thoreau's essay, for the most part, the alternative to resignation and acquiescence in obedience to the law was armed revolt or revolution. Thoreau's essay suggested another tactic, provided the conception for it, and gave it respectability.

"Civil Disobedience" takes a grim view of the state's (government's) competency as regards rightfulness and morality; "government is at best but an expedient," and "there will never be a really free and enlightened State, until the State comes to recognize the individual as a higher and independent power." The essay also takes an extremely skeptical view of the state's accomplishments, which are more a reflection of people's unthinkingly attributing qualities and achievements to it out of inordinate deference to it than an actual accounting of its beneficial activities. Thoreau wrote about government: *"[I]t* does not keep the country free. *It* does not settle the West. *It* does

not educate. The character inherent in the American people has done all that has been accomplished; and it would have done somewhat more, if the government had not sometimes got in its way." No man was just or virtuous because of the state or its law but rather because of the clarity of his conscience in choosing to obey a government worthy of his respect, or a law for reason of its moral soundness. Yet, Thoreau believed, most people don't recognize when the government robs them of their personhood by substituting its judgments for theirs, its prerogative for their freedoms, its moral (or immoral) vision closing in upon their individual freedom of conscience.

Thoreau was outraged that the government of a northern state was obligated to return slaves who had escaped from the South back to their owners, and that a part of the poll, highway, or other tax provided the revenue in support of efforts to adhere to this law, the Fugitive Slave Act of 1850. Hence, he refused to pay a tax and let himself be placed in the town jail, a location he regarded as the "true place for a just man" and "the only house in a slave-state in which a free man can abide with honor." Thoreau felt implicated in the system of slavery, rejected by the North, and argued that if the law "requires you to be the agent of injustice to another, then, I say, break the law" and do not lend yourself to the evil you condemn." But most people either looked to the state eventually to right the wrong or were themselves incapable of envisioning a course of action to address it.

The essay appeals to the honest citizen who says "I was not born to be forced. I will breathe after my own fashion." This person will cheerfully disobey an unjust law and personally set in motion the friction that is necessary to counter the machine of the state, ultimately to reawaken the sovereignty of the people so as to oppose their governing authorities who disrespect the right the law in question has wronged with the support of a present majority. In this way citizens will observe their ethical duty to make moral energy effective in the world. Apart from engaging in civil disobedience for the purpose of changing an unjust law, there are few outlets for the average citizen who wishes to protest a law or policy perceived to be unjust but that has widespread support in the relevant legislature or in the courts. Yet, as citizen, this person is a member of the sovereign body.

Thoreau's essay "Civil Disobedience" came to be a major influence on the thinking of the twentieth-century's leading nonviolent demonstrators, principally Indian nationalist leader Mahatma Gandhi (1869–1948) and American civil rights defender Martin Luther King Jr. (1929–1968), and it continues to recommend itself to readers who seek a better integration of their words and beliefs with their actions or who simply strive for moral integrity.

Thoreau, Henry David. *"Civil Disobedience" and Other Essays.* New York: Dover, 1993.

Civil Law System

The legal systems of the world are divided into two categories: civil law and common law. Most of continental Europe, Latin America, the former Soviet Union, the Middle East, and former French Africa are civil law countries. By contrast, the United States, the British Commonwealth, and most former British colonies are common law countries. Civil law and common law as two distinct legal systems should not be confused with "civil law" as a contrast to "criminal law." For that reason, some scholars prefer to refer to civil law systems as "inquisitorial" and common law systems as "adversarial."

The major difference between civil law and common law countries concerns the source of law relating to day-to-day legal affairs. In common law countries like the United States, legal authority comes from judges, who are appointed from the ranks of practicing lawyers and over time develop the law through rulings in legally specific cases known as "precedents." These holdings have the power to bind subsequent courts (*stare decisis,* pronounced *STAR-ry de-SI-sis*). Although state legislatures can, and often do, take this power away from judges by codifying limited areas of law (such as no-fault statutes to govern insurance coverage of damage caused in automobile accidents or to

guide divorce), common law legislation is often drafted to structure rather than replace judges' power to interpret the law. This is particularly the case in the core private law subjects of torts, contracts, and property.

By contrast, in civil law systems, these areas of law are the subject of extensive codes. Historically, civil law codes reflected a profound suspicion of judges. Thus, in eighteenth-century France, judges were seen as exemplars of aristocratic privilege. After the 1789 French Revolution, the National Assembly tried to restrict the power of the judges by drafting a code so clear and comprehensive that no judicial interpretation would be necessary. In practice, however, that clarity proved impossible, and during the twentieth century, in particular, civil law countries had to come to terms with the inevitability of some judicial interpretation of statutes. Still, the use of precedent remains extremely limited, which explains why law libraries in civil law countries are often a fraction the size of their common law counterparts.

In place of precedent, civil law countries substitute the scholarly writing of legal academics. This reflects the civil law's roots in eleventh-century Italy, where scholars rediscovered the compilation of Roman law prepared in late antiquity under the East Roman Emperor Justinian (527–565). The recovery of Justinian's *Code,* which came just as Europe was starting to emerge from the Dark Ages, provided a framework for the budding legal scholars in Bologna and other Italian cities. Eventually this framework was adopted by most European jurisdictions ("the reception of Roman law"). Most modern civil law countries now have their own modern codes, but the influence of legal academics remains paramount.

In addition to having different sources of law, civil law and common law countries also have different types of criminal procedure. Most common law countries are characterized by adversarial procedures, in which the prosecution and defense present their version of the case to the jury, which renders its verdict. The role of the judge is limited to making sure each side follows the rules of procedure and evidence. To use a familiar analogy, the common law judge is like an umpire.

By contrast, the civil law judge is the master of the proceedings. For example, in Germany, the judge decides what evidence the court will hear and usually handles the questioning of the witnesses, including the accused. The judge then retires (either with or without lay jurors) to render a verdict, which must explain, in writing, the decision reached by the judge and jurors. The roles of the prosecution and defense are limited to suggesting evidence for the judge to look at and making brief closing speeches. The judge's reasoned defense of the verdict—which stands in contrast to the common law jury's yes-or-no verdict—enables civil law jurisdictions to dispense with some of the more formalistic rules of evidence most common law systems find necessary.

The United States is predominantly a common law country. Nevertheless, the civil law has had an impact. First, Louisiana, Puerto Rico, and Guam are civil law jurisdictions, in which private law subjects are codified. Second, the inquisitorial procedures of civil law are held out by some critics of the common law justice system as a model for legal reform. On the one hand, critics see the relative absence of evidentiary rules in civil law jurisdictions as an antidote to the "battle of experts" that makes U.S. trials so long and complex. In addition, civil law criminal procedure is praised for viewing the law as a search for the truth rather than a contest between the prosecution and defense. Ironically, this comes at a time when civil law jurisdictions criticize their own inquisitorial systems for placing too much power in the hands of trial judges. Acting on these criticisms, Italy adopted a more adversarial set of criminal procedure rules in 1988.

The rise of multinational organizations (such as the European Union and the International Criminal Court) that join civil law and common law states together will place increasing attention on the compatibility of the two legal systems. While civil law and common law differ in some doctrinal matters, these are minor. Nor should the different approaches to precedent pose problems, since most international law is statutory. The bigger obstacle concerns criminal procedure. Any international tribunal will have to choose between inquisitorial and adversarial procedures. This could pose difficulties because both civil law and common law societies associate their procedures with legal fairness. Compromises will have to be worked out on a case-by-case basis.

There has been vigorous debate over which system

does better at protecting civil liberties. On the one hand, inquisitorial procedure emphasizes the search for the truth, a search conducted by the judge, a civil servant who is (theoretically) neutral and stands between prosecutor and accused. By contrast, adversarial procedure stresses fairness. The accused has the same powers as the prosecution—including the power to present evidence and question witnesses. Critics of the common law note that these powers come into play only when the accused is adequately represented by counsel, a situation that does not always exist. Furthermore, the growth of plea bargaining has made many of the legal protections of the adversarial system irrelevant.

Civil Liberties

The term "civil liberties" describes both those areas of life in which individuals have the right to be free from governmental interference and the right of the people to be treated equally by the government.

The American approach to civil liberties is tied to the belief that government is created and empowered by the people. "The God who gave us life gave us liberty at the same time," Thomas Jefferson wrote, meaning that all human beings are endowed with liberty at the moment of their creation. God did not create governments, however. These are created by the people of a nation to provide them with physical safety and whatever other benefits they may from time to time consider necessary, including protection of their inherent rights and liberties. Government, fashioned by the people, can legitimately exercise only those powers that the people choose to give it. The First Amendment to the U.S. Constitution, for example, states that Congress cannot interfere with the people's liberties of religion, speech, and press. The Fourth Amendment prohibits the government from carrying out unreasonable searches and seizures; the Fifth, from holding people in double jeopardy; the Sixth, from punishing an accused person without a fair and public trial.

Although civil liberties restrict the government, they also limit the majority, in whose name the government acts. In effect, the Bill of Rights (the first ten amendments to the Constitution) defines democracy as majority rule with protection of the rights and liberties of the individual from both the government and the majority. Under the Constitution, neither the government nor the majority can, for example, punish the speech of people who advocate unpopular ideas, the U.S. Supreme Court held in *Brandenburg v. Ohio,* 395 U.S. 444 (1969). Nor can believers such as Jehovah's Witnesses be barred from the peaceful proselytizing that is an article of their faith, the Court ruled in *Cantwell v. Connecticut,* 310 U.S. 296 (1940); and government cannot imprison a person who is not represented by a lawyer, an issue present in *Gideon v. Wainwright,* 372 U.S. 335 (1963), and *Argersinger v. Hamlin,* 407 U.S. 25 (1972).

Civil liberties are dynamic rather than static entities. Their boundaries change as society does, whether because of evolving views or technological innovations. The term "speech" as it is used in the First Amendment, adopted in 1791, for example, did not refer to messages sent across the Internet, but the U.S. Supreme Court held in *Reno v. American Civil Liberties Union,* 521 U.S. 844 (1997), that the speech right applied there. Although the Fourth Amendment's guarantee against unreasonable searches and seizures did not originally envision electronic eavesdropping or thermal-imaging devices, the Court ruled in *Berger v. New York,* 388 U.S. 41 (1967), that the physical intrusion required to plant an eavesdropping device violated the Fourth Amendment. Similarly, it decided in *Kyllo v. United States,* 533 U.S. 27 (2001), that when Oregon police acted without a warrant and used a thermal-imaging device to ascertain whether marijuana was being grown inside a house, they engaged in an unconstitutional search.

The Thirteenth, Fourteenth, and Fifteenth Amendments to the Constitution, enacted after the Civil War, made the right to equal treatment by government a key element of civil liberties. The federal courts gradually applied the right to various areas where the federal or state governments had discriminated among citizens, such as race, as in *Brown v. Board of Education,* 347 U.S. 483 (1954), and gender, as in *Reed v. Reed,* 404 U.S. 71 (1971).

Perhaps the most contentious claims have been those about civil liberties not expressly mentioned in the Constitution. The word "privacy" does not appear there, for example, which is one reason the Supreme Court could state in *Olmstead v. United States,* 277 U.S. 438 (1927), that wiretapping did not violate a constitutional privacy right. Ideas had changed by the 1950s, however, when the Court held in *Griswold v. Connecticut,* 381 U.S. 479 (1965), both that the right to privacy was implicit in the Constitution and that anticontraception laws violated marital privacy. The Court then effectively overruled *Olmstead* in *Katz v. United States,* 389 U.S. 347 (1967).

The *Griswold* case became the basis for the Court's declaration in *Roe v. Wade,* 410 U.S. 113 (1973), that the right to privacy encompasses abortion, and for subsequent rulings extending the right of privacy to decisions by terminally ill people or their legal guardians to end their lives, as held in *Cruzan v. Director, Missouri Department of Health,* 497 U.S. 261 (1990); and applying the right to the private sexual behavior of gays and lesbians, as held in *Lawrence v. Texas,* 539 U.S. 558 (2003).

During the first century and a half of the nation's existence, the federal government was relatively small and uninvolved in issues that would have presented a threat to civil liberties. As a result, the definition of liberties was left in large measure to state governments. Because the Bill of Rights said only that Congress could not abridge rights, the federal government was assumed to have no role in safeguarding the people from civil liberties encroachments by the states, which were left free to violate civil liberties unless their own constitutions or statutes prohibited them from doing so. In 1925, however, the Supreme Court ruled in *Gitlow v. New York,* 268 U.S. 652 (1925), that the First Amendment guarantees of speech and press were binding on the states, and the federal judiciary began to assume the function of ensuring that the states did not violate civil liberties. The other parts of the Bill of Rights were gradually held to be binding on the states as well as the national government—for example, the First Amendment protections of speech and religion in *Cantwell v. Connecticut,* 310 U.S. 296 (1940); the exclusionary rule (tied to the Fourth Amendment) in *Mapp v. Ohio,* 367 U.S. 643 (1961); the Fifth Amendment protection against self-incrimination in *Malloy v. Hogan,* 378 U.S. 1 (1964); and the Sixth Amendment right to a jury trial in *Duncan v. Louisiana,* 392 U.S. 145 (1968).

Today, therefore, the liberties guaranteed by the First through Tenth Amendments, the Thirteenth through Fifteenth, the Nineteenth, Twenty-fourth, and Twenty-sixth are binding upon all levels of government in the United States. There is continuing disagreement about how those liberties are to be interpreted in specific situations, but the nation continues to adhere to the founding fathers' revolutionary idea that a democratic government must not transcend the boundaries the people delineate or impinge upon the civil liberties they cherish.

Civil Rights Cases (1883)

Civil Rights Cases, 109 U.S. 3 (1883), was the nonstandard caption the U.S. Supreme Court gave to several cases that it consolidated for decision. In this famous ruling, the Court held that the Civil Rights Act of 1875, enacted by Congress specifically to enforce the Thirteenth and Fourteenth Amendments, was itself unconstitutional, and that it was beyond the power of Congress to forbid private discrimination

against African Americans. The end of the Civil War and the abolition of slavery legally freed the slaves but did not end the disparate treatment of whites and blacks in the United States. The Thirteenth Amendment (1865) abolished slavery. The Fourteenth Amendment (1868) extended the Bill of Rights (the first ten amendments to the Constitution) to all citizens of the United States and forbade the making or enforcing of laws that abridged these rights. It granted to Congress the power to enforce the amendment by appropriate legislation.

In an effort to secure to African Americans their full rights as citizens of the United States, the U.S. Congress passed a series of civil rights acts, culminating in the Civil Rights Act of 1875. The act was grounded on the recently ratified Thirteenth and Fourteen Amendments. Among other items, it provided for fines and the prosecution of persons who violated the law and the civil liberties of others on the basis of race or color.

The *Civil Rights Cases* stemmed from a variety of violations of the act in widely separated parts of the nation. Two of the defendants were indicted for denying lodging accommodations to persons of color in Missouri and Kansas, another for refusing to seat an African American in the dress circle of Maguire's theater in San Francisco. Another was indicted for denial of accommodations at the Grand Opera House in New York. In Tennessee, the Memphis and Charleston Railroad Company refused to allow a woman of African descent to ride in the ladies' car. All these cases were consolidated by the Supreme Court as the *Civil Rights Cases* and were decided simultaneously.

In a major setback for civil rights, Justice Joseph P. Bradley, writing for the Court, concluded that the legislation was unconstitutional. Giving the Fourteenth Amendment a very literal and narrow reading, the Court held the amendment applied only to "state action of a particular character that is prohibited. Individual invasion of individual rights is not the subject-matter of the amendment." Private persons were free to discriminate. The Court also concluded that private discrimination was not a "badge of slavery," and thus Congress lacked the power to prohibit it under the Thirteenth Amendment

The *Civil Rights Cases* helped encourage the hardening of racial attitudes. So called Jim Crow laws (named after an African American character in a minstrel act) were enacted, and African Americans were systematically excluded from enjoying the privileges of white Americans. State laws across the nation mandated racial separation in schools, parks, playgrounds, restaurants, hotels, public transportation, theaters, restrooms, and countless other places. African Americans were frightened into accepting these conditions by threats of violence, beatings, and lynchings, and U.S. courts gradually sustained these laws. It would be almost a century before the rights of African Americans originally intended by the Civil Rights Act of 1875 again would be enacted by the Civil Rights Acts of 1964 and 1968.

Civil War and Civil Liberties

The Civil War (1861–1865) provided the most severe test of civil liberties in U.S. history by challenging, and ultimately abolishing, the institution of slavery and by spawning a host of postwar civil rights laws and jurisprudence. The Civil War actually began as a struggle to preserve the Union. Abraham Lincoln, though personally opposed to slavery, was politically opposed primarily to the extension of slavery to other states. His major concern was the preservation of the Union. In a famous letter to Horace Greeley, editor of the *New York Tribune,* in 1862, Lincoln wrote, "My paramount objective in this struggle is to save the Union, and is not either to save or destroy slavery." His vision was of America as the great bastion of democracy for the world, and he believed that promise would be destroyed by dividing the nation.

Lincoln's election in 1860 was highly divisive. By

the time he was inaugurated in March 1861, seven southern states already had seceded from the Union to form the Confederate States of America. In his inaugural address, President Lincoln warned that federal properties (forts, custom houses, and so on) located in the seceding states would continue to be occupied by the United States. The war officially began in April 1861 following the Confederate attack on Fort Sumter, one of those properties off the coast of South Carolina.

Once the war began, Lincoln exercised extensive powers on his own authority before Congress came into session. He was widely criticized for suspending the writ of habeas corpus (forcing authorities to specify grounds for incarceration) in areas where Confederate sentiment was strong, and in *Ex parte Milligan,* 71 U.S. 2 (1866), the Supreme Court eventually invalidated the conviction of a civilian who had been tried for aiding the enemy by a military court.

The Emancipation Proclamation freeing the slaves was not issued until January 1, 1863, nearly two years after the war began. The war itself helped turn the tide against slavery among many who were previously indifferent. The issue of slavery also was a delicate one with a number of foreign nations, who thought slavery was evil.

By the time the war ended with General Robert E. Lee's surrender at Appomattox, Virginia, on April 9, 1865, the point of the Civil War was to put an end to slavery and to secure the civil liberties of the newly freed men and women. The conflict ultimately laid the groundwork for a veritable explosion of civil liberties that went far beyond ending slavery, though for African Americans these would be extraordinarily slow in being realized. The war also ended once and for all the question of any state's claimed right to secede from the Union.

During the postwar Reconstruction period, Congress quickly proposed and in 1865 the necessary number of states ratified the Thirteenth Amendment prohibiting slavery. It was followed in 1868 by the Fourteenth Amendment, which made the former slaves U.S. citizens and extended to them the equal protection of the laws. In 1870, by the Fifteenth Amendment, states were prohibited from denying the right to vote to any man because of his race. There also followed a series of civil rights statutes, culminating in the Civil Rights Act of 1875, which purported to prohibit discrimination against African Americans by private citizens in the provision of hotel accommodations, public entertainment, and the like.

Nevertheless, it became increasingly clear that although the former slaves were legally free, the states, private individuals, and the courts would not permit them to exercise the same rights and privileges enjoyed by white Americans. Their civil liberties were those of second-class citizens. The states, especially in the South, began the systematic enforcement of segregation of the races by the enactment of "Jim Crow" laws (named after an African American character in a minstrel act). Many of the northern states, which had no slaves before the war, had practiced segregation for decades, especially by maintaining racially segregated schools. Segregation increasingly became the law of the nation, despite congressional intent to provide equal access to all citizens.

The Supreme Court further contributed to the ineffectiveness of the Fourteenth Amendment and other civil rights legislation intended to end racial discrimination. First, in the *Slaughterhouse Cases,* 83 U.S. 36 (1873), the Court interpreted the Privileges or Immunities Clause of the Fourteenth Amendment in such a restrictive manner as to make it almost completely ineffective in the protection of the rights of the freed men and women.

Subsequently, in the *Civil Rights Cases,* 109 U.S. 3 (1883), the Court declared unconstitutional the Civil Rights Act of 1875, which provided for fines and even imprisonment for those who denied access to hotels, theaters, public transportation, and other public facilities to others on the basis of race or color. In another narrow interpretation, the Court found that the Thirteenth and Fourteenth Amendments did not apply to the actions of private persons who practiced discrimination in the provision of such facilities and services. This decision also had a major impact on lower-courts' interpretation of the Civil Rights Act of 1871, a statute passed in the wake of the war and the Fourteenth Amendment.

That legislation, also known as the Ku Klux Klan Act, was destined to become very important. It too was intended to protect the civil rights of African Americans through the Fourteenth Amendment. However, it was also destined to remain dormant until

The Civil War ended with General Robert E. Lee's surrender at Appomattox, Virginia, on April 9, 1865. Intended to end slavery and secure the civil liberties of newly freed blacks, the war ultimately laid the groundwork for an explosion of freedoms that went far beyond the termination of slavery. *(Library of Congress)*

the 1960s, largely because of the belief that the *Civil Rights Cases* decision of 1883 had rendered it unconstitutional as applied to any action not undertaken by a state.

One of the great ironies of the Fourteenth Amendment is that it was interpreted by the Supreme Court as placing limits on state action primarily with respect to property and private economic interests. It became the civil liberties beacon for business long before it was made effective for its originally intended beneficiaries, black Americans.

Reconstruction ran its course; Americans began to lose interest in the cause of civil liberties for African Americans and other minorities; political compromise coincident with the 1876 election diminished congressional concern; and civil liberties were dealt yet another crippling blow by the Court in *Plessy v. Ferguson,* 163 U.S. 537 (1896), which provided the legal justification for the "separate but equal" concept. The civil liberties of African Americans began a dismal spiral downward, as Jim Crow laws proliferated throughout the early twentieth century and racial discrimination hardened markedly. African Americans were disenfranchised, barred from attending white schools, refused service in public establishments, and forced to use separate restrooms and to drink from separate public water fountains. Moreover, white racists treated them with calculated indignity, hatred, and violence. The dark cloud that hung over African American citizens in the United States for almost a century after the Civil War would not begin to lift until the 1950s and the civil rights movement of the

1960s. In *Brown v. Board of Education,* 347 U.S. 483 (1954), the Court finally overruled *Plessy v. Ferguson* in finding segregation in schools unconstitutional. The Civil Rights Acts of 1964 and 1968 restored the promises of the Civil Rights Acts of 1870 and 1875, and the Voting Rights Act of 1965 extended the franchise to African Americans.

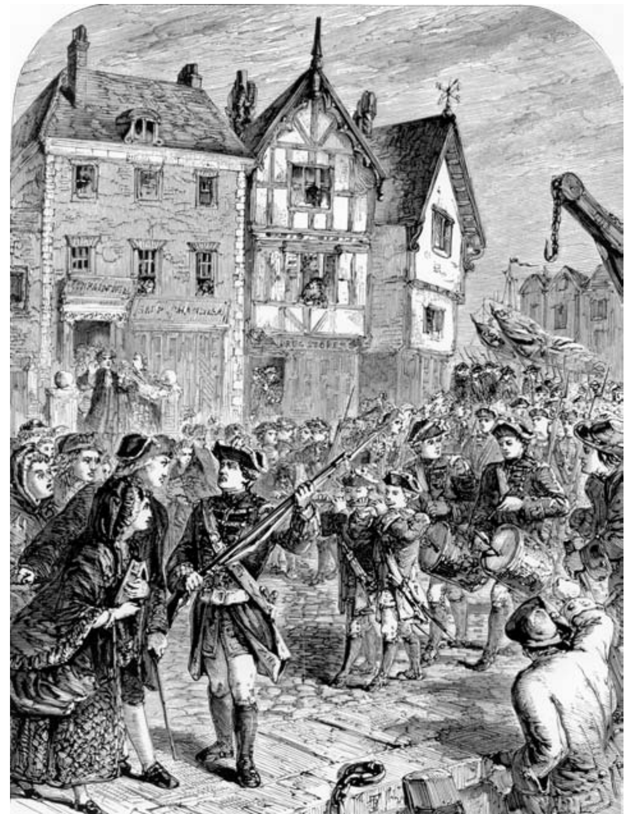
Civilian Control of the Military

Civilian control of the military refers to the practice of vesting ultimate authority over the military forces in a country in civilian, or nonmilitary, control. Such civilians head the government, control the heads of the armed services, and provide oversight over military management. The civilians are, in turn, accountable to the people through elections and through the ability of the people to seek redress of constitutional violations in the courts. This principle is primarily embodied in the provisions of the U.S. Constitution that vest Congress with the power to declare war and that make the president the commander-in-chief of the armed forces. Civilian control of the military is a prerequisite for a democracy and is critical to the protection and maintenance of civil liberties in the United States. In many other nations, sometimes even where civilians are officially vested with power, military officials have toppled regimes in coups and have ignored human rights.

The tradition of civilian control of the military in the United States dates back to George Washington's willingness, as commander-in-chief of the Continental forces that opposed the British, to accept orders from Congress (as weak and unable to provide resources as it often proved to be). Washington refused to use or approve of military force to get what he thought members of the military were due to receive from Congress, and he renounced military power when the war was over. Washington was often likened to the Roman general Cincinnatus, who left his fields to take up arms in defense of his nation and then returned to his farm after the crisis ended.

Prior to independence, the Boston Massacre (1770) created an important impression on the colonies regarding the necessity of civilian control over the military. In this violent event, British troops in Boston fired on a crowd that was harassing them. In addition, the colonial population was especially outraged at the



British troops entering Boston to enforce taxation and other colonial legislation. A common complaint during the establishment of the United States was based not only on the presence of British military members in the towns and fields of the colonies but also on their being forcibly lodged in the homes of the people. *(© North Wind Picture Archives)*

quartering of British troops in their private homes. This concern was expressed in the Declaration of Independence and subsequently addressed by the Constitution's Third Amendment (part of the Bill of Rights), which prohibited such billeting of troops in times of peace without an owner's consent and in times of war except "in a manner to be prescribed by law."

Many Americans, especially those who were influenced by the "republican" political tradition, were so concerned about military influences that they hoped to avoid a standing army altogether. The hope that private individuals might come to the military aid of their country, much as the "minutemen" had done in the Revolutionary War, was one impetus for the right to bear arms that is specified in the Second Amendment. The idea of relying completely on nonprofessional volunteers did not ultimately prove feasible. Many Federalist proponents of the new Constitution argued that a small standing army might preserve civil liberties by deterring foreign aggression, and the Constitution did not prohibit such an institution. Still, the Constitution limited the length of military appropriations and subjected members of the military to civilian control. Citizens and elected officials have continued to guard against granting excessive powers to the military. President Dwight D. Eisenhower, himself a former commander of the Allied forces in Europe during World War II, later warned about the dangers of a "military-industrial complex."

Although times of war and crisis have never resulted in military rule within the United States (except in parts of the South during the Civil War and its aftermath), such events have often tested the boundaries between military and civilian life. During the Civil War, Abraham Lincoln exercised broad powers and suspended the writ of habeas corpus (petition for release from unlawful confinement) in the South. In *Ex parte Milligan,* 71 U.S. 2 (1866), the U.S. Supreme Court invalidated the trial and conviction of a civilian by a military court that Lincoln had authorized. In *Ex parte McCardle,* 74 U.S. 506 (1868), however, the Court allowed Congress to withdraw its appellate jurisdiction in a case involving habeas corpus appeals from a Vicksburg, Mississippi, newspaper editor convicted by a military commission of publishing libelous editorials inciting insurrection.

Although civilian authorities remained in control during World War I, World War II, and the Cold War, these conflicts often tested America's commitment to civil liberties. In *Schenck v. United States,* 249 U.S. 47 (1919), the Court upheld the conviction of an individual who had attempted to interfere with U.S. recruiting by mailing pamphlets to potential inductees, and in *Gitlow v. New York,* 268 U.S. 652 (1925), the Court subsequently upheld the Espionage Act of 1917.

In actions that many believe reflected undue executive and judicial deference to military assessments of potential danger, World War II was marked by an executive order excluding Japanese Americans from designated military zones in the American West and by their subsequent detention in camps. The U.S. Supreme Court validated the exclusion in *Korematsu v. United States,* 323 U.S. 214 (1944).

All these conflicts put pressures on the exercises of freedom of speech and association, pressures that have been renewed with recent fears over the threat of terrorism in the aftermath of attacks against New York and Washington, D.C., on September 11, 2001. As in the Civil War, this threat has also raised issues as to the authority of military courts over potential saboteurs.

The Korean War served as an example of a major confrontation between civilian and military authorities when General Douglas MacArthur attempted to pursue a more aggressive military policy on the Korean Peninsula than President Harry S Truman believed was appropriate for the political objectives being sought. After MacArthur continued publicly to criticize U.S. policies, Truman exercised his prerogative as commander-in-chief to fire MacArthur on April 11, 1951.

Combined with explicit constitutional provisions, this example and others have served to create a strong tradition of civilian control of the military in the United States. This has, in turn, provided that elected officials, who are accountable to the people, will control the wielding of the military sword.

Debate continues about the proper balance of power between Congress and the president (courts exercise almost no authority in this area) in military affairs. This concern was evident in the adoption, over President Richard Nixon's veto, of the War Powers

Act of 1973. At a time of heightened concern over how America had become involved in the Vietnam War, this congressional resolution sought to provide for greater consultation between the president and Congress, for notification of presidential commitments of troops into hostile situations, and for termination of such commitments that did not receive congressional approval after specified time periods. Significantly, however, the conflict was between the proper balance of authority that should be exercised in foreign affairs by two civilian authorities and not over whether civilian or military officials should dominate.

Clear and Present Danger

The phrase "clear and present danger" became the U.S. Supreme Court's test in 1919 for assessing whether speech could be punished or whether doing so violated the free speech rights guaranteed by the First Amendment to the Constitution. The test was first enunciated by Justice Oliver Wendell Holmes Jr.

Earlier Courts had followed the rule that speech could be punished if the expression might tend to disturb the peace or encourage a crime. In *Schenck v. United States,* 249 U.S. 47 (1919), however, Justice Holmes declared that the test instead should be whether the words were spoken "in such circumstances and are of such a nature as to create a clear and present danger" that they would result in evils that a legislature might legitimately want to prevent. The relevant "circumstance" in *Schenck,* Holmes thought, was that the nation was in the midst of World War I, and thus Charles Schenck could legitimately be punished for creating the clear and present danger of obstructing the war effort by sending new draftees a pamphlet denouncing the military draft as unconstitutional.

After the *Schenck* decision, however, Holmes rethought his approach to speech and dissented when the Court relied on it to uphold the conviction of another man who published a pamphlet criticizing the president and urging workers to strike in protest against the war. In dissenting in *Abrams v. United States,* 250 U.S. 616 (1919), Holmes argued that the societal good was best served by "free trade in ideas." Wide latitude should be given to speech unless it "imminently threaten[s] immediate interference" with the law. Holmes asserted a similar dissent in *Gitlow v. New York,* 268 U.S. 652 (1925). His new formulation substituted the word "imminent" for "present," suggesting that speech could be punished only if it incited an immediate evil.

Another modification of the doctrine was suggested by Justice Louis D. Brandeis in *Whitney v. California,* 274 U.S. 357 (1927). In that case, the Supreme Court in effect relied on the doctrine of clear and present danger when it upheld the conviction of a woman who remained in the California Communist Labor Party after the party adopted a platform advocating the use of force to change the government, even though she specifically expressed that she was against the use of such force. Brandeis believed the Court's approach to clear and present danger failed to provide sufficient protection for the blunt expression of ideas necessary in a democratic society. Concurring in *Whitney* for procedural reasons, Brandeis nonetheless suggested that speech could not be punished unless there was "reasonable ground" to fear "that serious evil

will result" and that "the danger apprehended is imminent." Advocacy of violence was not sufficient, he argued, if there was still opportunity for the kind of "full discussion" that could "avert the evil by the processes of education."

The Holmes-Brandeis view remained a minority one for several decades. When speech cases next reached the Supreme Court during the Cold War years of the 1950s, it interpreted the clear-and-present-danger test to restrict unpopular speech so severely that even advocacy of future violence was punishable. In *Dennis v. United States,* 341 U.S. 494 (1951), the Court held both that the Cold War was not the kind of "comparatively isolated event" that had confronted Holmes and Brandeis in cases such as *Abrams,* and that a clear and present danger existed if a group was indoctrinating members for possible future action.

By the late 1950s and early 1960s, however, judicial thinking had evolved, especially as Cold War fears eased somewhat and the justices recognized the central role played by speech in the civil rights movement. The Court began redefining clear and present danger, striking down restrictions on speech in cases such as *Yates v. United States,* 354 U.S. 298 (1957), and *Keyishian v. Board of Regents,* 385 U.S. 589 (1967). Finally, in 1969, when the state of Ohio attempted to punish a Ku Klux Klan leader's speech at a poorly attended rally on a remote farm, the Court formally adopted the standard enunciated by Justice Brandeis. The First Amendment does not permit a state to criminalize advocacy, it declared in *Brandenburg v. Ohio,* 395 U.S. 444 (1969), "except where such advocacy is directed to inciting or producing imminent lawless action and is likely to incite or produce such action."

With *Brandenburg,* the doctrine that speech cannot be punished unless it presents a substantial and imminent danger became the law of the land. "Clear and present danger" remains a catchphrase in the American vocabulary, but the country's approach to speech is much more lenient than that initially envisioned by Justice Holmes.

Clemency

Pardons and amnesties are forms of clemency (official forgiveness or at least leniency by the government) that derive from Article II, Section 2 of the U.S. Constitution, which gives the president "[p]ower to grant reprieves and pardons for offenses against the United States, except in cases of impeachment." (Analogous provisions in state constitutions confer a similar power on state governors for offenses against the state.) Legal scholars often make artificial distinctions between pardon and amnesty, but presidential exercise of the pardoning power has ignored these academic delineations, especially during the modern media age. Nonetheless, amnesties tend to deal with large groups, whereas pardons are bestowed on individuals. The fundamental issue is whether the type of clemency is intended as limited or broad, regardless of the label applied.

ORIGINS

Regardless of what the form of clemency is termed, the exercise of that executive power is typically unpopular with the public, since it shortcuts the normal judicial process. Yet that is precisely why this power was conferred upon the chief executive; it sometimes is needed under special circumstances and may provide a safety valve to dispel national tension. It is based in the classical notion of "magnanimity," or benevolence, associated with great leaders. Alexander Hamilton defended the power in *Federalist No. 74.* He understood that law is man-made, that matters are not always black and white, and that absolutes are not

always the best resolution of such matters. This concept was immortalized in the 1880s in author Herman Melville's classic novella *Billy Budd.*

Hamilton's defense of the presidential power was based on his experience with George Washington. An exemplar of classical prudence, as military commander during the American Revolution, Washington had exercised the power with restraint and called for its application to the loyalists after the colonists won the war. As president, Washington set the precedent for exercise of the only unchecked constitutional power granted to the chief executive by rarely granting clemency. Unlike its historical use by state governors, prompting numerous scandals, presidents, until perhaps quite recently, have been remarkably responsible in how they used this constitutional power. To institutionalize this power to grant "reprieves and pardons," a bureaucratic process involving the Justice Department has been developed for pardons. Amnesties are relatively uncommon but are a consistent part of the judicial policy of chief executives capable of magnanimity.

HISTORICAL PATTERNS

A consistent, if largely underrecognized, pattern can be discerned in the clemency record of presidents. America's greatest presidents as ranked by scholars—the Mount Rushmore quartet (George Washington, Thomas Jefferson, Abraham Lincoln, Theodore Roosevelt) plus Franklin D. Roosevelt—form a group of the most active and flexible chief executives. This same quintet of great presidents issued more amnesties, including individual pardons, than all the other presidents combined. In addition to George Washington's precedent, Abraham Lincoln, the Great Emancipator willing to free slaves, became even more magnanimous as the Great Reconciler of a torn nation. His "with malice toward none" philosophy personified the modern equivalent of the classical magnanimous leader. Lincoln granted the second-largest number of amnesties in American history. The policy exercised by Lincoln was virtually *sui generis* (a legal phrase loosely meaning "in a class by itself") for leadership during a civil war.

Given the media's magnification of every presidential act, dynamic, flexible chief executives in the twenty-first century may be more reluctant to withstand public criticism because of the inherent political risk involved in a magnanimous policy. From the 1970s forward, pardons became as closely scrutinized and sharply criticized as amnesties. Jimmy Carter had to present his clemency for Vietnam War resisters, which was more generous than Gerald Ford's, by calling it a "pardon" rather than an amnesty. Gerald Ford's controversial pardon of Richard Nixon may have deprived the unelected chief executive of an electoral victory. His pardon was instantly characterized as a Machiavellian act rather than as a magnanimous one. Modern political campaigns have used the pardoning-power record of candidates as the basis for negative campaign attacks. George W. Bush castigated Governor Michael Dukakis (D-MA) during the 1988 presidential campaign with advertisements focusing on his pardon of Willie Horton, who committed a vicious crime while on probation. The lesson was not lost on Bill Clinton, who waited until the waning hours of his administration to grant pardons instead of granting them annually. As a result, what would have been a fairly typical number of pardons if granted annually over his administration was portrayed as a proverbial mountain of pardons rather than a series of molehills.

Such reactions may persuade modern active presidents that they should restrain their use of clemency and act as traditional passive presidents who do not exercise their power to grant pardons and amnesties. Warren G. Harding initially favored clemency for World War I opponents but reversed his stance following heavy criticism directed at him for pardoning Eugene V. Debs, the Socialist Party leader who had been convicted under a statute prohibiting antiwar activity. Calvin Coolidge appointed the first clemency commission in U.S. history as a political shield from public criticism; he agreed to abide by the commission's recommendations.

Harding's initial leniency was a reaction triggered by southern-born Woodrow Wilson, who demonstrated an extremist streak that blocked any consideration of leniency for those who opposed his foreign policy or criticized his racist attitude. At the other end of the clemency spectrum was Andrew Jackson, who issued the highest number of amnesties in American history. Jackson acted not from magnanimity but

from political motivation designed to subvert the intentions of radical Republicans and win favor from fellow southerners.

A survey of the clemency record of presidents suggests that the founders were wise to confer such an unchecked judicial power on the executive. It allows for decency, even if in the modern media age it also poses additional political risks to chief executives and those who would benefit from clemency.

Clinton v. Jones (1997)

In *Clinton v. Jones,* 520 U.S. 731 (1997), the U.S. Supreme Court addressed the issue of whether a president had any immunity for his nonofficial acts. The case began when Paula Corbin Jones brought a civil damages case against President William Jefferson Clinton claiming that while he was governor of Arkansas and she was an Arkansas state employee, he made crude sexual advances that she rejected.

Justice John Paul Stevens, writing for a unanimous Court, rejected the president's claim of temporary immunity from the civil suit. First, he rejected the president's argument, based on precedent, that the Supreme Court had granted public officials immunity from civil litigation in order to enable them to perform their public duties without fear that their decisions would give rise to personal liability. In *Nixon v. Fitzgerald,* 457 U.S. 731 (1982), the Court applied this rationale to hold that a president was entitled to absolute immunity from civil damages only for his official acts, but it did not suggest that immunity extended to his unofficial conduct.

Justice Stevens then turned to the president's argument for a postponement of the litigation based on the Article II character of his office and separation-of-powers principles. Separation of powers was not involved, Stevens said, because the judiciary was not being asked to perform an executive function but to exercise its Article III powers that govern the judiciary. Nor did separation of powers forbid the burdens that judicial review would impose on the president, because "the burden on the President's time and energy . . . cannot be considered as onerous as the direct burden of judicial review and the occasional invalidation of his official actions." By contrast, Stevens feared that delay could prejudice Jones's interest in a timely trial and in the preservation of evidence.

Justice Stephen G. Breyer, concurring, argued that the Court had unwisely dismissed *Nixon v. Fitzgerald* as dictum (nonbinding analysis) and thereby minimized the potential impact civil litigation could have on the president's time and energy. The Court had also undervalued separation of powers by relying on a district court to make the accommodations necessary to avoid disrupting the president's performance of his duties, including a stay of litigation. To give greater recognition to separation of powers, Justice Breyer argued that Article II contained a requirement forbidding judicial interference with the president's discharge of his public duties, and that once a president had explained the nature of the conflict and the burden it would impose, the district-court judge would be permitted to schedule a trial to avoid the conflict.

In sum, the Court in *Clinton v. Jones* denied the president the right to temporary immunity that would permit him to delay a trial for civil damages until after he left office. President Clinton's case, however, never went to trial but was dismissed and settled out of court. Along with a grand jury inquiry into his sexual relationship with Monica Lewinsky, a White House intern, however, the case did lead to an impeachment inquiry. The House of Representatives approved two articles of impeachment, one for perjury before the federal grand jury and the other for obstruction of

justice, but the Senate failed to convict Clinton on either one.

Cloning Human Beings

Cloning is an asexual reproduction technique that has been successfully used to reproduce genetically identical plants and nonhuman animals such as the late, famous sheep Dolly, cloned in 1997. The prospect of research into the development and application of cloning techniques to human beings has raised both hopes and fears and multiple issues pertaining to civil liberties, rights of privacy, and definitions of personhood. Some political leaders, including Presidents William J. Clinton and George W. Bush, have called for either a moratorium or an outright ban on human cloning. On the other side, researchers, patients, and family members of patients with currently incurable diseases or injuries hope that the application of cloning techniques for the purpose of extracting embryonic stem cells—undifferentiated cells that can potentially become any type of cell in the human body—will lead to cures. They argue that a distinction needs to be made between "therapeutic cloning" and "reproductive cloning." Therapeutic cloning is done in order to extract stem cells of a known genetic origin and does not result in the birth of any cloned individual. Reproductive cloning is designed to bring about the birth of a baby.

Opponents of both forms of cloning sometimes contend that cloning is wrong because it is an act of hubris, and that humans should not "play God." Proponents of cloning respond that it is difficult to say why this particular form of medical intervention is objectionable on these grounds, whereas other commonly accepted medical interventions, such as organ transplants and fertility treatments, are not. If the argument against hubris is accepted to ban cloning, then that completes the task of deciding on a reasonable position on the issue of human cloning. If, on the other hand, it is too difficult to provide a principled distinction between those medical interventions that are instances of overweening pride and those that are not, then it becomes necessary to consider whether there are other reasons to ban human cloning of either type.

There is widespread agreement that at least a temporary ban on human reproductive cloning is justified until more research shows it to be safe and reliable for individuals who would thus be brought into existence—some animals that have been cloned appear to have health problems as a result of the way they were created. Some proponents of a permanent ban on even safe cloning argue that reproductive cloning would be an affront to the sacredness of the sexual union of a loving couple as the cause of human reproduction.

Other opponents point to the potential for a strain on family relations when the child is actually the genetic twin of one of the parents, and the parents attempt to seek fulfillment of their own dreams through such a child. Some also see a threat to the value of individuality and uniqueness, a step on a slippery slope that could lead to treating human beings as commercial products rather than as moral agents with individual rights. In response, some contend that arguments for the sacredness of the union are based on a particular religious perspective that would be inappropriate for governments to consider, or that other concerns, such as those of possible resulting social problems or mistreatment, are highly speculative. Here, the question is whether such concerns are so well supported as to trump the value of reserving a private sphere in which the individual is free of interference from others. If so, then a permanent ban on reproductive cloning is justified. If not, then at most a temporary ban is justified.

Regardless of how the question of reproductive cloning is resolved, the issue of therapeutic cloning remains. Proponents of a permanent ban on such therapeutic cloning often contend that even in cloning an early pre-implantation embryo, a researcher brings into existence something that, under the right con-

"Images Removed Due to Copyright Issues"

ditions, would develop into what is indisputably an individual human being, with rights that deserve to be protected. That is, if the very early, pre-implantation embryo were nurtured properly and successfully implanted in a woman's uterus and successfully carried to term and delivered, the result would be a human baby. Working backward from this result of a gradual process of development to its beginning means that the only principled place to draw the line prior to which the resulting human being did not yet exist is the time at which the researcher first cloned the early-stage embryo. On this reasoning, whether or not the researcher ever intended to bring someone into existence is irrelevant. Once the researcher has successfully cloned a very early human embryo, the researcher has brought a human being into existence and is from that point forward obligated to try to keep him or her alive. Extracting stem cells for research or therapy results in the death of that human being and cannot be justified, no matter how many other lives might be potentially saved or how much suffering alleviated through that means.

The crucial premise of this argument in favor of banning therapeutic cloning, identical to that expressed by those opposed to abortion, is expressed by saying "Life begins at conception." Clearly, a living sperm and a living ovum are required for conception to occur; but, just as obviously, neither that sperm alone nor that ovum alone is already the resulting individual. Before their fusion, each of these gametes is the potential origin of many different individual people, or none at all, depending on whether it ever fuses with another gamete and, if so, with which one, of many. The parallel claim applied to cloning is that life

begins at the moment of cloning, meaning that the life of a unique individual human begins then.

One response to this line of reasoning, based on a particular view of embryonic development, is to argue that even after the moment of conception or of cloning, the identity of a particular individual human being is not immediately determined. Thus, during the first fourteen days of cell divisions within the early pre-implantation embryo, each component cell is an undifferentiated, pluripotent cell, that is, capable of producing, through further divisions, any of the many different kinds of cells that make up the human body, but not yet itself any one of those kinds. In fact, some of those cells will become part of the placenta rather than of the developing embryo itself. Because of this lack of differentiation during the first fourteen days, it is possible for a pre-implantation embryo to split, resulting in two embryos. Although the original early embryo had to exist in order for either resulting twin to come into existence, neither could trace his or her identity as an individual any further back than the split. Furthermore, as sometimes happens naturally in multiple births, additional splits can occur, so two become three, four, five, or more. In principle, any pre-implantation embryo could be split artificially using a process called "blastomere separation" that is one form of cloning.

However, fourteen days after the first cell divisions that begin soon after conception or cloning, the new resulting cells are irreversibly differentiated. From that point on, the parts of the early embryo can no longer become separated and still produce separate, viable embryos. Accordingly, this point, rather than the moment of fertilization or cloning, might be identified as the place where a unique individual human being comes into existence. Therapeutic cloning would involve the destruction of a very early embryo. However, since the purpose is to extract stem cells, it would be done prior to the period of cell differentiation, and so would not involve bringing someone into existence and then killing that being. By this reasoning, an embryo during the first fourteen days of cell division can more reasonably be compared to contraception, in that it prevents one or more potential people from coming into existence but does not kill any unique individual who already exists.

Does this analysis successfully refute the view that therapeutic cloning violates the cloned embryo's right to life? A fair answer will depend both on the relevant empirical evidence about embryonic development and the conceptual issues of what constitutes the existence of a unique individual. In the meantime, medical science continues to advance, highlighting ethical concerns over both therapeutic and reproductive cloning.

Cohen v. California (1971)

In *Cohen v. California*, 403 U.S. 15 (1971), the U.S. Supreme Court significantly expanded the limits of offensive speech as an extension of the protection for expression provided by the First Amendment to the U.S. Constitution.

Paul Cohen was arrested for displaying the message "Fuck the Draft" on the back of his jacket in the corridor outside the municipal court in the Los Angeles County Courthouse. Cohen was convicted of violating a disturbing-the-peace statute that made "maliciously and willfully disturbing the peace or quiet of any neighborhood or person by offensive conduct" a crime. At trial, Cohen testified that the purpose of the message on his jacket was to state publicly his opposition to the military draft during the Vietnam War. Although no evidence was presented that he engaged in any violence or that anyone was pro-

voked to violence as a result of his message, he received a thirty-day jail sentence.

Upon appeal, the California Supreme Court defined "offensive conduct" as "behavior which has a tendency to provoke others to acts of violence or to in turn disturb the peace." The court held that "it was certainly reasonably foreseeable that such conduct might cause others to rise up to commit a violent act against the person of the defendant or attempt to forcibly remove his jacket," relying on the "fighting words" doctrine from the Court's 1942 decision in *Chaplinsky v. New Hampshire*, 315 U.S. 568 (1942), in upholding Cohen's conviction and fine.

Cohen appealed the California ruling to the U.S. Supreme Court. In an opinion written by Justice John M. Harlan, the Court based its decision primarily on the First Amendment guarantee of free speech. In *Chaplinsky,* the Court had upheld a ban on speech in a narrow set of circumstances that might cause a violent reaction by listeners. The case involved a Jehovah Witness who had called a city marshal a "god damned racketeer and a god damned fascist." Although *Chaplinsky* has never been officially overruled, the case has not been cited as precedent in a majority opinion since 1942, and the majority in *Cohen* refused to apply the fighting-words doctrine to the particular four-letter word on Cohen's jacket.

The Court rejected the rationale that Cohen's conduct could be repressed, stating that "while the particular four-letter word being litigated . . . is perhaps more distasteful than most of its genre, it is nevertheless often true that one man's vulgarity is another man's lyric." The opinion concluded with the directive "the State may not, consistent with the First Amendment, make the simple public display here involved of this single four-letter expletive a criminal offense." Interestingly, the obscenity issue was not considered, since Cohen was never charged with violating any obscenity statute, and the message he conveyed was not considered to be erotic.

Justices Harry A. Blackmun and Hugo L. Black and Chief Justice Warren E. Burger dissented in *Cohen*, arguing that the defendant's conduct constituted fighting words that could be repressed under *Chaplinsky*. They maintained Cohen's act was an "absurd and immature antic," and that since it constituted action rather than speech, the First Amendment did not protect it.

Supporters of the controversial *Cohen* decision maintained the case championed the principle that the definition of what constituted offensive speech was enlarged and therefore an individual's right to freedom of speech clearly triumphed. Critics of *Cohen,* however, argued that the decision denied state legislatures and judges the right to reflect the will of the people in determining that actions such as Cohen's were unacceptable rather than protected free speech. They also argued the decision denied the basic ability of legislators and judges to make reasonable, commonsense judgments—namely, that wearing the phrase "Fuck the Draft" on a jacket in courthouse corridor was unacceptable behavior rather than protected speech.

The impact of *Cohen* as precedent was readily seen in 1972 in four related cases in which the Court vacated state-court judgments restricting the use of offensive speech. Specifically, the phrases "white son of a bitch, I'll kill you," *Gooding v. Wilson,* 405 U.S. 518 (1972), and "god damn mother fuckers," *Lewis v. Orleans,* 415 U.S. 130 (1974), were leveled against arresting police officers. Also, "mother fuckers," *Rosenfeld v. New Jersey,* 408 U.S. 901 (1972), was shouted at school board members and teachers at a public board meeting. And finally, "mother fucking pigs, and mother fucking fascists," *Brown v. Oklahoma,* 408 U.S. 914 (1972), were statements made by individuals referring to policemen at a meeting in a university chapel. Chief Justice Burger and Justices Blackmun and Rehnquist also dissented in these cases.

In retrospect, however, *Cohen* was an early volley fired in what later came to be called the "culture wars"—the fault lines in U.S. culture and politics that denote divisions about what society believes are its core moral values and the degree to which the courts and the legislatures should determine the limits of social and political behavior. These fault lines, of course, are evident not only in free speech questions but also in issues relating to the very definition of obscenity as seen in movies and books and on television and the Internet. Finally, these fault lines also apply to the

limits of conduct in highly controversial matters such as abortion- and gay-rights conflicts.

Colegrove v. Green (1946)

In *Colegrove v. Green,* 328 U.S. 549 (1946), the U.S. Supreme Court refused to decide whether legislative malapportionment violated the Constitution, on the grounds that this issue presented a "political question," which the Court has historically declined to address. In the *Colegrove* case, residents of Illinois brought suit claiming that because the electoral districts in the state had vastly unequal populations, the apportionment violated the principle that every person's vote should count as much as the next person's. Due to population shifts over time, the largest district in Illinois had a population of 914,053; the smallest district had a population of 112,116. This disparity in the population of congressional districts is referred to as "legislative malapportionment." Other states, including Ohio, Maryland, Texas, and Florida, also had significant disparities in the population of their districts. In general, legislative malapportionment favored the rural areas at the expense of the fast-growing suburban and urban centers.

The Illinois residents argued that because they lived in a heavily populated district, their vote was much less effective than the vote of those living in a less populated district. Residents of the heavily populated districts were allowed to choose only one representative for Congress even though their population was nine times the population of the least populated districts. In practice, this meant that urban areas were underrepresented and were therefore less able to protect their policy interests. The Illinois residents argued that this inequality in the voting power of citizens violated the equal protection of the laws as guaranteed by the Fourteenth Amendment to the Constitution.

In a closely divided opinion (four–three), the Supreme Court held that legislative malapportionment was a "political question" and therefore should not be decided by the courts. In what has now become a famous phrase, Justice Felix Frankfurter stated that courts should not enter "the political thicket." The Court held that it would be harmful for democracy to involve the judiciary in the politics of the people. In addition, the Court held that there was no federal requirement that congressional districts contain an equal number of inhabitants. The dissenting justices argued, however, that legislative malapportionment constituted a form of discrimination against the residents of the heavily populated districts because their votes were less effective than the votes of those living in less populated districts. The dissenting justices claimed that the Equal Protection Clause of the Fourteenth Amendment forbade discrimination of this kind.

In 1962, the Supreme Court overturned its holding in *Colegrove v. Green*. In a landmark decision, *Baker v. Carr,* 369 U.S. 186 (1962), the Court held that legislative malapportionment was a legitimate subject for judicial review. The *Baker* decision triggered the famous "reapportionment revolution," as a result of which electoral districts across the country were divided along the "one-person, one-vote" principle announced by the Court in *Reynolds v. Sims,* 377 U.S. 533 (1964).

Colorado Republican Federal Campaign Committee v. Federal Election Commission (1996)

Complex First Amendment issues arise in the context of election campaigns and legislative efforts to regulate campaign money—and therefore speech—in an attempt to maintain the integrity and fairness of the political system. Efforts to restrict speech and assembly collide with constitutional protections, and the outcome under any particular set of facts is difficult to predict.

In *Colorado Republican Federal Campaign Committee v. Federal Election Commission,* 518 U.S. 604 (1996), the U.S. Supreme Court found unconstitutional an element of the Federal Election Campaign Act (FECA) of 1971 that restricted expenditures by political parties during the general election campaign of congressional candidates. In 1986, the Colorado Republican Party paid for radio ads attacking the presumptive Democratic nominee in the upcoming senatorial election. Because the amount spent exceeded the dollar limit allowable under the provision, the Federal Election Commission (FEC) and the Democratic Party successfully charged the Colorado Republicans with violating the FECA.

In a ruling invalidating the provision, Justice Stephen G. Breyer, writing the plurality opinion for the Court, reasoned that political parties should be free to make unlimited independent expenditures just as would any ordinary political committee, individual, or candidate. Rejecting the government's claim that "independent" party *expenditures* were the functional equivalent of *contributions*—in that there exists an inherent and unavoidable "coordination" between a party and its candidate—the Court found no evidence to suggest that such expenditures were any more problematic than those afforded constitutional sanction by *Buckley v. Valeo,* 424 U.S. 1 (1976), and its progeny. Of significance, however, is that the plurality declined to reach the question of whether expenditures that were not truly "independent"—those that *were* explicitly "coordinated" between parties and candidates, in other words—would be deserving of similar constitutional protection.

Concurring in the result, though dissenting in part, Justices Anthony M. Kennedy and Clarence Thomas, writing separately, criticized the plurality opinion for failing to invalidate the limits as facially unconstitutional restrictions on the party's First Amendment rights—no matter the form of the expenditure. The state's emphasis on the potential for a corrupt relationship between the organizations making the expenditures and the individuals benefiting from them—following the logic sustaining contribution limits in *Buckley*—was misplaced for the dissenters: Of course parties hold influence over the views, values, and activities of their candidates—that is what they are supposed to do.

For Justice John Paul Stevens, dissenting from the Court's ruling and reasoning, it was precisely this potential for corruption that justified deference to the congressional perceptions expressed in the FECA. Parties, especially those with deeper pockets, have the potential to exert an undue and unhealthy amount of influence over both their candidates and the electoral process in general. Thus, this element of the FECA provided a leveling of the electoral playing field and a cleansing of the political process.

Parties are deserving of speech rights generally on par with those of individuals, the Court said in *Colegrove,* as it chipped away further at the campaign finance restrictions of the FECA. Still, significant unresolved theoretical questions remained: What, for example, is the proper place and purpose of political parties in today's campaigns and elections? Can candidates or potential candidates be "corrupted" by their party? Do independent expenditures by parties inspire problems that require state regulation? For the plurality, the answer was "no," though the *Colegrove* decision left open the question of whether party expenditures made in "coordination" with candidates would receive the same constitutional protection as "independent" expenditures. The issue was eventually resolved in *Federal Election Commission v. Colorado Republican Federal Campaign Committee*, 533 U.S. 431 (2001), in which the Court ruled that parties may

not coordinate their expenditures with candidates' spending.

Commercial Speech

Despite the admonition that "Congress shall make no law . . . abridging the freedom of speech," the First Amendment periodically has been deemed inapplicable to certain entire categories of expression. Libel and obscenity are among the most notable examples of speech that the U.S. Supreme Court considers unworthy of constitutional protection. For a time, commercial advertising was also a category of expression that the Supreme Court considered to be outside of the First Amendment. In *Valentine v. Chrestensen,* 316 U.S. 52 (1942), the Court tersely held that government could restrict or even ban commercial leafleting without running afoul of the constitutional right to free speech.

In the 1970s, however, the Court signaled its readiness to reconsider the issue, and in *Virginia State Board of Pharmacy v. Virginia Citizens Consumer Council, Inc.,* 425 U.S. 748 (1976), the Court abandoned its absolutist posture and conceded that commercial speech was entitled to some form of constitutional shelter. Citing the need for consumers to be able to make informed economic decisions, Justice Harry A. Blackmun determined that the First Amendment protection for free speech could be construed as covering the right to receive economic information. But by couching the issue in terms of the rights of the listener rather than the rights of the speaker, the Court left the door open for paternalistic regulation of advertising. Commercial speech was entitled to constitutional protection only as long as it would be beneficial to consumers; advertisers could not claim an unqualified right to speak their mind about their product or service analogous to the right of political speakers to advance their ideological agenda.

Once advertising's constitutional merit was transformed from a nonstarter into an exercise in drawing legal lines, it became inevitable that the Court would devise a procedure to govern when and how those lines would be drawn (a task left unfinished in *Virginia Board of Pharmacy*). Amazingly, it took four full years, during which time the Court groped its way through six more cases involving commercial speech, before a methodology finally emerged.

The four-part test announced in *Central Hudson Gas and Electric Corp. v. Public Service Commission of New York,* 447 U.S. 557 (1980), focused both on the contested regulation of commercial speech and on the commercial speech itself: "For commercial speech to come within [the First Amendment] . . . it at least must concern lawful activity and not be misleading. Next, we ask whether the asserted government interest is substantial. If both inquiries yield positive answers, we must determine whether the regulation directly advances the governmental interest asserted, and whether it is not more extensive than necessary to serve that interest."

Although the clear purpose of the *Central Hudson* test was to foment streamlined and consistent resolution of commercial speech cases, it ultimately created more problems than it fixed. Five of the first fifteen commercial speech cases decided after *Central Hudson* could be resolved only via plurality opinions, and many of the majority opinions were unusually fragmented. In addition, a debate raged on the Court for a decade over whether the fourth *Central Hudson* prong merely provided an upper limit to regulatory behavior, or whether it triggered the application of "least restrictive means" analysis mandating a minimum level of legislative or municipal control. Amid

this turmoil, Chief Justice William H. Rehnquist (who had vociferously dissented from the decision to abandon the absolutism of *Chrestensen*) commanded a five–four majority in *Pacific Gas and Electric Co. v. Public Utilities Commission,* 475 U.S. 1 (1986), in favor of the argument that the greater power to outlaw a particular activity, such as casino gambling, necessarily included the lesser power to outlaw advertising about that activity, even if the activity itself was legalized—only for the Court to disavow this "greater-includes-the-lesser" approach in *44 Liquormart, Inc. v. Rhode Island,* 517 U.S. 484 (1996), after three of its adherents retired. Eventually, the Court melded the final two *Central Hudson* prongs into a looser inquiry of whether there is a reasonable "fit" between the legislative ends in restricting advertising and the means selected to achieve them, as it held in *City of Cincinnati v. Discount Network, Inc.,* 507 U.S. 410 (1993), and in *Edenfield v. Fane,* 507 U.S. 761 (1993).

One potential explanation for the continuing confusion over the circumstances in which First Amendment protection will be extended to commercial speech is that a sizable portion of the Court's jurisprudence in this area has been hashed out in cases pertaining to advertising by attorneys. Traditionally, the American Bar Association and its state-level incarnations have considered advertising to run contrary to norms of lawyerly decorum. Although this instinct has receded somewhat in recent years, antipathy for attorney advertising remains prominent within the legal profession. Sitting at the apex of that profession, Supreme Court justices have had to reconcile their evolving receptiveness to bringing advertising within the purview of free speech protection with their natural inclination to safeguard the dignity of their field.

The former trend often sees the Court invalidate regulations on commercial speech; by contrast, the latter consideration induces the Court to give state bar associations significant latitude to restrict lawyers from peddling their services in an unacceptable manner and to punish lawyers who run afoul of these restrictions. The fact that a former ABA president, Justice Lewis F. Powell Jr., wrote the *Central Hudson* test as well as the majority opinion in three attorney advertising cases is among the reasons the Court's work on commercial speech has been alarmingly incoherent.

The constitutional status of commercial speech remains in a state of flux, to the point that litigants in many recent commercial speech cases, such as *Lorillard Tobacco Co. v. Reilly,* 533 U.S. 525 (2001), have asked the Court to dispose of the *Central Hudson* test altogether. Interestingly, it is not a debate that fits neatly into the current Court's perceived ideological alliances. Chief Justice Rehnquist remains unconvinced that the right of free speech gives rise to "a merchant's unfettered freedom to advertise in hawking his wares" (as he put it in his dissent in *Central Hudson*); meanwhile, his conservative colleague Clarence Thomas is the current Court's leading voice for granting commercial speech the identical level of constitutional protection as is afforded to noncommercial speech.

Common Law

Common law consists of judicial decisions that apply society's common values and principles to specific controversies. In its broadest sense, common law is the amalgam of customs, convictions, and practices that reflect the values, attitudes, and mores of the people of a country or jurisdiction and that serve as a foundation for decisions by courts in resolving disputes or remedying injuries. In a common law system, the main source of law comes from judges who decide particular disputes in individual cases between private parties. Some of the subjects of the common law include rights in land and other property, inheritance issues, contracts, and negligence and other individual harms. The system of common law developed primarily in England and was adapted and adopted in the United States. This original connection between

the common law of England and that of the United States is evident in the U.S. Constitution, where the Seventh Amendment provides that "[i]n suits at *common law* . . . the right of trial by jury shall be preserved, and no fact tried by a jury shall be otherwise reexamined in any court in the United States, than according to the rules of the *common law*."

The common law system is to be contrasted with the *civil law system,* in which the primary source of law is a unified body of written law, such as a code or series of connected legislative enactments. These codes or legislative acts are meant to be relatively comprehensive and to provide the basis for deciding individual cases or disputes. The civil law system prevails in many European countries, including France, Germany, Italy, and Spain, as well as in some non-European countries, such as Japan.

In the modern world, these two systems of law, common and civil, have tended to grow closer together. Common law countries have developed extensive statutory laws that to some extent replace the common law. Civil law countries have developed a body of case law in which judges apply (and necessarily interpret) the codes. Still, the focus of the common law system is on the ability of judges to make law as well as to apply it, whereas the civil law system emphasizes the limited role of judges in simply applying a statute or code to a particular situation.

In a common law system, each case or dispute is decided on its own merits based on the body of common law extant at that time. The common law changes only as specific new disputes are brought to judges for resolution. Evolution in the common law occurs as judges apply existing principles to new situations, sometimes causing modification of the underlying principle or distinguishing its application to the particular current controversy or dispute. Therefore, change in the common law is incremental in nature.

There is an inherent tension in the common law between certainty and consistency, on the one hand, and the changing conditions of society and notions of public policy, on the other. The balance between these competing factors comes in the application of two important related principles. The first is that each decision by a judge in resolving a specific case or dispute operates as a *precedent* in the common law system. A precedent serves as an example of the application of the legal principles of the common law and can influence decisions in similar subsequent cases.

The second important concept is that of *stare decisis* (pronounced *STAR-ry de-SI-sis*), literally, "to stand by the decision." This doctrine provides that, absent extraordinary justification, a *precedent* by a court serves to bind that same court (or courts below it within the same jurisdiction) in similar subsequent cases or disputes. *Precedent* and *stare decisis* operate in the common law system to create a presumption that similar fact patterns and disputes will be resolved consistently with each other. This allows people to plan their activities knowing what the law is and having confidence that judges will apply the law consistently to new situations unless there are strong distinguishing factors or public policy justifications that require a different resolution.

The common law has always played an important part in the development and protection of civil liberties. For example, the right not to be compelled to testify against oneself and the right to a jury trial, embodied in the Fifth and Seventh Amendments to the Constitution, respectively, were long recognized in and adopted from the English common law. Similarly, the judicial development of the right of privacy in its various aspects is an example of the recognition and protection modern common law courts have given to fundamental civil liberties.

Communists

The Communist movement shaped civil liberties in the United States both by the positions it championed and by the police measures it inspired. Communists

advocated the rights of the working class and racial minorities long before the political mainstream did, yet they employed undemocratic conspiratorial methods in pursuit of their goals. Government responses to the movement stretched the Constitution to its limits and violated fundamental rights to political speech and association as provided by the First Amendment to the Constitution.

The Communist Party inspired fear throughout American society due to its roots in the Russian Revolution (1917), its allegiance to Soviet communism, and its penchant for conspiracy. The fears betrayed a lack of faith in the democratic process, but they were grounded in an accurate sense of the Communist agenda. In the decades before World War II, fears were compounded by social inequalities that existed independent of the Communist Party. Communists first split off from the Socialist Party in 1919 over its refusal to proclaim sympathy for Soviet Russia. The new party quickly divided over use of conspiratorial methods, but it merged again in 1921 as the Workers Party and became the Communist Party in 1929.

The movement remained committed to revolutionary change and was loyal to the Third International based in Moscow. The American Communist Party accepted the Leninist principle of democratic centralism, and for many years it advocated overthrow of the government. Party policy oscillated between cooperation and competition with labor unions and other progressive social organizations, occasionally inducing party members to infiltrate these groups with the intent of subverting their agendas. Reliance on secret methods should not obscure the fact that, at times, some sector of the public shared the Communists' views. Communist support for union activism and the redistribution of wealth proved popular during the Great Depression of the 1930s.

For almost fifty years, the government, supported by much of the electorate, used harsh and sometimes unconstitutional measures to control Communists. State and federal governments prosecuted Communists with a vigor that weakened the "free trade of ideas" extolled by Justice Oliver Wendell Holmes Jr. in his 1919 dissent to *Abrams v. United States,* 250 U.S. 616 (1919), in which a protester was convicted of distributing pamphlets criticizing American intervention against the Bolsheviks. Laws directed at Communists and other leftists have provided the First Amendment some of its sorest tests. The Espionage Act of 1917 forbade citizens "to willfully obstruct the recruiting or enlistment service of the United States," and the Sedition Act of 1918 added restrictions on false statements and speech against the government. The laws silenced many who objected to World War I, including socialist Eugene Debs. In *Schenck v. United States,* 249 U.S. 47 (1919), the Court upheld the conviction of a prominent socialist for urging resistance to the draft, ruling that speech is not protected by the Constitution if it creates a "clear and present danger" of "substantive evil." Fear of alien subversion inspired the federal government to deport suspect aliens in the 1920s and 1930s, and states in turn passed laws prohibiting the advocacy of "criminal anarchy" and "criminal syndicalism." In 1925, the Court in *Gitlow v. New York,* 268 U.S. 652 (1925), upheld the conviction of Benjamin Gitlow, a member of the Socialist Party, under a New York law prohibiting criminal anarchy. California convicted Anita Whitney of criminal syndicalism for attending the 1919 Communist Labor Party convention, a decision the Supreme Court upheld in *Whitney v. California,* 274 U.S. 357 (1927).

President Roosevelt pardoned all remaining violators of the Sedition and Espionage Acts when he came to office 1933. The "red scare" abated during his presidency, as economic conditions brought the mainstream closer to leftist ideas. Although the Alien Registration Act of 1940 (Smith Act) made it "unlawful knowingly to advocate or teach the duty, necessity, or propriety of overthrowing the government by force or violence," hostility toward Communists was eclipsed by wartime friendship with the Soviet Union. The Smith Act was not directed against Communist subversion until after the war, when international tensions raised new and powerful fears.

Infringement of civil liberties reached its zenith in the post–World War II years, when world events triggered an atmosphere in which any citizen could be suspected of Communist sympathies. In *Dennis v. United States,* 341 U.S. 494 (1951), leaders of the Communist Party were convicted under the Smith Act for mere advocacy of insurrection, without any proof of action. Membership in the Communist Party was proof alone of the offense. Congress reacted to

public fears by creating a permanent standing House Committee on Un-American Activities (HUAC). The committee investigated Communist influence in the motion-picture industry in 1947, which led to the blacklisting of many talented members of the profession; in 1948 HUAC investigated Communist influence in the State Department, which led to the perjury conviction of Alger Hiss. HUAC followed the Hiss case by looking into Communist influence in almost all areas of life. State legislatures also went on the hunt for Communists. As a result, public employees and some employees in private industries were compelled to take loyalty oaths.

The Senate proved no less vigilant. It authored the Internal Security Act of 1950 (McCarran Act), which required that all Communist and Communist-dominated organizations register with the federal government, and created a Subversive Activities Control Board. The Senate strengthened the act with the Communist Control Act of 1954. Senator Joseph McCarthy (R-WI) of the Senate Permanent Subcommittee on Investigations began scandalous investigations into Communist infiltration throughout government and society. Although his well-publicized claims were often baseless, McCarthy ruined many careers but encountered little opposition from fellow senators. Many citizens collaborated willingly with his committee, others only under threat. McCarthy's downfall came in 1954 when he accused the Army of "coddling Communists" during nationally televised hearings. Countercharges of improper conduct by members of McCarthy's staff cost him public support, and the Senate soon sanctioned him for other misconduct.

The Supreme Court was inconsistent in its defense of Communists' civil liberties. The "clear and present danger" standard established in 1919 eroded significantly before the Court reasserted the right to espouse Communist ideas in a series of decisions in the period 1955–1958. It ruled in 1957 that teaching communism or other revolutionary theories was not, in itself, grounds for conviction. Proof was required that a defendant urged direct action to overthrow the government. Yet in 1961, the Court again upheld the conviction of a Communist Party member, maintaining that the defendant had been an active party member and had intended to overthrow the government.

Communists have played an ambiguous role in the history of American civil rights. Communists advocated the rights of disenfranchised social groups before the political mainstream recognized them, and they were alert to the Nazi threat long before others. Yet Communists also betrayed democratic ideals when they advocated overthrowing the government. Government authorities pushed civil liberties to their limit in response to the perceived threat of communism, and in this they were supported by the courts, by agencies such as the Federal Bureau of Investigation, and by mainstream social institutions. Communists inspired some of the darker episodes in the history of American civil liberties, creating precedents used by later governments that encroached on civil liberties in response to conspiratorial threats.

Compelling Governmental Interest

"Compelling governmental interest" is a term used to defend state (state in the broad sense, from local to federal) action that curtails or limits the exercise of fundamental rights by citizens. As the name implies, state actions taken against fundamental rights, such as free speech or equal protection, must be undertaken in furtherance of essential (compelling) state interests. The requirement that the state show such a compelling interest in cases involving the Equal Protection Clause is a fairly recent development, but it has become one of the most important standards for the protection of rights under the U.S. Constitution.

In the mid-1930s, the U.S. Supreme Court began

a reexamination of the long-held belief that all rights were equal under the law. Despite the fact that the Constitution itself makes no hierarchical division among rights, justices such as William O. Douglas and Frank Murphy argued that some rights were clearly more important than others. These and other liberally minded judges began to assert that some freedoms, such as the First Amendment's protections for speech, press, assembly, and religious exercise, were fundamental to any truly democratic process, and that those rights were clearly more important than others, such as run-of-the-mill regulations governing driver's licenses or trash-pickup days. Their argument was that democracy could continue without vigorous protection of property or other rights, but it could not long exist without freedom of speech or of the press precisely because those rights were fundamental to the democratic enterprise.

This was not simply an academic debate, however. The logical conclusion for this argument was that legislation or executive action that impinged on these "preferred," or "fundamental," rights deserved far less judicial deference and required a more gripping reason than did state action limiting the exercise of other, less important rights.

Laws that limit the exercise of nonpreferred, or nonfundamental, rights are judged on the basis of their reasonableness, subject to only minimal scrutiny by courts. If the law or regulation is "reasonably" related to any "legitimate" government purpose (interest), then the law or regulation is normally presumed by the Supreme Court to be a constitutional exercise of power.

In contrast, laws that limit the exercise of fundamental freedoms are subject to the much higher standard of strict scrutiny by courts. In cases involving preferred freedoms, such as freedom of speech or equal protection, the Supreme Court abandons its usual assumption of constitutionality of laws passed by government. Any law that limits the exercise of fundamental rights or freedoms is assumed by the Supreme Court to be unconstitutional until the government can show otherwise by meeting the strict-scrutiny standard.

Under strict scrutiny, as articulated in cases such as *Korematsu v. United States,* 323 U.S. 214 (1944), or *Texas v. Johnson,* 491 U.S. 397 (1989), the government must show that it is acting in response to a "compelling" state interest. Further, it must show that the law in question is tailored as narrowly and specifically as possible to accomplish its ends. Finally, it must demonstrate that the law in question is the least restrictive alternative capable of achieving those ends.

Comstock Acts

Named for nineteenth-century antiobscenity crusader Anthony Comstock (1844–1915), the Comstock Acts refer to a series of federal and state laws prohibiting the dissemination of obscene materials. Though modified over the years by statute and court decision, the antiobscenity laws inspired by Comstock and his followers remain on the books and continue to be enforced at the local, state, and federal level.

Prohibitions on obscenity did not begin with Comstock. Some colonial governments passed laws prohibiting obscenity and several states legislated against such materials from independence and throughout the nineteenth century. The federal government began prohibiting the import of obscene materials in 1842 and amended its customs laws as technological advances required (adding in 1857, for example, obscene daguerreotypes and photographs to the items prohibited). The first federal prohibition against sending such materials through the mails was passed in 1865 and provided fines of up to $500 and imprisonment of up to one year for each violation. This law, in slightly modified form, was reenacted in 1872.

Despite the existence of these earlier laws, it was Comstock's tireless crusade against obscenity beginning in the late 1860s that made the issue a nationally

contentious one for the first time. Comstock was born in 1844 in New Canaan, Connecticut, the son of a successful farmer. His mother died when he was ten, and by the time of the Civil War, his father had lost his farm. Following the death of his brother at Gettysburg, Comstock joined the Union Army but saw no action. He was devoutly religious and neither smoked nor drank alcohol—attributes that earned him the derision of his fellow soldiers. After the war, he moved to New York City, became a clerk in a dry goods store, and married. In New York, he was appalled by the vice he saw around him and became especially concerned about its effects on the young men then pouring into the city in search of jobs. In 1868, relying on a new state law that prohibited the sale of obscene material, Comstock began purchasing obscene books and then having the sellers arrested. Approving of his efforts, the Young Men's Christian Association (YMCA), which had lobbied for the state antiobscenity law, began secretly funding him through its Committee for the Suppression of Vice.

In 1873, Comstock, accompanied by two other members of the committee and funded by wealthy New Yorkers, traveled to Washington to lobby for a tougher federal obscenity law free of the loopholes that had frustrated earlier enforcement efforts. This new law, commonly referred to as the Comstock Act, not only prohibited the mailing or importation of obscene materials but also made it illegal to mail or import information about contraception or abortion as well as items that might be used for contraception, abortion, or indecent purposes. The new law also prohibited people from intentionally receiving such materials by mail. It increased the maximum fine to $5,000 and the maximum prison term to ten years for each violation. In the wake of the federal statute, dozens of states passed new laws prohibiting the advertisement or dissemination of indecent materials or materials related to contraception or abortion. These actions at the federal and state levels complemented a successful movement to prohibit abortion in almost all states by 1900.

Armed with the federal statute and granted the powers of a U.S. postal agent, Comstock vigorously enforced federal and state laws against hundreds of people over the next forty years, including feminist and free-love advocates Victoria Woodhull and Ezra Heywood, publisher Frank Leslie, New York abortionist Madam Restell (Ann Lohman), and family planning pioneer Margaret Sanger and her husband, William. Comstock drew political and financial support for his activities from wealthy and powerful men who made up the memberships of the New York Society for the Suppression of Vice (which had spun off from the New York YMCA in 1873) and the New England Society for the Suppression of Vice (founded in 1878 and known after 1890 as the Watch and Ward Society). The passage of state Comstock Acts demonstrated widespread support for the antiobscenity, anticontraception, and antiabortion campaign.

Not everyone supported Comstock or the laws he inspired. Many saw Comstock as a puritanical busybody, hounding and entrapping his enemies. He was frequently ridiculed by the mainstream press and by intellectual and cultural elites angered by his refusal to discriminate between low-grade pornography (which most disdained) and works of important literary and artistic merit. In 1878 a petition signed by 50,000 citizens was presented to the House of Representatives requesting repeal of the Comstock Act. The House refused, and Comstock labored on, pursuing individuals and campaigning for a variety of antivice causes right up to his death in 1915.

People charged under the acts also challenged them in court, arguing that the materials were protected by the First Amendment, that Congress was without authority to regulate such materials, or that their materials were not obscene. In *Ex parte Jackson,* 96 U.S. 727 (1878), the U.S. Supreme Court held that Congress had the authority to ban obscene materials from the mails and, implicitly, that obscenity did not fall within the First Amendment's protections. A far more difficult issue was to define "obscene." Initially, state and federal jurisdictions adopted the definition first articulated by a British court in *Regina v. Hicklin,* L.R. 3 Q.B. 360 (1868). In *Hicklin,* the court held that materials were obscene if any part of them would cause sexual excitement in persons most vulnerable to such stimulation. The *Hicklin* test set a very low standard for proving obscenity. Though the rule was sometimes criticized, it was not until *United States v. One Book Entitled "Ulysses,"* 72 F.2d 705 (2d Cir. 1934), that an alternative was offered. In this case, the U.S. Court of Appeals for the Second Circuit rejected

Hicklin. Instead, works were not obscene when the literary nature of the work was sincere, the erotic material was not introduced to promote lust, and it did not furnish the dominant note of the publication. Critical acclaim for the work or its designation as a classic was also evidence that it was not obscene. The decision in *Ulysses* was adopted by numerous federal and state courts. Because it looked at the work as a whole and because it rejected *Hicklin*'s depraved-person standard, it became much harder to prove a work was obscene in the jurisdictions in which *Ulysses* was adopted. In *Roth v. United States,* 354 U.S. 476 (1957), the U.S. Supreme Court explicitly defined obscenity in the context of a challenge to a conviction under the federal Comstock Act.

The Court first held that the First Amendment did not protect obscene material. Material was now obscene if the average person, applying contemporary community standards, would determine that the material taken as a whole appealed to a prurient interest. In *Miller v. California,* 413 U.S. 15 (1973), the Court reaffirmed its basic holding in *Roth,* refined its definition of obscenity, and applied it to state obscenity laws. The Court held that in a state obscenity prosecution, the First Amendment was not violated by a prosecution so long as jurors determined that the work depicted, in a patently offensive way, sexual conduct specifically defined by the state obscenity law and that the work, taken as a whole, lacked serious literary, artistic, political, or scientific value. *Miller* is still the standard for determining whether a work is obscene and thus unprotected by the First Amendment for federal and state law purposes.

A variety of theories have been put forth to explain Comstock and the antiobscenity movement. Some have argued that Comstock's obsession with obscenity reflected his own prurient interests in the material. Others, noting the anticontraception and antiabortion elements of the campaign, argue that it was motivated by a desire to control female sexuality and was thus primarily patriarchal in character and sexist in intent. Still others argue that the campaign against obscenity reflected anxiety on the part of ruling elites threatened by the urbanization, immigration, and new mass culture of the era—developments that threatened the more traditional cultural, social, political, and moral power structures. Still others claim that middle- and upper-class parents supported the antiobscenity movement because they were worried about the impact of obscenity on their children's futures. In a world where traditional restraints were breaking down, obscenity might encourage young people to engage in behavior such as masturbation, premarital sex, homosexuality, and adultery, the consequences of which could destroy their ability to contract favorable marriages, successfully reproduce, and maintain the integrity and status of their own families. These explanations for "Comstockery," as British playwright George Bernard Shaw critically described the campaign against obscenity, are not mutually exclusive.

More than 130 years after the Comstock Act was passed, federal law was still prohibiting the mailing or importation of obscene or abortion-related materials and imposing fines and lengthy prison sentences for its violation. In *Griswold v. Connecticut,* 381 U.S. 479 (1965), the U.S. Supreme Court struck down as unconstitutional state laws limiting access to contraception information and devices. In 1971, Congress amended the Comstock Act, dropping the prohibitions on mailing or importing materials related to contraception. And in the wake of the Supreme Court's decision in *Roe v. Wade,* 410 U.S. 113 (1973), the constitutionality of the provisions relating to abortion was left in question.

Confrontation Clause

The Sixth Amendment to the Constitution contains the Confrontation Clause, a critical feature of the adversarial system of criminal law used in U.S. courts. The Confrontation Clause requires that an accused person be permitted to challenge, through cross-examination, the arguments, testimony, and credibility of those who would testify against the accused. The Sixth Amendment states in part that "[i]n all criminal prosecutions, the accused shall enjoy the right . . . to be confronted with the witnesses against him." The right to confront one's accusers is a crucial element of the Sixth Amendment and the Bill of Rights; it was intended to end the eighteenth-century British practice of admitting depositions and ex parte (one-sided) affidavits as evidence in criminal proceedings.

The Confrontation Clause was first made applicable to the states through the Due Process Clause of the Fourteenth Amendment in *Pointer v. Texas,* 380 U.S. 400 (1965). In this case, the defendant was convicted of robbery based primarily on the testimony of a victim who had moved out of state after he testified at the preliminary hearing but before the trial was conducted. Equally important, the defendant was not represented by counsel at the preliminary hearing. The Supreme Court, in a unanimous decision, held that the Confrontation Clause guarantees an accused the opportunity to confront witnesses and have them cross-examined by counsel. Because the victim was never cross-examined by counsel, the defendant was deprived of his right of confrontation, and the victim's testimony was deemed inadmissible. The Court did note that there were certain exceptions to the Confrontation Clause, such as the admission of a dying person's statement or the sworn testimony of a deceased witness who had testified at a previous trial. The meaning of the Confrontation Clause was further defined in *Davis v. Alaska,* 415 U.S. 308 (1974), in which the Court reiterated the right to cross-examination, and *Mattox v. United States,* 156 U.S. 237 (1985), in which it held that the accused has the right to have his jury observe a witness's demeanor during testimony.

The confrontation right was expanded in *Coy v. Iowa,* 487 U.S. 1012 (1988). In this case, John Coy had been accused of sexually assaulting two thirteen-year-old girls. Pursuant to an Iowa statute, a translucent screen was placed between the two girls and Coy while they testified. The Supreme Court ruled five–four that the use of the screen was unconstitutional because the Confrontation Clause guarantees a criminal defendant the right to a physical face-to-face confrontation with adverse witnesses during testimony.

The protection afforded in *Coy* was narrowed in *Maryland v. Craig,* 497 U.S. 836 (1990). Here, the defendant had been convicted of child abuse. The victim's testimony had been taken via a one-way closed-circuit television, as permitted under Maryland law provided it could be shown that the child would suffer "serious emotional distress" if not protected from viewing the defendant. Craig argued that the one-way closed-circuit television was unconstitutional because it deprived her of the opportunity to confront her accuser. In a narrow decision (five–four), the Court upheld the constitutionality of the Maryland statute because it achieved the purpose of the Confrontation Clause: It ensured the reliability of evidence, presented an opportunity for the defense to cross-examine, allowed for the witness to take an oath, and provided a way for the jury to observe witnesses' demeanor during testimony. The result of *Craig* was that the Confrontation Clause did not entitle an accused to an inviolate right of face-to-face confrontation if it could be shown that an overriding state interest existed, such as protecting a child witness from trauma. Justice Antonin Scalia dissented from the majority opinion, stating that the Court should not ignore explicit constitutional text and substitute for it the current favored public opinion, and that even though Maryland's practice may not be unfair, it is not permitted by the Constitution. There is a prominent distinction between *Craig* and *Coy* that should be noted. In *Craig,* the Maryland statute that was held constitutional required a case-specific finding that a child witness would suffer "serious emotional damage," whereas the

Iowa statute struck down in *Coy* relied on an assumption of psychological trauma.

Idaho v. Wright, 497 U.S. 805 (1990) was a companion case to *Craig*. In *Wright,* a mother had been charged with lewd conduct on her five-and-a-half- and three-and-a-half-year-old daughters. The Idaho trial court had admitted into evidence statements made by the younger daughter to her physician. The Supreme Court held (five–four) that the admission of the child's statements violated the mother's rights under the Confrontation Clause because the statements did not fall under traditional hearsay exceptions, and the interview lacked "particularized guarantees of trustworthiness," since it was conducted without procedural safeguards: The physician failed to videotape the interview, he asked leading questions, and he possessed a preconceived idea of how the child should answer. These procedural errors were not harmless beyond a reasonable doubt, and admission of the interview was unconstitutional.

In short, the Confrontation Clause guarantees the accused a right to confront adverse witnesses in all significant criminal proceedings, the purpose of which is to ensure the reliability of evidence. This is accomplished by allowing the jury to observe the demeanor of a witness during testimony and by permitting defense counsel to question the credibility, arguments, and testimony of witnesses.

Congress and Civil Liberties

The U.S. Congress is sometimes accused of being hostile to individual rights. This accusation is not without foundation, but it is also true that Congress has intervened from time to time to protect civil liberties from infringements by the administrative (executive) branch of government.

The founders of the country placed responsibility for upholding the Constitution with all three branches of government. It was not until 1803, with Chief Justice John Marshall's (1785–1835) opinion in *Marbury v. Madison,* 5 U.S. 137 (1803), that the doctrine of judicial review was interpreted to make the U.S. Supreme Court the final arbiter of constitutionality. In *Marbury,* Justice Marshall ruled that Congress had exceeded its constitutional authority by enacting a provision of the Judiciary Act of 1789, and that the provision could not be enforced. The consequences of that decision were profound, because *Marbury* established that the Supreme Court has the final say about constitutionality of a law.

Since *Marbury,* Congress has repeatedly tested the limits of its constitutional authority, and the Supreme Court has often (but certainly not always) responded by striking down laws infringing on the liberties of U.S. citizens. In the process, many observers feel that congressional responsibility to legislate in conformity with the Constitution and Bill of Rights has been compromised. In this view, Congress responds to voters' demands by passing laws its members know are unconstitutional, secure in the knowledge that the Court will overturn them.

THE "MOST DANGEROUS BRANCH"

Members of Congress are elected. Unlike federal judges, who are appointed to serve for life and who are thought to be insulated from majority passions, elected officials are—and are intended to be—responsive to the will of the people who elected them. This may be why the founders considered Congress "the most dangerous branch" of the new government. Indeed, the First Amendment begins with James Madison's phrase "*Congress* shall make no law . . ."

Although the Constitution gave the federal government certain powers, the scope of those powers was limited not only by the Bill of Rights (the first ten amendments to the Constitution) but also by the notion of *delegation;* that is, unless the Constitution had specifically granted, or delegated, a power to the central government, that power was reserved to the states or to the people. Among the delegated powers, how-

ever, were some that have been used to authorize broad exercises of central authority. The Commerce Clause, for example, gives Congress the right to regulate interstate commerce, a regulatory authority that has been used to justify all manner of legislation, from federal regulation of aviation and cable television to the passage of civil rights laws.

As Congress has steadily increased government's presence in the lives of U.S. citizens, constitutional challenges to that presence have increased as well.

HISTORICAL EXPERIENCE

While government expansion has increased the likelihood of constitutional conflicts, the tendency of Congress to ignore constitutional constraints is hardly a new phenomenon. In 1798, in response to a threatened war with France, and with the ink barely dry on the Bill of Rights, Congress passed four laws known collectively as the Alien and Sedition Acts. Both Thomas Jefferson and James Madison argued that the acts were unconstitutional, and some historians attribute Jefferson's election as president in 1800 to widespread outrage over their passage.

Despite subsequent consensus in the legal community that the Alien and Sedition Acts had been unconstitutional, Congress passed substantially similar legislation during World War I. The Espionage and Sedition Acts of World War I imposed significant restrictions on free expression, and Congress justified those restrictions on the basis of national security. Criticism of the war effort or the draft were made federal crimes, and socialist leader Eugene V. Debs was given a ten-year jail sentence for saying to an audience, "You are good for more than cannon fodder[;] there's more I'd like to say but I can't for fear of going to prison."

World War II brought violations of civil liberties on an even greater scale. After the December 1941 attack on Pearl Harbor, Congress authorized the internment of 120,000 Japanese Americans, 70,000 of whom were U.S. citizens, even though no Japanese American had ever been indicted for any crime against the United States. President Franklin D. Roosevelt called the camps to which they were taken "concentration camps."

During the 1940s and 1950s, fear of "godless communism" led to laws like the Smith Act of 1940, which made it a crime to "print, publish, edit, issue, circulate, sell, distribute or publicly display any written or printed matter advocating, advising or teaching" the violent overthrow of the government. Section three of the act prohibited the organization of "any society, group, or assembly of persons" to engage in such advocacy. In an indication of the depths of popular hysteria over communism, the supposedly insulated Supreme Court upheld as constitutional both the internment of the Japanese Americans and the application of the Smith Act to various political activists. One explanation of the Court's seeming timidity can be found in the *Congressional Record* of the times; during the height of anti-Communist fears, the Court's free speech decisions were routinely the subject of congressional diatribes. The Court was accused of "coddling Communists," and efforts were even made to impeach Chief Justice Earl Warren.

After the 1995 bombing of the Alfred P. Murrah Federal Office Building in Oklahoma City, Oklahoma (a bombing carried out by native-born U.S. citizens), Congress expanded federal authority to infiltrate "suspicious" domestic groups and authorized the Immigration and Nationalization Service to deport resident aliens for even minor infractions.

Although legal history is filled with such examples of congressional overreaching, Congress occasionally has stepped in to prevent violations of civil liberties by government agencies. For example, Congress passed the Privacy Act of 1974 in the wake of revelations that the Federal Bureau of Investigation (FBI) had amassed files on citizens who were not suspected of criminal activity but who held political opinions of which the FBI disapproved. Among those with FBI files were actor Rock Hudson, industrialist Henry Ford, and labor leader Cesar Chavez. Congressional oversight committees regularly question officials about the activities of government agencies in order to ensure the compliance of those agencies with due process, equal protection, and other constitutional guarantees.

CONTEMPORARY CONFLICTS

Wars and other dangers have prompted many of the most egregious congressional incursions on individual liberties, but overreaching legislation has not been

High school recess period, Manzanar Relocation Center, California, 1943. World War II brought violations of civil liberties on a grand scale. After the attack on Pearl Harbor, Hawaii, Congress authorized the internment of 120,000 Japanese Americans, 70,000 of whom were U.S. citizens. *(Library of Congress)*

limited to wartime. New technologies, especially, have often generated attempts at suppression. In 1997, invoking the First Amendment, the Supreme Court overturned the Communications Decency Act of 1996, an effort to prevent the posting of undefined "indecent" materials in cyberspace. Much of the contemporary tension between individual liberties and state regulation falls within the zone of the so-called social issues: Abortion, gay rights, and pornography have all generated constitutional confrontations between advocates of "community" or "family" values and defenders of the individual's right to personal autonomy. Central to these conflicts is the contested notion of social harm: Advocates of restrictions on personal behavior argue that these behaviors harm society by diminishing common standards and vulgarizing public life; opponents of such restrictions argue that it is inconsistent with the Constitution and American values to criminalize private behaviors that do not harm the person or property of others. Depending upon the results of a given election, either side may be in control of Congress at any particular time.

Today, some of the thorniest issues raised by congressional action are in the areas of drug prohibition and national security. Rather than approaching drug abuse as a public health problem, Congress has steadfastly maintained its right to outlaw the use of disfavored substances and has given various federal agencies broad authority to act against those found to be in violation of drug laws. The drug war has generated a significant number of cases in which Fourth Amendment protections have been narrowed and exceptions made to that amendment's protections

against unreasonable search and seizure. Laws authorizing civil forfeitures in drug cases have also been criticized on constitutional grounds.

In the aftermath of the September 11, 2001, terrorist attacks on the World Trade Center in New York City and the Pentagon in Washington, D.C., Congress that fall passed two laws that have generated multiple constitutional challenges: the USA Patriot Act (2001) and the Homeland Security Act (2002). Among other provisions, these laws allow the government to compel businesses to provide information about any person—including medical and educational records and even books checked out of public libraries or purchased from bookstores. They also authorize the indefinite detention of those persons designated by the administration as "enemy combatants," and no appeal of that designation is provided. "Enemy combatants" can be denied access to lawyers, or, if they are allowed counsel, discussions with their lawyers can be wiretapped without their knowledge and without a warrant. Enemy combatants can ultimately be tried and condemned to death by military tribunals that are not bound by traditional rules of military justice or by constitutional norms, and from which no appeal can be taken.

Not surprisingly, these laws have provoked considerable criticism, and lawsuits challenging various parts of both bills will ultimately be decided by the Supreme Court. As of September 1, 2004, although it had dealt with related issues in cases like *Rasul v. Bush,* 124 S. Ct. 2686 (2004), *Rumsfeld v. Padilla,* 124 S. Ct. 2711 (2004), and *Hamdi v. Rumsfeld,* 124 S. Ct. 2633 (2004), the U.S. Supreme Court had yet to directly address the constitutionality of these laws. A U.S. District Court for the Central District of California did decide in *Humanitarian Law Project v. Ashcroft,* 309 F. Supp. 2d 1185 (2004), that a provision of the Patriot Act prohibiting the "expert advice or assistance" to terrorist organizations was "unconstitutionally vague and overbroad." Defenders will argue that the dangers posed by terrorists justify these actions, and that at least some civil liberties must be traded for security. Critics will remind the Court of its acquiescence in the internment of the Japanese in World War II, and will argue that terrorism wins if it causes the United States to abandon the constitutional principles of individual rights that have defined the country for over two hundred years. The Court will uphold some of the new powers Congress has handed to the administrative branch and will strike down others, further defining—and refining—congressional authority to make laws that infringe on the civil liberties of American citizens and continuing the tug-of-war that began with *Marbury v. Madison.*

Congressional Investigations

The U.S. Supreme Court held in *McGrain v. Daugherty,* 273 U.S. 135 (1927), that the power to investigate, which includes the power to compel testimony, is an inherent part of the legislative process. The investigative power is the way Congress gets the accurate and up-to-date information it needs to make effective laws.

SCOPE AND PROCEDURES

Congressional standing committees are continually sending out requests for information and receiving the answers, mostly in writing. Sometimes they conduct surveys. Committees also hold formal investigative sessions, called *hearings,* in which witnesses testify in person and answer questions posed by members of Congress or staffers. Though most are held in Washington, D.C., committee members have on occasion traveled to other parts of the country to hold hearings on some regional problem or to make the hearings more convenient for the witnesses.

Most hearings inquire into some social problem within the subject-matter specialty of a standing committee; others study the possible impact of a proposed piece of legislation. The witnesses are usually people affected by the problem or bill, and they want to tes-

tify about it. They may be lobbyists representing affected groups, officials of the executive branch who will have to enforce the proposed legislation, or academic or other private-world experts in the subject. A verbatim record is made of such hearings and published, together with whatever written testimony is received on the subject. Copies are placed in public libraries nationwide that store government documents; the materials can then be used by students, academic researchers, or other concerned people. The records often contain the most up-to-date information on such subjects as patterns of illegal drug use in the United States, research on the behavioral impact of television watching, or regional distribution of poverty.

SENSITIVITY AND SECRECY

On occasion, Congress will also investigate some disaster, scandal, or political problem, sometimes creating a special committee for this sole purpose. In this way, the causes of Gen. George Armstrong Custer's last stand, intelligence failures before the Pearl Harbor attack in 1941, and war profiteering during the 1939–1942 defense buildup have all been investigated. Later committees focused on the Watergate debacle (the 1972 bungled burglary of Democratic National Committee headquarters by people associated with President Richard M. Nixon's reelection campaign) and the Iran-contra scandal (U.S. involvement in secret arms sales in the mid-1980s to fund opposition in Nicaragua to the Sandinista government). Other committees have studied the scope of organized crime in America, labor racketeering, or illegal drug trafficking. Because these committees touch on sensitive subjects, many potential witnesses—often the only people with relevant and accurate information—are unwilling to testify. They may fear criminal prosecution, deportation, lawsuits, or economic or other private reprisals by people harmed by the scandals, or the witnesses may simply suffer embarrassment.

The problem is made worse by the fact that hearings are almost always public. The mass media will report, and the public will gain access to, whatever immoral or potentially criminal behavior the witness is forced to admit under the relentless questioning of the lawyers employed by the committee staff. During investigations in the 1950s into the penetration of international communism into American government, entertainment media, and educational institutions, secret testimony, taken from government informants, was used to discredit witnesses. (Even today, government informants are sometimes allowed to testify in disguise, and their names are not given to witnesses.) Hearing sessions were sometimes closed to the public for reasons of national security. These rare forays into secrecy did not benefit the hapless witnesses, as might be supposed. Rather, they harmed the witnesses by allowing rumors and speculations to develop—rumors that painted a worse portrait of the witness than the secret testimony itself.

CIVIL LIBERTIES ABUSES

The legality of the use of secrecy in the 1950s was never definitively resolved. Later court rulings on criminal procedure generally have disfavored secrecy, however, and there also have been shifts in public opinion. The public has become less willing to extend unqualified trust to federal agencies such as the Federal Bureau of Investigation, instead insisting on openness of information for public inspection. For this reason, secrecy has become rare. A public questioning of motives and behavior, relentlessly driven by a sneering, contemptuous lawyer, is the usual fate of the present-day "hostile witness."

Witnesses are forced to endure this painful and harmful questioning wherever it leads, because Congress possesses the power of "compulsory process," or *subpoena*. When properly notified, the witness must appear before the committee and answer all of its questions, on pain of being held in contempt of Congress. In the nineteenth century, there were examples of contemptuous witnesses being arrested by the House sergeant-at-arms and locked up in the basement of the Capitol until they purged their contempt or until Congress adjourned, treatment the Supreme Court approved in *Anderson v. Dunn,* 19 U.S. 204 (1821). Later, Congress passed a law making contempt of Congress a federal crime. Under a federal statute, a witness who refuses to answer can be turned over to a federal prosecutor, indicted, tried, and, if

"Images Removed Due to Copyright Issues"

convicted, fined and imprisoned for up to a year (*U.S. Code,* vol. 2, sec. 192).

Thus, hostile witnesses face a dilemma. When confronted with an embarrassing question, the witness can answer and face whatever consequences the answer entails, or refuse to answer on pain of prosecution for contempt. To avoid being impaled on the horns of this dilemma, witnesses have raised numerous constitutional issues. Under some circumstances, the Supreme Court has held that the separation of powers operates to protect certain members of the executive or judicial branches from hostile questioning, though it does not protect every official all of the time. The Court held in *Watkins v. United States,* 354 U.S. 178 (1957), that congressional questioning must also be relevant to some legitimate legislative purpose. There is no power to "expose for the sake of exposure." However, because the substantive powers Congress has are so extensive and discretionary, this limit may require little more than the procedural quibble that Congress must clearly state a good reason for asking the questions, as the Court noted in *Barenblatt v. United States,* 360 U.S. 109 (1959).

RIGHTS OF WITNESSES

Through the years, certain civil liberties issues have been raised under constitutional provisions. Some witnesses have cited the First Amendment to justify a refusal to answer, on the theory that the right to speak includes a right to remain silent or, at the very least, to edit the contents of speech. Courts have generally refused to accept this rationale. Witnesses have been more successful in claiming the protection of the

Fifth Amendment right against compulsory self-incrimination. The Supreme Court has held that this right can be invoked during congressional hearings if the purpose is to keep the witness from uttering words that a prosecutor could record and use in a criminal court proceeding later on. (The words must incriminate the witness, however. There is no right to keep silent to protect some third party from being prosecuted.)

If the Fifth Amendment is invoked, Congress may either excuse the witness or offer immunity. In a broad sense, a grant of immunity (which the witness may not refuse) can supplant the Fifth Amendment. The witness must then answer the questions. But in return, if federal prosecutors put the witness on trial, they cannot use the information provided by the witness. Immunity has been described as a practical compromise, allowing Congress access to necessary information but for the trade-off of making it more difficult to bring some evildoers to justice. In theory, prosecutors can still prosecute persons who have been given immunity, but that has become increasingly difficult. For example, Oliver North, a Marine officer who worked in the White House during President Ronald Reagan's tenure, had unique information about the Iran-contra scandal. When he testified under a grant of immunity, the prosecutor took elaborate precautions to avoid using the information North provided, even ordering staff members not to watch the televised hearings or read about them in the newspapers. He successfully prosecuted North for felonies arising out of the scandal. But an appellate court reversed, holding that there was no way to be sure that information from North's testimony did not find its way into the prosecutor's files.

Finally, congressional power to investigate is limited by certain procedural protections. Witnesses are entitled to be told the questions, to know in at least general terms the purpose of the inquiry, and to have access to counsel. Though hearings are not adversarial proceedings, and witnesses have no right to question the members of Congress or their staffs, some have been allowed to make exculpatory statements and even to produce exculpatory or explanatory witnesses of their own. Some congressional committees have recognized such common law rights as attorney-client privilege, while others have not done so. As is typical of congressional procedures, there are few rules but many precedents. Although the Supreme Court has suggested that the Bill of Rights broadly applies to hostile questioning, it has provided few guidelines regarding what those rules are.

Conscientious Objectors

The term "conscientious objector" (CO) refers to an individual who refuses to carry weapons or serve in the military because of a deeply held moral or religious aversion to killing. This aversion poses a dilemma for the state, which must balance the competing goals of national defense with respect for the rights of its citizens to abstain from acts they find morally repugnant. Although the United States currently grants CO status to those opposed to war on religious or moral grounds (including individuals on active duty), the expansion of the rights of COs has been a slow, uneven process.

The Quakers and other radical Protestant sects who settled in the American colonies in the seventeenth and eighteenth centuries were the first groups to win the right to refuse to serve. Their pacifism was religious in nature—the Quakers believed that each person contained part of the Spirit of God. Most colonial governments respected the preferences of these industrious and often prosperous citizens by allowing them

"Images Removed Due to Copyright Issues"

to substitute militia service with payment of a fine. Quaker Pennsylvania even made do without a militia for several decades. But there were exceptions. Local sheriffs sometimes imprisoned and beat COs, especially those who refused on religious grounds to pay the fine. Only Georgia, founded explicitly as a military colony, made no provision for conscientious objectors.

During the Revolutionary War, the Continental Congress passed a law allowing for conscientious objection, and when James Madison proposed the Bill of Rights, he included an amendment stating that "no person religiously scrupulous of bearing arms shall be compelled to render military service in person." Although the amendment did not pass, during the Civil War both the North and South allowed conscientious objectors to pay a fine or hire a substitute.

World War I brought an end to the use of fines and substitutes. The 1917 Selective Draft Act restricted CO status to members of traditional peace churches and required that COs perform alternative service. Significantly, the act left both the decision whether to grant CO status and the alternative service itself in the hands of the military. Those individuals denied deferments, as well as "absolutists" who refused to perform alternative service, were placed in military jails where they faced brutal conditions. In part for these reasons, the rate of conscientious objection was extremely low—out of 2.8 million inductees (66,000 of whom sought CO status), the state granted only 3,500 exemptions.

During World War II, the conscientious objection system was returned to civilian hands. In addition, the 1940 Selective Service Act expanded the definition of conscientious objection to include those whose opposition to war rested on "religious training and be-

lief." This formulation covered Jews, Catholics, and members of mainline Protestant churches but excluded secular objectors and Jehovah's Witnesses, who refused to fight on behalf of "Satanic" governments.

With the Cold War era came an increase in the number of CO exemptions granted, such that by the late 1950s nearly one in ten inductees obtained CO status. Many of these new applicants were motivated by moral opposition to war. The Vietnam War accelerated this phenomenon. By 1972, the last year of the military draft, more people were granted CO status than were inducted into the armed forces.

Meanwhile, the U.S. Supreme Court substantially broadened the scope of conscientious objection. In *Seeger v. United States,* 380 U.S. 163 (1965), the Court broadly interpreted the phrase "religious belief" in the Selective Service Act (section 6j) to cover persons whose belief in a supreme being played the same role as a traditional religious belief. In *Welsh v. United States,* 398 U.S. 333 (1970), the Court expanded this term to include those whose deeply held moral objection to killing did not rest on a belief in a higher power. As Justice John M. Harlan, concurring in *Welsh,* pointed out, the Court read section 6j so expansively to avoid a conflict with the two religion clauses (the Free Exercise and Establishment Clauses) of the First Amendment. In *Gillette v. United States,* 401 U.S. 437 (1971), however, the Court refused to extend CO status to selective objectors (for example, those who opposed only the Vietnam War).

In the postconscription era, conscientious objection remains an issue for the several hundred members of the armed forces who each year seek discharges on the basis of a moral or religious opposition to war. In assessing these cases, courts examine the sincerity of the soldier's belief and will grant exemptions even when the objection to war surfaces shortly after induction. The rate of conscientious objection claims in the military increased during the 1991 Gulf War. A progressive Web site reported a similar increase in the number of such applicants when war with Iraq began in March 2003.

Conservatism

Conservatism is a body of thought that values tradition, history, and imagination. It emerged in its modern form in the writings of the statesman Edmund Burke (1729–1797), who served in the British House of Commons. Burke's *Reflections on the Revolution in France* (1790) is generally considered the first sustained defense of conservatism. Burke wrote *Reflections* to counteract what he saw as the radical influence of the French Revolution in England. The book emphasized history, tradition, and loyalty to old customs, in contrast to the French revolutionaries' emphasis on abstract rights, and was extremely influential in Europe and in America.

Modern conservatism in America began shortly after the end of World War II. Books such as Russell Kirk's *The Conservative Mind* (1953), Richard Weaver's *Ideas Have Consequences* (1948), Whittaker Chambers's *Witness* (1952), and Robert Nisbet's *The Quest for Community* (1953) and magazines such as *National Review* served to orient the young conservative movement.

Conservatives confronted civil liberties questions from the beginning, and over the past half century have examined them in several areas. One of the first issues concerned the influence of Communist spies in the United States. In the 1950s, many conservatives considered communism the greatest threat to American security. The activities of the Un-American Activities Committee in the House of Representatives and the series of hearings held by Senator Joseph McCarthy (R-WI), which were designed to reveal the existence of alleged spies in the U.S. government, generated great controversy in America over the extent to which the government could prohibit or punish persons simply for believing in Communist principles.

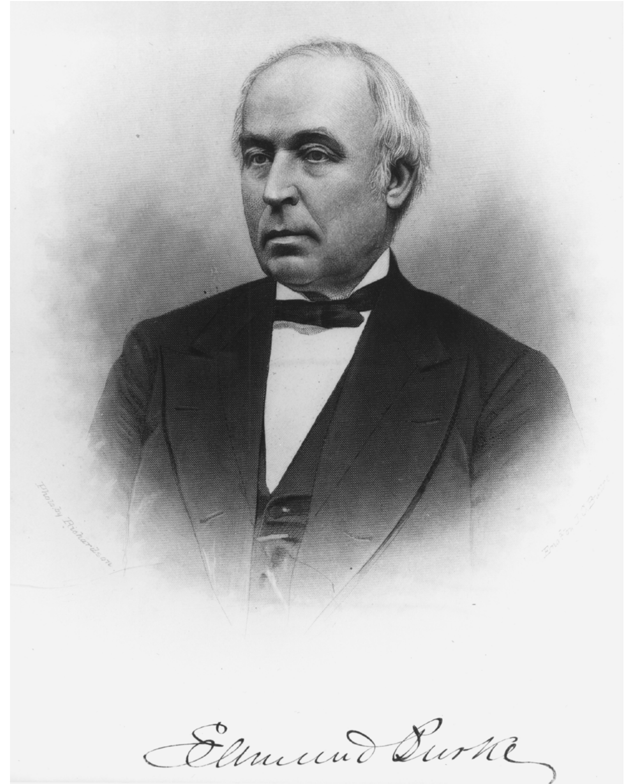
Conservatives were torn in their support for Mc-

Carthy. William F. Buckley Jr. and L. Brent Bozell, two prominent conservatives of the time, published *McCarthy and His Enemies*, which defended the senator's hearings into "un-American activities." Others, such as Russell Kirk, thought that the Wisconsin senator was a "destructive critic" who obscured the more important issues of Communist infiltration. In an important essay on the McCarthy controversy, Willmore Kendall, a conservative Yale political theorist, depicted the controversy as one about the nature of civil liberty in America. Conservatives, he argued, believed that there were some opinions so dangerous that the government could restrict or even prohibit them. Liberals, on the other hand, thought that tolerance of all opinions was the more important value. Because of their belief, conservatives were more willing to restrict what liberals considered civil liberties in the name of security or social order. Many conservatives still believe that the Constitution is not a "suicide pact" and does not require tolerance of opinions that would destroy it.

The 1960s raised a different set of civil liberties issues. This time, conservatives were concerned that the actions of the federal courts, especially the U.S. Supreme Court, would damage the fabric of society. In a range of decisions on pornography, free speech, religious liberty, criminal law, states' rights, and racial and gender discrimination, the Supreme Court expanded the notions of civil liberties in significant ways. In general, the Court extended the explicit rights guaranteed under the Constitution to areas that did not appear to have been contemplated by the framers, such as the right to privacy. The Court also reduced the influence of nonlegal custom or convention that served to restrict individual liberty.

Conservatives opposed almost all of these actions by the courts, on the ground that the interpretation of the Constitution set out in these decisions was invalid. Specifically, many conservatives rejected what they saw as an overly individualistic reading of the Constitution, which placed sometimes ill-defined rights at the center of the text.

Some liberals agreed with this assessment; they split off from their former colleagues and became known as the "neoconservatives." The neoconservatives attacked what they saw as liberalism's destruction of social mores and intermediate institutions in the name of an abstract "liberty" that would ultimately undermine any foundation for civil liberties. Rather than promoting civil liberties, these conservative critics maintained, such decisions were restricting the traditional freedoms of Americans.



Conservatism emerged in its modern form in the writings of statesman Edmund Burke (1729–97), pictured, who served in the British House of Commons. Burke's *Reflections on the Revolution in France* (1790) is generally considered the first sustained defense of conservatism.
(Library of Congress)

With liberalism destroying intermediate institutions and authorities between the individual and the government, conservatives believed that civil liberties would be at the sole discretion of the national government. Ultimately, government would act to restrict civil liberties because government was always tempted to greater power. These disputes forced conservatives to develop their own theories about the bases of civil liberties. Most conservatives grounded their belief in civil liberties to some sort of natural law. The natural law provided certain basic liberties that every government must respect for it to be legitimate and democratic. The difficulty for conservatives was translating

the general dictates of the natural law to specific protections. To solve this problem, many conservatives contended that civil liberties should develop naturally from local communities and institutions such as churches, schools, and towns rather than the central government. Conservatives such as Kirk also argued that civil liberties must be joined with civic duties. No one in a society had absolute freedom or liberty to do whatever that person wished. Rather, civil liberties had to be balanced by the responsibility of every citizen to use those liberties appropriately. This approach may protect civil liberties from reduction by a central governmental power, but conservatives have been less able to answer the question of local oppression of individuals or groups by the majority.

Since the terrorist attacks on the United States on September 11, 2001, conservatives again have become concerned about civil liberties in America. The dramatic proposals offered by the U.S. attorney general and Congress, such as the Patriot Act, worry some conservatives, because the extensive new powers granted to government may encroach on traditional protections under the federal and state constitutions. Other conservatives believe that the circumstances have changed sufficiently to justify added burdens to protect freedom.

Constitutional Amending Process

The constitutional amending process is the two-step procedure, outlined in Article V of the U.S. Constitution, that provides for written additions to the document. Although it has not been successfully exercised frequently, the constitutional amending process has been used throughout most of U.S. history to make the Constitution more democratic and to expand civil rights and liberties. This process replaced a much more rigid provision under the Articles of Confederation, the initial outline for governance of the new nation, whereby amendments had to be proposed by Congress and unanimously ratified by the states. By contrast, the framers of the Constitution provided two methods to propose amendments and two ways to ratify them. These mechanisms were designed to assure that U.S. citizens would not have to resort to revolution in order to bring about needed constitutional changes.

To date, two-thirds majorities in Congress have proposed all amendments that have been ratified, but there is an unused alternative that provides that Congress must call a convention to propose amendments if so requested by two-thirds of the states. The Constitution further requires that amendments be ratified by three-fourths of the states. They do this, at congressional specification, either through existing state legislatures or, as in the solitary case of the Twenty-first Amendment repealing national prohibition of alcohol, through special conventions called for this purpose. Given that Rhode Island did not send delegates to the 1787 Constitutional Convention in Philadelphia, the three-fourths majority required to ratify amendments is roughly equivalent to the nine states that Article VII of the Constitution required to ratify the Constitution before it would go into effect.

Article V contains two so-called entrenchment clauses. The first was designed to prevent the taxation of the importation of slaves, a provision that terminated by specification in twenty years. The remaining entrenchment clause provided that no state may be deprived of its equal representation in the U.S. Senate without its consent. This clause reflected the importance of the Connecticut Compromise at the Constitutional Convention, in which delegates agreed that states would be represented in the U.S. House of Representatives by population but in the U.S. Senate equally (two senators per state). Scholars debate whether the judiciary would be able to enforce unstated limits on amendments, such as those that might follow from principles articulated in the First or Fourteenth Amendments.

The Article V amending process has been a for-

midable obstacle to textual changes. Although members of Congress have introduced more than 11,000 proposals (most of them repetitive), it has only proposed thirty-three amendments by the requisite two-thirds majorities. Of these, twenty-seven have been ratified. Given the difficulty of the amending process, many expansions of individual rights have necessarily been initiated by changing customs and usages as well as through judicial decisions.

In the nation's early history, the Court decided in *Hollingsworth v. Virginia,* 3 U.S. 379 (1798), that the president did not need to sign amendments for them to become valid. In the *National Prohibition Cases,* 253 U.S. 350 (1920), the Court upheld the constitutionality of the Eighteenth Amendment. In *Dillon v. Gloss,* 256 U.S. 368 (1921), it further upheld the provision in that amendment specifying that it would have to be ratified within a seven-year period (though the Twenty-first Amendment repealed prohibition in 1933). In *Coleman v. Miller,* 307 U.S. 433 (1939), however, the Court decided that the question as to whether the ratification of an amendment represented a "contemporary consensus" was a "political question" largely left to congressional discretion. Congress seemingly exercised such discretion in 1992 when it accepted the belated ratification of the Twenty-seventh Amendment limiting the timing of congressional pay raises. Originally proposed as part of the Bill of Rights with no time limit, it was finally ratified after continuing displeasure with Congress.

Many amendments have dealt with structural features of American government. The large majority of amendments that have addressed civil rights and liberties, most notably the first ten amendments (the Bill of Rights), the post–Civil War Amendments (Thirteen through Fifteen), and amendments relating to voting rights (for example, the Nineteenth, addressing women's suffrage, and the Twenty-sixth, making the voting age eighteen) have expanded them. The Eighteenth Amendment, providing for national prohibition of alcohol, was arguably an exception, but the Twenty-first Amendment repealed it. Most provisions of the Bill of Rights, which once were applied only to limit the national government, have subsequently been applied to the states as well in a process often called "incorporation." Scholars continue to debate the extent to which this development was mandated by the language and the intentions of those who drafted and ratified the Fourteenth Amendment (specifically the Due Process Clause and the Privileges or Immunities Clause) and the extent to which the incorporation doctrine represents judicial innovation.

A number of unanswered questions surround the constitutional amending process. Although practice appears to indicate that states may ratify amendments they have previously rejected, it is not as clear whether they should be able to rescind ratification of pending amendments. Congress extended the original seven-year deadline (a time specified in the authorizing resolution that accompanied the amendment rather than within its text) for the proposed Equal Rights Amendment for women, but the amendment did not receive additional state ratifications during this extension, and the case became moot before the Supreme Court decided whether this extension was valid. As already noted, Congress accepted ratification of the Twenty-seventh Amendment, which contained no such deadline, more than 200 years after Congress proposed it. Scholars continue to debate whether two-thirds of the states can call an unlimited convention or whether they can limit the scope of such a convention to specific topics.

From time to time, surveys indicate that Americans are more devoted to the general principles of civil liberties than to their concrete application in individual cases. The difficulty of the amending process arguably serves as a guard against popular passions that might lead to improvident amendments that would restrict such applications of civil liberties. Scholars sometimes express fears over the possible uses of the untried convention mechanism (especially were such a convention to be unlimited) for proposing amendments. However, members of Congress have introduced relatively few amendments that would have restricted the scope of civil liberties; no amendments have restricted provisions within the Bill of Rights; and the convention mechanism would be subject to a number of political and constitutional restraints, including the provision for ratification by three-fourths of the states.

Constitutional Amendments

Constitutional amendments have played a key role in the protection of civil rights and liberties in U.S. history. The Constitution adopted at the 1787 Constitutional Convention in Philadelphia contains some guarantees prohibiting or limiting certain actions restricting civil liberties within the text, most notably in Article I, Sections 9 and 10. These guarantees, however, like protections for rights later incorporated into the text of constitutional amendments, would be relatively meaningless without provisions for separation of powers among the three branches of the national government and for division of power between the nation and the states. In this respect, the entire Constitution can be considered to be a bill of rights.

Article V of the Constitution provides for two methods of proposing and two ways of ratifying amendments. To date, two-thirds majorities of both houses of Congress have proposed all amendments, but the Constitution also provides that Congress must call a convention to propose amendments at the request of two-thirds of the states. Three-fourths of the states must ratify amendments. At congressional specification, they do so either through their state legislatures or, as in the solitary case of the Twenty-first Amendment repealing national prohibition of alcohol, through special conventions called for this purpose.

The first and one of the most important uses of the amending process resulted in the adoption of the first ten amendments known as the Bill of Rights. The founding fathers devoted little discussion to this issue at the Constitutional Convention, apparently believing that the strengthened national government they were creating would pose little threat to civil rights and liberties. During debates over the ratification of the Constitution, Antifederalists used the absence of a bill of rights to argue against it. Initially responding that such a bill was unnecessary and might, in the event of omissions, even prove dangerous, leading Federalists eventually agreed that if the Constitution were adopted without prior amendments, thus avoiding a second constitutional convention, they would push for its later adoption. James Madison, one of the most influential architects and ardent defenders of the new Constitution and a member of the first session of the House of Representatives, accordingly gathered proposals from the states and reworded and grouped

them into concrete proposals that, with revision, later became the first ten amendments, which became part of the Constitution in 1791.

The importance of these amendments in protecting civil liberties is evidenced by the number of entries in these volumes that stem from them. The First Amendment prohibits governmental establishment of religion or abridgment of its free exercise; it also guarantees rights of speech, press, peaceable assembly, and petition. The much-debated Second Amendment deals with the right to bear arms, and the Third prohibits the billeting of soldiers in private homes. These two amendments were drafted in reaction to abuses suffered under the British. The Fourth Amendment outlaws unreasonable searches and seizures and specifies procedures for obtaining search warrants. It prohibited the general warrants, or writs of assistance, that the British king had allowed.

The Fifth Amendment primarily deals with the rights of individuals who are accused of crime. It provides for grand jury indictment, prohibits double jeopardy and compulsory self-incrimination, guarantees "due process," and provides that any governmental taking of property must be compensated.

The Sixth and Seventh Amendments deal with the rights of individuals on trial, the first applying to criminal and the second to civil cases. Sixth Amendment guarantees include protections for a speedy and public trial; the right to an impartial jury (also guaranteed by the Seventh Amendment); and the rights of the accused to be informed of charges, to confront adverse witnesses, to have compulsory process for obtaining witnesses, and to have the assistance of counsel.

The Eighth Amendment limits excessive bail and fines and prohibits "cruel and unusual punishments." The Ninth Amendment is the framers' attempt to recognize the existence of unenumerated rights. The Tenth Amendment further recognizes the existence of powers reserved to the states.

Whereas the Bill of Rights arguably recognized rights that the framers already acknowledged, the post–Civil War amendments extended these rights to all individuals, including those once held in bondage. The Thirteenth Amendment prohibited such slavery. The Fourteenth Amendment defined citizenship to include all persons born or naturalized within the United States. It further guaranteed all such persons their privileges and immunities, their right to due process, and the equal protection of the laws. This last clause became the vehicle through which the Supreme Court gradually applied most of the provisions in the Bill of Rights, which originally limited only the national government, to the states as well.

Other amendments have not so much expanded civil rights as they have served further to democratize American government. Amendments Fifteen (1870), Nineteen (1920), Twenty-three (1961), and Twenty-six (1971) have all lifted restrictions on voting rights, with the Fifteenth and Nineteenth being the most significant. The Fifteenth Amendment, long evaded by a diverse array of tactics, was designed to prohibit discrimination on the basis of race, whereas the Nineteenth prohibited discrimination on the basis of sex.

Unless one classifies acceptance of the income tax in the Sixteenth Amendment as such a measure, the only amendment significantly restricting civil liberties was the Eighteenth (1919). It provided for national prohibition of alcohol. Notably, that amendment was repealed by the Twenty-first (1933).

On at least four occasions, including when the Fourteenth Amendment reversed the Supreme Court's notorious decision in *Scott v. Sandford,* 60 U.S. 393 (1857), in which the Court had declared blacks to be property and not citizens, amendments have overturned unpopular judicial decisions. Opponents of amendments restricting burning the American flag or of proposals responding to other contemporary Supreme Court decisions have argued that the amending process has never yet been, and should never be, used to restrict guarantees of liberty in the Bill of Rights or elsewhere.

Constitutions of many other nations provide for the protection of social and economic rights and not simply political rights. Scholars continue to debate the wisdom of such provisions, which sometimes serve in other nations as articulations of national hopes rather than as legally enforceable mechanisms.

Constitutional Interpretation and Civil Liberties

Despite the human longing for self-evident propositions, laws must be interpreted, except in rare circumstances. Someone must say, "This is what it really means." For example, on the subject of religion, the First Amendment provides that "Congress shall make no law respecting the establishment of religion or prohibiting the free exercise thereof." The word "Congress" is clear, but what does "respecting" mean? or "establishment"? or "prohibiting"? or "free exercise"? or even "religion"? Hundreds of court cases have explored the legal meaning of these words. Most people are surprised to learn that the word "respecting" meant that Congress could not rule on religion one way or another. It could neither establish nor disestablish religion in the states. As a result, Massachusetts had an established church until 1834, and it was perfectly legal. Similarly, most people think "establishment" means officially recognizing one religion as the preferred religion of the state having a protected legal status. For many years, however, courts interpreted the word to mean any financial aid. More recent courts have counted as establishment any symbol or ritual that might imply endorsement or preference.

How can laws be interpreted in a principled, consistent way? For judges and justices trying to apply a law so that citizens deem it legitimate and fair rather than arbitrary, dependence on personal values or preferences will not do. Scholars divide these variously, but there are essentially five different approaches to interpretation.

The first is called "the plain meaning of the words" or sometimes "textualism." Basically, this means taking the dictionary meaning of words or the commonsense meaning given to words by reasonable people. It helps to look at dictionary meanings at the time the phrases were written. This approach works well when deciding how many houses of Congress there will be, how many senators shall be elected by each state, and other numerical-type phrases. It is not useful for many words and phrases such as those pertaining to the religion clauses or most other civil liberties. What are "unreasonable searches and seizures" (Fourth Amendment) or "cruel and unusual punishments" (Eighth Amendment)?

The second approach is called "original intent" or "the intent of the founders" or, when interpreting statutes, "intent of the legislators." Scholars look for explanations the writers might have given at the time of passage of the bill or subsequently—for example, debates in the legislature (reported in the *Congressional Record* or similar official record in the states) or possibly in letters to others or later writings, such as autobiographies. Scholars also study other writings. For example, scholars today legitimately read James Madison's *Memorial and Remonstrance*, even though it was written in 1785, to get a sense of his intent in proposing the First Amendment religion clauses. There are several difficulties with this approach. The intent is often not clear. There were roughly fifty-five founders and many more ratifiers, and they often had conflicting intentions. Which ones matter? Finally, in many civil liberties issues that arise in the modern world of technology, the founders could have had no intentions at all. Thus, to insist on using only these first two means of interpretation would render the Constitution irrelevant for most modern issues.

A third way to interpret constitutional phrases or statutes is to look at their meaning in the cases previously decided by the U.S. Supreme Court. Phrases and statutes have a history; they have been interpreted and applied by courts in earlier cases and so have developed through the use of precedents. In the common law tradition, this is the primary way laws change, adapt, and take on new meanings. U.S. courts have used past case law to interpret the Fourth

Amendment's prohibition against unreasonable search and seizure when applying it to searches of automobiles and computer hard drives.

A fourth way to interpret constitutions and statutes is to acknowledge development of meaning "within the spirit" of the particular law. It is to acknowledge that the writers of laws could not have foreseen all the circumstances and technological developments that were to come and to which their laws must be applied. Therefore, one looks to the spirit of the law and applies it accordingly. This could be called "the living constitution" approach to interpretation. For example, the founders could never have anticipated the telegraph, telephone, fax machine, e-mail, or cell phones. They did adopt the Fourth Amendment, however, which provides that "the right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated." According to this method of interpretation, it is perfectly reasonable to adapt the desire for privacy expressed in this phrase to developing technology. That adaptation is surely within the spirit of what the founders were trying to achieve.

The fifth way to interpret constitutional phrases or statutes is candidly to admit that times and values change dramatically and that laws must be adapted "to meet the needs of the time." Supreme Court justices who have used this approach have then tried to tie interpretation into the basic structure or inferred meaning of the U.S. Constitution. For example, they have found constitutional meaning in "liberty of contract," "privacy," and "separation of church and state." Of course, these phrases do not appear in the Constitution in so many words. This approach goes to the outer edge of the "living Constitution" school of thought. Both liberals and conservatives have thought it necessary to adapt the Constitution to meet the needs of the times in different circumstances. For example, early in World War II, some 200,000 people of Japanese ancestry, many of whom were citizens born in the United States or naturalized, were forcibly removed from the West Coast and put into internment camps in places like Arizona, Utah, and Nevada based on the fear that they might sabotage war efforts against Japan. This was clearly racial profiling that violated both equal protection and due process rights guaranteed in the Constitution. But military commanders, supported by President Franklin D. Roosevelt, sincerely believed removal was necessary to protect the nation. The Supreme Court, over the strenuous objection of its liberal justices, ruled that these actions did not violate the Constitution in a time of war.

Proponents of a woman's right to choose abortion have argued that a "zone of privacy" is implied in the Constitution. Opponents of laws setting minimum wages, mandating safe working conditions, and protecting union organizing argued in the 1920s and 1930s that the Constitution protected a "liberty of contract" that forbade such laws. Neither of these examples, one considered a liberal issue, one a conservative issue, would be constitutional under the plain-meaning or original-intent approaches to civil liberties.

Constitutionalism

Constitutionalism is a normative political theory of limited government and the rule of law. A constitution refers to the nation's (or a state's) arrangement of the powers and institutions of government and the rights of individuals. In a broad sense, constitutionalism refers to the adherence to norms and principles as defined in a particular constitutional text or, where there is no text, the constitutional order. Although broadly defined, constitutionalism is value-neutral and refers to the adherence to any constitutional text or order, be it authoritarian or liberal, the concept of constitutionalism presupposes substantive and procedural

limitations on government power and protection of individual rights and human dignity. Constitutionalism presumes that there are some things government should not do, even if proper procedures specified in the constitutional text are followed.

In the United States, constitutionalism is combined with representative democracy to form constitutional democracy. The fundamental principle distinguishing constitutional democracy from other forms of constitutionalism is the notion of "popular sovereignty"—that the people shall govern. The central tension of constitutional democracy concerns the balance between the power of the people and the ideals and principles of constitutionalism that seek to restrain them.

Constitutionalism assumes that people are by nature free and should protect their rights through a system of government in which they give permission for others to rule them but limit that permission in time and scope through an institutional structure based on rights and rule of law. Constitutionalists are often pessimistic about human nature. Whereas democratic theorists trust that people can govern themselves, constitutionalists fear the human inclinations to act selfishly and abuse public office. According to constitutionalism, there is a higher authority that restricts choices and transcends the individual's obligations to government. Historically, this higher authority was understood as derived from a Supreme Being, but over time the higher authority has become the constitutional order itself viewed as embodying principles of natural and fundamental rights.

In American constitutionalism, the supremacy of the U.S. Constitution stems from its foundation in popular will. Although the founding fathers drafted the text, the people breathed life into the constitutional order when they ratified the document. Earlier the supremacy accorded to constitutions stemmed from the belief that they embodied principles of right and justice, which were regarded as above human hands and part of the natural rights of man. The Ninth Amendment of the U.S. Constitution, in stipulating that "the enumeration of certain rights in this Constitution shall not prejudice other rights not so enumerated," illustrates this theory as translated into terms of personal and private rights. Unlike democracy, constitutionalism defines substantive criteria upon which government may not trample, even with the enthusiastic acceptance of a massive majority of the nation. Reasoned argument and deliberation resolve conflicts and disagreements regarding the content of those rights and powers. Whereas in a pure democracy a law is valid as long as it was enacted through proper procedures of legislative selection, debate, and administration, constitutionalism denies legitimacy to a law that violates the constitutional text and/or the concept of human dignity it seeks to protect.

After the collapse of communism in the early 1990s, many countries began to draft constitutional texts. In seeking to form enduring and secure constitutional orders that respect the rights of members, these founders contemplated anew the procedural and substantive demands of the concept of constitutionalism. In the United States, the constitutional order offers a procedural framework of government that guarantees the liberal rights of life, liberty, and property and the political rights of participation. In contrast, many of these newly formed constitutional orders emphasize highly substantive views of constitutionalism guaranteeing such social rights as the right to work, to welfare, and a place to live.

Scholars agree on several basic principles of constitutionalism. These include requirements for the establishment of government such that the exercise of power must be in accordance with established standards and that governments be limited in the ends they may seek and in the means they may use to pursue legitimate ends. The people of a democracy, as sovereign, must agree to limit not only their government but also themselves. In addition, laws must result from a stipulated set of procedures and must be made to comport with the "rule of law" by being evaluated according to a set of fundamental standards and subject to judicial review. Aside from these limitations on governmental power and the legitimacy of legal enactments, the rights of individuals may be protected by guarantees of specific rights beyond the control of government, or by specific grants of powers to governmental institutions to protect rights. Finally, there are some aspects of life that are not the proper business of politics and government and are accordingly placed beyond the reach of its authority.

In establishing the form and character of a political

system, constitutional drafting can be a profoundly democratic act. Through a process of public deliberation, the "founding" culminates in the endorsement of a constitution by the people. In the United States, there are a number of structures that combine to form a constitutional democracy. The separation of powers among the legislature, executive, and judiciary creates an overlapping system that restrains and checks each branch of government. The federal structure divides powers between the national government and the states to ensure that power will not become overly centralized at the national level. Together with the Bill of Rights (the first ten amendments to the Constitution), these form the broad limitations on power and boundaries of rights. In addition, the United States employs a system of staggered elections for the two houses of its national legislature that ensures that no party can gain a majority of both at a single election.

The cornerstone of these limitations is the judiciary, which, insulated politically, is authorized to invalidate legislative and executive action found to violate those rights. In the early history of the United States, controversy centered on who held the final authority on what the constitutional text required. In the seminal opinion *Marbury v. Madison,* 5 U.S. 137 (1803), the Supreme Court established its authority over constitutional resolution. More recently, an evolving understanding of civic constitutionalism has expanded the scope of constitutional interpretation to include the legislative and executive branches of government, the states, civil and social groups, and the public more generally.

Constitutionalism tries to limit risks to liberty and dignity by lowering the stakes of politics. Constitutional democracy adds the further safeguard of promoting, directly and indirectly, the right to participate in governmental processes. The Achilles heel of constitutionalism is that there are certain political questions such as abortion and the death penalty that are either "zero-sum" or have no "correct" answer and are simply too controversial for resolution. Although constitutionalism offers no method by which to resolve such disputes fully, it offers an ongoing civic discourse that comprehends constitutional meaning as something derived gradually over time. As such, the promise of constitutional democracy is not the end of economic and political struggle but rather is peaceful deliberation and consideration of disputes through consistent and open processes that allow multiple interests to be heard and respected. Still, constitutionalism has proved to be particularly vulnerable in times of crisis, when it has generally failed to safeguard fundamental rights and human dignity. The Alien and Sedition Acts during World War I, President Abraham Lincoln's suspension of the writ of habeas corpus during the Civil War, U.S. Attorney General A. Mitchell Palmer's raids after World War I to crack down on alleged radicals, the internment of Japanese Americans and confiscation of their property during World War II, and the restrictions on civil liberties particularly targeted against Muslims in the aftermath of the September 11, 2001, terrorist attacks in the United States all call into question the ability of constitutionalism to restrain governmental power and public hysteria in a time of crisis.

Contempt Powers

In the English common law, contempt is a crime consisting of the willful disregard of public authority. Al-

though the Constitution of the United States does not acknowledge the offense, courts and legislatures, both state and federal, have long punished disobedience and disrespect as a power inherent in the judicial and legislative process. Frequent clashes have occurred between individuals exercising their civil liberties and judges and legislators who regard such behavior as contemptuous. The justices of the Supreme Court have found it difficult to balance two public values—the need to maintain the authority of the judicial and legislative process, on the one hand, and the desire to protect citizens from arbitrary punishment and curtailment of their freedoms, on the other.

Disrespect for a court of law can take many forms. Rudeness toward a judge by a defendant, witness, or attorney, bad behavior in the courtroom, refusal to answer a proper question, failure to file papers on time or to follow local judicial rules, and disobedience of a court order can subject the contemner to a fine or imprisonment. In many cases, however, punishment will not produce the result desired by the court. Contempt, therefore, may be either civil or criminal. If a judge cites a litigant for criminal contempt, payment of a fine or completion of a jail sentence ends the matter. The wrong is to the court, and the purpose of the action is punitive. If a judge demands that the witness answer an attorney's question or turn over a document and the witness ignores the court's request, the judge can cite the witness for civil contempt. The person will pay a daily fine or stay behind bars until he or she complies with the judicial order. The wrong is to a litigant, and the purpose of the judge's action is remedial. Failure to pay child support or alimony is a common example of civil contempt. In cases of civil contempt, prisoners are said to carry the key to their cells in their own pocket. Defendants can purge themselves of the contempt by complying with the order.

CONTEMPT AND FIRST AMENDMENT RIGHTS

In the period 1900 to 1940, judges frequently issued injunctions against labor organizers to prevent strikes, picketing, and boycotts of employers. Unions claimed that the judges were interfering with their constitutionally protected freedoms of speech, assembly, and association. Defiance of such judicial orders usually resulted in fines and imprisonment for contempt. The Supreme Court attempted to strike a balance between the competing values of judicial authority and individual freedom. In *Gompers v. Buck's Stove and Range Co.,* 221 U.S. 418 (1911), for example, the Court overturned the conviction of Samuel Gompers, leader of the American Federation of Labor, a large trade union organization, on the grounds that the local court had treated a boycott as criminal contempt when in fact it was civil. The judge should have given Gompers an opportunity to purge himself of the contempt by ending the boycott.

Local white officials hostile to the effort by black civil rights activists to effect an end to segregation by peaceful marches and demonstrations appealed to state judges to issue injunctions to stop such direct action. The claim by demonstrators that the First Amendment gave them the right to protest in public places against unjust laws collided with the courts' authority to enforce their orders. In April 1963, Martin Luther King Jr., leader of the Southern Christian Leadership Conference, was arrested and summarily convicted of criminal contempt in Birmingham, Alabama, for defying an injunction against parading without a permit. Four years later the U.S. Supreme Court upheld Dr. King's conviction in *Walker v. Birmingham,* 388 U.S. 307 (1967), and he served a four-day sentence. The justices said that the protesters should have gone to court to challenge the constitutionality of the injunction rather than simply ignore it.

Courts can subpoena journalists and demand that they reveal the sources of their news stories or turn over notes and other documents. Reporters have claimed immunity from such coercive orders under the First Amendment's guarantee of freedom of the press. The Supreme Court, however, refused to recognize a "reporter's privilege" against subpoenas in *Branzburg v. Hayes,* 408 U.S. 665 (1972). The period of incarceration for a reporter found in contempt is typically brief. Citation for civil contempt in principle could lead to indefinite confinement. To avoid this possibility, courts have ruled that the incarceration ends when the authority of the sentencing body ex-

pires. The recalcitrant prisoner thus is released within a few months, such as when time expires for the grand jury then sitting or when the term of court ends.

RESTRICTIONS ON THE CONTEMPT POWER

American law has made many changes in the law of contempt to make it less threatening to civil liberty. Under English common law, courts could punish behavior that occurred outside the courtroom if the judge regarded it as disrespectful. Judges, for example, found authors in contempt for writing publications that brought the court into disrepute. The House of Representatives, however, in 1830 impeached U.S. District Judge James H. Peck because of his conviction and punishment for criminal contempt of a lawyer who had published an article critical of a decision of the judge then on appeal. The Senate refused to convict the judge of "high crimes and misdemeanors," but Congress then passed a law in 1831 making it clear that federal judges had no such power as the one claimed by Judge Peck. The First Amendment protects expression of opinions critical of a judge outside his or her presence. No one is guilty of contempt for any publication made or act done out of court that is not in violation of a judicial rule or order or in disobedience of the court's process.

In *Malloy v. Hogan,* 378 U.S. 1 (1964), the Supreme Court ruled that the Fifth Amendment privilege against self-incrimination, as also applied against the states by the Due Process Clause of the Fourteenth Amendment, permitted witnesses to refuse to answer questions posed by a grand jury, trial court, or legislative committee if the answers could lead to criminal prosecution. Witnesses granted immunity from prosecution before testifying, however, must answer all questions or face commitment for civil contempt.

SUMMARY PUNISHMENT FOR CONTEMPT

In common law, judges are empowered to impose summary punishment for contempt. An offended judge can impose a fine or prison sentence without trial. The judge acts as prosecutor, judge, and jury. Further, findings of contempt cannot be appealed unless the fine or prison term is excessive. American law, however, places limitations on this power. In some states, only a judge other than the one whose authority was defied can impose convictions of criminal contempt.

In *Green v. United States,* 356 U.S. 165 (1958), the Supreme Court, in a five–four vote, upheld a three-year prison sentence summarily imposed by a judge on two convicted felons who had failed to surrender themselves to begin a prison term following their trial. In the principal dissent, Justice Hugo L. Black argued that such tremendous power, vested in a judge without the protection of an indictment by a grand jury or a trial by a petit jury, was contrary to the spirit of the Constitution and totally unjustified historically. Ten years later, in *Bloom v. Illinois,* 391 U.S. 194 (1968), the majority agreed with Justice Black and held that serious criminal contempt was so nearly like other serious crimes that it was subject to the Constitution's jury trial provisions. The Court said that only petty contempt could be tried without honoring a demand for trial by jury.

Six months' incarceration is the line between petty and serious criminal contempt. The Seventh Circuit Court of Appeals ruled in *In re Dellinger,* 461 F.2d 389 (1972), that federal judges could not impose sentences of more than six months for criminal contempt without a jury trial. In 1969 U.S. District Judge Julius Hoffman had summarily sentenced each of the "Chicago Seven" defendants and their two defense attorneys in a conspiracy case arising out of an antiwar protest at the 1968 Chicago Democratic National Convention to lengthy prison terms on 159 specifications of criminal contempt. The specifications included acts of disrespect such as not standing for the judge, blowing kisses to the jury, and insulting the court, such as by calling Judge Hoffman "a pig" and "a fascist." William Kunstler, one of the attorneys, received a sentence of four years and thirteen days. The Court of Appeals in *Dellinger* overturned all their convictions.

Current federal practice requires the judge faced with serious criminal contempt to refer the disrespectful behavior to a prosecutor. Federal prosecutors must present the evidence to a grand jury and obtain an indictment before proceeding to trial, where the de-

fendant is entitled to a jury. In *International Union, United Mine Workers v. Bagwell,* 512 U.S. 821 (1994), the Supreme Court held that a criminal contempt fine was punitive and therefore could be imposed only through criminal proceedings, including the right to jury trial.

LEGISLATIVE CONTEMPT

The U.S. Congress and the state legislatures have the inherent power to issue subpoenas, compelling testimony or the production of documents, and to impose per diem fines or to commit to jail witnesses who fail to appear or to answer a question. Legislative contempt, like judicial contempt, may be criminal or civil. Legislatures, however, lack the power of summary conviction enjoyed by judges in cases of petty criminal contempt. In federal law, contempt of Congress is the crime of obstructing its work, with a punishment of up to one year in prison and up to $1,000 in fines. There have been convictions for contempt for bribing members of Congress.

In 1857, Congress passed a law to prevent members of the House and Senate from punishing their political enemies. If anyone commits criminal contempt in the eyes of a congressional committee, the committee must ask the full legislative house to vote a contempt citation and refer the matter to the U.S. attorney, who may then bring the alleged offender before a grand jury for indictment and a criminal court for trial. A commitment for civil contempt cannot last more than two years because it expires when the session of Congress ends.

Because of repeated abuses by legislators, especially during the Cold War and the civil rights protests, the Supreme Court further limited the contempt power of Congress. Congressional committees, especially the House Un-American Activities Committee, and state legislatures in the South attempted to expose Communist sympathizers and members of the National Association for the Advancement of Colored People by subjecting them to legislative questioning. The Supreme Court intervened and in *Gibson v. Florida Legislative Investigation Committee,* 372 U.S. 539 (1963), ruled that before issuing subpoenas, a congressional committee must have authorization from the full House or Senate to conduct the investigation. The investigation, moreover, must have a clear legislative purpose. The questions posed by the legislators must be pertinent to the subject of the investigation. The Court held that witnesses had a constitutional right to refuse to answer any question that was on an unauthorized topic, was irrelevant to the topic, or might incriminate them.

Contract, Freedom of

A contract is an agreement between two or more parties that creates binding legal obligations. Freedom of contract is the right of individuals and organizations to create and enter into legally binding agreements with others, based on mutual consent. In this manner, people are able to create their own promissory obligations, which the state will enforce in most circumstances.

Freedom of contract is a fundamental principle of the common law legal system and one of the most basic civil liberties in the United States. This principle rests on the idea that it is in the public interest to allow people to structure their future obligations through binding agreements free from government interference. For this reason, a contract derives its legitimacy from the intent of the parties and their personal

expectations rather than government policies. Allowing people to create their own binding obligations maximizes freedom and enhances the economic efficiency of society by promoting the allocation of resources to their highest valued uses.

The courts use an objective standard to determine whether parties have formed a contract. Contracts may be express or implied; the distinction lies merely in the mode of manifesting assent. A party may reveal the intention to *make* a promise with language or by implication from other circumstances, including course of dealing (how the parties have dealt in the past), usage of trade (what conduct is typical in the particular field), or course of performance (if a party performed but did not specifically "make" a promise). Agreement to *accept* a promise may be manifested by words or other conduct, even silence.

The law presumes the validity of contracts, and courts are generally reluctant to invalidate them. Courts may refuse to enforce contracts for a variety of reasons. For example, courts will not enforce an illegal contract. Contracts for murder or other crimes are not protected by freedom of contract. Similarly, contracts by minors or others whose status is presumed to negate their ability to understand freely the consequences of their actions will not be enforced. Other nonenforceable contracts are those procured by fraud or duress or the result of a mistaken assumption of a material fact.

When contracts violate an important public policy, they are not enforced if the policy being enforced is stronger than the policy of freedom of contract itself. An example of public policy important enough to overcome the principle of freedom of contract is the policy against restraints of trade. Certain noncompetition, price-fixing, or monopolistic contracts are not protected by freedom of contract.

The concept of freedom of contract, or liberty of contract, also has a basis in the U.S. Constitution and appears in most state constitutions as well. Article I, Section 10 of the U.S. Constitution provides that no state shall pass any law impairing the obligation of contracts. In addition, although not explicitly mentioned in the Fifth or Fourteenth Amendments, freedom of contract has been construed as being protected by the Due Process Clause found in both provisions.

The constitutional liberty-of-contract doctrine was employed by the U.S. Supreme Court in the late nineteenth and early twentieth centuries to invalidate social and economic reform legislation. On this basis, maximum-hour and minimum-wage legislation was deemed inconsistent with liberty of contract. This strict construction of liberty of contract was subsequently abandoned as a legal doctrine and is no longer used to strike down social or economic legislation.

Contracts Clause

Article 1, Section 10 of the U.S. Constitution provides that "No state shall . . . pass any law impairing the obligation of contracts." Now largely forgotten, the Contracts Clause figured prominently in constitutional law until the early twentieth century and served as a key protection for property rights.

In the post–Revolutionary War era, state legislatures repeatedly intervened in debtor-creditor relations with a variety of laws designed to assist debtors at the expense of creditors. Although the Contracts Clause was little debated at the 1787 Constitutional Convention in Philadelphia, the provision was clearly intended to curb state debtor-relief laws that undercut the sanctity of private contracts and threatened to disrupt credit relationships. The clause was modeled after a similar provision in the Northwest Ordinance of 1787 that banned legislative interference with private contracts. It is significant that the framers selected more comprehensive language that seemingly covered all types of public as well as private contracts. Many state constitutions also included language forbidding the impairment of contracts.

The Contracts Clause assumed a major role early in constitutional development. In 1792 a federal circuit court struck down a state debtor-relief law as an impairment of contract. Alexander Hamilton, in a 1795 opinion letter, called for a broad reading of the Contracts Clause and asserted that a state land grant was the equivalent of a contract. During the tenure of John Marshall as chief justice (1801–1835), the Contracts Clause served as the principal vehicle by which the Supreme Court vindicated the rights of property owners against state infringement. A supporter of private property, business enterprise, and the national market, Marshall looked skeptically at state interference with private economic arrangements. He elaborated the meaning of the clause in a series of famous cases.

In the landmark case of *Fletcher v. Peck,* 10 U.S. 87 (1810), Marshall ruled that the Contracts Clause covered every description of contract and prevented a state from breaching its own agreements. It followed that the Georgia legislature could not rescind a land grant despite allegations of bribery in the original sale. Revealingly, in *Fletcher* Marshall characterized the Contracts Clause, along with clauses prohibiting ex post facto laws (providing for retroactive punishment) and bills of attainder (providing for punishment without trial), as a "bill of rights for the people of each state." Thereafter the Marshall Court applied the Contracts Clause to a variety of public contracts. In *New Jersey v. Wilson,* 11 U.S. 164 (1812), for instance, the Court held that repeal of a grant of a tax exemption impaired the obligation of contract. Further, the Court in *Trustees of Dartmouth College v. Woodward,* 17 U.S. 518 (1819), determined that the grant of a corporate charter, even one issued before the current U.S. government, was a constitutionally protected contract, and that legislative changes to the charter violated the Contracts Clause. This decision encouraged the growth of corporate enterprise by affording constitutional protection against legislative infringement of charters of incorporation.

In the absence of a national bankruptcy law, the states continued to enact debtor-relief legislation. In *Sturges v. Crowninshield,* 17 U.S. 122 (1819), Marshall concluded that New York's bankruptcy law was invalid because it relieved debtors of the obligation to pay debts contracted before the measure was passed. On the other hand, in *Ogden v. Sanders,* 25 U.S. 213 (1827), over a rare dissent by Marshall, the Court insisted that the Contracts Clause did not operate prospectively. Hence, state laws could reach debts incurred after the date of enactment.

Despite differences in outlook between Marshall and his successor as chief justice, Roger B. Taney (1835–1864), the Supreme Court continued to apply the Contracts Clause vigorously. To be sure, Chief Justice Taney was inclined to give the states greater latitude in fashioning economic policy and to cut back on judicial supervision of contracts when the state was a party. In *Charles River Bridge v. Warren Bridge,* 36 U.S. 420 (1837), for example, Taney maintained that state grants and charters must be strictly construed to facilitate progress, and he rejected the notion that implied corporate privileges were protected by the Contracts Clause. Yet the Court under Taney strictly enforced the clause in cases involving debtor-relief laws and grants of tax exemption. In the leading case of *Bronson v. Kinzie,* 42 U.S. 311 (1843), the justices found two Illinois statutes that retroactively limited mortgage foreclosure sales to be an unconstitutional abrogation of contractual obligations.

The attempted repudiation of bonded debt by localities in the late nineteenth century was repeatedly challenged as a violation of the Contracts Clause. Drawing upon principles derived from the clause, the Taney Court in *Gelpche v. City of Dubuque,* 68 U.S. 175 (1864), protected the legitimate expectation of bondholders from a subsequent state-court decision that the bonds were invalid under state law. In effect, the Court decided that a state court could not divest the rights of bondholders by a retroactive change in the law. Thereafter the Court under Morrison R. Waite as chief justice (1874–1888) and his successor, Melville W. Fuller (1888–1910), regularly sided with creditors, invoking the Contracts Clause to uphold local government bonds in the hands of creditors against repudiation.

Despite the high regard for the sanctity of contract manifest in these decisions, the Contracts Clause gradually diminished in importance during the late nineteenth and early twentieth centuries. In part this was because other constitutional provisions, such as the Due Process and Takings Clauses, emerged as stronger guarantees of property rights. But other factors were

also at work. By its terms, the Contracts Clause applied only to the states and afforded no protection from federal interference with contractual arrangements. Congress, for example, could authorize the revamping of contracts by means of bankruptcy laws. Further, the clause prevented only retroactive impairment of existing contracts, leaving the states free to regulate the terms of future contracts.

Even more significant was recognition by the Supreme Court of exceptions to the Contracts Clause. In *Stone v. Mississippi,* 101 U.S. 814 (1880), the justices ruled that a state could ban the sale of lottery tickets notwithstanding the fact that a charter had previously granted the right to operate a lottery. The Supreme Court reasoned that a state legislature could not bargain away its authority to control the health, safety, and morals of the public. The concept of an alienable police power opened the door for state legislatures to modify or revoke public contracts. Similarly, the Court determined in *Illinois Central Railroad v. Illinois,* 146 U.S. 387 (1892), that under the public trust doctrine, a state could not irrevocably grant land under navigable waters.

Nonetheless, the Supreme Court in the first two decades of the twentieth century still relied on the Contracts Clause to strike down debtor-relief laws and measures designed to frustrate the payment of state bonds. The eclipse of the Contracts Clause is linked with *Home Building and Loan Association v. Blaisdell,* 290 U.S. 398 (1934). At issue was the validity of a state mortgage moratorium statute enacted during the Great Depression. Although this was the very type of law that seemed to fall within the purview of the Contracts Clause, a sharply divided Supreme Court upheld the statute as a reasonable response to emergency economic conditions. The Court in *Blaisdell* did not intend to undercut the Contracts Clause fatally, and in fact, the justices applied the clause several times to invalidate state debtor-relief laws in the late 1930s. But after the constitutional revolution of 1937, during which the Court began to acquiesce to the wishes of the executive and legislative branches, the Court ceased to scrutinize economic regulations meaningfully, and the once-powerful Contracts Clause was neglected for decades.

It would be a mistake, however, to dismiss the Contracts Clause as a dead letter. In the 1970s, the Court invoked the clause to strike down state laws in *United States Trust Co. v. New Jersey,* 431 U.S. 1 (1977), and in *Allied Structural Steel Co. v. Spannaus,* 438 U.S. 234 (1978). Some lower federal and state courts have also used the Contracts Clause to curb state legislative interference with private and public contractual arrangements. Thus, the Contracts Clause retains a modest degree of vitality as a safeguard for economic rights.

Cooley, Thomas McIntyre (1824–1898)

Born in New York, Thomas McIntyre Cooley at age eighteen moved to Michigan, where he became one of the most influential scholars and jurists of the nineteenth century. He was elected to the Michigan Supreme Court in 1865 where he and fellow justices James V. Campbell, Benjamin Graves, and Isaac Christiancy formed the so-called Big Four of the Michigan Supreme Court who became nationally famous for the intellectual rigor and insight of their decisions. During his time on the bench, Cooley also served as professor and the first dean of the University of Michigan's Law Department, which was the forerunner of the current University of Michigan Law School.

Although Cooley was a prolific writer who published several leading works on torts and tax laws and who edited the writings of William Blackstone and Joseph Story, his greatest influence on U.S. constitutional theory rests upon his treatise in the field (Cooley 1868). In it, Cooley developed the notion of due process of law as a powerful protector of property and liberty rights. In particular, he argued for strong substantive property rights, including the liberty to contract, and for limits on the state police power to interfere with economic enterprises. Cooley believed strongly in a self-regulating market, and his ideas mixed common law traditions of due process with the Jacksonian libertarian ideal of equal rights without class legislation. Accordingly, Cooley vehemently opposed the legislative delegation of special privileges to certain groups, including the use of public powers like taxation and eminent domain for the benefit of only a few private entities.

Along with Christopher G. Tiedeman's book on the state's police power (1886), Cooley's work provided the intellectual foundation for the era of laissez-faire constitutionalism between the Civil War and the Great Depression, and it informed much of the judicial thinking during this time about police power, property rights, and the ability of state legislatures to regulate economic rights. In this last regard, Cooley's thought also paved the way for the eventual application of substantive due process guarantees to state activities through the Fourteenth Amendment.

Following his defeat for reelection to the Michigan Supreme Court in 1885, Cooley was appointed the first chairman of the newly formed Interstate Commerce Commission (ICC) in 1887. Just as his judicial acumen had raised the prestige of the Michigan Supreme Court and the University of Michigan's Law Department, his presence as chairman of the ICC enhanced its legitimacy, too. Moreover, as head of one of the first federal administrative agencies in U.S. history, Cooley advanced standards of understanding administrative law that would be followed decades later when the U.S. administrative state began to grow at a more rapid pace. For example, Cooley helped to establish an administrative rule-making process at the ICC, and he articulated a concept of administrative due process to protect parties with complaints before the agency. He also argued strongly for judicial deference to administrative determinations. Cooley served as ICC chairman until 1891 and died in 1898. In 1972 the chief justice of the Michigan Supreme Court led a group of lawyers and judges to found the Thomas M. Cooley Law School in Lansing.

Copyright, Patent, and Trademark

Copyrights, patents, and trademarks are forms of intellectual property that Congress has been given constitutional authority to regulate. The founding fathers' intent was to provide protection for inventions and authored works that people create. Article I, Section 8, clause 8 of the Constitution provides that Congress shall "promote the progress of science and useful arts, by securing for limited times to authors and inventors the exclusive right to their respective writings and discoveries." Patents and copyright—if not trademarks—have a long history. One of the earliest patents was a three-year monopoly granted to the Florentine architect and engineer Filippo Brunelleschi in 1421 for the manufacture of a barge with hoisting gear used to

transport marble. Copyrights grew out of the royal practice of granting patent monopolies. The British crown granted monopolistic copyrights to the London Stationers Company, which the court of Star Chamber regulated to maintain control over the political and religious content of publications within the realm.

PATENTS

Congress enacted the first federal patent law in 1790. President George Washington signed the first patent on July 31, 1790, after Thomas Jefferson, the secretary of state and ex officio patent examiner, granted a patent to Samuel Hopkins of Pitsford, Vermont, for a new method of making potash, an industrial chemical used in making soap, glass, fertilizers, and gunpowder. Notable patent-holders include Thomas Edison (electric lamp, among others), Alexander Graham Bell (telegraphy machine), Orville and Wilbur Wright (flying machine), John Deere (steel plow), and Edward Land (Polaroid camera). In 1870 Congress gave the Patent Office trademark jurisdiction, and currently the Patent and Trademark Office is under the jurisdiction and supervision of the Department of Commerce.

The basic authority for current patent law is derived from legislation passed July 19, 1952, and codified in Title 35 of the *United States Code.* Inventions are eligible for patent protection. The patent gives inventors "the right to exclude others from making, using, offering for sale, or selling" the patented item in the United States or "importing the invention into the United States." There are three types of patents: A "utility patent" for twenty years (effective June 8, 1995) is granted to anyone who "invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof"; "plant patents" are granted to anyone who "invents or discovers and asexually reproduces any distinct and new variety of plant, including cultivated sports, mutants, hybrids, and newly found seedlings, other than a tuber propagated plant or a plant found in an uncultivated state"; and "design patents" are granted for fourteen years to anyone who "invents any new, original and ornamental design for an article of manufacture."

TRADEMARKS

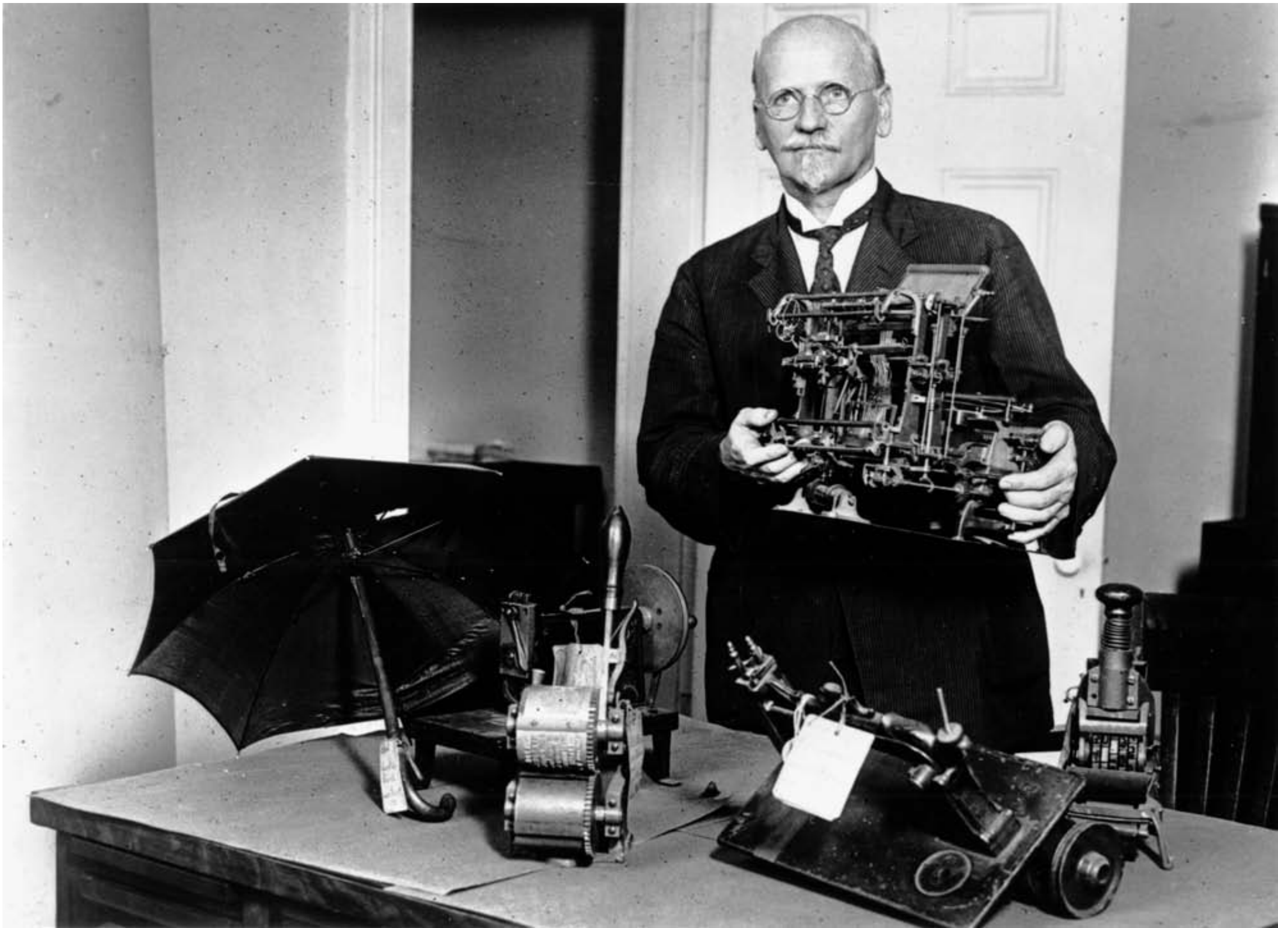
The Trademark Act of 1946 governs the registration and administration of the trademark laws. Trademarks include "any word, name, symbol, or device or any combination thereof adopted and used by a manufacturer or merchant to identify his goods and distinguish them from those manufactured or sold by others." Closely associated to a trademark is a "service mark," which the statute defines as "a mark used in the sale or advertising of services to identify the services of one person and distinguish them from the services of others." Examples of a trademark include Apple Computer's multicolored apple with a bite taken on the right side, and the golden arches of McDonald's. An example of a service mark is "Midas Muffler Shops," in which "Midas" is the associated trademark.

Trademarks do not create any exclusive rights in the services or products they represent. They merely become the exclusive property of the owner and user for identification purposes. Trademark applicants must usually show that they have adopted and are using the mark as shown on a drawing that must accompany an application; that they believe they are the owners of the mark; that the mark is in use in commerce; that to the best of their knowledge and belief, no one else has the right to use the mark in commerce, either in the identical form or in such near resemblance as to be likely, when applied to the goods or services of the other person, to cause confusion or mistake, or to deceive; and that the drawing shows the mark as currently used on or concerning the goods or services.

COPYRIGHT

Congress enacted the first national copyright law in 1790, and registrations of copyrights were administered by the clerks of the federal district courts. The U.S. Supreme Court stated in *Twentieth Century Music Corp. v. Aiken,* 422 U.S. 151 (1975), that

> The limited scope of the copyright holder's statutory monopoly, like the limited copyright duration required by the Constitution, reflects a balance of competing claims upon the public in-



Thomas E. Robertson, U.S. commissioner of patents, with patented machinery, tools, and umbrella, 1930. In 1870, Congress granted the Patent Office trademark jurisdiction. Currently, the Patent and Trademark Office is under the jurisdiction and supervision of the Department of Commerce. *(Library of Congress)*

> terest: Creative work is to be encouraged and rewarded, but private motivation must ultimately serve the cause of promoting broad public availability of literature, music, and the other arts. The immediate effect of our copyright law is to secure a fair return for an 'author's' creative labor. But the ultimate aim is, by this incentive, to stimulate artistic creativity for the general public good.

The administration of copyrights moved to the Library of Congress in 1870 to be conducted under the direction of the Librarian of Congress, and in 1897 it became the Copyright Office, a separate Library of Congress department. As of fiscal year 2001, the Copyright Office had recorded 29,732,771 copyrights. The first copyright law granted a copyright privilege to books, maps, and charts for a term of fourteen years with the right to renew for an additional fourteen years. John Barry registered the first copyright entry for *The Philadelphia Spelling Book* in Philadelphia.

Copyright literally means the "right to copy." Copyright is a privilege granted to producers of original works of authorship that grants them the exclusive right to their works in certain regards. Section 106 of the Copyright Act of 1976 (the last general revision of the copyright laws) grants copyright owners the exclusive right to reproduce the work in copies or phono records; to prepare derivative works based upon the work; to distribute copies or phono records of the work to the public by sale or other transfer of

ownership, or by rental, lease, or lending; to perform the work publicly, in the case of literary, musical, dramatic, and choreographic works, pantomimes, and motion pictures and other audiovisual works; and to display the copyrighted work publicly, in the case of literary, musical, dramatic, choreographic works, pantomimes, and pictorial, graphic, or sculptural works, including the individual images of a motion picture or other audiovisual work; and, in the case of sound recordings, to perform the work publicly by means of a digital audio transmission. Copyrights are available for published and unpublished works, but cannot be applied to an idea, procedure, process, slogan, principle, or discovery.

Copyright protection begins at the point in time that authors produce the work. Only the author or the author's designee can claim copyright protection. Although copyright protection is available to all unpublished works, and registration with the Copyright Office is not required to secure copyright protection, there are certain advantages to publication and registration, particularly with regard to overcoming a claim of "innocent infringement."

The Sonny Bono Copyright Term Extension Act of 1998 extended the copyright period. Works created before January 1, 1978, are protected for the author's life plus seventy years, and in cases where there are multiple authors, the seventy-year period begins on the death of the last surviving author. For "works for hire" (works prepared by employees within the scope of their employment or works specifically commissioned for use of such products as an instructional text or atlas), and for anonymous and pseudonymous works, the protected term is ninety-five years from publication or 120 years from creation, whichever is shorter. The period of copyright protection for works created before January 1, 1978, is generally seventy-five years including available renewal periods. In *Elred v. Ashcroft,* 537 U.S. 186 (2003), some individuals and businesses whose products or services were built on copyrighted works that had gone into the public domain unsuccessfully challenged the Copyright Term Extension Act because it violated the "limited times" provision of Article I, Section 8, clause 8 and the free speech guarantee of the First Amendment.

Copyright privileges are limited. For example, section 107 of the 1976 Copyright Act contains the "fair use doctrine," which provides that "use of a copyrighted work, . . . for purposes such as criticism, comment, news reporting, teaching (including multiple copies for classroom use), scholarship, or research, is not an infringement of copyright." The factors that must be considered in determining the existence of fair use are "(1) the purpose and character of the use, including whether such use is of a commercial nature or is for nonprofit educational purposes; (2) the nature of the copyrighted work; (3) the amount and substantiality of the portion used in relation to the copyrighted work as a whole; and (4) the effect of the use upon the potential market for or value of the copyrighted work" (*U.S. Code,* vol. 17, sec. 107). The law also requires that some copyrighted works be licensed upon payment of specified fees such as those paid under the Audio Home Recording Act of 1992, which requires manufacturers of consumer digital audio recorders to pay royalties designed to cover recordings of registered works by consumers. In exchange for this payment, manufacturers are granted statutory immunity from copyright infringement suits based on the use of these devices by consumers.

Finally, as new information technologies evolve, such as the Internet and the World Wide Web, protection of copyrights, trademarks, and patents becomes more difficult. For example, it has become easier to exchange music or videos across the Internet, making it easier to infringe on these intellectual property rights.

Corfield v. Coryell (1823)

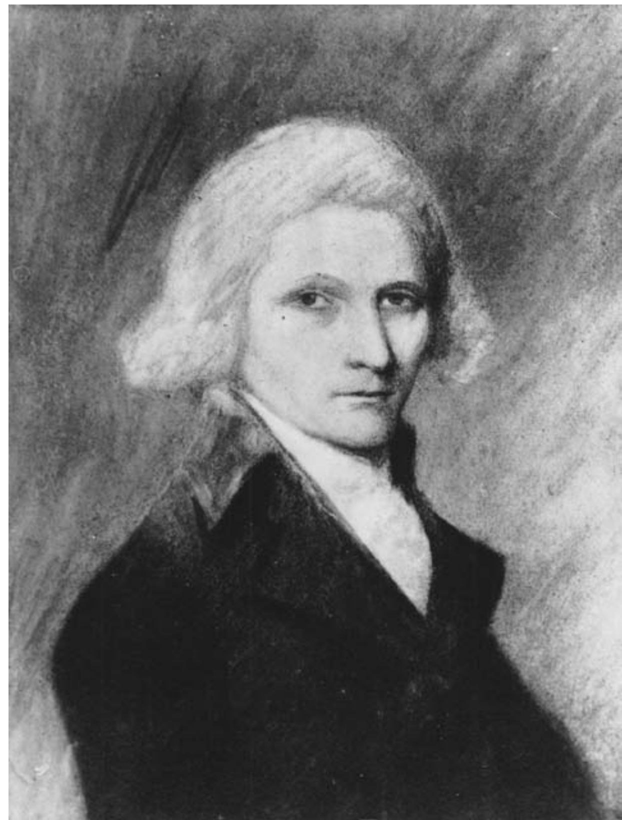
Corfield v. Coryell, 6 F. Cas. 546 (C.C.E.D. Pa. 1823) (No. 3,230), was the first leading case construing the Privileges and Immunities Clause of Article IV, Section 2, of the U.S. Constitution, and the case remains important today. It held that a state's constitutionally required extension of privileges and immunities to persons regardless of state citizenship applied only to fundamental rights and did not preclude all regulatory distinctions based on a person's citizenship status.

The case resulted from the effort by the state of New Jersey to prohibit noncitizens from collecting oysters except from aboard a vessel owned by a New Jersey resident. Offenses were punishable with monetary fines and seizure of property. When a nonresident vessel discovered in New Jersey waters collecting oysters was "seized, condemned, and sold," the statute was challenged as unconstitutional. *Corfield* was a circuit court case decided by Supreme Court Justice Bushrod Washington. It raised two constitutional questions. The first was a "dormant Commerce Clause" challenge. How exclusive is the power of Congress to legislate on the subject of interstate commerce? Does the congressional power enumerated in Article I, Section 8 preclude all state regulation of commerce, even in the absence of overriding federal regulation?

The second constitutional challenge was pertinent to the national extension of civil rights and provided the decision with its most lasting significance. Did the New Jersey statute violate the Constitution's guarantee that "the citizens of each state shall be entitled to all privileges and immunities of citizens in the several states" (IV.2.1)? Article IV as a whole presented several interpretive obstacles in the early years of the republic. The Constitution's first three articles structure the institutions of the new national government. The three sections of Article IV address the relationship between the national government and the preexisting state governments. The disputes that arose over the meaning of the three sections of Article IV were therefore closely related to the constitutional debates that culminated in the Civil War. The U.S. Supreme Court addressed these issues in *Prigg v. Pennsylvania,* 41 U.S. 539 (1842), *Luther v. Borden,* 48 U.S. 1 (1849), and *Scott v. Sandford,* 60 U.S. 393 (1857).

At issue in *Corfield* was whether the Privileges and Immunities Clause established a blanket requirement that states make no distinctions between their citizens and the citizens of other states, or if it established the nondiscrimination requirement only with respect to fundamental rights. In other words, can states ever favor their own citizens?

Justice Washington concluded that the clause applied only to fundamental rights and therefore states could limit some benefits to their own citizens. The state must never distinguish between its citizens and noncitizens in the provision of fundamental liberties, such as freedom of speech or religion, but regulatory distinctions based on particular state-specific benefits remained acceptable:



Corfield v. Coryell, a circuit court case decided by Supreme Court Justice Bushrod Washington (pictured), was an important case outlining the economic rights states must afford nonresidents under the Privileges and Immunities Clause of the Constitution. *(Library of Congress)*

> We feel no hesitation in confining these expressions to those privileges and immunities which are, in their nature, fundamental; which belong, of right, to the citizens of all free governments; and which have, at all times, been enjoyed by the citizens of the several states which compose this Union, from the time of their becoming free, independent, and sovereign. What these fundamental principles are, it would perhaps be more tedious than difficult to enumerate. They may, however, be all comprehended under the following general heads: Protection by the government; the enjoyment of life and liberty, with the right to acquire and possess property of every kind, and to pursue and obtain happiness and safety; subject nevertheless to such restraints as the government may justly prescribe for the general good of the whole.

Washington's interpretation of the clause allowed for substantial regulatory distinctions based on one's state citizenship status, as long as those distinctions did not interfere with certain fundamental liberties.

The inability to collect oysters did not seem to affect a person's natural rights adversely, and therefore it is not surprising that Washington rejected the claim that the New Jersey statute violated the Constitution: "But we cannot accede to the proposition which was insisted on by the counsel, that, under this provision of the constitution, the citizens of the several states are permitted to participate in all the rights which belong exclusively to the citizens of any other particular state, merely upon the ground that they are enjoyed by those citizens."

The continued influence of Washington's interpretation led to failure of many privileges and immunities claims, as evidenced in Chief Justice William H. Rehnquist's finding in *Baldwin v. Fish and Game Commission of Montana,* 436 U.S. 371 (1978), that citizenship-based disparities in the cost of hunting licenses did not violate privileges and immunities. Still, in recent years there has been some effort to revive the clause, as the Court ruled in *Saenz v. Roe,* 526 U.S. 489 (1999), that a state violated privileges and immunities by restricting welfare benefits to long-term state residents. Rehnquist, this time writing in dissent, used Justice Washington's opinion in *Corfield* to support his argument for the continuation of a more limited reading of the Privileges and Immunities Clause.

Corporate Speech

Corporate "speech" is a protected form of expression under the First and Fourteenth Amendments to the Constitution. American corporations are organizations created and structured by federal and state law. States and the federal government have developed a bewildering number of corporate forms to enhance the economic performance of businesses, to facilitate legal transactions, and to promote and regulate social and political action and advocacy. Whether corporations should have free speech rights equal to those of individuals, or free speech rights at all, has been an issue of great contention and is one aspect of a larger debate over the public role of corporations in American society.

Corporations have rights, including free speech rights, because they are considered "persons" within the meaning of the Constitution. The Supreme Court established corporate personhood in *Santa Clara County v. Southern Pacific Railroad. Co.,* 118 U.S. 394 (1886). The Court did not address the issue explicitly but rather assumed the status of corporations as constitutional persons after Chief Justice Morrison R. Waite, prior to oral argument, simply declared they were.

Corporate speech is of two general types: commercial and noncommercial. In *Pittsburgh Press Co. v. Pittsburgh Commission on Human Relations Commis-*

sion, 413 U.S. 376 (1973), the Supreme Court defined "commercial speech" as expression that does "no more than propose a commercial transaction." This is a purposely narrow definition because, as a general matter, commercial speech is a less protected form of expression under the First Amendment, and the Court does not want to stifle corporate participation in public discourse, as it noted in *Bigelow v. Virginia,* 421 U.S. 809 (1975).

Laws regulating commercial corporate speech, as well as that of individuals, are examined using a four-part test articulated in *Central Hudson Gas and Electric Corp. v. Public Service Commission of New York,* 447 U.S. 557 (1980). The *Central Hudson* test allows states and the federal government to regulate commercial speech if it is false or misleading or promotes unlawful activity, or if the regulation directly promotes a substantial government interest while only regulating as much speech as is necessary to achieve the government's regulatory purpose. At the same time, regulations on commercial speech that attempt to reduce demand for a product or influence consumer behavior by restricting the flow of accurate information to consumers are unconstitutional, as the Court held in *44 Liquormart, Inc. v. Rhode Island,* 517 U.S. 484 (1996).

Noncommercial speech is corporate expression that falls outside the Court's narrow definition of commercial speech and includes speech on topics of current public concern. The Supreme Court has been particularly interested in evaluating federal and state regulation of corporate comment on political issues and the corporate use of money to influence electoral outcomes.

As a general matter, courts protect corporate speech that takes a position on an issue of political significance as much as it does similar speech by individuals. The Supreme Court, in *First National Bank of Boston v. Bellotti,* 435 U.S. 765 (1978), held that regulation of corporate political speech is unconstitutional unless enacted to achieve a compelling governmental interest and narrowly drawn to avoid unnecessarily burdening corporate expression.

The Court concluded that the expression of political views is valuable, regardless of the source of those views. The Court rejected the argument that regulating corporate political speech was of compelling interest because corporations exerted undue influence on political discourse and the democratic process; the Court stated simply that there was no empirical evidence of that assertion. Even when corporations have taken advantage of their business position to influence a captive audience, the Court has protected corporate speech. For example, in *Consolidated Edison Co. v. Public Service Commission,* 447 U.S. 530 (1980), the Court held that a utility company with a government-granted monopoly was protected by the First Amendment when it sent politically oriented messages to its customers in billing envelopes.

The right of corporations to attempt to influence the outcome of political elections is a highly contentious issue in American law and politics. When corporations contribute money directly to a political campaign or spend money to endorse or criticize a particular candidate for office, they are protected by the First Amendment. Because it is virtually impossible to communicate effectively to a mass audience without spending money, the spending of money itself is a form of protected expression, the Court stated in *Buckley v. Valeo,* 424 U.S. 1 (1976).

As a general rule, the direct contribution of political money to political campaigns by both individuals and corporations ("contributions") is subject to greater government regulation than spending by individuals and corporations on behalf of or against a candidate independent of the candidate's input ("independent expenditures"). The Court in *Buckley* held that governments have a compelling and constitutional interest in preventing political corruption or the appearance of corruption. Governments are justified, therefore, in regulating contributions to political campaigns because inordinate individual or corporate financing of a political campaign creates the danger or appearance of a quid pro quo relationship between the politician and the donor.

As a result, federal and state governments may prohibit corporations from making contributions to political campaigns from their general treasury. Corporations are usually allowed to set up political action committees (PACs) that may solicit funds and make contributions to candidates. The law may also set the maximum amount of money that PACs may give to political candidates. In addition, under *Federal Election Commission v. National Right to Work Com-*

mittee, 459 U.S. 197 (1982), federal or state law may limit from whom a corporation may solicit funds for its PAC. The law upheld in *National Right to Work Committee* limited solicitation to a corporation's stockholders and their families and employees and their families, or, for nonstock corporations, its members.

Generally, regulations of "independent expenditures" are less likely to be constitutional than limitations placed on direct campaign contributions, because the danger of an actual or apparent quid pro quo does not exist. For this reason, corporate and individual spending on referendums, which involve no political candidates, may not be regulated, as the Court held in *Bellotti*.

Nevertheless, the Supreme Court decision in *Austin v. Michigan Chamber of Commerce,* 494 U.S. 652 (1990), opened the door to greater government regulation of corporate campaign spending. The Supreme Court, for the first time, held that states could prohibit most types of corporations, including umbrella organizations such as trade associations and chambers of commerce, from using funds in their general treasuries to make independent expenditures for or against political candidates.

The *Austin* opinion noted that the *Bellotti* decision held open the possibility that corporate speech might be regulated more closely than individual speech if a compelling governmental interest in treating it differently could be shown. The Court stated that Michigan's compelling interest was not in preventing an actual or apparent quid pro quo relationship but rather in ensuring that the amount of money spent, and therefore support given, to political candidates was proportional to numerical support among the population. In other words, the Court accepted the argument, rejected in *Bellotti* as empirically unfounded, that corporate speech has an unfair influence on elections.

The Court distinguished its ruling from the decision in *Federal Election Commission v. Massachusetts Citizens for Life, Inc.,* 479 U.S. 238 (1986), in which the Court struck down a federal law that banned corporate independent expenditures, as applying to a different type of corporate entity. Corporations that meet the following criteria are exempt from laws like the one upheld in *Austin*: The corporation (1) exists specifically to discuss political ideas and cannot act as a business or have a multifaceted mission; (2) has no shareholders or people with a claim to the corporation's assets; (3) must be independent of business corporation influence.

In conclusion, corporations share many of the same free expression rights as individuals. Corporate commercial speech is subject to greater regulation than corporate political speech, and politically oriented corporate expression is subject to greater regulation than individual political expression if the nature of the corporate form creates a compelling governmental interest in specifically limiting corporate speech.

Corrupt Practices Act of 1925

The U.S. Supreme Court's decision in *Newberry v. United States,* 256 U.S. 232 (1921), which held that Congress lacked the constitutional power to regulate primary elections, prompted Congress to enact the Corrupt Practices Act of 1925. The act is significant as it represented a comprehensive revision of existing campaign legislation. It attempted to address the First Amendment free speech issues and other constitutional matters that necessarily arise in election campaigns.

The new law extended the prohibition against corporate contributions previously covered by the Tillman Act of 1907 to include "anything of value," and it criminalized making and accepting corporate contributions. The act continued the limitation on the right of federal employees to contribute to political campaigns that was first instituted by the 1867 Naval

Appropriations Act. The act also expanded campaign disclosure requirements by requiring political committees (defined as organizations that accept contributions or make expenditures "for the purpose of influencing or attempting to influence" the presidential or vice presidential elections in two or more states or as part of a national committee) to report total contributions and expenditures, including the names and addresses of contributors of $100 or more and recipients of $10 or more in a calendar year. A significant innovation was the act's requirement that campaign financial reports had to be filed quarterly—before the relevant election.

The U.S. Supreme Court upheld the Corrupt Practices Act against a challenge that the limit on the right of federal employees to make financial contributions to federal candidates violated the rule established in *Newberry,* in which the Court held that Article I, Section 4 of the Constitution granted state governments the exclusive right to regulate and administer elections. Justice Oliver Wendell Holmes Jr., writing for the Court in *United States v. Wurzbach,* 280 U.S. 396 (1930), quickly disposed of the argument by refusing to acknowledge the relevance of *Newberry,* stating that it "hardly needs argument to show that Congress may provide that its officers and employees neither shall exercise nor be subjected to pressure for money for political purposes, upon or by others of their kind, while they retain their office or employment."

The Court upheld the act in a second attack in a case that charged a political committee with conspiracy in accepting contributions and making expenditures to influence the election of presidential and vice presidential electors in two states. In upholding the act against a challenge similar to the one in *Wurzbach,* Justice George Sutherland, speaking for the Court in *Burroughs v. United States,* 290 U.S. 534 (1934), stated that the "power of Congress to protect the election of President and Vice President from corruption being clear, the choice of means to that end presents a question primarily addressed to the judgment of Congress. If it can be seen that the means adopted are really calculated to attain the end, the degree of their necessity, the extent to which they conduce to the end, the closeness of the relationship between the means adopted and the end to be attained, are matters for congressional determination alone." *Burroughs* is among several cases the Court decided in the 1930s in which the justices expressed strong intent to bow to the wishes of Congress.

County of Allegheny v. American Civil Liberties Union (1989)

The decision in *County of Allegheny v. American Civil Liberties Union,* 492 U.S. 573 (1989), was one in a series of efforts by the U.S. Supreme Court to clarify the meaning of the test developed in *Lemon v. Kurtzman,* 403 U.S. 602 (1971), and to balance the First Amendment need for state neutrality toward religion and the right of citizens to practice their religion freely. In this instance, the controversy centered around two holiday displays located on public property in downtown Pittsburgh, Pennsylvania. The first display was a crèche, or Christian nativity scene, which was placed on the Grand Staircase of the Allegheny Courthouse. At other times, this space might be used for concerts, art displays, or other public events. The crèche display would be visible to anyone visiting the courthouse. At the top of the manger rested an angel holding a banner reading "Gloria in Excelsis Deo" (Glory to God in the Highest). The second contested display was located just outside the City-County Building. This display included a forty-five-foot decorated Christmas tree, an eighteen-foot Hanukkah menorah, and a sign noting the city's "salute to liberty."

The holding in this five–four decision suggested the growing pressure within the Court to revisit the *Lemon* test as well as the contextual nature of the decisions involving holiday displays. Under the Estab-

lishment Clause of the First Amendment, the constitutionality of such displays depends not only upon their religious content but also upon the length of time they are displayed, the physical location of the display, and the presence of secular symbols of the season along with overtly religious symbols.

In his opinion for the Court, Justice Harry A. Blackmun reaffirmed the *Lemon* precedent, which required a three-pronged analysis. The Court first inquired as to the purpose of the display; only a secular purpose would pass constitutional muster. Next, the Court assessed the primary effect of the display, which must also be secular. Finally, the Court had to determine whether the display (regardless of its purpose or effect) created an "excessive entanglement" between government and religion. Blackmun proceeded to refine the third prong by replacing the "excessive entanglement" language. He suggested that excessive entanglement would be present if a "reasonable person" observing the display would perceive it as an "endorsement" of a particular religion or of religion in general. The "endorsement" language shifted the focus from the Court's assessment of entanglement to the public's probable reading of the display.

The majority held that the crèche display, because of its prominent placement and its overtly and purely religious message (Glory to God in the Highest), violated the Establishment Clause. In so holding, the Court had to distinguish the display in Allegheny from a crèche display that was held to be constitutionally permissible in the earlier case of *Lynch v. Donnelly,* 465 U.S. 668 (1984). In *Lynch,* the crèche was placed in a private park and was accompanied by more secular seasonal items, such as Santa and his reindeer, a Christmas tree, and oversized candy canes. The city provided all materials for the display and covered the cost of lighting. Yet because the display appeared on private property, it was not an "endorsement" of religion in the same way that the crèche in Pittsburgh was. The Court deemed the display containing the tree and the menorah permissible, as the symbols had both cultural and religious significance and were accompanied by a sign praising religious liberty; their less prominent placement also rendered the display less of an endorsement than the crèche.

Justice Anthony M. Kennedy filed a lengthy and strongly worded dissent, joined by Chief Justice William H. Rehnquist and Justices Antonin Scalia and Byron R. White, in which he argued that the *Lemon* test was an overly rigid interpretation of the Establishment Clause. For Kennedy and the other dissenters, the key question was whether the government was engaging in "proselytization" on behalf of a particular religion—that is, whether it actively promoted specific religious beliefs through its actions and displays. For example, a large cross attached to the top of the courthouse, year-round, would clearly constitute an attempt to proselytize. A crèche display acknowledging Christmas tradition, in Kennedy's view, did not.

In sum, the *Allegheny* case represents yet another attempt by the Court to sort out Establishment Clause doctrine and to confine the government to neutrality without requiring it to promote secularism.

County of Riverside v. McLaughlin (1991)

In *County of Riverside v. McLaughlin,* 500 U.S. 44 (1991), the U.S. Supreme Court analyzed whether there was a requisite time limit within which individuals arrested without a warrant were entitled to appear before a neutral magistrate following the arrest. The timing would be especially important because a judicial officer would not yet have determined the existence of probable cause for the warrantless arrest. The probable-cause requirement as incident to an arrest

has its origins in the Fourth Amendment to the U.S. Constitution.

In *Gerstein v. Pugh,* 420 U.S. 103 (1975), the Court held that this appearance before a magistrate should occur "without unnecessary delay," but did not set forth a specific standard to determine unnecessary delay. Rather, the *Gerstein* Court required that persons arrested without warrants have "prompt" judicial determinations of the existence of probable cause. The Court attempted to clarify "promptness" in *McLaughlin.*

Riverside County, California, incorporated probable-cause determinations into its arraignment procedure (arraignment is a defendant's initial court appearance during which charges are leveled). Under the county's policy, arraignments had to take place within two days of arrest, excepting weekends and holidays. The five–four Court, speaking through Justice Sandra Day O'Connor, said *Gerstein* had established a "practical compromise" between the interests of arrested persons and the "realities" of law enforcement. *Gerstein* allowed local jurisdictions some latitude in procedures used to make probable-cause determinations because, in O'Connor's words, some delays would be "inevitable." Postponing probable-cause hearings was reasonable in some situations because police must "cope with the everyday problems of processing suspects through an overly burdened criminal justice system." At the same time, she said, "flexibility has its limits; *Gerstein* is not a blank check." O'Connor indicated that although the Constitution did not compel a specific time limit, it was necessary to provide "some degree of certainty" so that states and counties could establish procedures "with confidence that they fall within constitutional bounds."

A jurisdiction that chooses to combine probable-cause determinations with other pretrial proceedings, such as arraignments, must do so "as is reasonably feasible." The Court concluded that hearings conducted within forty-eight hours of arrest would, "as a general matter, comply with the promptness requirements of *Gerstein.*" *Gerstein* violations may still occur within the first forty-eight hours, but the burden of demonstrating unreasonable delay rests with the arrested party. After forty-eight hours, the "calculus changes." The burden then shifts to the government to demonstrate the existence of a "bona fide emergency or other extraordinary circumstance." Neither delay exceeding forty-eight hours in order to consolidate pretrial proceedings nor intervening weekends or holidays can provide the basis for delay. Both were presumptively unreasonable, said O'Connor, and would not qualify as extraordinary-circumstance exceptions. Using this standard, the Riverside County policy did not meet the *Gerstein* promptness requirement. Although *McLaughlin* indicated that judicial review of warrantless arrests should occur within forty-eight hours, the time limit was not rigidly set. Rather, the Court spoke of the shifting burdens of proof at the forty-eight-hour point.

Justices Antonin Scalia, Thurgood Marshall, Harry A. Blackmun, and John Paul Stevens dissented. In their view, the Fourth Amendment required that an arrestee appear before a judicial officer as soon as reasonably possible; a probable-cause hearing should occur "immediately upon completion of the administrative steps incident to arrest." The dissenters did not see the combining of a probable-cause determination with other proceedings as sufficient justification for delay. Justice Scalia indicated that twenty-four hours should define the outer limit of reasonable delay.

Court-Packing Plan

During a totalitarian era in world history when some people advocated new fascist and communist regimes as superior to democracy, Franklin D. Roosevelt (FDR) was eager to demonstrate to doubters at home

and abroad that democracy provided a viable framework to address the crippling Great Depression. The New Deal was his ad hoc, experimental solution launched during his first presidential term to combat the economic, social, and political crisis the depression triggered. However, the Supreme Court of the United States, dominated in the 1935–1936 term by an active conservative bloc, declared several major pieces of Roosevelt's New Deal legislation unconstitutional. These included the National Recovery Administration Act, the Agricultural Adjustment Administration Act, and the Bituminous Coal Conservation Act. By the end of 1936, the Court had struck down New Deal legislation in seven of nine cases brought before it.

For FDR, the situation was aggravated by the fact that he did not have the opportunity to nominate even one justice to the Court during his first term. A landslide 1936 reelection victory bolstered FDR's confidence and contributed to a disastrous attempt to concoct a political remedy that would prevent the Court from declaring further New Deal legislation unconstitutional and would strengthen the presidency. The ill-thought-out scheme, quickly dubbed FDR's Court-packing plan when introduced, became the first major political blunder of his four-term presidency.

PURPOSE AND PLAN

Both FDR and Homer S. Cummings, his first attorney general, agreed that a constitutional amendment to address composition of the Supreme Court would take too long. They sought an expedited approach to overcome the rejection of New Deal legislation by the Court's consistent five–four holdings despite overwhelming support for the measures from the public and the Congress. Bolstered by hubris from his landslide victory, FDR elected to attempt a political shortcut rather than wait for attrition to alter the conservative Court. Cummings secretly drafted a bill that concealed the underlying intent by broadening it to allow for forty-four new judges on the lower federal benches and up to six additional Supreme Court justices. It applied to everyone with ten years of judicial service who failed to retire within six months after reaching the age of seventy. Six of the justices were already beyond seventy years old. Other than the president, the attorney general, and two top Justice Department assistants, only Solicitor General Stanley F. Reed and Robert H. Jackson, who later became attorney general and went on to become Reed's replacement, knew of FDR's plan. The president's failure to consult with others before launching his plan was the first of a series of misjudgments that undermined approval of it.

Schemes to enlarge the Court had precedents from the Abraham Lincoln and Ulysses S. Grant administrations, and a nine-member Court was not chiseled in stone. A great irony of FDR's Court-packing episode was that the most recent previous attempt to assure a younger judiciary had been made by former U.S. Attorney General James C. McReynolds, one of the sitting justices targeted by FDR for removal. The racist McReynolds had been attorney general for President Woodrow Wilson before Wilson appointed him to the Supreme Court to rid his administration of the disruptive attorney general. The Court's most bigoted member, McReynolds now was among the four most conservative and elderly activist justices. The conservative bloc's consistent voting record against New Deal economic and social legislation had led a frustrated FDR to accuse the four justices of wanting to turn the nation back to its "horse-and-buggy days." These so-called Four Horsemen, an appellation drawn from the biblical Four Horsemen of the Apocalypse, triggered FDR's jeremiad, just as McReynolds's behavior had triggered Wilson to appoint him to the Supreme Court to clean the presidential cabinet.

REACTION

FDR stunned Congress on February 5, 1937, with introduction of the Court-packing scheme. A five-month battle ensued. Congressional Republicans, newspaper editors, and the organized bar came out strongly against the bill. By contrast, it attracted strong support from many Democrats. Hatton W. Sumners (D-TX), House Judiciary Committee chairman, favored the retirement of senior justices, and Henry F. Ashurst (D-AR), Senate Judiciary Committee chairman, initially supported the bill. Future Supreme Court justices Hugo L. Black and Frederick Moore Vinson, along with Reed and Jackson, helped FDR to prepare his March 9, 1937, fireside chat justifying the proposal. Ultimately, FDR was counting

on the popular leadership of Senate Majority Leader Joseph T. Robinson (D-AR), to carry the Senate fight. The Senate knew that Robinson had been tapped to be FDR's first Supreme Court nominee under the new plan.

If that deal were not enough, top presidential aide Tommy "the Cork" Corcoran attempted to solidify Senate support with a thinly veiled promise to another senator, but his overture backfired and created a vocal opponent instead. Corcoran suggested to Senator Burton K. Wheeler (D-MT) that he would have the opportunity to influence the choice of other justices to the reconstituted Court if he supported the measure. The semibribe resulted in Wheeler's leading the bipartisan opposition. Wheeler first attracted national attention during the forced resignation of Harry M. Daugherty, Warren Harding's attorney general, and he had been the first national figure to endorse FDR's presidential ambitions. The Court-packing plan led to their permanent break. Wheeler would go on to become the senatorial filibuster hero in Frank Capra's 1939 movie classic *Mr. Smith Goes to Washington.*

The bill's fate was doomed by three strikes against it in quick succession. First, in late March 1937, under the able leadership of Chief Justice Charles Evans Hughes, the Supreme Court suddenly began to reverse itself on New Deal measures. Next, on May 18, conservative activist Willis Van DeVanter, one of the Four Horsemen, announced his retirement on the same day that the Senate Judiciary Committee voted ten to eight against the bill. Finally, Robinson suffered a fatal heart attack on July 14, only eight hours after formal Senate debate on the bill began. Just as suddenly, a group of freshmen Democratic senators announced opposition, and others felt Robinson's death freed them from their pledge to support the bill. On July 22, Democratic Senator Mavel Logan of Kentucky, McReynolds's home state, moved that the bill be recommitted to the Judiciary Committee. As a face-saving measure, FDR on August 26 signed the Judiciary Procedures Reform Act, which reformed lower-court procedures without mentioning judicial enlargement.

It was a costly—and avoidable—major political miscalculation for an activist administration. The president would have suffered less political harm if he had directed that the bill be withdrawn after the Court modified its stance. Perhaps the ultimate irony was that if FDR's Economy Act of 1933 had not reduced retirement pensions for justices by half, some of them might have retired prior to 1937. The controversy had two direct adverse results: It caused FDR to postpone for more than two years his plan to strengthen and reorganize the executive branch, and it weakened the New Deal coalition by contributing to the rise of the "conservative coalition" of Republicans and southern Democrats. The president, who was unable to name a single justice to the Court during his first term or enlarge the Court during his second, eventually named more justices than any president since George Washington. In that way, he lost his battle to enlarge the Court but won the ultimate war to "pack" the Court.

Coy v. Iowa (1988)

In *Coy v. Iowa,* 487 U.S. 1012 (1988), the U.S. Supreme Court overturned an Iowa law that permitted installation of a screen between an underage victim of sexual assault and the defendant accused of the assault during the victim's testimony in order to protect the victim from further trauma. The case posed important issues pertaining to defendants' right to confront their accusers under the Confrontation Clause of the Sixth Amendment to the U.S. Constitution.

The state of Iowa charged John Coy with sexually assaulting two thirteen-year-old girls. Concerned that testifying before the defendant in court would further harm the girls, the trial court acted in accordance with Iowa law and placed a screen between Coy and the victims when the victims took the witness stand. (The Iowa law also allowed victims to testify over closed-circuit television.) The defendant could observe the testimony of both girls through the screen, but the girls could not see the defendant. The jury later found Coy guilty on two counts of assault. Coy appealed his conviction, claiming the use of the screen violated the Confrontation Clause, which he argued required face-to-face contact between accused persons and their accusers.

The Supreme Court found the Iowa law unconstitutional. Justice Antonin Scalia, writing for the six-two majority, underscored the long-standing principle of face-to-face contact embodied by the Confrontation Clause. Scalia argued that the requirements of the clause did more than enable cross-examination but also added to the perception of fairness essential to the functioning of the judicial branch and made it more difficult for witnesses to lie because they were in the visual presence of those they were accusing. Although the state may be interested in the well-being of underage victims of sexual assault, this interest did not outweigh the right of accused individuals to confront their accusers. In addition, the Court found the Iowa law too broad in its assumption that all underage witnesses were subject to trauma from testifying. The Court remanded the case to the Iowa Supreme Court to decide if use of the screen affected the outcome of the case.

Justice Sandra Day O'Connor wrote a concurring opinion emphasizing the view that the principles of the Confrontation Clause were not absolute. Although she agreed with the outcome of *Coy,* Justice O'Connor argued that other arrangements, such as the use of closed-circuit television, could be used in other situations if the state demonstrated a justifiable interest in protecting an underage witness from harm. The Court accepted this reasoning two years later in *Maryland v. Craig,* 497 U.S. 836 (1990), by allowing a six-year-old victim to testify over closed-circuit television after the state showed the young girl would not have been able to communicate in front of the group gathered in the courtroom. Justice Scalia and three other justices dissented in *Craig,* producing a five–four ruling.

Creation Science

Creation science is an offshoot of creationism, a loose set of cultural-religious beliefs that holds that the physical universe and life within it appeared suddenly and have not changed substantially since their creation. In its most common form, creationism is simply literal adherence to the text of the Book of Genesis, an Old Testament narrative crediting an omnipotent God with creating all planetary life at some point in the past. Some creationists have extrapolated from the genealogical record of Genesis that this event, and the creation of the universe and Earth, occurred approximately 7,000 years ago.

Creationism was not defined as a movement until adherents began viewing it as an opposing force to the theory of evolution, which emerged in the 1800s and grew in popularity thereafter. The initial controversy was triggered in 1859 with naturalist Charles Darwin's publication of *On the Origin of Species,* which asserted that all life developed from simple organisms and gradually diversified into more complex forms. In this view, the various life forms on Earth are the random outcome of billions of years of mutation, isolation, and natural selection, not the result of a divine plan as creationists argue. The dispute between creationism and evolution intensified in 1871 when Darwin published *The Descent of Man.* This account plainly contradicted the Old Testament view that humans were the product of a separate creative act by God but rather asserted that *Homo sapiens* evolved from "lower" animals through numerous transitional forms.

Initially tied to the biblical narrative, creationism did not make a serious claim to being a scientific discipline until the latter part of the twentieth century. In its most sophisticated form, "intelligent design," creation science usually dispenses with the "young earth" claim of its precursors and accepts the geological age of Earth and various principles of evolution. Although most creationists continue to argue that animal and plant species are distinct creations or "kinds" that are not related developmentally to each other, proponents of the intelligent-design theory usually acknowledge that a limited amount of evolutionary transformation has occurred, but they also claim that some organic structures are too complex to have developed on their own and thus had to have been designed, as if they were a watch or a mousetrap. They therefore conclude that evolutionary science should not discount the presence and necessity of a creator in its paradigm.

The legal clashes between the two camps have generally focused on the constitutionality of teaching creation science in the public schools, although initially evolution had to fight an uphill battle to be included in the science curriculum. Those who advocate intelligent design claim that as a scientific explanation it is sufficiently rigorous to compete with evolution in the classroom, or conversely, that evolution is, at best, only a theory and that academic freedom allows, or even requires, alternative accounts of life's origins to be offered. Others simply maintain that the teaching of evolution alone, or the exclusion of the creationist account from the public schools, amounts to a violation of students' religious rights. Opponents of creation science generally regard it as nothing more than a thinly veiled effort to make the biblical account of creation look more scientifically respectable. From this perspective, even at its most sophisticated, creation science is at best an ad hoc compilation of specious hypotheses designed merely to undermine evolution, with no independent data to buttress its claims.

At first glance, this controversy implicates both religious clauses of the First Amendment. Under the Free Exercise Clause, government is prohibited from interfering with an individual's free exercise of religion, but generally the courts have not viewed this clause as being violated by the teaching of evolution or by creationism's exclusion from the curricula. On the other hand, the Establishment Clause prohibits government from engaging in activity that would constitute an establishment, or furtherance, of religion. Inclusion of creation science in the science classroom has been held to violate the Establishment Clause because it promotes religious doctrine and not scientific inquiry and methodology. Moreover, its inclusion in curricula outside the sciences is still constitutionally problematic because the Genesis story is usually the only cultural account of the origins of life that is taught.

As a legal dispute in the United States, the evolution-creationist controversy first came to prominence in 1925 with the much-celebrated "monkey" trial of John Scopes. Because there was as yet no creationist science, only a resolute desire to protect the biblical account from being discredited, Tennessee, like many states, simply prohibited teaching that man had descended from a lower order of animals. Scopes, a high school science teacher, tested the law, and the American Civil Liberties Union (ACLU) took up his cause. In the sensational trial that followed, three-time Democratic presidential aspirant William Jennings Bryan squared off against renowned agnostic litigator Clarence Darrow.

The ACLU actually wanted to lose so that the case could advance to higher courts and have more impact when it was eventually overruled. Scopes did lose, but the Tennessee Supreme Court overturned his conviction in 1927 in *Scopes v. State,* 154 Tenn. 105, 289 S.W. 363, on a technicality, effectively indicating that it would no longer enforce Tennessee's Anti-Evolution Act. It would be many years before a more definitive ruling on this dispute would be issued.

In *Epperson v. Arkansas,* 393 U.S. 97 (1968), the U.S. Supreme Court finally got an opportunity flatly to reject statutes that banned evolution science from being taught in the classroom as a violation of the Establishment Clause. By the time of *Edwards v. Aguillard,* 482 U.S. 578 (1987), antievolutionists had developed a creationist science to compete with evolution. A Louisiana law, the Balanced Treatment Act, required that creation science be taught alongside evolution in the science classroom or that neither account could be taught. The state attempted to justify the law as one giving "equal time" to different viewpoints in the interest of academic freedom. The Supreme

Court ruled against the act and declared that creation science's inclusion in (or evolution's exclusion from) the science curriculum violated the Establishment Clause.

The controversy has continued to simmer in recent years. School boards and localities still occasionally undertake rearguard efforts to circumvent court rulings and keep creation science viable as an alternative to evolution. In 1999 the Kansas State Board of Education issued new educational guidelines that neither required nor prohibited the teaching of evolution, or the "big-bang theory," in the state public classrooms. Although the board used facially neutral language, it was clear that creationist forces had motivated this revision in curricula standards. Before a legal challenge could be mounted, however, a new board in 2001 reinstated the requirement that evolution be taught. A similar controversy arose in Georgia in 2004 when the state proposed banning the word "evolution" from its science curricula, but the issue faded after the state backtracked on its decision.

Cruel and Unusual Punishments

The Eighth Amendment to the U.S. Constitution contains what is called the Cruel and Unusual Punishments Clause. The clause is a constitutional limit on the types of punishments that can be imposed within the United States. Since the founding of the nation, the U.S. Supreme Court has ruled that three kinds of punishments may be deemed cruel and unusual: barbaric punishments that involve torture and mutilation; punishments that are grossly disproportionate to the crime committed, for both capital (death penalty) and noncapital cases; and prison conditions and practices that are inhumane and abusive.

TORTURE AND MUTILATION

The text of the Eighth Amendment's ban on cruel and unusual punishments is borrowed almost verbatim from Section 10 of the English Bill of Rights (1689): "That excessive bail ought not to be required, nor excessive fines imposed; nor cruel and unusual punishments inflicted." Face branding, nose splitting, whipping, crucifixion, and burning alive at the stake were some of the punishments inflicted on offenders under English criminal law during the fifteenth through seventeenth centuries. The ban on cruel and unusual punishments in the English Bill of Rights, and later in the Eighth Amendment to the U.S. Constitution, was intended to prevent the use of such barbaric and inhumane punishments. For almost a century after ratification of the Bill of Rights (the first ten amendments to the Constitution) in 1791, no "cruel and unusual punishment" cases reached the U.S. Supreme Court because the terrible punishments imposed under English law, except for flogging, were not used in the United States. During this period, courts at all levels interpreted the clause to prohibit certain methods of punishment rather than to guarantee proportionality between crime and sentence. Basically, if a punishment was sanctioned by state law, it was not considered cruel and unusual.

CAPITAL PUNISHMENT

The death penalty was in use in all of the states at the time the Bill of Rights was ratified. Death by hanging, which has been a punishment since ancient times, was a form of execution used during the colonial period and has not been regarded as cruel and unusual. In its early decisions on the Eighth Amend-

ment, the Supreme Court confronted new methods of administering the death penalty—firing squad and electrocution—and had to determine if these novel modes of execution were cruel and unusual. In *Wilkerson v. Utah,* 99 U.S. 130 (1879), the Court held that death by firing squad for a murder conviction was not a violation of the Eighth Amendment. Death by shooting, the Court reasoned, did not fall into the same category of such barbarous punishments as disembowelment, beheadings, public dissections, and burning alive at the stake. Twelve years later, in the case *In re Kemmler,* 136 U.S. 436 (1890), a unanimous Supreme Court upheld the use of the electric chair. Death by electrocution was certainly unusual, but it was held not cruel. For a punishment to be "cruel," it must entail something more than "the mere extinguishment of life" and involve "unnecessary mutilation of the body."

Although capital punishment itself has never been ruled cruel and unusual, the Court in *Furman v. Georgia,* 408 U.S. 238 (1972), held that the death penalty, as it was then being administered for murder and rape, was so "arbitrary" and "wantonly and freakishly" imposed as to be cruel and unusual. Following the *Furman* decision, thirty-five states revised their death penalty statutes to address the concerns of the Court. In *Gregg v. Georgia,* 428 U.S. 153 (1976), the Court upheld these new death penalty statutes and declared that the death penalty was not a cruel and unusual punishment. In a subsequent case, however, the Court in *Woodson v. North Carolina,* 428 U.S. 280 (1976), held that a mandatory death penalty for murder was cruel and unusual because it sought to avoid arbitrariness by eliminating individualized sentencing.

In other cases, the Court has held that a sentence of death is too severe for certain crimes. In *Coker v. Georgia,* 433 U.S. 584 (1977), the Court ruled that death was an inherently disproportionate penalty for rape of an adult and was therefore cruel and unusual punishment, and in *Eberheart v. Georgia,* 433 U.S. 917 (1977), a sentence of death for kidnapping was held to be grossly disproportionate to the crime. In *Tison v. Arizona,* 481 U.S. 137 (1987), the Court ruled that the death penalty could be imposed on someone who participated in felony murder and showed reckless indifference to human life.

The Eighth Amendment also forbids the execution of certain types of persons because of their age or mental capacity. It is cruel and unusual to execute someone who is insane at the time of the execution. Imposing the death penalty on offenders who are less than sixteen years old at the time they committed the crime is also a violation of the Eighth Amendment, but in *Stanford v. Kentucky,* 492 U.S. 361 (1989), the Court held that the imposition of the death penalty on sixteen- and seventeen-year-old offenders did not amount to cruel and unusual punishment. In a recent decision, the Court said that it was cruel and unusual to execute a mentally retarded offender.

EXCESSIVE PRISON TERMS

In *Weems v. United States,* 217 U.S. 349 (1910), the Supreme Court for the first time applied a proportionality standard under the Eighth Amendment. Weems received a sentence of fifteen years of hard prison labor in chains and a loss of all civil rights for life for falsifying public documents. In its holding, the Court remarked that the Eighth Amendment's protections were not tied to a particular theory or moment in time but "should be determined by current sensibilities." The Court found the punishment cruel and unusual because it was excessive and disproportionate to the crime. In *Trop v. Dulles,* 356 U.S. 86 (1958), the Court ruled that expatriation, which is a loss of citizenship, was a cruel and unusual punishment for the crime of desertion from the army. The Court stated that "the concept underlying the Eighth Amendment is nothing less than the dignity of man," and that the clause "must draw its meaning from the evolving standards of decency that mark the progress of a maturing society." In the first application of the clause to a state criminal law, the Supreme Court in *Robinson v. California,* 370 U.S. 660 (1962), struck down a ninety-day sentence for the status offense of drug addiction. Narcotics addiction is an illness, the Court said, and it is cruel and unusual to punish persons for being sick.

In cases involving mandatory prison terms, the Supreme Court ruled in *Rummel v. Estelle,* 445 U.S. 263 (1980), that a mandatory life sentence for conviction of three nonviolent felonies was not cruel and un-

usual. Just three years later, however, the Court struck down a sentence of life without parole for a similar offense. In *Harmelin v. Michigan,* 501 U.S. 957 (1991), the Court declared that a sentence of life in prison without parole for a first-time conviction of possessing more than 650 grams of cocaine was not grossly disproportionate given the seriousness of the crime. Most recently, a bare majority of the Supreme Court upheld California's tough "three strikes" law in *Ewing v. California,* 538 U.S. 11 (2003), ruling that a prison term of twenty-five years to life for petty theft was not cruel and unusual. In affirming the punishment, the Court noted the popularity of such laws and the need for state legislatures to have the flexibility to incarcerate habitual offenders.

PRISON CONDITIONS

The protections of the Eighth Amendment have been applied to the conditions of confinement and the practices of prison administrators as well. For example, in *Estelle v. Gamble,* 429 U.S. 97 (1976), the Court held that denying prisoners adequate medical care violated the Eighth Amendment. Although a precise definition of what prison conditions constitute cruel and unusual punishment remains unclear, the Court has ruled that conditions of confinement "must not involve the wanton and unnecessary infliction of pain, nor may they be grossly disproportionate to the severity of the crime warranting imprisonment." The Court also has said that the Eighth Amendment is violated if prison officials acted intentionally or as the result of "deliberate indifference" to improper prison conditions. Double-celling of inmates is not cruel and unusual, but excessive overcrowding, unsanitary conditions, and abusive treatment of inmates by guards may be considered cruel and unusual, especially when such factors are examined in their totality.

Cruzan v. Director, Missouri Department of Health (1990)

In *Cruzan v. Director, Missouri Department of Health,* 497 U.S. 261 (1990), the U.S. Supreme Court held that Americans have a constitutionally protected right to die under the Fourteenth Amendment. Nancy Cruzan was in an automobile accident that left her severely brain-damaged. Despite her condition, Cruzan did not require artificial respiration and was not terminally ill, but she was unable to feed herself, and doctors had to provide her with artificial nutrition and hydration through a feeding tube. Nancy's parents brought suit on her behalf in an effort to be permitted to withdraw her life-sustaining treatment.

This case presented a unique issue to the Supreme Court: The patient who wished to refuse treatment did not in fact have the capacity to make that desire known. Cruzan was in a persistent vegetative state (PVS). Dr. Fred Plum, the creator of the term "persistent vegetative state" and a renowned expert on the subject, has described PVS as follows: " 'Vegetative state describes a body which is functioning entirely in terms of its internal controls. It maintains temperature; it maintains heart beat and pulmonary ventilation; it maintains digestive activity; it maintains reflex activity of muscles and nerves for low-level conditioned responses. But there is no behavioral evidence of either self-awareness or awareness of the surroundings in a learned manner.' "

The *Cruzan* case questioned the constitutionality of the Missouri statute that required "clear and convincing evidence" of a patient's decision to terminate life-sustaining treatment. It reasoned that this standard of proof was appropriate in light of the critically important decision to terminate a human life. The Court engaged in an exhaustive discussion of the cases and principles applicable to the "right-to-die" trend

that had been litigated up until that time. The Court held that under the Constitution, Americans possess a "constitutionally protected liberty interest" in refusing medical treatment. The Court noted a second foundational principle for this holding in the doctrine of "informed consent."

The Court held that "[T]he logical corollary of the doctrine of informed consent is that the patient generally possesses the right not to consent, that is, to refuse treatment." The establishment of a liberty interest necessarily requires that that interest be balanced against the state's compelling interest in protecting and preserving life. In balancing Cruzan's interest in terminating life-sustaining treatment against the state's interest in preserving life, the Court held that the Missouri statute passed constitutional muster. The practical result was that Nancy Cruzan's parents were not permitted to remove her artificial nutrition and hydration as they had hoped in light of the factual finding that there was a lack of clear and convincing evidence of Nancy's desire to refuse life-sustaining medical treatment. The Court explained in *Cruzan* that

> [T]he choice between life and death is a deeply personal decision of obvious and overwhelming finality. We believe Missouri may legitimately seek to safeguard the personal element of this choice through the imposition of heightened evidentiary requirements. . . . Finally, we think a State may properly decline to make judgments about the "quality" of life that a particular individual may enjoy, and simply assert an unqualified interest in the preservation of human life to be weighed against the constitutionally protected interests of the individual.

At the core of this landmark right-to-die case is the basic principle that individuals possess a right to refuse medical treatment that can be exercised on their behalf in the presence of clear and convincing evidence of their desire to do so. *Cruzan* has had a profound impact on constitutional law and has led the majority of states to establish specific procedures for ensuring that an individual's wishes regarding life-sustaining treatment will be followed in the event of that person's incapacity.

D

Darrow, Clarence (1857–1938)

Clarence Seward Darrow was the most well-known and well-respected criminal defense attorney in the first half of the twentieth century. He also has served as an inspiration for legions of lawyers who share his commitment to advancing civil rights and civil liberties. Darrow gained this reputation as a champion for civil liberties and civil rights not only through the cases he defended but also through the many articles and speeches he gave defending the rights of every citizen.

Clarence Darrow was born April 18, 1857, in Farmdale, Ohio. At a very young age, he moved with his family into the famed "octagon house" in Kinsman, Ohio, where his father, Amirus, quickly gained a reputation as the "village atheist." In fact, this moniker would later be ascribed to Clarence Darrow as well. The Darrow home was a wonderful place to grow up, Darrow would state later, because he was always surrounded by books and healthy philosophical and political discussions around the dinner table. Darrow took this thirst for knowledge with him as he studied at Allegheny College and later at the University of Michigan Law School. After law school, Darrow returned to northeastern Ohio and started a law practice. The small disputes of rural Ohio did not hold Darrow's attention for long, however, and he moved with his young family to Chicago, Illinois. It was in Chicago that Darrow would make his mark on the law.

When Darrow first moved to Chicago, he represented railroad interests there—an unlikely job to those who know Darrow's reputation. Still, it was through this representation that he met two individuals who became inspirations to him: John Altgeld and Eugene Debs. John Altgeld, who would later become governor of Illinois, was a young and active politician who espoused the same progressive beliefs that Darrow held. He encouraged Darrow to get active in politics, and it was Altgeld's influence that led Darrow to become an advocate for those who were shunned by society. Eugene Debs was a union organizer and one of the protagonists in the 1894 strike against the Pullman railroad car company. At the time of the strike, Darrow represented railroad interests, which was how he originally met Debs, but Darrow soon quit his job representing the railroads in order to defend Debs. Though Darrow did not win Debs an acquittal, Darrow's career path was changed forever, as he went on to defend others like Debs who were hailed into court for taking actions or holding beliefs despised by the majority of society.

The case that first vaulted Darrow's name to the forefront of the American legal psyche—symbolic of his defense of unpopular beliefs and people—was the trial of William Haywood in Idaho. Haywood was a leader of the Western Federation of Miners, and he was accused of blowing up Idaho's former governor, Frank Steunenberg. Darrow's famed defense skills first gained wide acclaim in the case. Darrow understood that the mine owners were blaming Haywood for the death of the former governor as a way to silence Haywood's unionizing activities. In a stunning trial, Darrow was able to gain Haywood's acquittal, and his reputation was made as both a defense lawyer and a defender of unpopular beliefs.

Darrow's next great trial came in Los Angeles, California, where he defended the McNamara brothers, James and John, who were accused of bombing the *Los Angeles Times* building. The McNamara brothers' defense was supported by the labor movement; in fact, it was Samuel Gompers, the founder of the American Federation of Labor, who lured Darrow to California to defend them. Also present in Los Angeles with Darrow was the noted liberal commentator Lincoln Steffens, who attempted to get Darrow to plea bargain the case because he was certain of the brothers' guilt. Darrow, however, attempted to gain an acquittal for the McNamaras. Unfortunately, Darrow's lead defense investigator was apprehended bribing one of the jurors, which caused Darrow to have the brothers plead and caused Darrow himself to be indicted. Darrow was ultimately acquitted of wrongdoing, but he decided to retire from the practice of law.

In a busy retirement, however, Darrow gave hundreds of lectures, engaged in thousands of debates, and

Clarence Seward Darrow (1857–1938), a famous attorney and supporter of civil liberties, defended teacher John Scopes for teaching evolution in Tennessee in violation of a state law. The Scopes case became known as the "monkey trial." *(Library of Congress)*

wrote numerous articles on many liberal and socialistic topics. By 1920 he was lured back into the practice of law by a fledgling new group that advocated the basic rights of individuals—the American Civil Liberties Union (ACLU). His first major case with the ACLU was the defense of the Communist Benjamin Gitlow on the charge of trying to overthrow the U.S. government. Although he was unable to gain Gitlow's original acquittal, his actions—including an appeal to the U.S. Supreme Court—ultimately led to the high court's incorporation of the First Amendment right to free speech into the Due Process Clause of the Fourteenth Amendment, thus applying free speech rights against the states.

During the next decade, Darrow defended many cases that expanded the civil rights and civil liberties of the citizenry. In 1924 he defended two young Chicagoans who committed a thrill killing of a fourteen-year-old boy, Bobby Franks. Richard Loeb and Nathan Leopold were charged with murder and faced the death penalty. Both boys had confessed, but Darrow wanted to save their lives. Darrow had both Leopold and Loeb plead to the murder. He then stated that he wanted the judge to consider testimony from medical witnesses before levying a sentence: "We want to state frankly here that no one believes these defendants should be released. We believe they should be permanently isolated from society. . . . We ask that the court permit us to offer evidence as to the mental condition of these young men. We wish to offer this evidence in mitigation of punishment." Darrow then brought forth all types of psychological experts who described how the boys' upbringing and mental features argued for them not to be executed. Darrow argued that the boys showed no remorse, and although he claimed they were not insane, the boys were not normal. Darrow also argued that the death penalty was barbaric, and it was improper to kill men who were so young. The judge agreed and sentenced both Leopold and Loeb to life in prison. Thus Darrow set a precedent for mitigating the death penalty through psychological testimony highlighting the upbringing of the defendant.

Probably Darrow's most famous case, however, came in 1925, when the ACLU asked him to defend a young biology teacher in Dayton, Tennessee, named John Scopes; his prosecution became known as the "monkey trial." At that time, Tennessee had a law prohibiting the teaching of evolution; however, Scopes chose to teach evolution in his class and was arrested. Darrow went to Tennessee to defend Scopes, and the prosecutors retained the services of the famed statesman William Jennings Bryan, "The Great Commoner," to assist them. The trial gained national attention, much of it through the actions of prominent newspaper commentator H.L. Mencken. The trial took on a circus atmosphere, with every conceivable souvenir that had a monkey motif put on sale. The prosecution's major piece of evidence was the Bible. The defense called a noted zoologist to explain evolution. Both sides fought over God's role in the origin of the species, but it was Darrow's defense strategy of calling William Jennings Bryan as an expert on the Bible that resulted in the great fame of this case. Darrow got Bryan to testify to all sorts of events from the

Bible, but when Darrow got Bryan to admit that the earth was not created in six conventional days, the fallacy of some of Bryan's beliefs was evident. Although the testimony was later deemed inadmissible, Darrow won a great victory for freedom of religion, although Scopes was ultimately convicted (his conviction was overturned by the Tennessee Supreme Court on a technicality).

The last great case of Darrow's career that affected the history of civil rights directly was his defense of Ossian Sweet, a black doctor, in Detroit, Michigan, later in 1925. Sweet had been charged with murder after a man was killed by shots coming from the Sweet home. Sweet and his brothers were defending their house from an angry mob of people who were incensed that a black family had moved into a white neighborhood. Darrow was quickly approached by the National Association for the Advancement of Colored People (NAACP) to assist in Sweet's defense. The trial was presided over by Frank Murphy, who would go on to become a U.S. Supreme Court justice.

The defense's main theory was self-defense; however, the prosecution argued that there had been no mob at the Sweet home that night. Darrow, however, was able to show that the angry mob and extreme climate of racism had caused the unfortunate killing of the man near the Sweet home. At the end of the first trial, the jury was deadlocked and could not reach a verdict. On retrial, Darrow won acquittal for Sweet. He stated during his closing argument at the first trial: "There are persons in the North and South who say a black man is inferior to a white and should be controlled by whites. There are those who recognize his rights and say he should try and enjoy them. To me this case is a cross-section of human history. It involves the future, and the hope of some of us that the future shall be better than the past."

Darrow tried only a limited number of cases in the last years of his life, but when he died March 13, 1938, his reputation as an advocate for civil rights and civil liberties was well established, particularly as a result of the 1924–1926 cases. Adding to his fame as an advocate for individual rights was the publication of his autobiography, *The Story of My Life,* in 1932. Darrow's life, and the cases he tried, served as the inspiration for many a young lawyer. But his effect on civil rights and civil liberties transcended his legal representation of criminal defendants; it surfaced in the unpopular issues he advocated and brought into the mainstream of beliefs by his mere presence. To understand the legacy of Clarence Darrow is to understand the climate of change that occurred in civil rights and civil liberties because of his advocacy and writings. His fidelity to the cause of righting injustice ensures that his reputation will serve as an inspiration for years to come. As he famously remarked, "You can only protect your liberties in this world by protecting the other man's freedom. You can only be free if I am free."

Death Penalty for the Mentally Retarded

Mentally retarded individuals were subject to the death penalty in the United States until 2002, when the U.S. Supreme Court decided *Atkins v. Virginia,* 536 U.S. 304 (2002). By a six–three margin—six justices against state-sanctioned death of the mentally retarded and three justices for it—the Court imposed a moratorium on capital punishment of the mentally

retarded, holding that it constituted cruel and unusual punishment prohibited by the Eighth Amendment to the Constitution. The majority believed a national consensus had developed against executions of mentally retarded persons, noting that since it last addressed the issue in 1989, eighteen state legislatures had passed laws limiting the death eligibility of certain defendants based on mental retardation alone. Justice John Paul Stevens delivered the majority opinion; Chief Justice William H. Rehnquist dissented, joined by Justices Antonin Scalia and Clarence Thomas.

In 1989 the Supreme Court decided in *Penry v. Lynaugh,* 492 U.S. 302 (1989), that the Eighth Amendment did not categorically prohibit imposition of the death penalty upon the mentally retarded. The Court found no societal consensus against their execution and held that when a mentally deficient defendant is found competent to stand trial and thus sane—able to appreciate the wrongfulness of his or her actions—the Constitution did not prohibit the imposition of a death sentence on that defendant. Under this view, mental retardation would be considered a mitigating factor in determining a death sentence.

The Court in *Atkins,* revisiting the issue thirteen years later, reversed course in its holding that such executions were cruel and unusual punishment. The Court left it to the state courts and legislatures to determine what conditions must exist for a person to be declared mentally retarded.

In a separate dissent, Justice Scalia did not find that such executions breached standards of decency:

> [T]he Court concludes that no one who is even slightly mentally retarded can have sufficient moral responsibility to be subjected to capital punishment for any crime. As a sociological and moral conclusion that is implausible; and it is doubly implausible as an interpretation of the United States Constitution. Under our Eighth Amendment jurisprudence, a punishment is cruel and unusual if it falls within one of two categories: those modes or acts of punishment that had been considered cruel and unusual at the time the Bill of Rights was adopted, and modes of punishment that are inconsistent with modern standards of decency as evinced by objective indicia.

In Justice Scalia's view, administering the death penalty against those judged mentally retarded was not inconsistent with "modern standards of decency." Chief Justice Rehnquist in his separate dissent said that "the current legislative judgment regarding the execution of defendants like petitioner more resembles a post hoc rationalization for the majority's subjectively preferred result rather than any objective effort to ascertain the content of evolving standards of decency."

The majority in *Atkins* noted that in the years since *Penry,* eighteen state legislatures had passed laws limiting the death eligibility of certain defendants based on mental retardation alone. It also noted polls and statistics indicating that execution of such individuals did not conform to the public's ideal of "evolving standards of decency." Justice Stevens in his majority opinion expressed the belief that society must make accommodation for mentally retarded individuals because they are to some degree less culpable for their crimes than other people.

Death-Qualified Juries

"Death-qualification" refers to the process of screening potential jurors in capital cases and eliminating those persons who are hesitant or unwilling to play a role in imposing the death penalty. Such persons are dismissed "for cause" and may not sit on the jury. In the thirty-eight states that currently authorize capital punishment, the jury makes the decision to impose death, or a lesser sentence, after finding the defendant guilty. Death-qualified juries have become especially important in light of the U.S. Supreme Court's decision in

Ring v. Arizona, 536 U.S. 584 (2002), deciding that only juries can impose death sentences. Death-qualification excludes jurors who are unwilling to impose or recommend a sentence of death as well as "nullifiers"—jurors who acquit a defendant they believe to be guilty out of concern that a death sentence will be imposed by the judge.

Proponents of death-qualification argue that it is necessary to the efficient and consistent application of a penalty that is duly prescribed by law; jurors who are unwilling or unable to apply the law should not be allowed to decide capital cases. Critics of death-qualification argue that it violates the defendant's Sixth and Fourteenth Amendment rights to an impartial jury because it creates a jury that is predisposed to favor the prosecution both in determining guilt and imposing a sentence. Critics also claim that death-qualification creates juries that are not a fair cross-section of the population, and that it is biased against particular groups of potential jurors and defendants. The U.S. Supreme Court has addressed these issues in a series of cases.

The Court first faced the issue of death-qualification in *Witherspoon v. Illinois,* 391 U.S. 510 (1968). Illinois law allowed the removal of any juror with "conscientious scruples against capital punishment," even if the juror asserted that he would be able to follow and apply the law. The trial judge began the selection process by saying "let's get these conscientious objectors out of the way," after which nearly half of the potential jurors were eliminated. William Witherspoon appealed both his murder conviction and death sentence on the grounds that the Illinois procedure excluded all jurors who had even the slightest hesitation about imposing the death penalty. He argued that such a jury would be predisposed to impose the death penalty after conviction, and he offered social science research supporting his claim that death-qualified jurors would also be more prone to convict. The Supreme Court upheld Witherspoon's conviction, finding the evidence on conviction-proneness to be inconclusive, but it reversed his death sentence. "In its quest for a jury capable of imposing the death penalty," the Court said, "the State produced a jury uncommonly willing to condemn a man to die." Nonetheless, the Court suggested that it would be acceptable for the state to exclude those jurors who indicated a complete unwillingness to impose death in any circumstances. Such jurors have become known as "*Witherspoon*-excludables."

The *Witherspoon* decision led to increased efforts to document the effects of death-qualification. Although the numbers vary year to year, a substantial minority of Americans do not support the death penalty; even fewer feel personally able to impose it. A survey conducted after *Witherspoon* found that 38 percent of those questioned would never vote guilty in a death penalty case, or would vote guilty but then refuse to impose the penalty. If this survey is accurate, nearly 40 percent of the population would be considered "*Witherspoon*-excludable." Studies also show that those opposed to the death penalty are disproportionately women, racial minorities, and lower-income people; death-qualification thus appears to conflict with Supreme Court rulings that the jury must represent a fair cross-section of the community. Because prosecutors seek the death penalty disproportionately against black defendants, it appears especially troubling that black jurors are more likely than whites to be excluded. These findings also raise questions about the role of the jury in a democratic society. The jury is often said to act as the "conscience of the community" by mitigating or rejecting harsh laws, and death-qualification appears to limit severely the jury's ability to perform this function.

The new social science evidence about the effects of death-qualification was brought before the Supreme Court in *Wainwright v. Witt,* 469 U. S. 412 (1985), and *Lockhart v. McCree,* 476 U.S. 162 (1986). Although the studies introduced by the condemned were unanimous in supporting the argument that death-qualification produced juries more likely both to convict and to impose the death sentence, the Court in *McCree* dismissed all of this evidence as flawed or inconclusive. Further, Justice William H. Rehnquist argued in the Court's majority opinion that even if the evidence were sufficient to show that death-qualified juries were conviction-prone, this did not create a violation of the Sixth Amendment. A jury, Justice Rehnquist said, failed to be a fair cross-section of the population only if it excluded certain "distinctive groups," such as racial or ethnic groups. *Witherspoon*-

excludables, according to the Court, did not form such a distinctive group.

The Court in *McCree* not only did not limit the states' ability to death-qualify juries, but it even expanded the states' power. The Court said that the question should not be whether a juror was completely and always opposed to capital punishment, but whether his feelings against it "would prevent or substantially impair the performance of his duties as a juror." Thus, after *McCree,* jurors can be excluded even if their opposition to the death penalty is not so complete that they would automatically vote against it.

Although *McCree* made it easier for prosecutors to exclude jurors who oppose the death penalty, in *Morgan v. Illinois,* 504 U.S. 719 (1992), the Court ruled in favor of defendants by allowing what has been called "life-qualifying" exclusions of jurors. At the defendant's trial, after the judge excluded all jurors who had moral scruples that would prevent them from voting for the death penalty, the defense attorney asked that the court exclude those jurors who would automatically vote to impose the death penalty if the defendant were found guilty of murder. The judge refused the request, and after being convicted, the defendant appealed to the Supreme Court. Reiterating a position it had previously suggested in *Ross v. Oklahoma,* 487 U.S. 1250 (1988), the Court held that a juror who would automatically impose the death sentence without considering all the evidence as to the defendant's culpability was not impartial, as required by the Constitution. In *Morgan,* therefore, failure to exclude such a juror thus violated the defendant's Sixth Amendment rights, and his death sentence was reversed.

In its death-qualification rulings, the Supreme Court has tried to avoid not only juries that automatically support capital punishment, but also those that automatically reject it. It is fair to say, however, that the balance is tilted in favor of the death penalty because the prosecutor's ability to exclude death penalty opponents is broader than the defendant's ability to exclude those who favor capital punishment. The balance has shifted over time, however, and as social science research advances and attitudes toward the death penalty change, it is likely to shift again.

Debs, Eugene Victor (1855–1926)

A five-time U.S. presidential candidate, Eugene V. Debs was also an eloquent leader of the American labor movement and of the Socialist Party of America. Through his activism in forming the American Railway Union to protect the rights of railroad employees, his criticism of World War I, and his efforts to draw attention to capitalist exploitation of labor, Debs made important contributions to the development of civil liberties in the United States.

Eugene Debs was born in Terre Haute, Indiana, to Alsatian immigrants. He dropped out of high school at age fourteen and began working in the railroad industry. Debs held several positions in that industry, including working as a laborer, painter, and fireman. These experiences gave him valuable insight into the life of a laborer. He quit his job as a fireman after one of his friends was crushed by a locomotive. Debs then became a billing clerk at a grocery store. His unending passion for the railroad, however, led to his association with the Brotherhood of Locomotive Firemen, a labor union for railway firemen. Debs held several positions within that organization, serving as secretary for the Terre Haute lodge, assistant editor of the *Locomotive Firemen's Magazine*, and secretary-treasurer of the entire organization. His commitment to the brotherhood is evident in comments he made in the April 1902 issue of *The Comrade*, a popular socialist magazine, "I was filled with enthusiasm and my blood fairly leaped in my veins. Day and night I worked for the brotherhood. To see its watch fires glow and ob-

Eugene V. Debs, as he left the federal penitentiary at Atlanta, Georgia, on Christmas Day, 1921. Debs, a famous Socialist and labor organizer, often was jailed for his political views and activities. *(Library of Congress)*

serve the increase of its sturdy members were the sunshine and shower of my life."

His experience with railroad unionization led him to believe that it would be advantageous for railroad employees to have a general organization open to all types of railroad workers, as opposed to the specialized unions in existence at the time. Debs believed that if all railroad men belonged to the same union, then railroad companies would have no choice but to listen to their concerns. In 1893 he organized the American Railway Union (ARU) to that end. This new organization was successful in a strike against Great Northern Railroad, which had decreased workers' wages during an economic depression. However, the ARU was crippled after its role in one of the most significant strikes in American history, the 1894 strike against the Pullman Company.

The Pullman Company employees protested wage cuts, layoffs, and poor working conditions. Many of the Pullman employees were members of the ARU, and after much deliberation the organization voted to boycott all trains carrying Pullman passenger cars. Debs was initially reluctant to become involved with the strike because he feared that his young organization would be unable to win against the powerful company. He was correct. The strike and boycott disrupted rail traffic across the country. Ultimately, violence broke out and President Grover Cleveland sent

in federal troops to maintain order. In another blow to the strikers, a federal court in Chicago issued an injunction prohibiting the strike leaders from assisting with the boycott because it was interfering with the U.S. mail. Debs and the other leaders decided to defy the order and were sentenced to jail on charges of contempt and conspiracy to obstruct the mail.

The six-month sentence Debs served at the McHenry Jail in Woodstock, Illinois, proved to be a turning point in his life. Prior to the Pullman strike, Debs thought of himself as a trade unionist. While he was imprisoned, however, he was exposed to the writings of several prominent Socialists, and after his incarceration, he began to speak in favor of many Socialist ideals. Debs argued that capitalism was a system of exploitation that needed to be overthrown. An important component of his thinking was the Marxist concept of class struggle. In other words, in society there was a struggle between the rich and the poor, the haves and the have-nots. The rich capitalists exploited the poor by not paying fair wages and by subjecting them to hazardous working conditions in order to increase their profits. Because this system was unjust, Socialists argued, it should be abolished.

Debs was a charismatic speaker and believed that one of the most important tasks for the socialist movement was the education of American workers so that they were aware of their plight. He believed the workers' ignorance was a major obstacle to the achievement of Socialist goals. Although he was committed to abolishing the capitalist system, he did not condone the use of violence and rarely advocated its use.

His opposition to violence extended even to war. Debs was opposed to U.S. involvement in World War I and was convicted of violating the Espionage Act of 1917, which made it a crime to obstruct or attempt to obstruct the military recruiting and enlistment service of the United States, and he was sentenced to ten years in prison. His conviction came after a speech he made in Canton, Ohio, that centered primarily on socialism. In *Debs v. United States,* 249 U.S. 211 (1919), the U.S. Supreme Court upheld his conviction because his speech was intended to obstruct the war effort. This was just one in a series of cases in which the Court upheld government limits on speech during a time of war. President Warren G. Harding commuted his sentence in 1921.

In order to promote Socialist goals, Debs ran for president five times. He ran on the Social Democratic Party ticket in 1900 and on the Socialist Party ticket in 1904, 1908, 1912, and 1920. The 1920 campaign was run from prison where Debs was still serving part of his sentence, and yet he won almost a million votes.

Eugene V. Debs was the most prominent Socialist in U.S history. He was a key figure in the labor movement and was a significant voice of dissent to U.S. policies in the early twentieth century.

Debs, In re (1895)

In re Debs, 158 U.S. 564 (1895), arose out of sharp conflict at the end of the nineteenth century between labor and management in the railroad industry and culminated in a holding by the U.S. Supreme Court that allowed the use of injunctions by lower courts to thwart the efforts of labor groups to organize. It was one of only three major cases decided in the Court's 1894 term, but it paved the way for industry's widespread use of injunctions as a means of curbing the nascent labor movement in the United States.

In June 1894, after the Pullman Palace Railroad Company cut wages by 20 percent, the workers of the American Railway Union (ARU) declined to work on any Pullman Palace railroad cars. The strike immediately immobilized both the east and west lines of rail in and out of Chicago and eventually brought trains in over half the country to a halt. The dispute between the largest industrial union and twenty-four railroads affected commerce across the nation. Pur-

suant to orders from the U.S. Attorney General, local U.S. attorney Richard Olney sought and obtained an injunction against the ARU through its leaders. The broad injunction prohibited ARU leaders from engaging in any activity to further the strike in any fashion. The court based its jurisdiction upon the union's obstruction of passage of the U.S. mail.

Eugene V. Debs, president of the ARU, and other union officers refused to comply with the injunction. Although Illinois Governor John Peter Altgeld objected to forceful federal intervention to end the strike, President Grover Cleveland sent federal troops to break it up. Once the troops ended the strike, the federal government petitioned the trial court for orders of contempt against Debs and the other union officers. The court found Debs and his codefendants in contempt and ordered a six-month jail sentence for Debs and three-month sentences for the others. The legal foundation for the conviction rested on violations of the Sherman Antitrust Act. Through his attorneys, Clarence Darrow and former Senator Lyman Trumbull, Debs appealed to the U.S. Supreme Court for a writ of habeas corpus (petition for release from unlawful confinement).

The Supreme Court upheld the convictions under a very broad interpretation of the scope of federal power to act to protect interstate commerce and the mails. In the opinion, the Court did not address the applicability of the Sherman Act to labor union activities but found "the United States may remove everything put upon highways, natural or artificial, to obstruct the passage of interstate commerce, or the carrying of the mails." This sweeping expansion of federal-court equity jurisdiction gave both the state and federal governments a powerful new mechanism to thwart the efforts of organized labor. This case stood in stark contrast to *Pettibone v. United States,* 148 U.S. 197 (1893), in which two years earlier a unanimous Supreme Court had held no federal equity jurisdiction could be invoked over state criminal law processes. The impact from *Debs* was immediate. State and federal judges issued injunctions to stop organized labor activities. Labor leaders who disobeyed these injunctions were quickly jailed for contempt. The use of injunctions as a weapon against labor became so widespread that the Democratic platform of 1896 specifically criticized government by injunction.

Eugene Debs ultimately abandoned organized labor and moved to the political sphere by joining a coalition that formed the Socialist Democratic Party. Debs was the presidential candidate of the new party from 1900 through 1912 and again in 1920. He won 6 percent of the national vote in 1912, and in 1920, imprisoned for giving an antiwar speech, he won 3.5 percent of the national vote from his jail cell.

Declaration of Independence

The Declaration of Independence was a signed statement by fifty-six colonial leaders stating their reasons the thirteen colonies should separate from British rule. Today it remains both a symbol of, and a symbol to, the nation. It represents both the founding of the United States of America in 1776 and the principles upon which that regime—both the government and the way of life it fosters—are based. A committee of five, Thomas Jefferson, John Adams, Benjamin Franklin, Roger Sherman, and Robert Livingston, drafted the Declaration. Jefferson was the principal author. The Declaration proposed three major principles: (1) equality, (2) consent, (3) and revolution.

The principle of equality was perhaps the most popular and most controversial idea articulated in the document. Jefferson stated the principle as follows: "We hold these truths to be self-evident, that all men are created equal; that they are endowed by their Creator with certain unalienable rights; that among these are life, liberty, and the pursuit of happiness." Interestingly, the Declaration marked the first time in 5,000 years of history that any nation had been founded on the principle of equality.

Reading of the Declaration of Independence from the east balcony of the Old State House, Boston, Massachusetts, July 18, 1776. *(National Archives)*

There are many dimensions to the meaning of equality, and the debates that have evolved from these have had a profound impact on American history. First, Jefferson saw the principle of equality as recognizing that no person had the right to rule any other person by nature—that is, by birth. Drawing upon the ideas of seventeenth-century English philosopher John Locke, Jefferson stated that each person had an equal right to pursue life, liberty, and happiness and to be free of unreasonable interference from government. By this, he was not referring to equality in material things such as wealth or property, since physical strength, intelligence, talents, and environmental influences could affect them, but rather to the precept that each person deserves equality of opportunity. Indeed, this interpretation of equality—equal opportunity for all—has served as the basis for many other political, social, and economic conflicts, from women's suffrage in the late nineteenth and early twentieth centuries to the civil rights movement in the 1950s and 1960s to the school busing conflicts and affirmative action struggles that followed. Moreover, it has driven contemporary debates over diversity and multiculturalism as well.

The second principle, consent, evolved directly from the principle of equality. Although Jefferson stated that the goal of government was to secure the rights to life, liberty, and the pursuit of happiness, the government must be based upon the consent of those to be governed. In other words, government is not legitimate unless the people have agreed to it. Accordingly, although the Declaration encouraged a love for liberty, it did not specifically advocate any particular form of government. However, the debates in the Continental Congress as well as later writings of Jefferson and other founding fathers left little doubt that a representative, or republican, government was preferable.

Implied in Jefferson's idea of consent is the notion that once consent is given to the government and its laws, the citizen has the duty to obey the laws. Jefferson saw consent as a necessary element to maintain civil society so that citizens would be connected to their government and hence give it legitimacy.

The third principle, also central to the Declaration, is the right to revolution. The principle grants citizens the right to revolution when political conditions threaten to destroy their freedom. The justification for revolution is located in the Declaration immediately after the statement of the consent principle: "That whenever any form of government becomes destructive of these ends [the principles of equality and consent], it is the right of the people to alter or to abolish it." A very important qualification on that right, however, appears in the next two sentences: "Prudence, indeed, will dictate that governments long established should not be changed for light and transient reasons." Nevertheless, "when a long train of abuses" places people under "absolute despotism," it is their "right" and their "duty" to change such a government and "provide new guards for their future security." Accordingly, Jefferson clearly opposed engaging in revolution solely because of a disagreement with a particular policy or action. Were he alive today, for example, Jefferson probably would have opposed revolution based upon opposition to U.S. involvement in Vietnam in the 1960s or Iraq in 2003, as these

events have not destroyed life, liberty, and happiness in any overall way affecting the entire nation. Therefore, they would not have constituted for Jefferson a "long train of abuses," even though some individual citizens and groups strongly opposed these policies.

In the last part of the Declaration, Jefferson included a bill of particulars: a list of reasons justifying the break with England. He condemned King George III, to whom the colonists had previously expressed loyalty, for dissolving the colonial legislatures, obstructing justice by making the length of judges' terms dependent on his will, denying trial by jury, quartering troops in colonists' homes without consent, and imposing taxation without representation, to name a few. Beyond their immediate impact, the most important result of listing the grievances was that they could serve as a model for future generations to judge whether revolution could be justified.

In addition, it cannot be overlooked that the Declaration was an important cause of the nation's Civil War. Although it is generally argued that slavery and related sectional issues caused the war, all too few fully understand that the Declaration provided the underlying philosophical base for the abolitionist movement that arose in the thirty years prior to 1861. Nearly every abolitionist pamphlet quoted or referred to the principle of equality in order to justify opposition to slavery. Ironically, the principle of equality also provided support for the proslavery forces, as they had a strong belief in states' rights and resented the intrusion of the national government and the Northern free states into their internal affairs. In addition, many Southerners believed that the principle in the Declaration contributed significantly to what many historians have called an inevitable conflict. Although the Civil War might have occurred eventually in spite of the Declaration, it is doubtful that it would have taken place as early as 1861 without it.

It should also be noted that there were some inherent conflicts in the Declaration concerning its desires for liberty, government by consent, and just and effective government. For example, how could a tyrannical majority be prevented from seizing power and denying liberty to a weak minority? And what if the people had willingly consented to such a condition? The Declaration provided no specific answers to these conflicts because it was not establishing a government. This was, of course, the task of the framers of the Constitution in 1787. They sought to provide ways to solve these conflicts through such principles as republican, or representative, government; separation of powers; federalism; bicameralism; right to trial by jury; the guaranteed right of habeas corpus (the right to be charged in open court and to challenge legally one's imprisonment); the prohibition against ex post facto laws (not being charged with a crime when the committed act was not a crime); bills of attainder (imprisonment by a legislative body without benefit of a trial); and, eventually, the first ten amendments to the Constitution, known as the Bill of Rights.

The Declaration did, however, state the universal principles upon which this nation was founded in order to justify to the world why the colonists believed their revolution was necessary and why the principles of natural rights, consent, and revolution effectively served not only the political well-being of the nation in 1776 but also potentially all future nations and their citizens. Accordingly, the American independence movement exemplified by the Declaration has inspired most of the major movements for independence in the world since 1776. This was true of the French Revolution of 1789, the various independence movements against Spanish rule in the 1820s, the Russian Revolution of 1917 (the Bolsheviks' demands for equality, not their tyrannical exercise of power), and of the post–World War II independence movements in the underdeveloped nations of European powers' former colonies.

Deep Throat

Deep Throat is the best-known, most profitable, and most controversial pornographic film ever made. Filmed in 1972 for about $25,000, the movie had made an estimated $600 million by 2002. The movie created controversy by repeatedly being in court on obscenity charges, which raised important First Amendment free speech issues, and because of the turbulent and tragic life of its star, Linda Lovelace (nee Boreman).

Contradiction and controversy cloud any attempt to tell the story of *Deep Throat* completely. Apparently the film was made in Miami, Florida, and directed by Gerald Damiano, who had met Linda Lovelace and her husband, Chuck Traynor, at a party. Traynor and Lovelace had made short pornographic films, called "loops," for some time before meeting Damiano. Lovelace was paid $1,200 for her performance, and many reports suggest that the Colombo crime family from New York City supplied the film's entire budget.

Originally entitled *The Doctor Makes a House Call*, the film is sixty-two minutes long. The plot is the story of a young woman who, after several encounters, finds she cannot have an orgasm. She visits a doctor who discovers that her clitoris is located in her throat, and for the rest of film she serves as a "therapist" to several other individuals who experience sexual problems.

The success of *Deep Throat* was phenomenal, and it attracted attention from many mainstream media outlets. Lovelace appeared on *The Tonight Show* with Johnny Carson as well as on the covers of *Esquire* and *Playboy.* She published an "autobiography" and released other movies (mostly reedited loops from her earlier career).

Controversy followed quickly on the film's success. Throughout the 1970s and early 1980s, *Deep Throat* was the subject of many court battles over the definition of obscenity and community standards. Under the *Miller v. California* decision, 413 U.S. 15 (1973), juries were allowed to declare material obscene if, based on contemporary community standards, the material, taken as a whole, appealed to prurient interest. Prosecutors around the United States placed *Deep Throat* on trial and asked juries to declare it obscene. The film was declared obscene in New York City, but prosecutors failed to gain convictions in Massachusetts and Tennessee. The most famous case was in Memphis, Tennessee, where one of the film's stars, Harry Reems, was put on trial.

Deep Throat was the first "out-of-the-closet" pornographic movie in American history. The film made millions for its creators and distributors, many of whom were reputed to be organized crime figures from New York and Florida.

The film's stars did not fare as well as its producers. After divorcing Chuck Traynor, Linda Lovelace married Larry Marchiano and quit pornography altogether. In 1980, now Linda Marchiano published *Ordeal*, an autobiography that claimed her former husband forced her into sexual acts. Marchiano gave speeches, testified before city councils, and in 1985 addressed the Meese Commission on Pornography. She died as a result of injuries sustained in a car wreck in 2002. Harry Reems tried for many years to establish a mainstream acting career but ended up selling real estate.

Despite the huge sums of money government officials spent trying to suppress *Deep Throat,* the film has become a part of America's popular culture and legal history.

Democracy and Civil Liberties

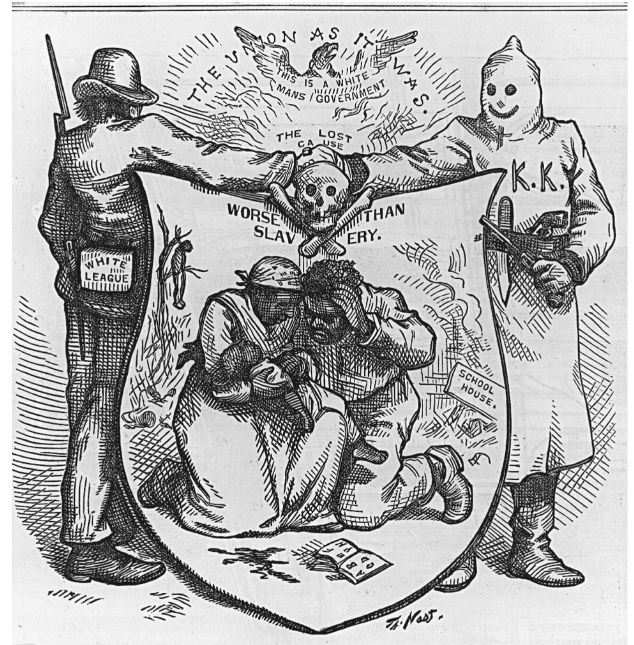
The term "democracy" is derived from the Greek word *demokratia*, which means rule (*kratos*) by the people (*demos*). A democracy, unlike a monarchy or an aristocracy, is a system of government in which the

people rule. A fundamental tenet of democratic government is the political equality of all citizens. Because the people are rarely unanimous, democratic rule is commonly understood as rule by the majority of citizens, or majority rule.

Majority rule, however, can endanger the rights and liberties of a powerless minority. James Madison, a principal architect of the U.S. Constitution and one of the authors of *The Federalist Papers*, identified a problem that subsequent thinking has called the "tyranny of the majority." In essence, the tyranny of the majority occurs when a democratic majority votes to persecute the members of a minority group or deprive them of their rights and liberties. In other words, majority rule can result in the denial of the civil liberties of certain citizens. Civil liberties are defined as the freedoms that protect against the interference of others, in particular, against the coercive power of the state.

The framers of the U.S. Constitution designed a system of government that would minimize the tension between democracy and liberty. There are two basic principles of the U.S. system of government, which are counterbalanced against one another. The first principle is that of democratic rule by a majority of the people through their elected representatives. The Constitution establishes a representative democracy because all citizens have the right to vote for representatives at the local, state, and national levels. The second principle is that the power of majority rule must be limited in order to ensure the civil liberties of all citizens. Various provisions of the Constitution provide protection against the violation of civil liberties. The purpose of providing constitutional protection for civil liberties is to prevent a majority of the people from depriving a minority of their rights and liberties.

The U.S. Constitution guarantees a range of civil liberties, including the freedom of speech and assembly, the right to vote, the right to equal protection under the law, and procedural guarantees in criminal and civil trials. These civil liberties are protected by certain provisions in the Constitution, such as the prohibition on ex post facto laws (laws that apply retroactively) and the right to habeas corpus (a petition to be released from illegal detention). Civil liberties are also guaranteed by the first ten amendments of the



Despite the passage of the Thirteenth through Fifteenth Amendments as well as several civil rights laws, former slaves faced many threats and limits on their ability to exercise their newfound liberties. Throughout the nineteenth century and much of the twentieth century, groups such as the Ku Klux Klan often harassed or even murdered African Americans who sought to exercise their rights.
(Library of Congress)

Constitution (known collectively as the Bill of Rights) and by the Thirteenth, Fourteenth, Fifteenth, and Nineteenth Amendments.

The Bill of Rights guarantees the majority of civil liberties. The First Amendment guarantees the freedom of speech, association, and assembly and the freedom of the press. The First Amendment also protects the free exercise of religion and provides for a strict separation between state and church. The Fourth, Fifth, and Sixth Amendments provide a number of guarantees against arbitrary state action in civil and criminal trials. All persons are protected against unreasonable searches and seizures, against arbitrary arrest and detention, and against double jeopardy (being tried twice for the same crime). All persons have a right to "due process," which means that the government may not deprive any person of life, liberty, or property without following a fair and legal process. Other civil liberties include the right to counsel, the right to a speedy and public trial, and the right to be confronted by witnesses. The Supreme Court has also

read a "right to privacy" into the Bill of Rights. The right to privacy protects all persons from governmental interference in personal and private affairs. The freedom of a woman to choose to have an abortion falls under the privacy right. The Second Amendment protects the right to bear arms. As originally written, the Bill of Rights protected citizens from the actions of the federal government, but these rights were eventually applied against actions of the state governments in a series of cases decided by the Supreme Court between the 1930s and the 1960s.

After the Civil War, three amendments were made to the U.S. Constitution. The Thirteenth Amendment outlaws slavery. The Fourteenth Amendment declares that the states must provide equal protection under the law, and that they may not deprive any person of life, liberty, or property without the due process of law. The clause guaranteeing equal protection under the law is the primary protection against state discrimination on the basis of race, sex, and national origin. The Fifteenth Amendment provides that the right to vote shall not be denied on account of "race, color or previous condition of servitude." In addition, the Nineteenth Amendment, adopted in 1920, protects the right of women to vote.

Many of the civil liberties discussed here, such as the freedom of speech and association, the right to vote, and the right to equal treatment under the laws, are indispensable for the proper functioning of democracy. These civil liberties are preconditions for democratic government. For much of the history of the United States, however, these basic civil liberties were denied to entire segments of the population for many years. Despite the existence of constitutional protections, powerful majorities were able to deprive minorities of their rights and liberties.

After the Civil War, white supremacist groups, such as the Ku Klux Klan, killed hundreds of blacks who voted or ran for office. At the same time, southern states adopted numerous tactics, including literacy tests, property qualifications, and poll taxes, to deprive blacks of the right to vote. In addition, southern states implemented a program of segregation in which blacks were separated from whites in every aspect of life, including housing, transportation, restaurants, education, and employment. The U.S. Supreme Court upheld the constitutionality of segregation in *Plessy v. Ferguson,* 163 U.S. 537 (1896), on the grounds that "separate but equal" accommodations for blacks and whites in railroad cars did not violate the Equal Protection Clause of the Fourteenth Amendment.

The civil rights movement of the 1950s and 1960s challenged the injustice, oppression, and discrimination that blacks faced. Civil rights protesters organized sit-ins and boycotts to protest the inequality of public accommodations. Important leaders in the African American community, such as Dr. Martin Luther King Jr., rallied their followers to resist the discriminatory practices and institutions that had been forced upon blacks. In 1954, the Supreme Court finally overturned its decision in *Plessy v. Ferguson* (1896). In *Brown v. Board of Education,* 347 U.S. 483 (1954), the Court explicitly rejected the "separate but equal" doctrine as a violation of the Equal Protection Clause of the Fourteenth Amendment and ordered the desegregation of public schools. Congress passed the Civil Rights Act of 1964, which banned discrimination on the basis of race. In 1965, Congress passed the Voting Rights Act, which prohibited the use of any voting device that denies the right to vote on the basis of race or color. As a result of the civil rights movement, the basic civil liberties of all citizens are better protected, and the democratic system of government is more inclusive.

Democratic Party

At the end of the twentieth century, the Democratic Party was viewed as the political party more supportive of civil liberties than its Republican rival. Yet, it is noteworthy that the Democrats historically have not been the party of civil libertarians. Until the middle of the twentieth century, the party pursued policies hostile to the wishes of advocates of civil liberties.

At the outset of World War I, the Democratic president, Woodrow Wilson, signed into law two bills limiting free expression. Under these laws, it became unlawful for anyone to say anything critical of the president, Congress, the American flag, or the military or to oppose the war effort. Under the Espionage and Sedition Acts, individuals were prosecuted for expressing their views in a public manner. Prominent figures, such as the leader of the Socialist Party, Eugene V. Debs, were arrested along with individuals less well known. Following the end of hostilities on November 11, 1918, the Wilson administration continued to enforce these measures. Wilson's attorney general, A. Mitchell Palmer, conducted "raids" of political meetings that he deemed to be controversial and threatening to the nation.

During the 1920s, the Democrats did not hold the presidency. This was the Republican era of Warren G. Harding, Calvin Coolidge, and Herbert Hoover. Although out of office, the Democratic Party continued to operate its mechanism for presidential nominations on an old rule that effectively prevented presidential candidates who held certain viewpoints from receiving the party's nomination. The two-thirds rule meant that the party nominee had to receive the votes of two-thirds of the delegates to Democratic national conventions. In effect, this rule gave the southern states a veto over the presidential nomination. This, in turn, could prevent any serious consideration of ideas within the party relating to civil rights reforms.

With the election of Franklin D. Roosevelt (FDR) in 1932, the Democratic Party was returned to the White House and to control over both houses of Congress. So strong was the reaction against the Republicans that Democratic control of the Senate and House of Representatives gave the new president an excellent opportunity to pass programs to deal with the economic crisis of the Great Depression. FDR's New Deal, which included numerous programs to address social and economic ills and which ushered in an era of growing governmental intervention in citizens' lives, became a permanent fixture of American life. Through the Works Progress Administration (WPA), the government became active in infrastructure projects (roads, dams, bridges), and Social Security was created as an economic safety net. Through the Civilian Conservation Corps (CCC), the government hired many people to build or maintain parks. Although the New Deal reform impulse died by the end of the twentieth century, New Deal programs remained in effect and enjoyed high levels of support from the general public.

In his reelection campaign of 1936, FDR was able to convince enough members of his party to drop the two-thirds rule. This change in party procedures relating to presidential nomination would have far-reaching consequences for the Democrats and the nation. With this change, the South, with its system of racial segregation and intimidation, would lose its veto power over presidential nominees. As a result, Democrats seeking the presidency in the future would be able to discuss civil rights reforms and stand a chance of receiving the party nomination. The debate of ideas within the Democratic Party was expanded by this change. The liberal wing of the party gained enhanced influence, and this was crucial to the eventual success of many civil rights and civil liberties issues in the years ahead.

Although FDR's actions on behalf of repealing the two-thirds rule had positive effects in the long term, wartime led him, just as it had Wilson before him, to take actions that infringed on the civil liberties and civil rights of many Americans. It was during World War II that President Roosevelt signed an executive order establishing internment camps for Americans of Japanese ancestry. Those sent to camps had no way to appeal to justice, no chance to speak out against the action. Individuals were simply informed they had to leave their homes and enter a government camp.

With the election of Franklin D. Roosevelt in 1932, the Democratic Party took control of both houses of Congress. This control gave the new president an excellent opportunity to pass his New Deal programs to address the economic crisis of the Depression. *(National Archives)*

In taking this step, the president had the support of Congress and public opinion, but this episode in American history is illustrative of the power of a majority to take away basic freedoms of unpopular minority groups. Referred to as the "tyranny of the majority" by political theorists, it is truly a dangerous reality when it makes the leap from political theory to political reality. Although it is difficult in retrospect to grasp the intensity of the hatred toward Japan and the Japanese people, its effect on people of Japanese backgrounds in the United States is quite clear. Homes, investments, careers, and family possessions were lost as a result of this forced resettlement program of the U.S. government.

By the middle of the twentieth century, the Democratic Party was moving increasingly in the direction of supporting federal legislation to require basic civil rights for black Americans. President Harry S Truman desegregated the armed forces and sent to Congress a message on civil rights. He also delivered a public speech on civil rights. His actions caused the southern states to break with the Democrats in the 1948 election. Strom Thurmond of South Carolina ran as a Dixiecrat (a Democrat from the South) opposed to Truman's policies on civil rights. However, momentum continued to build for changes in the ways black Americans were treated. The Supreme Court's decision in *Brown v. Board of Education,* 347 U.S. 483 (1954), prohibited racially segregated schools. The emerging civil rights movement of the mid- and late 1950s set the foundation for the changes that would come in the 1960s.

Americans risked arrest, physical harassment, and even death in many southern states for expressing views in favor of equal rights for black Americans. As civil rights supporters began to express opinions publicly, tensions in the South increased dramatically. A young minister from Atlanta, Georgia, Dr. Martin Luther King Jr., became the leader of the movement.

Influenced by the work of the leader for Indian independence, Mahatma Gandhi, King believed it necessary to confront injustice peacefully but directly. In this way, the elements enforcing an unjust set of laws would become ashamed of their actions and changes would result. To carry out these measures, King led demonstrations, marches, and planning sessions. Every act of expressing ideas and planning ways to change American policy in the South was met with a set of dangers. Many people working for civil rights lost their lives, and King himself was under surveillance by the Federal Bureau of Investigation (FBI).

The Democratic Party of the 1960s moved to change policies on civil rights. Laws were enacted to guarantee the right to vote for black Americans and to prohibit discrimination in public accommodations, housing, and employment. It was also a time when greater tolerance was expressed with regard to protesters marching against the war in Vietnam and to news coverage of events during that war. However, officials in charge of the 1968 Democratic National Convention in Chicago displayed a less than enthusiastic embrace of people's civil liberties. Chicago police, at the direction of Mayor Richard Daley, tried to

repress the demonstrators who had gathered in that city for the Democrats' presidential convention. There were violent confrontations that resulted in several injuries.

In the years after 1968, a new group of politicians, more supportive of civil liberties than their predecessors, emerged as leaders of the Democratic Party. Certainly, the 1972 break-in of Democratic National Committee headquarters by agents associated with the Richard Nixon White House (an episode known as Watergate) made these Democrats more sensitive to issues tied to liberties and freedoms. Congressional Democrats started investigations of the Central Intelligence Agency (CIA) and the FBI, and these led to new limits on surveillance by the two agencies.

After the September 11, 2001, terrorist attacks in New York City and Washington, D.C., Congress passed the USA Patriot Act. Sought by the Republican administration of George W. Bush, the new legislation gave the Department of Justice new powers of surveillance over American citizens and noncitizens and of their indefinite detention by authorities. Critics charged that this legislation violated many civil liberties, such as the right to due process. Many Democrats voted in favor of the legislation. Despite that, opposition to the civil liberties policies of the Bush administration has come primarily from the Democratic Party.

Dennis v. United States (1951)

In *Dennis v. United States,* 341 U.S. 494 (1951), the U.S. Supreme Court held that in order for speech to be suppressed, there must be a showing that the would-be suppressor employed a balancing test and found the evil caused by the speech was greater than the protections guaranteed by the First Amendment of the U.S. Constitution. The case also served as what very well may be the loosest construction of the incitement test by the Court.

The plight of Eugene Dennis and his eleven comrades was the basis for the first major prosecution of Communists during the Cold War "red scare" of the 1950s. Dennis and eleven other Communist Party leaders were prosecuted under the Smith Act of 1940. The Smith Act "made it a crime to teach or advocate the violent overthrow of any government in the United States, to set up an organization to engage in such teaching or advocacy, or to conspire to teach, advocate, or organize the violent overthrow of any government in the United States." Dennis was indicted for conspiring, along with eleven other Communist leaders, to overthrow the U.S. government. The trial before Judge Harold Medina of the U.S. District Court for the Southern District of New York became known as the "battle of Foley Square," which referred to the name of the courthouse where the case was tried. Lasting for over nine months, the trial resulted in the conviction of the twelve Communist leaders and the creation of a 16,000-page court record.

On appeal, the case was heard by the U.S. Court of Appeals for the Second Circuit with judges Learned Hand, Thomas Swan, and Harrie Chase serving as the panel. It fell to that court's most lauded jurist, Learned Hand, to write the opinion in *United States v. Dennis,* 183 F.2d 201 (2d Cir. 1950), the precursor to the Supreme Court case. Judge Hand was no newcomer to the field of First Amendment law; in fact, he had penned the first major First Amendment incitement case, *Masses Publishing Co. v. Patten,* 244 F. 535 (S.D.N.Y. 1917), when he was a federal district court judge. But Hand's opinion in *Dennis* was vastly different from his earlier pronouncement.

First Amendment law had changed markedly in the thirty-three years since *Masses* was released, mostly as a result of World War II. During the late 1940s and early 1950s, a renewed fear of communism also became ever present. *Dennis* was decided in this atmosphere. Influenced by previous Supreme Court decisions and his own decision in *United States v. Carroll Towing Co.,* 159 F.2d 169 (2d Cir. 1947), a negligence case, Hand created a balancing test for incitement cases that the Supreme Court adopted less than a year later. "As we have said, 'clear and present danger' depends upon whether the mischief of the repression is greater than the gravity of the evil, discounted by its improbability; and it is of course true that the degree of probability that the utterance will bring about the evil is a question of fact." For Hand, this question of fact was best left to be answered by Congress.

Dennis was ultimately argued at the Supreme Court in December 1950, but the decision was not issued until the following June. Chief Justice Frederick M. Vinson delivered the opinion of the fractured Court and stated that "[s]peech is not an absolute, above and beyond control of the legislature when its judgment, subject to review here, is that certain kinds of speech are so undesirable as to warrant criminal sanction." But these words hid Vinson's intent to hamper communism in any way he could. To do this, the Court gave the government power to take action, even if there was no imminent threat, to stop communism. Vinson stated, "If the ingredients of the reaction are present, we cannot bind the Government to wait until the catalyst is added."

Vinson did not speak for the entire Court. Grounding their opinions upon the First Amendment historically, Justices Felix Frankfurter and Robert H. Jackson concurred only in the judgment. In fact, Justice Frankfurter's words were a harbinger of later free speech jurisprudence: "The language of the First Amendment is to be read not as barren words found in a dictionary but as symbols of historic experience illuminated by the presuppositions of those who employed them." Justice Hugo L. Black and William O. Douglas dissented strongly. Justice Douglas's declaration that "free speech is the rule, not the exception" became the battle cry of First Amendment advocates.

Dennis v. United States was to be the most restrictive decision the Court would issue concerning free speech, especially incitement. Later decisions chipped away at the edifice of anticommunism present both in this decision and in the nation as a whole. In fact, the Court in *Brandenburg v. Ohio,* 395 U.S. 444 (1969), would later adopt Hand's earlier opinion in *Masses* to protect those who held opinions disparate from the society at large.

Department of Justice

The Department of Justice (DOJ), created in 1870, has the primary responsibility of enforcing federal laws. In addition, the DOJ is involved with preventing and controlling crime and supervising federal prisons. The Attorney General (AG) of the United States heads the Department of Justice and is charged with the responsibility of investigating and prosecuting those who violate federal laws, including those who hinder others from enjoying their civil rights.

Several prominent federal law enforcement agencies are part of the DOJ, including the Federal Bureau of Investigation, the Drug Enforcement Administration, the U.S. Marshals, and the Civil Rights Division. Of course, not only must these agencies investigate and prosecute violation of civil rights laws, but they also are bound to respect those same laws as they conduct their activities.

HISTORY

Congress enacted the Judiciary Act of 1789, which provided for a U.S. attorney general (AG) and district attorneys to manage criminal and other matters that involved the interests of the federal government. During this period the district attorneys were not under the supervision of the AG and were free to hire private counsel to assist them with government matters. However, as the nation and its business grew, Congress saw the need for a federal agency to administer these matters and established one by law in 1870.

LAW ENFORCEMENT AGENCIES UNDER THE DOJ

Federal Bureau of Investigation (FBI)

Initially named the Bureau of Investigation in 1908, this agency was renamed the Federal Bureau of Investigation (FBI) in 1935. An investigative agency of the federal government, the FBI has jurisdiction over federal crimes, including civil rights violations. J. Edgar Hoover headed the FBI from 1924 to 1972. Although he was credited with advancing the professionalism of the agency—for example, establishing the FBI training academy and the FBI's Ten Most Wanted List—Hoover also indulged in controversial acts that hindered the integrity of the agency for decades.

J. Edgar Hoover headed the Federal Bureau of Investigation (FBI) from 1924 to 1972. An investigative agency of the federal government, the FBI has jurisdiction over federal crimes, including civil rights violations. *(National Archives)*

U.S. Marshals Service

President George Washington named the first appointees to the U.S. Marshals Service in 1789. Responsibilities of these early marshals included protecting government officials and providing law enforcement for unsettled western territories. With the development of state governments, the marshals were assigned to work for U.S. district courts and provide various services. Some services, such as providing security for federal courts, judges, and witnesses, remain an integral part of their work today. A more recent responsibility of U.S. marshals came as a result of the enactment of the 1984 Comprehensive Crime Control Act and its provisions for forfeiture of assets. U.S. marshals are given the responsibility for the inventory and disposal of property seized as a result of defendants' federal offenses. Although the U.S. Marshals Service is the oldest federal law enforcement service, it was not given agency status until 1969.

Drug Enforcement Administration (DEA)

The Drug Enforcement Administration (DEA) is charged with the responsibility of enforcing the drug laws and regulations in the United States. In addition, the DEA assists other law enforcement agencies in the investigation of crimes involving the manufacturing, distribution, and trafficking of legal and illegal controlled dangerous substances.

The forerunner of the DEA was the Federal Bureau of Narcotics, which was established in 1930. Multiple agencies became involved with drug crime as illegal drug use grew. There was no coordination of these law enforcement efforts until 1973, when the DEA was formed to assist in this area.

DOJ AND CIVIL LIBERTIES

The Department of Justice has a significant history of investigating civil rights violations. As a result of the civil rights movement, Congress passed important civil rights legislation during the 1960s. Attorney General Robert F. Kennedy used the new laws to involve the DOJ in civil rights violations. These federal laws were designed to criminalize behaviors that interfered with or deprived others of their constitutionally protected civil liberties, including (1) conspiracy to deny civil rights; (2) forcible interference with civil rights (prohibiting interference with individuals who are exercising their constitutionally guaranteed rights, such as enrolling in a public school or eating in a public restaurant); (3) deprivation of civil rights under color of law, which prohibits public officials from attempting to deprive individuals of their civil rights through the power of their office; and (4) willful interference with civil rights under the Fair Housing Act, which prohibits any interference with individuals' right to buy, rent, or live in their home.

Despite the mandate of the DOJ that included enforcement of federal civil rights laws, the agency did not always observe that charge. J. Edgar Hoover, the most famous and controversial director of the FBI, used illegal investigative techniques, such as unauthorized wiretaps, against several civil rights advocates. Hoover and the FBI targeted Dr. Martin Luther King Jr. for such treatment, thereby compromising his constitutional rights.

In more recent years, legislation adopted to wage war against terrorism has given the DOJ greater law enforcement powers that concern some civil rights advocates. For example, the FBI has greater latitude in conducting electronic surveillance of religious and political organizations and in detaining foreign nationals suspected of terrorism for longer periods of time without charging them. Some civil rights advocates view the increased powers of the DOJ with suspicion, as being potentially in violation of such constitutional rights as due process.

DeShaney v. Winnebago County Department of Social Services (1989)

In *DeShaney v. Winnebago County Department of Social Services,* 489 U.S. 189 (1989), the U.S. Supreme Court refused to hold a local governmental agency liable for violating an individual's right to due process when it failed to act to protect a son from his father's abuse. Joshua DeShaney and his mother had sued the Winnebago County Department of Social Services alleging that it had deprived Joshua of his liberty interest in violation of his rights under the Fourteenth Amendment's Due Process Clause. Joshua DeShaney was a young child who had been subjected to a series of beatings by his father. County social services and several of its social workers received complaints that Joshua's father was abusing him, but did little to protect him and did not intervene on his behalf when strong evidence of child abuse existed. Joshua's father finally beat him so severely that he suffered permanent brain damage and was rendered profoundly retarded.

The U.S. Supreme Court held in a six–three de-

cision written by Chief Justice William H. Rehnquist that nothing in the Fourteenth Amendment required a state to protect its citizens from a violation of their rights by a private individual. The Court found that the Due Process Clause is phrased as a limitation on the state's power to act, not as a guarantee of certain minimal levels of safety and security. The clause forbids the state itself from depriving individuals of life, liberty, or property without "due process of law," but its language cannot fairly be extended to impose an affirmative obligation on the state to ensure that those interests do not come to harm through other means. The majority further held that Joshua's father created the danger, not the government. The government's duty to protect persons against violence amounts to a violation of due process only when the state creates the danger, such as if Joshua were injured while in the state's custody at a prison.

In dissent, Justices William J. Brennan Jr., Thurgood Marshall, and Harry A. Blackmun argued that inaction can be every bit as abusive as action, and that oppression can result when a state undertakes a vital duty and then ignores it. The dissenters argued that direct physical control was not required to create a duty on behalf of the state, and that the state's knowledge of an individual's predicament and its expressions of intent to help that person could amount to a limitation on the individual's freedom to act on his or her own behalf or to obtain help from others. The dissenters claimed that through its child protection program, the Winnebago County Department of Social Services actively intervened in Joshua's life, became increasingly certain that Joshua was in grave danger, and failed to protect his life and liberty. They claimed the Fourteenth Amendment was, in part, designed to undo the formalistic legal reasoning that infected antebellum jurisprudence, and they argued for a broader reading of the amendment that comported with dictates of fundamental justice.

The case is symbolic for its clarification of positive and negative rights under the Fourteenth Amendment. The majority held that an individual's civil liberties are negative rights with which the state must not interfere; nothing in the language of the Due Process Clause itself requires the state to protect the life, liberty, and property of its citizens against invasion by private actors. The minority argued that civil liberties are positive rights that impose an affirmative duty on the state for protection. They pointed to the U.S. constitutional tradition, the origins of the right to protection, and the meanings and applications of the Fourteenth Amendment to prove the need for a federal guarantee of the right to protection as an essential part of the amendment's history.

Dickerson v. United States (2000)

In *Dickerson v. United States,* 530 U.S. 428 (2000), the U.S. Supreme Court declared unconstitutional a federal statute that permitted use of "voluntary" confessions at trial even if secured in violation of *Miranda v. Arizona,* 384 U.S. 436 (1966), the case that gave rise to the famous *Miranda* warnings the Court held that law enforcement officials must give criminal defendants to advise them of their rights under the Fifth and Sixth Amendments. Two years after the Court's decision in *Miranda,* Congress enacted the Crime Control and Safe Streets Act of 1968 (CCSSA). Under *Miranda,* confessions secured in violation of the warnings police were required to give suspects prior to custodial interrogation were inadmissible at trial. Section 3501 of the CCSSA, as codified, provided, however, that a *Miranda* violation was only one factor to be considered by courts in determining whether a confession was "voluntary" and therefore admissible in federal criminal prosecutions.

Given the obvious inconsistency between the *Miranda* decision and the 1968 statute, both Democratic

and Republican administrations consistently declined to invoke CCSSA's section 3501. Beginning with *Harris v. New York,* 401 U.S. 222 (1971), however, the Supreme Court recognized exceptions to the *Miranda* ruling. In *Harris* the Court held, for example, that confessions secured in violation of *Miranda* could be used to impeach a defendant's trial testimony. Later cases upheld use of *Miranda*-tainted confessions to secure other evidence against the accused and held that *Miranda* did not apply to grand jury proceedings or to questioning in the field designed to prevent imminent threats to public safety. As a rationale justifying such exceptions, a majority reasoned that *Miranda* was a judicially created prophylactic designed to deter police misconduct rather than a constitutional requirement applicable to every context.

Against that background, a federal district judge in Virginia suppressed statements that accused bank robber Charles Thomas Dickerson made to police on the ground that although they were voluntary under traditional constitutional standards, they were secured in violation of the required *Miranda* warnings. The government appealed that ruling to the U.S. Court of Appeals for the Fourth Circuit.

The trial judge had not included consideration of section 3501, and the Department of Justice had forbidden the local U.S. attorney to raise it on appeal. Nevertheless, in a highly unusual move, a divided appeals court panel, declaring that "[f]ortunately, we are a court of law and not politics," 166 F.3d 667, 672 (5th Cir. 1999), used the case to hold that section 3501, not *Miranda,* governed the admissibility of confessions in federal court. Citing *Harris* and its progeny, the panel reasoned that *Miranda* was not a constitutional requirement but merely a judicially created rule that Congress had power to overrule through legislation, such as section 3501.

Acting for the government, the solicitor general refused to raise a section 3501 claim before the Supreme Court. As a result, the Court named a scholarly critic of the *Miranda* decision as an amicus curiae (friend of the court) to defend the law's constitutionality. His efforts, however, were to no avail. Speaking through Chief Justice William H. Rehnquist, himself a frequent *Miranda* critic over the years, a seven–two majority concluded that *Miranda* had a constitutional basis and that section 3501 thus conflicted with the Constitution. Distinguishing *Harris* and related rulings, Rehnquist conceded that language in a number of the Court's opinions supported the Fourth Circuit's position, but he emphasized that no constitutional rule was immutable—that all were subject to modification in later cases. He insisted, moreover, that *Miranda* had constitutional underpinnings, especially since it had been consistently applied in state as well as federal cases even though the Court had no general supervisory power over state courts of the sort it exerted over federal judges, only the authority to assure that state-court rulings conformed to the Constitution. Leaving open the question of whether the current Court would adopt the *Miranda* rule were the issue before the justices for the first time, Rehnquist further concluded that the force of *stare decisis* (to adhere to previous decisions, pronounced *STAR-ry de-SI-sis)* weighed heavily against overruling a precedent of such long standing.

Justice Antonin Scalia, joined by Justice Clarence Thomas, registered a biting dissent. Scalia readily conceded that the fairest reading of *Miranda* would assign the warnings announced there the status of a constitutional rule. He contended, however, that the Court had long since abandoned that notion, endorsing instead the position that *Miranda* constituted only a judicially created rule broader than the constitutional ban on compulsory self-incrimination. Since, as the majority observed, the Court could not require state courts to adhere to such nonconstitutional rules, Scalia declared, *Miranda* should be overturned.

Directed Verdicts

A directed verdict is a court-ordered disposition of a civil lawsuit after trial has begun. Such action is handled under the court's procedural rules, such as the *Federal Rules of Civil Procedure* that govern trials in federal courts, combined with assessment of sufficiency of the evidence. Typically, the defendant moves for a directed verdict at the end of plaintiff's presentation of evidence. If the judge determines that the evidence presented is insufficient to supply the jury with any reasonable basis to find for the plaintiff, the judge may withdraw the case from the jury and enter judgment as a matter of law for the defendant. This is called a directed verdict.

If the judge does not grant the motion for a directed verdict, the defendant typically proceeds to present evidence, and the jury renders a verdict. After the verdict, the losing party may ask the court to grant a "judgment notwithstanding the verdict" (sometimes called judgment NOV) of the jury. Once again, the court will make a determination of whether the evidence is sufficient, this time in relation to the verdict of the jury. If there is not sufficient evidence to support the verdict, the court will reverse the jury determination and grant judgment notwithstanding the verdict.

Both the directed verdict, typically granted at the end of plaintiff's evidence, and the judgment notwithstanding the verdict, granted after the jury decision, are governed by the same legal standard. Under the *Federal Rules of Civil Procedure,* both the directed verdict and the judgment notwithstanding the verdict are alternative forms of *judgment as a matter of law.* Judgment as a matter of law may also be granted on behalf of a defendant in a federal criminal proceeding under the *Federal Rules of Criminal Procedure.*

Although the standard for granting a directed verdict or a judgment notwithstanding the verdict is the same, the precise nature of that standard has varied among courts and throughout time. Some courts, erring on the side of preserving the greatest role possible for the jury, refuse to grant a directed verdict if there is *any* evidence to support the nonmoving party, sometimes referred to as the requirement of a mere *scintilla of evidence.* Other courts, less jury-friendly, have required that there be *substantial evidence* to avoid a directed verdict. Some courts consider only the evidence presented by the nonmoving party; others consider the same evidence but only when viewed most favorably to the nonmoving party; and still others purport to consider all of the evidence. The modern standard under the *Federal Rules of Civil Procedure,* Rule 56, is that judgment as a matter of law should be entered against a party when "there is no legally sufficient evidentiary basis for a reasonable jury to find for that party."

The concept of the directed verdict initially appears to be inconsistent with the right to a jury trial guaranteed by the Seventh Amendment to the U.S. Constitution. When the court grants the motion, the jury never gets to decide the case.

When there is a genuine dispute over which party should win based on conflicting evidence, the jury must decide. If one party's evidence is so weak or so limited that only one reasonable conclusion could be reached based on it, then the judge has the right to direct a verdict—that is, to grant judgment as a matter of law; there is nothing for the jury to decide. In this context, the constitutional right to trial by jury is not impaired.

Disability Rights

In the United States, the civil rights of people with disabilities are primarily ensured by the Due Process and Equal Protection Clauses of the Fourteenth Amendment to the Constitution. In addition, landmark national legislation has been passed since the 1960s aimed at codifying specific rights and antidiscrimination protection in areas such as education, em-

ployment, and access to public services and accommodations. In the area of disability, questions over the cost of strict implementation and the interpretation of statutory provisions often make these rights uncertain.

HISTORICAL PERSPECTIVE

Historically, the rights of the disabled were not ensured or protected. Legislatures avoided the topic, and the courts did not often rule in favor of the disabled. One of the first major court cases concerning the rights of the disabled was *Buck v. Bell,* 274 U.S. 200 (1927), in which the U.S. Supreme Court allowed the state forcibly to sterilize a mentally handicapped woman, Carrie Buck. In its decision, the Court found that the state had a legitimate interest in preventing "those who are manifestly unfit from continuing their kind." Using a consequentialist argument, the Court found that the state could engage in this action if it benefited the rest of society.

LEGISLATION

Social Security

Despite the Court's decision in *Buck,* by the end of World War I Americans were beginning seriously to consider the civil rights and liberties of the disabled. Among the first significant laws to benefit the disabled was the Social Security Act of 1935. This piece of legislation authorized assistance to blind and disabled children in the form of matching grants to the states. However, assistance under the original act was limited, and not until the 1950s was the Social Security Act amended to include substantial disability rights. The 1950 amendment provided public assistance in the form of state grants-in-aid to permanently and totally disabled individuals. In 1954, the Vocational Rehabilitation Act was revised, and in 1956, Social Security Disability Insurance (SSDI) was created for disabled workers ages fifty to sixty-four. A number of important acts have been adopted since then.

President George H. W. Bush signs into law the Americans with Disabilities Act of 1990 (ADA) on the south lawn of the White House, July 26, 1990. The ADA was the most important federal law protecting the rights of the disabled.
(George Bush Presidential Library)

Architectural Barriers Act

Congress passed the Architectural Barriers Act in 1968. Considered to be the first truly federal disability rights legislation, this law mandated that all federally constructed or leased buildings be accessible to those with physical disabilities.

Rehabilitation Act

The Rehabilitation Act of 1973 was enacted "to promote the rehabilitation, employment, and independent living of people with disabilities." The act was proffered with no significant commitment of federal authority. Section 504, a somewhat routine inclusion, was but a tip of the hat to equal access for people with disabilities, physical and mental. This provision, which was modeled after Title VII of the Civil Rights Act of 1964, prohibits employers who receive federal financial assistance, federal employers, and employers having certain contracts with the federal government from discriminating against people with disabilities. Section 504 represented a significant departure from the assumptions of dependency and incapacity inherent in much of the earlier U.S. vocational rehabilitation policy.

Individuals with Disabilities Education Act (IDEA)

Congress adopted the Education for All Handicapped Children Act in 1975 on the basis that "improving educational results for children with disabilities is an essential element of our national policy of ensuring equality of opportunity." This bill established the right of children with disabilities to a public education that is individualized to meet each disabled child's needs. It also called for the public school system to mainstream this education by educating disabled children alongside their peers who were not disabled. In *Honig v. Doe,* 484 U.S. 305 (1988), the Supreme Court affirmed the "stay put" rule of the legislation under which a disabled child could not be moved, expelled, or suspended from the child's agreed-upon "individualized education program" without due process. In 1997 the Congress reauthorized the act under the title Individuals with Disabilities Education Act (IDEA). The reauthorization sought to strengthen parental and child involvement in individualized education programs, increased and strengthened assessment programs, and provided additional funding through state programs.

Developmentally Disabled Assistance and Bill of Rights Act

In 1975 the Developmentally Disabled Assistance and Bill of Rights Act provided federal funding for programs assisting the developmentally disabled. It also delineated the rights of those who are institutionalized. However, subsequent Supreme Court rulings effectively blocked some of the rights and liberties in the legislation. In *O'Connor v. Donaldson,* 422 U.S. 563 (1975), the Court, relying on due process rights, ruled that nondangerous individuals who were found to have a mental illness could not be held without their consent or treatment. However, in *Pennhurst State School v. Halderman,* 451 U.S. 1 (1981), the Court significantly narrowed the scope of disability policy when it found that the Developmentally Disabled Assistance and Bill of Rights Act constituted merely federal-state funding statutes, and there was no obligation for the states to provide the high costs of "appropriate treatment" and a "least restrictive environment" to its mentally retarded citizens. This decision overturned a Pennsylvania appellate court's ruling that the unsafe, unsanitary, and inhumane conditions at the Pennhurst State School violated both the Due Process Clause and the Equal Protection Clause of the Fourteenth Amendment. Justice William H. Rehnquist's opinion stated that the Developmental Disabilities Assistance and Bill of Rights Act did not imply that states must enforce Fourteenth Amendment guarantees.

Americans with Disabilities Act (ADA)

With the Americans with Disabilities Act (ADA) of 1990, Congress acted in order "to provide a clear and comprehensive national mandate for the elimination of discrimination against individuals with disabilities." This law has been hailed as the most comprehensive guarantee of civil liberties and civil rights for disabled

individuals. Similar to, but more comprehensive than, the Rehabilitation Act, the ADA defines disability as (1) a physical or mental impairment that substantially limits an individual's major life activities, (2) a record of such an impairment, or (3) being regarded as having such an impairment. The ADA expands the employment coverage of the Rehabilitation Act to include entities in the private sector. Further, the ADA significantly expands the scope of antidiscrimination protection for people with disabilities to include public services and public accommodations and services operated by private entities.

LIMITATIONS ON CIVIL RIGHTS

The rights of the disabled have waxed and waned, not only with federal legislation but also with various Supreme Court decisions. In *Cleburne v. Cleburne Living Center,* 473 U.S. 432 (1985), for example, the Court applied the Equal Protection Clause of the Fourteenth Amendment to argue that localities may not prevent group homes for the disabled from being built in residential areas solely because the residents are disabled. However, in *Heller v. Doe,* 509 U.S. 312 (1993), the Court carefully distinguished between mental retardation and mental illness to allow the guardians of the mentally retarded to commit them to state facilities against their wishes.

The ADA, which dramatically expands the rights delineated in the Rehabilitation Act, defines people with disabilities as an "insular minority." Yet, the civil rights of these people are far less absolute than those for other groups considered insular minorities. Amendments to the Rehabilitation Act allow investigation of what is "reasonable." Similarly, "undue hardship" is the safe harbor that prevents many accommodations from being deemed "reasonable" under the ADA's Title I employment protection. In *Olmstead v. L.C.,* 527 U.S. 581 (1999), the ADA's Title II protection was also interpreted to permit cost to be a consideration in a municipality's provision of public services.

In 1999 the Supreme Court issued a trio of opinions that established precedent for a dramatic narrowing of the ADA's Title I employment protection. In *Sutton v. United Air Lines, Inc.,* 527 U.S. 471 (1999), the Court affirmed a lower-court decision that the petitioners, commercial airline pilots with correctable vision, were not substantially limited in any major life activity. Thus, the twin sisters had no claim of disability under the ADA, as they were precluded from one specific job, not a class of jobs. Using similar reasoning, in *Murphy v. United Parcel Service, Inc.,* 527 U.S. 516 (1999), the Court held that a mechanic with controllable high blood pressure was not precluded from a class of mechanic jobs, as necessary for ADA protection, rather only from mechanic jobs that required driving commercial vehicles. In *Albertsons, Inc. v. Kirkingburg,* 527 U.S. 555 (1999), the Court held that the appellate court was in error when it found a monocular truck driver disabled for purposes of ADA protection, as he continued to work in a mechanic position that he had held for more than twenty years.

The concept of federalism has also come to play an important role in the judicial application of the ADA's protection. In *Board of Trustees v. Garrett,* 531 U.S. 356 (2001), the Supreme Court decided that Title 1 of the ADA was unconstitutional when applied to state employees. The petitioners sued their state employers for violations of the ADA. The Court found the Eleventh Amendment, which prohibits private citizens from suing the state in federal court, applied to the ADA, and thus disabled state workers could not sue their respective states to recover monetary damages. However, states are still required to follow the mandates of the ADA, and state employees can pursue enforcement of the law. In *Tennessee v. Lane,* 124 S. Ct. 1978 (2004), the Supreme Court ruled that states may be sued if they deny disabled individuals access to the courts. In this case, George Lane was using a wheelchair when he was required to appear in court. Because the courthouse lacked a ramp or elevator, Lane had to crawl up two flights of stairs to reach the courtroom. Overall, states are still required to follow the mandates of the ADA, with state employees and some private individuals able to pursue enforcement of the law.

The struggle to attain rights and civil liberties thus continues for disabled individuals and their advocates. Organized political groups and movements as well as individual citizens continue to seek new and improved legislation as well as court decisions that will promote

equality of opportunity and inclusion and eliminate discrimination against disabled people.

Discovery

Discovery is the process during litigation, either civil or criminal, by which the parties and their attorneys disclose information relating to the litigation. Discovery is important because it can reveal whether there is sufficient evidence, for example, to continue a case. In a criminal case, discovery allows the accused to see what evidence the prosecution has and thus be more able to develop a defense. Discovery rules and methods differ among the various state and federal jurisdictions and between civil and criminal litigation; in cases in federal courts, the *Federal Rules of Civil Procedure* and the *Federal Rules of Criminal Procedure* govern discovery. Discovery rules may also differ as to whether a party must disclose information merely because the action has been filed, or whether a party must disclose information only at the request of the other party. No matter what rules and methods apply, the philosophy behind modern discovery rules is to preserve the fairness of the trial and prevent surprise at trial.

Discovery permits a party to gain access to evidence in the opponent's sole possession. It permits one party to anticipate the other party's theories of the case. Discovery improves the productivity of the investigative process by requiring the parties to share names of witnesses. It also preserves witnesses' testimony. Discovery enhances efficiency in the trial process so that the parties, in advance of trial, can determine what the witnesses know. The parties can then determine which witnesses should be called at trial and, if called, the subject of the testimony. Discovery exchange gives parties the information needed to decide to negotiate a settlement or proceed to trial.

Modern discovery rules permit discovery into "any matter, not privileged, that is relevant to the subject matter of the pending action," or under recent amendments to the federal rules, "any matter, not privileged, that is relevant to the claim or defense of any party."

State rules normally require a party to disclose information only if the other party requests, whereas federal rules automatically mandate disclosure of some information. Both systems provide for interrogatories, depositions, requests for admission of fact and law, and requests for production of documents and tangible things. Interrogatories are written questions a party must answer in writing under oath. A deposition is a transcribed question-and-answer session in which a party or other witness under oath answers questions asked by an attorney. In certain circumstances, a party may use these depositions as a substitute for a witness's live testimony at trial. Requests for admissions of fact and law reduce the number of issues in dispute by a party admitting them. Requests for production of documents and tangible things make documentary and tangible evidence available to the parties.

The federal rules not only permit these discovery methods but also require voluntary disclosure of certain information shortly after the filing of suit. Each party must initially disclose the identity of individuals likely to have information the party may use to support a claim or defense. Each party must also produce

a copy or description and location of all documents, data compilations, or tangible things the party may use to support a claim or defense. A party seeking damages must produce a computation of the damage claims and the documents upon which the computation depends. Those defending a damage claim must produce any insurance agreement that may be liable to satisfy part or all of any judgment entered in the case. All parties must identify and produce a written report of any experts expected to testify at trial.

A party may object to certain requested discovery on various grounds, such as that the discovery seeks to invade the attorney-client privilege (what clients tell their attorney is confidential), seeks to invade the marital privilege (one spouse has the privilege not to testify against the other spouse), seeks the mental impressions and theories of the attorney (commonly called attorney work product), or is not reasonably likely to lead to the discovery of admissible evidence. The court then decides the discovery dispute, or the parties may resolve the issue by negotiation.

After completion of this initial discovery and in advance of trial, courts may require the parties to identify witnesses expected to testify at trial, witnesses expected to testify by deposition, and documents or things the parties expect to introduce into evidence.

Criminal discovery rules rely upon the same discovery methods but also provide for the prosecution's disclosure of certain information, upon request, without a court order. These include

1. The identity of persons the government intends to call as witnesses, along with any written or recorded statements and memoranda reporting oral statements;
2. Any defendant or codefendant's written or recorded statements and the substance of any oral statements the person made;
3. Those portions of any existing transcript of grand jury proceedings containing the testimony of the defendant and any persons whom the state intends to call as witnesses;
4. Any existing transcript of the preliminary hearing and any prior trials held in the defendant's case;
5. Any reports or statements of experts concerning the case, including the results of any physical or mental examinations and of scientific tests, experiments, or comparisons;
6. Any books, papers, documents, or photographs the government intends to introduce, which were obtained from or belong to the defendant;
7. Any record of any prior criminal convictions for any of the witnesses the state intends to call;
8. Any criminal charges against a witness the state intends to call and whether any deal exists between that witness and the prosecution;
9. A written statement by counsel for the government setting forth the facts relating to the time, place, and person making any photograph or electronic surveillance;
10. Any material or information that tends to negate the guilt of the defendant, mitigate the degree of the offense, or reduce the punishment; and
11. If the state expects notice of any defense of alibi, the date, time, and place of the alleged offense.

In turn the prosecution may request the defendant to disclose these items:

1. Reports or statements of experts in connection with the case;
2. Results of physical or mental examinations and scientific tests, experiments, or comparisons the defense intends to introduce;
3. The identity of witnesses the defense intends to call, together with written or recorded statements and memoranda reporting part or all of their statements;
4. Those parts of any books, papers, documents, photographs, or objects the defendant intends to introduce;
5. Whether the defendant intends to rely on the defense of mental disease or defect (insanity); and
6. The identity of any witnesses to any alibi defense.

Postjudgment discovery occurs after trial and judgment, usually to determine the nature of the judgment debtor's assets or to obtain testimony for use in future proceedings.

DNA Testing

The collection of large databases of deoxyribonucleic acid (DNA) identifiers is a double-edged sword for the public and civil rights. At conflict are the scientific ability to specifically identify a person beyond doubt, on the one hand, and the protection of individual privacy and liberty, on the other. DNA is of major importance in criminal prosecutions but also plays a critical role in civil cases such as suits to establish paternity.

As the blueprint for every cell in the body, DNA is truly individual, with the minor exception of identical twins. Several DNA "markers" can be reviewed from cells to narrow a pool of people to a single person. The testing of DNA has been used to identify the perpetrators of crimes and to exonerate the innocent. DNA also is collected to identify U.S. military members.

The Justice Department prepared a research report that included twenty-eight case studies for individuals exonerated by DNA evidence after they were found guilty in a jury trial. The report revealed significant policy implications regarding validity of eyewitness testimony, definitions of "expert witness," and laboratory standards applicable to samples from crime scenes. Third-party consensual sex in rape cases, multiple-defendant crimes, and time frames for the completion of testing also were issues raised in the report.

In another set of cases, the quality of DNA testing and the credentials of individuals performing these tests were at issue. In Bexar County, Texas, the forensic expert, Frank Zain, lied. Inconclusive test results were evaluated in favor of the prosecution, and Zain testified in several cases that test results confirmed the defendant had committed the crime. Zain and his testing results were excluded, after which four other cases were appealed in West Virginia. Retesting excluded those individuals as well. More than 130 cases in West Virginia and Texas came under doubt because Zain was the testing specialist involved.

In 1998 the National Institute of Justice (NIJ) reported on the wide uses of DNA testing and noted the increasing awareness of a variety of shortfalls in the processes of collection, use, and capacity of testing in the sphere of law enforcement. The NIJ also took note of the significant backlog of testing already evident in that year.

More recently, the NIJ reported to the Attorney General's Office on delays in forensic DNA analysis. The NIJ estimated that 350,000 rape and homicide cases were awaiting DNA testing. A significant portion of these samples were being held at the 17,000 law enforcement agencies, not in laboratories. Much of this backlog was the result of resource shortfalls, jurisdiction funds, and lack of adequately trained technicians and scientists.

In addition to samples directly related to crimes, all states have mandates for the collection of samples from convicted felons (in thirty-three categories of crimes) for inclusion in the DNA databases. These databases are usually a state system but have been pulled together by the Federal Bureau of Investigation into the Combined DNA Index System (CODIS). The collection of DNA samples from individuals convicted of crimes has been challenged under the First, Fourth, and Fifth Amendments to the Constitution, but these claims have often failed because of the assumption that these individuals have forfeited some of their rights through the commission of a crime or that the collection of a sample is not subject to the same search and seizure protections (Fourth Amendment) as a home or property. The rationale is that the collection of DNA is for identification purposes only and is unrelated to a criminal investigation. This DNA information may help to "identify" the individual in unsolved cases.

Privacy concerns regarding samples collected through other mechanisms must be considered. The Armed Forces Institute of Pathology in Maryland has

Texas Governor Rick Perry at the signing ceremony for legislation providing for postconviction DNA testing, Washington, D.C., April 2001. Since the late 1990s, DNA evidence has led to the overturning of the convictions of over 100 individuals convicted of murder and sentenced to be executed. *(© Bob Daemmrich/The Image Works)*

collected over 3.3 million DNA samples from military members since 1994. Although the destruction of samples may be requested, this can occur only after the person completes all military service; for many individuals, this could be a lifetime. A person beginning a career that spans thirty years and is "retired" to the inactive reserve would remain registered.

Many universities have DNA banking programs for research and organ transplants. These programs conduct epidemiological studies that have a great deal of value in genome projects and treatments of disease and conditions ranging from arthritis to mental disease to cancers. These DNA banks could be compromised under the guise of research. The release of genetic information that could be tied to an individual could result in invasion of privacy and curtailment of liberty. An individual might be excluded from the workplace or not allowed a driver's license because of genetic markers for hemophilia (a blood-clotting disorder) or chorea (a nervous system disorder).

Realistically, the collection of DNA samples has a potentially massive impact on the scope of privacy for an individual. The public may see clear reasons to collect samples in order to identify war dead, to condemn or exonerate alleged criminals, and to cure disease. The release of genome information for other purposes, however, could be deleterious: Insurance companies could potentially exclude coverage for "preexisting conditions"; groups could be stigmatized in schools or workplaces because of a genetic anomaly; inferences regarding the legitimacy of birth could destroy families. Critics concerned about the erosion of personal liberties are aware of the potential shortfalls and fears associated with the indiscriminate collection of DNA samples and are concerned that such collection could result in major discrimination in the future.

As early as the mid-1990s, experts began offering proposals for the control of personal information developed through the collection of DNA samples. The Genetic Privacy Act of 1995 was a model law created by three professors at the Health Law Department at Boston University's School of Public Health. The model act defines the term "DNA sample" as "any human biological specimen from which DNA can be extracted, or DNA extracted from such specimen." This would be a valuable definition because patients provide potential DNA samples through routine blood donation or routine laboratory studies.

The collection of DNA information has surely aided law enforcement in the identification of perpetrators of crime and in the elimination of potential suspects. Like all sources of personal information, DNA has proved very useful but at the same time may be misused. There have been efforts to control the dissemination of personal information procured through medical activities. For example, the Privacy Act of 1974 provides for the control and release of information and includes conditions for "need-to-know" parameters, such as access by law enforcement, debt collectors, and the census. The law also provides civil remedies and criminal penalties for the unauthorized release of information.

The Health Information Portability and Accountability Act (HIPAA) of 1996 and subsequent regulations require providers of medical care to control personal information, to notify the individual of any release of that information, and to adopt other protective measures. The balancing test between society's needs to identify an individual fully and that individual's right to privacy will no doubt be refined in the courts.

The engagement of policy makers, law enforcement, the medical community, and, most important, the public will be critical to determining the boundaries of DNA collection and use. Key components will be the ability to bifurcate personal information from samples and a provision for the subsequent destruction of samples after reasonable use.

Doe v. Bolton (1973)

On January 22, 1973, the same day it handed down its landmark opinion in *Roe v. Wade,* 410 U.S. 113 (1973), recognizing a woman's right to choose abortion, the U.S. Supreme Court decided a companion case, *Doe v. Bolton,* 410 U.S. 179 (1973), finding unconstitutional a Georgia law that regulated abortions.

Sandra Bensing, who was publicly designated as "Mary Doe," had attempted to receive a therapeutic abortion in Atlanta, Georgia, in 1970. The pregnancy she wished to terminate was her fourth. Two of her previous children were in foster care; the third had been adopted. She and her husband, who was employed only sporadically and who had abused both Sandra and the children, were separated at the time. In addition, she had spent time in a state psychiatric hospital. When Sandra's attempt to secure an abortion was denied by the hospital, she brought a case against state Attorney General Arthur K. Bolton. Also joining the suit were a number of physicians who claimed that the Georgia law chilled and deterred their practice of medicine, as well as several clergy, nurses, and social workers.

The Georgia legislation, which had been adopted

in 1968, was considered a reform statute compared with laws that totally banned abortion. Performing an abortion remained a crime under the 1968 law, but it provided a series of conditions under which the procedure could be legal. A physician, licensed in the state, must find that terminating the pregnancy was necessary to protect the life or health of the mother, either because the fetus was likely to be born with a grave and permanent mental or physical defect or because the pregnancy was the result of rape. The mother had to be a Georgia resident. In addition, the law required that two other physicians must independently concur in the diagnosis and that three members of the hospital's staff, serving on a special committee, must also approve the procedure. After all those authorizations, the abortion had to be performed in a specially licensed hospital.

In a seven–two decision, the Supreme Court found the Georgia law unconstitutional. Reiterating that they did not believe a woman's constitutional right to an abortion was absolute, the justices found that the restrictions creating the three-stage approval process were not justifiable because they interfered with a woman's decision made in accordance with her physician's best clinical judgment that an abortion was necessary. No other medical procedures required physicians to seek approval as a matter of criminal law. The Court also found unconstitutional the provision mandating that a woman seeking an abortion be a Georgia resident. A state could not limit the medical care within its borders to its own residents.

Justices Byron R. White and William H. Rehnquist dissented, as they had in *Roe v. Wade.* They claimed that, in both decisions, the Court was valuing the convenience or whim of mothers over the life of the fetus. They believed that the majority was exceeding its powers by creating a new constitutional right and overriding the will of citizens expressed through state legislation banning or limiting abortion rights.

Doe v. Bolton is significant as a supplement to *Roe.* Whereas the latter decision found state laws that prohibited abortion unconstitutional, *Doe* held that laws imposing unacceptable restrictions on legal procedures were also unconstitutional.

Dolan v. City of Tigard (1994)

State and local governments are empowered to restrict the use of private property through the use of zoning regulations and building permits. These ordinances are frequently intended to alleviate flooding and traffic congestion around a developed area. Yet these regulations must abide by the Fifth Amendment, under which the government must compensate individuals when their property is taken for public use, a provision referred to as the Takings Clause.

In *Dolan v. City of Tigard,* 512 U.S. 374 (1994), the U.S. Supreme Court considered the balance between zoning regulations and the Takings Clause. Florence Dolan sought to expand her hardware business by extending her building and paving a parking lot for her customers. The city of Tigard agreed to issue a building permit for her expansion with the requirement that she surrender approximately 15 percent of her land to build a greenway/bicycle path and to provide for flood control for a nearby creek.

Dolan refused the permit requirements and sued the city. She claimed that Tigard was taking her property without compensation. The Supreme Court agreed. In his opinion for the five-member majority, Chief Justice William H. Rehnquist referred to the Court's opinion in *Nollan v. California Coastal Commission,* 483 U.S. 825 (1987). In *Nollan,* the Court had ruled that when the government required that land be surrendered in exchange for a permit, the regulation of the land had to advance a public purpose and there had to be a nexus, or close connection, be-

tween the regulation and the purpose for the regulation.

In *Dolan,* Chief Justice Rehnquist agreed that preventing flooding and reducing traffic congestion were proper public purposes for the city to have. He also agreed that there was a close connection between the setting aside of some property to handle the greater traffic congestion and flood problems created by the expansion of the business. But he disagreed with the 15 percent number required by the city. The Court said that the city of Tigard had not explained why it needed 15 percent of Dolan's land for flooding and traffic purposes rather than 10 percent or 5 percent. Rehnquist set down the requirement that any seizure of private property be roughly proportional to the problems that the seizure was supposed to solve. Under this ruling, the city of Tigard would be required to show that the 15 percent number would alleviate traffic and flooding concerns as it was supposed to do. Otherwise, the city would have to compensate Dolan for taking any land in excess of that needed to solve the problems of flooding and traffic.

The *Dolan* decision placed an additional burden on governments that sought to take land for public use in return for granting a permit. The government would have to show that the amount of land it sought would be just enough—but not too much—for carrying out its stated goals.

Double Jeopardy

"Double jeopardy" refers to the criminal prosecution of the same person more than once for the same offense. According to the Fifth Amendment of the U.S. Constitution, no individual shall be "subject for the same offense to be twice put in jeopardy of life or limb." Even before the Constitution was written in 1787, common law effectively protected Americans from being tried twice for the same crime. Traditionally, the U.S. Supreme Court has held that restrictions on double jeopardy protect individuals from *multiple prosecutions* for the same crime and against *multiple punishments* for the same crime. However, determining what does and does not constitute double jeopardy is not always so simple.

An individual may be tried in both federal and state court on separate charges arising from a single offense without being put in double jeopardy. For example, in *United States v. Lanza,* 260 U.S. 377 (1922), the Court held that an individual's protection from double jeopardy had not been violated when the state of Washington charged him with violating state prohibition laws and the U.S. government charged him with violating federal prohibition law. Similarly, when four California police officers were acquitted in state court of beating Rodney King during an arrest in 1991, federal prosecutors were allowed to charge the four with violating King's civil rights.

The issue of being tried by separate jurisdictions for the same crime also arises when more than one state has a nexus to a crime. The Court dealt with this issue in *Heath v. Alabama,* 474 U.S. 82 (1985), involving the murder of Rebecca Heath, who was nine months pregnant when two killers hired by her husband kidnapped her from her home in Phoenix City, Alabama, and transported her across the state line to Troup County, Georgia, where she was killed. Larry Heath pled guilty to "malice murder" in Georgia and was sentenced to life in prison. The state of Alabama subsequently convicted him of murder in connection with the kidnapping and imposed the death penalty. Heath claimed that Alabama was placing him in double jeopardy, but the Court rejected his claim, contending that "under the dual sovereignty doctrine, successive prosecutions by two States for the same

conduct are not barred by the Double Jeopardy Clause of the Fifth Amendment."

Since double jeopardy generally means that a person cannot be *convicted* twice for the same crime, the protection does not extend to indictments, because determining guilt is not part of such proceedings. If one grand jury fails to indict a person, prosecutors still can bring the evidence before additional grand juries without putting the accused in double jeopardy. By contrast, if a person is found not guilty in one trial, prosecutors cannot try the person again for the same crime in hopes that the second jury might find the person guilty. For instance, in *Kepner v. United States,* 195 U.S. 100 (1904), the Supreme Court overturned the actions of an appeals court in the Philippines (which was under the protection of the United States at the time of the alleged crime) that found a lawyer guilty of embezzlement after a trial jury had acquitted him, determining that the defendant was protected from double jeopardy under both Filipino common law and the U.S. Constitution.

In *Serfass v. United States,* 420 U.S. 377 (1975), the Court held that in jury trials, jeopardy attaches at the point that the trial court begins to hear evidence. Only rarely would a trial be halted once it has begun. This might occur when a juror is disqualified or when a jury fails to reach a verdict. For example, the Court held in *United States v. Perez,* 22 U.S. 579 (1824), that because the defendant had been neither acquitted nor convicted by the time his trial was halted, prosecutors were free to bring him to trial again without placing him in double jeopardy; the Court reaffirmed this position in *Richardson v. United States,* 468 U.S. 317 (1984). In *Sattazahn v. Pennsylvania,* 537 U.S. 101 (2003), the Court held that double jeopardy likewise did not apply when an initial penalty-phase jury was unable to reach a decision but a second penalty-phase jury handed down a death sentence.

Under normal circumstances, the government has no right to appeal a case in which a defendant was exonerated; however, the Supreme Court determined in *Palko v. Connecticut,* 302 U.S. 319 (1937), that when an error occurred in a trial court that prejudiced the state's case, the government was within its rights to call for a new trial. Frank Palko had been tried in a Connecticut court on charges of first-degree murder, but the jury had instead found him guilty of second-degree murder. Under Connecticut law, the government appealed on the grounds that the state's case had been damaged because the judge excluded testimony concerning the defendant's confession of guilt and cross-examination testimony in which the defendant's credibility was impeached. The judge also failed to explain to the jury the differences between first- and second-degree murder. The appellate court agreed with the government.

Palko then was retried and found guilty of first-degree murder. He claimed the second trial placed him in double jeopardy, violating his rights under both the Fourteenth and Fifteenth Amendments. The Supreme Court held that federal double jeopardy standards did not apply to the states except in cases where a defendant's rights were violated by "a hardship so acute and shocking that our polity will not endure it." In such cases, the Fourteenth Amendment became applicable.

Some thirty years after *Palko,* the Court reversed course in *Benton v. Maryland,* 395 U.S. 784 (1969), deciding that the double jeopardy protection of the Fifth Amendment was included in the protections of the Fourteenth Amendment—that is, the Court incorporated the double jeopardy protection into the Due Process Clause of the Fourteenth Amendment, thus applying the federal protection against the states as well. In this case, the defendant had been exonerated on charges of larceny but was convicted of burglary charges and sentenced to ten years in prison. An appeals court later found that both the grand and petit juries had been constitutionally selected, and Benton was retried. Despite his claim of double jeopardy, the second jury convicted Benton on both charges and sentenced him to fifteen years for burglary and five years for larceny. The Supreme Court overturned both convictions, declaring that the "petitioner's larceny conviction cannot stand once federal double jeopardy standards are applied." The Court announced that henceforth "the double jeopardy prohibition of the Fifth Amendment, a fundamental ideal in our constitutional heritage, is enforceable against the States through the Fourteenth Amendment."

The Court has held that in most cases where a defendant wins a new trial, the trial must not place a

defendant in double jeopardy. For instance, in *Green v. United States,* 355 U.S. 184 (1957), the Court considered whether double jeopardy attached for Everett Green, who initially had been found guilty of arson and second-degree murder but exonerated of first-degree murder. After he was sentenced to one to three years on the arson charge and five to twenty years on the murder charge, an appeals court overturned Green's conviction and ordered a new trial on the first indictment. Green claimed he had been placed in double jeopardy when he was found guilty of first-degree murder in the second trial and was given the death sentence. The Supreme Court overturned Green's conviction, asserting that "a defendant need not surrender his valid defense of former jeopardy on a different offense for which he was not convicted and which was not involved in his appeal."

As long as the statute of limitations on a crime has not expired, a person may be tried years later without being placed in double jeopardy. This issue arose in a case involving a murder committed in Mississippi in the early days of the civil rights movement. White supremacist Byron de la Beckworth was charged with the murder of civil rights leader Medgar Evers, which occurred June 12, 1963, in the driveway of Evers's home in Jackson. On two separate occasions, all-white juries had failed to render verdicts against Beckworth. Thirty-one years later, in 1994, the courts rejected Beckworth's claim of double jeopardy because no verdict had been reached in the earlier trials; a third trial jury found Beckworth guilty of the murder and sentenced him to life in prison.

Douglas, William O. (1898–1980)

For almost thirty-seven years (1939–1975), William O. Douglas, an activist for liberal causes and underdog individuals, served as conscience of the nation from his chair on the U.S. Supreme Court. He had the longest tenure of any justice in the history of the tribunal, participating in more than 1,200 decisions and filing 795 dissents. According to one scholar: "It is now a commonplace that most of the dissents of Justices [Oliver Wendell] Holmes and [Louis D.] Brandeis became the law during the period of Douglas' tenure on the Court. What is less well appreciated is that during the same period of time even more of the dissents of Douglas became the law."

Douglas and Hugo L. Black were allies on the Court for thirty years. They had an absolutist belief that the First Amendment forbade any judicial restraint on speech and press. They argued, at first in dissent, that the Bill of Rights (the first ten amendments to the Constitution) was applicable to the states through the Due Process Clause of the Fourteenth Amendment. After *Mapp v. Ohio,* 367 U.S. 643 (1961), a majority of the Court accepted that interpretation. Black and Douglas parted company, however, in the sit-in and right-to-privacy cases of, for example, *Cox v. Louisiana,* 379 U.S. 536 (1965), and *Adderley v. Florida,* 385 U.S. 39 (1966).

Douglas was brilliant but prone to sweeping generalizations. He used bold and blunt language: "The Constitution is not neutral. It was designed to take the government off the backs of people." "The right to be let alone is indeed the beginning of all freedom." "Common sense often makes good law."

His opinions were succinct. Some of his brethren felt overworked, but Douglas urged the Court to decide more of the cases brought before it.

Douglas grew up in the state of Washington. He attended Whitman College and went to New York to attend Columbia University Law School, where he graduated second in his class. A few years later he was teaching at Columbia Law School and then at Yale Law School. Douglas was one of the leading contributors to realist scholarship, recasting the teaching of the law of business and finance along functional lines

(including the subject of bankruptcy and clinical studies of the cause of business failure).

In 1934 he was selected to direct an eight-volume study for the new Securities and Exchange Commission (SEC). He brought in as his number-two person for the study Abe Fortas, his prize student at Yale. Douglas was appointed to the SEC in 1936 and became its chairman in 1937. In 1939 he was appointed to the Supreme Court, at age forty the second-youngest justice in U.S. history. He was one of the most intellectually talented persons ever appointed to the Court. In 1944, President Franklin D. Roosevelt considered selecting Douglas as his running mate (as did Harry S Truman in 1948).

Douglas was a defender of free speech during the Cold War years. In *Terminiello v. Chicago,* 337 U.S. 1 (1949), he wrote to overturn a disorderly conduct conviction of an unfrocked Catholic priest who harangued an audience in an auditorium, but Douglas dissented in *Feiner v. New York,* 340 U.S. 315 (1951), when the Court sustained the disorderly conduct conviction of a street speaker who ignored a police officer's order to stop speaking.

Douglas and Black dissented in *Dennis v. United States,* 341 U.S. 494 (1951), in which the Court upheld the convictions of leading U.S. Communists for conspiring to advocate and organize to advocate the forcible overthrow of the government.

To his later shame, Douglas had joined the majority in the 1944 Japanese relocation case of *Korematsu v. United States,* 323 U.S. 214 (1944). He was able to rationalize his actions at the time because he was authoring the Court's unanimous opinion in *Ex parte Endo,* 323 U.S. 283 (1944), freeing a loyal secretary from a relocation center.

During the Vietnam War, Douglas was unable to persuade the Court in *Parker v. Levy,* 417 U.S. 733 (1974), to consider the validity of the use of the Selective Service Act to draft men for a conflict not sanctioned by a congressional declaration of war. The law was challenged as being in violation of international law and of treaties to which the United States was a party.

Douglas was the son of a Presbyterian minister. Over time he became more absolute in insisting on the separation of church and state. He was in the majority in *West Virginia Board of Education v. Barnette,* 319 U.S. 624 (1943), which held unconstitutional a law mandating the flag salute in schools. Yet in *Zorach v. Clauson,* 343 U.S. 306 (1952), he agreed that a New York City program could permit public schools to release students during the school day so that they might attend religious centers for religious instruction.

He concurred in *Engel v. Vitale,* 370 U.S. 421 (1962), that a state-prescribed prayer for public schools violated the First Amendment and took the occasion to say he had been wrong to accept state-supported school busing for parochial schools as constitutional in *Everson v. Board of Education,* 330 U.S. 1 (1947).

In *Girouard v. United States,* 328 U.S. 61 (1946), his opinion for the Court was that a Seventh-Day Adventist who was not willing to take up arms in defense of the United States could nevertheless be naturalized. This ruling overturned *United States v. Schwimmer,* 279 U.S. 644 (1929), and *United States v. Macintosh,* 283 U.S. 605 (1931).

Douglas held in *Schneider v. Rusk,* 377 U.S. 163 (1964), that a naturalized citizen should not lose citizenship for having had a continuous residence of over three years in the foreign state in which she was born.

Douglas championed a right of privacy. He helped strike down in *Griswold v. Connecticut,* 381 U.S. 479 (1965), a ban on contraceptive information. This support for the patient-physician relationship led to *Roe v. Wade,* 410 U.S. 113 (1973). Douglas dissented in cases holding "obscenity" not protected by the First Amendment, such as *Roth v. United States,* 354 U.S. 476 (1957), and *Paris Adult Theatre I v. Slaton,* 413 U.S. 49 (1973).

Douglas took a leading part in Fourth and Fifth Amendment decisions that curbed coerced confessions, protected the right against self-incrimination, and prohibited illegal searches. In *Furman v. Georgia,* 408 U.S. 238 (1972), he was one of the five justices who voted to strike down the death penalty as a cruel and unusual punishment prohibited under the Eighth Amendment. (After he retired, the Court in *Gregg v. Georgia,* 428 U.S. 153 (1976), reinstated capital punishment if conducted under acceptable standards.)

Douglas helped to breathe life into the Equal Protection Clause in cases dealing with civil rights for blacks. He was sensitive to laws that discriminated

against the poor. His *Points of Rebellion* (1969) was an advocacy of dissent. Off the Court, he displayed concern for the environment and support for antiwar activists.

All of these liberal leanings provoked efforts to have him impeached. (Leading the pack in 1970 was House Republican leader Gerald Ford, who said that an impeachable offense was one for which there were the votes.) Opponents of the Court's rulings on First Amendment issues, civil rights, and criminal due process went after Douglas. Even his marital situation (he married a twenty-three-year-old) played a role in the effort to drive him from the Court. There had also been efforts to impeach Douglas after he stayed the execution of alleged spies Julius and Ethel Rosenberg in 1953, although the Court ultimately voted six–three that their execution could proceed.

Draft Card Mutilation Act of 1965

In spring 1965 a group of antiwar protesters culminated a chaotic demonstration outside U.S. Army induction headquarters in lower Manhattan by dropping their draft cards into a pot and setting them on fire. This behavior became a hallmark of what came to be known as "symbolic speech"—expression communicated not by literal speech but by symbolic actions. The civil liberties issue that arose was whether such symbolic speech was entitled to protection under the First Amendment to the Constitution.

At the time, it was a federal crime, punishable by up to five years in prison and a substantial fine, to forge or alter a draft card, called a "registration certificate." Angered by criticism of Vietnam policy both in fact and in form, Congress quickly responded to this latest episode in a rash of draft-card burnings. On August 5 the chairman of the House Armed Services Committee, L. Mendel Rivers (D-SC), introduced the Draft Card Mutilation Act of 1965, which provided criminal penalties for anyone who "knowingly destroys, knowingly mutilates, or in any manner changes such certificate."

The Draft Card Mutilation Act was unquestionably intended to be a political response to the rising tide of protest over the Vietnam War (1964–1975). Congressman Rivers flatly stated on the floor of the House that the new language was inserted as "a straightforward clear answer to those who would make a mockery of our efforts in South Vietnam by engaging in the mass destruction of draft cards. If it can be proved that a person knowingly destroyed or mutilated his draft card, then . . . he can be sent to prison, where he belongs. This is the least we can do for our men in South Vietnam fighting to preserve freedom, while a vocal minority in this country thumb their noses at their own Government." The bill's Senate cosponsor, Strom Thurmond (R-SC), likewise made it plain that the new legislation was aimed at more than flamboyant protest; it was inspired by general distaste for political dissent: "[D]efiance of the warmaking powers of the Government should not and must not be tolerated by a society whose sons, brothers, and husbands are giving their lives in defense of freedom." The legislation was passed by the Senate on a unanimous voice vote and sailed through the House of Representatives by the overwhelming margin of 393-1; the lone dissenter was Rep. Henry Smith III (R-NY), whose courage in opposing the bill was subsequently feted in a *Washington Post* editorial.

It was not long before the new provisions were put into action. On March 31, 1966, David O'Brien burned his draft card during an antiwar protest on the

Burning draft cards to protest the Vietnam War, 1960s. The Supreme Court ruled that the burning of a draft card was not constitutionally protected symbolic speech. *(© Mark Godfrey/The Image Works)*

steps of the South Boston courthouse. He was rescued from an angry mob and spirited inside the courthouse by Federal Bureau of Investigation agents, who promptly read him his rights and arrested him. At his trial, O'Brien admitted to burning his draft card but claimed he did so as an attempt to foster debate over the war and the selective service system, further arguing that the 1965 amendments were an unconstitutional infringement on his right to free speech. He was convicted, but the First Circuit Court of Appeals overturned his conviction, holding that the statute violated the First Amendment.

The Supreme Court, however, reinstated his conviction, although in so doing the justices conceded that O'Brien's behavior had an expressive dimension. *United States v. O'Brien,* 391 U.S. 367 (1968), stands as the first recognition that so-called symbolic speech could in certain circumstances qualify for First Amendment protection. Those circumstances were laid out by Chief Justice Earl Warren in a four-part test: "[W]e think it clear that a government regulation is sufficiently justified if it is within the constitutional power of the Government; if it furthers an important or substantial governmental interest; if the governmental interest is unrelated to the suppression of free expression; and if the incidental restriction on alleged First Amendment freedoms is no greater than is essential to the furtherance of that interest."

The "substantial interest" cited by the Court as the justification for the Draft Card Mutilation Act was the need for the Selective Service System to run efficiently. Requiring participants in the system to have their registration certificate on their person at all times facilitated communication between registrants and draft boards and enabled registrants to demonstrate proof of their enrollment at any time such proof was

requested. The acknowledged fact that O'Brien was communicating a political message by burning his draft card did not immunize his behavior; as long as the need to restrict his action was sufficient and noncensorial, his speech could be curtailed.

The comments of the new statute's sponsors revealed an unequivocally censorial motive and thus represented patent violations of multiple prongs of the new *O'Brien* test. Yet the Court opted to disregard the intentions of Representative Rivers and Senator Thurmond, despite the fact that the test assigned legislative intent a central and dispositive role in the symbolic-speech inquiry. The Court cavalierly suggested that legislative debate was fundamentally irrelevant to the purpose of divining the intent behind an unambiguously worded law: "[W]e are asked to void a statute that is, under well-settled criteria, constitutional on its face, on the basis of what fewer than a handful of Congressmen said about it. What motivates one legislator to make a speech about a statute is not necessarily what motivates scores of others to enact it, and the stakes are sufficiently high for us to eschew guesswork." This suggestion disingenuously suppressed the fact that the remarks David O'Brien was citing in his defense came from not merely a "handful of congressmen" but from the authors of the statute. Consequently, it is hard to avoid the conclusion that the Court crafted its own conveniently constitutional rationale for the act and substituted it for the constitutionally illicit rationale promulgated by the act's drafters.

Notwithstanding O'Brien's defeat at the Supreme Court (he received a six-year prison sentence—considerably longer than the one to three years typically meted out to someone who refused induction—though he ultimately served only two years), his violation of the Draft Card Mutilation Act broke new ground by prompting the Court to grant politically expressive conduct some degree of First Amendment immunization.

Drug Kingpin Act

The Drug Kingpin Act is the common name given to the Foreign Narcotics Kingpin Designation Act of 1999. Signed into law by President William J. Clinton, the bipartisan legislation was cowritten by Senator Dianne Feinstein (D-CA) and Senator Paul Coverdell (R-GA), who has since died. The statute has raised significant constitutional issues because of its encroachment on such rights as due process as it focuses on ways to curb drug trafficking.

The statute grants the president plenary power to identify and sanction suspected international drug entities and individuals. The president may create a "blacklist" of alleged kingpins (Tier I kingpins) and may direct the Treasury Department, most notably, to freeze U.S.-based financial assets and transactions of all on the list, and such actions are not subject to judicial review. In Tier II are all those doing business with the targeted entities or individuals or who have gained in some way from these bodies; they also are subject to these sanctions. In determining who qualifies as a kingpin under the statute, the president uses classified information provided by the Central Intelligence Agency, the Federal Bureau of Investigation, the Customs Department, the Drug Enforcement Agency, and the Departments of Defense and State. A nonclassified public report of these determinations must be made in June of each year before sanctions can be imposed. Noncompliance with the terms of the act subjects violators to fines up to $10 million as well as incarceration for as long as ten years.

Since being signed into law in 1999, the act has given rise to several blacklists, but the Treasury Department did not act to freeze assets or limit transactions until January 2002. At that time, Treasury

targeted twenty-seven Tier II entities that were accused of financially supporting the Tier I kingpins designated publicly since 1999. Most of these entities were located in the Caribbean and Mexico and represented a wide array of business interests said to be acting as fronts for drug kingpin activities. These businesses included a drugstore chain and pharmaceutical distributor as well as a hotel resort, courier services, real estate, and electronic security firms.

Supporters of the legislation argue that the financial networks used to support drug kingpin activity compromise national security. Civil libertarians, however, worry about the act's lack of judicial review and the potential to sanction innocent people doing business with a suspected Tier II entity. Information used to identify targets is classified. The president has complete authority either to pursue or not pursue these targets. There are no allowances for the due process guarantees of search and seizure, notice, or presumption of innocence until proven guilty. The only form of judicial review allowed under the act is in reference to civil penalties imposed under it. Critics worry that innocent businesses will have little recourse if they, too, fall under suspicion when one of their associates is blacklisted or has its assets frozen.

Due Process of Law

Although the term "due process" is not easily defined, the guarantee that no individual shall be deprived of "life, liberty, or property, without due process of law" is one of the most litigated and important civil liberties in the United States today. The provision is found in both the Fifth and Fourteenth Amendments to the U.S. Constitution. The idea of due process is associated with the concepts of fairness, equality, rationality, regularity, and justice in both legal procedures and outcomes. Due process is universally recognized as fundamental to democratic nations that seek to protect individual rights and liberties.

DEFINITION AND DEVELOPMENT

The phrase "due process of law" developed from the provision in the Magna Carta in England during the thirteenth century stating that governments were subject to the "law of the land." This ideal of fair treatment influenced the American founding fathers, who incorporated it within the Fifth Amendment (ratified in 1791) as a limitation on actions by the national government, and the authors of the Fourteenth Amendment (ratified in 1868), who intended to extend this provision to limit arbitrary actions by the states, especially as these actions applied to racial minorities.

Initially, the U.S. Supreme Court interpreted the provisions of the first ten amendments known as the Bill of Rights—including those in the Fourth, Fifth, Sixth, Seventh, and Eighth Amendments, relating to the rights of individuals who were accused of or on trial for crimes—as applicable only to the national government. After the adoption of the Fourteenth Amendment, however, the Court came to rely upon its Due Process Clause as the primary vehicle through which the central provisions of the Bill of Rights were applied to the states, in a process known as "incorporation." (Some scholars think the Court could just as well have relied upon the Privileges or Immunities Clause of the Fourteenth Amendment.) Although the incorporation concept has not been limited to such guarantees, courts have increasingly defined due process by reference to specific provisions, especially those governing procedures in criminal courts, within the text of these amendments.

CONTEMPORARY APPLICATIONS

Thus, although the Supreme Court has often found it difficult to define the idea of "reasonableness," it has ruled that the states are bound through the Due Process Clause to abide by the provisions within the

Fourth Amendment prohibiting "unreasonable searches and seizures," requiring that police officers establish "probable cause" before obtaining search warrants, and requiring that warrants specify "the person to be searched, and the persons or things to be seized." In an attempt to give teeth to these provisions, the Court has also applied the exclusionary rule, most notably in *Mapp v. Ohio,* 367 U.S. 643 (1961), to outlaw the use at trial of illegally secured evidence by the states as well as by the national government. Subsequent exceptions to this rule—good faith, plain view, inevitable discovery, and the like—demonstrate not that the Court has abandoned the idea of due process but simply that it has attempted to apply this concept in a prudential manner.

Similarly, the Court has concluded that the states are bound by the provisions in the Fifth Amendment that prohibit double jeopardy, protect against self-incrimination, and require compensation for property expropriated for public purposes. Provisions of the Fifth Amendment, like other measures limiting police procedures, often require careful judicial line-drawing. Thus, although the Court invalidated forced verbal confessions from suspects in *Breithaupt v. Abrams,* 352 U.S. 432 (1957), and *Schmerber v. California,* 384 U.S. 757 (1966), it upheld the practice of extracting blood from individuals involved in car accidents to test their intoxication, even without their consent.

In *Gideon v. Wainwright,* 372 U.S. 335 (1963), the Supreme Court decided due process required that the right to counsel specified within the Sixth Amendment meant that state governments, like the federal government, must supply counsel for indigent individuals accused of felonies. The Court subsequently expanded this decision to cover other crimes for which an individual could be incarcerated. In a decision that it subsequently reaffirmed, the Court ruled in *Miranda v. Arizona,* 384 U.S. 436 (1966), that the Fifth Amendment right against self-incrimination and the Sixth Amendment right to an attorney were so important that police officers had a positive obligation to warn suspects of such rights before interrogating them.

Although the Court has allowed for variations in jury size and nonunanimity in state criminal trials that are not permitted at the national level, in *Duncan v. Louisiana,* 391 U.S. 145 (1968), it also used due process principles to require that states provide jury trials in criminal cases. In addition, it has extended to the states the Sixth Amendment requirement that individuals be notified of the charges against them and that they have the right to use judicial procedures to secure witnesses on their behalf. Increasingly, the Court has also used the Due Process Clause to require states to treat prisoners fairly and to abide by the Eighth Amendment prohibition on "cruel and unusual punishments."

DUE PROCESS OUTSIDE THE BILL OF RIGHTS

Although the Supreme Court has increasingly cited specific provisions within the Bill of Rights in defining due process of law, it has accepted the idea that "due process" has its own potency and it has thus chosen not to confine the notion of due process to these specific provisions. Thus, in *Rochin v. California,* 342 U.S. 165 (1952), the Court majority, led by Justice Felix Frankfurter, invalidated the conviction of a defendant after the police forcibly broke into his house and subsequently had his stomach pumped to recover drugs that he had swallowed after their entry. Frankfurter based his decision not simply on the fact that the police had violated specific provisions of the Bill of Rights (although they had) but on the fact that he thought police conduct in the case "shock[ed] the conscience" and thus violated fundamental principles of decency and fairness associated with the idea of due process.

It is possible to imagine a host of procedures not specifically covered in the Bill of Rights that nevertheless would fall short of due process. Statements indicating prejudice on the part of a judge or jury, providing inadequate time for an accused to mount a defense, allowing the courtroom to degenerate into a circus atmosphere by excessive media presence, or the like, could all constitute grounds for due process appeals.

PROCEDURAL VERSUS SUBSTANTIVE DUE PROCESS

Although the primary focus of the Due Process Clause has been on procedures, what scholars call *procedural*

due process, the Court has sometimes also given this clause a more substance-driven dimension, an idea known as *substantive* due process. In the late nineteenth and early twentieth centuries, dissenting justices and other critics of the Supreme Court claimed that it applied its own standards of justice on matters of economic theory to strike down laws of which it disapproved. A good example is *Lochner v. New York,* 198 U.S. 45 (1905), in which Justice Oliver Wendell Holmes Jr. dissented from the majority's invalidation of a New York statute limiting the working hours of bakers. The Court majority thought the statute violated freedom of contract (a favorite battle-cry of supporters of laissez-faire economics), but Justice Holmes observed that "[a] constitution is not intended to embody a particular economic theory."

With far less justification, Justice Holmes wrote the eight–one decision in *Buck v. Bell,* 274 U.S. 200 (1927), permitting state sterilization of a woman (Carrie Buck) believed to be mentally retarded despite arguments that such action was unfair and arbitrary. The Court subsequently applied a kind of substantive due process and equal protection analysis in *Skinner v. Oklahoma,* 316 U.S. 535 (1942), in invalidating a law requiring the sterilization of certain thrice-convicted felons but not others.

Scholars continue to debate whether the recognition of a right to privacy in *Griswold v. Connecticut,* 381 U.S. 479 (1965), in which the Court struck down Connecticut's birth control laws, and in *Roe v. Wade,* 410 U.S. 113 (1973), recognizing a woman's right to obtain an abortion, is a form of substantive due process. Certainly, the modern Court has applied much stricter standards of review of legislation dealing with matters of privacy (involving, for example, race, gender, minority rights, political rights like freedom of speech and press) than it has of economic legislation, which it typically subjects to only minimal, so-called rational-basis, review. This "double standard" is often traced to footnote four of *United States v. Carolene Products Co.,* 304 U.S. 144 (1938), written by Justice (later Chief Justice) Harlan Fiske Stone.

OTHER APPLICATIONS OF DUE PROCESS

The idea of due process is often tied to the idea that governmental bodies and agencies must provide adequate hearings, procedures, or forums before punishing individuals or depriving them of basic rights. Most notably, in *Goldberg v. Kelly,* 397 U.S. 254 (1970), the Court ruled that due process required the government to provide an evidentiary hearing before terminating an individual's welfare payments. By contrast, it did not require such a prior hearing in *Mathews v. Eldridge,* 424 U.S. 319 (1976), for suspension of state disability payments. Although state entities cannot act arbitrarily, courts sometimes find that schools, prisons, and administrative boards may adopt procedures that fall short of full trials or hearings and still protect the due process rights of individuals who are brought before them.

CONCLUSION

The elusiveness of the idea of due process will undoubtedly continue to be both its greatest strength and its greatest weakness. Although the term has gained specificity from its association with specific provisions of the Bill of Rights, the concept embraces a more general idea of fairness that will continue to require the application of general principles to widely varied circumstances.

Duncan v. Louisiana (1968)

In *Duncan v. Louisiana,* 391 U.S. 145 (1968), the U.S. Supreme Court identified the circumstances under which states must provide a criminal defendant with a jury trial. The Sixth Amendment to the Constitution had already been interpreted to require such jury trials in federal courts.

Gary Duncan was convicted of simple battery without a jury trial. His attorney had petitioned for a jury trial, but the petition was denied because under Louisiana statutes, simple battery was considered a misdemeanor punishable by a maximum of two years' imprisonment and a fine of not more than $300. After Duncan was convicted, the judge sentenced him to a jail term of sixty days and fined him $150.

The Supreme Court of Louisiana refused to review the case, and Duncan then appealed to the U.S. Supreme Court, claiming violation of his rights under the Sixth Amendment, as applied to the states by the Due Process Clause of the Fourteenth Amendment. The U.S. Supreme Court reversed, for the following reasons.

The right to trial by jury in criminal cases is fundamental to American justice. The Fourteenth Amendment guarantees trial by jury in all criminal cases that, if tried in a federal court, would fall within the guidelines of the Sixth Amendment. The key to the Court's ruling is found in the maximum amount of jail time Duncan could have received—two years—as opposed to the sentence given, sixty days.

The majority opinion, written by Justice Hugo L. Black, reflected that two years' imprisonment did not signal a petty offense and that potential deprivation of liberty for that amount of time would require a jury trial in federal court. To comply with the Fourteenth Amendment's due process requirements, states must provide a jury trial when the maximum potential sanction exceeded eleven months, twenty-nine days—in other words, one year or more.

Justice Abe Fortas, concurring with the majority, also maintained that the Court would be wrong to impose all federal requirements pertaining to criminal trials, including unanimous verdicts and juries composed of twelve individuals, upon the states. Justice Fortas's language included comments that just because the federal standard was twelve did not reflect some magic associated with that number.

Edmonson v. Leesville Concrete Co. (1991)

In *Edmonson v. Leesville Concrete Co.,* 500 U.S. 614 (1991), the U.S. Supreme Court ruled that the equal protection component implicit in the Fifth Amendment's Due Process Clause required a civil litigant to provide a race-neutral reason for peremptory challenges of potential jurors in a federal trial. A peremptory challenge historically has been used by a party to reject someone as a potential juror for no reason at all. In that feature, it differs from a challenge "for cause."

This case tested the Supreme Court's commitment to race neutrality. Thaddeus Edmonson, who was suing the Leesville company for injuries suffered on a military base, claimed Leesville improperly used two of its three peremptory challenges permitted under federal law to exclude blacks from the jury. Lower courts ruled against Edmonson, holding that *Batson v. Kentucky,* 476 U.S. 79 (1986), applied only to prosecutorial peremptory challenges in criminal proceedings.

The Supreme Court disagreed. Justice Anthony M. Kennedy, who in earlier cases had used a color-blind reading of the Constitution to strike race-conscious affirmative action policies, applied that principle in *Edmonson*. A juror excluded from a civil trial on the basis of race, he wrote, would be denied the same civil rights as one excluded from a criminal trial. Although Leesville was a private actor, its challenges constituted state action because their use necessitated "the overt, significant assistance of the court", the requisite "state action" without which the Due Process Clause would not have applied.

Race-based peremptory challenges served to violate the rights of potential jurors. As Justice Kennedy explained, "to permit racial exclusion in this official capacity compounds the racial insult inherent in judging a citizen by the color of his or her skin." Furthermore, allowing such challenges "mars the integrity of the judicial system and prevents the idea of democratic government from becoming a reality." There may have been legitimate reasons for the exclusion of these jurors, but those reasons "can be explored in a rational way that consists with respect for the dignity of persons."

Although some observers consider peremptory challenges essential to the adversarial system used in U.S. courts, Justice Kennedy argued that "if race stereotypes are the price for acceptance of a jury panel as fair, the price is too high to meet the standard of the Constitution." To facilitate the perception and the reality of juries as free of "invidious" race prejudice, a litigant must have standing (the right to bring a claim) to assert the rights of the excluded juror.

The dissenting justices, who in other cases supported color blindness, found the principle inapplicable in *Edmonson*. To Justice Sandra Day O'Connor —joined by Justice Antonin Scalia and Chief Justice William H. Rehnquist—a private civil trial did not constitute state action but rather was "largely a stage on which private parties may act." In her view, "Government erects the platform [but] it does not thereby become responsible for all that occurs upon it." Although Justice O'Connor noted that racism was "particularly abhorrent when manifest in a courtroom," she concluded that "not every opprobrious and inequitable act is a constitutional violation."

Justice Scalia wrote that despite its "great symbolic value," this decision added "yet another complexity to an increasingly Byzantine system of justice." Under *Batson,* the state was already prohibited from race-based challenges; the *Edmonson* ruling now would affect defendants and private individuals. Much of the price of this victory for color blindness, Scalia concluded, "will be paid by minority litigants who use our courts."

The ruling in *Edmonson* was extended in *Georgia v. McCollum,* 505 U.S. 42 (1992), to challenges by criminal defendants; in *J.E.B. v. Alabama ex rel. T.B.,* 511 U.S. 127 (1994), to peremptory challenges based on gender in a civil trial; and in *Campbell v. Louisiana,*

523 U.S. 392 (1998), to the racial composition of grand jury foremen.

Education

Americans have a long history of supporting education for democratic purposes. Thomas Jefferson, for example, considered his founding of the University of Virginia in Charlottesville even more important than his service as the third president of the United States, and he once claimed that "the diffusion of knowledge" was the foundation for "the preservation of freedom and happiness." Thus, through education, citizens could best defend their civil liberties.

To that end, Congress passed the Northwest Ordinance of 1787 requiring new territories to provide public education; it later required members of the erstwhile Confederacy to guarantee education to all citizens. In both cases, the policies were enacted due to the importance of education in the theory of republican government.

Education has long been seen as a way not only to ensure but also to encourage democracy. Many influential American leaders followed democratic theoretical precepts stating that only an educated people can govern itself. This principle led to the early establishment of schools and was the basis for demands by excluded groups that they, too, be embraced by public education. Throughout U.S. history, access to education has been expanded to include more and more people. But even as education has remained important, people's expectations of public schools have changed dramatically. Once a place to learn to read well enough to understand the Bible, public schools are now viewed as the proper place to teach a trade, develop citizens, assimilate new immigrants, and solve a variety of social problems.

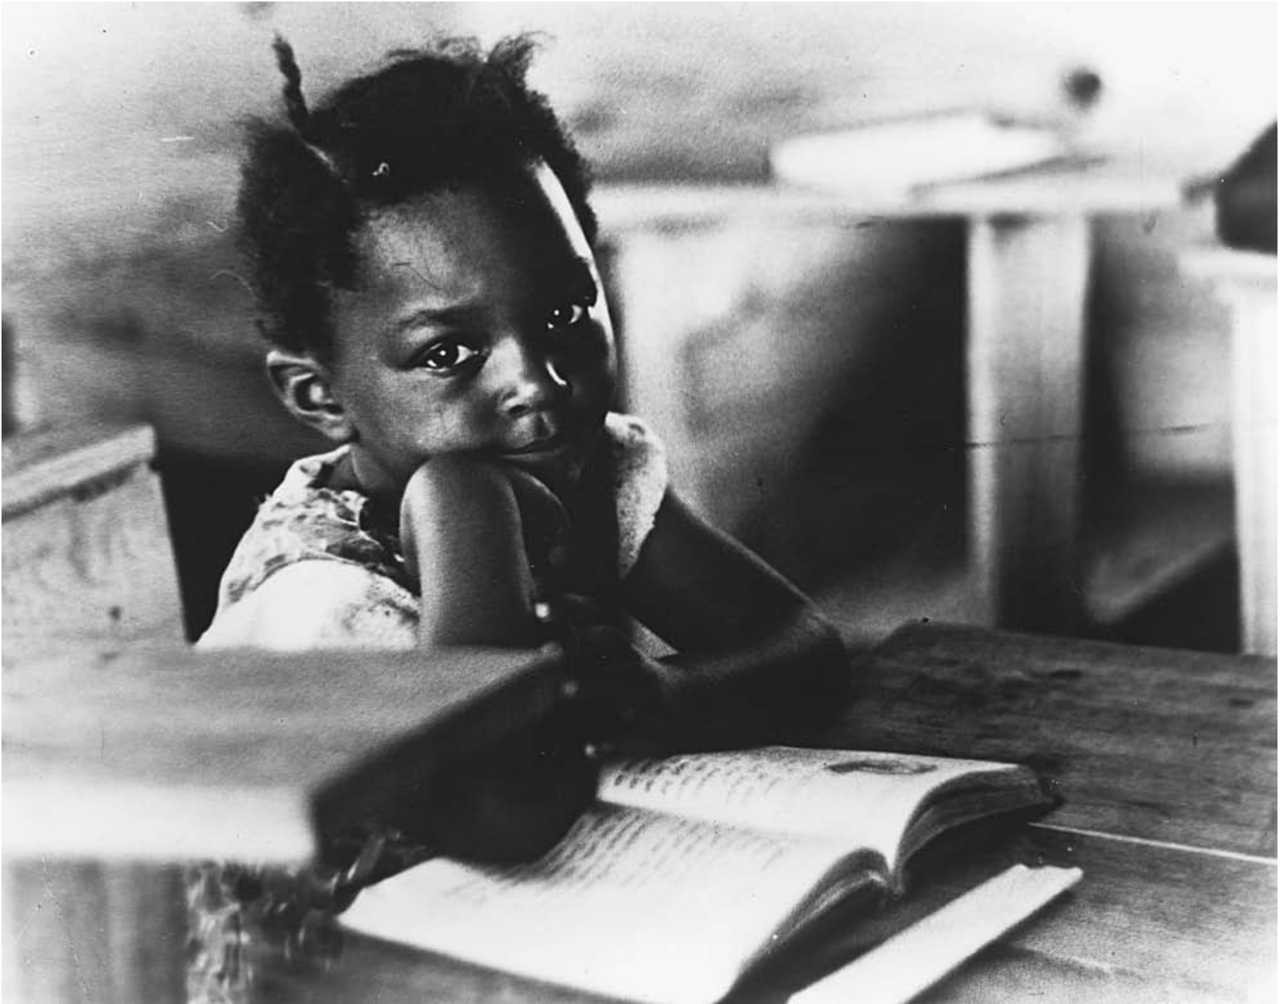
EARLY AMERICAN EDUCATION

Along with establishing a church, setting up a local school was one of the first duties performed by early American settlers and pioneers. The two objectives often were closely linked, and taxes were levied to pay for both a preacher and a teacher. These one-room schoolhouses of nostalgic fame fit well with early American Protestantism. For example, Horace Mann, an education activist and official in mid-nineteenth-century Massachusetts, said that "in receiving the Bible," the school allowed that book "to speak for itself." Protestantism's reliance on each individual to interpret scripture, rather than to depend on a priest, thus encouraged students to attend school at least until they achieved functional literacy. Schools gradually evolved in each community, and mandatory attendance laws started appearing in the mid-nineteenth century. Still, attendance was not universal, with blacks and Native Americans often excluded, and few students went beyond primary education.

EARLY TWENTIETH-CENTURY DEVELOPMENTS

Schools continued to expand during the 1900s, and attendance increased at all levels. The most important education philosopher of the twentieth century, John Dewey, argued that education in a democratic society must be universally available to all. A member of the progressive movement, Dewey believed that education could, and should, be used to break down social classes and encourage mobility. Schools, he said, must give all members of society the ability to begin their careers from an equal start.

Dewey also believed that education should be prac-



A photograph from "How About a Decent School for Me?" pamphlet (created by the NAACP) dealing with the desegregation of southern schools. *(Library of Congress)*

tical, and this led him to urge that vocational education be kept within the general school curriculum. With this expanded focus designed to provide basic training and often tightly tied to local industry, students who did not plan to attend college had more reason to complete their secondary education. This practical aspect of education was ultimately placed alongside the classical curriculum, ensuring that all students would benefit from attending public schools. The inclusion of vocational education in the high school curriculum prompted more students to continue their education beyond the primary level. Access was thus expanded to more people.

SCHOOL DESEGREGATION

The twentieth century also brought the slow process of desegregating public schools. During the nineteenth and early twentieth centuries, schools throughout the nation were segregated by race. The South, through its post–Civil War Jim Crow laws mandating separate facilities for the races, continued to require black and white children to attend separate schools until the 1954 decision in *Brown v. Board of Education,* 347 U.S. 483. In this case, a unanimous U.S. Supreme Court decided that the states could not require students to attend separate schools. Calling ed-

ucation the most important function of state and local governments and "the very foundation of good citizenship," the Court wrote that "separate educational facilities are inherently unequal" and therefore a violation of the Equal Protection Clause of the Fourteenth Amendment. The case was reheard a year later, known as *Brown II,* 349 U.S. 294 (1955), when the Court ruled that school districts must desegregate "with all deliberate speed." Although students from all backgrounds were already incorporated into the public schools, *Brown* and other cases effectively continued the expansion of educational access to ensure that students received a more meaningful education.

As for other desegregation cases heard after *Brown,* the Court ruled in *Swann v. Charlotte-Mecklenburg Board of Education,* 402 U.S. 1 (1971), that busing was a legitimate way to desegregate schools; in *Keyes v. Denver School District No. 1,* 413 U.S. 189 (1973), that northern cities were also subject to desegregation requirements; and in *Milliken v. Bradley,* 418 U.S. 717 (1974), that suburbs could not be made to participate in an interdistrict busing plan if they did not intentionally segregate students. In the 1990s, several cases involved districts that still had high levels of segregation; they were permitted to end their desegregation plans, as the Court ruled in *Board of Education v. Dowell,* 498 U.S. 237 (1991).

FUNDING PUBLIC SCHOOLS

Relatively little—about 7 percent—of funding for public schools comes from the federal government. Most of this is provided through policies such as Title I of the Elementary and Secondary Education Act of 1965, which was designed to provide additional resources to poor students. The great majority of public school funding is provided by the states and localities, often raised at least in part through property taxes.

Some people have argued that basing school funding on property taxes promotes a disparity of resources, because areas with greater property wealth are able to raise more money than areas with less property wealth. California was the first state to require that all schools receive substantially equal funding in the 1971 state-court case of *Serrano v. Priest,* 5 Cal. 3d 584, 96 Cal. Rptr. 601 (1971). The U.S. Supreme Court

Support rally for pilot test program for school vouchers in Texas, with legislators, parents, and students.
(© Bob Daemmrich/The Image Works)

heard a similar argument in *San Antonio Independent School District v. Rodriguez,* 411 U.S. 1 (1973), but held that differential funding levels did not violate the Equal Protection Clause of the Fourteenth Amendment. Since that case, however, many states have decided that their own state constitutions require equal funding and have loosened the relationship between property taxes and school funding. Like desegregation, the movement to equalize school resources effectively expands access to equal and meaningful education.

OTHER REFORMS

Desegregation discussions dominated the education policy and academic agendas until the early 1980s. But with the 1983 congressional report titled *A Nation at Risk*, which found that public school students had low rates of academic achievement, discussions began to focus more on reforms that could raise test scores. With this came a renewal of debate about use of vouchers (or cash-equivalent certificates that allow parents to send their children to the public or private school of their choice) to encourage competition (originally suggested by Milton Friedman in 1955) and about the establishment of charter schools.

Those who support allowing families to decide which school their children should attend and funding these choices through vouchers argue that families will choose the best schools. Schools that are chosen by fewer families, they argue, will be forced to improve

in order to remain competitive. Opponents of vouchers often argue that if the best students are taken out of failing schools, these schools will be left with even fewer resources than they have now.

Charter schools are somewhat different. These schools are usually managed by an organization independent of the school district, sometimes for a profit. Charter schools often have a particular theme, such as arts or technology, and are generally allowed great leeway in their choice of curriculum and teaching methods. Charter schools are public, however, and usually receive a certain level of funding per student from either the state or a local education agency. Like previous reforms, both vouchers and charter schools are designed to improve educational quality.

CONCLUSION

Although there are still inequalities within the American education system, the trend since before the American Revolution has been to increase access to, and equality among, public schools. This has occurred through the gradual reduction of segregation in schools, the incorporation of vocational education into comprehensive high schools, and the equalization (in some states) of school funding. Even the current debate about instituting school choice is designed to make all schools competitive, thereby expanding the resources and opportunities available to the disadvantaged. Whether this will substantially improve the education of America's youth remains to be seen; what is certain, however, is that the public's commitment to education remains solid.

Edwards v. California (1941)

In *Edwards v. California,* 314 U.S. 160 (1941), a unanimous U.S. Supreme Court reaffirmed the existence of a constitutional right to travel. The opinion was authored by Justice James F. Byrnes.

California had passed a statute in an effort to limit the competition for jobs in the aftermath of the Great Depression, when people from Oklahoma and surrounding states were moving west to escape the drought and to seek employment. This statute, commonly known as the "Okie Law," prohibited the transport into California of any indigent person who was not a citizen of the state of California. The defendant was charged and convicted under the statute for transporting his brother-in-law from Texas to California.

The issue before the Supreme Court was whether California's prohibition on the transportation of people into the state was within the state's police power. The Court held that the transportation of people across a state line constituted a type of interstate commerce subject to congressional power, and if it were to be regulated, such control "must be prescribed by a single authority." Thus, in *Edwards,* only Congress possessed the power to regulate interstate travel, and the Okie Law was beyond the scope of California's state power because it created an "unconstitutional barrier to interstate commerce." In dicta (nonbinding analysis), Justice Byrnes alluded to the fact that the Court would not accept stereotypical judgments about indigent people as a basis for laws that discriminated against the poor.

In his concurring opinion, Justice William O. Douglas—in a point upon which Justices Robert H. Jackson, Hugo L. Black, and Frank Murphy agreed—in-

sisted that the Court should hold that the right to interstate travel was a privilege of national citizenship that was protected by the Privileges and Immunities Clause of the Fourteenth Amendment.

Edwards is significant for three reasons: First, it strengthened the constitutional right to travel; second, it marked another unsuccessful attempt to broaden the application of the Privileges and Immunities Clause; and third, it foreshadowed the Supreme Court's invalidation of laws that discriminate against people on the basis of wealth.

Edwards v. South Carolina (1963)

In *Edwards v. South Carolina,* 372 U.S. 229 (1963), the U.S. Supreme Court dealt with the liberty of Americans to assemble peacefully on public property to protest government policies and to have that right protected by the national government against state and local government actions. The governing legal principles were the protections afforded by the First Amendment to the Constitution.

During the civil rights movement of the 1950s, black Americans relied on acts of nonviolent public protest to demand changes to a segregated South. After the two decisions in *Brown v. Board of Education*—the first, 347 U.S. 483 (1954), declaring that the "separate but equal" concept was unconstitutional, and the second, 349 U.S. 294 (1955), ordering school districts to integrate "with all deliberate speed"—the civil rights movement gained momentum in seeking to end racial segregation. Most white public authorities, however, were neither sympathetic nor ready to change the Jim Crow system of racial separation. As more public protests, such as sit-ins and marches, spread across the American South, officials used both legal and nonlegal means to quell the demonstrations.

In 1961 more than 180 African American high school and college students marched from a Baptist church in Columbia, South Carolina, to the state capitol building. Joined by other supporters, these students marched to protest the continued racial intolerance of the state and to demonstrate their dissatisfaction. As they reached the grounds of the statehouse, the students encountered about thirty law enforcement officers, who first informed them they could continue their protest in the public area as long as they were peaceful. The students and others continued their march and demonstration in a peaceful manner, with several hundred onlookers watching the activities. Although there were no signs of imminent violence, the police then told the marchers to leave the grounds or face arrest. Many of the marchers, including the defendant, a minister, began to sing "We Shall Overcome" and refused to leave. Fearful of the growing crowd of onlookers, police began making arrests for "breach of the peace" under a city ordinance. The city manager of Columbia later described the protesters as "loud, boisterous and flamboyant," yet in testimony at the trial, there was no evidence that "fighting words" had been spoken at the time of the dispersion order.

Convicted and fined for disturbing the peace, the protesters, led by the defendant, appealed the case, which finally reached the U.S. Supreme Court in 1963. At issue was whether the liberty to assemble and petition the government for redress, as protected by the First Amendment, was to be applied to state and local governments through the Fourteenth Amendment's Due Process Clause. South Carolina argued that every state had a right to regulate order and protect public safety. When the protesters refused to disperse after being ordered to do, the state had a duty to protect public safety. By an eight–one vote, the U.S. Supreme Court incorporated the right to "petition the Government for redress of grievances" to apply to state actions and overturned the convictions of the protesters.

In an opinion by Justice Potter Stewart, the Court held that the "function of free speech under our system of government is to invite dispute." Use of the city ordinance to arrest individuals engaged in a peace-

ful march, the Court held, showed that the ordinance was "so vague as to permit punishment of the fair use of" the freedom of speech and assembly, and the Court ruled that the Fourteenth Amendment to the U.S. Constitution applied the First Amendment's liberty of assembly and petition to state actions. Without actual or even meaningful threat of violence, and no ensuing damage to public property, the law enforcement officials had no cause to disperse the crowd, and they therefore violated the protesters' First Amendment rights.

Edwards is a key case in American civil liberties history, as it incorporated the legal protection and guarantees of the rights expressed in the First Amendment regarding assembly and petition to apply to actions of state and local government officials.

Effective Death Penalty Act of 1996

The Effective Death Penalty Act of 1996 (EDPA) is a federal law that was meant to streamline the procedures used to administer the death penalty in federal and state court. The complete name of the legislation is Antiterrorism and Effective Death Penalty Act of 1996, passed by the 104th Congress January 3, 1996.

Title I of the act substantially amends federal habeas corpus law as it applies to state and federal prisoners, whether on death row or imprisoned for a term of years. Federal habeas corpus is the statutory procedure under which state and federal prisoners may petition the federal courts to review their convictions and sentences to determine whether the prisoners are being held contrary to the laws of the United States. The EDPA amends the availability of federal habeas corpus through several provisions, including

1. Barring federal habeas reconsideration of legal and factual issues ruled upon by state courts in most instances;
2. Creating a general one-year statute of limitations within which habeas petitions must be filed after the completion of direct appeal;
3. Creating a six-month statute of limitation in death penalty cases;
4. Encouraging states to appoint counsel for indigent state death row inmates during state habeas or unitary appellate proceedings; and
5. Requiring appellate-court approval for repetitious habeas petitions.

In addition to limits on habeas corpus, the EDPA recasts federal law(s) concerning restitution, expanding the circumstances under which foreign governments that support terrorism may be sued for resulting injuries, and increases the assistance and compensation available to victims of terrorism.

The legislation also introduced several provisions meant to address terrorism. Title III, International Terrorism Prohibitions, is designed to help sever international terrorists from their sources of financial and material support. Among other provisions, it authorizes the regulation of fundraising by foreign organizations associated with terrorist activities. It also adjusts the Foreign Assistance Act to help isolate countries that support terrorists and provide for counterterrorism efforts in other countries. Title IV, Terrorist and Criminal Alien Removal and Exclusion, deals with excluding and removing individuals who have been defined as alien terrorists from the United States and narrowing the asylum provisions to prevent them from being used to frustrate efforts to expel or remove undesirables.

The EDPA is a controversial piece of legislation. Some critics contend that the law tramples on many basic civil liberties, such as the right of habeas corpus, or that it so limits the appeals available to those sentenced to death that it raises due process concerns or otherwise promotes the execution of innocent individuals. Supporters of the law claim that it is a necessary tool to fight terrorism, especially since the September 11, 2001, terrorist attacks in Washington,

D.C., and New York City, and that it merely eliminates frivolous appeals.

Eighth Amendment

The Eighth Amendment to the U.S. Constitution bars government from inflicting "cruel and unusual punishments." Early U.S. Supreme Court cases construing this language primarily considered the constitutionality of modes of punishment other than imprisonment. More recently, the Court has issued decisions dealing with claims that a term of years was disproportionate to the defendant's culpability. Since the mid-1970s, however, the Court's Eighth Amendment jurisprudence has focused on the death penalty.

With respect to physical punishments, the justices have always agreed that the Constitution forbids the types of torturous methods deemed cruel and unusual at the time the Bill of Rights was adopted, such as whipping, burning at the stake, breaking on the wheel, and disembowelment. Confronted with practices in use, however, the Court upheld death by shooting and electrocution in the latter part of the nineteenth century. With rare exceptions, later state and federal decisions have continued to sanction these in addition to other forms of execution—for example, lethal injection, now employed by the vast majority of death penalty jurisdictions, and lethal gas. The Court itself never again ruled on a challenge to a means of killing. Yet it did strike down a few idiosyncratic punishments, such as expatriation in *Trop v. Dulles,* 356 U.S. 86 (1958), and incarceration for narcotics addiction in *Robinson v. California,* 370 U.S. 660 (1962).

In reliance on the view that the Eighth Amendment encompasses a narrow-proportionality principle governing noncapital cases, the Court has considered several attacks on extremely long prison sentences. In the context of recidivist statutes, which are aimed at habitual criminals, the Court sustained a life sentence with possible parole for a three-time minor thief and forger in *Rummel v. Estelle,* 445 U.S. 263 (1980). In *Ewing v. California,* 538 U.S. 11 (2003), the Court upheld a twenty-five-year-to-life term for a man with a more serious record, who stole three golf clubs valued at about $400. But in *Solem v. Helm,* 463 U.S. 277 (1983), the Court invalidated a life sentence without parole for a seventh nonviolent felony. Outside the recidivist setting, the justices have sanctioned two consecutive twenty-year terms for possession and distribution of nine ounces of marijuana, and life without parole for possession of 672 ounces of cocaine. As Justice Sandra Day O'Connor conceded in *Lockyer v. Andrade,* 538 U.S. 63 (2003), "[O]ur precedents in this area have not been a model of clarity."

Capital punishment, not surprisingly, has proved the most controversial component of Eighth Amendment jurisprudence. Sentiment against the death sentence has waxed and waned over the years. Opponents have had to confront the fact that the framers of the Constitution plainly did not intend to do away with the ultimate penalty. For some justices, that might have been the end of the matter. In *Trop,* however, the Court opined that the "[t]he Amendment must draw its meaning from the evolving standards of decency that mark the progress of a maturing society." In other words, changed public attitudes could be used as a basis for revising doctrines governing the penalty and, indeed, for abolishing it entirely.

The modern capital punishment era began in 1972, when the landmark five–four decision in *Furman v. Georgia,* 408 U.S. 238, invalidated all extant death penalty laws. There was no single opinion for the Court; each justice weighed in with his own views. With varying emphasis, members of the Court majority faulted defects in the penalty's administration: Two principal ones were arbitrariness and discrimination against minorities and the poor. In oft-quoted words, Justice Potter Stewart compared receiving a capital sentence to being struck by a bolt of lightning—so "wantonly" and "freakishly" was death imposed. More broadly, Justice William J. Brennan Jr. deemed the punishment innately degrading to human

dignity and, along with Justice Thurgood Marshall, would have dispatched it permanently.

Yet because the other majority justices in their opinions left open the possibility that capital punishment could be fixed, legislatures soon passed "new and improved" death penalty statutes. Five of them came before the Court a scant four years after *Furman.* Three (from Georgia, Florida, and Texas) were upheld; two (from Louisiana and North Carolina) were struck down. These cases, especially *Gregg v. Georgia,* 428 U.S. 153 (1976), and *Woodson v. North Carolina,* 428 U.S. 280 (1976), have shaped capital jurisprudence to the present day.

Without expressly deciding what was compelled to ensure constitutionality, the Court proclaimed that the so-called guided-discretion statutes, which it was sustaining, had adequately addressed the problem of arbitrariness. In most jurisdictions, prior to *Furman,* jurors had been given absolute power to impose either life or death on defendants. By contrast, the Court noted with approval, the Georgia, Florida, and Texas laws required the sentencer to find beyond a reasonable doubt—at a separate penalty trial—at least one aggravating factor. They also permitted the defendant to introduce any mitigating factors and provided for automatic appellate review. Mitigation was deemed so important, moreover, that the Court voided the remaining statutes, which mandated death for certain crimes. The *Woodson* plurality opinion stated: "[T]he fundamental respect for humanity underlying the Eighth Amendment requires consideration of the character and record of the individual offender and the circumstances of the particular offense."

Thus, after the *Gregg* quintet, the modern capital punishment edifice rests on twin pillars: nonarbitrariness and individualization. These stand in some tension with each other, however, as justices and scholars alike have remarked. In general, over the years the Court has continued to insist that defendants be allowed to introduce, and sentencers not be barred from considering, any conceivable mitigating evidence. But it has adhered much less faithfully to the injunction against capricious imposition of death. The justices have, among other things, held that proportionality review of capital penalties (approved in *Gregg*) is not required; that a state may run a capital system demonstrated to be tainted by racial discrimination; and that the sentencer may rely on inflammatory victim-impact evidence. These rulings do not accord with the heightened need for reliability that, as the *Woodson* Court noted, is demanded because death is so different from other punishments.

Finally, using its "evolving standards" jurisprudence, the Court has created some absolute zones of immunity from death. That ultimate punishment has been deemed excessive for the mentally retarded, juvenile murderers under sixteen, rapists of an adult woman, defendants with a relatively minor role in a felony murder (murder that occurred during commission of another felony, such as arson), and those who are insane at the time of execution.

It would appear that few categorical challenges to capital punishment remain, although perhaps the Court will eventually reconsider the propriety of death for killers sixteen and seventeen years old when the crime was committed, which it has upheld. Possibly, too, sometime in the future the Court may issue a *Furman II,* embracing the Brennan and Marshall view that the death penalty inherently violates the Eighth Amendment. Meanwhile, in the apt words of Justice Harry A. Blackmun, the state will likely continue to "tinker with the machinery of death" rather than dismantle the doctrinal structure erected in the wake of *Furman.*

Eisenstadt v. Baird (1972)

In *Eisenstadt v. Baird,* 405 U.S. 438 (1972), the U.S. Supreme Court augmented its ruling in *Griswold v. Connecticut,* 381 U.S. 479 (1965), recognizing that personal autonomy and privacy in reproduction extend beyond the marital relationship and are located in the individual. *Griswold* had overturned a Connecticut law that banned the use of contraceptives by married couples. The Court in *Eisenstadt* found a Massachusetts statute outlawing the prescription or distribution of contraceptives to nonmarried persons to be unconstitutional as well. This law made it a felony to dispense contraceptives, but it did not criminalize their use. Only registered pharmacists and physicians could legally distribute birth control to married people. Any dissemination of contraceptives to single individuals for the purpose of birth control was illegal. To challenge the constitutionality of the law, a birth control advocate, Bill Baird, arranged to be arrested after sharing contraceptive devices during his lecture on contraception and overpopulation at Boston University. Baird distributed Emko Vaginal Foam to single women in the audience.

The Supreme Court, in Justice William J. Brennan Jr.'s six–one majority opinion in *Eisenstadt,* argued that the right to make reproductive decisions belonged to individual persons and was not based in the marriage relationship. Justice Brennan found the Massachusetts statute unconstitutional because "the statute's distinction between married and unmarried people was an unconstitutional denial of equal protection of the laws." The right of privacy is rooted in the individual, not inherent in the marital state as was stated in *Griswold.*

In *Eisenstadt,* the Court connected a fundamental right to control the choice of reproduction to the right of privacy, which the Court found in *Griswold* was implicit in the Bill of Rights. *Eisenstadt* held that any distinction between married and unmarried individuals was a violation of the Equal Protection Clause of the Fourteenth Amendment. In his majority opinion, Justice Brennan stated:

> If under *Griswold* the distribution of contraceptives to married persons cannot be prohibited, a ban on distribution to unmarried persons would be equally impermissible. It is true that in *Griswold* the right of privacy in question inhered in the marital relationship. Yet the marital couple is not an independent entity with a mind and heart of its own, but an association of two individuals each with a separate intellectual and emotional makeup. If the right of privacy means anything, it is the right of the individual, married or single, to be free from unwarranted governmental intrusion into matters so fundamentally affecting a person as the decision whether to bear or beget a child.

No legitimate state interest could be defended by the state of Massachusetts; it could not demonstrate how the law was either a preventive health measure or a means of discouraging extramarital sex. Therefore the law was unconstitutional, and single individuals were given the same access to birth control as married people. This right of privacy would be expanded the next year to encompass the right to have an abortion in *Roe v. Wade,* 410 U.S. 113 (1973).

Electronic Eavesdropping

Electronic eavesdropping, which includes wiretapping, consists of attempts by the government to intercept private communications through any kind of electronic transmission—including telephones, cell phones, voice mail, e-mail, other computer transmissions, pagers, and the like. The controversy over electronic eavesdropping emerges at the center of the conflict between an individual's privacy, the "right to be let alone," versus the onward march of technology. Early inventions such as the telephone challenged people's conceptions of privacy and what constituted an

unreasonable search and seizure in the context of the Fourth Amendment to the Constitution. At first, the U.S. Supreme Court did not recognize this new technology as an intrusion on the individual's expectation of privacy, but it eventually ruled that the Fourth Amendment protected "people, not places."

The basic premise behind privacy and the Fourth Amendment comes from the common law tradition that a "man's home is his castle." With the advent of electronic telecommunications, the Supreme Court was left to answer the question of whether telephone communications counted as being within the castle. Were they the same as a person's physical possessions, which were protected from warrantless search and seizure under the Fourth Amendment? In its first consideration of these questions, the Supreme Court ruled in *Olmstead v. United States,* 277 U.S. 438 (1928), that a conviction obtained via wiretapping was not a violation of the Fourth Amendment, ruling narrowly that the amendment protected only a person and his or her house and personal papers and effects.

In the narrow five–four decision, written by Chief Justice William H. Taft, the majority refused to consider telephone messages as on par with the seizure of tangible items. According to Taft, "the language of the Amendment cannot be extended and expanded to include telephone wires, reaching the whole world from the defendant's house or office," and "the intervening wires are not part of his house or office, any more than are the highways along which they are stretched." Therefore, the defendant's privacy was not invaded, nor was the interception of his telephone call unreasonable.

Justice Louis D. Brandeis dissented, promising "the progress of science in furnishing the Government with means of espionage is not likely to stop with wiretapping." Brandeis envisioned possible advances that would enable the government to get to "secret papers" without having to seize them physically. In that anticipation, he asked, "Can it be that the Constitution affords no protection against such invasions of individual security?" Similarly, Justice Oliver Wendell Holmes Jr. considered electronic eavesdropping to be "dirty business," of which the government should not be part.

Taft, in his majority opinion, invited Congress to pass legislation on wiretapping, which to date was lacking. In the late 1920s and early 1930s, federal and state laws were passed to ban wiretapping by government agencies. These laws, however, merely limited the spending of revenue on wiretap operations and made certain wiretap evidence inadmissible in court. In 1934, Congress passed the Federal Communications Act, section 605 of which, though the act failed to outlaw wiretapping completely, prohibited "intercepting and divulging" telecommunications. The Court ruled in *Nardone v. United States,* 308 U.S. 338 (1939), that this provision meant the federal government could not use intercepted communications as evidence. However, the Court allowed authorities to skirt section 605 by following *Olmstead* and narrowly ruling that the following activities were not unreasonable searches: listening in on conversations going on in an adjacent office by means of a detectophone (a device that enabled law enforcement to hear between walls), as it held in *Goldman v. United States,* 316 U.S. 129 (1942); and having a third party use a "bug" to record conversations, the Court's holding in *On Lee v. United States,* 343 U.S. 747 (1952).

Further efforts to make changes to wiretapping legislation stalled until 1967. That year, the Supreme Court handed down two important decisions: First, in *Berger v. New York,* 388 U.S. 41 (1967), the Court found unconstitutional a New York statute allowing electronic eavesdropping because it did not provide judicial authorization for placing bugs or taps. Also, the statute was too vague, not listing what would be "searched," what was being sought, or for how long, and there was no notice to the subject or notification of what had been "seized." *Berger* fleshed out what was considered reasonable for electronic eavesdropping: (1) probable cause, (2) specificity of area to be wiretapped, (3) providing notice to subject of wiretapping, (4) conducting the electronic eavesdropping for a limited time, (5) and turning over to an authorizing agent the items seized.

In the second decision, *Katz v. United States,* 389 U.S. 347 (1967), the Court overturned the strict-constructionalist decision of *Olmstead* and noted that since the Fourth Amendment protected "people, not places," the bugging of a pay-phone booth to intercept the defendant's communications consisted of an illegal search and seizure. The defendant had a "reasonable

expectation of privacy," according to Justice John M. Harlan's concurrence.

But the right to privacy is not an absolute. Therefore, given a compelling governmental interest, electronic eavesdropping can be consistent with the Fourth Amendment, so long as certain procedures are followed. Just as the Communications Act of 1934 was the congressional response to *Olmstead,* in 1968 Congress responded to *Katz* and *Berger* with Title III of the Omnibus Crime Control and Safe Streets Act. Title III created a framework for reasonable use of electronic eavesdropping by

- Listing the types of crimes for which a wiretap/bug might be requested (a list of predicate offenses for which electronic eavesdropping may be permissible included sabotage, treason, espionage, kidnapping, fraud, forgery, as well as any number of offenses related to organized crime);
- Requiring a court order approving the eavesdropping;
- Requiring probable cause that a crime was being committed, and by the person who would be bugged, and establishing that other means of collecting evidence would be insufficient;
- Showing the minimal use of electronic eavesdropping; and
- Providing notice to subjects at the end of surveillance.

Implementation of the law inevitably led to constitutional challenges that reached the Supreme Court, which picked at the foundation established in *Berger* and *Katz.* For example, in *United States v. White,* 401 U.S. 745 (1971), the Court ruled that the warrant requirement did not apply to willing informers, citing the "assumption-of-risk rule" under which an individual ran the risk that a conversation might be recorded by a government informant or undercover police officer. Conversely, a unanimous Court ruled in *United States v. United States District Court,* 407 U.S. 297 (1972), that a claim of national security was insufficient to waive the warrant requirement for electronic eavesdropping.

Additional legislation was passed after 1968 to complement Title III, such as the Foreign Intelligence Surveillance Act of 1978, which created the standards for using electronic surveillance domestically for purposes of gathering foreign intelligence; the Electronic Communications Privacy Act of 1986, an extension of Title III, with restrictions on "new" technology, such as cell phones, e-mail, voice mail, pagers, and the like; and the Patriot Act of 2001, passed in the wake of the September 11 terrorist attacks in New York City and Washington, D.C. The Patriot Act expanded previous legislation on electronic eavesdropping, added terrorism and "cybercrime" offenses to the predicate-offense list, and authorized "roving" surveillance for purposes of domestically collecting foreign intelligence—that is, without having to identify the specific place where communications might be intercepted. This was a departure from Title III.

The use of electronic eavesdropping will continue to present challenges to the Fourth Amendment and people's notions of privacy as technology becomes more advanced. With it seeming inevitable that scientists will develop newer and more sophisticated methods of "overhearing" conversations, the degree to which the government can constitutionally infringe upon individual privacy will be hotly debated.

Elk Grove Unified School District v. Newdow (2004)

In enforcing a state policy requiring all public elementary schools to begin each day with "appropriate patriotic exercises," the Elk Grove Unified School District in Sacramento County, California, required that each class salute the American flag and recite the Pledge of Allegiance. Since congressional action in

1954, the Pledge, which was originally formulated in 1892 by Francis Bellamy, a Baptist minister, has referred to the nation as being "under God." Michael Newdow, an atheist whose daughter was enrolled in school in this district, challenged the law as an unconstitutional violation of the Establishment Clause of the First Amendment, which the U.S. Supreme Court long applied to the states through the Due Process Clause of the Fourteenth Amendment. Under this clause, government (local, state, federal) is prohibited from engaging in action that would constitute "establishment" of religion.

A U.S. magistrate, backed by a U.S. district judge, dismissed Newdow's challenge to the law, but in *Newdow v. U.S. Congress,* 328 F.3d 466 (9th Cir. 2002), a divided U.S. Ninth Circuit Court of Appeals reversed the decision and ruled that the words "under God" constituted an impermissible establishment of religion because the requirement failed the "coercion test" that the Supreme Court had announced in striking school graduation prayers in *Lee v. Weisman,* 505 U.S. 577 (1992). In that test, the "coercion" element focused on the existence of psychological compulsion in a school setting, where students would be subject to majority behavior and peer pressure to "fit in."

In *Elk Grove Unified School District v. Newdow,* 124 S. Ct. 2301 (2004), issued on Flag Day (June 14), the U.S. Supreme Court reversed the Ninth Circuit, with all eight justices participating (Justice Antonin Scalia recused himself after having made public comments supporting the Pledge) in agreement on reversal. Justice John Paul Stevens's majority decision, in which Justices Anthony M. Kennedy, David H. Souter, Ruth Bader Ginsburg, and Stephen G. Breyer concurred, focused on Newdow's perceived lack of "standing," a principle of legal procedure used to determine whether a particular party is entitled to bring a lawsuit to court. Concurring opinions by Chief Justice William H. Rehnquist and Justices Sandra Day O'Connor, and Clarence Thomas would have upheld the Pledge law on the merits.

Justice Stevens distinguished two kinds of standing—standing under Article III of the Constitution (the "case and controversy" requirement) and prudential standing. He thought the latter was implicated in this case. He pointed out that although Michael Newdow and Sandra Banning shared joint custody of their daughter, courts had awarded Banning sole legal custody, and, as a Christian, she both supported the Pledge and did not want her daughter involved in the case. Stevens argued that the Court had a policy against granting standing in cases involving domestic relations.

Rehnquist, O'Connor, and Thomas thought the Court's limited standing doctrine applied only in domestic relations cases involving "divorce, alimony, and child custody" issues. They further believed the Ninth Circuit Court of Appeals was in a better position to interpret the applicability of state law to issues of standing than it was.

On the more substantive issue, Chief Justice Rehnquist pointed to a host of presidential and public acknowledgments of God. He did not consider the words "under God" to be either "a prayer" or "an endorsement of religion," which previous decisions relating to prayer in school and related matters would outlaw. Rather, the words were a simple acknowledgment of the nation's history, "a patriotic exercise, not a religious one." He opposed giving a parent of a child a " 'heckler's veto' over a patriotic ceremony willingly participated in by other students."

Justice O'Connor continued to advance her "no endorsement" test. She viewed a noncoercive pledge as a permissible act of "ceremonial deism." She cited four reasons to believe that the words "under God" were permissible: the long "history and ubiquity" of the words, which had been widely sanctioned for fifty years; the absence of "worship or prayer"; the "absence of reference to particular religion"; and the "minimal religious content" of the words.

In concurrence, Justice Thomas argued that the Establishment Clause, which he believed to have been a "federalism provision," could not be "incorporated" against the states. If the Court was correct in *Lee v. Weisman* in invalidating prayer at high school graduation exercises, Thomas believed the Court would have to invalidate the words "under God" as well. For him, however, *Lee* was incorrectly decided, because he believed the Free Exercise Clause prohibited only the kind of coercion that was accomplished "by force of law and threat of penalty," neither of which was at issue in *Elk Grove*.

Although the Court dodged the constitutional issue in this case, it is likely to recur. *Elk Grove* does not

indicate where a majority of the current Court stands in regard to the substantive issue.

Elkins v. United States (1960)

The Fourth Amendment to the U.S. Constitution guarantees the right to freedom from unreasonable searches and seizures. The "exclusionary rule"—as developed through a series of U.S. Supreme Court cases, including *Elkins v. United States,* 364 U.S. 206 (1960)—is an attempt to apply that right to the practices of law enforcement and criminal procedure. It is the primary means for protecting that right, and it is often seen as the only truly effective means. The rule excludes evidence gathered in violation of the Fourth Amendment from use in trials; it thus is an attempt to remove the incentive for law enforcement and others to commit such violations. *Elkins* specifically put an end to the "silver platter" doctrine, which had allowed federal courts to make use of evidence obtained illegally by state law enforcement personnel. The Court said eliminating this doctrine was necessary to make the exclusionary rule—and therefore the Fourth Amendment—real in practice rather than merely in principle.

Under the common law, evidence was admissible regardless of origin. It was of course possible to prosecute those who obtained evidence illegally, but doing so required a separate case. This was small comfort to those convicted on the basis of such evidence, and it was (and is) often not practically possible to pursue justice against those who gathered evidence illegally—particularly not from jail.

Boyd v. United States, 116 U.S. 616 (1886), was the first important case to address this issue. E.A. Boyd was not searched, but he was compelled to provide incriminating papers at trial. If he had not produced them, this would have been treated as a confession, despite the Fifth Amendment protection against self-incrimination. The Court ruled that this forced production of papers was analogous to an unreasonable search and seizure, and it asserted a connection between the Fourth and Fifth Amendments. Similarly, in *Weeks v. United States,* 232 U.S. 383 (1914), the conviction of an individual was overturned because the evidence against him was obtained in violation of the Fourth Amendment. Permitting admission of illegal evidence encouraged illegal searches and seizures; by ending this, *Weeks* was intended to make the Fourth Amendment concrete. Although *Weeks* established the exclusionary rule, it was limited to federal officers providing evidence in federal courts, and—especially after *Wolf v. Colorado,* 338 U.S. 25 (1949), which held that state courts could determine for their trials whether to admit illegally obtained evidence—the *Weeks* case left state courts and state officers largely unrestrained in their application of Fourth Amendment protections, even when state officers were providing evidence to federal courts. In practice, this procedure often allowed unconstitutional searches and seizures to go unrestrained and unpunished.

In *Elkins,* police had obtained a warrant to search one of several defendants' homes for pornography. None was found, but there was evidence that wiretaps were being made. Individuals were indicted for this, but the Multnomah County District Court in Oregon decided that the original search warrant was invalid and suppressed the evidence. This decision was appealed, but a higher state court concurred that the evidence had been obtained unlawfully. State law enforcement officers then placed the evidence in a safety deposit box, and federal law enforcement officers retrieved it. This convenient serving up of evidence "on a silver platter" is what had given the silver-platter doctrine its name. After the state case was dropped, federal prosecutors obtained a conviction that the federal Court of Appeals for the Ninth Circuit upheld.

When the U.S. Supreme Court considered *Elkins,* the justices concluded that evidence that could not have been used if gathered by federal officers also could not be used in federal courts even if gathered by state officers, and they explicitly referred to and overruled the silver-platter doctrine. In this way, the *Elkins* decision avoided simply declaring the evidence inadmissible because, according to the Oregon courts, it was obtained unlawfully. Even if the seizure had been acceptable by state standards, the evidence would have been inadmissible in federal courts. This distinction is important because it addresses the different standards for exclusion of evidence that are possible—or had been possible—in various states.

Since *Elkins* compelled federal courts to exclude a broader range of evidence than many of the state courts would have excluded, it made the state courts' use of such evidence problematic, which set the stage for *Mapp v. Ohio,* 367 U.S. 643 (1961). The Supreme Court's decision in *Mapp,* which referred to *Elkins,* explicitly required a uniform application of the exclusionary rule, and it made evidence obtained by unconstitutional searches and seizures inadmissible even in state courts. Between them, *Elkins* and *Mapp* affected the practice of all law enforcement, regardless of jurisdiction, and brought criminal procedure in line with constitutional protections. The exclusionary rule, as shaped and broadened by these decisions, remains a distinctive and valued feature of American jurisprudence.

Ellsworth, Oliver (1745–1807)

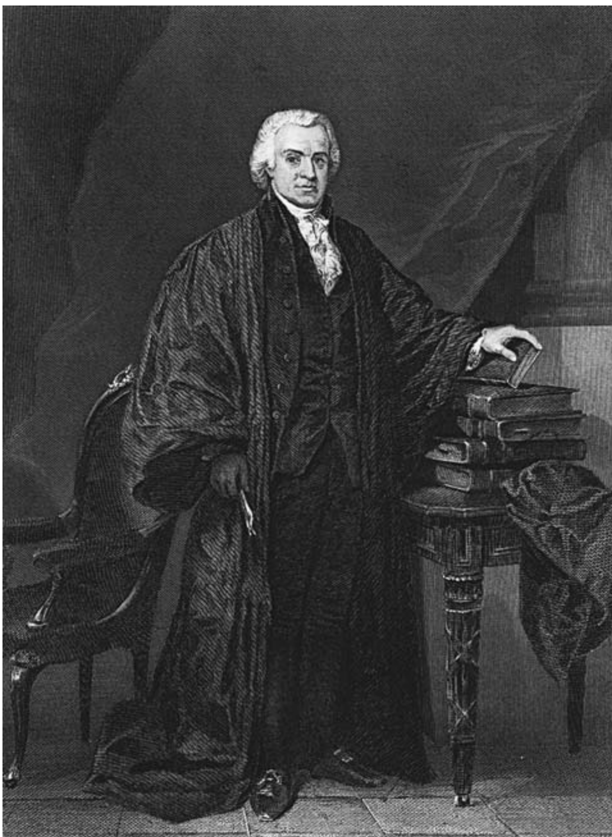
Little remembered today, Oliver Ellsworth played an extraordinarily important role in the construction of the U.S. Constitution, the U.S. Congress, and the U.S. federal court system. A gifted orator and a consummate practical politician, he moved in his political beliefs from a strong states-rights advocate, as a member of the Connecticut General Assembly, to a committed Federalist.

Born April 29, 1745, in Windsor, Connecticut, Ellsworth initially intended a career as a Calvinist minister. A 1766 graduate of the College of New Jersey (now Princeton University), he opted instead for the law. Still, his deep commitment to Calvinism informed his entire career, most particularly his views on civil governance. He held numerous important positions: Connecticut Superior Court judge (1785–1789), chief justice of the U.S. Supreme Court (1796–1800), delegate to the Continental Congress (1777–1784), delegate to the Constitutional Convention (1787), U.S. senator (1789–1796), and diplomat (1799–1800).

An important founder of the republic, Ellsworth participated in the preparation in Philadelphia of the first draft of the Constitution. He returned to Connecticut some twenty days before the historic signing, September 17, 1787, and so was not one of the signatories. His talent for compromise more than once freed a locked and threatened Constitutional Convention. As coauthor with Roger Sherman of the "Connecticut compromise," he secured his most brilliant arrangement: a bicameral federal legislature in which the people of each state were represented, according to population and by election, in a lower House of Representatives, and each state, regardless of size or population, was represented equally with all other states (two senators per state) in a Senate. Each state legislature chose its Senate representatives (a provision later altered by the Seventeenth Amendment). This compromise undoubtedly saved the convention.

A man of his day, however, Ellsworth also effected ignoble compromises on the issue of slavery. He supported the three-fifths rule, counting a slave as three-fifths of a person for the purposes of taxation and representation. He advanced the compromise forbidding Congress the power to restrict the slave trade before 1808. Although defended as an agreement necessary to secure South Carolina's and Georgia's allegiance to the new Constitution, it could also be interpreted as a collusive financial arrangement between New England shipping interests and Southern slaveholders. Historically, the fledgling republic's best opportunity to ameliorate the slave issue was lost. To emphasize the "federated" (as opposed to the "national") character of the new republic, Ellsworth also contributed the resolution naming the new government "the *United States.*"

In 1789, Ellsworth became one of Connecticut's first two senators, serving seven years. As chairman of the judiciary committee and principal author of the Judiciary Act of 1789 (the first Senate bill of the first session of the First Congress), Ellsworth, with New Jersey's William S. Paterson, created a three-tiered federal judiciary: the top tier, a Supreme Court (a chief justice and five associate justices); the bottom tier, one District Court for each state (plus one each for the not-yet states of Maine and Kentucky) presided over by a federal judge; the middle tier, three traveling Circuit Courts, each serving a distinct geographical location and each consisting of two Supreme Court justices and the local district judge. Additional provisions of the act, such as concurrent jurisdiction with state courts of many federal questions and the right to trial of defendants in the district in which they lived, did much to mollify fears that an independent federal judiciary might usurp the power of state courts or threaten established civil liberties.



Oliver Ellsworth was one of the first justices of the U.S. Supreme Court. *(Library of Congress)*

Ellsworth was cochairman of the Congressional Joint Committee of Conference, also formed in 1789, to resolve differences in the House and Senate versions of the Bill of Rights. He was the Senate floor leader for its passage, as well as the author of the final wording of the First Amendment's Establishment Clause. His support for the bill, however, was a pragmatic compromise. Privately, he was against a Bill of Rights, thinking it a delaying tactic against ratification of the Constitution designed by Antifederalists. Also, he argued, because the people themselves were the source of political power, the recurring elective process provided the best security for civil rights. Chosen leaders of virtue would be better guarantors of an individual's civil liberties than would a complicated enumeration of those liberties, which nonvirtuous leaders would, in any case, trample. In like manner, his Establishment Clause intended a prohibition against Congress establishing a single national religion. He thought that religion should be a local matter, supported and reinforced, as in Connecticut, by local laws and state taxes. Individuals, however, should always have freedom of conscience in matters of religious worship.

Sworn in on March 4, 1796, Ellsworth served as chief justice of the Supreme Court until November 1800 when he accepted a diplomatic assignment to France. His decisions were few and dealt mainly with procedural and jurisdictional questions, not civil liberties. In a Southern Circuit Court decision, however, he held that although the United States could freely

naturalize a citizen of another country on the wish of that applicant, an American's allegiance to the United States was not unilaterally dissoluble in the same manner.

Politically, he supported the Alien and Sedition Acts of 1798. Those well-intentioned but disastrous war measures of President John Adams greatly lengthened residency requirements for foreigners to gain citizenship, gave the president a right to deport "dangerous" aliens, and severely attacked the First Amendment's freedom of speech clause. Oliver Ellsworth died at home November 26, 1807, after a period of semiretirement.

Ely, John Hart (1938–2003)

John Hart Ely held several important positions as a legal scholar: Richard A. Hausler Professor at the University of Miami Law School; dean of Stanford Law School; and Tyler Professor of Constitutional Law at Harvard University. He perhaps became best known among American scholars for "The Wages of Crying Wolf: A Comment on *Roe v. Wade"* (1993). In that essay Ely criticized Justice Harry A. Blackmun's "right to privacy" rationale the U.S. Supreme Court used in voiding Texas's ban on most abortion procedures in *Roe v. Wade,* 410 U.S. 113 (1973).

Ely wrote three major books. *Democracy and Distrust: A Theory of Judicial Review* (1980) was a defense of judicial activism, as outlined in the famous footnote four formula of *United States v. Carolene Products, Inc.,* 304 U.S. 144 (1938), and as generally applied in the Court under Chief Justice Earl Warren. In *War and Responsibility: Constitutional Lessons of Vietnam and Its Aftermath* (1993), Ely argued that the Vietnam War was constitutional insofar as Congress enacted the Tonkin Gulf Resolution and appropriated funds to support U.S. military troops. However, the key lesson was that leading members of Congress willingly abdicated authority to check presidential aggrandizement of power because they did not want voters to hold them accountable for war-making acts, especially mistakes. Ely's third major book, *On Common Ground* (1996), covered a variety of topics that reflected the breadth of issues Ely addressed in his writing and speaking career. In it he discussed such diverse subjects as federalism, separation of powers, freedom of expression, religious freedom, criminal procedure, and racial discrimination.

One of Ely's most provocative essays in *On Common Ground* was "Substantive Due Process." He began the chapter with a "Memorandum for Chief Justice Earl Warren Concerning *Griswold v. Connecticut* (1965)" that Ely wrote as a law clerk for Chief Justice Warren. G*riswold* concerned a ban on the use of contraception as applied to the poor clientele of Planned Parenthood clinics. Ely recommended holding against the state for its denial of equal protection of the law.

In the provocative "Wages of Crying Wolf" (1993), Ely opened his comment by pitting a woman's liberty and the right to life of a fetus as opposing interests. He took up the standard scholarly criticism of *Roe v. Wade* that the opinion was broader than necessary in restricting the state's interest in protecting fetal life during the first trimester. Ely agreed but believed this missed the real problem in the case. Furthermore, he conceded that as a legislator facing the moral quagmire of deciding between a woman's liberty and a fetus's unborn life, he would prefer a public policy reinforcing the woman's liberty. The real problem, he asserted, was that the Court had no business express-

ing judicial activism by voiding public policy, even unwise public policy, unless it was clearly unconstitutional, and that when the ordinary democratic processes discriminated against a class of people by placing unreasonable barriers in their way for changing the legislative will, this was clearly unconstitutional. The case in point was *Lochner v. New York,* 198 U.S. 45 (1905), the "wolf" Ely cited as warning against the dangers of *Roe.* In *Lochner,* the Court in a seven–two vote had used a substantive liberty "right of contract" to strike down a mandatory workday of no more than ten hours a day, a precedent that lasted until 1937.

Ely defended the Warren Court's reliance on the *Carolene Products* approach to judicial activism because he thought this approach, unlike the attempt to develop a right to privacy in *Roe*, rested on democratic values implicit within the Constitution rather than on judicially discovered rights. Even in *Griswold*, the essential holding was that a "right of privacy" was necessary to stop governmental snooping in the bedroom. However, under Chief Justice Warren E. Burger, the Court in *Roe v. Wade* for the first time in over thirty-five years found a substantive personal liberty beyond the Constitution's textual guarantees, beyond its need to ensure democratic policy-making, and beyond its need to oversee policy-making structures.

Ely believed that the feminist defense of *Roe v. Wade* was inadequate. Nonetheless, he approved the ruling in *Planned Parenthood of Southeastern Pennsylvania v. Casey,* 505 U.S. 833 (1992), which decided against overruling *Roe.* He admitted that he lacked a well-developed theory of *stare decisis* (pronounced *STAR-ry de-SI-sis*), or precedent, but he believed that the recognition of the right to an abortion was a progressive egalitarian development for women, and he also believed that too many women now relied on *Roe* to overrule the right to an abortion. Ely seemed not to care that his viewpoint could never satisfy enough political actors to gain him a seat on the Supreme Court.

Emancipation Proclamation

On September 22, 1862, President Abraham Lincoln announced his intention to emancipate the slaves in those areas still in rebellion against the Union on January 1, 1863. On January 1, in the Emancipation Proclamation, he ordered that "all persons held as slaves within any State or designated part of a State, the people whereof shall then be in rebellion against the United States, shall be then, thenceforward, and forever free."

Historian John Hope Franklin identified the Emancipation Proclamation as among the most significant documents in the American political tradition for its revolutionary implications for civil rights and racial equality. The proclamation's stance toward civil rights is complicated, however, as it tacitly acknowledged a constitutional protection of slave property that is not lightly abridged, at the same time that it proclaimed the injustice of slavery, transformed the character of the Civil War, and foreshadowed the Thirteenth Amendment.

The proclamation further commanded that "the Executive Government of the United States, including the military and naval authority thereof, will recognize and maintain the freedom of [freed slaves], and will do no act or acts to repress such persons, or any of them, in any efforts they may make for their actual freedom." Lincoln defended his action by pointing to the power "vested" in him "as Commander-in-Chief, of the Army and Navy of the United States in time of actual armed rebellion against the authority and government of the United States." Emancipation was a "fit and necessary war measure for suppressing said rebellion." The scope of Lincoln's order and the

means he deployed to enforce it emphasized his understanding of constitutional powers, the nature of the Union, and the complexity of the constitutional mandate regarding slavery.

Lincoln defended the Emancipation Proclamation as a war measure authorized by the president's power as commander-in-chief. By summer 1862, the Union effort to suppress the Southern rebellion had suffered repeated setbacks. Discouraged by the reluctance of his generals to engage the enemy, Lincoln assumed direct control of the army and ordered it in early 1862 to confront the Southern armies. Several defeats followed, and emboldened by these victories, General Robert E. Lee actually invaded the North, crossing into Maryland west of Washington. On September 17, Union and Confederate forces met at Antietam in Maryland. The battle resulted in more casualties than from any engagement in U.S. history.

President Abraham Lincoln issued the Emancipation Proclamation in 1862, which freed all slaves in the Southern states that had seceded from the Union. The proclamation was an important first step toward granting civil liberties and basic freedoms for African Americans. *(Library of Congress)*

Lincoln's decision to emancipate the slaves was a war measure taken to salvage a Union in increasingly desperate shape. In a July 4, 1861, speech to Congress, he had already assumed and defended a vast array of questionable executive powers. Yet that power remained limited, and the Emancipation Proclamation emphasized these limits with its suggestion that the national government was prohibited from denying the constitutionally protected positive right to slave property. This is evident in the proclamation's form, its constitutional justification, its method of enforcement, and the scope of its application.

The executive order of emancipation was preceded by a 100-day warning of Lincoln's intent. Lincoln appreciated the Constitution's conventional protection of the right to property in a slave, and justice demanded that he warn those in rebellion of his intention. Moreover, his declaration of the slaves' freedom was not coupled with a promise of forced liberation. He remained formally unwilling to use the federal army to free the slaves, instead merely promising the maintenance of a freedom already earned, presumably through the slaves' own action.

Lincoln promised that after the probationary period he would evaluate which areas were still in a state of rebellion and thus subject to the proclamation. In other words, the proclamation did not serve to free all the nation's slaves but merely those in Confederate states. In the "border states" of Missouri, Kentucky, and Maryland, all of which protected the institution of slavery, citizens maintained their slave property under the proclamation. The decree's restricted scope was further emphasized by Lincoln's earlier retraction of General John C. Frémont's September 1861 order of emancipation in Missouri. Certainly, the limited reach of the Emancipation Proclamation served a political purpose, as the maintenance of border-state loyalty was integral to a war effort run from Washington, a Southern town surrounded by the Confederate-sympathizing state of Maryland.

Additional limits to the proclamation's jurisdiction suggest, however, that Lincoln was not motivated simply by politics but he recognized that slave property was constitutionally protected. In addition to the border states, Lincoln exempted portions of Virginia and

parts of southern Louisiana, which were quickly secured by the Union at the start of the war. In other words, even in otherwise rebellious states, where the war emergency had ended, Lincoln seemed unwilling to use national power for emancipation. After the criminal behavior of the rebels was subdued by the national government, it was not within the scope of executive power to strip persons of their slaves.

Still, in spite of these limits, the Emancipation Proclamation did display an American aspiration to full racial equality. In conclusion, Lincoln stated, "And upon this act, sincerely believed to be an act of justice, warranted by the Constitution, upon military necessity, I invoke the considerate judgment of mankind, and the gracious favor of Almighty God." Former slave and statesman Frederick Douglass explained that not one word of the Constitution required amending for him to be admitted to full civil and political equality. Lincoln agreed with Douglass, challenging Chief Justice Roger B. Taney's infamous *Dred Scott* opinion in *Scott v. Sandford,* 60 U.S. 393 (1857), which claimed that the Declaration of Independence constitutionalized racial inequality and slavery.

At the same time, however, the Constitution did protect a positive right to slave property, most notably in the fugitive slave clause of Article IV. Like Justice Joseph Story in his interpretation of that clause in *Prigg v. Pennsylvania,* 41 U.S. 539 (1842), and Lord William Mansfield in the English *Somerset* case (1772), Lincoln in the Emancipation Proclamation recognized this right but emphasized its conventional character. He assumed that the right was an attack on human nature itself, and it therefore existed only with enabling legislation. Prior to the war, Lincoln repeatedly promised the South that he had neither the intention nor the power to regulate the "peculiar institution" as it existed in the states. Yet after the 100-day warning of his provisional Emancipation Proclamation, in areas where the South was still in rebellion, order had broken down. Therefore, no enabling legislation any longer existed, and the martial law of the Union armies would recognize all persons to be free persons.

Eminent Domain

The term "eminent domain" refers to the power of a government to compel the transfer of real or personal property from private owners to the government. Confiscation of property by government seemed a throwback to feudal times, when civil liberties were few. Yet Parliament in England had long used eminent domain for public projects. Similarly, the governments in colonial America compelled owners to transfer real and personal property to facilitate the construction of roadways and public buildings. Colonial governments also delegated the power of eminent domain to private parties, such as grist mill proprietors and ironwork operators, whose activities were seen as promoting economic growth.

The Constitution does not expressly confer the power of eminent domain upon Congress. As early as *Vanhorne's Lessee v. Dorrance,* 2 U.S. 304 (1795), however, a federal circuit court declared that eminent domain was an inherent power of government as an element of sovereignty. In *Kohl v. United States,* 91 U.S. 367 (1875), the U.S. Supreme Court explicitly recognized that both the state and federal governments could exercise the right of eminent domain in order to perform governmental functions.

The Fifth Amendment to the Constitution implicitly acknowledged the existence of eminent domain by placing limits on its exercise. The Takings Clause of that amendment mandated that government must take property only for "public use" and only upon the payment of "just compensation." Similar language appears in virtually every state constitution. Indeed, some state constitutions require compensation when property is "damaged" as well as taken by governmental action. In other words, the Fifth Amendment and its state counterparts closed the door on the outright confiscation of property by government.

In *Barron v. City of Baltimore,* 32 U.S. 243 (1833), the Supreme Court ruled that the Bill of Rights (the first ten amendments to the Constitution) applied only to the federal government and did not bind the states. State courts therefore initially took the lead in fashioning eminent domain law. During the antebellum era, the state governments frequently employed eminent domain to stimulate economic development through improved internal transportation. In this connection, state courts encouraged an open-ended understanding of "public use" by consistently upholding state legislative delegations of eminent domain to canal and railroad companies. Moreover, although recognizing the constitutional principle of just compensation, some state courts sought to minimize the cost of eminent domain by offsetting the loss suffered by an individual whose property was taken against the imputed benefit of a project.

In the late nineteenth century, the Supreme Court began to strengthen the protection afforded property owners under the Takings Clause. In *Pumpelly v. Green Bay Co.,* 80 U.S. 166 (1871), the justices determined that a flooding of land constituted a taking even without a formal eminent domain proceeding. This established the basis for the doctrine of "inverse condemnation," which holds that a physical invasion of land by government represents a compensable taking. Further, the Court gave a broad reading to the just-compensation requirement in *Monongahela Navigation Co. v. United States,* 148 U.S. 312 (1893), observing that the compensation paid should be a "full and perfect equivalent" for the property taken. In most instances the measure of compensation is determined by market value. Even more significant, in the seminal case of *Chicago, Burlington, and Quincy Railroad Co. v. Chicago,* 166 U.S. 226 (1897), the justices unanimously determined that the payment of just compensation for private property taken for public use was an essential element of due process of law guaranteed by the Fourteenth Amendment. By virtue of this decision, the just-compensation requirement of the Fifth Amendment was imposed on the states.

A contentious issue with regard to eminent domain is the limitation that private property must be taken for "public use." It was early settled that eminent domain did not empower government simply to take the property of one person and hand it to another, even upon the payment of compensation. The Supreme Court stressed this point in *Missouri Pacific Railway Co. v. Nebraska,* 164 U.S. 403 (1896), declaring that it was a deprivation of due process to take property for a private purpose. The public-use limitation, however, was steadily eroded by judicial deference to legislative findings that a particular appropriation of property served the public interest. Both state and federal courts treated the exercise of eminent domain as primarily a legislative matter. For example, in the early twentieth century, they upheld state laws authorizing individuals to obtain rights-of-way across the land of others for purposes of mining or irrigation.

After World War II, the Supreme Court virtually abandoned any meaningful review of "public use" as a limit on the power of eminent domain. In *Berman v. Parker,* 348 U.S. 26 (1954), the Court upheld the taking of land for redevelopment by a private agency as part of an urban renewal project and equated the public-use requirement with the police power. The justices were also highly deferential to legislative assessments about the need to use eminent domain, holding in *Hawaii Housing Authority v. Midkiff,* 467 U.S. 229 (1984), that the state could authorize the transfer of land titles from landlords to tenants to alleviate the perceived evil of concentrated land ownership. Some state courts, however, continue to scrutinize public use and occasionally invalidate the exercise of eminent domain on grounds that the planned acquisition is primarily for private benefit.

The Supreme Court has applied the doctrine of inverse condemnation in a number of leading cases. In *United States v. Causby,* 328 U.S. 256 (1946), the Court ruled that frequent flights over a farm by military airplanes represented the taking of a flight easement for which compensation must be paid. Likewise, the Court held in *Kaiser Aetna v. United States,* 444 U.S. 164 (1979), that the opening of a privately owned pond to public navigation constituted a taking of property. The recognition of inverse condemnation actions for physical invasion has opened the door for the allied doctrine that a land use regulation may be so severe as to amount to a taking of property.

In modern practice, eminent domain is commonly asserted by a formal judicial proceeding to condemn property. This results in a decree of condemnation. It is not necessary that the just compensation be paid in

advance of the government's acquisition of title. With inverse condemnation, the property owner institutes the proceeding against the government to recover compensation.

Employment Division, Department of Human Resources of Oregon v. Smith (1990)

Employment Division, Department of Human Resources of Oregon v. Smith, 494 U.S. 872 (1990), was a case that raised issues of an individual's freedom to practice religion as desired, a right set forth in the Free Exercise Clause of the First Amendment to the U.S. Constitution. The clause provides that "Congress shall make no law . . . prohibiting the free exercise" of religion. The U.S. Supreme Court, however, held in this case that the state could prohibit certain practices used in a particular religion provided the law was neutral and did not abridge any other constitutional provisions.

Alfred Smith and Galen Black worked for a private drug rehabilitation organization. When it was discovered that they had, as members of the Native American church, ingested peyote for sacramental purposes, they were fired. They applied for unemployment compensation and were found ineligible because of work-related misconduct. The Oregon Court of Appeals held that the denial of unemployment compensation violated the Free Exercise Clause of the First Amendment. The U.S. Supreme Court reversed this decision with Justice Antonin Scalia writing for the majority. Justice Sandra Day O'Connor wrote a concurring opinion, and Justice Harry A. Blackmun wrote a dissent.

Prior to this case, the Supreme Court had held that cases involving the Free Exercise Clause should be decided using the test in *Sherbert v. Verner,* 374 U.S. 398 (1963). Under the *Sherbert* test, government actions that substantially burden religious practice must be justified by a compelling government interest and must put the least possible restraint on freedom of religion. In *Employment Division v. Smith,* Justice Scalia, writing for the majority, found the *Sherbert* test unacceptable because it required judges to "weigh the social importance of all laws against the centrality of all religious beliefs." Then, he replaced the *Sherbert* test with one of neutrality: The right of free exercise does not relieve a person from complying with a valid and facially neutral law of general applicability on the ground that the law proscribes or requires behavior contrary to that person's religious practice, as long as the law does not violate any other constitutional protection. Justice Scalia understood that the Supreme Court was making free exercise of religion highly dependent on a religious community's ability to exercise leverage in the political process: "It may fairly be said that leaving accommodation to the political process will place at a relative disadvantage those religious practices that are not widely engaged in." He termed it an "unavoidable consequence of democratic government." Applying the neutrality test to this case, Justice Scalia found that an Oregon statute of general applicability forbade the ingestion of peyote and did not make an exception for the sacramental use of it. Thus, Smith and Black could be denied unemployment compensation.

In her concurring opinion, Justice O'Connor argued that the majority should not have departed from its use of the *Sherbert* test, since it was a well-settled interpretation of the Free Exercise Clause. She also stated that the new test "appears unnecessary to resolve the question presented, and is incompatible with

our Nation's fundamental commitment to individual and religious liberty." Justice Blackmun in his dissent objected to the abandonment of the *Sherbert* test and wrote that the majority could only have effected this overturning of settled law "by mischaracterizing this Court's precedents."

This decision met with a great deal of criticism when it was announced. Most notably, the U.S. Congress attempted to reinstate the *Sherbert* test by passage of the Religious Freedom Restoration Act of 1993 (RFRA). In 1997, however, the Supreme Court invalidated most applications of RFRA in *City of Boerne v. Flores,* 521 U.S. 507 (1997), finding that in passing RFRA, Congress had trespassed on the Supreme Court's power to interpret the Constitution.

Choper, Jesse. *Securing Religious Liberty: Principles for the Judicial Interpretation of the Religion Clauses.* Chicago: University of Chicago Press, 1995.

Engel v. Vitale (1962)

In *Engel v. Vitale,* 370 U.S. 421 (1962), the U.S. Supreme Court held that the state of New York could not sponsor the recitation of a prayer at the start of the school day without violating the Establishment Clause of the First Amendment. The First Amendment to the U.S. Constitution forbids the establishment of any state-sponsored religion and the government's intrusion on the right of individuals to the free exercise of the religion of their choosing. The Establishment Clause was at issue in *Engel v. Vitale.* The state of New York had, through its state officials, composed an official school prayer that was to be recited at the start of each school day and was published in their "Statement on Moral and Spiritual Training in the Schools." The prayer read, "Almighty God, we acknowledge our dependence upon Thee, and we beg thy blessings upon us, our parents, our teachers and our Country." Shortly after this practice was adopted by the school district, the parents of ten school children brought the lawsuit giving rise to this judicial opinion. The parents claimed that the state law authorizing the school district to direct the use of prayer in public schools, and the school district's regulation ordering recitation of the prayer, offended the Establishment Clause.

The Establishment Clause stands to protect the citizenry against government-sponsored religion. In this case, the board of education had established "protective" procedures to ensure that students who did not want to participate in the prayer were not compelled to do so. Parents were permitted to have their children kept outside of the room entirely, or students were permitted simply to refrain from recitation of the prayer. Neither teachers nor school administrators were permitted to comment on participation or nonparticipation in the prayer. The Court held that these provisions were not protective enough of the separation of church and state. The simple fact that the prayer was state-composed violated the Constitution according to the Court, a principle supported by reviewing the long history of state-sponsored religion. Ironically, the same Puritans who sought refuge from religious persecution in England came to the colonies and established churches or religions in twelve of the thirteen colonies. It was this very danger that the people would again come under state-controlled religion that the drafters of the First Amendment sought to avoid.

Engel v. Vitale stands for the proposition that the "wall" between the federal government and the religions that operate within America's borders is a critical protector of religious liberty. The First Amendment serves as the guardian against intrusion of the state into the religious lives of American citizens. Justice Hugo L. Black closed the majority opinion by quoting James Madison:

> [I]t is proper to take alarm at the first experiment on our liberties . . . who does not see that same authority which can establish Christianity, in exclusion of all other Religions, may establish with the same ease any particular sect of Christians, in exclusion of all other Sects? That the same authority can force a citizen to contribute three

pence only of his property for the support of any one establishment, may force him to conform to any other establishment in all cases whatsoever?

English Bill of Rights

The English Bill of Rights (1689) was enacted by Parliament in the wake of the "Glorious Revolution," which removed James II and brought William and Mary to power in 1688. The document provides for the defense of individual liberties by asserting the political independence of the House of Commons and limiting the arbitrary use of executive authority by the king. Along with Magna Carta (1215) and the Petition of Right (1628), the English Bill of Rights stands as the basis for individual freedoms and the legal foundation for England's unwritten constitution.

The philosophical basis for the Bill of Rights began with England's break with the Catholic Church. Because he was conscious of the political uncertainty associated with a split from Rome, King Henry VIII sought the approval of Parliament to legitimize his religious authority over the realm. This precedent of consultation with Parliament, which was later reinforced by his daughter, Queen Elizabeth I, provided Parliament with an unprecedented degree of oversight concerning foreign policy, royal expenditures, and the organization of the Anglican Church. This gradual rise of cooperative parliamentary governance came as many European sovereigns consolidated their power into absolutist political regimes.

The philosophical basis for the English Bill of Rights began with England's break with the Catholic Church when King Henry VIII sought Parliament's approval to legitimize his religious authority over the realm. *(Library of Congress)*

The Stuart line of monarchs played an important role in antagonizing Parliament by deliberately undermining many of these collaborative arrangements in an effort to assert the "divine right of kings." After deposing two sovereigns and one military dictatorship, Parliament felt it necessary to formalize its longstanding power-sharing arrangements under an English Bill of Rights.

The text of the bill can be divided into three basic

parts: an enumeration of grievances, a declaration of parliamentary prerogatives, and regulations governing future royal successions.

Under the declaration of parliamentary prerogatives, English kings were prohibited from acting unilaterally to raise a standing army, collect taxes, or rescind existing statutes. Furthermore, under the act, monarchs were prohibited from interfering with Parliament's core legislative functions. The act prohibited monarchs from manipulating the election of the House of Commons or prosecuting members for statements made during open debate.

To ensure that royal officials would never again abuse the judiciary in an effort to intimidate their political opposition, the English Bill of Rights broadly reiterates basic civil liberties that are outlined in Magna Carta. These include a prohibition on forfeitures before convictions, excessive bail, disproportionate fines, and "cruel and unusual punishments." Finally, to ensure the "redress of all grievances, and for the amending, strengthening and preserving of the laws," the Bill of Rights required that "parliaments ought to be held frequently."

Nearly a century after its enactment, the English Bill of Rights provided inspiration for American colonists who were seeking independence from Great Britain. Concerned that the crown had deprived colonial subjects of their rights under the common law, the Second Continental Congress (1775) publicly renounced its allegiance to England.

The Declaration of Independence, which provides the moral justification for a political separation from England, echoes Parliament's complaints against the Stuart monarchs. Although the purpose of the American Revolution was to terminate royal authority over the colonies, in the minds of the revolutionaries, the struggle was waged to preserve basic freedoms won in the Glorious Revolution and codified in the English Bill of Rights.

The passage of the English Bill of Rights signaled the end of the most serious conflicts over the appropriate use of executive power. English monarchs would continue to play an important role in national governance. However, never again would a sovereign nullify an existing statute or publicly champion the divine right of kings. By asserting legal prerogative to settle the question of monarchical succession, the English Bill of Rights ultimately resolved the question of political supremacy and secured the rights of its citizens under the common law.

English-Only Laws

English-only laws can be either practical applications of policy or symbolic statements that are rarely enforced. When these laws affect policy, they traditionally have been met with failure in both the popular vote and in the courts. The earliest example of this was a 1919 statute mandating English-only instruction up until the eighth grade. The U.S. Supreme Court invalidated this law in 1923 in *Meyer v. Nebraska,* 262 U.S. 390. Later, the Court Interpreter's Act of 1978 arose from *United States ex rel. Negron v. New York,* 434 F.2d 386 (2d Cir. 1970), in which a non-English-speaking defendant was convicted of murder without the benefit of an interpreter during trial. The federal appellate court held that the law violated the defendant's Sixth Amendment right to a fair trial. More recent attempts to federalize an English-only philosophy have been similarly defeated.

The U.S. House of Representatives passed an "English empowerment" bill in 1996 that would have required only English to be used for all federal business, including ballots for all U.S. elections. Although the bill never became law, strong support still exists for

the English-only philosophy. Arizona's constitution contained an English-only provision similar to the House proposal, but the Arizona Supreme Court struck down the provision in *Ruiz v. Hull,* 191 Ariz. 441, 957 P.2d 984 (1998), on the basis that the law violated both free speech rights under the First Amendment and equal protection of the law under the Fourteenth Amendment. The Arizona law prohibited state workers from using any language other than English to perform any "official act," even including prohibitions on interpersonal discussions between coworkers. States have been more successful using the English-only approach for their educational policy because it does not place as severe a burden on the free speech rights of those affected by the law.

California voters enacted Proposition 227 in 1998 mandating that immigrant students receive a year of English instruction before being enrolled in mainstream bilingual classes. Supporters argue that standardized test scores would improve if children were immersed in English before entering a bilingual education program. Although bilingual programs themselves are not eliminated under the law, critics insist that such rules foster a sense of failure because students are labeled as deficient and may never achieve the skills level of majority-group classmates. Some schools have effectively avoided the law's reach by becoming charter schools. Still, parents can apply for a waiver if their child is ten years or older, knows English, or has "special needs." Teachers who refuse to abide by Proposition 227 can be fired and even sued for civil damages. So far, the courts have upheld challenges to the law.

In 2002, twenty-six states employed some official English designation. In 2000, Arizona voters adopted the California immersion approach. The southern half of the state, which holds the majority of registered Democrats and a strong teachers union, staunchly opposed the measure. Many schools there were accused of avoiding the law by improperly granting waivers. Schools in support of the program were denounced for blindly following the law and were sued after refusing to grant legitimate waivers for students. Given the controversy and difficulty in enforcing these English-only provisions, many states, such as Colorado, have been less willing to adopt an English-only approach. Recent studies there show that current bilingual programs are reaching the English-only goals without the use of immersion programs.

English Roots of Civil Liberties

Given the shared history between England and the United States, it is not surprising that many of America's civil liberties had their origins in English law. From the signing of Magna Carta in 1215 until the colonies declared their independence in 1776, developments in England shaped both state and national governments in the United States.

Perhaps the most basic and oldest of all civil liberties is the right to due process. This concept, guaranteeing that people could not be punished or their property seized except through proper legal channels, first appeared in Magna Carta. Over the centuries, its value was reaffirmed as an essential protection for individuals against the abuses of royal or governmental power, including arbitrary or discretionary imprisonment. Throughout the sixteenth century, English judges repeatedly ruled that although monarchs had the power to imprison people, courts had the right to review those cases and determine whether the imprisonment was lawful. It was Charles I's claim in the "Five Knights" case that he had the right to discretionary imprisonment, free from judicial review, that prompted Parliament to issue the Petition of Right in 1628. Similarly, his seizure of the property of those

who refused to pay an assessment not authorized by Parliament was also widely viewed as a violation of due process.

Closely related to due process is habeas corpus. Though habeas corpus today is generally understood to ensure that people are not imprisoned unlawfully, it began in the Middle Ages as a way to guarantee defendants' presence in court or prison. In the sixteenth century, the Court of King's Bench developed habeas corpus as a check on unconstitutional imprisonments. In the next century, habeas corpus was extended to include those individuals who had been imprisoned by lower courts. The Habeas Corpus Act of 1679 strengthened the law's provisions by ensuring that prisoners could receive hearings when courts were in recess; it also protected jurors from imprisonment if the courts were dissatisfied with the verdict; it ensured that individuals were not wrongly committed to insane asylums; and in 1771, the court extended habeas corpus to slaves, ruling that slaves who did not wish to leave England—to return to the colonies, in this case—could not be compelled to do so. The force of this law was such that even James II, who regularly claimed powers by right of his prerogative, seems not to have ignored habeas corpus; his solution was instead to set bail higher than defendants could afford to pay.

While Magna Carta did not specify how due process was to be achieved, over the course of the Middle Ages, trial by jury came to be the accepted mechanism. Grand juries were formalized under the Assize of Clarendon in 1164, which established trial by ordeal as the measure of guilt or innocence. When the Fourth Lateran Council outlawed trial by ordeal in 1215, the English courts had to find a replacement. Within several years, the petit (trial) jury, made up of men from the vicinity, was developed; after 1351, members of the grand jury that produced the indictment could no longer serve on the petit jury that tried the case.

Defendants' rights at trial were limited, however. Until the eighteenth century, defendants did not have the right to call their own witnesses to testify under oath and could not testify under oath themselves until 1798; unlike the crown, they could not bind witnesses to appear at trial; they were not allowed to use defense attorneys in felony cases until 1730, and even then, right to counsel did not become law until 1836. Rules of evidence developed only in the eighteenth century, as well. Magna Carta established the principle that, upon conviction, punishment should be proportional to the offense committed. Provisions against cruel and unusual punishments first appeared in the English Bill of Rights of 1689, though the number of capital crimes expanded in the eighteenth century.

Several legal scholars helped defend and perpetuate civil liberties in England and, by extension, America. One of the most famous scholars was Sir Edward Coke, author of the *Institutes of the Laws of England.* (Library of Congress)

The idea that some sort of council or legislature must approve taxes also has its origins in Magna Carta. Once Parliament developed later that century, Magna Carta's provisions came to be interpreted as requiring Parliament's consent to levy taxes. In the seventeenth century, both Charles I and James II drew their subjects' ire by ignoring that principle and levying taxes not endorsed by Parliament; in both cases, they lost their throne.

Religious toleration was a relatively late addition to English civil liberties. Throughout the Middle Ages and into the sixteenth century, the punishment for heresy was burning at the stake. When Charles II was

restored to the throne in 1660, religious toleration seemed possible; within three years, however, the Test Act and the Conventicle Act denied non-Anglicans religious freedom. The Act of Toleration, passed after the Glorious Revolution of 1688, granted non-Anglicans freedom of worship but denied them political and other rights. Full rights were granted in 1829. Separation of church and state, a fundamental principle of the U.S. Constitution, still does not formally exist in England.

Several legal scholars helped defend and perpetuate civil liberties in England and, by extension, America. One of the most famous was Sir Edward Coke, author of the massive *Institutes of the Laws of England.* Coke, a former chief justice in the Courts of Common Pleas and of King's Bench, was a leader of the parliamentary opposition to Charles I in the 1620s; his conviction that Charles's actions violated fundamental rights of the English led him to propose and help draft the Petition of Right in 1628. Coke completed four volumes of the *Institutes* before he died in 1634; the last three volumes were so unpopular with Charles's government that they were suppressed and appeared in the 1640s only after civil war had weakened Charles's grasp on government.

Equally influential was Sir William Blackstone, the eighteenth-century lawyer, judge, and author of *Commentaries on the Laws of England.* Blackstone's achievement was to write a comprehensive work that could be understood by lawyers and laymen alike, including those who drafted and ratified the U.S. Constitution; several of them, including Alexander Hamilton, noted Blackstone's influence.

Although the U.S. Constitution's guarantees of civil liberties surpasses what existed in England at that time, it is clear that English history played a significant role. The emphasis on due process, trial by jury, and legislative approval of all taxes had their origins in England; the authors of the U.S. Constitution drew on principles that long predated American independence.

Enumerated Powers

The term "enumerated powers" refers to the powers of the Congress and, by implication, the powers of the federal government specifically listed in Article I, Section 8 of the U.S. Constitution and in subsequent amendments. The powers listed in Article I, Section 8, include the power to lay and collect taxes, duties, imposts and excises and to pay (government) debts to provide for the common defense and general welfare of the United States; to borrow money on the credit of the United States; to regulate commerce between the states and with foreign nations and among Indian tribes; to establish a uniform rule of naturalization (citizenship) and uniform bankruptcy laws; to coin (print) money and fix the standard of weights and measures; to punish counterfeiting; to establish post offices and post roads; to set patent and copyright laws, thereby protecting and encouraging inventors and writers; to establish other federal courts inferior to the Supreme Court; to define and punish piracy and other offenses against the law of nations occurring beyond the boundaries of individual states; to declare war, provide funds for the military, and set rules for those in military service; to call the (state) national guard into federal service as needed; and to choose and to govern the seat of the national government, the District of Columbia.

DERIVATION OF IMPLIED POWERS

By enumerating powers, the framers of the Constitution intended to suggest that the powers of government should be limited, but how limited? In making this list, did the founding fathers intend to suggest the *categories* of powers the new national government would have, or did they intend the new national government should have *only* these specific powers? The

last clause in Article I, Section 8 gives one answer: "The Congress shall have power . . . to make all laws which shall be necessary and proper for carrying into execution the foregoing powers." This "necessary and proper," or "sweeping," clause supports a claim that Article I, Section 8 contains broad categories of powers, giving Congress the power to select appropriate means to carry them into effect.

Another clear but quite different answer is based on the Tenth Amendment. For the new Constitution to go into effect, nine or more state conventions had to approve the new document. Many Americans, especially those fearing that the new national government would have too much power, insisted that the first Congress propose amendments limiting the powers of the new national government. Opponents of the new Constitution were called "Antifederalists." Those favoring the new Constitution, the Federalists, agreed to add amendments limiting powers of the new government. James Madison, the father of the Constitution and a leading Federalist, proposed amendments in a speech before the House of Representatives. Congress proposed and the states quickly ratified the first ten amendments, called the Bill of Rights. Most provisions in the Bill of Rights were intended to limit action by the new national government (including the exercise of enumerated powers).

The Tenth Amendment further stated that the "powers not delegated to the United States . . . are reserved to the States . . . or the people." The "reserved powers" clause did not say that all powers not "expressly" delegated to Congress were reserved to the states, although this narrow view was championed by Thomas Jefferson and other advocates of "strict construction" of the Constitution. This strict-construction approach, which would have limited congressional powers to those specifically enumerated, was one prominent early interpretation of the Tenth Amendment.

Writing a constitution for a new government is a complex and important task, so it is not surprising that the new Constitution contained omissions and internal tensions. Relying in part on the necessary-and-proper clause, the U.S. Supreme Court in *McCulloch v. Maryland,* 17 U.S. 316 (1819), held that although the Constitution had not specifically vested the new government with the power to create a national bank, since the government had an "enumerated power" to coin and spend money, and since the Constitution did not specifically prohibit the establishment of a national bank, the federal government also had the "implied right" to create a bank in which that money might be kept.

This "implied rights" doctrine flowing from the *McCulloch* decision is the constitutional basis for many actions by the national government (such as funding school lunch programs) that are not specifically mentioned in Article I, Section 8. Congress also often accomplishes its goals by offering financial incentives to states that comply with its wishes. Today the Article I listing of powers gives only a hint of the many powers that Congress exercises.

As Chief Justice John Marshall recognized in *McCulloch,* both enumerated and implied powers remain subject to specific limitations prescribed in the Bill of Rights and elsewhere in the U.S. Constitution. Although Congress has the power to tax, it cannot apply such a tax in a manner that might discriminate among religions, hinder freedom of speech or press, or interfere with other rights in the First Amendment. Similarly, federal law enforcement activities are governed by other limitations in the Bill of Rights, and states are limited by provisions of these amendments as applied to the states via the Due Process Clause of the Fourteenth Amendment—by means of what is known as the "incorporation" doctrine.

ENUMERATED POWERS AND CIVIL LIBERTIES

The following brief review of some congressional enumerated powers reveals that many of these powers have been exercised in tension with civil liberties.

Power to Regulate Commerce

The power of the federal government "to regulate commerce . . . among Indian tribes" gave the federal government general control of Indian affairs, replacing the role previously played by individual states and colonies. Many scholars believe the forced removal westward of Indian tribes and the forced relocation of Indians onto reservations during the nineteenth cen-

tury violated the collective and individual rights and liberties of Native Americans.

Power over Naturalization and Citizenship

The power of the national government "to establish a uniform rule of naturalization" (citizenship) grants to the Congress and the president extensive power to set rules governing foreigners visiting and noncitizens living in the United States. The U.S. Immigration Service arrests and jails a portion of those who have entered the United States illegally. The civil rights due these jailed noncitizens remains a complicated and contentious area of American law.

Power to Punish Offenses Against the Law of Nations

The right of the national government "to define and punish piracy and other offenses against the law of nations" provided the constitutional basis for U.S. participation in the Nuremberg trials in Germany of alleged war criminals at the end of World War II. The same rationale justifies U.S. participation in the International Court of Justice and other international courts. These courts seek to punish those who violate the very basic human rights of the governed. In the recent past, U.S. participation in international courts has been limited due to a belief that these courts are ineffective and will not grant defendants the full panoply of civil rights that would be conferred by U.S. courts.

Power to Declare War

The power to declare war was the constitutional basis for several federal actions following the December 1941 Japanese attack on Pearl Harbor that drew the United States into World War II. Thereafter, the United States declared martial law (military government) in Hawaii. President Franklin D. Roosevelt ordered curfews for Japanese Americans on the Pacific Coast and later ordered them moved from there to detention camps in Arizona and elsewhere in western states. The Supreme Court bowed to "military necessity" in accepting forced relocations, most notably in *Korematsu v. United States,* 323 U.S. 214 (1944), and never clearly ruled detention of Japanese Americans to be unconstitutional. Only after the war did the Court declare that military government in Hawaii violated the Constitution. Many lawyers and legal scholars believe these actions violated the civil rights of these ethnic Americans. On a more positive side, President Harry Truman's 1948 executive order mandating racial integration in the U.S. armed forces also logically flowed from the enumerated power of the federal government to set rules for those in military service.

Power to Govern the District of Columbia

The power "to govern the seat of the national government" means that Congress has general authority to govern the District of Columbia subject to oversight by federal courts. National courts have exercised power over the states through the Fourteenth Amendment. The Supreme Court used this power in *Brown v. Board of Education,* 347 U.S. 483 (1954), to desegregate schools in Topeka, Kansas. In *Bolling v. Sharpe,* 347 U.S. 497 (1954), the Court proceeded under the Due Process Clause of the Fifth Amendment to apply similar standards to school districts in the District of Columbia.

Summary

It should be clear that the grant of specific powers to Congress in Article I, Section 8, and in subsequent amendments has been used both to restrict and expand civil liberties. Given the broad scope that courts have given to the exercise of implied powers, most Americans probably look more to governmental structures and to specific constitutional limitations as guarantors of individual rights than to the limited number of powers granted.

Equal-Time Rule

The "equal-time rule," or the equal-opportunity provision, of the 1935 Communications Act (section 315) was designed to open the airwaves to all qualified candidates for public office. The basic principle of the rule is that broadcasters who either give or sell airtime to one candidate must do the same for that candidate's opponent. Some critics claimed that this equal-time provision violated the free speech rights of broadcasters.

At issue, of course, are the rights of free speech and press provided in the First Amendment to the Constitution. Broadcasters with a particular political bent argued that they had the right to put anyone and anything on the airwaves. Congress, however, required that they give opposing views a hearing as well.

The government justifies this equal-time control on the broadcast industry based on scarcity in the number of broadcast frequencies that exist, and the fact that those airwaves are a public resource. In preventing a potentially biased broadcast media from neglecting the public interest and monopolizing a public resource, the government steps in for the public good. As such, the equal-time rule, along with the now-defunct fairness doctrine, which required a balanced handling of issues, was adopted to ensure candidates on both sides of an issue a balanced opportunity to communicate with citizens. Regulatory responsibility fell to the Federal Communication Commission (FCC).

Section 315 of the act states, "[i]f any licensee [station] shall permit any person who is a legally qualified candidate for any public office to use a broadcasting station, he shall afford equal opportunities to all other such candidates for that office in the use of such broadcasting station." Additionally, the FCC has modified the rule to require that the same audience time be given to each candidate and at the same rate (most-favored-advertiser rate or cheapest rate). Other amendments include important exemptions that free broadcasters in certain circumstances from equal-time concerns. These exemptions include the broadcasting of bona fide newscasts, news interviews, news documentaries, or on-the-spot coverage of news events.

Some notable rulings on the equal-time provision include *Felix v. Westinghouse Radio Station,* 186 F.2d 1 (3d Cir. 1950), in which a federal court ruled that "friends of the campaign," or surrogates of the candidate, did not trigger the rule; the trigger must be the candidates themselves who are granted the airtime. Additionally, in *Farmers Educational and Cooperative Union v. WDAY, Inc.,* 360 U.S. 525 (1959), the U.S. Supreme Court ruled that stations could not edit presentations made by candidates. The result of this, for example, is that candidates have made vicious and racist statements on the air, but the editors are expressly prevented from editing the content. Political speech is indeed an exceptionally protected liberty.

In the 1960s, the FCC expanded the equal-time rule to include nationally broadcast speeches, such as the presidential state-of-the-union address. As a result, immediately after the presidential address, the opposing party would issue a response. Political debates, however, were particularly difficult events for the rule to accommodate. In the famous 1960 presidential debate between candidates John F. Kennedy and Richard M. Nixon, Congress had to suspend the rule for the event. In the presidential debates between Jimmy Carter and Gerald Ford in 1976 and between Ronald Reagan and Jimmy Carter in 1980, the FCC permitted the debates under the technicality that they were "public meetings," which under the "regular news" exemption suspends the equal-time rule. This technicality also made possible the exclusion of minor-party candidates. In 1983, the FCC clearly removed political debates from equal-time requirements, so long as candidates were chosen in a nondiscriminatory way. Those who felt discriminated against (for example, Ross Perot in 1992 and 1996, who claimed he received inadequate airtime) could appeal to the FCC.

The equal-time rule has resulted in several unintended consequences, and the scarcity principle justifying it is quickly becoming a moot point because of rapidly developing technology that increases the number of broadcast outlets. First, the rule may be having a "chilling effect" on broadcast communica-

tions. That is, broadcasters may avoid including candidates simply because when they are faced with an all-or-none proposition, they may select none and avoid an equal-time problem. Second, and relating to the first point, is the argument that the rule, in effect, is a device that protects incumbents. Challengers are in more need of media coverage in order to establish name recognition and a public presence. The purported "chilling effect," if it occurs, clearly harms them. In addition, the rule does not give candidates free airtime when their opponents had to pay for theirs. Underfunded candidates, usually challengers, can still receive much less airtime than those who are well funded.

The equal-time rule, it would seem, exists in a precarious state. The fairness doctrine, which for years was conceived of as its sister rule, died during the deregulation sweep of the 1980s. The main justification for the demise of the fairness doctrine was that the scarcity principle no longer applied, as cable and satellite communications expanded. The same principle applies to the equal-time rule. Will it follow the path of the fairness doctrine and leave stations to operate in the open market rather than under the watchful eye of the FCC? The 1980s under the deregulation-oriented Reagan administration probably would have been a propitious time for this to happen, but the equal-time rule has developed into something of a proud tradition of both broadcasters and public officials and therefore continues.

Escobedo v. Illinois (1964)

Escobedo v. Illinois, 378 U.S. 478 (1964), is a landmark case establishing the legal principle that a suspect's confession is inadmissible in court if the suspect requests legal representation during questioning and is denied that opportunity by police. The circumstances of this case originated from a murder conviction obtained through the questioning of a suspect without that person's attorney being allowed access to the interrogation.

Danny Escobedo was taken into custody January 30, 1960, after being implicated in the murder of his sister's husband by a friend, Benedict DiGerlando. Although Escobedo made several requests to see his attorney, the Chicago, Illinois, police denied him access to counsel. Instead, investigators began a long, arduous process of asking questions and applying pressure on him to confess. Despite this, he continued to ask to see his attorney, Warren Wolfson. Again, Chicago police refused to honor his request to consult with his legal representative. Even more problematic, Escobedo's attorney was at the police station that evening frantically trying to see his client. Wolfson made contact with several layers of police hierarchy that evening, including the Chicago police commissioner, with whom he filed a complaint regarding police treatment of his client. Earlier in the evening, Wolfson pointedly noted that the Illinois criminal code stated that attorneys must be given access to their clients. This, too, had no effect, even though Wolfson conveyed the requirements of the Illinois statutes to a police supervisor.

This was not the first time Wolfson had encountered difficulties with the Chicago police on this case. Prior to this, Escobedo had been taken to the police station, presumably for questioning about the circumstances of his brother-in-law's murder. After similar interactions with police officers and supervisors, Wolfson petitioned an Illinois court for a writ of habeas

corpus. It was granted. Accordingly, the Chicago police had released Escobedo in this earlier incident.

However, after the arrest of January 30, 1960, Wolfson was unable to gain release of his client or to see him. This meant that Escobedo was subject to questioning without legal advice. Eventually, he made an error that resulted in his conviction. He said that DiGerlando had shot the victim. Had his attorney been present, he presumably would have prevented this damaging statement. Escobedo was unaware that under Illinois law he had implicated himself in the crime. Both men eventually received convictions in the murder case.

The Illinois Supreme Court upheld the conviction of Danny Escobedo. The U.S. Supreme Court decided to bring the case forward to the federal level. In a five–four vote, the Court overturned his conviction and established new requirements for police handling of interrogations.

In reaching its decision, the Supreme Court cited *Gideon v. Wainwright,* 372 U.S. 335 (1963), the Sixth Amendment, and the Fourteenth Amendment. In *Gideon,* the Court held that an individual facing felony charges must be provided legal representation if that person is unable to afford the cost of retaining an attorney. In *Escobedo,* the Court extended the *Gideon* argument by claiming that without legal representation during interrogation, the right to legal counsel during trial is less valuable. Instead of protecting the constitutional rights of citizens, the pre-*Escobedo* system moved the balance in favor of the prosecution.

The Sixth Amendment guarantees every person the right "to have the assistance of counsel for his defense." In examining the details of the *Escobedo* case, the Court ruled that prosecutors in Illinois had violated this amendment by purposely keeping Escobedo's attorney away during interrogation sessions. However, the Court made the important constitutional point that the Sixth Amendment was applicable to *Escobedo* through the Fourteenth Amendment, which made the Bill of Rights and other rights binding on the states. Until the Fourteenth Amendment, the restrictions on police conduct contained in the U.S. Constitution were designed for only the federal level. The Fourteenth Amendment changed this by its wording that no state may "deprive any person of life, liberty, or property without due process of law" and that the states shall not "deny to any person within its jurisdiction the equal protection of the laws." Although the language of the Fourteenth Amendment seems clear, it was not until 1925 that the Supreme Court upheld the doctrine that this amendment made other amendments binding on the states. Thus, the Fourteenth Amendment made it possible for the Supreme Court to apply the Sixth Amendment in *Escobedo*.

Escobedo is classified with cases to which the exclusionary rule also applies. In *Mapp v. Ohio,* 367 U.S. 643 (1961), the Supreme Court extended the exclusionary rule to state and local governments. As a result, today the United States is unique in its use of the exclusionary rule, under which evidence that is illegally or improperly obtained cannot be used as evidence in court. In most nation-states, the evidence may be used against an accused individual, and sanctions may be imposed on the police for violating procedure. *Mapp* marked an extension of the parameters of the exclusionary principle, and so would the Court's 1966 decision in *Miranda v. Arizona,* 384 U.S. 436 (1966).

Espionage Act of 1917

The Espionage Act of 1917 was the second major antisedition law enacted by Congress—the first being the Sedition Act of 1798. In both instances, events of wartime led to congressional efforts to infringe on civil liberties, such as the First Amendment's rights of free speech, association, and press, especially against foreigners who might be perceived as friendly to the

country's enemies during armed conflicts such as World War I.

One of the most important parts of the Espionage Act of 1917 was section 3. Among other things, it provided penalties up to $10,000 or twenty years in prison, or both, for willfully making statements with intent to interfere with the operation or success of the military or naval forces of the United States.

A week after the United States entered the war April 6, 1917, President Woodrow Wilson established the Committee on Public Information (CPI), headed by newspaperman George Edward Creel, which in short order waged an intensive public opinion campaign that favored the war effort at the expense of anything foreign and strongly influenced the enactment of the Espionage Act on June 17, 1917. Among other things, the act outlawed all willful attempts to cause insubordination, disloyalty, mutiny, or refusal to serve in the military. In combination with the Sedition Act of 1918 enacted less than a year later, the Espionage Act of 1917 formed the basic sedition law until Congress formally repealed it in 1948. Even then, the act's provisions formed the basis of later acts scattered throughout the current code.

The portion of the act defining espionage as an act of obtaining information relating to the national defense "to be used . . . to the advantage of any foreign nation" was applied primarily to foreign-born, antiwar radicals, including Russians believed to support the Bolshevik Revolution and German Americans believed to be sympathetic to the kaiser. Major targets were anarchist groups such as the Industrial Workers of the World (IWW). Representatives of forty-three labor groups founded the IWW in Chicago in 1905. Its main goal was to fight capitalism in favor of a radical socialist system for the United States. Wobblies, as members of the IWW were called, actively opposed America's participation in World War I and engaged in violent activities to hamper the war effort, such as forcefully limiting the production of copper at some western copper mills. The government responded by prosecuting the Wobblies under the newly enacted Espionage Act.

After World War I, the U.S. Supreme Court upheld the constitutionality of the 1917 legislation in a series of cases. One of the first was *Schenck v. United States,* 249 U.S. 47 (1917), which involved the prosecution of a member of the Socialist Party for distributing antiwar literature. Justice Oliver Wendell Holmes, writing for the unanimous Court, employed his famous example of the danger in falsely shouting "fire!" in a crowded theater, and his equally famous "clear and present danger" test in upholding the constitutionality of the act's restriction of expression.

Another notable case involved the radical newspaper *The Milwaukee Leader*, whose second-class-mailing privilege was revoked on the ground that it systematically published false reports and statements with the intent to interfere with the success of the U.S. military effort, promote the success of America's enemies, and obstruct the recruitment and enlistment of military service personnel. In *United States ex rel. Milwaukee Social Democratic Publishing Co. v. Burleson,* 255 U.S. 407 (1921), Justice John H. Clarke, writing for the majority, with Justices Holmes and Louis D. Brandies dissenting, stated that the Espionage Act was a legitimate means of "preventing disloyalty and disunion among our people of many origins, and to the end that a united front should be presented to the enemy."

During the so-called McCarthy era of the 1950s, when Senator Joseph McCarthy (R-Wisc.) chaired congressional hearings into alleged Communist infiltration of the government, the portions of the Espionage Act that had not been repealed in 1948 were still being used to prosecute and convict persons with foreign connections. One such case involved the prosecution of the son of a Polish garment worker, Julius Rosenberg, and his wife, Ethel, both of whom were political activists and former members of the Young Communist League in New York. The Rosenbergs were accused of furnishing to the Soviet Union classified material regarding secret atomic weaponry and other military information obtained from the top-secret atomic bomb project at Los Alamos, New Mexico. The section of the Espionage Act the government used to indict and convict the Rosenbergs prohibited furnishing any foreign government with an array of documents or other information relating to national defense. Violation of this section was punishable by death. They were convicted, and the district judge on April 5, 1951, sentenced the Rosenbergs to die. During the next two years, they sought unsuccessfully to have their conviction overturned. The Rosenbergs

were executed at Sing Sing prison in New York on June 19, 1953—the day the U.S. Supreme Court refused to hear their appeal.

Although there had been no antisedition law in place between the expiration of the 1798 Sedition Act and the 1917 Espionage Act, the 1917 act was used for decades to prosecute acts of disloyalty and can still be found in the current *United States Code* at different places in somewhat updated form.

Establishment Clause

The Establishment Clause of the First Amendment to the U.S. Constitution commands, "Congress shall make no laws respecting an establishment of religion." At a minimum, this directive prohibits the national government from providing official status or privileges to any church. Whether this clause forbids all aid to religious communities, however, has been a continuing controversy.

ESTABLISHMENT IN COLONIAL AMERICA

Colonial America was a Christian America. It was the shared assumption of almost every American colony that government and Christianity should not be separated. Indeed, every colony but one had an established church. The Anglican Church reigned supreme in seven colonies until the Revolutionary War. Massachusetts did not disestablish the Congregational Church until 1833.

"Establishment" meant the 1,400-year tradition in Western societies that assumed government should grant the dominant church special protection, privileges, and public funds, and its clergy special ceremonial status. The early Virginia colony punished attacks on orthodox Christian doctrine, required citizens to tithe to support the Anglican clergy, and permitted only Anglicans to vote.

The favored church could ignore or harass dissenters. Those who were not members of the established church might be fined or persecuted. The Dutch colony of New Netherlands (later New York) barred Jews, Lutherans, and Quakers. The New England colonies, with the lone exception of Roger Williams's Rhode Island, branded, exiled, and occasionally hanged Quakers.

A wave of revivalism swept through America in the 1740s. Enthusiastic evangelists converted thousands of colonists away from the established churches. One estimate suggests that by 1776 the majority of Virginia's churchgoers were evangelical Presbyterians or Separate Baptists, not members of the established Anglican Church.

Thomas Jefferson proposed a bill in 1779 for religious liberty that would abolish establishment in Virginia. It failed. At the end of the war, Virginia was in economic and social collapse. Patrick Henry, George Washington, and John Marshall advocated a tax for the "support of the Christian religion" to help overcome the decline of public morality. Repeating the arguments made by evangelical Christians, James Madison attacked the proposed tax and argued in his "Memorial and Remonstrance Against a Religious Assessment" (1785) that Christianity did not need government assistance to prosper. Madison organized a coalition of evangelical Christians and aristocratic landowners that defeated the tax bill. Madison then quickly resubmitted Jefferson's bill for religious freedom.

The Virginia Statute for Religious Freedom became law on January 16, 1786. The new law was a radical change in American thinking. It shattered the consensus that the church and state must work together in order to maintain an orderly and peaceful society. The Virginia statute was the first clear declaration that church and state ought to be separated.

ESTABLISHMENT CLAUSE JURISPRUDENCE

All but one American state ratified the Constitution after being assured that an amendment would be added prohibiting the establishment of a national church and the interference of government in individual religious exercise. The new Bill of Rights, eventually ratified in 1791, contained the First Amendment.

The religion clauses of the First Amendment pose two sets of problems. First is the boundary problem, later called "separation," expressed in the prohibition against a state-sponsored and -financed church. The second is a liberty problem posed by the guarantee for free exercise of religious beliefs. A potential conflict arises between the two. If the government is too zealous in its neutrality, erecting a wall too high between church and state, it may unfairly burden individuals' constitutional right to the free and unhindered exercise of their faith.

The precise meaning of the Establishment Clause is open to debate. It is clear that none of the principal leaders at the founding believed that government should ignore religious feelings. George Washington required church attendance for his soldiers, added "So help me God" to the presidential oath, and issued the first Thanksgiving Day proclamation. Thomas Jefferson encouraged religious instruction at the University of Virginia. James Madison, the primary author of the First Amendment, opposed a provision in the Northwest Ordinance of 1787 that set aside public land to support churches. Madison did so because he thought it was bad public policy, not because he thought it was unconstitutional.

There were only five U.S. Supreme Court cases involving the Establishment Clause until the 1940s. States dealt with religion on a local basis. It was not until the case of *Everson v. Board of Education,* 330 U.S. 1 (1947), that the Supreme Court used the Fourteenth Amendment's Due Process Clause to apply the Establishment Clause to state governments. Since then, the Court has heard more cases arising from religion issues than from almost any other area of constitutional law.

In *Everson,* Justice Hugo L. Black upheld a New Jersey program reimbursing parents for the costs of sending their children by public bus to private religious schools. Justice Black held that although the Establishment Clause prohibited state or national governments from favoring a church, it did not prevent an individual from receiving the benefits of a state program. There ought to be a "wall of separation," Justice Black wrote, but that wall must not deny to religious individuals the benefits granted to all citizens.

Three schools of thought have developed on the meaning of the Establishment Clause. Each accepts that the religion clauses prohibit any compulsion in matters of faith and that government should not become excessively involved in church affairs. They share little else.

An "evangelical school" sees the separation doctrine as the best protection of religion from the political strife and petty self-interest of the secular world. The school draws inspiration from the writings of Roger Williams, the seventeenth-century founder of Rhode Island and the originator of the phrase "wall of separation," a phrase found nowhere in the Constitution or the First Amendment. No Supreme Court majority has adopted the evangelical perspective. American churches with a strong separatist tradition, such as the Southern Baptist, have long endorsed this position.

A "secular school" seeks to wall religion off from politics in order to safeguard secular values against religious passions. Justice Wiley B. Rutledge, dissenting in *Everson,* offered the classic secularist argument against aid to religious groups. "Public money devoted to payment of religious costs, educational or other, brings . . . the struggle of sect against sect for the larger share or for any. . . . The dominating group will achieve the dominant benefit; or all will embroil the state in their dissensions." In the view of the secular school, aid is tantamount to establishment, and such aid is unconstitutional. Prohibited aid includes religious instruction and state-enforced prayer in public schools, state funding of school trips, and the customary benediction by clergy at the graduation ceremonies of public high schools.

An "accommodationist school" insists that government must recognize and accommodate the strong religious beliefs held by its citizens. Justice William O. Douglas's opinion in *Zorach v. Clausen,* 343 U.S. 306 (1952), is a clear statement of this position. In upholding programs permitting public school students to leave the campus during regular school hours for

religious instruction, Douglas wrote, "We are a religious people." The government would "show a callous indifference to religious groups" if it failed to accommodate to their religious sensibilities. To fail to accommodate would be to express "hostility," not neutrality, "preferring those who believe in no religion over those who do believe." Provided no one is coerced into attending religious instruction, there is no breach of the Establishment Clause.

Other cases expressing an accommodationist perspective have upheld devotional prayer in legislatures, Sunday-closing laws, state programs providing free nonsectarian textbooks to public and private high schools, and tax deductions for parents of students attending private schools. The Court has also approved state-paid interpreters for a deaf student attending a Catholic high school, tax-exempt status for church property, a manger scene as part of a larger Christmas display on public property, and government-funded buildings at private religious colleges.

The Supreme Court has developed tests to help distinguish between constitutional and unconstitutional accommodations. The so-called *Lemon* test, from *Lemon v. Kurtzman,* 403 U.S. 602 (1971), as developed in later cases such as *Lynch v. Donnelly,* 465 U.S. 668 (1984), protects the value of separatism by requiring the government to show that the primary *purpose* of a program or law is secular, neither advancing nor inhibiting religion. The test also requires that the primary *effect* is secular and that there is no excessive *entanglement,* thus keeping to a minimum any government intrusion on the affairs of a church.

FUTURE CHURCH-STATE RELATIONS IN THE UNITED STATES

The religiosity of the American people has persisted into the modern era. Of the population age eighteen and older, the proportion attending church is virtually the same today as it was in 1950 and higher than in 1850 when the first official census of religious affiliation was taken.

The vitality of religion in the United States is based on religious pluralism and the formal separation of church and state. The absence of an established church not only encourages the proliferation of denominations, because all are free to compete, but also protects churches from excessive entanglement with unpopular governments.

The history of the Establishment Clause challenges the assumption that churches and the government must inevitably conflict. Religiously devout citizens who fear the government's intrusion on their beliefs and religiously skeptical citizens who fear the church's intrusion on their beliefs might seek solace in the easy answer that one is the realm of private action and the other is the realm of public action. U.S. history and Supreme Court decisions teach a different lesson. The resolution of church-state relations may take the form of how much and what kind of religion can coexist peacefully and usefully with how much and what kind of politics.

Estes v. Texas (1965)

When flamboyant Texas financier Billie Sol Estes was indicted for swindling in 1962, his celebrity status prompted intense media coverage of the case, including requests by local television stations to broadcast his trial. The media based their claim on the right to a free press as set forth in the First Amendment to the U.S. Constitution. Over Estes's objection, this request was granted, and the pretrial hearing was disrupted by the presence of several bulky and intrusive cameras (plus technicians to operate them), along with a maze of attendant wires strewed around the courtroom floor.

Ironically, the unruly pretrial hearing had the effect of foreclosing most live coverage of the trial itself.

Although the cameras were restricted to a specially constructed booth in the back of the courtroom, there was a constant need for ad hoc adjustment of the rules for broadcasting the proceedings. The end result was that the pretrial hearing was broadcast in its entirety, but at the trial only the prosecution's opening and closing arguments and the delivery of the verdict were transmitted live.

A divided U.S. Supreme Court overturned Estes's conviction in *Estes v. Texas,* 381 U.S. 532 (1965). A four-justice plurality, led by Justice Tom C. Clark, concluded that television cameras posed such overwhelming potential to distort court proceedings that broadcasting a criminal trial constituted an automatic violation of a defendant's Fourteenth Amendment due process rights, even if the defendant could not show any isolable resultant prejudice. The crucial fifth vote to reverse Estes's conviction came from Justice John M. Harlan, who agreed with the plurality that Estes was entitled to a new trial but felt that his fellow justices had gone too far in announcing a flat ban on television coverage. Although he denied he was advocating a case-by-case approach, Harlan's apparent willingness to exclude cameras from only sensationalized cases seemed case-specific.

Notwithstanding the *Estes* ruling, over the next few years several states experimented with pilot programs to televise criminal trials, and the Court evaluated one such experiment in *Chandler v. Florida,* 449 U.S. 560 (1980). A group of Miami Beach police officers convicted of burglarizing a local restaurant relied on *Estes* for their argument that they had been deprived of a fair trial when local television broadcast three minutes of testimony from the prosecution's star witness (a ham radio operator who overheard the officers communicating over their police radios during the burglary).

In a markedly odd opinion, Chief Justice Warren E. Burger upheld the officers' convictions but nevertheless contended that *Estes* had not been overturned. Instead, he claimed that Justice Harlan's concurring opinion in *Estes*, which Burger now reinterpreted as urging a "totality of the circumstances" approach, had long been considered to control the holding in *Estes*, and that Justice Clark's plurality opinion had essentially been disregarded. When a totality-of-the-circumstances approach was applied to the Miami Beach robbery, Chief Justice Burger concluded, the defendants' right to a fair trial was not compromised by the brief snippet of televised testimony.

Although Burger's reading of the facts may have been correct, his reading of the law was hopelessly disingenuous. He based his argument that Justice Harlan's concurrence controlled the holding in *Estes* on the fact that the Supreme Court had used a totality-of-the-circumstances approach in its resolution of the infamous Sam Sheppard murder trial, *Sheppard v. Maxwell,* 384 U.S. 333 (1966). However, the appearance of the "totality of the circumstances" language in *Sheppard* was a function of the fact that the Sheppard trial was not broadcast live and was not raised as a means of reevaluating *Estes.* The transparency of Burger's action was further revealed by the fact that *Estes* and *Sheppard* were written by the same man—Justice Clark. Thus, if Burger's account were true, it necessarily meant that one year after cobbling together a fragile coalition supporting a flat ban on televising criminal trials in *Estes,* Clark completely disavowed his handiwork in *Sheppard.* Burger's claim that *Estes* mandated a case-by-case approach to televising criminal trials was, to say the least, highly implausible, and it prompted a sharp response from Justice Potter Stewart, who maintained that the convictions in *Chandler* could not be sustained unless *Estes* was overruled.

To the degree that *Estes v. Texas* remains good law, it stands for the proposition that criminal trials may be closed to television without offending the First Amendment's protection for a free press, although *Chandler v. Florida* makes it clear that, in certain circumstances, criminal trials may be televised without offending the Due Process Clause of the Fourteenth Amendment.

Eugenics

Eugenics is a philosophy that supports the improvement of the human species through human engineering and selection. Eugenics has been inextricably linked to nationalism, racism, Nazism, and white supremacy, and it attempts to use science to support claims that some peoples are naturally superior to others. This thinking, of course, leads advocates to call for the banning of civil rights for certain individuals. Eugenicists have continually used biology to substantiate their claim that social status, mental deficiencies, criminality, and other traits can be linked to heredity. Supporters of the philosophy attempt to attain racial purity by limiting social interaction and reproduction. Eugenicists' attacks have targeted the insane, the mentally and physically handicapped, criminals, homosexuals, foreigners, peoples of different color and race, and the poor.

Although eugenic theories have been associated mostly with Nazi Germany's racial purification plan, which during World War II led to the deaths of millions of Jews and other non-Aryan peoples, the eugenics movement can also be found in America's history. The U.S. eugenics movement rose with the progressive movement and peaked in the late 1920s, but it influenced thinking both before and after this time.

The American eugenics movement can be divided into three main stages. Although the term "eugenics" was not developed until 1883, precursors of the philosophy appeared in the first stage of American eugenics—the suppression of blacks. The second and third stages of America's embrace of eugenics—the fight against immigration and the use of sterilization as a method of reproductive control—occurred during the actual eugenics movement in the late 1800s and early 1900s, culminating in the late 1920s with the endorsement of the movement's ideals by the U.S. Supreme Court.

The first stage of American eugenic thought appeared during the enslavement of blacks, the Civil War, and the period of Reconstruction, to approximately 1880. Most notable from this stage in U.S. history is the invocation of science to conclude that one race was physically superior to another race, even before eugenicists embraced science decades later. Proponents of eugenics used physical measurements of slaves to conclude that they were inferior to the white race.

Alleged scientific advances led to alternative methods for determining the inferiority of certain races, and those methods were directed toward a second group in the late 1800s and the early 1900s. Americans fought to reduce the numbers of immigrants, claiming they were taking jobs from the pure races and were polluting the white race through intermarriage. In 1912, Henry Herbert Goddard began administering IQ tests to immigrants who arrived at Ellis Island, near New York City. He concluded that approximately 60–80 percent of immigrants were "feeble-minded" and would become social dependents on the state. Although Goddard never clearly defined the term "feeble-minded," his tests led to restrictive immigration legislation in 1917 and 1924 that was not overturned until 1965.

The American eugenics movement peaked in the 1920s when states began enacting legislation for the forced sterilization of the mentally ill, the physically ill, and criminals. In 1907, Indiana became the first state to pass such legislation, creating a domino effect in other states. In all, approximately thirty-three states enacted sterilization legislation, and scholars believe that over 70,000 people were sterilized in the United States as a result of the eugenics movement. In *Buck v. Bell*, 274 U.S. 200 (1927), the Supreme Court endorsed sterilization as an efficient means of racial purification.

In *Buck,* the Supreme Court reviewed Virginia's Eugenical Sterilization Act, which allowed inmates in the state's asylum to be sterilized against their will. In reviewing the state's attempt to sterilize Carrie Bell, Justice Oliver Wendell Holmes Jr. in his majority opinion incorporated eugenic views and upheld the legislation. Accepting a genetic link to "feeble-mindedness," he argued that forced sterilization would

prevent future generations of the mentally and physically deficient from burdening society.

Although the eugenics movement waned in the United States during World War II, eugenic ideologies continued. In 1942 the Supreme Court issued an opinion in *Skinner v. Oklahoma,* 316 U.S. 535. This time a unanimous Court struck down Oklahoma's Habitual Criminal Sterilization Act, holding that forced sterilization of habitual criminals violated the Equal Protection Clause of the Fourteenth Amendment. Although the case established reproduction as a fundamental right, it did not overturn *Buck.* The Court distinguished the mentally deficient from habitual criminals, concluding that although there was proof that mental deficiencies were hereditary, there was no proof that criminality was.

By the late 1970s, most U.S. sterilization laws were repealed, immigration laws became less strict, and the civil rights movement had reaffirmed equal protection for African Americans. Advances have been made in individual rights in regard to reproduction, marriage, and privacy, but effects from the eugenics movement can still be felt. Some eugenics critics argue that eugenic ideals have been aided by birth control and abortion, with the state directing advertising toward African American and Native American women and the poor. Others point to the "red scare" of the 1950s, when Communists were believed to have infiltrated government, as an extension of the eugenics movement, and they cite America's continued fear of immigrants and foreign nationals. Such influences to the contrary notwithstanding, current cases affirm that adult Americans are guaranteed a constitutional right to reproduce and to continue the human species, without judgments as to their intellect.

Everson v. Board of Education (1947)

In *Everson v. Board of Education,* 330 U.S. 1 (1947), the U.S. Supreme Court held that the First Amendment protections for religion apply to actions of the states as well as the federal government, and that the amendment's Establishment Clause ("Congress shall make no law respecting an establishment of religion") was not violated by a New Jersey statute that through tax benefits reimbursed parents of parochial school children the cost of busing their children to religious schools. *Everson* is a landmark decision not so much because it gave parents a tax benefit for the expense of having their children bused to private schools, but rather because it incorporated the First Amendment's Establishment Clause as applicable against the states. This incorporation meant that states, not just the federal government, were responsible for ensuring adherence to the First Amendment's provisions.

In *Everson,* the parents of a New Jersey school pupil sued the local board of education. The father, Arch Everson, alleged that the New Jersey statute in question violated his right to due process of law and that it violated the Establishment Clause of the First Amendment. Justice Hugo L. Black, writing for the majority, engaged in a broad discussion of the history of church-state law in the United States. It should be noted that his description contrasts sharply with the overview provided by Justice Wiley B. Rutledge in the dissenting opinion. These differing characterizations of church-state history in the United States are the subject of much debate among legal historians. The Court has accepted these characterizations of U.S. history as true and has struggled with church-state law in the years since *Everson.*

The *Everson* majority first addressed the question of a whether the parents' rights suffered under the Due Process Clause of the Fourteenth Amendment.

According to the Court, the success of this claim rested on the question of whether the state statute served a public purpose. The Court held that the Due Process Clause was not violated because there was a public purpose behind the statute. The Court's discussion of the history of church-state law in America led the majority to hold that the Establishment Clause should receive the same application and broad interpretation as the Free Exercise Clause of the First Amendment did at that time. The Court held that the Establishment Clause requires that the federal and state governments shall not pass laws that aid one religion, aid all religions, or prefer one religion over another. Nor may the government force an individual to go to or to remain away from church. The Court quoted Thomas Jefferson, saying the law was intended to erect "a wall of separation between church and state." The critical characteristic of appropriate state action is that it be neutral in its relationship with groups of religious believers and nonbelievers. It does not, however, require that the state take an adversarial position against religion. Interestingly, the Court also held that New Jersey's statute permitting the use of tax-raised funds to pay for bus fares to parochial school did not violate the Establishment Clause.

Since *Everson,* the Court has grappled with that wall that has been erected between church and state. In *Lemon v. Kurtzman,* 403 U.S. 602 (1971), the Court established a three-pronged test for determining when a statute would not violate the Establishment Clause: (1) A statute must have a valid secular purpose; (2) its principal or primary effect must neither advance nor inhibit religion; and (3) it must not foster an excessive entanglement with religion. The *Lemon* test laid its foundation on the principles forwarded by the Court in *Everson*, but it has come under significant fire by courts and legal scholars. The critical question continues to be whether a state or federal regulation has the forbidden effect of advancing or inhibiting religion, and if so, it cannot stand.

Evolution

States and municipalities have attempted to limit the teaching of evolution based on religious objections. Such a governmental restriction raises First Amendment concerns, because it supposedly stifles free speech and dictates what speech is permissible. Evolution is a widely accepted scientific theory premised on the view that the earth and its life are the product of change over long periods of time. It posits that the higher-order species have evolved through natural selection from lower-order species. Natural selection embodies the notion of the "survival of the fittest," both within species (meaning that the fittest compete and the victors procreate) and across species (as different species compete for resources).

The father of the theory of evolution was naturalist Charles Darwin, whose writings in the mid-1800s took the scientific world by storm, especially with the publication of *On the Origin of Species* (1859). Darwin wrote in *The Descent of Man* (1871), "We thus learn that man is descended from a hairy, tailed quadruped, probably arboreal in its habits, and an inhabitant of the Old World." Most scientists initially accepted the evolutionary theory, but its ramifications for the origins of human existence led to a fiery fundamentalist Christian outrage.

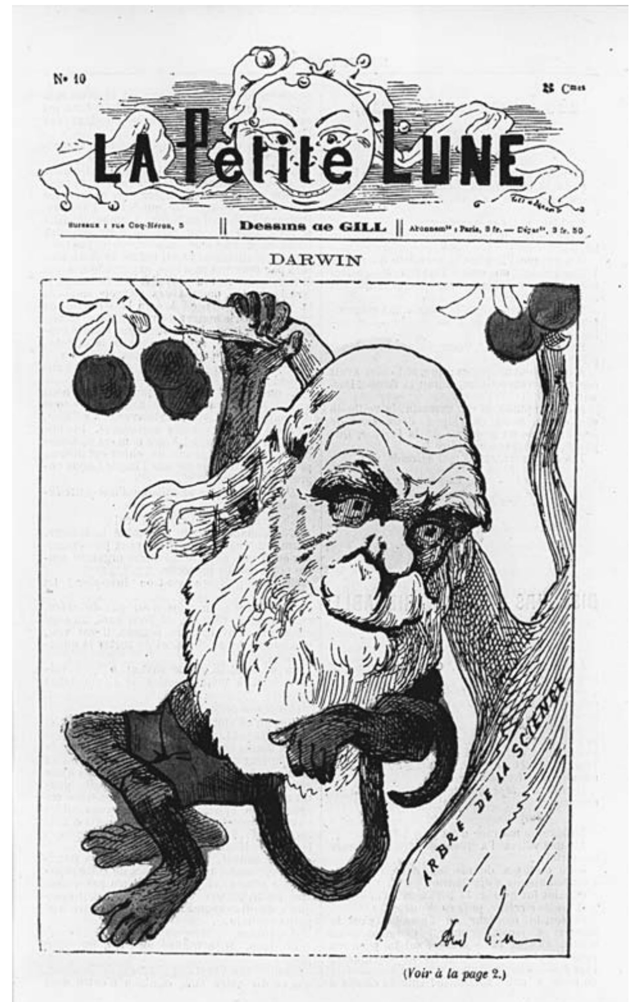
This response was based on the fact that some aspects of evolutionary theory conflicted with the creation story in the Bible. Genesis 1:27 states: "So God created man in his own image, in the image of God he created him; male and female, he created them," and Genesis 2:7 sets forth: "And the Lord God formed man of the dust in the ground, and breathed

into his nostrils the breath of life; and man became a living soul." In short, evolution seemed to call into question the validity of the biblical creation story that portrays God as the divine creator, instead arguing that the state of the human form is the result of natural forces over millions of years.

This was the context in which the Tennessee state legislature in 1925 passed an antievolution statute making it "unlawful for any teacher in any of the Universities, Normals and all other schools of the State which are supported in whole or in part by the public school funds of the State, to teach any theory that denies the story of the Divine Creation of man as taught in the Bible, and to teach instead that man has descended from a lower order of animals." Called the Butler Act, the law led to one of the most famous court dramas in U.S. history, the *Scopes* "monkey trial." John Scopes, a public high school teacher and football coach, agreed to challenge the act in a test case arising out of Dayton, Tennessee.

Given the gravity of the question at hand, namely the origin of humankind, along with the strongly held beliefs on each side of the debate, it is not surprising that two national figures argued the case in court. William Jennings Bryan, a devout Christian and influential Democratic politician, acted as special prosecutor. Defending Scopes was Clarence Darrow, an agnostic attorney considered the greatest trial lawyer of his time, whose fees were paid by the American Civil Liberties Union. The initial trial was decided in favor of the state, and Scopes was fined $100 for violating the Butler Act. He appealed to the Tennessee Supreme Court, which in *Scopes v. State of Tennessee,* 154 Tenn. 105 (1927), overturned the lower-court conviction on a technicality (the judge had set the punishment, but the state constitution required it to be set by jury), while upholding the constitutionality of the state statute. The reversal on a technicality essentially denied Scopes and his backers the chance to appeal to the U.S. Supreme Court, and the case that held the attention of the nation faded away on a minute legal detail.

The U.S. Supreme Court finally weighed in on the issue of evolution in 1964 in *Epperson v. Arkansas,* 393 U.S. 97 (1968). On the tail of the *Scopes* decision, Arkansas passed the Rotenberry Act in 1928, which forbade teachers in any state school to teach the "theory or doctrine that mankind ascended or descended from a lower order of animals" or to use a textbook to that effect. Nearly four decades later, a biology teacher, Susan Epperson, sought a declaratory judgment (a petition to a court to declare a law unconstitutional) overturning the state law even though it was not being enforced at the time. She had been provided with a textbook that included discussion of evolution, and she thought it was her responsibility at least to acquaint her students with it.



This caricature shows English naturalist Charles Darwin as a monkey hanging from the tree of Science. The cartoon was a response to the 1871 publication of his book *The Descent of Man.* *(Library of Congress)*

Unlike *Scopes,* this case quickly moved through the state courts to the U.S. Supreme Court. The constitutional question was whether the Arkansas law con-

stituted a state establishment of religion, which is prohibited under the First Amendment to the Constitution. Justice Abe Fortas penned the majority opinion, ruling that Arkansas's statute violated the Establishment Clause since it "selects from the body of knowledge a particular segment which it proscribes for the sole reason that it is deemed to conflict with a particular religious doctrine; that is with a particular religious interpretation of the book of Genesis by a particular religious group." Justice Hugo L. Black, concurring, raised the concern that the majority's reasoning did not actually achieve "religious neutrality" because there were strong views that evolution was actually antireligious, and forcing its inclusion improperly tipped the neutrality balance.

It was this notion of neutrality that opened the door for a law that led to *Edwards v. Aguillard,* 482 U.S. 578 (1987). Louisiana passed a law commonly called a "balanced-treatment act" mandating the equal treatment of creation science and evolution in the public schools. Creationism holds that humans were created by God in the beginning of time in accordance with a very literal understanding of the biblical story in Genesis. By mandating balanced treatment, Louisiana's law seemed to align with the notion of neutrality embodied in Justice Black's concurrence in *Epperson.* Justice William J. Brennan Jr. delivered the opinion of the Court in *Edwards,* finding that "[t]he pre-eminent purpose of the . . . legislature was clearly to advance the religious viewpoint that a supernatural being created humankind." This was, in short, a violation of one of the three prongs of the *Lemon* test, from *Lemon v. Kurtzman,* 403 U.S. 602 (1971), in that a law's primary effect must be neutral with respect to religion, and the Court therefore found the Louisiana law unconstitutional. Justices Antonin Scalia and Chief Justice William H. Rehnquist dissented, accepting the law as serving the secular state purpose of advancing academic freedom.

There is a clear tension between the Establishment Clause issue that arises from a balanced-treatment statute and the Free Exercise Clause concerns of fervent believers who sincerely judge that their rights are violated when they or their children are exposed to evolution in public schools. The strength of opinions on the question of human origin, and the ongoing tension between establishment of religion and free exercise of it, ensure that the debate will continue in the courts and perhaps in the classroom.

Evolving Standards of Decency

The phrase "evolving standards of decency" implicates an enduring debate regarding judicial interpretation: How should the courts interpret foundational principles that the framers enshrined in the Constitution, such as the Eighth Amendment's ban on "cruel and unusual punishments" and the Fifth and Fourteenth Amendments' command to render "due process of law"? The interpretative implications for applying the "evolving standards of decency" criterion to the ban on "cruel and unusual punishments" have presented difficult issues. Defining what is a "cruel and unusual punishment," and how to recognize it, at first seems to clarify constitutional debate, but instead the debate merely shifts to another level.

A classic statement of the application of "evolving standards of decency" to the Eighth Amendment is in Justice Joseph McKenna's opinion in *Weems v. United States,* 217 U.S. 349 (1910):

> Legislation, both statutory and constitutional, is enacted, it is true, from an experience of evils, but its general language should not, therefore, be necessarily confined to the form that evil had theretofore taken. Time works changes, brings into existence new conditions and purposes. . . . The future is their care and provision for events of good and bad tendencies of which no prophecy can be made. In the application of a constitution, therefore, our contemplation cannot be only of what has been but of what may be.

To be sure, not all Supreme Court justices agree with Justice McKennan's "living Constitution." Some would agree with Justice Antonin Scalia, who has declared that "the Constitution that I interpret and apply is not living but dead—or, as I prefer to put it, enduring." Representative of the argument against using "evolving standards of decency" is Justice Hugo L. Black's statement in *McGautha v. California,* 402 U.S. 183 (1971). Concurring in a decision that refused to invalidate capital punishment, Justice Black stated,

> The Eighth Amendment forbids "cruel and unusual punishments." In my view, these words cannot be read to outlaw capital punishment because that penalty was in common use and authorized by law here and in the countries from which our ancestors came at the time the Amendment was adopted. It is inconceivable to me that the framers intended to end capital punishment by the Amendment. Although some people have urged that this Court should amend the Constitution by interpretation to keep it abreast of modern ideas, I have never believed that lifetime judges in our system have any such legislative power.

The first case to approach a definition of "cruel and unusual punishment" was *Wilkerson v. Utah,* 99 U.S. 130 (1879), which involved a person sentenced to death under a Utah capital offense statute. Although Justice Nathan Clifford upheld the punishment by simply declaring that "punishment of shooting as a mode of executing the death penalty for the crime of murder in the first degree is not included . . . within the meaning of the eighth amendment," he relied on the practice at common law. He stated that "difficulty would attend the effort to define with exactness the extent of the constitutional provision which provides that cruel and unusual punishments shall not be inflicted; [but] it is safe to affirm that punishments of torture, such as those mentioned by the [common law] commentators . . . are forbidden by that amendment to the Constitution."

The "evolving standards of decency" criterion as a measure for the Court's interpretation of the "cruel and unusual" clause began to develop in earnest in 1910 with *Weems v. United States,* 217 U.S. 349, a case arising in the Philippines that involved a punishment of fifteen years' imprisonment for falsifying payments of 208 and 408 pesos to public employees. The *Weems* Court invalidated the punishment of a fine and imprisonment at hard labor for twelve to twenty years with the prisoner carrying an ankle chain. The prisoner also was perpetually barred from political rights, including holding office, and was subject to lifetime surveillance. All these punishments on one person also were invalidated. Defining "cruel and unusual punishment," the *Weems* Court outdistanced *Wilkerson v. Utah* by examining circumstances that occurred after the Constitution was adopted.

Justice White, dissenting, espoused a narrow interpretative approach that, like Justice Black's position in *McGautha v. California,* restricted the examination to penalties existing when texts were adopted. He declared that "the cruel punishments against which the bill of rights provided were the atrocious, sanguinary and inhuman punishments which had been inflicted in the past upon the persons of criminals. This being certain, the difficulty of interpretation, if any is involved, is in determining what was intended by the unusual punishments referred to and which were provided against."

The first major Supreme Court decision employing the "evolving standards of decency" concept and the phrase was *Trop v. Dulles,* 356 U.S. 86 (1958), which invalidated a statute that provided for termination of U.S. citizenship for soldiers convicted of wartime desertion. Chief Justice Earl Warren, writing for the Court and pointing to a "United Nations' survey of the nationality laws of 84 nations that revealed only two countries, the Philippines and Turkey, that impose denationalization as a penalty for desertion," forthrightly declared that the "Amendment must draw its meaning from the evolving standards of decency

that mark the progress of a maturing society." He adopted the comments from the lower-court opinion: "In my faith, the American concept of man's dignity does not comport with making even those we would punish completely 'stateless'—fair game for the despoiler at home and the oppressor abroad, if indeed there is any place which will tolerate them at all."

Justice Black in dissent, again looking to the situation existing at the time the text was adopted, argued that "to insist that denationalization is 'cruel and unusual' punishment is to stretch that concept beyond the breaking point. It seems scarcely arguable that loss of citizenship is within the Eighth Amendment's prohibition because it is disproportionate to an offense that is capital and has been so from the first year of Independence."

One of the most notable decisions to use the "evolving standards of decency" approach was *Furman v. Georgia,* 408 U.S. 238 (1972), in which the Court declared in a per curiam (by the Court) opinion without any elaboration that the imposition and carrying out of the death penalty in the two cases before the Court constituted cruel and unusual punishment violating the Eighth Amendment. The noteworthy feature of *Furman v. Georgia* is not so much that the "evolving standards of decency" concept was used as a yardstick to invalidate capital punishment in Georgia and Texas, but that both the majority and the minority applied this standard. This case represents the fact that although the Supreme Court firmly entrenched the "evolving standards of decency" criterion in U.S. constitutional law, it merely moved the argument from what existed in the eighteenth century to an equally contentious debate concerning contemporary standards.

Joining the majority in *Furman,* Justice William O. Douglas opined that the proscription of cruel and unusual punishments "is not fastened to the obsolete but may acquire meaning as public opinion becomes enlightened by a humane justice." Justice Brennan's opinion was typical of the majority. Quoting from *Trop v. Dulles,* he said the Court's decision would be "a simple task were we required merely to measure a challenged punishment against those that history has long condemned. That narrow and unwarranted view of the Clause, however, was left behind with the 19th century." Justice Harry A. Blackmun, typical of the minority position, argued that standards of decency had not evolved. He asserted that to be sure "the Court [is] evidently persuaded that somehow the passage of time has taken us to a place of greater maturity and outlook. [But] the argument, plausible and high-sounding as it may be, is not persuasive, for it is only one year since *McGautha,* only eight and one-half years since *Rudolph,* 14 years since *Trop,* and 25 years since *Francis,* and we have been presented with nothing that demonstrates a significant movement of any kind in these brief periods."

A very recent application of the "evolving standards of decency" argument is *Atkins v. Virginia,* 536 U.S. 304 (2002). A Virginia jury sentenced a defendant to death upon his conviction of first-degree murder. He maintained that the jury could not sentence him to death because he was mentally retarded. The Supreme Court in a six–three decision held that executing mentally retarded criminals violated the Eighth Amendment. Noting the significance of U.S. and state legislation on the issue, Justice John Paul Stevens stated that the "large number [eighteen] of States prohibiting the execution of mentally retarded persons (and the complete absence of States passing legislation reinstating the power to conduct such executions) provides powerful evidence that today our society views mentally retarded offenders as categorically less culpable than the average criminal. . . . The practice, therefore, has become truly unusual, and it is fair to say that a national consensus has developed against it."

The *Atkins* Court also considered additional evidence that it claimed made it clear that a much broader social and professional consensus had formed against executing mentally retarded individuals. For example, several organizations with germane expertise had adopted official positions opposing the imposition of the death penalty upon a mentally retarded offender. This included testimony by the American Psychological Association and by religious groups reflecting Christian, Jewish, Muslim, and Buddhist traditions. The Court also considered views from the world community and found that the imposition of the death penalty for crimes committed by mentally retarded offenders was overwhelmingly disapproved.

Chief Justice Rehnquist in dissent recognized that the "question presented by this case is whether a na-

tional consensus deprives Virginia of the constitutional power to impose the death penalty on capital murder defendants" that are mentally retarded. Nonetheless, citing the fact that twenty states permitted mentally retarded convicts to be executed, he argued that "in making determinations about whether a punishment is 'cruel and unusual' under the evolving standards of decency embraced by the Eighth Amendment, we have emphasized that legislation is the 'clearest and most reliable objective evidence of contemporary values.' " Rehnquist also lodged a protest against the majority's placing "weight on foreign laws, the views of professional and religious organizations, and opinion polls in reaching its conclusion."

Although the "evolving standards of decency" test may have held promise as a means to make the Eighth Amendment clearer by considering not only what was, but what has been, what is, and even what might be, it appears only to have moved the debate from what was to what has been, what is, and what might be, all of which are no less problematical.

Ewing v. California (2003)

In *Ewing v. California,* 538 U.S. 11 (2003), the U.S. Supreme Court upheld a state law under which an individual was sentenced to twenty-five years to life for stealing three golf clubs worth $399. In ruling on this case, the Court effectively upheld what has come to be known as "three strikes and you're out" laws. At issue was whether California's mandatory sentencing law violated the Eighth Amendment to the Constitution prohibiting cruel and unusual punishment.

As a result of increased crime rates in the United States in the early 1990s, many states got tough on crime and passed laws setting out mandatory minimum sentences for individuals who were repeat felony offenders. One type of mandatory minimum law came to be known as the "three strikes" law. Generally, under a three-strikes law, a person who commits a second felony receives an enhanced punishment for the second offense, and one who commits a third offense gets an even greater punishment, perhaps even life imprisonment.

Since 1993 twenty-six states and the federal government have enacted some variation of a three-strikes law. California passed a three-strikes law in 1993 as a result of the abduction and murder of Polly Klass by Richard Davis, a repeat felon. The California three-strikes law was similar to those found in other states and included provisions for individuals convicted of a second or third felony.

In *Ewing v. California,* Gary Ewing was on parole after serving a nine-year prison term for first-degree robbery. Prior to that, he had been involved in numerous crimes, including robbery and burglary. Ewing entered the pro shop at a golf course, stole three clubs valued at $399, and later was caught and charged with grand theft. Ewing asked the trial judge to treat the grand theft as a misdemeanor and not a felony, and he also asked the judge to ignore his previous convictions, all with the purpose of avoiding being sentenced under the three-strikes law. The judge refused, counted the grand theft as a felony, and also counted Ewing's four prior felony convictions. This meant that because Ewing had at least two felonies, the judge sentenced him to jail for twenty-five years to life. A state appellate court affirmed the sentence, the California Supreme Court declined to review, and the case was accepted for review by the U.S. Supreme Court.

Ewing argued that his sentence violated the Eighth Amendment prohibition on cruel and unusual punishment in that twenty-five-years-to-life imprisonment was disproportionate to the crime. Relying upon *Solem v. Helm,* 463 U.S. 277 (1983), in which the

Court held that the Eighth Amendment prohibited "a life sentence without possibility of parole for a seventh nonviolent felony," Ewing contended that a possible life sentence for the stealing of three golf clubs worth less than $400 was unconstitutional. Justice Sandra Day O'Connor, however, writing for a split majority in a five–four opinion, rejected that argument.

First, the Court acknowledged that in addition to limiting capital cases, the Eighth Amendment did contain a narrow proportionality principle that applied to noncapital murder cases. However, the Court said that it would strike sentences only if they were grossly disproportionate to the crime. Citing *Rummel v. Estelle,* 445 U.S. 263 (1980), in which the Court held that it did not violate the Eighth Amendment for a state to sentence a three-time offender to life in prison with the possibility of parole, the O'Connor majority in *Ewing* contended that enhanced sentences under recidivist statutes like the California three-strikes law, which was aimed at deterring and incapacitating repeat offenders, served an important state interest and were therefore constitutional. Moreover, the Court noted, although there might be serious questions regarding how effective three-strikes laws were in deterring criminals, questions about effectiveness and the types of punishments enacted were matters of legislative discretion and not issues for the judiciary to address.

Justice O'Connor was joined by Justices William H. Rehnquist and Anthony M. Kennedy. Justice Antonin Scalia wrote a concurrence arguing that the Eighth Amendment banned only certain modes of punishment, not duration. Justice Clarence Thomas issued a concurrence upholding the opinion but further arguing that the Eighth Amendment contained no proportionality requirement. In dissent, Justices John Paul Stevens and Stephen G. Breyer, joined by Justices Ruth Bader Ginsburg and David H. Souter, contended that the Eighth Amendment did in fact contain a proportionality requirement and that Gary Ewing's sentence was unconstitutional.

Ewing was an important case because it effectively diminished the scope of judicial review for certain types of sentences, giving Congress and state legislatures significant ability to enact tough and lengthy punishments.

Ex Post Facto Laws

An ex post facto law is one that punishes individuals for acts that were not criminal when they were committed or that enhances penalties for crimes previously committed. This was an injustice the founding fathers of the United States associated with the government of Great Britain and hoped to prevent. The framers of the U.S. Constitution accordingly provided in Article I, Section 9 that "no bill of attainder [a legislative punishment without benefit of a trial] or ex post facto law shall be passed," a limitation on Congress that was also applied to the states in Article I, Section 10. These clauses require that legislatures must make only decisions that apply prospectively. Although the ex post facto law is clearly forbidden,

courts have been left to define the term and to determine when a law applied to past acts violates this constitutional measure.

In *Calder v. Bull,* 3 U.S. 386 (1798), the U.S. Supreme Court set out four categories of laws that would violate the Ex Post Facto Clause of the Constitution. First, if any law retroactively makes an action a crime though it was innocent when done, that law is ex post facto and unconstitutional. Second, a law that makes a crime greater than it was when it was committed is ex post facto and unconstitutional. Third, a law that increases the punishment for a past crime is ex post facto and unconstitutional. Fourth, a law that alters the rules of evidence to the detriment of the accused is ex post facto and unconstitutional. These four types of laws can be applied only to crimes or actions committed after the effective date of the law. The four categories constituted the test for ex post facto violations until the Supreme Court clarified with two later cases.

The Supreme Court set out a two-part test in *Weaver v. Graham,* 450 U.S. 24 (1981), clarifying that an ex post facto violation can exist only when the law is applied retroactively and when the change in the law has been substantive rather then procedural. Because the purpose of prohibiting ex post facto laws is to ensure that individuals have notice of the consequences of their actions before they are committed, procedural changes that do not affect the substantive rights and obligations of the individual do not trigger ex post facto review. The Supreme Court further explained its decisions on ex post facto laws in *Collins v. Youngblood,* 497 U.S. 37 (1990), stating that laws changing the definition of an offense or increasing its punishment are not defensible because they affect the substance of the law applied retrospectively and therefore create an ex post facto violation.

Because only criminal penalties can be ex post facto violations, a court must decide if a law that applies retroactively is a criminal penalty. In doing so, a court will look at more than whether the law states that it is or is not a criminal penalty. In fact, the Supreme Court has set out several factors for determining whether a law is a criminal penalty, including whether it will result in a restraint such as imprisonment and whether the goals the law seeks to accomplish by the penalty are traditional aims of punishment (such as retribution or deterrence). The intent of the legislators when they passed the bill is very important in making this determination, and a court may look at legislative history such as committee and debate records in order to identify that intent.

Courts have used these tests to examine many laws challenged as ex post facto violations. For instance, in *Beazell v. Ohio,* 269 U.S. 167 (1925), when a retroactively applied law that required defendants accused of the same crime to be tried jointly was challenged as ex post facto, the Supreme Court decided that the change in the law was procedural and therefore not an ex post facto violation. Likewise, a law that changed the location where a trial was to be held was challenged as ex post facto when applied retroactively, but the Supreme Court ruled in *Gut v. Minnesota,* 76 U.S. 35 (1869), that this, too, was a procedural change in the law rather than a change affecting the substantive rights of the defendants. Similarly, in *Smith v. Doe,* 538 U.S. 84 (2003), the Court decided that an Alaska law requiring the registration of convicted sex offenders was primarily civil and nonpunitive in purpose and was therefore constitutional.

On the other hand, courts have struck down laws when those laws satisfy the tests laid out for ex post facto violations. One example of an unconstitutional ex post facto law was a statute that denied bail to a defendant who had been convicted and was awaiting the appeal of his case. In *Cunningham v. State,* 423 So. 2d 580 (Fla. Dist. Ct. App. 2d Dist. 1982), the Florida Court of Appeals decided that because the defendant's crime took place before the law was passed, his substantive right to bail pending his appeal had been taken away and the law was therefore an ex post facto violation.

Another such violation occurred when the Utah legislature altered a law to allow uncorroborated testimony by an accomplice to be sufficient to support a conviction. The law at the time the defendant committed the crime was that a conviction could not be had on the testimony of an accomplice, unless the accomplice's testimony was corroborated by other evidence that in itself connected the defendant to the commission of the offense. In *State of Utah v. Schreuder,* 726 P.2d 1215 (Utah 1986), the court found this

to be an ex post facto violation because it lessened the amount of evidence needed to convict a defendant, thus affecting his substantive rights.

In *Lynce v. Mathis,* 519 U.S. 433 (1997), the U.S. Supreme Court found an ex post facto violation when a prisoner challenged a state statute that had retroactively canceled his provisional early release credits. The credits were awarded to alleviate prison overcrowding, and the Court held that canceling them increased the prisoner's punishment and could not be upheld.

The Ex Post Facto Clause of the Constitution preserves the separation of powers between the legislature and the judiciary by forbidding the legislature to pass laws that act in a judicial capacity to punish crimes that have already taken place. Appropriately, it has rested in the hands of the judiciary to decide when the legislature has overstepped itself in this regard and to ensure that the legislature enacts only criminal laws and penalties that affect the judicial system prospectively.

Exclusionary Rule

The exclusionary rule states that illegally obtained evidence may not be used at a trial to convict a person of a crime. The importance of this rule lies both in the restraints it places upon the ability of police to search individuals illegally and in its protection of privacy rights.

The constitutional origins of the exclusionary rule grow out of the Fourth Amendment to the U.S. Constitution. This amendment generally requires that searches by the government of an individual's person, home, or possessions cannot occur unless (1) there is probable cause (a good reason to suspect the individual has done something illegal) and (2) a warrant is issued to the police by a neutral magistrate.

Yet the issue underlying the exclusionary rule involves evidence: What should be done with evidence that has been illegally obtained, for example, by a warrantless search? In *Olmstead v. United States*, 277 U.S. 438 (1928), Justice Louis D. Brandeis argued in dissent that evidence obtained from an illegal wiretap should not be admitted in court because it violated the Fourth Amendment. Instead, this evidence should be excluded from the trial as a way to protect the privacy rights of the accused.

The first instance of the application of the exclusionary rule was in *Weeks v. United States*, 232 U.S. 383 (1914), in which the Supreme Court applied it against the federal government. In *Wolf v. Colorado*, 338 U.S. 25 (1949), however, although the Court held that the Fourth Amendment did apply to the states, it rejected the claim that the exclusionary rule also applied. But the Court reversed *Wolf* in the landmark case *Mapp v. Ohio*, 367 U.S. 643 (1961), and held that the exclusionary rule did apply to states such that evidence obtained in illegal searches and seizures could not be used to convict an individual.

The Supreme Court decision in *Mapp* was very controversial and remains so to this day. Some critics claim that the exclusionary rule makes it harder for police to catch and convict criminals because law enforcement authorities are limited in how they can obtain evidence. In addition, some argue that excluding evidence of a crime makes no sense. Justice Benjamin N. Cardozo once remarked that it made no sense to let the guilty go free simply because a police officer made a mistake and undertook an illegal search. Instead, opponents of the exclusionary rule contend that perhaps there are other remedies to address illegal searches besides excluding the evidence. For example, some advocate letting victims of illegal searches sue the police for violation of their privacy rights.

In response, Justice William J. Brennan Jr. and other supporters of the exclusionary rule have argued

that the only way to place limits on unconstitutional police behavior is to exclude the illegally obtained evidence. Their argument is that the exclusion of the evidence serves as a deterrent upon police and illegal searches. Moreover, civil lawsuits against the police are not effective remedies for violation of the Fourth Amendment not only because of the cost and difficulty of bring a suit against a police officer, but also because individuals who are the victims of illegal searches may be convicted for the crimes they have committed and therefore would not be viewed very sympathetically by juries.

The exclusionary rule is shrouded by two myths or misperceptions. First, opponents of the rule suggest that many guilty individuals go free because of the exclusion of certain types of evidence. There is little support for this claim, however: Few defendants ever walk away completely free as a result of the exclusionary rule.

A second misconception surrounding the exclusionary rule is that illegally obtained evidence cannot be used at all. This is not true. The rule only bars the use of illegally obtained evidence at trial, for the purpose of convicting an individual. The Supreme Court since *Mapp* has carved out several exceptions to the exclusionary rule, permitting illegally obtained evidence to be used in grand jury proceedings, to impeach those accused of crimes if they testify at trial, and to assist in making sentencing decisions. In addition, the Supreme Court has also carved out numerous exceptions to when a search warrant is required, giving police broad authority to undertake warrantless searches in many cases. Thus, the exclusionary rule, though an important tool for protecting individual liberties, is nonetheless quite restricted in its application.

To this day the exclusionary rule is still under attack. For example, after the terrorist attacks on New York City and Washington, D.C., on September 11, 2001, Congress passed the Patriot Act to make it easier for law enforcement both to get search warrants and to undertake illegal searches and use that evidence in trial. However, the Supreme Court so far has not been willing to relax the exclusionary rule in light of the war on terrorism.

Executive Orders

An executive order is a document issued by the president of the United States that has the force of law. In some cases, executive orders can threaten civil liberties, as occurred during World War II when the president ordered the relocation of Japanese Americans to internment camps. All presidents have issued these orders to create and control executive branch agencies; to implement statutes, treaties, and executive agreements; and to accomplish their domestic and foreign policy objectives. No one knows how many orders have been issued. There is neither a commonly accepted definition of executive orders nor any clear distinction between them and a presidential proclamation. Some proclamations could be classified as executive orders, such as George Washington's 1793 proclamation of neutrality, Abraham Lincoln's 1863 Emancipation Proclamation, and Gerald Ford's 1975 proclamation pardoning former president Richard Nixon for any possible wrongdoing in connection with the Watergate incident (the bungled burglary of Democratic National Committee headquarters in the Watergate complex by individuals with connections to the Nixon administration and the subsequent attempted cover-up). Further confusing matters is that executive orders were not numbered until 1862, not systematically numbered until 1907, and not published in the *Federal Register* until 1935. As of April 2003, the numbered series totaled 13,290 executive orders.

Presidents have used executive orders to create task forces, commissions, and advisory committees; to implement congressional statutes creating government agencies and authorizing their reorganization; and to promulgate rules governing agency personnel and pro-

cedures and public participation in federal agency decision-making. President Ronald Reagan relied upon the orders of Presidents Gerald Ford and James

that enhanced his power as chief executive by granting the Office of Management and Budget the authority to conduct cost-benefit analyses of proposed agency rules. Presidents have also issued executive orders to limit access to government information, outlaw racial discrimination, and, during World War II, to mandate the relocation of Japanese Americans and to order government seizure of the steel mills. Such actions have raised significant questions about whether the president has the constitutional authority to issue such orders and whether they intrude upon congressional power and diminish individual freedom and equality.

Presidents have restricted public access to national defense and foreign policy information held by federal agencies through the exemption granted by express congressional authorization (Exemption 1) in the Freedom of Information Act of 1974 (FOIA) to use executive orders in establishing criteria for public access to such information. When the administration of President Richard M. Nixon denied Congress information on an underground nuclear test, even though the FOIA provides that the exemption does not apply to Congress, the U.S. Supreme Court held in *United States v. Mink,* 410 U.S. 73 (1973), that it had no

"Images Removed Due to Copyright Issues"

authority to examine the documents and decide the issue of congressional access. The *Mink* decision prompted Congress to amend the FOIA in 1974 to require that agencies adopt rules to promote access and enhance judicial review. Since then, presidents have used executive orders to alter the Exemption 1 information available for disclosure. President Reagan's Executive Order 12,600 (1987) provided that information would be withheld if there was a "substantial legal basis." President William J. Clinton's Executive Order 12,598 (1995) replaced the Reagan policy with one that permitted the declassification of documents older than twenty-five years and provided a more permissive classification standard: Information would not be withheld unless there was a substantial doubt that its release would compromise national security. In 2003, President George W. Bush amended the Clinton order to delay for three years the information scheduled for release under the twenty-five-year rule and expanded federal agency authority to classify information about critical infrastructures, such as the Internet, weapons of mass destruction, and defense against transnational terrorism.

President Franklin D. Roosevelt and his successors relied upon the authority set forth in Article II of the Constitution for the chief executive to issue executive orders addressing the nation's dilemma of racial discrimination. Roosevelt's Executive Order 8802 (1941) forbade discrimination in defense industries in violation of federal contract equal employment provisions. President Harry Truman continued this policy and in Executive Order 9981 (1948) outlawed racial segregation in the armed forces services. After the passage of the Civil Rights Act of 1964, President Lyndon B. Johnson issued Executive Order 11,246 (1965) to supplement Title 7 of the 1964 Civil Rights Act by providing that government contracts with private companies would prohibit employment discrimination on the basis of race, sex, religion, or national origin and by creating an administrative apparatus to assure compliance by means of government inspections, court injunctions to enforce the nondiscrimination contractual provision, and disqualification from future contracts. In his "Philadelphia plan," President Nixon extended Johnson's order by requiring private companies to set hiring goals for minority

groups as a condition for receiving government contracts. The executive order was challenged but upheld by the Court of Appeals for the Third Circuit in *Contractors Association of Eastern Pennsylvania v. Secretary of Labor,* 311 F. Supp. 1002 (E.D. Pa. 1971), as a proper use of the president's implied power of economic procurement.

At the same time, one president relied upon his Article II diplomatic and military authority to engage in racial discrimination. President Roosevelt relied upon his commander-in-chief power when he issued Executive Order 9066 (1942) authorizing the secretary of war to identify military areas of the country, impose travel restrictions in these areas, and exclude Japanese persons from these areas. This executive order, quickly supported by Congress, provided the authority for the military to evacuate Japanese nationals and Japanese American citizens from West Coast military zones. In Executive Order 9066, Roosevelt also relied upon his commander-in-chief power to create the War Relocation Authority, which assisted the military evacuations and operated the relocation-detention centers. When these actions were challenged, the Supreme Court avoided the constitutional issues of racial discrimination and the detention program.

Hirabayashi v. United States, 320 U.S. 81 (1943), upheld the military curfew as a valid exercise of the presidential and congressional war powers; *Korematsu v. United States,* 323 U.S. 214 (1944), found the West Coast evacuations were a matter of military necessity; and *Ex parte Endo,* 323 U.S. 283 (1944), authorized a writ of habeas corpus only because the War Relocation Authority had detained a citizen whose loyalty had been proved. In sum, the Supreme Court's decisions authorized presidential and congressional actions that violated the constitutional guarantees of the presumption of innocence, equality, freedom of movement, and private property.

Presidents have also used their commander-in-chief authority to seize and operate private businesses. President Roosevelt used executive orders to seize shipbuilding, cable, and coal companies for which Congress later provided statutory authorization by passing the War Labor Disputes Act of 1942. President Truman relied upon the power in 1952 to avoid a strike in the steel industry and assure continued steel production for the Korean War by issuing Executive Order 10,340 (1952) authorizing the secretary of commerce to seize and operate the steel mills. Instead of invoking the Taft-Hartley Act of 1947, enacted over his veto but enabling him to forestall the strike for eighty days, he informed Congress of his seizure action and invited it to take action. In *Youngstown Sheet and Tube Co. v. Sawyer,* 343 U.S. 579 (1952), the Supreme Court struck down his executive order.

Justice Hugo L. Black's majority opinion denied that the president had authority under his commander-in-chief power to take private property in order to keep a labor dispute from stopping the production of war materiel, because the seizure was too far removed from the theater of war where the president had the right to set policy. Nor could the seizure be justified under the president's executive authority, because Article II states that the president must carry out law, not make it. The Defense Production Act of 1950 governed seizure but not in these circumstances, and Congress had rejected an amendment to Taft-Hartley authorizing seizure in an emergency. In sum, the Court's decisions reminded President Truman that he did not have unrestrained discretion in domestic affairs, even to further international military policy. Without congressional consent, the president's seizure order was a usurpation of legislative power.

In *Dames & Moore v. Regan,* 453 U.S. 654 (1981), the Supreme Court was much more deferential when it examined President Reagan's Executive Order 12,294. The order implemented an executive agreement, negotiated by President Carter, to release U.S. embassy personnel held hostage in Iran, terminate all litigation involving the government of Iran, and submit the litigation to binding arbitration by an international claims tribunal. The firm of Dames & Moore, which had received a judgment against the Atomic Energy Organization of Iran, challenged the executive order. The Court limited its analysis to statutory sources for the president's power and found that even though neither the International Economic Emergency Powers Act nor the Hostage Act provided specific authorization to suspend claims against Iranian property, Congress had enacted other legislation that implicitly approved of claim settlement by executive agreement as a necessary incident to the reso-

lution of a major foreign policy dispute. As a consequence, the Court's decision created doubt as to whether *Youngstown Sheet and Tube* required the president to obtain fairly explicit legislative authorization for his actions.

Executive orders have become a necessary component and accepted practice of the modern presidency. Only a few of the more than 13,000 orders have generated intense political controversies, and even fewer have provoked constitutional challenges when they have intruded upon congressional power and diminished individual freedom and equality. The courts have been reluctant to strike them down as executive-branch law-making even when they have limited access to information, permitted racial discrimination, and authorized the seizure of private property, as long as they clearly draw upon the constitutional powers of the president or are not incompatible with the express or implied will of Congress.

Fairness Doctrine

In 1949 the Federal Communications Commission (FCC), acting on a mandate from Congress to provide a "public interest" standard in broadcast communications, formalized what became known as the "fairness doctrine." The fairness doctrine required that broadcasters present controversial issues of public importance and present those issues in a fair and balanced manner. In 1959 Congress passed an amendment that most scholars thought codified the FCC standards. By 1971 stations were required to keep "Ascertainment of Community Needs" records and present them for FCC consideration at the time of their license renewal. The administration of President Ronald Reagan, however, sought to abolish what it viewed as content-based regulation in the fairness doctrine, an objection that raised issues of freedom of the press as guaranteed by the First Amendment to the U.S. Constitution. In 1987 the FCC, then dominated by Reagan appointees who shared his deregulatory tendencies, ruled the fairness doctrine unconstitutional and ceased enforcing it. Congress passed legislation clearly codifying the doctrine through statute, but was unable to override President Reagan's veto, and thus the fairness doctrine ended.

The rise and fall of the fairness doctrine illustrate important issues that concern First Amendment liberties in the age of broadcast communications. Freedom of the press is of primary importance in the U.S. democratic system and is formalized by the First Amendment. Still, the press is occasionally restricted in what it can present to the public. Libel, obscenity, and unapproved reporting on national security or war maneuvers can lead to postpublication government sanction and liability. Broadcast media (radio and television operating over the airwaves, but not cable or satellite) are even more regulated than most communications media because they operate over a limited spectrum of broadcast frequencies. These broadcast frequencies are the public's domain, and because they are limited in number, the government justifies their regulation in the public interest. This regulatory responsibility falls to the FCC, which is in theory an independent regulatory body. In practice, however, the FCC is a highly political entity whose members are nominated by the president and confirmed by the Senate and whose budget is approved by Congress. In addition to the formal pressures on the FCC, its practices are under constant public scrutiny and industry pressure.

The first U.S. Supreme Court challenge to the fairness doctrine came in *Red Lion Broadcasting Co. v. Federal Communications Commission,* 395 U.S. 367 (1969). In this case, a broadcast station in Pennsylvania aired a "Christian Crusade" program that attacked author Fred J. Cook. Cook appealed for airtime to reply to the attack, and when the station refused, he petitioned the FCC. The FCC sided with Cook, the station appealed, and the case eventually made its way to the Supreme Court. The Court concluded that Congress, although ambivalent with some wording, had in 1959 expressly recognized the fairness doctrine in statutory law. Most important, noting the principle of the scarcity of broadcast frequencies, the Court found the fairness doctrine in compliance with the First Amendment and thus constitutional. The Court did note, however, that evidence of a "chilling effect" could render the doctrine unconstitutional. "Chilling effect" refers to the argument that specific regulations (like the fairness doctrine) could lead broadcasters to avoid controversial issues purposefully so as not to violate the regulation. If this were to happen, the fairness regulation would be, in effect, stifling speech and thus unconstitutional.

A combination of factors brought about the end of the fairness doctrine. First, television and radio journalists thought they operated under a double standard with respect to their colleagues in print media, who were not subject to fairness-doctrine requirements. A former chairman of the FCC made this point clear when he stated that "[l]imitations on broadcast content that would be unconstitutional if applied to the print press have been routinely upheld when applied to broadcasting. Although broadcasters have First Amendment rights, they are subordinate to the rights of the viewing public." Second, the 1980s brought

many advances in communications technologies. With the advent of cable and satellite communications, the "scarcity" argument lost much of its strength. Third, this was an era marked by deregulation. FCC Chairman Mark Fowler, a Reagan appointee, publicly opposed the fairness doctrine and promised its demise. All of these factors culminated in the FCC's "1985 Fairness Report," in which the agency found that the fairness doctrine was having the "chilling effect" against which the Court had warned and that the scarcity justification no longer applied. In *Meredith Corp. v. Federal Communications Commission,* 809 F.2d 863 (1987), a case the FCC argued based on the findings of its 1985 report, a district court found that Congress had never codified the doctrine and left open the option for the FCC to dissolve the doctrine, which it did. Congress then passed legislation to codify the doctrine, but failed to muster enough votes to override Reagan's veto.

With the advent of new technologies, the concern over strict regulation in broadcast journalism may be an issue of the past. Airwaves are no longer the scarce public good they once were, and the FCC has interpreted that fact as justification for making the airwaves an open marketplace, regulated by the laws of supply and demand, rather than justifying their regulation based on the common good. Today the public relies on the goodwill of journalists and their ability to present balanced coverage. Although broadcast programming is usually regarded as free to consumers, they do in fact pay; they pay with their attention and endure the advertising that buys time. The only recourse currently available to citizens, should they be sufficiently upset with unfair reporting, is to change the channel.

Fair-Use Doctrine

The term "fair use" represents an important limitation on the exclusive legal rights that copyright law grants to protect owners of creative works and other forms of intellectual property. The concept of fair use, based in common law, developed over time in judicial doctrine as courts attempted to strike a balance between the rights of copyright owners to control their property and the greater benefit to society that these works may provide. In the United States, the doctrine of fair use was solidified in statutory language when Congress amended the Copyright Act in 1976 (Public Law 94-553).

The origins of copyright can be traced to the sixteenth century when European governments began the practice of granting patent monopolies to national printing companies. Article I, Section 8, clause 8 of the U.S. Constitution assigned Congress the power to "promote the progress of science and the useful arts by securing for limited times to authors and inventors the exclusive right to their respective writings and discoveries." The phrase "for limited times" underscored the important concept that society benefited from the free access to ideas and technological innovation and that ownership of such copyrights should not be unlimited.

Fair use is a further recognition of a greater good accruing to society when reasonable limitations are placed on the exclusive grant of copyright. The fair-use doctrine allows for limited copying and other use of materials protected by copyright without having to secure specific permissions or pay compensation to the owner. As a judicial doctrine, fair use was first defined in a U.S. court in *Folsom v. Marsh,* 9 F. Cas. 342 (No. 4,901) (C.C.D. Mass. 1841). In this case a charge of copyright infringement was brought when an author

of a fictional biography of George Washington used the president's private letters without securing express permission to use them. Justice Joseph Story determined that no infringement had occurred and concluded: "In short, we must often, in deciding questions of this sort, look to the nature and objects of the selection made, the quantity and value of the materials used, and the degree in which the use may prejudice the sale or diminish the profits, or supersede the objects, of the original work." This finding became the foundation of many subsequent rulings on fair use over the years.

In 1976, this body of judicial doctrine formed the basis for the fair-use statutory language now found in Section 107 of the Copyright Act (*U.S. Code,* vol. 17, sec. 107). Section 107 provides express statutory limitations on copyright based upon the fair-use doctrine and includes guidance on determining in which cases a fair-use claim can be made. The text provides that "the fair use of a copyrighted work . . . for purposes such as criticism, comment, news reporting, teaching (including multiple copies for classroom use), scholarship, or research, is not an infringement of copyright." The fair-use doctrine would protect, for example, a reviewer quoting a short portion of a book in writing a review of the piece, a teacher using photocopied pages of a short story in a language arts class, or an individual making a copy for personal use.

Section 107 further cited the following four factors to determine whether the use of a work was a fair use:

> (1) The purpose and character of the use, including whether such use is of a commercial nature or is for nonprofit educational purposes;
> (2) The nature of the copyrighted work;
> (3) The amount and substantiality of the portion used in relation to the copyrighted work as a whole; and
> (4) The effect of the use upon the potential market for or value of the copyrighted work.

In some special cases, an even greater level of free access can be provided under further extensions of the fair-use doctrine. One such extension was the basis for the 1996 Chafee Amendment to the Copyright Act (codified at *U.S. Code,* vol. 17, sec. 121). This law contains provisions allowing entities that serve blind and other reading-impaired individuals to create Braille and other specialized format versions of complete published nondramatic literary works without having first to obtain permission from the copyright owner or provide any form of compensation.

Subsequent legislation, however, may have the effect of reducing the availability of fair use in the case of electronic media. The Digital Millennium Copyright Act (DMCA) of 1998 (Public Law 105-304) includes expansive protections for copyright owners of digitally encoded intellectual property, including computer software, digital video, and e-books. The DMCA effectively criminalizes any action of circumventing encryption protection measures used by copyright owners to control access to digitally encoded copyrighted works. Since the DMCA did not invalidate the 150-year history of the fair-use doctrine, courts may once again be called upon to provide the needed balance between the rights of copyright owners and the greater benefits to society for having access to digital materials through protected fair use.

Family Rights

The law has long acknowledged that the family is the fundamental unit of society. For example, the United Nations' Universal Declaration on Human Rights proclaims that the family "is the natural and fundamental group unit of society and is entitled to protection by society and the State." Similarly, the Holy See's Charter of the Rights of the Family recognizes

that "the rights of the person, even though they are expressed as rights of the individual, have a fundamental social dimension which finds an innate and vital expression in the family." Accordingly, in the United States, the family unit has been the subject of legal regulation and protection, and the existence of family relationships is relevant to many different areas of law, including constitutional law, immigration, taxation, tort law, contract law, and inheritance and property law.

Traditionally, protection of the family unit has been the province of state governments (families are thus not specifically mentioned in the U.S. Constitution), and states have normally exercised primary jurisdiction over laws regulating the family, such as those involving marriage, divorce, and child custody and support. Nevertheless, in recent years, the federal government has also promulgated a number of laws affecting the family. For example, in the Family Educational Rights and Privacy Act of 1974, Congress provided parents the right to inspect and review the educational records of their children and prohibited the distribution of funds to applicable educational agencies or programs that prevent such access. The statute also protects the student against release of educational records without the written consent of the parents, or of the student once he or she has reached age eighteen. In the Family and Medical Leave Act of 1993, in order to balance the demands of the workplace with the needs of families, Congress mandated that all eligible employees (men and women) are entitled to up to twelve weeks of unpaid leave per year to receive medical care or to care for family members who have undergone medical treatment or for the birth or adoption of a child. Congress has passed other laws affecting the family, most notably in the areas of child support and child custody.

Additionally, in a number of cases, the U.S. Supreme Court has had occasion to address constitutional rights in the specific context of family relations. These decisions recognize the fundamental right of a man and woman to marry, and to bear and raise their children, and the role of the states in regulating familial relationships. For example, in *Maynard v. Hill,* 125 U.S. 190 (1888), the Supreme Court noted that marriage, "as creating the most important relation in life, as having more to do with the morals and civilization of a people than any other institution, has always been subject to the control of the legislature." The Court has also noted, however, that in some contexts states may not regulate or prohibit the fundamental right to marry. For example, in *Loving v. Virginia,* 388 U.S. 1 (1967), the Supreme Court struck down a law prohibiting interracial marriages. In *Pierce v. Society of Sisters,* 268 U.S. 510 (1925), the Supreme Court addressed family rights in the specific context of parental rights and held that a law requiring attendance in public school violated the "liberty of parents and guardians to direct the upbringing and education of children under their control." In *Griswold v. Connecticut,* 381 U.S. 479 (1965), in striking down a law forbidding the use of contraceptives even by married persons, the Court stated that marriage "is a relationship lying within the zone of privacy created by several fundamental constitutional guarantees."

From these cases protecting the rights of the family, the Court has created other rights. For instance, in *Roe v. Wade,* 410 U.S. 113 (1973), the right to privacy was extended to include a "woman's decision whether to or not to terminate her pregnancy." A child's own rights have also been considered by the Supreme Court. For example, in *Santosky v. Kramer,* 455 U.S. 745 (1982), the Supreme Court stated that "until the state proves parental unfitness, the child and his parents share a vital interest in preventing erroneous termination of the natural relationship." At times, the Court has determined that children's rights may trump those of their parents. For example, in *Planned Parenthood of Central Missouri v. Danforth,* 428 U.S. 52 (1976), the Supreme Court struck down a law requiring parental consent for a minor to obtain an abortion; subsequent cases have allowed states to require consent of a parent, as long as there is a judicial bypass option. Finally, in *Lawrence v. Texas,* 539 U.S. 558 (2003), overturning one of its recent cases to the contrary, the Supreme Court held that a Texas statute prohibiting "deviate sexual intercourse" violated two men's due process rights. In so holding, the majority emphasized the personal liberty interests of adults to decide how to conduct their private sexual lives.

Finally, recent issues in family law involve the movement to redefine "marriage" and "family" and the accompanying legal consequences of such an effort. Some states and local governments have decided

to extend some form of legal protection to same-sex couples. For example, in 1999, in response to direction from the Vermont Supreme Court, the Vermont legislature passed the Vermont Civil Union Law effective July 1, 2000. Under that law, gay and lesbian couples became entitled to many of the benefits and protections of traditional marriage, such as the right to sue for wrongful death, the right to receive family leave benefits, the right to inherit property without a will, and the use of family law such as alimony and child custody and support. In the most sweeping decision to date, the Massachusetts Supreme Judicial Court recently held that under the state constitution, there was no rational basis to support the exclusion of same-sex couples from civil marriage and its benefits. Accordingly, on May 17, 2004, same-sex couples legally married for the first time in U.S. history. In response to the recent success of the proponents of same-sex marriage, a number of states have passed legislation protecting the traditional definition of marriage as between a man and woman and attempting to limit the forced recognition of same-sex marriages under the Full Faith and Credit Clause of the Constitution. At the federal level, there also has been discussion about seeking to amend the Constitution to prohibit same-sex marriage, but constitutional amendments are rare and difficult to pass because they require ratification by three-fourths of the states.

Federal Aid to Elementary and Secondary Education Act of 1965

President Lyndon B. Johnson's highest priority in his Great Society socioeconomic programs for alleviating poverty was to broaden educational opportunities and enrich the quality of school offerings for the children of America. His vehicle to accomplish this was the Elementary and Secondary Education Act (ESEA) of 1965. The use of money pursuant to this legislation became the source of a significant amount of litigation before the U.S. Supreme Court in the area of church-state relations. The major issue became whether such federal assistance violated the Establishment Clause of the First Amendment to the U.S. Constitution. Under that clause, government cannot enact laws that would constitute "establishment of religion."

A dilemma Johnson faced in developing this legislation was the reality that many people viewed such federal aid as unconstitutional support of parochial schools. The church-state issue persisted as a stumbling block as the Johnson administration worked on formulating this policy. Johnson's approach was that the funding would constitute categorical aid—money that could be used only for narrowly defined purposes—to poor children in city slums and depressed rural areas. Motivating this approach was the Supreme Court's decision in *Everson v. Board of Education,* 330 U.S. 1 (1947), in which the Court held that federal

aid to parochial students was constitutional if it went to children rather than to schools.

Under Title I of ESEA, special restrictions applied to the money appropriated. Among these was that the school district must retain complete control over the funds; must provide the services through public employees or other persons independent of the private school and any religious institution; and must ensure that services supplement rather than displace the level of services provided by the private school. Perhaps most significant was that programs supported by this money must be "secular, neutral, and nonideological." From 1965 on, schools struggled with how to provide Title I services to private schools—especially parochial schools.

In 1985 the Supreme Court heard arguments in *Aguilar v. Felton,* 473 U.S. 402 (1985), which involved a suit by six New York City taxpayers against the school district for offering Title I services on private school premises during school hours. The Court, in a five–four decision, found the board's program unconstitutional on the basis of "excessive entanglement" of church and state in the administration of Title I benefits. In effect, this entanglement violated the Establishment Clause. On remand, the federal district court permanently prohibited Title I services to be administered on the premises of sectarian schools.

In response, the board and parents of eligible New York City parochial school students sought relief from the permanent injunction established by *Aguilar.* In turn, the Supreme Court reversed *Aguilar* in 1997 in a five–four decision in *Agostini v. Felton,* 521 U.S. 203 (1997). The Court's majority held that recent rulings had so undermined *Aguilar* that it was no longer good law.

Two of these recent rulings were *Witters v. Washington Department of Services for the Blind,* 474 U.S. 481 (1986), and *Zobrest v. Catalina Foothills School District,* 509 U.S. 1 (1993). When Larry Witters, a Christian college student suffering from a progressive visual condition that made him eligible for state vocational rehabilitation assistance to blind persons, applied to the state for financial assistance to pay his educational costs, he was denied on the ground that his training constituted religious instruction. The Court reversed the Washington State Supreme Court, holding that the granting of aid under the statute to finance Witters's training at a Christian college would not advance religion in a manner inconsistent with the Establishment Clause.

In the *Zobrest* case, James Zobrest, deaf since birth, asked his school to provide a sign-language interpreter to accompany him to classes at a Catholic high school pursuant to the Individuals with Disabilities Education Act (IDEA). The Court determined that the IDEA created a neutral government program dispensing aid not to schools but to individual children with disabilities. Thus, the Court held that the Establishment Clause did not prevent the school district from furnishing the student with a sign-language interpreter to facilitate his education at a parochial school.

One recent case, *Zelman v. Simmons-Harris,* 536 U.S. 639 (2002), involving government aid to schools although not ESEA Title I money, might augur the direction the Court under Chief Justice William H. Rehnquist may be heading in church-state issues of permitting taxpayer money to be used in parochial schools. To help students in struggling school districts, the state of Ohio established a program to provide educational choices to families residing in the Cleveland, Ohio, school district. The program provided tuition aid for students to attend a participating public or private school of their parents' choosing and tutorial aid for students who chose to remain enrolled in the public school. The Court held in *Zelman* that Ohio's "voucher" program did not violate the Establishment Clause, thus allowing tax dollars to be funneled into private schools, including the parochial schools.

Since the enactment of ESEA and the initial cases before the Supreme Court, the justices seemingly have become more open to approving the use of taxpayer money in parochial schools. Whether this trend will continue depends, in large part, on the composition of the Court and whether any changes in it may take place.

Federal Bureau of Investigation

The Federal Bureau of Investigation (FBI) is a division of the U.S. Department of Justice and is its principal investigative arm charged with analyzing violations of federal laws. The FBI has the broadest investigative authority of all federal law enforcement agencies.

The agency was founded in 1908 under the guidance of then President Theodore Roosevelt and Attorney General Charles Bonaparte. President Roosevelt issued an executive order creating an investigative force within the Justice Department. In 1909 Attorney General George Wickersham named the force the Bureau of Investigation. Congress gradually added duties to its jurisdiction until in 1933 it was reorganized with wider powers as the Division of Investigation in the Department of Justice. It was renamed the Federal Bureau of Investigation in 1935.

The FBI's overall mission is to uphold the law through the investigation of violations of federal criminal statutes and to protect the United States from foreign intelligence and terrorist activities. Federal statutes authorize the attorney general to appoint officials to detect crimes against the United States and give the FBI authority and responsibility to investigate specific crimes. As of 2003 the agency had investigative jurisdiction over more than 200 categories of violations of federal law.

During its early period, the FBI investigated such areas as bankruptcy, fraud, antitrust, and neutrality violations. During World War I, it was given responsibility for espionage, sabotage, sedition, and draft violations. The passage of the National Motor Vehicle Theft Act in 1919 also broadened the agency's jurisdiction. Shortly after World War I, the FBI was the lead agency of an operation that became known as the "Palmer raids" (named after A. Mitchell Palmer, U.S. attorney general under President Woodrow Wilson); these raids were a dragnet of arrests of tens of thousands of alien radicals in thirty-three cities. In part because most of the victims were arrested without a warrant, the majority were eventually released either before or after their prosecution. One of the supervisors of the Palmer raids was a young Justice Department lawyer named J. Edgar Hoover.

After the resignation of Attorney General Harry Daugherty, J. Edgar Hoover was selected in 1924 as the agency's director, a post he held until his death in 1972. During the 1930s, the FBI gained wide support for its capture of a handful of highly publicized gangsters. Riding a wave of popularity and an aggressive public relations program, culminating in speeches, articles, and books such as Hoover's *Masters of Deceit,* the reputation of the FBI as the nation's premier enforcement agency grew. On March 14, 1950, the agency began its "Ten Most Wanted Fugitives" list.

In the wake of a 1971 theft of internal documents from an FBI office in Media, Pennsylvania, and the post-Watergate congressional investigations in the mid-1970s (stemming from a bungled burglary at Democratic National Committee headquarters by individuals connected with President Richard M. Nixon's administration), the FBI's reputation sank. The documents and investigations showed that under Hoover's direction the FBI had invested a large part of its budget and staff for political rather than enforcement purposes. The FBI's counterintelligence (COINTEL) program began as an effort to undermine the Communist Party, but eventually it extended to black political activists such as Martin Luther King Jr., members of the Black Panther Party, student protesters against the Vietnam War, some early leaders in the women's liberation movement, and the Ku Klux Klan.

Information obtained through FBI investigations is presented to U.S. attorneys or other Justice Department officials, who decide if prosecution or other action is warranted. The FBI has identified three strategic priorities: Tier 1 (national and economic security); Tier 2 (criminal enterprises and public integrity); and Tier 3 (crimes against individuals and property).

The FBI is a field-oriented organization in which nine divisions and four offices provide program direction and support services to field offices in fifty-six major cities, approximately 400 satellite offices, four specialized field installations, and twenty-three foreign liaison posts. Of the fifty-six field offices, all but one are in the United States and that one is in Puerto Rico. The locations were selected according to crime trends, the need for regional geographic centralization, and the need to manage resources.

The FBI has more than 11,000 special agents and 13,700 other employees who perform professional, administrative, technical, clerical, craft, trade, or maintenance operations. The annual budget for the FBI in 2001 was more than $1.27 billion.

The FBI's role in international investigations has expanded due to the authority granted by the congressional application of extraterritorial jurisdiction and the growth in international criminal activity. FBI investigations abroad require the approval of the host country and coordination with the U.S. Department of State and any other involved agency through the FBI's legal attaché program.

Federal Communications Commission

In 1934, Congress passed the Telecommunications Act establishing the Federal Communications Commission (FCC) to govern all electrically transmitted messages, which at the time included those by telephone, telegraph, and radio. The agency's jurisdiction has since expanded to cover cable and broadcast television as well as Internet and satellite transmissions. The FCC was initially created because the limited availability of broadcast spectra required regulation by some central authority. Federal regulation of railroads and telegraph set a precedent for regulating the means of communication, which posed thorny issues of freedom of speech and the press as provided in the First Amendment to the U.S. Constitution. In the twenty-first century, the concept of wires and microwaves being "carriers" is common, but to people in the 1870s a "carrier" was a railroad, a wagon, or a pack animal. By equating wires and, later, microwaves with railroads and freight companies (termed "common carriers"), the courts laid the foundation for applying the same principles of regulation and taxation to telegraph, telephone, and radio as had been applied to the common carriers of physical goods. As technology progressed, the regulatory powers of the FCC expanded to include television and then cable and satellite transmissions and now the Internet.

The roots of telecommunications law go back at least as far as the late nineteenth century when the U.S. Supreme Court indicated that telegraph companies had the same characteristics as common carriers and thus could be regulated similarly. As various administrative agencies were created in the 1930s, the courts had to determine whether agencies such as the FCC correctly applied the laws that Congress wrote when the agencies were created. Regulation of telephone and telegraph lines, as with regulation of freight carriers, dealt only with the use of physical space, but regulation of broadcast media meant limiting the number of broadcast frequencies, called spectra. To prevent frequency chaos, the FCC used the "public interest" as its guiding principle to "secure the maximum benefits of radio to all the people of the United States." The carryover to television was obvious when that medium became common, but the "public interest" rationale has not been quite so evident in the case of cable television and the Internet.

Part of the problem faced by the FCC and the courts is that a broadcast license has value and can be bought and sold, a factor that puts the idea of regulating in the public interest in conflict with the tra-

Monitoring at the Federal Communications Commission (FCC) listening post, 1944. The FCC regulates the licensing of television and radio stations. *(Library of Congress)*

ditional common law of private property. The Court in *Express Company v. Caldwell,* 88 U.S. 264 (1875), found that there was no property right in a telegraph license, and that was the starting place by which the Court sought to regulate broadcasting stations as to content. The Court came to regard the broadcast license as being a public convenience, interest, or necessity and as such was something the FCC could fairly regulate both as to content and to technology.

Using these basic concepts, the FCC primarily tried to regulate technology itself. The agency assigned frequencies and times of broadcast, such as limiting broadcasters to daylight hours only. It also regulated the power output of stations, allowing some to broadcast to a huge area and others to only a very limited range. Such parameters led to granting of multiple licenses in the same areas and, as the law developed, a growing recognition of the value of market forces and what the FCC termed "a quasi–property right in broadcast licenses." Accordingly, debate grew about which station could dominate a particular market.

Various forms of regulation were ruled to be within the authority of the agency and not to violate the basic civil rights protected by the First Amendment to the U.S. Constitution. Thus, the idea of the public interest grew to encompass the concept that the agency could regulate content. The FCC tried in the early 1950s to outlaw product-giveaway programs (stations giving away merchandise as part of promotional activities to increase listeners or viewers) by denying licenses to stations and networks. The Supreme Court ruled that action was beyond the scope of the agency's power as delegated by Congress. Content was further regulated by what words could and could not be used.

In 1978 the Supreme Court in *Federal Communications Commission v. Pacifica Foundation,* 438 U.S. 726 (1978), upheld an agency ruling that George Carlin's "seven dirty words" comedy routine could not be broadcast. Rules were developed for the sake of "fairness" and were repealed when they proved unworkable.

More problematic were questions of regulating content on cable television and the Internet. Cable television has been required to carry locally broadcast programs, and attempts to regulate content on the Internet failed with *Reno v. American Civil Liberties Union,* 521 U.S. 844 (1997). Where the desire and need to regulate speech will lead to next is, as yet, unknown.

Federal Communications Commission v. Pacifica Foundation (1978)

In *Federal Communications Commission v. Pacifica Foundation,* 438 U.S. 726 (1978), the U.S. Supreme Court held that the Federal Communications Commission (FCC) could place a time-frame restriction on the radio broadcasting of nonobscene speech without violating the rights of free speech and press provided in the First Amendment to the U.S. Constitution. The case began with an afternoon broadcast of George Carlin's "seven dirty words" monologue by WBAI, a Pacifica Foundation radio station. The FCC, acting on a listener complaint, found that the monologue depicted sexual and excretory activities and organs in a patently offensive manner prohibited by federal communications law and then issued an order that did not impose any sanctions on Pacifica, but the agency included the complaint in the company's licensing file. After the federal appellate court reversed the FCC decision, a deeply divided U.S. Supreme Court upheld the agency, but its five–four decision did not present a majority on the First Amendment issue.

Justice John Paul Steven's three-justice plurality opinion concluded that the indecent speech had limited social value and for that reason was at the periphery of the First Amendment in a second constitutional tier where its protection would vary according to its context. In the broadcasting context, the FCC had the authority to impose a time regulation on indecent broadcasts. Two characteristics of the broadcast media justified regulation: the impact of the broadcast media on an adult's privacy in the home and the media's easy accessibility to children. Even though physical separation of adults and children in the broadcast audience was impossible, the FCC's action did not violate *Butler v. Michigan,* 352 U.S. 380 (1957), which held that government regulation of speech may not prevent adults from access to constitutionally protected materials and thereby limit them to reading only what is acceptable for children. Adults could hear the Carlin monologue during late-evening hours when fewer children were likely to be in the

audience. Nor did the FCC ruling restrict adult use of alternative forums: Adults could still purchase tapes and records and attend theaters and nightclubs to hear the words in the Carlin monologue.

Justices Lewis F. Powell Jr. and Harry A. Blackmun in a concurring opinion disagreed with Justice Stevens's plurality opinion that offensive nonobscene speech was less deserving of First Amendment protection than other kinds of speech. Instead, they supported the FCC order because of the unique characteristics of the broadcast medium combined with the government's interest in protecting unwilling adults and children from offensive speech. Justices William J. Brennan Jr. and Thurgood Marshall in dissent also objected to the plurality's two-tier First Amendment standard and argued that broadcasting entering the home could be turned off with minimum effort and offense and that parents, not government, were responsible for protecting children from indecent language. Justices Potter Stewart and Byron R. White also dissented, arguing that the FCC lacked the statutory authority to ban the Carlin monologue.

In sum, the *Pacifica* decision authorized the government to restrict nonobscene indecent broadcast material, but later decisions—including *Sable Communications of California, Inc. v. Federal Communications Commission,* 492 U.S. 115 (1989); *Reno v. American Civil Liberties Union,* 521 U.S. 844 (1997); and *United States v. Playboy Entertainment Group,* 529 U.S. 803 (2000)—have made clear that federal government efforts to limit indecency in phone networks, cable television, and the Internet would be strictly scrutinized by the Court.

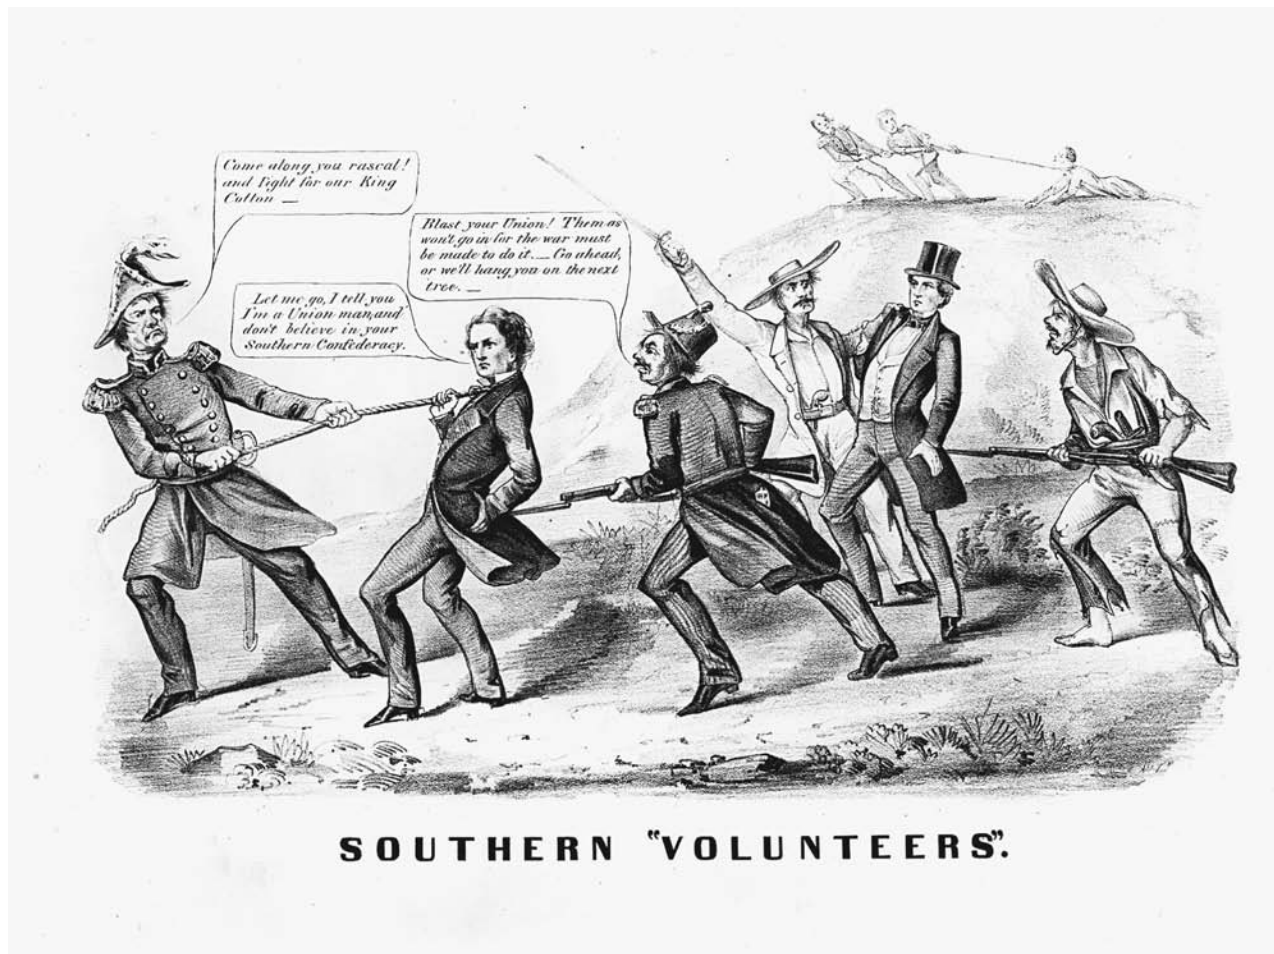
Federal Conscription Act of 1863

On March 3, 1863, the first general military draft in the history of the United States was imposed by the National Conscription Act. It authorized the federal government to draft American citizens and foreigners who had declared intentions to become citizens. Men were conscripted not only by the Union but also by the Confederacy. The reason for a draft was to ensure that the necessary military manpower for fighting the Civil War could be generated. One of the major criticisms was that the rights and civil liberties of lower-class, poorer men were violated in favor of the middle and upper classes. Military service could be avoided by paying a commutation fee of $300 or by finding a qualified substitute. Only wealthier individuals could buy their way out of the draft. A bounty fee of $100 was paid to every volunteer, draftee, or substitute.

The National Conscription Act of 1863 was passed in accordance with the provision in Article I, Section 8 of the Constitution giving Congress the power "to raise and support armies." The result was a radical departure from tradition, with the federal government replacing the states as the primary agency for generating military manpower. Under this act, the United States was divided into 185 military districts, with a military officer assigned to each district having the responsibility of registering and calling up draftees for military service. The law imposed a military obligation on able-bodied males between the ages of twenty and forty-five and on married men up to age thirty-five. Exemptions were allowed for men who were already serving in the military, men with physical disabilities, or men performing critical jobs, such as railroad engineers or postmasters. Drafted men were enlisted for three years or until the war was over, whichever came first.

Because the primary issue of the Civil War was slavery, many citizens demanded the enlistment of African Americans, since the number of white volunteers was inadequate. The U.S. War Department ordered the recruitment of free African Americans and slaves in late July 1863. Slave masters were paid $300 for each able-bodied slave enlisted in the Union military.



This 1862 print, "Southern 'Volunteers' " may have appeared soon after the Confederate Congress passed a conscription act on April 16, 1862, to strengthen its dwindling army of volunteers. Almost one year later, on March 3, 1863, the Union enacted the first national draft in American history. *(Library of Congress)*

Because the National Conscription Act was viewed as unfair by the lower classes, protests and riots broke out in the working-class sections of various cities in both the North and the South. Of particular note were the draft riots in New York City. On July 13, 1863, many laborers, mostly poor and unskilled, expressed their outrage at the new draft law by attacking and setting the draft office in New York City on fire. Violent attacks on wealthy people and institutions escalated over the next three days. Rioters also beat and killed many African American citizens, viewing them as the cause for the war and the draft. Although peace was finally restored by the arrival of federal troops on July 16, opposition to the military draft produced by the inequalities of federal conscription, as well as racism, led to the loss of almost 100 lives.

Federal Death Penalty Act

Since the very first Congress, the United States has had a federal death penalty law. Although the text of the Constitution does not expressly mention the death penalty, death for serious crimes was a common punishment in the eighteenth century. The framers at the 1787 Constitutional Convention accepted the death penalty and provided for its existence by imposing limits on the prosecution in capital cases. For example, the Fifth Amendment mention of "capital" crimes suggests that government can deprive a citizen of "life" if that person is provided due process of law. Moreover, treason, widely recognized as a capital offense, is mentioned in Article III, and Congress is authorized to "declare the punishment of treason."

In 1790 Congress enacted the first federal death penalty statute. The law defined the federal offenses of treason, murder, piracy, counterfeiting, and forgery and provided a mandatory penalty of death upon conviction. For the next century there were no major changes to the federal death penalty. Congress passed a bill in 1897 entitled "An Act to Reduce the Cases in Which the Death Penalty May Be Inflicted." The law abolished the death penalty for all but five federal offenses and effectively made all federal capital punishment discretionary by allowing the jury to decide the propriety of the death penalty.

In *Furman v. Georgia,* 408 U.S. 238 (1972), a majority of justices on the U.S. Supreme Court voted to strike down state death penalty laws that gave a jury unguided discretion in deciding whether to impose a sentence of death. A few years later, however, the Court in *Gregg v. Georgia,* 428 U.S. 153 (1976), upheld revised state death penalty statutes and provided standards to govern application of the death penalty.

The first post-*Gregg* attempt by Congress to reformulate the federal death penalty scheme was the Drug Kingpin Act of 1988. The law authorizes the death penalty for certain drug-related murders. One section of the law specifically targets the leaders (kingpins) of drug-related criminal enterprises. The law, however, fails to mention anything about the method, manner, or place for carrying out federal death sentences.

Under the Federal Death Penalty Act of 1994, Congress expanded the federal death penalty to almost sixty different offenses. Except in two areas, the super-drug-kingpin provision and the nonhomicidal espionage provision, the new offenses limit the availability of the death penalty to crimes in which death results. People in any state or territory can receive a death sentence for a wide variety of crimes, including the murder of certain government officials, kidnapping resulting in death, murder for hire, sexual abuse crimes resulting in death, car jacking resulting in death, and the use of a weapon of mass destruction against a U.S. citizen or on U.S. property.

Unlike the Drug Kingpin Act, the 1994 law attempts to comply with the constitutional requirements set forth in *Gregg* and details the manner in which the federal death sentence is to be administered. For example, the law mandates that a U.S. marshal supervise the implementation of the sentence in the manner established by the law of the state in which the sentence is imposed. If the law of the state where an individual is convicted of a federal crime does not allow for the death penalty, the court is responsible for designating another state in which the sentence will be carried out.

There are several civil rights and liberties problems surrounding the Federal Death Penalty Act. A Justice Department study found racial and geographic disparities in the application of the federal death penalty. A couple of federal courts have declared the law unconstitutional on the grounds that it does not adequately protect a defendant's rights to a fair trial and to due process of law. One federal judge argued that the risk of executing an innocent person was too great. These decisions have been reversed on appeal, but the Death Penalty Act will continue to be litigated in the courts for years.

Federal Election Campaign Act of 1971

The Federal Election Campaign Act of 1971 (FECA) was the third major regulatory scheme to address the effects of money in electoral politics, following the Tillman Act (1907) and the Federal Corrupt Practices Act (1925). Yet it replicated many of the flaws of its predecessors, such as the conspicuous absence of any meaningful system of enforcement.

Then in 1974, the Watergate scandal (the bungled 1972 burglary of Democratic National Committee headquarters in the Watergate apartment complex in Washington, D.C., by individuals connected to President Richard Nixon's reelection campaign and the ensuing attempted cover-up, all of which ultimately led to the president's 1974 resignation) prompted Congress to strengthen the new legislation with a series of major amendments. The new provisions included a cap on contributions to candidates for federal office: Individuals or groups were limited to $1,000 gifts to individual candidates per election and a total of $25,000; political action committees (PACs) were limited to $5,000 gifts to individual candidates per election (though these figures were not indexed to inflation). The new rules also capped individual or group expenditures of money not given directly to a candidate but spent "relative to a clearly identifiable candidate" at $1,000 per candidate per election. Limits on the total amount of money a candidate could spend in a federal election campaign were established, as were limits on candidates' ability to spend money from their own personal fortunes to further their campaigns (both of these limits were based on the office sought). A system of federal matching funds in presidential elections, to be funded by a checkoff on individual tax returns, was introduced. Perhaps most important, the 1974 amendments created a new independent agency—the Federal Election Commission (FEC)—that would oversee the campaign finance system and enforce its regulations, and concomitantly created additional filing requirements designed to track contributions and expenditures.

Within weeks of President Ford's reluctant signature, an ideologically varied group of plaintiffs banded together to challenge the new amendments. Included in this group were conservative New York Senator James Buckley, liberal Wisconsin Senator Eugene McCarthy, the American Civil Liberties Union, the American Conservative Union, and other groups.

In *Buckley v. Valeo,* 424 U.S. 1 (1976), the Supreme Court was split. Interpreting a limitation on the amount of money that could be spent on speech as a direct limitation on speech itself, contrary to the First Amendment to the Constitution (noting that "being free to engage in unlimited political expression subject to a ceiling on expenditures is like being free to drive an automobile as far and as often as one desires on a single tank of gasoline"), the Court invalidated the limitations on candidates' expenditures. But the Court upheld the caps on campaign contributions, in the name of preventing the appearance of quid pro quo corruption, and further held that certain purportedly "independent" expenditures by individuals and groups could be tantamount to campaign contributions and thus also could be limited without offending the First Amendment.

The Court's evisceration of the 1974 amendments in *Buckley*—and thus its rejection of congressional rationale for limiting the flow of money into electoral politics—precipitated three decades of circumvention. In 2002, Congress passed replacement legislation—the Bipartisan Campaign Reform Act—attempting to plug the loopholes that were created. To the surprise of many observers, the Court narrowly upheld the legislation in *McConnell v. Federal Election Commission* 124 S. Ct. 619 (2003).

Federal Election Commission v. Colorado Republican Federal Campaign Committee (2001)

Answering the question that was left conspicuously unresolved in *Colorado Republican Federal Campaign Committee v. Federal Election Commission,* 518 U.S. 604 (1996) (Colorado I), the U.S. Supreme Court in *Federal Election Commission v. Colorado Republican Federal Campaign Committee,* 533 U.S. 431 (2001) (Colorado II), determined that the provision of the Federal Election Campaign Act (FECA) pertaining to "party-coordinated spending" did not unconstitutionally deprive political parties of their First Amendment right to support candidates. Whereas the Court in Colorado I found the FECA provision limiting a party's "independent" expenditures to be unconstitutional, this follow-up case involved only those party expenditures made in "coordination" with a candidate.

Accepting the government's argument that expenditures coordinated between parties and candidates were effectively "contributions"—allowing for increased regulation within the framework established by *Buckley v. Valeo,* 424 U.S. 1 (1976)—the majority (the plurality and dissenters from Colorado I) upheld the FECA provision. Writing for the Court, Justice David H. Souter emphasized the "reality" of the world of campaign finance, asserting that without restrictions of this sort, donors could and would use the parties as a conduit to funnel contributions to particular candidates, thereby increasing the potential for corruption and inappropriate influence in the political system. Restrictions on the financial ties among donors, parties, and candidates were therefore essential to preserve the spirit of the *Buckley* decision and maintain the integrity of the political process.

Writing with the customary vigor he has brought to campaign finance cases, Justice Clarence Thomas, expressing the frustrations of the dissenters, chastised the majority on several grounds. In his view, the Court not only had failed to apply strict scrutiny, but it also was essentially punishing political parties for doing their job. Candidates and parties had to be "inextricably intertwined," in other words, and the institutional structure and resources of these associations were *designed* to influence campaigns and underwrite individuals running for election. Absent any evidence of actual harm or corruption (beyond the conjecture and assumptions accepted by the majority), Justice Thomas urged, parties should be free to spend (or "speak") as they see fit. Moreover, he offered, though joined by only two of the three other dissenters on this particular point, the time had come to revisit and overrule the "contribution" and "expenditure" distinction at the heart of *Buckley* itself.

What made Colorado II such an interesting case was that the sentiments expressed by the majority and dissenters depicted competing theoretical expectations of the political process and captured the complexity of the larger campaign finance debate. At the heart of the reasoning on both sides was serious division as to the place and purpose of party organizations in the U.S. political system, as well as differences over such intangibles as public perceptions and human nature. Justice Souter's "corruption-by-conduit" argument, for example, emphasized the systemic and imprecise nature of such abuse, while underscoring the inherently evasive, "nudge, nudge, wink, wink" nature of "coordinated" expenditures, whereas Justice Thomas's dissent portrayed a scenario wherein the vast sums of money exchanged between, and expended by, parties and candidates implied nothing more than a healthy and right-functioning political process. Which vision will ultimately prevail? With three dissenters willing to overrule *Buckley,* and with multiple Supreme Court vacancies likely in the near future, the debate in Colorado II could forecast major changes in the U.S. system of financing election campaigns.

Federalism

Federalism can be generally described as a form of government in which powers are divided by a written constitution between the central government and its member units. There are about a dozen federal systems in the world today. Most call their member units *states,* and a few use *provinces* (Canada and Argentina). Germany uses *Lander,* and Switzerland uses *canton*.

Federalism in its American form was the invention of the authors of the current Constitution of the United States. Drawing upon ancient alliances, the Swiss confederation, colonial experience, and the Articles of Confederation (the predecessor to the Constitution), they crafted a form of government that combined features from a unitary system and a confederation. The federal union was a union of the national government and the states. The goal of the union was a system of ordered liberty.

POWERS

The Constitution of the United States divides powers between the national government and states in such a way that each level has exclusive functions and concurrent functions. The Constitution grants enumerated powers to the national government, such as taxation, regulation of commerce, the military, and other functions that are national in scope or that deal with foreign relations (Article I, Section 8). In addition, it has powers that are logically derived from the expressly delegated powers (implied powers). The national government also has powers that are resultant from its inherent nature as a government. For example, setting up a government of military occupation is not explicitly stated in the Constitution, but explicit authority is unnecessary because this is what governments have always done.

The powers of the states when all else is assigned are a considerable block of unspecified powers termed "reserved powers" (Tenth Amendment). There are also explicit powers or rights that are reserved to the people. These rights are listed in the Bill of Rights, which is composed of the first ten amendments to the Constitution. These rights were listed to protect the people from abuse by the national government.

In the nineteenth century, advocates of states' rights were heartened by the U.S. Supreme Court's refusal to apply the Bill of Rights to the states in the cases of *Barron v. City of Baltimore,* 32 U.S. 243 (1833), and, following the passage of the Fourteenth Amendment, the *Slaughterhouse Cases,* 83 U.S. 36 (1873). States and many people far from the national government viewed the attempt as a threat to civil liberties. In the twentieth century, most provisions in the Bill of Rights were applied to the states (incorporated) through the Due Process Clause of the Fourteenth Amendment. The Second Amendment, the amendment dealing with the right to "keep and bear arms," was the notable exception. In addition, the Ninth Amendment specified that the previous eight amendments were not an exhaustive list. Thus, the first Congress in drafting the Bill of Rights fashioned an incomplete listing, believing it to be certain that other rights, unknown at the time, would be discovered in years to come. One such right discovered in recent years was the right of privacy, which became the legal ground for abortions.

CIVIL LIBERTIES

The federal system protects civil liberties in a variety of ways. Under Article I, Sections 9 and 10 of the Constitution, both the national and state governments are prohibited from taking a number of actions, including issuing bills of attainder, passing ex post facto laws, or creating titles of nobility. These prohibitions protect citizens.

Another protection is the right of habeas corpus (a petition seeking release from illegal confinement). The right may be suspended but only in extreme circumstances.

Two important clauses that protect civil liberties are the Due Process Clause of the Fifth and Fourteenth Amendments and the Privileges and Immunities

Clause in Article IV, Section 2 of the Constitution. Both of these clauses protect individuals from unequal treatment by the state governments.

The U.S. federal system is by intention decentralized. There are many positive benefits generated by the system. It permits unity and diversity. Local control of a multitude of decisions means that the people directly participate in governing themselves in many areas of life. Unity occurs despite the vast heterogeneity of the millions of Americans spread across the continent. This enables people to be free to make numerous decisions affecting their lives. It also makes local government an important fact of political life.

Inefficiency is a negative consequence arising from the federal system. The U.S. federal system is fragmented into one national government, fifty states, over three thousand counties, plus thousands of cities, towns, special districts, school districts and other units numbering at least 87,000. This system does not promote efficiency, of course, but the efficiency of tyranny is not the goal.

Some critics of the federal system note that the states vary in their treatment of prohibited behaviors (for example, illegal drug use) or restrictions on obscene materials. There is a lack of uniformity in sentencing or great variance in the provisions of welfare for the poor. In other cases businesses complain of the enormous variations in state laws governing contracts, torts, or other areas of the law. Movements for creating uniform codes of business law have had some success. However, uniform codes then receive conflicting interpretations by judges in different states, and the result is conflict in case law.

Some advocates of reform would replace the states with more "administratively logical" units. Others would also consolidate education policy or other policies in the national bureaucracy. Advocates of such changes reject concerns about the dangers of abuse of civil liberties, with little fear that a centralized government will emerge such as the one the colonies revolted against in 1776.

Federalists

The supporters of the U.S. Constitution chose the name "Federalists" to designate themselves. Fifty-five men from twelve states (all but Rhode Island) formulated the document at the Constitutional Convention that met in Philadelphia during the summer of 1787. Although the convention had been called to revise and enlarge the government as it existed under the Articles of Confederation, the delegates generally agreed not only that the single branch of this government (a unicameral Congress) lacked adequate powers over the states but also that it would be imprudent to grant additional powers to an Articles-configured government.

The Virginia delegation took the lead when Governor Edmund Randolph introduced a plan at the beginning of the convention that proposed adding to the powers of Congress, dividing Congress into two houses, and creating separate legislative and executive branches. This plan became the basis for early discussion in the convention. Although delegates rejected many aspects of the Virginia plan and added many others, the plan succeeded in introducing the idea of both a bicameral Congress and three independent branches of the national government. Delegates entrusted increased powers to the national government but did not eliminate the states.

Many of the delegates who gathered in Philadelphia had fought in the American Revolution against Great Britain. They were clearly interested in seeing that the liberties won from Britain remained secure against the government in America. The supporters of

the Constitution accordingly provided for a number of specific limitations within the document. Congress was prohibited in Article I, Section 9, for example, from suspending the writ of habeas corpus (a petition seeking release from unlawful confinement) except in times of rebellion or invasion. Similarly, Article I, Section 9 restrained Congress from enacting bills of attainder (legislative punishments without trials) or ex post facto laws (retroactive criminal laws). Congress was prohibited from interfering with state importations of slaves for twenty years, from preferring ports in one state to those of another, or from granting titles of nobility. Similarly, Article I, Section 10 not only prohibited states from exercising powers entrusted exclusively to the national government, such as entering into treaties and coining money, but also prohibited them from passing bills of attainder, ex post facto laws, or laws impairing the obligation of contracts.

Despite such explicit limitations, the framers of the Constitution relied chiefly upon the structure of the new government to protect individuals from the deprivation of their civil rights and liberties. By separating and dividing powers among three branches, the framers intended to provide checks and balances against such abuses. Some Federalists also thought that the state and national governments would check one another. In *The Federalist No. 10,* a key essay designed to defend the new Constitution, James Madison argued that the sheer size of the new government would secure liberty. He theorized that government over this large area would embrace so many factions, or interests, that no one would be able to dominate over the others. He also believed that representative government would seek to refine public views.

Toward the end of the convention, Virginia's George Mason proposed adding a bill of rights to address civil liberties, but few thought that such a bill was necessary. As they envisioned the new government, it would exercise only limited powers, and these would not threaten civil rights or liberties.

When state conventions debated ratifying the new Constitution, Antifederalist opponents of it focused on the omission of a bill of rights. The Federalists originally argued that such a bill was not only unnecessary but could even prove dangerous. They reasoned that if certain rights were not included in such a bill, either intentionally or by oversight, the government might assume that it could infringe on them. Antifederalists remained unconvinced and threatened either not to ratify the Constitution or to call yet another convention. Fearing that a second convention might undo the work of the first, key Federalists agreed that they would work for the addition of a bill of rights once the Constitution was adopted.

James Madison took the lead in the first Congress to accomplish this, carefully working to see that rights were protected without destroying the power that he thought the new government needed to exercise. The proposed amendments were presented in 1789, and by 1791 the necessary number of states (eleven) ratified what became the Bill of Rights (the first ten amendments to the Constitution). Madison had hoped to add at least one amendment that would limit the states, which he thought would pose the greater threat to liberty, but he did not succeed in this endeavor, and in *Barron v. City of Baltimore,* 32 U.S. 243 (1833), the U.S. Supreme Court ruled that the Bill of Rights applied only to the national government. The Supreme Court decided relatively few cases on the basis of the Bill of Rights during the nation's first century, but it became increasingly important in the twentieth century when the Court, using a legal doctrine called "incorporation," decided that the Due Process Clause of the Fourteenth Amendment applied the major provisions in the Bill of Rights to the states.

Felon Disenfranchisement

Criminal disenfranchisement laws restrict the voting rights of criminal offenders. In those states that prohibit voting by convicts, criminal offenders (along with the institutionalized mentally ill) are now the only U.S. adults legally barred from the polls. The right to vote, of course, is a fundamental liberty necessary to an open, democratic society such as the United States.

"When a nation begins to modify the elective qualification," French author and aristocrat Alexis de Tocqueville observed about 1830s America in *Democracy in America,* "it may easily be foreseen that, sooner or later, that qualification will be entirely abolished." In the United States, Tocqueville's "invariable rule" of franchise expansion has mostly held, although progress toward universal suffrage has been unsteady. Almost all voter qualifications (restrictions) common in the United States during the early nineteenth century—groups prevented from voting by state laws included women, men with too little property, blacks, native peoples, illiterates, and those without extended residency, including many soldiers and students—have been abolished. Criminal disenfranchisement policies—sometimes called "felony disenfranchisement" laws, because felony conviction is the most common cutoff point—have deep roots in ancient and medieval Western thought and practice, but have been sharply criticized in recent decades by advocates of voting rights, better government, and criminal justice reform.

Experts estimate that almost 4.7 million U.S. adults are now barred from voting because of a criminal conviction, the majority of whom are not incarcerated, and over a million of whom have completed their sentences entirely. Disenfranchisement laws vary so widely across states that the Department of Justice has described current law as "a national crazy-quilt of disqualifications and restoration procedures." Thirteen states bar felons from voting even after their sentences have been completed; fifteen disenfranchise during incarceration, probation, and parole; four bar the vote during incarceration and parole but not probation; sixteen states and the District of Columbia bar offenders from voting only during incarceration; and two states do not strip voting rights from convicts at all. Several states disenfranchise more than 100,000 ex-offenders. For example, over 600,000 Floridians have lost their voting rights as the result of a criminal conviction, more than 400,000 of whom have completed their sentences. Each indefinite-disenfranchisement state has some procedure by which ex-convicts may petition to return to the franchise, but restoration requirements—which range from administrative procedures to full gubernatorial pardon—make regaining the vote difficult.

The diversity among state laws has confusing effects. A former inmate may vote in one state, but his former cell-mate may not in a neighboring state; an ex-convict who moves across state lines may gain or lose the right to vote. The voting rights of former felons, therefore, depend "solely on where a person lives," as a 2001 bill before the U.S. Congress put it. The vast majority of crimes punished by disenfranchisement, meanwhile, are not related to voting or to the electoral process. The United States is the only democracy that indefinitely bars so many offenders from voting, and it may be the only country with such sweeping disenfranchisement policies.

Because disenfranchisement laws are located in state constitutions and suffrage statutes instead of the penal code, the loss of the vote is legally not part of an offender's sentence; instead, it is a "collateral consequence" of conviction. Indeed, U.S. courts have disagreed over whether disenfranchisement is properly understood as a punishment or as "a nonpenal exercise of the power to regulate the franchise," as the U.S. Supreme Court described the policy in *Trop v. Dulles,* 356 U.S. 86 (1958). Historical and contemporary sources, however, strongly suggest that U.S. disenfranchisement laws were designed with punitive purposes, from the colonial period through the nineteenth century and into the present.

Many modern proponents of disenfranchisement define the sanction as a punishment and contend that barring convicts from voting is an effective penalty. A second argument claims that the restriction is not a punishment, because it aims only to protect the polity from the corruption of voters lacking civic virtue. As the Alabama Supreme Court famously ruled in *Washington v. State,* 75 Ala. 582 (1884), the purpose of denying suffrage to ex-convicts is "to preserve the pu-

rity of the ballot box, which is the only sure foundation of republican liberty." A person "rendered infamous by conviction of felony, or other base offense indicative of great moral turpitude," the court held, "is unfit to exercise the privilege of suffrage." Adherents of this view sometimes contend that felons are more likely than others to commit vote fraud.

A third common defense of disenfranchisement emphasizes the terms of the "social contract" (a view of society as a contract between government and the people intended to promote the social good, a theory proposed in the 1600s by English philosopher John Locke) and declares that those who break society's rules forfeit the right to make those rules. In *Green v. Board of Elections,* 380 F.2d 445 (2d Cir. 1967), an influential ruling upholding indefinite disenfranchisement, federal Judge Henry Friendly quoted directly from Locke and held that "[a] man who breaks the laws he has authorized his agent to make for his own governance could fairly have been thought to have abandoned the right to participate in further administration of the compact." Proponents of the social-contract view sometimes also argue that convicts must be kept from the polls because they might vote to weaken the criminal law.

Racial discrimination has also played an important role in U.S. criminal disenfranchisement. After the Civil War, some southern lawmakers openly employed disenfranchisement law exactly as they used the literacy test and the poll tax: as a policy neutral on its face but with the intent and effect of barring blacks, though not whites, from the polls. Previous policies disenfranchising all those subject to incarceration in the state penitentiary were replaced with new laws targeting only offenses of which blacks were more likely than whites to be convicted, including many nonprison offenses. In 1896, the Mississippi Supreme Court articulated the discriminatory nature of these policies. The 1890 constitution, the court observed in *Ratliff v. Beale,* 20 So. 865 (Miss. 1896), "swept the circle of expedients to obstruct the exercise of the franchise by the negro race." That race was composed of "a patient, docile people, but careless, landless, and migratory within narrow limits, without forethought, and its criminal members given rather to furtive offenses than to the robust crimes of the whites." Those "furtive offenses"—including burglary, theft, and obtaining money under false pretenses—were now grounds for disqualification, whereas "robust crimes" such as robbery and murder were not.

The most explicit and egregiously racist laws have been altered. But as critics of the policy observe, disenfranchisement today falls disproportionately on African Americans and other people of color in the United States, owing in large part to the "war on drugs" and systemic discrimination in the criminal justice system. Studies estimate that in a few states, almost one-third of black men are indefinitely disenfranchised. Together with the racist history of the laws, foes of disenfranchisement argue, such heavy impacts should compel legislatures and judges to be deeply skeptical of the policy. Although this argument has not yet succeeded in the federal courts, some advocates contend that the disparate impacts of disenfranchisement violate the Voting Rights Act of 1965 (VRA).

In addition to the VRA critique, opponents of disenfranchisement today make three broad claims. First, they contend that none of the central purposes of punishment—rehabilitation, deterrence, incapacitation, or retribution—is achieved by barring offenders from voting, particularly given the universal, invisible "collateral" way U.S. law does it. Second, they point out that vague notions of a "social contract" were long ago superseded in U.S. courts by the clear and direct language of rights. Pointing to numerous Supreme Court decisions, these critics maintain that because the right to vote is fundamental, restrictions can be justified only by a specific, compelling state interest—an interest that defenders of disenfranchisement have failed to identify. Finally, they contend that allowing and even encouraging convicts to vote would strengthen the U.S. polity by helping to rehabilitate offenders and by illustrating the public's faith in the robust character of U.S. elections.

Ferguson v. Skrupta (1963)

Ferguson v. Skrupta, 372 U.S. 726 (1963), is the most direct demonstration of the extent to which the U.S. Supreme Court deferred to legislatures on economic matters in the late twentieth century. The case repudiated the dominant judicial philosophy of the early part of the twentieth century, which had given significant protection to economic liberties.

Frank Skrupta challenged a Kansas law restricting the business of debt adjusting to licensed attorneys. Debt adjusting permits people facing financial problems to consolidate their debts and have an adjuster reimburse their creditors. Skrupta, who was not a lawyer, argued that lawyers dominated the state legislature and that their self-interests as lawyers affected their decision as to who was best equipped to settle debt problems. The Supreme Court had no problem rejecting Skrupta's attack. Reflecting the judicial doctrine that it was not the task of courts to second-guess the wisdom of the legislature in its regulation of economic matters, Justice Hugo L. Black argued that "courts should not substitute their social and economic beliefs for the judgment of legislative bodies, who are elected" to make laws.

Ferguson v. Skrupta rejected the line of Supreme Court cases imposing the doctrine of substantive due process onto the state and later the national governments. In cases such as *Lochner v. New York,* 198 U.S. 45 (1905), the Court had read specific limitations into the Due Process Clauses of the Fifth and Fourteenth Amendments on the government's power to regulate economic activity. Unlike procedural due process, which requires only that the government pass and enforce laws by agreed-upon rules, substantive due process is used by courts to examine the wisdom, need, or appropriateness of legislation. The Supreme Court used substantive due process to strike down 184 state laws from 1899 to 1937.

Nebbia v. New York, 291 U.S. 502 (1934), ended this judicial activism and demanded judicial deference to the legislature on economic matters. Thereafter, the challenger of an economic regulation had the burden of proving that the legislature acted irrationally or that the goal was not constitutionally permitted. Judicial restraint would respect that the legislative process could correct its own errors. "[J]udicial intervention is generally unwarranted no matter how unwisely [judges] think a political branch has acted," the Court noted in *Vance v. Bradley,* 440 U.S. 93 (1979). This hands-off policy does not apply, however, when fundamental personal rights are at stake, such as the freedom of speech, the right to vote, or the right to travel. In these and similar cases, courts are obligated to give strict scrutiny to regulations that attempt to restrict fundamental freedoms.

Ferguson v. Skrupta did not kill the doctrine of substantive due process. As Justice Potter Stewart pointed out in his concurring opinion in *Roe v. Wade,* 410 U.S. 113 (1973), "*Ferguson v. Skrupta* . . . purported to sound the death knell for the doctrine of substantive due process, [but] barely two years later, . . . *Griswold v. Connecticut,* 381 U.S. 479 (1965), [joined] . . . a long line of pre-*Skrupta* cases decided under the doctrine of substantive due process."

The "new" substantive due process cases established a constitutional right to certain forms of expressive individualism. The cases protected the right of married couples to obtain and use contraception (*Griswold*) and a woman's right to make the choice about carrying a pregnancy to term (*Roe*). The broad deference the Court has given to legislative judgments on

economic matters may also be changing. In *Lucas v. South Carolina Coastal Council,* 505 U.S. 1003 (1992), for example, the Supreme Court rejected South Carolina's effort to preserve the coast environment by harshly restricting property development. The case not only implicated economic issues because property development was so restricted but also raised due process concerns because it infringed on the owner's property rights.

Fifteenth Amendment

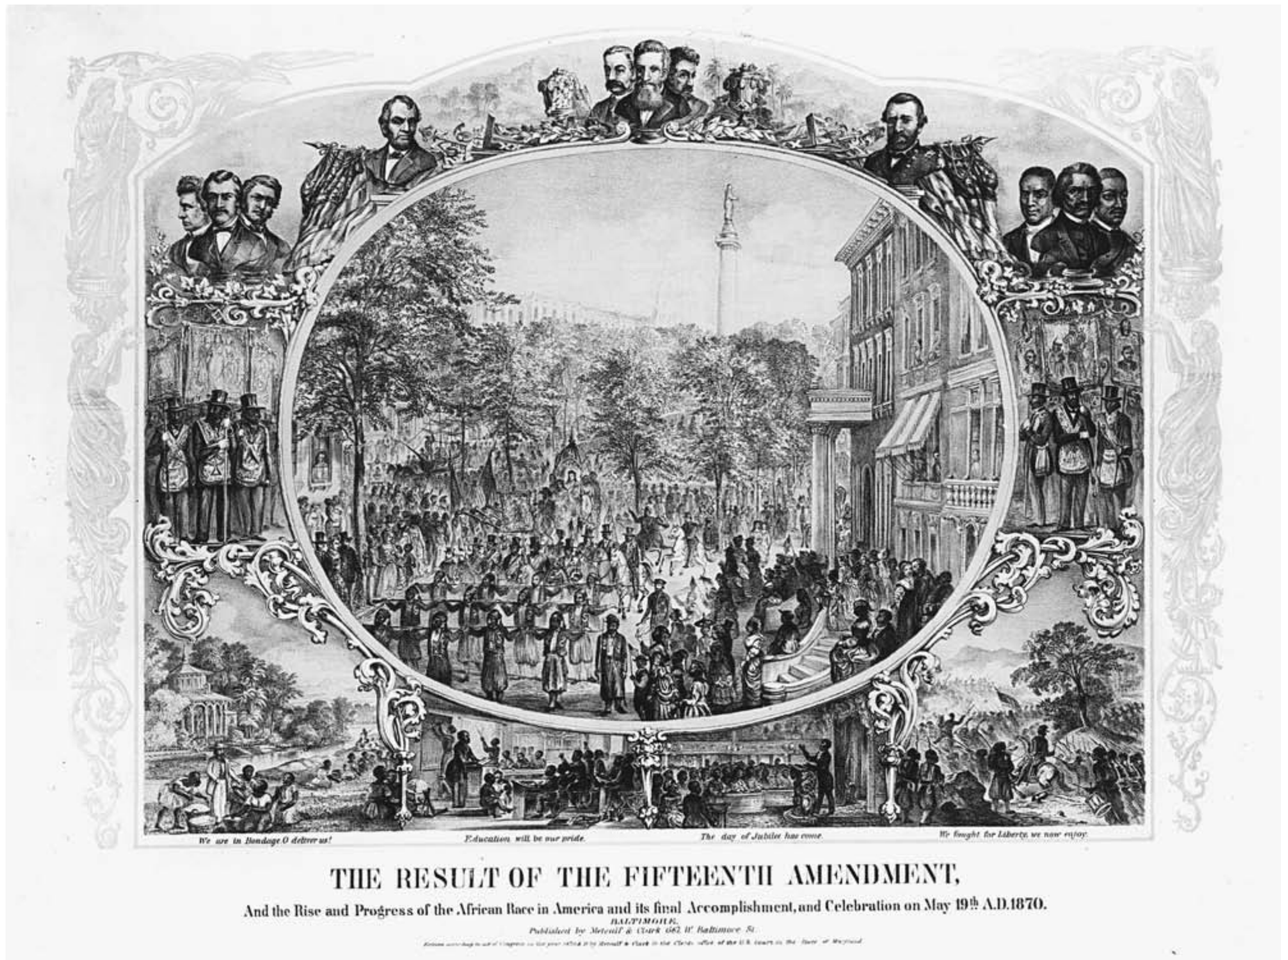
The Fifteenth Amendment of the Constitution provides that "the right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of race, color, or previous condition of servitude." In the post–Civil War period, the Thirteenth, Fourteenth, and Fifteenth Amendments were adopted in order to eradicate slavery and provide African Americans with constitutionally protected civil rights, including the right to vote. The Fifteenth Amendment was ratified in 1870.

Although the Fifteenth Amendment forbade the denial of suffrage on the basis of race, it took many decades before full black enfranchisement became a reality. After the Civil War, southern states engaged in a wholesale effort to disenfranchise blacks by first extralegal and then legal means. White supremacist groups, most notably the Ku Klux Klan, mounted violent campaigns against African Americans in a successful effort to stifle political participation. In 1870 alone, the year the Fifteenth Amendment was ratified, the Ku Klux Klan terrorized and killed hundreds of blacks who tried to vote or hold office. The use of widespread political fraud, such as stuffing ballot boxes and closing poll stations, further undermined black participation in elections.

In response to the violence of white southern resistance, Congress passed the Enforcement Act of 1870 and the Enforcement Act of 1871, which prohibited interference with the right to vote by means of intimidation, threats, or official discrimination in the application of the election laws. This legislation proved inadequate, however, particularly after northern Republicans withdrew federal troops from the South in the wake of the Compromise of 1877, which was an effort to resolve the disputed presidential election of 1876.

In the 1890s, southern states passed legislation and amended their constitutions to further reduce black enfranchisement without directly violating the Fifteenth Amendment. Numerous tactics were adopted, including literacy tests, constitutional interpretation tests, good character tests, poll taxes, white primaries, and property qualifications. These laws and regulations were phrased in neutral terms, but were expressly designed to prevent blacks from voting. In addition, local officials administered the disenfranchising laws in a discriminatory fashion so that blacks, but not whites, were barred from voting. By 1910 almost no African Americans were able to vote.

The Supreme Court did little to protect the black franchise; indeed, it upheld the constitutionality of the white primary in *Grovey v. Townsend,* 295 U.S. 45 (1935); the poll tax in *Breedlove v. Suttles,* 302 U.S. 277 (1937); and the literacy test in *Lassiter v. Northhampton County Board of Elections,* 360 U.S. 45 (1959). It was only in 1944 that the Supreme Court decided in *Smith v. Allwright,* 321 U.S. 649, that because the Democratic primary was integral to the election process, limiting participation in the primary to whites violated the Fifteenth Amendment. The tide began to turn slowly once the federal government adopted the Civil Rights Acts of 1957, 1960, and 1964, which provided federal court judges and federal officials the authority to monitor voting practices in the South and intervene when necessary. These acts were ultimately unsuccessful in improving black enfranchisement, however, because the states merely evaded court decisions or switched to other disenfranchising tactics.



This drawing commemorates the enactment of the Fifteenth Amendment, which prohibited the denial of suffrage on grounds of race, and its celebration in Boston, May 19, 1870. *(Library of Congress)*

The adoption of the Voting Rights Act of 1965 was a watershed event in the history of voting rights. Section 2(a) of the Voting Rights Act prohibits any voting qualification, standard, practice, or procedure that "results in a denial or abridgement of the right of any citizen . . . to vote on account of race or color." In effect, the legislation automatically disallowed the use of literacy tests, good character tests, and other devices that were used to disenfranchise African Americans. In addition, it authorized the attorney general to enroll voters in the South. To prevent the emergence of new disenfranchising laws, the law also required certain states to seek approval from the Justice Department before changing any of their electoral procedures. In 1966 the Supreme Court upheld the constitutionality of the Voting Rights Act in *South Carolina v. Katzenbach,* 383 U.S. 301 (1966). The right to vote as guaranteed by the Fifteenth Amendment was finally protected and enforced.

Fifth Amendment and Self-Incrimination

Added to the U.S. Constitution as part of the original Bill of Rights in 1791, the Fifth Amendment is a collection of rights. Most govern the circumstances under which someone can be made to stand trial in a criminal case. Every criminally accused person is entitled to the benefits of grand jury indictment (except in certain military cases), may not be subjected to double jeopardy (being tried twice for the same offense), is guaranteed due process of law, and cannot be compelled "to be a witness against himself." Somewhat incongruously placed with these criminal matters is a clause in the amendment that guarantees that private property cannot be taken for public use without compensation—called the Takings Clause—presumably in a civil eminent domain proceeding.

Like all of the original Bill of Rights (the first ten amendments to the Constitution), the Fifth Amendment was intended to bind only the federal government. State governments were presumed to have their own bills of rights. But after the adoption of the Fourteenth Amendment in 1866, the U.S. Supreme Court gradually included most of the Fifth Amendment among those liberties that state governments must also provide. Only the right to grand jury indictment has not been "incorporated" in this way and made binding on the states.

SELF-INCRIMINATION

The Supreme Court has applied a process of definition and elaboration of the four incorporated rights and has developed their protections far beyond what was intended in 1791. The privilege against compulsory self-incrimination has benefited the most from this extension and elaboration.

Origins and Purpose

The right against self-incrimination developed out of legal battles fought in British history. During the religious wars of the sixteenth and seventeenth centuries, certain courts, such as Britain's Star Chamber, used procedures under which defendants could be compelled to answer truthfully all questions they were asked, even when the answers doomed them to conviction and execution. If they refused, torture was sometimes used to force them to answer. A long political struggle against these courts followed. The value of protecting defendants against compulsory self-incrimination was recognized, and the right was effectively secured by the time of the American Revolution. In 1769 the famous British jurist William Blackstone wrote that the common law of England was that no man was required to betray himself.

Some of this struggle went on in Britain's American colonies as well. A protection against compulsory self-incrimination was written into the Massachusetts Body of Liberties in 1641. A Virginia statute of 1677, after court abuses surfaced in that colony, guaranteed that "noe man shall compell a man to sweare against himself in any matter wherein he is lyable to corporal punishment." Bills of rights adopted by Virginia, Pennsylvania, Vermont, and North Carolina on the eve of the revolution guaranteed that no defendant could be compelled to give evidence against himself. It is clear that the framers of the Fifth Amendment were familiar with the long historical struggle and the valuable fundamental right that emerged from it.

Scope

Although the protection against compulsory self-incrimination was originally intended only to protect criminal defendants from being compelled to testify during their own trials, the Supreme Court gradually extended it to other witnesses, reasoning that it was unjust to compel testimony that would be written down and preserved forever and that could be used against the witnesses in some potential future trial. Using the same reasoning, the Court extended the right to witnesses called by grand juries, congressional investigating committees, and even some (but not all)

"Images Removed Due to Copyright Issues"

administrative bodies. Even the most preliminary and informal police interrogations must cease as soon as the witness expresses a desire to end the questioning.

Courts have further held that if a defendant exercises this right to remain silent, prosecutors and other officials cannot comment on this refusal to speak or otherwise use it to convince the jury that guilt should be inferred. Common sense might suggest that an innocent defendant should have no objection to speaking out. But the Supreme Court concluded that there may be many reasons why an innocent person may want to preserve silence.

The right to remain silent is critical to any criminal investigation. Because it exists, police can presume—and juries can conclude—that statements defendants make are not coerced, are truthful, and are made in each defendant's strategic interest. But if defendants don't know that they can remain silent and that their silence cannot be used to prejudice the proceedings against them, they may conclude it is necessary to lie or otherwise dissemble to prevent police abuse. In the 1950s and 1960s, the Supreme Court dealt with several cases in which defendants did not seem to know they had the right to remain silent. Some individuals were of low intelligence, and others did not speak English. Others were described as emotionally unstable or feeble-minded. Still others were interrogated in unusual ways. In *Spano v. New York,* 360 U.S. 315 (1959), for example, an emotionally unstable suspect, after being questioned for three days without relief, was manipulated by an acquaintance, a rookie police officer who pretended to be a friend. In *Leyra v. Denno,* 347 U.S. 556 (1954), an emotionally exhausted suspect who had been questioned for three days confessed to a psychiatrist who was trained in hypnosis. The Court found in both cases that the questioning violated the defendants' right against self-incrimination.

Some interrogation techniques bordered on torture. The Supreme Court overturned convictions based on confessions obtained with the assistance of truth serums, or after prolonged periods during which suspects were held incommunicado, denied sleep, or otherwise mistreated. In the famous *Miranda v. Arizona,* 384 U.S. 436 (1966), the Court created a "prophylactic rule": Before police can seriously question any criminal suspect, they must make sure the suspect understands the right to remain silent and the related right to consult with a lawyer. Since *Miranda,* police abuses have dramatically declined.

Broad as the right against self-incrimination is, and as well protected as it is, it does not cover all circumstances. Because it is a personal right, it cannot be invoked to protect corporations or other business entities. Furthermore, U.S. legal tradition generally extends the right only to testamentary evidence; that is, a witness cannot be compelled to utter words or to write them down. In contrast, the Fifth Amendment traditionally has not been extended to such nontestamentary evidence as fingerprints; blood, hair, saliva, or semen samples that will be subjected to forensic testing; and even voice or handwriting specimens that will be subjected to forensic examination. Witnesses can be compelled to be photographed for identification purposes, to stand or walk in a police lineup, and to model particular clothing or headgear. Witnesses can also usually be compelled to produce documentary evidence. This can take the form of business records, letters, e-mails, and even diaries. As a rule, persons and businesses can be compelled to produce records that the law requires them to keep, such as

income records required by the tax laws, even when the records suggest such crimes as income tax evasion.

Nor can the right be claimed by someone who is not subject to incrimination—that is, who cannot be put on trial and, on conviction, subjected to criminal punishment. In a few cases, courts have held that the privilege can be claimed by persons who can be subjected to noncriminal but government-imposed penalties such as loss of government employment or disbarment. But the privilege cannot be invoked to protect a person from private reprisal, such as loss of private employment, or from social disgrace, disapproval, or ridicule.

DOUBLE JEOPARDY

A person who has been tried and acquitted for a crime, or who has been pardoned, is protected by the prohibition against double jeopardy. Because such a person can never again be a defendant in a trial for that crime, the person cannot ever be incriminated and thus cannot refuse to answer questions about the crime in a subsequent court proceeding. Nevertheless, a defendant who has been acquitted of a crime may still be sued by the victim for civil damages arising from that crime and may be compelled to testify during the civil trial.

For this reason, prosecutors sometimes extend an offer of immunity to critical witnesses. They may promise not to prosecute witnesses for crimes about which they testify. If there is no prosecution, there can be no incrimination. Alternatively, prosecutors may promise not to use the information witnesses supply in the event the case is not prosecuted. If the prosecutor does not use witnesses' words or information derived from them at trial, there can be no self-incrimination. Finally, a properly made grant of immunity cannot be refused by a witness, but if prosecutors violate the agreement, an appeals court will set aside any conviction obtained using the self-incriminating information.

Fighting Words

Fighting words are words that, when used in a specific context and directed against specific individuals, would have the tendency to cause a breach of peace or harm to the persons to whom they are directed. Such words (and in many cases, symbols treated as expression) are generally not considered protected speech under the free speech provision in the First Amendment to the U.S. Constitution. They may include personal epithets and words that cause harm. The question of what expression will constitute fighting words is highly controversial because of the diverse nature of U.S. society and because political speech traditionally has been the most protected type of speech—in terms not only of the right of a speaker to speak and the right of a listener to hear but also of society's need for robust discussions of timely political issues. Therefore, forceful speech is generally protected, even when it is potentially insulting, and particularly when it constitutes political speech.

In *Chaplinsky v. New Hampshire,* 315 U.S. 568 (1942), the U.S. Supreme Court upheld under a fighting-words statute the conviction of an individual who, while lecturing on a public street, called a police officer a fascist and a racketeer. Although the statements were not necessarily a direct threat, the Court considered them to be impermissible fighting words. Today, insulting, nonthreatening words directed to police and other public officials would not likely be labeled illegal fighting words, as indicated by *Gooding v. Wilson,* 405 U.S. 518 (1972).

Even when speech is directed at specific groups, the government may not regulate fighting words when the law in question targets a particular content or viewpoint. In *R.A.V. v. City of St. Paul,* 505 U.S. 377 (1992), the Supreme Court considered the constitutionality of an antibias law that outlawed cross burn-

ing and the use of other symbols that might be considered fighting words or expression, such as the Nazi swastika. The Court ruled that because the ordinance banned the offensive symbols only when used by the proponents of racial and religious hatred and not by advocates of intolerance, it was unconstitutional. If speakers had other intentions, such as opposing intolerance, they could use the symbols as they pleased. The St. Paul ordinance prevented the use of these fighting words and symbols only by particular groups, therefore constituting an impermissible viewpoint-based restriction by government.

In *Virginia v. Black,* 538 U.S. 343 (2003), the Court upheld laws banning cross burning provided the action was carried out with an attempt to intimidate. This is the classic Court definition of what constitutes fighting words. The Court has found that there are no fighting words per se—that is, words that are offensive by their very nature. This decision was also consistent with *R.A.V. v. City of St. Paul* (1992), because it ruled that cross burning was a particular act that had a long history in the United States and that the law could be applied only in circumstances indicating a direct intent to intimidate specific individuals, no matter what the content of the words. When burning a cross becomes a truly threatening act directed at specific individuals, it no longer is simply speech.

In *Cohen v. California,* 403 U.S. 15 (1971), the Court overturned the conviction of a California man who entered a public courthouse wearing a jacket displaying the words "fuck the draft." In overturning his conviction, the Court said that the "emotive force" of the words justified their use. In some contexts, however, offensive words might constitute fighting words—for example, epithets yelled at a specific person on the street.

Flag burning has also been viewed by some as constituting per se fighting words or expression—an act so offensive that it should not receive constitutional protection. However, the Court ruled in *Texas v. Johnson,* 491 U.S. 397 (1989), that laws prohibiting flag burning and desecration were inherently content-based and thus constitutionally invalid. They constituted illegal government suppression of free expression and political speech based on content.

Today, fighting words remain a highly controversial aspect of First Amendment law, particularly when they involve hate groups. In 1977 a group of neo-Nazis decided to protest in Skokie, Illinois, a Chicago suburb with a large Jewish population, including approximately 5,000 concentration camp survivors. The protesters intended to wear Nazi uniforms and swastika armbands. In an effort to protect town citizens from harmful effects of the march, city officials attempted to prohibit the wearing of Nazi uniforms, the displaying of swastikas, and the distribution of anti-Jewish literature. The Court refused to view these actions as fighting words just because some people might be offended or become violent or upset upon hearing and seeing such expression. Although the protesters voluntarily canceled the march, the free speech doctrine articulated in this case remains viable today.

Fingerprinting

Despite a 100-year history, the use of fingerprints to prove identity continues to generate controversy. Courts and commentators question not only the conventional wisdom that fingerprint analysis provides a fail-safe method of identification but also the methods by which law enforcement agencies acquire and organize fingerprint databases. In the context of civil liberties, fingerprinting raises important issues of privacy rights and due process protections.

HISTORY

In the early 1900s, courts began to allow testimony of fingerprint examiners to aid in the analysis of whether a "latent print" (one left at the crime scene) matched the fingerprint of the criminal defendant. As fingerprint analysis gained acceptance, its proponents made great efforts to repudiate reports that fingerprints held additional information, for example, a propensity for deviant behavior. Otherwise, identification would be corrupted by any conclusion that the fingerprint contained "criminal attributes." Proponents were successful in their efforts to persuade skeptics that fingerprinting was error-free and that it should be limited to one use—achieving a positive identification. Soon courts around the country embraced the theory that a proper comparison of prints conclusively determined identity.

Recognizing the trend of accepting fingerprint analysis in the courtroom, law enforcement agencies started to compile databases containing fingerprints for future analysis. Constitutional challenges to this development were largely unsuccessful. Requiring a suspect's fingerprints has failed to trigger the Fourth Amendment's "unreasonable search and seizure" concerns raised by the retention of DNA samples, retrieval of which requires more intrusive procedures to obtain blood, saliva, skin, semen, or hair. Though courts generally hold that individuals have little to no reasonable expectation of privacy in their fingerprints, a governmental agency must demonstrate a minimal level of individualized suspicion to justify the forced retrieval of prints for law enforcement purposes. Police may not, therefore, without probable cause, force a person to provide fingerprints, as the U.S. Supreme Court held in *Davis v. Mississippi,* 394 U.S. 721 (1969).

CHALLENGES TO USE AND COLLECTION

Henry Faulds (1843–1930), a medical scientist who helped create the first fingerprint comparison techniques, warned that although a set of ten fingerprints may provide the basis for a definitive match, the same could not be said for a solitary print fragment. Contemporaries dismissed his apprehension, but recent scholarship and court decisions are raising concerns that echo Faulds's warnings.

Recent challenges have targeted the reliability of fingerprint examiners. No uniform standards govern their certification. The Federal Bureau of Investigation (FBI) internally conducted proficiency tests suggesting that a false negative (missing a match) may occur only 1 percent of the time and that a false positive (finding a match were there is none) occurred less often. In 1995, however, an external proficiency test of other laboratories revealed that only 44 percent of the examiners scored perfectly, and 22 percent reported a false positive.

In addition, examiners commonly must evaluate a latent print that is somehow compromised. For example, a fingerprint left at a crime scene is contaminated or is only a partial print. Surveys suggest that examiners vary in determining whether a print is too compromised to be compared. A print may be distorted due to differences in pressure and temperature or the shape of the surface on which the print is deposited. The Department of Justice estimated the average size of a latent fingerprint fragment to be only one-fifth the size of a full fingerprint—and from this an examiner must determine if there is a match. No study has been conducted to determine the frequency with which such distortions occur.

A more fundamental challenge to fingerprint analysis is whether fingerprints are indeed unique to each individual. Although examiners will attest that a fingerprint fragment is unique to one finger in the world, that premise has never been scientifically established but is instead based on anecdotal evidence and experience. Indeed, no testing has been conducted to determine the probability of two different people having the same fingerprint.

Criticism is also aimed at the collection and use of fingerprints by government agencies. Under J. Edgar Hoover's leadership of the FBI, in addition to obtaining fingerprints from arrested or convicted individuals, the agency procured prints from other federal, state, and local agencies as well as through volunteer drives. In addition, Hoover did not restrict use of the database to criminal identification but intended that it also be used to monitor associations of citizens. Collecting fingerprints from individuals lacking any connection to the commission of a crime and permitting broader

Rosa Parks being fingerprinted soon after refusing to move to the back of a bus, 1956. Her defiance touched off an extended bus boycott in Montgomery, Alabama. *(AP/Wide World Photos)*

use of the database raised the ire of civil liberties organizations.

Law enforcement agencies have been known to organize their databases by race or ethnicity. In addition, when police target a certain area, the resulting database overrepresents that area in relation to less policed areas. Some police cruisers are now outfitted with onboard digital scanners that can automatically read an arrestee's fingerprints and immediately scan existing databases for a match. This contributes to the creation of databases that are skewed by factors such as race and class.

As law enforcement agencies come to rely more heavily on DNA samples positively to identify suspects of crimes, controversy over these procedures may overshadow the current debates surrounding fingerprint analysis. Nevertheless, fingerprint evidence will continue to be used, and its ramifications for privacy rights and civil liberties will persist. Since the September 11, 2001, terrorist attacks on New York City and

Washington, D.C., the United States has adopted a policy of fingerprinting foreign travelers to the country, raising further concerns about civil liberties and discrimination.

First Amendment

The First Amendment to the U.S. Constitution is the first of the ten amendments collectively known as the Bill of Rights. The First Amendment guarantees such basic rights as freedom of speech, freedom of the press, freedom of religion, and freedom of association by prohibiting government interference with these civil liberties. At first glance, the guarantees of the First Amendment seem simple and uncontroversial. However, when these guarantees are applied to real-life situations, the issue that inevitably arises is how these guarantees function when the freedoms of two or more individuals or groups conflict or when these freedoms conflict with important governmental interests. Perhaps because the rights guaranteed by this amendment are so fundamental and encompass activities engaged in by virtually every individual, interpretations of the First Amendment have led to significant debate and controversy throughout this country's history and continue to do so today. Because the U.S. Supreme Court is the ultimate arbiter of the Constitution, the justices' interpretations of its provisions carry immense weight in all constitutional matters, but especially in First Amendment cases.

SPEECH

By definition, freedom of speech implies that people can say anything at anytime and at anyplace they please. However, that is obviously not the case in practice. For example, imagine the chaos that would occur if individuals were free to shout "bomb" in a crowded airport whenever they pleased even though no bomb was present. Similarly, imagine the disruption to learning if schoolchildren could talk about anything they wished at anytime so that math class was transformed into a discussion about popular television shows. Because of the potential problems caused by totally unregulated speech in scenarios such as these, the U.S. Supreme Court has permitted certain restrictions on freedom of speech and even exempted some speech from First Amendment protection. Because of the importance of freedom of speech in U.S. society, however, such restrictions and exemptions have been as limited as possible.

Some of the first challenges to the First Amendment's free speech guarantee came during World War I when the government enacted laws to prohibit acts such as espionage that could undermine the U.S. war effort. In *Schenck v. United States,* 249 U.S. 47 (1919), the Supreme Court developed the "clear and present danger" test for determining when the state could legitimately regulate speech that advocated criminal, treasonous, or dangerous actions. Under this test, speech could be prohibited when the nature of the speech and the circumstances in which such speech was used created a clear and present danger that an illegal or harmful act would occur.

In *Brandenburg v. Ohio,* 395 U.S. 444 (1969), the Supreme Court abandoned the clear-and-present-danger test in favor of an "incitement" test, holding that the government may not prohibit protected speech unless such speech is "directed to inciting or producing imminent lawless action *and* is likely to incite such action" (emphasis added). So, for example, the government cannot prohibit individuals from speaking about the merits of overthrowing the government, but can prohibit individuals from speaking about such a topic when they are advocating action

American statesman and journalist Benjamin Franklin, apprehended by two policemen who have just served him a "Notice of Arrest," in his printing shop. Franklin was an influential pamphleteer and propagandist before and during the Revolutionary War. This 1970s cartoon may have been a commentary on how authoritarian curbs on freedom of the press violate the First Amendment. *(Library of Congress)*

on the part of their listeners and those listeners are likely to carry out such action whether now or in the future.

In contrast to the speech just discussed, some speech is so devoid of ideas as to be unprotected by the First Amendment. For example, it is permissible for the government to prohibit shouting "bomb" in a crowded airport, since that act of speech conveys no ideas and would likely lead to panic and possible injury. Similarly, the Supreme Court developed a "fighting words" test in *Chaplinsky v. New Hampshire,* 315 U.S. 568 (1942), to exempt from First Amendment protection any speech likely to cause immediate violent retaliation. For example, the government can theoretically prohibit one individual from verbally assaulting another with foul and offensive names face to face, since that behavior will likely result in violence. However, because the Court has not upheld a fighting-words law since it first articulated the doctrine in *Chaplinsky,* some scholars question whether the fighting-words exception remains valid.

One of the broadest restrictions the Supreme Court has allowed the government to place on speech covered by the First Amendment is the time, place, or manner restriction. As long as a governmental regulation is content-neutral, then restrictions as to time, place, and manner are permissible. For example, it is permissible for a public school to prohibit students from discussing any subject other than math during their math class. Such a restriction is content-neutral and simply operates to regulate students' speech at a particular time and in a particular place. However, it would not be permissible for a public school to prohibit students from discussing only Judaism, for example, in their math class or to prohibit students from ever discussing any topic besides math even outside of school.

In addition to protecting pure speech, the right of free speech also protects symbolic actions that convey a message, such as saluting the flag or burning the flag. In *Tinker v. Des Moines Independent Community School District,* 393 U.S. 503 (1969), the Supreme Court held that because black armbands that school students wore to protest the Vietnam War constituted speech (expression) protected under the First Amendment, the school could not suspend the students for engaging in such activity. One logical extension of the First Amendment's free speech protection is that the government cannot force individuals to speak or engage in symbolic actions. For example, in *West Virginia Board of Education v. Barnette,* 319 U.S. 624 (1943), the Court ruled that public schools could not force students to pledge allegiance to the flag.

The Supreme Court has historically held that the First Amendment protects even the most repugnant symbolic speech such as cross burning, which has a long history of association with the Ku Klux Klan's violence against African Americans. However, the Court recently revised that position in *Virginia v. Black,* 538 U.S. 343 (2003), holding that a state can ban cross burning when that activity is intended to intimidate. The Court's decision in *Black* has confused many civil libertarians, who on the one hand despise acts of racial intimidation but on the other

hand believe that all thoughts should constitute protected speech.

RELIGION

The plain language of the First Amendment's two religion clauses makes clear that the framers of the Constitution were concerned with assuring that individuals would be free to practice whatever, if any, religion they desired, pursuant to the Free Exercise Clause, and that in order to assure that freedom, it would be necessary to prevent the government from becoming involved in any or all religions, pursuant to the Establishment Clause, by trying to pass religion-oriented laws.

When applying the Establishment Clause, the Supreme Court has historically talked about the framer's intent, which the Court described in *Everson v. Board of Education,* 330 U.S. 1 (1947), as the effort to "erect a wall of separation between church and state." Yet several instances of religious symbolism or expression have a prominent place in government. For example, the country's money contains the words "In God We Trust," and the president of the United States is traditionally sworn in on the Bible. Although such vestiges of tradition have been permitted to remain as harmless civil religion, the Supreme Court has vigilantly struck down laws that amount to more than a purely symbolic union of church and state. Accordingly, in *Abington School District v. Schempp,* 374 U.S. 203 (1963), the Court held that the Establishment Clause was violated by laws requiring public school students to participate in Bible readings and prayer recitations.

Relying on its holding in *Schempp* and similar cases, the Court has unwaveringly made clear that the Establishment Clause will be violated when any religious activity, no matter how nonsectarian, is sponsored or sanctioned by a public school. For example, in *Lee v. Weisman,* 505 U.S. 577 (1992), the Court held that the Establishment Clause was violated by nonsectarian prayer at a public school's graduation ceremony.

The Supreme Court's decisions on school prayer have led many conservative religious groups to denounce the Court and proclaim that God is no longer allowed in schools. Unfortunately, some school officials have fed into this misperception by refusing to allow any religious activity on school grounds instead of taking the time to understand what activities are and are not permissible under the First Amendment. These individuals fail to realize that students are as free to pray in school or read their Bible, Koran, or other religious text as they have ever been. The Court's prayer decisions simply mean that no students can be coerced by public school or other government officials to participate in religious activities against their will.

As for the Free Exercise Clause, it obviously prohibits the government from passing laws that directly target religious beliefs or practices, but the issue becomes more complicated when a law that is neutral toward religious beliefs or practices inadvertently has an impact on them. For example, in *Sherbert v. Verner,* 374 U.S. 398 (1963), the Supreme Court held that it was impermissible for South Carolina to deny unemployment benefits for a Seventh-day Adventist who refused to accept suitable work without cause since she could not work Saturday because it was her religion's Sabbath. However, in *Employment Division, Department of Human Resources v. Smith,* 494 U.S. 872 (1990), the Supreme Court held that a neutral state law prohibiting the use of peyote could be applied in order to deny unemployment benefits to Native Americans who used peyote solely for religious purposes.

PRESS

Scholars are not entirely clear what reference the framers intended when they provided the guarantee of "freedom of the press." There has long been debate as to whether this freedom is simply an explicit extension of the First Amendment's free speech guarantee or whether "the press" as an institution has been given special constitutional protection. Cases dealing with freedom of the press have typically focused on two main issues: the extent to which the government can protect information from disclosure by members of the press and the extent to which members of the press can decline to share information, such as the identity of a source, with the government.

Historically, the Supreme Court has not looked favorably upon the press's attempt to gain access to in-

formation or proceedings that the government wishes to remain confidential. For example, in *Pell v. Procunier,* 417 U.S. 817 (1974), the Court upheld a California law that prohibited the press from interviewing individual inmates. However, in *Richmond Newspapers, Inc. v. Virginia,* 448 U.S. 555 (1980), the Court appeared to depart from that position, holding that criminal trials must be open to the public unless the trial court could articulate an "overriding interest" to the contrary.

Although the Court refused to allow members of the press to shield themselves from being called to testify before a grand jury in *Branzburg v. Hayes,* 408 U.S. 665 (1972), Justice Lewis F. Powell Jr. in his concurrence stated that members of the press did have "constitutional rights with respect to the gathering of the news." Accordingly, Powell noted that members of the press could petition the trial court for a protective order when they felt they were being improperly called to testify. Because a majority of lower federal courts have followed Powell's concurrence rather than the *Branzburg* majority decision, and because many states have passed laws giving the press limited immunity with regard to revealing their sources, it is relatively rare that members of the press are subpoenaed to testify today.

ASSOCIATION

As an extension of the enumerated right of the people to assemble to address their grievances to the government and the individual's right to free speech, the Supreme Court first articulated the "right to associate" with its decision in *National Association for the Advancement of Colored People v. Alabama ex rel. Patterson,* 357 U.S. 449 (1958). In that case, the Court stated that it would be a violation of the right to associate if Alabama required the NAACP to publicly disclose its membership list. In subsequent decisions involving the disclosure of membership information, one of which was *Gibson v. Florida Legislative Investigation Committee,* 372 U.S. 539 (1963), the Court made clear that such disclosure would impermissibly infringe on the right to associate unless the state had a compelling interest and there was a "substantial relation" between that interest and the information sought.

First National Bank of Boston v. Bellotti (1978)

In a holding that preserved a place for corporate speech in political debate, the U.S. Supreme Court in *First National Bank of Boston v. Bellotti,* 435 U.S. 765 (1978), found unconstitutional a Massachusetts criminal statute that prohibited corporate contributions and expenditures designed to influence or affect the vote on questions submitted to the voters, unless the political issue materially affected the property, business, or assets of the corporation. First National Bank of Boston and others desired to "speak" (spend) in opposition to a proposed state constitutional amendment authorizing a graduated individual income tax and thus alleged a violation of its political speech rights under the First Amendment to the U.S. Con-

stitution. In defense of the restriction, the state argued that the significance of the context justified the regulation of certain "speakers" in the interest of preventing distortion, corruption, and the drowning out of citizens' voices in the electoral process.

Writing for a five–four majority, Justice Lewis F. Powell Jr. focused less on the messenger—essentially avoiding the question of whether corporations have certain rights—and more on the message, reasoning that the bank's contributions were essential to a diverse and vibrant exchange of ideas. What mattered most, in other words, was the political *speech* at stake, not the political *speaker,* because the general public was capable of sifting through the input and arguments proffered by a vast array of contributors. Justice Powell did not summarily reject the notion that corporate "speech" could overwhelm the electoral process—accepting that, with sufficient evidence, such a restriction could be constitutional—but he explained that the state had failed to provide proof justifying such a prohibition.

In separate dissents, Justices Byron R. White and William H. Rehnquist emphasized the particular nature and power of the corporate form. To varying degrees, each conceded that corporations may have a legitimate voice in the political arena, but made the important point that because corporate bodies are created by the state, they may legitimately be subject to various restrictions on expression not imposed upon individuals. In particular, the state had the obligation to prevent institutions enjoying state-conferred advantages from dominating or compromising the integrity of the electoral process.

Although state restrictions on corporate speech and state concerns for relative parity and equality of opportunity for political speakers would not garner majority support until *Austin v. Michigan Chamber of Commerce,* 494 U.S. 652 (1990), in many ways *Bellotti* anticipated the debate that ensued over campaign finance issues throughout the 1980s and 1990s. The *Bellotti* majority, following the logic of *Buckley v. Valeo,* 424 U.S. 1 (1976), criticized the state for its paternalistic regulation of the "marketplace of ideas," but the dissenters recognized the inherently problematic nature of certain speakers and certain forms of speech—acceding to the state the power to supervise such forms of expression in the service of larger public or societal interests. A significant comment, however, was that although the evidentiary burden was not satisfied in *Bellotti,* the Court did concede that the state assumes an important regulatory role during campaigns and elections.

Flag Burning

Perhaps nothing more symbolizes America's commitment to civil liberties than the constitutional status of the U.S. flag. A revered symbol of national unity, it flies in front of every public building, is mounted in almost every classroom in the country, and is witness to thousands of schoolchildren daily pledging allegiance to it and to the nation for which it stands. Boy and Girl Scouts through the decades have learned the proper way to display the flag, to fold it, and to dispose of flags that have worn out. One of the most famous monuments in the country stands in Arlington National Cemetery in Virginia and commemorates U.S. Marines raising the flag on the Japanese island of Iwo Jima after winning a bitter World War II battle. Yet the nation protects the right of people to desecrate its flag, the very symbol of its commitment to freedom. How did this happen?

During the Vietnam War years, antiwar protesters looked for ways to persuade citizens and lawmakers to end the war. They discovered that news media were more likely to broadcast dramatic events and developed a number of tactics to get their protests on the

evening news programs, including marching in demonstrations, burning draft cards, pouring blood on draft records, and wearing provocative T-shirts and armbands. These activities confronted the courts with a newly developing type of communication called "symbolic speech." But it was the civil rights movement rather than the Vietnam War that first gave the courts an opportunity to deal with the issue of flag desecration.

After a newscaster in New York City announced that civil rights leader James Meredith had been shot in Mississippi, a Korean War veteran became upset, took his personal flag into the street, and set it on fire, saying to passersby, "If they can let this happen to James Meredith, we don't need no flag." The man was arrested for defaming the flag and given a $100 fine that was promptly suspended. Nonetheless, he sued as a matter of principle, arguing violation of his free speech rights under the First Amendment to the U.S. Constitution.

When *Street v. New York,* 394 U.S. 576 (1969), made its way to the U.S. Supreme Court, the justices were divided. They agreed the defendant's words were protected but were unable to agree on whether his act of burning the flag was similarly protected as symbolic speech. They were given a second chance to consider the issue five years later in *Spence v. Washington,* 418 U.S. 405 (1974). The case involved an antiwar protester who had taped a large peace symbol on each side of a flag, which he then publicly displayed. The Court ruled that this was indeed symbolic speech and therefore protected against government interference.

The Supreme Court confronted the issue of flag burning head-on in *Texas v. Johnson,* 491 U.S. 397 (1989). Gregory Johnson was among a group of protesters outside the Republican Party's national convention in 1984. After a march through the city to protest President Ronald Reagan's nomination for a second term, Johnson unfurled an American flag and set it on fire while other protesters shouted anti-American slogans. He was arrested and charged with violating the Texas law prohibiting flag desecration. Upon his conviction he was sentenced to a year in prison and a $2,000 fine. His appeal eventually reached the Supreme Court.

In one of his last opinions before retiring, Justice William J. Brennan Jr., presenting the five–four majority holding, first asked whether Johnson's actions could be considered "expressive conduct" intended to send a message, and whether it was likely to be understood as such by those who observed his actions. Asserting that the flag burning was indeed expressive conduct, he then asked whether Texas had any interest in supporting Johnson's conviction that was not related to suppressing his expression. Because there was no incitement to violence or actual breach of the peace connected to the demonstration, he concluded that Texas's only interest was to preserve the flag as a symbol of nationhood and national unity. That interest, however, was overridden by the protection of speech

The American flag-burning issue comes to a Fourth of July parade. Burning the flag remains repugnant to the great majority of Americans, but most understand and appreciate the depth of commitment to civil liberties that drives a nation to protect even those who find its policies abhorrent. *(© Bob Daemmrich/The Image Works)*

guaranteed by the First Amendment. Justice Brennan concluded that "the government may not prohibit the expression of an idea simply because society finds the idea itself offensive or disagreeable."

An interesting aspect of *Texas v. Johnson* was the concurring opinion by Justice Anthony M. Kennedy, who wrote separately to point out that sometimes justices must make decisions they find personally repugnant because of their commitment to constitutional principles. He pointed out, "[T]he flag is constant in expressing beliefs Americans share, beliefs in law and peace and that freedom which sustains the human spirit. The case here today forces recognition of the costs to which those beliefs commit us. It is poignant but fundamental that the flag protects those who hold it in contempt."

Not surprisingly, a national uproar followed the Court's ruling, and numerous members of Congress proposed a constitutional amendment to prohibit flag desecration. Met with opposition from civil liberties groups and many of its own members, Congress instead passed the Flag Protection Act of 1989. This law differed from the Texas law at issue in *Texas v. Johnson* because it prohibited all mutilating, defacing, burning, or trampling on the flag without inquiring into the motives of the people involved. Many people hoped this difference would pass constitutional muster, but the Court struck the law down in *United States v. Eichman,* 496 U.S. 310 (1990), for the same reasons as prevailed in *Texas v. Johnson.*

Burning or otherwise desecrating the flag remains repugnant to the great majority of Americans, but most people understand and appreciate the depth of commitment to civil liberties that drives a nation to protect even those who find its policies repugnant.

Flag Salute

In *Minersville School District v. Gobitis,* 310 U.S. 586 (1940), the U.S. Supreme Court ruled constitutional a law mandating the flag salute and recitation of the Pledge of Allegiance in public schools, but just three years later, in *West Virginia Board of Education v. Barnette,* 319 U.S. 624 (1943), the Court overruled *Gobitis* and held a West Virginia flag-salute statute unconstitutional. The cases involved issues pertaining not only to the Free Exercise Clause of the First Amendment to the Constitution (prohibiting government from interfering with an individual's right to free exercise of religion) but also to the right to free speech that is guaranteed under the First Amendment.

America's most common form of paying respect to a national emblem or symbol, the flag salute, started as part of a nationwide public school observance in 1892 honoring the 400-year anniversary of Columbus's discovery of America. Immediately it became popular and was widely used in schools in every state. By 1935 twenty-four states had statutes requiring instruction in flag respect; nine specifically required that the flag-salute ceremony be conducted regularly in all public schools. None explicitly demanded pupils participate in the ceremony because at the time it seemed inconceivable that anyone might refuse.

As early as 1918, Mennonites, among others, refused the salute and Pledge, and for the most part, school officials chose to grant exemptions. This indulgence continued until the Jehovah's Witnesses objected in the 1930s and 1940s.

During this period, Jehovah's Witnesses were decidedly unpopular due to their peculiar views, methods of aggressive proselytizing, and repeated and severe condemnations of other religions. Many local governments sought to curb the Witnesses with antipeddling ordinances, which usually were successfully challenged in court. For example, in *Lovell v. City of Griffin,* 303 U.S. 444 (1938), the Supreme Court

struck down a local permit ordinance granting blanket discretion to the licensing authority, and in *Schneider v. State,* 308 U.S. 147 (1939), the Court held that pamphleteering on the public streets could not be prohibited altogether, even for the ostensible purpose of preventing littering.

In the mid-1930s a Witnesses leader endorsed refusal to salute and sparked a wave of refusals just as the flag salute became an issue again as war began raging in Europe. School officials reacted with disciplinary action. In Pennsylvania and Massachusetts alone, more than 200 Jehovah's Witness children were expelled from school. In most instances these children still faced compulsory education laws and thus had to enroll in private schools or risk prosecution.

The best hope for the Witnesses was litigation in the courts. They brought suits in six states to compel readmission of their children but lost each time. On four occasions in the 1930s, the Supreme Court refused petitions for certiorari from these rulings but finally heard such a case in April 1940.

Walter Gobitis had brought suit before a federal district judge in Philadelphia for an injunction compelling the readmission of his two expelled children to the Minersville, Pennsylvania, public schools. The court held that the compulsory flag salute violated the Free Exercise Clause of the First Amendment when the salute was enforced against Jehovah's Witnesses, and the federal appellate court affirmed this decision. The school board appealed to the Supreme Court, which, to the surprise of many, reversed the lower courts in an eight–one opinion written by Justice Felix Frankfurter. Justice Harlan F. Stone dissented. He thought it was shocking that a child could constitutionally be expelled from public school for refusing to participate in the daily flag-salute ceremony even though it violated the child's religious beliefs. The Court's majority believed that the need to promote national unity could justify overriding the Free Exercise Clause.

Within two years *Gobitis* was under fire from all sides. The decision ushered in a bad period for Jehovah's Witnesses, who became targets of violence. In one week the Department of Justice received reports of hundreds of physical assaults on Jehovah's Witnesses by citizens and public officials. As the violence grew, so did unfavorable reaction to *Gobitis.* Further complicating the situation was congressional passage of a joint resolution codifying the rules of flag etiquette. A hint of the eventual reversal came in *Jones v. Opelika,* 316 U.S. 584 (1942), in a dissenting opinion, in which Justices Hugo L. Black, William O. Douglas, Frank Murphy, and Harlan F. Stone expressed their belief that *Gobitis* had been wrongly decided.

The Jehovah's Witnesses filed a class action lawsuit in Charleston, West Virginia, in August 1942, and the case was heard by a three-judge panel. Walter Barnette's children, among others, had been expelled from school for insubordination (for refusing to salute) and could not afford private schooling. They faced potential fines or imprisonment for failing to adhere to compulsory education laws. The three-judge panel decided unanimously in favor of the children, who were readmitted to school promptly. *West Virginia Board of Education v. Barnette,* 319 U.S. 624 (1943), reached the Supreme Court in March 1943, and the decision upholding the lower court's ruling was announced June 14 (Flag Day), 1943. Justice Robert H. Jackson wrote the eloquent *Barnette* opinion, deciding the case on free speech grounds rather than freedom of religion. The Court held that the government could not compel citizens to express beliefs without violating freedom of speech, regardless of whether the objections to saluting the flag were religiously based. Freedom of speech had to be respected. As Jackson put it, "If there is any fixed star in our constitutional constellation, it is that no official, high or petty, can prescribe what shall be orthodoxy in politics, nationalism, religion, or other matters of opinion or force citizens to confess by word or act their faith therein."

The Pledge of Allegiance drew even more potential controversy in 1954 when, in an attempt to distinguish U.S. democracy from "godless" communism, Congress added the words "under God." The Supreme Court occasionally, particularly in concurring opinions, stated in dicta (nonbinding analysis) that the presence of "one nation under God" in the Pledge would be constitutional. In March 2004, however, the Court heard arguments in *Elk Grove Unified School District v. Newdow,* No. 02-1624, in which an atheist father in California demanded that "under God" be removed from the Pledge on the grounds that it was

unconstitutional to force his daughter to recite it at her elementary school. The Court of Appeals for the Ninth Circuit had agreed with the father in *Newdow v. U.S. Congress,* 328 F.3d 466 (9th Cir. 2002), holding that including the words "under God" made the Pledge "a profession of religious belief" that violated the First Amendment.

A future Court opinion may change what is constitutionally permissible in certain circumstances, such as when teachers lead schoolchildren in the Pledge and salute. Unlikely to be changed, however, is the Court's continuing prohibition of the compulsory flag salute.

Flast v. Cohen (1968)

In *Flast v. Cohen,* 392 U.S. 83 (1968), the U.S. Supreme Court established guidelines for determining when individuals, in their capacity as taxpayers, may challenge the constitutionality of taxing and spending programs. The civil liberties issue not only was one of congressional taxation and spending within constitutional parameters but also was related to whether individuals had the right to bring a case to court in the first place, a requirement called "standing."

Litigants traditionally have had standing to sue when they could demonstrate that the policy at issue had harmed them personally in some direct fashion. But could individuals claim standing simply by virtue of being taxpayers whose contributions funded an allegedly unconstitutional policy? In its first look at the issue, in *Frothingham v. Mellon,* 262 U.S. 447 (1923), the Supreme Court set stringent limits on taxpayer standing by requiring that claimants show that the challenged policy caused, or was about to cause, them some particularized harm. To rule otherwise, said the Court, would cause federal courts to be inundated with lawsuits from parties seeking to challenge the constitutionality of programs they opposed on policy grounds. The Court under Chief Justice Earl Warren, believing that the assumptions underpinning *Frothingham* had become less compelling, sought to reconsider in *Flast v. Cohen* the Court's long-standing position on taxpayer standing.

Flast featured a challenge to disbursements made under the 1965 Elementary and Secondary Education Act, which provided federal funding to educate children from low-income families. The seven appellants claimed that federal funds were being used to provide instruction, textbooks, and library materials to religious schools, and in their view, such disbursements violated the Establishment Clause and the Free Exercise Clause of the First Amendment to the U.S. Constitution. The Free Exercise Clause prohibits government interference with an individual's right to free exercise of religion; the Establishment Clause prohibits government from engaging in activity that would constitute establishment of religion. The appellants argued that they had standing because, as taxpayers, they suffered the harm of being forced to subsidize religious expression.

The Supreme Court, by an eight–one margin, held that *Frothingham* established no blanket rule against taxpayer lawsuits. Such lawsuits, said Chief Justice Warren, were consistent with traditional notions of standing, provided that the taxpayers could sufficiently establish their personal stake in the dispute to guarantee that proceedings would indeed be adversarial. More specifically, taxpayers, in their capacity as taxpayers, wishing to challenge the constitutionality of federal taxing and spending programs would have to meet two criteria. First, they would have to show a "logical link" between their taxpayer status and the type of legislative policy being challenged. This restriction limits taxpayer suits to challenges to congressional authority to regulate under the taxing-and-spending clause of Article I of the Constitution. Second, they would have to show a connection between their taxpayer status and the particular alleged constitutional infringement. It is not enough to argue that Congress has gone beyond the scope of its dele-

gated powers; the taxpayer must show that Congress has violated specific constitutional provisions.

In *Flast,* the appellants had standing because they were able to demonstrate that substantial amounts of tax revenue were supporting the challenged program, and that the Establishment Clause of the First Amendment specifically constrains congressional power to tax and spend. Chief Justice Warren argued that *Frothingham*'s outcome was consistent with the test set forth in *Flast,* as the appellant there had challenged a federal spending program but had not claimed that the congressional enactment had run afoul of a specific constitutional constraint.

Flast promised a substantial expansion of access to federal courts for parties seeking judicial remedies for allegedly unconstitutional spending programs. This promise, however, has not been met, as the Court under Chief Justice Warren E. Burger and subsequently under Chief Justice William H. Rehnquist has, on balance, interpreted *Flast* restrictively by requiring that plaintiffs demonstrate more direct and personal harms than *Flast* appeared to require.

Fletcher v. Peck (1810)

In *Fletcher v. Peck,* 10 U.S. 87 (1810), involving one of the earliest cases of political corruption in the United States, the U.S. Supreme Court held that the Georgia legislature's repeal of an earlier land grant violated the Contracts Clause of the Constitution. That clause prohibits states from passing laws that would be injurious to contractual obligations. The case was an early test of the extent to which states could disrupt contracts between private parties.

In 1795 the Georgia legislature sold 35 million acres of public lands, an area near the Yazoo River that included what is now Alabama and Mississippi, to four land companies. Almost all of the legislators had received bribes in return for their votes. Georgia citizens, disgusted by their legislators' actions, voted most of them out of office. In 1796 the new legislature repealed the 1795 law and nullified the original land deal. This created a problem because between the time of the initial land grant and the repeal, the four companies had sold much of it to other parties, who then sold it to additional purchasers. One of those involved was John Peck, a citizen of Massachusetts, who had bought 600,000 acres from one of the four land companies and later sold 15,000 acres to Robert Fletcher, a New Hampshire resident. In 1803, Fletcher sued Peck to recover the money he had paid, claiming that Peck sold him land that he did not actually own. The case was brought in federal circuit court under a constitutional provision that permits federal courts to hear suits between citizens of different states. After the federal circuit court ruled in favor of Peck, Fletcher appealed to the U.S. Supreme Court.

When the case reached the Supreme Court, the justices had to decide whether the new legislature could rescind the original land grant without violating the Contracts Clause of the Constitution. This clause, found in Article I, Section 10, provides that no state shall pass any law "impairing the obligation of contracts." The Supreme Court held that Georgia's new legislature had in fact violated this constitutional provision. In the majority opinion, Chief Justice John Marshall asserted that since the initial land sale was not prohibited by the state constitution, it was a valid act of the legislature. Although conceding that the land grant was tainted by corruption, he concluded that it was not the Court's role to examine the legislature's motives. Furthermore, he maintained that the litigants in this case were not parties to the original fraudulent transactions but both were "innocent" purchasers who had rights to their property. Chief Justice Marshall said that a new legislature certainly had authority to repeal legislation passed by a previous legislative body, but it could not undo actions that were taken under the earlier law. In his view, these property rights had been "vested" (fixed) and could not sub-

sequently be annulled. Finally, he concluded that the term "contracts" in the Contracts Clause referred not only to agreements made between private parties but also to public grants, including grants of land. Therefore, the sale of lands by the Georgia legislature to the four land companies was a valid contract that could not be repealed by a new legislature.

Fletcher v. Peck was the first case addressing the Contracts Clause and was the first time the Court used its power of judicial review to strike down a state law because it violated the Constitution. Most significant, this case became an important precedent for the protection of property rights in the United States. Chief Justice Marshall's interpretation in *Fletcher v. Peck* was extended to later cases, and the Contracts Clause became the primary vehicle used to protect businesses from state regulation from that point until the late 1800s.

Florida v. J.L. (2000)

In *Florida v. J.L.,* 529 U.S. 266 (2000), the U.S. Supreme Court examined the legal boundaries of the police practice of having officers publicly stop and frisk individuals they suspect may be involved in a crime. The case raised issues under the Fourth Amendment to the U.S. Constitution pertaining to search and seizure and the language of the amendment regarding "unreasonable" and "probable cause."

In *J.L.* (the initials indicate the party is a minor), an anonymous phone caller told Miami police that a young black male standing at a particular bus stop, wearing a plaid shirt, was carrying a gun. Officers went to the bus stop and found three black males, including one, J.L., who was wearing a plaid shirt. Aside from the tip, the officers had no reason to suspect any of the young men of criminal conduct. An officer frisked J.L. and found a gun in his pocket.

J.L. was charged with carrying a concealed weapon and possessing a firearm while under age eighteen. His attorney moved to suppress the introduction of the gun into evidence because the discovery of the gun resulted from an illegal search. The trial court granted the motion, but the appellate court reversed, and then the Florida Supreme Court reversed the state appellate court, finding the search unconstitutional under the Fourth Amendment's prohibition of unreasonable searches. The U.S. Supreme Court agreed to review the decision.

A unanimous Supreme Court affirmed the Florida Supreme Court decision and ruled in favor of the minor, J.L. The Court held that an anonymous tip, absent any additional evidence of wrongdoing, could not justify the police conduct of stopping and frisking someone. Justice Ruth Bader Ginsburg, writing the opinion for the Court, reasoned that tips from unknown callers from unknown locations were too unreliable to justify stop-and-frisk searches. Specifically, the tip leading to the arrest of J.L. was unreliable because it gave no predictive information to allow police to test the informant's knowledge or credibility. The vague description of J.L.'s appearance did not make the tip reliable, Justice Ginsburg asserted, because a tip must be reliable in its claim of illegality, not just in its tendency to identify someone. Furthermore, Justice Ginsburg rejected the government's contention that a special exception should be made for anonymous tips regarding illegal possession of firearms.

Justice Anthony M. Kennedy, joined by Chief Justice William H. Rehnquist, wrote a concurring opinion stating that although the anonymous tip in *J.L.* was unreliable, some anonymous tips, if specific enough, could provide a lawful basis for stop-and-frisk searches. Justice Kennedy suggested that a tip might be deemed reliable if it predicted future conduct of the suspect, or if an unnamed caller with a familiar voice predicted criminal behavior two nights previously in a row.

The *J.L.* case was significant in that it set limits to the circumstances under which police can perform a stop-and-frisk. This type of pat-down search is known in legal circles as a "*Terry* stop," named after the case

Terry v. Ohio, 392 U.S. 1 (1968), that legalized the common police practice of pat-down searches if police have a "reasonable suspicion" of criminal behavior. The *Terry* decision was noteworthy because it represented the first time the Court approved searches under a standard lesser than "probable cause," the usual constitutional requirement. Decided during the tenure of Chief Justice Earl Warren, *Terry* represented a departure from the typically liberal decisions made by the Warren Court in the area of criminal procedure. The majority decision in *J.L.* suggested that in order for police to conduct a *Terry* stop lawfully, the justification of "reasonable suspicion" must arise from the actions of the suspect. Decided by a Court staffed with strong conservative justices such as Chief Justice Rehnquist and Justices Antonin Scalia and Clarence Thomas, the unanimous outcome in favor of the criminal defendant may have come as a surprise to a number of Supreme Court watchers.

Ford, Gerald R. (b. 1913)

Gerald R. Ford served as president of the United States from August 9, 1974, to January 20, 1977, and lost the 1976 election to Jimmy Carter. A longtime member of the U.S. House of Representatives from Michigan, Ford entered the executive branch through the provisions of the Constitution's Twenty-fifth Amendment, which sets out the selection process for vacancies in the presidency and vice presidency. He became vice president in 1973 after Spiro Agnew's resignation and was elevated to the presidency when Richard Nixon resigned the following year in the wake of the Watergate scandal (a bungled burglary of Democratic National Headquarters at the Watergate hotel in Washington, D.C., by individuals with political connections to Nixon). As president, Ford issued the controversial pardon exonerating Nixon of all crimes he might have committed as president, and he oversaw the withdrawal of the United States from Vietnam in 1975. Ford also grappled with the controversy that erupted after the public learned of improper domestic surveillance and operations conducted by the Central Intelligence Agency (CIA) during the Nixon administration. In taking those actions, the agency had violated the civil liberties of many Americans.

The CIA was created in 1947 to gather and analyze information or intelligence affecting U.S. national security. Because some members of Congress feared that such an agency could be used to spy on Americans at home, the CIA's charter included strict limitations on its domestic role. Yet in December 1974, a *New York Times* report alleged that the CIA had for years spied on U.S. citizens and groups it deemed subversive—including protesters of the Vietnam War, civil rights activists, and political foes of President Nixon.

Surprised and alarmed by the charges, and mindful of the upcoming 1976 presidential election, President Ford acted quickly. On January 4, 1975, he created the President's Commission on CIA Activities to inquire into such activities taking place within the United States. Ford hoped that establishing the commission, to be headed by Vice President Nelson Rockefeller, would avert a congressional inquiry into the CIA. Ford worried that an investigation by Congress would be hard to control and might result in the unnecessary disclosure of sensitive information that could damage the CIA's ability to function. Nevertheless, both houses of Congress launched their own investigations.

In its final report, released on June 10, 1975, the Rockefeller Commission contended that most of the CIA's domestic activities had complied with the agency's statutory authority. The report did acknowledge that the CIA had sometimes overstepped its bounds and described some of the transgressions, including illegal mail openings and wiretaps, attempts to infiltrate dissident groups, and other instances of

As president, Gerald R. improper domestic spying. Yet the commission report omitted information about the CIA's plots to assassinate Fidel Castro and other foreign leaders. Senator Frank Church (D-Idaho), chair of the Senate investigative committee, soon made that material public and emerged as a leading critic of the CIA. Church compared the agency to "a rogue elephant on the rampage" and called for greater congressional oversight of the nation's intelligence operations.

Ford, who viewed the Church Committee as reckless and politically motivated, realized that he had to respond to the political storm. On February 18, 1976, he issued Executive Order No. 11,905, which established a new structure for the control and oversight of the CIA and imposed restrictions on its domestic activities. In announcing the order, Ford stressed the vital work done by the CIA and other intelligence agencies but also emphasized that those agencies must "conform to the standards set out in the Constitution to preserve and respect the privacy and civil liberties of American citizens."

Forsyth County, Georgia v. The Nationalist Movement (1992)

In *Forsyth County, Georgia v. The Nationalist Movement,* 505 U.S. 123 (1992), the U.S. Supreme Court

considered whether an ordinance that required a permit for parades and demonstrations was constitutional. The case raised difficult issues of free speech rights pursuant to the First Amendment to the U.S. Constitution. In a five–four decision, the Court held that the Forsyth County ordinance violated the First Amendment.

The ordinance at issue in the case stemmed from two marches held in 1987 in Cummings, Georgia, the county seat of Forsyth County. In the first march, Hosea Williams, a city councilman from Atlanta, led ninety demonstrators in a "March Against Fear and Intimidation." About 400 counterdemonstrators, including members of the Ku Klux Klan, lined the parade route, shouting racial epithets and throwing rocks and beer bottles. These counterdemonstrators so outnumbered police that organizers stopped the parade.

Undaunted, Williams returned the following weekend—this time with more than 20,000 marchers, including prominent civil rights leaders and politicians. Although about 1,000 counterdemonstrators once again confronted the marchers, the more than 3,000 law enforcement officers hired to protect the demonstrators successfully contained the counterprotesters but at a cost to the government of $670,000.

In response, Forsyth County adopted an ordinance that required those wishing to hold a parade first to obtain a permit from the county's administrator. The ordinance also authorized the administrator to charge a fee, up to $1,000, for costs related to the parade, including police protection. After Forsyth County adopted this ordinance, an organization called The Nationalist Movement decided to hold a rally at the county courthouse. The county imposed a $100 fee for the permit, but rather than pay the fee, the organization sued the county in federal court, claiming that the ordinance violated the First Amendment.

The case was eventually appealed to the U.S. Supreme Court. A closely divided Court held that the ordinance violated the First Amendment for two reasons. First, the Court concluded that the ordinance unconstitutionally granted the county administrator absolute control over the amount charged as a permit fee. The Court stated that "[t]he First Amendment prohibits vesting such unbridled discretion in a governmental official," because of the risk that the official would use that discretion to censor unpopular views—in short, to suppress speech. In other words, the Court feared that the administrator would charge higher permit fees for speech the government did not like. Second, the Court held that the ordinance violated the First Amendment because it allowed the administrator to charge marchers whose speech may trigger violence a higher fee to cover the cost of increased police protection. This was unconstitutional, in the Court's view, because the First Amendment prohibits speech from being treated differently because of its content.

Four justices dissented from the majority's holding. Relying on previous Supreme Court precedent, the dissent argued that the government could vary the amount charged for a permit without violating the First Amendment. Additionally, the dissenters argued that the Court should not have declared the ordinance unconstitutional because there was no evidence that the county administrator actually discriminated against applicants based on the content of the proposed speech.

Of course, the dissenters' view did not carry the day. Rather, the majority opinion in *Forsyth County* made clear that the First Amendment requires any permit system to include clear and definitive standards for determining whether permits shall be granted, and prohibits government officials from exercising too much discretion in the decision process. Additionally, the government may not charge applicants higher fees based on the content of the organization's speech. After *Forsyth County,* other plaintiffs challenged the constitutionality of permit and licensing ordinances, with varying outcomes based on the language of the specific ordinances at issue.

Fortas, Abe (1910–1982)

On October 4, 1965, Abe Fortas was sworn in as an associate justice of the U.S. Supreme Court. Born in Memphis, Tennessee, on June 19, 1910, Fortas earned a bachelor's degree at Southwestern College and his law degree at Yale Law School. Prior to his ascension to the Court, Fortas taught at Yale Law School, held several posts in administrative agencies, and maintained a successful private law practice in Washington, D.C. On May 14, 1969, Justice Fortas resigned from the Court and returned to private practice. He died April 5, 1982.

During his four-term tenure on the Supreme Court, Justice Fortas routinely aligned himself with the liberal bloc of justices on questions involving civil liberties, although his dependability on these doctrinal questions was not absolute. Mindful that judicial decisions were not divorced from society, he tempered liberal ideals with pragmatism, exercising judicial restraint not to attenuate constitutional principles to their outermost edges.

In the area of criminal defendants' rights, Justice Fortas voted consistently in favor of individuals challenging the criminal justice system. Although he was a zealous defender of the Fourth Amendment's protection against unreasonable searches and seizures, he was not an absolutist; pragmatism necessitated an exception in matters of national security. Fortas was an absolutist, however, in his interpretation of the Fifth Amendment's protection against self-incrimination as an important safeguard against unchecked governmental authority. He also believed that the right to counsel guaranteed under the Sixth Amendment was fundamental to the rule of law. Indeed, before he became a justice, he presented oral argument in *Gideon v. Wainwright,* 372 U.S. 335 (1963), in which he successfully argued that, consistent with the Sixth Amendment, indigent criminal defendants must be afforded counsel at public expense.

Justice Fortas made significant contributions regarding the rights of juvenile defendants. His majority opinion in *In re Gault,* 387 U.S. 1 (1966), gave juveniles facing court proceedings the same rights to due process, to assistance of counsel, and against self-incrimination as afforded to similarly situated adults. Justice Fortas was unequivocal in his belief that due process requirements leveled the playing field between the prosecution and defense. Constitutional protections guaranteed to criminal defendants were not automatically minimized merely because defendants were minors.

Also a strong defender of the First Amendment's free speech guarantee, Justice Fortas spoke for the Court majority in *Tinker v. Des Moines Independent Community School District,* 393 U.S. 503 (1969), upholding students' right to wear armbands in silent, passive protest of the Vietnam War. This conduct, he reasoned, was nondisruptive to the school environment and was akin to pure speech enjoying the full protection of the First Amendment. The Constitution did not permit the suspension of civil liberties during the school day to promote order and discipline.

Justice Fortas championed peaceful, nonviolent civil disobedience. He maintained that disobeying unconstitutional or immoral laws (such as laws imposing racial segregation) was permissible. Protesting valid laws, however, was unjustifiable; such conduct constituted rebellion because all individuals were obligated to obey just laws. The Constitution's protection of even vociferous, harshly expressed disagreement with the government's actions did not extend to subversive conduct such as espionage or sabotage. Protest was not an absolute constitutional protection: Deliberately violating the law was permissible only if the protest targets the law being disobeyed; breaking one law as a means of protesting another law constituted an impermissible act of rebellion.

Justice Fortas's judicial decisions reflected his commitment to strengthening civil liberties for all individuals. With pragmatic restraint, he balanced promotion of constitutional protections for those least equipped to defend themselves effectively against abuses of governmental authority.

Four Freedoms

In an effort to move Congress from an isolationist to internationalist outlook in matters of government policy, Franklin D. Roosevelt delivered his famous "four freedoms" speech and in the process stated a philosophy that precipitated a watershed shift in citizens' perception of the proper role of federal government in a democratic society. Roosevelt defined the "four essential freedoms" as freedom of speech and religion and freedom from fear and want. That presidential speech on January 6, 1941, planted the seed of public expectation about federal government involvement that eschewed the prevailing Jeffersonian concept of negative government—minimal involvement—to the new positive view that expected government intervention to prevent fear and want. The term "four freedoms" became popular shorthand to express U.S. war aims during World War II and to serve as a charter for the New Deal itself. Its immediate effect was to help secure passage of the Lend-Lease Act, legislation designed to get military supplies to European allies during the war before the United States entered the war officially.

As early as his first presidential inaugural address on March 4, 1933, Roosevelt broached the concept

No government censor rules on what may appear in these publications. Crowded newsstands such as this one, with newspapers and magazines representing every political party and every social theory, are possible only in a democracy, where there is freedom of speech and of the press. *(Library of Congress)*

of freedom from fear as he assured an apprehensive nation that "the only thing we have to fear is fear itself." He continued to build on that theme as domestic New Deal legislation to combat the Great Depression was refocused toward World War II and the international stage as means to combat fascism and Japanese militarism and to set the stage for ending colonialism. He pursued these aims even while working with his Communist ally, the Soviet Union, as well as with the colonial British and French.

Roosevelt used his first formal meeting with Winston Churchill, held off the coast of Newfoundland on August 14, 1941, for a joint announcement from the United States and Great Britain of a post–World War II order that guaranteed the principles of self-determination, free trade, freedom of the seas, and nonaggression. It also hinted at a postwar international organization to guarantee global security. These principles were aimed at assuring Americans that democratic ideals would unite the Allies despite the fact that Joseph Stalin was a Communist and Winston Churchill was a traditional democrat who favored colonialism.

During the 1944 presidential election campaign, Roosevelt called for an "Economic Bill of Rights" for postwar America to sustain prosperity after the war. In his final State of the Union message, Roosevelt outlined measures to perpetuate full employment and proposed a permanent Fair Employment Practices Commission to assure minority jobs. These provisions became building blocks for President Harry Truman's Fair Deal and the work of Eleanor Roosevelt at the United Nations. The modern concern for human rights grew from Roosevelt's four-freedoms speech to set a standard for both U.S. government and international organizations.

Fourteenth Amendment

The Fourteenth Amendment to the U.S. Constitution was proposed June 13, 1866, and declared ratified July 28, 1868. Together with the Thirteenth Amendment (abolishing slavery) and the Fifteenth Amendment (extending suffrage to black males), it was one of the amendments designed to address the political and legal aftermath of the Civil War. Although the Fourteenth Amendment was designed broadly to ensure the fair treatment of newly free blacks in the South, it later would become one of the most litigated sections of the Constitution with its interpretation both narrowed and expanded frequently by the U.S. Supreme Court.

Because of the historical circumstances surrounding its ratification, the issue at the heart of most debates over the Fourteenth Amendment has been the Court's interpretation of the limits of the power of state governments under the U.S. Constitution. More specifically, the leading cases interpreting the meaning of the amendment have dealt with the extent to which it was intended to apply some or all of the ideas of the Bill of Rights (the first ten constitutional amendments) to the states.

The Fourteenth Amendment contains five sections, but the first one has been the most important for understanding the protection of civil liberties from state action. In grand but broad language, Section 1 spelled out three distinct limitations on state behavior: (1) "No state shall make or enforce any law which abridges the privileges or immunities of citizens of the United States" (Privileges or Immunities Clause); (2) "no state shall deprive any person of life, liberty, or property without due process of law" (Due Process Clause); and (3) no state shall "deny to any person

within its jurisdiction the equal protection of the laws" (Equal Protection Clause).

Initially, many believed that the first limitation, the Privileges or Immunities Clause, was intended to ensure that state laws complied with the federal Bill of Rights. In the *Slaughterhouse Cases,* 83 U.S. 36 (1873), however, the Supreme Court read the clause narrowly to apply it only to rights of national citizenship, and only one case since has been decided under this clause. One historical effect of this narrow, initial interpretation of the Privileges or Immunities Clause was practically to read it out of the Constitution; however, because of the general disarray of its Fourteenth Amendment jurisprudence, the Court in *Saenz v. Roe,* 526 U.S. 489 (1999), recently hinted at a desire to revisit its interpretation of this clause.

Another effect of the *Slaughterhouse Cases* was to shunt the legal debate over the application of the Bill of Rights to the states onto the second limitation listed in Section 1, resulting in a great deal of confusion and debate among the Court's opinions regarding the extent of due process protections under the Fourteenth Amendment. Nonetheless, the Due Process Clause has now become the primary lever for applying the libertarian protections in the Bill of Rights to the states. Drawing upon the ideas of laissez-faire constitutionalist thinkers in the late nineteenth century, the Supreme Court began to consider an expansive meaning of due process in order to limit state interference with economic liberties and property rights. Finally, in *Chicago, Burlington, and Quincy Railroad Co. v. Chicago,* 166 U.S. 226 (1897), the Court held that "just compensation" for a taking of private property was an element of due process protected by the Fourteenth Amendment as applied to the states, although it did not explicitly apply the just-compensation language of the Fifth Amendment to the states in order to reach this conclusion. Rather, it used an embryonic conception of "fundamental fairness" (the idea that due process encompasses principles of justice so rooted in tradition as to be fundamental, or even indispensable) in order to justify its decision. Later, in *Twining v. New Jersey,* 211 U.S. 78 (1908), the Court again refused explicitly to apply a portion of the Bill of Rights to the states, but it did acknowledge that some rights contained in the Bill of Rights could be applied to state action because they were part of due process under the Fourteenth Amendment.

During the first part of the twentieth century, the Court continued to use the Due Process Clause of the Fourteenth Amendment to apply selected protections of the Bill of Rights to state action, even though it relied only upon the "fundamental fairness" notion of due process and refused to apply explicit language. Finally, after years of debate and a growing concern over the definitional slipperiness of due process, the Court in *Duncan v. Louisiana,* 391 U.S. 145 (1968), identified explicit language from a section of the Bill of Rights (the Sixth Amendment language concerning the right to a jury trial) as being applicable to the states. In all subsequent decisions applying sections of the Bill of Rights to the states, the Court has used the explicit language of the section in its application as satisfying the meaning of due process.

The process of applying the explicit language of a particular section of the Bill of Rights to state action through the Fourteenth Amendment became known as "incorporation," but because of the history of the amendment itself, the extent of incorporation remains subject to debate. Some historical evidence suggests that the framers of the Fourteenth Amendment intended to incorporate the entire Bill of Rights as applicable to the states (total incorporation), and several eminent legal scholars and jurists—most notably former Supreme Court Justice Hugo L. Black—have also called for this approach. The Supreme Court, however, has so far taken a piecemeal approach and chosen only selected portions of the Bill of Rights for incorporation (selective incorporation). Nonetheless, the Due Process Clause of the Fourteenth Amendment remains the strongest constitutional check on potential state encroachments on civil liberties.

The Equal Protection Clause of the Fourteenth Amendment did for civil rights what the Due Process Clause did for civil liberties. The Equal Protection Clause became especially important in the aftermath of the Supreme Court decision in *Brown v. Board of Education,* 347 U.S. 483 (1954), declaring that the doctrine of racial separation in the public schools, at the time called "separate but equal" schooling that the Court once had upheld, must come to an end. Later issues such as school busing and affirmative action ar-

guably proved to be more difficult than earlier issues of invidious segregation and discrimination.

Although Section 1 of the Fourteenth Amendment is the most frequent subject of both judicial litigation and scholarly analysis, the other four sections contain important provisions relevant to the recovery of the country following the Civil War, a period called Reconstruction. Section 2 amended the original constitutional calculation of a state's representation in Congress to include the "whole number of persons" within a state, and it prescribed representational penalties for states that restricted the right to vote, as several states in the South attempted to do during Reconstruction. Section 3 disqualified from public office any former public official who supported a rebellion or insurrection against the United States. Section 4 upheld the validity of the national debt but denied the validity of any debt incurred in aid of a rebellion or insurrection against the United States.

Finally, the seemingly innocuous language of Section 5 giving Congress the legislative power to enforce the provisions of the Fourteenth Amendment became the subject of much debate and confusion in the latter part of the twentieth century. The Court tried to carve out the extent of that power, namely by placing limits on how Congress could use its Fourteenth Amendment power to abrogate state sovereign immunity in federal court, despite the apparent prohibition on such an ability under the Eleventh Amendment. In sum, although the jurisprudence on Section 5 is in even more disarray than the jurisprudence on Section 1, all five sections of the Fourteenth Amendment taken together represent the strongest constitutional check on state power to interfere arbitrarily or unjustly in the lives of its citizens.

Fourth Amendment

As one of the first ten amendments (the Bill of Rights) to the U.S. Constitution, the Fourth Amendment protects individuals from unreasonable government searches and seizures and governs requirements for arrest: "The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no warrants shall issue but upon probable cause, supported by oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized." The Fourth Amendment was written over two centuries ago to preserve Americans' freedoms to be private and left alone. The substance of these rights, however, varies with the latest interpretation of the Supreme Court. The meanings of the amendment's terms, the relationship of its clauses, and its very power are living questions continually being reconsidered.

Interpretation of the Fourth Amendment has fallen to the U.S. Supreme Court as the ultimate arbiter of the Constitution. Therefore, in a practical sense, the rights and remedies of the Fourth Amendment are essentially what the Supreme Court says they are. Supreme Court Justice Louis D. Brandeis, in *Olmstead v. United States,* 277 U.S. 438 (1928), considered the Fourth Amendment's "right to be let alone" to be one of the most "valued" and "comprehensive" of rights. Further, in *Mapp v. Ohio,* 367 U.S. 643 (1961), the Supreme Court deemed Fourth Amendment rights of security and privacy "against arbitrary invasion by police" to be so important that they were "implicit in the concept of ordered liberty." The Court's view of the power of the Fourth Amendment, however, has tended to ebb and flow over time.

ORIGIN AND CREATION

The Fourth Amendment is part of the Bill of Rights, the ten amendments crafted largely by James Madison in response to Antifederalist concerns about overbearing federal power. Although the Fourth Amendment came into effect in 1791, its origins can be traced back at least to the English notion that "a man's home is his castle." The right to be free from unlawful search and seizure, however, has been called a "made in America" freedom, for it grew out of the colonists' abhorrence of the crown's use of general searches, known as writs of assistance, to enforce laws against smuggling.

STRUCTURE AND MEANING

The Fourth Amendment consists of two clauses, the Reasonableness Clause, which forbids the government from performing any unreasonable search or seizure, and the Warrant Clause, which describes the necessary ingredients for an arrest or search warrant. The two clauses are connected by the ambiguous word "and." Consequently, the Supreme Court has spent most of the twentieth century debating the relationship of the two clauses. One view, favored by the Court under both Chief Justices Earl Warren (1953–1969) and Warren E. Burger (1969–1986), interpreted the "reasonableness" required in the first clause as measured by the existence of a warrant described in the second clause. In this approach, Fourth Amendment reasonableness mandated that police seek a warrant before intruding on privacy or else provide a reason for failing to do so. This created the "warrant preference" whereby only police action previously sanctioned by a magistrate would be presumed reasonable. Any actions taken without a warrant had to be defended as falling within an exception to the warrant requirement. This approach had the benefit of restricting government power to limits specifically laid out in the text of the Fourth Amendment and therefore fulfilled the purpose underlying the written Constitution. The warrant preference, however, also created an awkward road map for police to follow, for officials had to consider a list of exceptions that became increasingly cumbersome as it grew seemingly with each new case.

A competing view, which began to gain ascendancy on the Court when William H. Rehnquist became chief justice (1986), interpreted the Reasonableness and Warrant Clauses as independent of each other. Here, reasonableness was what the Court said it was in a particular case, regardless of whether police procured a warrant. Thus, reasonableness was not given meaning from the Warrant Clause. This approach avoided the problem of having a warrant requirement with ever-increasing numbers of exceptions, as the Court tended to craft new warrant exceptions each term to deal with new situations of exigent circumstances. On the other hand, members of the Court worried in *Chimel v. California,* 395 U.S. 752 (1969), that such an "unconfined" reasonableness analysis could cause Fourth Amendment protection "to approach the evaporation point."

APPLICATION: WHAT IS A "SEARCH" AND A "SEIZURE"?

As with any other law, the Fourth Amendment can be violated only if it applies in the first place. Therefore, the Burger and Rehnquist Courts have prevented exclusion of evidence due to Fourth Amendment violations by limiting Fourth Amendment application. Since the Fourth Amendment mentions only "searches" and "seizures," Fourth Amendment application turns on whether the government action falls within the definition of either a "search" or "seizure." When it first considered "search," the Court crafted a tangibly exact definition. In *Olmstead* and two other cases, *Goldman v. United States,* 316 U.S. 129 (1942), and *Silverman v. United States,* 365 U.S. 505 (1961), the Court honed the definition of a Fourth Amendment search into "a physical encroachment within a constitutionally protected area." This meant a search occurred whenever police physically trespassed onto an individual's property.

A dramatic change in what a "search" meant came in *Katz v. United States,* 389 U.S. 347, (1967), in which the Court overturned its *Olmstead* decision and extended the warrant requirement to electronic surveillance. In his concurring opinion in *Katz,* Justice John M. Harlan defined a search as essentially a government intrusion on an individual's actual and rea-

sonable expectation of privacy. For instance, the government would be committing a Fourth Amendment search if it viewed a person bathing in a shower at home, but not if it viewed a person bathing in the sun at a public beach. Similarly, students might expect to have less privacy in a public school setting, where they are subject to teachers and principals, than elsewhere. Justice Harlan's definition still remains the definitive statement of a Fourth Amendment search. Recently, however, in *Kyllo v. United States,* 533 U.S. 27 (2001), the Court once again returned to the *Silverman* test of "constitutionally protected area" in deciding what was a search. Thus, Fourth Amendment interpretation is such a dynamic exercise that what is old becomes new again.

In contrast to searches, the definitions for seizures vary with whether the government is seizing a "person" or a "thing." In *California v. Hodari D.,* 499 U.S. 624 (1991), the Court defined an officer's seizure of a person on the street as involving either application of "physical force," such as grabbing or tackling a person, or an officer's "show of authority" along with an individual's "submission" to the show of authority. This latter case would occur, for example, when police shouted "Halt in the name of the law" and a person, upon hearing this, stopped. The Court further refined its definition of seizure of a person in *Florida v. Bostick,* 501 U.S. 429 (1991), which involved police who approached a man sitting on a bus. Because a reasonable person would not feel "free to leave" when seated on a bus as police approached, the correct definition for seizure of a person in these circumstances would be "whether a reasonable person would feel free to decline the officers' requests or otherwise terminate the encounter." Thus, if police merely approach and ask a few questions or otherwise fall short of this definition, the Fourth Amendment does not apply as far as seizures are concerned.

The definition for seizure of a "thing" is much more straightforward. In *United States v. Jacobsen,* 466 U.S. 109 (1984), the Court merely analyzed whether the government made a "meaningful interference with the suspect's possessory interests," as in grabbing or destroying property. Therefore, merely looking at or even tracking an object does not constitute a seizure and is not subject to Fourth Amendment constraints.

REACH AND POWER

As originally crafted, the Fourth Amendment, as well as the rest of the Bill of Rights, limited only federal government officials. However, after adoption of the Fourteenth Amendment in 1868, the amendment's reach became a new question. The scope of Fourth Amendment protections was decided in a series of cases beginning with *Weeks v. United States,* 232 U.S. 383 (1914). In *Weeks,* the Court determined that the Fourth Amendment was enforceable against federal officials by use of the exclusionary rule, a court-created remedy used to suppress illegally obtained evidence from use in criminal trials. Next, the Court extended Fourth Amendment application, though not the exclusionary remedy, to the states in *Wolf v. Colorado,* 338 U.S. 25 (1949). Finally, in the seminal case *Mapp v. Ohio,* 367 U.S. 643 (1961), the Court extended the exclusionary rule to discourage state breaches of the Fourth Amendment.

This consistent expansion was then followed by a pendulum swing toward contraction of the Fourth Amendment. The Court carved a series of exceptions to the exclusionary rule, including allowing admission of illegally obtained evidence in grand jury proceedings, in trials for impeachment purposes, and to prove guilt at trial if the evidence were cleansed of taint. Perhaps the most dramatic retreat of Fourth Amendment coverage occurred in *United States v. Leon,* 468 U.S. 897 (1984), in which the Court permitted the entry of evidence when officers acted in objective good faith reliance on a defective search warrant. The good faith doctrine was further extended in *Arizona v. Evans,* 514 U.S. 1 (1995), with the Court upholding a conviction in which officers relied on only an erroneous computer entry signaling the existence of a warrant. Thus, the scope of the Fourth Amendment waxes and wanes with each new Supreme Court interpretation, as does application of the exclusionary rule to exclude tainted evidence from trial.

NONCRIMINAL SETTINGS: "SPECIAL NEEDS"

Traditionally, the Fourth Amendment has limited police in their pursuit of criminal investigations. Recently, however, Fourth Amendment litigation has

entered noncriminal enforcement areas, such as inspections of housing, railroads, and schools. Because these new contexts involve government interests beyond conventional law enforcement, the Court has labeled these concerns "special needs." The special-needs doctrine empowers government officials to perform arguably intrusive searches, such as in the case of routine airport inspections, without the traditional Fourth Amendment requirements of a warrant, probable cause, or individualized suspicion. Instead, government officials are required to determine the reasonableness of their actions by balancing the government's interests against those of the individual.

Frankfurter, Felix (1882–1965)

Although consistently ranked among the twelve great justices of the Supreme Court of the United States, Felix Frankfurter rates more toward the bottom than the top of the "greats" list. Ironically, his tenure on the Supreme Court from January 5, 1939, to August 28, 1962, diminished the stellar reputation he had enjoyed at the time Franklin Roosevelt appointed him to replace the distinguished Benjamin Cardozo.

ORIGINS

Frankfurter, a Jewish immigrant, was one of the most psychologically marginal justices ever to sit on the high bench, as he never stopped trying to compensate for his background. He was born November 15, 1882, to Jewish parents in Vienna, Austria, but his Jewish heritage was a minimal influence on his life. He married a Congregational minister's daughter. "Reason" became his religion, but it was Frankfurter's own extremist version of reason that he developed while a very serious student struggling not for grades but for acceptance. It was a personal ideology he used to transform himself from an outsider immigrant into an unduly conforming citizen of his adopted country. He was the ultimate assimilationist with a deep-seated need to become a part of the Brahmin establishment, which he overidealized first at Harvard Law School and later on the Court.

His family immigrated to New York City's impoverished Lower East Side in 1894, when he was twelve. Frankfurter could not speak English when he arrived. His extraordinary energy to achieve, a by-product of his marginal status, pushed the bright immigrant to finish third in his 1901 graduating class at City College of New York. Forever after, he retained a nearly mystical faith that public education, with its American melting pot values of energy, talent, and brains instead of Old World emphasis on class, religion, and race, could transform individuals.

He entered Harvard Law School in 1902 and met Roscoe Pound, a faculty member who was a founder of sociological jurisprudence and who became one of Frankfurter's several mentors. Frankfurter graduated first in the class of 1906 and in 1912 joined the Har-

Felix Frankfurter (left) with Eleanor Roosevelt and Franklin D. Roosevelt Jr. in Hyde Park, New York, May 1956. Frankfurter was one of the Supreme Court justices who supported the constitutionality of the New Deal. *(National Archives)*

vard Law School faculty, continuing to serve as a law professor until 1939 at what he considered the ideal institution as long as he was among its philosopher kings.

As a political liberal, he mixed academics with government service and political causes. Both before and during World War I, he became a protégé of Henry L. Stimson, a Bull Moose Republican who shared Frankfurter's work ethic and became Woodrow Wilson's secretary of war. Wilson appointed Frankfurter the chairman of the Labor Department's War Labor Policies Board where he became acquainted with Franklin D. Roosevelt, who served on the board as secretary of the navy. During the interwar period, he developed close ties to Louis D. Brandeis and Oliver Wendell Holmes Jr. while helping to found both the *New Republic* and the American Civil Liberties Union. The magazine and the ACLU championed the case of gaining a new trial for immigrants Nicola Sacco and Bartolomeo Vanzetti, radical Italian aliens who were sentenced to death for murder in a tainted trial.

Frankfurter held no position in the Roosevelt administration, yet he helped draft some of its legislation and introduced British economist John Maynard Keynes to FDR. Frankfurter helped influence the leftward drift of the Roosevelt administration. Perhaps most important, he acted as a one-man employment service for the administration, supplying a steady stream of his Harvard law students, dubbed "Felix's Happy Hotdogs," to it. It came as no surprise that

Frankfurter was Roosevelt's third nominee to the Supreme Court, since Frankfurter actively campaigned to fill the slots formerly occupied by Holmes and Cardozo, who had presided at his 1919 wedding.

FRANKFURTER'S JURISPRUDENCE

At a time when he had the opportunity to solidify his legacy by leading his brethren on the Court, Frankfurter managed to undercut his legacy and diminish his own reputation. He earned the dubious title as the second most divisive personality on the Court during the twentieth century behind James C. McReynolds, a racial bigot. Frankfurter became an "intellectual bigot," trying repeatedly to turn the Court into an idealized Harvard graduate seminar. Those who refused to accept his legal reasoning, even after he gave them the benefit of fifty-minute lectures on his rationale, became his enemies. Unlike his brethren Hugo L. Black, who developed his own unique "absolutist doctrine" of the First Amendment, and William O. Douglas, who embraced legal realism, Frankfurter's overconformity led him to accept the dominant jurisprudence of the Court and stunted his legal growth. His subjective "balancing approach" translated his political liberalism into judicial conservatism on the Court. The psychological outsider had become a superpatriot about his adopted country and religion—"the law" as he defined it. He believed that judges should show deference to the elected branches of government just as firmly as he believed that his brethren should defer to his superior legal scholarship in the same way he had deferred to his Harvard mentors in recognition of their greater wisdom. Duties and obligations became more important than rights under his skewed jurisprudence.

This perspective allowed the one-time civil libertarian to join the government's side in *Korematsu v. United States,* 323 U.S. 214 (1944), accepting the need to relocate Japanese Americans during World War II for security reasons; but he dissented in *West Virginia Board of Education v. Barnette,* 319 U.S. 624 (1944), supporting a mandatory Pledge of Allegiance in schools; in *Mapp v. Ohio,* 367 U.S. 643 (1961), maintaining the exclusionary rule did not apply to the states; and in *Baker v. Carr,* 369 U.S. 186 (1962), stating that legislative redistricting matters should not be heard by the courts. If his civil liberties legacy is of minimal importance, his record on civil rights is better. In 1948 he became the first justice to hire a black law clerk, and he helped Chief Justice Earl Warren strike down segregation in public schools in *Brown v. Board of Education,* 347 U.S. 483 (1954), as well as in other areas of the law.

Nonetheless, Frankfurter's contribution to the law was greater before his Supreme Court service. His prima donna personality caused self-inflicted damage to his legacy, and his ideal of equality regressed into patriotic paternalism.

Free Exercise Clause

The Free Exercise Clause is the portion of the First Amendment to the U.S. Constitution that protects the right of individuals to practice their religion without interference from government. The issues the clause has raised since the amendment was added to the Constitution in 1791 include the meaning of "free exercise," the definition of religion, the level of government being addressed, and the problems that arise when this clause appears to conflict with other constitutional and legal protections. The First Amendment reads in part: "Congress shall make no law respecting an establishment of religion or prohibiting the free exercise thereof." The Free Exercise Clause encompasses the last five words.

When the first Congress debated the addition of a

Bill of Rights to the Constitution, James Madison proposed language protecting freedom of conscience as well as freedom of religious belief and worship. Moreover, he wanted these protections to apply to the states as well as the national government. The language adopted was more narrow than he wished and did not mention the states, but its placement at the beginning of the First Amendment still made a powerful statement. It also presented a challenge. Most state constitutions at that time already contained guarantees of "free exercise." Some added limitations such as "free exercise of religious worship," and others expanded the protection to include, for example, "the dictates of conscience." Since the First Amendment did neither, its words remained open to interpretation. They could mean merely freedom to think or speak about religion, freedom to act on one's religion in ways that did not involve illegal behavior, or even freedom to engage in activities forbidden by law to other individuals.

The courts, which are the major arbiters of the Establishment Clause, not only must choose among these possible meanings from their own perspectives but also must place themselves on the spectrum of views in the "original intent" debate. Under the original-intent doctrine, their task is to interpret the Constitution based on what its creators intended. In contrast, advocates of the "living Constitution" interpret it in a way that makes sense in a modern, religiously pluralistic society, arguing that the framers were well aware that economic and social change would occur and that the document needed to accommodate such change. Yet another recurring issue is whether a generous reading of the Free Exercise Clause on behalf of a particular religion runs the risk of violating the neutrality required of government by the Establishment Clause. Thus, the history of the Free Exercise Clause is best understood as a process not just of application but also of discernment of its meaning and determination of its place in the larger framework of the First Amendment.

Because free exercise rights of majority religions are rarely threatened, litigation involving the Free Exercise Clause has frequently involved minority and often unpopular religious groups. The Jehovah's Witnesses, for example, have been credited as major players in securing and expanding free exercise rights. Even so, spokespersons for majority faiths often recognize that a threat to the rights of any religion is potentially a threat to the rights of all. Thus, especially in recent decades, both liberal and conservative religious groups, which are typically on opposite sides of Establishment Clause issues, have frequently been on the same side in free exercise disputes.

Free exercise issues span a wide spectrum, reflecting the diversity of America's religious landscape. These have ranged from animal sacrifices, conscientious-objector status, and abortion rights to wearing religious apparel while in military uniform, protecting the privacy of confessions to clergy, and payment of Social Security tax, to name just a few.

FROM SECULAR REGULATION TO COMPELLING INTEREST

The first major U.S. Supreme Court effort to define the Free Exercise Clause came in 1879 in *Reynolds v. United States,* 98 U.S. 145, a case involving polygamy as practiced at that time among Mormons in pre-statehood Utah. The Court held that Mormons could believe in and even speak favorably of polygamous relationships, but the Free Exercise Clause did not protect their right to act on this belief because they were part of a larger population covered by the territory's antipolygamy law that Congress had enacted as a legitimate use of its power. This interpretation of the Free Exercise Clause is often referred to as the "secular regulation" rule, meaning that a religious group is not exempt from legislation that is valid for society at large.

Such an interpretation, however, seemed little more than a restatement of the Free Speech Clause. Perhaps the framers of the Constitution intended free exercise of religion to mean more. The Supreme Court started to gravitate toward that line of thought in *Cantwell v. Connecticut,* 310 U.S. 296 (1940), the landmark case that also "incorporated" the Free Exercise Clause to apply to the states via the Fourteenth Amendment. *Cantwell* upheld the rights of Jehovah's Witnesses to proselytize door-to-door and on the streets. The Court reiterated its position that the freedom to believe is absolute, but the freedom to act is not. The Court

also instructed state governments to avoid imposing regulations that would unnecessarily limit religious freedom.

Further attempts to find a workable meaning for free exercise were reflected in two flag-salute cases. In *Minersville School District v. Gobitis,* 310 U.S. 586 (1940), the Court deferred to state legislative judgment to decide whether requiring Jehovah's Witnesses to salute the flag promoted patriotism. Four years later, in *West Virginia Board of Education v. Barnette,* 319 U.S. 624 (1943), the Court reversed itself, saying that the state could not require the flag salute of anyone whether for religious or other reasons. Although this was a landmark case for freedom of expression, its extension beyond the realm of religion left the meaning of the Free Exercise Clause still ambiguous.

After other attempts to balance belief and action, the Court reached its most sweeping interpretation of the Free Exercise Clause in 1963 in *Sherbert v. Verner,* 374 U.S. 398, involving a Seventh-day Adventist who was denied unemployment compensation when she refused to take a job requiring her to work Saturday because that day was the Sabbath in her religion. In this case and in *Wisconsin v. Yoder,* 406 U.S. 205 (1972), involving Amish families who wanted to remove their children from compulsory education, the Court ruled that the government must be able to show a "compelling interest" when interfering with freedom of religion. This meant that even in situations where a law applied to the general public, exceptions must be made to protect religious liberty unless the government could demonstrate that limits on religious practice were absolutely essential to achieving the compelling interest of government, and that these concerns could be met in no other way. Thus the Court ruled that providing unemployment benefits for one Seventh-day Adventist would not cause a major burden for the state, and that Amish children were part of a self-sufficient agricultural community, so the usual arguments for requiring secondary education simply did not apply to them.

END OF COMPELLING INTEREST

The compelling-interest test remained the standard for applying the Free Exercise Clause until 1990. Like other such tests, it was not foolproof; there could be and were disagreements about when a compelling government interest existed, but it was generally regarded as providing wide latitude for religious liberty. This approach changed sharply with the landmark case of *Employment Division, Department of Human Resources of Oregon v. Smith,* 494 U.S. 872 (1990). *Smith* involved a Klamath Indian who was refused unemployment compensation after losing his job in an Oregon drug rehabilitation program because he had ingested peyote, an illegal substance in the state, in a Native American religious ritual. The Court, in a six–three decision with an opinion written by Justice Antonin Scalia, abandoned the compelling-interest test and returned to the reasoning in *Reynolds* and *Gobitis*. Justice Scalia concluded that Oregon could make an exception for sacramental use of peyote if it wished, but it was not required to do so under the Free Exercise Clause.

This decision met with approval in some circles. Many law enforcement officials welcomed it, for example, because of the nature and extent of religious rights demanded by prisoners under the compelling-interest standard. However, it was unpopular across the religious spectrum, and a large coalition of religious organizations successfully lobbied Congress to pass the Religious Freedom Restoration Act (RFRA) in 1993, restoring "compelling interest" as the proper standard for applying the Free Exercise Clause. The Court reacted by striking down RFRA in *City of Boerne v. Flores,* 521 U.S. 507 (1997), in which a Roman Catholic church sought to alter and enlarge its building in violation of local provisions governing the historic district in which it was located. RFRA was found by the Supreme Court to violate not only the constitutionally mandated division of powers between federal and state governments but also the separation of powers between the legislative and judicial branches of government.

Thus, at the start of the twenty-first century, the Court appeared to have returned to the secular-regulation rule of the nineteenth-century *Reynolds* case. On the one hand, it is too soon after *Smith* to predict what line of development the Court will follow in Free Exercise Clause rulings. On the other, it is possible, based on a network of pre- and post-*Smith*

federal and state judicial decisions and legislative actions, to state with some specificity what is and is not encompassed in a contemporary understanding of the Free Exercise Clause.

First, the Free Exercise Clause applies to all branches and levels of government. States may choose to afford more protection to religious practice than does the Free Exercise Clause; they may not provide less.

In addressing the Free Exercise Clause, courts have sought to avoid providing an authoritative definition of religion or ruling on the validity or lack thereof of a given faith. Over time, however, the Supreme Court has expanded its working definition of religion to include the religious beliefs and practices of individuals who are not part of an organized religion, individuals who may differ from the tenets of the organized religion to which they belong, or even individuals who do not believe in a deity but follow a belief system similar to that of a deistic religion. Likewise, persons who choose to disbelieve in religion are protected in this right by the Free Exercise Clause.

As to the meaning of free exercise, freedom of religious worship has extensive protection, as does religious speech, including proselytization and solicitation. Any restrictive laws aimed specifically at a religion violate the Free Exercise Clause, as the Court affirmed unanimously in the post-*Smith* era in *Church of the Lukumi Babalu Aye, Inc. v. City of Hialeah,* 508 U.S. 520 (1993), in which it struck down a city ordinance forbidding animal sacrifice for religious purposes.

Free-exercise conflicts sometimes arise over health and safety issues, such as refusal to receive blood transfusions. The tendency has been to consider this a legitimate form of "free exercise" for adults but not when applied to children. When more generally applicable public health or welfare matters are at stake, they have often taken precedence over free exercise claims. Examples include child labor laws or vaccination requirements.

The right of conscientious objection to military service has long been granted by Congress; and the Supreme Court has enhanced this protection by expanding the grounds for exemption from a military draft to the point that conscience as well as religion may be a valid basis. However, a right to object to service in some wars rather than all wars for reasons of religion or conscience has never been recognized.

In some instances, when the Establishment Clause and Free Exercise Clause appear to conflict, government support of religion is permitted in order to facilitate free exercise. Examples include providing chaplains in the armed forces and in prisons. In public schools and universities, religious organizations are entitled to access to campus facilities equal to that granted to nonreligious organizations.

The Free Exercise Clause protects only from government intrusion and does not apply to the private sector, but civil rights legislation protects a person from discrimination in employment based on religion or lack thereof. However, religious organizations acting on their religious beliefs may discriminate in hiring or may impose religiously based requirements, such as required chapel attendance in church-affiliated colleges. Private organizations that wish to receive federal funding may have to agree to limit their imposition of religiously based rules of behavior.

Still, because of the many variables in both the law and the courts, it is impossible to predict how the Free Exercise Clause might apply in any given situation. Because the Supreme Court does not rule until a case is brought to it and may even decline to hear that case, the Court has not addressed all potential free exercise issues. Further, cases may end within a state court system or at the federal district or appeals court level, a procedure that may cause similar cases to be handled in inconsistent ways. The Supreme Court itself is not always consistent in its rulings, and as the personnel of the Court changes, there may well be further alterations in its treatment of free exercise claims. Moreover, some of its decisions, such as *Smith,* have hinged more on its attitude toward the power of states and of elected legislatures than on the merits of the free exercise claims themselves; a Court with different attitudes on these topics might produce decisions expanding or restricting free exercise protections.

The Free Exercise Clause is certain to continue to challenge the courts and other parts of government for three basic reasons. First, the number and variety of religions in the United States with diverse and sometimes controversial practices continue to grow. Second, since *Smith,* even some major Christian denominations have seen their free exercise rights chal-

lenged over such issues as operating soup kitchens or homeless shelters in violation of zoning laws. Finally, because of widespread unhappiness about the *Smith* decision, many denominations and religious organizations spanning a wide spectrum of beliefs, practices, and political views are committed to working together to achieve greater protection for religious liberty through a more expansive interpretation of the Free Exercise Clause in courts and legislatures at both the national and state levels.

Fricke v. Lynch (1980)

In *Fricke v. Lynch,* 491 F. Supp. 381 (D.R.I. 1980), a federal district court in Rhode Island addressed the issue of whether the right to free expression provided by the First Amendment to the U.S. Constitution should be extended to minors, in this case a high school student who identified himself as homosexual and who wished to bring his male date to the senior prom.

The *Fricke* case became a well-publicized call for greater rights for homosexual minors. In 1980, Aaron Fricke wanted to take Paul Guilbert to the senior prom at Cumberland High School in Rhode Island. After failing to gain permission from school authorities, he took his case to the U.S. District Court for Rhode Island, where Judge Raymond Pettine found in his favor. His prom became a cause célèbre and his case an important precedent for broadening the rights of homosexual youth to self-expression.

In 1979, Guilbert had attempted to take a same-sex date to the junior prom. That request was denied by principal Richard Lynch, who had concerns about safety—concerns justified by the harassment Guilbert later received, which required Lynch or other school personnel to escort him around campus. That incident received some publicity, which drew negative attention to the school and to Guilbert. A year later, Fricke was undeterred in his similar quest. He had just "come out" and already faced the threat of violence. Other students were aware of his sexuality, and he felt that his integrity, and his ability to face his peers with self-respect, would be damaged by the obvious fiction of going to the prom with a girl—or by the outcast status that not attending would imply. Pursuing his case would also allow him to contribute to the well-being of other gay students and of homosexuals generally. Fricke's position reflected the mood of the gay liberation movement, which during this period emphasized that safety, in the long term, was best served by seeking acceptance through visibility. This premise added weight to Fricke's claim that going to the prom was an expressive act with political import and thus a protected First Amendment right.

After principal Lynch's initial verbal denial, Fricke continued seeking permission, and eventually Lynch wrote a letter explaining his refusal. He wanted to prevent assaults on Fricke and Guilbert and to shield the school, its students, and the town from negative reactions; furthermore, he felt unable to protect property and persons at the prom, which was being held out-of-state. Fricke followed the school district's appeal process, unsuccessfully. He then filed suit in the U.S. District Court for Rhode Island, naming principal Lynch as defendant. Shortly after this, another student assaulted Fricke, who required five stitches near his right eye. Lynch thereafter provided Fricke with a safer parking spot and, as with Guilbert, a protective escort. The assailant was suspended, and no further incidents occurred.

Though other arguments were available (for example, that a person has a right to be homosexual), Fricke's case was based on the First and Fourteenth

Amendments: on his rights to free speech and association and to equal protection. Judge Pettine supported the claim based solely on speech, finding communicative intent in Fricke's attending the prom. There was a precedent in *Gay Students Organization v. Bonner,* 509 F.2d 652 (1st Cir. 1974), in which a court had ruled that a University of New Hampshire regulation preventing a gay student group from holding social events on campus violated the First Amendment.

In the school's defense, principal Lynch consistently appealed to safety and never objected to homosexuality per se. Judge Pettine agreed that the school had legitimate concerns and the authority to act on them, but that "the school's interest is in suppressing certain speech activity because of the reaction its message may engender. Surely," he concluded, "this is still suppression of free expression." He agreed with Fricke that the school could realistically provide adequate security, asking, "May the school prohibit the speech, or must it protect the speaker?" Normally, danger of reprisal is not grounds for prohibiting expression.

Fricke is significant in part because it applied this reprisal principle to high school students, whose status and rights are often unclear. Judge Pettine cited *Tinker v. Des Moines Independent Community School District,* 393 U.S. 503 (1969), which involved students who wore armbands to school to protest the Vietnam War. In *Tinker,* the U.S. Supreme Court limited interference with student expression to what was necessary to maintain safety and stability and explicitly denied that "discomfort and unpleasantness" were grounds for suppressing expression. By extending *Tinker* to the self-expression of openly gay and lesbian high school students, *Fricke* became central to the application of First Amendment protections to homosexuals and to youth.

Friend of the Court

See Amicus Curiae

Frontiero v. Richardson (1973)

The U.S. Supreme Court's decision in *Frontiero v. Richardson,* 411 U.S. 677 (1973), helped establish gender equality as a constitutional right. The holding was grounded in analysis of the Due Process Clause of the Fifth Amendment to the U.S. Constitution, the clause that implicitly guarantees all individuals equal protection of the law.

Sharron Frontiero was a first lieutenant in the United States Air Force. Her husband was attending college on the GI bill (the Servicemen's Readjustment Act of 1944, which Congress passed to give returning World War II veterans benefits to reenter private life), receiving a stipend of only $205 a month. Lieutenant Frontiero put in a request for the increased quarters allowances and the housing and medical benefits for her husband that were routinely awarded to dependents of male officers. The Air Force, however, refused to recognize Joseph Frontiero as his wife's dependent because she had failed to demonstrate that she was supplying more than one-half of the family's income. Only female officers were required to meet that evidentiary burden; the Air Force simply assumed that wives of officers were economically dependent on their

husbands. Sharron Frontiero sued, claiming that she was being discriminated against on the basis of her sex.

The Defense Department maintained that requiring proof of spousal dependency from servicemen would be an intolerable administrative burden, and that it was more cost-effective to assume that all wives were dependent and all husbands were not. Frontiero replied that almost 60 percent of all married women were employed outside the home and could not be assumed to be dependent upon their husbands. Because she was denied benefits that male military personnel received, she added, she was effectively receiving less pay than male officers.

Frontiero was represented in part by attorney Ruth Bader Ginsburg, who made her first oral argument before the U.S. Supreme Court when it heard the case in 1973 (and who became an associate justice on the Court in 1993). Ginsburg sought to convince the Court that the guarantee of equal protection implicit in the Due Process Clause of the Fifth Amendment required the justices to view all classifications based on sex, like those based on race, with suspicion and to subject them to "strict scrutiny"—meaning that they had to assume the classifications were unconstitutional and that the difficult burden of proving validity of the classifications fell on the government. Justice William J. Brennan Jr.'s opinion for himself and three other justices agreed, and Frontiero won her case.

"There can be no doubt that our Nation has had a long and unfortunate history of sex discrimination," Justice Brennan wrote. "Traditionally, such discrimination was rationalized by an attitude of 'romantic paternalism' which, in practical effect, put women, not on a pedestal, but in a cage." He viewed the Air Force's assumption of female economic dependence as a constitutionally impermissible continuation of such paternalism and discrimination.

Three other justices agreed that the Air Force's policy was unconstitutional, because the Court had held in *Reed v. Reed,* 404 U.S. 71 (1971), that administrative convenience did not justify discriminating on the basis of sex. They rejected the strict-scrutiny argument, however. The eighth justice concurred with the ruling but did not mention strict scrutiny, and the ninth dissented. Because five of the nine justices did not accept the high standard for which Ginsburg argued, the decision left lower courts free to uphold gender-based classifications without subjecting them to the same strict scrutiny accorded to classifications based on race. *Frontiero* would prove to be as close as the Court would come to extending the strict-scrutiny test to gender classifications.

Fruits of the Poisonous Tree

The "fruits of the poisonous tree" doctrine prohibits law enforcement from using evidence or information derived from illegal police conduct. The doctrine is not articulated in the U.S. Constitution but rather evolved through case law by which the U.S. Supreme Court undertook to rein in unconstitutional police conduct, specifically conduct that violated criminal defendants' rights such as protection against illegal search and seizure. The doctrine interacts with the exclusionary rule, which draws on the fruits-of-the-poisonous-tree principle to exclude from trial or certain other uses any evidence obtained by impermissible police conduct. In short, the initial wrongful police action is the "poisonous tree"; any additional information and evidence derived from that "tree" are "poisonous fruits." Both types of evidence are subject to exclusion.

In *Weeks v. United States,* 232 U.S. 383 (1914), the U.S. Supreme Court held that evidence obtained in violation of a suspect's constitutional rights was in-

admissible in a federal court. Six years later, in *Silverthorne Lumber Co. v. United States*, 251 U.S. 385 (1920), the Court extended the exclusionary rule to the *indirect* use of illegally obtained evidence. The government had subpoenaed documents from the Silverthorne Lumber Company on the basis of information it had secured in violation of the Fourth Amendment prohibition against unreasonable search and seizure. Holding that the government could neither use documents unlawfully seized nor avail itself of information acquired from them, Justice Oliver Wendell Holmes Jr. emphasized that allowing such indirect use would permit the government to profit from its illegal actions and would "reduce . . . the Fourth Amendment to a form of words."

This extension of the exclusionary rule to evidence derived from unconstitutional police methods came to be known as the "fruits of the poisonous tree" doctrine after Justice Felix Frankfurter used the metaphorical phrase in *Nardone v. United States,* 308 U.S. 338 (1939). In that case, Frankfurter said the government's use of derivative evidence would create a rule "inconsistent with ethical standards and destructive of personal liberty."

Exceptions to the fruits-of-the-poisonous-tree doctrine followed close upon the development of the legal principle itself. One exception, in fact, was mentioned in dictum (nonbinding analysis) in the *Silverthorne* case: The "independent source" rule holds that if a particular piece of evidence, discoverable as a result of illegal police conduct, was independently obtained in a lawful manner, the evidence will not be suppressed as "poisoned fruit." Thus, in *Murray v. United States,* 487 U.S. 533 (1988), the Court allowed the use of evidence obtained through execution of a search warrant. Prior to requesting the warrant, government agents illegally entered the suspect's warehouse and observed suspicious bales believed to be marijuana. The illegal entry was not mentioned in the affidavit supporting the warrant. Because the warrant was supported by other competent evidence not connected with the illegal entry, the Court upheld the search and allowed use of the evidence.

A second exception, the "attenuation" or "dissipation of taint" doctrine, was first articulated in *Nardone* and more fully developed in *Wong Sun v. United States,* 371 U.S. 471 (1963), and *United States v. Ceccolini,* 435 U.S. 268 (1984). This exception provides that when the nexus between the illegal conduct and the challenged evidence has become weakened by virtue of circumstances such as passage of time or intervening forces—for example, a defendant's voluntary confession—the taint may be purged and the evidence admissible.

A third exception, the "inevitable discovery" rule, permits the use of otherwise tainted evidence if the prosecution can prove by a preponderance of the evidence that the information would have inevitably been discovered without the benefit of the unlawful police behavior. This exception was established in *Nix v. Williams,* 467 U.S. 431 (1984). The Court decided that officers had illegally interrogated a murder suspect while they were transporting him (they had appealed to the need to give the girl he had murdered a "Christian burial"), and the interrogation led to his disclosure of the location of her body. At the time of the disclosure, a search party was within two and a half miles of the body and was conducting a systematic search, which soon would have covered the place where the body was located. The Court therefore allowed introduction of the body and its location in the defendant's retrial because it would inevitably have been discovered regardless of the constitutional violation.

The Court's gradual erosion of the fruits-of-the-poisonous-tree doctrine and the exclusionary rule itself reflects its shift in emphasis regarding the purpose of the two principles. The Court retreated from such rationales as preservation of the integrity of criminal proceedings or reparation for violations of individual rights; subsequent decisions have relied primarily on deterrence and the removal of incentives for police misconduct as justifications for the rules. Consequently, cost-benefit analyses have replaced much of the righteous indignation expressed by Justice Holmes in *Silverthorne.*

Fuller, Melville W. (1833–1910)

Melville W. Fuller was chief justice of the U.S. Supreme Court from 1888 to his death in 1910, a twenty-two-year period that spanned a pivotal era in American history. The Supreme Court during Fuller's tenure grappled with novel issues arising from rapid industrialization, the emergence of large-scale business enterprise and a national market, and the acquisition of overseas territories.

Born in Augusta, Maine, in 1833, Fuller graduated from Bowdoin College, studied law as an office apprentice, and attended classes at Harvard Law School. He moved to Chicago in 1856, established a thriving law practice, and became active in Democratic Party politics. Fuller became a close friend of President Grover Cleveland, and Cleveland appointed Fuller chief justice in 1888. The core values of Fuller's jurisprudence, derived from the political tradition of Andrew Jackson, were a commitment to limited government, state autonomy, private property, and individual liberty.

Fuller was a skillful social leader of the Court rather than a dominant intellectual force. He was an excellent judicial administrator, who expedited the Court's handling of cases and helped secure passage of the Evarts Act in 1891 to establish federal circuit courts of appeals. Yet Fuller also orchestrated a conservative coalition on the Court that reflected his views and guided the Court to a more active role in American society. Under Fuller's leadership, the Supreme Court vigorously defended property rights and contractual freedom as means to restrict the reach of government and thus safeguard liberty. It looked skeptically at laws

Melville W. Fuller was chief justice of the U.S. Supreme Court from 1888 to his death in 1910. Under Fuller's leadership, the Supreme Court vigorously defended property rights and contractual freedom as a means to restrict government's reach and thus safeguard liberty. *(Library of Congress)*

that infringed upon the workings of the free market or attempted to redistribute wealth. In addition, the Fuller Court was anxious to preserve the traditional distribution of power between the national and state governments, and it rejected an expansive application of the Bill of Rights to the states. Fuller and his colleagues usually deferred to state governance of social issues and criminal justice and upheld most state health and safety regulations. Nonetheless, the Fuller Court frequently relied upon the dormant commerce power (in the Commerce Clause) to prevent the states from interfering with the movement of goods in the national market.

Although primarily a consensus builder, Fuller wrote some of the leading opinions of the era. In *United States* v. *E.C. Knight Co.,* 156 U.S. 1 (1895), he concluded that manufacturing was local in nature

and not part of interstate commerce. This decision restricted the power of Congress to apply the Sherman Antitrust Act to manufacturing monopolies. Moreover, Fuller struck down the 1894 federal income tax as an unconstitutional direct tax in *Pollock v. Farmers Loan and Trust Co.,* 157 U.S. 429 (1895). Fuller generally voted with the majority, and so he joined such important opinions as *Lochner v. New York,* 198 U.S. 45 (1905), which invoked the liberty-of-contract doctrine to invalidate a statute limiting the hours of work in bakeries. In more than a dozen decisions between 1901 and 1904 called the Insular Cases, however, Fuller was unable to persuade the majority that the Constitution and Bill of Rights applied to the nation's newly acquired overseas territories, such as Puerto Rico.

Much of the jurisprudence of the Fuller Court was eclipsed by the New Deal of President Franklin D. Roosevelt and the constitutional revolution of 1937. Still, the themes of federalism and property rights, which were so prominent in Fuller's thinking, again have become lively topics of constitutional dialogue.

Fundamental Rights

Fundamental rights are the most highly valued rights in civil society. The definition of these rights varies greatly across the international spectrum. In the United States, fundamental rights are thought to be implicit in the founding documents of the Constitution and Bill of Rights (the first ten amendments to the Constitution). The judicial branch, typically the U.S. Supreme Court, gives effect to these "rights" when cases arise that challenge one of their core values. These rights are deemed fundamental because without them the basis for a free, democratic society would not exist. A narrow class of fundamental rights preserves more state power, whereas a broad class of these rights weakens state power. Scholars of jurisprudence suggest different methods of determining whether a right is, indeed, fundamental.

A *judge's values* can be used as one way to measure whether a value is fundamental according to the constitutional design. This practice is typically viewed as undemocratic because it seems to replace the people's vote with the single vote of an unelected judge. Principles of *natural law* can be used as an alternate way to decide which values are most honored. These principles typically divine themselves from a higher moral authority. Opponents of this approach are disturbed by the moral necessity of these values, especially when religious freedom is involved.

Other approaches use a *neutral-principle* method, which treats all like cases alike in order to preserve the overarching principle or value controlling the case. Critics would say this approach is much too vague and often sacrifices the right result to preserve law for its own sake. *Reason, tradition,* and *consensus* are three other ways judges determine whether a right is fundamental. *Moral-reasoning* approaches suffer from the misconception that individual decision-makers will ineluctably reach the same conclusion when confronted with the same case. But this is rarely true in practice when difficult constitutional issues are at odds. *Traditional values* have often been used to invoke the claim that a right is fundamental. But in a democratic society, tradition usually rests on the shoulders of a temporary majority who often falls out of favor at some point during the ebb and flow of electoral cycles. Thus, a purely traditional approach could be used illegitimately to supplant current values with outdated preferences from the past. In a *consensus* approach, sometimes described as the most democratic way of determining fundamental values, society's widely shared values would form the basis for a determination. This, too, is fraught with trouble, however, since a value that is currently important might simply be a

product of unique circumstances rather than a lasting value implicit in the larger constitutional framework.

Typically, the four values held to be fundamental, and worthy of the strictest judicial scrutiny, are the freedoms of religion, press, assembly, and speech. These First Amendment protections were among the first provisions of the Bill of Rights that the U.S. Supreme Court applied to the states as well as the national government. When these rights are involved, the government must show a compelling interest to justify any abridgment. Since these rights were the most debated during the formation of the Constitution and Bill of Rights, they are often viewed as the most fundamental.

In addition, other highly valued rights are implied throughout the Constitution, and the courts have struggled with determining which, if any, of these deserve the entitlement of being "fundamental" and the legal power that term restricts. One such value is privacy. Throughout the Constitution are references to behaviors that are seen as bars to liberty, and many of these involve the concept of privacy (but not the word itself). The Second Amendment speaks of not quartering soldiers in homes. The Fourth Amendment warns against unlawful searches and seizures of personal papers. The Fifth Amendment protects against self-incrimination. The Sixth Amendment makes sacred the attorney-client privilege. And the Fourteenth Amendment makes a broad guarantee of personal liberty. Additionally, rights not mentioned explicitly in the other amendments are reserved to the people according to the Ninth Amendment. Using rationales from many of these amendments, the Supreme Court used privacy, as a fundamental right, in *Roe v. Wade,* 410 U.S. 113 (1973), to bar most governmental (federal, state, and local) prohibitions against abortion, despite later public opposition that no such right existed in the Constitution.

One of the least disputed examples of a fundamental right would be found in the many nuances of the First Amendment to the Constitution. In a landmark case, *New York Times Co. v. United States,* 403 U.S. 713 (1971)—often referred to as the *Pentagon Papers* case—the U.S. Supreme Court turned back government attempts to censure printed material in the *New York Times.* The *Times* was trying to print a classified study entitled "History of U.S. Decision-Making Process on Viet Nam Policy." In allowing publication to proceed, Justice Hugo L. Black argued that "[t]he word 'security' is a broad, vague generality whose contours should not be invoked to abrogate the fundamental law embodied in the First Amendment. The guarding of military and diplomatic secrets at the expense of informed representative government provides no real security for our Republic."

More recently, the U.S. Court of Appeals for the Sixth Circuit in *Detroit Free Press v. Ashcroft,* 303 F.3d 681 (6th Cir. 2002), confronted the First Amendment issue of post–September 11, 2001, detention hearings for nonresident aliens who had overstayed their visas or who were undocumented entirely. Ruling less than a year after the September 11, 2001, terrorist attacks in New York City and Washington, D.C., the court reversed one of its earlier rulings from the late 1970s and found that the press and the public, including family members, had a right to access deportation hearings even in cases where "special interests" like terrorism were suspected. The Sixth Circuit opinion balanced the needs of national security against the needs of an informed society, concluding that freedom must trump, or outweigh, fear when it comes to the exercise of First Amendment rights. Specifically, the court found that even in "troubling times. . . . A true democracy is one that operates on faith that government officials are forthcoming and honest, and faith that informed citizens will arrive at logical conclusions."

Furman v. Georgia (1972)

In *Furman v. Georgia,* 408 U.S. 238 (1972), the U.S. Supreme Court held that Georgia's imposition of the death penalty violated the Eighth and Fourteenth Amendments of the U.S. Constitution because it was administered in an arbitrary and capricious fashion. In this case, Justices William O. Douglas, William J. Brennan Jr., Potter Stewart, Byron R. White, and Thurgood Marshall filed separate opinions in support of their judgments. Chief Justice Warren E. Burger and Justices Harry A. Blackmun, Lewis F. Powell Jr., and William H. Rehnquist filed separate dissenting opinions. *Furman* was highly significant because it invalidated nearly every death penalty statute in the United States, bringing a halt to executions for several years.

Furman was a consolidated case that also involved other defendants. In all three cases, the defendants were African Americans who had been sentenced to death for murder or rape. William Henry Furman's conviction was for murder in Georgia. In the sentencing, the jurors were not provided with any guidelines regarding when death or life imprisonment should be imposed. Instead, they were left to their own discretion whether to impose the death penalty.

In overturning Furman's sentence, a five–four majority of the Supreme Court reached different conclusions regarding why the Georgia capital punishment law was unconstitutional. Justices Douglas, Stewart, and White ruled that the application of the Georgia death penalty statute violated the Due Process and Equal Protection Clauses of the Fourteenth Amendment in that death was more likely to be imposed on the poor and African Americans than on others. Justice Stewart drew a parallel between the death penalty and being struck by lightning, seeing both as highly random; therefore the death penalty violated the Eighth Amendment's ban on "unusual" punishments. Justice White saw the rarity of the imposition of the death penalty as undermining its value, thereby also making the punishment a violation of the Due Process Clause. Finally, both Justices Marshall and Brennan ruled that the imposition of the death penalty was in itself cruel and unusual punishment, no matter how administered, and therefore was unconstitutional.

The dissenters in the case drew upon a variety of arguments to uphold Furman's conviction and the Georgia death penalty statute. Chief Justice Burger, for example, contended that the Eighth Amendment's original purpose was to ban torture and that it was up to legislators to decide if they wanted to outlaw the death penalty. Justices Powell and Blackmun—the latter eventually came to agree with Brennan and Marshall that the death penalty was unconstitutional—concurred with Burger's claim that it was up to Congress and state legislatures to eliminate capital punishment.

As a result of *Furman v. Georgia,* death penalty statutes across the United States were declared unconstitutional. Hundreds of individuals on death row had their sentences commuted to life in prison, such as Charles Manson in California, who had led a gang of young people on a murder spree during which they killed movie star Sharon Tate and others. No individuals would be executed in the United States for several years after *Furman,* and it was not until *Gregg v. Georgia,* 428 U.S. 153 (1976), involving a statute requiring that juries be given guidance to determine when the death penalty was an appropriate punishment, that the Supreme Court would uphold new death penalty statutes and allow executions to resume.

G

Garcia v. San Antonio Metropolitan Transit Authority (1985)

In *Garcia v. San Antonio Metropolitan Transit Authority,* 469 U.S. 528 (1985), the U.S. Supreme Court upheld the regulation of state employees under 1974 amendments to the federal Fair Labor Standards Act of 1938 as a valid exercise of the power granted to Congress under the Commerce Clause of the U.S. Constitution. The decision reversed the Court's holding in *National League of Cities v. Usery,* 426 U.S. 833 (1976), which had exempted "traditional governmental functions" of states from federal regulation. Court decisions involving the extent of power the Commerce Clause grants have shifted with changing times, but they usually have had in common a debate between advocates of broad congressional power and supporters of states' rights.

The San Antonio Metropolitan Transit Authority (SAMTA) of San Antonio, Texas, argued that as a state agency undertaking local government activities, it qualified for an exemption from the minimum-wage and overtime requirements of the federal act. A transit employee named Joe Garcia sought the protection of the federal legislation and challenged the exemption. The U.S. District Court of Western Texas exempted SAMTA, citing *National League of Cities* in support. The Supreme Court reversed the Texas ruling.

Garcia is also a landmark in the jurisprudence of federalism. The Constitution divides the task of governance between the states and the federal government. The Supreme Court is called on to serve as the umpire of disputes between governments over the scope of their powers. During the New Deal presidency of Franklin D. Roosevelt, the Supreme Court found many of the administration's efforts to regulate the national economy unconstitutional on federalism grounds. The Court eventually became more sympathetic to national regulation and oversaw an expansion of federal activity largely under the auspices of the Commerce Clause power granted to Congress. A wide-ranging commerce power gave Congress the ability to legislate in many areas traditionally assumed to be the sphere of the states. Congress went one step further and began to regulate the states in their employment activities. *Garcia* was the zenith of the Supreme Court's permissibility with the Commerce Clause and federal regulation of state activities. In recent years, however, the Court has reinvigorated limits on the commerce power in cases such as *United States v. Lopez,* 514 U.S. 549 (1995), in which it struck down the Gun-Free School Zones Act of 1990, banning gun possession in school zones, as exceeding congressional authority under the Commerce Clause. The Court also revived state immunity in cases such as *Alden v. Maine,* 527 U.S. 706 (1999).

Given the exemption states could receive from federal labor standards under *National League of Cities,* the states had been understandably keen to ensure that a broad definition of such functions was formulated by the courts. Writing for the majority in *Garcia,* Justice Harry A. Blackmun found that the search for such a core of traditional responsibility conducted in the interim between *National League of Cities* and *Garcia* had been unfruitful. Of the fifteen lower-court decisions Blackmun cited as relevant, five had exempted states or their agencies, and ten had not. Regardless of the results, Blackmun wrote, it was "difficult, if not impossible, to identify an organizing principle that places each of the cases in the first group on one side of a line and each of the cases in the second group on the other side."

Justice Blackmun's opinion in *Garcia* was the embodiment of a "functionalist" approach to federalism. Federalism, he argued, required flexibility more than formalism or rigidity of categories. For a federation to endure and for the units in a federation to flourish, he claimed, they must be allowed to experiment and work outside the bounds of rigid structures. A judiciary patrolling the border between federal and state power ultimately would be hostile to such practices. Blackmun encouraged the judiciary to thin out its patrols and allow governments to blur the lines.

The major question was how the courts were to provide flexibility for evolving federal arrangements

yet avoid judicial subjectivity. Blackmun argued that it could not be done—that subjectivity was inevitable. Thus, questions that had once received judicial resolution were better served by political processes. The majority claimed that state interests were protected through the institutions of national government, namely, the electoral college and the Senate. "The principal and basic limit on the federal commerce power is that inherent in all congressional action—the built-in restraints that our system provides through State participation in federal governmental action." Since one chamber of Congress was composed of the nominal representatives of the states, such representation should ensure that federalism was respected. According to the Court's ruling in *Garcia,* if the federal legislation at hand had made it through the national political process, that meant state concerns had been heeded. It therefore became unnecessary for the Court to consider state sovereignty or any other limit that might be argued to overrule congressional action. Nevertheless, this perspective had come under increasing fire by the late 1990s into the early twenty-first century.

Gault, In re (1967)

The inception of the modern juvenile justice system began in 1967 with the U.S. Supreme Court's decision in *In re Gault,* 387 U.S. 1 (1967). The decision had a tremendous impact on the juvenile justice process, creating a framework that still exists today. Prior to 1967 the focus of the system was on ensuring the social welfare of the juvenile. The system focused on the child's right to custody and not on the child's right to liberty.

Fifteen-year-old Gerald Gault had been found delinquent by the Juvenile Court of Gila County, Arizona, for making lewd telephone calls to a neighbor. At the time he made the prank calls, Gault was on probation for being present when another boy stole a wallet. As punishment for making the prank calls, Gault was sentenced to the State Industrial School until the age of twenty-one, a period of six years. In an eight–one decision, the U.S. Supreme Court found the Arizona Juvenile Code violated the Due Process Clause of the Fourteenth Amendment, since it denied juveniles several procedural due process rights. Gerald Gault had been denied adequate written notice of charges, the right to counsel, the privilege against self-incrimination, and the right to confront and to cross-examine witnesses.

Justice Abe Fortas delivered the Supreme Court's opinion. He noted that the juvenile justice system was created in order to protect children from the harsh realities of the adult criminal justice system. It was an attempt by states to protect, care for, and rehabilitate juveniles. Fortas pointed out that the results of the system had not been entirely acceptable. Had the fifteen-year-old Gault been over age eighteen, he would not have been tried in juvenile court and would have been entitled to rights under the Constitution. The law he violated was a misdemeanor. As an adult, he would have received a $5 to $50 fine or been incarcerated for up to two months. Since he was a minor, he was denied procedural rights guaranteed to adults and received a six-year sentence. Thus, minors were often left without both the procedural safeguards guaranteed to adults and rehabilitative treatment. Since a gap existed between the benevolent intent and the practice in reality, Justice Fortas stated, procedural safeguards were required. The Fourteenth Amendment and the Bill of Rights were not created only for adults. Children also had the right to liberty.

This emphasis on procedural rights as outlined in *Gault* dominated the juvenile justice system for two decades. During the 1980s the view began to change. A rapid increase in juvenile crime occurred from 1985 to the mid-1990s (though it decreased thereafter). During this time the focus shifted from ensuring the fairness of the system to considering the offenses committed. The media increased their coverage of juvenile crime, and state legislatures reexamined their statutes and began to emphasize deterrence and punishment.

Today, juveniles who commit serious crimes are often tried in adult court.

Gideon v. Wainwright (1963)

In the landmark case *Gideon v. Wainwright,* 372 U.S. 335 (1963), the U.S. Supreme Court held that the right of an indigent defendant in a criminal trial to have the assistance of counsel was a fundamental right essential to a fair trial and due process under the Fourteenth Amendment to the U.S. Constitution. The *Gideon* decision reversed the Court's previous position in *Betts v. Brady,* 316 U.S. 455 (1942), and changed the operation of criminal procedure throughout the nation.

The case arose in Florida when the petitioner, Clarence Earl Gideon, was charged with breaking into and entering a poolroom with intent to commit a crime. This offense constituted a felony under Florida law. Gideon appeared in court without funds and without a lawyer and asked the court to appoint counsel for him. The judge denied the request, citing the Florida legal requirement that counsel would be appointed only for defendants charged with a capital offense. Gideon then conducted his own defense and was convicted by a jury and sentenced to serve five years in state prison. After the Florida Supreme Court denied his appeal, Gideon filed a handwritten petition with the U.S. Supreme Court.

The issue before the Court was whether it should interpret the Fourteenth Amendment to incorporate a requirement that indigent defendants have the right to counsel. In *Johnson v. Zerbst,* 304 U.S. 458 (1938), the Court had already held that the Sixth Amendment applied in federal court to require that counsel be provided for indigent defendants unless they competently and intelligently waived that right. But the Court had previously rejected the argument that the Fourteenth Amendment required states to do the same. In *Betts v. Brady,* the Court held that only the Bill of Rights provisions deemed fundamental and essential to a fair trial were made obligatory upon the states by the Fourteenth Amendment and that the appointment of counsel was not essential to a fair trial.

In *Gideon,* the Court simply reversed itself, holding that certain fundamental rights found in the first eight amendments to the Constitution were applicable to the states through the Due Process Clause of the Fourteenth Amendment, a legal concept known as the incorporation doctrine. The fundamental right of the accused to the aid of counsel in a criminal prosecution was one such right. More directly, the Court asserted, "[t]he right of one charged with crime to counsel may not be deemed fundamental and essential to fair trials in some countries, but it is in ours."

Ginsburg, Ruth Bader (b. 1933)

Ruth Bader Ginsburg was born in 1933 and has served on the Supreme Court since 1993. As a professor at Columbia University Law School and director of the American Civil Liberties Union's Women's Rights Project in the 1970s, she argued six gender-equality cases before the Supreme Court and won five. In the process, she played the leading role in estab-

Ruth Bader Ginsburg, Supreme Court nominee, at Senate confirmation hearings. In her career as a lawyer and an associate justice, Justice Ginsburg has been noted for her defense of women's rights. *(© Rob Crandall/The Image Works)*

lishing the constitutional right of women to equal treatment.

Ginsburg's particular contribution lay in part in her insistence that each law challenged as discriminatory to women be understood in the context of their historical marginalization. In *Edwards v. Healy,* 421 U.S. 772 (1975), for example, she argued that laws requiring men but not women to serve on juries seemed generous, but they exacerbated the societal belief that women did not perform equal citizenship responsibilities and therefore could be denied equal societal benefits. Another pertinent case was *Duren v. Missouri,* 439 U.S. 357 (1979), which struck down a Missouri law giving women automatic exclusion from jury duty. Because the justices listening to her pleas were all men, she brought gender-equality cases on behalf of men who were harmed by gender-specific laws, as she did in *Weinberger v. Wiesenfeld,* 420 U.S. 636 (1975), in which she challenged the Social Security Act's provision of survivors' benefits for widows but not widowers.

President Jimmy Carter appointed Ginsburg to the federal Court of Appeals for the District of Columbia in 1981, and President Bill Clinton elevated her to the U.S. Supreme Court in 1993, by which time she had earned praise as a nonideological judge who emphasized procedure and objectivity. As reflected in her Supreme Court opinions, her judicial philosophy is based on a firm commitment to popular democracy and protection of individual rights.

Ginsburg dissented, for example, when the Court in *Board of Trustees v. Garrett,* 531 U.S. 356 (2001), held that Congress had no authority to give legal recourse to state employees who alleged discrimination on the basis of disability; in *Kimel v. Board of Regents,* 528 U.S. 62 (2000), which held similarly as to age; and in *United States v. Morrison,* 529 U.S. 598 (2000), which held likewise for women victimized by sexual violence. Her dissent in *Adarand Constructors, Inc. v. Peña,* 515 U.S. 200 (1995), chastised the majority for not recognizing both the reality of persistent racial inequality and the authority of Congress to enact remedial affirmative action programs. In *Florida v. J.L.,* 529 U.S. 266 (2000), she wrote for a unanimous Supreme Court that police could not constitutionally stop and search people on the basis of anonymous tips. She dissented in *Arizona v. Evans,* 514 U.S. 1 (1995), when the Court upheld a conviction based on a warrantless search resulting from inaccurate state computer records, and in *Board of Education v. Earls,* 536 U.S. 822 (2002), when the Court upheld the power of school districts to test students in extracurricular activities for drugs.

A high point of Ginsburg's judicial career came in *United States v. Virginia,* 518 U.S. 515 (1996), when she wrote for the Court that the Virginia Military Institute, a publicly funded college, could not constitutionally refuse to admit women. Her opinion, which held that the Constitution required courts to examine gender-specific governmental policies with "skeptical scrutiny" and to uphold them only if the government presented an "exceedingly persuasive justification" that did not rely upon outmoded stereotypes, drew upon the precedents that Ginsburg herself had established as an attorney in the 1970s.

Gitlow v. New York (1925)

In *Gitlow v. New York,* 268 U.S. 652 (1925), the U.S. Supreme Court faced the issue of whether the free speech provision of the First Amendment to the U.S. Constitution applied to the states. The Court concluded that free speech was a fundamental personal liberty and as such was subject to the Due Process Clause of the Fourteenth Amendment by which fundamental rights were to be protected from infringement by the states.

Benjamin Gitlow, a former Socialist assemblyman and a participant in the founding of the American Communist Party, was convicted of violating New York's Criminal Anarchy Act, a state version of national sedition legislation. The New York statute, enacted in 1902, made it a crime to advocate the violent overthrow of the government. Gitlow and several other Communist Party members were charged with violating the law by publishing subversive materials. Gitlow admitted he was a Communist and that he published the *Revolutionary Age* newspaper and a pamphlet entitled *Left Wing Manifesto.* His primary objective in distributing these materials was the "destruction, conquest and the annihilation of the government of the United States," but he denied that these materials amounted to an actual call for violent revolution. Clarence Darrow, Gitlow's attorney, argued that although the Communists perhaps were wrong and badly misguided, they were entitled to express their views.

The jury convicted Gitlow and the others after fewer than three hours of deliberation. Gitlow was sentenced to a minimum of five years in prison, but he and the others had their convictions overturned in the New York appellate courts or received pardons from Governor Alfred E. Smith. Smith postponed his pardon of Gitlow to give time for the appeal of his case to the Supreme Court. On June 8, 1925, the Supreme Court found New York's anarchy statute constitutional and upheld Gitlow's conviction by a seven–two vote.

Although Gitlow lost, free speech did not fare quite so badly. Before ruling on the New York law and Gitlow's conviction, the Court first had to determine whether the free speech provision of the First Amendment even applied to the states. The Court concluded that free speech was a fundamental personal liberty protected by the Fourteenth Amendment from impairment by the states. This aspect of the *Gitlow* decision was crucial to the nationalization (incorporation) of the Bill of Rights (the first ten amendments to the Constitution)—the extension of most of the Bill of Rights to actions of the states by means of the Due Process Clause of the Fourteenth Amendment.

Justice Edward T. Sanford said for the Court that New York's statute was constitutional because it penalized only expression that incited violence—it prohibited advocacy of government overthrow by unlawful means. The Constitution neither conferred an "absolute right to speak or publish" whatever one may choose nor provided "immunity for every possible use of language and prevents the punishment of those who abuse this freedom." Without reasonable restrictions, utterances that incited violence would "imperil [the nation's] existence as a constitutional State." The First Amendment, Justice Sanford suggested, did not deprive a state of the "primary and essential right of self-preservation."

New York's law reflected the legislative judgment that such expression could be prohibited because it represented a sufficient danger of "substantive evil." The danger was no less real or substantial because the "effect of a given utterance cannot be accurately foreseen." Advocacy of the objectives contained in the *Manifesto* could provide the "spark" that caused a "smoldering fire" to "burst into a sweeping and destructive conflagration," and a state was not unreasonable if it sought to "extinguish the spark without waiting until it has enkindled the flame." A state cannot be required to postpone adoption of protective measures until the revolutionary utterances had led to "imminent or immediate danger." In other words, a state may "suppress the threatened danger in its incipiency." Sanford's reference to anticipated danger prompted the characterization of the *Gitlow* ruling as enabling the "killing of the serpent in the egg."

Justice Oliver Wendell Holmes Jr., writing for Justice Louis D. Brandeis and himself, disagreed that the *Manifesto* was an unlawful incitement. "Every idea," Holmes said, "is an incitement," and in his judgment there was no real and present danger of forceful overthrow of the government by the small group who

shared Gitlow's views; the "redundant discourse" contained in the *Manifesto* had "no chance of starting a present conflagration." Gitlow later was pardoned by Governor Smith and resumed active participation in the Communist Party.

Globe Newspaper Co. v. Superior Court (1982)

In *Globe Newspaper Co. v. Superior Court,* 457 U.S. 596 (1982), the U.S. Supreme Court struck down a Massachusetts law that denied the public and press access to a courtroom during the testimony of an underage victim of a sexual offense. The case raised issues of the right to a free press as provided in the First Amendment to the U.S. Constitution.

In accordance with the General Laws of Massachusetts, the Superior Court of Norfolk County closed its proceedings to public observers when three teenage girls took the stand to testify against the man accused of raping them. The Globe Newspaper Company challenged the action, claiming the law infringed on the rights of a free press as protected by the First Amendment. Lawyers for the Superior Court argued the Massachusetts law encouraged young witnesses to testify truthfully and protected underage victims of sexual assault from additional unnecessary humiliation.

The Supreme Court sided with Globe and overturned the Massachusetts law. Justice William J. Brennan Jr., writing for the six–three majority, found the law in violation of the First Amendment, arguing it was necessary for courtrooms to remain open to the press and public in order to subject the proceedings to public scrutiny and to lend the air of fairness to the judicial process. Although the state may have an interest in protecting minors from further trauma stemming from the crime, this interest did not outweigh the First Amendment. The Court allowed for the possibility that a state could bar the public from attending a criminal trial if the state demonstrated a compelling government interest, but the broad scope of the Massachusetts law (which applied to all cases involving a minor and not just to those involving a state interest) did not meet this standard.

Chief Justice Warren E. Burger argued in a dissent that the majority's decision interfered with the state's responsibility to protect its citizens. He found it bizarre that states could still protect the interests of a minor standing trial for rape by closing the courtroom to the public but could not do the same in order to protect an innocent underage rape victim.

Goldberg v. Kelly (1970)

In *Goldberg v. Kelly,* 397 U.S. 254 (1970), the U.S. Supreme Court in a six–three vote invalidated a New York procedure for terminating welfare payments. The New York practice did not provide welfare recipients sufficient opportunity to present evidence challenging termination of their benefits; it thus deprived them of their rights under the Due Process Clause of the Fourteenth Amendment to the U.S. Constitution.

Residents of New York who received financial aid

under the federal program Aid to Families with Dependent Children (AFDC) and had that aid terminated filed suit on the grounds that the procedure used in New York violated their right to due process. New York, when terminating benefits for AFDC and the state-administered Home Relief program, gave affected recipients a seven-day notice and the right to submit a written statement of protest. The terminated recipients were not allowed an evidentiary hearing prior to termination, but were required to wait until after it was an accomplished fact.

The district court held that only a pretermination evidentiary hearing would satisfy constitutional due process and rejected the argument of the welfare officials that the combination of the existing posttermination hearing and the informal pretermination review was sufficient.

The Supreme Court, through Justice William J. Brennan Jr.'s opinion for the majority, held that giving recipients the right only to submit a written statement prior to termination and affording only a posttermination hearing did not meet the requirements of procedural due process under the Fourteenth Amendment. The recipients had to be given an opportunity to retain an attorney if they wished to present in person their argument why their benefits should not be terminated. The Court recognized that the state had an interest in conserving resources, but that this interest was outweighed by the interests of the welfare recipients in receiving uninterrupted public assistance, which among other things promoted the general welfare. Justice Brennan further concluded that welfare benefits were a matter of statutory entitlement for persons qualified to receive them, and procedural due process was applicable to their termination.

Goldberg, Arthur J. (1908–1990)

In his service to the nation as a labor lawyer, secretary of labor, associate justice of the Supreme Court, and ambassador to the United Nations, Arthur J. Goldberg consistently fought for the rights and liberties of workers and the disadvantaged.

Born in Chicago's west side in 1908, Goldberg was the last of eight children of Ukrainian Jewish immigrants and grew up in poverty. His father drove a horse and wagon through the streets of Chicago selling food and vegetables to support his large family. Upon his death at age fifty-one, the Goldberg children went to work. Young Arthur's jobs included wrapping fish, selling shoes, and selling coffee at Wrigley Field during Cubs games—all while excelling in the public schools. He graduated high school at age sixteen and then attended Crane Junior College and DePaul University, taking night classes while continuing to work during the day. At age eighteen, he enrolled in Northwestern Law School and in 1929 graduated first in his class.

Goldberg left his first job at a top Chicago law firm after he was asked to foreclose mortgages during the depression. He opened his own practice and began representing workers and the oppressed. He first gained national attention as counsel for the Chicago Newspaper Guild in its 1938 strike against the William Randolph Hearst newspapers in Chicago. Working without pay, Goldberg spent hour after hour in courtrooms defending picketers. Hearst eventually recognized the union. During World War II, Goldberg served as a captain and then major in the army. After the war, Goldberg returned to private practice, represented the United Steelworkers, and was instrumental in the 1955 merger of the American Federation of Labor with the Congress of Industrial Organizations (AFL-CIO). He became the group's chief counsel, brokering agreements and filing amicus briefs in support of civil rights cases at the U.S. Supreme Court. In 1961, President John F. Kennedy appointed him U.S. secretary of labor.

But only one year later, Kennedy tapped Goldberg for a seat on the Supreme Court. Goldberg immediately provided a key fifth liberal vote and joined Court

Arthur Goldberg receiving the Presidential Medal of Freedom from President Jimmy Carter, July 26, 1978. Justice Goldberg was a defender of individual rights on the Supreme Court under Chief Justice Earl Warren. *(Courtesy Jimmy Carter Library)*

majorities in such landmark cases as *Gideon v. Wainwright,* 372 U.S. 335 (1963), establishing a constitutional right to counsel; *Escobedo v. Illinois,* 378 U.S. 478 (1964), ruling that the Sixth Amendment provides an "absolute right to remain silent"; *New York Times Co. v. Sullivan,* 376 U.S. 254 (1964), holding that the First Amendment protects the publication of statements about public figures; and *Griswold v. Connecticut,* 381 U.S. 479 (1965), determining that the Constitution contains a right to privacy that includes the use of contraception by married couples.

Convinced by President Lyndon Johnson that he could play a major role in ending the war in Vietnam, Goldberg resigned from the Court in 1965 to serve as U.S. ambassador to the United Nations. Goldberg's efforts to end the war, however, were futile, as the Johnson administration continued to escalate the conflict. When Johnson's nomination of Abe Fortas to be chief justice encountered Senate opposition, the president briefly considered Goldberg. But the Senate would not act on any nomination by the lame-duck president, and Johnson never submitted Goldberg's name. The ambassador left his post in 1968 and ran unsuccessfully for governor of New York in 1970. He served President Jimmy Carter as ambassador-at-large, focusing on human rights issues. He received the Presidential Medal of Freedom in 1978 and practiced law until his death in 1990 at the age of eighty-one.

Good Faith Exception

The good faith exception is an exception to the general requirement that a warrant is required for most searches and seizures. The Fourth Amendment to the Constitution guarantees the right of people to be secure in their persons, homes, papers, and effects against unreasonable search and seizure. One of the most important practical questions for the courts was how this amendment would be enforced if the government conducted an illegal search. In its decision in *Weeks v. United States,* 232 U.S. 383 (1914), the U.S. Supreme Court created the "exclusionary rule" to deal with the effects of an illegal search. Under this rule, the fruits of any search that violated the Fourth Amendment could not be used in court against the accused.

The exclusionary rule has been controversial. In a series of decisions, the Court, under the leadership of Chief Justice Warren E. Burger, began to create exceptions to the exclusionary rule. For example, the Court decided that illegally seized evidence did not have to be excluded from grand jury proceedings, that the exclusionary rule did not apply to civil trials, and that state prisoners could no longer petition for a writ of habeas corpus (petition for release from illegal confinement) to review their convictions on Fourth Amendment grounds involving violation of the exclusionary rule. For the most part, these exceptions involved peripheral matters and were more symbolic than practical.

In a pair of companion cases, *United States v. Leon,* 468 U.S. 897 (1984), and *Massachusetts v. Sheppard,* 468 U.S. 981 (1984), the Burger Court created the good faith exception to the exclusionary rule. In each of these cases, the police applied for a warrant despite procedural flaws, and a magistrate issued the warrant. Lower courts excluded the evidence in each case. The Burger Court reversed in both cases, creating the good faith exception. The Court ruled that the exclusionary rule was primarily designed to deter illegal police behavior. The Court, in an opinion authored by Justice Byron R. White, held that the exclusionary rule should not be applied to circumstances when officers acted in a reasonable fashion and when it was not designed to deter illegal police behavior. The Court ruled that the problems were caused by the magistrate's error and the police had acted in good faith.

The Rehnquist Court continued to extend the good faith exception, though most opinions created only peripheral extensions. Thus, the Court expanded the doctrine to include situations involving police reliance upon flawed court records, as in *Arizona v. Evans,* 514 U.S. 1 (1995), and on state statutes, as in *Illinois v. Krull,* 480 U.S. 340 (1987). Such decisions limited application of the doctrine to instances in which police rely upon a government document (warrant, court record, statute) that they have no reason to believe is flawed. The bottom line as a result of *Leon* and *Sheppard* is that evidence will rarely be suppressed when a judge issues a warrant. But some state supreme courts have found a legitimate means to extend procedural rights by declaring that rights denied by the Supreme Court under the U.S. Constitution are protected independently under state constitutions; those courts have held that there is no good faith exception to the rules of search and seizure in their constitutions.

Good News Club v. Milford Central School (2001)

Good News Club v. Milford Central School, 533 U.S. 98 (2001), pitted a public school's obligation to avoid endorsement of religion against the school's obligation to offer facilities to the public on an evenhanded basis. The case involved distinct issues arising under the Establishment Clause of the First Amendment to the U.S. Constitution and free speech rights in a public forum, also interpreted as arising under the First Amendment. In a divided opinion, a majority of the Court ruled in favor of granting open access in a case involving an evangelical Christian organization for grade school children that wished to meet in classrooms immediately after school.

Milford is a village in upstate New York with a single school for kindergarten through twelfth grade. School district policy allowed rooms to be used by nonschool groups for educational, social, civic, or recreational meetings and entertainment events, but in an effort to avoid unconstitutional establishment of religion (the Establishment Clause prohibits government actions what would constitute establishment of religion), the policy did not allow school premises to be used for "religious purposes."

The Good News Club was an evangelical Christian group that held meetings for elementary school children that were similar to church Sunday school sessions. Club meetings featured prayers, religious songs, and memorization and discussion of Bible verses. The centerpiece of each meeting was a "challenge" in which children who considered themselves saved would declare loyalty to "Jesus as Savior," and children who were "unsaved" would be invited by the teacher to receive Jesus as "your Savior from sin." In 1996 the Milford school board decided that club meetings were a "religious purpose" under its policy and so denied use of the school building.

The Second Circuit Court of Appeals held that the exclusion of the Good News Club was within the school's authority to reserve designated public-forum spaces for certain groups or for the discussion of certain topics. In a strongly worded decision, a majority of the U.S. Supreme Court ruled that the school's policy did not designate among subject matters (which would have been acceptable) but instead discriminated among viewpoints (which was not). Six members of the Court ruled that "speech discussing otherwise permissible subjects cannot be excluded from a limited public forum on the ground that the subject is discussed from a religious viewpoint." In so holding, the majority rejected the notion that speech consisting of prayer, religious exercise, evangelism, or religious indoctrination constituted a distinct category requiring separate constitutional analysis. "What matters for purposes of the Free Speech Clause," said the majority, "is that we can see no logical difference in kind between the invocation of Christianity by the Club and the invocation of teamwork, loyalty, or patriotism by other associations [like the Boy Scouts] to provide a foundation for their lessons." On this point, Justice David H. Souter and other dissenters argued that "an evangelical service of worship calling children to commit themselves in an act of Christian conversion" was different in kind from a "discussion of a subject from a particular, Christian point of view." The dissenters objected that the Constitution did not require "that any public school opened for civic meetings must be opened for use as a church, synagogue, or mosque."

The majority then considered whether the school's obligations under the Establishment Clause might outweigh the viewpoint-neutrality doctrine. Five members concluded that it could not: When school facilities are being used for a nonschool function without direct government sponsorship, the cases forbidding school-sponsored prayer are inapposite. Although many earlier cases accepted that the danger of state endorsement of religion was stronger the younger the audience, the *Good News* majority said that the Establishment Clause did not "foreclose private religious conduct during nonschool hours merely because it takes place on school premises where elementary school children may be present." One dissenter objected that the majority's Establishment Clause discussion was unnecessary; three other justices argued that trial was needed to determine whether club meetings after school would amount to an unconstitutional message of official endorsement of the club's religion.

Although *Good News Club* was a controversial case with twenty friend-of-the-court briefs (amici curiae) filed on behalf of over fifty-five different parties, its

result was consistent with earlier decisions involving older students that favored equal access to educational facilities for religious groups. For example, *Widmar v. Vincent,* 454 U.S. 263 (1981), and *Rosenberger v. University of Virginia,* 515 U.S. 819 (1995), required university facilities to be made available for religious groups. *Lamb's Chapel v. Center Moriches Union Free School District,* 508 U.S. 384 (1993), required high schools making rooms available to community groups to allow religious presentations. *Westside Community Schools v. Mergens,* 496 U.S. 226 (1990), upheld the constitutionality of a provision of the Equal Access Act requiring secondary schools receiving federal funds to allow meetings of religious clubs in any "limited open forum" operated by the school. The novelty of *Good News Club* was its extension of the doctrine to elementary schools.

Grand Jury

A grand jury consists of a group of individuals summoned and sworn in by a court and charged with the responsibility to ascertain if there is sufficient evidence to justify going forward with a criminal trial. Grand juries are distinct from petit juries in that the former determine if charges are warranted, whereas the latter determine if a criminal defendant is guilty. If a grand jury determines that the prosecutor has presented enough evidence to warrant a trial, it issues an indictment, also referred to as a true bill. An alternative to a grand jury in some states is a preliminary hearing at which a judge evaluates the evidence presented by the prosecutor and decides if a trial should take place. At the federal level, the Sixth Amendment requires the use of a grand jury for the indictment of an individual "for a capital or otherwise infamous crime."

Members of grand juries are generally selected from the same pool of individuals and by the same means as members of petit juries. In most jurisdictions, this means that grand jurors are selected from lists of registered voters or licensed drivers. The number of grand jurors varies depending upon the jurisdiction, with the number of jurors serving on state grand juries ranging from five to twenty-three and the number serving on federal grand juries ranging from sixteen to twenty-three. Unlike petit juries, which sit to dispose of a single case, grand juries sit for varying terms of service and may hear evidence regarding any number of potential crimes. Grand juries may also conduct investigations separately from the process of deciding on an indictment in a particular case or cases, with few if any formal restraints on the scope of such investigations. In *United States v. Morton Salt Co.,* 338 U.S. 632 (1950), the U.S. Supreme Court thus observed that a grand jury may "investigate merely on suspicion that the law is being violated, or even just because it wants assurance that it is not."

The antecedent of the grand jury was the jury of inquest, which originated in English law during the tenth and eleventh centuries. Over time, grand juries evolved from accusatory bodies into institutions intended to protect citizens from politically motivated or otherwise unwarranted criminal prosecutions. In colonial America, a 1735 case involving John Peter Zenger perhaps best illustrates that point. New York Governor William Cosby sought to have Zenger—the publisher of the *New York Weekly Journal,* a paper highly critical of the governor and his administration—indicted by a grand jury for publishing seditious libels. When the first grand jury declined to indict Zenger, a second grand jury was summoned. Though the second grand jury did find that two items published in the *Journal* were libelous, a petit jury subsequently accepted the truthfulness of the items and refused to convict Zenger. More recently, in *Wood v. Georgia,* 370 U.S. 375 (1962), the Supreme Court asserted that grand juries "served the invaluable function in our society of standing between the accuser and the accused, whether the latter be an individual, minority group, or other, to determine whether a

charge is founded upon reason or was dictated by an intimidating power or by malice and personal ill will."

Individuals may be compelled to testify before a grand jury through a subpoena. Such persons may be summoned as witnesses or as subjects of investigation. In either case, individuals testifying before a grand jury do not enjoy the same protections afforded criminal suspects subject to police questioning as required by *Miranda v. Arizona,* 384 U.S. 436 (1966). In particular, no one is obligated to advise those testifying before a grand jury about their constitutional protections against self-incrimination, as the Court held in *United States v. Wong,* 431 U.S. 174 (1977). Individuals who do attempt to exercise their privilege against self-incrimination under the Fifth Amendment may find themselves required to testify anyway if the government grants immunity. Immunity may be granted to cover prosecution based on an individual's compelled testimony (known as *use* or *testimonial immunity*) or more broadly to cover prosecution for anything the grand jury is investigating (known as *transactional immunity*). In either case, the person called to testify does not have the right to decline immunity, as the Court held in *Brown v. Walker,* 161 U.S. 591 (1896), involving testimony about railroad freight charges; and in *Kastigar v. United States,* 406 U.S. 441 (1972), involving testimony about organized crime.

Individuals appearing before a grand jury also do not enjoy the right to legal representation. Typically, the only people present at grand jury proceedings are the jurors, the prosecutor, and the individual testifying, though the individual providing testimony is usually permitted to consult with his or her attorney (who remains outside the grand jury room) according to the Court's ruling in *United States v. Mandujano,* 425 U.S. 564 (1976). The rationale is that the Sixth Amendment right to counsel applies to individuals who have already been indicted for a crime, whereas grand jury proceedings (by definition) precede an indictment.

President William Clinton's videotaped grand jury testimony, September 1998. President Clinton was accused of sexual harassment by Paula Jones, accused of perjury by a special prosecutor, and impeached by the House of Representatives, although the Senate did not convict.
(© Bob Daemmrich/The Image Works)

Critics charge that contrary to the idealized version of the grand jury as a protector defending individuals against wayward prosecutors, grand juries are, in practice, dominated by prosecutors. Prosecutors are largely responsible for initiating and guiding grand jury proceedings. Further, since the prosecutor is the individual with the most legal training and experience as well as the individual with whom jurors interact the most consistently, jurors may be consciously or unconsciously prone to accede to the prosecutor's wishes. Other critics charge that prosecutors can further enhance their influence over grand jurors by withholding exculpatory evidence, which they are permitted to do. Prosecutors are further advantaged by the fact that they may use evidence obtained in violation of Fourth Amendment protections against unreasonable searches and seizures to secure an indictment, even if that evidence cannot be used subsequently at trial, as the Court ruled was permissible in *United States v. Calandra,* 414 U.S. 338 (1974).

One of the most controversial powers of grand juries is their authority to compel reporters to provide confidential information. In 1972 the Court in three companion cases—*Branzburg v. Hays, In re Pappas,* and *United States v. Caldwell,* all found at 408 U.S. 665 (1972)—firmly declined to exempt reporters from providing compelled testimony before grand juries under the First Amendment. In each of these three cases, reporters had reported on criminal activity that they were allowed to observe only upon the condition that they not reveal their sources. In refusing to afford reporters this exemption, the Court majority argued that very few confidential news sources would be affected, an assertion sharply disputed by Justice Potter Stewart, who had experience as a newspaper

reporter in his life prior to the bench. The majority further argued that it was preposterous to "seriously entertain the notion that the First Amendment protects a newsman's agreement to conceal the criminal conduct of his sources, or evidence thereof, on the theory that it is better to write about crime than to do something about it." In reaction to the ruling in these cases, many states passed shield laws offering reporters some protections for declining to provide such information.

Gravity-of-the-Evil Test

"Gravity of the evil," a phrase adopted as a test in free speech cases in *Dennis v. United States,* 341 U.S. 494 (1951), was the U.S. Supreme Court's attempt to reconcile the clear-and-present-danger test then in use with the anti-Communist mood of the country during the early 1950s McCarthy era, when Senator Joseph McCarthy (R-WI) launched his notorious investigations of alleged Communists in government. The Court-created tests were used to determine when government could permissibly regulate speech and not be in violation of the First Amendment to the U.S. Constitution.

Under the clear-and-present-danger test, the Court would permit suppression of speech only when the danger was both serious and immediate. This posed a problem in *Dennis,* a case involving eleven New York Communist leaders charged under the Smith Act, which made it illegal to teach or advocate the overthrow of the government by force or violence, because the defendants did not advocate immediate violence. If the Court applied the clear-and-present-danger test strictly, it would have to strike down the Smith Act as applied, because the threat posed by the defendants, if "clear," was not "present."

To remedy this situation, the Court devised a new test. Instead of looking for a clear and present danger, the Court asked "whether the gravity of the evil, discounted by its improbability," justified the prosecutions. The new test had the advantage of allowing the government to respond to grave but improbable threats. At the same time, the new test worried civil libertarians, who wondered if the new test marked the return to the days of *Gitlow v. New York,* 268 U.S. 652 (1925), and *Whitney v. California,* 274 U.S. 357 (1927), when the Court relied on the bad-tendency test, which allowed the state to punish all seditious speech, even if it posed no threat at all.

These worries were unfounded. The Smith Act did unleash a slew of anti-Communist prosecutions, but the bad-tendency test remained on the shelf. In fact, only six years later, in *Yates v. United States,* 354 U.S. 298 (1957), the tide began to turn. In *Yates* the Court interpreted the Smith Act narrowly and held that it did not cover the "advocacy of ideas." Then in *Brandenburg v. Ohio,* 395 U.S. 444 (1969), the Court held that the state now had to show that the speaker incited "imminent lawless action" and that the speaker's words would produce such action.

The gravity-of-the-evil test faded from view. So, too, did the clear-and-present-danger test. In both *Yates* and *Brandenburg,* the Court preferred bright-line standards to the abstract terms of "clear and present danger"—terms that, in times of crisis, could be expanded to justify increasing restrictions of speech. If the gravity-of-the-evil test did not protect speech itself, it did clear away the undergrowth of the clear-and-present-danger test, thus paving the way for the

expansion of speech protection in the late 1950s and 1960s.

Greek Roots of Civil Liberties

Many of the civil liberties people enjoy in the United States were initiated in Athens, Greece. There is little evidence of meaningful civil liberties in other Greek city-states. Athenian civil liberties grew concomitantly with democracy.

Solon (circa [c.] 630–561 B.C.E.) turned Athens from an aristocracy into an oligarchy (c. 594 B.C.E.). Cleisthenes (c. 560–500 B.C.E.) was the first leader to implement democracy by making the Assembly (*ekklēsia*) sovereign (508 B.C.E.). Participation in the Assembly was open to all citizens. The Assembly functioned broadly, legislating and adjudicating laws, declaring wars, and making peace. Pericles (c. 495–429 B.C.E.) initiated a radical democracy. He was the first to pay wages for public service in the Assembly (c. 457 B.C.E.); Cleon (?–422 B.C.E.), his successor, later increased such pay (c. 423 B.C.E.). There were two short-lived oligarchic revolutions, one in 411 B.C.E., the other in 404 B.C.E. (the Thirty Tyrants).

Civil liberties were delimited differently through different administrations. Such liberties were various and variable. Only adult males who were born of two Athenians could be citizens (*politai*), though prior to Pericles they required only one parent (the father). A legal guardian usually represented female city-members (*astai*), resident foreigners (*metoikoi*), and slaves (*douloi*) in court. Citizens had certain liberties. They could draft indictments (*graphai*) against anyone and on behalf of anyone. If charged with a crime in the company of others, they were given a separate trial. Citizens could associate freely. They could speak freely, as demonstrated by their philosophy, sophistry, and drama. Citizens could not become enslaved through debt, could not be tried twice for the same offense, and their punishment could not extend to their families.

In Athens, citizens were obliged to participate in civil and religious functions, on penalty of losing their civil rights (*atimia*). Citizens could also lose their rights by refusing to perform military service, by refusing to take sides during civil strife, or by violating the ten-year banishment of ostracism (so called for the pot-shards [o*straka*] on which an unfortunate candidate was listed). If a citizen caught his wife having sex with another man, the husband had to divorce her to retain his civil rights.

To prevent frivolous lawsuits, a citizen who brought an indictment had to win at least one-fifth

"Images Removed Due to Copyright Issues"

of the jury or pay a large fine (1,000 drachmas, about $50,000 in today's dollars). To protect against unconstitutional laws, a citizen could be charged with making an illegal proposal to the Assembly, even when the Assembly approved the measure. After 411 B.C.E., the Athenians outlawed any activity against democracy. Previously, a little-known diviner named Diopeithes successfully sponsored a motion to outlaw teaching astronomy or denying the existence of the supernatural (c. 432–429 B.C.E.). There were at least three famous prosecutions under the law: Anaxagoras of Clazomenae (c. 500–428 B.C.E.) was the first person indicted under the law (c. 450 B.C.E.); Aristophanes (c. 450–385 B.C.E.) was indicted in 426 B.C.E.; and Socrates (c. 469–399 B.C.E.) was indicted in 399 B.C.E. Anaxagoras left the city; Aristophanes successfully defended himself; Socrates was convicted and sentenced to death.

Thucydides (c. 450–400 B.C.E.) reported Pericles as eloquently espousing the Athenian values of freedom (*eleutheria*), equality (*isonomia*), justice (*dike*), and freedom of speech (*parrhesia*). Athenians valued freedom in their person and their associations, equality under the law, justice through jury-courts, and freedom to speak authentically.

Civil liberties for U.S. citizens are contained in the Bill of Rights (the first ten amendments to the Constitution) and in subsequent constitutional amendments. Such civil liberties include the freedom of speech, of religion, and of the press. Athens did not have a Bill of Rights as such. Still, in the United States, as in Athens, the actual scope of any civil liberty is determined in practice as new cases arise.

Gregg v. Georgia (1976)

In *Gregg v. Georgia,* 428 U.S. 153 (1976), the U.S. Supreme Court upheld the constitutionality of a Georgia death penalty statute that provided for a two-stage process: the first to determine guilt, the second, the punishment. In this case the Court effectively overturned its four-year-old decision in *Furman v. Georgia,* 408 U.S. 238 (1972), in which the Court had halted executions in the United States because of due process concerns about the fairness of the death penalty.

In *Furman,* the Supreme Court's concern in 1972 was that the death penalty was being applied in an arbitrary and capricious manner because applicable statutes gave juries too much discretion in deciding what sentence to impose. This decision led to the invalidation of all death penalty statutes in the country and the commutation of sentences of all individuals on death row to life imprisonment. The *Furman* decision also led to efforts to craft new death penalty statutes that the Supreme Court would uphold. Georgia was one state that enacted a new death penalty statute.

Georgia's new statute provided for guided discretion when the jury was to make a decision regarding what sentence to impose in a capital murder case. After a person was convicted of murder, there would then be a second hearing or trial to determine the penalty. Juries would have to weigh a list of statutorily defined aggravating and mitigating factors against one another to decide whether execution was an appropriate penalty. Aggravating factors could include the heinousness of the crime, for example; mitigating factors might include the upbringing of the defendant. If the jurors decided aggravating factors outweighed mitigating ones, they could impose the death penalty. Finally, the state law provided for automatic review of all death sentences.

In *Gregg,* Troy Gregg challenged the imposition of the death penalty after being found guilty and condemned to death for killing two men after they had picked him up hitchhiking. Gregg claimed self-defense. The Georgia Supreme Court upheld the death sentences for the murders, concluding that they

had not resulted from prejudice or any other arbitrary factor and were not excessive or disproportionate to the penalty applied in similar cases. Gregg appealed to the Supreme Court.

In a seven–two opinion written by Justice Potter Stewart, the Court upheld the Georgia statute. The majority ruled that the new provision giving the jury guided discretion did not violate either the Eighth Amendment prohibition on cruel and unusual punishments or the Due Process Clause of the Fourteenth Amendment. Instead, Georgia had addressed the concerns the Court articulated in *Furman* and had provided ample limits upon juror discretion when death could be a punishment. Justices William J. Brennan Jr. and Thurgood Marshall dissented in *Gregg,* arguing as they had in *Furman* that the death penalty was unconstitutional because it violated the Eighth Amendment ban on cruel and unusual punishments.

As a result of *Gregg,* states were again free to enact death penalty statutes and execute individuals so long as they created the two-stage, or bifurcated, process Georgia had enacted; limited juror discretion with a list of aggravating and mitigating factors; and provided for mandatory appeals if death was imposed as a sentence. Although the Court in *Gregg* upheld the death penalty, controversy persists regarding both its effectiveness and fairness as a deterrence or punishment for murder as well as its use in a racially arbitrary manner.

Griswold v. Connecticut (1965)

Griswold v. Connecticut, 381 U.S. 479, decided in 1965, formally established the constitutional right to privacy. The case became even more important constitutionally when it became the precedent for the famous *Roe v. Wade,* 410 U.S. 113 (1973), the case that legalized abortion in the United States. Even though elements of the right to privacy had received constitutional recognition dating to the early days of the republic, there was no general right to privacy in U.S. law prior to *Griswold.* Specifically, the Third Amendment prohibition against the quartering of troops in citizens' homes, the Fourth Amendment ban on unreasonable searches and seizures, and the Fifth Amendment right against self-incrimination all gave limited recognition to the right in the sense that each assumed a narrow dimension of privacy.

Griswold involved an 1879 Connecticut law that forbade the use of contraceptive devices to prevent conception or give information about their use. Intriguingly, no one had ever been prosecuted under this law until Estelle Griswold, the executive director of the Planned Parenthood League of Connecticut, opened a birth control clinic in New Haven, Connecticut, for the express purpose of challenging the law. After her arrest and conviction, she was fined $100. The state appellate courts sustained her conviction, and she appealed to the U.S. Supreme Court.

Griswold was decided by a seven–two vote in an opinion written by Justice William O. Douglas in which he argued the theory that "penumbras" (shadows) evolving from the guarantees of the Third, Fourth, and Fifth Amendments gave "life and substance" to a broad right of privacy. Justices Hugo L. Black and Potter Stewart dissented on the grounds that the majority had simply created a right to support their own judgments about the wisdom of the Connecticut law. Justices Black and Stewart conceded it was "an uncommonly silly law," but they argued it wasn't the proper role of the Court to judge the wisdom of the law, only its constitutionality. They maintained that if Connecticut wanted to pass such a law, it was that state's choice. They argued it was not the Court's prerogative to determine the wisdom of a law in the absence of a specific provision in the Constitution that was violated.

The impact of *Griswold* in Connecticut in 1965 was extremely minimal due to the nonenforcement of the law it overruled, but the right-to-privacy principle it established became crucial to both sides in the bitter

debates over abortion that followed (and continue) since *Roe v. Wade* was decided. The debate in *Griswold* over wisdom versus constitutionality underscored the larger debate between the opposing judicial philosophies of judicial activism versus judicial restraint seen in most of the Supreme Court civil liberties decisions in the last quarter of the twentieth century and beyond.

Grosjean v. American Press Co. (1936)

Grosjean v. American Press Co., 297 U.S. 233 (1936), was a crucial U.S. Supreme Court decision concerning the protection for freedom of the press as provided in the First Amendment to the U.S. Constitution. In *Grosjean* the Court unanimously declared unconstitutional a Louisiana law that sought to punish critics of the administration of Governor Huey P. Long through a license tax on the gross income of newspapers in the state with a circulation of more than 20,000 copies weekly. The law, enacted in 1934 at a time in Louisiana politics when "loyal opposition" was an oxymoron, was struck down initially by a lower federal court.

Writing for the unanimous Court, in a decision coming a mere five years after the famous free press case of *Near v. Minnesota,* 283 U.S. 697 (1931), Justice George Sutherland found the disingenuous Louisiana law to be an impermissible restriction on the dissemination of information in violation of the First Amendment as applied against the states through the Due Process Clause of the Fourteenth Amendment under the "incorporation" doctrine. In the eyes of the Court, the statute was simply a thinly veiled censorship tactic seeking to impose a prior restraint on certain newspapers critical of the politics and policies of the Long administration. Given the nation's commitment to self-rule, consent of the governed, and governmental accountability, it was essential, argued Sutherland, that the fundamental freedom of the press be exercised as freely as possible without unwarranted invasion by the government. A critical component of Sutherland's opinion for the Court was his focus on fundamental constitutional and First Amendment principles underlying freedom of the press rather than on the English common law; Sutherland fully recognized that the needs of and expectations on the press were different in the U.S. polity than in the seventeenth or eighteenth centuries in England.

Especially noteworthy in *Grosjean* was the vision Justice Sutherland offered concerning the role of the press in a constitutional democracy. In arguing for freedom of the press as a fundamental First Amendment freedom, Sutherland focused on both the need of the press to report information on public matters and for citizens to acquire information in order to keep the government accountable and to protect their common interests as an engaged, informed people. According to Sutherland, the framers of the First Amendment were well aware of struggles against censorial powers in England throughout the seventeenth and eighteenth centuries; they thus sought to provide more than mere protection against censorship. Rather, the First Amendment's protection for a free press, in the Court's opinion, was meant "to preserve an untrammeled press as a vital source of public information." According to Sutherland, "A free press stands as one of the great interpreters between the government and the people. To allow it to be fettered is to fetter ourselves."

Group Libel

Laws prohibiting group libel extend the protection against individual defamation of character to defamation based on group status. (Defamation is generally defined as written or oral communication that damages an individual's reputation or otherwise holds the individual up to contempt.) The idea animating group-libel laws is that a democracy relies upon both the political equality of all citizens and the peaceful coexistence among different races, ethnicities, and religious faiths. These relationships are at the foundation of civil liberties in a democracy. Public attacks designed to defame well-defined groups (especially minority groups) and bring them into low estimation leads, with the accumulation of time, to breaches of the peace, disharmony, and injuries to individual members of the defamed group. Nevertheless, group-libel laws, which were typically criminal, not civil, wrongs, allow the government to monitor, restrict, and punish a wide range of racist speech. Of course, these laws raise issues of free speech rights under the First Amendment to the U.S. Constitution.

Most group-defamation laws arose as a response to the techniques the Nazis used during the late 1930s and the 1940s to bring about nearly total contempt, hatred, and ostracism of the Jews in Central Europe. Nazi anti-Semitism was not the result of mere random or individual expressions of racism. Rather, the Nazis used sophisticated, systematic techniques to control and shape mass public opinion. Social scientists, who were beginning to study public opinion during this era, were aware of how easily it could be both shaped and distorted within a mass democracy. Sociologists were also studying the degree to which an individual's reputation and interests were tied to the respect granted to the social groups to which the person involuntarily belonged, such as racial or ethnic groups. A typical group-libel law would make it a crime to spread material that condemned a racial or ethnic group's virtue or that would bring a group into public ridicule.

These group-libel laws focused on a newly defined danger of speech, one that did not have any precise analogy to then-existing legal doctrines of free speech as it was understood under the First Amendment. The problem of group defamation was not a problem of "clear and present danger"—the test at the time for constitutionally permissible restrictions on speech—since no single speech act alone would necessarily be the incitement to violence or illegality. Nor was the problem one of seditious libel or obscenity. The goal was to find a legal device to prevent the race-driven anger and conflict that established the environment for regular breaches of the peace and even all-out race riots. Another goal was to protect a tolerant liberal democracy from those who would subvert it through the very doctrines of toleration and free speech itself. Thus, group-libel laws, by targeting intolerance, would make democratic liberalism a fighting faith.

In *Beauharnais v. Illinois,* 343 U.S. 250 (1952), a five–four decision, the U.S. Supreme Court upheld the constitutionality of an Illinois criminal group-libel law. Key to the Court's defense of the statute was a two-tiered approach to free speech that held libel, along with fighting words and obscenity, as unworthy of First Amendment protection.

The ruling would turn out to be a hollow victory for supporters of group-libel laws. First, many of the interest groups that had defended and promoted group-libel laws abandoned them as a weapon against intolerance. Black leaders did not employ the laws in the civil rights struggle, largely because anti–free speech measures were used to harass groups like the National Association for the Advancement of Colored People and its members. Civil rights organizations focused instead on discriminatory behaviors and laws rather than on defamatory words. Second, the ruling in *Beauharnais,* though never formally overturned, was superseded by subsequent Supreme Court cases. Libelous statements regarding public figures or concerning topics of public concern are now protected by the First Amendment. Speech of an offensive nature has been granted increased protection as well, in order to allow for vigorous, if often hateful, public discussions.

In the late 1980s and early 1990s, many municipalities and universities established restrictions on hate speech. Both hate-speech and group-libel laws share the recognition that insults and defamation based on differences of race, sex, ethnicity, or religion tend to injure the self-esteem and social regard of the victim. Hate speech also may lead to a disruption in public harmony and harm the democratic sphere. Some hate-speech ordinances recognized, in a way that went beyond the scope of older group-libel laws, that certain symbols, such as burning crosses, swastikas, and hangman's nooses, too easily blurred the distinction between speech and conduct because they contained the historical references to violence and threats. Advocates of hate-speech codes, taking note of the changes in constitutional doctrine since *Beauharnais,* were reluctant to define such laws as a form of criminal group libel. Rather, they often defended these laws as a ban on fighting words. The Supreme Court, however, rejected this alternative defense in *R.A.V. v. City of St. Paul,* 505 U.S. 377 (1992). Most remaining hate-speech codes are restricted to special contexts such as schools and universities.

Habeas Corpus

Article I, Section 9, clause 2 of the U.S. Constitution sets forth the privilege of the writ of habeas corpus. This writ is basically a prisoner's petition to the appropriate federal court requesting release from unlawful confinement. Habeas corpus is a fundamental federal right that can be suspended only in times of war, rebellion, or invasion. The concept was taken from Parliament's Habeas Corpus Act of 1679. When first enunciated at the Constitutional Convention in 1787, the writ was seen as an integral part of the new government's promise of liberty and freedom from wanton displays of governmental authority; some states had similar provisions within their own constitutions.

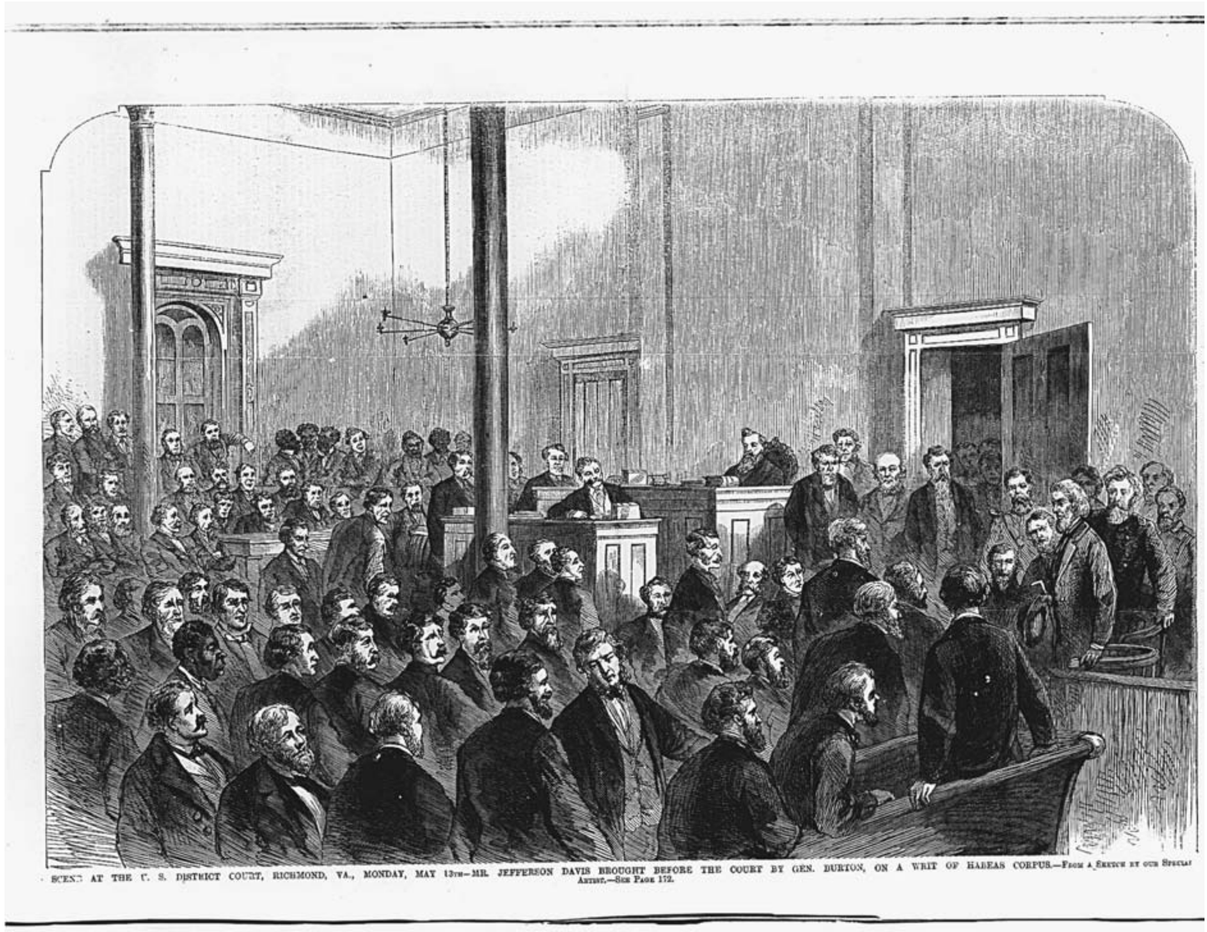
The practical effect of the writ of habeas corpus is to allow a person to challenge confinement based on any number of claims that a federal constitutional violation invalidates the case verdict or sentence. The request is made to a federal court, whether the complainant is in state or federal custody. Habeas relief may be requested at several different points in the process of a criminal conviction. For example, if an arrest is made in violation of an individual's Fourth Amendment right against unreasonable search and seizure, such a person can petition the court for release under a habeas corpus remedy. More commonly, the writ is used for postconviction relief as a cause for appeal to a higher court. It is a collateral, or additional, means used to challenge an unjust conviction solely on grounds of constitutional error. Defects involving judicial error, for example, do not typically fall under a habeas corpus claim.

Although theoretically a broad concept, habeas corpus practice has changed substantially since its inception. Initially, habeas relief could be entertained only if the question under consideration concerned a jurisdictional defect in state court. In *Fay v. Noia,* 372 U.S. 391 (1963), the U.S. Supreme Court extended the use of the writ to all constitutional controversies. In piecemeal fashion, constitutional challenges became so scrutinized under habeas corpus law that the cases showed little uniformity in the application of the privilege. In *Stone v. Powell,* 428 U.S. 494 (1976), the Court attempted to restrict such widespread review by holding that for matters involving trial-related defects, such as those occurring under the Fourth and Sixth Amendments most notably, habeas relief was unavailable unless the state had not provided a full and fair review of the constitutional defects enumerated. In other claims, such as an Eighth Amendment defect, habeas review could be granted even if the state court conducted a full and fair review of the complaint.

In order to effect a legitimate habeas petition, a prisoner must first exhaust all remedies available within the state, including appeal to that state's highest court, if applicable. There are timelines that also must be followed within the state-court systems to ensure that a prisoner has taken every course of remedy available before bringing a federal claim of habeas corpus. Only in rare instances, such as when a fundamental liberty is at stake or an egregious error has occurred, will a federal claim be entertained if the petitioner did not follow proper state procedures.

Public perceptions of habeas corpus have suffered since the late 1980s from many well-publicized cases in which prisoners were petitioning federal courts for relief based on what critics construed as flimsy reasons, such as menu choices and access to men's magazines. At the time, the courts were so overwhelmed with these filings and other legitimate cases that it could take years or even more than a decade to resolve a case completely. Victims' rights advocates felt that the laws protected the guilty more than the victims and were frustrated with the lack of final justice in their cases, especially when the convicted individual was awaiting death. In addition, levels of gun violence had continued to rise, especially among youth, and the death penalty was being used more frequently in states all across the United States.

In response to the perception that habeas was being abused and that crime was not being properly deterred, the Supreme Court imposed additional limitations on use of the writ. Social discontent rose to such a degree that habeas relief became a central feature of the Antiterrorism and Effective Death Penalty



Scene at the U.S. District Court in Richmond, Virginia, on May 13, 1867, when Jefferson Davis was brought before the court on a writ of habeas corpus. A writ of habeas corpus requires that the government bring confined individuals before judges to explain why they are being detained. *(Library of Congress)*

Act (AEDPA) of 1996. Under this legislation, a state prisoner must petition for habeas relief within one year after the prisoner's state conviction becomes final. This short one-year deadline led one former Supreme Court justice, Harry A. Blackmun, to conclude that the death penalty could never be imposed in a manner that ensured fairness.

Recently, public opinion toward habeas relief has again begun to shift in light of the research in Illinois through which more than a dozen death-row inmates were released after a thorough review of their cases by independent legal investigators. In 2003 outgoing Illinois governor George Ryan commuted the sentences of all remaining death-row prisoners in light of the procedural defects that had accompanied so many convictions during his tenure in office. Although there is still strong support for the get-tough-on-crime approach in general and the death penalty specifically, the use of habeas corpus is starting to reemerge as a means to ensure that fundamental constitutional guarantees are protected.

Hamdi v. Rumsfeld (2004)

The reaction to the September 11, 2001, terrorist attacks on the World Trade Center in New York City and the Pentagon in Washington, D.C., has generated a number of legal questions. Among the most important is the status of designated "enemy combatants" and their rights versus the president's power to wage war. On the same day the U.S. Supreme Court upheld jurisdiction of federal courts to hear habeas corpus appeals by foreign nationals being held at Guantanamo Bay, Cuba, in *Rasul v. Bush,* 124 S. Ct. 2686 (2004), and ruled in *Rumsfeld v. Padilla,* 124 S. Ct. 2711 (2004), that Jose Padilla, a U.S. citizen arrested in New York in connection with terrorist attacks, had brought his appeal through the wrong court, the Court also handed down its decision in *Hamdi v. Rumsfeld,* 124 S. Ct. 2633 (2004). In *Hamdi,* the Court ruled that a U.S. citizen being held in a naval brig in Charleston, South Carolina, was legally detained but that he had a due process right to contest his detention before a neutral magistrate.

Yaser Esam Hamdi was born in Louisiana in 1980, spent much of his youth in Saudi Arabia, and was captured in Afghanistan in 2001 by U.S. forces fighting against the Taliban. The U.S. government claimed he was an "enemy combatant" who had been captured with a rifle in his possession; his father claimed his son had gone to Afghanistan shortly before the Iraq war started in March 2003 to do "relief work" and had been trapped once the war began. After his father filed an appeal on his behalf, a U.S. district court found that Hamdi's incarceration was not justified, and it ordered the government to turn over materials for its review. The Fourth Circuit Court of Appeals reversed the district court's decision that the incarceration was unjustified and reversed a habeas corpus petition requesting legal counsel for Hamdi on the basis that the government had established reason to believe Hamdi had been captured as an enemy combatant and that such a decision, implicating war powers, should be given judicial deference.

Five justices upheld the government's right to incarcerate Hamdi, but eight rejected the government's contention that he could not seek legal remedy. Justice Sandra Day O'Connor authored the Court's plurality decision, which Chief Justice William H. Rehnquist and Justices Anthony M. Kennedy and Stephen G. Breyer joined. They decided the president had authority to detain enemy combatants under the Authorization for Use of Military Force (AUMF), which Congress adopted after September 11, 2001, authorizing the president to use "all necessary and appropriate force" against "nations, organizations, or persons" associated with those attacks. The plurality argued that detention of combatants to keep them from returning to the battlefield was "a fundamental incident of waging war" that might last as long as the conflict continued. In contrast to the situation in *Ex parte Milligan,* 71 U.S. 2 (1866), invalidating the military conviction of a civilian during the Civil War, the plurality pointed out that Hamdi was a prisoner of war who had been captured in combat. These justices found further support in the Court's decision in *Ex parte Quirin,* 317 U.S. 1 (1942), involving the trial of German saboteurs during World War II.

The acknowledgment that Hamdi was legally detained did not, however, preclude him from relief. Justice O'Connor pointed out that Congress had not suspended the writ of habeas corpus, which requires the government to justify continued incarceration. In seeking to ascertain the contours of this right, the Court examined criteria established in *Mathews v. Eldridge,* 424 U.S. 319 (1976), a case dealing with suspension of welfare payments. These criteria required weighing Hamdi's "liberty interest," as guaranteed by the Fifth Amendment, against the government's interest in seeing that combatants do not return to combat against the United States. Whereas the Court of Appeals was willing to defer to the government's claim of a continuing need to incarcerate Hamdi, Justice O'Connor said that "a citizen-detainee seeking to challenge his classification as an enemy combatant must receive notice of the factual basis for his classification, and a fair opportunity to rebut the Government's factual assertion before a neutral decisionmaker." However, unlike the district court, O'Connor believed that the government could rely in part on hearsay evidence and that there should be "a presumption in favor of the Government's evidence."

Rejecting arguments that her decision interfered with the doctrine of separation of powers, Justice O'Connor said that "a state of war is not a blank

check for the President when it comes to the rights of the Nation's citizens." She further argued that "it would turn our system of checks and balances on its head to suggest that a citizen could not make his way to court with a challenge to the factual basis for his detention by his government, simply because the Executive opposes making available such a challenge." She left open the possibility that the government might meet the standards she outlined through an appropriately constituted military tribunal.

Justice David H. Souter authored a concurring opinion, joined by Justice Ruth Bader Ginsburg, denying that AUMF was intended to justify the detention of U.S. citizens. Souter argued that a section of a federal statute, designed to forestall such incarcerations as the World War II internment of Japanese Americans that the Court approved in *Korematsu v. United States,* 323 U.S. 214 (1944), prohibited such incarceration without more specific language. He suggested that the United States might be violating the Third Geneva Convention in regard to the treatment of Hamdi. Justice Souter also argued that the president had no inherent authority to incarcerate Hamdi. Pointing to the Court's decision voiding the presidential seizure of domestic steel mills in time of war in *Youngstown Sheet and Tube Co. v. Sawyer,* 343 U.S. 579 (1952), Souter pointed out that "the President is not Commander in Chief of the country, only of the military." He nonetheless joined the majority in recognizing that Hamdi was entitled to habeas corpus relief.

Justice Antonin Scalia authored a dissent joined by Justice John Paul Stevens. Pointing to a long Anglo-Saxon history opposing imprisonment by executive authority as being contrary to due process, Scalia distinguished the status of enemy aliens and U.S. citizens. In his view, Congress should suspend the writ of habeas corpus, the executive should charge Hamdi with an offense, or the government should set him free. Scalia observed that "[a] view of the Constitution that gives the Executive authority to use military force rather than the force of law against citizens on American soil flies in the face of the mistrust" that led to constitutional restrictions. Scalia further called into question the application of *Ex parte Quirin,* observing that it "was not this Court's finest hour." He thought the plurality's standards for justifying the government's continuing incarceration of Hamdi were too loose. Scalia observed that the habeas corpus provision "merely guarantees the citizen that he will not be detained unless Congress by ordinary legislation says he can be detained; it guarantees him very little indeed." He did make it clear, however, that his decision applied only to U.S. citizens.

Justice Clarence Thomas's dissent indicated that he was the only justice willing both to justify Hamdi's incarceration under federal war powers and to find the governmental interest in national security important enough to override Hamdi's plea for habeas corpus review. Thomas emphasized the role of the two elected branches, and especially of the unitary executive, in foreign affairs and said the Court should be deferential to this power. He believed that in such a context, "due process requires nothing more than a good-faith executive determination" that Hamdi's continued incarceration was desirable. He did not believe the majority had adequately weighed the government's interest in national security in coming to its decision.

Hand, Learned (1872–1961)

Learned Hand was the longest-serving federal judge in the history of the United States and the most prominent judge who never sat on the U.S. Supreme Court. He was responsible for writing a number of landmark opinions in the field of civil liberties. In fact, many of his opinions are still cited by courts because of their lucidity and foundation upon many of the basic rights that Americans hold so dear. As Hand stated, "If we are to keep our democracy, there

must be one commandment: Thou shalt not ration justice."

Billings Learned Hand was born January 20, 1872, into a family that could trace its commitment to the law back three generations. In fact, the death of his father Samuel, when Hand was still quite young, all but preordained that young Learned would dedicate his life to the law. After studying at the Albany Academy in New York, Hand continued his studies at Harvard, where he pursued philosophy under William James and George Santayana. His excellence as a student was clear. Hand received the gold key of Phi Beta Kappa and served as the class orator when he graduated in 1893 summa cum laude. Also remarkable was that during his undergraduate study, he received his master's degree in philosophy.

Though he dreamed of a career as a philosopher, Hand knew that it was his duty to pursue a life in the law, which he did at Harvard Law School. There Hand was exposed to the great legal thinkers of the day, and it was their teachings that would form the foundation of Hand's lifelong commitment to civil liberties.

The longest-serving federal judge in U.S. history, Learned Hand was responsible for writing a number of landmark opinions in the field of civil liberties. *(Library of Congress)*

At age thirty-seven, Hand was appointed as a district court judge for the U.S. District Court for the Southern District of New York. On this bench, and later on the bench for the U.S. Court of Appeals for the Second Circuit, he made his mark on civil liberties.

Scholars studying Hand's storied career have always had trouble coming to terms with the seeming dichotomy in Hand's opinions and pronouncements concerning civil liberties. They ask, how could the author of *Masses Publishing Co. v. Patten,* 244 F. 535 (S.D.N.Y. 1917), which protected the distribution of antiwar materials by a left-wing magazine, also write *United States v. Dennis,* 183 F.2d 201 (2d Cir. 1950), which upheld the conviction of individuals who had helped organized the U.S. Communist Party? How could somebody who so vociferously opposed the U.S. Supreme Court's opinion in *Lochner v. New York,* 198 U.S. 45 (1905)—because it crippled progressive legislation designed to regulate the hours of workers—deride that same Court's decision in *Brown v. Board of Education,* 347 U.S. 483 (1954)—which ended segregation in the South? How could a judge who denounced the government's conduct during searches and seizures state that the prosecution should be given latitude at trial? The answer, though seemingly inapposite, is found in Hand's lifelong consistency of opinion regarding civil liberties.

Even before reaching the federal bench, Hand strongly disagreed when a court interposed its beliefs and declared a statute enacted by the state legislature unconstitutional. In *Lochner v. New York,* the U.S. Supreme Court did just that in invalidating New York's minimum-wage-and-hour law. Hand, as a young lawyer, wrote repeated articles stating that it was improper for the Court to invalidate the will of the people because a law might interfere with the goals of big business. He felt strongly that substantive due process should not be used to stymie progressive legislation. Deference must be given to the legislature because its members were elected to mirror the interests of their

constituency. So it should not have come as a surprise, almost fifty years later, that Hand would oppose the Court's desegregation decision in *Brown v. Board of Education.* In his book *The Bill of Rights,* which was based on the Oliver Wendell Holmes lectures Hand gave in 1958 at Harvard Law School, he restated his belief that courts should not interpose their will over the will of the state legislature. It was not that Hand did not despise racism, for he did; it was that he still felt substantive due process should not be used to interfere with what was an issue for the state legislature and the public will. This belief may not have been popular, but it was consistent.

This belief also was apparent in how Hand was able to change the law in naturalization cases from application of the highly individualistic moral-turpitude standard to the standard of the community, as he discussed in *Posusta v. United States,* 285 F.2d 533 (2d Cir. 1961). Hand felt that a judge should not be able to impose his personal beliefs upon an alien. Rather, he preferred that the courts follow the community's mores and beliefs. Hand believed a man was evil only when his peers believed him to be so. Again, Hand felt that the public's will should be preserved as long as it did not directly interfere with rights guaranteed by the Constitution.

Hand revealed these beliefs also in his treatment of obscenity cases. For him, the issue was not what the judge found evil but what the community found evil. Hand stated in *United States v. Kennerley,* 209 F. 119 (S.D.N.Y. 1913), "I question whether in the end men will regard that as obscene which is honestly relevant to the adequate expression of innocent ideas, and whether they will not believe that truth and beauty are too precious to society at large to be mutilated in the interests of those most likely to pervert them to base uses." Later, Hand's analysis in *United States v. Levine,* 83 F.2d 156 (2d Cir. 1936), in which he stated that the court should look to the standards of the community to identify obscenity, was the same type of analysis that the U.S. Supreme Court would adopt in *Jacobellis v. Ohio,* 378 U.S. 184 (1964), and later in *Miller v. California,* 413 U.S. 15 (1973). Material was obscene when an average member of the community said it was obscene.

Hand's criminal procedure cases, likewise, reflect the reverence he had for the Constitution in specific and civil liberties in general. When faced with an improper search in *United States v. Kirschenblatt,* 16 F.2d 202 (2d Cir. 1926), Hand stated that, "[a]fter arresting a man in his house, to rummage at will among his papers in search of whatever will convict him, appears to us to be indistinguishable from what might be done under a general warrant. . . . Nor should we forget that what seems fair enough against a squalid huckster of bad liquor may take on a very different face, if used by a government determined to suppress political opposition under the guise of sedition." This is not to suggest that Hand favored the rights of the defendant over those of the prosecutor, as can be seen in his remark in *United States v. Sherman,* 171 F.2d 619 (2d Cir. 1948): "No prosecution is tried with flawless perfection; if every slip is to result in reversal, we shall never succeed in enforcing the criminal law at all." The ultimate question for Hand was one of fairness, as he showed in *United States v. Wexler,* 79 F.2d 526 (2d Cir. 1935), in which he ruled that tying the prosecutor's hands during closing argument yet giving the defense freedom to do as it wished was not equitable; therefore, the prosecutor should be allowed to show a proper amount of passion. In the end, Hand's criminal decisions show a judge who inherently respected the Bill of Rights but who also understood the importance of fundamental fairness to all involved.

Hand probably is most revered for his opinions in free speech cases, especially as the right pertains to the concept of incitement. The opinion that catapulted Hand into renown in legal circles, and later among the public at large, was *Masses Publishing Co. v. Patten,* 244 F. 535 (S.D.N.Y. 1917). *Masses* concerned the postmaster of New York City not circulating into the mails a magazine that spoke out against the government, especially about conscription. Hand ruled that not distributing the magazine was improper, and to suppress speech, the speaker must be advocating immediate unlawful action: "Words are not only the keys of persuasion, but the triggers of action, and those which have no purport but to counsel the violation of law cannot by any latitude of interpretation be a part of that public opinion which is the final source of government in a democratic state." Over three de-

cades later, in *United States v. Dennis,* 183 F.2d 201 (2d Cir. 1950), Hand again was forced to set forth the test for incitement, particularly given how much the fears of World War II and the spread of Communism had gripped the American psyche. "In each case [the courts] must ask whether the gravity of the 'evil,' discounted by its improbability, justifies such invasion of free speech as is necessary to avoid the danger." This holding seems strange compared with his less stringent test in *Masses.* But again, Hand was consistent. He followed the precedent of the U.S. Supreme Court, which time and again had limited the "clear and present danger" test—at the time the test of constitutionally permissible restrictions on speech. Ironically, less than a decade after his death, the Supreme Court adopted Hand's *Masses* imminent lawless action test for incitement in *Brandenburg v. Ohio,* 395 U.S. 444 (1969).

At the end of Hand's career, the American public started to have a regard for Hand similar to that which the legal community had held him in for years. In retirement, Hand spoke more freely than he felt he could as a judge. Returning to his free speech roots, he spoke out against the tactics of Senator Joseph McCarthy (R-WI) and the "red scare" McCarthy created with allegations that Communists were infiltrating government at all levels. Before Hand's death on August 18, 1961, newspaper editor Irving Dillard published selections of Hand's writings called *The Spirit of Liberty,* the name of a speech Hand had given at a naturalization ceremony in New York City during the height of World War II. His words at that gathering in 1944 were a proper ending to an article reviewing Hand's impact on civil liberties: "I often wonder whether we do not rest our hopes too much upon constitutions, upon laws and upon courts. These are false hopes; believe me, these are false hopes. Liberty lies in the hearts of men and women; when it dies there, no constitution, no law, no court can save it; no constitution, no law, no court can even do much to help it. While it lies there it needs no constitution, no law, no court to save it."

Harlan, John Marshall (1833–1911)

John Marshall Harlan served as a justice of the U.S. Supreme Court 1877–1911. A native Kentuckian, he was born into a family of slave owners and vigorously advocated the property rights of slave owners even to the point of opposing the passage of the Thirteenth Amendment prohibiting slavery. He received his undergraduate degree at Centre College in Danville, Kentucky, known by some as the Harvard of the South.

Justice Harlan was a man who was not afraid to speak his mind even when eight other Supreme Court justices disagreed with him. Despite his past history as a slave owner and his opposition to the Thirteenth Amendment, Justice Harlan was often the lone voice advocating equal treatment of the races during his term of service on the Supreme Court. He also became an advocate for civil liberties outside the arena of race with his dual contentions that the guarantee of due process applied to the states through incorporation in the Fourteenth Amendment and that the Fourteenth Amendment's equal protection guarantees were applicable to both states and individuals.

In *Lochner v. New York,* 198 U.S. 45 (1905), Justice Harlan stood up for the rights of workers when the Court's majority ruled unconstitutional a New York law making it illegal for bakers to work more

Despite his past history as a slave owner and his opposition to the passage of the Thirteenth Amendment prohibiting slavery, Justice Harlan was often the lone voice advocating equal treatment of the races during his tenure on the Supreme Court. *(Library of Congress)*

than ten hours per day or sixty hours per week. In his opinion, it was absurd for the majority to rule that such a law violated the Fourteenth Amendment by restricting the liberty of workers to work as many hours as they pleased without regard for any possible health effect.

When, in *Patterson v. Colorado,* 205 U.S. 454 (1907), a majority of the Court upheld conviction under the Colorado libel law of a Denver publisher for writing an article criticizing state judges, Justice Harlan maintained that the publisher's speech was protected by the First Amendment. Unlike the majority, he strongly believed that the First Amendment was incorporated in the Fourteenth Amendment and therefore that its free speech guarantee applied to the states.

Justice Harlan was the only dissenter in the *Civil Rights Cases,* 109 U.S. 3 (1883), in which the Court's majority held unconstitutional the Civil Rights Act of 1875 that mandated equal treatment for all races. In his dissent, he voiced his contention that the Thirteenth Amendment gave Congress the power not only to abolish slavery but also to pass laws prohibiting racial discrimination. Harlan also voiced his disagreement with the majority's view that the Fourteenth Amendment was applicable only to the states and not to private individuals.

Justice Harlan's most famous dissent occurred in *Plessy v. Ferguson,* 163 U.S. 537 (1896), in which the Supreme Court was called upon to consider the constitutionality of a Louisiana law that required railroads to provide "separate but equal accommodations" for white and black passengers. In order to help an attorney test the constitutionality of the Louisiana law, Homer Plessy, who was one-eighth African American, entered a whites-only railroad car and refused to leave. Plessy was subsequently arrested. With one justice abstaining, the Supreme Court held that Louisiana's law requiring separate but equal accommodations was constitutional. However, Justice Harlan dissented from that opinion, stating, "Our Constitution is color-blind, and neither knows nor tolerates classes among citizens."

Justice Harlan's dissent in *Plessy* provided the framework for the Supreme Court's unanimous decision fifty-eight years later in *Brown v. Board of Education,* 347 U.S. 483 (1954). In *Brown,* the Court overruled *Plessy* to hold that the doctrine of "separate but equal" was impermissible regarding the public education system and that such a doctrine violated the equal protection guarantee of the Fourteenth Amendment.

Even while Harlan was still a justice, there were some indications his ideas were going to help change the Court's position on civil rights issues. For example, in *Bailey v. Alabama,* 219 U.S. 219 (1911), the Court held that it was an unconstitutional violation of the Thirteenth Amendment for Alabama to imprison an African American for failure to carry out a work contract.

Since Justice Harlan's death, it has become obvious that his opinions were ahead of his time, as the nation came to espouse individual rights and equality of all

races as fundamental ideas and continued to strive toward ensuring those ideals.

Harmless Error

The phrase "harmless error" refers to an error by a judge in the conduct of a trial that an appellate court finds is not sufficient for it to reverse or modify the lower court's judgment at trial. It is both a product of judicial review as well as a legislative result. Harmless error is defined in Rule 160 of the *Federal Rules of Criminal Procedure* (all rules cited hereafter refer to these procedural rules) as follows: "No error in either the admission or exclusion of evidence, and no error or defect in any ruling or order or in anything done or omitted by the Court or by any of the parties, is ground for granting a new trial or for vacating, modifying, or otherwise disturbing a decision or order, unless refusal to take such action appears to the Court inconsistent with substantial justice. The Court at every stage of a case will disregard any error or defect which does not affect the substantial rights of the parties."

All properly preserved (noted for the record in the trial court, usually by attorneys raising objections) errors of law may be brought up on appeal, and the appellate court may then make a determination as to which ones, if any, are "harmless." There are three types of error: *Structural* error undermines the integrity of the entire judicial proceeding and requires automatic reversal; *harmless* error under Rule 52(a) involves an objection made by defendant at trial; *plain* error under Rule 52(b) involves instances where the defendant did not raise an objection at trial. The *Federal Rules of Criminal Procedure* govern the issue of harmless error (only at the federal level, but states have similar rules of criminal procedure), but the U.S. Supreme Court has established and modified its own parameters for harmless error.

In 1967 the Court in *Chapman v. California,* 386 U.S. 18, further narrowed its interpretation of the harmless-error standard designed to protect a defendant's constitutional rights. *Chapman* involved a defendant convicted of robbery, kidnapping, and murder. At trial, Ruth Elizabeth Chapman (along with her accomplice) chose to exercise her Fifth Amendment right against self-incrimination and did not testify. The state's attorney made numerous references to Chapman's silence and drew inferences of her guilt as a result of it. On appeal, Chapman argued that the error was so egregious that it required reversal. The Court agreed.

Justice Hugo L. Black wrote the majority opinion requiring reversal:

> We are urged by petitioners to hold that all federal constitutional errors, regardless of the facts and circumstances, must always be deemed harmful. Such a holding, as petitioners correctly point out, would require an automatic reversal of their convictions and make further discussion unnecessary. All 50 States have harmless-error statutes or rules, and the United States long ago through its Congress established for its courts the rule that judgments shall not be reversed for "errors or defects which do not affect the substantial rights of the parties." We conclude that there may be some constitutional errors which in the setting of a particular case are so unimportant and insignificant that they may, consistent with the Federal Constitution, be deemed harmless, not requiring the automatic reversal of the conviction.

Justice Black's opinion in *Chapman* was an example of the Court's practical approach to appeals. Justice Black understood that allowing all errors to be classified as reversible would result in unrealistic goals on the part of trial courts. Errors that affected the substance of the case and/or trial, however, were deemed to be worthy of being the catalyst for reversal.

The Court in *Chapman* set forth the test for determining whether a constitutional error is harmless. That test is whether it appears "beyond a reasonable

doubt that the error complained of did not contribute to the verdict obtained." In some sense, this is coded language from the Court that really means the Court will decide later if the appealing party could not have won at trial in any event. The harmless-error test from *Chapman,* as well as state and federal codes, remains in effect.

Harris v. Forklift Systems, Inc. (1993)

In *Meritor Savings Bank v. Vinson,* 477 U.S. 57 (1986), the U.S. Supreme Court declared that the creation of a "hostile work environment" constituted sexual harassment, a form of discrimination on the basis of sex prohibited by Title VII of the Civil Rights Act of 1964. In *Meritor,* the Court made it clear that the sexual conduct in question must be "sufficiently severe or pervasive to alter the conditions of the victim's employment and create an abusive work environment." The unanswered question was, What did "severe" mean? Did an employee have to suffer psychological injury as well as impaired work performance? In 1993 the Court attempted to answer this question in *Harris v. Forklift Systems, Inc.,* 510 U.S. 17 (1993).

Teresa Harris was a manager at Forklift Systems, Inc., an equipment rental firm, from April 1985 to October 1987. The company's president, Charles Hardy, frequently and publicly made derogatory, gender-based comments to Harris and other female employees. Hardy referred to Harris as a "dumb ass woman," told her "you're a woman, what do you know" and "we need a man as the rental manager," made sexually suggestive comments about her clothing, asked her to retrieve coins from his front pants pockets, and suggested that they go to the Holiday Inn to negotiate her raise. After enduring this for some time, Harris complained to Hardy about his behavior in August 1987; he claimed to be joking, apologized, and promised to stop. However, in September, when Harris was arranging a deal with a Forklift customer, Hardy asked her, "What did you do, promise the guy . . . some [sex] Saturday night?" She then quit and filed suit against the company.

Overruling both the district and the appeals courts, the Supreme Court upheld Harris's claim of sexual harassment. Writing for a unanimous Court, Justice Sandra Day O'Connor said that an establishment of psychological injury was not required for a claim of sexual harassment. O'Connor noted that "Title VII comes into play before the harassing conduct leads to a nervous breakdown. A discriminatorily abusive work environment, even one that does not seriously affect employees' psychological well-being, can and often will detract from employees' job performance, discourage employees from remaining on the job, or keep them from advancing in their careers."

Referring to *Meritor,* the Court stressed that sexual speech, even if offensive, is not necessarily harassment. The Court said that an "abusive environment" can be determined only by looking at the totality of circumstances. It pointed specifically to four factors: the frequency of the conduct; whether it is physically threatening or humiliating; its severity; and if it "unreasonably interferes" with an employee's work performance. The Court admitted that these standards were somewhat imprecise, but could find "no test more faithful to the inherently vague" language of Title VII (as Justice Antonin Scalia wrote in a concurring opinion).

Harris v. Forklift Systems is a major step in defining sexual harassment and enabling victims to seek redress through the judicial process. As such, it also represents a significant effort by the Court to define the limits of legally acceptable speech and behavior in the workplace.

Hatch Act

The Hatch Act of 1939 attempted to curtail political corruption and intimidation among federal workers by restricting some free speech and freedom of association activities of all but the highest levels of the executive branch. It thus raised the issue of whether government workers had fewer constitutional rights than private citizens, such as speech and association rights protected by the First Amendment to the U.S. Constitution.

The Hatch Act arose from allegations of electioneering and worker coercion among New Deal–related federal agencies, but it was arguably an extension of civil service reforms begun in the late nineteenth century. The act was amended in 1993, and thereafter many federal agencies and civil service associations provided employees with guidelines on their Web sites regarding such behaviors as raising campaign funds, wearing political buttons, running for office, and engaging in campaign activity while wearing government uniforms.

Although the law always protected the rights of federal employees to vote and express political opinions, some critics argued that other restrictions were necessary to protect federal workers from being subjected to political or supervisory pressure to serve or contribute to campaigns as well as to limit federal government influences upon electoral activity. Opponents of such regulations argued they violated workers' First Amendment rights.

Under the original legislation, most federal government employees were prohibited from being active in congressional and presidential campaigns as well as from soliciting and/or receiving contributions to such campaigns. The act said "it shall be unlawful for any person employed in the executive branch of the Federal Government, or any agency or department thereof, to use his official authority or influence for the purpose of interfering with an election or affecting the result thereof . . . [and] take any active part in political management or in political campaigns." But top elected and appointed officials of the executive branch were exempted, such as the president, vice president, and cabinet secretaries.

In 1940, Congress amended the Hatch Act in order to prohibit similar activities by state and local workers employed by agencies and programs funded by the federal government. This amendment also placed a $3 million limit on annual spending by political parties and limited individual campaign contributions to $5,000 annually, but these policies were not enforced and were ultimately replaced by the Federal Election Campaign Acts of the 1970s.

RELATED COURT CASES

The first Hatch Act case to reach the U.S. Supreme Court was *United Public Workers v. Mitchell,* 330 U.S. 75 (1947). Members of several executive agencies argued the law was an unconstitutional violation of their freedom of speech under the First Amendment. Writing for the Court, Justice Stanley F. Reed cited judicial and legislative precedent surrounding the regulation of civil service employees during the 1880s and added that "[i]t is accepted constitutional doctrine that these fundamental human rights are not absolute." In separate dissents, Justice William O. Douglas argued the ban was too broadly drawn, and Justice Hugo L. Black, considered a First Amendment "purist," said the Hatch Act deprived millions of federal workers of their rights of expression and political participation. This precedent was largely upheld in a later case on the Hatch Act, *United States Civil Service Commission v. National Association of Letter Carriers,* 413 U.S. 548 (1974).

THE HATCH ACT TODAY

In 1993, Congress significantly amended the Hatch Act to redefine the scope of permissible political activities of state and federal workers. According to the U.S. Office of Special Counsel Web site, "under the amendments most federal and [District of Columbia] employees are now permitted to take an active part in

political management and political campaigns. A small group of federal employees are subject to greater restrictions and continue to be prohibited from engaging in partisan political management and partisan political campaigns." For many employees, prohibited activities include participating in partisan elections as a candidate or organizer, making campaign speeches, distributing campaign material in partisan elections, organizing political rallies or meetings, holding office in political clubs or parties, circulating nomination petitions, and working to register voters for one party only, among others. Various civil service organizations have also posted new guidelines for their members. For example, the Web site of the National Association of Letter Carriers offers the following advice at the end of its "dos" and "don'ts" list for political activity: "Bottom Line: Be off the clock, out of the uniform (and government vehicles), and away from the work place."

Although President Bill Clinton attempted to clarify the law with these changes, people associated with the White House were dogged by allegations of improper fundraising and politicking surrounding the 1996 election, including Vice President Al Gore (despite being exempt from the letter of the law), Secretary of Labor Alexis Herman, and Democratic fundraiser John Huang, among others.

Hate Crimes

Hate crimes are acts that are already defined as crimes but in addition are motivated by bias against an individual or group due to protected characteristics such as race, gender, national origin, color, and sexual orientation. Accordingly, an act that is not already a crime does not become a crime simply because it is directed toward someone who has a protected characteristic.

For example, if X refuses to speak to Y because Y is Hispanic, X has not committed a hate crime, because snubbing someone is not a crime. Rather, in order for a hate crime to occur, a criminal act must also occur. Likewise, in order for a hate crime to occur, the perpetrator must be motivated by protected characteristics of a group or individual. Thus, if X murders Y in the course of a bank robbery or because of a personal grudge, the murder is not a hate crime. In contrast, if X, a male, murders Y, a female, because X hates women and considers them inferior, the murder is a hate crime if gender is a protected class in the jurisdiction where the crime occurred.

One of the difficulties in determining whether a hate crime has occurred is that perpetrators of such crimes are not generally open about hating and/or selecting victims because they are part of targeted groups. For example, just because Q, a heterosexual, assaults Z, a gay man, does not automatically mean that a hate crime has occurred. Rather, it is necessary to determine whether Q targeted Z *because* Z is gay. One factor that may help in making such a determination is that, unlike in crimes of passion, perpetrators of hate crimes rarely know their victims prior to committing the criminal act.

There are currently three federal hate-crime laws: the Hate Crimes Statistics Act of 1990 (HCSA), the Violence Against Women Act of 1994 (VAWA), and the Hate Crimes Sentencing Enhancement Act of 1994 (HCSEA). The Hate Crimes Statistics Act mandates that the federal government collect statistical information about crimes that occur due to a victim's race, religion, disability, sexual orientation, or ethnicity. The HCSA is the first federal law to recognize sexual orientation as a class, but conservatives in Congress allowed passage of the law only after inclusion of a subsection noting that the law was not intended to "promote or encourage homosexuality."

The law does not provide the federal government with any new law enforcement powers, only data collection powers. Since the HCSA does not itself create new categories of crime, the federal government is unable to collect the mandated statistics in locations where state or local governments do not define such

"Images Removed Due to Copyright Issues"

crimes or fail to keep such statistics themselves. The Violence Against Women Act, which was reauthorized in 2000, sets aside money for states, tribal governments, and local governments to fight violent crimes against women and to bolster services for women who are victims of such crimes. In addition, VAWA makes it a federal crime for an individual to cross state lines to continue to abuse or harass an intimate partner. Since, by and large, VAWA does not create a new category of crime, its enforcement is dependent on state or local definitions of hate crimes. In contrast to HCSA and VAWA, the Hate Crimes Sentencing Enhancement Act is not as focused on state or local action but rather provides for the U.S. Sentencing Commission to increase the penalties for crimes due to the "actual or perceived race, color, religion, national origin, ethnicity, gender, disability, or sexual orientation of any person." Nevertheless, because the HCSEA does not apply to criminal acts unless they are federal crimes, such as crimes committed on federal property or in national parks, most criminal acts are not subject to enhanced sentencing under the HCSEA.

Due to the significant limitations on these three federal hate-crimes laws, states and municipalities continue to pass their own hate-crimes laws. Such laws differ regarding not only the classes protected but also the effect of classifying a crime as a hate crime. For example, some states and municipalities do not consider it enough that the perpetrator selected the victim due to the individual's membership in a protected class but rather require a determination that the perpetrator is prejudiced against members of that class before classifying the crime as a hate crime. That is, under some state or local laws, it would be enough to show that X selected Y because Y is black, but under the laws of other states or municipalities, a prosecutor would also need to show that X harbors hostility toward blacks as a group. In addition, different laws set out different protected classes; for example, state A might protect "gender, race, and national origin," whereas state B might protect only "race and national origin."

Many people consider hate crimes objectively worse than "ordinary" crimes because such crimes often send a message to other members of the victim's group regardless of whether the perpetrator intended to send such a message. Although many civil libertarians favor protecting minority groups who are targeted due to innate characteristics, there is significant tension between that goal and potential encroachment on the First Amendment by enhancing punishment based on the thoughts of perpetrators. Unfortunately, it seems doubtful that sending the message that society disapproves even more strongly of hate crimes than other crimes will have any deterrent effect on hate crimes. At the same time, sending such a message likely may start society on a slippery slope toward regulating which thoughts are permissible and which are not.

Until recently the U.S. Supreme Court appeared to disfavor hate-crimes laws. For example, in *R.A.V. v. City of St. Paul,* 505 U.S. 377 (1992), the Court held that a hate-crimes ordinance (Bias-Motivated Crime Ordinance) adopted by Saint Paul, Minnesota, vio-

lated the right of free speech provided by the First Amendment to the U.S. Constitution. The Court also stated that the city had means to regulate crimes such as cross burning other than to target the motivations for such actions. For example, the city could have enacted a law prohibiting all burning of wooden objects on the property of another, but instead it chose to target the placing of objects known or reasonably known to cause anger and similar emotions due to "race, color, creed, religion, or gender." In *R.A.V.,* the Court held that such a content-based prohibition on symbolic action could not stand.

The Court's position on hate-crimes laws seemed to shift substantially with the decision issued in *Virginia v. Black,* 538 U.S. 343 (2003), in which the Court held that a state could ban cross burning when the act was engaged in with an intent to intimidate. The Court attempted to distinguish its holding in *R.A.V.* from its holding in *Black* by stating that under *R.A.V.,* it was permissible for a state to ban an entire class of speech as long as the reason was due wholly to the content of the speech itself and the ban was not directed toward one of a class of "specified disfavored topics." Accordingly, the Supreme Court argued in *Black* that it was upholding Virginia's law banning cross burning that was performed with an "intent to intimidate" because of cross burning's history and because, unlike the law at issue in *R.A.V.,* the Virginia law did not distinguish between targets of intimidation.

Virtually all civil libertarians deplore burning a cross to intimidate someone, but they argue that states could regulate such a practice in many ways other than by banning a category of expressive speech. For example, a law simply banning the burning of a cross on the property of another should be just as effective to stop the offensive practice without involving free speech concerns. Despite the Court's attempt to characterize *Black* as consistent with *R.A.V.,* the *Black* opinion marked a significant departure from the Court's history of interpreting the First Amendment to forbid content-based restrictions on symbolic speech. Although the Court attempted to limit its decision in *Black* by citing the long history of cross burning, the singling out of a category of symbolic speech could signal the beginning of an erosion of First Amendment protection for such speech. Whether that will be the trend must await future Court decisions.

Government officials likely will continue to use hate-crimes laws in an effort to curb illegal behavior motivated by prejudice. If such laws ultimately deter perpetrators from committing crimes due to bias against protected characteristics, society may determine that some encroachment on the First Amendment is justified. On the other hand, if no deterrence is shown, such laws may be overturned in favor of providing symbolic speech with the broadest First Amendment protection available.

Hate Speech

Hate-speech laws are highly controversial because the diverse nature of the United States often produces sharp divisions among different groups, sometimes resulting in highly offensive and hateful speech. The two sides of the debate about what constitutes hate speech view the Constitution in very different ways. Proponents of these laws argue that the Fourteenth Amendment guarantees every citizen equal citizenship. They claim that members of minority groups cannot become truly equal citizens unless they are

protected from purely bias-motivated hate. Opponents counter that the First Amendment was designed to protect speech even when it is highly offensive to most listeners; if bias-motivated speech is prohibited, soon other forms of offensive speech will come under fire. Thus, the courts must weigh the right of citizens to speak, even when their words are hateful, against the right of other citizens to live their lives unharassed by such speech.

The first U.S. Supreme Court case to address a hate-speech law was *Beauharnais v. Illinois,* 343 U.S. 250 (1952). Joseph Beauharnais was arrested under an Illinois law prohibiting the distribution of materials portraying "depravity, criminality, unchastity, or lack of virtue of a class of citizens, of any race, color, creed, or religion." As the president of the White Circle League, Beauharnais had handed out racist leaflets. The Supreme Court said that libel against groups (group libel) was little different from libel against individuals and upheld his conviction. Although *Beauharnais* was never explicitly overturned, later decisions rendered it invalid. Now, criminal libel consists only of false statements of fact about private, individual citizens; these laws do not apply to groups and public figures, such as elected officials (although such individuals can win civil libel judgments when they show that information was published about them with the knowledge that it was false or with reckless disregard for its truth or falsity).

Forty years later, the Court addressed hate speech in *R.A.V. v. City of St. Paul,* 505 U.S. 377 (1992). In this case, the Supreme Court invalidated the Saint Paul, Minnesota, Bias-Motivated Crime Ordinance, which banned the use of swastikas, burning crosses, and similar symbols to arouse fear or anger on the basis of race, color, creed, religion, or gender. A group of white teenagers had burned a cross on the lawn of a black neighbor and were arrested under this ordinance. The city argued that the law did no more than prohibit fighting words, words likely to bring about a breach of peace and therefore unprotected under the First Amendment. The Supreme Court disagreed, ruling that the ordinance represented "viewpoint discrimination"; that is, it allowed fighting words for the tolerant but did not allow them for the intolerant. The Court emphasized that the First Amendment was intended to protect speech even if the ideas it contained would be offensive to most listeners. The ordinance also banned offensive symbols such as swastikas and burning crosses only when used by the proponents of racial and religious hatred. A protester could, for example, display a swastika as part of a protest against Nazism. The ordinance was unconstitutional because the symbols and offensive speech that were banned were based on the viewpoint of the speaker; therefore the law violated a long-standing First Amendment speech principle—that the government cannot limit speech based on content of the speech. Furthermore, the ordinance was considered content-based because it did not prohibit speech biased in regard to characteristics other than race, color, creed, religion, or gender. For example, symbols meant to arouse fear on the basis of sexual orientation would not be prohibited.

Although the Court's decision was unanimous, a concurring opinion signed by four justices cited very different reasons for invalidating the Saint Paul anti-bias law. These justices emphasized that the law was too broad. It did not specify that for fighting words to be unconstitutional, they must communicate ideas in a threatening rather than simply an obnoxious manner. It banned all use of the symbols when used in a bias-motivated manner, even if the particular situation was not specifically threatening. Therefore, officials could have used the ordinance to restrict speech that would otherwise be protected.

The Court recently again dealt with cross burning in *Virginia v. Black,* 538 U.S. 343 (2003), in which it allowed laws banning cross burning but only when the action was carried out with an attempt to intimidate. The ruling was consistent with *R.A.V.* because it ruled specifically on cross burning, noting that this particular act had a long history in the United States and that in certain circumstances burning a cross would become truly threatening action rather than being simply speech. When a perpetrator used the symbol to cause fear and intimidation, the state could regulate the action because it would be a "true threat," a threat in which the speaker would be communicating a serious intent to commit an act of unlawful violence to a particular individual or group of individuals. Because the Ku Klux Klan often used the

burning of crosses to relay this message, the action still carries the same threat today and is therefore not protected when used to intimidate in this manner. A burning cross symbolizes violent, hate-filled times in American history and as such is a particularly dangerous form of intimidation. These factors make it legal for the state to single out the action for prohibition in cases when it is used to intimidate.

The Court has also permitted states to punish crimes motivated by racial hatred more harshly than other crimes. In *Wisconsin v. Mitchell,* 508 U.S. 476 (1993), the Court considered a Wisconsin hate-crime law that allowed for stricter punishments if a crime was motivated by bias. Although many of the same problems of the ordinance in *R.A.V.* remained—Wisconsin opted to punish racially motivated crimes while not punishing, for example, crimes motivated by bias against the poor—the Court upheld the Wisconsin law as constitutional because it was tied to conduct instead of speech. Just as employers may be punished for discriminatory hiring practices, crimes motivated by bias go beyond speech and therefore lose First Amendment protection.

Many other nations, including Canada and Germany, do permit laws against speech that is biased against racial, ethnic, and religious groups, even if no specific intimidation is demonstrated. Free speech principles in the United States require far more neutral standards in their application. They do not allow government to limit speech based only on content of the speech. They can limit speech in a context that directly intimidates specific individuals.

Hawaii Housing Authority v. Midkiff (1984)

Under the Takings Clause of the Fifth Amendment to the U.S. Constitution, government must provide "just compensation" to a property owner when it takes the owner's property for "public use." Most disputes involving the Takings Clause center on whether compensation is required or the amount that is required, but in a growing number of cases, the government's definition of "public use" has been challenged. One such case was *Hawaii Housing Authority v. Midkiff,* 467 U.S. 229 (1984).

In *Midkiff,* the U.S. Supreme Court took a step toward defining public use and how far the courts could be involved in determining it. The case was prompted by a 1967 Hawaii law that condemned the property of large landowners and forced them to sell the land to people who were leasing it at the time. The condemnation portion of the law was enacted to force the owners to sell and also to reduce their tax burden. The state sought to move ownership of scarce land on the islands from a few large landowners to many smaller landowners.

When the condemnation and sales began, a group of property owners challenged the power of the state to take their land. According to them, the Hawaii law was not taking land for public use but rather was seizing the land in order to redistribute ownership to other private parties. In the owners' view, this violated the "public use" provision of the Takings Clause and therefore was unconstitutional.

The Supreme Court disagreed with those arguments. Justice Sandra Day O'Connor wrote for a unanimous Court in upholding the Hawaii law as a constitutional taking of private land for public use, stating that the courts had little authority to overturn a government's judgment that property was taken for a public use. In this case, the legislature determined the Hawaii law would aid the public by distribution of land among many owners. This would increase private property ownership while lowering the price of land on the market, in turn improving the lives of ordinary Hawaiians and compensating the original landowners. The Court found that there was a rational basis for the state's action and that the law was

linked to the goal of lowering the cost of buying property.

The result in *Midkiff* represented a retreat from some of the Court's previous rulings requiring compensation for taking of property. The Court decided that the Constitution entrusted legislatures with the power to determine the meaning of public use. With this power in hand, many local governments have begun seizing private property and selling it to private developers. As this practice has continued, the courts have become more involved in defining public use and forcing government to show it was acting for the public in seizing land.

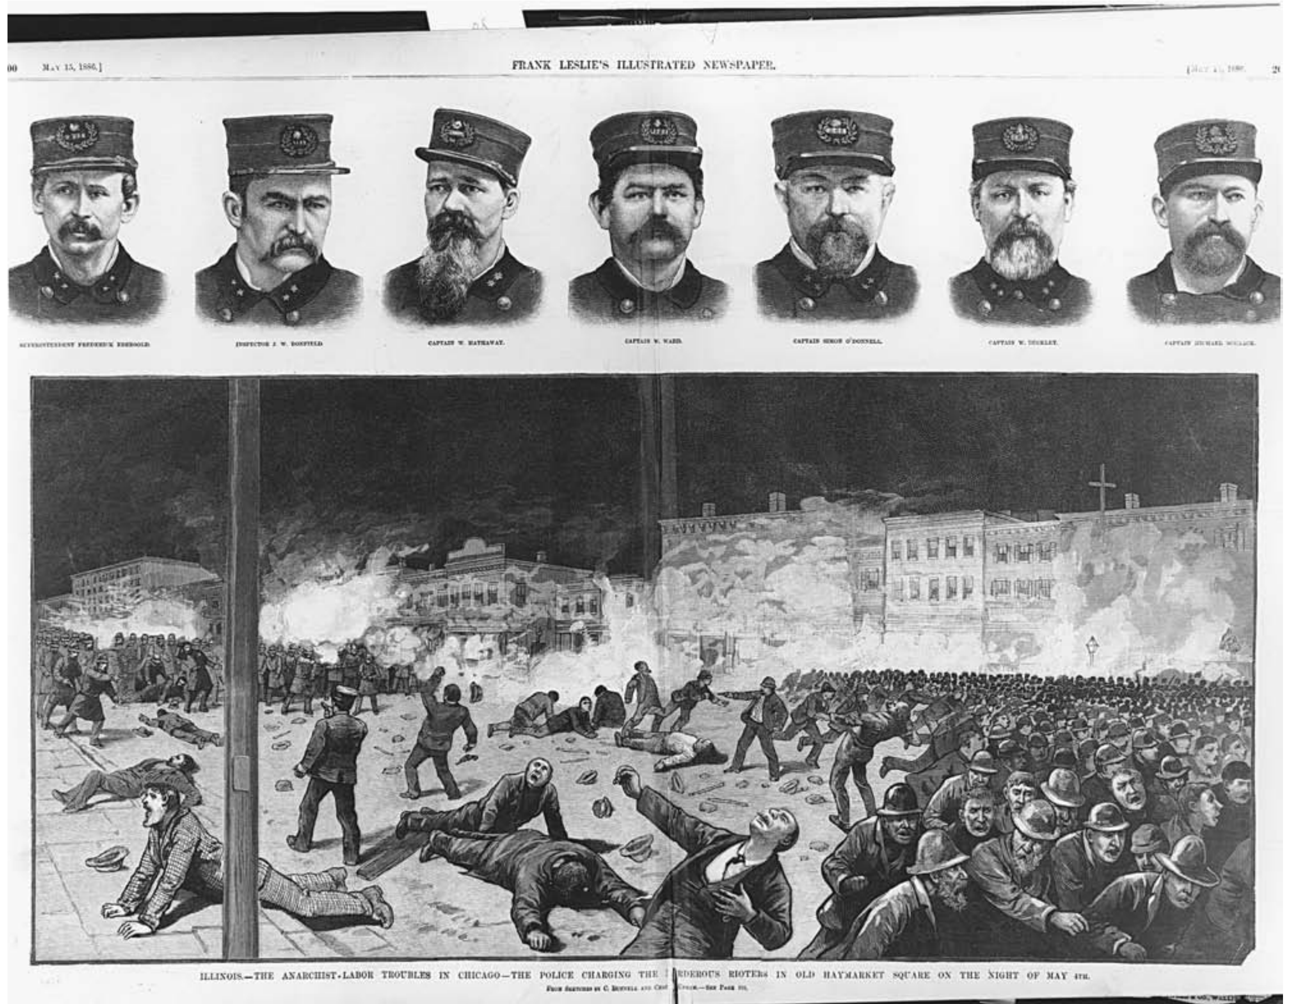
Haymarket Affair

The Haymarket affair was a series of events that occurred in conjunction with a labor rally in Chicago's Haymarket Square on May 4, 1886. The day before, violence had erupted during an assembly of striking workers at the McCormick Reaper Works plant, and several workers were killed. The workers had been on strike since May 1 as part of a nationwide strike in support of the eight-hour workday. During this period, workers had few legally recognized rights and little power to bargain with large industrialist employers, and labor violence was not uncommon.

The rally at the Haymarket was planned as a response to the police violence during the McCormick incident. The rally began at 8:30 at night in Chicago but, because of poor attendance, shortly thereafter was moved one block to the Haymarket at Des Plaines Street and Randolph Street. At about ten o'clock that night, as the rally wound down, 176 policemen, led by Police Inspector John Bonfield, marched on the crowd of approximately 200 people. The police demanded an immediate dispersal of the crowd and an end to the public display. As the police made their way into the crowd, a bomb exploded and killed one police officer. The explosion caused the police and the workers to panic. In the chaos that followed, the police, and possibly some workers, fired their guns. This event became known as the Haymarket riot. Six more police officers died of injuries suffered primarily from police weapons. Over sixty officers were injured, but worker injuries were not recorded because other workers at the rally removed those who were injured or killed.

In the immediate aftermath of the Haymarket riot, Chicago police and prosecutors indicted and arrested at least thirty well-known anarchists and socialists in the community. Of those indicted, eight were held for trial on charges of conspiracy to commit murder. Although no evidence was ever presented as to the identity of the bomb thrower, all eight men were convicted. Seven of the men were sentenced to death. On November 11, 1887, August Spies, George Engel, Adolph Fischer, and Albert Parsons were hanged. The words of August Spies as he prepared to die have been widely quoted. His words also appear at the base of a monument erected to commemorate the event located in the German Waldheim Cemetery of Forest Park, Illinois: "There will come a time when our silence will be more powerful than the voices you strangle today."

Louis Lingg committed suicide in prison to deprive the state of the opportunity to kill him. He killed himself when he placed a smuggled stick of dynamite in his mouth and lit it. Governor Richard Ogelsby, who privately stated his belief that all the men were innocent, commuted the sentences of Samuel Fielden and Michael Schwab to life sentences. The eighth man, Oscar Neebe, was sentenced to fifteen years in prison, in part because even the prosecution thought he was not guilty. The jailed men remained incarcerated for seven years until Governor John Peter Altgeld became the first Democratic governor in Illinois since the 1850s. Shortly after Altgeld became governor in 1893, he revisited the Haymarket affair. The pardons



Police charging rioters on May 4, 1886, in Haymarket Square, Chicago. The Haymarket affair was one of a number of violent attempts by management and government forces to subvert organized labor. *(Library of Congress)*

he issued for the three surviving men were bolstered by depositions from witnesses and a substantial amount of documentary evidence to show none of the men should have been convicted. The Haymarket affair is remembered as one of the more unjust and wrongful attempts by management and government forces to subvert the organization of labor.

Hazelwood School District v. Kuhlmeier (1988)

In *Hazelwood School District v. Kuhlmeier,* 484 U.S. 260 (1988), the U.S. Supreme Court held that minors in the United States could not claim identical rights and privileges as their adult counterparts. This fundamental principle is true both in the public school

setting and in parent–child relationships. The disparate treatment results from the special obligations that schools and parents have in educating students in appropriate behavior and from the assumption that minors are not yet adults. A major collision point involves the free speech rights guaranteed by the First Amendment to the U.S. Constitution.

In *Hazelwood* the Court was faced with a difficult combination of issues. The lawsuit was brought by former high school students who had served on the staff of their high school newspaper. This newspaper was produced as part of the school's journalism class; the class instructor supervised its production. The students claimed a violation of their First Amendment rights when the high school's principal decided to remove two articles from the final issue of the newspaper to be published that school year. One article dealt with teenage pregnancy, and the principal removed it because he feared members of the student body would be able to determine the identity of the girls written about in the article. The second article related to issues facing students of divorced parents. This article included information about a student's father whose name the journalism teacher had removed. The principal was concerned that this parent had not been given time to respond or an opportunity to consent to publication of the article. These concerns led the principal to order the paper published without two pages (which also meant other nonoffending articles were excluded from publication).

The Court recalled its holding in *Tinker v. Des Moines Independent Community School District,* 393 U.S. 503 (1969), that students maintained their rights to freedom of speech and expression while in the public school setting. The Court also explained that this right to freedom of speech and expression was not absolute. The majority in *Hazelwood* cited *Bethel School District v. Fraser,* 478 U.S. 675 (1986), which held that a student could not use explicit language in a school assembly, and *New Jersey v. T.L.O.,* 469 U.S. 325 (1985), which held that students did not enjoy identical privacy rights and Fourth Amendment protections in the school setting as they would outside school or as adults do generally. The Court held that the school newspaper in *Hazelwood* was not a "public forum" for constitutional purposes and that school officials had always conducted the journalism class like an academic course; as a result, school officials had the right to regulate the contents of the newspaper in any reasonable manner. In *Hazelwood* the Court held that the regulation the school's principal applied was in fact reasonable. The Court characterized the facts of this case as posing a different situation from when a school might attempt to chill an individual student's speech expressed on school premises, and held that this situation was different because it was a school-sponsored activity.

It is important to recognize the difference between the speech in question in *Hazelwood* and other forms of student speech and expression. In *Hazelwood* the Court noted the distinction between this and another Missouri case in which regulation was improper because the newspaper in question was an off-campus underground publication that was permitted to be sold on a state university campus but was not a university-sponsored publication. This distinction between requiring a school to tolerate particular student speech is different from the issue of whether a school must affirmatively promote particular student speech. The former was the question at issue in *Tinker,* in which the Court held that the wearing of black armbands in protest of the Vietnam War was constitutionally protected symbolic speech. In contrast, *Hazelwood* held that a school does have authority to place reasonable regulations on student speech in a school-sponsored program.

Hearing

A central feature of due process, a hearing is the means by which a person singled out by the state or by others can protest deprivation of or interference with life, physical integrity, liberty, property, or other entitlements. The right to due process is articulated in the Due Process Clauses of the Fifth and Fourteenth Amendments to the Constitution and in state constitutions as well, and the hearing is a means to guarantee that right. As a procedural device, the hearing helps minimize arbitrary and capricious governmental behavior and provides an avenue of redress for harms committed. Determining the extent and nature of the right to a hearing requires the answer to four questions.

WHEN REQUIRED

Crimes for which the deprivation may be a fine, a jail sentence, or loss of life itself cannot be prosecuted without providing at least one hearing and, usually, several hearings of different sorts. These may include hearing at arraignment, before a grand jury (if one is required), and eventually either before a judge if a plea is entered, or at a trial, which is a specialized form of hearing with elaborate procedural rules.

In civil matters, it is more difficult to generalize about the need for a hearing. Generally, a hearing is required only when the government singles out a particular individual. Thus, when a legislature enacts a statute or an administrative agency promulgates a general regulation aimed at a large body of people, not usually selected or known by name, no hearing is constitutionally required (although most legislative enactments and administrative rule-making are preceded by legislative or administrative hearings). But when the state aims at a particular individual, whether on its own account or on behalf of another person (for example, by entertaining private lawsuits in court), it must provide a forum in which the individual may be heard. For example, the legislature may enact an income tax law without having to hold a hearing, but it must provide hearings for protesting taxpayers who insist the tax law is being unlawfully applied to them.

There are two major exceptions to this generalization. First, an alien may be excluded at the border without any sort of a hearing, even if the alien has long resided in the United States and is returning from a sojourn abroad. Second, individuals may be deprived of certain sorts of entitlements or benefits created by the state without necessarily being provided a forum to protest—for example, a government employee may be fired from an "at-will" job without being provided a hearing. But the U.S. Supreme Court has ruled that certain benefits are sufficiently important that they may not be revoked or terminated without a prior hearing. These include welfare benefits and natural parents' custody of their children.

WHERE HELD

Criminal prosecutions must be heard in court, as must most claims between individuals for money damages arising from accidents, contract breach, and the like. However, there is no general constitutional principle that every civil hearing must be in court. In the modern state, administrative boards or agencies conduct many hearings crucial to the rights of individuals. For example, parole boards determine whether to release prisoners from jail, and public school authorities may suspend a student after an informal hearing with the student to determine whether there is reason to doubt the facts that gave rise to the decision to suspend.

TIMING

The timing of hearings depends on the circumstances. There is no general rule that a hearing must be held before the deprivation, but when the burden on the individual will be particularly severe, a hearing must be held first. Criminal defendants must be tried before they can be sentenced. Likewise, the state must provide a hearing before it terminates welfare benefits, garnishees wages, summarily suspends a driver's license following an accident, or obtains a court injunction against a particular course of conduct. Under some circumstances, when public harm would result from delay, the government may act first and hold a hearing

later. For example, the government may seize adulterated food and drugs without providing notice or a hearing in advance. In some cases, a judicial hearing held after an administrative action may provide sufficient protection; thus the Supreme Court has ruled that the Social Security Administration may discontinue disability checks as long as the claimant later has an opportunity to contest the withdrawal of benefits in court.

PROCEDURAL REQUIREMENTS FOR FAIR HEARING

Like timing, fairness depends on context. The greatest panoply of procedural rights is reserved for criminal prosecutions, both federal and state. Such prosecutions must observe procedural protections for the defendant spelled out in the Bill of Rights to the U.S. Constitution (its first ten amendments). These rights, which have been elaborated in thousands of court cases, include, crucially, the right to counsel, to cross-examine witnesses in open court, and to be free of any obligation to testify against oneself. Civil trials require the right to appear with one's own lawyer before a neutral judge bound by the known rules of evidence. Judges with a personal stake in the outcome of a case may not constitutionally hear it. In a 1927 case, the Supreme Court struck down as violating due process an Ohio law that permitted a justice of the peace personally to pocket a portion of the fines he assessed in traffic cases; a judge with a personal stake in the outcome has an incentive to bias the hearing and decision. Administrative hearings must likewise be held before unbiased decision-makers. Although the agency itself might have some stake in the recovery of fines (for example, to pay its expenses), the actual administrative judge or hearing officer may not be personally biased.

Hearsay

The rule of evidence pertaining to inadmissibility of hearsay is designed to protect the right of cross-examination in order to preserve the fairness of a hearing or trial. The rule requires that the actual witness to a statement or event be present at trial, either in person or by deposition (out-of-court questioning answered under oath), so that the opposing attorney may test the witness's truthfulness, perception, and memory. The hearsay rule has its basis in common law and in the right of criminal defendants to confront the witnesses against them (the Confrontation Clause) as guaranteed by the Sixth Amendment to the U.S. Constitution.

The classic, common law definition of inadmissible hearsay states that evidence that rests in part on the truthfulness of an out-of-court assertion made by someone other than the witness is inadmissible to prove the truth of the matter asserted.

The *Federal Rules of Evidence* define nonadmissible hearsay as statements or nonverbal assertive conduct made by one other than the witness testifying at trial offered to prove the truth of the matter asserted.

Examples illustrate hearsay and the civil liberties, constitutional, and testimonial dangers of admitting it as evidence in a trial. Assume the court must decide "Who was driving the car at the time of the collision?" Olive testifies, "Bill told me he saw Hal driving the car when it pulled out of the gas station." Olive's testimony constitutes inadmissible hearsay because Bill is not testifying. Bill is the real witness, and his credibility, perception, and memory should be subject to cross-examination.

The identity of the person who committed a crime may be a major issue in a criminal prosecution. Velma may not testify that Serena told her she saw Angela kill Boyd. Velma's testimony would be hearsay because Serena actually witnessed the criminal act, and the attorneys for defendant Boyd need to test her testimony by cross-examination.

Classic hearsay evaluation requires an analysis to

determine whether the trial witness, or some other witness, should be the one cross-examined about the statement offered, and whether certain exceptions to the hearsay rule may apply. Some exceptions depend on whether the person who originally made the statement is available but not on the witness stand at trial, and some depend on whether the person who originally made the statement is unavailable to testify (for example, has since died). All exceptions to the hearsay rule depend upon whether the circumstances under which the out-of-court statement was made were such that there is little likelihood for falsity and the testimony need not be tested by further cross-examination.

Hearsay exceptions recognized when the availability of the original witness is immaterial include a statement made during the course of a verbal act, such as an excited utterance or spontaneous declaration; a statement of existing mental, emotional, or physical condition; a statement made for purposes of medical diagnosis or treatment; a properly identified business record; past recollection recorded (the person wrote a summary of what was witnessed near that time); certain public records or reports; and admissions by a party-opponent. Exceptions that depend upon the unavailability of the out-of-court witness include testimony at an earlier hearing or trial; a "dying declaration" (deathbed statement); a statement against interest (prejudicial to oneself); or a statement about personal or family history. The federal rules provide a residual exception that permits a court to admit evidence possessing circumstantial guarantees of trustworthiness. In that situation the party offering the evidence must notify the other party of its intent to offer the statement, along with the name and address of the person originally making the statement.

Herrera v. Collins (1993)

In 1982, Leonel Herrera was convicted and sentenced to death in Texas for shooting and killing a police officer. Ten years later, after exhausting his direct appeals and one round of habeas corpus (petition for release from unlawful confinement) without success, he again collaterally attacked the judgment, arguing for the first time that new evidence revealed him to be factually innocent of the crime, which had been committed solely by his deceased brother, Raul. Herrera lost in state court; Texas law barred claims of this nature raised more than a month after sentence. He fared no better in federal court. Ultimately, the U.S. Supreme Court granted Herrera's petition for review. It presented two questions: (1) whether the Constitution's Eighth Amendment (barring cruel and unusual punishment) and Fourteenth Amendment (applying due process protections against the states) permitted a state to execute a guiltless person and (2), if not, what postconviction procedures were needed to guard against this dire result.

In *Herrera v. Collins,* 506 U.S. 390 (1993), five justices explicitly answered the first question in the negative; not surprisingly, no one stated a contrary view. The second question posed greater problems. Once found guilty, a criminal defendant no longer enjoys a presumption of innocence. Thus, to assess Herrera's claim, the habeas court would likely have to hear his witnesses—the new ones as well as, perhaps, the ones who had previously testified. But what should be the petitioner's remedy, if the judge believed him innocent? Although Herrera was asking only that the Court vacate his sentence (strategically, he may have been trying to make his argument seem less radical), logically he ought to be freed or, at least, receive a new trial.

Declining to enter this legal thicket, the Court, endorsing dicta (nonbinding analysis) from an old decision, *Townsend v. Sain,* 372 U.S. 293 (1963), ruled six–three that a free-standing claim of actual innocence, based on newly discovered evidence, was not grounds for "habeas relief absent an independent constitutional violation"—for example, admission at trial of a coerced confession.

The majority opinion, authored by Chief Justice

William H. Rehnquist, distinguished a line of precedent in which the petitioner, by making a colorable show of actual innocence, could overcome certain procedural barriers to having his constitutional claim considered on the merits by the habeas court. In addition, the Court distinguished *Jackson v. Virginia,* 443 U.S. 307 (1979), which did authorize federal courts to overturn a state conviction on purely evidentiary grounds but only if the proof was so inadequate that no rational trier of fact could have found the defendant guilty beyond a reasonable doubt—a standard required by due process, as explained in *In re Winship,* 397 U.S. 358 (1970). By contrast to Herrera's, this type of claim rested on evidence in the record, did not invite the court to make its own determination of guilt or innocence (an incursion on principles of federalism), and asserted an independent constitutional violation.

The majority, however, did leave open the possibility that a death-sentenced prisoner who, unlike Herrera, made "a truly persuasive demonstration of 'actual innocence' " after trial might obtain federal relief if no state forum would process his claim. But the majority posited that "the threshold for such an assumed right . . . would be extraordinarily high." In dissent, Justice Harry A. Blackmun, who believed Herrera deserved a hearing, wrote that it ought to suffice for the claimant to show that he was "probably" innocent. To execute someone who meets this test, the justice opined, "comes perilously close to simple murder."

It bears emphasis that the issues treated in *Herrera* are by no means academic. As of May 2003, 108 death-row inmates had been released on grounds of innocence since 1973; fifty-seven of these exonerations occurred after 1992. It is not known how many less fortunate prisoners may have been put to death despite being innocent.

Hicklin Test

The *Hicklin* test, a narrowly drawn inquiry for determining obscenity that derived from the British case of *Regina v. Hicklin,* L.R. 3 Q.B. 360 (Eng. 1868), was widely used in the United States for much of the late nineteenth and early twentieth centuries. As the twentieth century (and notions of morality) progressed, courts increasingly rejected the test as too narrow, and it was formally repudiated by the U.S. Supreme Court in 1957.

The *Hicklin* test had its origins in the British Obscene Publications Act of 1857, sponsored by the Lord Chief Justice John Campbell. The act authorized the police to seize published material they deemed obscene and to have that material destroyed unless its owner appeared before a court and disproved the charge. Under the act, authorities seized copies of "The Confession Unmasked," a political pamphlet that opposed the election of Catholics to the Parliament by purporting to recount in lurid detail "the depravity of Romish priests" and the "questions put to females in confession." Judge Benjamin Hicklin agreed with the pamphlet's owner that the tract could not be held obscene given the legitimate political purpose of its producers. (The slanderous anticlericism of the tract was not then considered to stain its legitimacy as political speech.)

On appeal to the Court of the Queen's Bench, Chief Justice Alexander Cockburn reversed Judge Hicklin's holding on the ground that a legitimate political purpose was not a proper defense under the act. Instead, the chief justice wrote, the question was simply "whether the tendency of the matter charged as obscenity is to deprave and corrupt those whose minds are open to such immoral influences and into whose hands a publication of this sort may fall." This tract, like medical treatises and other specialized literature, perhaps contained material legitimate and appropriate for certain professional audiences, but it

should not be "exhibited for any one, boys and girls, to see as they pass." Thus, under the *Hicklin* test, a determination of obscenity could be made based on the impact that selected, decontextualized elements of the publication might have on particularly susceptible individuals. Under this test, British authorities banned the literature of French writers Émile Zola, Gustave Flaubert, and Guy de Maupassant, as well as scientific and medical materials on human and animal sexuality.

The *Hicklin* test was imported almost immediately into the United States; an early application came in *Commonwealth v. Landis,* 8 Phila. Rep. 453 (1870). The test was a favorite of turn-of-the-century moral crusader Anthony Comstock and was used by various U.S. authorities in often successful efforts to ban works by feminist authors as well as several texts on medicine and hygiene. The test also caught up the literature of novelists, including Theodore Dreiser's *An American Tragedy* in *Commonwealth v. Friede,* 171 N.E. 472 (Mass. 1930); D. H. Lawrence's *Lady Chatterley's Lover* in *Commonwealth v. Delacey,* 171 N.E. 455 (Mass. 1930); James Joyce's *Ulysses* in *United States v. One Book Entitled "Ulysses,"* 72 F.2d. 705 (2d Cir. 1934); and Henry Miller's *Tropic of Cancer* and *Tropic of Capricorn* in *Besig v. United States,* 208 F.2d 142 (9th Cir. 1953).

In the United States, Judge Learned Hand was among the earliest to question the *Hicklin* test in *United States v. Kennerley,* 209 F. 119 (S.D.N.Y. 1913), a case against the publisher of the novel *Hagar Revelly,* which told of the hard life of an impoverished woman on the streets of New York, written by a social hygienist hoping to warn youths of the dangers of vice. Judge Hand worried that testing literature from the perspective of the most susceptible individual would "reduce our treatment of sex to the standards of a child's library in the supposed interest of a salacious few." He also complained that the test allowed a work to be labeled obscene based on selected passages taken out of context rather than on an assessment of the work as a whole. Nevertheless, feeling constrained by precedent, Hand put aside his qualms and relied on the *Hicklin* test when he assessed the book.

However, Judge John M. Woolsey took the matter a step further, ruling in *United States v. One Book Entitled "Ulysses,"* 5 F. Supp. 182 (S.D.N.Y. 1933), that whether a work was obscene hinged on its effect not on a particularly susceptible person but rather on one with "average sex instincts, . . . who plays . . . the same role of hypothetical reagent as does the 'reasonable man' in the law of torts." Having read *Ulysses* as a whole, Judge Woolsey concluded that it was not obscene. Learned Hand, by then on the Second Circuit Court of Appeals, joined in an opinion written by his cousin Augustus Hand affirming that conclusion in *United States v. One Book Entitled "Ulysses,"* 72 F.2d 705 (2d Cir. 1934). Over time, more courts began to follow this line of reasoning, creating a split in First Amendment jurisprudence.

The Supreme Court's first indication of dissatisfaction with the *Hicklin* test came in *Butler v. Michigan,* 352 U.S. 380 (1957). Echoing the earlier concerns of Learned Hand, Justice Felix Frankfurter for a unanimous Court commented that a Michigan state law codifying the *Hicklin* test effectively "reduc[ed] the adult population of Michigan to reading only what [was] fit for children." Shortly thereafter, in *Roth v. United States,* 354 U.S. 476 (1957), the Supreme Court expressly rejected the *Hicklin* test as "unconstitutionally restrictive of the freedoms of speech and press." In an opinion by Justice William J. Brennan Jr., the Court mandated that obscenity was to be determined with regard to the sensibilities of "the average person, applying contemporary community standards," rather than of the most susceptible individual, and in terms of "the dominant theme of the material taken as a whole" rather than decontextualized excerpts and selected passages.

Hiibel v. Nevada (2004)

Since its decision in *Terry v. Ohio,* 392 U.S. 1 (1968), the U.S. Supreme Court has recognized the right of police officers briefly to "stop and frisk" individuals they reasonably suspect might be engaged in criminal activity. Statements that justices made in dicta (comments not directly bearing on a particular case decision and nonbinding for future cases) in *Terry* and subsequent cases had indicated that individuals being stopped and frisked had the right not to answer questions directed to them by police officers. That right was limited, however, the Court said in *Hiibel v. Nevada,* 124 S. Ct. 2451 (2004), which implicated Fourth, Fifth, and Fourteenth Amendment provisions and the broader right of privacy: The Court modified this understanding to the extent that it allows police officers, acting under state law, to arrest individuals about whom they have a reasonable suspicion of criminal activity but who refuse to give their names.

A police officer in Humboldt County, Nevada, had questioned Larry "Dudley" Hiibel after the officer received a report that a man in a truck had assaulted a woman passenger. The officer approached the suspect who was standing outside his truck with his daughter inside. The officer believed the man was intoxicated and made eleven separate requests for him to identify himself. When he refused, the officer arrested him. He was identified as Hiibel and was fined $250 under the state's "stop and identify" statute. A state district court affirmed the fine, which the Nevada Supreme Court upheld. Hiibel did not believe that providing his name would be incriminating; he simply believed that the police officer did not have the right to require him to provide it.

The Supreme Court upheld this conviction against Fourth and Fifth Amendment challenges in a five–four decision authored by Justice Anthony M. Kennedy and joined by Chief Justice William H. Rehnquist and Justices Sandra Day O'Connor, Antonin Scalia, and Clarence Thomas. The majority distinguished the Nevada law from traditional vagrancy laws, which it often had invalidated for vagueness. By contrast, the Nevada statute required only that individuals identify themselves by name, which the majority believed could be particularly important information in cases where domestic assault was suspected or where the safety of officers might be involved. The majority further rejected the idea that such a law violated the Fifth Amendment provision against self-incrimination (as with Fourth Amendment provisions, applied to the states via the Due Process Clause of the Fourteenth Amendment). The majority observed that the Fifth Amendment protected only communications that were "testimonial, incriminating, and compelled." Although the justices accepted the idea that providing one's name could be "testimonial," they did not believe it was either compelled or incriminating. The justices conceded there might be circumstances in which providing a name would be incriminating, but they did not believe this case represented such an instance. They observed that even individuals who invoke the Fifth Amendment in criminal cases "answer when their names are called to take the stand."

In dissent, Justice John Paul Stevens argued that the Nevada law violated the provision against self-incrimination. He pointed out that "a name can provide the key to a broad array of information about the person, particularly in the hands of a police officer with access to a range of law enforcement databases." Justice Stephen G. Breyer's dissent, joined by Justices David H. Souter and Ruth Bader Ginsburg, pointed to dicta in previous cases limiting the individual's obligation to respond to questioning during *Terry*-type searches.

Hill v. Colorado (2000)

In *Hill v. Colorado,* 530 U.S. 703 (2000), the U.S. Supreme Court upheld a Colorado "bubble" law that made it a crime for anyone within 100 feet of the entrance of any health care facility to "knowingly approach" within eight feet of an unconsenting person "for the purpose of passing a handbill to, displaying a sign to, or engaging in oral protest, education or counseling." The Colorado legislature had enacted the law as a means of protecting women visiting health clinics to obtain counseling on abortion or birth control from being harassed and insulted by antiabortion protesters. Leila Jeanne Hill claimed that this law restricted her rights to protest peacefully and distribute leaflets on a public sidewalk. Although she was joined by such diverse bedfellows as the American Civil Liberties Union, the AFL-CIO, and the People for the Ethical Treatment of Animals, the Colorado Supreme Court upheld the law as a neutral "time, place, and manner" regulation.

The Supreme Court affirmed in a six–three vote, distinguishing *Hill* from an earlier decision in *Schenck v. Pro-Choice Network of Western New York,* 519 U.S. 537 (1997), in which it had invalidated a requirement for a floating bubble around persons seeking to enter or exit a clinic. Justice Stevens's majority opinion found the Colorado statute narrowly tailored to protect the significant state interest of safeguarding "the recognizable privacy interest in avoiding unwanted communication." This interest is greatest in the home, but it "can also be protected in confrontational settings," such as the entries of medical facilities, where there is a high degree of unwelcome contact from which escape is difficult. Colorado's regulation passed constitutional scrutiny because it applied only to certain places, was content- and viewpoint-neutral, and provided police with clear guidelines that protected this right to privacy while allowing the expression of dissenting messages.

Justice David H. Souter's concurrence—joined by Justices Sandra Day O'Connor, Ruth Bader Ginsburg, and Stephen G. Breyer—emphasized that the law "simply does not forbid the statement of any position on any subject." It only prohibited "approaching another person closer than eight feet (absent permission) to deliver the message." From that distance, the message on any sign would remain visible, and the content of any speech still audible.

Justices Antonin Scalia (joined by Clarence Thomas) and Anthony M. Kennedy passionately dissented. To Justice Scalia, the majority's decision "enjoys the benefit of the 'ad hoc nullification machine' that the Court has set in motion to push aside whatever doctrines of law stand in the way of that highly favored practice." He found the Colorado statute to be content-based on its face against antiabortion speakers, and he feared the implications of the majority's reasoning on labor pickets and other public protests.

Justice Kennedy argued that the Court "delivers a grave wound to the First Amendment." Other parts of Colorado's law—and other state and federal laws—would punish those who block access, trespass, or attempt to harass or assault individuals attempting to enter medical clinics. But in upholding this law, he wrote, "the Court approves a law which bars a private citizen from passing a message, in a peaceful manner and on a profound moral issue, to a fellow citizen on a public sidewalk."

Kennedy concluded that the majority also "strikes at the heart of the reasoned careful balance" he believed to be "the basis for the joint opinion in *Casey*"—a reference to *Planned Parenthood of Southeastern Pennsylvania v. Casey,* 505 U.S. 833 (1992). In his view, abortion is a moral and personal choice—one the state cannot compel but one that others can use their liberty to attempt to influence. In "a cruel way," Kennedy wrote, "the Court today turns its back on that balance" as it "tears away from the protesters the guarantee of the First Amendment when they most need it."

The Court's decision was announced the same day as *Stenberg v. Carhart,* 530 U.S. 914 (2000), which struck down a Nebraska law banning partial-birth abortion. Justices Scalia and Kennedy read substantial portions of their dissents in *Hill* from the bench.

Hodgson v. Minnesota (1990)

The U.S. Supreme Court in *Hodgson v. Minnesota,* 497 U.S. 417 (1990), determined that a Minnesota statute requiring a minor to notify both parents before having an abortion was constitutional because it provided a judicial process by which exceptions could be granted under limited circumstances (judicial bypass). On June 25, 1990, the Supreme Court issued two decisions about the powers of the states to regulate the availability of abortions for minors. Both *Hodgson* and *Ohio v. Akron Center for Reproductive Health,* 497 U.S. 502 (1990), which upheld a state requirement to notify one parent or get a judicial bypass, examined the constitutionality of state parental notification requirements such that doctors must ensure parents are alerted to their child's desire to abort. In these decisions, the Court built upon an intricate construction of previous Supreme Court decisions.

All abortion decisions inevitably cite the watershed case of *Roe v. Wade,* 410 U.S. 113 (1973), in which the Court held that an adult woman had a fundamental constitutional right to terminate her pregnancy under certain delineated circumstances. The Court later expanded this fundamental right in *Planned Parenthood of Central Missouri v. Danforth,* 428 U.S. 52 (1976), to minors who were deemed mature; the justices noted "constitutional rights do not mature and come magically into being only when one attains the state-defined age of majority." In 1979 the Court in *Bellotti v. Baird,* 443 U.S. 622 (1979) (*Bellotti II*), determined that a state could require parental consent prior to a minor's termination of her pregnancy, but it must give minors the option to judicially bypass this requirement. The mature minor must be given a means of exercising her fundamental right to abort.

The *Hodgson* Court ruled that certain minors must have a way to avoid parental involvement: These exceptions would include a minor who was mature enough to make the decision without parental consultation; a minor for whom the notification of her parents could be psychologically or physically dangerous; or a minor for whom the abortion definitely would be in her best interest. The Minnesota statute required the notification of both biological parents, and the Ohio law required notification of only one parent, but both states provided a version of the *Bellotti II* judicial bypass procedure. The issue in both cases was whether the two notification statutes were constitutional under such previous cases as *Bellotti II* and *Danforth.*

The statute applicable in *Hodgson* required that minors give notice to both biological parents at least forty-eight hours prior to the abortion, with two exceptions: (1) for a minor who declared she was the victim of neglect or when parental abuse information was given to the proper juvenile authorities and (2) if the minor could convince the proper court that she was "mature and capable of giving informed consent" or that an abortion, without notifying both of her parents, would be in her best interest.

The Supreme Court determined that although Minnesota's provision for a two-parent notification clause was unconstitutional, the bypass procedure protected the statute as a whole. The majority opinion observed, "Minnesota has offered no sufficient justification for its interface with the family's decision making process created by . . . two-parent notification. [This] is the most stringent notification statute in the country . . . Minnesota's two-parent notice requirement is all the more unreasonable when one considers that only half of the minors in the state of Minnesota reside with both biological parents. A third live with only one parent."

Although the majority of the Court found this two-parent notification provision unconstitutional, Justice Sandra Day O'Connor provided the vote determining that the judicial bypass procedure rendered the entire statute constitutional. This second majority argued that the minor had the alternative of going to court

through the bypass procedure in order to avoid the notification of one or both parents; therefore, the law was constitutional.

Holmes, Oliver Wendell, Jr. (1841–1935)

Oliver Wendell Holmes Jr. joined the U.S. Supreme Court in 1902, beginning a twenty-nine-year period of service that, arguably, was bested only by John Marshall in its impact on how judicial scholars conceive of the role of law in American life and study its creation by judges and justices. Prolific by the standards of even the most erudite justices, Holmes made intellectual contributions to legal and judicial studies ranging from his late-nineteenth-century lectures at the Lowell Institute in Boston, Massachusetts, to the written opinions he produced during his final years on the Court.

Holmes was the son of a Boston writer and physician, and his upbringing is best characterized as a mixture of Protestant austerity and family membership in the New England intellectual community. Holmes's account of his childhood revealed that Ralph Waldo Emerson was among the frequent dinner guests at what was a distinctly literary home.

Holmes served two years in the Twentieth Regiment of the Massachusetts Volunteer Infantry during the Civil War, suffering three wounds, the second of which was a nearly fatal bullet to the neck at Antietam, Maryland. After a lengthy recovery in Boston, Holmes returned to his post as a senior infantry officer and ultimately completed military duties in 1864. Historians debate the impact of Holmes's Civil War experiences on his legal philosophy. Whatever the linkages between his life as a soldier and his perspectives on the law, Holmes apparently encountered little difficulty in the transition to the civilian world, matriculating at Harvard College less than three months after leaving military service. Holmes completed his formal education at Harvard in 1866 well prepared for entry into both Boston society and legal practice. In 1867 he began practicing in Boston and, in 1870, assumed lecturing duties at Harvard Law School.

By 1881, as indicated by the content of his lectures at the Lowell Institute, Holmes had established the foundations of what ultimately became his mature perspectives on the sources of legal principles and role of law in society. In the same year, he published *The Common Law,* a remarkably comprehensive yet, in parts, elliptically related account of these foundations. Holmes's ascent in the American legal hierarchy had only begun, however. In 1881 he accepted an appointment to the Massachusetts Supreme Judicial Court, and by the early 1890s, Holmes was issuing opinions consistent with his later preference for judicial restraint in reviewing the constitutionality of legislative acts. Thus, Holmes's chief jurisprudential orientations were in place prior to his nomination to the Supreme Court.

The first of President Theodore Roosevelt's three nominations to the Court, Holmes took the oath of office December 8, 1902, and remained on the high bench until his retirement January 12, 1932. Inasmuch as his jurisprudential contributions are known, his productivity, in terms of sheer opinion-writing activity, was unprecedented for his time on the Court. During his twenty-nine-year tenure, Holmes produced some 873 written opinions for the Court, more than any other justice in Supreme Court history. In addition, his seventy-three written dissents, unremarkable by today's standards, were exceeded in the nineteenth- and early twentieth-century Courts only by Justices Stephen J. Field and John Marshall Harlan.

Holmes's stature on the Court as a prolific writer is eclipsed, however, by the weight of his substantive impact on the law. A close reading of Holmes's opinions reveals the two fundamental characteristics of his

jurisprudence. First, Holmes conceived of law not as a body of fixed principles but rather as a malleable instrument for solving human problems. Furthermore, Holmes is regarded as a consummate legal realist; he viewed law as a product of the values and policy preferences of judges and justices, a view consistent with his categorical rejection of what would later be called mechanical jurisprudence. The dual foci of his thought appeared most succinctly in the opening paragraph of *The Common Law*: "The life of the law has not been logic: it has been experience. The felt necessities of the time, the prevalent moral and political theories, intuitions of public policy, avowed or unconscious, even the prejudices which judges share with their fellow-men, have a good deal more to do than the syllogism in determining the rules by which men should be governed."

The second and equally important quality of Holmes's thought concerns his view of the proper station—or what political scientists refer to as role orientation—of the Supreme Court in U.S. politics. In brief, Holmes embraced the principle of legislative supremacy and a related preference for judicial self-restraint. Moreover, in a series of masterfully crafted dissents, Holmes confronted the conservative, activist Courts of the first two decades of the twentieth century, often lecturing his colleagues on their misapprehensions of the proper role of the courts in U.S. constitutional government. Furthermore, Holmes railed against the Court's majority for overstepping the boundaries of legitimate judicial authority and ruling unconstitutional legislation regulating working conditions of American laborers. Herein lies a key explanation for Holmes's stature in Supreme Court history: His impact on constitutional thinking resulted chiefly from his willingness to violate what was at the turn of the century an institutional norm of consensus.

In a way quite distinct from John Marshall, Holmes made his mark on U.S. constitutional history initially in the vessel of the dissenting opinion. His most famous dissent, occurring in response to Justice Rufus Peckham's majority opinion in *Lochner v. New York,* 198 U.S. 45 (1905), reveals the essence of Holmes's view of judicial forbearance. There, he wrote in support of a New York statute regulating the maximum hours a person was allowed to labor in the dank cloisters of the city's bakeries. Chastising his brethren for using both the Fourteenth Amendment and, relatedly, the theory of liberty of contract as a justification for their economic theories, he stated: "The 14th Amendment does not embody Mr. Herbert Spencer's Social Statics. [Some] of these laws embody convictions or prejudices which men are likely to share. Some may not. But a Constitution is not intended to embody a particular economic theory, whether of paternalism and the organic relations of citizens to the state or laissez faire."

Holmes further argued that the Court majority had understated the scope of legislative power: "[I] think that the word 'liberty,' in the 14th Amendment, is perverted when it is held to prevent the natural outcome of a dominant opinion, unless it can be said that a rational and fair man necessarily would admit that the statute proposed would infringe fundamental principles as they have been understood by the traditions of our people and the law."

At bottom, Holmes linked to his preference for judicial restraint a mode of constitutional interpretation commonly labeled "rational-basis" review. More specifically, Holmes advocated the use of the Court's power to strike down laws only when a clear constitutional violation was afoot and when it could be shown that the statute was not a reasonable legislative response to a perceived public problem. Holmes's application of the rational-basis test became the standard employed by the Court in reviewing the constitutionality of congressional or state legislation in areas where nonfundamental liberties are concerned.

In contradistinction to his perspectives on government regulation of economic liberties, Holmes drafted a key dissent in 1919 that would notably shape constitutional thinking about the role of free of speech in American democracy. In *Abrams v. United States,* 250 U.S. 616 (1919), Holmes said that the clear-and-present-danger doctrine he adopted just months prior in *Schenck v. United States,* 249 U.S. 47 (1919), failed to capture the protections afforded to persons by the First Amendment. In *Abrams,* Holmes observed that the communication of an idea could be prohibited and punished only when the expression posed an imminent threat of lawlessness and, correspondingly, an imminent threat to the success of a lawful government activity.

The distinction between Holmes's reasoning in *Schenck* and *Abrams* is of no small importance: In *Abrams* he markedly expanded the scope of lawful communicative activity, shrinking the zone of expression subject to government regulation. The theoretical perspective he adopted in *Abrams* reflected a general defense of free expression as necessary for sound policy making. Holmes explained that "the ultimate good desired is better reached by free trade in ideas—that the best test of truth is the power of the thought to get itself accepted in the competition of the market, and that truth is the only ground upon which their wishes safely can be carried out. That at any rate is the theory of our Constitution." Holmes concluded in *Abrams* that the First Amendment did not allow prosecution under the Sedition Act of 1918 of a group of Russian immigrants who distributed printed materials critical of U.S. involvement in World War I.

The impact of Holmes's position in *Abrams* reached deep into the twentieth century. The Court's per curiam opinion in *Brandenburg v. Ohio,* 395 U.S. 444 (1969), embraced the view, adopted by Holmes in *Abrams,* that advocacy of imminent lawless action marked the boundary between protected speech and expression subject to government limitation. In *Brandenburg,* the Court reversed the conviction under an Ohio criminal syndicalism law of a Ku Klux Klan member who encouraged the view that hostile encounters with federal government organizations might, in the future, be necessary to achieve the Klan's purposes. Reversing the Ohio Supreme Court's order dismissing Brandenburg's appeal, the justices distinguished advocacy of some future lawless activity from advocacy of lawless action that was likely to occur in immediate proximity to the expression. Echoing Holmes's opinion in *Abrams,* the Court explained that "the mere abstract teaching . . . of the moral propriety or even moral necessity for a resort to force and violence is not the same as preparing a group for violent action and steeling it to such action."

Confounding Holmes's apparent dedication to individual liberty was his opinion in *Buck v. Bell,* 274 U.S. 200 (1927)—a decision that ranks among the more regrettable episodes in Supreme Court history. In *Buck,* Holmes extended his restraintist orientation to uphold a Virginia statute allowing court-approved sterilization of mentally disabled persons. Rejecting the idea that forced sterilization impinged on personal privacy, Holmes defended the state's practices, in part, on utilitarian grounds. Writing for an eight-justice majority, Holmes seemed to call upon a combination of personal experiences in war and the most callous use of analogy:

> We have seen more than once that the public welfare may call upon the best citizens for their lives. It would be strange if it could not call upon those who already sap the strength of the State for these lesser sacrifices, often not felt to be such by those concerned, in order to prevent our being swamped with incompetence. It is better for all the world, if instead of waiting to execute degenerate offspring for crime, or to let them starve for their imbecility, society can prevent those who are manifestly unfit from continuing their kind.

At bottom, his majority opinion in *Buck v. Bell* encapsulates one of the more intriguing questions about Holmes's jurisprudential perspectives. Considering that *Buck* came late in his judicial career, nearly a decade after his most important opinions in free speech cases, what are historians and social scientists to conclude about Holmes's conception of the scope of constitutionally protected personal and political freedoms? Did Holmes apprehend a principle that protected expression of what he would label offensive and potentially dangerous ideas yet simultaneously denied basic forms of personal privacy on the basis of serving a more important public good? Perhaps his thinking on the subject of personal privacy, a subject not directly explored by the Court until more than thirty years after Holmes retired, reflected a combination of a fundamental commitment to judicial restraint and the strictures of early twentieth-century discourse on the matter of individual autonomy. Strikingly, however, Holmes had dissented in *Olmstead v. United States,* 277 U.S. 438 (1928), the wiretapping case in which fellow justice Louis D. Brandeis (with whom Holmes was often allied) in his dissenting opinion had articulated a right to privacy.

Arguably, the confluence of these two streams in Holmes's thought—the idea that law exists to respond to human needs and that judicial decisions are principally a creature of the judicial mind—accounts for

Holmes's place in the history of American jurisprudence. In addition, social scientific analysis points to a probable linkage between the circumstances of his young adulthood, the length of his service on the Court, and the enduring impact of his legal scholarship.

Home Building and Loan Association v. Blaisdell (1934)

In *Home Building and Loan Association v. Blaisdell,* 290 U.S. 398 (1934), the U.S. Supreme Court held that a Minnesota law aimed at alleviating the effects of the Great Depression did not violate the Contracts Clause of the Constitution. This clause, found in Article I, Section 10, provides that no state shall pass any law "impairing the obligation of contracts."

Following the 1929 stock market crash, the U.S. economy collapsed and the nation was in financial ruin. As President Franklin D. Roosevelt and Congress worked at the national level on legislation to stimulate economic recovery, provide relief to those in need, and return the nation to economic health, a number of state legislatures also took action to deal with the crisis. One of the main problems faced by farmers, homeowners, and owners of small businesses was mortgage foreclosure. Because of high unemployment, low prices for farm goods, and other financial difficulties, these people could not meet their mortgage payments, and many lost their property. As a result, more than a dozen states were persuaded to pass laws to assist others in danger of mortgage foreclosure.

One of these statutes, the Minnesota Mortgage Moratorium Act of 1933, faced a legal challenge in the U.S. Supreme Court. The Minnesota law permitted debtors to petition a state trial court to postpone foreclosure of their mortgages for up to two years, with the stipulation that they pay monthly installments. John and Rosella Blaisdell, residents of Minneapolis, fell behind on their regular mortgage payments, and they applied for such an extension. The trial court agreed and ordered the Blaisdells to pay monthly installments of $40. Over the objections of the Home Building and Loan Association, the Minnesota Supreme Court upheld the lower court's decision. The company then appealed to the U.S. Supreme Court, claiming that the Minnesota law violated the Contracts Clause of the Constitution.

By a five–four vote, the Supreme Court affirmed the ruling of the state high court. Chief Justice Charles Evans Hughes wrote the majority opinion, holding that there was no Contracts Clause violation. He said that although the Minnesota law modified the contract contained in the mortgage, it was a temporary measure enacted to deal with an emergency situation—the economic crisis gripping the state and nation. Hughes argued that the Contracts Clause should not be interpreted to prevent the state from using its police power—its power to protect public health, safety, welfare, and morals—to respond to that crisis. The four dissenters, led by Justice George Sutherland, criticized the majority for ignoring what they saw as a clear violation of the Contracts Clause. Justice Sutherland asserted that the moratorium law impaired contractual obligations, and by upholding it, the Court was opening the door to even greater invasions of the "sanctity of public and private contracts."

Blaisdell was decided before the Court heard cases involving the New Deal legislation enacted by President Roosevelt and Congress. Some supporters of the New Deal hoped that the *Blaisdell* ruling was a signal that the Court would also look favorably on the federal legislation, but they were initially wrong. In several key cases decided in 1935 and 1936, the Court struck down major portions of President Roosevelt's New Deal program before reversing course and largely leaving social and economic matters to legislative dis-

cretion. Since *Blaisdell,* the Court has rarely interpreted the Contracts Clause to prohibit states from enacting economic regulations designed to protect the public welfare.

Home Schooling

In modern times, the concept of teaching children at home may seem to be a strange practice employed by an eccentric few. In reality, it is the concept of modern public schooling that is new. Most of the nation's founding fathers, including George Washington and James Madison, were tutored at home. Additional such notables were Benjamin Franklin, Thomas Edison, Alexander Graham Bell, Abraham Lincoln, Franklin D. Roosevelt, Albert Einstein, Winston Churchill, John Marshall, Mark Twain, John Stuart Mill, and Clara Barton. With the rise of free public education and widespread compulsory education laws in the eighteenth and nineteenth centuries, however, the number of families choosing to school children at home radically declined. In the past few decades, home schooling has seen a revival, and recent estimates put the number of home-schooled children in kindergarten through twelfth grade at 1.725 to 2.185 million, with a growth rate of 7–15 percent per year. In a few instances, home schooling has pitted the interests of parents in educating their children as they see fit against the interests of the state in ensuring a literate, responsible community.

Parents' motivations for home schooling their children vary widely and include both conservative and liberal ideologies. For example, parents may choose to home school based on religious reasons, on pedagogical reasons, on the special needs of the child, or on dissatisfaction with academic quality and lack of discipline in public schools. Styles of home schooling are limited only by the creativity of parents and the flexibility of state laws. Some parents follow accredited curricula, which are designed and supervised by licensed education professionals. Other parents do not follow any set curriculum and allow their children to self-guide their own studies.

With the recent renewed interest in home schooling came legal challenges, most of them based on state compulsory education or truancy laws. For example, in 1985, the Texas Education Agency (TEA) declared that home schooling was illegal and prosecuted over eighty families for truancy. Home-schooling parents filed a class-action lawsuit, and on appeal the Texas Court of Appeals held in *Texas Education Agency v. Leeper,* 843 S.W.2d 41 (Tex. Ct. App. 1991), a decision subsequently upheld on other grounds, that the TEA had "deprived the home school parents of equal protection under the law." In 1989 the Texas legislature exempted private and parochial schools from many of the public school requirements and clarified that a private or parochial school included home schools.

In addition to legal challenges to home schooling, many critics claim the practice has sociological and pedagogical problems as well. Complaints include the claim that students taught at home lack socialization

"Images Removed Due to Copyright Issues"

skills, that they do not receive a diverse education, and that parents are woefully unprepared to be teachers. Home-schooling parents respond that there are adequate opportunities for extracurricular activities, that private tutoring allows them to suit the particularized needs of their children better, and that home-schooled children often academically outperform children from traditional school environments.

Although the U.S. Supreme Court has yet to address a parent's right to home school, it has held that parents have a fundamental right to direct the upbringing and education of their children. The right is not without limits, and the Court has made clear that states have a strong interest in regulating education. Two Supreme Court cases, both involving compulsory education laws, established that parents have a fundamental right to educate their children, but that the state can regulate this right. In *Pierce v. Society of Sisters,* 268 U.S. 510 (1925), the Court addressed whether an Oregon compulsory attendance law requiring all children age eight to sixteen to attend public school violated the Fourteenth Amendment. Both private and parochial schools challenged the law. In finding the statute unconstitutional, the Supreme Court stated that it "unreasonably interferes with the liberty of parents and guardians to direct the upbringing and education of children under their control. . . . The child is not the mere creature of the State; those who nurture him and direct his destiny have the right, coupled with the high duty, to recognize and prepare him for additional obligations." Nevertheless, the Supreme Court affirmed that states have the power "to require that all children of proper age attend some school."

In *Wisconsin v. Yoder,* 406 U.S. 205 (1972), the Supreme Court again emphasized the state's interest in the education of children by noting that "there is no doubt as to the power of a State, having a high responsibility for education of its citizens, to impose reasonable regulations for the control and duration of basic education." In *Yoder,* the Court addressed the constitutionality of Wisconsin's compulsory attendance law when members of the Amish community were arrested for failing to send their children to any school (public or private) after the eighth grade. The Amish objected to formal schooling based largely on their religious beliefs, and they therefore challenged the Wisconsin law based on both the Free Exercise Clause of the First Amendment and the Fourteenth Amendment's Due Process Clause, which they claimed protected parental rights. Acknowledging that the state had a strong interest in the education of children, the Court noted that the state's interest "is not totally free from a balancing process when it impinges on fundamental rights and interests." On the facts of the case before it, the Court concluded that the Amish had presented enough evidence to overcome the state's interest in requiring a formal high school education. Of course, *Yoder* was based heavily on the constitutional principle of free exercise of religion, which would not apply to all parents who chose to home school their children.

Home-schooling regulations vary from state to state. Some states have minimal requirements for home-schooling parents and do not require parents to notify the state of their intent to home school or to receive permission to do so. Other states require that students spend a certain amount of time doing studies, parents comply with certain licensing requirements, the home-school curricula cover certain prescribed subjects, or home-schooled students take and achieve a certain level on standardized tests. On the national level, the No Child Left Behind Act of 2001 exempts home-schooled students from certain required standardized tests. Although litigation based on parents' rights to home school their children is decreasing, other issues remain. For example, pending cases include home-schooling participants seeking access to community centers or eligibility to compete on public school athletic teams. Pending legislation includes the effort to protect the privacy of home-schooling records on a par with the privacy accorded other educational records.

Homeland Security Act

In November 2002, the Homeland Security Act was passed overwhelmingly by both the House and Senate and signed into law by President George W. Bush. The main purpose of the act was to establish the framework for the Department of Homeland Security (DHS), the agency intended to coordinate domestic detection and prevention of terrorism. The 500-plus-page law also included language on a wide variety of issues affecting civil liberties. The law was viewed by many observers as the next step in the Bush administration's domestic war on terrorism, which had previously included the interrogation of many people of Middle Eastern descent, the establishment of military tribunals to hear terrorism cases, and the October 1991 passage of the Patriot Act, which granted the government extensive new powers of investigation.

The Homeland Security Act raised questions about the balance of national security versus civil liberties, how to shape the domestic response to an open-ended war against new foes, and whether too much authority was shifting to the executive branch without congressional or legal constraint. More specifically, civil liberties groups questioned broad new rules for evidence sharing among government agencies, new regulations on Internet security and information, and new restrictions on the Freedom of Information Act (FOIA). Other sections of the legislation, however, pleased civil liberties groups, since they limited introduction of a national identity card, stopped implementation of the controversial Operation Terrorism Information and Prevention System (TIPS), and established an Officer of Civil Rights and Civil Liberties within the DHS.

The line between legitimate government action to guarantee national security and unconstitutional regulation of civil liberties has always been hotly contested, especially in times of war. Throughout its history, the United States has tried to preserve liberties, but also has allowed restrictions such as the Alien and Sedition Acts, internment of Japanese citizens during World War II, regulation of the media during almost every war, and investigations of antiwar protest groups. The terrorist attacks of September 11, 2001, in New York City and Washington, D.C., reignited this basic controversy. Many key government officials, including President Bush and especially Attorney General John Ashcroft, argued that national security considerations were now paramount, although civil liberties remained important. Others countered that the war on terrorism did not justify major shifts in domestic practice and that the war itself was about preserving American freedom; thus the government should not overly restrict freedom in order to defend it.

The war on terrorism also created new wrinkles in the long-standing debate. First, the enemy was not solely an outside power but included people working within the United States. Second, the war had no clear end point, so the time frame for removal of restrictions justified as "wartime necessities" was uncertain. In the first year after September 11, the administration argued that to protect the country from the new threat, law enforcement agencies needed new investigative power and flexibility, such as the ability to monitor Internet communications, financial transactions, and records of private religious and political organizations. Extensive detention and deportation of suspects were also deemed necessary. Many in Congress and civil liberties groups questioned these specific policies and the overall trend of shifting authority to the executive branch with limited congressional or judicial review of actions. Opposing the administration without looking unpatriotic or weak on terrorism, though, became difficult.

In 2002 several key members of Congress began pushing for the statutory establishment of the DHS, which was initially established by presidential directive. They felt this action would help unify antiterrorism efforts and reassert congressional oversight of executive activity. At first Bush opposed the idea, but then he reversed course and submitted his own preferred plan for the legislation. Notwithstanding the

complexity of creating a new department by combining twenty-two existing federal agencies with at least 170,000 employees and a budget close to $40 billion, the legislation moved quite quickly. It was slowed by some debates on exactly which agencies should be merged. Progress was further slowed by debates about the administration's insistence on a personnel system for the department that would give managers extensive authority and weaken the collective bargaining power of unions and, later, additions of numerous protections for special interest groups. Floor debate on the bill was postponed until after the November elections, thereby shielding members from potential political fallout from their votes. The House approved the bill 299 to 121, in large part because of Republican support. The Senate vote was 90 to 9 with unanimous Republican support.

As passed, the legislation included several sections affecting civil liberties. In response to the view that September 11 might have been prevented had there been more coordination among intelligence gathering and law enforcement agencies, the act greatly increased the information to be shared among the DHS, the Federal Bureau of Investigation (FBI), the Central Intelligence Agency (CIA), local police forces, and even foreign law enforcement agencies. In some early versions of the legislation, such sharing of information was tied closely to terrorism investigations, but the final version was broader in sweep.

The legislation also addressed issues relating to Internet security and privacy. The maximum criminal penalty for hackers who knowingly cause, or attempt to cause, death from an electronic attack was increased. The new law also modified language in the Patriot Act to protect Internet service providers from penalties for disclosing private electronic communications to law enforcement if they, "in good faith," felt an emergency involving possible death or serious physical injury was involved. This "good faith" standard replaced more limiting "reasonable belief" language. Prior to recent antiterrorism laws, government officials had to get a warrant, subpoena, or court order to receive electronic information, but now the government can conduct surveillance of any computer anytime there is "an immediate threat to a national security interest." Critics worry that this will allow the government to use data-mining software to collect huge amounts of information on average citizens.

The new legislation also modified rules for Freedom of Information Act (FOIA) requests. In what was seen as corporate-friendly language, the FOIA exempted from disclosure "any critical infrastructure information" that was voluntarily submitted by a company to a federal agency for use in security planning. For example, a software company might submit information about a known bug in its software that could allow hackers to penetrate a system. Once that information was submitted to the government, it would be protected for national security reasons so that terrorists could not request the information and then use it to their advantage. This provision, however, could potentially allow companies to hide known safety or other flaws from consumers.

Supporters of civil liberties, such as the American Civil Liberties Union (ACLU), were pleased that government power became subject to some limitations, including some that directly countered administration ideas. Soon after September 11, officials floated the idea of a national identification card, but this was opposed by those who felt it would give government too much power to trace and monitor citizens. Section 1514 of the Homeland Security Act says that it should not be construed as authorizing a card. Another controversy centered on the proposed TIPS program, which would encourage citizens to report unusual or suspicious behavior of other citizens; section 880 prohibits implementation of TIPS. Civil liberties groups also hope that the Civil Liberties Officer will become an important position.

The bill's strong support in Congress reflected general public support for new measures. ABCNews/*Washington Post* polls showed that 79 percent of those questioned felt it was important to investigate terrorism, even if such an investigation required an intrusion on personal privacy. Close to two-thirds polled supported expanded FBI surveillance, even though an almost equally large number saw such surveillance as an encroachment on individual privacy. The legislation, along with other new laws and administration actions, has led over sixty cities and towns to pass resolutions urging federal authorities to respect civil liberties or calling on local authorities not to cooperate with federal investigations that threaten civil rights.

Long-term views will likely be shaped by the extent of future terrorism, since future acts would prolong and perhaps expand the new investigations but also would call into question whether sacrifices of liberty are being rewarded with increased security.

Hoover, J. Edgar (1895–1972)

Few individuals had a more visible, or controversial, persona in the twentieth century than did J. Edgar Hoover, the longtime director of the Federal Bureau of Investigation (FBI) who served as head of an executive agency under eight successive presidents. A skillful administrator and publicist who helped establish his agency and who successfully adapted to the perceived security risks of several different eras, Hoover possessed secret files and was willing to provide them to presidents in power. These activities posed unique threats to civil liberties.

Born to the family of a civil servant in the nation's capital in 1895, Hoover graduated from the National University Law School (later combined with George Washington University) and was hired in 1917 by the Alien Enemy Bureau of the Department of Justice. Put in charge of a Radical Division within the department, Hoover was responsible for coordinating and directing the controversial Palmer Raids, named after Attorney General A. Mitchell Palmer and conducted during the first "red scare," 1919–1920, that targeted Communists and anarchists but that paid little attention to individual rights.

In 1921 Hoover was elevated to the assistant directorship and in 1924 to the directorship of the agency that in 1935 was renamed the Federal Bureau of Investigation. Hoover focused on professionalizing the agency by developing scientific law enforcement techniques, including fingerprinting, as well as issuing annual reports on crime in the United States. The FBI also battled prominent gangsters that brought it increasingly into the public eye (although Hoover, perhaps hoping to conserve agency resources, would later deny that the Mafia existed).

During World War II, Hoover worked closely with President Franklin D. Roosevelt, and the agency was involved in counterintelligence against the Nazis (including saboteurs who had landed in the United States). After the war, it focused on the threat of domestic communism, eventually distancing itself from the Truman administration by cooperating with Richard Nixon and the House Un-American Activities Committee in investigations that led to successful prosecutions against Alger Hiss and Julius and Ethel Rosenberg. Hoover stayed in the good graces of President Dwight D. Eisenhower's administration by eventually breaking with Republican Senator Joseph McCarthy of Wisconsin when his anti-Communist campaign went too far.

Hoover developed a "Counter Intelligence Program," first against Communists and later against the Ku Klux Klan, the Black Panthers, and the new Left. Although Hoover began enforcing civil rights initiatives during the administration of President Lyndon B. Johnson, in one of the more disgraceful chapters in Hoover's career, he taped Dr. Martin Luther King Jr.'s sexual activities and sent them to King and his wife.

A defender of middle-class values who was militantly anti-Communist, Hoover wrote a popular book entitled *Masters of Deceit,* which exposed the Com-

munist threat to the American way of life. Because Hoover suspected that some of the leaders of the antiwar and civil rights movements were sympathetic to the Communist Party, he was willing to bend the rules to engage in surveillance of these organizations. A Select Committee to Study Government Operations with Respect to Intelligence Activities, led by Idaho's Democratic Senator Frank Church, concluded that Hoover had "conducted a sophisticated vigilante operation aimed squarely at preventing the exercise of First Amendment rights of freedom of speech and association."

Today, Hoover is often mentioned in connection with a longtime relationship with his associate director, Clyde Tolson, believed by some Washington observers to have been homosexual. Hoover died of a heart attack during the Nixon administration in 1972. The Washington, D.C., headquarters of the FBI that he did so much to shape was subsequently named in his honor.

Hostile Audience

The term "hostile audience" refers to situations in which speech provokes unsympathetic listeners to violence or threats of violence. The provocation can come from either the form of speech or the message itself. The advocacy of unpopular causes or the use of unpopular forms of speech tests the essence of the free speech guarantee of the First Amendment to the Constitution. Free speech advocates would permit such expressions to be used in what Justice Oliver Wendell Holmes Jr. called the "marketplace of ideas," where they may change opinions in the long run. Those more concerned with preserving the public peace would restrict use of these words. The U.S. Supreme Court has tried to balance these competing interests.

The seminal case in this area—although perhaps now honored more in the breach—is *Feiner v. New York,* 340 U.S. 315 (1951). Irving Feiner addressed an open-air meeting in Syracuse, New York, in 1949, urging his listeners to attend a pro-civil-rights meeting that evening. In the course of his talk, Feiner made what the Court characterized as derogatory remarks concerning President Harry Truman and the mayor of Syracuse (he called them both "bums") and the American Legion (a "Nazi Gestapo"). He also said, "The Negroes don't have equal rights; they should rise up in arms and fight for them." An audience member said to the arresting police officer, "If you don't get that son-of-a-bitch off, I will go over and get him off there myself," and the officer stepped in to prevent a fight. After Feiner ignored two requests by police to stop speaking, they arrested him. He was charged and convicted of breach of the peace and failing to obey police instructions.

In upholding the New York conviction, the U.S. Supreme Court found that "not only violent acts, but acts and words likely to promote violence in others" constituted a genuine breach of the peace, quoting *Cantwell v. Connecticut,* 310 U.S. 296 (1940). Further, the Court held that prevention of such a breach was a legitimate governmental interest, even as it acknowledged that a state may not "unduly suppress free communication of views . . . under the guise of conserving desirable conditions."

Justice Felix Frankfurter's dissent would ultimately prove more persuasive to later Courts. Frankfurter argued that Feiner, in essence, was sentenced for the unpopularity of his views, noting that it was rare for a crowd to hear unpopular views without some tumult ensuing.

Subsequent Court decisions never actually overturned *Feiner,* but have made clear that a hostile audience per se is no basis for punishment of speech. Modern jurisprudence has drawn the distinction between restrictions on the time, place, and manner of speech, which are generally permissible, and content-based restrictions, which are not permissible absent a showing of a compelling governmental interest. Re-

cent Court decisions have generally held that a restriction on speech based on a hostile audience is, in fact, a content-based restriction.

In *Edwards v. South Carolina,* 372 U.S. 229 (1963), the Court reversed the conviction of black students who demonstrated in front of the South Carolina State House to protest their lack of civil rights. When a large crowd of onlookers gathered, the police told the black students to disperse, then arrested them when they refused. Noting that states were bound to honor First Amendment rights, which were incorporated into the Due Process Clause of the Fourteenth Amendment and made applicable to the states, the Court held South Carolina was barred from criminalizing the peaceful expression of unpopular views because the right to such discussion is "a fundamental principle of our constitutional system." In distinguishing this case from *Feiner,* the Court found no evidence of hostile reaction from the crowd or any element of breach of the peace. This decision raises other questions: For example, does the First Amendment require police to restrain hostile audiences? Does a heckler have the authority to silence a provocative speaker?

In *Gregory v. Chicago,* 394 U.S. 111 (1969), the Court broke *Feiner*'s link between crowd conduct and speech. *Gregory* involved eighty-five demonstrators, accompanied by 100 police, who peacefully marched from city hall to the mayor's residence to support the desegregation of the public schools. When some of the more than 1,000 bystanders began shouting threats and racial epithets at the demonstrators, the Chicago police, in order to avert civil disorder, ordered the demonstrators to disperse. They refused and were arrested. The U.S. Supreme Court overturned the defendants' convictions for disorderly conduct, noting that restrictions based on audience conduct could not be upheld when the speaker did not commit any breach of the peace. In his concurring opinion, Justice Hugo L. Black observed that the Chicago disorderly-conduct statute was impermissibly vague, calling it a "meat-ax ordinance" that attempted to prohibit activity specifically permitted by the First Amendment.

In his concurring opinion in *Gregory,* joined by Justice William O. Douglas, Justice Black indicated that under narrowly drawn statutes, the state may still retain the power to put an end to a speech if the best efforts of the police cannot avert civil disorder that erupts from the clashing views of individuals in public spaces exercising their rights of free speech and assembly.

In light of *National Socialist Party of America v. Village of Skokie,* 432 U.S. 43 (1977), it is unclear whether the hostile-audience doctrine remains intact. In this case, the Nazi Party wanted to march through Skokie, Illinois, a predominantly Jewish neighborhood with a large number of Holocaust survivors, "wearing their uniforms, displaying swastikas, and handing out pamphlets that promoted the hatred of Jews, among others." The city obtained an injunction stopping the Nazi Party from demonstrating. The U.S. Supreme Court reversed on procedural grounds, and later the Illinois Supreme Court ruled that the anticipation of a hostile audience did not justify the city's attempt at prior restraint.

In a case arising out of the same incident, *Collin v. Smith,* 578 F.2d 1197 (7th Cir. 1978), certiorari denied, 439 U.S. 916 (1978), in which the Nazi Party successfully challenged Skokie city ordinances restricting the message and costumes of demonstrators, the U.S. District Court questioned the constitutional validity of restricting speech on the basis of its tendency to induce violence, a decision the Seventh Circuit Court of Appeals affirmed.

Although it remains unknown whether these lower-court decisions presage a U.S. Supreme Court viewpoint, it is difficult to imagine a more clear-cut example of hostile audience and civil disorder than the Skokie experience presented.

Hot Pursuit

"Hot pursuit" is one of the exceptions to the requirement that government agents need a warrant to conduct a search or seizure, pursuant to the Fourth Amendment to the U.S. Constitution.

The Fourth Amendment specifies that in order to conduct a search or seizure there must be two elements present: probable cause and a warrant. Although the application of the warrant requirement appears rather simple, there are circumstances in which the "exigencies of the situation" permit a search and seizure without the presence of a warrant. Hot pursuit is one such exception to this requirement. The hot-pursuit exception, though mentioned in *Johnson v. United States,* 333 U.S. 68 (1947), was first applied in *Warden, Maryland Penitentiary v. Hayden,* 387 U.S. 294 (1967), in which the Court created the principle that police chasing a fleeing suspect, for example, or coming upon evidence of a just-completed crime, are faced with such extreme circumstances (suspect escaping, evidence disappearing) that it would be unreasonable to expect police to stand down from the situation and take the time to apply to a court for a warrant. From these cases it is evident that the goal of this exception is to recognize that there are certain situations in which it is not feasible for the police to obtain a warrant. The U.S. Supreme Court has recognized the hot-pursuit exception, as well as other exceptions, but such exceptions are not limitless. Central to determining whether an exception applies is an examination of the exigency of the situation and the gravity of the circumstances.

Johnson v. United States did not involve hot pursuit of a suspect but rather the search of a hotel room where there was alleged drug use. The Court addressed what types of circumstances would qualify for exemption from the warrant requirement. The Supreme Court acknowledged that a warrant was necessary in *Johnson,* but noted there indeed could be "exceptional circumstances" in which a warrant would not be required. Such circumstances include instances where a suspect was fleeing or likely to take flight; when the search is of a movable vehicle; or when there is potential for evidence being removed or destroyed. Without the presence of such exceptional circumstances, a search without a warrant cannot be justified.

In *Hayden,* the Court applied the hot-pursuit exception but simultaneously placed limits on its use. This 1967 case involved the armed robbery of a Baltimore cab company after which the perpetrator fled. Upon witnessing the incident, two cab drivers followed him, whereupon the perpetrator entered a house. The cab drivers notified the police of the location of the individual. The police arrived immediately and entered the house without a warrant. They searched the house and apprehended the individual as well as weapons and clothing belonging to him. He later challenged the search of his home and the admissibility of the evidence obtained from it.

The Court ruled that the search was valid even though a warrant was absent, because the "exigencies" of the situation deemed it necessary for the police to act quickly: "The Fourth Amendment does not require police officers to delay in the course of an investigation if to do so would gravely endanger their lives or the lives of others" and could potentially result in a loss of evidence. Although the Court acknowledged and applied the hot-pursuit exception, the decision cannot be interpreted as granting the police carte blanche to conduct searches in light of such exigent circumstances. The Court specifically noted that in order for a warrantless search to be justified on the grounds of hot pursuit, probable cause must also be present, and there must be relatively little time between the crime and the warrantless search.

The *Hayden* decision was subsequently upheld in *United States v. Santana,* 427 U.S. 38 (1976), a case involving an undercover drug operation. When law enforcement attempted to apprehend "Mom" Santana, who had been suspected of selling drugs, she quickly retreated into her home. Citing *Hayden,* the Court concluded this was a "true hot pursuit," for there was a need to act quickly in order to prevent the destruction of evidence. In rendering this decision, however, the Court slightly amended the definition of hot pursuit. The police initially sought to apprehend Santana in public, but she *quickly* retreated to her home, a private area where there would be a greater expectation of privacy. Although the Court recognized that the term "hot pursuit" definitely implied some sort of chase, the pursuit "need not be an extended hue and cry 'in and about the public streets.' "

Although exigent circumstances are certainly grounds for the application of the hot-pursuit exception, the Court in *Welsh v. Wisconsin,* 466 U.S. 740 (1984), pointed out that other elements also must be considered. On a rainy evening in 1978, Randy Jablonic witnessed a car being driven rather erratically. Eventually the car swerved off the road, whereupon the driver, Edward Welsh, exited the vehicle and asked Jablonic for a ride home. Jablonic advised Welsh to remain there until the police arrived, but Welsh decided to leave the scene. Moments later the police arrived, and Jablonic informed them that the driver was either ill or inebriated. The police then searched for the vehicle registration in order to obtain Welsh's address and search his home. Without a warrant the police entered the home and found Welsh lying naked in bed, then placed him under arrest for driving while intoxicated. Taken to the police station, he refused to take a breath-analysis test. Welsh later challenged the entry of the police into his home, arguing that the police could not make a warrantless entry into his home for a nonjailable traffic offense. The state argued that the entry occurred during a hot pursuit in which they were seeking to prevent a loss of evidence (the results of the breath-analysis test) and seeking to protect the public from drunk drivers.

The Supreme Court rejected the state's contention, stating that before government agents enter a home without a warrant, they must demonstrate exigent circumstances. In order to make such a showing, however, the gravity of the underlying offense must also be considered. The *Welsh* case involved no serious crime but only a traffic offense in which "there was no immediate or continuous pursuit of the petitioner." Although the Court found no hot pursuit involved, the justices noted that in instances of minor offenses, such as Welsh's traffic violation, the application of the hot-pursuit exception should "rarely be sanctioned."

The Supreme Court has consistently noted that under the Fourth Amendment, searches and seizures within a person's home, absent a warrant, are "presumptively unreasonable." This underlying principle is one reason the Court has applied warrant exceptions sparingly. Exceptions to the warrant requirement, especially the hot-pursuit exception, are "few in number and carefully delineated," the Court noted in *Welsh.*

House Un-American Activities Committee

During the height of Cold War fears about subversive activities of Communists in the United States, the House Un-American Activities Committee (HUAC) conducted highly publicized hearings to expose the Communist ties of individuals in public employment, education, labor unions, and other influential fields. For individuals brought before the committee, the hearings sometimes led to ostracism, loss of employment, and even criminal prosecution. The activities of HUAC raised serious civil liberties issues because they damaged the lives and careers of individuals based on their political associations and beliefs, fundamental liberties pursuant to the First Amendment to the U.S. Constitution.

By House resolution in 1938, Congress established the Special Committee on Un-American Activities under the leadership of Rep. Martin Dies Jr. (D-TX). (The committee's name was later changed to produce the more easily pronounced acronym HUAC.) After repeatedly renewing HUAC, the House finally converted it to a standing (permanent) committee in 1945. Although HUAC's creation was motivated largely by concerns over subversive activities in support of the Nazis, the focus shifted to anticommunism in the wake of World War II and the emergence of the Cold War. Based on fear that numerous Ameri-

Hollywood screenwriters and directors enter federal court in Washington, D.C., to face trial on charges of contempt of Congress for their defiance of the House Un-American Activities Committee, 1950. *(AP/Wide World Photos)*

cans were working on behalf of international forces of communism to overthrow the U.S. government, the HUAC hearings sought to expose individuals with ties to the Communist Party.

HUAC's best-known activities took place during a time when anticommunism was a dominant concern in U.S. politics. With the defeat of the Axis powers in 1945, the wartime alliance with the Soviet Union gave way to tension and hostility between what had become the world's only two superpowers. Communists had been feared even before the Bolshevik Revolution of 1917 in Russia, but events in the years following World War II raised the stakes dramatically. Stalin's Soviet Union imposed police states throughout Eastern Europe, including Poland, Czechoslovakia, and East Germany, and supported Communist forces in the Greek Civil War. When the USSR demonstrated its nuclear capacity in 1949, far earlier than U.S. intelligence had anticipated, the revelation heightened concerns over Soviet military designs, and the impression grew that American spies had betrayed U.S. nuclear secrets. Chinese intervention in the Korean War on the side of the North in 1950 furthered the sense that a far-reaching international Communist coalition sought to overrun democratic societies around the world. There was also a belief among many Americans that Communists within the United States posed a severe threat to national security. This belief was reinforced by the high-profile conviction of Alger Hiss for perjuring himself before HUAC while answering questions about his alleged espionage and by the convictions of Ethel and Julius Rosenberg for conspiring to pass U.S. atomic secrets to the Soviet Union.

In this political context, a number of policies were developed, at both the state and federal levels, to combat the threat of domestic communism, including the requirement of loyalty oaths for positions in public employment and some professions, which required individuals to swear that they had never been members of a Communist organization. In addition, the Smith Act of 1940 was employed to prosecute leaders of the Communist Party for advocating the violent overthrow of the U.S. government, and Congress passed new anti-Communist legislation, including the McCarran Internal Security Act of 1950, which required Communist organizations to register the names of members and contributors with the Subversive Activities Control Board.

Enlisting legislative committees to conduct investigative hearings was another element of the governmental strategy to root out domestic communism, and HUAC was not the only committee active in this regard. Senator Joseph McCarthy (R-WI), for example, used his chairmanship of the Senate Permanent Subcommittee on Investigations, of the Senate Committee on Governmental Operations, to make accusations of Communist influence in the executive branch and the U.S. Army. Relying on its subpoena power, HUAC compelled suspected Communists to appear and interrogated them about their ties to Communist organizations and about the political activities of their friends and acquaintances. Witnesses before the committee were faced with several alternatives, each raising moral and legal dilemmas. An admission of membership, past or present, in Communist organizations could lead to ostracism and blacklisting, which effectively blocked employment in certain professions. The mechanism by which HUAC permitted witnesses to demonstrate remorse was for them to provide the names of others involved in Communist activities, which some critics viewed as an unconscionable act of collaboration. Witnesses who refused to testify on the grounds of the Fifth Amendment privilege against self-incrimination avoided legal censure, but because this was widely perceived as a tacit admission of guilt, these individuals subjected themselves to the label of "Fifth Amendment Communist" and to many of the same reprisals visited upon those who openly confessed Communist activity. On the other hand, witnesses who claimed First Amendment protection, or who refused entirely to cooperate, could be criminally charged with contempt of Congress. Indeed, this was the fate of the so-called Hollywood Ten, notable actors, writers, and directors who refused on First Amendment grounds to cooperate with HUAC's investigation of Communist ties of their Hollywood colleagues.

HUAC's activities were challenged as violations of civil liberties on a number of grounds. The committee's mandate was to consider legislation addressing the Communist menace, but its hearings took on aspects of court proceedings, yet without affording all of the rights guaranteed to the accused in criminal trials. The committee, for example, could make vague accusations, based on past or former political associations, without allowing witnesses the opportunity to offer evidence on their own behalf or to cross-examine the witnesses against them.

In its earliest reviews of HUAC's activities and other Cold War–era policies targeting individuals for Communist associations, the Supreme Court generally upheld the government's actions. In *Dennis v. United States,* 341 U.S. 494 (1951), for example, the Court left undisturbed the Smith Act convictions of eleven Communist Party leaders, and in *Barsky v. Board of Regents,* 347 U.S. 442 (1954), it upheld New York's termination of a college professor who had refused to cooperate with HUAC. In a series of cases in 1956 and 1957, culminating in four decisions issued June 17, 1957 (referred to by opponents as "Red Monday"), however, the Court sided with parties challenging anti-Communist policies. Thus, for the first time, in *Watkins v. United States,* 354 U.S. 178 (1957), the Court questioned the scope of HUAC's investigative power, overturning the contempt conviction of a recalcitrant HUAC witness. The Court's interference was heavily criticized, and the justices retreated for some time, upholding the prison sentence of a Smith Act defendant as late as 1961. After 1962, however, the Court indicated in a series of cases that it would no longer tolerate prosecutions based on individuals' refusal to testify to legislative committees about Communist associations. In *Brandenburg v. Ohio,* 395 U.S. 444 (1969), the Court unanimously adopted an understanding of the First Amendment

that clearly protected the advocacy of political ideas, sharply distinguishing mere advocacy from the incitement of imminent lawless activity.

Although the House, after changing HUAC's name to the Committee on Internal Security in 1969, abolished it in 1975, the committee's activities remain controversial today, as highlighted by the dispute over Elia Kazan's lifetime achievement award at the 1999 Academy Awards ceremony. Unlike many of his colleagues during HUAC's heyday, Kazan chose to cooperate with the committee, providing the names of other Hollywood figures who had been members of the Communist Party. Hundreds staged demonstrations against the award, protesting the honoring of a man who had turned on his friends rather than stand up for artistic freedom. The activities of HUAC are sometimes cited as an example of the danger posed to civil liberties by overly aggressive governmental reactions to security threats. In the midst of the U.S. response to the September 11, 2001, terrorist attacks on New York City and Washington, D.C., the anti-Communist policies of the Cold War era stood as a historical reminder of the challenges involved in seeking to protect national security while also continuing to protect cherished individual freedoms.

Hughes, Charles Evans (1862–1948)

Charles Evans Hughes had a long career that included service both in elected office and as a U.S. Supreme Court justice. A man of great probity, who was often called upon to deal with issues related to civil rights and liberties, Hughes has the distinction of being the only member of the Court to serve two separate terms as a justice.

Born in New York in 1862, Hughes was a precocious child who graduated from Brown University and was first in his class at Columbia Law School. After work in private practice and as a law professor at Cornell, Hughes conducted highly successful investigations of gas and electricity pricing and of the insurance industry in New York.

Hughes's political career began when he was elected the Republican governor of New York in 1906, defeating William Randolph Hearst, and became a close friend of President Theodore Roosevelt. The popular Hughes was a progressive Republican at the time, seen as more liberal during his two terms as governor than the then-sitting president, William Howard Taft. Concerned that Hughes was a potential Republican challenger for the presidency, Taft appointed Hughes to be an associate justice of the Supreme Court in 1910. Hughes's first term on the Court lasted six years. His most important decision of this period was about transportation pricing in the *Shreveport Rate Cases,* 234 U.S. 342 (1914), covering the companion cases of *Houston, East and West Texas Railway Co. v. United States* and *Texas and Pacific Railway Co. v. United States.* In *Shreveport,* Hughes ruled that the federal government could use the Commerce Clause to regulate intrastate commerce—commerce within a state—if that intrastate commerce had an effect on interstate commerce. This case opened the door to greater federal regulation of railroads by the federal Interstate Commerce Commission.

Hughes resigned from the Court in summer 1916 to accept the Republican presidential nomination. He was the only sitting justice ever to be nominated for president. After losing a close election to Woodrow Wilson in November 1916, Hughes was out of office

Chief Justice Charles Evans Hughes with his wife and daughter. During Hughes's tenure as chief justice, the Supreme Court had a mixed record in the protection of individual rights. *(Library of Congress)*

for four years. But in 1921 he was appointed secretary of state by President Warren Harding. In this capacity, he negotiated the terms of the 1922 Washington Naval Conference that limited the navies of the United States, Japan, and Great Britain. After resigning in 1925, he returned to private legal practice.

In 1930, Chief Justice William Howard Taft resigned, and President Herbert Hoover appointed Hughes to the vacancy. Hughes took over a Court divided by both ideology and personal disagreements. In addition, he faced a constitutional crisis in 1936 and 1937 when President Franklin D. Roosevelt sought to pack the Court by increasing its size. It was during his term as chief justice that Hughes wrote his most important decisions and likely saved the Supreme Court from destruction by an angry president.

The conflict between the justices and the president centered on Roosevelt's New Deal and the programs he created to end the Great Depression. The New Deal was the first time the federal government attempted to run the economy using its powers to regulate interstate commerce, tax, spend, and coin money. Congress passed these laws swiftly, but they ran afoul of the justices' interpretation of congressional powers.

Hughes was seen as a swing justice on the Court, moving between the three more liberal justices, Louis D. Brandeis, Benjamin N. Cardozo, and Harlan F. Stone, and the four more conservative justices, Pierce Butler, James C. McReynolds, George Sutherland, and Willis Van DeVanter. Hughes's vote usually determined which side won. In 1935 he wrote the opinion in the *Gold Clause Cases*—the combined cases of *Norman v. Baltimore and Ohio Railroad Co.,* 294 U.S. 240 (1935), and *Perry v. United States,* 294 U.S. 330 (1935)—that upheld the right of the government to take the United States off the gold standard and made it illegal for people to own gold. In 1936, Hughes authored the opinion in *Ashwander v. Tennessee Valley Authority,* 297 U.S. 288 (1936), upholding that agency as constitutional.

At the same time, Hughes wrote opinions striking down New Deal laws. In *A. L. A. Schechter Poultry Corp. v. United States,* 295 U.S. 495 (1935), Hughes struck down the National Recovery Administration's (NRA) attempt to regulate the buying and selling of chickens. He ruled that such activities fell outside the power of Congress to regulate commerce or trade between or among the states. In addition, he ruled that the NRA delegated too much congressional power to the president without proper standards. Hughes wrote the opinion in *Panama Refining Co. v. Ryan,* 293 U.S. 388 (1935), which also struck down part of the NRA allowing the president to determine the amount of gasoline and oil transported across state lines.

These decisions rejecting major portions of the New Deal brought down the wrath of the president on the justices. After his reelection in 1936, Roosevelt offered a "Court reform" bill, which would have increased the size of the Supreme Court to fifteen in a supposed effort to make the Court more efficient. Hughes and others saw it as a Court-packing plan, intended to fill the Court with Roosevelt supporters who would rubber-stamp the president's policies.

Working with the president's opponents in Congress, Hughes presented evidence that the Court was deciding cases at a rapid pace and that additional justices would only slow the Court's work. He also produced a letter signed by the most liberal and the most conservative members of the Court disagreeing with the president's Court "reform" plans. These arguments were used by opponents of the plan in Congress to hand Roosevelt a defeat. Yet in the long term Roosevelt won, and between 1937 and 1941, he was able to replace six justices because of retirement or death.

But even with these new justices who disagreed with Hughes's politics, the chief justice remained the dominant figure on the Court. He controlled the justices' weekly conferences, ensuring that all members were able to state their opinion without interruption and then make a decision without unnecessary rancor among them. Hughes was able to influence the more liberal Roosevelt appointees in their votes. Thus, in *Stromberg v. California,* 283 U.S. 359 (1931), the Court struck down a conviction for displaying a red flag; in *Missouri ex rel. Gaines v. Canada,* 305 U.S. 337 (1938), Hughes mandated that Missouri provide law school education for its African American citizens; in *Near v. Minnesota,* 283 U.S. 697 (1931), he authored a decision establishing a strong presumption against prior restraint of a scurrilous state newspaper; and in *Lovell v. City of Griffin,* 303 U.S. 444 (1938), he overturned a city ordinance that required Jehovah's Witnesses to obtain a permit before they distributed literature. In one of the last decisions in which he participated, *Minersville School District v. Gobitis,* 310 U.S. 586 (1940), Hughes joined the Court in upholding a state requirement that students salute the flag. After he left the Court, however, that decision was overturned under his successor, Chief Justice Harlan Fiske Stone.

Chief Justice Hughes retired in spring 1941 and lived the remainder of his life quietly, remaining out of politics until he died in 1948.

Hunter v. Underwood (1985)

In *Hunter v. Underwood,* 471 U.S. 222 (1985), the U.S. Supreme Court held that laws barring convicts from voting, if the laws were enacted with clear discriminatory intent, may violate the Equal Protection Clause of the Fourteenth Amendment to the Constitution. Beyond its significance in voting rights law, *Hunter* illustrates that the Court will sometimes find that what appear to be racially neutral laws instead violate the Constitution's ban on discrimination.
