INS detainees are the fastest-growing segment of the nation's correctional population: 8,200 detainees were held by the INS in 1997, and by 2001, that figure leaped to more than 20,000 (INS, 2001). Opponents of INS detention practices also contend that the safety of undocumented immigrants and asylum seekers hangs in the balance when local jails and private correctional companies assume custody. Despite formal complaints and lawsuits over abuse and neglect, the INS has continued sending its detainees to facilities known for their mistreatment and deplorable conditions of confinement.

Recent rulings by the U.S. Supreme Court have shed light on the harsh detention policies of the INS, in particular its use of indefinite detention. As of 2002, there were 4,400 INS detainees convicted of deportable offenses who were detained indefinitely because the U.S. government did not have official diplomatic ties with their nation of origin, including Cambodia, Cuba, Gaza, Iran, Iraq, Laos, Vietnam, and former satellites of the Soviet Union. These men and women are held, despite the High Court ruling of 2001 that determined that immigrants who have committed crimes in the United States cannot be locked up indefinitely simply because the government has no place to send them (see Indefinite Detention Project, 2000; *Ma v. Ashcroft*, 2001; *Zadvydas v. Underdown*, 2001).

EFFECTS OF THE SEPTEMBER 11 ATTACKS AND THE USA PATRIOT ACT

The September 11, 2001, terrorist attacks on the World Trade Center and the Pentagon have given the debate over INS detention a new resonance. On October 26, 2001, President George W. Bush signed into law the USA PATRIOT Act (Uniting and Strengthening America by Providing Appropriate Tools Required to Intercept and Obstruct Terrorism). Whereas the PATRIOT Act received overwhelming bipartisan support, civil liberties and immigrants' rights organizations worry that the new law will have unfair consequences for immigrants and foreign nationals visiting with valid visas. Chief among those concerns is mass detention shrouded in government secrecy.

In less than two months following the September 11 attacks, the government had rounded up and detained more than 1,200 persons of Middle Eastern descent. Although the PATRIOT Act expanded the powers of the Department of Justice and the INS, it limited the length of detention to seven days before the government must charge the detainee of a crime. Once charged under the new law, however, detainees found to be engaged in terrorist activities can be held for six months. Weeks after September 11, evidence surfaced of abuse and mistreatment against those detained, prompting tremendous concern among human rights advocates. In a year following the attacks, the government's dragnet had failed to link the vast majority of those detained to the terrorism investigation. Most of those who were swept up were charged on immigration violations, usually overstaying their visas.

Compounding the controversy over mass detention, the government has maintained a policy of secrecy. Attorney General John Ashcroft repeatedly denied access to basic information about many of those in detention, including their names and current location. Such secrecy has been denounced by human rights and civil liberties advocates as well as by news organizations and even some political leaders who have complained that the attorney general has failed to explain adequately the need for those drastic measures.

Reports that detainees have been subjected to solitary confinement without being criminally charged as well as being denied access to telephones and attorneys raises questions about whether detainees are being deprived of due process. Moreover, those deprivations clearly contradict assurances by the Justice Department that everyone arrested since September 11 has had access to counsel. Eventually, key members of Congress challenged the sweeps of aliens in search of terrorists, requesting from the attorney general detailed information on the more than 1,200 people detained since the terrorist attacks. Specifically,

lawmakers asked for the identity of all those detained, the charges against them, the basis for holding those cleared of connection to terrorism, and a list of all government requests to seal legal proceedings, along with the rationale for doing so.

CONCLUSION

Unlike people charged criminally, INS detainees are not entitled to government-appointed counsel, thus many are not represented. Some civil rights advocates complain that law enforcement officials are charging people with INS violations, holding them in solitary confinement, and then interrogating them before they can consult attorneys who might advise them not to talk at all. In an effort to abolish the Justice Department's secrecy on detentions, a coalition of 21 news and civil liberties organizations filed a request under the Freedom of Information Act to release information about the people detained. In 2002, a federal appeals court declared that the Bush administration acted unlawfully in holding hundreds of deportation hearings in secret. The court issued stinging language criticizing the government's failure to recognize fundamental civil liberties. Months following the court's ruling, however, the Justice Department still refused to comply with the court order and continued its commitment to government secrecy.

INTERMEDIATE SANCTIONS

Intermediate sanctions are community-based corrections that are more restrictive than probation, but less restrictive than prison. Some intermediate penalties include intensive supervision probation, community residential corrections centers, and electronic home monitoring. Intermediate sanctions are designed to reduce incarceration and to lower the costs of holding offenders in the most restrictive environments. They are also meant to provide more supervision than that which can be offered through regular probation or a similar sanction. Finally, intermediate sanctions also offer incremental alternatives in resentencing probation and parole violators. Instead of sending or returning these violators to jail or prison, intermediate sanctions can be used to increase the supervision and services offered to probationers and parolees.

CURRENT PRACTICE

Though the various practices considered to be intermediate sanctions can be traced to the start of the use of community-based programs for offenders, the modern categorization of these sanctions began in the early 1980s when U.S. prison and probation populations grew dramatically. At this time, it was thought that intermediate sanctions could help lower the numbers of those confined or placed on probation. In practice, this has not been the case.

Intermediate sanctions are designed to (1) provide a wider variety of sentencing alternatives for offenders, (2) decrease the costs for the corrections system, (3) reduce the rate of reoffending, and (4) maintain community safety. Several intermediate punishments are often used in combination with one another or in addition to regular probation or parole. The most common of these sanctions are fines, restitution, community service, day reporting centers, intensive supervision probation or parole, home confinement, electronic monitoring, residential community corrections centers, and boot camps.

Fines, Restitution, and Community Service

The punitive nature of fines, restitution, and community service is all the same: financial. The amount someone is fined as punishment varies based on the level or seriousness of his or her offense. Often the fine may be part of a restitution program that repays victims for damages resulting from an offense. In contrast, community service does not involve an upfront payment of any sort. Instead, it requires an individual to participate in unpaid labor with public or private nonprofit agencies to benefits society in general.

As they stand alone, fines, community service, and restitution are not more restrictive than regular probation. However, when imposed in addition to probation and other intermediate sanctions such as home confinement or electronic monitoring, they fit within the definition of intermediate sanctions. In addition, in certain cases, imposing a fine or community service may provide an alternative to using overcrowded jails and prisons.

Day Reporting Centers, Intensive Supervision, Home Confinement, and Electronic Monitoring

Day reporting centers, intensive supervision, and home confinement provide surveillance without incarceration. Day reporting centers monitor offenders who live in their own homes. Individuals must report to the centers several times throughout a week, if not daily, for various activities, including drug treatment and drug testing, counseling services, and vocational and educational assistance. The first day reporting centers appeared in Connecticut and Massachusetts in the mid-1980s. By the mid-1990s, there were more than a hundred of such centers in several states.

Offenders who have been sentenced to intensive supervision probation are strictly monitored and supervised in lieu of going to prison. A variation on this is intensive supervision parole, which is similar to the program in probation, but provides supervision for offenders released on parole from prison who need greater supervision than that which is supplied with regular parole programs. Intensive supervision probation (ISP) was originally put into practice during the 1950s and 1960s, by reducing caseload sizes and increasing offender contacts. But it was not until 1982, when Georgia initiated the most stringent ISP at the time, that there was a nationwide movement to include ISP programs as an alternative to imprisonment. Every state had implemented a form of ISP for offenders by 1990.

Offenders on home confinement serve their sentences at their homes, rather than in jail or prison. They may be monitored by electronic devices to determine whether they are abiding by court orders, including remaining in their homes at specified times. Offenders in New Mexico who had been apprehended and punished for white-collar offenses or driving under the influence of altering substances were the first offenders to be required to use electronic monitoring. There are various forms of electronic monitoring in use, most commonly where the offender wears an ankle bracelet that transmits information with a device that remains in the home where the offender resides.

Residential Community Corrections Centers and Boot Camps

Finally, residential community corrections centers and boot camps provide secure living without long-term incarceration in a prison or jail. Residential community corrections centers, also commonly referred to as halfway houses, are facilities where offenders reside instead of going to prison or jail, or after their release from prison or jail. Residents are allowed to leave the facility on a daily basis to work and attend school in the community. They may also earn the opportunity to receive overnight passes to the homes of family members. Some community corrections centers may offer specific services, such as drug abuse treatment.

Boot camps are a form of incarceration typically used for first-time, younger offenders that involve a military-based regimen over a short period. Boot camp inmates are then released to the community under some form of probation or parole supervision.

SUPPORT FOR INTERMEDIATE SANCTIONS

Several positive outcomes are attributed to intermediate sanctions. Their cost-effectiveness is typically one of their most attractive characteristics. Though they are generally more expensive than supervising an offender on regular probation or parole, intermediate sanctions cost less to operate per day than housing offenders in an institutional setting. Proponents point out that many prisoners are not a major threat to the community and could benefit more from serving their sentences as an intermediate sanction, with less cost to the public and less stigmatization of the offender. Offenders are less stigmatized by intermediate sanctions because they are allowed to live in the community at large without many people being aware of their offender status. Also, remaining in the community allows offenders to contribute to society and their victims by working to pay for their crime (i.e., restitution) and to defray the costs of their supervision.

Supporters also argue that individuals in intermediate sanctions are more able to become involved in treatment programs since there are more of these resources outside the prison than inside. Participating in treatment in the community allows the offenders to better practice the techniques they have learned. Treatment programs in prison, though warranted, do not often provide offenders the best opportunity to apply these skills in their ordinary surroundings. Thus, when released from prison, offenders may not be fully aware of how to relate their training to their real-world lives.

Last, intermediate sanctions resolve problems of reintegration into the community. Returning to a public life after serving a prison sentence can be difficult for some offenders. By eliminating the prison sentence, the difficulties of adjusting to life outside of prison is also eliminated.

SOME PROBLEMS WITH INTERMEDIATE SANCTIONS

Not everyone is in favor of intermediate sanctions. Though the cost-effectiveness of specific programs is not disputed by many, critics argue that intermediate sanctions are not cost effective if the use of institutional programs is not reduced. In this view, intermediate sanctions simply add to, thus increasing, the overall budget of the corrections system. Similarly, some argue that intermediate sanctions lead to "net widening" in the criminal justice system, whereby more people are sentenced to some form of correctional supervision simply because there is now a great range of options. Some offenders who would have received a probation sentence or less, for example, would now come under the control of stricter supervision requirements, though they may have been just as successful on regular probation or with no supervision at all. Once these programs exist, opponents of the use of intermediate sanctions contend that judges will find people to place in the programs, even if they are of no more benefit than less rigorous punishments.

Public safety as it relates to intermediate sanctions is another concern for critics. Some of the programs falling within the definition of intermediate sanctions require that offenders be those who would

otherwise have been sentenced to prison. Though they have been screened out as offenders who are most obliging to strict community supervision, critics still believe these high-risk offenders would be better off in an institutional placement because community safety remains a concern. Finally, many are concerned about the effectiveness of intermediate sanction programs. Research conducted on intermediate sanctions such as boot camps, intensive supervision probation programs, monetary sanctions, and halfway houses do not show any less recidivism than when regular probation or prison are used as punishment.

CONCLUSION

Though there is more extensive use of intermediate sanctions today, the traditional community-based corrections methods of probation and parole are still the most widely used forms of community supervision. Even still, the implementation and use of intermediate sanctions are expected to rise due to continuing struggles with jail and prison crowding and sentencing practices. Due to conflicting views about their success rate and purpose, more research must be done to determine the effectiveness and legitimacy of the various intermediate sanctions.

IRISH (OR CROFTON) SYSTEM

The Irish system of penal discipline, developed by Sir Walter Crofton in Ireland from 1854 to 1862, was viewed by late-19th-century prison reformers as a model for prison administration. In the 1870s, supporters of the Irish system played a major role in formulating correctional policies and shaping the reformatory movement in the United States. Vestiges of Crofton's Irish system can be found even today in the centralization of correctional administration, contemporary classification, education and behavior modification programs, community corrections, and parole.

BACKGROUND

When transportation of convicts to Australia finally ceased in 1868, prisons throughout Britain became increasingly overcrowded and troublesome. At the same time, concern grew over the number of convicts being released into the community, some through "tickets of leave" developed in Australia as a form of parole for good behavior.

In famine-struck Ireland in 1854, the British government responded to serious conditions in Irish prisons by appointing Walter Crofton (1815–1897) chairman of the Irish Board of Directors of Convict Prisons. With a centralized colonial Irish government, Crofton and his directors began to construct the Irish convict system. In their work, they were greatly influenced by the ideas of Alexander Maconochie, who had been placed in charge of the Australian penal colony on Norfolk Island in 1840. At the time, Norfolk Island housed convicts who had committed crimes subsequent to their transportation to Australia and consequently were viewed as requiring the most punitive of conditions. Maconochie, convinced of the value of positive incentives, developed a "mark system" rewarding work and good

behavior with earned amenities and early release. Though Maconochie's experiment lasted only a matter of years, since he was removed from his post in 1844, his philosophy of convict discipline and prison management was widely disseminated and adapted by Crofton. With almost 4,000 convicts, Crofton and his associates faced overcrowded housing, limited resources, inadequate staff, and malnourished and resistant inmates. Out of these conditions, Crofton organized and skillfully publicized the "Irish system" of penal discipline.

THE IRISH SYSTEM

Crofton set out to develop a system that could integrate both punishment and reformation. In it, as in the mark system, prisoners were required to complete three stages to be eligible for a sentence reduction and/or supervised release. The Irish system, as it came to be called, was made up of an initial punishment stage and two stages of increasing reformative incentives.

During the first or punishment stage, men were held in solitary confinement at Dublin's Mountjoy Prison, which had been built in 1850 and was thought to be a model cellular prison. Under Crofton's system, men were placed in separate cells, with a restricted diet. For eight or nine months they were held in spartan conditions and put to work at oakum picking. Women, viewed as more "sensitive," were held four months to the same regime. The goals of this part of the process were control and submission, a "deterrent" awareness of the consequences of crime, and after enforced idleness, desire for productive work.

During this period of punishment, Crofton asserted, the inevitable hostility that punitive and degrading practices evoke could be averted through strategies that sustained hope for liberty. Consequently, each convict was instructed that the successful completion of the later stages depended on their self-control as "arbiters of their own fate" who needed an active cooperative relationship with "those placed over them." Crofton demanded that staff maintain positive, fair, and model relationships with prisoners to reinforce the legitimacy of their rule. Secular and religious education was critical for reformation. Crofton enlisted the aid of the National Board of Education to provide licensed teachers and arranged for both Catholic and Protestant chaplains. The observations and recommendations of the teachers and chaplains, although sometimes disputed and censored, were included in the yearly reports.

At the successful completion of their first stage, male convicts were transferred to public work prisons while the women remained at Mountjoy, working in a common sewing room. "Benevolent Catholic and Protestant ladies" regularly visited the women and there was nursery space for children. For both women and men entering the second stage, there was a four-level system of classification. Earning a designated number of "marks" at each level, based on the "will to achieve" in discipline, school, and industry, brought increasing gratuities and privileges and a distinctive badge. Misconduct could bring the loss of marks, restricted diet, and for men, return to Mountjoy. Monthly rosters, meticulously kept for each convict, can still be viewed in the Irish National Archives.

After achieving the advanced second-stage level, at the third stage convicts, with the exception of political prisoners, moved from the ordinary prisons to the highly publicized "intermediate prisons." There, in Crofton's words, "individualization" with small numbers took place in an open environment. Descriptions stressed that the purpose was not only to test the assumed self-control and good conduct of the convict but through lectures and job placement to increase their chances for employment after release and lessen public fears by their visible presence in the community. At their intermediate-prison stage, women convicts were placed in two "houses of refuge"; at Goldenbridge the Sisters of Mercy administered a refuge for Catholic women, while Protestant ladies provided a smaller refuge in Dublin.

In 1857, only after the integrated three stages of the Irish system were in place, were "tickets of leave" issued providing the final incentive of a reduction of sentence and supervised release. With a well-organized and centrally controlled constabulary developed for Ireland under British rule, each released convict registered immediately and reported monthly to the local constabulary. Any irregularity or a new crime brought the convict back

to prison, protecting the Irish use of tickets of leave from the public outcry in England.

The development of the Irish system met resistance not only from inmates, who smashed Mountjoy's cell fixtures, but also from within Crofton's staff, some of whom resented the strict discipline, frequent inspections, and low wages, as well as from his English colleagues. Joshua Jebb, Crofton's counterpart in England, aided by a disgruntled Presbyterian chaplain at the Cork Prison, reacted to the Irish system's acclaim and the implied failure of his efforts in England by launching attacks on the validity of Crofton's widely circulated reports. Some noted that employment in a depopulated Ireland rather than a system of prison discipline aided the successful integration of convicts and others warned of dangers to liberty in police surveillance. Pamphlet wars were waged between proponents and opponents of the Irish system. In the eight years before Crofton's retirement in 1862, however, the Irish system became the working model of the prison reform movement.

NETWORKS OF REFORM

During this period, in what has been described as a form of "penitentiary tourism," persons interested in prison reform visited prisons and met regularly in national and international prison congresses. Their motivations varied, including a mixture of belief in the new social sciences, a commitment to evangelical Christianity or humanitarian benevolence, a middle-class fear of the "dangerous classes," and governmental concerns with social disorder. Crofton was a frequent speaker at the yearly meetings of the National Association for the Promoting of the Social Sciences, and the Dublin meeting in 1861 brought visitors to the intermediate-stage prison at Lusk and the women's refuge at Goldenbridge, spreading the word of their successes internationally. Glowing descriptions of the total dedication of Lusk's James Organ to lecturing, finding employment, and constant supervision of male convicts modeled the role for future parole agents. Women reformers, including Rhoda Coffin, instrumental in 1873 in founding the first separate women's institution in the United States, visited and praised the Irish system's provision for women. With their Dublin contacts, members of the New York Prison Association began planning with Zebulon Brockway for the first reformatory based on the mark system, opening at Elmira in 1876. Contacts with Crofton and his writings by the organizers of the 1870 National Prison Association meeting, held during a period of economic and political unrest, led to the call in the famous Declaration of Principles for the implementation of the "Irish or Crofton prison system" in the United States.

CONCLUSION

In the context of contemporary penal theory, the goals of the Irish system, to produce through individualized surveillance "an altered and reformed being," could be considered as a model for Michel Foucault's analysis of disciplinary power. Though Crofton's system was never developed in its entirety outside of Ireland, and even there existed only for a relatively short period, increasing centralization of correctional administration, the use of classification, forms of behavior modification, educational programs, community corrections, and parole have become integral components of correctional policy and practices.

IRWIN, JOHN (1929–)

John Irwin is a prison sociologist who has combined scholarship with activism throughout his intellectual career. His career, however, did not begin in the usual way. After developing a heroin habit and weaving in and out of the local jail system for short periods, Irwin was sentenced to a prison term at the California Training Facility in Soledad. While serving a five-year sentence, Irwin embarked on a program of self-study, maximizing the limited resources available in the prison library and developing work routines that guided his future achievements in sociology and criminology. Irwin's critique of this system and his experience with it can be found in his third book, *Prisons in Turmoil,* which was published in 1980.

EDUCATION

After his release, Irwin began his college studies at San Francisco State College (now University). He soon transferred to University of California, Los Angeles (UCLA), to finish his undergraduate degree, before commencing graduate work in sociology at the University of California, Berkeley, in the spring of 1963. Here he developed his longstanding association with Herbert Blumer, Erving Goffman, and David Matza.

After Berkeley, Irwin returned to San Francisco State, this time as a professor, where he remained for the next 27 years. Before his retirement in 1994, Irwin developed a research program that critiqued the prison system from a perspective of justice and fairness. Works produced during his teaching career include *Scenes* (1977), *Prisons in Turmoil* (1980), and *The Jail* (1985) as well as numerous articles and presentations.

PRISON CULTURE

While a student at UCLA, Irwin enrolled in a graduate seminar on the sociology of prisons taught by Donald Cressey. During this class, Irwin took issue with the view that prison culture was a functional response to the pains or deprivations of imprisonment. Drawing from his own experience in prison, he suggested that other factors—specifically, preprison identity—created prison culture. Cressey challenged Irwin to develop a statement of his view and, together, they published the primary statement of the importation theory of prison culture in the seminal article "Thieves, Convicts and the Inmate Culture" (1962).

At Berkeley, Irwin completed his dissertation, subsequently published in 1970 as *The Felon.* This work remains a landmark in the study of prison culture and outlines the basic tenets of prison adaptation from a career perspective. In it, Irwin expands his earlier argument that forms of prison adaptation are closely tied to preprison orientations. He describes various ways prisoners adapt to incarceration depending on their preprison identities and self-definitions. These modes include "doing time" (closely associated with the thief identity); jailing (associated with the state-raised youths and those without any connection to conventional society); and gleaning (chosen by those who attempt to improve their life chances by developing new intellectual, vocational, or social skills while incarcerated). Irwin also describes the emerging importance of race and ethnicity in the convict world and foreshadows his later articulation of this phenomenon in *Prisons in Turmoil* (1980).

In *Prisons in Turmoil* (1980), Irwin continues his investigation of the prison social order. Beginning with sociological description of "The Big House: The Great American Prison," he reviews the history of American prisons and the evolution of prison

WOMEN LIFERS

The numbers of women lifers have increased significantly in the past two decades. These women experience similar frustrations and limitations as their male counterparts. They exhibit an above average risk of being victims of suicide. Because of their sentences, they also are denied the prospect of programs and privileges. They are commonly prescribed psychotropic drugs to make them numb to their surroundings. Female lifers also experience an additional sense of guilt and depression caused by not being able to watch over and take care of their children as they grow up.

JUVENILE LIFERS

In the early 1990s, legislators responded to the sharp increase in juvenile violent crime by incorporating many punitive changes within the court system and penal processes. One result is that juvenile offenders are increasingly transferred from family and juvenile court to adult court, and at much younger ages. In addition, over the past 15 years increasing number of juveniles have been sentenced to life without parole. The Convention on the Rights of the Child, an international treaty passed by every member of the United Nations except Somalia and the United States, prohibits using life imprisonment without the possibility of parole for any crime committed by a minor. The United States did not sign this treaty.

The federal sentencing guidelines disallow "youthfulness" as a mitigating factor to reduce sentences outside the guidelines' range. According to the National Corrections Reporting Program, which describes admissions to state prisons in 38 states, an estimated 16 juvenile offenders were admitted to prison under a life-without-parole sentence in 1996. In the same year, an estimated 204 juvenile offenders began serving life sentences. That figure continues to rise.

LIFERS WITHOUT PAROLE

Parole eligibility varies from state to state as well as from country to country. Recently, there has been an increase in the numbers of men and women accorded life sentences without parole. Lifers without parole will be in prison until they die. Their release is possible through two conditions only: the use of clemency and, in some states, medical parole for the terminally ill. Both are used extremely infrequently. For these lifers, they live in the present; they try to survive each day, because they really do not have a future to look forward to.

There is no empirical evidence to date to indicate that inmates serving a sentence of life without parole are more likely to engage in major misconduct violations. In fact there are studies that show they are no more likely to engage in misconduct than their fellow inmates who are eligible for parole. In addition, a recent study indicates that "no hope of parole" actually reduces the likelihood of violent misconduct. With the growth of the no-parole option, future research is necessary to ascertain the effects of no parole on a younger lifer population.

LIFERS IN OTHER COUNTRIES

Lifers in England and Wales face similar sentence regulations as those in the United States. There are two types of life sentences in Britain and Whales: mandatory and discretionary. Mandatory lifers are those convicted of murder and are the majority of lifers in British correctional facilities. Most of these women and men will be eligible for parole after a certain amount of time—usually 15 years—although a small number will never be released.

Discretionary lifers are convicted of one of the following crimes: manslaughter, armed robbery, arson, rape, and kidnapping. In these cases, the judge has the discretion over the sentence and parole is possible if so ordered. The Crime (Sentences) Act 1997 requires the court to impose the sentence of life in prison with the possibility for parole for a person convicted of a second serious violent or sexual offense. The make-up of the lifer population in England and Wales is quite similar to the United States.

MANAGEMENT

Lifers are regarded as the most cooperative of prisoners by many prison officers and criminologists. Even so, at the initial stage of their incarceration they are viewed as maximum-security risks. They also receive few educational and vocational programs. This is especially true for lifers without parole eligibility. However, there are a variety of programs operated by lifers themselves, with the help of correctional staff. One of the more highly publicized lifers' groups is the Rahway Lifers Group Inc. at Rahway State Prison in New Jersey. The documentary *Scared Straight* chronicled the efforts of this group to turn troubled youths away from a life of crime. Today, the group maintains a Web site and continues to operate its youth tour program.

At Graterford State Prison in Pennsylvania, the lifers group recently hosted the first ever Crime Prevention Summit bringing together 100 Philadelphia civic leaders and police brass with lifers inside the prison walls. The goal of the conference was to discuss ways to end urban violence and drug distribution in the city of Philadelphia.

In the United Kingdom, lifers are assisted by both prison counseling services and Internet information to prepare them for their potential release. The Web site is comprehensive, addressing issues of anger management, parole release, and expectations, and other life skills' issues necessary to affect a positive outcome after release.

These programs share the common goal of promoting a positive self-image for lifers as well as providing opportunities for positive changes in individual offenders. Similar programs exist throughout the United States and the United Kingdom.

CONCLUSION

The changing demographics of lifers, the emerging juvenile and female lifers, and the nonviolent lifer illustrate the importance of reform in the correctional system. Lifers are becoming older requiring the prison systems to reexamine the needs of inmates. They have special needs in housing, recreation, and medical care that require special attention of prison administrators. Lifers have changed due to strict sentencing and penal policies and comprise an increasing percentage of the modern prison. This fact alone warrants review by administrators into operational changes.

LITERACY

Literacy skills are important to people in prison for a number of reasons. Many prison jobs require prisoners to read instructions or order forms, and inmates are often required to write requests for belongings, items, or medical treatment. Reading and writing provide productive options for passing time while in prison. Letters to family and friends are a vital link to the outside world. Literacy skills are also important for those who will leave prison and attempt to reintegrate into the community. Jobs, continued education, and many social opportunities depend on the ability to read and write—regardless of whether an individual is in prison.

Research consistently demonstrates that quality education is one of the most effective forms of crime prevention since educational skills help deter people from committing criminal acts. One study, for example, indicated that those who benefited from correctional education recidivated 29% less often that those who did not have educational opportunities while in the correctional institution.

In the United States, however, a "get tough on crime" mentality has resulted in a push to incarcerate, punish, and limit the activities of prisoners. As part of this move, over the past 10 years political pressure has led to the elimination of funding for many corrections education programs. Many programs that have been demonstrated as extraordinarily effective have been completely eliminated.

Nonetheless, literacy programs continue in many correctional facilities, in part because they can be run at a relatively low cost. In addition, state and federal guidelines that encourage the development of literacy skills typically apply to all citizens, including prisoners. Prison literacy programs also benefit from volunteer efforts of organizations and individuals.

NEED FOR LITERACY PROGRAMS

Illiteracy is perhaps the greatest common denominator in correctional facilities. Data collected from the National Adult Literacy Survey (NALS) show that literacy levels among inmates are considerably lower than for the general population. For example, of the five levels measured by the NALS, 70% of inmates scored at the lowest two levels of literacy (below fourth grade). Other research suggests that 75% of inmates are illiterate (at the 12th-grade level) and 19% are completely illiterate. Forty percent are functionally illiterate. In real-world terms, this means that the individual would be unable to write a letter explaining a billing error. In comparison, the national illiteracy rate for adult Americans stands at 4%, with 21% functionally illiterate.

A related concern is that prisoners have a higher proportion of learning disabilities than the general population. Estimates of learning disability are as high as 75% to 90% for juvenile offenders. Low literacy levels and high rates of learning disabilities have contributed to high dropout rates. Nationwide, over 70% of all people entering state correctional facilities have not completed high school, with 46% having had some high school education and 16.4% having had no high school education at all. Since there is a strong link between low levels of education and high rates of criminal activity, it is logical to assume that high dropout rates will lead to higher crime rates.

PRISON LITERACY PROGRAMS

The correctional facility provides a controlled education setting for prisoners, many of whom are motivated students. However, the prison literacy educator faces many challenges. Students in these programs have varying levels of ability and have had a range of educational experiences. The educator's challenge is compounded by the uniqueness of prison culture and the need for security. Prisons adhere to strict routines, which may not be ideal in an educational setting. During their sentence, inmates are often moved from one facility to another. This movement interrupts, or ends, the individual's educational programming. These structural issues are accompanied by social factors that can further limit learning opportunities. Peer pressure may discourage attendance or achievement. Prison administrators usually only support education to varying degrees—especially if they see it as a threat to the primary functions of security and control.

In spite of the challenges, examples in the literature demonstrate that programs based on current thinking about literacy and sound adult education practices can be effective in prison settings. Successful prison literacy programs are learner centered, recognizing different learning styles, cultural backgrounds, and multiple literacies. Successful programs typically use learner strengths to help them shape their own learning. Historically, literacy education has been offered to the general population by two volunteer agencies: Literacy Volunteers of America (LVA) and Laubach Literacy International. (In 2002, these agencies merged to form ProLiteracy Worldwide.) These agencies train volunteers and staff who administer the programs in prison. Although the training emphasizes specific skills and curricula, educational programming in a correctional institution is always dependant on the philosophy and policies of the correctional facility. As such, it is difficult to ensure consistent delivery of literacy services from one institution to another.

TESTING AND CURRICULA

Several standardized reading tests are available to literacy instructors. Besides the Test of Adults in Basic Education (TABE), two other tests are commonly used. One, the Grey Oral Reading Test, measures the fluency and comprehension of the learner. For example, it determines the learner's ability to recognize common written words such as *car, be, house,*and *do* by sight or in context. A second commonly used test for literacy skills is the National Assessment of Adult Literacy (NAAL). This test is divided into five levels ranging from assessing the learner's ability to fill out a deposit slip (Level I), determining the difference in price between two items (Level II) to demonstrating proficiency in interpreting complex written passages (Level V). These tests can be used to assess needs, track progress, and demonstrate success to the learner and to administrators who may be called on to support the program.

Several literacy curricula are also available to prison educators. The National Institute for Literacy developed standards for literacy as a component of lifelong learning. This program focuses on skill acquisition in three areas: worker, family member, and citizen. The standards are broken down into four general areas with several subareas. For example, "communication" is broken into the following subareas: (1) reading with understanding, (2) conveying ideas in writing, (3) speaking so others can understand, (4) listening actively, and (5) observing critically. The curriculum uses activities that are relevant to the learner's life to develop skills in reading. Laubach Literacy offers curricula that can be used in classroom settings or in one-on-one instruction. "Reading Is Fundamental" and "Project Read" are examples of federally funded literacy programs that offer text-based curriculum.

Although there are similarities among each of these programs, data do not suggest a standardized delivery method for literacy programs in correctional facilities. The programs generally include reading, writing, calculating, listening, speaking, and problem solving as core parts of a literacy curriculum. In general, successful programs are learner centered, participatory, sensitive to the prison culture, and linked to postrelease services.

CONCLUSION

Since the 1970s, correctional philosophy has shifted from a rehabilitative to a punitive approach. Even so, correctional facilities remain responsible for addressing literacy problems among the corrections population. The logic behind providing literacy services in prison is that all of society benefits by allowing access to educational resources that are available to everyone else. As such, literacy programs should not be seen as "special treatment" for prisoners. The federal government encourages literacy skill improvement in all entities, including prisons, that receive federal aid and at least 26 states have enacted mandatory educational requirements for certain populations. These policies demonstrate the importance placed on efforts to improve literacy skills.

Although there are challenges, literacy programs can provide relatively inexpensive educational programs within correctional institutions. When we consider the high cost of imprisonment, coupled with a growing prison population, literacy programs provide a cost-effective opportunity to improve the job-related skills of incarcerated individuals. A large percentage of these individuals will be released from prison and will be expected to successfully, and lawfully, reintegrate in our communities. Literacy education provides a large payoff to the community in terms of crime reduction and employment opportunities for ex-offenders. Investments in these programs have been confirmed as wise, and cost-effective, public policy.

LOCKUP

A lockup is a temporary holding facility for pretrial detainees, usually located within a courthouse or a police station. Lockups are also known as holding pens, bullpens, or tanks. They must be distinguished from jails, which are usually operated by county sheriff's departments. Typically, jail populations are composed of defendants awaiting trial who either did not make bail or who were not offered it, convicted misdemeanants who will spend all of their incarcerated term in jail, and convicted felons who are awaiting bedspace in a state prison. Lockups, on the other hand, are run by local police departments and are located within the police station. They may also be operated by the court and located in the basement of the courthouse.

Unlike the vast amount of scholarly work on corrections and jails in the United States, there is little literature, scholarly or otherwise, about lockups. The near academic and official silence over these institutions is surprising since the number of lockup facilities is almost four-and-one-half times larger than the number of local jails. Within the United States, there are more than 15,000 lockups but only about 3,400 local jails.

CURRENT PRACTICE

Detainees in a police lockup are individuals who have just been arrested and are awaiting their first court appearance, which may include informal charging and bail setting. While the Speedy Trial Act of 1974 (revised in 1979) does not specify the length of time from the point of arrest to the point of the first court appearance, states typically require that detainees must be brought to a judge, or an appropriate judicial officer, within 48 hours. The median time of holding is 22 hours. If detainees cannot make bail, they will await trial in a county-operated jail. In some jurisdictions where the jails are overcrowded, lockups may be used for longer periods of time.

Roughly 16% of all police departments in the United States operate lockup facilities, which are overnight holding facilities, while 19% administer holding cells, which are not for overnight detention. In jurisdictions with more than 1 million residents, 56% of the local police departments manage a lockup

facility, while up to 42% of police departments in smaller jurisdictions do likewise. Most police departments with jurisdictions of more than 10,000 residents operate an adult lockup. The median capacity ranges from 70 detainees in jurisdictions with more than 500,000 residents to 3 in jurisdictions with fewer than 10,000 residents. Nationally, the number of adult detainees in local police lockups is approximately 41,000.

JUVENILES

Nationally, there are approximately 7,500 juvenile detainees held in lockup. One in seven police departments has a juvenile lockup facility, usually those located in the largest jurisdictions. The capacity of most institutions ranges from 16 in the largest jurisdictions to 1 in areas with fewer than 2,500 residents. Unlike adult detainees, the median time of holding for juveniles is six hours.

SOME PROBLEMS WITH LOCKUP

There are several areas of concern with regard to lockup. Of most importance is the lack of comprehensive standards for the treatment of detained persons in police lockups. In addition, the use of police officers rather than trained prison officers may cause problems for those who are held. Finally, conditions of confinement for detainees are often poor, and since so little academic attention is given to them, unlikely to change.

The need for comprehensive standards about the treatment of detained persons in police lockups is not specific to the United States. An examination of similar institutions in the Netherlands and other countries around the world reveals a similar problem. Recent efforts to create standards can be found in the United Nations' *Body of Principles for the Protection of all Persons Under Any Form of Detention or Imprisonment* (1988), *Standard Minimum Rules for the Treatment of Prisoners* (1955 and 1977), *The Convention Against Torture and Other Cruel, Inhuman or Degrading Treatment or Punishment* (1984), and *Basic Principles for the Treatment of Prisoners* (1990). However, only 10 of the rules found in the *Standard Minimum Rules for the Treatment of Prisoners* address the treatment of detainees in lockup facilities. As a result, police departments implement custodial procedures and build cellblocks without proper guidance.

POLICE CULTURE AND ITS IMPACT ON LOCKUP

Understanding police culture and its values may help to explain the lack of interest in police lockups. Since its movement toward professionalism in the 1920s, the police have increasingly taken pride in keeping the peace and fighting crime. As a result, the caregiving aspect of the custodial role that police are required to take on when operating lockups is unfamiliar to many officers. The difference in values and primary responsibilities between the police and correctional personnel may lead police and prison officers to treat inmates differently. Specifically, police tend to see criminals as liable for the consequences of their misconduct while prison officers take on the more human services approach, combining the roles of counselor, diplomat, caretaker, caregiver, and disciplinarian.

Finally, the conditions of confinement pose a number of problems. Although, as has already been stated, little is known about the experiences people have in lockup, the United Nations' *Convention Against Torture and Other Cruel, Inhuman or Degrading Treatment or Punishment* (1984) has drawn increased attention to the conditions under which detainees are held in any institution. Research has found that police stations around the world have denied prisoners communication, recreational activity, and basic necessities such as blankets, health care, and adequate nutrition. Furthermore, it is common for hardened criminals and prisoners under trial to be housed together. At worst, cases of torture and killings of inmates at the hands of police officers within lockup have been documented by Amnesty International. These are all violations of basic human rights as specified by the United Nations.

One well-known example of poor conditions in the United States was found in New York City's

criminal court lockup. The Visiting Committee of the Correctional Association of New York began its visits to the court lockup in 1989. The committee found it to be overcrowded, with broken toilets and sinks, no medical care, and inadequate or missed meals. There were no operating standards for cell capacity, food, health care, and access to family and legal counsel. As a result, the Midtown Community Court holding pen was created. Instead of bringing suspects to central booking and holding them at the police station, police now transport suspects directly to the court lockup or to the Midtown North Precinct. This current practice has minimized holding time of detainees and has allowed the city to monitor the conditions of lockup. The lockup was found to be clean and bright with glass panels instead of bars.

CONCLUSION

Lockup facilities have tended to be ignored by researchers as well as by criminal justice administrators. The low priority given to these facilities is a result of (1) the small numbers of inmates housed in these facilities, (2) the short periods of time inmates are kept at these facilities, and (3) the lack of fit of the custodial role into police culture. In addition, the operation of lockup facilities by police departments or courts is far from ideal. Police officers report that lockups in their stations create congestion problems within the stationhouse itself and report feelings of resentment and betrayal for being required to engage in custodial activities. Many police officers also feel unqualified for the task. Finally, lockup facilities are not subjected to the same operating standards as jails and prisons. This problem, both nationally and internationally, creates situations where violations of international standards are more likely to occur.

LOWELL, JOSEPHINE SHAW (1843–1905)

The life of philanthropist and social reformer Josephine Shaw Lowell is something of an enigma. She demanded that the poor take responsibility for themselves at the same time that she promoted a wide range of social services, including antipoverty programs. She called on capitalists to pay workers fair wages and the state to pursue full employment. She advocated eugenics through preventive incapacitation, yet condemned retribution and fought for the rehabilitation of prisoners. A leader in the scientific charity movement, she combined principles of public duty, social responsibility, and civic materialism with an ardent pro-labor and anti-imperialist stance. Lowell was a complex personality.

Like many privileged reformers of her day, Lowell was influenced by her class position, social-cultural context, and historical conjuncture. Born in West Roxbury, Massachusetts, on December 16, 1843, to affluent parents, Sarah Sturgis and Francis George Shaw, Josephine traveled the world, attending

schools in Europe as well as in the United States. Her parents were abolitionists and Unitarians; their circle of associates included feminists, communitarians, and transcendentalists. In 1863, she married Charles Russell Lowell, Jr., who, while serving in the Second Massachusetts Cavalry, died after sustaining injuries on a Virginia battlefield. She also lost her brother, Robert Gould Shaw, in an attack on Fort Wagner. He was leading a regiment of black soldiers.

Adding to the chaos of the Civil War (which drew republican women to the public sphere) was the Industrial Revolution, the abolition of slave labor, and waves of immigrants arriving on America's shores. The industrial reserve swelled, cities became overcrowded, crime increased—especially among women and immigrants—and the middle class grew fearful of the "dangerous classes," the working poor, the unemployed, the racialized, and the foreign. Simultaneously, and somewhat paradoxically, the relentless and unbridled force of the industrial bourgeoisie during the Gilded Age projected an image of American liberty built on economic freedom and individual autonomy.

OF CHARITY, PENITENTIARIES, EUGENICS, AND REFORM

Lowell's vision of social action was forged in this crucible. Charity was not supposed to ameliorate suffering, she argued, but fundamentally to transform the recipient, converting irresponsible paupers into hard-working and economically independent citizens. Her secular ideology thinly disguised a Protestant ethic that was rooted in a religious conception of human nature. In her book, *Public Relief and Private Charity* (1884), she argued that human nature is such that if individuals receive assistance without working for it, moral degradation inevitably results. Perhaps worse, when people see others receiving public relief, they cannot help but covet the same seemingly carefree life. On the basis of this, she emphasized work requirements as a prerequisite for charitable gifts, and, to make sure recipients were indeed working, surveillance of their habits.

Lowell's approach to social reform was labor intensive and paternalistic. She urged practitioners to enter homes to teach poor mothers how to rear their children. When the poor found their way into penal institutions, she demanded the development of educational and vocational programs behind prison walls.

In 1876, Lowell was appointed to the New York Board of Charities. This role brought her into contact with the harsh realities of the penitentiary. An adherent of the "new penology," articulated by such figures as Zebulon Brockway and the American Prison Association, Lowell campaigned for separate women's prisons, reformatories to rehabilitate minor offenders, and the indeterminate sentence, a measure believed essential for keeping persons in custody while they received treatment. Impressed by Richard Dugdale's notorious study of degeneracy, *The Jukes* (1875), she joined the eugenics movement. Dugdale's findings (which were fraudulent) told the story of a promiscuous woman responsible for a generation of criminals, inebriates, and miscreants. To prevent proliferation of undesirables, Lowell advocated preventative incapacitation and viewed crime control as prophylactic. To achieve this end, she established the Newark Custodial Asylum for Feebleminded Women.

Despite these views, Lowell eventually recognized that crime and poverty were the result of structural conditions and dedicated herself to the struggle for higher wages and improved working conditions for women. Thus, her story is a lesson in how experience can change point of view and practice.

CONCLUSION

Lowell's work remains relevant to contemporary debates surrounding welfare reform and the future of antipoverty programs. Those seeking to end programs for the poor have, in large measure, selectively co-opted Lowell's themes, such as personal responsibility and hostility toward welfare dependence, successfully eliminating Aid to Families with Dependent Children (AFDC), the major federal cash transfer program for poor children. Perhaps this would have pleased Lowell, who argued against "mothers' pensions" in favor of "widows' pensions" on grounds that the former would repeat the sin of abandonment. At any rate, for the history of corrections in America, Lowell is a central figure in the evolution of women's prisons and reformatories. Her work links charitable

approaches to reformation rooted in organized religion to the emerging effort to address social problems through the application of rational scientific principles and social control.

M

MACONOCHIE, ALEXANDER (1787–1860)

Alexander Maconochie is an important figure in penal history, known as the originator of the "marks" system. Maconochie developed this strategy of incentives and privileges at the Norfolk Island penal colony in the mid-1800s as a means of managing men who had been deemed uncontrollable. In the United States, a version of the marks system was most famously applied at Elmira Reformatory by Zebulon Brockway. Although Maconochie was ultimately forced to leave his position as warden of the Norfolk Island prison, echoes of his highly structured system of prison management can be found in prisons throughout the world today.

HISTORY

In 1840, the notorious prison on Norfolk Island (a penal colony in the Pacific Ocean hundreds of miles northeast of Sydney) was sent a new governor, Captain Alexander Maconochie. He had requested this post. Norfolk Island was a place of secondary punishment for convicts who reoffended in the British colony of New South Wales. It was distinguished by a regime of brutality designed to strike terror in the hearts and minds of all transported felons. Here, men were starved at the slightest infringement of rules and were confined in small fetid cells. Here, too, they could be flogged until their bones were revealed. Norfolk Island was a place where hope was removed from prisoners' lives, and where death was eagerly awaited.

Maconochie, a former soldier, had been employed in Van Diemen's Land as a private secretary to Governor Sir John Franklin before he sought this new employment. He was a prison reformer, concerned to establish a process of improvement even in the most brutal prison of the antipodes. Inspired, in part, by his Christian beliefs, Maconochie thought it necessary to build new, healthier prisons with strict, regulated regimes that would persuade inmates not to reoffend. These institutions would also equip prisoners with skills to support themselves with honest labor once back in the world.

THE MARKS SYSTEM

Maconochie's contribution to prison reform lay in his introduction of a scale of "marks" that prisoners could earn for good behavior. Once an individual achieved a certain number of marks, his living conditions would improve. An accumulation of marks would also result in an early form of parole known

as a "ticket of leave" that allowed a person to be released from prison under license.

Maconochie experimented on Norfolk Island with these ideas and, to his mind at least, achieved some notable results. He altered inmates' lives by allowing them to hope. Unfortunately for the Norfolk Island convicts, the ticket of leave could only be permitted on the island itself. They had little chance of returning to the mainland and even less of returning to England. Maconochie could not achieve miracles, but he could and did permit a level of humanity to return to the men's lives.

Convicts in this system had been brutalized. One man's treatment had included a period of time chained to a rock in Sydney Harbor, where he became an object of mockery for those who could reach him and throw bread or less savory items at him. His life sentence was to be served out on the island, and by the time Maconochie reached it the convict could barely make himself understood. He was removed from the prison and sent to live by himself in a small hut where he was permitted to cultivate a garden and was supplied by convict stores. In this way, Maconochie believed he had retrieved an individual who was thought to be beyond help of any kind but God's.

MACONOCHIE CHALLENGED

Not everyone wished to see convicts reform themselves. Many proponents of the penal system firmly believed that a place of secondary punishment had to strike terror rather than hope in the malefactor's heart. They did not necessarily share a belief in the inherent goodness of man as a being created in God's image, which was the foundation of much reformist thought.

The first assessments of the marks system to reach London were negative, and in 1844 the colonial secretary ordered Sir George Grey to remove Maconochie from his post. A few weeks after this order had been received in Sydney, the home office received reports of a very different kind about Maconochie's successes. It was too late. Maconochie was recalled to live his life out in unrewarding positions in which he was briefly permitted to introduce his system of marks and then dismissed as too radical. Norfolk Island reverted to its former brutal regime. Yet Maconochie's ideas remained influential within the British convict system, and were imported to the Irish system and ultimately to the United States in the 1870s. In Australia, marks were instituted in Fremantle Convict Establishment, a large prison built for 1,000 inmates, in the 1850s. They remained in the system until the 20th century, although their implementation became more and more debased and further and further from the Christian ideals of their founder.

CONCLUSION

Marks gave convicted criminals the opportunity to alter some part of their sentence by behaving well within the prison structure of rules and regulations. They worked in Fremantle while men labored outside the walls, where their activities could be noted and recorded by an interested public. Behind prison walls, however, marks easily became dependent upon the goodwill of the recording officer, with increased chances of corruption or poor assessment. Despite such problems, a structured system of incentives and privileges was introduced to the English prison system in the 1990s that in many respects is a modern application of Alexander Maconochie's 19th-century ideas.

MALCOLM X (1925–1965)

The prison experiences of Malcolm X proved to be the turning point in his life and career. During his years of incarceration, he underwent a profound spiritual conversion that transformed him from a petty criminal into the principal spokesperson for the Nation of Islam.

BIOGRAPHICAL DETAILS

Malcolm Little was born on May 19, 1925, in Omaha, Nebraska. His childhood could not have been more troubled. Malcolm's father, Earl, was an ardent advocate of the United Negro Improvement Association, the militant black organization established by Marcus Garvey. Earl's uncompromising politics aroused the enmity of the Ku Klux Klan, which repeatedly terrorized the family. The Littles abandoned Omaha and settled first in Milwaukee, Wisconsin, and then Lansing, Michigan. Trouble awaited them with every move. When the family moved into an otherwise all-white neighborhood in Lansing, they were served with an eviction notice. After Earl refused to relinquish the property, local whites burned it to the ground. On September 28, 1931, Earl was killed when he fell under the wheels of a streetcar. The circumstances surrounding his death are clouded in confusion. According to some, Earl was murdered by white supremacists known as the Black Legion; in the opinion of others, he died as the result of a drunken fall.

Whether or not the cause of his death was an accident, the impact on the rest of the family was catastrophic. Earl's widow, Louise, struggled unsuccessfully to support her children. Malcolm became increasingly unruly at school. He also started to steal. In January 1939, exhausted by strain, Louise Little was admitted to the Michigan State Mental Hospital. Malcolm was sent to live with an adoptive family. Expelled from school, he was then admitted to a detention home.

Malcolm found temporary reprieve when he moved to Roxbury, Massachusetts, under the legal guardianship of his half-sister, Ella Little-Collins. However, he soon descended into a life of petty crime. Under the alias "Detroit Red," Malcolm worked the streets of Harlem as a pimp, drug dealer, and number runner. In November 1944, he received a three-month suspended sentence and one year of probation for pawning a stolen coat. Four months later, he was arrested for a robbery in Detroit but failed to attend the trial hearing.

IMPRISONMENT

Eventually, the law caught up with him. On January 12, 1946, Malcolm was arrested when he attempted to reclaim a stolen watch left for repair at a jewelry store. The police then uncovered a cache of stolen goods in his apartment. Malcolm stood trial along with the other members of his small gang in February 1946. Two of his accomplices, a white woman Malcolm had dated, along with her sister, received minor sentences. Malcolm and his friend Shorty were advised to plead guilty on the assumption that they would each receive a maximum of two years' imprisonment. However, the judge had other plans and handed down sentences of eight to ten years. On February 27, 1946, Malcolm entered the Charlestown State Prison. Prisoner 22843 was still only 20 years old.

Yet prison was to prove Malcolm's salvation. There he befriended a fellow inmate, John Bembry ("Bimbi"), who encouraged him to study. In January 1947, Malcolm was transferred to the Concord Reformatory, where he received a letter from his brother Philbert, who had converted to the Nation of Islam. Further letters followed from other family members who had also become Black Muslims. By the time of his transfer to the Norfolk Prison Colony in 1948, Malcolm was himself a disciple of the Nation of Islam. Malcolm Little became Malcolm X. His new identity symbolized the African name that he never knew, stripped from his forebears who had been enslaved by white Christian masters. Through the teachings of Elijah Muhammad, spiritual leader of the Nation of Islam,

Malcolm learned that the "original man" who founded human civilization was black, but that this had been deliberately concealed by whites who distorted the texts of holy scripture. Malcolm started to practice the strict code of personal discipline demanded by the Nation of Islam, refraining from the consumption of pork, alcohol, tobacco, and narcotics. He also embraced the political doctrine of the Black Muslims: racial pride, self-determination, and the establishment of an independent black republic. Malcolm's success in recruiting and converting other inmates to the Nation of Islam eventually led to his being placed under FBI surveillance.

CONCLUSION

Malcolm was paroled on August 7, 1952. He did not look back. Rapidly working his way through the ranks of the Nation of Islam, Malcolm established himself as an outstanding spokesman for the poor and oppressed black masses. The experience of incarceration had proved crucial in determining his new identity and calling. In the years ahead, Malcolm's own tale of crime, imprisonment, and spiritual conversion served as inspiration to the black underclass who formed the core membership of the Nation of Islam.

MANAGERIALISM

Managerialism is an ideology. As such, it is a set of values, ideas, and beliefs about the state of the world that provides justification for action. At the heart of managerialism lies the belief that with better management, we can solve economic and social problems, including crime and crime control. Managerialist thought fostered and has been nourished by the development of actuarial justice and its expression in corrections: new penology.

CONTEXT AND DEFINITION

In Western societies in the 1980s, a consensus emerged that governments were regulating, owning, and owing too much, and that the welfare state was not working as planned. People wanted to be taxed less and were expecting others to become more self-reliant. Privatization and deregulation became popular. At the beginning of the 21st century, when globalization is increasing at ever-greater pace, governments are immersed in neo-liberalist philosophy: privatization of programs, deregulation of corporate behaviors, reducing government debts, participating in free trade agreements, and providing fewer social services at a lesser quality.

At the same time that this shift in philosophy occurred, the public sector has been transformed by the emergence of the "New Public Management." The trend, initiated in New Zealand and the United Kingdom, has appeared in the United States and Canada since about 1995. New Public Management is a paradigm that promotes a decentralized and performance-oriented culture in the public sector. More precisely, New Public Management can be identified through a number of features:

- Providing high-quality services that citizens value
- Demanding, measuring, and rewarding improved organizational and individual performance
- Advocating managerial autonomy, particularly by reducing central agency controls
- Recognizing the importance of providing the human and technological resources managers need to meet their performance targets, and
- Maintaining receptiveness to competition and open-mindedness about which public purposes should be performed by public servants as opposed to the private sector (Borins, 2002, p. 3).

Managerialism emerged from the New Public Management trend.

To understand managerialism, *management* has to be distinguished from *administration*. *Administration,* the traditional concept and set of practices, refers to the review and decision making within public services. In contrast, *management* means the search for the best use of resources in pursuit of stated objectives (Politt, 1993, p. 5). This whole enterprise revolves around the tasks of better planning, organizing, staffing, directing, coordinating, and budgeting. Of course, the pursuit of best management often involves transferring many of the values, principles, and practices of the private sector (performance indicators, audit, etc.) to the public sector.

As with many of these trends, managerialism hit the education system, health care, and social services first, and only slowly penetrated criminal justice. Because New Public Management and managerialism developed first in these parts of the world, it is not surprising to find that it has been documented in criminological research mainly in Australia, New Zealand, and the United Kingdom. Traces of it can nevertheless be found in the United States, Canada, and other Western criminal justice systems.

MANAGERIALISM IN THE CRIMINAL JUSTICE SYSTEM

The Representation of Criminal Justice

The mere fact of conceiving of police departments, courts, probation, prison, and parole offices, all organizations with very different goals and logics, as a "system" reflects ideas of managerialism. Justice is no longer to be represented by a blind woman holding a scale. The external "justice" point of view has been replaced by an internal "system" point of view, namely a chart: the criminal justice funnel. This "system" is made of "interconnected" agencies among which information must flow. Bottlenecks must be avoided for faster throughput. This conception of the criminal justice system directly reflects the preoccupation with efficient processing of case and files. Along the same line, the criminal justice system is redefined as a service industry that has to satisfy its customers rather than as the regulatory role of government as it was understood in the past. This redefinition is vivid when, for example, state-employed parole officers call parolees "clients."

Policing

Within the police force, managerialism induces what Chan (1999) calls a "new accountability." Traditionally, police accountability was conceived with reference to values such as the rule of law and responsible government. Police practices were governed centrally by laws and rules that were enforced by the courts and the police hierarchies. The new accountability has involved a shift from this centralized control to self-regulation and external controls: record keeping by each police officer, monitoring by electronic tracking system and cameras in the patrol cars, auditing, and so on. As a result, some police officers specialize in dealing with accountability requirements while others do the "regular" work. Also, individual police officers as well as the organization become mostly preoccupied with the accountability measures, which now become a measure of their performance.

Tribunals

In accordance with the managerialist trend, productivity and cost efficiency is more and more a preoccupation for the courts. In Britain, for example, a policy has been put in place to encourage a wider use of police cautioning, a practice that has been found as effective as prosecution but less time and resource consuming both for the police and the courts (Raine & Wilson, 1997). For the same reason, policies are put in place to allow a large number of minor offenses to be dealt with by the police through fixed penalties. In Canada, the federal government is even considering doing so for possession of small amount of cannabis. The numeric importance of these cases and their congestion effect on the courts are not alien to the current discussions.

Probation and Parole

The traditional role of parole and probation officers, namely therapeutic intervention, has been seriously shaken in the last decades as it has been colonized by managerialist values and practices.

Accountability and administrative management have replaced rehabilitation as the primary goal of probation and parole. Parole and probation officers are now case managers, and their main tools are restriction of liberty and increased surveillance (Simon, 1993). An interest in the causes of behavior has been replaced by a focus on behavior control and prediction. Likewise, the goal of developing a meaningful relationship between professionals and service users has been replaced by the careful administration of standardized questionnaires and scales. Rehabilitation and individual relationships do not lend themselves easily to performance indicators; control does. Hence, the professionals have something tangible to show for their work (number of contacts, proper forms filled out, etc). Despite official policies, though, some studies showed that both the workers and the service users resist the attrition of the therapeutic relationship.

Prison

With the increasing spread of managerialism, prison workers find themselves in the same situation as probation and parole officers. Their discretion has been limited, and their attempts to reform prisoners curtailed. In both areas of the criminal justice system, the consequences of managerialism varies depending on the population under consideration. Governors (wardens) of women's prisons in England and Wales, for example, find that complying with procedures designed for the guidance, regulation, and performance of men is often difficult. Supposedly gender-neutral regulations are not always appropriate for women prisoners, yet wardens are not allowed to stray from policy. Whereas they had been able to rely on their long-term expertise in order to meet their goals as prison administrators—namely to make prison legitimate to a number of groups (different segments of the public, politicians, academics, etc.) whose demands are often incompatible—now prison governors are often forced to implement codes that may be inappropriate for their population. Moreover, due to the procedural nature of managerialism, the governors themselves are evaluated not only on the outcome of their policies but also on the process itself, which must be clearly documented when any decision is made.

CONCLUSION

Among other things, managerialism in criminal justice emphasizes better standards and greater accountability. A priori, these are positive contributions. However, acting in the name of greater efficiency can also cause neglect of human rights and due process. Moreover, the fetishism of better management should not hide the fact that the assumptions of managerialism are value laden and contestable. For example, whose standards are being imposed? Performance and efficiency for whom? As a result, it is important to ask whether managerialism is appropriate to organizations like those in the criminal justice system that are engaged in meeting public need and performing public services rather than producing consumer goods.

MARION, U.S. PENITENTIARY

U.S. Penitentiary (USP) Marion is located 300 miles south of Chicago and 120 miles from St. Louis in the southern tip of Illinois. Marion is a small penitentiary used to isolate high-security male prisoners. The prison has no wall, but is surrounded by a high-security fencing wrapped in razor wire, protected by gun towers, with multiple cellblocks divided by a maze of security grills and doors.

Marion, like all Federal Bureau of Prisons (BOP) prison facilities, is federal property situated on a U.S. government reservation, not that different from a Native American reservation or military base. Legally, USP Marion is not part of Illinois, since it is beyond state jurisdiction.

THE FEDERAL BUREAU OF PRISONS

The BOP uses an "inmate classification system" as a means to segregate, punish, and reward prisoners. This is a "classification ladder" with maximum security at the top and minimum security at the bottom. The classification designations have changed over the years to accommodate the dramatic growth in BOP prisons and population.

The old system had six security levels, with 6–5 being maximum security, 4–2 being medium, and 1 being minimum. USP Marion was the only Level 6 institution. U.S. Penitentiaries were Level 5 (e.g., USP Atlanta, USP Leavenworth, USP Lewisburg, USP Lompoc); the Federal Correctional Institutions (FCI) ranged from 4 to 2 (e.g., FCI Talladega, FCI Sandstone, FCI Oxford); and the Federal Prison Camps (FPC) were 1. Security levels 6 through 2 were "in" custody, which meant inside the fence or wall. Level 1 was "out" custody, which meant they were federal camps and do not have fences. Level 1 "community custody" referred to prisoners in camps who were eligible for community programs, work assignments, or furloughs.

In the 1990s, the BOP collapsed these six security designations into five: high, medium high, medium low, minimum, and administrative. The BOP prisoner population is approximately 10% high (USP), 25% high medium (FCI), 35% low medium (FCI), and 25% minimum (FPC), with the rest not assigned a security level; many of these men and women are in administrative facilities (detention or medical), in transit, or are held in local jails or private prisons. "Administrative" refers to Administrative Detention Max (ADX) Florence (Colorado), the highest-security prison in the country; FTC Oklahoma City, a medium-security transport prison; and the federal medical centers, which may be maximum, medium, or minimum security.

The federal prisoner population can further be described as 92% male and 50% white, with the rest being black, Hispanic, Asian, Native American, or "other." The BOP reports that 70% of prisoners are American citizens, with 20% being Mexican, Colombian, or Cuban, and 10% unknown or from other countries. Seventy-five percent of these men and women are serving sentences longer than five years, with nearly 50% doing 10 years or more. Fifty-eight percent are doing time for drug convictions. The average age of a federal prisoner is 37 years. The federal prison system has no parole; all prisoners are required to serve at least 85% of their sentence before release to community supervision.

All federal penitentiaries (maximum security) and correctional institutions (medium security) have disciplinary or administrative detention cellblocks that hold hundreds of prisoners for weeks or months at a time. In comparison, USP Marion and ADX Florence are used to isolate individual prisoners for years at a time. These prisons are used to segregate maximum-security male prisoners who are escape risks, political problems, a threat to the order of other institutions, or have assaulted or murdered prisoners or correctional staff. Today, Marion serves as a model for the construction of similar federal and state facilities.

HISTORY

USP Alcatraz served as the nation's highest-security prison until it closed in 1963. As Alcatraz was decommissioned, the prisoners were transferred to large maximum-security penitentiaries, like USP Leavenworth, USP Atlanta, USP Lewisburg, and USP Lompoc. These are "mainline" penitentiaries; they each hold several thousand prisoners. In these

penitentiaries, the prisoners sleep in locked cells but are allowed to travel to the dining hall, work station, and yard through a controlled movement that happens once an hour.

In 1963, the BOP built USP Marion as a smaller prison to house the Alcatraz convicts and others. Some of these were political prisoners who were associated with the Black Panthers, Japanese Red Army, anarchist groups, and the American Indian Movement. In 1973, the "control unit" cellblocks were first created at Marion. These consisted of segregation cells, where prisoners were locked in their cells but were allowed out for limited activities. In 1979, Marion was designated the only Level 6 institution. At this time, Marion became the primary destination for federal prisoners considered by the BOP to be disruptive or dangerous.

In 1983, Marion erupted in violence, when during a six-day period two officers and one prisoner were killed, while two other officers were seriously injured. To restore order, additional officers were brought into the prison. It is reported that the officers retaliated by brutally beating prisoners. Since that time, Marion has had a history of unrelenting warfare between convicts and correctional staff.

Since 1983, the prison has been in permanent lockdown. Prisoners confined in control unit cellblocks are confined 22–24 hours a day in their one-man cells and are not allowed any physical contact with other inmates. They are fed in their cells and are subject to intense security procedures.

THE "MEAN" LITTLE HOUSE

Marion is known for having some of the most violent prisoners in the BOP. Some of these are spies, terrorists, and political activists sent there directly from court. Most of the men who are transferred to Marion from other institutions have become violent after years of brutal survival in other federal or state penitentiaries. The minimum success of Marion has been keeping some of these dangerous individuals locked up securely. The BOP claims isolating violent prisoners at USP Marion and ADX Florence has lowered the rate of assault in the rest of the federal prison system.

Nevertheless, research suggest that only a small number of federal prisoners require the close supervision provided by USP Marion's control unit design. Furthermore, critics argue that Marion and other supermax penitentiaries are systematically socializing prisoners to be more violent. Sensory deprivation, physical and mental deterioration of prisoners, in addition to high rates of suicide and murder seem intended to bend, break, and destroy prisoners. Those who are not broken get even stronger and more dangerous.

THE PRISONERS

Marion has housed political prisoners, organized gangsters, drug cartel members, spies, terrorists, gang leaders, government informants in need of protection, and foreign officials. Some of the most famous individuals have been convicts who have become "legends in their own time" among federal prisoners. These are those men who have defied federal prison authorities by disrupting the orderly operation of different penal institutions or masterminding prison demonstrations or rebellions.

By BOP standards, Marion has a small population. For example, the inmate count at Marion is only 357, and its rated capacity is 440, as compared to "big house" penitentiaries like USP Atlanta with 2,151 and USP Leavenworth with 1,200. All prisons count their prisoner population several times a day. "Big house" refers to full-scale penitentiaries with tall walls and gun towers, many of which were built in the 19th or early 20th centuries.

Some prisoners, especially those serving long sentences, may be difficult to manage in large institutions, where prisoners live two or more men to a cell and walk corridors on the way to the dining hall, work station, or recreational yard. The BOP sends prisoners to Marion when they have been designated as unable to live in "general population" prisons.

PRISON STAFF

The officers at Marion are recruited from both the local community and from bureau staff nationwide. Federal correctional officers must transfer to distant

institutions to climb the BOP career ladder. Many officers would prefer to work in minimum- or medium-security facilities rather than at penitentiaries or high-security facilities like Marion. In general, the higher the security level, the more violence and assaults against staff. As Marion is a special prison with severe security procedures, the BOP prefers that prison staff be reassigned to other prisons after three years of service. Nonetheless some officers employed at Marion may be compelled to remain at the institution, and forego promotions, because of family obligations.

CONTROL UNIT

Marion is the first experiment by the federal government with high-security administrative detention. "Disciplinary detention" refers to prisoners being confined in solitary confinement when found in violation of prison rules. In comparison, "administrative detention" is based on the dictates of the prison administration and does not require a disciplinary charge, hearing, or conviction. In effect, prison authorities may use administrative detention to isolate individual prisoners.

Marion control units do not have "controlled movement" of the prison population every hour. There is minimal movement by prisoners within the institution. The convicts are locked in their cells 22–24 hours a day, where they receive all meals, and they are not allowed to talk or socialize with one another. Marion has separate control unit cellblocks reserved for violent prisoners, a high-security unit for protective custody prisoners, and additional units that, while restrictive, provide a gradual increase in institutional privileges.

Generally, after one or more years of good conduct reports, prisoners may be moved to less restrictive cellblocks where they are gradually allowed more privileges. These may include eating in a dining hall, federal prison industry work, commissary access, and social activities.

PROGRAMS AND SERVICES

Marion has had few programs or services for rehabilitation. The BOP officially repudiated rehabilitation in 1976. Still, most federal prison facilities do have education, usually limited to adult basic education (ABE; 8th grade) and general equivalency diploma (GED; 12th grade); job training programs, for example, grounds and building maintenance or food service; and short courses on anger management, stress reduction, parenting, and substance abuse.

Marion prisoners have few program opportunities until they reach the less restrictive cellblocks. Even then their options are limited to self-study to pass ABE or GED, television, and reading. As they are not allowed outside the building, there is no opportunity to engage in outdoor activities or work. Since 1968, Marion prisoners have been subjected to behavior modification experiments that include intense group pressure, thought reform techniques, and transactional analysis. It is also reported that prisoners are forced to take medication. Once Marion prisoners have graduated from the control units, they work in the Federal Prison Industries (UNICOR) prison cable factory. UNICOR Marion produces electronics communication cables for the military used in tanks, armored personnel carriers, and helicopters. During the Gulf War, the prisoners were compelled to do overtime production. Larger factories producing the same military hardware operate at FCI Oxford and FMC Lexington. Marion prisoners are required to work in the small prison factory before they are transferred back to "mainline" penitentiaries or are released to the street.

PRISONERS RELEASED FROM USP MARION

What happens when prisoners locked down in control units, after years of brutal conditions and socialization, are released to the "free world" without the benefit of programs, services, furloughs, or halfway houses? Marion prisoners, like those released from most maximum-security prisons, go straight to the street when their sentences are completed because they are too hardcore to live in halfway houses. The outcome is often sadly predictable. One famous example can be seen in Jack Henry Abbott, whose book *In the Belly of the Beast* (1981) became a national best-seller. Abbott, who served 25 years in

prison, did 15 years in solitary confinement. He stabbed a waiter to death on a Manhattan sidewalk within six weeks of his release from Marion.

FEDERAL PRISON CAMP

The federal prison reservation includes a satellite minimum-security camp immediately adjacent to the prison. These Marion campers work doing grounds keeping and food service inside the main institution.

USP MARION AND COMPARABLE SUPERMAX PENITENTIARIES

USP Marion represents the blueprint for building super-secure federal and state facilities. For example, many federal medium-security facilities or correctional institutions have recently built new administrative segregation cells for solitary confinement.

States have recently turned to the use of "supermax" units or institutions to control the most disruptive or potentially troublesome prisoners. A survey conducted by the National Institute of Corrections in 1997 found at least 57 supermax facilities, with more than 13,500 beds in the United States, and 10 jurisdictions were developing 3,000 additional supermax beds. Roy King updated these figures in 1999 to 34 states with nearly 20,000 cells. Still, the figures are only an estimate, as "supermax" is defined differently by many prison systems. At the very least, we know that across the country there are a growing number of prisoners confined in high-security cellblocks. The conditions of confinement in these prisons are more restrictive than those on death row. Supermax prisons have no educational or vocational programs, with prisoners provided only limited visiting time with family, phone communication, or access to law library, and confined for the duration of their stay in austere 60–80-square-foot cells. These new high-security facilities are expensive, costing the taxpayers additional monies per square foot and bed space. Scarce public resources are squandered on concrete and steel structures rather than spent on education and job training for prisoners. The BOP constructed a new supermax in 1994. Administrative MAX (ADX) Florence is one of four federal prisons in the Florence Correctional Complex built in southern Colorado. It is now the highest-security prison in the United States. This prison was built not only to eliminate escapes but also to defend from outside attack. At medium- and maximum-security facilities, an "outrider" is a correctional officer who patrols the prison perimeter in a pickup truck, armed with a shotgun, outside the fence or wall. The Florence outrider is a white armored personnel carrier. There are 550 permanent lockdown one-man cells, but only half of these are occupied at any given time. The empty cells are for prisoners who may be transferred in from rebellious or rioting institutions. In 1998, Ray Luc Levasseur (1998a, 1998b), a prisoner at ADX Florence, wrote about four-point spread eagle restraints, forced feedings, cell extractions, mind control medications, and chemical weapons used to incapacitate prisoners.

TRANSFER OF HIGH-SECURITY PRISONERS

High-security prisoners may be transferred back and forth between USP Marion, ADX Florence, and segregation cellblocks in mainline federal penitentiaries. Some of these are prisoners sentenced by state courts that have been moved into federal custody. The BOP uses transfers to further isolate high-security prisoners who are suspected of planning escapes or insurrections.

CONCLUSION

We know very little about these supermax facilities and the long-term consequences of this form of severe prison conditions on prisoners. We do recognize that penitentiary convicts assigned to administrative segregation and supermax facilities may spend years in these units before being released. We also know that some portion of this population is released directly from prison to the streets and, in some cases, with no parole supervision, assistance, or plan for their reentry to the community.

MARTINSON, ROBERT

Robert Martinson was a correctional researcher who became famous following the publication of a provocative 1974 article on correctional treatment entitled "What Works? Questions and Answers About Prison Reform," in which he concluded that nothing works to reform and rehabilitate criminals. Although the phrase "Nothing works" became synonymous specifically with Martinson, he was actually a member of a research team that included Douglas Lipton and Judith Wilks, themselves well-regarded scholars in the field of corrections.

THE RESEARCH

These authors analyzed 231 studies of rehabilitation and treatment programs conducted over a 22-year period from 1945 to 1967. The study was sanctioned by the New York State Governor's Special Committee on Criminal Offenders and was funded through the Omnibus Crime Control and Safe Streets Act. Although final revisions for the report were completed in 1971, for political reasons associated with the nature of the findings, the publication of the full report was withheld by the Governor's Committee for more than four years. Following a district court case in Bronx, New York, however, Martinson was able to publish, reportedly without the authorization of his coauthors, the first official account of this research in the widely recognized and distributed magazine *Public Interest*.

Known as the Martinson Report, his article contains one of the most oft-cited statements in the history of criminal justice: "With few and isolated exceptions, the rehabilitative efforts that have been reported so far have had no appreciable effect on recidivism" (Martinson, 1974, p. 25). In the matter of just one sentence, Martinson challenged the conventional wisdom about rehabilitation that had prevailed for nearly a century. His article also provoked criticisms of the effectiveness and viability of parole, early release, and indeterminate sentencing.

IMPACT AND CONSEQUENCES

The rehabilitative model that for so long had dictated sentencing policy shifted during the 1970s to a crime-control model focused almost entirely on retribution and deterrence. Of course, this change came about not simply because of one article. Instead, the ready acceptance of Martinson's conclusions was as much due to the political context of the time as it was to the substance of his claims. A number of high-profile prison revolts, including events at San Quentin and Attica, brought to light the deplorable conditions of U.S. prisons. There was also a spike in crime rates and a growing climate of political conservatism. This combination of factors set the stage for Martinson's report

and commenced the demise of the rehabilitation paradigm.

THE ACADEMIC RESPONSE

Many direct challenges have been made against the "Nothing works" doctrine in the three decades since the publication of Martinson's article. Though some conclude that the body of evidence is now robust enough to proclaim that Martinson's report has been discredited and that his extreme pessimism was unfounded, most reappraisals of Martinson's original thesis are usually prefaced with such qualifying phrases as "guardedly optimistic," "cautious hopefulness," and "'promising." Given the fervor in energy and resources devoted to the search to prove Martinson wrong, such tempered statements do little to justify with a high level of confidence that Martinson was simply wrong. There are, however, enough modest success stories to suggest that the bleak outlook may have been premature. Indeed, Martinson himself provided a retraction to his originally pessimistic view in a 1979 article in the *Hofstra Law Review*. Nonetheless, his later modification of his extreme position did little to dispel the acceptance of the original thesis or to curb the enthusiasm of those who saw Martinson's original conclusion as politically appealing.

More recent and sophisticated analyses of treatment have concluded that many programs work, as long as they are offender specific, sufficiently funded, well designed, and well implemented. In this, they follow Ted Palmer's original reply to Martinson in 1975, in which he asserted that, rather than asking what works best for offenders as a whole, we should ask, "Which methods work best for which types of offenders, and under what conditions or in what types of setting?" (Palmer, 1975, p. 150).

CONCLUSION

The Martinson report brought to light the glaring lack of sophistication of then-current research methodologies and evaluation techniques, forcing researchers to develop meaningful evaluation criteria and to articulate clear and consistent definitions of recidivism. It also raised questions about the proper role of science in informing policy and the capacity of outside forces (e.g., funding agencies) to control the direction and dissemination of scientific research.

While Martinson had his critics, there is no denying the substantial contributions that he made to the field of corrections. Along with the impact he had on correctional policy and philosophy, Martinson also single-handedly influenced the research agendas and professional careers of many scholars. Despite his influence, Martinson's career was cut short when he committed suicide in 1980. At the time he was working with Judith Wilks on a research program assessing the impact of various programs on recidivism at the Center for Knowledge in Criminal Justice Planning. A collection of Martinson's papers and correspondence is maintained in the Lloyd Sealy Library at the John Jay College of Criminal Justice in New York City.

Possibly no one person had more of an impact on the field of correctional treatment than Robert Martinson. If Martinson himself was attracted to the "Nothing works" doctrine because it had the potential to lead to a decrease in the use of imprisonment, he would be sorely disappointed. He likely would not have predicted, certainly based upon his research findings, the dramatic growth in prisons as the almost exclusive means of social control.

MASSACHUSETTS REFORMATORY

The history of the Massachusetts Reformatory at Concord provides an instructive case study of the changing perceptions and uses of imprisonment. Beginning as an Auburn-style penitentiary in 1878, it was converted in 1884 into the Massachusetts Reformatory for Men, which was patterned on the much more famous Elmira Reformatory in New York that opened in 1876. In the 1920s, it shifted in use to a juvenile and youthful offender facility, while in the 1950s it became the Massachusetts Correctional Institution at Concord. It is now a medium-security facility that serves as the Massachusetts Department of Correction's Reception and Diagnostic Center.

HISTORY

The first Massachusetts Prison, designed by Charles Bulfinch, was built in Charlestown in 1806 and reorganized in the 1820s as a model penitentiary. The rules and regulations of the facility provided for an initial period of solitary confinement for each inmate to ensure reflection and remorse, to be followed until the end of their sentence by "hard labor" in silence, augmented if necessary by the use of the whip. As described by one warden in an 1829 report, the inmates moved and acted "like machines" under the discipline of the penitentiary. Under labor contracts, the productive labor of the prisoners was assumed not only to provide for the costs of the prison but also provide a profit for the state, a goal retained but frequently not met.

With the aging of the Massachusetts Prison at Charleston, in 1878 a new facility, considered a model prison for the time, was built at Concord, with individual cells lit by large windows. In 1884, in the midst of controversy over both the profitability of its vocational shops and the desire that Massachusetts respond to the recommendations of the 1870 Principles of the National Congress of Penitentiary and Reformatory Discipline, the governor signed a bill that returned the prisoners held at Concord to Charleston and established the Massachusetts Reformatory for Men. Rejecting the systems of isolation, lockstep, and fear, the principles emphasized that the goals of prison discipline were to reward good conduct, industry, and educational efforts—to resocialize, retrain, and reform offenders, especially the youthful offender. One consequence of these goals was the movement to indeterminate sentences, with release from prison based on the individual efforts of the prisoner.

Massachusetts had already responded to the reformatory movement after successful agitation by influential women within the state, with the construction of the Reformatory Prison for Women at Sherborn (later renamed Framingham) in 1877—one of the first reformatories for women in the United States. Containing large work- and schoolrooms, the reformatory offered the hope that with disciplined work and education, and incentives of increased privileges and conditional release, vagrants, prostitutes, drunkards, and "idle and disorderly women" would be reformed. Women convicted of more serious offenses continued to be sentenced to the penitentiary.

THE MEN'S REFORMATORY AT CONCORD

In an effort to bring the 1870 principles into practice in Massachusetts for male inmates, in December 1884, the name of the Concord Prison was changed to become the Massachusetts Reformatory for Men. The initiative was based on the widely heralded New York Reformatory for Men in Elmira, founded by Zebulon Brockway. However, like Elmira, it did not live up to its promise, facing, as did the New York facility, major overcrowding as well as other difficulties. In the first nine months of operation it held more than 700 prisoners.

Following the movement for indeterminate sentences, on July 24, 1886, a new law was passed that would allow for sentencing with no fixed duration.

A prisoner could be sentenced for a maximum of five years (for crimes like breaking and entering or larceny) but could be released on parole within two or less. Those sentenced to a maximum of two years for drunkenness could also be released on parole considerably earlier. Ideals were often distant from practice.

The Concord Reformatory was underfunded. In 1892, for example, there were still only seven police officers who served as guards for 700 to 1,000 prisoners. For many years the age composition was mixed, with prisoners from 14 to 60 years of age or older housed at the reformatory. These men were separated from one another and put to work on the basis of elaborate rules of classification. Inmates were employed in cloth- or furniture-making industries inside as well as on extensive prison farms. Another 9% worked outside the prison in local factories.

With the subsequence changes in mission and administration that occurred through the years at Concord and Framingham, both reformatories tended in time to resemble ordinary prisons, with systems of discipline equally harsh and limited resources to prepare their inmates for release. In Sheldon and Eleanor Glueck's famous and controversial recidivism studies of the "graduates" of the two institutions in the 1930s, the researchers found that some 80% of inmates were again found guilty of crimes and returned to some form of imprisonment, usually jails. Their conclusion that the reformatories failed to reform was not unexpected (Glueck & Glueck, 1930, 1934).

CONCLUSION

Having started as a general reformatory for men of all ages, the Massachusetts Reformatory at Concord became a juvenile and young adult facility after World War I. The earlier high hopes placed in the reformatory movement were not realized because lack of funding, difficulty in recruiting adequate staff, and frequent overcrowding made it difficult to carry out the intensive classification, retraining, and education that was assumed necessary for the goals of the reformatory to be achieved. The later Glueck studies (1930, 1934) made officials aware of the need for modifications such as age segregation and greater attention to relevant training, but overall their research found that only a relatively small percentage of young men (and young women) could be considered to have been truly reformed.

MAXIMUM SECURITY

Prison inmates and institutions are given security classifications. Most classification systems divide prisoners and facilities into minimum, medium, and maximum levels. Many states and the federal system now also have supermaximum secure prisons; however, under ordinary circumstances, "maximum security" refers to the highest level of inmate classification and institutional security.

Maximum-security facilities are designed to allow prison administrators total physical control over all aspects of inmates' conduct for extended periods of time. Prisoners classified as maximum

security are placed in these facilities, where they are usually housed in their cells for most of the day. The cells are typically built to house one inmate, although prison crowding has sometimes forced two inmates into a cell.

HISTORY

The idea of a maximum-security facility grew from the practice of solitary confinement that formed the roots of American penal practice. In the late 1700s and early 1800s, citizens in Philadelphia reorganized the Walnut Street Jail and introduced solitary confinement as a means of reforming convicted felons. They believed that convicts incarcerated in isolation could more readily reflect on their sins, work out their own paths to salvation, and thus revitalize the inner light of God's grace. Their beliefs inspired authorities to construct single- and separate-cell prisons in Pennsylvania and elsewhere. This strategy became known as "the Pennsylvania system" and shaped prison practice in most places until it was replaced in the mid-19th century by the Auburn system.

In the early 19th century, a newly organized Auburn Prison in New York State began operation. Prisoners in this institution worked together in workshops and ate together in dining halls; however, at night they slept in separate cells. The undergirding ideology of this incarceration practice was the Puritan premise that criminals were innately depraved. All society could hope to do was bend the convict to its will through relentless discipline and punishment. Ironically, the workshops helped teach the inmates skills and trades; consequently they inadvertently opened the door to inmate rehabilitation. This prison style became known as "the Auburn system."

The Pennsylvania system ultimately failed because prison operators did not take into account the devastating effects of isolation on the sanity of many inmates. Rehabilitation attempts under such conditions proved to be unsuccessful. As a result, at the end of the 19th century, the Auburn system became the major penological practice in America. This approach to prison management sought to create a skilled and disciplined workforce. Though it embraced some rehabilitation and reform-oriented practices, compliance in the Auburn system was enforced through swift and severe punishment. In the early 20th century, the Auburn system was also replaced, this time by a more limited vision of prison management in which inmates were simply warehoused in new fortress-like maximum-security prisons. Order was enforced with swift, violent force. Prisoners in these facilities often sat idle; they merely passed time. As a result, they commonly lost their physical and mental alertness. Alcatraz, commonly known as "the Rock," was one of the most notorious of these new-style maximum-security penitentiaries.

SECURITY AND CLASSIFICATION

The security rating assigned to a prison affects a range of structural and environmental features, such as the type of housing it offers and its inmate: staff ratio. Other conditions, including whether the institution has a mobile patrol and/or a gun tower, what type of perimeter barriers it has, and what its internal security and detection devices are like, also determine the security rating.

The security level of an inmate is usually based on his or her potential risk to the community. Other factors that are taken into account include an inmate's sentence length; security of the victim, witnesses, and the general public; and other judicial recommendations. The classification process starts once an offender has been convicted and sentenced by the courts and continues when the person arrives at a specific prison. Usually prisoners' security levels are reconsidered at regular intervals throughout their time behind bars. In the federal system, for example, the first reassessment of a person's classification level usually occurs around seven months after arrival in a facility. Reviews then occur on an annual basis. In these security reviews, many different factors are taken into account, including sentence length, escape attempts, history of violence, drug and alcohol abuse, mental or psychological stability, frequency and nature of disciplinary reports, a demonstration of financial responsibility (meaning the ability to pay fines, restitution, or

family support), and family stability. Reevaluations may increase or decrease an inmate's security level and may sometimes cause an individual to be moved to a different establishment.

THE FEDERAL SYSTEM

Only individuals who are defined as "assaultive, predacious, riotous, serious escape risks, or seriously disruptive to the orderly running of an institution" are given the rating of "maximum." All men with this security level are usually sent to a penitentiary or, if deemed particularly dangerous or difficult to control, to USP Marion or ADX Florence. The rare woman labeled "maximum" may be held at a special high-security unit at FMC Carswell. A security rating of maximum not only affects where a prisoner resides but also determines in what occupation he or she may take part, because prisoners with this rating are subject to "maximum control and supervision."

U.S. penitentiaries (USPs) such as Marion and Leavenworth have walls or reinforced fences and close staff supervision. Prisoners in them are held in both single-occupant and cell housing. There is no penitentiary for women.

RACE AND GENDER

Research suggests that disproportionate numbers of minorities tend to be given higher security levels. This may reflect their greater history of confinement. The practice is also, in some cases, connected to the war on drugs or to a person's involvement in a gang. In the federal system, for example, the length of sentence is one of the determinants of a person's security level. Since drug offenders tend to receive particularly long sentences, they are more likely to be placed in higher-security facilities, even if it was their first offense and involved no violence. Likewise, in most prison systems, gang affiliation results in a higher security classification level.

In contrast, few women are given the rating of maximum security. In the federal prison system, the small number of maximum-security women are concentrated in part of FMC Carswell. Before Carswell, such women were housed at the notorious control unit in FMC Lexington. Other prison systems, like Connecticut's, rate their sole women's facility as inclusive of all security levels. This practice means that women of lower security live under restricted conditions due to the presence of a small number of maximum-security-rated offenders.

EFFECTS OF MAXIMUM SECURITY

Higher-security-level facilities are typically characterized by higher rates of officially reported disciplinary infractions when compared to lower-security facilities. Critics argue that the inmates act out as a result of the inhumane nature of high-security establishments. In contrast, proponents of maximum-security facilities contend that the increased number of incidents reflects the nature of those who are housed in maximum-security institutions. Contradicting both views, self-report studies have revealed less total misconduct in the higher-security institutions because of the reduced opportunities that result from the increased supervision and structure of such places.

Several other consequences of imprisonment in maximum-security institutions have emerged in the literature. Some studies have linked serious mental health problems to the social deprivation suffered by the inmates who are housed in some of these facilities. In addition, the lack of rehabilitation programs and contacts with community or family members often reduces the opportunities that the prisoners will have for correcting the behavior that was the reason for their incarceration. As such, maximum-security inmates released into the community typically have high rates of recidivism.

CONCLUSION

In most prison systems, a security or classification rating of maximum security represents the highest and most restricted level of institutions and inmates. Maximum-custody facilities are those that are most often portrayed in movies and on television. However, only about 40% of all prisons in the United States are maximum-security facilities. In operating

these facilities, the progressive goals of rehabilitation or reintegration are typically not a part of the higher-custody institution's scheme. Instead, the facilities are geared toward supervision and control. More often, the goal of these facilities that house maximum-security inmates is solely incapacitation.

McVEIGH, TIMOTHY (1968–2001)

Timothy McVeigh was convicted and executed for the 1995 bombing of the Alfred P. Murrah Building in Oklahoma City. The "deadliest terrorist attack in United States history" (Kittrie & Wedlock, 1998, p. 776) to that time killed 168 people, including children in the day care center that was located directly above the blast. McVeigh's motivations appear to have been rooted in an antigovernment ideology fueled by the government's killing of Randy Weaver's wife and child at Ruby Ridge, Idaho, and 76 Branch Davidians (including children) at Waco, Texas—an event occurring exactly two years prior to the Oklahoma City bombing.

In a letter from death row, McVeigh explained, "The bombing was a retaliatory strike: a counter-attack, for the cumulative raids (and subsequent violence and damage) that federal agents had participated in over the preceding years (including, but not limited to, Waco)" (Vidal, 2001, p. 410). He believed government actions were growing "increasingly militaristic and violent, to the point where at Waco, our government—like the Chinese—was deploying tanks against its own citizens," so the Oklahoma City bombing represented for him the "moral and strategic equivalent of the U.S. hitting a government building in Serbia or Iraq" (p. 410).

BIOGRAPHICAL DETAILS

McVeigh is described as having a high IQ and a relatively normal childhood involving comic books, football, student council, computer hacking, and a job at Burger King. He played war with the children he baby-sat and enjoyed variations like *Star Wars:* "What seemed to attract him was the battle of good and evil" in which McVeigh 'always took the side of the good guys' (Michel & Herbeck, 2001, p. 26). In a pattern consistent through his later years, he could be charming when he wanted, but he rarely dated. His growing fascination with guns and survivalism led him to enlist in the Army in 1998. He excelled in basic training, where he met Terry Nichols and Michael Fortier, both of whom were also convicted for participating in the Oklahoma City bombing. While in the military, McVeigh first read the *Turner Diaries* (McDonald, 1996), a fictional racist account of Earl Turner's resistance to the "Zionist Occupied Government" that overtakes the United States and disarms white citizens. McVeigh claims he did not share the book's racism, but identified with "the *Diaries'* obsession with guns and explosives and a final all-out war against the 'System'" (Vidal, 2001, p. 409).

THE FIRST GULF WAR

During Operation Desert Storm, the military decorated McVeigh with a Bronze Star for valor, among other commendations (Hamm, 1997, p. 149). After the Persian Gulf War, he failed Special Forces training. With a "postwar hangover," posttraumatic stress, and possibly Gulf War Syndrome, McVeigh spent the next years leading up to the bombing traveling the gun show circuit, making contacts in the survivalist right, discussing the *Turner Diaries*, spending time with Nichols and Fortier, and taking methamphetamine.

THE CASE

Police arrested McVeigh near Oklahoma City because his car had no license plate and the officer found several weapons. McVeigh was wearing a shirt with a quote attributed to Thomas Jefferson: "The Tree of Liberty must be refreshed from time to time with the blood of patriots and tyrants." While he was held, authorities connected him to the bombing, and the trial would be shown via closed circuit TV to an overflow crowd of survivors of the bombing and victims' relatives. The jury convicted him on all 11 counts after four days of deliberations, and after the hearings in the penalty phase, the jury deliberated two more days before handing down the death sentence.

DETENTION AND EXECUTION

While awaiting execution, McVeigh was first held at the supermax federal facility in Florence, Colorado. He was on "Bomber's Row" with Ted Kaczynski ("the Unabomber") and Ramzi Yousef (convicted in the 1993 World Trade Center bombing). McVeigh was transferred in July 1999, "when the government decided it had enough death-row inmates—twenty was the magic number—to make it cost effective" to open the only federal death row in Terra Haute, Indiana (Michel & Herbeck, 2001, p. 373).

McVeigh claimed, "My objective was a state-assisted suicide," so he waived his appeals to hasten the execution date (Michel & Herbeck, 2001, pp. 358, 374). The Bureau of Prisons made arrangements to show his lethal injection via closed circuit TV to victims back in Oklahoma, in the same way as his trial. McVeigh requested that his execution be broadcast more publicly, and the Internet Entertainment Group unsuccessfully sued to be allowed to Webcast the event. As he had throughout his trial and sentencing, McVeigh remained expressionless and offered no apologies for what he had done.

CONCLUSION

McVeigh's trial for 168 deaths was the largest murder case in U.S. history. His execution was the first conducted by the federal government since 1933, when Victor Fuguer was hanged for kidnapping and murder. The execution thus represents the first experience of the federal government with lethal injection and the first use of the new facilities at Terra Haute. The closed circuit broadcast was the first time an execution had been televised, even to a limited audience, but in a manner consistent with federal prohibitions on making a photographic record of an execution.

MEDICAL EXPERIMENTS

The use of inmates for medical experiments is a part of American prison history that tells us as much about society's attitudes toward prisoners as it does about prisoners' willingness to take part in any activity that might enhance their terms of confinement, despite the apparent danger. Despite doctors swearing to the Hippocratic Oath and widespread professional recognition of the ethical mandates of the Nuremberg Code of 1947 (fashioned after the atrocities of Nazi concentration camp experiments were exposed), thousands of inmates throughout the United States participated in hundreds of medical experiments between 1900 and the 1970s. It has been reported that more than 42 institutions participated in major research efforts. It has also been estimated that prisoners were used in the testing of at least 85% of all new drugs invented during these decades.

Many inmates were directly or indirectly misled to believe that their participation would affect their future in the system, win them favor with administrators, or influence an upcoming parole hearing. In addition, the "pains of imprisonment"—the loneliness and the deprivations of incarceration—caused some individuals to desire the rewards offered by research studies. Most inmates had no money for cigarettes or toiletries, simple items that would make their existence tolerable, and many experiments paid between $1 and $5 per day. The price was usually set in terms of the pain or inconvenience rather than the medical risk involved. For example, prices for participation in the Upjohn and Parke-Davis experiments in the 1970s in Southern Michigan State Prison ranged from 25 cents for a fingertip blood sample to $12 for a spinal tap. In 1976, 74 inmates at that facility earned more than $32,520, an average of about $439 each for their involvement in medical research.

THE ETHICS OF EXPERIMENTATION

Initially, there were no guidelines or regulations for medical experiments or experimental drug tests, and there was no supervision by agencies such as the Food and Drug Administration (FDA). It was not prisoner research specifically that led to closer government scrutiny and participant protections. Instead, reforms were most often initiated following the disclosure of high-profile projects conducted in communities where poor, uneducated, and mostly minority subjects were involved, such as the Tuskegee syphilis study. In this case, between 1932 and 1972, poor sharecroppers in rural Alabama were injected with this serious venereal disease to test the utility of drugs at all stages of infection. Half, the control group, were left untreated, and others were given medicine only in the advanced stages of the disease so that researchers could study the drugs' effect on the most serious cases. Although cases such as this have received much media attention, particularly in recent years, culminating in presidential apologies and compensation programs, less focus has been given to the many varied medical research projects involving prisoners.

The reform of medical research procedures outside prisons eventually carried over into these facilities as well. Over the years, the FDA as well as a number of other regulatory agencies set up guidelines to ensure that all experiments would be approved and monitored by an independent institutional review board (IRB). In addition, research that involves prisoners must also pass a special layer of scrutiny in contemporary research settings. In most cases, an inmate representative or an advocate who reviews proposals on behalf of the inmates, such as a chaplain or a staff attorney, is also included in the funding or approval-granting process. These days, anyone wishing to use prisoners in a research project must obtain the prisoners' informed consent. All researchers are required to establish that the people participating in their study understand what the experiment involves. "Informed consent" implies that someone is intellectually able to assess the risks surrounding the research endeavor. This usually precludes a significant number of inmates who, because of a language barrier, developmental or physical disability, illiteracy, or mental impairment, would be limited in their ability to evaluate meaningful information offered about the research and its possible effects. Participants may not be

coerced into participating in the study, nor should they have unrealistic or false perceptions of the potential rewards that may or may not be attached to participation. Finally, the research should not involve deception. Therefore, subjects may not be given false information about the nature of the experiment, treatment, drug, or information they are receiving for the purpose of achieving some other goal that is withheld from the participant. Although some researchers have argued that for some investigations, it is important that their subjects be uninformed and thus unbiased in their subsequent behaviors, there are always serious ethical risks to this type of inquiry.

SPONSORSHIP AND CONDUCT

In addition to other ethical problems, critics have revealed racism and corruption in prison medical experiments. For example, documenting the long and sordid history of medical experiments at Philadelphia's Holmesburg Prison, Allen Hornblum (1998) relates that higher-paying and less dangerous projects were targeted for white prisoners. Inmates with clerical connections could direct their friends toward the most profitable and low-risk assignments. Some "confederate" inmates even wore fake bandages to give themselves credibility when they told potential recruits that they themselves had participated in the experiments and that the procedures were easy and harmless.

In most cases, the experiments were carried out by large drug manufacturing companies, although from time to time local physicians or researchers working on grants for research institutes or the government were also involved. For example, the National Institute of Allergy and Infectious Diseases of the U.S. Public Health Service tested malaria in the federal prison at Atlanta in 1944. The U.S. Army's Surgeon General also sponsored a similar program at the Illinois State Penitentiary the following year: hundreds of prisoners were exposed to hungry disease-carrying mosquitoes. Infected inmates suffered fevers, chills, and the aches of the disease as they were measured, probed, wired, and watched as the disease ran its course. While some received medications, for comparison purposes others did not. Some received treatment only in the latest stages of the illness, to test the effectiveness of the medications in subsequent phases. This particular experimental project was in operation for more than 25 years. Most of the prisoners received only five days reduction to their sentences and $50.

THE THREE PHASES OF DRUG TESTING

Often drug testing takes place in three phases. In Phase I, a drug is given to 100 or so subjects who are normal, healthy, with no obvious signs of any disease. Researchers simply monitor the effect of the drug on the body, tracking its absorption and its bioavailability and measuring any side effects or toxic reactions. Prisoners were often used in this type of research, including early experiments on LSD.

Phase II testing uses small groups of patients, or those purposefully infected with the disease or condition. In many prison research cases, the medical problem had to be created or induced. The zeal of medical experimenters was epitomized in Dr. Joseph Goldberg, who, having determined that the painful inflammatory disease of pellagra was caused by poor nutrition, set about to induce a dozen male convicts at Mississippi's Parchman Prison. The inmates, all healthy, white laborers in 1915 when the experiment began, were promised pardons in return for six months in diet-deprived isolation. Goldberg, known for also voluntarily contracting the diseases he was studying, was elated when the men began to manifest the symptoms of rashes, joint pain, and weight loss. Although the prisoners described the tortuous experiment as hellish and some begged to be withdrawn, all later recovered and were released as promised.

In 1962, 200 inmates in Ohio were injected with cancer cells by researchers associated with the Sloan Kettering Cancer Center, funded by the National Cancer Institute and the American Cancer Society. At that time researchers were still unsure whether cancer could be transmitted from one person to another and wanted to see if cancer cells would be rejected or would grow in otherwise healthy tissue.

The director of this project was later put on probation by the New York State Board of Regents for conducting these same experiments on his regular (outside) patients without their knowledge.

Phase III drug testing involves giving the medication to large groups of ill people who live under normal, everyday circumstances out in society. That is the final step in the testing process, and it allows researchers to see the way the drug functions under routine conditions. Obviously, inmates would not be used in this final phase.

INCENTIVES

Money was not the only incentive for participation in medical experiments. Other benefits included reassignment to more spacious living areas with television and exercise rooms, the use of phones, and extended visiting privileges. Subjects were also given cigarettes, books, and better food. Many simply enjoyed the medical attention and the interest paid to their health. In some cases, the research initiatives or surgical procedures appealed to the conscience of the prisoners to "do good" for society. Federal prisoners in Tallahassee voluntarily drank DDT to study its effects on the body, and more than 1,000 inmates at an Ohio prison donated skin to save the life of a badly burned nine-year-old girl. In 1943, an Army bomber plane was named after an inmate who died in the medical experiment that tested drugs needed by soldiers.

From a medical standpoint, inmates were easy-to-control research subjects. They were healthy, had regular diets, were relatively free of alcohol or drugs, and were unlikely to wander away or lose interest in participating. Most prisons allowed inmates to earn money or credit toward time served for donating blood. Prisoners frequently donated as often as allowed. Until the early 1980s, inmate records at the Texas Department of Corrections still reflected the good-time credit or "blood time" earned through the donation system.

In addition to the incentives received by the inmate participants, the facilities and their administrators also received substantial rewards or compensation for cooperation with the drug companies. When Eli Lilly experimented on its early forms of the painkiller Darvon with inmates at Indiana State in 1972, the prison received a dishwasher, a remodeled hospital, high school supplies, library books, and recreational equipment. At the Oregon State Penitentiary, a group of inmates volunteered for bilateral testicular biopsies. In these experiments, researchers were testing the effects of steroids and sex hormones on sperm production and reproductive health. Tissue was removed from the testes of each subject and was examined, before and after the administration of the chemicals. In return, the prison received pharmacy services and some emergency medical equipment.

However, not all relationships with outside researchers were positive for the penal institution. In the early 1960s, Timothy Leary, the famous drug guru from Harvard University, was experimenting with psilocybin, a narcotic similar to LSD in hallucinogenic properties. Leary believed that the drug could reduce criminal tendencies, so he administered it to inmates at the Concord State Prison in Massachusetts. After extensive testing, the program was canceled because state officials believed that Leary was creating internal tensions and inciting inmates to rebel. Leary was eventually fired from the university when his extensive personal experimentation with hallucinogenic drugs and his advocacy of such use became public.

CRITIQUE

Medical experiments conducted during the Cold War, when the United States feared nuclear attack, have only recently been uncovered in detail. In addition to prisoners, the homeless, mentally ill, and unhealthy poor were often subjected to secret tests involving highly radioactive substances. In a 1963 memo, one radiologist (Healy, 1994, p. A12) explained that "I'm for support at the requested level, as long as we are not liable. I worry about possible carcinogenic effects of such treatments."

Many of the experiments conducted on inmates were extremely dangerous and caused serious permanent damage. Between 1963 and 1973, 131 prisoners in Washington and Oregon had their

genitals irradiated by X-rays or their testicles dangled in irradiated water in order to study the effects of radiation on reproduction. These experiments were funded by the Atomic Energy Commission, a forerunner of the Nuclear Regulatory Commission. Participants were paid $5 per month. After these tests the men were directed to receive vasectomies to "eliminate the possibility of defective offspring"; several of the participants changed their minds at that point, however, and did not have the vasectomy.

Around that same time a physician in Alabama conducted a plasma separation experiment in which blood samples, minus the plasma, were injected back into the donors. This process was repeated up to 16 times per month on some inmates. Unfortunately, the project was conducted in such unsanitary conditions with unsterile equipment that more than 500 cases of serum hepatitis resulted. Three inmates died from this experiment, and yet no formal complaints were ever filed. Because the research experiments did not track participants over a long period of time or conduct later follow-ups, it is difficult to say exactly how much permanent physical damage was caused by these projects. Prison records and experimental data were often destroyed, and former prisoners are characteristically difficult to locate once released.

THE DEMISE OF DRUG EXPERIMENTS

Legal and societal changes over the past 20 years have greatly reduced if not eliminated medical testing in prisons. The negative publicity attached to lawsuits and federal investigations convinced states to abandon such activities and to formulate policies against it. Concern over the coercive implications of participation, legal liabilities, and sophisticated government regulations regarding testing procedures has discouraged related practices. By 1980, the Department of Health, Education, and Welfare had stopped funding medical research that involved inmates. The Federal Bureau of Prisons and other federal agencies also stopped participating in such efforts. Finally, the American Correctional Association enacted a ban on medical research with prisoners as a criterion for obtaining accreditation.

CONCLUSION

The practice of widespread deception and exploitation in drug trials and medical experiments has been significantly limited by commitment to ethical guidelines and the control of "watchdog" agents in our society. Today, inmates are less likely to be considered suitable subjects for medical research. With high rates of serious health problems, HIV, hepatitis, hypertension, and histories of intravenous drug abuse, prisoners are better served with medical care rather than medical experiments.

MEDICAL MODEL

The *medical model* dominated prison philosophy and practice during the mid-20th century. Its proponents viewed criminality as a type of illness curable by various psychiatric or psychological interventions. They argued that prisoners were not responsible for their crimes and therefore should be treated through medical and psychological interventions rather than punished.

Support for the medical model waned during the late 1960s and 1970s in response to growing criticism that it could neither explain nor effectively treat crime. Nonetheless, its influence remains today, through, for example, various rehabilitation programs and in the field of biological criminology. The main difference is that current manifestations of the medical model are much less likely to mitigate responsibility and oppose punishment.

HISTORY

In order to understand the medical model of criminality, we must examine the medical model itself more generally. The medical model, which claimed to be rational, objective, and value-free, became the dominant method of health care within the West during the 19th century. Shaped by the scientific method, it was based on five key assumptions. The first, *mind-body dualism,* sees a clear division between the mind and the body. This view diminishes patients' own accounts and management of their illnesses and encourages the "clinical gaze," whereby the body is thought to be something that may be observed, manipulated, and treated by an expert. The second assumption, *physical reductionism,* reduces illness to physical or organic causes while omitting social, psychological, and spiritual aspects.

Specific etiology, the third pillar of the medical model, proposes that every disease has one specific, identifiable cause, such as a parasite, virus, or bacterium. It dismisses the complexity of illness as well as broader contributing factors. The fourth supposition, *mechanical metaphor,* views the body as a machine whose periodic breakdown or malfunction results in disease. Finally, due to the *technological imperative*, practitioners usually seek to cure illnesses rather than prevent them. This view also underpins the use of drugs, surgery, and other medical interventions.

THE MEDICAL MODEL OF CRIME

During the 19th century, the medical model became increasingly applied to an expanding number of social problems. In particular, at this time, both madness and crime came to be understood as diseases requiring medical treatment. Thus, one of the earliest applications of ideas from the medical model in the criminal justice system was with offenders thought to be insane. It was argued that since this group was mad, they could not be held accountable for their crimes and therefore deserved treatment rather than punishment. Alienists (nascent psychiatrists) established their field, in part, through their legal testimonies regarding the sanity and dangerousness of accused criminals and their professed expertise in classifying, understanding, and treating the criminally insane. In response, jurisdictions began to found specialized institutions for the criminally insane. In the United States, the first of these was established in 1855, adjacent to the Auburn State Prison in New York.

The application of the medical model to crime was also apparent in the work of various 19th-century scholars who linked physical attributes to criminal behavior. The most famous of these was Cesare Lombroso. In his 1876 study of Italian prisoners, he concluded that criminals had particular physical traits that signaled their "atavism" or reversion to a primitive state of evolution. Likewise, he proposed that they were subject to "degeneration," in which their criminality indicated that they were reverting to a racially primitive state of development.

Other adherents of biological explanations of crime emphasized heredity. For example, Robert Dugdale's 1877 study of one "degenerate" American family, the "Jukes," brought him to the conclusion that crime was inherited. Many also argued that crime was a consequence of "feeble-mindedness." This term was used loosely and interchangeably with others such as "moral imbecile" and "defective delinquent," each of which identified inborn low intellect as a primary cause of criminal behavior. All of these explanations reflected and perpetuated the eugenicist, and thereby racist and sexist, views and ideas of class of the time. In a number of cases, such ideas caused criminals and others deemed socially undesirable, such as people of color and the mentally ill, to be sterilized and/or institutionalized.

During the 20th century, the medical model of criminality persisted, albeit in a somewhat different form. While many of the earlier ideas remained, some took on a new shape due to scientific developments in burgeoning fields such as neurology and genetics. Of great influence here were theories linking different chromosomal anomalies (such as males with an XYY chromosomal constitution) and crime. Psychologically oriented theories increasingly came to exist alongside and be incorporated with biologically based theories. This change of approach largely reflected the influence of Sigmund Freud and his followers, who believed that the repression of internal impulses, such as sex and aggression, created mental symptoms. Freud advocated psychoanalysis, or the "talking cure," which attempted to treat mental symptoms by reliving and resolving past conflict. His ideas informed various psychological explanations of crime as well as its treatment. An example of this is the notion of the psychopathic personality who could be treated through therapy and drugs.

PSYCHIATRY AND CRIME

Psychiatry has been the most influential medical subdiscipline upon our understanding and treatment of crime. Gerry Johnstone (1996) identifies two separate approaches to crime within psychiatry: medical-somatic and social-psychological. The first assumes the existence of an organically rooted disorder typically located in the brain. Treatment closely mirrors physical medicine: surgery is performed and/or drugs are administered. Experts must be medically trained. Because of their knowledge, these experts are entitled to make all the decisions about their patients, who in turn are typically passive and have little say over what is done to them.

In contrast, advocates of a social-psychological approach assume that individuals are physically healthy, becoming ill only in response to their environment. As such, deviant behavior is typically perceived to be the consequence of psychological or emotional damage caused by neglect, abuse, or some other trauma. However, the focus is not on the environmental or situational causes but on the psychological injuries they inflict. Because the disorder is manifested "subjectively" or within the psyche, patients are expected to take an active part in their treatment. Medical expertise is not mandatory, and treatment is therefore provided by a range of experts and even nonexperts, including occupational therapists, religious instructors, and prison guards.

Both the medical-somatic and social-psychological approaches individualize crime. Whether the cause of crime is located in the mind or the body, the focus is on the individual rather than the social structure. Therefore, the two approaches reinforce and strengthen one another.

Throughout the 20th century, psychiatry and its related disciplines shaped the "rehabilitative ideal," which increasingly dominated Western prisons following World War II. The rehabilitative ideal institutionalized the medical model through official acceptance that prisoners could be reformed by various medical-somatic and social-psychological interventions. While it was claimed the introduction of the medical model into prisons would make penal institutions more humane, in practice it led to compulsory and indeterminate sentencing on rehabilitative grounds and the implementation of a vast range of interventions, many of which were harmful. These included plastic surgery, castration, drug therapy, electroconvulsive treatment, psychosurgery, gas, psychotherapy, group counseling, individual counseling, therapeutic communities, aversion therapy, operant conditioning, and token economies.

CRITICISMS

During the mid-1960s, a series of criticisms was directed toward the medical model of crime and the rehabilitative ideal it introduced. First, it was maintained that physical illnesses are fundamentally different from offending behavior, since they exist independent of judgments made by others. Criminality, on the other hand, exists only because of judgments made by other people. Second, it was argued that while illness is not the result of a rational, deliberate choice, crime is. The medical model

of crime fails to consider the inner, subjective meanings of offenders and thus fails to address their motivations. Third, illness and crime have different causes; while illness has a physical etiology, crime does not. The search for physical causes of crime is thus a pointless exercise that further serves to obscure the social causes of crime.

Fourth, many critics claimed that the introduction of the medical model created harm, both in deflecting attention away from social-structural issues and through the invasive treatments it inspired. In viewing offenders as "sick," they were also seen as irrational, helpless, and pitiful. This conceptual stripping of agency created conditions in which numerous harmful, invasive, and often compulsory interventions were carried out, including experimentation. Such practices furthermore reflected racist, sexist, and classist assumptions. Because they held scientific status and were conducted in the name of treatment, however, they were claimed to be benevolent and just. A final attack, coming from a different ideological position, maintained that the medical model of rehabilitation was "soft on criminals."

Various forms of prisoner resistance, including litigation, the civil rights movement, and intellectual developments such as anti-psychiatry, reinforced these criticisms. Most important, a series of research projects indicated that few interventions had any impact upon reoffending. Most famously, in 1974, Robert Martinson's examination of 231 studies led to the broad conclusion that none of the treatments introduced into prisons worked to reduce offending. Though Martinson himself later dissociated himself from this interpretation of his work, his article nonetheless created a climate of doubt that offenders could be rehabilitated. In response, the United States moved away from the rehabilitative ideal toward a hard-line law-and-order approach toward crime.

THE MEDICAL MODEL OF CRIME TODAY

Though the medical model of crime was seriously challenged, it did not disappear from prisons. Indeed, in some places, rehabilitation is currently undergoing a revival through the implementation of cognitive-behavioral strategies that reduce reoffending as well as because of the popularity of ideas within biological criminology. Cognitive behavioralism is essentially a social-psychological model. Practitioners claim that it is prisoners' faulty thinking that causes them to engage in crime, and thus that offenders need largely to be taught how to think differently. Such views have been most influential in Canada and Britain, although they are also present within the United States. They underpin numerous prison programs that seek to address "offending behavior."

At the same time as psychologists seek to retrain how offenders think, a new biological criminology, informed by genetics and evolutionary psychology, is advancing various medical explanations of crime. Whereas previous manifestations of the medical model assumed that prisoners should not be held accountable for their crimes, current variants no longer exonerate prisoners from responsibility. Consequently, there is concern that they may contribute to the growing prison population and punitive penal practices.

CONCLUSION

Supporters of the medical model hoped that it would not only contribute to a more humane environment, but would cure prisoners of their criminality. However, its narrow assumptions as well as the severe limitations imposed by the carceral environment meant that these prospects largely failed. Though it is no longer the official primary justification of punishment, many of the central ideas of the medical model of crime remain current in the U.S. prison system. In particular, the belief that the source and cure for crime lies within individual prisoners continues to shape a range of policy from drug rehabilitation programs to education and individual therapy.

MEDIUM SECURITY

"Medium security" may refer either to the security of the penal facility or to the classification level of an inmate. Medium-secure prisons, which are often called correctional institutions, house one-third of all state prisoners. These institutions allow individual freedom of movement for the inmates within a secure perimeter. Inmates with a security classification of "medium" may work outside the security fence only under armed supervision.

CLASSIFICATION

In the early 20th century, in response to changing ideas in the behavioral sciences and an increased faith in the possibility of educating and reforming offenders, correctional administrators began examining alternatives to maximum-security prisons for the confinement of criminal offenders. At the same time, a classification system was being developed to determine the level of security and treatment inmates required and to identify special populations such as high risk, or the mentally ill, in order to house them in purpose-built institutions. Jails and pretrial detention centers were also being separated from those facilities that housed convicted felons.

Most classification systems are based on four different levels of security: maximum, medium, minimum, and open. Correctional facilities are then built to match a particular level of security, for both the facility and inmate population. "Security," in this sense, refers to the type of physical structure needed to hold the inmates, the internal structure that determines the scope of prisoner movement within the facility, and how much supervision each inmate needs.

TODAY'S MEDIUM-SECURITY FACILITY

The majority of correctional facilities built since the mid-20th century have been medium security. Though the predominant consideration in the design of these prisons is still security, increasingly the internal control features are hidden to create a more humane environment. Indeed, many of today's medium-security facilities, at both the federal and state levels, are patterned after the university or college campus. Examples include the Federal Correctional Institute at Glenville, West Virginia; the Texas Department of Criminal Justice Medium Security Facility at Amarillo; and the Virginia Women's Multi-Custody Correctional Facility at Fluvanna City. Inmates in these facilities may be housed either in dormitory-style rooms or in individual cells that are built around congregated living areas. In both designs, people share common and readily accessible showering and toilet areas.

External barriers are pivotal to all penal institutions. Those in medium-secure facilities typically begin with a double chain-link fence topped with barbed or razor wire. The area between the fences may contain electronic devices, such as motion or infrared sensors. Towers overlooking the institution are staffed by armed correctional officers, while other guards patrol the perimeter on foot or in vehicles.

In addition to such external barriers, medium-secure institutions rely on a number of internal measures. Most institutions, particularly those that have recently been built, rely on electronic surveillance in addition to locks and bars. Other strategies, such as clear separation of activities, highly defined movement paths, and officer training are all pivotal to the maintenance of order and control in all prisons.

THE MEDIUM-SECURITY INMATE

Approximately one-third of all state inmates are currently housed in medium-security facilities. Individuals assigned to medium-security facilities are classified as low escape and behavioral risks. They typically wear institutional clothing but may

also be granted the opportunity to wear civilian clothing during recreational or free time. Inmates in medium-security facilities have less restricted movement than those in maximum-security, and they are searched and counted less frequently.

Medium Security for Women

Women currently account for nearly 7% of the entire prison population, and their number is increasing at a faster rate than men's. Female inmates are housed in either all-women facilities or in co-correctional facilities. Currently, there are 104 women's correctional facilities at the state and federal level. Of these, 36, or one-third, are medium security facilities. Of the 84 co-correctional facilities located throughout the country, 40% are medium security.

A medium-security classification for a female inmate indicates that she will live in a dormitory within the correctional institution. When examining all levels of inmate classification, a pattern emerges for female correctional facilities. If a facility serves only women, it will merit a lower security rating than comparable co-correctional or all-male facilities. This is because women are not considered high security risks, nor are they considered to be great risks to themselves or other inmates, since they are not as violent as men.

CONCLUSION

The classification system used to determine the level of security and type of prison programs for inmates created four levels of security. Medium security is a correctional design that is physically secure while providing some freedom of movement for the inmates. In the 1990s, more than 400 new correctional facilities were built in the United States. Of those, approximately 55% were medium security. With the continuing prison construction boom, any new correctional facility built in the 21st century will most likely be a medium-security facility.

MEGAN'S LAW

Megan's Law is an attempt by state and federal legislatures to notify the public about and protect them from recently released sexual offenders. The legislation was named in commemoration of seven-year-old Megan Kanka of Hamilton Township, New Jersey, who was sexually assaulted and strangled to death by a former sex offender, Jesse Timmendequas. After the police found Kanka's body in a nearby park, neighbors and community members held vigil and petitioned for legislation that would notify community members of a sexual offender's location. "Megan's Law" resulted from this community action.

NATIONAL ADOPTION OF MEGAN'S LAW

In 1994, then-Governor Christine Todd-Whitman signed Megan's Law into New Jersey legislation, only two months after the untimely death of Kanka. In 1996, Republican presidential candidate Bob Dole proposed national legislation providing states with two years to enact their own state version of Megan's Law or risk the loss of their state funding. Then-President Bill Clinton subsequently signed the federal version of the law into action in 1996. Presently, all 50 states have some version of Megan's Law. This legislation amended the previous Jacob Wetterling

Act of 1990 and has a number of provisions that vary by state. With few exceptions, such as an offender's age and/or type of sexual offense, Megan's Law applies to all sex offenders convicted after the state or federal enactment of the statute.

Megan's Law seeks to protect the community from released sexual offenders by increasing the public's awareness of their whereabouts and by providing local authorities with a pool of possible suspects. The law operates with a number of conditions, including the registration, notification, and civil commitment of sexual offenders, the possible use of the death penalty or life imprisonment, the development of a central database, lifetime supervision of offenders, DNA, fingerprinting, and the right to refuse "good time" credits. The two most well-known provisions of Megan's Law are sex offender registration and community notification.

SEX OFFENDER REGISTRATION

Sex offender registration is the less controversial of the two provisions. It is a practice that dates prior to Megan's Law and was the foundation of the Jacob Wetterling Act, which differs from Megan's Law mainly by not requiring dissemination of information. Under sex offender registration provisions, sex offenders are allocated a time frame, generally 72 hours, upon release from prison to register their information with the local authorities where they plan to reside. Offenders register on an annual basis for at least 10 years, and if deemed necessary, they register for life. The information that offenders provide includes their full name, their address, date of birth, Social Security number, a physical description, photographs, DNA, fingerprints, a place and address of employment if available, and a court or therapist's assessment of future dangerousness. Failure to comply results in criminal penalties, which often result in the offender's return to prison for a technical violation. In most states this is a crime of the fourth degree.

COMMUNITY NOTIFICATION

Notification of a sexual offender's residence has attracted much controversy. This procedure is intended to inform the community and past victims that a sexual offender is living nearby. The hope is that community members will protect themselves and their children accordingly. Generally speaking, although this varies slightly by state, the tier that an offender is placed into determines the level of notification. There are three tier levels. Tier 1 represents the lowest-risk sexual offenders and only requires notice to the police and the victims that the offender is likely to be encountered around their residence. Offenders are considered low risk if they are under probation or parole, are receiving therapy, are employed, and are alcohol- and drug-free. Tier 2 represents moderate-risk sex offenders; these people have difficulty complying with authority and supervision, lack employment, deny their offenses with no remorse, abuse alcohol and drugs, and have a history of violent behavior. These behaviors are believed to put an offender at a higher risk for recommitting a sexual offense; therefore their notification is broader. This level requires notification to organizations, educational institutions, day care centers, and summer camps.

Tier 3 sex offenders are the offenders who are most at risk for reoffending. This category has generated the most resistance. The entire community that may encounter the offender—usually a particular radius is chosen—is notified through posters, pamphlets, and possible door-to-door visits from the local authorities. Tier 3 offenders have the same risk factors as Tier 2 offenders, but Tier 3 includes an increased likelihood of reoffending because their behavior is deemed repetitive and compulsive. These offenders often have a sexual preference for children and refuse to be treated. Only a small number of offenders—approximately 5%—are placed into a Tier 3 classification.

LEGAL CHALLENGES

Megan's Law has survived a number of legal challenges from both state and federal courts. The first criticism is that it can be considered double jeopardy (multiple prosecution or punishment for the same offense) because offenders have already served their time in prison. Offenders claim that they have fulfilled

the punishment requirement while incarcerated and that placement under a Megan's Law statute can be considered cruel and unusual punishment under the Eighth Amendment. This argument has fueled a number of legal challenges, but courts have avoided this claim by incorporating the requirement of sex offender registration and notification into the initial sentence.

Megan's Law statutes have also faced due process or Fourteenth Amendment challenges. The Fourteenth Amendment states that no person shall be deprived of life, liberty, or property without due process. Offenders claim that Megan's Law statutes infringe on their right to privacy and travel. In addition, it has been argued that offenders should be able to challenge their tier placement because of the heavy implications these tiers carry. Significant due process safeguards were considered to prevent infringements. These precautions included an offender's ability to challenge his tier placement and subsequent notification level. Right to privacy and arguments do not hold up; the courts have stated that the public's right to safety outweighs the offender's right to privacy. Additional challenges to the implementation of Megan's Law have included the vigilante actions of neighbors and community members living in the radius of sexual offenders. Although these vigilante actions are not widely reported, community members have protested outside the homes of registered sexual offenders, and in more serious circumstances have physically assaulted offenders. It is a punishable crime if citizens are found to have used sexual offender registries to commit a criminal offense against the offender. These community members are subject to both monetary fines and potential criminal charges.

SEXUAL OFFENDER REGISTRIES

All 50 states and the District of Columbia have some form of centralized sexual offender registries. Various departments ranging from the department of public safety to the local police departments and bureaus of identification maintain these centralized registries. To date, more than two-thirds of all states make their sexual offender registries available to the public, either in an offender-searchable format or in a more general information format. The number of sexual offenders registered in each state varies proportionally to the state's population. Larger states like California have approximately 33,000 sexual offenders included in their registries, while smaller states like Connecticut have 2,075 sexual offenders registered. Washington State, the first state to develop and maintain a sexual offender registry, has approximately 16,500 sexual offenders registered; this is a similar number to the 14,500 registered in New York State. Compilations are available online for each states' number of registered sexual offenders.

The compliance rate of registering under sexual offender statutes poses a serious problem in some states. Because many states mandate that sexual offenders register within 72 hours of their release from incarceration, a number of sexual offenders have been noncompliant with the requirement of registering. In a recent article it was noted that California has lost track of one-third of their released sexual offenders, while the majority of other states claim that they simply don't know their offenders' compliance rates. A minority of states have been successful in tracking their compliance rates, including Connecticut, Oregon, and Pennsylvania, with compliance rates ranging from 85% to nearly 95%.

CONCLUSION

Despite some legal challenges made to it, public response to Megan's Law has been fairly favorable. Many community members believe that Megan's Law's stipulations should be required of all sexual offenders, irrespective of the possibility that such a law penalizes individuals beyond their prison sentence. They have demanded to know who was living in their neighborhoods, and the government has agreed.

MENS REA

Mens rea is a Latin term meaning "guilty mind," criminal intent, or the mental state of an individual committing an act. Criminal law generally requires that *corpus delicti*, a Latin-based phrase meaning "the body of the crime," be proven before an individual can be found guilty of any unlawful activity. *Corpus delicti* is comprised of three basic elements of the crime: (1) *actus reus*, or the guilty act; (2) *mens rea*, or the guilty intent; and (3) concurrence, or the amalgamation of the guilty act and the guilty intent. *Mens rea* is an integral facet of the criminal justice legal process.

HISTORY

A belief that an individual must have a "guilty mind" in order for his or her action to count as a crime has existed for hundreds of years, dating as far back as the Roman Empire. The term *mens rea* was not utilized in English common law, however, until around the mid-18th century. The basic premise underlying this concept is that in order for an individual to be found guilty of a criminal act, the perpetrator must have acted with a guilty mind, or *mens rea*. This is articulated by the Latin *maxim actus not facit reum nisi mens sit rea* ("an act does not make one guilty unless his mind is guilty").

Ideas about *mens rea* found their way into American law in the latter part of the 18th century. By the time of the writing of the U.S. Constitution, the principles behind *mens rea* had already been integrated into general American law. As states gradually defined statutory law, *mens rea* was assumed; although it was not typically defined in the writings of the law, it was understood as common law.

During the Industrial Revolution, *mens rea* was incorporated in general law in public welfare offenses. Before this time, lawmakers and law officials were not concerned with why an individual committed a criminal act, but simply with the act itself. Additionally, they were not concerned with the intent of the offender, but that the prohibited act had been committed. With the implementation of various industry-related jobs and the dangers associated with them, however, society geared its public opinion toward the *why* instead of the *how*.

By the turn of the 20th century, an individual could be found to be criminally liable only if he or she was aware of the potential impact of his or her behavior. Thus, an injury caused without *mens rea* might be grounds for civil liability, but not for criminal prosecution. Even so, when the offense involves crimes such as violations of liquor laws and/or anti-narcotic laws, motor vehicle laws, traffic-related laws, sanitary and building codes and regulations, and factory laws, offenders are held to be strictly liable, and proof of intent is not required.

Mens rea is an integral part of the criminal justice systems throughout the nation. In all 50 states and Washington, D.C., it is part of every criminal code. In the instance of premeditated murder, both *mens rea* and *actus reus* must be present to establish a guilty verdict. This can be clearly understood by examining the standards of *mens rea* and its components.

THE *MENS REA* STANDARD

The phrase *mens rea* denotes the prerequisite that there exist a "culpable state of mind." Most crimes, according to state and federal statutes, necessitate a condition of mind that is certainly guilty, while additional crimes only call for sheer "recklessness" or "negligence." There are very few crimes that have no *mens rea* requirement. The U.S. Supreme Court has categorized the *mens rea* requirement into three categories: crimes including (1) "general

intent," (2) "specific intent," and (3) "recklessness" or "negligence" ("strict liability" is sometimes utilized as a fourth requirement for *mens rea*).

For the "general intent" requirement, it must be shown that the defendant desired to perpetrate the act that served as the *actus reus*, or guilty act. The next requirement, "specific intent," holds that while the defendant had the desire to carry out the act, he or she also had the desire to do something further relating to the crime. Finally, an example of the "recklessness" or "negligence" requirement can be found in instances of crimes resulting from intoxication or mistake. For intoxication, the general intent requirement is seldom vacated; however, the specific intent requirement may be vacated for a particular crime. A mistake of fact is more probable to vacate the specific intent requirement of *mens rea*. While all of these listed requirements for *mens rea* are necessary to prove the intent of the crime, the intent cannot stand alone in criminal liability; the act and the intent must be present in singularity and in concurrence.

CORPUS DELICTI

As stated previously, the *corpus delicti*, or body of the crime, includes three basic elements: (1) *mens rea*, (2) *actus reus*, and (3) concurrence. The *mens rea*, or guilty intent, has been discussed; however, *actus reus* is an important component as well. The *actus reus* requirement establishes the need for the actual occurrence of a criminal act. Additionally, for the act to be criminal, it must be voluntary. In some situations where criminal intent is present, but the act did not occur, liability may be decreased; conspiracy is, in some instance, an example of this decrease in liability. To prove certain degrees of a crime as defined by most criminal statutes and the Model Penal Code, both *actus reus* and *mens rea* must be present, which becomes the concurrence of the two requirements for *corpus delicti*.

CONCLUSION

Ideas about criminal responsibility have been prevalent throughout history and can be traced back in America to early common law. By the time of the writing of the U.S. Constitution, the principle of *mens rea* had already been integrated into general American law. The era of the Industrial Revolution witnessed the implementation of the *mens rea* requirement in public welfare issues involving civil liability. Eventually, this requirement could be found in every state code as well as the Model Penal Code. Generally, *mens rea*, or guilty intent, must be accompanied by *actus reus*, the criminal act, and the mergence of these two makes up the *corpus delicti*, or body of the crime.

MENTAL HEALTH

The emotional and psychological well-being of convicts in correctional facilities is of considerable concern for prison officials, the courts, the psychiatric community, and society in general. While counseling and treatment services are available in many correctional institutions, these facilities are often ill equipped to deal with persistent and severely mentally disordered offenders and those persons identified as dangerous and psychiatrically ill. In those instances where treatment is uneven, absent, or otherwise ineffective, questions remain about whether the correctional milieu is itself responsible for breeding and sustaining long-term mental illness and dysfunctional prison behavior.

HISTORY

In the Western world, criminal (and civil) confinement of persons with mental disorders dates back many centuries. Historically, different cultures have had an uneasy relationship with how best simultaneously to address the needs of mentally ill citizens who engaged in criminal wrongdoing while also protecting the public from the likelihood of future harm. Within the United States, four progressive reform strategies can be identified, dating back to the colonial period.

The first reform occurred during the period of colonial jurisprudence. It was termed the "moral treatment movement." It emphasized hard work and penitence in the asylum rather than confinement in the correctional setting. During the moral treatment era, the conviction was that with enough religion, prayer, and labor, persons with mental disorders would be saved, and, therefore, would eventually refrain from criminal and delinquent transgressions.

The second reform emerged in the mid-1800s. It was termed the "mental hygiene movement." Discoveries in science, advances in psychopharmacological therapies, and a commitment to curing mental disease or defect meant that the promise of treatment was the source of change. Psychopathic hospitals displaced the asylums of the past, and mentally ill offenders were subjected to various experimental drug regimens and other unproven procedures (including lobotomies).

The third reform movement surfaced in the 1950s. It was termed the period of "deinstitutionalization." Disappointed by the failings of the mental hygiene era and outraged by the deteriorating, debilitating, and prison-like conditions in which persons with psychiatric disorders lived in psychopathic hospitals, progressive-minded politicians and social activists sought to validate the identity and affirm the (constitutional) liberties of persons with mental illness. This was the period of patients' rights. As such, during the 1950s and 1960s there was a massive deinstitutionalization movement, and psychiatric patients were placed in less restrictive community-based environments.

The fourth reform movement emerged in the 1980s and continues into the early 21st century. Some researchers refer to this period as a time of "abandonment" in the care and treatment of persons with mental disorders. Others regard this period as a time during which various community mental health practices have been implemented with varying degrees of success. Deinstitutionalization produced a massive exodus from many state psychiatric facilities. This exodus raised a host of practical questions about how best to address the needs of persons with mental illness in community settings. Most critics agree that the limits of the fourth reform movement include cyclical or "revolving door" psychiatric treatment, homelessness, incarceration, and even death for some street dwellers with acute and/or chronic psychiatric disorders. Current efforts at progressive reform attempt to respond to each of these social problems.

Despite all progressive efforts at reform, each movement includes some serious limitations. These shortcomings have always produced a strong reaction, culminating in significant philosophical or policy changes. However, notwithstanding these well-intentioned, reform-minded efforts, each successive strategy has always given way to prison or related confinement practices.

CURRENT TRENDS AND STATISTICS

Two criminal law issues impact how persons with mental disorders are funneled through the criminal justice system and how they are dealt with by systems of confinement. First, some defendants can be found incompetent to stand trial (IST). Under these conditions, defendants are sent to a psychiatric facility unit until such time as they are competent to proceed to trial. IST determinations are prospective; that is, they question the mental state of the defendant at the time of the trial's commencement. However, the IST finding does not rule out a subsequent prison sentence, especially if the person becomes competent following appropriate psychiatric treatment, proceeds to trial, and is found guilty of the criminal charges.

Second, some defendants can be found not guilty by reason of insanity (NGRI). Under these conditions, the defendant is acquitted. NGRI defenses are retrospective; that is, they question the mental state

of the defendant at the time the crime occurred. More recently, several state jurisdictions have implemented guilty but mentally ill (GBMI) statutes. These legislative enactments specify that, notwithstanding psychiatric disorder, a person can be found guilty and subsequently sentenced to a prison term. Of all those persons incarcerated, experts generally agree that approximately 20% experience problems with mental illness in one form or another. This figure rises considerably when focusing specifically on "Axis II" or personality disorders (e.g., borderline personality disorder, paranoid personality disorder, antisocial personality disorder). Estimates for persons with mental illness in local lockups, country jails, or secure holding facilities vary according to state or county jurisdiction. Researchers generally agree, however, that the incarceration of the mentally ill is on the rise. This is especially the case for dangerous mentally ill offenders, including sexually violent predators and psychopathic mentally ill offenders. So far, the clinical treatment of such dangerous mentally ill offenders in correctional settings has not produced promising success rates. Thus, in 18 state jurisdictions, civil confinement is ordered following the completion of one's prison term as a convicted sexually violent predator.

PROBLEMS

Typically, convicted mentally ill offenders receive a sentence of probation. They are treated in the community or some other less restrictive environment for their psychiatric disorder. However, given the absence of an adequate release or discharge plan, short-term civil commitment, bouts of homelessness, and temporary confinement to a jail or local lockup often follow.

When persons experiencing psychiatric illness are placed in correctional facilities, there are several problems that surface. Access to and quality of treatment vary across types of prisons. For example, approximately 41% of jail detainees receive some form of mental health treatment; approximately 60% of prison convicts receive some form of psychiatric care. Overwhelmingly, the correctional facility's treatment of choice for both groups is drug therapy, with 36% of those in jail and 50% of those in prison receiving this treatment. In both instances, the presence of counseling personnel and services is often uneven, fragmented, or inadequate.

Researchers also question what the long-term emotional effects are for individuals placed in solitary confinement. To date, empirical evidence indicates that exposure to short bouts of prison seclusion is not psychologically crippling or debilitating. Investigators caution, however, that more research is needed in order to understand what the specific psychological effects are for repeated and/or long-term exposure to solitary confinement. Women in prison are diagnosed with personality disorders more frequently than their male counterparts. They also are more likely to be administered drug therapy. Prolonged bouts of depression, persistent and severe mood swings, and prison adjustment and socialization difficulties regularly result in personality disorder diagnoses for women. Researchers estimate that these diagnoses are assigned to women at a rate that is two to three times greater than that for their male imprisoned counterparts.

Women also experience sexual abuse while confined and are at risk of self-harm. Conservative estimates for the rate of sexual victimization of women in prison indicate that nearly 30% will experience some form of unwanted sex while confined. Researchers report that this figure also includes correctional officer-on-convict sexual abuse. Self-injurious behavior is a routine occurrence in many female correctional facilities. Examples include body mutilation and attempted suicide. Investigators have linked the incidence of sexual victimization and self-harm to prison conditions and to the woman's inability to be with and care for family, especially her children. Life on death row also raises important issues about the emotional well-being of convicts. Some studies suggest that the presence of impending death, the ongoing and protracted appellate process, and one's incessant exposure to the grief, anxiety, and remorse of others on death row, create a culture of psychological disorganization and social disequilibrium. In other words, waiting to die along with others has a profound negative effect on one's emotional health.

Life on death row also includes persons who are mentally ill awaiting execution. The U.S. Supreme

Court has ruled that one cannot be put to death if one is mentally incompetent. Moreover, the court has stipulated that medicating someone for the sole purpose of competency restoration violates both the right to privacy clause of the First Amendment and the cruel and unusual punishment clause of the Eighth Amendment. However, several federal appellate courts have concluded that under certain circumstances, restoring one's competency for purposes of execution is permissible. In these instances, the safety of the correctional personnel and/or the safety of the mentally ill death row convict must be jeopardized by the individual's psychiatric disorder, necessitating mental health (i.e., drug therapy) intervention. These decisions are further complicated when a mentally incompetent death row convict exercises his or her right to refuse treatment, thereby forestalling (potentially) prospects for competency restoration.

CONCLUSION

The relationship between prison facilities and mental health is unmistakable. This association implicates the legal and psychiatric communities as well as the public at large. While most crimes are not committed by mentally ill persons, the history of progressive reform in the United States indicates that these citizens often find themselves confined, in one setting or another. Not surprisingly, then, critical researchers question the basis for this confinement—whether in jails, prisons, or psychiatric hospitals. Some have suggested that what is at stake is the territorialization or the vanquishing of difference in the name of conformity. In these instances, one's *status* as mentally ill is synonymous with one's *identity* as dangerous, deviant, diseased. Thus, critical scholars examine how the state's efforts to contain, corral, or otherwise correct human expressions of difference represent institutional expressions of punishment.

Notwithstanding the concerns raised by critical commentators, correctional facilities directly confront issues of mental health for convicts in a myriad of ways. Treatment needs and counseling services are real concerns. The effects of solitary confinement and life on death row are real problems. Competency restoration for psychiatrically disordered offenders awaiting execution is a complex ethical dilemma. These matters signal just how much the correctional environment implicates the emotional well-being of offenders. They also challenge us to reconsider whether, and to what extent, the prison culture nurtures, grows, and sustains maladaptive and dysfunctional convict behavior.

METROPOLITAN CORRECTIONAL CENTERS

Metropolitan correctional centers (MCCs) and metropolitan detention centers (MDCs) are high-rise correctional facilities that house inmates in dense urban environments. These institutions are generally designed to hold prisoners and pretrial detainees temporarily while awaiting transport, trials, or court hearings. Although their major function is the detention of criminal defendants in order to secure their presence at trial, the centers may also hold witnesses for appearances before grand juries or trials. Some also house noncitizens awaiting the outcome of U.S. Immigration and Customs Enforcement (ICE) proceedings. Some inmates may be detained overnight, while others are held for months. In rare cases, individuals may be confined in metropolitan correctional centers for more than a year while awaiting termination of court processes, and may also serve out sentences in excess of one year while providing labor for the facilities.

Urban detention centers serve all the major purposes of correctional facilities found elsewhere but concentrate on one primary feature: integration with court facilities and attorneys in urban settings. As federal criminal prosecutions have grown greater in number, the U.S. Justice Department has had increasing incentives to construct federal detention facilities in major cities to complement regional jails that already existed.

FEDERAL METROPOLITAN DETENTION AND CORRECTIONAL CENTERS

While the designation "metropolitan correctional center" may suggest various urban jail and prison facilities operated by state and local jurisdictions, the term represents a specific category of correctional institution at the federal level. Metropolitan correctional centers and metropolitan detention centers are important components in the U.S. Federal Bureau of Prisons system of correctional institutions. There are presently three federal MCCs (in downtown Chicago, San Diego, and New York City) and a half-dozen MDCs (at Los Angeles, Brooklyn, Guaynabo, Puerto Rico, Honolulu, Seattle-Tacoma, and Philadelphia). Each of these institutions is located at the heart of a major city in close proximity to other government buildings.

The MCCs house both male and female inmates and are classified as administrative detention institutions. This means that they have special detention missions and can hold inmates of all four federal security classifications. In practice, the facilities generally hold most nontrustee inmates under high-security conditions, regardless of their individual classifications. All three metropolitan correctional centers were built in the mid-1970s during a period when corrections planners were experimenting with new approaches to the architecture and management of prison facilities.

Metropolitan detention centers are essentially federal jails. They are not appreciably distinct from the MCCs in their overall physical plants and operations, but they are designed to accomplish a more narrow set of correctional missions. Intended to provide short-term incarceration for approximately 500 federal pretrial detainees each, they are all beyond capacity today. Most are also classified as administrative and hold inmates of all federal security levels. Where MDCs exist, they displace the need of the U.S. Justice Department to lease cell space from city and county jails operated by local jurisdictions.

ARCHITECTURE

Urban skylines have long been graced by correctional facilities, but the modern metropolitan detention centers are distinguishable by their deliberately unobtrusive, relatively attractive, noncorrectional appearance. In fact, most of the federal MCCs and MDCs could easily be mistaken for metropolitan office buildings, and some have won architectural awards for their designs. The centers have no visible razor wire fences, thick block structures, or corner guard towers. There are also no detectable prison bars and no obvious armed patrols circling the facilities. This last feature helps the institutions avoid the cagelike appearance of traditional prison structures. Entrances to the buildings exhibit no obvious indicia of high security,

because transportation of inmates to and from them takes place in large underground sally-port parking driveways, where buses and vans pick up and drop off inmates.

MDC PHILADELPHIA

Visitors to downtown Philadelphia might easily mistake the city's Federal Metropolitan Detention Center for an elegant hotel or a high-tech office building. Typical of the metropolitan detention centers, MDC Philadelphia is situated directly across the street from a federal courthouse and adjacent to other government buildings. It is also close to historic 19th-century buildings such as the Mellon Bank Center. Designers of the Philadelphia MDC intended the building's function not to be apparent to casual passers-by. Built in 1999 at a cost of $68 million, the 11-story concrete structure was constructed with 800 precast concrete panel walls. The designers' goal was to make the structure attractive and well suited to the historic downtown neighborhood. The contractor built a 120-foot-long tunnel from the basement of the detention center to the federal courthouse across the street. The 14-foot-wide tunnel, 30 feet below the street, was dug by hand due to space restrictions. The Philadelphia Metropolitan Detention Center contains 628 housing cells, each measuring 80 square feet and including a slit window. Although one of the newest MDCs, it is similar in its interior layout and operation to the MDCs found elsewhere.

MCC SAN DIEGO

MCC San Diego, first exhibited in 1974, rises 21 stories above a two-block "green belt" among a group of federal government buildings in San Diego. It was the first high-rise correctional institution completed for the U.S. Bureau of Prisons and was designed to hold 500 inmates and 160 staff. Like the metropolitan correctional centers at Chicago and New York, it has a large recreation yard on the top level and has its intake, administrative, and medical facilities on the first three floors. The remaining floors house inmates in modular two-story New Generation-style accommodations.

MCC CHICAGO

Chicago's Metropolitan Correctional Center, built in 1975 as a "skyscraper prison" has an extremely narrow sharp triangular shape, jutting out from the Chicago Federal Center Complex. With 27 floors rising above Chicago's Van Buren Street, MCC Chicago provides a picturesque addition to the city's skyline. The facility was designed to hold 411 detainees and 160 staff but now houses nearly 600. A U.S. magistrate courtroom occupies the second level, and a U.S. federal district court is situated one block away. The upper half of the building contains inmate cells that open into a two-tier multipurpose dayroom. The exercise yard is located on the roof and is hemmed in by 30-foot concrete walls with fenced openings.

MCC NEW YORK

MCC New York is an 11-story facility connected to the offices of the U.S. attorney and the U.S. Courthouse near the Manhattan financial district. When it opened in 1975, MCC New York was intended for 480 detainees and 160 staff. Today it generally holds more than 700 inmates. The three interconnected facilities (the MCC, the U.S. Courthouse, and the U.S. Attorney's Office) are integrated into a single complex with similar styling and materials used for the construction of each. Just as in MCC San Diego and MCC Chicago, inmates are housed in New Generation-style living units with 40 to 100 individuals living in small rooms along two tiers clustered around an open multipurpose dayroom.

INTERIORS

Designers of the MCCs and MDCs sought to "normalize" the character of both the exterior and interior physical environments. Thus the interiors of all the federal metropolitan centers lack traditional symbols of incarceration. They also have exterior windows, carpeting, and bright interior colors to encourage inmates to care for their living areas. Comfortable furniture and wood paneling instead of steel are intended to soften the effect of incarceration on the inmates' minds.

In each center, the lower floors are set aside for administrative offices, admissions, and medical facilities. The outer walls provide a secure perimeter, while central areas of the building are occupied by security control areas for staff. Inmates are housed in New Generation-style settings, with groups of 30 to 100 inmates kept in small modular units with access to larger common areas. All inmate activities in the dayrooms take place behind large glass panels, visible to staff at any angle, either directly or by closed-circuit camera.

MANAGEMENT AND OPERATION

Both metropolitan detention and correctional centers are capable of functioning as long-term prisons for federal inmates. In practice, however, the facilities hold people for relatively short periods of time. Metropolitan correctional and detention centers in cities like San Diego, New York, and Chicago are situated on costly real estate where space is at a premium. Inmates are rarely held for purposes other than trials or court appearances.

Metropolitan detention facilities complement suburban and rural federal prisons with different correctional missions. Each metropolitan facility is located on a federal prison transportation route that connects institutions from all over the United States. Airplanes and buses that travel along the route make regular drop-offs and pick-ups of inmates being transferred to and from the various federal prisons for different purposes. Each of the facilities have built-in vehicle sally-port intake and release areas on or below the ground floor. These are enclosed, secure areas from which inmates can be safely moved to and from transport vehicles.

TRENDS

When the three MCCs were constructed in the mid-1970s, some analysts predicted that metropolitan prison institutions would be a growing trend. Only a handful of similar prisons have been built in the intervening years, however. Like the U.S. correctional system in general, metropolitan detention centers have become crowded holding facilities as the federal prison population has grown. Each center now operates with inmate populations far in excess of its intended capacity. The U.S. Bureau of Prisons (BOP) as well as most state correctional agencies has opted to build their largest facilities in suburban or even remote rural settings to take advantage of opportunities for greater expandability.

CONCLUSION

Metropolitan correctional centers and detention centers provide correctional space in dense downtown areas where inmates and staff have easy access to court facilities, attorneys, and government administrators. Since the mid-1970s, inmate populations held by the U.S. federal prison system have increased dramatically, and the U.S. government has opted to construct its own jail facilities in some downtown environments instead of renting bed space from local jails. Evaluations of these metropolitan correctional and detention centers find that the attitudes of staff and inmates toward the centers can be described as more favorable than their attitudes toward traditional correctional institutions. Inmates in the centers are apparently more active, less violent, and more likely to engage in constructive activities.

MILITARY PRISONS

Military prisons have been housing offenders from each branch of service since the early 1870s. The system replaced corporal punishment practices and was meant to standardize the treatment of military offenders in correctional facilities. It was designed to separate them from the "influences" of civilian offenders and facilities, decrease rates of desertion from service, and prepare military offenders for return to active duty or to a productive civilian life.

The Department of the Army acts as the Corrections Executive Agent for the Department of Defense and oversees all of the armed services correctional facilities and programs. While each service still operates penal facilities of its own, some are under the guidance of more than one branch. Consequently, the confinement experience varies according to programming and everyday practice, depending on service and facility. The facility on which there is the most available literature is the military's only maximum-security, long-term facility, the U.S. Disciplinary Barracks (USDB) at Fort Leavenworth, Kansas, which houses offenders from all branches and all sentenced officers. Although military prisons continue to differ from civilian federal and state prisons in inmate population characteristics and somewhat in structure, the correctional philosophy of the former is increasingly permeating the walls of the latter. One distinguishing characteristic of the military corrections system is its "restoration to duty" option, where an offender may be sentenced without discharge from service. This is seen by many as both a successful rehabilitative technique, by providing a working goal for the offender while incarcerated, and a form of release preparation. As a result, former military inmates may not experience the extensive stigma and difficulties obtaining employment and housing, upon release, as their civilian counterparts, which may account for decreased recidivism rates.

HISTORY

In 1871, then-Judge Advocate Major Thomas F. Barr began to evaluate the experience of military prisoners living among different stockades and state correctional facilities across the nation. He found that their treatment varied considerably, particularly concerning disciplinary measures. Prior to the formation of separate military prisons, minor infractions tended to be addressed harshly, with punishments such as flogging, shackling, tattooing, branding, solitary confinement, and execution. In a letter to the Secretary of War, William W. Belnap, Major Barr expressed his concerns about the U.S. system and requested that research be conducted on the British Military Prisons in Canada as a comparison.

British Military Prisons ran according to a mission based on three goals: to maintain discipline, reform offenders, and reduce the rate of military reoffending. These facilities were run systematically, with consistent use of discipline and prisoner classification. Authority was highly valued, as long as it was humane and effective in the goals of the overall mission. The findings of this research lead to a legislation submitted by the U.S. Congress in January 1872, establishing the first American military prison, also the first federal penal institution. The bill was written with specifications for the prison to be at Rock Island Arsenal, Illinois. This site, already guarded and situated between two rivers, provided opportunity for prisoner labor in the form of assembly and repair of small arms. Its location was soon criticized, however, as the bordering rivers would necessitate intensified security measures to protect both the arsenal itself and its new residents. In addition, the form of labor would require time-intensive training measures not conducive to the high turnover rate of inmates. Thus, an amendment to the bill in May 1874 led to the establishment of the first military prison at its present location: Fort Leavenworth, Kansas.

The founders of the military prison hoped to regulate the standard treatment of inmates, decrease rates of desertion and other military crimes, separate criminals with more rehabilitation potential, and finally, return the service personnel to a productive military or civilian life upon release from confinement. The establishment of a military prison system led to

the abolition of many of the previous disciplinary measures, with the exception of solitary confinement. Military prisoners could now be segregated from civilian offenders and facilities, and the addition of training while incarcerated would allow them to continue to improve upon basic military principles. These changes were made to reconcile the correctional experience and the overall interests of military service.

MILITARY FACILITIES TODAY

The U.S. Armed Forces is governed by laws specified by the Uniform Code of Military Justice (UCMJ), part of the Manual for Courts-Martial. The corrections system of the Department of Defense consists of institutions organized by tier levels differing by mission and length of sentence. Tier I facilities house inmates confined pretrial and those with sentences of up to 90 days. The majority of military prisoners are housed in Tier II facilities, where sentences range from 91 days to 5 years. Each branch of service has at least one institution under the first two tiers, and usually inmates are housed by the service in which they serve. The U.S. Disciplinary Barracks (USDB) is the only Tier III and maximum-security correctional institution, where those serving terms of five years to life and death sentences are confined.

Facilities run by each branch are generally divided between four security levels: maximum, close (between maximum and medium), medium, and minimum. Prisoners may be as young as 17 years old, the minimum enlistment age. Since 1987, military prisoners include those who have committed any offense on active duty, whether or not service related. The traditional hierarchical ranks among the convicted are not upheld. That is, generally military prisoners are not distinguished by military rank with regard to correctional treatment and daily privileges. Inmates maintaining officer status upon entry may be segregated from enlisted inmates in their own housing units at the USDB only, and upon official dismissal from service they abandon these rights and are required to live within the general inmate population.

DEPARTMENT OF THE AIR FORCE

The Air Force Security Forces Center (AFSFC) has many roles in the correctional process. It seeks to aid in individual problem solving and behavior correction, as well as reformation for specific court-martialed offenders who may return to duty. This organization also conducts transfers of all U.S. Air Force (USAF) inmates and those inmates with sentences longer than three months. In addition, the AFSFC oversees 54 correctional facilities internationally and three Tier II regional correctional facilities. The USAF assists other branches of the military in the operation of three separate facilities: the USDB at Fort Leavenworth, Kansas, and the two Naval Consolidated Brigs in Miramar, California, and Charleston, South Carolina.

DEPARTMENT OF THE NAVY

In the early 1980s, an extensive study of the naval correctional system lead to significant attempts to improve the poor conditions that had plagued small facilities since the closing of the 80-year-old naval prison in Portsmouth, New Hampshire. Two consolidated brigs were built at Miramar, California, and Charleston, South Carolina, to serve as the Navy's new major confinement facilities. Consolidated brigs are direct-supervision facilities housing inmates with sentences ranging from 30 days to one year. They also provide training to prepare inmates for return to active duty or civilian life or hold them until they are ready to transfer to a long-term facility. Each facility has the capacity to house 450 prisoners but instead maintains full capacity at 360 to comply with the accreditation standards of the American Corrections Association (ACA).

The study resulted in a reconstruction of the naval correctional system into a three-tier system of waterfront brigs for detainees awaiting trial and inmates with relatively short sentences, consolidated brigs, and the option to transfer long-term inmates to the Federal Bureau of Prisons. Currently, the Department of the Navy operates six shore brigs, five pretrial confinement facilities, 20 shipboard brigs, and 10 detention spaces worldwide. The Department

of the Navy also manages the Naval Corrections Academy, founded in 1976, located at the Lackland Air Force Base, Texas, where correctional personnel are trained. Finally, as of 1995, the department established a detachment that serves the USDB at Fort Leavenworth, Kansas.

U.S. MARINE CORPS

Before 1968, the U.S. Marine Corps corrections program was under the direction of the Department of the Navy correctional facilities, although staffed by Marine Corps personnel. In 1970, the Marine Corps created their own formal correctional program, including specific corrections Military Occupations of Specialty. By the early part of the decade, policy for the Navy and Marine Corps brigs was standardized in a publication of the Naval Corrections Manual. The closing of the Naval Disciplinary Command in Portsmouth, New Hampshire, saw the transfer of many Marine Corps inmates to the USDB. The end of the Vietnam conflict resulted in a decrease in the inmate population; thus, the need for Marine Corps correctional personnel declined. Six Marine Corps brigs were reclassified as detention facilities by the end of the decade. At the same time, the responsibility for apprehending absentees and deserters moved from the Federal Bureau of Prisons to the newly formed Marine Corps Absentee Collection Unit.

Today, the Marine Corps operates five brigs and two detention facilities in several states. Programs at each brig emphasize the retraining and readaptation of military standards and expectations. Physical training supplements recreational activities, work, and counseling programs.

DEPARTMENT OF THE ARMY

Four regional correctional facilities (medium-security level), two Army confinement facilities (minimum-security), and the USDB (the central maximum-security prison) and three facilities overseas make up the U.S. Army Corrections System. The Regional Corrections Facilities (RCFs) and the USDB implement several custodial and correctional treatment programs for military prisoners across branches of service. Short-term inmates can be found in the Army confinement facilities that provide services and programs on a smaller scale. Reform is the central focus of the official correctional policy, as stated by the Department of the Army and the Department of Defense in 1970. The concept of punishment remains relatively absent from the policy, as it is considered to already be intrinsically part of the nature of correctional confinement.

THE UNITED STATES DISCIPLINARY BARRACKS

The United States Disciplinary Barracks (USDB) is the only all-service, long-term confinement option for military offenders. For the most part, all inmates from every branch serving sentences longer than five years are sent to the USDB. Academy students and officers from each branch also serve their time here regardless of sentence length.

Established in 1874, it was called the U.S. Military Prison until 1915. Less than 20 years after the military prison was founded, the federal government determined that it too needed a federal prison system for civilian offenders who were serving time in various state and local facilities and were experiencing similar problems to those motivating the original establishment of the military prison system. The passage of the Three Prisons Act of 1891 transformed the USDB into the first federal civilian prison (USP Leavenworth), leaving the Army again without its own penal institution. The federal government became unsatisfied with the facility shortly afterward and built a new one nearby, to which the civilian federal prisoners moved. Control of the USDB has alternated between the U.S. Department of Justice as a federal prison and the Department of the Army as a military prison several times, but has remained under the Army since October 1940. Still, military prisoners may be transferred to federal civilian institutions for several reasons, including if the offender is proving harmful to the rehabilitation of other, potentially successful, military inmates.

In 1988, the USDB was the first military institution to be accredited by the American Corrections Association. Today, the facility struggles with deteriorating physical conditions as well as budgetary and staffing constraints due to lack of technological advancement. Thus a new facility is currently under construction.

SECURITY AT USDB

The acting warden of USDB is the Commandant and is ranked a Colonel (0-6) Military Police officer. Even though the prison is classified as a maximum-security institution, only a small percentage of inmates are classified at this level. The level of discipline and subsequent living conditions vary significantly among each level. Maximum custody only includes those serving sentences for severe crimes and/or those with a history of escape attempts. Most inmates are classified as medium custody upon entry. A custody level (Minimum Inside Only), unique to the USDB, exists between medium and minimum levels. At this level, inmates may enjoy minimum-custody privileges inside the facility, while movement outside the facility requires them to undergo medium-security measures. The Trustee Unit houses those reporting to work and other responsibilities without supervision.

Officially, control at USDB is to be achieved with the least amount of force possible, with correctional training as the ultimate goal. Military prisons experience lower rates of internal violence than do its civilian counterparts. A Discipline and Adjustment Board (D&A) is used to maintain discipline in the USDB. The board reviews aspects of each alleged violation of institutional rule or of the UCMJ. Disobedience, rule violations, threatening conduct, and staff harassment are the most frequent offenses appearing before the D&A.

INMATE POPULATION

The inmate population at the USDB has changed significantly in the past century. For most of the 20th century, the most common offenses for which sentences were being served were desertion, fraudulent enlistment, larceny, and assault. By 1996, however, fewer than 1% were serving sentences for traditional military offenses, and a great increase was evident in crimes against persons. Patterns in sentencing length have also changed dramatically. In the mid-1990s, the USDB facility operated at 80% capacity. As in civilian prisons, a steady increase began in 1979 and continued into the early 1980s. This expansion was due, in large part, to the change in average sentence length of those housed at the USDB, where the minimum was six months in the early 1980s and reached five years in 1994. By the late 1990s, the average sentence length had increased to 13.4 years. Inmates serving sentences at all military correctional institutions, however, are not likely to serve the entire term. Good conduct time (GCT), work abatement (WA), or special abatement (SA) in addition to clemency and parole can contribute to shortening the confinement stay.

As of 1999, the majority of all prisoners under military jurisdiction were white (non-Hispanic) (1,262 out of the total 2,279 prisoners) with the next most represented ethnic group black (non-Hispanic) inmates (674). The same year, the total inmate population included only 84 females. This inmate population is different than that of the average civilian prison, in that prisoners are older, more educated, and most often, first-time offenders. The number of inmates awaiting death by lethal injection as of the mid-1990s was under 10.

MILITARY CORRECTIONAL PROGRAMS

Title 10 of the United States Military Code requires that all correctional facilities include educational, training, and rehabilitation opportunities. Programs offered in the Military Corrections System vary across facilities according to service. The mission of military corrections is one of rehabilitation, not punishment, at every stage, from reception to release.

The most extensive correctional training program of all the facilities in the military corrections system is found at the USDB, where the motto is "Our Mission: Your Future." The Directorate of Training is divided into two divisions: academic and vocational. Few inmates are in need of basic education courses

and can take a relevant course as needed; a higher education program option is available. In fact, the average inmates can expect to increase their academic level up to two grade levels with participation in this program. The Vocational Division includes 15 programs wherein a significant portion of the labor products benefits the military in some way. In addition, a large farm with animals and crops acts as a place of work for minimum-security inmates. Finally, counseling programs meant to prepare inmates for reintegration upon release, including job preparation and other workshops, are available. A work-release program, started in November 1970, operates to aid in this process and has shown to be successful. To participate, the inmate needs only to be classified as minimum security and be within two years of parole eligibility. The type of crime for which the individual is confined is irrelevant for eligibility in military work-release programs.

Finally, at the USDB, inmate treatment programs and correctional psychological research projects are the basis of the Directorate of Treatment Programs (DTP). The DTP is divided among three divisions: Treatment Planning, Rehabilitation, and Mental Health.

THE CASE FOR AND AGAINST A SEPARATE MILITARY SYSTEM

To its critics, the military corrections system no longer serves the same unique purposes for which it originated. Restoration-to-duty rates have declined significantly since the Vietnam conflict. This is due both to restrictions of eligibility as well as the ease at which new military personnel may be recruited from the community. Goals of decreasing military crimes have long since been reached, leaving less differentiation between civilian and military sentenced criminals.

For its supporters, however, military crimes not acknowledged by state and federal penal codes need a place for enforcement, and the assembly of military populations would prove useful should military need arise in a time of crisis. Finally, low rates of prison violence, the absence of overcrowding, and lower recidivism rates demonstrate that greater knowledge of the management of military prisons may provide valuable information toward the improvement of civilian correctional facilities suffering from those problems.

CONCLUSION

The military corrections system holds criminal offenders obligated to a given military jurisdiction. While it shares some qualities with other penal systems, particularly the federal one, it is unique in many ways. Criminological research on this part of U.S. corrections is sparse, since access is often denied to anyone not associated with some part of the armed forces. As a result, it is difficult to know whether military prisons are effective, humane, or even completely necessary.

MILLER, JEROME G. (1931–)

Jerome G. Miller has served as a corrections administrator, reformer, and advocate in the United States since the 1970s. Best known for closing the juvenile reformatories in Massachusetts in the early 1970s, he also established and directs the National Center on Institutions and Alternatives and has written two influential books: *Last One Over the Wall: The Massachusetts Experiment in Closing Reform Schools* (1991) and *Search and Destroy: African-American Males in the Criminal Justice System* (1997).

Educated as a psychiatric social worker, Jerome Miller spent 10 years as a clinician in the U.S. Air Force. This experience, together with training in the therapeutic community concepts of Maxwell Jones, greatly influenced his view of institutionalization and care. After a stint as a social work professor at Ohio State University, he received an unexpected appointment as commissioner of youth services in Massachusetts in 1969. It provided him the opportunity to put into practice his progressive views of juvenile institutionalization.

THE "MASSACHUSETTS EXPERIMENT"

The customary difficulties of providing humane and effective treatment in coercive institutional settings stood in the way of Miller's reforming the juvenile facilities. He also encountered major political and bureaucratic obstacles in his attempts to move the reform schools in the direction of the therapeutic community ideal. He benefited, however, from strong support from Governor Francis Sargent, who very much wanted juvenile correctional reform. In addition, Miller found some talented and supportive staff and a lack of preparation and coordination on the part of his foes. Most of all, he was willing to take risks and to sacrifice his appointment if necessary. Both of these characteristics became necessary after he systematically closed all of the state's reformatories.

In 1970, after a year of thwarted efforts to transform them, Miller abruptly began closing the state's reform schools. In March 1972, he and staff closed the Lyman School for Boys, the seventh and final of these institutions. The previous residents of these institutions were not to be forgotten. Instead Miller had developed networks of community-based services throughout the state that were designed to help those who had been released from the institutions. Meant to address a variety of youth needs and to allow for flexible responsiveness in programming, these community-based services ranged from advocacy and mentoring through alternative education and vocational training to foster care and group homes. A residential psychiatric unit housed the small proportion of youth requiring such intervention.

Contemporaneous and subsequent research indicates the effectiveness and appropriateness of the Massachusetts Experiment. The state experienced no significant increase in serious juvenile delinquency. The most developed local systems of care more adequately met youth need without inflicting the harms associated with incarceration. Today, more than 30 years after this major project in juvenile corrections deinstitutionalization, Massachusetts continues to have one of the nation's lowest levels of juvenile institutionalization.

CAREER AFTER LEAVING MASSACHUSETTS

In 1973, Miller accepted an appointment as director of the Illinois Department of Children and Family Services (IDCFS). At about the same time, Governor Daniel Walker appointed David Fogel, a progressive from California by way of Minnesota, as director of the Illinois Department of Corrections (IDOC). As friends and allies, Miller and Fogel came as a package deal with a plan to reform youth services and juvenile corrections in a significant way. The plan, endorsed by the governor, who viewed it as a centerpiece for his administration, would transfer the juvenile division of IDOC to IDCFS. Miller then would establish something like the Massachusetts Experiment, closing juvenile reformatories while developing networks of community-based services for youth. Fogel would concentrate on ensuring that adult prisons operated constitutionally and that field services focused on effective reintegration of former prisoners into their communities. The plan fell apart when the Illinois Senate defeated Fogel's

nomination, due to an unrelated battle between Walker and Chicago's powerful mayor, Richard J. Daley. Subsequently, Miller found himself stymied in intended major reform efforts. As he succeeded in overseeing implementation of the more modest Unified Delinquency Intervention Services (UDIS) project, he became enmeshed in various child welfare controversies and left the state in 1976.

Subsequently, Jerome Miller became commissioner of children and youth in Pennsylvania, where his efforts contributed to removing a thousand youths from adult prisons. He cofounded the National Center on Institutions and Alternatives, which has advanced client-specific sentencing advocacy, and where he serves as clinical director of its Augustus Institute. He also has served as a jail and prison monitor in Florida, under federal court appointment, and as receiver of the District of Columbia's child welfare system.

MINIMUM SECURITY

"Minimum security" refers both to those prisoners who pose the least risk of harm to the public as well as to the institutions in which they are housed. Minimum-security prisoners are typically afforded greater freedoms than their counterparts with greater custody classifications; they may be placed in facilities without perimeter barriers, and they often have limited access to the community. Minimum-security prisons have lower staff-to-inmate ratios. The low level of risk to public safety that minimum-security prisoners pose has led many to argue about whether it makes sense to incarcerate such offenders or instead whether they should be placed in the community with structured supervision and support.

CLASSIFICATION CONSIDERATIONS

Factors that weigh in security designation and custody classification vary among correctional systems. However, a minimum-security inmate is typically an offender who presents (1) with no or an insignificant prior criminal record; (2) with no history of violence, particularly no recent threatening or assaultive behavior; (3) with no history of escape or escape attempts; (4) with no gang or organized crime affiliations; and (5) with no outstanding detainers. Other considerations that can affect an inmate's classification include the seriousness of the offense for which the term of imprisonment is being served, the inmate's age and gender. Younger inmates are viewed as more prone to violence and disruption, while women are thought to be generally less aggressive and, therefore, more secure than men. Also, a person's education level, employment history, and the length of sentence to be served are taken into account. Better-educated inmates and those with a stable employment history or shorter sentences to serve are all seen as more reliable.

While the existence of one of the foregoing risk factors can alone preclude minimum-security designation, most classification systems recognize the need for graduated measures that allow for subjective judgments. In other words, correctional officials review classifications on a case-by-case basis. All the elements are added, resulting in a final rating. Correctional officials managing thousands of individuals in volatile settings tend to err on the side

of caution and place prisoners in higher-security institutions should there be any question about potential risk of harm to staff or other inmates.

Because, as noted previously, women are considered to be safer than men, many correctional systems employ separate standards for classifying female inmates. It is thus more likely that a female prisoner will be housed at a minimum-security institution than a similarly situated male. In contrast, non–U.S. citizens are often ineligible for minimum-security placement regardless of their respective backgrounds due to immigration consequences of their convictions and related detainers placed by the U.S. Immigration and Customs Enforcement (ICE) to secure attendance at removal hearings. Indeed, many foreign prisoners are released to ICE custody after completing their sentences only to be held indefinitely pending a removal hearing and deportation should it be so ordered.

HOUSING

Minimum-security housing varies depending on a correctional system's structure and available resources. As an example, some jurisdictions permit the placement of low-risk offenders sentenced to short terms of confinement (e.g., 18 months or less) in community-based facilities, such as halfway houses or work release centers. Such places afford opportunities for daily release into the community to attend to employment, medical, religious, or other obligations. In them, offenders may only leave the institution for preapproved activities and times and are otherwise confined.

However, the most common form of minimum-security confinement is the prison camp, a correctional institution that employs less rigorous supervision over inmate activities and movement than traditional prisons (e.g., penitentiaries). Consistent with the understood level of risk, there are generally fewer perimeter security measures in place at camps, such as fences or walls, fewer patrol officers and towers, and prisoners bunk in either open cells or dormitories instead of locked cells. Work assignments regularly entail duties away from the institution, such as landscaping government property, and minimum-security prisoners might be afforded access to a wider range of rehabilitative programming. For instance, in some correctional systems, an inmate must be classified as minimum security to participate in a boot camp program—a physically rigorous, shortened period of incarceration for offenders perceived as lacking life structure or discipline.

Irrespective of whether it is a camp or work release center, minimum-security housing is designed to promote change in individuals by teaching to them live independently while respecting the rights of others. Accordingly, minimum-security inmates are still subject to most of the same rules, regulations, and policies that govern a correctional system as a whole. Rules violations, disruption of institutional operations, and threatening behavior toward staff or other inmates can result in a minimum-security prisoner's brief period of detention within an administrative segregation unit (i.e., solitary confinement) or transfer to a higher-security institution. Conversely, higher-security inmates who demonstrate positive institutional adjustment through program participation, infraction-free conduct, or contributions to the institution or inmate population can achieve reductions in classification that lead to minimum-security placement and preparation for eventual release. Ultimately, minimum-security placement is considered a gateway toward community reintegration.

MINIMUM SECURITY FACILITIES IN THE FEDERAL PRISON SYSTEM

The Federal Bureau of Prisons has a number of minimum-security prison camps (FPCs) as well as three intensive confinement centers (ICCs) in Lewisburg, Lompoc, and Bryan. Reflecting their security classification, most of these facilities have no fences, and there is a low staff: inmate ratio. To be admitted to an ICC, prisoners should have either no history of incarceration or only a minor one and must agree to participate in a six-month program that is tailored to each inmate. These centers are like boot camps and have limited amenities. Drug treatment is a prominent part of the daily routine.

Usually, a term of confinement in one of these institutions is followed by some time in a ICC.

In contrast to those housed briefly in ICC, residents of prison camps may stay there for many years. Individuals may be either sent to the camps directly from the court or transferred from other higher-security facilities. They are usually housed in open dormitories. Though there is more freedom of movement in these institutions, they generally offer fewer opportunities for education and recreation because they are primarily work-oriented institutions. This is particularly the case for those prison camps located next to higher-security facilities. In the federal correctional centers (FCCs), which the bureau has built since the 1980s, camps are merely part of a series of other institutions, including correctional institutions and penitentiaries. Some prisoners argue that in this arrangement the inmates of the prison camp lose out since "the camp plays second fiddle to the needs of the bigger sister with regard to staff, supplies, requests, and recreational facilities" (Tayoun, 1997, p. 17).

THE CASE FOR AND AGAINST MINIMUM-SECURITY FACILITIES

Critics of minimum-security institutions deride them as insufficiently punitive "country clubs" that are more akin to college than the retributive desire for harsh penalties. Such objections are grounded in unsubstantiated concepts of deterrence that equate the severity of punishment with lower recidivism rates. Indeed, in recent years, states facing budget shortfalls have approved the release of large numbers of minimum-security prisoners, given the estimated annual cost—$22,000—to house and care for a single minimum-security prisoner.

There is a growing call to keep nonviolent, first-time offenders (i.e., minimum security) in the community. Structured community-based sanctions, such as day reporting centers, weekends in jail, house arrest, and community service, provide meaningful, cost-effective punishment while accounting for an individual's background. When an otherwise minimum-security prisoner is kept in the community, there is greater opportunity for treatment, training, and satisfaction of restitution and court costs with an associated reduced drain on taxpayers.

CONCLUSION

As growing numbers of states face deepening fiscal crises and as state and federal prisons become increasingly overcrowded, the treatment of minimum-security prisoners and the form and purpose of minimum-security prisons are being reevaluated. At the same time that people are calling for changes in policy that would enable certain minimum-security inmates to serve out their sentences in the community, minimum-security prisons are increasingly being asked to hold well-behaved offenders with higher security levels in order to reduce the pressure on other institutions. What the long-term effects of these two changes will be is, as yet, unclear.

MORRIS, NORVAL RAMSDEN (1923–2004)

Norval Morris was one of the world's preeminent legal scholars, criminologists, and penal

reformers. His work on prisons, sentencing, punishment theory, and mental health continues to be influential in both academic and public policy realms.

BIOGRAPHICAL DETAILS

Born in Auckland, New Zealand, in 1923, Morris received his law degrees at Melbourne University and a PhD in Law and Criminology at the University of London. He held several academic posts before serving as the Japan-based Director of the United Nations Institute for the Prevention of Crime and Treatment of Offenders from 1962 to 1964. From 1964 until 1994 Morris was on the faculty of the University of Chicago Law School. He served as Dean of the Law School from 1975 to 1978.

For more than 50 years, Morris worked to advance both the theoretical understanding of his field and to further its effective practice by teaching and mentoring generations of lawyers, policy makers, and scholars. He provided counsel to various components of the criminal justice system, including acting as a federal court's Special Master concerning issues of protective custody at Stateville Penitentiary (Illinois), and serving for more than 25 years on the Advisory Board of the National Institute of Corrections (and as chairman from 1986 to 1989).

EARLY WORK

Morris began his academic career exploring the question of recidivism. He expressed concern about preventative detention and the relevance of prison behavior to the prison release decision. He ultimately asserted that "at the time of sentencing as good a prediction as to when the prisoner can be safely released can be made as at any later time during confinement" (Morris, 2001, p. 186). In the 1950s, Morris also addressed the problem of unjustified sentencing disparity, and argued in favor of systematic, scientific studies on questions of crime and punishment, an approach that was not widely followed at the time.

THE DEVELOPMENT OF PENAL GOALS

Morris was one of the early advocates for punishment limited by principles of just desert. According to him, *desert* is "an essential link between crime and punishment. Punishment in excess of what is seen by that society at that time as a deserved punishment is tyranny" (Morris, 1974, p. 76). While Morris has contended that equality should merely be a guiding principle in part because of finite resources, he has strenuously argued that desert is a limiting principle—an absolute requirement—of just punishment. The punishment must be deserved, or, in Morris's term, it must be within the range of potential punishments that are not undeserved. To further determine an appropriate sentence, Morris has suggested following the concept of parsimony, which requires that the "least restrictive (punitive) sanction necessary to achieve defined social purposes should be imposed" (Morris, 1974, p. 59).

Despite his rejection of rehabilitation as a justification for imprisonment, and contrary to much of the scholarly and political rhetoric of recent decades, Morris repeatedly argued that rehabilitative programs remain crucial to both the theory and practice of incarceration and other sanctions. The important point is that such programs should be voluntary and should not be used to increase the length of an inmate's sentence.

In conjunction with his views of desert, Morris explored the proper role of predictions of dangerousness in the law, particularly in setting a defendant's sentence. Initially he believed that predictions could not properly be considered at sentencing, although he later came to argue that there was a narrow but legitimate purpose for predictions of dangerousness. Morris asserted that predictions of dangerousness cannot justify a more severe punishment than would be permissible without such a prediction. Yet within the array of punishments that satisfy the limiting principle of just deserts, Morris reasoned that reliable predictions of substantially greater than typical dangerousness may appropriately alter sentencing determinations. Morris investigated the relationship between law and mental illness, both in terms of criminal responsibility and sentencing. He

objected to the amalgamation of the criminal justice and mental health systems, and strongly criticized various legal approaches to the mentally ill defendant, including the insanity defense.

Never content with isolated abstract arguments, Morris also described how a prison for recidivist criminals might be structured. The Federal Bureau of Prisons designed the programming and management at FCI Butner, North Carolina, based on Morris's description.

RETHINKING PENALTIES AND PRISON

In the 1990s, Morris turned his attention to the question of intermediate punishments. He and Michael Tonry argued that both prison and probation were overused and that a gap existed between those punishments:

> We are both too lenient and too severe; too lenient with many on probation who should be subject to tighter controls in the community, and too severe with many in prison and jail who would present no serious threat to community safety if they were under control in the community. (Morris & Tonry, 1990, p. 3)

Morris also used his skill as an author and stylist to confront basic problems of crime and punishment, and to bring these questions to a broader audience. In his classic work *The Brothel Boy and Other Parables of the Law* (1996), he brought to life the fictional Burmese experiences of police officer and magistrate Eric Blair, who later gained fame as the author George Orwell. Morris created engaging stories set in 1920s Burma built around challenging legal and moral questions of criminal and mental health law.

CONCLUSION

Morris continued to produce provocative works until he died. Such works included *Maconochie's Gentlemen* (2001), which uses a quasi-fictional form to study the emergence of the modern prison in the 1840s on Norfolk Island, 1,000 miles off the Australian coast. Morris's rich and subtle punishment theory—skeptical about state power, modest in its claims about society's ability to effectively redress criminality, yet hopeful with respect to the human character—permeates the book, and has informed much of his work. "Punishment may avenge, and restraint may, to a certain limited extent, prevent crime; but neither separately, nor together, will they teach virtue" (Morris, 2001, p. xx).

MOTHERS IN PRISON

The female prison population in the United States doubled during the 1990s and is continuing to rise. This increase affected minority women disproportionately, with black and Hispanic females far more likely than whites to be in prison. Two-thirds of the women in prison have one or more minor children. By the end of 1999, more than 53,000 mothers of minor children were incarcerated in state or federal prisons. This resulted in approximately 126,000 minor children with a mother in prison in 1999, almost double the number in 1990. Twenty-two

percent of the children with a parent in prison were under five years old.

Unlike prisoner fathers, mothers in prison were often living with their children immediately prior to incarceration. In 1997, nearly 65% of the mothers in prison reported living with one or more of their minor children prior to their arrest. In the federal prison system, about 63% of women prisoners reported one or more minor children in the home prior to incarceration. As a result, in 1999 there were more than 35,000 women incarcerated who had resided with their children prior to arrest. Minority women and their children are particularly affected by the high incarceration rates of women. In state prisons, nearly half of the incarcerated parents were black, and nearly 1 in 5 were Hispanic. In the federal system, 44% were black, and 30% Hispanic. Several important issues have arisen as a result. The problems include placement of the children, contact between the prisoner mother and her children, the effects on the mothers, and the effects on the children. Furthermore, pregnancy during incarceration is becoming an increasing issue. A growing number of women enter prison pregnant, with some children born while they are incarcerated. Finally, some programs are being developed to address the problems of mothers in prison and their children.

PLACEMENT OF CHILDREN

Because nearly two-thirds of prisoner mothers lived with one or more of their minor children prior to incarceration, placement of the children is a serious issue. Almost half of the mothers in prison were the only parent in the home prior to arrest, and almost one-third of them lived alone with their children prior to incarceration. The children, therefore, must be placed in another household or setting.

While the children of prisoner fathers usually remain with the other parent during incarceration, the majority of children of prisoner mothers do not. The father becomes the caretaker in only about 1 out of 4 cases. Instead, the most common placement of these children is with the prisoner's family, usually with her relatives. The prisoners' parents are most likely to become the caretakers, and siblings are the second most likely. On average, women in state prisons have 2.38 children. In many cases, the children are separated from each other as well as from their mothers. Additionally, they may be moved from one family member to another during the course of the mother's imprisonment. Most incarcerated mothers hope to resume their parenting responsibilities upon release. However, when children are placed in foster care or state custody, it is not uncommon for parental right to be terminated. Therefore, mothers in prison try to avoid nonfamily placement, fearing permanent loss of custody.

CONTACT BETWEEN INCARCERATED MOTHERS AND THEIR CHILDREN

The majority of incarcerated mothers report regular contact with their children. There are three common forms of interaction: telephone calls, mail, and visits. Approximately 60% of mothers in prison report weekly communication with their children, and nearly 80% report monthly contact. The most common form of contact is through letters. Telephone calls are also common. Visiting is the least common method of staying in touch, with only 24% of prisoner mothers reporting monthly visits from their children, and more than half reporting never receiving a visit from their children.

Writing letters to children helps maintain family bonds. However, many of the prisoners' children are under the age of five. For the youngest, letters may not be an effective way to preserve their relationship with their mother. Telephone contact is the next most common form, with nearly 40% of the mothers in prison reporting weekly telephone contact. However, since prisoners must call collect, the toll charges may be prohibitive, and it may be difficult for the mother to call at times convenient for the family.

Prison visits are the least common form of mother-child contact. Visiting is often problematic because of the locations of women's prisons. Because of the smaller number of women prisoners compared to men, there are fewer women's prisons. These are frequently located in remote areas. Therefore, a woman is often incarcerated at considerable distance

from her family. In fact, most are housed at least 100 miles from where they lived prior to incarceration. Women in some states are warehoused in prisons located in other states, creating further difficulties. Visiting is difficult, due to the cost and the time involved. Furthermore, some women do not want their children to see them in prison and discourage visits. However, maintaining the mother–child relationships increases the mental health of both the mothers and the children. Children who are able to visit their mothers are more likely to be able deal with their separation anxiety as well as their fears for their mothers' safety. Furthermore, successful reunification after the woman's release is enhanced by ongoing contact. With less contact, the relationship between the mother and the child weakens, creating problems upon release.

EFFECTS ON THE MOTHERS

Separation from children may be linked to depression in mothers in prison. For many of them, the maternal role is one of few positive roles available. Self-esteem is decreased by the disruption of the relationship. Prisoner mothers may try to minimize emotional pain by distancing themselves from their children, further straining the relationships.

Mental health services for women in prison are limited. The majority of administrators indicate a need for increased mental health services in women's prisons, particularly programs designed to increase self-esteem. There are also some counseling programs available for women to help them deal with separation from their children. However, screening and assessment of women prisoners is frequently accomplished using instruments designed for men, resulting in the needs of women prisoners being overlooked. Few correctional facilities assess the need for counseling related to separation from their children.

EFFECTS ON THE CHILDREN

When a mother is incarcerated, the family unit is disrupted. Children are separated from their mothers and often from their siblings. Furthermore, the relationships of children and their mothers become strained. Children may fear for their mothers' safety, and depression is a common reaction in all age groups. School attendance and performance is frequently affected as well, often resulting in older children dropping out of school. Finally, the children of imprisoned mothers may engage in law-violating behaviors themselves, resulting in arrest and punishment. While the mothers may receive some mental health services while in prison, most states do not provide services for the children of incarcerated parents or for their caretakers.

Placement of a minor child with the mother's family, while usually the mother's preference, may not always be in a child's best interest. The majority of women prisoners have histories of physical and/or sexual abuse. Therefore, children who live with family members of the prisoner may be placed in potentially abusive situations. Furthermore, the additional responsibility of the child or children adds to the economic and emotional strain on families that have limited resources. Some research has suggested that nonfamily placements are associated with higher-quality care, both material and emotional. However, fear of loss of custody leads women to place the children with family, despite the potentially negative consequences.

PREGNANT PRISONERS

More than 5% of women prisoners are pregnant at the time of incarceration, with nearly 1,400 children born to incarcerated mothers in the United States in 1998. Pregnancies in prison are frequently high risk, due to the lifestyles of the women prior to incarceration. Homelessness, poverty, substance abuse, and histories of abuse all increase the potential for problematic pregnancies and births. Moreover, few prisons have the specialized types of care needed to ensure good birth outcomes.

Pregnancy may increase the stress faced by prisoners. In addition to the difficulties of incarceration, the pregnant prisoner must deal with the impending separation from her child, ill-fitting prison uniforms, and decisions about placement of the child. Additionally, her health care will be limited. Often

the pregnant prisoner may be placed in a maximum-security prison, regardless of her own security level, because of the need for medical care. Furthermore, only 15% of state prisons provide a special diet for pregnant prisoners.

Despite these problems, birth outcomes for pregnant prisoners are often better than for those whose children were born outside of prison, since incarcerated women may receive better medical care than they received on the street. Slightly fewer than half of the women's prisons in the United States offer specific prenatal care services, while another 40% provide prenatal services from community agencies. Women who were homeless or living in poverty prior to prison at least have shelter and adequate nutrition in prison, further increasing the likelihood of a positive birth outcome. Alcohol and drug consumption is less likely as well. Thus, the reduction in risk factors can contribute to better birth outcomes for both the mothers and their infants. Prison policies differ in regard to delivery of the infant. In most prisons, the mother is transferred to a local hospital to deliver. Policies concerning restraint of pregnant prisoners vary. In some states, it is illegal to shackle a pregnant prisoner during the move to the hospital for birth. However, in other states, restraints are allowed during the transfer, and in some states they are even used on pregnant prisoners during labor and delivery. In most jurisdictions, the policy is to use the least restrictive measures allowable in the situation.

Policies also vary concerning the contact allowed between the prisoner mother and her newborn. In some jurisdictions, virtually no contact is allowed. The mother may see the infant briefly at birth, then not again until after release. More commonly, the mother may spend time with the infant until she is discharged from the hospital, usually 1–2 days. Finally, some jurisdictions allow the mother to keep her infant with her in prison for about 18 months.

PROGRAM NEEDS AND AVAILABILITY

Mothers in prison and their children have special needs. In a number of prisons, programs have been developed to address those needs. Since the goal of most mothers is reunification with their children after they are released, institutions usually try to deal with the problems faced by prisoner mothers, including development of parental skills, substance abuse treatment, and life skills development. In a recent study, prison administrators reported a need to increase available mental health services for women prisoners, including parenting programs designed to strengthen the women's nurturing and discipline skills.

While there are some mental health services available for mothers in prison, fewer are available to their children and the children's caretakers. A few programs have been developed to ensure that the children are given needed treatment, although they are limited. Substance abuse is also a problem. Mothers in prison are likely to have serious drug abuse histories. More than half the mothers in state prisons reported drug use in the month prior to incarceration, and only slightly less than half committed their offense while under the influence of drugs.

Lack of contact between mothers and their children is another problem, leading to the development of programs to increase mother–child contact. In some locales, transportation is provided to the prison by either the state or a community or church organization. Other prisons have introduced innovative programs utilizing computers to allow "virtual visits." Others have mother–child programs to increase contact, including programs such as "Girl Scouts Beyond Bars" and family visits. In a few correctional systems, programs have been put into place that allow overnight visitation between mother and child. The most innovative programs for mothers in prison are those that allow the children to remain with the mother. The most well-known program, Bedford Hills Correctional Facility Children's Center in New York, not only allows infants to remain with the mothers the first year but also teaches the mothers parenting skills. This program also provides services to children outside of the program and facilitates visitation. The program utilizes prisoners as peer counselors to increase its effectiveness. Eleven states and the Federal Bureau of Prisons have instituted programs that allow

infants and mothers to remain together from 3 months to 18 months after birth.

Finally, there are a few innovative programs that assist in the reunification process. The Women's Prison Association in New York City has a multiphase program that starts with visiting. When the mothers are deemed ready, the children join them in a halfway house setting, where both mothers and children receive services. Finally, the program assists the family with obtaining housing, employment, and social services. They receive follow-up services for one year after completion of the program. Other jurisdictions have implemented community-based programs that allow mother and children to remain together as an alternative to incarceration.

CONCLUSION

While mothers in prison face a wide range of problems, some programs are being instituted to address those problems. The most effective programs are those that deal with multiple issues in a holistic fashion. Successful reunification of mothers and their children is a difficult task. However, through addressing underlying mental health issues, substance abuse issues, life skills, and parenting skills, the chance of success is increased.

MUSIC PROGRAMS IN PRISONS

Music programs are used in prisons as part of the rehabilitation process. Advocates point to the therapeutic nature of music, the positive outlet of energy, and the stimulation of the creative processes as reasons to support the continuation and proliferation of music programs. Music programs emphasize cooperation and provide a skill that can be used outside of prison—if not as a source of income, then as a productive hobby.

PROGRAM CONTENT

Music programs have traditionally been offered in all kinds of facilities, from lower-security to maximum-security places like Angola and San Quentin. Prison music includes music lessons, playing and performing in groups or bands, and the opportunity to make recordings and/or perform live on radio and television. Historically, prison bands existed in many states in the early 1900s. Today, prison groups and bands sometimes travel outside the prison to perform in parades and at local festivals; others are limited to performing inside the institution for their convict peers only. They have played at rodeos in Texas and still perform at Louisiana's Angola Rodeo. Instruction varies from hiring professional

music instructors to volunteers to prisoner teachers. At Angola, Louisiana, in the 1970s, Charles Neville of the Neville Brothers had full-time work duty in the music room as a convict music teacher.

Music programs can be part of larger overall arts programs that include theater, dancing, and painting, while sometimes they are part of other self-help groups organized by the prisoners themselves. They also can be free-standing music programs and/or part of the prisons' recreational program.

SUPPORT FOR PROGRAMS

Art and music program advocates believe that such classes restore a sense of humanity and safety that is vital to rehabilitation. The sense of completion and of contribution to the creation of something that society values can help inmates increase their self-esteem and recapture a sense of pride and satisfaction in themselves and their work. Other benefits can include relearning responsibility and discipline through individual and group practice and performance. As part of an all-around rehabilitation program, Superintendent Fred Jones appointed Wendell Cannon as Parchman's first director of music in 1960, although prison bands had existed at Parchman, Mississippi, since the 1940s. Cannon was empowered to exempt his choice of convict-musicians from the field and thus lured the black convicts into the music program; only white convicts had participated in the prison bands to date.

Music and art programs also have been shown to reduce recidivism rates. They provide an alternative to traditional education programs, to which inmates who have had negative experience with schooling in the past may be averse. The open structure of these programs also helps them bring together diverse groups of individuals from different racial, ethnic, geographical, and class backgrounds into a harmonious cooperative atmosphere. As part of a multifaceted program to promote tolerance and mutual respect among its inmates, Ohio's Marion Correctional Institution created "Music in the Air." One successful participant of a music program observed, "I traded a pistol for a trumpet!" Music programs have even been used as a form of psychotherapy to develop the relationship between the therapist and the client. Therapists believe that music can help individuals who would otherwise have a difficult time expressing themselves. Evaluation of a music therapy program implemented in a female correctional facility concluded that music therapy reduced tension and anxiety while also increasing motivations and ties with reality for the women convicts. Art and music programs have also been used in the treatment of sexual offenders against children.

Examples

Goals other than rehabilitation prompt prison systems to create music programs. In the late 1930s, the Texas radio program, *Thirty Minutes Behind the Walls* was created to gain favorable publicity for the prison system and to offset the negative publicity surrounding a recent rash of escapes, beatings, and gun fights within the prison. Not only male prison systems initiate music programs. Women prisoners at the Goree, Texas, prison farm for women created a band in the early 1940s because they believed that they might get the attention of then-Governor O'Daniel and be able to play their way out of prison. The women not only performed at rodeos and on the prison radio program; the "Goree Girls" also traveled extensively around the state. None of the women were paroled out of prison because of their singing abilities, but the notoriety of the prison radio show certainly declined when the last and most popular member of the band was paroled in 1943. By 1944, the prison radio show was no more.

Some states provide funding for prison music programs; in others, funding may be left to private foundations that support the arts and have an interest in correctional facilities. Prominent foundations and groups include "Art Behind Bars" in Florida and "Irene Taylor Trust" in England. Inmates have even requested to be transferred to prisons with well-known music programs, including the State Correctional Institution Graterford in Pennsylvania. At this prison, inmates are graded and must receive at least a C in order to get credit as a student in the music program.

Drawbacks

One drawback to music programs is the potential they may provide for smuggling contraband into the prison. In the past, for example, SCI Graterford experienced increased violence and drug overdoses that led to a temporary suspension of the program. Another current stumbling block has to do with negative publicity over such programs, which are viewed by many critics as being "soft" on criminals. A recent VH1 television series that highlighted various states' music programs, *Music Behind Bars,* brought such negative publicity from victims' family members and Bill O'Reilly of *The O'Reilly Factor* that Pennsylvania's Governor Schweiker canceled all prison music programs for murderers in Pennsylvania.

Less controversially, there can be a problem of consistency. Since prisoners are frequently moved from one institution to another during their confinement, they may find that they are unable to continue studying or playing music if they are moved to an institution that does not provide the necessary equipment. Accordingly, music may become yet another source of prison frustration rather than rehabilitation. Even with such positive support for prison programs, musical instruments are expensive and are often difficult to obtain and maintain. Access to them can become a problem for security. Finally, by definition, prison music programs operate as part of the overall system of social control that conflicts with goals of rehabilitation. Prisoners' ability to participate in such programs is not based simply on talents but on one's "good" prison behavior, and in Pennsylvania, the nature of one's crime. "Dark Mischief," one of the current bands at Graterford, must perform regularly. If the convicts do not like the show, the men lose their playing privileges.

CONCLUSION

Music programs, at least in the form of bands, have existed in prisons throughout the country since the early 1900s. Music programs offer a constructive and creative rehabilitation method for the correctional industry. While some may view these types of programs as a luxury that prisoners do not deserve, research supports their positive effects. As long as funding is available, either through the government or private foundations, music programs will continue to offer a piece to the rehabilitation puzzle. However, correctional budgets are being cut in many states across the nation, and prison music programs are suffering. Many bands do not travel anymore, instruments are not repaired, and music rooms are closed in an effort to cut costs.

N

NARCOTICS ANONYMOUS

Offenders with substance abuse problems make up a minimum of 75% of the U.S. inmate population. Despite this alarming figure, currently fewer than half of U.S. prisons offer targeted substance abuse programming. Those programs that are offered most commonly include self-help programs such as Narcotics Anonymous. Narcotics Anonymous (NA) is a nonprofit organization made up of recovering addicts who meet regularly to support one another in the recovery process. The NA program developed from the Alcoholics Anonymous framework in the late 1940s. The organization grew slowly through North America until the 1980s, when they published their *Basic Text,* which became highly influential. The NA program is centered on complete abstinence from all drugs, although anyone with the desire to stop using may participate.

PROGRAM FRAMEWORK

Narcotics Anonymous is based on the premise that addicts are in the best position to help others through the process of substance abuse recovery. Peer support is considered key to reform; members can rely on others who have been through the same process to help them survive through cravings, deal with their emotions, and build a drug-free lifestyle. New members are encouraged to seek a more experienced person as a sponsor—an individual guide and counselor. Recovering addicts are guided through the recovery process by NA's 12 steps. Addicts must admit that they have a problem and seek help. The other parts of the healing process involve moving through self-examination, self-disclosure, making amends, and finally helping others with their addictions.

The 12 steps also require addicts to acknowledge God in their own terms, as a higher spiritual power key to the recovery process. NA has no religious affiliation; the emphasis is on bringing people to a spiritual awakening that is meaningful to them and on the adoption of a moral code of honesty and responsibility.

PROGRAM DELIVERY IN THE CORRECTIONAL SETTING

Narcotics Anonymous operates within the correctional setting through Hospitals and Institutions (H&I) meetings and presentations. Volunteers from the community, in cooperation with the facility, conduct these meetings and presentations. NA does not employ service delivery professionals; all volunteers are program members. H&I provides presentations introducing the principles of NA and sharing early recovery stories to inmates in short-term

(less than one year) facilities. In longer-term facilities, regular meetings with increased participation and sharing are encouraged as the recovery process takes place within the institution.

NA meetings are usually open discussions facilitated by volunteers. Members share their stories of relapse and recovery and receive support from their peers. Meetings do vary and may include, for example, guest speakers, a book study, or a focus on a particular topic of concern, such as dealing with drugs within the prison environment. The frequency of meetings depends on the availability of volunteers and space within the facility, but usually ranges from one to two meetings per week.

BENEFITS AND CONCERNS

Narcotics Anonymous programs are extremely low cost and require few facility resources to operate. Established NA groups can provide members with a subculture that is separate from the drugs, alcohol, and contraband within the institution. Unintentionally, however, they may also provide a concentrated source of potential clients for narcotics dealers.

ROLE IN THE TREATMENT CONTINUUM

The Federal Bureau of Prisons requires that nonresidential treatment programs be available in all institutions. However, 12-step programs such as NA do not qualify as nonresidential treatments under the Bureau of Prisons' classification; therefore they are usually accompanied by other treatment options. Although 12-step programs can be extremely powerful and successful for some inmates, they are not universally applicable and are best used in conjunction with more intensive interventions. Inmates may, for example, be required to attend NA meetings as follow-up to participation in treatment communities, detoxification, or counseling.

CONTINUITY THROUGH THE RELEASE PERIOD

One of the primary benefits of NA in the correctional setting is its continuity. Men and women approaching release are provided with meeting directories and phone numbers in order to establish contact with an NA group in the community. This outreach provides a source of familiarity and stability for inmates in the community while continuing the substance abuse recovery process. Members are encouraged to find a sponsor immediately upon release to provide an individual source of support through the transition period.

CONCERNS WITH SPECIAL POPULATIONS

The NA framework may be inapplicable or alienating to some prisoner groups. Most women with substance abuse problems have issues relating to self-esteem, emotional expression, and victimization that may interfere with or even be intensified by the open presentation and discussion process of NA. Members of minority ethnic or religious groups may feel alienated by the concepts of God and spirituality presented in NA literature. The required goal of freedom from all substance use may also prevent the participation of inmates with substance abuse problems who see abstinence as unattainable or unnecessary.

CONCLUSION

Narcotics Anonymous provides a low-cost option for a system in need of vastly increased substance abuse programming. The efficacy of NA alone as a solution to substance abuse among inmates remains contentious. However, evidence does indicate that NA can be an important contributing factor within a comprehensive substance abuse program. Support provided by the program within the institution and particularly throughout the release process can be a valuable part of the recovery and reintegration process.

NATION OF ISLAM

The Nation of Islam was established by Wallace D. Fard in Detroit, Michigan, during the summer of 1930. When Fard mysteriously disappeared three years later, Elijah Muhammad (nee Poole) assumed his position as spiritual leader. Under the direction of Muhammad, the Nation of Islam espoused a black separatist doctrine at odds with the integrationist aims of mainstream civil rights organizations. Muhammad prophesied that the imminent destruction of the white race would allow black people to claim their rightful inheritance to the Earth. Throughout its history, the Nation of Islam has drawn not only much of its grassroots support but also some of its most important leaders from the African American prison population.

ORIGINS OF THE PRISON MINISTRIES

The efforts of the Nation of Islam to recruit the support of black prison inmates occurred largely as a result of the Second World War. Opposing what it perceived as a war of white imperialist aggression, the Nation attempted to claim conscientious objector status for its members who were threatened with enlistment in the U. S. Army. In 1942, Elijah Muhammad was convicted with more than 60 other Black Muslims for draft evasion, and was sentenced to three years' imprisonment.

During his incarceration, Muhammad reflected on the failure of civil rights leaders to recruit support from the black prison population. Following his release in 1946, he set out to establish prison ministries across the United States. These ministries attempted to rehabilitate African American inmates through a process of physical and spiritual transformation. Prison converts were instilled with a strict moral code of discipline, abandoning drugs and alcohol and cultivating the habits of thrift and hard work. Their personal redemption was accomplished by cleansing themselves in body and in mind of the destructive influences of the ghetto. To encourage a new sense of purpose and belonging, prison converts were provided with employment at one of the Nation's temples upon their release.

The most famous prison convert to the Nation of Islam was a petty criminal called Malcolm Little. Malcolm experienced his spiritual conversion while an inmate at the Charleston Penitentiary in Massachusetts. By the time of his release in 1952, Malcolm Little had become Malcolm X, a name that symbolized the rejection of the Christian surname imposed on his forefathers by white slave masters. Malcolm's brilliant oratorical skills swiftly established him as the preeminent spokesperson of the Nation of Islam. His status as a reformed inmate made him an ideal role model for other prison converts to the Nation.

THE FREEDOM OF RELIGIOUS PRACTICE IN PRISONS

The prison outreach programs of the Nation of Islam have received numerous awards. Despite such accolades, the ministries have suffered persistent opposition from prison authorities. Officials often perceive Black Muslim inmates as potential risks to prison security because of their supposed incitement of racial hatred. Converts to the Nation of Islam are also said to create an administrative burden because they demand exceptional treatment, such as the provision of special diets, days of worship, and religious instruction from their own ministers. These tensions have resulted in Black Muslims becoming the targets of harassment, intimidation, and violence. In response, the Nation of Islam has taken legal action on a number of occasions to secure the

protection of its supporters' right to practice their religion under the First Amendment to the U.S. Constitution. Although the courts have not been entirely consistent, they have in broad principle established the freedom of religious practice in prisons.

CONCLUSION

Under the leadership of Minister Louis Farrakhan, the Nation of Islam launched a renewed prison recruitment campaign in 1984 with considerable success. It is not possible to determine the precise number of prison inmates who convert to the Nation of Islam, since the sect does not disclose statistics. More research is needed on the Black Muslims' prison ministries, especially their presence within women's institutions, a subject that has received scant attention from scholars. Prisons certainly continue to be a rich recruiting ground for the Nation of Islam. Although African Americans constitute only 13% of the total U.S. population, nearly half of all prison inmates in the early 21st century are black. The disproportionately large black prison population will likely continue to provide a fertile source of converts for the Nation of Islam.

NATIONAL INSTITUTE OF CORRECTIONS

The National Institute of Corrections (NIC) is a subdivision of the Federal Bureau of Prisons in the Department of Justice. The NIC was created in response to a keynote address by Justice Warren E. Burger to the National Conference on Corrections in Williamsburg, Virginia. Justice Burger suggested that an agency should be created to handle national training, promote research and knowledge, develop professional guidelines and standards, and facilitate the exchange of ideas in corrections. His recommendations led to the formation of the NIC in 1974.

Today, a director appointed by the U.S. Attorney General administrates the NIC in conjunction with a 16-member advisory board. The NIC also utilizes staff employed by state and local governments who are appointed for two-year periods. The NIC has two offices in Washington, D.C., and Longmont, Colorado, that coordinate training, technical assistance, policy and program development, and provide information to federal, state, and local correctional agencies. The NIC provides direct assistance in the form of training, program development, and information to adult correctional agencies and personnel. It does not work with juvenile correctional agencies, but it does collaborate with other federal agencies on juvenile corrections, sex offender programs, and the 1994 Crime Bill.

The NIC uses many strategies to meet the goals set forth by local, state, and federal correctional agencies. Jails, prisons, and community-based correctional agencies can utilize information provided by the NIC on planning and management services, education, training and professionalism, and program development. The NIC also provides research opportunities on programs and policies that improve the organizational structure and operation of correctional agencies. Finally, the NIC works to provide programming that holds offenders accountable for their actions, emphasizes public safety and the safety of inmates, and facilitates responsible behavior among corrections staff and inmates.

DIVISIONS AND SPECIAL PROJECTS

The NIC is divided into five divisions and four offices. The Academy Division is primarily responsible for training programs in leadership, management, and training for trainers. It trains local, state, and federal correctional staff in a variety of locations

throughout the United States and its territories. It also provides videoconferences and technical assistance in curriculum development and systems management.

Probation, parole, and community-based sanctions are the focus of the Community Corrections Division. This section of the NIC works with more than 2,500 probation and parole offices and 1,200 community residential facilities to promote diverting offenders from jail, to develop programs for high-risk offenders, and to investigate sentencing policies for female offenders. The Community Corrections Division is also involved in updating and facilitating the use of Interstate Compact for the Supervision of Parolees and Probationers and in providing publications on issues in probation, parole, and community treatment.

The NIC also contains a Jails Division that provides technical assistance to more than 3,000 local, state, and federal jails in the United States and its territories. The Jails Division's mission is to provide training, technical assistance, and resources in jail development, management, and operations. Its main areas are in administration, management of the facility and inmates, mentally ill inmates, the building of new jails, and working with local officials in the understanding of the importance of jails.

The Prisons Division operates in a similar manner to the Jails Division, providing technical assistance and training to more than 1,400 state prisons and 50 departments of corrections in the United States and its territories. Publications in areas of special interest to prisons are also developed within the Prisons Division. Some of the more recent Prisons Division publications include information on male sex offenders, classification and assessment procedures, prevention and detection of infectious diseases inside the institution, and overcrowding. The Prisons Division also produces handbooks for institution administrators on female offenders, staff management, health care issues, and substance abuse problems.

The last NIC division is the Special Projects Division. This office does not focus on one specific aspect of corrections but instead works to secure funding and cooperative relationships with other local, state, and federal governmental offices on all issues of interest to corrections. Some of the programs sponsored by the Special Projects Division include an assessment of children who have incarcerated parents, the planning and implementation of new juvenile facilities, mental health programs, and drug intervention programs. The Special Projects Division has also focused attention on women offenders in the criminal justice system in large part because of the dramatic growth of the female population in every sector of corrections. As a result, the NIC now offers programs in women's facility planning, classification, sentencing, and diversion and treatment.

OFFICES

The four offices found in the NIC are the Administration Office, the Office of International Assistance, the Office of Correctional Job Training and Placement, and the Information Center. The Administration Office houses the NIC director and deputy director along with the NIC advisory board. These individuals are directly responsible for financial management, personnel decisions, and publications associated with the NIC. The International Assistance Office and the Information Center have related duties.

As a result of the Violent Crime Control and Law Enforcement Act of 1994, an Office of Correctional Job Training and Placement (OCJTP) was created in the NIC to improve federal, state, and local job training programs and placement opportunities for offenders and ex-offenders. The goal of the office is to improve offender job training and placement in order to reduce recidivism rates in local, state, and federal jails and prisons. The OCJTP offers these services to correctional agencies through publications, on-site and satellite training programs, and through technical assistance. Some current initiatives of this office include a 36-hour basic training program that develops skills for staff who work with job assistance programs for inmates and a multiyear study of offender job retention. The OCJTP also offers a 108-hour program to five-person teams to improve programs in offender workforce development and to expand relationships with offender

employment service providers. Staff may use the skills gained through many of the OCJTP training programs toward undergraduate or graduate credit hours at participating universities.

CONCLUSION

The NIC provides a variety of services to local, state, and federal correctional agencies in the United States, its territories, and internationally. All information is offered free of charge. Trainings are held at the NIC office, at various locations across the country, and by satellite through teleconferences. NIC staff members are willing to provide agencies, both private and public, with professional consultation on many topics, especially in the areas of agency management and administration. Administrators in need of assistance may contact the NIC for advice on facility planning, offender classification and programs, facility operations, physical plant operations, and pretrial and court services. Administrators may also use the information provided by the NIC to familiarize themselves with common practices in other states and facilities and to become acquainted with systemwide policies and programs. Because of the variety of services offered by the NIC, agency managers do not have to rely on in-house or local trainings but may request technical assistance from the NIC corrections specialists.

NATIONAL PRISON PROJECT

The National Prison Project (NPP) of the American Civil Liberties Union (ACLU) is the only nationwide, private sector organization with a primary mission to litigate on behalf of prisoners. It is based in Washington, D.C., and for the past 30 years has been at the forefront of all major legal battles to make prisons safer and more humane. During the 1990s, the NPP argued five cases in the U.S. Supreme Court and provided technical support to a national network of prisoner rights attorneys.

HISTORY

The NPP was founded in 1972 during a time when the federal courts were just beginning to address prison conditions. In the previous 10 years, the Supreme Court had made a series of decisions favorable to granting prisoners access to the federal courts. For example, in *Robinson v. California* (1962), the Court ruled that the Eighth Amendment ban on cruel and unusual punishment applied to state and local governments. The Court also ruled, in *Cooper v. Pate* (1964), that prisoners could file lawsuits under a federal civil rights law (U.S. Code 42, §1983).

DUE PROCESS, PRISON CONDITIONS, AND ACCESS TO LEGAL ADVICE

The NPP's initial strategy was to target the lack of due process in prison and parole hearings. Two years later, the Supreme Court granted due process rights in disciplinary proceedings and declared, "There is no iron curtain drawn between the Constitution and the prisons of this country" (*Wolff v. McDonnell,* 1974). As encouraging as this was,

the NPP was still faced with two major problems: a lack of meaningful change in the treatment of prisoners, and a lack of resources.

Attaining procedural due process did not guarantee fair treatment. According to Alvin Bronstein, a former executive director of the NPP, corrections officials provided what appeared to be fair hearings but they still made arbitrary, unfair decisions. Bronstein realized that what was needed was a more profound change. In order to achieve this, the NPP had to expand its litigation strategy. For the rest of the 1970s and all of the 1980s, the project focused on prison and jail conditions. Project attorneys challenged the constitutionality of a broad range of prison conditions. They also criticized the lack of parity in the treatment of male and female prisoners. Unfortunately, the NPP was simply too small to provide sufficient legal representation. Even though inmates had access to the federal courts, there were, and still are, no court-appointed attorneys available to prisoners who file civil rights lawsuits. Nor did the incarcerated population, in the early 1970s, have access to prison law libraries. In a 1968 Supreme Court decision (*Johnson v. Avery*), inmates were given the right to confer with each other on civil rights cases, but without formally trained legal advocates or law libraries, the opportunities for success were extremely limited.

A major breakthrough came in 1976 with the passage of the Civil Rights Attorney's Fees Award Act. This federal law guaranteed the recovery of reasonable attorney fees to those who were successful in prisoner civil rights cases. Somewhat predictably, this policy increased the number of private attorneys willing to take prisoner rights cases, as well as providing a source of funding that allowed the NPP to expand.

RECENT DEVELOPMENTS

By 1995, the NPP Washington, D.C., office had a staff of 30 and an operating budget of $2 million per year. The office is busier than ever before, since there are so many prisoners requesting legal assistance, now that the prison population has grown from 200,000 in 1972 to more than 1.5 million in 2001. The federal appellate courts and the Supreme Court have also become increasingly conservative. Prison crowding and judicial conservatism have put enormous pressure on the NPP to protect inmate rights and to ensure that the reforms it had negotiated in out-of-court settlements known as "consent decrees" were implemented. The NPP, however, experienced a major setback in 1996 when Congress passed the Prison Litigation Reform Act (PLRA).

The PLRA places substantial limits on the amount of attorney's fees that can be recovered in prison civil rights cases. This forced the NPP to reduce its staff and budget. Because the PLRA also discourages federal judges from appointing professional monitors or "special masters" to oversee prison reform, the NPP also lost an important source of support. For many years, project attorneys had worked closely with monitors who filed extensive reports on the progress of court-ordered or agreed-upon reforms. Other provisions of the PLRA severely limit the types of relief federal judges can grant in prison conditions lawsuits, and set two-year limits on court-ordered reform. In 1999, the constitutionality of the PLRA was challenged. The Supreme Court upheld the act and made it clear that even prison reform and consent decrees entered into before the act was passed were subject to the two-year limitation (*Miller v. French*, 1999). Many reform agreements the NPP had negotiated and worked on for years would be terminated.

By the late 1990s, the NPP had begun to adjust to a more restrictive environment. It was putting a greater emphasis on creating networks of prison reform activists. These networks were designed to focus on specific issues such as the treatment of HIV-positive inmates, the lack of appropriate medical care for female inmates, and the prevention of sexual assault. Litigation has also begun to focus on specific issues rather than broad prison conditions. For example, in April 2002, the NPP and the ACLU of Colorado filed a jail lawsuit over the treatment of mentally ill prisoners. In May 2002, the project filed suit against Texas prison officials, charging that they failed to protect an inmate they knew was highly vulnerable to sexual assault.

CONCLUSION

Over the past 30 years, the NPP has played an essential role in the reform of correctional institutions and practices. Due largely to the work of this organization, prisons and jails are more humane and safer than they were in the past. Despite the passage of the PLRA, the growth of conservatism among judicial and legislative branches, and continued prison crowding, the NPP and other reform groups continue to try to ensure that imprisonment in the United States is just, fair, and humane.

NATIVE AMERICAN PRISONERS

American Indians and Alaskan Natives who constitute the indigenous peoples of North America were colonized by the British, the Russians, and finally by the European Americans. In the process, their societies were devastated by conquest, war, and disease. European American policies of "Christianizing the savage" and "manifest destiny" promoted forced assimilation, the destruction of traditional social structures, the creation of an economic dependency, and an overall marginalization of these indigenous groups within the dominant culture. These days, disproportionate numbers of Native Americans inhabit U.S. penal facilities.

POPULATION CHARACTERISTICS

On April 1, 2000, there were 2,475,956 American Indians and Alaskan Natives living in the United States, with about 40% of American Indians residing in rural areas. More than half the American Indians and Alaskan Natives live in 10 states, with Oklahoma, California, and Arizona each having populations of more than 200,000 American Indians. An estimated 63,000 American Indians are under the custody, control, or care of the criminal justice system on an average day, amounting to about 4% of the American Indian population aged 18 or older (Greenfeld & Smith, 1999, p. viii). Consequently, on a per capita basis, American Indians are incarcerated at a rate about 38% higher than the national rate.

American Indians have higher per capita rates of violent criminal victimization than whites, blacks, or Asians. While American Indians make up less than 1% of the U.S. population, they suffer a rate of violent victimization of 124 per 1,000 persons aged 12 or older as compared to a rate for all races of 50 per 100,000, or about 2 1/2 times the national rate. In rural areas, the crime rate for American Indians is more than double that of rural whites or blacks, and the urban crime rate is more than three times that found among whites. Alcohol and drug use are a factor in more than half of violent crimes against American Indians, and American Indian murder victims were more likely to have been killed during a brawl involving alcohol or drugs (13%) than whites (6%), blacks (4%), or Asians (2%).

The violent crime rate for American Indian males in 1999 was 153 per 100,000 and for females 98 per 100,000. This compares to a rate of 40 per 100,000 for white females and 56 per 100,000 for black females. At midyear 2000, the incarceration rate for American Indians was about 15% higher than the overall national rate (Minton, 2001, p. 2). Finally,

American Indians have a rate of arrest for alcohol violations more than double the national rate.

In a study undertaken in the mid-1980s, authors Michael Phillips and Thomas Inui (1986) found that Alaskan Natives were 2.2 times more likely to be arrested, 3.3 times more likely to be arrested for a violent felony, 2.9 times more likely to be hospitalized for psychiatric reasons, and 6.9 times more likely to be treated in alcohol treatment centers. Between 1979 and 1992, homicide rates for American Indians were twice those of U.S. national rates, and suicide rates were about 1.5 times higher. Between 1990 and 1992, homicide and suicide alternated as the second and third leading causes of death for American Indian males aged 10 to 34. For American Indian females aged 15 to 34, homicide was the third leading cause of death.

WOMEN

Few studies document indigenous women's experiences of incarceration. However, from the small amount of existing research it is possible to see that American Indian women, like the majority of women in prison, have been victimized through sexual and physical abuse and often suffer from drug and alcohol dependency. Indigenous incarcerated women often have a background of family dislocation, including sexual abuse as a child or teenager, a high rate of violent death in the family, and depression and loneliness. They also have a history of alcohol consumption at an early age, of being placed in and running away from foster homes or from home, of suffering domestic violence and physical abuse, of being placed in state custody as children, and of drug and alcohol abuse at the time of arrest and jailing.

During their incarceration, indigenous women are disproportionately likely to be prescribed medication for what is considered depression. They also complain of being allocated low-status positions such as cleaning floors and toilets, in contrast to the white women who are given higher-status positions. Finally, American Indian women are disproportionately represented in maximum security and are not allowed visits from family and friends when on that status.

Writing about indigenous women's incarceration in Montana, Luana Ross (1998, pp. 86–87) notes an increase over the past decade in the average sentence length for all women and a trend to incarcerate rather than use alternative sanctions. A typical American Indian woman incarcerated in Montana is 30 years old, single or divorced with two children, with a history of violent victimization, unemployed, an eighth grade education, and is convicted of a crime that is alcohol or drug related and is serving an average sentence of 19.1 years (Ross, 1998, p. 88).

During imprisonment, many women experience sexual intimidation, are overprescribed psychotropic drugs, are placed in lockup for extended periods, and are separated from their children. However, an additional punishment for American Indian women is the denial of their culture. The Montana Women's Correctional Center is located five hours from the nearest Indian reservation, and with the exception of an American Indian woman who conducts therapy sessions with American Indian prisoners, all the staff are white. Women here cope with family separation and cultural dislocation by uniting together in their culture and by forming a close-knit group that is often perceived as threatening by prison staff, who classify some of the women as troublemakers.

While American Indian women benefit from counseling with an American Indian woman counselor whose clients in the prison are wholly American Indian, there are no other culturally specific programs, and prison staff indicate that American Indian women refuse to participate in other programs. The women complain that prison rules prevent them having adequate access to their spiritual leaders and that prison authorities refuse to allow them a sweat lodge, though they are permitted to burn sweet grass during prayer time.

In researching the experience of Alaskan Native women in an Alaskan prison, Cyndi Banks (2002), like Ross, found that many Alaskan Native women offenders had been brought up in foster homes and had family histories involving drug and alcohol abuse. Staff in this institution often perceived the silence of the Native women during counseling and group treatment as a denial of their responsibility for their criminality and as resistance to treatment,

instead of recognizing it as a cultural tendency first to observe unfamiliar events rather than instantly and actively to participate in them. Many staff seemed to resent the women's quietness and unwillingness to display the emotional patterns characteristic of European American women.

MENTAL HEALTH

Disproportionate numbers of Native Americans in prison are diagnosed with and treated for mental health problems, leading some to argue that prisons have become an alternative treatment option for American Indians. In a study based in New York State, for example, the authors discovered that more than half of the American Indians seen at mental health clinics were diagnosed with antisocial personality disorder compared to 25% of white patients. Yet, interviews with American Indian inmates, including women, revealed that the inmates often believed there was no basis for their referrals for mental health treatment. According to them, referrals were most likely if you acted in a "strange" manner, defined, they believed as "not behaving as most white Americans would behave" (Earle, Bradigan, & Morgenbesser, 2001, p. 127).

RELIGION

As a result of litigation concerning First Amendment rights, particularly the right to practice religion, the correctional system has been forced to accommodate American Indian beliefs, adjust to their rituals and religions as well as to their approaches to rehabilitation. In states like Nebraska, which has a substantial American Indian population, Indians living on reservations often speak their indigenous language as their first language and are usually familiar with aspects of their culture, including spiritual concerns, while prisoners from urban areas are likely to be less familiar with culture and religion. Imprisonment can serve as a cultural unifier for rural and urban American Indian prisoners because both are drawn into cultural and religious activities conducted within the prison system.

Religious activity among American Indian prisoners includes attendance at sweat ceremonies and sweat lodges, and these have become the single most important and widespread religious activity among these prisoners. However, despite a degree of acceptance by the correctional authorities, American Indians continue to feel that their cultural practices do not receive the same respect as, for example, the practice of a Western religion, and their access to sweat lodges continues to be impeded even though these structures are now found at nearly all facilities incarcerating American Indians.

CONCLUSION

The existing but scant research on indigenous women and men in prison reveals a number of issues, including the (mis)reading of Native culture by prison staff, the unfamiliarity of many indigenous groups (especially those in rural areas or on reservations), with the values, beliefs, and expectations of the European American culture, as well as how to cope with a prison sentence, and the necessity for culturally specific treatment programs. Few prisons offer cultural programs for American Indians, but those institutions that do rely mainly on Native Americans from the community willing to volunteer their time. Special items required for these programs are frequently viewed as "security risks" and are often denied by the prison authorities. The legacy of colonialism is evident in the incarceration rates and treatment of indigenous peoples, especially in the form of European American cultural dominance, which continues to inform many of the practices imposed on the indigenous incarcerated woman.

NATIVE AMERICAN SPIRITUALITY

Native spirituality speaks of the world as one spirit, referring to the creator of all things as the "Great Spirit." Mainstream religions might use words such as *God, Allah,* or *Mind* to describe this metaphor. In Native spirituality, every aspect of life is sacred, including the spirit that lives inside every human being. Sacred or holy teachings are often passed on through storytelling and the wisdom of the Elders or medicine men; such teachings, most often, include an intrinsic connection to land, tradition, and culture. Native spirituality is a highly ceremonial and experiential religion, with the ceremonies and traditions varying from tribe to tribe.

For traditional Native Americans, there is no separation between the sacred and the ordinary, nor any special day set aside for religious practices. Every act, every thought, every feeling walks hand in hand with Spirit. Rather than going to church, the traditional Native might attend a sweat lodge; rather than accepting bread from the Holy Priest, they may smoke a ceremonial pipe to come into Communion with the Great Spirit; and rather than kneeling with their hands placed together in prayer, they may let sweetgrass be feathered over their entire being for spiritual cleansing and allow the smoke to carry their prayers into the heavens.

With the arrival of the Europeans, the Native way of life and its connection to the land, culture, ceremonies, language, and to the Creator began to dissolve. Tens of millions of Native Americans died due to sickness, ill-advised government programs, persecution, greed, and the dogma of the Christian clergy. Many would say that the Natives lost their self-esteem because all they knew was forcibly removed from their life. They were also impoverished, as they had not functioned in a mercantile economy before. As a result, many ended up in prison. In the 1940s and later, the Native population in prisons grew disproportionately to the rest of the population. Prisons are often called "Iron Fences" or "Iron Houses" by Natives.

SUPPRESSION OF RELIGIOUS RIGHTS

Historically, only Christian beliefs were endorsed by prison administration and clergy, with the result that Native religion was suppressed inside of prisons. Today, despite federal laws guaranteeing the freedom of religious rights, Native Americans often face many difficulties in practicing their faith in U.S. prisons. For example, in 1999, the Brothers of Chillicothe Correctional Institution in Ohio started a campaign to fight for their Native rights. In this prison, they had been denied even the basic tenets of their spirituality, and are continually harassed during their prayer circles and private meditations. They had filed numerous grievances and Religious Accommodation Forms requesting the possession of certain medicine tools, a designated area of the yard for prayer, and recognition as an authentic religious group.

Prejudice and persecution exists elsewhere, too. For example, Canadian prisons have only recently

allowed Native sweat lodge ceremonies in every province; approximately half the states in the United States allow Native sweat lodge ceremonies. Often, these sweat lodges and other Native spiritual ceremonies are the only spiritual and psychological sustenance that Native American inmates receive.

As the strength and political awareness of the Native people increases, Native organizations, such as Native American Prison Support (NAPS) and the Ik8ldimek Legal Clinic have fought to ensure the basic human, civic, and religious rights for all Native American prisoners, as guaranteed by the U.S. and Canadian Constitutions. These groups, and others like them, have been fairly successful. As a result, sweat lodges, talking circles, sacred pipes, Elders, and other forms of traditional healing are gradually becoming more available in many correctional institutions.

GENDER AND NATIVE AMERICAN SPIRITUALITY

Native women are incarcerated mostly from crimes involving drugs, alcohol, or child abuse. Outside prison, some Native American women will only practice their religion with women, while others celebrate their traditions in a nonsegregated environment. Few Native American women helpers work in prisons. Most of the spiritual advisors are male, and they are not allowed to conduct a sweat lodge ceremony for the female inmates. Instead, Native women often gather together with leaders elected as spokespersons to conduct talking circles, which often include opening prayers, smudging, and the keeping of minutes of what they talk about.

CONCLUSION

A belief in the critical role of religion in the rehabilitation of prisoners was integral to the development of penal systems in the United States. While most clearly articulated in the early penitentiary movement, themes of spiritual reformation have been central as a goal of prison discipline. Controversy has continued to center on whose voices are to be heard in a system that has been dominated historically by those of evangelical Christianity. There has been limited recognition that spiritual reformation could occur through other Christian traditions and rituals, and even less awareness of the healing presence for those whose experience of spiritual truth is rooted in the beliefs and practices of Islam, Judaism, and Native spirituality. While an increasing awareness is reflected in the efforts to provide for the diversity of beliefs present within the prison populations, there are still a number of barriers facing Native Americans who wish to practice their spirituality in prison.

NEW GENERATION PRISONS

Since the late 1970s, most new prison construction in the United States has been modeled according to "New Generation" prison designs. These buildings are intended to maximize security and efficiency by means of easy observation and electronic surveillance of inmates. Such patterns utilize advancements in electronic communications and shatterproof glass materials to replace steel bars and stone blocks, creating a lighter, more comfortable environment that is also very secure.

New Generation prison architecture is largely a response to the rapidly changing penal population of the past three decades. New Generation prisons, along with methods of correctional management that deemphasize patrolling staff, have streamlined corrections operations at the same time as they have increased security. The early prototypes for these

designs were the metropolitan correctional centers (MCCs) built by the Federal Bureau of Prisons in the 1970s and Minnesota's Oak Park Heights facility constructed in 1982.

CONTRASTS WITH OLD GENERATION PRISONS

According to British criminologist Roy King (1999), New Generation prisons represent the third major stage in Western prison architectural development. The first generation prisons were generally built with long rows of cagelike cells arranged in tiers, intermittently patrolled by guards. They tended to mimic fortresses in their pronounced size and scale of exterior stonework with imposing turrets and gates. Large slabs of stone, immense Gothic gateways, and castle-like styling gave the impression of institutional imperviousness. Second generation prisons, for the most part, kept this same architectural style, but withdrew staff and introduced remote supervision by closed-circuit television.

In contrast to these older styles, New Generation prisons are designed to fit in with surrounding structures or landscapes, or to appear like college campuses or office buildings. The high-rise federal MCC complexes in downtown Chicago and New York, for example, cannot easily be distinguished from the bank and office towers that surround them.

DESIGN

Most New Generation prisons borrow from the radial "Panopticon" design developed by Jeremy Bentham in the early 19th century. They position observation stations at central locations surrounded by inmate units. Large floor-to-ceiling aquarium-style windows allow guards an unrestricted view of inmate cells, living quarters, and recreation areas. Prisoners generally live in standardized cells within self-contained modular units of 30 to 100 inmates.

New Generation units are often segmented into triangular living quarters, with two or more stories of cells along two sides overlooking an open association area. The large floor-to-ceiling shatterproof windows provide the third side. Observation stations generally appear outside the glass, providing a distinctive fish-tank-like appearance and allowing officers a full view of all inmate sleeping and living areas.

"LABOR REPLACEMENT TECHNOLOGY"

New Generation prisons are a product of sociological and psychological research that claims that people function most comfortably when they are housed in small groups. They are also influenced by the free-market competition among architectural firms and private prison firms for the most cost-effective designs. New Generation prisons are, in other words, designed for penal and fiscal efficiency.

In many cases, the mass incarceration trends of the 1980s and 1990s were accompanied by fiscal restraint among lawmakers, so prison designers had to incorporate cost-saving mechanisms into their proposed structures. Because salaries usually account for the majority of an institution's budget, New Generation layouts have been designed to minimize staff requirements. Closed-circuit TV surveillance and two-way communication devices have reduced the need for face-to-face encounters. Electronic door controls and computerization of many inmate operations allow for smooth inmate movements and strict adherence to daily schedules. Subdivided recreation pens connected to each block or unit instead of large facility-wide yards increase security by segregating populations into manageable groups. New Generation window designs allow one or two officers to monitor and control 200 to 300 prisoners.

STANDARDIZATION OF DESIGN

Since the 1970s, there has been a movement toward increased uniformity of cell and cellblock architecture. Cell segments are now standardized to allow for ease of remodeling and additions. In both Europe and the United States, designs have become so similar that separate facilities are often undistinguishable from each other. In the United Kingdom, for example, a single New Generation prison design has been identically repeated at several locations.

Some manufactures are now fabricating prison cells in factories rather than constructing them in the field, allowing sections of units to be transported and assembled on site. These trends have greatly increased the speed of delivery and installation of new cell space.

MANAGEMENT STYLE

New Generation prisons involve more than simply architecture. They encompass management techniques developed in response to the massive increases in penal populations of the past quarter-century. Their primary objective is to deliver recreation, work, exercise, sleeping, and eating to the inmate in as efficient a manner as possible. New Generation prisons tend to attempt cost cutting by reducing or downgrading staff, switching procurement from public to private sectors, and in some cases inviting wholesale privatization.

Unit management is also standardized. Inmates generally spend their nights in the smaller cells and are released into the larger dayrooms during the day. In the dayrooms, the inmates have access to shower facilities, game tables, television viewing, and pharmacy call. Meals can be delivered to the dayroom or to each individual cell. During counts, lockdowns, and whenever necessary, all inmates in a unit can be directed and locked in their individual cells.

WOMEN'S PRISONS

These trends in prison management and construction have also affected women's prisons. Standardized "unisex" architecture has taken the place of the small reformatory cottage-style women's housing. Indeed, most women's prisons now look more like prisons for men than ever before. New women's facilities, like FCI Victorville in California, are large, with central mess halls and multiple-person cells or dormitories.

MEASURABLE BENEFITS

New Generation designs have greatly decreased the costs of penal administration, enabling jurisdictions to incarcerate more inmates than ever before. Cost savings have in some cases been substantial; the state of California, for example, reported in 1995 that its substitution of electrified fencing instead of teams of snipers at its Calipatria Prison saved the state $2 million in labor costs per year.

Escape rates have also decreased considerably. The separation of inmates into self-contained living segments has made it easier for guards to track and monitor inmates designated to each unit. Abolition of opportunities for inmates of different blocks to mix with each other in dining halls and recreation yards have limited the means by which inmates can evade counts and identity checks.

New Generation proponents have also touted the safety improvements that have come with the new architectural designs. There are fewer edges, corners, and "ligature points" upon which inmates might hang themselves or others. It appears that New Generation prisons have decreased suicides as well as suicide attempts.

CRITICISMS

Not all observers however, support New Generation institutions. The facilities have been criticized for violating prisoners' privacy by exposing all inmate activities to observation at all times. Such institutions have also tended to move perceptively toward greater security than may be necessary. Some New Generation prisons have been deliberately modeled so that every inmate can be reduced to "supermax" security levels with relative ease. Some extreme examples of New Generation facilities, like the county jail in San Rafael, California—which is 60 feet below ground—seem to offer security far in excess of institutional needs. New Generation management style is also criticized for neglecting interpersonal interaction between inmates and staff, intelligence gathering, and direct communication between prisoners and staff.

Above all, New Generation prisons have helped fuel the move toward mass incarceration by making penal administration more efficient and cost effective. Critics maintain that these "improvements" are actually detriments to sound criminal justice

policymaking and that they promote incarceration above rehabilitation.

CONCLUSION

Almost every large prison or detention center constructed in the United States since the 1980s has incorporated elements of New Generation design. Many European countries have also adopted New Generation concepts in their new facilities. Such designs have been popular with prison purchasers because of increased labor efficiency, and also because they complement hardened attitudes toward crime control.

NEW MEXICO PENITENTIARY

Built in 1957, the Penitentiary of New Mexico has until recently served as the state's primary prison. Designed to house 850 inmates, it has long been plagued by poor administrative practices, inadequate security, and the absence of basic amenities. The penitentiary first gained national notoriety when a class-action suit was filed in 1979 in which its inmates alleged that confinement at the penitentiary violated their constitutional rights. In 1980, a large-scale riot at the prison brought the problems identified by the prisoners to the fore. Their suit, which later became the basis for the Duran Consent Decree, identified 14 areas of the penitentiary needing improvement. These areas included legal correspondence, food and medical services, and classification and disciplinary processes. The decree mandated court oversight of all medium- and maximum-security prisons operated by the New Mexico Corrections Department.

STAFF AND INMATE INTERACTION

For most of the penitentiary's history, staff maintained institutional control by cooperating with inmate leadership. However, as the 1970s ended, the relationship between staff and prisoners turned increasingly hostile. Administrative personnel eventually wrestled much of the power away from the well-established inmate leadership. To accomplish this, they increasingly relied on the use of physical coercion, segregation, and inmate informants. Ultimately, the relationship between staff and the inmate population turned mutually antagonistic and violent.

Compounding the problems existing between staff and prisoners, the penitentiary experienced five different administrations from 1975 to 1980. This turnover increased anxiety within the institution, leading to heightened levels of distrust and violence. Ultimately, these conditions culminated in a full-scale riot.

THE 1980 RIOT

On February 2, 1980, the penitentiary was the site of one of the bloodiest prison riots in American history. In a matter of minutes, prisoners overpowered four correctional officers and gained access to the penitentiary's control center. Once the control center was breached, keys permitted prisoners to gain access to most areas. Following the riot, investigations revealed that approximately 150 inmates had actively participated. During the 36-hour disturbance,

33 inmates were murdered. Two hundred additional inmates were raped or otherwise brutalized.

In addition to the enormous loss of life, the riot left the education, kitchen, and administrative areas gutted. The cost of facility repair was estimated to be between $70 and $100 million. The attorney general later reported that crowding, understaffed security, correctional officer misconduct, and classification inadequacies were contributory factors.

TODAY'S PENITENTIARY COMPLEX

Following the riot, the state legislature appropriated nearly $88,000,000 for the construction of new institutions. Today's penitentiary consists of three additional facilities located adjacent to the original building. With the addition of these three prisons, the original building was designated the main unit. In September 1985, the north unit was opened to house administrative segregation and close- and medium-security inmates. In April 1988, the south unit began operation and was designed to house medium-custody inmates. In September 1990, the minimum-restrict unit began operation holding inmates with the two lowest levels of security classification, minimum and minimum restrict. The addition of these facilities ensures that those offenders deemed to be the most dangerous are segregated from those who are less serious or violent.

Conditions at the penitentiary, though improved, have remained a concern of inmate advocacy groups and legislators. In 1997, authorities at the main unit discovered a 30-foot tunnel, complete with kitchen, tools, and riot plans. This discovery led the governor to declare an institutional emergency. Many others called for the prison's permanent closure. In 1998, the main unit was closed due to its dilapidated condition. Furthermore, the Corrections Department saw closure of the main unit as an opportunity to disassociate itself from its bloody and storied history. Recent debate has centered on leasing the now-vacant facility to a private correctional contractor for the housing of federal prisoners. The main, north, south, and minimum-restrict units are referred to, in their entirety, as the Penitentiary of New Mexico at Santa Fe.

CONCLUSION

The Penitentiary of New Mexico is an example of a prison historically plagued by a lack of basic amenities, mismanagement, and administrative turnover. More recently, the penitentiary provides a case study in how to effectively operate a contemporary prison complex with a concern for staff and inmate safety. This concern is reflected in the establishment of the nation's first accredited correctional training academy as well as in the operation of modern facilities that ascribe to well-established penological principles.

NEW ZEALAND

New Zealand is a nation of 3.9 million people, located in the South Pacific approximately 1,200

miles southeast of Australia. The country consists of two main islands, known simply as the North and the South Islands. The North Island has more than twice the population of the South Island. Native or part-native New Zealanders, known as *Maori,* constitute about 14% of the total population. Inhabited by Europeans from 1792, New Zealand became a British colony in 1840. Although it has been fully independent since 1907, in its statutory development, New Zealand has often modeled that of England, and its early prison system reflected the same influence.

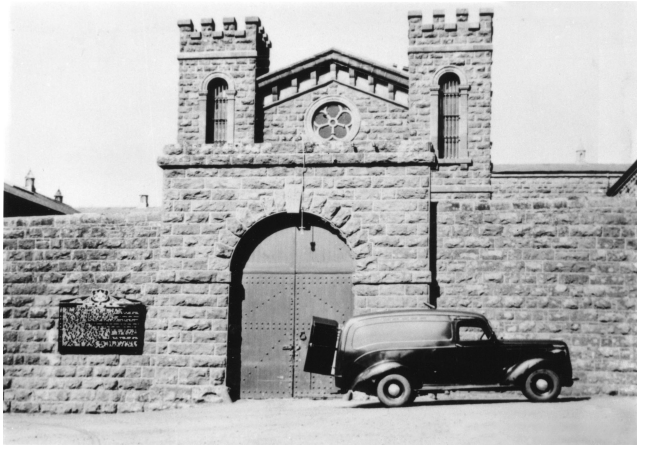

Photo 1 *Entrance to Mt. Eden Prison in the 1950s; a "Black Maria" (prisoner escort vehicle) is in the foreground.*

CORRECTIONS HISTORY

Before 1880, New Zealand's prisons were ineptly and often corruptly administered by local authorities, but in 1880 the system started to become centralized, and Captain Arthur Hume, an English prison deputy governor, was appointed as the country's first Inspector General of Prisons. Hume created a harsh regime similar to that of Victorian Britain, and he instituted an ambitious prison building program. The most enduring legacy of this program is Mt. Eden Prison, a radial-style institution designed in 1882 from plans shipped out from London. Mt. Eden still operates today and is one of the country's oldest surviving prisons (see Figure 1).

New Zealand has a long history of liberalism in corrections. Although Hume himself was an authoritarian, in 1886 New Zealand developed the world's first national probation system. After Hume's retirement in 1909, reflecting the country's growing reliance on farm exports, a vigorous agricultural program was pursued. Between 1910 and 1922, tens of thousands of acres of rural land were purchased and turned into prison farms or forests. Many of these enterprises still operate today. After 1909, security was deemphasized. By 1913, the issuing of firearms to guards had ceased at most prisons, and distinctive arrow markings had been removed from prisoners' clothing. Between 1910 and 1923, the percentage of inmates employed in outside work schemes grew from 8% to 70%. Segregation of young offenders began in 1910, and a system of juvenile reformatories, known as "Borstals" after their British counterparts, commenced in 1917. Borstal Training for juveniles continued until 1980, when, due to high recidivist rates, it was abolished.

Between 1840 and 1935, 76 men and one woman were hanged in New Zealand (all but one for murder), but in 1935 executions ceased, and in 1941 capital punishment for murder, along with corporal punishment, was legally repealed. Hanging for murder was reintroduced in 1951, and eight more men were executed before the penalty was struck out again in 1961. Hanging remained for crimes such as treason but was repealed completely in 1989.

The 1950s and 1960s were periods of great experimentation in New Zealand corrections. During the 1950s, full-time welfare officers were appointed to all prisons, hours of lockup were reduced, education services were improved, and opportunities for recreation were extended. In 1950, centralized training for prison officers commenced. In 1961 the first "boot camps" for juveniles—known initially as Detention Centers after their British counterparts and renamed Corrective Training Centers in 1981—were established and remained until high recidivism prompted their closure in 2002. In 1961 a work-release scheme was started, and in 1965 weekend furloughs for low-risk inmates began. Today, minimum-security prisoners (more than half of all inmates) are eligible to apply for a 72-hour "home leave," plus traveling time, every two months.

The 1960s also saw the beginning of experimentation with alternatives to incarceration. The most successful was periodic detention, launched in 1963. Periodic detention started as weekend incarceration in a work center for juveniles, but was extended to adults in 1966. In 1980, due to cost, Periodic detention became restricted to day attendance only, but its popularity as a sentencing option continued to grow. In 2002, periodic detention and a sentence called community service, which had been created in 1980, were merged under a new sentence named "community work." Approximately 29,000 offenders are sentenced to community work every year.

PRISONS TODAY

New Zealand operates 15 male and three female prison facilities, which cater to a total of approximately 6,000 inmates. Because it is an island nation from which escape is difficult, security levels are low. Of all classified inmates, just 2.5% are classified maximum security, 15% are high-medium, and 28.3%, are low-medium. The remainder, 53.8%, are minimum security. Apart from the Auckland Central Remand Prison (discussion following), there are no jails in the American sense. Arrested persons may be held overnight in police cells, but if bail is denied, they are transferred to special "remand" sections within local prisons, where they await trial and sentence.

In 1994, following international trends, New Zealand legislated for the contracting of prison services to private enterprise. The move was highly controversial, and political opposition held up the tendering process for a number of years. However, in July 2000, Australasian Correctional Management Pty. Ltd., a subsidiary of the U.S. Wackenhut group, began operating a purpose-built, 275-bed remand prison in Auckland. Known as Auckland Central Remand Prison (ACRP), it is the only privately run correctional facility in use in New Zealand. There are currently no plans for the contracting of any more.

Prisons in New Zealand range from the archaic and decrepit to the modern and new. Seven of the 15 male prisons have buildings that are more than 70 years old, and facilities in these institutions are run down and extremely limited. They cater principally to prisoners classified as high-medium security risks, and inmates in these prisons often have to share their cells with another prisoner. There are no dormitories. There are also a number of modern medium-security institutions, all of which have single-cell accommodation and facilities such as playing fields and gymnasiums. An innovation over the past decade or so has been the building of cheap but effective 60-bed units for low-medium- and minimum-security prisoners. In fact, today the majority of prisoners live in units of this type. Inmates in 60-bed units all have their own cells, which are equipped with flush toilets, hot and cold running water, and a heating pipe. Cells are of wooden or concrete block construction, with a pleasant interior, and are set in a rectangle that looks out onto a grass compound with a tennis or basketball court in the center. The units are self-contained, with a visiting room, education rooms, a weight room, flower gardens, and often a vegetable garden and a kitchen. They are surrounded by a double mesh wire fence, but many prisoners work outside the wire, and most have permission to play sport outside as well.

There is one maximum-security prison in New Zealand, located at Paremoremo, 14 miles north of Auckland, the country's largest city. Officially known as Auckland Prison (East Division), the facility is more commonly referred to as Paremoremo Maxi (see Figure 2). Modeled on America's USP Marion, Paremoremo Maxi was opened in 1969 and normally holds no more than 200 men. Only about two-thirds of Paremoremo's inmates are actually classified as maximum security; the rest are high-mediums awaiting transfer elsewhere or inmates with special needs such as psychiatric or medical problems. In the 1970s, Paremoremo was a showpiece of correctional liberalism, with numerous programs and activities for prisoners. However, in the 1980s, fighting between gangs—which, typically for New Zealand, was not of a racial nature—necessitated closure of many of these. In the late 1990s, radical changes in administrative philosophy saw a further tightening of security, with a dramatic increase in lockup hours and the virtual abandonment of reformative efforts.

There are three institutions for females. The oldest and largest is Arohata, near the capital city of Wellington. Opened during the Second World War and catering mainly to low-security inmates, Arohata is set in a semirural area where some inmates are able to work outside. The principal female prison is Christchurch Women's Prison, commonly known as Paparua Women's. Opened in 1974, Paparua Women's has a small maximum-custody unit, but deals principally with 80 or so female prisoners with medium- and minimum-security classifications. The facility is badly situated—in the South Island and 600 miles from Auckland, where most women prisoners come from. Because of this, a women's division at Mt. Eden Prison in Auckland has been expanded and upgraded, currently holding about 45 inmates at a time. Occasionally the construction of a new women's prison nearer to Auckland has been mooted (proposed), but with female inmate numbers having grown only by about 120 in the past 20 years and with existing facilities often operating below capacity, the expense is difficult to justify.

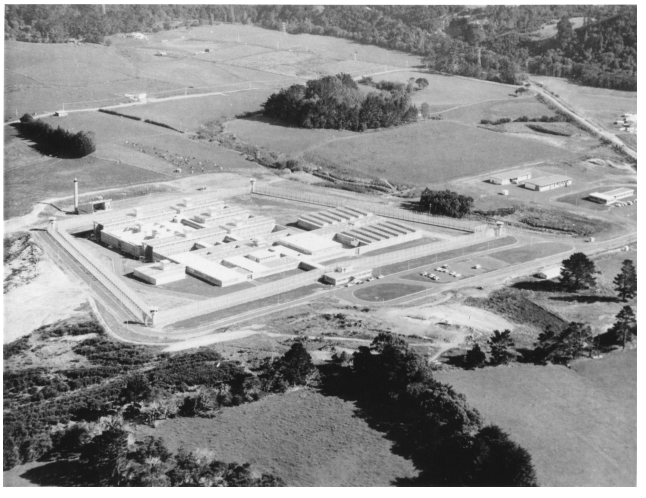

Photo 2 *Aerial photo of Auckland Maximum Security Prison (Paremoremo)*

SENTENCES

Compared with America, sentences in New Zealand are short. Although average terms have increased by 75% since 1981, in 2000, 79% of all inmates were given seven years or less, and the average prisoner served about eight months. The average American inmate who is released spends about 30 months in prison. Apart from murder, the longest sentences are given for rape (average 96 months), attempted murder (average 88 months), and manslaughter (average 69 months). Approximately 8.6% of the New Zealand prison population is serving non-determinate sentences of life imprisonment for murder or selling Class A drugs (such as heroin, LSD, and cocaine; 6.5%), or preventive detention for repeated violent or sexual offending (2.1%). The standard nonparole period for murder is 10 years, and for preventive detention it is five years. The majority of prisoners serving life sentences will be released after about 12 years. Since 1987, judges have had discretion to sentence those with life sentences and preventive detainees to minimums that are longer than 10 years, and in 2002 the Sentencing Act mandated a 17-year minimum for all murders committed with certain aggravating features. Although the figures will no doubt increase as a result of the new law, in 2002 only 25 inmates in the entire country had done more than 12 years on their current terms, and only four had done more than 15 years. In 1995, the longest nonparole period ever was given—25 years, for serial rape. The longest nonparole period awarded for murder is 20 years, given to a man in 2002 who had killed his wife and daughter with an axe.

Since July 2002, there has been no automatic release on "good time" for inmates serving more than two years. Those doing two years or less are released automatically at half-sentence, and all others, provided they are not subject to a nonparole minimum, are eligible to apply for parole after serving one-third of their sentences or 10 years, whichever is the lesser. Prisoners released on parole may be recalled to prison if they reoffend or commit significant breaches of parole conditions. In recent years, 28% of parolees have been found to have breached the conditions of their parole. Many of these have been dealt with by a warning, and not all have been recalled to prison.

A recent innovation in New Zealand has been home detention. First proposed in 1991, legislated in

1993, and piloted for two years beginning in 1995, home detention originally allowed the electronic monitoring of certain offenders in their homes toward the end of their sentences. In 1999, legislation was passed enabling courts to grant offenders serving two years or less leave to apply for home detention immediately after sentencing. Prisoners serving terms of more than two years may apply to the parole board for release on home detention, for up to two years, prior to final discharge. At the end of 2001, approximately 200 offenders were serving prison sentences under conditions of home detention.

THE PRISON POPULATION

The primary purpose of home detention, like the liberalization of the parole laws, was to reduce the prison population. As happened in the United States, the prison population of New Zealand increased steadily after the Second World War. From 1,000 inmates in 1950, the average inmate population (including remands) reached 2,000 in 1967, 3,000 in 1984, 4,000 in 1991, and 6,000 in 2002. This last figure equates to a ratio of 154 per 100,000 mean population. Principal causes of the increases have been jumps in youthful crime in the 1950s, the advent of recreational drug use in the 1970s, and leaps in serious violent offending in the 1980s. Average sentences for violent offending almost doubled between 1985 and 1998, and between 1987 and 2002, violent offenders were ineligible for parole. This led to an accumulation of violent offenders in prison. Today, 62% of all inmates are doing time for violence, compared with 42% in 1987. The next largest group of offenders in prison are there for property damage (21%), followed by drug offences (7.5%).

Liberalizations in parole for nonviolent offenders, which allowed parole at half-sentence in 1985 and then at one-third-sentence in 1993, had only a temporary effect on prison populations. This was largely a result of high recidivist rates. In New Zealand, 58% of all prison releases are reconvicted within a year, and 86% are reconvicted within five years. More than half of all prisoners are reimprisoned within five years of release.

MAORI PRISONERS

Maori and part-Maori, who, as noted, represent about 14% of New Zealand's total population, are overrepresented in crime statistics and in the country's prisons. Maori are significantly more likely than the overall population to be unemployed, to have problems with heavy alcohol use, to come from single-parent families, and to experience physical and sexual abuse at the hands of adults when they are children. As adults, they are far more likely than non-Maori to be convicted of crimes involving serious violence such as aggravated robbery, injurious assault, rape, and homicide. They are also much more likely than non-Maori to belong to outlaw gangs, and the largest gangs by far are the Maori gangs. As a result, Maori are grossly overrepresented in prisons. More than half of all inmates are Maori: 3.7 times what would be expected on the basis of population. Recidivist rates of Maori are also higher than for non-Maori.

WOMEN

There are three institutions in New Zealand that cater to women prisoners, one in each of the three major urban centers. Numbering 233 in 1999, or 4% of the male inmate population, women prisoners are less likely than men to be serving terms of more than three years. Compared with men, women are more likely to be imprisoned for crimes involving drugs, property, and serious traffic violations, but are equally likely to be doing time for nonsexual violence. There is good evidence to suggest that, even when relevant sentencing factors are held constant, women are less likely than men to be imprisoned, and if imprisoned, their terms tend to be shorter. Recidivism figures for women are lower than men's, despite the fact that the proportion of female inmates that are Maori, at almost 60%, is higher than for men.

JUVENILES

In New Zealand, young people under the age of 17 cannot be prosecuted other than for purely indictable offences such as murder, manslaughter,

rape, or dealing in Class A drugs. Children aged 10 to 13 can only be prosecuted for murder or manslaughter. The youngest killer ever prosecuted for murder was 12 when he committed the offence. He was convicted of manslaughter in 2002 and sentenced to seven years.

Most juveniles who are sentenced to imprisonment serve their sentences in facilities administered by the Department of Child, Youth, and Family Services (CYFS) until they turn 17, when they are transferred to prison. Teenagers are normally segregated from adults in special sections of adult prisons. In addition, since 1999 four dedicated youth offender units catering for about 150 inmates have opened, which deliver special programs designed to address the specific needs of pre-adults. Three of these units are smoke-free, and positive drug test returns are close to zero. In 1999 there were 435 inmates aged 15 to 19 in New Zealand prisons—9% of the adult sentenced population.

PRISON PROGRAMS

For nearly 100 years, New Zealand has had a comparatively progressive approach to correctional reform. One consequence, with small prisons and high wages for staff, is that incarceration costs are high. In New Zealand, where the local spending power of the New Zealand dollar is about equivalent to that of the U.S. dollar, it costs an average of approximately $60,000 to keep an inmate in prison for a year—almost three times the American figure. About one-eighth of the corrections budget is spent on rehabilitative services and programs. In 1990, an experiment known as *He Ara Hou* ("A New Way") commenced, emphasizing rehabilitation as an equivalent to custody in the administration of prisons. A serious attempt was made to reduce authoritarianism and break down the barriers that exist between staff and inmates. Formal systems of unit management and case management were installed, and unit managers were given considerable discretion in running their units. Inmates were actively encouraged to participate in programs.

He Ara Hou was partially successful in achieving its objectives. Inmates report that tension with staff did decline in the early 1990s, and many officers took a personal interest in their welfare. Enrolments in educational and other programs increased, and there was an apparent decline in assaults, escapes, and suicides. But the new initiatives were never systematically analyzed, nor were they properly monitored. Lax procedures at some institutions led to irregularities in financial and general management, abuse of some prisoners, and corrupt relationships between some inmates and staff. By 1992, a series of embarrassing scandals had commenced, involving drugs, sex, money, escapes, and abuse of prisoners. The gravity of these matters prompted the resignation of the Assistant Secretary for Justice at the end of 1993, followed by the Secretary for Justice himself in 1994. Thus, *He Ara Hou* came to an end.

In 1995 the Department of Justice, which administered prisons, ceased to exist. A Ministry of Justice was created as a partial replacement, but the task of prison management fell to a new department known as the Department of Corrections. Under this title, a fresh experiment in rehabilitation commenced, known as Integrated Offender Management (IOM). Unlike its predecessor, IOM was systematically planned and gradually phased in over a five-year period. It consists of a sophisticated computerized offender recording program and a psychological approach to rehabilitation based in a series of "interventions" designed to address an inmate's "criminogenic needs." Central to the plan is an intense 10-week tailored program administered toward the end of an offender's sentence.

Although IOM has been introduced in all prisons, high running costs have restricted its applicability. Initially, the department anticipated that nearly all inmates would be exposed to IOM and that it would reduce reoffending between 10% and 15%. But the scheme has been more expensive and less effective than hoped. In 2001, only 18% of eligible inmates were able to receive IOM, despite $12 million in expenditure. Moreover, to date, those exposed to IOM have exhibited recidivist rates that are not significantly different from those not exposed to it. However, with the program still in its infancy, in 2002 the department still remained optimistic of being able to cut recidivism rates by up to 10%.

PRISONER SOCIETY AND CULTURE

There has never been a study of female convict culture in New Zealand, but among men, the social code of inmates is highly similar to that described by Sykes and Messinger (1975) in their landmark study. The male prisoner community is traditionalistic in its notions of masculinity. Men are expected to be strong, stoical, principled, and honest. The ideal man handles his problems on his own and without complaint. He does not bully the weak, nor does he compromise with bullies. He protects his dignity and is prepared to use violence when necessary: for example, when threatened, when abused, or when dealing with thieves and informers. Thieves ("tealeaves") and informers ("grasses") are the lowest form of life in a prison, and no self-respecting prisoner has anything to do with them. The ideal convict does not fraternize with staff; he sees them as a necessary nuisance, but otherwise of little consequence in his life.

Of course, such ideals are seldom realized, but men who approximate them achieve high respect. In truth, staff frequently receive information from prisoners, the weak are always at risk of being bullied, there are numerous disputes over stolen property or unpaid debts, and long-term inmates are often on friendly, first-name terms with long-term staff. That said, however, prisoner society in New Zealand is markedly different in certain respects from that reported elsewhere, particularly the United States. There is little inmate stratification in New Zealand prisons. As a general rule, a high level of egalitarianism prevails, and it is unusual for an inmate or a cabal of inmates to have power over others. Related to this is the fact that homosexuality is rare and homosexual rape is almost unheard of. There are a number of reasons why this is so.

First, prisons are small, units are restricted to about 60, and most inmates have their own cells. It is difficult for any individual or group to dominate in such an environment without being noticed by staff and transferred to a more secure setting.

Second, sentences are fairly short. Population turnover is high, making it difficult for any group to stabilize its membership and consolidate power.

Third, prisons are well staffed and staff are well paid. This renders the cooptation of inmate leaders for administrative purposes unnecessary and removes the incentive of staff to support or ignore the activities of power groups. Conversely, powerful inmates have little to gain and much to lose (e.g., privileges and parole chances) by attempting to "stand over" other inmates.

Finally, in New Zealand itself, class structure is less pronounced than in many capitalist countries. Wealthy entrepreneurs and workers often mix together in pubs, in clubs, and in other recreation. Exploitation of the rich by the poor is adulterated. New Zealand is a compassionate society, with a relatively generous welfare system, which generates few homeless and no beggars. Linked to this, particularly in the working classes, is a strong egalitarian ethic. Class and racial tension is largely dormant, and there is popular contempt for authority. The rich and the powerful are tolerated, but only as long as they act like "ordinary blokes."

This same culture is clear in prisons. Here, racial conflict is rare, and inmates who attempt to dominate others are denounced as "standovers," "screws," and "coppers." Doing one's own time and minding one's own business are highly valued. Those who do not risk ostracism, abuse, assault, and general hostility from the body of inmates as a whole. As a result, there is high incentive in New Zealand prisons, supported by management, the custodial environment, and years of social conditioning, for the preservation of equality among the incarcerated.

CONCLUSION

New Zealand is a country that, like many others, has faced rising prison numbers in recent decades. With some success, it has attempted to address the problem by creating alternatives to imprisonment and by liberalizing parole. It has also attempted to reduce recidivism, and for many years has had a humane approach to the treatment of criminals. Sentences are relatively short, prison conditions are generally good. Sincere efforts are made to assist inmates to discard the criminal lifestyle. So far, the

results of these efforts have been disappointing, and recidivist rates are high. But one positive spin-off of this liberalism is that prison society itself is comparatively nonexploitive and the experience of living in custody is relatively benign.

NEWGATE PRISON

Newgate Prison was authorized by the Connecticut General Assembly in 1773 to utilize incarceration as a punishment for crime, the same year that construction began on the more famous Walnut Street Jail in Philadelphia. All male offenders who were not under sentence for a capital crime were to be imprisoned at Newgate. Prior to this time, most crimes, other than those deemed to be capital crimes, were punished through specific acts, such as branding, flogging, the stocks, fines, public shaming, and banishment. Unlike the Walnut Street Jail, Newgate was not influenced by the movement for reform as advocated by the Quakers or by individuals such as Benjamin Rush and Thomas Eddy.

THE INSTITUTION

Newgate Prison was constructed within an abandoned copper mine in East Granby, Connecticut. Prisoners worked, lived, and were housed in huts and cabins that were constructed inside the underground caverns and shafts of the mine.

The underground structure of the prison and installation of an iron door over the entrance shaft were at first believed to be escape-proof. Consequently, few if any guards would be required to run the prison. Captain John Viets, Newgate's first keeper, appointed by the Connecticut General Assembly, initially provided the only security for the institution. However, within three weeks, the first prisoner had escaped (with assistance) through a mineshaft. Although additional security measures were implemented by new legislation from the General Assembly, escapes were frequent and sometimes violent.

In addition, overcrowding became a serious issue over time. In one instance, 32 men were housed in an area only 21 feet by 10 feet by 7 feet. As well as escaping, prisoners also regularly burned any structures that were built over the mine. All of these problems were exacerbated by a combination of untrained staff and poor management. Ultimately, the difficulties with security would contribute to the closing of Newgate.

THE PRISONERS

Initially, the Connecticut General Assembly only dictated imprisonment for males convicted of five offenses: robbery, burglary, horse theft, counterfeiting, and forgery. However, it eventually included women, murderers, political prisoners, and prisoners of war. Newgate also housed Tories during the American Revolutionary period.

Prison labor was one of the core components of life at Newgate. Although at first prisoners worked

in the mines, it quickly became evident that they lacked the training and skills necessary to make the venture profitable. Instead, they were set to work making nails, barrels, shoes, and wagons as well as doing farm work.

The prisoners housed at Newgate worked in close quarters with one another and were housed collectively, in contrast to the solitary system proposed in the Pennsylvania model. They were allowed to congregate after the workday to gamble and trade their rations for the day. These rations included a pound of meat, a pound of bread, a pint of cider, and potatoes. Additionally, those who had money from working or other sources had access to a tavern near the prison in the evenings. Such close contact between the inmates provided some savings on the cost of imprisonment, but it also made it easier for violence, riots, and insurrections to occur.

PROBLEMS

It was evident almost immediately that Newgate would have serious problems. Riots, uprisings, and escapes became commonplace. During many escapes and escape attempts, the inmates would burn, vandalize, and attempt to destroy the prison. After each incident, additional security measures were added, and new guards were hired. This became a problem especially when the prison was used to house Tories during the Revolutionary Period. As Durham (1990) notes, "The combination of these prisoners and the traditionally weak security of the prison were causes for local alarm" (p. 311). The result was an order by the Council on Safety that oversaw the prison to increase the number of guards. However, the repeated increases in the number of guards securing the prison ultimately defeated the purpose of using the abandoned mine, with its unique structure, as a prison in order to limit operational costs.

It was not merely the increased cost of running the prison that forced its abandonment in 1827. The effect of the prison on the inmates, evident upon release, also became a major factor. The prison environment further corrupted the inmates and helped to breed "cruelty, riots, insurrections, vice and crime" (Lewis, 1967, p. 67). Amplifying this problem was the use of measures including flogging, the stocks, the treadmill, and the hanging of an inmate by the heels as a punishment for unruly behavior, escapes, and riots. Furthermore, as noted previously, the congregation of the inmates enabled many to learn additional criminal skills from each other, thereby increasing their abilities and skills.

CONCLUSION

Despite its shortcomings, Newgate was still believed to be the preeminent prison in the United States until it closed in 1827, when the last prisoner was transported to Wethersfeld Prison in Connecticut. Even so, the legacy and impact of Newgate on the evolving penal theories was not great. These days, it is remembered most commonly as one the first institutions to utilize imprisonment as a form of punishment in the U.S.

NORFOLK PRISON

Massachusetts Correctional Institution (MCI) Norfolk was the first "community-based" prison in the United States. It was designed to be a community, with a central quadrangle, similar to that of many

traditional colleges. Dormitories lined the longer sides of the quadrangle. A community services building and an education center were located at either end. Industry buildings were placed outside the quadrangle. Though it has grown beyond this layout, the central quadrangle is still the focal point of the institution today.

HISTORY

Howard Belding Gill (1890–1989), a Harvard MBA with an interest in prison reform, was first superintendent of the Prison Colony at Norfolk. He was appointed in 1927 and directed the completion of work on the prison. The first prisoners came to the site in 1927 from the Charlestown State Prison. They finished building much of the prison complex itself, including the construction of the perimeter wall.

Gill considered Norfolk to be one of the first examples of "a new prison discipline." In contrast to the traditional Auburn prison model, which he believed was designed to "break the spirit of the criminal," Gill envisioned a community with an emphasis on education and industry (Gill, 2001, p. 49). Norfolk prisoners would not wear traditional prison uniforms. They were granted a stake in the management of the institution through participation in an advisory council.

Gill's philosophy depended upon classification. At its simplest, this entailed sorting the tractable from the intractable. He argued that the traditional view that "every prisoner should be treated alike" (2001, p. 51) could not be supported in light of the recent psychological studies by such criminological pioneers as William Healy (1915) and Bernard Glueck (1916). "Tractable prisoners," he proposed, should be housed in cottages or dormitories, rather than "massive, monolithic monkey cages" (Gill, 2001, p. 51) and provided with "work, education, medical care religion, recreation [and] family welfare . . . designed to *adjust the offender to the society to which he will return*, i.e. acculturation" (Gill, 2001, p. 52; italics in original).

After four inmates escaped from the colony, Gill came under fire from the Massachusetts legislature, and following a controversial hearing in 1934, he was removed as superintendent (Johnsen, 1999). The second superintendent, Maurice N. Winslow, continued many of Gill's policies, though he instituted uniforms and did not allow prisoners to own dogs. Norfolk maintained a reputation as a progressive institution, supporting such diverse activities as poetry reading, debating society, and an academic quiz team.

Perhaps the most famous alumnus of the Norfolk Prison Colony was Malcolm Little (Malcolm X), who lauded the "culture" of the institution as he found it in 1948 and credited the educational support he received there with enabling him to achieve a level of fluency that far surpassed his formal eighth grade education. According to Malcolm X:

> The Norfolk Prison Colony's library was in the school building. A variety of classes were taught there by instructors who came from such places as Harvard and Boston universities. The weekly debates between inmate teams were also held in the school building. You would be astonished to know how worked up convict debaters and audiences would get over subjects like "Should Babies Be Fed Milk?"
>
> As you can imagine, especially in a prison where there was heavy emphasis on rehabilitation, an inmate was smiled upon if he demonstrated an unusually intense interest in books. There was a sizable number of well-read inmates, especially the popular debaters. Some were said by many to be practically walking encyclopedias. They were almost celebrities. No university would ask any student to devour literature as I did when this new world opened to me; of being able to read and understand. (Malcolm X, 1992, pp. 199–200)

TODAY

Today, MCI Norfolk houses more than 1,400 prisoners. It is the largest medium-security prison in Massachusetts. It has a 19-foot-high maximum-security perimeter wall that is 5,000 feet long surrounding 18 dormitory-type units and two modular units. Current educational programs include those offered through the MCI Norfolk School: adult basic education through general equivalency diploma and vocational programs including barber school, computer technology, culinary arts, welding, and the Boston University college program. Treatment

programs include Correctional Recovery Academy, Sex Offender Treatment Program, and Security Threat Group Program.

CONCLUSION

The vision of the prison community established in the planning of Norfolk did not come to pass. However, many of the reforms espoused in the "modern penology" of the 1920s have been instituted and accepted throughout correctional systems: classification, full-time schooling, treatment programs, and meaningful vocational study are the norm. As Gill stated in the State House hearing in 1934, "You seek to remind me that the men at Norfolk are criminals; I seek to remind you that the criminals at Norfolk are men" (Janusz, 1990, p. 57).

NOVEMBER COALITION

The *November Coalition* is a nonprofit, grassroots organization that seeks to educate the public about the war on drugs. According to their Web site, the coalition includes

> a growing body of citizens whose lives have been gravely affected by our government's present drug policy. We are prisoners, parents of those incarcerated, wives, sisters, brothers, children, aunts, uncles and cousins. Some of us are loving friends and concerned citizens, each of us alarmed that drug war casualties are rising in absolutely horrific proportions. (November Coalition, n.d.)

It is one of a number of prison reform groups lobbying to rescind current federal and state laws on drugs.

WHAT DOES THE NOVEMBER COALITION DO?

Formed in 1997, the November Coalition uses real-life examples to illustrate how a drug arrest can become a "frightening introduction to conspiracy statutes, government's liberal use of informants, guideline-sentencing laws, and the nightmare usually leaves defendant and family confused and full of despair." Through individual accounts, they show how long-term imprisonment has dramatic effects on personality and personal relationships. Prisoners suffer from severe restrictions on their human and constitutional rights, and all of these difficulties exact a personal toll on offenders and those who love them.

The November Coalition seeks to rehumanize prisoners by telling their stories. This strategy reveals the damaging impact of mandatory minimum sentencing on individuals and their families. Autobiographical accounts help to demonstrate that many drug offenders are regular people, good citizens and neighbors, whose lives have been derailed by a misguided sentencing policy. Some of these stories remind us that those in prison are children who are also victimized—in part by the actions of their parents, and in part by the draconian measures used to fight drug use. Other stories share the painful experiences of aging parents who have lost their children due to the long sentences they must serve. The firsthand accounts document the disparate impact that drug policies have on different races and social classes. These stories also relay

feelings about politicians who have escalated the drug war even though they have admitted past drug use that could have sent them to prison rather than to the White House.

The November Coalition argues that the discriminatory impact of drug policies, in which members of minority communities far outnumber whites in prison, should have been predicted. If that were not possible, then the discriminatory impacts are certainly clear to today's policymakers. According to the coalition, drug policies have created a situation in which the most vulnerable are least able to defend themselves against injustice. Such policies do not constitute a war on drugs; they have become a war on people. The coalition also points out the similarities between alcohol prohibition of the 1920s and drug prohibition today. Drug users have been dehumanized through demonizing propaganda, in particular "the crack epidemic," that dominated national media during the late 1980s.

PUBLICATIONS

The coalition produces a newsletter called *The Razor Wire* to report on drug policy reform efforts, legislative updates, and news about drug law vigils and meetings. This publication also includes letters from prisoners and others who have been victimized by the war on drugs. The organization also puts out *The Wall,* which is an online collection of prisoner photos and stories that document the impact of the war on drugs. *The Razor Wire* and *The Wall* can be found on the November Coalition Web site. The Web site also includes essays, statistics, and other information that supports efforts toward changing prisons and our views toward punishment. In addition to educating people about the necessity of penal reform, the coalition has demonstrated that the Internet can be an effective tool for information sharing and for organizing those who share an opposition to a policy that has shaped our justice system and filled our prisons.

CONCLUSION

The November Coalition provides an example of the effectiveness of grassroots challenges to policy. Working with limited resources, the group has made great progress in their efforts to educate the public and policymakers about problems associated with current legislation for drug crimes. The November Coalition succeeds in providing an arena where prisoners' voices and stories can be heard. These stories and voices are invaluable in the effort of challenging the status quo.

O

OAK PARK HEIGHTS, MINNESOTA CORRECTIONAL FACILITY

Oak Park Heights, in Minnesota, is one of the first "New Generation" prisons constructed after the demise of the medical model in penology, which saw the role of imprisonment as the diagnosis, treatment, and cure of criminal behavior. It represents one of three fundamental changes in Minnesota penal policy in the 1970s and early 1980s: the introduction of a new sentencing system, an alternative to incarceration initiative, and the decision to build a new high-security prison.

OVERVIEW

The new sentencing system specified the number of months to be served for specific offenses and designated those crimes that would result in confinement in state prison and those that could be dealt with by alternatives to incarceration. Under the Sentencing Guidelines, only offenders convicted of crimes against persons (e.g., murder, assault, armed robbery, rape, child molestation) and drug trafficking, as well as those who had failed in the various alternatives to imprisonment, would be sent to state prison. Once in prison, they must serve two-thirds of their sentences in prison and one-third on supervised release. The second change, the Community Corrections Act, provided state funds to enable Minnesota counties to keep nonviolent offenders in their jails, under probation supervision, or placed in community-based facilities and programs. The third new direction in penal policy was the decision to build a high-security prison to replace the State Penitentiary at Stillwater built in 1914. This decision was influenced by a series of inmate homicides (3 in 1975) and suicides (11 between 1971 and 1974), an increase in assaults on inmates and on staff, and allegations of drug trafficking that led to a legislative investigation.

In 1976, the Joint House-Senate Committee on Minnesota State Prison issued a detailed report that found that the state's only penitentiary for adult males was seriously mismanaged, that staff and inmates feared for their safety, and that dangerous prisoners were not effectively separated from the general inmate population. The investigation concluded that controlling prisoners in giant cell halls that were four tiers high, each containing 512 cells, made visual surveillance of inmate activity "impossible."

A new Commissioner of Corrections, Kenneth F. Schoen, replaced the warden at Stillwater with the Department of Corrections' Inspector of Jails, Frank W. Wood. With a promise of no interference from departmental headquarters, Wood introduced

Photo 1 *Oak Park Heights, administrative building in the foreground*

Photo 2 *Oak Park Heights security facility, Minnesota*

a proactive strategy to restore order in the prison. He greatly restricted and controlled all inmate movement, initiated random lockdowns and shakedowns of inmate cells, work and recreation areas, built walls to divide the large cell blocks into more manageable spaces, and replaced most of the administrative staff. Wood's management philosophy was summed up in words that have become widely quoted in penology: "If you gave me the choice between this place [the new prison] with a dishonest, incompetent staff and a tent with honest, competent staff, I'd take the tent" (King, 1991).

While Wood was bringing Stillwater Prison under control, planning moved ahead for the construction of the new high-security prison at Oak Park Heights (OPH). The new institution was to employ a nontraditional design to house a relatively small population of violent and predatory prisoners. Wood was appointed warden and began outlining security and staffing needs, along with inmate programs and services. With Wood's management strategy in place, Oak Park Heights began receiving prisoners in March 1982.

DESIGN

Oak Park Heights is an earth-sheltered maximum-security prison built into a hillside overlooking the St. Croix River Valley (Photos 1–3). From a nearby road and residential area, all that is visible of the facility is a one-story brick administration building. Because it lies 30 feet or more under the ground, OPH has been able to achieve significant economies in heating and cooling costs. Double parallel fences with razor ribbon between them and equipped with electronic motion detection devices provide perimeter security.

OPH is comprised of nine separate 52-man units arranged in a U-shape; the units are connected by two separate traffic corridors, one for prisoners, the other for staff. Except for disciplinary segregation units, each unit has its own eating and indoor recreation areas and a heavy wire mesh enclosed outdoor recreation yard. A larger institution yard can accommodate prisoners from up to, but not more than, two units for softball, handball, and other sports. An unusual feature of these units is the use of wood covers on railings.

In each unit, an officer in a secure control "bubble" is able to observe other staff interacting with prisoners as well as inmates moving in the adjacent corridor. As a result, prisoners can move from one part of OPH to another without a staff escort. Two staff in each unit rotate every two hours with the officer in the bubble. In the event of trouble, the control officer records the names and actions of prisoners and calls for assistance.

The nine units serve a variety of custodial and program functions within the same physical perimeter. One provides the medical needs for the

entire department of corrections; while another houses mental health cases. There is an educational unit, an industries unit, and an honor unit. There is also a disciplinary segregation unit for short-term punitive confinement and two special housing units (SHU) for inmates who are permitted to leave their cells only for individualized exercise. The ninth unit, recently completed and operational, offers a long-term control or "supermax" function. Here a prisoner cannot leave his cell without wrist and leg restraints and under the escort of several officers.

Inmate cells, called rooms, range in size from 70 square feet to 153 square feet for medical and mental health rooms. Standard cells have horizontal concrete slabs to hold a foam mattress and to double as a desk or table during the day; a vertical concrete configuration built into the wall contains shelves, storage space, and a flat surface for a television set. Toilets and wash basins are made of stainless steel and are set in concrete. Showers in all units are individually enclosed, locked stalls. Rooms have narrow, vertical windows providing natural light and looking into the large interior yard; from second-floor rooms inmates can see the river valley. OPH has never been crowded, since all cells were designed for one person.

STAFFING

Oak Park Heights opened with a staff complement of 289, of whom 234 had no previous experience working in prisons; the plan was to avoid hiring, in Warden Wood's words, "people with bad habits." Only 55 had worked in other Minnesota correctional facilities. Thirty of the new staff were women. Almost half of the new recruits had four-year college degrees—compared to 15% at nearby Stillwater Prison. The new staff were trained to deal with prisoners, as Wood said, in a "nonabrasive way," and they continue to receive 40 hours of in-service training each year. The absence of violence has been the measure of this strategy. Recently, however, 30 of the original positions have been eliminated due to state budget cuts, with the result that prisoners now remain in their cells during weekends. What effect this change will have on inmate violence is, as yet, unclear.

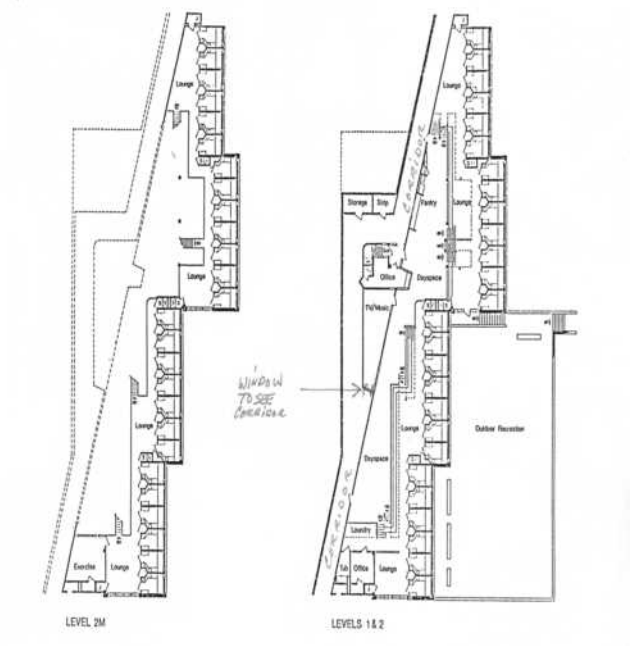

Photo 3 *Oak Park Heights diagram*

INMATE POPULATION AND PROGRAMS

Oak Park Heights' population is comprised of Minnesota's most violent offenders, who are serving long sentences, as well as prisoners who have been designated as escape risks or are viewed as management problems in other Minnesota prisons. Individuals who have committed violent crimes against others, including murder, assault, criminal sexual assault, kidnapping, and robbery, constituted 86.5% of the population in February 2003.

For the past 20 years, prisoners from the high-security federal prison at Marion, Illinois, have been accepted as "boarders." Almost all of these transfers, serving long sentences for serious crimes, have engaged in violence in prison, often associated with the major federal prison gangs that do not have a significant presence in Minnesota. Other boarders are interstate transfers. In exchange, the Department of Corrections has sent some Minnesota prisoners to other jurisdictions for purposes of protective custody. Oak Park Heights inmates who may engage in physical confrontations with rap partners, witnesses, or other inmates can be readily separated by transfer to another unit within the prison—as

can prisoners observed or reported to be forming a gang or any illegal organized activity.

Job options at OPH include working as an orderly, joining the kitchen crew, or other maintenance and recreation services. Educational programs include classes and self-study courses. Courses in anger management and critical thinking skills are also offered. Prisoners can take remedial classes to obtain a general equivalency diploma (GED), and, if they pay for courses themselves, they can earn a BA degree. Religious and recreational activities are also available, as is access to legal resources. Inmates are allowed up to 16 hours of contact visits each month—although those in disciplinary segregation may have only noncontact visits. All inmate telephone calls are monitored and tape recorded.

MANAGEMENT PHILOSOPHY

The importance of the management philosophy that goes with a new design is fundamental in understanding how Oak Park Heights has functioned since 1982. Remarkably, five wardens, including the current warden Lynn Dingle, have continued the Wood strategy that was first employed at Stillwater and carried over to Oak Park Heights. All gained their prison experience working under Wood at Stillwater, Oak Park Heights, or both.

In addition to the points already noted, the management philosophy at OPH includes the following guidelines: At least one officer will always be stationed in each unit's protected control bubble so that staff can call for assistance in the event of any altercation or disruption of normal activities. Forty out of 200 custodial staff are women; they are assigned to all units because experience at OPH has shown that they have often helped deescalate problems. The institution also maintains a high ratio of staff to inmates. Prisoners will be frequently "pat-searched" to condition them to submit to staff authority, as well as to detect weapons or contraband. Any prisoner not assigned to a job or involved in an educational or treatment program will be locked in his cell. No protective custody unit will be established; such cases are transferred to other prisons.

Only such physical force as is necessary will be used to control prisoners who are acting out. Staff who are assaulted will be restrained and allowed no "payback," since they cannot preach nonviolence to prisoners and solve their own problems with violence. State or federal transfers will be given a fresh start at arrival but will be required to sign a contract agreeing to abide by facility rules; violation of the contract will lead to their prompt return to the jurisdictions from which they came.

A variety of services and program offerings will be made available to inmates, because going to prison *is* the punishment. OPH is not responsible for rehabilitating prisoners, but it is responsible for maintaining an environment that is conducive to change for those who are so inclined. The regimen at OPH is intended to reduce the frequency, scope, and seriousness of the inevitable incidents that will occur in a high-security prison. The regimen is not intended to aggravate the conditions of confinement under the mistaken belief that it will make inmates averse to coming back.

CONCLUSION

Essential measures of the success of the penal principles at Oak Park Heights relate to the control of violence and the protection of inmate rights. Since the prison opened, no inmate or staff member has been killed, nor have there been any escapes—not even any attempts—and no riots or major disturbances that have involved as much as an entire unit. The Federal District Court has had no case in which OPH has been found to violate the constitutional rights of any prisoner, and the prison received a 100% compliance score from the American Correctional Association the first time it applied for accreditation.

—David A. Ward

OFFICER CODE

Correctional officers form a distinct subculture within prisons, with their own beliefs and informal code of conduct that set them apart from inmates, administrators, and the world outside. The *officer code* is organized principally around ideas of solidarity within the subculture. The strength of the officer subculture within different prisons can be measured by the degree to which officers adhere to the code and by the severity and certainty of consequences imposed on those who violate the code.

CENTRAL NORMS OF THE OFFICER SUBCULTURE

Norm 1: Don't Rat

The prohibition against informing against others is fundamental to most codes of solidarity. In law enforcement, the manifestation of this norm is commonly referred to as "the blue wall of silence." In the prison world, the injunction is strongest in regard to testifying against a fellow officer for abuse of an inmate or informing on an officer to an inmate.

Testifying against a fellow officer is the most obvious and flagrant violation of the officer code. An officer who violates this norm in effect forfeits his or her membership in the subculture and the protection it provides within the prison world. It is a sanction that in most prisons cannot be borne. As an officer working in a maximum-security prison noted, "If nothing else, you do believe that you need, you *know* you need, the rest of the officers in order to perform, and if you're alone, you can't last in a place like that a long time." Even officers who might be secretly sympathetic to a fellow officer who testified would turn their backs "because of that unwritten code that says that I violated them or I violated their code and I'm a *correctional officer*" (Kauffman, 1988, p. 98).

Events at Corcoran Prison in California during the 1990s illustrate the strength of this norm. Over a five-year period, some officers at the prison staged "gladiator fights" between inmates belonging to rival gangs. The fights frequently ended with officers shooting the inmates. Of 50 who were shot, seven died. By comparison, only eight other inmates in the entire California prison system were killed by officers during the same time period. When two Corcoran officers eventually blew the whistle on their fellow officers, they were threatened and harassed to the point that they felt compelled to resign. Ratting out an officer to an inmate, for example, by revealing the identities of officers who beat up an inmate or tore up an inmate's cell, is also a serious offense in the officer subculture, because doing so may endanger the lives of the officers involved. "Payback" is a constant threat within the prison world where antagonists can put little distance between themselves, and few distractions from long-standing grudges exist.

Norm 2: Always Go to the Aid of an Officer in Distress

The most important positive obligation under the officer code is to go to the aid of any fellow officer in distress, except in those rare instances when an officer has forfeited his or her membership in the officer subculture (see Norms 1 and 3). The obligation to provide immediate, unquestioned assistance to fellow officers in danger lies at the heart of the officer code. It is the norm on which positive feelings of officer solidarity are based. This norm is so important that those who consistently uphold it can sometimes violate other parts of the officer code without fear of reprisal.

For obvious reasons, the injunction to aid a fellow officer is strongest at those prisons in which

employees perceive themselves to be in the greatest danger. Officers, especially rookies, who consistently violate this norm at prisons where tensions are high between staff and inmates are likely to be ostracized by their fellow officers, thus making their own situation at the prison untenable.

Norm 3: Don't Deal Drugs With Inmates

The prohibition against dealing drugs with inmates is based not on negative attitudes toward drugs per se, but rather on fear of the increased danger to officers presented by inmates under the influence of drugs. Officers who violate this norm risk ostracism, harassment, and the threat of physical harm by fellow officers. The norm is taken so seriously in some prisons that, if an officer persists in dealing drugs with inmates, the norm against ratting no longer applies.

Despite the vehemence with which officers may espouse this norm, drugs are plentiful in many prisons, and officers suspect one another of involvement. Demand is great, making incentives strong. Dealing drugs not only offers economic rewards, but it also can offer at least temporary respite from fear and threat of violence by inmates who can trade protection as well as money in exchange for drugs. Because the incentives to violate this norm are strong, informal sanctions for violating it are severe.

Norm 4: Always Support a Fellow Officer in a Dispute With an Inmate

Officers strive to maintain solidarity against inmates in appearance as well as in fact. Whether they agree with the actions of a fellow officer or not, they should never make another officer look bad in front of an inmate. Any disagreements between officers should be handled out of prisoners' hearing and sight. Officers are not supposed to act as impartial arbiters in disputes between inmates and fellow officers. Instead, the code mandates that they provide immediate and unquestioning support for one another as long as prisoners are present.

The expectation that officers will back one another is sufficiently strong in some prisons that officers will sign disciplinary reports as witnesses to events for which they were not, in fact, present. In its most extreme form, this norm calls for officers to support informal sanctions imposed by fellow officers on inmates, including acts of violence against inmates. Especially in prisons with sustained levels of conflict between officers and inmates, many officers believe that the only way to deter violence is to punish violence with violence. Those who refuse to support such sanctions (passively, by not participating; less commonly, by interceding) risk ostracism and harassment. Although seasoned officers who abide by other norms of the officer code can often abstain from violence without fear of censure, younger officers are more vulnerable. The norm mandating unquestioned support for officers in disputes with inmates, combined with the norm against ratting against fellow officers, promotes and protects the development of a violent officer subculture in some prisons.

Norm 5: Don't Fraternize With Inmates

The officer subculture is shaped by its opposition to the inmate subculture. The role of the officer, as defined by the subculture, is to neither help nor befriend inmates. It is, instead, to maintain order and security within the prison and protect fellow officers. The norm against fraternization may even prohibit expressions of sympathy or support regarding inmates made in private conversation with other officers.

Officers who are too lenient or too popular with inmates can jeopardize the safety of more hard-line officers, or at the very least make their jobs more difficult. Those who fraternize with inmates also attract suspicion that they are dealing drugs with inmates or cannot be relied upon in disputes with them.

Sanctions for violating this norm vary widely from prison to prison and often from shift to shift or unit to unit within prisons. But as long as officers uphold all other norms mandating solidarity vis-à-vis inmates, they rarely risk more than mild censure and harassment by their peers if they interact too closely with inmates.

Norm 6: Maintain Solidarity Versus All Other Groups

Officers ideally maintain solidarity versus anyone who is not an officer, including prison administrators, social workers, government officials, and, perhaps most of all, representatives of the news media. Officers typically view prison administrators, even those who have come up through the ranks, as pandering to inmates and unwilling to back officers in the difficult and dangerous work that they do. They have no illusions about how those outside the prison world see them: violent, power hungry, corrupt, racist, a "breath away from being inmates themselves." Members of news and entertainment businesses seem to revel in contrasting the depths and variety of the inmate experience with the stereotypical image of the brutal "screw." The beliefs, expectations, and obligations embodied in the officer code are designed in part to shield officers from these negative images, to allow them to reject their rejecters. As a result, the correctional officer subculture rivals, and in many prisons exceeds, police adherence to a code of silence versus the world outside.

Norm 7: Show Positive Concern for Fellow Officers

This last norm represents a behavioral ideal subscribed to, if not carried out, by most officers. That ideal prescribes consideration for fellow officers on the job—not leaving the person on the next shift with a problem, taking time to share important information with colleagues, covering for each other. It also prescribes—but does not require—concern for fellow officers off the job, especially if an officer or family member is injured or ill.

The officer code mandates no sanctions for those who fail to show positive concern for fellow officers. Yet the close bonds and tight-knit community that are the hallmark of the officer subculture in numerous prisons are for many officers the most rewarding aspects of their job.

CONCLUSION

Important variables affecting the nature and strength of the officer code at each individual prison include the security level of the prison, history of violence at that institution, size and nature of the inmate population (adolescent, geriatric, insane, etc.), and gender of the inmates and staff. Thus, large maximum-security facilities for men like Corcoran Prison tend to have far stronger officer subcultures and codes than do small, low-security prisons for women, where relatively congenial relations between officers and inmates may exist and neither officers nor inmates are fearful for their lives. Little has been written about the officer code, least of all by officers themselves. Those who study prisons have paid scant attention to varieties and intricacies of the officer subculture, in sharp contrast with rich detail provided about inmate subcultures. Yet, the prison world is largely defined by dynamic interaction between these two subcultures and the norms of behavior that each group mandates for its members.

O'HARE, KATE RICHARDS (1877–1948)

Kate Richards O'Hare, known by many as "Red Kate" because of her outspoken socialist beliefs, her political activism for the rights of women, workers, and children, and her vocal opposition to the United States' entry into World War I, was

imprisoned for her political beliefs in 1919. Following her experience as a federal prisoner in the Missouri State Prison, she actively advocated for the reform of prisons. Her life story demonstrates the manner in which the government may use prisons to control public dissent. It also shows how individuals may effect changes in penal practices and beliefs.

BIOGRAPHICAL DETAILS

Kate Richards was born in Ada, Kansas, on March 26, 1877. She attended school in Nebraska for a short period of time before becoming an apprentice machinist working alongside her father in a Kansas City, Missouri, shop. Richards joined the International Order of Machinists union and, on her own time, devoted herself to temperance work through the Women's Christian Temperance Union.

POLITICAL INFLUENCES

During her tenure as a machinist, Richards became interested in the writings of many radical authors, including Henry George, Ignatius Donnelly, and Henry Demarest Lloyd. However, it was a speech made by Mary Harris "Mother" Jones and a meeting with Julius Wayland, the editor of *Appeal to Reason,* that ultimately converted Richards to socialism.

Richards joined the Socialist Labor Party in 1899, and two years later moved to the more moderate Socialist Party of America. She then enrolled in the first class of the International School of Socialist Economy in Girard, Kansas. This school was founded by the influential journalist Julius Wayland and was designed to train socialist organizers. Richards met and married Francis O'Hare while attending school in 1902. They spent their honeymoon lecturing on socialism and continued their efforts for 15 years. Their journeys on their lecture tours reached from the Great Plains states to places as far away as Britain, Canada, and Mexico.

In 1904, Kate O'Hare successfully published a socialist novel titled, *What Happened to Dan?*, later revised and reprinted as *The Sorrows of Cupid* in 1911. The O'Hares then became copublishers and coeditors of the radical weekly publication *National Rip-Saw,* published in St. Louis, which they subsequently renamed the *Socialist Revolution* in 1917. In 1910, Kate O'Hare unsuccessfully ran for the Kansas Congress on the Socialist ballot. In 1917, she became chair of the Committee on War and Militarism and toured the country to speak against the United States' entry into World War I. Shortly after her coast-to-coast travels, the Federal Espionage Act was passed that made it a federal offense to make speeches undermining the war effort.

IMPRISONMENT AND PENAL REFORM

In July 1917, Kate O'Hare was indicted under the new Federal Espionage Act for making an antiwar speech in North Dakota, and was convicted and sentenced to five years in prison. The trial judge acknowledged that the United States was a nation of free speech, but reminded all that war was also a time of sacrifice when people should not weaken the spirit or destroy faith or confidence of the people. Two years later, in April 1919, after her appeals failed, Richards became a federal prisoner, joining anarchist Emma Goldman in the women's section in the Missouri State Penitentiary, at the time the largest prison in the country.

O'Hare's prison confinement made a lasting impression on her. She immediately began to write widely circulated letters that were collected and published as *Kate O'Hare's Prison Letters* (1919) and *In Prison* (1923). Her protests about the absence of treatment for syphilitic women, the unhealthy living conditions and the inadequate food, the silent system, and more significantly, the illegal use of the contract labor of the federal prisoners by the Oberman Manufacturing Company, led to the visit by the federal inspector of prisons, Joseph Fishman. In his subsequent report he demanded that the prison officials remedy some of the more flagrant abuses. In 1920, her prison sentence was commuted after a nationwide campaign by socialist and civil libertarians. Later that year, she later received a full pardon from President

Woodrow Wilson and immediately sent to him a 63-page report on the conditions for federal women prisoners at the Missouri State Prison, likening their conditions to slaves stripped of their human rights, yet affirming that within the prison she found the opportunity for social service.

In 1922, Kate O'Hare recommenced her political activities, concentrating on various aspects of prison reform. First, she organized and lead a march on Washington called the Children's Crusade. The march was headed by children of antiwar agitators who were still in prison to demand immediate amnesty for all. Two years later, O'Hare began a national survey of prison labor in 1924 that took two years to complete. She increasingly spoke on the need for prison reform in her numerous public lectures, focusing on the inhumanity of the prison system and reaffirming the call she had made in her published memoir, *In Prison* (1923), that the federal government should build a federal prison for women that would be the model for all state prisons. Her voice became one of many that resulted in the development of the Federal Reformatory for Women at Alderson, West Virginia. Following also from her prison experience, she began to speak and write on the outrage of convict labor contracts where prison-made goods produced under abusive conditions competed with the work of free labor. While supporting the discipline of work for prisoners, she argued for fair wages and working conditions.

After her divorce from Frank O'Hare in 1928, she married again and moved to California, and initially thought she would remove herself from an active political life. However, her efforts at prison reform had not come to an end. As a result of her reputation and political connections, with the election of a Democratic governor interested in bringing significant change to an archaic penal system, a new director of penology was appointed, and O'Hare was appointed his assistant. During her tenure from late 1938 to 1940, she headed a major investigation that resulted in the dismissal of all of the members of the boards of directors for incompetence and neglect, the greater centralization of the prison system, the initial development of the first minimum-security facility for men at Chino, and the appointment of the famous Clinton T. Duffy as warden of San Quentin State Prison. When she retired from the position after one year, California was on the way to developing one of the most progressive penal systems in the United States. In appreciation of her services, she was invited to attend the sessions of the State Crime Commission, and she continued to be present until the year of her death in 1948.

CONCLUSION

Kate Richards O'Hare stands out among historical U.S. prison reformers because of her socialist beliefs and activities. Her personal experience of incarceration was clearly important in shaping her consequent dedication to challenging the inhumanity of the prison system while actively working for change in practices and policies. Though rarely remembered these days in discussions of imprisonment, O'Hare demonstrates the importance of free speech, the way in which an individual may challenge the power of the state, and the ongoing need for changes to this nation's prison system.

OPTOMETRY

In the 2003 standards for jail and prison medical care issued by the National Commission on Correctional Health Care (NCCHC), there is no specific standard for optometry. Yet, the NCCHC requires a full health assessment of all inmates entering the facility, which comprises a systematic review of all bodily systems, including inmates' visual needs. Inmates must be referred to specialists when they require consultation or care beyond the capabilities of the correctional facility, and they are entitled to eyeglasses if a physician deems them necessary for proper functioning.

EYE CARE AND THE LAW

Eye care is guaranteed to all prisoners in the United States both through the U.S. Constitution and through state constitutions and state laws. However, optometry services do not have to be the best available or even very good to meet legal requirements. Instead, the courts have merely set a threshold for the minimally acceptable ophthalmologic care that inmates are to receive.

Federal Law

Under the U.S. Constitution, prison officials must practice eye care that is not deliberately indifferent to serious medical needs (*Estelle v. Gamble*, 1976). Ordinary negligence in providing optometric treatment and/or differences of opinion as to matters of medical judgment does not lead to successful lawsuits under the Eighth Amendment (*Keyes v. Strack*, 1997). Courts have ruled that it is constitutionally permissible to prescribe an inmate with eyeglasses for a serious eye condition that the inmate thinks requires further treatment and evaluation (*Perkins v. Pelican Bay State Prison*, 1994), provided that the glasses are an appropriate treatment for the inmate's condition (*Dunville v. Morton*, 2000).

Under the deliberate indifference standard, even incompetent care may not be actionable under Title 42, U.S. Code §1983. Medical personnel must do the best they can, acting on their professional medical opinion. Even an inmate with a detached retina who complained about his blurred vision and worsening eye condition but who did not get timely treatment until months later may not be able to show deliberate indifference as long as prison officials continued to rely on their medical judgment and provide some treatment, even if substandard (*Keyes v. Strack*, 1997). As long as eye care is consistent with professional medical opinion (*Hodge v. Coughlin*, 1994), dissatisfaction with the treatment provided is inactionable under Section 1983 (*Grove v. Prison Health Services*, 1990).

Liability may, however, result if prison officials house inmates in such a way that contagious conditions are spread among cellmates. Thus, in *Freeman v. Lockhart* (1974), the inmate was placed in a prison cell with a cellmate whom prison authorities knew was infected with tuberculosis. After contracting tuberculosis in his eyes, the inmate received eye drops instead of undergoing the surgery suggested by an optometrist. The court ruled that the prisoner might be able to prove the allegations stated in the Section 1983 lawsuit.

Denial of eye care for serious eye conditions may invoke liability, including when a doctor refuses to provide eyeglasses to an inmate at the state's expense. In *Ennis v. Dasovick* (1993), for example, an inmate who wore glasses for 28 years was denied a new pair of eyeglasses by prison medical officials. The North Dakota Supreme Court found that the doctor may be liable for refusing to provide new eyeglasses to the inmate at the state's expense. Similarly, delay of care for serious eye conditions might also invoke liability, including actions that delay the time before an inmate can be seen by an ophthalmologist. Thus, in *Brady v. Attygala* (2002), an inmate with a serious eye injury repeatedly requested to be seen by a specialist outside of the prison facility. When he finally saw an ophthalmologist several weeks later, the physician informed him "his eye was infected, that it could not be saved, and that his vision could not be restored"

(p. 1018). The court ruled that the inmate might be able to recover damages for officials' deliberate indifference to serious medical needs.

State Law

Under state law, the standard for liability is medical malpractice. Courts have ruled that eye care given to inmates must meet acceptable standards of professional competence; care that falls below professional standards is negligence. An optometrist may violate a national standard of care by not immediately referring an inmate with a serious eye injury to an ophthalmologist. Such was the case in *Moss v. Miller* (1993), in which an inmate suffered serious eye injuries, but the two examining physicians and the optometrist did not refer him to an ophthalmologist for treatment of an orbital fracture or blowout fracture of the eye socket. Over the next two months, the inmate was examined 10 times and arrangements were made for the inmate to receive X-rays and an eye patch. Eight weeks after the injury, he was referred to an ophthalmologist who attempted corrective surgery, but the double vision remained a permanent disability. A jury found that the optometrist violated a national standard of care by not referring the inmate immediately to an ophthalmologist.

Delaying the proper diagnosis and treatment of a serious eye condition for two years might also result in medical malpractice. In addition, inappropriately treating eye infections with non-efficacious doses of antibiotics may be medical malpractice. In *Jacques v. State* (1984), after nasal surgery an inmate developed a serious infection of the eye area. The inmate received antibiotics, suffered pain, underwent subsequent surgery, and was permanently scarred under the eye. The Court of Claims of New York held that the "failure to use antibiotics post-surgery constituted medical malpractice" (p. 466).

CONCLUSION

Delivering eye care to prisoners is complicated by the specialties involved, the equipment needed, and the lack of optometric expertise in most correctional health care facilities. It is also sometimes compromised by the relatively scarce information available about specific eye ailments in jails and prisons. Data are not systematically collected on these issues, and very few studies have been written on the topic. Eye care for inmates frequently involves much more than providing glasses for poor vision. There are ailments that result from diabetes, high blood pressure, and other chronic diseases that adversely impact vision. There are also violent prison encounters that damage prisoners' eyes and require treatment and referral to specialists. Getting eye specialists to practice inside the prison walls or transporting inmates to and from free-world specialists presents security and logistical concerns for correctional administrators. While most facilities do a reasonable job of providing this basic medical service to inmates, given the lack of expertise among correctional health care personnel and the contractual nature of most optometry in prison settings, even well-intentioned personnel find it challenging to deliver quality eye care to inmates.

OVERCROWDING

Determining whether a correctional facility is overcrowded involves consideration of a facility's rated capacity, operational capacity, and design capacity. The *rated capacity* refers to the number of beds or inmates assigned by a rating official to institutions within a specific jurisdiction. *Operational capacity* is the number of inmates who can be accommodated based on an institution's staff and existing programs and services. Finally, the *design capacity* refers to the number of individuals that planners or architects intended the facility to hold.

Overcrowding is not distributed evenly throughout the country. For example, according to the Bureau of Justice Statistics, the California prison system has a design capacity of nearly 80,000, however, by the end of 2001, it had an inmate population of more than 150,000—or almost 100% more than its design capacity. That same year, 21 additional states and the federal system were operating at or above their design capacity. Despite such figures, the situation seems to be improving as the number of state facilities ordered to limit population dropped from 216 in 1995 to 119 in 2000.

POPULATION GROWTH AND ITS CAUSES

By the end of 2002, more than 1.4 million inmates were incarcerated in federal and state prisons, compared to 1.0 million in 1995. After dramatic increases in the 1980s and 1990s, the incarceration rate has leveled off in recent years, though it is still growing. From 2001 to 2002, the prison population grew 2.6%, which was less than the average annual increase of 3.6% since 1995. More than half of the increase in the prison population since 1995 has been due to increased convictions for violent offenses.

One reason for the increase in inmate population is that the response to certain types of offenses and certain types of offenders (e.g., repeat offenders, drug offenders, violent offenders, immigration violators, and those convicted of drunk driving or weapons offenses) has become harsher. In the 1980s, the Reagan administration ushered in a "Get tough on crime" era that still influences sentencing practices today. In 1986, Congress enacted mandatory sentencing laws, which required judges to impose fixed sentences to those convicted of certain crimes in an effort to deter and incapacitate offenders. Currently, all 50 states have adopted one or more types of mandatory sentences. Then, in 1994, Congress passed stricter penalties for repeat offenders under the Violent Crime and Control Law Enforcement Act. The act mandated life imprisonment for individuals convicted of two or more felonies, serious violent felonies, and serious drug crimes. Many states responded by passing similar legislation. In March 1994, for example, Governor Pete Wilson of California signed the nation's first "three-strikes" law. Bill 971 ordered judges to impose a sentence of at least 25 years to life, or three times the normal sentence attached to the crime—whichever entailed the longer sentence—on offenders who were convicted of selected serious felonies or who had previously been convicted of any two felonies. In 2003, 26 states and the federal government had laws similar to California's, typically allowing a prison term or something close to it for someone convicted of a third felony.

Another reason for overcrowding is that convicted inmates are remaining incarcerated for a larger portion of their prison sentence. Traditionally, judges had discretion in sentencing an offender under felony class guidelines. Following the mandatory sentencing laws of 1986, however, states began implementing minimum sentence requirements for certain crimes. If a crime under these guidelines called for a minimum of 10 years and no greater than 30 years, the offender must serve at least 10 years. For crimes that have mandatory minimum requirements, judges may not pass alternative sentences to ease already crowded conditions in state prisons. In addition, truth-in-sentencing laws require offenders to serve 85 percent of their allotted time.

Although these laws satisfied legislators and lobbyists seeking "get tough" on crime approaches, by effectively abandoning parole, they have filled and often overfilled many state prison systems, since prisoners no longer circulate through them as rapidly as they once did. Other factors that contribute to overcrowding include high rates of recidivism and the difficulties associated with accurately projecting the inmate population.

CONSEQUENCES

Prison overcrowding strains resources and contributes to budgetary problems and a lack of programs. As states are forced to expand their correctional budget each year, other state-funded programs like public assistance programs and education suffer. Budgetary problems have made it difficult to offer programs such as drug and alcohol rehabilitation, education, and recreation. Given that an estimated 97% of those incarcerated will eventually be released to the mainstream society, the absence of such offerings is problematic. For example, most prisoners come from low-income families and have little education and few marketable job skills. Since the 1960s, the number of industrial-sector jobs (which historically have provided work to unskilled or uneducated workers) has been cut in half, making a significant impact on local employment opportunities. As more facilities operate at and above capacity, however, funding to provide prisoners with marketable job skills becomes harder to secure as resources become scarcer. Also, in order to accommodate more prisoners, many administrators are retrofitting classrooms, gymnasiums, and recreation rooms into large dormitories. Many newly constructed facilities designate minimal space for education and recreation programs. Consequently, prisoners must cope with greater idleness, which in turn contributes to greater stress and possibly greater violence.

RESPONSES

Three popular responses to overcrowding are prison construction, selective incapacitation, and the control of populations. The construction strategy responds to prison overcrowding by adding beds and building new facilities. The number of federal, state, and private facilities increased 14%, from 1,464 in 1995 to 1,668 in 2000. While this strategy is popular throughout the United States, it is very expensive. Nationwide, it costs an average of $54,000 to construct one bed space in a prison. In addition, the average cost of housing an inmate for one year ranges from $30,000 to $60,000. Many states are suffering large budget deficits as a result of the rapid growth of their prison system. California, for example, between 1980 and 1990 spent more than $5 billion building new prisons. The cost of financing the new prisons runs another $5.2 billion. Across the nation, prison construction has outpaced the construction of new schools. Moreover, while construction addresses overcrowding, it has no impact on reducing prison populations and may actually contribute to growing incarceration rates. States such as California, Texas, and Florida have spent millions of dollars on new prison construction, yet their prison populations continue to swell. Critics argue that the construction strategy is based upon an "If you build it, they will come" philosophy; that is, the more prisons that are built, the more inmates will be found to fill them.

Advocates of selective incapacitation hold that judges should only incarcerate a select group of offenders (i.e., repeat, violent offenders) whom they deem dangerous to society. Nonviolent offenders could be sentenced to community correctional facilities, probation, or rehabilitation programs. The idea is to free up bed space while keeping the public safe from the violent offenders. In reality, however, the passage of mandatory sentences such as Three-Strikes Laws, mandatory minimums, and truth-in-sentencing provisions have limited judges' discretion, as they must adhere to sentencing guidelines.

According to the population sensitive flow-control strategy, judicial districts are allotted a certain number of prison beds to which they may sentence offenders. Once that number is reached, the judge of that particular district must pursue alternative means of sentencing. Intensive Supervision Programs (ISP) developed as a popular type of alternative or intermediate sanction. After its

introduction in the late 1960s and early 1970s, however, ISP was abandoned, based on research that it did not lower arrest rates for those participating. In 1982, Georgia modified ISP for use with first-time offenders or people convicted of less serious crimes. States across the nation soon followed Georgia's lead and developed similar ISP programs. ISP soon became a tool in easing prison crowding conditions when state prisons were near or at the designed capacity. ISPs involve more frequent contact between offenders and their supervising officers and more restrictions compared to regular probation. Studies of their effectiveness have had mixed results with some research suggesting that ISPs have not succeeded either in reducing correctional costs or in preventing crime.

Another possible means of reducing prison overcrowding is to make greater use of community corrections. Community corrections refer to programs designed to punish, supervise, or treat offenders within the community. The most popular forms are probation and parole. Other programs include pretrial diversion, dispute resolution and restitution, community service, day fines and probation fees, work-release programs, halfway houses, and electronic monitoring. The same goals and philosophies that apply to institutional corrections also apply to community corrections. Although much less expensive than incarceration, community corrections programs are still costly.

CONCLUSION

Greater reliance on incarceration combined with longer and mandatory sentences have contributed to the crowding problem facing many state and federal prison systems. Historically, the public has not supported policies that are perceived as "soft" on crime. The situation, however, is changing. Declining crime rates have made people less concerned about street violence and more concerned about issues such as education, the economy, and health care. Currently, state governments are grappling with the high costs of maintaining prisoners in a poor economy. Consequently, legislators have been prompted to reexamine some of the most stringent laws, such as those imposing mandatory minimum sentences and forbidding early parole. This may signal the beginning of a reversal in a 20-year trend toward more punitive anticrime measures, which in turn may reduce the use of incarceration and reduce crowding (Flavin & Rosenthal, 2003).

OVERPRESCRIPTION OF DRUGS

The issues around control and regulation of offenders through medical practice have provoked considerable debate. In particular, much controversy has centered on the extent and ethics of using psychotropic drugs for disciplinary and control purposes in prisons.

The use of psychotropic medications as a means of controlling inmate populations is not new. Prisoners in the 19th and early 20th centuries were known to be given "sleeping draughts" to alter their behavior. However, the emergence of the drug industry involving multinational companies, the large-scale manufacture and availability of powerful new combinations of chemicals, the worsening prison crisis, and increasing concern for order and security in prison meant that the prescription of drugs took on a new significance in the postwar period.

ORDER AND CONTROL

Prison reports and accounts from ex-prisoners, ex-governors, and prison doctors and other medical workers in Britain from the 1950s and 1960s provided some evidence of the use of psychotropic drugs to control "difficult" or "unruly" prisoners and those with various mental disorders, including schizophrenia and dementia. As the crisis of containment intensified and a small number of subversive prisoners were blamed for the increasing number of prison disturbances in the 1970s, so the allegations became stronger that drugs were being used for disciplinary purposes. Similarly, in the United States, there is evidence to suggest that psychotropic drugs were used in prisons and jails since at least the 1970s as a "quick, cheap, and effective" solution to warehousing increasing numbers of inmates into smaller spaces, while using fewer support services. "Healthy" inmates are frequently medicated without diagnosis or proper psychiatric and physical assessments. In *Liles v. Ward* (1976), a group of female inmates in a New York state prison were transported to a state mental hospital because they were deemed to be "disciplinary problems" by the correctional staff and placed on psychotropic medications (sometimes by force) in order to maintain peace and tranquility on the ward.

GENDER

The overprescription of psychotropic drugs has to be understood in the context not only of wider concerns about prison (dis)order but also of the differential understandings of male and female criminality. Medical professionals and other criminal justice experts have traditionally sought to analyze, categorize, judge, and treat female offenders differently than men. The medicalization of female deviance, the drive to normalize women's behavior according to particular ideals of femininity, and the tendency of medical professionals to overprescribe mood-altering drugs for women are common practices. In the United States, significantly more women than men receive prescriptions for antidepressants, tranquilizers, and sedatives. They are also given them for different reasons. Within correctional facilities, the use of psychotropic medications on male inmates is often justified with reference to "problems of institutional control," while female inmates tend to be drugged in the name of "treatment" in an attempt to correct their deviant behavior in a psycho-physiological manner.

There is some evidence to suggest that psychotropic drugs have been used disproportionately in terms of the rate of prescription per head of the female prison population. In their research study in Britain, Genders and Player (1987) found that large doses of antidepressants, sedatives, and tranquilizers were dispensed to women in prison, proportionately five times as many doses of this type of medication as men received in prison. A recent debate in Parliament also rekindled concerns that neuroleptics and other heavy tranquilizers are routinely prescribed to young women prisoners who mutilate themselves, and that medical drugs are used as pacifiers that move prisoners from nonaddictive illegal drugs to highly addictive medicinal drug use. In the U.S. context, Auerhahn and Dermody Leonard (2000) also found that it is the combined effect of being female and exhibiting behavior inconsistent with the normative requirements of the feminine ideal that often triggers the use of medication in their sample of inmates. Furthermore, they argued that the drugging of female prisoners and jail detainees can lead to disproportionately harsh outcomes for these offenders, including inability to participate fully in their own defense and to receive due process of the law.

RACE

Another important dimension in the debate around the overprescription of drugs has been the assessment and treatment of ethnic minorities. Critics argue that many medical and criminal justice professionals tend to operate on the basis of ethnocentric assumptions or racist stereotypes and view acute stress reactions in black people as symptoms of mental disorder, especially schizophrenia. One result is that black psychiatric in-patients are more likely than whites to be defined as "aggressive," placed in secure units, and subjected to harsh and invasive forms of treatment such as intramuscular medication and electroconvulsive therapy. More specifically, there were a number of cases involving black prisoners in Britain during the 1980s that raised issues around the psychiatric assessment of these prisoners, the inappropriate and/or inadequate medical treatment they received, the question of force-feeding, the use of drugs as controlling mechanisms, and their certification as either mentally ill or insane, which meant that they could be transferred to mental hospitals.

RESISTANCE AND LITIGATION

Medical practices in the prison system have not gone unchallenged. In Britain, the formation of prisoner rights campaign groups in the 1970s provided a forum for prisoners to articulate their concerns. At the time, concern over the disciplinary role of prison doctors in general and emerging allegations about the overprescription of drugs in prisons in particular led to an alliance between various prison reform groups, drug agencies, and mental health campaign groups and the setting up of the Medical Committee Against the Abuse of Prisoners by Drugging in 1977.

Resistance has also taken the form of litigation by prisoners over enforced medical treatment with mixed results. In the United States, the Eighth Amendment, which protects citizens from cruel and unusual punishment, has been used to challenge inadequate medical care in prison and, perhaps more significantly, to challenge a requirement to participate in treatment programs and/or be subjected to involuntary injection of psychotropic drugs. For example, the court held that the use of aversive drug therapy, which caused temporary painful and frightening medical problems as a way of "encouraging" better behavior, could constitute cruel and unusual punishment; this decision was upheld in *Knecht v. Gillman* (1973). The Fourteenth Amendment, with its equal protection clause, and the due process clause have also been used in prisoner rights suits in this area. In *Harper v. State* (1988), the Washington Supreme Court held that prison inmates had the right to refuse to take antipsychotic drugs prescribed by prison authorities, and that this right could be overridden only when the state proves a compelling state interest to administer medication. However, the U.S. Supreme Court reversed this ruling in *Washington v. Harper* (1990) and found that psychotropic drugs can be administered to unwilling prisoners if the prison and medical staff can show that medicating the inmate is related to "legitimate penological interests," including the maintenance of prison order.

CONCLUSION

It has become increasingly difficult for prisoners to challenge the appropriateness of medication they receive against a background of a worsening prison crisis. To the extent that the courts are prepared to defer to the expertise of prison administrators in the management of prisons and medical intervention into the lives of some of the most vulnerable prisoners, there is a danger that the emphasis on prison security and control will prevail at the expense of prisoner rights. While some prisoners may genuinely require certain prescription drugs, the historical precedence of overprescription of certain kinds of drugs for certain sections of the inmate community, along with various more recent legal challenges about the provision of medications, suggests that this practice is vulnerable to misuse.

PANOPTICON

The Panopticon is an idealized architectural form designed by British philosopher Jeremy Bentham (1748–1832) in the 18th century. Originally put forward as a design for a range of institutions, including schools, factories, and military barracks, the Panopticon has been particularly influential in prison architecture, theory, and management.

OVERVIEW

In 1787, Jeremy Bentham visited Russia to see his brother, Samuel, who was working as an engineer for Prince Potemkin, Prime Minister of Catherine the Great. At the time, Samuel Bentham was constructing a circular textile mill designed so that overseers could monitor their workers without being seen. Jeremy Bentham found this design intriguing and thought it would work well for other types of buildings, including prisons. He wrote several letters to a friend, in which he described his ideas for what he came to call the "Panopticon," based on what he had seen in Russia. Printed in 1791, though never sold in bookstores, Bentham's letters and two postscripts written in 1790 and 1791 describe the architectural design and its possible application in detail.

Despite years of planning and lobbying by Bentham, a Panopticon prison was never been built in his home country of England. However, Panopticon-style prisons were built in Spain, Holland, the United States, and other parts of the world, including Cuba. Additionally, many of Bentham's ideas about the need for constant surveillance exist in corrections today, including video cameras or in-home confinement with electronic monitoring systems that control and monitor an inmate's whereabouts.

THEORY

The Panopticon, as planned by Bentham, is a prison in which the jailer or a guard can view all the inmates in their cells without being seen himself. Ideally, inmates would be watched at all times. However, Bentham recognized that constant surveillance was not possible. Instead, the Panopticon would make each inmate unsure of whether he or she was being viewed. Such ambiguity would make prisoners feel as if they were always being watched.

Bentham believed that constant surveillance would both punish and reform inmates. It would also make them efficient workers. Each person would behave in a way that he or she thought acceptable to the prison guard simply because the guard might be watching. Prisoners would also work hard at whatever task they were set, to avoid reprimand and punishment. Gradually, they would become

better citizens, because they would be more aware of others and learn and have practice in behaving in socially acceptable ways. Furthermore, the solitary situation of each prisoner would help the inmate consider his or her wrongdoing and repent.

ARCHITECTURE

The omnipresence of the guard in the Panopticon is created through its architecture. The Panopticon was to be a circular building of several stories. The cells would be placed along the circumference of the building, and the prison guard or inspector would occupy the center of the prison, allowing him to view each of the cells around and above him.

In the Panopticon, each cell would be shaped like a pie wedge with the point cut off. Each cell would be partitioned from the one next to it by a wall protruding from the outer wall of the prison toward the center, in the form of radii. The outer edge of the cell, the one along the outer edge of the prison building, would have a window. According to Bentham, this window would be large enough to provide light to the inmate's cell and to the guard's area in the center of the prison. As a result, the Panopticon would reverse the principles of the dungeon, because the prisoners would be kept in the light instead of the dark. However, since the prisoners would never know whether they were being watched, they would be in the dark in another sense.

The narrower end of the cell, across from the window, would have a grate so as to allow the all-seeing guard to view the inmate at all times and to allow the lighting to come through from the inmate's cell to the guard area. Within the grating or bars on the door, there would be a door to allow prisoners entry into the cell when he or she arrived and to allow the prison keepers in as they saw fit. Bentham was careful to plan the building so inmates would be kept separate. He thus included what he called "protracted partitions" on each cell. These partitions were extensions of the walls separating each cell from the one next to it that went beyond the grating into the open area to prevent the inmates from viewing one another.

The guard or prison keeper would work in the center of the prison, where he or she could view each of the cells and thus each of the inmates. However, it was important that the inmates were not able to see the guard if they were to believe that they were under surveillance at all times. Thus the windows of the guard area would have blinds as high as needed to prevent the inmates from seeing the guard. Furthermore, the guard area, or lodge, would have four quarters divided by removable partitions of thin material to prevent the inmates from seeing shadows and determining where the guards were or exactly what they might be looking at. Additionally, Bentham planned for small lamps, backed by reflectors, to be placed outside of each window of the guard area, which would make it impossible again for the inmate to see where the guard was in the light of the day or in the night. These lamps would allow the guard to see into the inmates' cells at all hours of the day and night.

Bentham believed that if inmates were to hear the guard talking to a specific inmate, they would realize they were not being viewed at that time, and thus the goal of the all-seeing and all-knowing Panopticon would be undermined. Thus, Bentham suggested that a small tube made of tin could be stretched from each cell to the guard area, allowing the guard and an inmate to talk to one another without the other inmates hearing.

Bentham did not spare any detail in his plans for the Panopticon. He suggested that the cells and the guard area could be warmed by flues surrounding them, yet they would all be housed on the inside of the building, thus preventing the wasting of warming air. And, somewhat apologetically, Bentham also noted that a plan for the removal of human waste was also important, and thus he suggested an earthen pipe much smaller than a human be attached to each cell that would allow excrement to flow downward and away. Further, he suggested that a water pipe be included in each cell as well, for cleanliness.

PANOPTICON INSTITUTIONS

Unfortunately for Bentham, his Panopticon was never built in England, though he spent many years

lobbying for it. Panopticon prisons were planned in France and Ireland but were never built there either. The Western State Penitentiary, which opened in Pittsburgh in 1825, was modeled on Bentham's ideas, but it was ordered rebuilt after Bentham's death in 1833 due to its unsuitability. Other circular prisons resembling Bentham's design were built too late for Bentham to see, including several in Spain in 1852 and three in Holland during the 1880s.

More than a century after Bentham fought so diligently for his Panopticon, two prisons were built that closely followed the Panopticon design, though on a larger scale. The first, built on the Isle of Pines in Cuba in 1926, was designed to hold 5,000 inmates. A circular dining area was surrounded by five tiers of cells that opened onto balconies on each level, allowing the inmates to be seen at all times. The second was Stateville Penitentiary in Joliet, Illinois, built between 1916 and 1924.

Joliet was built originally with four circular cell houses. Each cell house was four stories high, with cells lining the outer wall of the building and a domelike top with several panels of windows in the ceiling to let light from the outside help light the inside of the building. The guard house in the center had an elevated platform where the guard could view all of the cells. However, the guard area did not have an intricate system of blinds that kept the inmates from seeing the guard, as in Bentham's original design. It is important to note that the circular Panopticon buildings were not well received, and because of budgetary concerns the final cellblock built at Joliet was built as a long, rectangle-shaped building.

THE PANOPTICON AS A PHILOSOPHICAL METAPHOR

Though more than 200 years old and never built exactly to Bentham's specifications, Bentham's idea of the Panopticon is still a guiding concept in the field of punishment, particularly as it is explored in the writings of French philosopher Michel Foucault. In *Discipline and Punish*, Foucault (1995 [1977]) argues that today's society is very much like Bentham's Panopticon, since citizens are under constant surveillance. Like prisoners in the Panopticon prison who self-police their own behavior because the guard may be watching, we too discipline ourselves, keeping society ordered and calm.

Foucault's philosophical expansion of the idea of the Panopticon as a metaphor for society has become increasingly apt in the computer age. With the Internet, we see Bentham's ideas linked to the invasion of our privacy, as noted by Docker (2002):

> The Internet is the most sophisticated and insidious surveillance system yet invented. Cookies and web bugs allow marketing companies, political organizations, governments and cyber stalkers to find out everything they want to know about users from their height and weight to their political, religious and breakfast cereal preferences. Every time a user logs on, an electronic trace of their activities can be recorded, collated, assessed and manipulated to create profiles and databases. We don't know precisely who may be doing it or for what purpose, but we know that it's happening or could be happening. It makes the least paranoid of us disconcerted. (p. 1)

Within contemporary prisons, discipline is frequently maintained through surveillance. Rather than relying on architectural design alone, however, modern institutions utilize closed circuit television cameras throughout. Prisoners are constantly monitored, both physically and through complex classification systems in which information about them is regularly entered.

CONCLUSION

The Panopticon as originally designed by Jeremy Bentham in the 18th century was a circular design with a guard house constructed in the center that permitted a prison guard to view all inmates at all times. Under Bentham's scheme, the inmates could not see the guard and thus would never be sure when they were under surveillance. To avoid the risk of punishment they would behave at all times. Several such prisons were built in Holland, Spain, Cuba, and at Joliet, Illinois, in the United States, although none functioned as seamlessly as Bentham had hoped. Some people, even if they are monitored, will

always resist. Others will find sophisticated ways of avoiding the penal gaze.

Despite the practical inadequacies of the Panopticon, as Michel Foucault has demonstrated, the ideas behind its design provide a rich source of analysis for modern society. By arguing that there are significant commonalities between prison and the community, Foucault suggests we may all, on some level, be imprisoned. In turn, this idea provides an intriguing way to analyze the distribution of power throughout society and its many institutions, of which the prison is just one.

PARCHMAN FARM, MISSISSIPPI STATE PENITENTIARY

Situated in a remote area of the Yazoo Delta of Mississippi, Parchman Farm is, perhaps, the most notorious penal institution in the American South. For many years, prison authorities based their regime on the racial oppression and physical exploitation of inmates and resisted nearly all attempts at reform.

HISTORY

Parchman Farm was founded by Mississippi Governor James K. Vardaman in 1904. Vardaman conceived the prison as a solution to the convict lease system, under which state authorities hired out black prison inmates to private contractors who employed them as unpaid laborers. The governor believed that the railroad barons and plantation owners had no interest in promoting the reform of prison inmates, but sought only to bolster their profits at the public expense. Parchman Farm was therefore intended to improve the condition of black prisoners by instilling them with the habits of hard work and respect for white authority.

In many respects the new prison proved to be as brutally repressive as the convict lease system it replaced. Parchman was a working plantation on which inmates toiled to produce cotton. Prison authorities pushed their labor force hard in pursuit of profit. Discipline was enforced through the threat of and actual physical punishment. Most inmates formed an intimate acquaintance with "Black Annie," the leather strap used to whip slow or insubordinate workers. Few prisoners attempted to escape; fewer still succeeded. Many of the guards (or "trusties") were themselves convicts who stood to gain a complete pardon from the governor should they shoot an attempted escapee.

RACE

The overwhelming majority of Parchman's population was black. In 1917, for instance, African Americans constituted 90% of inmates. The racial balance altered during the interwar era. One explanation for this is the increasing migration of African Americans out of Mississippi in search of employment opportunities in the industrialized Northern states. Another is the hard times of the Great Depression, which led to a large increase in economically motivated crimes among whites. As a result, by the 1930s, whites represented almost one-third of the inmate population.

GENDER

Women prisoners at Parchman never made up more than 5% of the total population. These women were almost exclusively black. One of the most serious problems women faced was the absence of a female prison staff. White male warders were insensitive to their needs, and women prisoners were exposed to persistent violence and sexual abuse.

EARLY REFORMS AND THE CIVIL RIGHTS MOVEMENT

The first reforms of conditions at Parchman occurred in the 1940s. Programs in basic education and vocational training were introduced at this time, although they suffered from serious lack of funding. All prisoners served their full sentences until 1944, when a parole system was finally introduced.

Despite the promise of these early reforms, inmates did not experience substantial improvements in their condition until several decades later. The limitations of reform were underlined by the experiences of civil rights activists known as the Freedom Riders, who were imprisoned at Parchman in the early 1960s. In 1960, the U.S. Supreme Court prohibited the segregation of terminal facilities used by interstate bus passengers (*Boynton v. Virginia*, 1960). The following May, the Congress of Racial Equality attempted to test this decision through a direct-action campaign known as the Freedom Rides. Black and white activists boarded two buses in Washington, D.C., and traveled south toward New Orleans. Savagely assaulted by segregationist mobs in Alabama, the activists decided to abandon the buses and fly to their destination for a final rally. Black students from Nashville nonetheless resolved to continue the Freedom Rides. Anxious to avert any further violence, the Kennedy administration secured an agreement from Mississippi authorities to secure the peaceful arrest of the protesters when they reached the state capitol of Jackson. More than 300 students were arrested and imprisoned at Parchman Farm, where they were crowded into the cells and exposed to physical mistreatment by prison warders. By late summer, most of the students had posted bond. The political embarrassment caused by the Freedom Riders led the Justice Department to secure an order from the Interstate Commerce Commission in October 1961 mandating compliance with the Supreme Court decision. However, although the imprisonment of the Freedom Riders publicized the appalling conditions at Parchman Farm, state authorities resisted political pressure to introduce reforms.

It was another decade before serious efforts were made to reform conditions at Parchman. In February 1971, civil rights lawyer Roy Haber launched a class action suit on behalf of four inmates. The U.S. Justice Department filed a brief in support of the plaintiffs, the first time that the federal government had intervened in a prison reform case at the state level. In October 1972, Judge William C. Keady issued his "Findings of Fact and Conclusions of Law." The report exposed Parchman as a brutal institution that denied prisoners of many of their basic human rights. Living conditions were squalid and overcrowded. Medical facilities were unsanitary. And, despite the passage of civil rights legislation in the 1960s, the prison continued to practice racial segregation. Although Keady ordered immediate reform, conditions improved only slowly as a result of the obstructionist tactics of prison authorities.

CONCLUSION

Parchman Farm is nearly a century old. According to the 2000 annual report of the Mississippi Department of Corrections, Parchman currently has a total inmate capacity of 5,631. None of these prisoners are women. Female offenders are now held at the Central Mississippi Correctional Facility in Pearl. Despite the relocation of women prisoners, the inmate population at Parchman continues to increase because of the imposition of tougher sentencing policies. Many of the harshest sentences are handed down to African Americans, who still represent a disproportionate share of the prison population: 70%, according to one recent study. The increase in inmate numbers continues to place an intolerable strain on prison resources.

Parchman is therefore still in desperate need of modernizing reforms. In January 2002, death row inmates launched a hunger strike in protest at what they claimed were the inhumane conditions in which they were held. The American Civil Liberties Union filed a lawsuit on behalf of six of the prisoners. According to reports conducted by court-appointed experts, inmates continue to suffer from poor sanitation, punitive disciplinary practices, and inadequate health care programs. Although a decision on the case still has to be made, it is has once more underlined the harsh realities of this most notorious penal institution.

Legal Case

Boynton v. Virginia, 1960.

PARDON

A *pardon* is an official act, typically by someone in the executive branch of government, setting aside punishment for a crime. Although the term "pardon" is sometimes used interchangeably with "clemency" to refer generally to all nonjudicial reductions in punishment, it is more accurate to think of pardon as a distinct component of the executive clemency power.

A pardon is the most expansive type of clemency recognized under American law. Courts generally hold that a pardon not only releases the offender from punishment, but also eliminates moral guilt for the offense, so that in the eyes of the law pardon recipients are as innocent as if they had never been charged or convicted. By contrast, commutations and reprieves are less expansive forms of clemency, with a *commutation* substituting a lesser punishment for a greater one, and a *reprieve* temporarily postponing punishment.

The U.S. Constitution vests the power to pardon violations of federal law in the president. Most state constitutions authorize the governor, acting exclusively or in concert with an administrative body, to issue pardons for state law violations.

HISTORY

The power to pardon can be traced directly to the prerogative of the British crown. Historically, English monarchs used pardons not only to soften harsh penalties imposed by the common law but also to accomplish other ends. Pardons were sometimes issued to win the support of key nobles and clerics during times of strife, and were even used to fund the treasury through the outright sale of pardons. The king employed pardons to provide cheap labor for the American colonies: Felons were typically granted a pardon if they agreed to work on colonial plantations. Pardons were also helpful in extracting testimony from accomplices that would incriminate codefendants.

FEDERAL POWER TO PARDON

Article II, section 2 of the U.S. Constitution gives the president authority "to Grant Reprieves and Pardons for offenses against the United States, except in cases of Impeachment." According to Alexander Hamilton, this power was intended to be expansive so that exceptions in favor of "unfortunate guilt" could readily be made. Although the Constitution does not mention types of clemency other than pardons and reprieves, the U.S. Supreme Court has consistently interpreted the president's pardon authority broadly and has held that it also includes the power to grant other types of clemency, such as commutations. Presidential pardons may be

granted either before or after conviction, and also with conditions attached.

Although the frequency with which pardons are issued has declined in recent decades, the power to pardon historically was employed in a variety of ways. In 1795, President Washington granted an unconditional pardon to many of the participants in the Pennsylvania Whiskey Rebellion. After the Federalists were defeated in the election of 1800, President Jefferson pardoned those convicted and sentenced under the Alien and Sedition Act, which the Federalists had used in clear violation of the First Amendment to silence the Jeffersonian Republicans. Presidents also used the pardon power to help man the Navy.

The pardon power was employed to heal the wounds of a divided nation after the Civil War. President Lincoln and his successor Andrew Johnson pardoned many who had fought against the Union, conditioned on their voluntarily taking an oath to uphold the Constitution. In response, Congress sought to curtail the clemency power through legislation. However, Congress's efforts to restrict the president's power were frustrated by the judiciary in cases such as *Ex parte Garland* (1866), where the U.S. Supreme Court held that the pardon power "is not subject to legislative control."

As a practical matter, the exercise of the pardon power has been subject only to the constraints that each president has chosen to recognize, leading to some controversial uses of the power. The most famous of these was President Gerald Ford's pardon of Richard Nixon for all federal crimes he had, or may have, committed in connection with the Watergate scandal. President George H. W. Bush, shortly before leaving office, likewise was criticized when he pardoned several members of his administration for violations of federal law connected with the illegal sale of arms to Iran to raise money for Nicaraguan rebels. Most recently, President Bill Clinton generated controversy by granting pardons and commutations to 140 persons on his last day in office, including a widely criticized pardon to Marc Rich, who had fled the country to avoid facing criminal tax evasion and racketeering charges.

STATE POWER TO PARDON

Following the American Revolution, state governments at first tended to reject the British legacy of complete executive control of the pardon power. Eight of the 13 states vested the authority to remit punishment for state law violations in a legislative council and the governor jointly, or in the legislature alone. However, perhaps owing to the influence of the federal Constitution, the idea that the executive was the proper repository of the pardon power took hold, and newly admitted states usually allocated the power to the governor alone.

Today the governor retains the pardon power in most jurisdictions, typically pursuant to the state constitution, although many of these states have established advisory bodies that make nonbinding recommendations to the chief executive. In the remaining states, the governor either shares the power to make pardon decisions with an administrative board, or it is placed solely in the hands of an administrative body.

Few formal constraints are imposed on the issuance of pardons in most states, apart from limitations on the types of offenses for which clemency can be granted (treason and impeachable crimes are commonly excluded), and the timing of pardons (a number of states permit clemency only after conviction). Notwithstanding this discretion, commentators agree that in recent years there has been a dramatic decrease in the number of pardons issued in most states, particularly in controversial cases such as those involving the death penalty. Former Governor George H. Ryan of Illinois proved a notable exception to this trend when he issued four pardons to prisoners on death row shortly before he left office in January 2003.

PARDONS IN PRACTICE

Pardons at both the state and federal level are most commonly sought by persons who have completed their punishment, have lived a law-abiding life for a significant period of time, and desire to be free of the civil disabilities that can accompany a criminal conviction. The formal disabilities typically imposed on

those who have been convicted of a crime include prohibitions against voting, serving on a jury, holding public office, and owning firearms. In most jurisdictions, a pardon is an effective means, and sometimes the only one, for restoring some or all of these privileges.

Usually, the decision maker must be persuaded that an applicant has become a contributing member of society who has paid for his or her wrongdoing and is unlikely to repeat his or her criminal behavior. Because of the political repercussions that sometimes attend the granting of pardons, the manifestation of broad community support for a pardon—especially from the victims, prosecutors, or sentencing judge—can be crucial.

Pardons are seldom used to release prisoners from incarceration or from completion of probation or parole. Instead, commutations are the type of clemency most often employed to remit ongoing punishment. However, in those rare cases when a compelling showing has been made that an individual is innocent, a pardon may be used to terminate imprisonment or other penalties. In 2003, Governor George H. Ryan of Illinois pardoned four death row inmates because he was convinced that the prisoners were innocent of murder and had been convicted on the basis of confessions extracted through torture. Exculpatory DNA evidence might also lead to the issuance of a pardon. However, even where there is strong evidence of innocence, obtaining a pardon can be a long, arduous process.

Procedures for applying for a pardon vary from jurisdiction to jurisdiction. In the case of requests for a presidential pardon, applicants will usually have to complete an FBI background check before the Justice Department will consider their application and make a nonbinding recommendation to the president. Moreover, federal regulations specify that a request for a pardon may not be filed until "at least five years after the date of the release of the petitioner from confinement" (*28 Code of Federal Regulations* §1.2, 2003). Various states likewise require that pardon requests be investigated, and some state laws mandate that before a pardon can be granted, specified individuals such as the prosecuting attorney or sentencing judge must be notified.

In certain cases, particularly where minor offenses are involved and the punishment has been completed, it may be possible to prepare a request for pardon without the assistance of an attorney. In more complicated cases or those involving serious crimes, employing a professional advocate to assist in making the case for a pardon is generally desirable.

CONCLUSION

Pardons, the official embodiment of mercy and flexibility in our criminal justice system, continue to play a limited role in the remission of punishment in the United States. Owing to the expansive nature of this form of clemency, it is unlikely that pardons will be used on a large scale to release individuals from prison. Moreover, pervasive societal acceptance of retributive theories of punishment that emphasize being tough on crime make it even more unlikely that public officials will frequently be impelled to issue pardons to individuals while they are incarcerated. Pardons, however, should be readily available to those who have paid their debt to society and seek formal reconciliation with the community whose laws they have transgressed.

Legal Case

Ex parte Garland, 71 U.S. 333 (1866).

PARENS PATRIAE

Parens patriae is the philosophy that the state should serve as a surrogate parent for neglected, dependent, and delinquent children. It stems from the belief that the state or government has both the right and the responsibility to substitute its own discretion and control over children whose parents fail to meet their responsibilities. It has been used as the primary rationale for a separate juvenile justice system, operating under its own rules and assumptions, in the United States and elsewhere.

HISTORY

The doctrine of *parens patriae*, which literally means the "parent of the country," originated from early English common law in the 12th century. It developed to protect the crown's interest in chancery courts and was brought to the United States as the primary justification for allowing the state to remove children from their homes and the inadequate care of poor parents. In such interventions, the children became wards of the state and were often then sent to houses of refuge or reformatories. It was thought that these institutions could care for the basic needs of delinquent and dependent children and instill in them morals and work ethics they were not receiving from their own parents or in their own communities. By removing them from their families and sending them away to reformatories, the state attempted to prevent these children from growing up to become paupers and criminals.

The juvenile justice system in the United States was created with *parens patriae* at its heart and as its legal foundation. Beginning in Chicago in 1899, the juvenile courts were designed to accommodate the special needs of children. Juvenile court judges were intended to adopt a caring, protective outlook in treating wayward or needy children. As part of this philosophy, it was thought that minors did not need due process rights because the proceedings were never meant to be adversarial—everyone was expected to work toward the same goal of helping the child to become a conforming, productive adult. The criminal justice system would continue to operate to sanction and punish adults, but judges in the juvenile system were expected to act as kind and benevolent parents to the children in their courtrooms, deciding each case in the best interests of the particular child and his or her circumstances. Juvenile court judges were given absolute power to decide what to do with the children in their courtrooms. Based purely on their own wisdom and discretion, they decided whether to remove the children from their homes, where to send them, and how long their sentences should last.

Unfortunately, young people who had committed similar crimes—or no crime at all—often received wildly diverse sentences and placements because the system had no safeguards to hold judges' biases in check. Girls, for example, were watched over more closely than young men, and they were much more likely to be punished for early sexual behavior. Poor and minority youth were vulnerable to state intervention and were overrepresented in punitive detention homes and reformatories. *Parens patriae* apparently worked best in the interests of middle- and upper-class boys.

CONTROVERSY AND CHANGE

Historically, the juvenile court and the doctrine of *parens patriae* have been criticized at many points. In particular, the individualized—and often discriminatory—treatment handed out to children by juvenile court judges was often condemned. To embrace *parens patriae* was to discount the need for due process rights for juveniles and to trust that judges had the wisdom and the heart to care for their young charges as a kindly parent would. It also assumed they would dispense sentences equitably.

Yet, cases like Gerry Gault's called this implicit trust into question. Gault, a 15-year-old boy, was accused of making obscene telephone calls and was subsequently sent to the state reform school for an indeterminate sentence, up to his 21st birthday or a sentence of potentially six years. Gault was not

given the right to a lawyer, was not allowed to confront his accusers, and was not allowed to remain silent and avoid expressing guilt. Had he been an adult, he would have been able to do all of those things.

Gault appealed his case to the Supreme Court, and, in doing so, forever changed the face of juvenile justice. In 1967, the Supreme Court mandated that juveniles should be allowed most of the due process rights adults receive; they would now be allowed the right to receive notice of the charges; the right to be represented by counsel; the right to confront and cross-examine witnesses; and the right to avoid self-incrimination. With this decision, juvenile courts were transformed into more formal, less discretionary organizations, as due process rights were incorporated into the philosophy of *parens patriae*.

These changes heralded a new era in juvenile justice, during which many states changed their juvenile systems to become more like the adult criminal justice system. In 1978, for example, Washington State took a major step away from *parens patriae* and radically reformed its juvenile code, adopting a criminalized version of the juvenile court. In the new model, the focus is placed on the offense rather than the child or the family, and juvenile court mirrors the process of the adult court. Punishments are rationalized under a determinate sentencing scheme, and judges are meant to mete out sanctions based solely on three criteria: the seriousness of the offense, the age of the offender, and the offender's prior criminal record. The goal is to give similar punishments for similar crimes; the child's race, gender, social class, or family circumstances should not factor into the sentence. Washington's juvenile justice system no longer features benevolent judges acting in the child's best interest. The focus in Washington is on punishing delinquents and holding them accountable for their actions rather than "saving" wayward children—*parens patriae* is no longer a priority or a reality.

Such reforms in juvenile courts have lead some to question the utility of keeping separate juvenile and criminal courts. Barry Feld (1999), for example, has proposed the abolition of the juvenile court in favor of an integrated court system to serve both adults and juveniles. In such a system, scarce resources could be combined; juveniles' rights would be enhanced and carefully protected; and young offenders would automatically be given a youth discount in sentencing. While the integrated court takes on the responsibility for social control and punishment, Feld argues, we may then be able to expand the possibilities for child welfare and encourage societal commitment of providing positive intervention in the lives of all children, not just the juvenile criminals. In this vision of the future, *parens patriae* moves out of the court system but back into the larger community.

CONCLUSION

As long as there remains a separate juvenile justice system in the United States, *parens patriae* will always hold an important place in it, either as a guiding principle or simply as a benchmark of how far from its original goals the system has strayed. The debate continues as to whether we should more fully embrace the ideas of *parens patriae* or to sever ties completely with it and move away from this philosophy. To embrace the philosophy of *parens patriae* is to treat troubled juveniles benevolently with rehabilitation as the goal, and to hand juvenile court judges full discretion to deal with children less formally and according to the needs of each. The alternative would be to model juvenile courts more closely after their adult counterparts, with primary concern going to protect the rights of each individual and to ensure that juvenile court judges dispense rationalized punishments.

To understand the U.S. juvenile system, it is imperative to take into account its philosophical foundations and ideals, its strengths, and its shortcomings. Only then can we judge its successes and failures. Only then can we decide whether *parens patriae* has earned its place as the foundation of our treatment of juvenile offenders and should continue to help determine the future direction of the juvenile court.

PARENTING PROGRAMS

According to a survey conducted by the Bureau of Justice Statistics (Mumola, 2000), more than 55% of all state and federal prisoners are parents. To serve this population, prisons and nonprofit groups have developed several types of programs. The most common offer parent education classes, with family activities, prison nurseries, halfway houses for nonviolent mothers, and support services provided at some facilities.

Parent education courses are increasingly common at both men's and women's prisons nationwide. These courses are based on two rationales: (1) evidence suggesting that parents who maintain close contact with their children during incarceration are less prone to recidivism; and (2) research pointing to improved outcomes for children of participating parents. Children of prisoners have particularly high rates of criminal behavior and suffer disproportionately from such problems as depression, disruptive behaviors, and low academic performance. While it is not clear that these outcomes are directly a result of the incarceration of the parent, prisons provide parenting classes in the hope that teaching these skills will improve prisoners' ability to help their children avoid negative behaviors.

HISTORY

Parenting programs for women were created long before similar ones for men because the presence of pregnant inmates forced corrections officials to confront issues of motherhood at women's prisons. Mothers also seemed in greater need of services; they were more likely than fathers to be the custodial parents of their children prior to their own incarcerations and more likely to regain custody upon their release. In addition, cultural beliefs about gender led officials to assume that mothers "naturally" had the stronger attachment to their children and were more important to their development. In the 19th century, such beliefs were reflected in the establishment of nurseries for women who gave birth while in prison. Some prisons also began parent education classes. In general, these educational efforts were provided as part of a group of programs intended to raise the moral standards of the female inmates.

Programs for fathers were not instituted until the 1970s. These early programs were designed to help men maintain a relationship with their children and to lower the incidence of domestic violence against these children and their mothers. They were originally intended for fathers who had lived with their children prior to incarceration, but many men who had lived apart from their children also began to express an interest. Today, most programs include both types of fathers.

CURRENT SITUATION

Parenting programs are currently offered in most states. This does not mean, however, that classes are provided at every facility or to every parent. Not all classes run on a consistent basis; demand sometimes exceeds available space, and some prisons place limits on who can participate. For example, some do not allow people who are on death row or who are serving life sentences to participate. Others use clinical evaluations to determine those inmates

for whom the courses are best suited. The states with parenting programs in the largest numbers of penal facilities include California, New York, and Pennsylvania. Nationally, classes tend to be offered in more women's prisons than men's and in more low- and medium-security facilities than supermax or maximum-security prisons. At the time of writing, prison fatherhood programs are becoming increasingly popular, and new curricula are being developed and implemented in many state, federal, and local facilities. Some are even being instituted in juvenile facilities and jails, sites where few services have been provided in the past.

The United States is not alone in its provision of parenting programs—other countries, including Israel, Britain, and Canada, also offer special services to incarcerated parents. These services vary widely, but they are more comprehensive in some countries than in the United States. Israel, for example, provides parenting classes for all incarcerated parents, along with self-help groups and family counseling for spouses. They also run big brother and big sister programs for the inmates' children. Israeli prison services typically continue after the parents' release.

TYPES OF PARENT EDUCATION

Parent education courses focus on a wide range of topics. Some emphasize parenting attitudes, with the idea that behaviors cannot change unless the underlying attitudes change first. Others focus on self-identity issues and on improving participants' self-esteem. Also popular are courses that cover parenting skills and child development. An important component of many courses is the discussion of issues of particular interest to the incarcerated population. Issues addressed include how incarcerated parents can actively participate in children's lives, how to explain incarceration to children, what happens to children who are placed in foster care, and what legal rights incarcerated parents have. Courses for incarcerated fathers also commonly focus on coparenting issues.

Most parent education programs take place inside the prison and include only inmates and an instructor. The instructors usually come from the community, although some courses employ correctional staff or peer leaders. Less common are classes that include the inmates' children or that take place outside of the facility. Most programs offer a blend of education and support: information presented in a formal way combined with opportunity for participants to discuss specific issues they face as parents. Individual classes vary widely in length and duration; for example, some courses meet twice a week for 12 weeks, while others might meet more frequently over a four-week period. (See Figure 1 for a sample course outline.)

24-week parenting courses covering the following topics:

- Domestic violence
- Child abuse
- Family reintegration
- Effect of parental incarceration on children
- Effective discipline
- Child development
- Communication skills

Figure 1 *Sample Curriculum, PB&J Family Services, Inc., New Mexico*

Recent thought on prison parenting programs stresses the need for a more holistic approach that recognizes that an inmate's ability to parent well is influenced by factors such as employment status, family relationships, and level of social support. Holistic programs often attempt to include family members in classes and to link inmates and newly paroled parents to support services. An example of this type of program is the Family Works Program run by the Osborne Association in New York. Inmate fathers can take parenting classes and receive counseling about family matters, employment, and other reintegration issues. Outside prison, the Osborne Association runs a Family Resource Center for inmates' families. This center has

a toll-free hotline for families needing information and advice.

ISSUES IN PARENT EDUCATION COURSES

There are a number of areas of debate regarding parent education courses. First, it is not clear whether different curricula should be offered in gender-specific classes, and if so what the differences should be. People who support different curricula generally argue that mothers and fathers each have a unique type of relationship with their children. In particular, mothers are more likely to live with their children both pre- and postrelease. Fathers may have specific legal needs, including paternity establishment and payment of child support. Proponents of different curricula also point out that, in our gendered society, motherhood is generally more important to a woman's identity than fatherhood is to a man's.

A second area of debate about parent education courses involves their cultural content. Critics charge that the curricula of many courses have a white middle-class bias. This is a particular concern when minorities are disproportionately represented in prison, and most inmates are poor. A final area of debate involves who should teach parent education courses. Some believe that peer-led courses are the most effective in conveying course content; others insist that outside instructors are more effective. Little research has been conducted on these questions.

EVALUATION OF PARENT EDUCATION

Few large-scale evaluations of prison parenting programs have been conducted. There are logistical difficulties that made such evaluations difficult to plan and implement. In particular, it is hard to assemble control groups, and it is also difficult to find measures to capture the complex behavioral and attitudinal changes potentially caused by the classes. Looking at those studies which have been conducted, it appears that parenting classes may have a short-term impact on prisoners' attitudes and on their self-esteem. Some studies also find that improved parenting skills, more appropriate use of discipline, and enhanced knowledge of child development result from classes. Because the majority of the studies follow participants only during the class term, or for a few months following, we do not know if any effects persist over time. Due to the lack of longitudinal data, and previously inconsistent results, more research needs to be done in this area.

OTHER TYPES OF PARENTING PROGRAMS

In addition to parent education courses, prisons and nonprofits offer a variety of parent support services, particularly for female inmates. One innovative example is the Girl Scouts "Beyond Bars" program. This program, begun in the 1990s, brings 5- to 17-year-old daughters of incarcerated mothers to the prison once or twice a month for scout meetings. The girls also meet weekly outside the prison. In some locations, the mothers are required to attend parent support or education classes in addition to their attendance at the scout meetings. This program is currently in operation in at least 23 facilities in 22 states.

Some women's prisons have adopted programs that allow inmates more extended contact with their children. Bedford Hills in New York, for example, has a program that allows children to visit their mothers for a weekend. Although the children are not allowed to sleep at the prison, they stay with nearby host families and are allowed contact with their mothers during the day. The York Correctional Facility in Connecticut has an extended family visits program that allows women to spend time with their families in a private space. At the far end of the spectrum, prison nursery programs allow women who give birth while in prison to keep their children with them for a set number of months. Currently, four states have such programs.

Special visiting areas are another way some prisons accommodate the needs of inmates with children. These areas are generally secluded from the general visiting area and are decorated in a child-friendly way. The prison, or a nonprofit group, provides toys and activities. Having something to do

keeps children entertained and also eases interaction between inmates and their children. In New York, for example, the Osborne Association provides children's visiting areas at both Sing Sing and Woodbourne Correctional Facilities.

A different type of parenting program involves legal aid to inmates facing problems involving custody, guardianship, child support, or foster care placement. One example of this type of program is the Child Custody Advocacy Services Project run by the Center for Children of Incarcerated Parents in California. This group provides advocates to help inmate parents with issues such as arranging visits, emergency placement of children, and the meeting of court-ordered family reunification requirements. The Las Comadres program in California specifically helps female inmates obtain foster care placements for their children.

Several states also provide alternatives to prison for nonviolent female offenders who are mothers. In North Carolina, for example, Summit House provides housing for women with children under the age of seven. Women who are eligible for the program must agree to participate in parent education classes, job skills training, and substance abuse counseling (if needed). They are allowed to live with their children in the house for up to 24 months.

Finally, community groups provide transportation to the prison for children of inmates. Such services are particularly useful for families who live many miles from their incarcerated relative.

CONCLUSION

Although there are a wide range of parent education programs and support services offered around the country, there are still many facilities that provide few or none. As in the past, more services are offered in women's prisons than in men's. In difficult budget times, prison parent services are often among the first programs to be cut. It does appear, however, that there is increasing public interest in providing services to incarcerated parents and their children. In 2002, President George W. Bush signed a bill making grants available to programs that provide mentoring to the children of incarcerated parents. This may signal a positive shift in public sentiment toward incarcerated parents and their children.

PAROLE

Parole is both a procedure by which a board administratively releases inmates from prison and a provision for postrelease supervision. The term comes from the French *parole,* referring to "word," as in giving one's word of honor or promise. It has come to mean an inmate's promise to conduct himself or herself in a law-abiding manner and according to certain rules in exchange for release.

ORIGINS AND EVOLUTION OF PAROLE

Chief credit for developing the early parole system usually is given to Alexander Maconochie

(1787–1860), who was in charge of the English penal colony at Norfolk Island, almost 700 miles off the coast of Australia, and to Sir Walter Crofton (1815–1897), who directed Ireland's prisons. Maconochie criticized finite prison terms and developed a system of rewards for good conduct, labor, and study. Through a classification procedure he called the "marks system," prisoners could progress through stages of increasing responsibility and ultimately gain freedom. Under his direction, task accomplishment, not time served, was the criterion for release.

Walter Crofton implemented Maconochie's marks system in the Irish Prison System in 1854. After a period of strict imprisonment, Crofton transferred offenders to "intermediate prisons" where they accumulated "marks" based on work performance, behavior, and educational improvement. Eventually they would be given tickets-of-leave and released on parole. Parolees submitted monthly reports to the police, and a police inspector helped them find jobs and oversaw their activities. The concepts of intermediate prisons, assistance, and supervision after release were Crofton's contributions to parole.

Zebulon Brockway (1827–1920), a Michigan penologist, was the first to implement parole in the United States. He proposed a two-pronged strategy for managing prison populations and preparing inmates for release: indeterminate sentencing (where inmates would earn release based on in-prison behavior) coupled with post-prison parole supervision. He put his proposal into practice in 1876 when he was appointed superintendent at a new youth reformatory, the Elmira Reformatory in New York. He instituted a system of indeterminacy and parole release, and is commonly credited as the father of both in the United States.

Indeterminate sentencing and parole spread rapidly through the United States. In 1907, New York became the first state formally to adopt all the components of a parole system: indeterminate sentences, a system for granting release, postrelease supervision, and specific criteria for parole revocation. By 1942, all states and the federal government had such systems. By the mid-1950s, indeterminate sentencing coupled with parole release was the dominant sentencing structure in every state, and by the late 1970s, nearly 80% of all U.S. prisoners were released as a result of a parole board discretionary decision.

Parole seemed to make perfect sense. First, it was believed to contribute to prisoner reform by encouraging participation in rehabilitation programs. Second, the power to grant parole was thought to provide prison officials with a tool for maintaining institutional control and discipline. The prospects of a reduced sentence in exchange for good behavior encouraged better conduct among inmates. Finally, release on parole as a "back end" solution to prison crowding was important from the beginning. Indeterminate sentencing coupled with parole release was a matter of absolute routine and good correctional practice for most of the 20th century.

MODERN CHALLENGES AND CHANGES

The pillars of the American corrections systems—indeterminate sentencing coupled with parole release, for the purposes of offender rehabilitation—came under severe attack during the late 1970s and early 1980s. Opponents generally made one of three major criticisms. First, *there was little scientific evidence that parole release and supervision reduced subsequent recidivism*. In 1974, Robert Martinson and his colleagues published the now-famous review of the effectiveness of correctional treatment and concluded, "With few and isolated exceptions, the rehabilitative efforts that have been reported so far have had no appreciable effect on recidivism" (Martinson, 1974, p. 22). Of the 289 studies they reviewed, just 25 (8.6%) pertained to parole, and yet their summary was interpreted to mean that parole supervision (and all rehabilitation programs) did not work. Once rehabilitation could not be legitimated by science, there was nothing to support the "readiness for release" idea, and, therefore, no role for parole boards or indeterminate sentencing.

Second, *parole and indeterminate sentencing were challenged on moral grounds as unjust and inhumane*, especially when imposed on unwilling participants. Research at the time showed there was

little relationship between in-prison behaviors, participation in rehabilitation programs, and postrelease recidivism. If that were true, then why base release dates on in-prison performance? Prisoners argued that not knowing their release dates held them in "suspended animation" and contributed one more pain of imprisonment.

Third, *indeterminate sentencing permitted parole authorities to use a great deal of uncontrolled discretion in release decisions,* and these decisions often were inconsistent and discriminatory. Since parole boards had a great deal of autonomy and their decisions were not subject to outside scrutiny, critics argued that it was a hidden system of discretionary decision making that led to race and class bias in release decisions.

THE CALL TO END REHABILITATION AND PAROLE

In 1976, Maine became the first state to eliminate parole. The following year, California and Indiana established determinate sentencing and abolished discretionary parole release. By the end of 2004, 16 states had abolished discretionary parole release for nearly all offenders. In 19 other states and the federal prison system, parole authorities had discretion over a small and decreasing number of parole-eligible inmates. By 2004, just 16 states gave their parole boards full authority to release inmates through a discretionary process. Likewise, at the federal level, the Comprehensive Crime Control Act of 1984 created the U.S. Sentencing Commission. That legislation abolished the U.S. Parole Commission and phased out parole from the federal criminal justice system in 1997.

The majority of prisoners (59%) in America are now released automatically and mandatorily, without ever appearing before a parole board. Mandatory parole is basically a matter of bookkeeping: One calculates the amount of time served plus good time and subtracts it from the prison sentence imposed. When the required number of months has been served, prisoners are automatically released. Proponents hoped that determinate sentencing with mandatory parole would make sentencing more consistent across offenders and offenses—and it has. However, it was also thought that "abolishing parole" would lengthen the time inmates spent behind bars—yet it has not. Perhaps more important, recent research suggests that inmates who "max out"—and leave prison without parole supervision—have higher failure rates than those who are released with parole requirements (Petersilia, 2003). No one is more dangerous than a criminal who has no incentive to straighten himself or herself out while in prison and who returns to society without a supervised transition plan. It seems, therefore, that it is in the interest of public safety that discretionary parole systems should be reinstituted.

THE CURRENT PAROLE POPULATION

Eventually, 93% of all prisoners return home. Though few are released by a parole board, virtually all will be subject to parole supervision—the "other" parole. Parole supervision remains in every state except Maine and Virginia, and nearly 80% of all prisoners released each year are subject to some form of conditional supervised release (despite the manner in which some states have changed its name to distance themselves from the negative connotation of "parole"). Parole supervision generally lasts one to three years, but can last much longer in some states (e.g., Texas parole terms are often 10 to 20 years). As the size of the prison population has risen, so too has the parole population.

Glaze and Palla (2004) reported that, at year-end 2003, there were 774,588 adults on parole in the United States. Parolees represented 11% of the approximate 6.8 million persons who were "under correctional control" (incarcerated or on community supervision). Four states (California, New York, Pennsylvania, and Texas) supervise more than half of all state parolees.

The parole population is mostly male, although the drug wars have imprisoned more females, and females are now 14% of the parole population. Most parolees are racial or ethnic minorities. Most have serious work and education deficits, and more than three-quarters of the parole population report a history of drug and/or alcohol abuse. Sixteen

percent of parolees report a mental condition or an overnight stay in a psychiatric hospital. Despite these serious needs for treatment, less than one-third of exiting prisoners will have received substance abuse or mental health treatment while in prison. And while some states have provided more funding for prison drug treatment, the percentage of state prisoners participating in such programs has been declining, from 25% a decade ago to about 10% today.

Moreover, despite evidence that inmates' literacy and job readiness has declined in the past decade, fewer inmates are participating in prison education or vocational programs. Today, just 25% of all those released from prison will have participated in vocational training programs, and about a third of exiting prisoners will have participated in education programs—both figures down from a decade ago. The data suggest that U.S. prisons today offer fewer services than they did when inmate problems were less severe, although history shows that we have never invested much in prison rehabilitation. It is not that inmates do not want to participate in these programs. On the contrary, virtually all prison programs today have long waiting lists.

At the same time, mandatory minimum sentences and truth-in-sentencing laws have increased sentence length, so that prisoners currently being released have served an average of 27 months in prison—5 months longer than those released in 1990. Moreover, about 25% of state and 33% of federal prisoners will have spent more than five years incarcerated. This longer time in prison translates into a longer period of detachment from family and other social networks, posing new challenges to parole and offender reintegration.

CASELOAD ASSIGNMENT AND COSTS

Parolees are required to report to their designated parole field office within a few days of release. In most states, parolees are legally required to return to the county of their last residence. When parolees first report to the parole field office, they are assigned to a caseload. Virtually all states use a classification system for assigning parolees to different levels of supervision. Such systems recognize that not all offenders are equal in their need for supervision.

Most often, caseload assignment is based on a structured assessment of parolee risk, and an assessment of the needs or problem areas that have contributed to the parolee's criminality. By scoring personal information relative to the risk of recidivism, and the particular needs of the offender (in other words, a risk/need instrument), a total score is derived, which then dictates the particular level of parole supervision (for example, intensive, medium, regular, administrative). Each jurisdiction usually has established policies that dictate the contact levels (times the officer will meet with the parolee). These contact levels correspond to each level of parole supervision. The notion is that higher-risk inmates and those with greater needs will be seen most frequently (for example, on "intensive" caseloads).

Research shows that 80% of U.S. parolees are supervised on "regular" caseloads, averaging 67 cases to one parole officer, in which they are seen (face to face) fewer than two times per month. Officers also may conduct "collateral" contacts, such as contacting family members or employers to inquire about the parolee's progress. Many parole officers are frustrated because they lack the time and resources to do the kind of job they believe is maximally helpful to their clients. Parole officers often complain that paperwork has increased, their clients have more serious problems, and their caseloads are much higher than the 35 to 50 cases that is considered the ideal caseload for a parole officer. However, there is no empirical evidence to show that smaller caseloads result in lower recidivism rates. On average, the annual supervision costs in 2002 for a parolee on regular supervision was $1,800.

Larger parole departments also have established "specialized caseloads" to supervise certain types of offenders more effectively. These offenders generally pose a particularly serious threat to public safety or present unique problems that may handicap their adjustment to supervision. Specialized caseloads are smaller than regular caseloads (usually about 30 parolees to 1 parole officer) and afford the opportunity to match the unique skills and training of parole officers with the specialized needs of parolees. The

most common specialized caseloads in the United States are those that target sex offenders and parolees with serious substance abuse problems, although fewer than 4% of all parolees are supervised on specialized caseloads (Petersilia, 2003).

CONDITIONS OF PAROLE SUPERVISION

All parolees are required to sign an agreement to abide by certain regulations. Seeing that the parolee lives up to this parole contract is the principal responsibility of the parole agent. Parole agents are equipped with legal authority to carry and use firearms, to search places, persons, and property without the requirements imposed by the Fourth Amendment (i.e., the right to privacy), to order arrests without probable cause, and to confine without bail. The ability to arrest, confine, and, in some cases, reimprison the parolee for violating conditions of the agreement makes the parole agent a walking court system.

Conditions of the agreement generally can be grouped into *standard conditions* applicable to all parolees and *special conditions* that are tailored to particular offenders. Special conditions for substance abusers, for example, usually include periodic drug testing. Standard conditions are similar throughout most jurisdictions, and violating any parole condition can result in a return to prison. Common standard parole conditions include the following:

- Reporting to the parole agent within 24 hours of release
- Not carrying weapons
- Reporting changes of address and employment
- Not traveling more than 50 miles from home or not leaving the county for more than 48 hours without prior approval from the parole agent
- Obeying all parole agent instructions
- Seeking and maintaining employment, or participating in education or work training
- Not committing crimes
- Submitting to search by the police and parole officers

Parolees are also subject to a number of statutory restrictions or "civil disabilities" when they return home. Their criminal record may preclude them from voting or retaining their parental rights, be grounds for divorce, and they may be barred from serving on a jury, holding public office, and owning firearms. Employers are also increasingly forbidden from hiring parolees for certain jobs and are mandated to perform background checks for many others. The most common types of jobs with legal prohibitions against parolees are in the fields of child care, education, security, nursing, and home health care. Since the mid-1980s, the number of barred occupations has increased dramatically. It may be that these policies are crime enhancing rather than crime reducing, given that being employed is significantly related to reduced recidivism.

If parolees fail to live up to their conditions, they can be revoked to custody. Parole can be revoked for two reasons: (1) the commission of a new crime, or (2) the violation of the conditions of parole (a "technical violation"). Technical violations pertain to behavior that is not criminal, such as the failure to refrain from alcohol use or remain employed.

In either event, the violation process is generally straightforward. Given that parolees are technically still in the legal custody of the prison or parole authorities, and as a result maintain a quasi-prisoner status, their constitutional rights are severely limited. When parole officers become aware of violations of the parole contract, they notify their supervisors, who can rather easily return a parolee to prison. Parolees do have some rights in revocation proceedings. Two U.S. Supreme Court cases, *Morrissey v. Brewer* (1972) and *Gagnon v. Scarpelli* (1973), established minimum requirements for the revocation or parolee, forcing parole boards to conform to some standards of due process. Parolees must be given written notice of the nature of the violation and the evidence obtained, and they have a right to confront and cross-examine their accusers.

RECIDIVISM AND CRIME COMMITTED BY PAROLEES

The transition from prison back into the community is exceedingly difficult. Parole historically has provided job assistance, family counseling, and chemical dependency programs. Parole agents were viewed as paternalistic figures, who mixed authority with help. Officers provided direct services (e.g., counseling) and also knew the community and brokered services (e.g., job training) for needy offenders. Many parole

agencies still do assist in these activities. Increasingly, however, parole supervision has shifted away from providing services to parolees and more toward providing surveillance activities. Parole agents are authorized to carry weapons in two-thirds of the states, and drug testing, electronic monitoring, and verifying curfews are the most common activities of many parole agents.

It is not surprising, therefore, that most offenders fail parole supervision. Langan and Levin (2002) found that 67% of released inmates were rearrested for at least one serious new crime within three years after their release; 47% were convicted of a new crime; 52% were returned to prison for either a new crime or a technical violation. Fully one-quarter of all released prisoners (25.4%) were resentenced to prison for a new crime in the three-year follow-up period. Generally speaking, higher rearrest rates were experienced by those originally in prison for crimes for money. Those with the lowest rearrest rates were in prison for crimes not generally motivated by desire for material gain (e.g., homicide). Research also shows that the first year after release from prison is the period when most recidivism occurs.

Such high parole revocation rates are one of the major factors linked to the growing U.S. prison population. In California, for example, almost two-thirds of *all* persons admitted to state prisons each year are parole violators. Nationally, parole violators now constitute about a third of all new prison admissions.

Parolees represent significant risks to public safety. Rainville and Reaves (2003) report that of *all* persons arrested for felony crimes in 2000, 6% were on parole at the time of their arrest. The Bureau of Justice Statistics (BJS) also reports that 22% of *all* those in state and federal prisons—and 18% of those serving death sentences—reported being on parole at the time of the crime that landed them in prison. Clearly, leaving parolees unattended and without services not only is bad policy, but also leaves many victims in its wake.

CONCLUSION

Nearly 760,000 parolees are now doing their time on U.S. streets. Most have been released to parole systems that provide few services and impose conditions that almost guarantee their failure. Monitoring systems are getting better, and public tolerance for failure on parole is decreasing. The result is that a rising tide of parolees is washing back into prison, putting pressure on states to build more prisons, which in turn, takes money away from rehabilitation programs that might have helped offenders while they were in the community. All of this means that parolees will continue to receive fewer services to help them deal with their underlying problems, assuring that recidivism rates and returns to prison remain high—and public support for parole remain low. Reforming parole should receive high priority, as an estimated 8 million U.S. prisoners will leave prison and return home in the coming decade.

PAROLE BOARDS

Parole boards decide whether eligible inmates may be released from prison to serve the remainder of their sentences under supervision in the community, on parole. There is much diversity among parole boards in the United States, making generalizations difficult and often inaccurate. However, there are some common themes that are worth noting. First, while some states elect their parole board officials, many boards are comprised of people who are appointed by the governor to serve specified terms of office. Second, states set a wide range of requirements that parole board members must meet in order to be eligible to serve as a board member. While some require that board members have college degrees and relevant experience in corrections, law enforcement, or other related field, others have no requirements for board membership. Parole boards also serve a variety of different functions. Many only determine release dates of prisoners. However, in some states, in addition to the release function, parole boards oversee parole revocation and parole supervision functions. Regardless of the scope of function, parole boards have considerable discretionary power and, in many jurisdictions, have absolute discretion over an offender's likelihood of early release.

THE NEW JERSEY STATE PAROLE BOARD: A CASE STUDY

In 1947, New Jersey ratified a new state constitution that dissolved the Board of Pardons and created the State Parole Board. From 1948 until April 1980, the board was one of four separate paroling authorities, each having separate policy and decision-making authority and jurisdiction. The State Parole Board held jurisdiction over inmates incarcerated in the state prison system. Parole jurisdiction for inmates committed to indeterminate sentences was vested with three part-time institutional boards of trustees: the Board of Trustees for the Youth Correctional Complex, the Board of Trustees for the Correctional Institution for Women, and the Board of Trustees for the Training School for Boys and Girls.

Recognizing that there was little continuity or uniformity in decision making among the boards, the New Jersey legislature passed the Parole Act of 1979, consolidating the authority to coordinate operations, develop policy, and foster consistent decision making. Additionally, the board has the authority to parole offenders sentenced to serve terms greater than 60 days in a county jail facility.

In May 2001, an act was passed by the 209th legislature of New Jersey transferring the powers and duties of the Department of Corrections' Division of Parole—the division responsible for the supervising offenders—to the State Parole Board. On September 4, 2001, the Division of Parole successfully merged with the State Parole Board. This transfer of power makes New Jersey's parole board one of the few boards in the United States with the authority to release an offender from confinement, supervise an offender in the community, and revoke parole status for violation of parole rules. In addition to these responsibilities, the New Jersey State Parole Board receives and investigates applications for executive clemency and may discharge offenders from supervision prior to the expiration of their maximum sentences.

The New Jersey State Parole Board is comprised of a chairman, 14 associate members, and three alternate associate board members, all eligible to make juvenile and adult parole decisions. The governor, with the advice and consent of the Senate, appoints all board members to a term of six years. One associate member is designated vice chairman by the governor. Members serve staggered terms and devote their full time to the duties of the board. As provided by law, each appointee has training or

experience in the law, sociology, criminal justice, juvenile justice, or related branches of the social sciences.

PAROLE BOARD DECISIONS

Generally, there are two types of parole board decisions: mandatory or discretionary release decisions. Some boards make *mandatory release decisions* that require offenders to have a mandatory period of supervision in the community after release from prison. Other states make discretionary parole release decisions. *Discretionary parole release decisions* are predicated on a set of criteria that vary greatly from state to state.

Many parole boards utilize subjective as well as objective tools to establish parole release criteria, including presentence investigation reports, psychiatric examinations, institutional behavioral reports, and parole plans. Other factors that parole boards consider when making their parole release decisions include most recent offense, frequency and severity of previous convictions, and institutional and victim's statements.

In addition, parole boards increasingly utilize results from risk or needs assessments to inform their parole release decisions. These assessments provide supposedly objective measures on which parole boards can base their decisions. There are different types of risk and needs assessments. Some assessments are static in nature—that is, they rely only on aspects of an offender's life that cannot be changed, like offense history and age, to determine likelihood of recidivism and to identify an offender's needs. Others include static and dynamic factors—factors in a person's life that can be changed, like marital status, drug use, attitude, and education. Assessments that are static and dynamic in nature have proved to be better indicators of offender risk and tend to be provide more reliable information to parole boards than those that address static factors alone.

PAROLE REVOCATIONS

Parole boards must carefully balance the decision to release an offender into the community because of the potential risk to public safety. Since the onus of responsibility for release decisions falls to the parole board, boards are generally very conservative in their release decisions.

While some parole boards are responsible only for releasing offenders to parole, others are also responsible for supervising and revoking parole. The parole board generally revokes parole when an offender has committed a new crime or a technical violation. The parole violations and revocations process is an administrative function, typically devoid of court involvement. Current parole violation and revocations procedures for all states are predicated on the 1972 U.S. Supreme Court Case, *Morrissey v. Brewer*.

Morrissey was the first landmark case involving the constitutional rights of parolees. The case involved John Morrissey, who was convicted in 1967 in Iowa for "falsely drawing checks" and sentenced to not more than seven years in Iowa State Prison. He was paroled from prison in 1968. However, seven months later, his parole officer learned that while on parole, Morrissey bought a car under an assumed name and operated it without permission, gave false information to an insurance company when he was involved in a minor car accident, and had given his parole officer a false address for his residence. The parole officer interviewed Morrissey and filed a report recommending that his parole be revoked, citing that Morrissey admitted to buying the car and obtaining false identification and being involved in the auto accident. The parole officer claimed that parole should be revoked because Morrissey had a habit of continually breaking the rules.

The parole board revoked Morrissey's parole, and he was returned to prison to serve the remainder of his sentence. Morrissey was not represented by counsel at the revocation proceeding and was not given the opportunity to cross-examine witnesses against him, and he was not advised in writing of the reasons for parole revocation. Morrissey was also not permitted to offer evidence on his own behalf or give personal testimony.

Morrissey appealed to the Iowa Supreme Court and was rejected, but the U.S. Supreme Court heard his appeal. While the Court did not directly address

the question of whether Morrissey should have had court-appointed counsel, it did make a landmark decision in his case. It overturned the Iowa Parole Board action and established a two-stage proceeding for determining whether parole ought to be revoked. Furthermore, the Court determined that although offenders are not entitled to the same due process rights as a criminal defendant, they are entitled to challenge the alleged violations and to confront, cross-examine witnesses, including the parole officer, and present evidence on their own behalf. Moreover, unlike a criminal trial, hearsay is admissible at violation hearings, and the level of proof required is considerably less than the criminal standard of beyond a reasonable doubt.

CONCLUSION

There are a variety of factors that make parole boards unique among criminal justice and correctional process mechanisms. Not only do they have an extraordinary amount of discretionary power, but also the varying degrees of qualifications and corrections or criminal justice experiences possessed by board members make uniform decision making difficult. Parole boards are the first line of defense between the offender and the community. Balancing the punitive and rehabilitative needs as well as the best interests of an offender with those of the community is a daunting task, one that must be performed diligently and carefully.

Legal Case

Morrissey v. Brewer, 408 U.S. 471 (1972).

PATUXENT INSTITUTION

Patuxent Institution is a 987-bed maximum-security facility located in Jessup, Maryland—centrally between Baltimore, Maryland, and Washington, D.C.—that is designed as a co-correctional facility for men, women, and young offenders. The population housed at the facility and the services offered are the most diverse in the state of Maryland and possibly in the nation. Notable programs and services include the Eligible Persons Program, Patuxent's Youthful Offenders Program, the Patuxent Drug Recovery Program, and the Correctional Mental Health Center for inmates with mental health histories. Convicted criminals are recommended for admission to Patuxent Institution by the sentencing court, by the state's attorney, or through petition to the institution directly by the individual offender.

As a division of the Maryland Department of Public Safety and Correctional Services, Patuxent Institution was designed to be functionally separate from the Maryland Division of Corrections (DOC). However, the Patuxent Institution maintains a close relationship with the DOC by hosting and overseeing a number of DOC programs outside the Patuxent facility: the Regimented Offender Treatment Center, the Residential Substance Abuse Treatment Program, and the Women's Intense Treatment Program.

HISTORY

Patuxent Institution opened in 1955 to ensure public safety through the treatment of individuals designated by the courts as "Defective Delinquency," Article 31B statute of the Annotated Code of Maryland. A "defective delinquent" was a criminal offender who demonstrated persistent antisocial or criminal behavior and was considered a danger to society. "Defective delinquents" were committed involuntarily to Patuxent Institution under an indeterminate sentence and required confinement with treatment.

To achieve its mission, the enabling legislation specified that the institution's chief administrator was to be a psychiatrist, with two associate directors who are psychiatrists, along with a clinical staff of psychiatrists, psychologists, and social workers. This is in sharp contrast to the typical correctional facility comprised of a warden, associate wardens, and correctional officers. Patuxent was charged with its own admission, inmate review, and paroling authority separate from the Maryland Division of Corrections. An inmate would be released only when the Institutional Board of Review and Parole determined the release was for the inmate's benefit and the benefit of society.

Patuxent became the most sued correctional facility in the U.S. due to its treatment of defective delinquency and the practices of involuntary referral and indeterminate sentencing. As a result, the 1951 enabling legislation was revised in 1977, and the "defective delinquent" definition was abolished. Offenders were no longer committed to the institution involuntarily under an indeterminate sentence, and the institution's mission was redefined by creating the Eligible Person (EP) program. EP focused on specialized treatment services for rehabilitation of chronic offenders. Although it initially served only male inmates, in 1987 the rehabilitation program was expanded to include women in Patuxent as well. In July 1990, the Patuxent Institution Building for Women was completed, and female inmates were transferred from various institutions to Patuxent Institution.

During 1988, two inmates with violent histories, including rape and murder, were released from the institution without consultation from the prosecuting court. In response, the Maryland General Assembly mandated an evaluation of the Patuxent Institution that ultimately led to a redefinition of the institution's mission. Since 1994, the facility has pursued a policy of remediation in which programs identify an inmate's deficits and then tailor treatments specific to his or her needs.

INSTITUTION PROGRAMS

Approximately 900 men, 100 women, and 200 young offenders take part in 10 major programs offered at the institution today: the Eligible Persons Program, the Youth Program, Correctional Mental Health, Mental Health Transition, Mental Health Step Down, Regimented Offender Treatment, Department of Corrections Transient and Residential Substance Abuse Treatment. The Eligible Person (EP) program, which provides specialized treatment services designed to rehabilitate habitual criminals and requires the inmate to submit to treatment, has the highest enrolment of all the courses.

The EP treatment program consists of a four-level graded-tier incentives and privilege system. Offenders who demonstrate responsible behavior may progress from the entry tier, which is Level I, to the honor tier, which is Level IV. Offenders are promoted through each level with good behavior and progress in the program; they can also be demoted from a level if their behavior is inappropriate. Level I orients individuals to the rules and expectations of the institution. Level II is the primary treatment phase, which consists of therapy, education, reinforcement, and peer support programs. Level III is the transitional phase, during which time offenders are presented with additional responsibilities. Level IV is the advanced and reentry level. During this phase offenders become eligible for the prerelease program, which will assist them with reentry to the community. An offender who withdraws from the program will be transferred to another facility and will be ineligible for readmission to Patuxent Institute for three years.

The Youth Program that was established in 1994 was developed as a derivative of the EP program and in response to the growing numbers of young offenders. That same year, the Correctional Mental Health program was established in response to concerns for inmates diagnosed with severe mental illness and the efficiency of centralized treatment. This program and specialized unit within the institution consolidated services throughout the state of Maryland for inmates suffering severe psychiatric disorders. Finally, that year, the Regimented Offender Treatment program was established through a cooperative effort between the Patuxent Institution and the Division of Parole and Probation. This program is designed for inmates who are preparing for parole or mandatory

release and delivers a 45-day treatment plan to male and female offenders incarcerated in the Division of Corrections with significant abuse histories.

In 2000, the Mental Health Transition program was set up in order to address the mental health needs of offenders preparing for release to society. Offenders in this course have access to both inpatient and outpatient medical services and are educated as to how to cope with a mental health issue within society. The Mental Health Step Down, which was established at the same time, focuses on the mental health needs of convicted offenders who have mental health issues and have had sporadic problems during their incarceration at other Maryland correctional facilities. This program prepares people to integrate into their home institution's general population.

The institution also offers a sex offender program. The Maryland Transitional Offender Program is a six-week program that provides treatment services to sex offenders, including cognitive-behavioral psychotherapy and offender relapse prevention modules. This program is a collaborative effort among several agencies, including the Department of Public Safety and Correctional Services, the Division of Corrections, the Division of Parole and Probation, and Patuxent Institution.

CONCLUSION

The Patuxent Institution has assumed a leadership role throughout the United States in developing and managing critical treatment issues. Originally designed to hold "defective delinquents," today it is a coeducational facility housing men, women, and youths. It offers educational programs, special drug treatment programs, youth programs, and mental health programs for offenders. In addition, Patuxent continues to operate separately from the Division of Corrections with its own admissions, inmate review board, and paroling functions.

PELICAN BAY STATE PRISON

Pelican Bay State Prison, located outside Crescent City, California, is the state's most secure facility available, housing the area's most serious male criminal offenders. Since opening in 1989, it has held some of the nation's most famous criminals, such as "Monster" Cody and Charles Manson.

Pelican Bay is a Level 4 maximum-security institution, which is California's highest security classification. It is surrounded by an electric fence, which has a current strong enough to kill anyone who tries to escape over it. The facility is separated into several maximum-security units, a mental health ward, administrative segregation, and the special housing unit (SHU). Originally built to house 2,280 inmates total, with 1,056 in the SHU, by 2001 Pelican Bay was operating with more than 3,300 inmates.

HISTORY AND CREATION OF PELICAN BAY

Pelican Bay was built, in part, in response to a perceived rise in violent crimes across the California prison system. From the early 1960s, inmate fights and yard attacks in prisons around the state had escalated, while inmate assaults of guards rose from 32 in 1969 to 84 in 1973. While some argue that the problems in California prisons related to the state's integration policies, which forced rival gangs onto the yards at the same time, prison officials

attributed them to an increase in gang activity and to the court-mandated decrease in institutional controls.

Inmates were not the only ones becoming more violent. In 1987, California adopted a "Shoot to kill" policy that allowed officers to kill any inmate engaged in behavior that could result in injury to others. The Department of Corrections also switched ammunition to a more powerful bullet in 1988, which typically kills its target with a single shot. As a result, 27 prisoners died at the hands of guards in California over a five-year period; in the rest of the country, only seven prisoners were killed by guards.

THE SHU

The SHU at Pelican Bay is California's most secure prison facility. Most inmates are sent there for committing violent acts within the prison system, attempting escape, being caught with a weapon, or being a known gang member. Once in the SHU, inmates are housed in solitary confinement.

The SHU, which is designed to hold 1,056 inmates, is made up of 132 areas referred to as "pods." Twenty-two separate units, each containing six pods, are arranged in a semicircle around a control room. The control room officer operates all of the cell doors and the entrances to the pods, while monitoring all inmate movement outside the cells through video surveillance. Within the pods are eight cells, each of which typically houses only one man. The cells have heavy perforated doors, which by their design limit an inmate's ability to assault others, without obstructing visibility in or out of the cell. Inside the cells, the bunks and toilets are molded to the floor. All items must be X-rayed prior to being admitted into the cells. The pods do not have any windows. The only natural light comes in from a few skylights.

Each pod has one exercise area, measuring 10 feet wide by 26 feet long, in which inmates are typically granted one hour of exercise alone per day. Otherwise they are contained in their cells for 22 to 23 hours a day. Unlike other prisons, inmates in the SHU are not allowed contact with others. Complete silence is maintained at all times. Any time an individual leaves his cell he is placed in restraints and escorted by two guards wearing Kevlar vests. Nonetheless, basic standards of care are meant to be maintained; SHU inmates are allowed to receive health services, meet with counseling staff, conduct legal research, attend hearings, and have noncontact visits with family or friends.

Inmates can only be released from the SHU by serving out their sentence, being granted parole, exhibiting good behavior, which qualifies them for Level 4 housing, or by going through the gang debriefing process. To debrief, the inmate must confess to gang-related activities and crimes in which he has personally been involved, as well as disclose crimes that other gang members have committed. The information, given to the Institutional Gang Investigation Lieutenant, is verified and corroborated as much as possible. The lieutenant must be satisfied that the information is accurate and the inmate is being truthful for the process to continue.

Those men who are in the process of debriefing are held in protective custody for one year, and ultimately moved to the Transitional Housing Unit (THU), where they sleep, eat, exercise, and work toward their high school equivalency exam. There are two correctional officers posted at the door of the gym in the THU to protect the residents from others who may wish to kill them for "snitching." These Pelican Bay policies have lead to the inmate credo of "Snitch, parole, or die" as the only way to get out of the SHU.

CRITICISMS

Prisoners and prison reform groups have brought numerous court cases against Pelican Bay in attempts to have it shut down or reformed. Some of the court cases have had limited success. In 1995, for example, a federal court decided in *Madrid v. Gomez* that placing mentally ill individuals in the SHU violated their Eighth Amendment rights. The court criticized a number of aspects of Pelican Bay, citing frequent staff misconduct and a lack of clear policy on the use of force. However, it limited its ruling to the treatment of the mentally ill. The court ruled that mentally ill inmates could not be held in the SHU, since this was "the mental equivalent of

putting an asthmatic in a place with little air to breathe."

However, critics argue that few changes have been made and that the *Madrid* order did not go far enough. They contend long-term placement in the SHU fosters the same mental illness that the court attempted to resolve in *Madrid*. Critics also maintain that the total isolation in the SHU promulgates violent behavior, which makes it more difficult for inmates to be released. They point to the fact that Pelican Bay has continued to lead the California Department of Corrections in serious incident reports, culminating in a riot in February 2000 in which one inmate died and 31 were wounded. In response, prison officials blame the violence on the type of men imprisoned in Pelican Bay.

CONCLUSION

Since Pelican Bay opened, the California Department of Corrections has reported a systemwide decrease in disorder in other facilities. This, along with the statewide increase in prison population, has contributed to Pelican Bay's substantial overcrowding. Despite widespread legal and academic criticism, and regardless of its own problems with violence, the numbers in Pelican Bay seem sure to rise.

Legal Case

Madrid v. Gomez, 889 F. Supp. 1146 (N. D. Cal. 1995).

PELL GRANTS

In 1972, Congress reauthorized the Higher Education Act of 1965 and provided for the development of the need-based Basic Educational Opportunity Grants, more commonly referred to as "Pell grants." These grants were set up to help poor students, including inmates, obtain undergraduate degrees. In most circumstances, a Pell grant covers only part of the cost of going to school and must be combined with some other form of financial assistance to enable a person to pay for his or her education. Though inmates received less than 2% of the monies awarded to students in the early 1990s, opposition to any financial aid for inmates was so high that the federal government eliminated Pell grants for inmates via the Violent Crime Control Act of 1994.

HISTORY

Inmate education programs have existed in some form since the earliest penitentiaries. Prior to the 20th century, most courses in the prison system focused on work and religion. In the 1960s, educational programs started to provide inmates with adult basic education, secondary education, and eventually postsecondary education. In 1965, there were only 12 postsecondary educational programs available nationwide for inmates. By the early 1980s, due to Pell grants, 27,000 inmates were enrolled in 350 programs nationwide. This number continued to increase, so that by the early 1990s there were more than 38,000 inmate students enrolled in postsecondary educational programs in 92% of the nation's correctional systems.

Following the passage of the Violent Crime Control Act, however, the numbers of individuals behind bars who can afford to take college classes has fallen dramatically. For example, according to Bureau of Justice Statistics (1994), in 1991, 13.9% of the state prison population and 18.9% of the federal prison population were enrolled in college-level courses. The most recent data available by the Bureau of Justice Statistics, in 1997 (Stephan, 1997, p. 20), reports these numbers decreased to 9.9% and 12.9% respectively. In the absence of financial aid for the majority of the inmates who were without the resources needed to support post-secondary offerings, states and cooperating colleges and university systems discontinued their programs.

THE CASE FOR AND AGAINST PELL GRANTS

To their supporters, Pell grants enabled prisoners to develop intellectually and socially by enrolling in university and college courses. They also involved tertiary institutions in the everyday life of penal institutions, thereby bridging the gap between the incarcerated and free populations. Perhaps most important, research revealed that inmates enrolled in postsecondary educational programs have continually shown to have lower recidivism rates than those not involved in these programs. Indeed, education and recidivism have an inverse relationship; as the level of education increases, the likelihood of rearrest, conviction, and reincarceration decreases.

To their critics, however, prisoners have no right to financial aid from the state. Legislators, some asserting inaccurately that law-abiding citizens were being displaced by criminals receiving federal aid for their education, evoked the long-held "principle of least eligibility" that no prisoner should have benefits not available to the working poor. Thus, Senator Jess Helms in 1991 argued that taxpayers were paying for inmates to get college tuition while law-abiding citizens were still struggling to pay for the same privilege. Though this argument appears to be somewhat overstated, given the small proportion of Pell grants that ever were earmarked for inmates, Helms's position provided a basis for the dismantling of the educational programs.

Some authors have pointed out not only the statistical inaccuracy in Helms's statement, but also his assumption that inmate students were not a part of a social economic class in need of tuition assistance or Pell grants. In 1991, 53% of the nation's inmates earned less than $10,000 a year (Bureau of Justice Statistics, 1994). Thus, except for their imprisonment, these inmates would have been eligible for Pell grants.

Finally, one has to look at the effect the changes in Pell grant eligibility for inmates had on minority inmates in the United States. Because members of minority groups have higher rates of incarceration in the United States compared to white citizens, they are greatly affected by the decline of postsecondary educational programs in the prison system. In 1986, 61% of those incarcerated were black, Hispanic, or of another minority race, while in 1991 the number rose to 65%. Research from the Justice Policy Institute (2003) has found that not only are states increasingly spending more money on incarceration than on higher education, but there are also more African American males in state prisons than in higher education. For instance, between 1980 and 2000, Texas added "four times the number of African American males to its prison system than it did to its colleges and universities" (Justice Policy Institute, 2003, p. 12). Because African Americans are more likely to face incarceration than white Americans, they are also those most affected by the change in inmate eligibility for Pell grants.

CONCLUSION

Over the years the cost of incarceration has risen dramatically. Though most of the additional expense is due to the increased number of people behind bars and thus could be reduced by incarcerating fewer people, many believe that we should save money by spending as little as possible on inmates and prisons. In this view, education is often presented as an unnecessary luxury. However, much evidence suggests the inverse may be true, since inmates who participate in classes are much less

likely to reoffend than those who have not. Thus, when inmates were eligible for Pell grants, recidivism rates were in the single digits. These days reoffending rates are as high as 60%.

Moreover, postsecondary education costs relatively little on top of the annual expense of confining an individual. The average cost of incarceration per day, per inmate in the United States is $57.92, or just over $21,000 a year, whereas the annual cost for an inmate student to be involved in postsecondary educational programs is a mere $2,500. Though it would entail some initial expenditure, increasing the number of inmates in further education would in the long term save states money by reducing the cycle that fuels imprisonment.

PELTIER, LEONARD (1944–)

Leonard Peltier has been imprisoned since 1977 for the June 26, 1975, shoot-out between members of the American Indian Movement (AIM) and the Federal Bureau of Investigation (FBI) at the Pine Ridge Indian Reservation in South Dakota, in which two federal agents were killed. He is currently in Leavenworth (Kansas) Federal Penitentiary, where he is serving two consecutive life sentences. To people around the world, Peltier is a symbol of the history of injustice against indigenous people. Amnesty International considers him a political prisoner, targeted for his activism.

PELTIER'S BACKGROUND

Peltier came from a large family of 13 siblings who lived in poverty on the Anishinabe (Chippewa) Turtle Mountain Reservation, just south of the Canadian border in North Dakota. At age eight, he was forced to attend a residential boarding school run by the U.S. government, where he was forbidden to speak his native language of the Anishinabe

and Lakota nations. After he returned, the government closed the reservation at Turtle Mountain and withdrew all federal assistance, causing terrible hunger and poverty among its inhabitants. At this point Peltier witnessed protests against these policies, and he had his first run-ins with the law. He served two weeks in jail for siphoning diesel fuel from a truck to heat his grandmother's home. At this time he also dropped out of school.

In 1965, Peltier moved to Seattle, where he worked with other Native people. His political consciousness was further awakened as he traveled to different Native communities and became involved in various struggles. The American Indian Movement formed in 1968, and Peltier was involved in the Denver chapter.

In 1970, Peltier participated in an occupation of abandoned buildings near Seattle to test federal law giving Indians rights to lands abandoned by federal agencies. The activists were beaten and jailed. Later Peltier joined the 1972 Trail of Broken Treaties caravan to Washington, D.C., where AIM occupied the Bureau of Indian Affairs offices. Upon returning to Milwaukee, Peltier was arrested for a fight with police and spent five months in jail awaiting trial. After bailing out from jail, Peltier went underground, fearing he would not get a fair trial. He resurfaced in 1975 at the Pine Ridge Indian Reservation in South Dakota, where he went in response to the request of Native elders.

CASE FACTS

In the early and mid-1970s, the Pine Ridge Reservation was fraught with problems. The Tribal Chairman, Dick Wilson, and his Guardians of the Oglala Nations (GOON) squad, armed by the FBI, ruled the reservation, often harassing those who opposed them. During this time period, 64 local Natives were murdered and 300 were harassed or beaten. The FBI's Counter Intelligence Program (COINTELPRO) targeted AIM as a dissident group, and more than a hundred FBI agents occupied Pine Ridge.

On June 26, 1975, the FBI entered the Jumping Bull Ranch, ostensibly looking for a young Native man who had stolen a pair of boots. Many AIM activists were camping on the property. A shoot-out ensued in which two FBI agents, Jack Coler and Ron Williams, and an Indian man, Joe Stuntz, died. Murder charges were brought against Peltier, Dino Butler, and Bob Robideau. Butler and Robideau were acquitted on the grounds of self-defense, after they submitted information about the regime of fear and terror that existed at the reservation at the time. Peltier, in contrast, fled to Canada, convinced he would not receive a fair trial. He was extradited on a falsified affidavit from a Native American woman, Myrtle Poor Bear, who later recanted her testimony that she saw him murder the agents. In fact, she had never met Peltier and was not present at the shoot-out.

Photo 1 *Leonard Peltier being led across Okalla Prison exercise yard, 1976*

To his supporters, Peltier's trial was rife with inconsistencies. Many suggest that witnesses were intimidated and the FBI suppressed evidence. In addition, the reliability of the government's ballistics evidence is disputed.

LIFE IN PRISON

While in prison, Peltier has suffered serious medical conditions, including a stroke that has left him

partially blind in one eye, a debilitating jaw condition that makes him unable to chew properly, diabetes, high blood pressure, and a heart condition. Despite the restrictions that result from these ailments, Peltier is an artist, a writer, and a humanitarian. He organizes and contributes to charitable causes such as clothes drives, Native American scholarship funds, and programs for battered women. He also makes art, and is the author of *Prison Writings: My Life Is My Sun Dance* (1999), a memoir that speaks powerfully to Indian identity and their treatment by the U.S. government.

CASE UPDATE

At the end of 2002, there were several measures pending to seek Peltier's release. His attorneys continue to seek full release through the Freedom of Information Act of all documents related to the case. A civil rights suit was filed April 4, 2002, against the FBI and other government officials, the Parole Commission, the Justice Department, and the president. Attorneys also filed a habeas corpus suit against the U.S. Parole Commission in 1999 over the repeated denial of parole. This suit has languished in the district court.

CONCLUSION

Many believe that Leonard Peltier is an innocent man incarcerated by the federal government as a warning to other activists. The virulence with which he was pursued and the inconsistencies in his case have only reinforced the determination of people working for justice everywhere. The history of violence and terror at Pine Ridge at the time of the case and the rampant anti-Indian sentiment made it impossible for Peltier to receive a fair trial. While all his appeals have been denied, Judge Heaney of the Court of Appeals of the Eighth Circuit wrote a letter in 1991 to Senator Inouye reversing his previous positions and stating that "the United States government must share responsibility with the Native Americans for the . . . firefight . . ." and recommended clemency or commutation of Peltier's sentence. Release of 100,000 FBI documents through the Freedom of Information Act may provide key evidence needed to free Leonard Peltier.

PENNSYLVANIA PRISON SOCIETY

The Pennsylvania Prison Society was founded in 1787. The oldest prison reform organization in the United States, it was originally known as the Philadelphia Society for Alleviating the Miseries of Public Prisons. Today, the society continues to advocate for the humane treatment of prisoners and improved prison conditions while assisting discharged offenders.

MISSION

The mission of the Pennsylvania Prison Society "is to advocate for a humane, just and restorative correctional system, and to promote a rational approach to criminal justice issues." Among its stated goals are the following:

- To monitor correctional facilities within the Commonwealth of Pennsylvania, advocating for remedial action where unsafe or inhumane conditions exist, and to urge the reaction and maintenance of constructive institutional environments.
- To ensure development and implementation of policies that will improve prison conditions and

programs, and to challenge corrections professionals to remain informed about innovations in the field and apply them.

- To support prisoners, their families, and those recently released in their efforts toward self-help and development, and to reduce their pain and misery through visitation, services, and intervention.

- To advocate for rational and progressive criminal justice legislation and programs, recognizing our overuse of incarceration as a failed experiment in crime control. To, therefore, substantially reduce the use of incarceration, through the implementation or more appropriate correctional settings.

- To inform, educate, and mobilize the public to promote correctional reform in Pennsylvania and to coordinate the networking and exchange of information among constituencies engaged in these efforts and similar activities involving criminal justice reform. (Pennsylvania Prison Society, 2002)

CURRENT PROJECTS

The Pennsylvania Prison Society is active in a number of different areas, each of which seeks to influence theories, understanding, and practices of punishment. Thus, it works to maintain the historical Eastern State Penitentiary as a museum, it publishes an influential academic journal, and it initiates numerous alternative penal practices and inmate-centered activities.

Eastern State Penitentiary

The original members of the Philadelphia Society for Alleviating the Miseries of Public Prisons advocated that inmates should be held in silence and solitary confinement. Such views became incorporated into the Pennsylvania system of imprisonment that was, in turn, embodied by the Eastern State Penitentiary. Although no longer in favor of solitary confinement, the society maintains its ties with Eastern State. It is, for example, currently involved in preserving the facility (closed since 1975) and establishing a center for correctional scholarship within it. In 1980, Philadelphia paid the state of Pennsylvania $400,000 for the prison, and the facility was reopened as a museum, with much support from the society. In 1996, the society was awarded a 10-year license to further develop the facility. An average of 25,000 people visit the museum every year.

The Prison Journal and Other Publications

Since 1921, the society has published the *Prison Journal*, which was established in 1845 as the *Journal of Prison Discipline and Philanthropy*. The journal examines theory, research, policy, and practice in the areas of adult and juvenile incarceration while addressing correctional alternatives and penal sanctions. It is one of the primary scholarly journals of prison research in the world.

The society also publishes an official quarterly newsletter, *Correctional Forum*, and since 2002, *Graterfriends*, a monthly prisoner advocacy newsletter devoted to providing inmates and families current correctional and legal information and legislative updates. The society receives funding from a number of sources, including the United Way, and is made up of members from diverse backgrounds and interests.

Alternative Penal Practices and Inmate Activities

Members of the Pennsylvania Prison Society campaign against the death penalty, examine alternative sentencing initiatives, and are currently challenging a 1997 referendum in Pennsylvania that made it difficult for life and death sentences to be commuted. The society also runs numerous community outreach programs, providing speakers knowledgeable about various criminal justice issues to community organizations and educational institutions.

In addition to such large-scale initiatives, the society operates a number of smaller, prisoner-centered programs. Thus, the society provides transportation to state correctional facilities for families of prisoners on a regular basis. The society also teaches parenting education classes to prisoners and offers services to elder prisoners that address the special needs of the rapidly growing population of inmates over the age of 50. In 1998, the society also supported the move to reinstate the voting rights of ex-offenders. In the Restorative Justice Program, the society approaches restorative justice from the perspective of the offender, running a

number of 20- to 24-hour restorative justice seminars with inmates, correctional staff, and others from the community as participants. Finally, the society currently funds an inmate-designed project known as the "Day of Responsibility," which involves a daylong seminar in which 75 inmates explore the meaning of individual responsibility through conversations with and presentations by speakers including offenders, victims, families, and representatives from the prison and community. The day ends with each participant being given the opportunity to sign the Prisoner's Pledge, written by an inmate in a Pennsylvania prison.

CONCLUSION

The Pennsylvania Prison Society is the oldest and one of the most active prison reform groups in the United States. In recognition of its continuing historic role of monitoring prison conditions and advocacy for humane treatment of prisoners, the General Assembly of Pennsylvania declared May 8, 1987, as Pennsylvania Prison Society Day. In 2002, the society received the Louis D. Apothaker Award, given annually by the Bar Foundation of Philadelphia to a non-legal group that has made significant contributions to the pursuit of equal justice. Both honors reflect growing recognition of the need for such reform groups in this country.

PENNSYLVANIA SYSTEM

The *Pennsylvania system* was a model of penal discipline that included hard labor, penitence, and the solitary confinement of inmates. This approach, often referred to as "separate confinement" or "isolation," is based on the philosophy of English penal reformer John Howard, and was supported by the Quakers of Pennsylvania in the late 1700s and early 1800s. They believed that solitary confinement with religious instruction and industry would reform inmates and turn them into good citizens. Solitary confinement was thought to be an effective punishment because it contrasted with the social nature of human beings.

The Walnut Street Jail was the first institution in which the Pennsylvania system was employed in the United States. In 1790, a small building was built on the grounds of the existing jail to hold prisoners in solitary confinement. This building was followed approximately 30 years later by the Eastern Penitentiary in Pennsylvania, which was the first penal institution specifically designed to operate as an institution of solitary confinement for all inmates. It opened in 1829, and was designed by architect John Haviland. Each cell was self-contained, with a private exercise yard. Prisoners worked, ate, slept, and exercised alone.

The Pennsylvania system did not last very long. Problems of overcrowding and the immense costs involved in building cellular institutions, in addition to accusations of cruelty and high rates of suicide and madness within the inmate community, ended it by 1866. The rival of the Pennsylvania system, the Auburn "silent system" or "congregate system," in which inmates worked together in silence, went on to become the more popular model for penitentiaries in the United States and abroad.

INSPIRATION FOR REFORM

The English settlers who came to the American colonies brought the English legal codes with them. Individuals convicted of crimes were sentenced to public corporal punishment, capital punishment, or banishment. However, partly as a response to their

own experiences in England, where Quakers were persecuted and suffered harsh punishments, the Quakers of Pennsylvania believed that offenders should be treated differently. They thought that offenders could be reformed through contemplation and penance. In light of these views, several Quakers, who were also elite members of Philadelphia society, established the Philadelphia Society for Alleviating the Miseries of Public Prisoners on May 8, 1787. There were 37 founding members, including Quakers such as Dr. Benjamin Rush and non-Quakers such as Benjamin Franklin.

The society began by working to appeal a Pennsylvania law stipulating public hard labor and petitioning the Executive Council of the Commonwealth to expose the poor conditions of the Walnut Street Jail in Philadelphia. Prior to the work of the society, all inmates, regardless of their sex, age, or crime, were held in severely crowded areas where sexual activity and the drinking of alcohol were commonplace. Those in the Philadelphia Prison Society believed that these conditions were inhumane and, moreover, would make offenders worse than they were before incarceration. Thus, following John Howard, they suggested that solitary confinement, hard labor, and an abstinence from liquor would be the best way to reform inmates. On April 5, 1790, the Pennsylvania legislature responded by passing an act stipulating that "hardened and atrocious offenders" should be subject to solitary confinement, and as a result, the Pennsylvania system of prison discipline would become a reality (Teeters & Shearer, 1957, p. 10).

THE WALNUT STREET JAIL

In response to the act, a three-story cell house with cells 6 feet wide, 8 feet long, and 9 feet high was erected in the yard of the Walnut Street Jail. Here, all the hardened criminals of the commonwealth of Pennsylvania would be housed in solitude with hard labor. The idea was to both punish and reform those convicted of crimes while separating the more hardened criminals from less serious offenders. The three-story building was thus, according to some, the first penitentiary.

Enforcing solitude and hard labor at the Walnut Street facility, however, proved to be difficult. In particular, overcrowding made it difficult to keep jail inmates separate from those confined to prison. Additionally, the administration of one institution holding both state and county inmates caused many problems, including the management of both county and state funding. Thus, the Philadelphia Prison Society persuaded the legislature to build two new penitentiary facilities, the Western Penitentiary near Pittsburgh and the better known Eastern State Penitentiary at Cherry Hill outside of Philadelphia, where the philosophies of hard labor and solitary confinement were to be instituted.

EXPANDING THE PLAN: BUILDING A NEW PRISON

Five architects submitted designs for the Cherry Hill prison, but only those by William Strickland and John Haviland were seriously considered. In the end, Haviland's plan was used. In designing the massive penitentiary, Haviland, an associate of John Howard, appears to have been influenced by the Maison de Force at Ghent in Belgium.

At a cost of $772,000, the Eastern State Penitentiary of Philadelphia at Cherry Hill was the most expensive building of its time and the first of that scale to have centralized heat and indoor plumbing. Surrounded by a 30-foot-high stone wall, the penitentiary was built in a radial design with each of seven rows of cellblocks radiating out from a central hub, like spokes on a bicycle wheel. Bigger than most modern cells, each was 7 feet by 12 feet with an 8-inch window for light in the 16-foot- high ceiling and an attached private exercise yard. Cells were built to house one prisoner and were furnished with a fold-up steel bed, simple toilet, stool, workbench, and utensils. Their doors were built with a "feeding drawer and peep hole" that permitted the prison keepers to see into the cell and feed the inmates while preventing the inmates from seeing the keepers (Teeters & Shearer, 1957, p. 70).

Eastern State Penitentiary Opens

The first inmate, Charles Williams, was received by Eastern State Penitentiary on October 25, 1829, to serve a two-year sentence for larceny. Following the philosophy of separate confinement, the architectural design made it nearly impossible for Williams and the other inmates to see or communicate with one another. The prison policy of placing hoods over inmate's heads when transporting them to or from their cells further prevented communication between offenders. Men, women, and juveniles both African American and white were held at Eastern State Penitentiary until 1923, when the State Industrial Prison for Women was built.

Day-to-Day Life Under Solitary Confinement

Inmates spent their time in isolation working at a craft such as shoemaking, carpentry, weaving, or spinning. They were also permitted to read scripture and exercise for an hour a day in their private yards. Inmates in the Pennsylvania system were to work toward reform without distractions. They were forbidden from meeting or communicating with other prisoners. Nor were they permitted to have visitors, read newspapers, or have any other communication with the outside world. Inmates only saw the guards, and they were not permitted to speak to them.

With Worldwide Attention Come Critics

With more than 15,000 visitors during its first year, the Eastern State Penitentiary was a great curiosity for prison reformers around the world. For example, Charles Dickens visited in 1842 and was one of few visitors who found great fault with the Pennsylvania system's practice of separate confinement. According to Teeters and Shearer (1957), Dickens wrote about the prison in "such terms of vituperation that the members of the Philadelphia Prison Society were compelled to repair the damage he had wrought throughout the world" (p. 114). Dickens had found the system cruel and strict, and he believed that the lack of human contact among the inmates caused many to go insane.

At this same time, New York prison reformers were advocating for a rival system of prison organization known as the "congregate system" or "Auburn silent system." Like those who supported the Pennsylvania system, proponents of the Auburn silent system advocated hard labor for inmates. However, in the Auburn system, the inmates worked together in absolute silence. Advocates of both systems spent much time and effort producing pamphlets and essays supporting each system, but in the end, the Auburn scheme found more supporters among those who built prisons in the United States. However, due to strong beliefs that crime was infectious, many European countries designed penitentiaries based on the Pennsylvania method.

THE END OF THE SEPARATE SYSTEM

Ultimately, the Pennsylvania system came to an end for two reasons. It was not only expensive and difficult to maintain, but also was thought by many to cause harm to inmates including mental illness. While the prison officials at Eastern State Pententiary asserted that the system was not harmful, numerous cases of mental illness among the inmates were believed to be caused by the complete isolation from other humans. Even before construction was completed on the Eastern State Penitentiary, the reality of physically maintaining a separate system became problematic. Though designed by Haviland to be one story, because of crowding, the final four blocks were built with two stories, making communication between prisoners in the lower and upper tiers much easier. By 1866, prisoners were placed in cells together at Eastern State Penitentiary as crowding forced the separate system to an end.

CONCLUSION

The Pennsylvania system of hard labor, penitence, and solitary confinement of inmates was believed by the Quakers of Pennsylvania to help reform inmates. Through the work of the Philadelphia Society, solitary confinement for all inmates was instituted, and the penitentiary was born. Though a complete system of solitary confinement of all inmates proved to be impossible to maintain and ultimately dangerous to the mental health of many

inmates, many of the Quakers' ideas about segregation and hard labor remain commonplace in contemporary penal systems. Practices of solitary confinement have not ended; they are now merely applied to smaller numbers of people.

PHILADELPHIA SOCIETY FOR ALLEVIATING THE MISERIES OF PUBLIC PRISONS

The Philadelphia Society for Alleviating the Miseries of Public Prisons was founded in 1787 by a group of prominent citizens in Philadelphia, including Benjamin Franklin and Dr. Benjamin Rush. Bishop William White was the society's first president. The society aimed to correct the abuses in the city jail, where offenders were confined together without regard to age, sex, race, or type of offense. Those who committed minor offenses were housed with more habitual criminals, and those awaiting trial who could not afford bail were placed together with those already convicted.

At this time, imprisonment was not a common punishment for criminal behavior. Instead, the death penalty was used extensively, and lesser offenses were punished by fines or brutal forms of corporal punishment, such as whipping, branding, and time in the stocks and pillory. Usually offenders were incarcerated before their real punishment was implemented.

The Philadelphia Society was not the first group to be organized in Philadelphia that was interested in the plight of prisoners and their families. In 1776, Richard Wistar established the Philadelphia Society for Assisting Distressed Prisoners, with the purpose of taking soup to starving prisoners. This earlier organization was very influential in changing much of the criminal law and improving jail conditions in Philadelphia, but was not long in existence.

ATTEMPTS AT REFORM

Members of the Philadelphia Society believed that prisons should not only remove dangerous criminals from society, but should also strive to reform inmates into law-abiding citizens. Their first recorded attempt to implement change was to introduce religious services into the Walnut Street Jail in 1787, against the opposition of the jail's administrators. One year later, in 1788, the society delivered its first public recommendation to the General Assembly for Pennsylvania in the form of a report. This document encouraged more private or solitary confinement and hard labor for prisoners, separation of hardened criminals from first offenders, segregation by sex, and the "prohibition of spiritous liquor among the criminals." A law passed the following year enacted all of the major recommendations put forth by the society.

Another early interest of the society was the repeal of a 1786 law that created the so-called

wheelbarrow men. The law called for felons housed in the Walnut Street Jail to be subjected to "hard labour, publicly and disgracefully imposed . . . in streets and towns, and upon the highways of the open country and other public works." Initially proposed as an alternative for certain capital offenders, this law forced inmates in brightly colored clothes to wear a ball and chain, attached to their ankles and carried in a wheelbarrow, and to dig ditches, repair roads, and do other work while "tethered like cattle." Because inmate food rations were so inadequate, prisoners also used this opportunity to beg for food. The practice so infuriated Benjamin Rush that he publicly denounced it even before the society was established. In 1790, the law was repealed, and hard labor moved into the jail; whether Rush or the society specifically had any great impact on this policy change can only be surmised.

BUILDING BETTER INSTITUTIONS

Though it is unclear whether the Philadelphia Society changed the wheelbarrow law, they certainly influenced a number of penal policy decisions in Pennsylvania throughout the 19th century. For example, the Philadelphia House of Refuge was built in 1828 at a cost of $38,000 (including the land) to separate juvenile delinquents from adult offenders housed in the Walnut Street Jail, and the Philadelphia Society was instrumental in its construction. The daily regime, while seemingly lenient and progressive when compared to the earlier situation, was nonetheless quite strict. The children arose at 4:45 A.M., began work at 7:30, and, with the exception of a dinner break, continued until 5:30. After supper and one-half hour of play, school lessons continued until bedtime at 8:00 P.M. As with other institutions of the time, the House of Refuge became increasingly overcrowded, and the society pushed for additional similar institutions and industrial schools.

Likewise, the Eastern State Penitentiary that was completed in 1829 and founded on the principle of solitude and enforced silence reflected much of the enthusiasm of members of the Philadelphia Society for the new "Pennsylvania" or separate system. Indeed, the architect of the penitentiary was the renowned John Haviland, a member of the society and designer of numerous county jails and the New Jersey State Penitentiary. Though they were not allowed frequent contact with inmates, members of the Visiting Committee of the Society visited prisoners on occasion as "official visitors."

WOMEN

With few exceptions, women were not allowed membership in the Philadelphia Society for almost 70 years after its inception. The first woman to be admitted as a regular member was Rose Steadman in 1858, although the famous reformer Dorothea Dix was given corresponding membership in 1844. Early records of the society showed cooperation with the Women's Society of Friends in Philadelphia, who supported the goals of the society. This group received an annual appropriation of $100 from the society to assist female offenders discharged from the Eastern State Penitentiary and the Philadelphia County Prison to readjust to life outside prison.

CONCLUSION

The Philadelphia Society for Alleviating the Miseries of Public Prisons has undergone numerous changes since its early beginnings in the 18th century. In 1844, for example, the society found it necessary to devise a more systematic method to disseminate to a wider audience the numerous letters, pamphlets, and other educational materials regarding its philosophies. The *Journal of Prison Discipline and Philanthropy* was first published as a quarterly in 1845 and in 1861 began appearing annually. The first editor was Dr. Frederick Adolphus Packard, a lawyer who joined the society in 1831. The first issues devoted surprisingly little attention to the history of the society or to the establishment of local penal institutions, focusing instead on prisons in England and penal reform in London. These days, this journal is known as the *Prison Journal* and is a crucial academic publication in the field of prison studies. In 1887, at the

celebration of its centennial, the society changed its name to the Pennsylvania Prison Society, which continues to work today for the improvement of prisons and the humane treatment of prisoners.

PHYSICIAN ASSISTANTS

A physician assistant (PA) is a person who is qualified to render medical services under the direction and supervision of a licensed physician. PAs do not seek independent practice, direct reimbursement from third-party payers, or federal preemption from state practice acts. Rather, PAs support a team approach to health care and seek an integrated practice arrangement with a supervising physician who provides direction and oversight to the medical care that is rendered.

The position of physician assistant was created in the 1960s to improve primary care access in rural areas. The role quickly spread to all areas of health care, with individuals now working in tertiary, secondary, and primary centers in urban and rural locales. A PA's scope of practice will vary according to the state practice act and the supervising physician's practice. For example, depending upon the state practice act, PAs may have prescribing authority. Those working in correctional institutions typically manage trauma, perform minor surgery, conduct health assessments and sick call, and manage infirmary care patients.

EDUCATION

To become a PA, a person must graduate from an accredited PA educational program. To be accepted into a program, an applicant must undergo a rigorous application process and meet academic, experiential, and personal criteria. Applicants need a strong science background to meet prerequisites in chemistry, physics, anatomy, and physiology. There are 123 PA educational programs, whose training ranges from 24 to 48 months and which offer master's, bachelor's, or associate's degrees. An increasing number of physician assistants hold master's degrees. In 1998, only 27% of PA programs awarded master's degrees; however, in 2000 the profession adopted the position that training programs should prepare PA students at the graduate level of education. As a result, in 2003, 54% of PA programs offered master's degrees.

PA program curricula typically average 1,153 hours of formal training, which is evenly divided between didactic and clinical phases. In the didactic phase, students are trained in basic medical, behavioral, and social sciences. Typical core courses in the first year include anatomy, physiology, pathology, pharmacology, ethics, and cultural competency. All PA programs have a clinical training component to their curriculum, where PA students undergo training in family practice, internal medicine, surgery, cardiology, orthopedics, and gynecology. Some PA programs have clinical rotations in correctional institutions. To complete a training program successfully, PA students must demonstrate mastery of core competencies in a variety of fields, including human anatomy and physiology. They must also be adept at interviewing, patient communication, and general physical examination skills.

Like the physicians they assist, PAs are taught a systemic, focused approach to patients, concerning the medical history and physical examination for cardiology, dermatology, infectious diseases, ophthalmology, otorhinolaryngology, pulmonology. nephrology, hematology, oncology, gastroenterology, urology, rheumatology, orthopedics, emergency medicine, endocrinology, geriatrics, neurology, obstetrics and gynecology, pediatrics, and surgery. They

are also expected to master universal precautions, venipuncture, ophthalmology examination, slit lamp function, auscultation, basic electrocardiogram (EKG) interpretation, basic life support, nasogastric tube insertion, urinary catheterization, prostate and rectal examinations, casting and splinting skills, macro and micro urinalysis, manual complete blood count, advanced cardiac life support, basic suturing skills, pelvic and Pap smear skills, and mental status and neurological examination.

In order to practice, physician assistants must understand health policy and health care ethics, nutrition assessment, and dietary history. They also need to know basic principles of pharmacokinetics, pharmacodynamics, and pharmacotherapeutics, comprehending the mechanisms of actions, toxicities, and interactions of specific drugs and drug classes. They are expected to possess skills, knowledge, and sensitivity in order to identify a variety of psychological, emotional, and social concerns that are presented by patients in health care settings. Finally, they must demonstrate familiarity with diverse communities, to understand social, environmental, and cultural factors that impact a patient's health, as well as possess critical thinking skills for clinical practice, including research design and methodology, epidemiology, and principles of evidence-based medicine.

CERTIFICATION

The majority of state medical examining boards require the PA to pass a national certifying examination through the National Commission on Certification of Physician Assistants (NCCPA). Individuals who achieve and maintain national certification may use the designation "PA-C." To maintain national certification, a PA-C must acquire 100 hours of continuing medical education every two years, and successfully pass a recertification process every six years. State regulatory boards will license, register, or certify a PA to practice medicine and surgery under the supervision of a licensed physician. This license, certification, or registration must be renewed on a specified cycle (e.g., annually, biannually, or triannually). In order to provide health care in state or local jails or prisons, a PA graduate must obtain approval from a state licensing board. Those working in the Federal Bureau of Prisons system, however, do not need this certification.

CORRECTIONS

The PA profession has no specialty certification or recognition of correctional medicine per se. However, many PAs obtain national certification through the Certified Correctional Health Professional Board of Trustees and use the "CCHP" designation. The CCHP certification recognizes a practitioner's knowledge of standards of care and the specialized legal and ethical principles and nuances of rendering health services to incarcerated populations.

In 2003, the American Academy of Physician Assistants estimated that there are nearly 2,000 PAs who are directly employed by a correctional institution. However, this figure does not reflect the number of PAs who are employed by solo, group, university, or hospital practices that have contracts with local jails or prisons. As a result, we do not know how many of the 55,000 practicing PAs render health care to incarcerated adults and youth.

CONCLUSION

The number of physician assistants has grown steadily since this profession was first established. This growth is due in part to the professionalism that PAs demonstrate, as well as to their cost effectiveness. Studies have demonstrated that PAs in competitive markets can provide a high level of service with minimal cost. In 2002, PA salaries averaged $63,490.

The future continues to look bright for the PA profession. The Employment and Training Administration of the U.S. Department of Labor in its 2005 fiscal year budget briefing reported exceptional need for physician assistants between 2000 and 2010, with the demand for qualified PAs at 57% employment growth. Opportunities for PAs in correctional medicine will remain high as well, since the need to provide cost-efficient, quality health services will rise with an ever-increasing incarcerated population.

PLANTATION PRISONS

The plantation model of imprisonment is an overall structure and philosophy of punishment that grew out of racist assumptions about the abilities of the mostly black convicts in the South who, initially, were former slaves. Traditional features of slave plantations combine to form the ideal type of the plantation model of imprisonment. Elements of this model are as follows: (1) agricultural work, (2) isolation, (3) plantation mentality, (4) mostly black prisoners, (5) worthlessness of convicts, (6) neglect of rehabilitation, and (7) emphasis on economy (Foster, 1995, p. 4). As Mark Carleton (1971) observes, "The survival of agricultural operations within the penal system . . . suggests that the terms 'convict,' 'slave,' 'Negro,' and 'farm work' have remained unconsciously interchangeable" (p. 7).

HISTORY AND DEVELOPMENT

Southern imprisonment practices did not follow the same pattern as those in the North. Antebellum Southern states did not embrace the penitentiary idea that imprisonment could change or reform the convict as enthusiastically as did their Northern counterparts. With few exceptions, the small number of Southern prewar penitentiaries were reserved for white men; slaves or women were rarely found in these institutions. Slavery controlled the South's lower classes.

Most Southern penitentiaries were damaged during the Civil War and, in any case, were not equipped to house the swelling numbers of prisoners, most of whom were freed slaves. Instead, Southern states soon leased out their prisoners to entrepreneurs and businesses. Some states required the lessee to pay a certain per capita amount to the state. Others gave away complete control of the convicts for nothing; others even paid the lessees to take the prisoners off their hands. Contrary to Northern leasing practices that limited leasing operations to the penitentiaries' sites, Southern states contracted out both male and female convicts to build railroads, levees, and roads and to work in mines and on former plantations. Free from state supervision, some lessees literally worked the prisoners to death. Unlike the previous system of slavery, they did not own the convicts and, consequently, often did not care about their welfare. When one died, they got another.

EMPHASIS ON ECONOMY

Many Southern entrepreneurs who leased convicts became very wealthy from their leasing enterprises. State legislators reasoned that such lease profits rightfully belonged to the state. Simultaneously, leasing ended in the early 1900s as railroad building subsided and road building was designated to local governments. Resuming control of the prisoners, Southern states turned to penal farms as a temporary solution to convict employment problems and "as a supplement which furnished work to certain unproductive classes" (Zimmerman, 1951, p. 466): women, children, the old and infirm. In Arkansas, Louisiana, Mississippi, and Texas, the temporary penal farms developed into penal plantations that became the hub from which the entire system radiated. Consequently, the plantation model of imprisonment emerged in its most pure form in these four states.

STATE PRISON PLANTATIONS

Southern states purchased thousands of acres of property, often from the descendants of slave plantation owners. Louisiana and Mississippi eventually restricted their farm operations to one remote geographical location each. Louisiana's Angola is now 18,000 acres, while Mississippi's Parchman was

20,000 acres at one time. Arkansas established two farms: Tucker for white convicts and Cummins for black women and men. Cummins also housed a death row. By 1960, Tucker encompassed 4,500 acres, while Cummins was 16,600 acres. Texas differed from the other states in that it developed multiple penal farms.

The geographic structure of plantations naturally led to isolation. Parchman, Mississippi, was located in an "inland wilderness" in the late 1800s. Even today, the only civilian access to Angola, Louisiana, is 20 miles down a narrow, curving, two-lane country road. Such remoteness has also kept these institutions out of the public eye except for the occasional news exposé, after which state and federal legislative and civilian commissions would be formed to investigate the institutions. Reports and policy recommendations would be made, most often to little or no avail. No fewer than five investigating committees, beginning in the 1930s, recommended that women be transferred away from Angola. They were not transferred until 1961, and even then remained under the administration of Angola for nearly a decade.

AGRICULTURAL WORK AND BLACK PRISONERS

Initially, work on these plantation prisons was almost exclusively agricultural. A 1968 report by the Southern Regional Council castigated Mississippi for harvesting half of its cotton crop at Parchman by hand with prison labor. Incredibly, nearly 20 years later, in 1985, inmates picked all the cotton by hand, as there were no mechanical pickers at the Mississippi State Penitentiary (State Prison Inmates, 1985, p. 14). Practices are similar even to this day in Louisiana. All prisoners admitted to Angola must serve their first 90 days working in the fields, and many of them spend the rest of their lives there.

Historically, agricultural work was believed to be suited to the South's "ignorant classes" (Perkinson, 2001, p. 73). Mississippi's Governor Vardman, who took charge of developing Parchman in the early 1900s, believed that

> a good prison, like an efficient slave plantation, could serve to socialize young blacks within the limits of their God-given abilities. It would not raise their intelligence or their morality, but it could teach them proper discipline, strong work habits, and respect for white authority. (Oshinsky, 1996, p. 110)

Texas legislators made similar observations about their black and Mexican convicts: "The limited capacity of these races to acquire technical knowledge . . . as well as their general adaptability to farm work, indicate the advisability . . . [of] employing [them] on farms" (Perkinson, 2001, p. 110). Such beliefs about prisoners' limited abilities not only strengthened the plantation prison but also subtly reinforced Southern segregation. Upon release black and Mexican prisoners were able to do only agricultural work. This racist ideology also illustrates why Southern penal philosophy and practices excluded any ideas about changing the individual prisoner; it was presumed that black convicts (and Mexicans in Texas) were capable of doing only agricultural work. The organization and classification of prisoners echoed this view.

PLANTATION STRUCTURE AND MENTALITY

Generally, prisons use some kind of classification system with the purpose of separating prisoners from one another in terms of age, gender, and seriousness of crime. It is believed that separating young prisoners from older prisoners especially will prevent the young ones from being corrupted and becoming more criminal. Although couched in reformative language, early Southern prisons' classification schemes were similar to antebellum slave owners' workforce divisions. In Louisiana, for example, convicts were divided into four classes: first-class men accustomed to manual work were sent to the levees, where the work was most severe. Second-class men with moderate strength and abilities were assigned to the sugar plantations. Third-class men went to the cotton plantations (Angola), and the hospital was home to the fourth-class men. All white men, with few exceptions, and all females were assigned to Angola. Some white men were "sent to the other plantations and the levee camps

for commissary clerks, or *similar mental services*" (Carleton, 1971, pp. 100–101; author's emphasis).

Work on the prison plantation was organized in the same manner as on slave plantations. Both systems used captive labor, the former convicts and the latter slaves. A small staff of rural lower-class whites supervised black gangs "and mixed physical punishment with paternalistic rewards in order to motivate their workers" on both slave and prison plantations (Oshinsky, 1996, p. 139). Convicts were driven from sun up to sun down, or as they said, from "can to cain't." The few paid white civilian guards supervised the convict guards or trustees, who were the equivalent of slave drivers.

Plantation prisons were both literally and figuratively slave plantations, even in convicts' perceptions of themselves. Texas convicts resented the fact that they were being treated as slaves and blamed a 1911 revolt on "a slave driver" (Perkinson, 2001, p. 331).

GENDER

Fieldwork was not restricted to men only. Although women's main jobs were gender specific, such as making all prisoners' clothing and working in the canneries, Louisiana's convict women hoed the sugar cane stumps in 1938 and worked in the sugar cane refineries in the 1950s. Louisiana and Mississippi did not hesitate to use their women convicts in the fields also, especially when the harvest demanded more laborers. Interestingly, Mississippi even used both white and black women as trustees armed with rifles.

TREATMENT OF PRISONERS

By the 1900s, corporal punishment for prisoners had been abandoned—in law, if not in practice—by most states outside the South. However, it was still commonplace in Southern prisons, since it was believed that only physical punishment could adequately discipline blacks. Leather straps known as "Black Annie" in Mississippi and "Old Caesar" in Texas were used for whippings.

In 1933 alone, 1,547 floggings were administered, with a total of 23,889 blows in Louisiana. Prisoners could receive as many as 50 or 60 lashes at a time. White sergeants in Mississippi delegated the chore to the black trustees in the black camps. Whippings were administered on bare flesh, and were not limited to men. Louisiana convict women working in the cannery were lashed on their bare chests in front of the men. A 1960s exposé also revealed that lashings still were commonplace on the Arkansas plantation prisons after corporal punishment had been outlawed in every state (Murton & Hyams, 1969).

CONCLUSION

The Southern plantation model of imprisonment was based on the ideological and racist assumptions that blacks and Mexicans were inferior to white people. These ideas dominated Southern penal practices well into the late 1970s and early 1980s, until federal judges finally intervened in prison business. In fact, plantation prisons inspired some of the most hotly contested federal prison lawsuits in the 1970s and 1980s. *Holt v. Sarver* (1970) declared the entire Arkansas prison system to be in violation of the Eighth Amendment ban against cruel and unusual punishment and set the stage for federal takeovers in Louisiana, Mississippi, Texas, and elsewhere. Federal interventions were necessary; as Judge West observed about Angola in 1974, the conditions were so bad that they would "shock a civilized society."

Arkansas, Louisiana, Mississippi, and Texas have come a long way in the past 25 years; the worst characteristics of the plantation model have disappeared. However, the long line (all the field lines) returning to the main prison at the end of the day illustrates the "aura if not the reality of a plantation run with docile slaves" (Johnson, 2002, p. 46).

Legal Case

Holt v. Sarver 30g F. Supp 362 (ED Ark. 1970)

PLATT, ANTHONY

Anthony Platt is a radical sociologist and criminologist who has written on a variety of topics, including riots, the history of the juvenile justice system, policing, and race. In his work he critically analyzes issues of social control, social disorder, and social theory. Platt is currently a professor of social work at California State University, Sacramento, where he has worked since 1977.

THE CHILD SAVERS

Within criminology, Platt's most well-known text is *The Child Savers: The Invention of Delinquency* (1977). In it, Platt analyzes the historical development of the child welfare and juvenile justice system in the United States. His study marked a decisive break with the liberal ideology that had previously depicted the development of the juvenile justice system as a benevolent and altruistic result of the enlightened middle classes. Instead, similar to other studies in the related fields of mental health (Rothman, 1971) and the prison (Ignatieff, 1978; Foucault, 1977), Platt portrays the child-saving movement as paternalistic, interventionist, and repressive. Thus he writes that:

> The child-saving movement was not a humanistic enterprise on the behalf of the working class against the established order. On the contrary, its impetus came primarily from the middle and upper classes who were instrumental in devising new forms of social control to protect their power and privilege. (Platt, 1977, xx)

The so-called child savers were 19th-century reformers who were concerned about the rights and welfare of the child. Most were white, middle-class, financially independent women. In many ways they embodied key liberal ideals of the Progressive era. Until the deconstructive and critical work of Platt, their actions were generally applauded, since they were instrumental in the ending of child labor and in the instigation of compulsory education. Many of these women operated specifically in the emerging urban ghettos and were inspired by a mixture of social health and welfarism. However, citing their roots and financial support from within the most powerful and wealthy sectors of society, Platt is clearly skeptical of the motivation for these women's philanthropic sentiments. Rather, he proposes that:

> the child-saving movement tried to do for the criminal justice system what industrialists and corporate leaders were trying to do for the economy—that is, achieve order, stability, and control, while preserving the existing class system and distribution of wealth. (Platt, 1969, p. xxii)

In fact, he even goes so far as to blame them for the development of ideas of delinquency by saying that:

> the origins of "delinquency" are to be found in the programs and ideas of [nineteenth century] social reformers who recognized the existence and carriers

> of delinquent norms. [The child savers] brought attention to—and in so doing, *invented*—new categories of youthful misbehaviour which had hitherto been unappreciated. (Platt, 1969, pp. 3–4; emphasis added)

In particular, according to Platt, the juvenile court system created by the reformers defined many behavioral characteristics of working-class and immigrant youth as criminal. In turn, this criminalization of behaviors forever connected delinquency with issues of race, ethnicity, and class. As a result, certain young people were more likely to be policed than others, and were also more likely to be placed in institutions.

CONCLUSION

Anthony Platt wrote about a number of topics, including the Berkeley student riots and affirmative action. In 1991, he published a biography of the largely forgotten early black sociologist E. Frazier Franklin. In terms of criminology, however, Platt is best known for his book *The Child Savers,* in which he documents how the treatment of young offenders began to change at the end of the 19th century when ideas of delinquency intersected with concepts of childhood.

By the turn of the century, Platt shows, children were treated differently in an institutional, educational, and psychological sense. They were also dealt different punishments than adults. Though in many ways an improvement on earlier means of dealing with young offenders, the new juvenile justice system had its own problems. In particular, it institutionalized negative assumptions about race and class that rendered certain youths and certain behaviors particularly vulnerable to surveillance and social control.

POLITICAL PRISONERS

While many definitions have been advanced for the term "political prisoners," there is no internationally recognized designation of who qualifies as a political prisoner and who does not. For some people, all crime and subsequently all prisoners are political, because the reaction of the state to crime is largely in the interests, values, and beliefs of the law-making power and ruling class. For others, however, political offenses are more "absolute" and tend to fall into two main categories: (1) crimes of domination or oppression by the state, and (2) crimes of rebellion, insurgency, social unrest, or civil disobedience against the state by individuals or groups.

It is important to note that the term "political prisoner," whether referring to politically motivated offenders or prisoners of conscience, remains largely unrecognized within the context of the law. Legally, politically motivated offenders in prison and prisoners of conscience are not differentiated from "ordinary" criminal offenders. In the case of Northern Ireland, for example, successive British governments have sought to present the disruptive actions of inmates in the Maze Prison as common crimes. Accordingly, the Northern Ireland Prisons Service asserts that there are "no political prisoners in Northern Ireland. All those sentenced to prison terms have been convicted of criminal offences" (BBC Special Report, 1998). Similarly, prisoners of conscience, who may be imprisoned for challenging (through nonviolent means) oppressive state

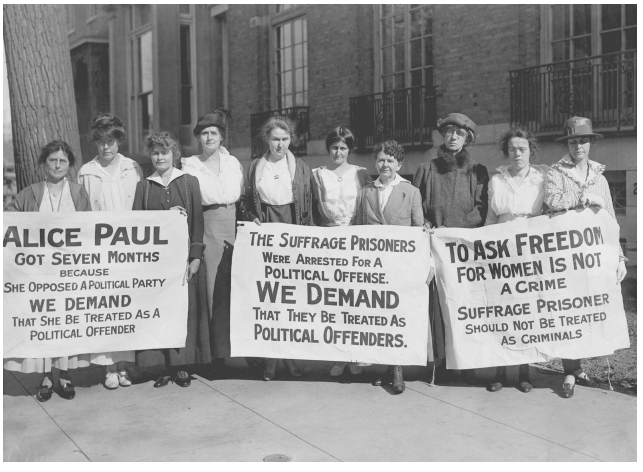

Photo 2 *Women seeking the vote, known as "suffragettes," were frequently imprisoned in the U.K. and the U.S. in the early 20th century. These women believed themselves to be political prisoners.*

policies, are not given special legal status and are considered "ordinary" criminal offenders.

PRISONERS OF CONSCIENCE

State crimes of domination and oppression occur when a sovereign state and its institutions commit crimes to protect and promote their interests. Examples of crimes by the state would include genocide, torture, domestic spying (illegal surveillance), human rights violations such as no elections or restrictions on freedom of speech, discrimination, false imprisonment or execution, fraud, and accepting lobbyists' money for special concession. Those who are perceived as a threat to the state's established order, and are subsequently unjustly targeted, victimized, and ultimately imprisoned, are referred to as "prisoners of conscience."' Amnesty International provides the following definition of *prisoners of conscience:*

> Those persons detained or otherwise physically restricted by reason of their political, religious or other conscientiously held beliefs, or by reason of their ethnic origin, sex, color, language, national or social origin, economic status, or birth, provided that they have not used or advocated violence. This definition includes prisoners who are believed to have been falsely accused of criminal offences which are politically related, and for which there is no credible evidence to link them to the political beliefs and actions within which they have been imputed. (Amnesty International, 1997, p. 1)

Amnesty International maintains that prisoners of conscience are currently being held in 94 countries around the world, including Afghanistan, Cameroon, China, Greece, Indonesia, Peru, and Tunisia. Many of these individuals have been imprisoned for political activities including spreading counter-revolutionary propaganda, shouting reactionary slogans, and speaking out about the right to self-determination. Incarcerating those who engage in such political activities defies many of the articles set out in the United Nations' Declaration of Human Rights, the International Covenant on Civil and Political Rights, and the International Covenant on Economic, Social and Cultural Rights.

POLITICALLY MOTIVATED OFFENDERS

Crimes of rebellion, insurgency, social unrest, or civil disobedience occur when an individual or group deliberately targets the ruling power's value system in a criminal or violent act motivated for ideological or political rather than personal reasons. Examples of politically motivated crime include assassination, terrorism against innocents (kidnapping, hijacking, bombing of public places), breaking of "unjust laws," treason, vandalism and destruction of symbolic property, and disruption of institutional functions. Those who commit such crimes are often referred to as "politically motivated offenders." Amnesty International has put forth the following definition of this type of prisoner: "Any prisoner whose case has a significant political element: whether the motivation of the prisoner's acts, [or] the acts themselves" (BBC Special Report, 1998). Given that authorities of most nations have refused officially to recognize a difference between criminal and politically motivated offenders, it is difficult to accurately determine the number of politically motivated prisoners within correctional facilities, both nationally and internationally.

PRISONERS OF CONSCIENCE, POLITICALLY MOTIVATED OFFENDERS, AND "ORDINARY" CRIMINALS

Many argue that there are important differences among prisoners of conscience, politically motivated offenders, and "ordinary" criminals—particularly with regard to the notion of altruism. Prisoners of conscience, who have defied repressive state policies, and politically motivated offenders, who have committed crimes, are presumed to have acted not out of personal gain or personal motives, but for the benefit of a larger group. Moreover, politically motivated offenders may believe that their violent or criminal acts are justified, as these may be the only means to attain their desired political goals. Some researchers have found other important differences, namely that "ordinary" criminals tend to come from lower social groups with poor educational attainment and are more likely to have criminal histories and personality defects. In contrast, politically motivated offenders and prisoners of conscience may come from middle-class origins, are said to be less likely to have psychiatric problems, and have average intelligence and educational backgrounds. Politically motivated offenders may also display little remorse for their crimes, hold no criminal self-concept, and commit their crimes out of a set of convictions.

DIFFERENTIAL TREATMENT

It has been argued that since politically motivated offenders and prisoners of conscience may be psychologically different from "ordinary" inmates, if one wishes to reform them one must treat them in a different manner. Some authorities in the United Kingdom have acknowledged that those guilty of crimes of a political nature should receive differential treatment from "ordinary" criminal offenders. Several attempts have been made in the United Kingdom to obtain special recognition by appealing to the European Commission on Human Rights for the right of political offenders to receive special treatment. Nonetheless, as noted earlier, differences between political and nonpolitical offenders are not recognized by most Western countries, and governments generally maintain that all offenders are treated in the same way regardless of the motive for their offenses.

Despite the widespread assertion that all offenders and prisoners are treated similarly, politically motivated offenders and prisoners of conscience appear to receive differential treatment from nonpolitical offenders. In countries such as Japan, politically motivated offenders have received relatively light punishments for their offenses as compared to their nonpolitical counterparts. Historically, in Western Europe, political offenders were perceived as morally superior because of their altruistic rather than personal objectives. Accordingly, a domestic political prisoner could expect far better treatment, based on the principle that while his or her actions might be punishable, the motives could be respected.

In contrast, in some countries, such as the United States, prisoners of conscience and politically motivated offenders may in fact receive harsher sanctions than nonpolitical offenders. For example, Susan Rosenberg, a white anti-imperialist, was sentenced to 58 years in prison for conspiracy, possession of a quantity of weapons, and false identification. Her sentence is 16 times longer than the average sentence meted out in federal court to weapons-possession offenders, and twice the average for first-degree murders. Other U.S. examples include Alejandrina Torres, Silvia Baraldini, and Marilyn Buck, whose sentences have ranged from 30 to 80 years in prison for crimes ranging from seditious conspiracy to racketeering to a number of armored car expropriations. Leonard Peltier and Mumia Abu-Jamal, who are believed by many to have been wrongly convicted of criminal offenses that are politically related, are currently both serving life sentences.

POLITICAL PRISONERS AND POLITICAL PRISONS IN THE UNITED STATES

While U.S. prisoners such as Peltier, Abu-Jamal, Buck, and others fall within Amnesty International's definition of prisoners of conscience and/or politically motivated offenders, the government of the

United States has consistently maintained that there are no political prisoners incarcerated in the country's penal facilities. However, authors, researchers, and prisoners have consistently disputed this claim. They argue that not only do prisoners of conscience and politically motivated offenders exist in the United States, but that historically the U.S. government has made concerted efforts to neutralize political dissidents using domestic counterintelligence programs and targeting radical political organizations such as the Black Liberation Movement, the American Indian Movement, and others.

THE LEXINGTON HIGH SECURITY UNIT

Political prisons within the United States also appear to be a reality. Although officially recognized by U.S. authorities as a facility for "high security" women, the High Security Unit (HSU) Prison for Women in Lexington, Kentucky, which opened in October 1986, was frequently referred to as a U.S. political prison. The 16-bed control unit, which never housed more than six women, was said to be modeled on Stammheim, the prison isolation model used to neutralize political prisoners and prisoners of war in West Germany. The Lexington Women's High Security Unit became the focus of national and international concern over human rights abuses by the U.S. government.

The majority of the women housed in the HSU had long-standing political histories and had been designated to the unit because of their political perspectives, affiliations, and politically disruptive activities. There was an implicit message made by authorities that prisoners could only be released from the HSU unit if they renounced their political affiliation and beliefs.

The defining feature of the Lexington Women's High Security Unit was isolation with extensive surveillance and sensory deprivation. Prisoners in the HSU lived in constant artificial light and 24-hour camera and visual surveillance. Correspondence and telephone calls were severely censored for many months, and prison guards prepared logs documenting the names and addresses of every person who corresponded with the HSU prisoners. Prisoners were denied private spheres, intellectual stimulation, contact with family and friends, undisturbed sleep, health care, education and recreation plans, and access to spirituality. Dr. Richard Korn, a psychologist who issued a report on the HSU at Lexington, referred to it as a "living tomb" that was designed to reduce prisoners to a state of submission essential for their ideological conversion.

In 1988, Amnesty International defined the HSU at Lexington as "an experimental control unit" and recommended its immediate closure. In June 1988, a federal judge ruled that the Bureau of Prisons and Justice Department had unlawfully designated prisoners to Lexington based on past political associations and personal beliefs. The HSU was closed in August 1988, and the women were moved to a larger women's prison in Marianna, Florida.

CONCLUSION

Although the existence of political prisoners is frequently denied, the imprisonment of prisoners of conscience and politically motivated offenders is apparent in numerous countries around the world. In response, humanitarian organizations continue to advocate for the unconditional release of prisoners of conscience and to ensure a prompt and just trial for politically motivated offenders.

POLITICIANS

The relationship between politicians and prisons may be examined in three different ways. First, often driven by ideological considerations rather than by empirical evidence, politicians make policy that influences prison management. Second, in some societies, politicians have used the prison as an instrument of repression for certain opposing groups and individuals. Third, politicians who violate the law are sometimes sentenced to serve time in correctional institutions.

POLICY

In shaping the penal system, correctional management is driven by the prevailing politics and ideology in a political jurisdiction. The heads of correctional agencies are usually political appointees who share the ideological views of those who hired them. Individual wardens and other administrators are subsequently made system directors, thus transmitting their ideological beliefs into practice. In order to secure budgetary resources, institution and agency heads must be attentive and responsive to the current correctional policy climate in the legislature and the executive mansion.

Likewise, crime control policy often appears to be motivated by ideology rather than by empirical evidence. Thus, since the 1980s, there has been a general move toward "Get tough" criminal justice policies that seem to be driven by burgeoning conservative views rather than by any evidence that they are effective. Laws such as Three Strikes and Truth in Sentencing have served to extend the amount of time some offenders spend in prison, stressing the resources of already overcrowded facilities, despite not affecting the crime rate overall.

It becomes clear that the media plays a critical role in the politics of prisons. For instance, the media help define which behaviors deserve punishment. Thus, hysterical and exaggerated news accounts of the dangers of crack cocaine led to increasingly harsh sentences for those convicted of crack-related crimes. In addition, politicians and the public often respond to media portrayals (accurate or not) of prison conditions. Riots, escapes, and stories of inmates working the system all frame the general policy discourse on corrections, and contribute in part to the "Get tough" movement.

There are some exceptions to the "Get tough" trend. For instance, as *community* has become a popular buzzword in criminal justice policy, certain community-oriented, rehabilitative policies have emerged. Drug courts are one contemporary example, in which the court, probation officers, and treatment providers collaborate to focus holistically on the needs of an offender. Likewise, fiscal realities have promoted policy change in some jurisdictions. In California, voters approved a ballot initiative that mandates probation and community-based treatment for first and second nonviolent drug offenses. The policy is expected to yield a substantial cost savings to the state. As the examples illustrate, politics is a complex process, and factors that are salient at one time (i.e., ideology) may give way to factors that are more persuasive (i.e., fiscal stress) at another time.

POLITICAL IMPRISONMENT

Prisons have also frequently been used as an instrument of politicians who wish to confine those who publicly dissent from or challenge an established authority. Examples of political imprisonment can include acts such the 1977 imprisonment of Argentine journalist Jacobo Timmerman, whose newspaper *La Opinión* published articles critical of the Argentine government. Other examples include the detention of large numbers of individuals, including the imprisonment of dissidents by Joseph Stalin in the Soviet Union, the horrors of the Nazi Holocaust, and, more recently, the incarceration of opposition under Saddam Hussein's regime in Iraq. Political imprisonment is widely perceived as a human rights violation and is decried by human rights advocacy organizations such as Amnesty International.

There is a variant of political imprisonment that might be called "the politics of criminalization," in which political perceptions about who—or what—is undesirable, immoral, and so on shape the development of criminal law. In turn, groups or actions labeled as deviant are criminalized, thereby creating new crimes and a new influx of prisoners with which prisons must cope. Randall Shelden describes the use of criminal justice agencies to control what he calls the "dangerous classes." An example may be found in the Red Scare of 1919–1920, in which socialists were targeted. In 1920, Eugene V. Debs was a presidential candidate for the Socialist Party while imprisoned as part of the Red Scare. A more recent example, discussed previously, is the manner in which crack cocaine was criminalized. The result was that (often minority) crack cocaine users received longer sentences than (often white) powder cocaine users. While not an example of overt racism, the effect of these laws is racial disparity in sentencing.

POLITICIANS IMPRISONED

The United States has seen a number of politicians behind bars. Several recent high-profile examples are worth mentioning. Richard Nixon's Attorney General John Mitchell was sentenced to prison for his role in the 1970s Watergate scandal. Former Washington, D.C., Mayor Marion Barry was sentenced to prison after he was videotaped using crack cocaine. In 1990, Barry was sentenced to six months in prison, and, in 1994 he was reelected as mayor of Washington, D.C. Dan Rostenkowski, Congressman from Illinois and former Chair of the House Ways and Means Committee, served 17 months for mail fraud. However, in 2000, he received a pardon from President Bill Clinton. In 2002, Ohio Congressman James Traficant was sentenced to eight years in prison for bribery, obstruction of justice, and racketeering; he was subsequently expelled from the House of Representatives. Such examples reflect the American philosophy that all people, regardless of political rank, can be perceived as equal under the law.

The imprisonment of politicians may have an effect on prison reform, as well. Some politicians who have been imprisoned subsequently become advocates for prison reform. Former Special Counsel Charles Colson served seven months in prison for obstruction of justice in a Watergate-related case. Following his incarceration, he founded Prison Fellowship Ministries, an organization that brings religious programming to many prisons, both in the United States and abroad. Former New York Court of Appeals Chief Judge Sol Wachtler was sentenced to 15 months in prison for charges related to the harassment of a former mistress. Wachtler subsequently wrote a book about his time in prison and has also called for the reform of prisons. In this way, one ironic effect of imprisoning politicians may be their subsequent calls for reform and the development of programs that stem from their experiences behind bars.

CONCLUSION

Currently in the United States, politicians are most commonly involved in the penal system through the policy they make. As our elected representatives, they should be directed in their penal policy by the views of the people. Thus, though it often seems as

though there is little that can be done about the current situation in U.S. prisons and jails, one solution remains: Voters can vote for candidates with alternative views about punishment.

PRERELEASE PROGRAMS

Prerelease programs help men and women prepare for life after prison. Former prisoners face many challenges upon reentry into community life, such as finding employment, reestablishing family relationships, resisting drug use and criminal behavior, and addressing mental and physical health problems. To help them deal with these issues, prerelease preparation generally includes vocational training, educational classes, mental health and drug treatment, and family skills training.

NEED

The vast majority of inmates (97%) will be released back into society, but few have the skills to survive legally. Prerelease programming has not kept pace with the growth in incarceration and with the corresponding increase in the number of inmates released (nearly 600,000) each year. A significant number of those released are subsequently reincarcerated because they are ill prepared for reintegration. Among nearly 300,000 prisoners released in 15 states in 1994, 67.5% were rearrested within three years for a new offense; 51.8% were sent back to prison for a new crime or for a technical violation of their release, like failing a drug test or missing an appointment with their parole officer.

Many inmates released from prison have received little or no drug treatment, have poor family support systems, and remain unskilled and uneducated. Nearly 80% of inmates have histories of substance abuse, and 16% suffer from mental illness, but only one-third of them receive substance abuse or mental health treatment in prison. Between 1991 and 1997, there was a decrease in participation in vocational training from 32% to 27%, and a decrease in participation in educational programs from 42% to 34%. While there is some evidence that prerelease programs are beneficial in preparing inmates for their release, few inmates participate in these programs. In both 1991 and 1997, only 10% of released inmates had participated in prerelease programs.

CURRENT PROGRAMS

All states have some type of prerelease program, but their content and strategies differ greatly. In most states, participation in prerelease is voluntary and available only to a small number of women and men. The programs are typically open only to those who can get transferred into minimum-security facilities or halfway houses. Some states have prerelease programs within their main facilities, but

most inmates are released without preparation. For those who do participate in prerelease programs, their preparation usually includes education, job training, substance abuse counseling, and information on resources available in the community. Participation in prerelease programs can begin as early as two years prior to release, but most begin just a few weeks in advance. All inmates receive some financial support, which can range from $25 to $200, plus clothing and bus fare to a location within the state.

Washington State has one of the most comprehensive prerelease programs, requiring some inmates to pass through a prerelease center. Between 30% and 40% spend time in a prerelease center. However, since these facilities are mostly minimum security, serious offenders are usually excluded. In contrast to Washington's efforts, Nevada has no formal prerelease program. Inmates receive only $25 and transportation to the city in which they will reside.

In contrast to the variations among the states, the federal system has a standardized prerelease program. Release preparation begins 30 months prior to release, and all eligible inmates participate in the program. Participants attend classes related to six broad topics of a core curriculum, which include health and nutrition, employment, personal finance and consumer skills, information and community resources, release procedures, and personal growth. Course development takes into account different inmate needs. For example, an individual who has been successful in business may not need many courses in the employment category. When possible, prison programs such as work, vocational training, parenting, and health promotion are incorporated into the release preparation program. Inmates in release preparation must complete all recommended courses to complete the program. They are encouraged to keep course completion certificates in an employment folder, which helps them find employment after release.

PAROLE

Parole is one of the greatest challenges former prisoners face. After release, 80% of ex-offenders are put on parole or under some type of criminal justice supervision. Prerelease programs may address the challenges of living under the conditions of their release. In Montgomery County, Maryland, for example, probation and parole officers meet regularly with the inmates they will supervise after release to help them prepare for their reentry and to help coordinate release plans. The officers can easily participate in release planning because the center is located in the community where they work.

Similarly, in New York City, La Bodega de la Familia works in partnership with parole to minimize the problems associated with adapting to life on supervised release. Prior to release, La Bodega contacts individuals who will be paroled and offers them case management services. Inmates become familiar with the expectations of parole before release, and if they choose, they can receive help adjusting to these expectations.

DRUG TREATMENT

Substance abuse is another challenge in prisoner reentry. While many inmates have histories of drug abuse, most never receive formal treatment. Even for those who do participate in drug treatment programs while incarcerated, treatment rarely continues after release. When faced with the challenges of reentry, those who do not receive treatment or counseling often relapse.

In recognition of this problem, the Montgomery County Pre-Release Center in Maryland holds a relapse prevention course that teaches inmates how to remain sober in the outside world. The course also shows people how to find outpatient treatment programs. For those who never received treatment while incarcerated, the center runs a separate course on the principles of addiction and recovery.

MENTAL HEALTH SERVICES

Mental disorders are far more prevalent among prisoners than in the general population. Access to mental health care in prisons is limited, and there is little postrelease care. Those who do receive mental health services while incarcerated generally need

follow-up postrelease care. Without access to community care, they may be unable to function normally. To ensure a continuity of care, corrections officials in Hampden County, Massachusetts, collaborate with a network of community health centers. A discharge facilitator ensures that, when released, inmates have appointments at these clinics.

In King County, Washington, the county jail sends the Department of Community and Human Services a list of new jail admissions each day. When a mental health care recipient is detained, the department notifies the person's health care provider. Mental health providers are required to track these cases and to continue treating people in custody after their release.

JOB TRAINING

Finding a job is a significant factor in the transition from prison to community life. Most inmates leave prison, however, with few employment prospects. Many offenders want to find legal and stable employment, but several factors stand in their way. First, incarceration is stigmatizing, making employers reluctant to hire ex-offenders. Second, returning prisoners are prohibited from working in certain occupations. Some states ban ex-offenders from public employment. Most states also have restrictions on hiring felons in particular professions, including real estate, medicine, nursing, physical therapy, education, and law. Another factor hindering inmates' ability to find employment is that time away from the job market prevents them from building important job skills.

Helping inmates acquire job skills and experience is essential to prepare them for employment. Few prisons are equipped to meet this need, but some states are changing this situation. Project RIO (Re-Integration of Offenders) in Texas provides job preparation services to inmates while incarcerated. Inmates receive vocational training and work experience matching their capabilities and interests. Project RIO trains inmates for jobs that pay good salaries outside of prison. The program also offers a job search workshop, assistance with job placement, and post-placement follow-up.

To overcome the stigma attached to incarceration, some prisons try to ease the fears of employers over hiring ex-inmates. Some accomplish this by inviting employers to meet with soon-to-be-released inmates. The federal system encourages institutions to conduct at least one mock job fair annually. "Mock job fairs" invite local employers to conduct mock job interviews with inmates who have approaching release dates. In some instances, employers offer inmates real job opportunities upon release.

Similarly, in Ohio, each prison holds a job fair at least once a year for inmates who will be released within a month. Employers may be more likely to offer jobs to inmates who can start soon. While some fairs provide opportunities for inmates to apply for jobs, many are meant to introduce inmates to companies that are willing to hire ex-offenders.

FAMILY STABILIZATION

Family stability is another challenge that prisoners face as their release approaches. The growth in incarceration over the past couple of decades has serious implications for families of prisoners. In 1999, more than half of all state inmates were parents of children. Women comprise only about 7% of the nation's prison population, but their incarceration rates are increasing faster than are those of men, which contributes to the high number of inmates with children. As the proportion of female inmates grows, the number of children with incarcerated parents will increase.

When mothers are incarcerated, their children are usually cared for by relatives or placed in foster care. The majority of imprisoned mothers expect to resume caring for their children after release. Mothers released from prison have difficulty finding housing, employment, and child care, which may cause stress for them and their children. Parents who have been incarcerated also have problems reconnecting emotionally with their children and sometimes with reestablishing custody.

Inmates also face difficulty reconnecting with other family members. Most people released from prison reside initially with family. Families often have conflicting emotions about an inmate's

release. They may feel hurt or angry by their relative's incarceration, and released inmates are often unable to respond appropriately to these emotions.

The Montgomery County, Maryland, Pre-Release Center helps inmates prepare for complex family situations before they return home. The center requires every inmate to have a sponsor, which can be any member of the family, who agrees to attend six weekly educational sessions. The center also provides family therapy for inmates and their sponsors.

La Bodega de la Familia also helps inmates connect with their families. Prior to an inmate's release, a case manager accompanies a parole officer in visiting the inmate's family to prepare them for release. Case managers work closely with the family to develop a plan for services and to help set goals for the inmate and the family. They help to facilitate the relationships between families, ex-inmates, and parole officers.

Many prisons now offer family-oriented programs that support family relationships. The National Institute of Corrections administered a survey in 2001 to state and federal departments of corrections (DOCs), and of the 54 DOCs that responded, 42 (78%) reported having a program to help inmates maintain supportive family relationships. The programs vary greatly. Some support family relationships by placing inmates in facilities near their families and assisting with visitation. Other agencies provide support to incarcerated parents through specially designed visitation spaces, parenting classes, and parent–child programs.

PROBLEMS

Prerelease programs are designed to help inmates prepare for reentry, but not all programs are effective for all inmates. Offenders enter prison with diverse backgrounds. They have different levels of education and work experience, different family structures, health conditions, and demographic characteristics. Few programs take these factors into account, which can impact the programs' effectiveness.

Other problems with prerelease programs were touched on earlier. First, most programs are voluntary. Prisoners may choose not to participate if they are unaware of the importance of prerelease planning. Another problem is that high-risk offenders are unable to participate because they cannot be moved to minimum-security facilities, and many are released without preparation for community life. Finally, mental illness and substance abuse often go undetected in prisoners; these inmates never receive the care they need prior to release. Even inmates with known health problems often never receive treatment.

CONCLUSION

There are many ways to help inmates prepare for the challenges of reintegration, but no program will benefit every inmate. Corrections officials have the difficulty of deciding which programs are appropriate for their jurisdictions. Certain elements are essential, however, in designing prerelease programs. First, offender needs must be matched with program services. Inmates with strong educational backgrounds may not need educational classes. Programs must also focus on offender traits that are changeable and that may contribute to crime, such as drug use or weak family ties. Another way to ensure the effectiveness of prerelease programming is to begin prerelease preparation long enough before release. Inmates will not recover from drug addictions or gain marketable job skills in a matter of weeks. Finally, successful prerelease programs must be followed by postrelease services. Ex-inmates must have access to immediate drug treatment and mental health care upon release, as well as help in securing employment and housing.

PRESIDENT'S COMMISSION ON LAW ENFORCEMENT AND ADMINISTRATION OF JUSTICE

During the late 1950s and into the early 1960s, both the crime rate and the number of crimes committed in the United States increased dramatically. Coupled with social protests for civil rights and against the war in Vietnam, there emerged a perception—fed by media and exploited by politicians—that there was a crisis requiring federal intervention. In response, President Lyndon B. Johnson called for the formation of the Commission on Law Enforcement and Administration of Justice (also known as the Crime Commission) in 1965. He charged the members of the commission to determine the causes of crime and to recommend what society could do to reduce it.

After two years investigating virtually every aspect of crime, law enforcement, and the administration of justice in the United States, the commission published their findings in *The Challenge of Crime in a Free Society* (President's Commission on Law Enforcement and Administration of Justice, 1967a). This document provided more than 200 recommendations on how to improve the existing criminal justice system and achieve the dual goal of reducing crime while treating people more decently. Information in it was based on the nine task forces the commission created, which dealt with the police, the courts, corrections, juvenile delinquency and youth crime, organized crime, science and technology, assessment of crime, narcotics and drugs, and drunkenness.

CORRECTIONS

The Crime Commission's Task Force on Corrections made 22 recommendations. Most of these focused on attempts to curb the recidivism rate and represented "practical, incremental steps toward a system capable of balancing incapacitation of dangerous offenders with sensible programs for the over 98% of offenders who return to community life" (Nelson et al., 1997, p. 1).

Rehabilitation, however, was not the Task Force on Corrections' main goal; instead, the focus was on reintegration. Its members believed that crime and delinquency were symptoms of the failure and disorganization of both the individual and the community. "The task of corrections therefore," as stated by the Task Force on Corrections,

> includes building or rebuilding solid ties between offender and community, integrating or reintegrating the offender into community life—restoring family ties, obtaining employment and education, securing in the larger sense a place for the offender in the routine functioning of society. (President's Commission, 1967b, p. 7)

For corrections to meet this task, changes had to be made not just in the individual offender, but in the community and in its institutions as well. The recommendations for implementing these changes fell under three general categories: community-based corrections, correctional institutions, and correctional decision making.

The commission sought to shift penal policy from prisons to community-based corrections. As commission member James Vorenberg (1972) put it:

> If we take a person whose criminal conduct shows he cannot manage his life, lock him up with others like himself, increase his frustrations and anger, and take

> away from him any responsibility for planning his life, he is almost certain to be more dangerous when he gets out than when he went in.

Prisons, the commission reasoned, were only to be for the most violent and dangerous of offenders; the majority of offenders would be better served by probation or parole. Thus, they recommended that more probation and parole officers be added (based on the ratio of 35 offenders per officer), and that these "services should be available in all jurisdictions for felons, juveniles, and those adult misdemeanants who need or can profit from community treatment" (President's Commission, 1967a, p. 166).

The commission also proposed expanding the training of probation and parole officers to allow them to utilize community institutions such as education and employment more effectively and to help offenders better reintegrate into the community. In addition, members advocated a number of community programs, such as halfway houses and intensive community supervision, that would allow more control over offenders than probation or parole while still utilizing community institutions to aid in the rehabilitation and reintegration of offenders.

For those offenders who had to be confined, the commission sought to improve their living conditions. In particular, they advocated increased educational and vocational training in prisons. The commission also recommended that prison industry programs assist in rehabilitation by instilling good work habits and in reintegration by providing employable skills. Other recommended changes in correctional institutions included taking control of local jails away from law enforcement and making them a part of the state correctional system, creating rehabilitation programs in local jails, and creating separate facilities, whenever possible, for persons awaiting trial.

The commission also recommended that every juvenile court jurisdiction create separate detention facilities for juveniles, as well as shelter facilities, apart from the correctional system, for abandoned, neglected, or runaway children. This last recommendation was due to the Crime Commission's finding "that in 93% of the country's juvenile court jurisdictions . . . there is no place for the pretrial detention of juveniles other than a county jail or police lockup" (President's Commission, 1967a, p. 178). The commission believed it was harmful to confine juveniles alongside adults, and even more so when the juveniles were abandoned, neglected, or runaway children—a common practice in communities that had no shelter facilities.

With the shift toward alternative forms of punishment comes the need for more and better information through the use of presentence investigations, clinical diagnosis by psychologists, and reception and classification centers. This information, according to the commission, helps to determine how dangerous an offender is, as well as how to address his or her particular needs and problems in order to reintegrate the offender into society. They recommended that this quest for information continue throughout the offender's stay in the corrections system, so that changes in the offender's needs and problems could be noticed and dealt with accordingly. As a final recommendation, the commission suggested research into the use of computers to aid in the management and storage of offender information.

EFFECT ON CONTEMPORARY CORRECTIONS

Although the Crime Commission laid the groundwork for a change in the correctional mindset, its recommendations were not fully carried out due to three key obstacles. First, the Attica rebellion in 1971 led much of the public to question the possibility of rehabilitation for prisoners. Second, Robert Martinson's (1974) claim that "Nothing works" influenced a generation of prison reformers and policymakers, weakening residual belief in the feasibility of rehabilitation or reintegration. Finally, the Nixon administration shifted government focus from rehabilitation of offenders to victims' rights and crime control.

Of the Task Force on Corrections' 22 recommendations, those pertaining to decision making in corrections have had the greatest effect. Computer projection models, as well as computer tracking of offenders from arrest to sentencing to release, have come to play a major role in corrections. Standardized classification systems for offenders

have also become an integral part of corrections at all levels. In addition, there has been a recent trend in alternatives to prison as punishment; however, these do not follow in the reintegrative mold cast by the Crime Commission. On the contrary, the new usage of probation and parole as the workhorses of corrections has developed out of the overcrowded prisons created by a shift to a more punitive model of corrections.

CONCLUSION

Although the Crime Commission's recommendations were not implemented exactly as planned, they nonetheless have played an important role in our criminal justice system. It must be remembered that the commission did not set out to change society. Instead, it sought to apply the underlying values and assumptions of society to change the "outmoded correctional apparatus of that day" (Nelson et al., 1997, p. 2). With the many problems arising from today's punitive model of corrections, such as overcrowded prisons and high recidivism rates, maybe it is time to look back on the recommendations and ideas of the Crime Commission and rethink our system of corrections.

PRETRIAL DETAINEES

Defendants arrested and charged with a felony criminal offense face one of two pretrial dispositions: they are released (on their own recognizance, conditionally, or on bail or bond) or they are remanded to custody. The pretrial disposition decision usually occurs during the preliminary hearing, generally within 48 hours of arrest. The type and seriousness of the offense and the defendant's employment status, prior record, and ties to the community are all considered relevant in the pretrial release determination. While there is a presumption in favor of release, more than one-third of all state felony defendants are detained because they are either unable to post bail (29%) or are denied bail (7%).

Across all offenses, federal felony defendants are more likely to face pretrial detention than are state felony defendants. Approximately two-thirds of all state felony defendants are released before trial, and the remaining one-third are detained usually because they are unable to post bail (fewer than 10% are actually denied bail). In contrast, nearly three-quarters of all federal felony defendants are detained before trial, and of those nearly half are detained because they are denied bail. In either system, people are more likely to be detained for violent offenses than they are for property offenses, and are as likely to be detained for public order offenses as they are for drug offenses.

Studies of the effect of the defendant's race and gender provide mixed evidence of a race/ethnicity/gender bias in pretrial detention or bail decisions. Nonwhite male defendants are more likely to be detained prior to trial than are white or female defendants. Approximately 60% of the more than 650,000 jail inmates are pretrial detainees, and just

under 60% of those inmates are also minorities. While some studies have found no racial/ethnic bias once other relevant variables (seriousness of the offense, prior record, and so on) are taken into account, others argue there may be an indirect racial effect through economic status.

PREVENTIVE DETENTION

In the past, pretrial release decisions rested almost exclusively on the likelihood that the defendant would appear in court. Over the past few decades, however, the federal government and most states have passed preventive detention statutes that allow a defendant to be remanded to custody to await trial because he or she is deemed dangerous. Defendants classified as dangerous can be held even if it is likely that they will appear if released. At the federal level, preventive detention is authorized by the Bail Reform Act passed in 1984. Though time served while awaiting trial is usually deducted from the eventual sentence for those found guilty, preventive and pretrial detention statutes, such as the Bail Reform Act, contain no provision for financial or other compensation for those detained before trial and later found not guilty.

CONSTITUTIONAL ISSUES

Pretrial detention is one of the more controversial issues in criminal justice because, as some argue, it subverts the presumption of innocence by depriving defendants of their liberty as though they were guilty. Despite the controversial nature of preventive detention, the U.S. Supreme Court, in *U.S. v. Salerno* (1987), upheld the provisions of the Bail Reform Act and ruled it was constitutional to detain persons awaiting trial. In *Salerno,* the court ruled that while the Eighth Amendment prohibits excessive bail, it does not create a constitutional right to bail, and therefore bail can be denied. Moreover, the Court declared preventive detention regulatory rather than punitive in nature and ruled that detention does not violate the due process requirement. Finally, the Court suggested that the government's legitimate interest in community safety might supercede an individual's liberty.

PROBLEMS ENCOUNTERED BY PRETRIAL DETAINEES

There are currently more than 650,000 jail inmates, more than half of whom are pretrial detainees. Most will spend between three months and one year in jail awaiting trial. Detainees awaiting trial often mix with convicted criminals who are either serving out their sentences in the jail or are awaiting transfer to prison. Because jails are short-term detention facilities, the medical, addiction, and psychiatric care that pretrial detainees may need is often unavailable.

Pretrial detention disrupts numerous facets of the detainee's life and may have a significant negative impact on his or her future prospects. The stigmatization that comes with a criminal arrest is compounded by an extended stay in the local county jail. For those who are employed at the time of their arrest, pretrial detention leads to the loss of income indefinitely and often results in the permanent loss of work. The detainee is also not the only one to experience hardship as a result of pretrial detention: his or her family may experience significant disruption, economic hardship, and stigmatization.

Pretrial detainees also face special problems in navigating the criminal justice system. First, poor defendants are far more likely to be detained while awaiting trial. Most pretrial detainees are defendants who cannot afford to post bail or hire a private attorney. Second, by virtue of their custody, pretrial detainees have less access to their attorneys and a compromised ability to assist in their own defense and prepare for trial. Some have offered evidence that pretrial detention increases the probability that the defendant will be found guilty at trial and, perhaps more significantly, be sentenced to imprisonment if convicted.

CONCLUSION

As the jail population continues to grow, so does the number of those detained while awaiting trial. The

percentage of jail inmates who are pretrial detainees has increased steadily (from approximately 50% a decade ago to close to 60% today). Pretrial detention presents significant challenges and disadvantages to pretrial detainees, both personal and trial related. As in other areas of criminal justice, minorities are more likely to experience these disadvantages than are whites.

U.S. v. Salerno, 481 U.S. 739 (1987).

PRISON CULTURE

It has long been recognized that, just as there is a culture among citizens in the free world, a separate culture also exists within prison walls. Beginning with Donald Clemmer's general study of the prison community in 1940, the dynamics of social relationships in the prison have been thoroughly studied and documented. Throughout the second half of the 20th century, studies moved from the general, as in Clemmer's investigation, to the specific, such as Gresham Sykes's (1958) pains of imprisonment and John Irwin and Donald Cressey's (1962) importation model. More recently, efforts at theoretical integration have been proposed.

PRISONIZATION

The concept of prisonization was first introduced in 1940 by Clemmer in his book *The Prison Community*. Clemmer defined *prisonization* as the assimilation process in prison where inmates take on "in greater or less degree . . . the folkways, mores, customs, and general culture of the penitentiary" (Clemmer, 1940, p. 299). Clemmer characterized the process of prisonization in terms similar to those used by early sociologists to capture processes of socialization and assimilation in communities at large. Just as we all assimilate to the norms, customs, and laws of our society, inmates must assimilate to the self-contained community of a prison. However, since the values of the prison are discordant with societal values, prisoners must readjust and learn new norms, rules, and expected patterns of behavior. Known as the "inmate code," what is considered unacceptable in the free world may be encouraged and rewarded inside the walls of the institution.

It has been argued that the prisonization process, to an extent, affects every inmate; however, several variables influence to what degree prisonization shapes a person's tenure in the institution. Not all inmates, that is, become prisonized to the same degree. The variables contributing to prisonization lie both within the offender as well as within the institution. The form and orientation of the institution can impact its effect on a person. Prisoners in treatment-oriented facilities tend to exhibit lower degrees of prisonization than do those in custody or discipline-oriented institutions. Further determinants of prisonization include intrapersonal experiences, such as the extent of social relationships; work involvement; and the acceptance of roles bestowed on the inmate by other social actors in the institution. Generally, prisoners with shorter sentences, stable personalities, and healthy relationships with members of the outside community as well as with fellow inmates who refrain from excess abnormal conduct within the walls are the least prisonized. On the other hand, people with long terms of incarceration, unstable personalities, and relationships unconducive to proper adjustment will tend to

be most prisonized. Because these characteristics and experiences are differentiated between and within inmates throughout their term of imprisonment, the degree of prisonization will occur at different rates for different inmates. The process may even occur in a cyclical fashion.

While Clemmer's analysis of prisonization is not without merit, it has been criticized for not delineating and explaining the origins of the prison culture upon which prisonization is based. This criticism gave rise to two of the most influential theories in modern penology: the deprivation model and the importation thesis. While each theory seeks to explain the origins of the prison culture, they do so by pointing to two different locales. The *deprivation model* locates the origins of the prison culture within the institution itself and the experiences of inmates therein. The *importation thesis,* on the other hand, describes the inmate culture as a conglomeration of characteristics prisoners bring into their institution at intake.

DEPRIVATION MODEL

Early penal culture theorists hypothesized that the culture of the prison originated within the walls of the institution. The unique views characterized by the process of prisonization were said to originate in the deprivations that the inmate faced and attempted to cope with every day. Although these issues elucidated scholars on the origin and implications of the inmate culture, they also raised key questions. What were the deprivations that inmates experienced? How did inmates cope with such deprivations?

A landmark work by Gresham Sykes in 1958 attempted to address these questions. In *The Society of Captives*, Sykes described the "pains of imprisonment" that inmates experience during their time in a correctional facility. According to him, the pains of imprisonment are experienced within the walls of the prison; hence, the origin of the culture is not outside the institution, but inside.

In his work, Sykes delineates five deprivations: the loss or deprivation of liberty, the loss or deprivation of goods and services, the loss or deprivation of heterosexual relationships, the loss or deprivation of autonomy, and the loss or deprivation of security. The *deprivation of liberty* refers not only to the loss of civil rights, both temporary and permanent, but also the loss of ability within the institution to decide such matters as when to sleep, eat, shower, work, and recreate. The *deprivation of goods and services* refers to the manner in which inmates are deprived of goods and services they could obtain in the community if they were free. Compounded by our larger society's ideal that the goods people own and the services they receive comprise their self-worth, the loss of goods and services can be viewed as especially difficult.

The *deprivation of heterosexual relationships* refers to the lack of female companionship in prison. The only available sexual outlet for men in prison is other men, which can lead inmates who so participate to question their masculinity. In addition, since heterosexual men define part of themselves through their interactions with women, a lack of such interaction may impact the inmate's sense of self. Through the deprivation of heterosexual relationships, then, men not only lose the interactions with women, but also the part of their own self-concept that is derived from those interactions.

The *deprivation of autonomy* can be understood as the result of the deprivation of liberty. As inmates realize that they cannot make basic choices for themselves, they also come to realize that officials in the institution have complete control over them. As a result, prisoners may be reduced to a state of childlike helplessness that may impact their ability to function normally upon release. Lastly, inmates experience the *deprivation of security,* which refers to the potential threat to personal safety that exists for inmates within the prison.

IMPORTATION MODEL

As with the initial analyses of prisonization, the deprivation model has not been without criticism. Many critics of this model claim that the inmate culture was derived not from within the prison but from offender characteristics and experiences prior to incarceration; hence, these were the key components of the dynamic relationships developed

within the walls of the prison. This view of the inmate world was termed the "importation model." The importation model departs from the explanations discussed thus far in that it does not characterize the prison as a closed social system organized around common values. Rather, from this perspective, it is thought that the prison is composed of multiple subcultures that rival each other with respect to values and norms. These smaller subcultures are derived from subcultures developed on the outside that are imported into the prison, as well as social-demographic characteristics and criminal career variables, such as time served in institutions and offense record. Therefore, instead of viewing the inmate as solely influenced by common processes, the importation model proposes that the inmate culture is comprised of conflicting groups with origins that exist outside institutional walls.

Irwin and Cressey (1962) developed a typology of conflicting inmate subcultures that includes the thief, the convict, and the straight subcultures. Inmates who belonged to the *thief* subculture adhered to norms and values developed and adopted by thieves in the criminal world. With central values such as trustworthiness and dependability, it is maintained that these offenders were most likely to refer to fellow thieves in the prison as their primary reference group. The codes of this group, instead of the inmate code, were held in high reverence. This may be related to the idea that prison is regarded as only a temporary break in the thief's criminal career.

Unlike members of the thief subculture, *convicts* strictly adhere to the inmate code. Convicts are those who have been raised in the prison system. Their primary reference group is that of the convicts within the walls of the prison. Irwin and Cressey (1962) do note the importance of deprivation when examining the convict subculture, as the deprivations noted by Sykes have the most impact on the full development of the convict subculture. Nevertheless, the values of this subculture are imported from outside the walls of the institution. *Straights,* on the other hand, were characterized by Irwin and Cressey as one-time offenders. These people often identified more with the officers and administrative staff than with other inmates. This group looked to receive as much as they could while in prison by way of educational and rehabilitative programs, and brought little threat of conflict and disturbance to the institution.

INTEGRATED MODEL

While early studies of the prison culture tend to consider the deprivation and importation models as opposite ends of a spectrum, more recent studies have understood these as complementary rather than competing models. Such an *integrated model* might recognize that while inmates will experience some pains of imprisonment, focusing exclusively on this fails to take into account the way in which inmate culture is constructed of conflicting personalities and prior experiences that are brought into the institution. In addition to combining the concepts of the deprivation and importation models, integrated models may also include additional factors not considered by these initial models, such as family visits, the institutional environment, and inmate coping behaviors. More sophisticated integration is possible via examination of reciprocal effects factors inherent of each model have on each other. It is thought that such variations of integrated models can help to clarify why different inmates respond differentially to the inmate culture and to the overall prison experience.

WOMEN'S INSTITUTIONS

It is important to note that the initial models of prisonization and prison culture were formulated under limited conditions as well as circumstances of the times in which they represent. Yet, many of the principles found in these models are used to explain portions of the inmate subculture today that were not considered in these initial formulations. For example, the theories of prisonization, deprivation, and importation were all formulated through examination of male inmates and institutions. As a result, their relevance for explaining the culture within women's prisons is unclear. Early studies of women's prisons did attempt to construct views of the female inmate culture using the models formulated from analyses of the male inmate culture. Most of

the studies of the culture within women's institutions focus on the formation of so-called pseudofamilies among women inmates. Women are more likely than men to form close ties with other inmates. While these ties are often sexual in nature, they are not necessarily so. Indeed, most women within pseudofamilies have an emotional relationship that has no physical or sexual aspect to it.

These pseudofamilies have been explained from both the deprivation and importation perspectives. In terms of deprivation, many researchers explain them as a means by which women ease the pains of imprisonment. That is, women in pseudofamilies may can gain a sense of autonomy in the institution as well as establish trust and safety among other inmates. Further, these relationships may also ease the deprivation of heterosexual encounters, whether that deprivation is either emotional and/or physical. In terms of importation, pseudofamilies are based on characteristics and gender roles derived from the outside world and there is some indication that pre-prison identities may carry over to prison. Women, then, may bring not only criminal identities into prison with them, but also gender roles from the larger society. Generally, studies of the female prison culture lend some validity to both the deprivation and importation models.

CONCLUSION

Although the deprivation and importation models were developed through the study of male prisoners, they can aid in our understanding of the female prison culture as well. However, newer examinations indicate that an integrated model, combining elements of both deprivation and importation, may be more useful in explaining the prison culture. Considering factors that inmates bring into the prison as well as socialization that occurs within the institution may be crucial to comprehend fully the nature and etiology of the prison culture for both male and female inmates.

The correctional system in the United States is experiencing a metamorphosis. Consequently, now is a critical time for the development of robust theories of the prison culture. Prison populations continue to soar at alarming rates, and laws impacting the prison population continue to change. Determinate sentencing laws, including Three-Strikes Laws and habitual offender statutes, have helped give the prison population a new dynamic, as the number of elderly offenders continues to grow. Other offender groups who are represented in increasing proportions are those inmates with terminal diseases, such as AIDS, and female offenders. It is entirely possible that this crossroad in corrections cannot be fully understood in the context of traditional models of the prison culture. Even if theoretical models take on a new composition, elements of the classical models will inevitably remain, as they are still relevant in gaining an understanding of the prison culture.

PRISON FARMS

Prison farms serve as important components of many correctional institutions in the United States. Such facilities exist to raise products for inmate consumption, reduce operating costs, generate revenue, occupy, and in some cases provide therapy for the prisoner population. Although a smaller percentage of today's inmates engage in farming than during the 19th and much of the 20th centuries, prison agriculture persists. Such operations are especially visible in Southern states.

HISTORY

While prison farms have existed at various points throughout the United States, the development was most important in the South. Following the Civil War, many states in that region leased convicts to private plantation and farm owners. The convict lease system emerged partly because the war destroyed most enclosed penitentiaries. States lacking the resources to rebuild or establish prisons resorted to leasing as a means for supporting their convict populations. Many of the prisoners leased to private business interests labored on large plantations, although some states contracted forces to such enterprises as railroads, turpentine forests, and coal mines. Since the largest number of those leased to farms and plantations consisted of recently freed slaves, and later, their descendants, the convict lease system closely resembled chattel slavery. Working in gangs supervised by armed guards, predominantly African American workforces labored on Southern cotton and sugar cane farms under brutal and inhumane conditions.

By the 1920s, virtually all Southern states had abolished the convict lease system. However, those same states owned and operated large prison plantations, usually known as "farms," where predominantly African American convict forces labored under deplorable conditions comparable to those under slavery and the lease system. Southern prison farms primarily raised cotton for sale upon the open market. Female inmates often engaged in outdoor farm labor as well. States expected agriculture to support convict populations, produce revenue for their treasuries, and prevent prisoner idleness. Officials maintained that both the convict lease system and state farms instilled positive work attitudes among black as well as white convicts.

Some states, most notably Texas and Louisiana, supplemented commercial production of cotton with other crops, including vegetables, grains, and livestock. States also fed their convict populations with prison farm products. Since states were forced to purchase and maintain land and equipment, prison farming was usually less profitable than the convict lease system. Texas's scattered properties prevented that state's correctional system from ever attaining a self-sustaining status. Mississippi's Parchman Farm, however, enjoyed much greater financial success.

Many penologists extolled the virtues of prison farms and advocated their establishment throughout the country, since they prevented inmate idleness. However, agriculture exposed convicts to degrading

and unhealthy working and living conditions typified by disease, physical violence, and correctional practices that did little to advance them vocationally, intellectually, or spiritually. Located in remote rural regions and generally removed from public view, prison farms subjected inmates to terrible abuses from staff as well as other inmates. The prisoners' rights revolution, epitomized by landmark federal court decisions in Arkansas, Mississippi, and Texas, ultimately ameliorated some of the worse abuses of prison farm labor. Along with the development of more correctional industries and increased legislative appropriations, federal judicial intervention made penal systems less dependent upon revenues derived from agriculture.

States outside the South also developed prison farms. Unlike Southern correctional administrations, other regions primarily designed farms for young felony offenders and misdemeanor criminals. Influenced by the late 19th-century reformatory movement, those states regarded agriculture as a tool for rehabilitation. Rhode Island and Pennsylvania, for instance, established farms, as did Massachusetts. The latter state opened a farm for women at the Sherborn Reformatory. New York followed suit with a similar facility at Bedford Hills. Prison farm expansion continued during the early 20th century. By the 1930s, Indiana, Illinois, Colorado, California, and Wisconsin were deploying some inmates to agricultural properties.

PRISON FARMS TODAY

In 2001, at least 29 states and the federal government managed prison farms that employed approximately 31,000 inmates. About 4.3% of all inmates in state and federal facilities work in agricultural occupations. The largest numbers of prison farm properties continue to be located in the South. Texas, for instance, places more than 21,000, or nearly 16% of its prisoners, on 130,000 acres of prison farms, while neighboring Louisiana works 3,000, or more than 19% of its inmates, on the 18,000-acre Angola Prison Farm. Arkansas sends more than 1,600, or 14% of its prisoners, to farms. While some states sell products on the open market as well as produce for inmate consumption, others primarily farm to reduce institutional food costs. The Georgia Department of Corrections operates a 10,000-acre farm system that includes food processing and distribution facilities. Similarly, Florida contains more than 68 vegetable farms on 475 acres to raise food products for the state's inmate population. Outside of the South, Ohio, with 748 inmates, maintains the greatest number of its correctional population on prison farms.

Prison farms produce items as disparate as cotton, corn, soybeans, potatoes, squash, melons, eggplant, cabbage, grapes, carrots, spinach, prunes, almonds, tomatoes, beets, beans, sorghum, and hay. Livestock, including beef and dairy cattle, hogs, and poultry, as well as horse raising, are important today. Like private farmers, correctional facilities must strive to conserve land, subdue weeds and insects, and maintain equipment. Similar to many private agricultural operations, prison farms are eligible for federal subsidies through price supports, land preservation payments, and compensation for disaster losses. At least 14 states received such benefits during 2001. The National Association of Institutional Agribusiness (NAIA) serves as a professional organization for correctional personnel engaged in agriculture and other food industries.

ISSUES

As in the past, prison farms today are often praised by correctional administrations for reducing institutional operating costs through both revenues received from sales and through internal food production. Even when prison farms are unprofitable, they still occupy inmates who would otherwise be idle. The NAIA suggests that inmate farm labor imbues offenders with favorable attitudes toward work, develops vocational skills, and enables many to locate jobs following their release from imprisonment.

Observers in some states note that many inmates engage in traditional nonskilled tasks such as fence mending, construction, manual landscaping, and gardening. Such labor-intensive jobs not only fail to train released inmates for the modern workforce,

but also promote operational inefficiency and increase opportunities for inmate mistreatment. Critics also contend that prison populations are unable to operate high-tech equipment, and that short-term inmates do not remain long enough to receive the training necessary to handle agricultural machinery. While prison farms may reduce institutional costs, they are not usually as successful as private, mechanized agricultural operators.

CONCLUSION

Prison farms provide employment opportunities and structured outdoor activity for many inmates who would otherwise be idle. They also enable institutions to produce food and reduce operating costs both through consumption of their agricultural products and through external sales. While prison farms continue to be more important in Southern state correctional facilities, they no longer shoulder the fiscal burdens for institutional support. Nor do such institutions retain the brutal reputations that they did during earlier periods. Economic forces, the federal judiciary, and political factors related to public attitudes toward crime and offenders will likely determine the extent to which correctional agencies develop or abolish farms on prison properties in the near future.

PRISON INDUSTRIAL COMPLEX

The term "prison industrial complex" has been used in recent years to describe the modern prison system from a new and more critical perspective. Traditionally, prisons have been viewed as serving such well-known functions as deterrence, incapacitation, treatment and rehabilitation, punishment, revenge, and so on. An alternative view sees them as engaging in the quite different role of social control of the poor and "dangerous classes." Simultaneously, prisons fill what may be called an unanticipated or latent function of providing jobs. They are sources of revenue and make profits for various state and private interests.

Some critics have suggested that the prison system is part of a much larger "crime control industry," in which the entire criminal justice system, plus a growing private security industry, provide a steady supply of jobs and profits. This system is large and very expensive. Expenditures are at least $150 billion annually, up from around $10 billion in the early 1970s. There are more than 50,000 different governmental agencies in this system, employing close to 2 million people, who share a more than $5 billion per month payroll.

Some critics have suggested that the "prison industrial complex" is similar to the "military industrial complex" (the term used by President Dwight D. Eisenhower in 1960), since it consists of patterns of interrelationships known variously as "policy networks," "subgovernment," or the "iron triangle." Within the military subgovernment, there is an "iron triangle" of the Pentagon, private defense contractors, and various members of congressional committees (e.g., armed services committees, defense

appropriations committees). The decision making within any given policy arena "rests within a closed circle or elite of government bureaucrats, agency heads, interest groups, and private interests that gain from the allocation of public resources" (Lilly & Knepper, 1993, p. 152).

The crime control industry includes much more than merely the criminal justice system itself. It includes a number of businesses that profit either directly or indirectly from the existence of crime and attempts to control it. Indeed, the *control* of crime—often expressed as a "war on crime" or a "war on drugs" or the "war on gangs"—has become a booming business, with literally hundreds of companies, large and small, competing for profits. Employment in this industry offers careers for thousands of young men and women, many with college degrees in criminal justice programs from more than 3,000 colleges and universities. The criminal justice system provides a steady supply of career possibilities (police officers, correctional officers, and so on), with good starting pay and benefits, along with job security. Many have formed powerful unions.

PRISON ADVERTISING

A multitude of businesses—large and small—have found a steady market for goods and services. An example can be seen in the various advertisements found in journals, newspapers, and other sources. An advertising brochure from an investment firm called World Research Group states, "While arrests and convictions are steadily on the rise, profits are to be made—profits from crime. Get in on the ground floor of this booming industry now!" (Silverstein, 1998, p. 156). Another example comes from two major journals serving the correctional industry, *Corrections Today* and *The American Jail*. *Corrections Today* is the leading prison trade magazine; the amount of advertising in this magazine tripled in the 1980s. *The American Jail* is similar. A sampling of a few issues of these two journals found advertisements everywhere. Among the companies whose products are advertised include the following:

- Prison Health Services, Inc. . . . , a company that has, since 1978, "delivered complete, customized healthcare programs to correctional facilities only. The first company in the U.S. to specialize in this area, we can deliver your program the fastest, and back it up with services that are simply the best."

- Southwest Microwave, Inc., manufactures fence security, with their latest invention known as "Micronet 750," which is "more than a sensor improvement"; it is "a whole new paradigm in fence detection technology."

- Acorn Engineering, Inc., offers stainless steel fixtures known as "Penal-Ware" (lavatories, toilets, showers, etc.) and "Master-Trol" electronic valve system.

- Rotondo Precast, Inc., boasts "over 21,000 cells . . . and growing."

- Nicholson's "BesTea" sells "tea for two or . . . two thousand. . . . Now mass-feeding takes a giant stride forward."

- Northwest Woolen Mills manufactures blankets with the slogan "We've got you covered."

- "Prison on Wheels," from Motor Coach Industries, an "Inmate Security Transportation Vehicle."

There are more than 200 different companies listed in these sources. In addition to these trade journals, one can turn to the American Correctional Association's annual *Directory* for further advertising. Or attend a conference of the American Jail Association. Advertising here included such lines as "Tap into the Sixty-Five Billion Local Jails Market" and "Jails are BIG BUSINESS" (Donziger, 1996, p. 93). Most dramatically of all, there is now a Web site on the Internet known as "Corrections Yellow Pages" that advertises goods and services for the daily operations of penal facilities around the country. There are at least 1,000 different ads on this site. A similar Web page is http://www.corrections.com, and there are others.

The reader can get some idea of the magnitude of this industry and the profits to be derived from it just by thinking of all the businesses involved in planning, building, and operating a typical jail, prison, courthouse, or police department. Included would be architects, structural and mechanical engineers,

electrical contractors, landscaping firms, security firms, bankers and mortgage companies, furniture suppliers, food service vendors, linen services, bedding manufacturers, toiletries, medical personnel (doctors, nurses, and others on call), and automobile companies (e.g., police cars, prison transportation vans), just to name a few. As incarcerated populations grow, so too would the operations of these businesses. Thus, a company called Correctional Medical Services provides medical care to approximately 150,000 inmates, three times as many as they "served" in 1987, as reported in a *USA Today* article appropriately titled "Prison Business Is a Blockbuster" (Meddis & Sharp, 1994, p. 13).

The amount of money that flows into the coffers of the prison industrial complex from tax dollars alone is substantial. The total operating budget for both state and federal correctional institutions came to $49 billion in fiscal year 1999—the most recent year these data are available. It costs between $20,000 and $40,000 per year to house one inmate in the U.S. prison system. And this figure does not count the costs of building a facility. A detailed summary is provided in a recent Bureau of Justice Statistics study (Beck, Karberg, & Harrison, 2003) on expenditures at the state level alone. State expenditures in constant dollars tripled from 1984 to 1996, from just under $7 billion to more than $22 billion. Costs of medical care average around $6.54 per inmate per day (around $2 million total). Not surprisingly, the bulk of the budget goes toward salaries and benefits (94%). This same report noted that expenditures for prisons increased more than any other category of state spending. For comparison, between 1985 and 1996, prison expenditures increased by 7.3%, compared to only 3.6% for education and 6.6% for health. In 2003, the governor of California (a state with huge budget deficits) supported a proposed 5,000-bed maximum-security prison in Delano, California (just north of Bakersfield), at a cost about $300 million to build and about $129 million per year in operating costs.

PRIVATE COMPANIES

Several types of businesses benefit directly from the imprisonment of offenders. These are companies that provide services such as food, vocational training, medical services, drug detecting, personnel management, architecture and facilities design, and transportation. There are also businesses that sell a variety of products, such as protective vests for guards, fencing, furniture, linen, locks, and many more. The supplying of goods and services to the entire criminal justice system (including prisoners, guards, and the police) is more than $100 billion per year (Dyer, 2000, pp. 12–13, 158).

Private business interests are continually looking for opportunities to make a profit. A telling example came in 1987 when the Texas legislature passed a bill to add 2,000 more prison beds, and during the hearings "salesmen wearing strange polyester suits and funky perfume descended on the state capital to hawk corrections products" (Lilly & Knepper, 1993, p. 158). Another example comes from a company that supplies health care, Prison Health Services, Inc., which had revenues of $19 million in 1988, up from $5.5 million in 1983. In addition, prison food services is a billion-dollar enterprise that is growing by between 10% and 15% per year. Even the Campbell Soup Company is getting in on the action, noting that the prison system is the fastest-growing market in food service. The list does not include leasing companies, brokerage houses, and banking firms, such as E. F. Hutton and Merrill Lynch, of which more is said following.

Among the more recent developments in the prison industry has been the entrance of long-distance phone companies. Such industry giants as AT&T, Bell South, and MCI have found prisons to be an excellent market for long-distance business. Indeed, this makes sense because inmates all over the country spend countless hours on the telephone talking with relatives. This requires a collect call, which brings these companies into prison for the huge profits to be made. AT&T has an ad that reads, "How he got in is your business. How he gets out is ours." AT&T estimated that in 1995 prison inmates generated about $1 billion in long-distance calls. MCI, not wanting to miss out, went so far as installing, for free, pay phones throughout the California prison system. They levy a $3 surcharge for each phone call made, the cost of which is paid for by the inmate's

relative. MCI offered the Department of Corrections 32% of the profits (Burton-Rose, Pens, & Wright, 1998; Schlosser, 1998, p. 63).

Finally, there are people known as "bed brokers." These individuals act like travel agents, only they help locate jail and prison beds rather than hotel rooms. An example is a company known as Dominion Management, of Edmond, Oklahoma. For a fee, they will search for a correctional facility with an empty bed, a sort of "rent-a-cell" program. Areas suffering from overcrowding are often in desperate need for additional space, the cost of which can run between $25 to $60 per "man-day." These bed brokers will earn a commission of $2.50 to $5.50 per man-day (Schlosser, 1998, pp. 65–66; Burton-Rose et al., 1998).

PRISON CONSTRUCTION

The construction industry is also experiencing a boom from the crime problem. Indeed, construction firms have been having a field day in the prison business. An article appearing in the weekly construction industry bulletin, *ENR News*, is instructive. Here it is noted that the 1994 Federal Crime Bill, signed into law by President Bill Clinton, was a $30 billion package, which included $8.3 billion in grants to the states for prison construction. About $6.5 billion would be financed from a Violent Crime Reduction Fund. This money would come from a reduction of the federal payroll by 235,000 people.

During the past decade, about 92,000 new beds were added each year. The beds are very expensive, ranging from $70,000 in a maximum-security prison to $29,000 in a minimum-security prison. As of 1998, the total cost of new prison construction was $3.88 billion—and this is just for the cells. For every 92,000 places added, there is an estimated cost of $1.3 billion per year. The construction of new prisons has become such a big business that a newsletter called *Construction Report* is published to keep vendors up to date on new prison projects. Recent issues reported the simultaneous construction of dozens of new prisons; in 1996 alone construction was begun on 27 federal prisons and 96 state prisons (Dyer, 2000, p. 13). Despite the budget problems in most states as of early 2003, prison construction continues, and has escalated most in rural areas. Indeed, in those rural counties that built a prison or jail, the new inmate population accounted for nearly half of the population growth in the 1980s. A total of 213 new rural prisons were built in the 1980s, up from only 40 built in the 1970s; in comparison, between 1900 and 1980 only 146 new rural prisons had been built in the entire country. Many rural towns have begun to solicit state governments to build a prison nearby. In Texas, some towns "bombarded the [Texas Department of Prison] with incentives that range from country club memberships for wardens to longhorn cattle for the prison grounds" (Donziger, 1996, p. 94).

Pelican Bay State Prison in Crescent City, California, provides another example of how prisons become interconnected with employment. Built at a cost of $277 million, it has become the largest employer in the county. Before it was built, Crescent City was a dying town, with most of its population living in poverty or near-poverty (20% unemployment rate). Of the county's 17 sawmills, only four were operating, while the fishing industry was dead. During the 1980s, a total of 164 businesses went broke. In typical corporate-welfare fashion, local supporters, seeing a way out of their predicament, practically gave away land, water, and power to get the prison built. The prison now provides about 1,500 jobs, a payroll of more than $50 million, and a budget of more than $90 million. The prison also indirectly created more business, such as a $130,000 contract to haul the garbage, a new hospital, a Wal-Mart, and a new Safeway market. Housing starts doubled since then, as did the value of real estate, while $142 million in real estate taxes was collected, up from $73 million 10 years earlier (Parenti, 1999, p. 212).

Politicians often seek assistance from private enterprise when building prisons. Faced with severe overcrowding in the 1980s, liberal New York Governor Mario Cuomo found that real estate prices were far too high near the city of New York, where the majority of inmates are from. So he received help from a Republican state senator from the northern part of New York, who in turn arranged for low prices

on land for prisons. The result? While in the 1970s this area had only two prisons, by the 1990s it had 20. One prison now occupies land formerly used for the Olympic Village at Lake Placid, while others have been opened in abandoned factories and sanatoriums. This recent prison boom "has provided a huge infusion of state money to an economically depressed region." These prisons bring in about $425 million in annual payroll and operating expenses—in effect, an annual "subsidy" of more than $1,000 for each person in the area. The annual salary for a correctional officer in this area is approximately $36,000, more than 50% higher than the national average.

Finally, in a town called Malone, New York, a $180 million supermax prison has recently been built. According to one report prior to its opening, the plan called for holding approximately 1,500 prisoners in a 14 foot by 8 1/2 foot cell for 23 hours per day. The prison ostensibly was to create 500 badly needed jobs in this part of New York in order to replace the 750 jobs lost at a local shoe factory because of downsizing. And Malone didn't need more prisons; they already had two medium-security institutions. The new prison will bring the prison population in Malone to about 5,000—in a town of only about 15,000. One writer notes that "prisons have become the North Country's largest growth industry. . . ." New businesses also tend to follow the building of new prisons—in the case of Malone, four new drugstores and eight new convenience stores (Wray, 2001, p. 52).

CONCLUSION

The incarceration rate of the United States remains the highest in the world, and as long as this remains the case, the "prison industrial complex" will continue to be a permanent feature of this country. Prisoners will continue to require food, clothing, and medical attention, while prison employees will need to be provided with salaries and benefits. These costs will continue to grow with the inevitable increases in the cost of living. An additional factor in the rising costs of prisons is the aging of the prison population: In recent years prisoners have become increasingly older. There has been some movement in many states to reduce prison sentences by, for instance, providing treatment for drug abusers instead of prison—California being a case in point, where the prison population began showing slight declines from 2000 to 2001 (Beck et al., 2002).

PRISON INDUSTRY ENHANCEMENT CERTIFICATION PROGRAM

The Prison Industry Enhancement (PIE) Certification Program was put into place in 1979 by the federal government to ease restrictions on

prison-made goods. Earlier legislation, such as the Hawes-Cooper and Ashurst-Sumners acts, had prevented or restricted the production, distribution, and sale of prison-made goods. The PIE program allows private sector industry to establish joint ventures with state and local correctional agencies to produce goods using prison labor. It certifies and exempts state and local departments of corrections from normal restrictions on the sale of prison-made goods in interstate commerce.

LEGISLATIVE HISTORY

The Prison Industry Enhancement Certification Program was first authorized under the Justice System Improvement Act of 1979 (Public Law 96-157, §827) and was later expanded under the Justice Assistance Act of 1984 (Public Law 98-473, § 819). The Crime Control Act of 1990 (Public Law 101-647) allowed for the indefinite continuation of the PIE Certification Program.

BACKGROUND

During the 19th century, prisons commonly put convicts to work and sold the fruits of their labor. This practice eventually brought about conflict between prison administrators and those members of society, including union members and small business people, who were displaced or in direct competition with prison-made goods. Critics of convict labor brought grievances to the federal government, pointing out that without the usual costs associated with labor and overhead of free enterprise, prison industries were able to make their products for prices much lower than in the private sector. These items were then sold either on the open market to the general public or to local, state, and federal governmental agencies, crippling other industries that had to pay living wages.

In 1924, then-Secretary of Commerce Herbert Hoover held a conference to discuss the "ruinous and unfair competition between prison-made products and free industry and labor" (70 Congress Rec. S656 (1928)). As a result of the conference, Congress requested that a study be done to look into the problem that existed between these two industries. Arthur Davenport, the chairman of the Advisory Committee on Prison Industries at that time, said that

> the effect of placing on the open market a volume of goods which have been produced below normal costs, is to lower prices and disorganize the market. The increase in prison production which is predicted will exaggerate this evil and make it difficult if not impossible for manufacturers employing free labor to exist in trade where the prison output becomes heavy. The solution of this problem, if prison production is to continue, would seem to be the elimination, in one way or another, of the direct price competition of prison products with so called Free Products. (70 Congress Rec. S656 (1928))

Davenport concluded that a solution was imperative—either prisoners would sit idle and not work or private industry would not be able to compete with the prices of prison-made products.

The first solution presented was the enactment of the Hawes-Cooper Act in 1929 (Public Law 70-669, 45 Stat. 1084). This law did little, however, to rectify the problem caused by prison-made goods. Under this law, products produced in prisons were placed under restrictions only when they arrived in the state where they were to be sold, but many states, at the time, did not have laws to regulate the sale of prison-made goods. It was not until the Ashurst-Sumners Act (Public Law L. 74-215, 49 Stat. 494 1939) was passed and it became a federal crime, subject to criminal prosecution and resulting in a fine or imprisonment of no more than two years, that the distribution of prison-made goods was finally regulated. The Ashurst-Sumners Act recognized exceptions, including

> agricultural commodities or parts for the repair of machinery, . . . commodities manufactured in a Federal, District of Columbia or State Institutions for use by Federal Government, or by the District of Columbia, or by any state or political subdivision of a State or not-for-profit organizations. (Title 18 U.S.C. 1761(b))

Under this legislation, the federal government was prohibited from entering into a contract with prison industry when it exceeded $10,000.

CURRENT PRACTICE

While amendments to the Justice System Improvement Act of 1979 allow for up to 50 PIE Certified Programs, according to the most recent information published by the National Correctional Industry Association (NCIA, 2004); only 38 corrections department programs have been approved under the authority of the Prison Industry Enhancement Certification Program. About 2,800 inmates work for more than 140 private businesses in this arrangement, making a variety of products including food, clothing, furniture, sheet metal, electronic equipment, and mattresses. According to Christian Parenti (1999), for example,

> In San Diego prisoners working for CMT Blues were employed tearing "made in Honduras" labels off T-shirts and replacing them with labels reading "made in USA." Other convicts take reservations for TWA, work at telemarketing and data entry, and slaughter ostriches for export to Europe. (p. 230)

Under the PIE Certification Program, restrictions are placed on the deductions allowed to be taken out of a prisoner's wages—at no time can more than 80% of the prisoner's wages be deducted. The only deductions that are permitted include room and board, state and federal taxes, family support, and crime victim's compensation. While deductions for room and board are discretionary, crime victim's assistance deductions are mandatory under the PIE program guidelines. All guidelines come under the Justice System Improvement Act of 1979 (Public Law 96-157, §827) and amendments that follow.

Since the inception of the PIE Certification Program in 1979 until 2001, figures show that prisoners in the Prison Industry Enhancement programs have been paid $197,619,245 in wages. At the same time, monies collected as part of wage deductions included contributions to victims' programs ($18,510,801), room and board deductions ($50,127,654), family support deductions ($11,717,213), and taxes ($26,695,997). Altogether, these deductions have totaled $107,051,665.

PROGRAM REQUIREMENTS

The Bureau of Justice Assistance has set forth eight requirements for a program to be certified to participate in the Prison Industry Enhancement program: (1) Businesses must pay wages at a rate not less than that paid for similar work in the same locality's private sector. (2) They must provide written assurances that the PIE Certification Program will not result in the displacement of workers employed before the program was implemented. (3) They also have to furnish written proof of consultation with organized labor and local private industry before PIE Certification Program startup, while (4) providing inmates with workers benefits, including workers compensation or its equivalent. (5) States are given authority to involve the private sector in the production and sale of prison-made goods, while (6) institutions must provide written assurance that inmate involvement is voluntary. (7) As part of any PIE program, the institution must collect and provide financial contributions of not less than 5% and not more than 20% of gross wages to the crime victim compensation/assistance programs. Finally, (8) all programs need to comply with the National Environmental Policy Act and related federal environmental review requirements.

PROGRAM EFFECTS

According to its supporters there have been a number of beneficial effects of the PIE program. First of all, because of the deductions for room and board, the financial burden of housing prisoners has been reduced. Millions of dollars have been reinvested in the day-to-day operating cost of participating PIE programs. Crime victims have been given money that can help restore some of the financial loses that victims have encountered or help them recover from other hardships. The PIE program has also affected the prisoners in positive ways: They are offered the opportunity to learn potentially valuable skills, provide compensation to their victims, and help occupy their time while in prison. Moreover, business are provided with a supply of labor and, in many situations, are provided facilities at no cost.

There has been relatively little opposition to the Prison Industry Enhancement program. Some groups and individuals, however, have been concerned about substandard and possibly dangerous working conditions as well as the significant deductions taken from prisoners' wages. As with other forms of prison labor, critics are also concerned that PIE programs negatively affect workers in the free labor market.

CONCLUSION

The Prison Industry Enhancement Certification Program, first implemented in 1979, is a key part of privatization of prison labor. For the first time since the 1930s, some private businesses are entitled to use prison labor to produce goods at relatively low cost to themselves. Companies interested in utilizing prison labor receive many tax breaks and other incentives. Often the institution will construct workrooms to their specifications. Most important, there is a guaranteed labor pool. Private businesses are, however, somewhat restricted by the legislation, forced to pay minimum wage and provide certain basic benefits and compensation. And this, as Christian Parenti observes, is often a sticking point: "With wages as low as 40 cents an hour in Honduras, and generous tax breaks to boot, why open a sweatshop inside some bureaucratic hellhole where you have to pay minimum wage?" (Parenti, 1999, p. 235).

Indeed, despite a certain amount of publicity about joint venture programs and prison labor in the 1990s, Parenti (1999, p. 233) believes that "capital avoids the penitentiary." There is often a lack of space for work. Because prison-made products are popularly regarded as "morally tainted," companies that do utilize prisoner services usually hesitate to publicize the source of their labor. Companies wishing to operate in penal facilities also face numerous problems of restricted flexibility, searches, security, guards, delays for counts, problems of location and delivery, and prisoner resistance (Parenti, 1999, pp. 234–235). Thus, despite the fanfare surrounding PIE, it has not revolutionized prison labor, and instead, most prisoners continue to remain idle.

PRISON LITERATURE

Prison literature is an established literary genre that spans the age of written text. It takes a multiplicity of forms, styles, and intents, and includes biography, fiction, poetry, drama, sociopolitical commentary, and analysis. From classical Greek and Roman literature through biblically inspired narratives and their antithesis to the philosophers, radical thinkers, and avant-garde of the 19th and 20th centuries, writers in prison have had a major impact on world literature.

The prison has served as an important symbol and metaphor throughout the recorded history (i.e., text) of Western thought, and its material realities have formed the immediate context and crucible for an influential and celebrated group of writers and

intellectuals. According to Davies (1990), "It is arguable that it is impossible to understand Occidental thought without recognizing the central significance of prison and banishment in its theoretical and literary composition" (p. 3).

WRITING AS RESISTANCE

Prison writing chronicles the societal reliance on carceral control over the ages and across cultures. It also reveals the scope of political, social, and cultural dissent, resistance to oppression, and the refusal of many to accept the normative structures of dominant classes or elites and their societies as embodied in the concept of "crime." Noted prison writers include prisoners of conscience, political prisoners, prisoners of war (e.g., Antonio Gramsci, 1891–1937; Rosa Luxemburg, 1871–1919; B. Behan, 1923–1964; the Dalai Lama, 1936–; Breyten Breytenbach, 1939–; Mumia Abu-Jamal, 1954–; L. McKeown, 1956–), outlaws, rebels, and common criminals (François Villon, 1431–?; Malcolm X, 1925–1965; George Jackson, 1941–1971; Victor Hassine, 1955–).

The fiction, poetry, commentary, and analysis of prisoners represent counter-inscriptions to dominant forms of social control, criminal justice policies, practices, and penal methods. Their accounts differ significantly from the accounts and representations found in academic studies, state reports, dominant political discourse and ideology, and the mass media. Writers in prison provide "history from below," revealing prison culture and practices by parting the mists shrouding the prison and carceral life and casting light upon the realities of the pains of imprisonment and the formative power of the prison. A random sampling of the vast array of literary and artistic work of prisoners immediately indicates that the experience of criminalization and imprisonment is disorienting, threatening, and total. At the macro level, it exposes the inequities of class, race, and gender that dominate the composition of prison populations, and reveals the "peculiar relationship of power-repression" (Breytenbach, 1984) that characterizes carceral custom over time and location. At the level of immediate experience, it focuses upon survival and resistance to the dominant features of carceral life: violence and brutality, solitary confinement, madness, self destruction, hopelessness, and death.

Prisoner Writing

As a long-term prisoner, administrators can offer few programs that appeal to me over a substantial period of time. During my first eight years of imprisonment I completed my undergraduate studies and a graduate program. After the universities awarded my degree, I realized that I could not proceed further with a formal education program. Although I had about 20 years of imprisonment ahead of me, the only programs that correctional administrators offered were three-month courses in arts and craft projects like basket weaving, picture framing, leathercraft, and pottery. Writing became my solace, my escape from the bedlam around me.

I find writing extremely therapeutic. When I have a pen in my hand and a piece of paper in front of me, I'm able to express thoughts that pass through me. Writing is more creative than reading, though they are related. I enjoy stringing ideas together through these words on paper because I know that someone else will read them. It's as if I'm touching them, or a part of them, even though fences and walls and chains separate us.

My writing has led to an extensive correspondence and friendship with people whom I did not know prior to my confinement. Those people helped me to become a better person. Indeed, through writing I met my beloved wife, Carole. I work every day to refine my writing and communication skills, as I am hopeful they will help my transition back into society after I conclude my term, in 2013.

Besides my correspondence, my writing has led to the publication of three books, including *About Prison, Profiles from Prison,* and *What If I Go to Prison?* I also write extensive amounts of content for MichaelSantos.net. It is a skill that prison administrators cannot take away from me, and while I finish these 26 years I expect to serve in prison, I will work every day to refine my skill at this chosen and cherished craft.

Prisoner Web Sites

As a consequence of my having been incarcerated since 1987, I have never used the Internet, nor have I seen a live Web page. That does not mean I don't make use of the incredible power that comes with having my own Web site. Indeed, through the generous help of my friends and family in the community, I have had my own Web site since 1996. It has made a considerable difference in my life.

In order to design the Web site that I wanted, I read extensively on the various options available. Then I drew the structure and hierarchy of the site out on paper. I sent my drawings home so my family could retain a Web designer to build the site for me. Because of the Web site, I have created my own forum, a place where I can publish the considerable amount of content I write to help others understand prisons, the people they hold, and strategies for growing through confinement.

The Web site has exposed me to tens of thousands of people, many of whom have become helpful in my network of support. Indeed, it was through my Web site that I met Carole, who has since moved from her home in Oregon all the way to New Jersey so we could nurture our relationship. We married on June 24, 2003, and look forward to spending the rest of our lives together.

The Internet removes some of the limits that come with imprisonment. Rather than communicating only with the felons around me, my Web site allows me to record the steps I take to prepare for my future, and interact with people all over the world. Visit www.MichaelSantos.net to see how my Web site has enriched my life.

INFLUENCE ON ACADEMIC STUDIES

Cohen (1973) and Franklin (1989) note that since the 1960s, there has been a literary renaissance in prison writing, especially in the United States, Canada, and Western Europe. In the current age of "mass imprisonment," writers in prison play a strategic role in exposing the inequities of criminal justice and in analyzing the excesses of the prison industrial complex. Through academic and political journals such as the *Journal of Prisoners on Prisons* (Canada), *Prison Legal News* (United States), *Prison Writing* (United Kingdom), *Sisters Inside* (Australia), and *Expac News* (Northern Ireland), contemporary prison writers are addressing their fate and that of their societies. The emerging "convict criminology" (Ross & Richards, 2003) initiative in the United States promises to further extend this trend into academic criminology. The development of "writers in residence in prison" programs has encouraged prison writers and widens the sphere of their influence to include writers and artists within their containing societies (e.g., Hadaway, 1986).

In the United Kingdom, the Writers in Prison Network has resulted in the production of the journal *Network Notes*, and numerous anthologies featuring the reflections of writers in residence (e.g., Hopwood, 1999). In the United States this development is captured in the compilation *Teaching the Arts Behind Bars* (Williams, 2003). This societal recognition of the literary and artistic productions of prisoners has resulted in numerous international anthologies of prisoners' poetry (e.g., Adilman, 1989), writing (e.g., Dowd, 1996; Franklin, 1998), and analysis (Gaucher, 2002).

RACE AND GENDER

While social class is a given as a focus and location for many prison writers, (e.g., Taylor, 1995), race and gender are specific categories that demand recognition. The history of the confinement of African Americans is represented in the oral traditions and songs of slavery through to their overrepresentation under contemporary conditions of mass imprisonment. Indeed, Franklin (1978, 1998) argues that the songs and writing of imprisoned African Americans constitute a coherent body of literature with a unique historical significance and cultural influence. This understanding is also evident in the "indomitable spirit of defiance which has empowered prisoners throughout Africa's colonial and postcolonial history" (Mapanje, 2003) as represented in the poetry and writing of African prisoners. Aboriginals in North America represent

another racially and culturally focused group of writers and artists whose work has influenced their tribal groups and their containing and constraining societies (e.g., Reed, 1993; Solomon, 1994; Meegwetch Wichiwakan Collective, 1994).

While the imprisonment of women has been a secondary concern in all societies, the contributions of women prison writers has exceeded their numbers and significance in prison populations worldwide. From the political discourse of Constance Markievicz (1868–1927), Rosa Luxemburg (1871–1919), N. Mandelstam (1899–1980), Ethel Rosenberg (1916–1953), and Assata Shakur (1947–) to the more gender-focused writing of Constance Lytton (1869–1923) and Norma Stafford (1932–), imprisoned women have made major contributions to political and gender-focused movements in their societies. The rapid growth in the imprisonment of women in the contemporary societies such as the United States, Canada, and the United Kingdom has fueled the growth of their written contributions to dominant discourse.

CONCLUSION

Prison writers make four distinct contributions to contemporary criminological discourses. By writing about their experiences of criminalization and incarceration, prison writers keep us up to date on the life and death issues of prison life. They provide inside observations on penal policy, its implementation and ramifications (e.g., mass imprisonment, prison overcrowding, prison violence, survival, and resistance). Their work rehumanizes the prisoner and serves to contest the distorting imagery their societies impose upon them. Finally, from their important impact upon the development of new critical discourses within criminology in the 1960s and 1970s, the plethora of contemporary prison writing continues to influence criminological discourse by shifting prisoners' accounts and understandings from the margin to the center of the discipline.

Prison Litigation Reform Act 1996

In 1996, Congress passed the Prison Litigation Reform Act (PLRA), 28 U.S.C. §1915, in order to limit inmate litigation. The PLRA's main provisions require prisoners to exhaust administrative procedures before filing lawsuits, allow courts to dismiss complaints if a cause of action is not clearly stated, limit attorney's fees and special masters, and regulate the relief that courts can order. The act's provisions also modified the filing procedures for indigent inmates who file *in forma pauperis* actions. Courts must now dismiss indigent inmate claims if they are "frivolous," "malicious," or "fail to state a claim upon which relief can be granted" (28 U.S.C. §1915(e)(2)). In addition, if an inmate has had three or more prior complaints or appeals dismissed, then he or she will be barred from filing any further actions unless the complaint addresses a situation of "imminent" or "serious" bodily harm (28 U.S.C. §1915(g)). Under the PLRA, inmates are restricted in filing both class action and individual lawsuits.

NUMBER OF INMATE LAWSUITS

In 1993, inmate lawsuits accounted for about 15% of all civil suits filed in the federal district courts. By 1995, they grew to about 25% of all federal district court civil lawsuit filings, accounting for about 65,000 cases. Prior to the PLRA, more than 95% of these filings resulted in either a dismissal or in no orders for relief, because they were proven to lack merit.

Between 1980 and 1996, while the actual number and percentage of inmate filings increased, their rate decreased 17%. The contradictory variation between the increased number and percentage of filings and the decrease in the rate of filings is due to changes in the prison population. Over the past 20 years, the prison and jail population has grown dramatically, with almost 2 million persons in custody. In 2001, the total incarceration rate was about 700 per 100,000 persons. Two years after the act's passage, in 1998, the percentage of inmate lawsuits decreased more than 60%, from about 41,000 to about 26,000 petitions filed. The dramatic decrease in inmate filings can be directly attributed to the PLRA, since courts used the act to reduce their dockets.

FRIVOLOUS CLAIMS

One congressional purpose underlying the statute is to reduce inmate litigation that is frequently presumed to be frivolous and wasteful of judicial time and resources. Some reported cases of frivolity involved prisons being sued for failure to have a

salad bar, utilizing white as opposed to beige towels, and charging an inmate for creamy peanut butter when he wanted to purchase the chunky kind. Although some claims by inmates are indeed trivial, many prisoners sue over health care, violence and overcrowding, religious exercise, and other fundamental rights concerns. Under the PLRA, valid claims cannot be readily distinguished from those that are trivial and may be summarily dismissed if the inmate does not pay filing fees or fails to properly explain how a legal right was violated.

JUDICIAL OVERSIGHT

Another congressional purpose for the PLRA is to limit judicial oversight of the nation's prison system. In the first half of the 20th century, courts had a "hands-off" policy and refused to entertain any inmate complaints. During the 1970s, the U.S. Supreme Court began to hold that inmates retained those constitutional rights and protections that are not inconsistent with being incarcerated. Women and men sued institutions using the First, Fourth, Fifth, Eighth, and Fourteenth Amendments by alleging that a variety of conditions of their confinement violated their rights. By the end of the 20th century, nearly every state had a prison system operating under a judicial consent decree. These decrees enabled courts to enforce their decisions by providing them with judicial oversight through the appointment of special masters who would evaluate how the prison system was operating. In this manner, courts were able to directly intervene and oversee correctional operations on a day-to-day basis.

Congressional proponents of the PLRA argued that prison administrators are in the best position to determine how to oversee the operation of their facilities. The act aims to reduce the ability of courts to create broad, sweeping changes that empower the courts to direct the institution and order how they are to be run. Rather than allowing special masters to dictate massive changes on a court's behalf, the PLRA instructs courts to limit the reach of their orders to that which is the least intrusive of correctional authority. Despite the limits the PLRA places on the courts' power of judicial review, most federal appellate courts have validated the act.

THE CASE AGAINST THE PLRA

The act's provisions that engender the most controversy are the "Three Strikes" and indigent inmate filings requirements. In addition, some scholars question whether Congress has the power to limit the scope of judicial review, while others also question the degree to which courts should return to a "hands-off" policy of judicial deference to prison administrations.

Opponents of the PRLA argue that the act's requirements deny inmates due process and equal protection of the law, since they affect inmate filings without regard to the legitimacy of an individual's claim. People who are illiterate or have limited education have difficulty articulating their legal claims and may not understand the procedural requirements pertaining to filing a complaint. If a court reviewing the filing determines that the claim is insufficient, the complaint will be dismissed even if it might have been "meritorious" if given an opportunity to correct the legal deficiency. Likewise, under the "Three Strikes" provision, if a court dismissed three prior filings by the petitioner, the inmate will automatically be prevented from filing another suit irrespective of its merit. Although the act allows people to file a claim if they are in imminent danger (despite having a "third strike"), it does not clearly define what this means. This exception is aimed at protecting women and men who presently are "in danger" at the time of their filing. However, if the harm is no longer present, then the litigant can have the filing denied. If this happens, the inmate, even if indigent, is still responsible for paying in full the court costs and filing fees (these monies may be paid on a monthly basis).

The PLRA also discourages claims, even if valid, by limiting the ability of prisoners to file claims in federal court if they have not exhausted all prison administrative avenues prior to filing. Under the PLRA, it is not clear how inmates are to determine whether they have exhausted administrative channels, or whether they must wait to file a lawsuit

even if the administrative remedies are "futile" or unavailable to them.

CONCLUSION

The constitutional questions that pertain to the PLRA will require analysis by the nation's high court. While many courts of appeal, utilizing a rational basis test of constitutionality, have determined that the act is constitutional, some scholars who challenge the legitimacy of the act argue that the statute must be analyzed with stricter scrutiny because it affects fundamental constitutional rights such as access to the courts. Legal groups like the American Civil Liberties Union are concerned that the PLRA goes too far in reducing the ability of persons to protect their rights. They argue that while the act can limit some petty complaints, it infringes upon fundamental rights and undermines the judicial process.

One of the most difficult places to define and protect rights is within correctional institutions. Although it might be tempting to reduce court congestion by employing the PLRA to prison litigation, judicial authority stems from the Constitution itself. It remains for the U.S. Supreme Court to determine if the PLRA unconstitutionally impacts the separation of powers between the judiciary and Congress, and the separation of powers between the judiciary and the executive branches (prison administration). It also remains for the U.S. Supreme Court to untangle the due process and equal protection claims that inmates have in litigating their claims given the act's "hands-off" procedural limitations.

PRISON MONITORING AGENCIES

Citizen monitoring of correctional facilities helps ensure that corrections officials run prisons fairly and humanely. Because of the inherent imbalance of power that exists within it, citizens have a responsibility to monitor, like "watchdogs," the performance of the criminal justice system. Only by having independent, external reviews can we hope to minimize abuses of power.

However, other than a few organizations like the John Howard Association, the New York Correctional Association, and the Pennsylvania Prison Society, citizen monitoring of corrections facilities is rare in the United States. Instead, the general public has willingly turned the work of criminal justice over to professional workers in the system. Thus, most states rely on professional associations such as the American Correctional Association, the American Jail Association, the National Juvenile Detention Association, and the National Commission on Correctional Health Care, which promote standards and quality control practices and, in some cases, operate accreditation programs. In some states, government-based prison and/or jail inspection entities exist, or private consulting organizations perform correctional institution visitations and inspection

work. These, however, are not citizen or volunteer-based organizations.

HISTORY

Citizen monitoring of prisons has a long history outside the United States. John Howard (1726–1790) is perhaps the best-known and most effective prison reformer in the history of the English-speaking countries. At the age of 40 he experienced firsthand the pains of incarceration; he became a casualty of the Seven Years War when the French captured him en route to Spain on a sea vessel. He spent several months incarcerated and was sent home in a prisoner exchange. In 1773, at the age of 47, he became High Sheriff of Bedfordshire. Upon becoming High Sheriff, he devoted his life and his family fortune to prison reform in England and several other countries. He died in the Crimea in 1790, having contracted typhus while visiting Russian military hospitals. John Howard initiated the first documented citizen inspections of jails in England and published the first statistical summaries of jails and the conditions of confinement (*The State of Prisons in England and Wales,* 1777). To this day, John Howard societies (or similar associations) exist in England, Australia, Canada, the United States, and several other countries, with common justice system monitoring and reform goals.

John Howard's enduring contribution to justice system improvement lies in his advocacy of citizen involvement in the matters of government. Independent observers and review of criminal justice system operations by citizen volunteers represent an important component of the balance of powers essential to the social contract and our democratic form of government. John Howard and other reformers of his era realized this and put it into practice with systemic monitoring of English penal institutions. Howard also implemented similar practices in England, Australia, Russia, and several other countries.

THE JOHN HOWARD ASSOCIATION

While the practice of citizen monitoring of correctional facilities is not widespread in the current U.S. penal system, it has long-standing acceptance, and the principle is widely understood. The John Howard Association (JHA) in Chicago, Illinois, began in 1901, providing services to current and former offenders, serving as a not-for-profit citizens' watchdog organization for corrections. The association continues to this day as the main organization in Illinois that conducts independent, routine, systematic visitation and monitoring of prisons and jails (adult and juvenile facilities). The association undertakes other reform-oriented activities and initiatives relating to sentencing and other criminal justice system issues, but the visitation and monitoring program remains the foundation of its public education, policy development, and advocacy initiatives, which help shape funding and legislation relating to corrections in Cook County and the State of Illinois.

In recognition of the group's effectiveness, federal and state courts have repeatedly appointed the John Howard Association and its staff to serve as court-appointed monitors in individual and class action suits against jails, prisons, and juvenile detention centers in Illinois. JHA staff members have also served as expert witnesses or consultants in other litigation. Several of the association's correctional facility monitoring reports are now part of the collection at the Chicago Historical Society, which felt they were significant documents pertaining to the city's history.

CONCLUSION

The hidden nature of corrections makes it difficult for citizens to engage in issues relating to punishment and corrections. However, there are many benefits from ongoing citizen monitoring of correctional facilities. Public monitoring enhances public education about the workings of the criminal justice system and can increase the public's confidence in the justice system. It lets people who are inside prisons, jails, and juvenile detention facilities—the correctional officers, staff, and the inmates—know that what happens inside the correctional institution matters to those on the outside. It also helps prevent abuse of power and authority.

Monitoring by independent citizens and agency staff with correctional expertise provides both

constructive criticism of shortcomings and appropriate recognition for accomplishments by correctional administrators and staff. It frequently reveals the need for additional resources, including facilities, equipment, staff, programs, or services that may be essential to the mission of correctional facilities. Independent monitoring of our most restrictive and punitive public institutions is vital in a democratic society that maintains the importance of ensuring that even the least deserving poor are protected.

PRISON MOVIES

Prison movies are among the most complex kinds of cinema, impossible to classify simply according to genre, period, or narrative conventions. Yet, they have historically been characterized as full of direct and superficial social messages and, in general, as less interesting than the majority of commercial movies. This tendency, in combination with the limited availability of many early and independent films, have restricted the development of a critical body of knowledge examining the relationship between cinema and the prison, particularly in comparison to crime, detective, gangster, or legal thrillers. All this, despite the fact that prison films make up a persistent category within the Hollywood system, as well as in various independent and international cinemas. They also regularly appear across politically alternative and experimental categories, documentary, B-movie distribution, and pornography. The prison film, thus, crosses generic boundaries, amalgamating conventions and tendencies from *film noir,* social consciousness films (including social documentary and social problem cinema), gangster films, crime thrillers, police procedurals, mysteries, action-adventure films, melodrama, comedies, musicals, animation, and women's cinema.

The prison film persists across cinema as a perennial setting in which to enact primary social dramas about physical, social, and psychological entrapment, a laboratory for enacting the struggle between good and evil, perpetually pitting the individual against the apparatus of the state, often through scenarios of stark injustice. With their characteristic bleak and oppressive worldviews, these films have served as extreme settings in which to act out the fundamental tensions of the human condition: struggles to preserve individual identity,

humanity, and dignity in the face of inflexible power structures and corrupt authorities.

HISTORY

Films set within prisons or incorporating penal institutions into their narratives have existed from the inception of cinema. Prison movies experienced their heyday in the Hollywood studio productions of the 1930s and 1940s. Films like *The Big House* (1930), starring Robert Montgomery, Chester Morris, and Wallace Beery, and *20,000 Years in Sing Sing* (1939), based upon the real-life experiences of Warden Lewis E. Lawes and starring Spencer Tracy, stand as exemplars of the period, crystallizing many of the key conventions of the formula. In this era, many of the fundamental frames and uses of the prison in cinema were established, including its quasi-biographical or true-life impulse (*Devil's Island*, 1939; *20,000 Years in Sing Sing*, 1939); its socially conscious focus (*I Am a Fugitive from a Chain Gang,* 1932; *Hell's Highway*, 1932; *They Made Me a Criminal*, 1939; *Sullivan's Travels*, 1941); the introduction of women-in-prison films (*Ladies of the Big House*, 1930; *Women in Prison*, 1938; *Caged*, 1950); the juvenile delinquency film (*Are These Our Children*, 1931; *Mayor of Hell*, 1933; *Crime School*, 1938; *Angels with Dirty Faces*, 1938; *Boys Town*, 1938); and the use of the prison film as a star vehicle for popular actors (Humphrey Bogart in *San Quentin* and *Dead End* in 1937, and *You Can't Get Away with Murder* in 1939; James Cagney in *Angels with Dirty Faces*, 1938, and *White Heat*, 1949; Clint Eastwood in *Escape from Alcatraz*, 1979; Paul Newman in *Cool Hand Luke*, 1967; Robert Redford in *Brubaker*, 1980, and *The Last Castle*, 2001).

In the past 50 years, American cinema has witnessed a series of transformations in the structure and trajectory of prison films. By the early 1970s, a number of films had emerged that, for the first time, overtly critiqued the notion of rehabilitation. Stanley Kubrick's *A Clockwork Orange* (1971) and *One Flew Over the Cuckoo's Nest* (1975) stand at the center of the emergence of a wave of "asylum films" that were not simply skeptical of the treatment model of corrections but depicted it as deeply destructive and coercive. Others include *Morgan: A Suitable Case for Treatment* (1966), *Cool Hand Luke* (1967), *Titicut Follies* (1967), *Riot* (1969), *The Longest Yard* (1974), *Short Eyes* (1977), *Scared Straight* (1978), and *On the Yard* (1979). Such films, with their emphasis on nonconformity and futility, differ from similar narratives of the preceding decade (*Carbine Williams*, 1952; *My Six Convicts*, 1952; *Riot in Cell Block 11*, 1953; *The Birdman of Alcatraz*, 1962; *Convicts 4*, 1962), which, when critical of rehabilitation, grounded its failure in the shortcomings of individuals who resisted professional treatment and correctional change.

Since the 1970s, a number of prison films have been made in the genre of science fiction. With its insular worlds, claustrophobic spaces, industrial entrapment, and near-total isolation in some form of "outer" space where individuals have been abandoned or trapped, these story lines invoke many of the key narrative devices of prison cinema, including elements of escape, authority, and transcendence (*Terminal Island*, 1973; *Escape from New York*, 1981; *Escape 2000*, 1981; *Prison Ship*, 1984; *Space Rage*, 1985; *The Running Man*, 1987; *Deadlock*, 1991; *Star Trek VI: The Undiscovered Country*, 1991; *Alien 3*, 1992; *Fortress*, 1993; *No Escape*, 1994). In these settings, the prison becomes an existentialist site for the elaboration of the human condition, where communities, cities, societies, and entire worlds are often rendered as prisons, as in the panoptic worldviews of *Blade Runner* (1982); *The End of Violence* (1997); *The Truman Show* (1998); *Dark City* (1998); *Pleasantville* (1998); *The Matrix* (1999); *The Cell* (2000); *X-Men* (2000); *The Panic Room* (2002); and *Minority Report* (2002).

THE FORMULA

The beginning of most prison films operates as a primer in prison sociology, introducing its viewers to the mechanical daily routines and processes of imprisonment typically through the entry of a central character into the overwhelming social world of the institution. The viewer follows this new "fish,"

who is usually unjustly convicted or punished, through the dehumanizing pains of imprisonment, his (or, less often, her) introduction to the convict code, and the consequent patterns of adaptation. Thus, prison films come typically with what Nicole Rafter (2000) identifies as stock elements: big casts that are easily typologized, including the new fish as hero; his older, more experienced (and hardened) buddy, who is often the con with standards (the "real man"); the "square john"; the rats, snitches, and squealers; the paternalistic and often impotent warden of the 1930s and '40s who transforms into the cruel, sadistic warden of contemporary cinema; the unsophisticated, brutal guard as "smug hack"; and the psychotic inmate who is beyond reclamation.

The prison film's most fundamental plot mechanisms and narrative devices are manipulative acts of personal violence (*Cool Hand Luke*, 1967; *American History X*, 1998), riots (*Brute Force*, 1947; *Riot in Cell Block 11,* 1954), thrilling escapes (*I Am a Fugitive from a Chain Gang*, 1932; *The Defiant Ones*, 1958; *The Shawshank Redemption*, 1994), and executions (*Angels with Dirty Faces*, 1938; *I Want to Live!*, 1955; *Dead Man Walking*, 1995; *The Green Mile*, 1999). These conventions build upon key axes of narrative structure, what Cheatwood (1998) labels the "fundamental structural elements" of these films, including their specific orientation toward such issues as confinement, justice, authority, and release (p. 213). Cheatwood argues that these elements reappear consistently across prison cinema and one may map cultural transformation through changes in the ways in which these elements are mobilized through various historical eras to justify or challenge imprisonment. For instance, Depression era films are more likely to characterize imprisonment as a miscarriage of justice, avoid the positioning of responsibility and blame upon individual offenders, and legitimate the existing justice system through the removal of a few key corrupt individuals (guards or wardens)—a style in many ways deeply inconsistent with contemporary treatments of these same conventions under incapacitation. Thus, the prison film operates as a significant sociohistorical artefact.

RACE AND GENDER

The rigid physical structures and restricted spaces of the cinematic prison are modeled in such a way as to mimic the constraints in social forces that lead the central characters to the prison, where the protagonist may be put into direct confrontation with the state and its most oppressive social institution. Consequently, prison portrayals have always engaged a complex set of identity politics about race and gender.

Contemporary images of race in prison films fluctuate between two poles of representation: (1) an explicit articulation of racial disproportionality or (2) race as omission. The first issue is often portrayed with respect to violence and gang formation in prisons and is explained as a failure of governance and the crisis of the state. This critique is often implied in the movie title: *American Heart* (1992), *American Me* (1992), or *American History X* (1998). (Others include *South Central*, 1992; *Malcolm X*, 1992; *Bound by Honor: Blood In, Blood Out*, 1993; *Slam*, 1998; *Monster's Ball*, 2001.) The second issue, where the racial politics of contemporary imprisonment are situated in nostalgic retrospectives of the penal past has been particularly apparent in the most popular prison films of contemporary cinema (*The Shawshank Redemption*, 1994; *The Green Mile*, 1999).

An explosion of sexploitation films in the aftermath of the rights movement, including such titles as *The Big Doll House* (1971), *The Big Bird Cage* (1972), *Black Mama, White Mama* (1972), and Jonathan Demme's first film, *Caged Heat* (1974), provides discrete cultural arenas for reworking gender roles within existing social hierarchies. The popularity of these women-in-prison films presents a clear cultural site for the punishment of women who violate prescribed roles. The films often incorporate a violent sexual style that brutally emphasizes power relationships under patriarchy. In this manner, the prison film has always existed somewhere between social consciousness and exploitative spectacle, between a specific concern with existing social realities (specifically, the conditions of imprisonment) and the institution's seductive use as both metaphor and fantasy.

CONCLUSION

Many scholars anticipate that contemporary prison cinema is undergoing significant transformation. They argue that the classical definitions, conventions, and plots of prison films have become increasingly murky and abstract with no clear moral message. Individual actors are rendered less capable of meaningful action in an increasingly arbitrary, confusing prison setting, where authority, justice, and moral systems are no longer clear or stable. In such a context, heroes become anti-heroes, and the easy resolutions of classical prison cinema are no longer believable. These films are exemplified by an odd mixture of self-reflexive documentary-style productions, including *Swoon* (1991), *Aileen Wuornos: The Selling of a Serial Killer* (1992), *Natural Born Killers* (1994), *Paradise Lost* (1996), and *Dancer in the Dark* (2000). Yet some of the most popular prison productions of the past decade have clearly been built on the established conventions and nostalgic formulas of classic prison films, including Frank Darabont's *The Shawshank Redemption* (1994) and *The Green Mile* (1999), both from works authored by Stephen King. As well, the most popular images of criminality in American cinema have continued to emerge from the walls of the prison, including the perpetual recycling of Dr. Hannibal Lecter (*The Silence of the Lambs*, 1991; *Hannibal*, 2001; *Red Dragon*, 2002). The images are vivid and diverse, never simplistic and somehow always difficult to turn away from, perpetually asserting through sheer ubiquity that prisons have primary social functions and fulfill complex cultural needs.

PRISON MUSIC

Prison music includes songs written and/or sung by the incarcerated and songs written by them after release that are thematically influenced by their experiences of imprisonment. Although prison music is most often recognized by the content of the songs, some of it has a distinctive structure that can be traced to the cultural heritage of the convict musician. For instance, prison work songs have a distinctive rhythm and plaintive sound that is immediately recognizable as part of African American heritage. Drawing from folk music, commercially recorded music, and unpublished songs of prisoners, prison music includes all forms of music: ballads, blues, rockabilly, reggae, country, rock and roll, rhythm and blues, work songs, and rap. However, work songs, blues, and country music are the most common types of prisoners' musical expressions.

AFRICAN AMERICAN PRISON MUSIC

Blues

The blues developed out of the unique social experience of black people in America, especially in reaction to their lack of freedom after Emancipation. It is said that the blues were born out of disappointment, one of which was most certainly the Southern mass imprisonment practices after Reconstruction that continued to enslave blacks. The "crying" sound, in addition to the major themes of the blues, depict a sadness and loneliness consistent with conditions of incarceration. According to H. Bruce Franklin (1982),

> The blues form . . . developed with the prison experience at its core, explicitly in songs such as "Penal Farm Blues," "Prison Bound" . . . and the many different songs entitled "Prison Blues," "Jailhouse Blues," and "Chain Gang Blues." (pp. 107–108)

As a result, many of the finest blues musicians were prisoners and ex-prisoners: Bukka White, Robert Pete Williams, Son House, Lightnin' Hopkins (whose ankles bore the scars of chain gang shackles), Leadbelly, and Billie Holiday.

Work Songs

The work song is perhaps one of the most unique cultural expressions of black Americans. Black prisoners imported this traditional music from slavery to accompany gang work on Southern prison penal farms, plantation prisons, and local chain gangs. The work ranged from cutting trees and picking cotton to hoeing and cutting sugar cane. These songs survived in prisons well into the 1960s because work conditions mirrored those of slavery. Led by a song leader, work songs are sung by a group of men, using a "call and response" pattern. Work songs supply a rhythm to labor by, they help pass the time, and they serve as a vehicle for expressing tension, frustration, and anger. In this sense, they qualify as protest. Bruce Jackson (1972) also suggests work songs allow the cooptation of the work by the prisoners:

> The songs change the nature of the work into the workers' framework rather than the guards'. By incorporating the work with their song, by, in effect, coopting something they are forced to do anyway, they make it *theirs* in a way it otherwise is not. (p. 30; emphasis in original)

In supplying a rhythm for work, the songs not only ensure efficiency by helping everyone to work at the same pace, but they also make labor safer. When a team of inmates is cutting down a tree (crosscutting), for example, the rhythm of the song regulates the swing and strike of the axes and prevents the unregulated swing that could possibly cut a fellow inmate's hand or leg (Jackson, 1972, pp. 31–32). The rhythm also helps some prisoners survive, since those who worked too slowly and lagged behind were singled out for beatings. "By singing together and keeping the strokes together while cutting logs or working with hoes, none could be singled out for being too slow so no one could be punished simply because he was weaker than his fellows" (Jackson, 1972, p. 30). Finally, work songs help men to alleviate tension, frustration, and anger by singing about the intolerable conditions under which they had to live. They could sing about things that they were not allowed to say—"it is as if sung words were not real."

Work songs have essentially disappeared from the prison community for a variety of reasons. Late 1970s federal court interventions into prison operations prohibited whippings and "sun-up to sundown" work, conditions that had provided the basis for work songs. Courts also ruled that no prisoners could have power over other prisoners, thus eliminating the old convict-guard system. Some states interpreted this ruling to mean song leaders of the work groups had "power" and accordingly forbade the use of work songs. Finally, Jackson (1972, p. xxi) found that young prisoners of the late 1960s no longer wanted to sing that "old time slavery stuff."

ANGLO-AMERICAN PRISON MUSIC

Anglo-American prison music arises out of a different tradition than African American work songs. Although some white prisoners worked on chain gangs and on plantation prisons, there is no evidence they used work songs as black prisoners did.

Similar to the early pre-execution ballads, white prisoners sing country music that includes themes that reflect the Protestant individualism of Anglo-American cultural traditions. Country music is not group music as the work songs were, and it does not represent any sense of community with others. Thematically and structurally, country music sung by prisoners is an individual expression about and by one person. Prison country music tells a musical story that presents criminals or convicts as people who blame themselves for being in prison. As Merle Haggard observes in "Momma Tried," it was not his mother's fault that he went to prison, but his. The criminals of country music set themselves apart

from the group as a bad example, someone not to copy. They worry about the shame families must bear for their wrongdoings. And they worry about loved ones from whom they are separated.

GENDER

Prison music seems to be an overwhelmingly male area of creativity, with few examples of women prison musicians to be found. There are some songs used by women while working. However, they differ from men's songs being used to accompany their work rather than to regulate it.

MYTHS ABOUT PRISON MUSIC

Johnny Cash never served time in a state prison, although he did serve a series of brief stays in jail. As a result of one of these stays, and on the eve of a prison concert, Cash wrote "Starkville City Jail." He had been arrested for "picking flowers" and "swaying in the southern breeze" at 2:00 A.M. (Fisher-Giorlando, 1987, p. 208). Cash has been associated with prison music because of his efforts to identify with convicts. They have embraced Cash because they perceive he has "convict attitude." Likewise, one of the most well-known myths about prisoner musicians, that Huddie "Leadbelly" Ledbetter sang his way out of prison, is also false. Although Governor Pat Neff of Texas pardoned Leadbelly, Leadbelly had actually served just a few months shy of his minimum seven-year sentence. Leadbelly was not pardoned out of Angola, either.

In some ways, prison music itself may be a myth. In the early part of the 1900s, folklorists visited prisons to collect folk music, believing that music in prison was unadulterated by the free world and was maintained in some pure cultural form. Prisons were believed to be unchanging institutions, frozen in time; therefore, cultural expressions that emerged from prison presumably had been preserved. Based on the belief that prison is a total institution, completely separate and uninfluenced by the outside world, prison music can exist. Although prisons today are as physically isolated as they were in the early 1900s, and access to them is heavily restricted, times have changed. Correctional facilities have become bureaucratic warehouses, and prisoners, through television, are more connected to societal ambience than they used to be. Prison music, therefore, has lost the relevance it once had for prisoners.

CONCLUSION

Some form of prison music as an expression of the incarceration experience is still written and sung from inside prisons. However, due to the pervasive availability of contemporary popular music within the institution, prison music of the 21st century is not necessarily focused on the prison world. Even songs that deal with the loss of loved ones may not be easily identified as prison songs. Unless the lyrics of the song clearly relate to the incarceration experience, it is difficult to identify the music as prison music.

Undoubtedly, prisoners will continue to create music regardless of scholarly arguments about the purist nature of it. Prisoners will form bands and choirs and dream about being successful musicians when released. The Lifers' Group at Rahway State Prison in New Jersey, however, has gone beyond these individual efforts. They produced the first rap music recording in which prisoners on the inside rap directly "to kids on the outside about prison life as it really is, and not some fictionalized version" (New Opportunities, 1992). Contrary to much criticism of rap, these men are using music in an innovative approach to deterrence. One wonders what the men who sang the work songs on the prison plantations and the chain gangs of yesteryear would say.

PRISON NURSERIES

Prison nurseries are residential units within prisons in which young children of inmates reside, usually with their mothers. Although they are rare in the United States, prison nurseries are commonplace in women's prisons elsewhere throughout the world. A 1987 survey of 70 nations found that only four—Suriname, Liberia, the Bahamas, and the United States—did not allow pregnant inmates to keep their babies with them after they were born in prison. All but 14 nations permitted young children born before their mothers' incarceration to accompany them to prison.

HISTORY

Prior to the 1950s, prison nurseries existed in many states, including California, Connecticut, Florida, Illinois, Kansas, Massachusetts, Maine, New York, New Jersey, Ohio, Virginia, and Wyoming. Some nurseries welcomed babies born prior to their mothers' incarceration as well as those born during imprisonment. For example, inmates at the Connecticut Women's Prison in Niantic gave birth to 47 infants in 1937. They joined 56 babies in the nursery who had come to prison with their mothers. The Niantic nursery remained full until the end of the 1940s, with almost as many babies at the prison as inmates, no doubt reflecting the criminalization of nonmarital sex by women. At the State Industrial Farm for Women in Lansing, Kansas, where children could remain with their mothers up to age two, children sometimes outnumbered the inmates.

Even states that did not have formal nurseries often allowed mothers to keep infants born at the prison who had no relatives to take them. These babies lived amid the general prison population, where many women vied for the chance to play surrogate mother.

Attitudes toward incarcerated mothers and their children changed in the United States after World War II. During the following decades, every state except New York closed its prison nurseries. Most prisoners were required to surrender their babies to relatives or child welfare agencies as soon as they gave birth. Legislators and prison administrators judged prison nurseries to be too expensive and the prison environment too bleak for young children, even babies. In any case, mothers in prison were deemed to be unsuited to the task of rearing the next generation.

NURSERIES OUTSIDE THE UNITED STATES

Most other prison systems throughout the world, meanwhile, continued to sustain the mother–child bond despite maternal incarceration. In some prisons in Central and South America, Africa, and Asia, entire families reside in prisons where a parent is

incarcerated. In others, like the women's prison in Córdoba, Argentina, young children may live with their mothers amid the general prison population or, as in the prison outside Buenos Aires, may reside in a separate wing for mothers and babies. Separate wings for mothers and young children can also be found within traditional prisons in Europe, such as the mother–child unit at Holloway, a large, high-security women's prison in London. Perhaps the only Western European nation that does not allow young children to reside in prison is Norway, which bans incarceration of mothers with young children altogether.

Perhaps the best-known prison nursery can be found in Frankfurt, Germany. At the women's prison in Preungesheim, mothers and babies under the age of 18 months reside in a separate building within the walls of the maximum-security prison. Children older than that but too young to attend school live with their mothers in a special campus-style unit built just beyond the prison's walls. Certified child care workers tend the children while their mothers work during the day at the prison or in the city. Mothers are responsible for their own children at all other times, and may take their children out into the community during specified hours. School-aged children are not allowed to live at the prison, but still the mother–child bond can be maintained. Mothers of children who reside in Frankfurt with relatives can be approved for the work-release job of being mother and homemaker for their own families, performing the myriad tasks of motherhood in their children's home during the day, but sleeping at the prison at night.

PRESENT-DAY NURSERIES IN THE UNITED STATES

The only prison nursery in the United States that remained open throughout the 20th century is the one at Bedford Hills, New York. There, mothers who give birth while in prison can keep their babies with them until they are 18 months old. Mothers and babies reside in a secure dormitory setting until the babies are one year old, at which time they move to single rooms. During the day, specially trained inmates care for the babies in a cheerful nursery while their mothers work at jobs within the prison and take parenting classes. Although most of the mothers complete their sentences in time to leave the prison with their babies, about 20% do not. In those cases, most of the children go to relatives outside the prison or are cared for in a special foster home that was established by the long-time director of the prison's nursery, Sister Elaine Roulet. Bedford Hills is an old, fortress-style prison with little room for modern amenities. Yet not only did the prison's staff keep alive what was for a time the only prison nursery in the United States, but they also pioneered summer camps for older children at the prison and child–parent-friendly visitation rooms and practices. In addition to the nursery at Bedford Hills, New York State now maintains nurseries at Taconic, a medium-security prison for women near Bedford Hills, and at the jail on Rikers Island.

In 1994, the Nebraska Correctional Center for Women became the first U.S. prison outside New York to open a nursery in more than half a century. Unlike Bedford Hills, pregnant inmates are only allowed to keep their babies with them at the prison if they have fewer than 18 months to serve—the maximum age for children in the program. Thus, all eligible mothers have release dates that allow them to leave the prison at the same time as their babies. As in New York, inmates take parenting and child care classes at the prison before and after giving birth. During the day, trained inmates provide childcare while the mothers work and attend classes.

Washington State and Ohio became the third and fourth states to open nurseries in 1999 and 2001. Like the Nebraska nursery, the one at Marysville, Ohio, is physically removed from most of the inmate population and is limited to nonviolent inmates with sentences of fewer than 18 months. The nursery at the Washington Corrections Center for Women in Gig Harbor is more expansive. Any mother who retains custody of her child is eligible for the program if she has a release date within three years of her baby's birth. The first 18 months are spent together at the prison, at which time mother and child can go to one of two prerelease centers for an additional 18 months. Even mothers who have committed

crimes of violence can apply if they will be the primary caregivers of their child on their release from prison. A program administrator explained, "If they are going to be parents on the outside, they should be in our program." The babies of Gig Harbor are also less quarantined from the general prison population. Administrators note that the presence of babies at the prison has a "calming effect" on the institution.

ARGUMENTS FOR AND AGAINST NURSERIES

Arguments against prison nurseries usually focus on four concerns: the well-being of the child, the depravity of the mother, cost, and liability. A prison, critics maintain, is no place to raise a child; it is a dangerous, unwholesome environment with unnatural constraints on its residents regardless of age. Incarcerated mothers have by definition violated important societal norms. Most would not be in prison if they had placed the welfare of their children first in their lives. They are unfit mothers who are likely to raise children as prone to crime as they have proved themselves to be. Furthermore, nurseries take space and are an added expense for overcrowded, underfunded prisons, and are an unnecessary risk for administrators dealing with litigation-prone inmate populations.

Even critics of prisons raise objections to nurseries. They fear that judges may be more likely to send pregnant women to prison if they will not be separated from their newborns. They also worry that nurseries, which serve the needs of only a few hundred incarcerated mothers and their babies, detract from the far more pressing need to maintain bonds between inmate mothers and the hundreds of thousands of children they leave behind when they go to prison.

Proponents respond that babies thrive in prison nurseries where they receive an abundance of care, attention, and affection and are oblivious to negative aspects of the prison world. Prison administrators note that many mothers in their nursery programs have demonstrated poor parenting skills on the outside, yet almost all prove to be devoted mothers on the inside, where they are drug and alcohol free and receive training and help with crucial parenting skills, often for the first time. Nursery proponents reason that since most inmates will be the primary custodial parents for their children after their release from prison, their children—and ultimately society as a whole—will benefit from nurturing the mother–child bond in a closely supervised setting rather than ripping apart the bond at birth and hoping it will mend itself once the mother is released. That alone, they suggest, justifies the added expense. Administrators also cite the beneficial effects that babies have on the prison environment as a whole, with corresponding decreases in conflicts and disciplinary problems throughout the institution, and an absence of lawsuits. Without carefully designed longitudinal research regarding the long-term effects of nurseries on mothers and children in the United States or elsewhere, debate between the two sides is likely to be inconclusive.

PRISON SHIPS

Prison ships are decommissioned ships (usually warships or barges) that have been refitted to accommodate

inmates serving a period of incarceration. The ships may be moored offshore and/or adjacent to a land-based prison or military establishment. Although convicted felons had been sentenced to penal servitude aboard the galley ships of most Mediterranean nations from antiquity through to the 17th century, the use of ships as places of confinement did not commence until the mid-18th century in England.

Collectively, prison ships became known as "prison hulks" or "the hulks" during the 18th century. From their inception in the 1750s to their general demise in 1859, these ships tended to be rat infested, with disease-ridden conditions and brutal practices. The early prison hulk was a product of three factors: (1) the various wars that England fought against her European neighbors, notably France during the 18th century; (2) the American Revolution; and (3) the increasing incidence of crime among the English poor during the 18th and 19th centuries. Prison hulks were employed in America, Antigua, Australia, Barbados, Bermuda, Canada, Gibraltar, Ireland, Malta, and South Africa. In recent years, due to problems of overcrowding, some U.S. jurisdictions have once again started to place inmates on prison ships.

18th-CENTURY ORIGINS

During the 18th century, England operated two penal systems under the civil authority. Since the time of King Henry II, counties (*shires* in England) had operated primitive lockups and *gaols* (pronounced "jails") under the administration of local Justices of the Peace; gaols were operated by gaolers who made their living by charging for food and lodging. During the latter part of the 18th century, the central government introduced legislation that authorized the temporary holding of convicts in decommissioned warships (or "hulks") and the building of two penitentiaries.

There were few penal sanctions authorized by England's criminal code during the late 18th and early 19th centuries. Punishments of the day included fines, military service, floggings, penal servitude (imprisonment at hard labor), transportation, and death. While military service was a popular sentence during both the Seven Years War (1756–1763) and the Napoleonic Wars, offenders convicted of non-capital crimes generally received the sentence of transportation. Capital offenders could also often have their death sentence commuted to transportation. Transportation was a form of banishment whereby convicts were transported to one of England's overseas colonies, where they were required to remain for a specified number of years (usually 7 years for non-capital crimes and 14 years for commuted capital crimes).

As the number of convicts awaiting transportation increased so, too, did the strain on the prison system. The rising numbers, both among those sentenced to a period of incarceration and those awaiting transportation, demanded that new means of housing be found. The use of prison hulks was seen as a temporary solution to the problem. Although hulks had early been employed by the Royal Navy to hold French prisoners of war during the Seven Years War, the application of them to deal with civilian prisoners was unique for the time.

The first civilian prison hulks were moored at Portsmouth Harbor and on the Thames River at Woolwich Warren. Large wards were constructed by partitioning the open gundecks, and smaller cells were made from the junior officers' cabins or constructed anew on the topside deck. Dismantling of the masts and rigging permitted an additional area to be built above the main deck of the ship. Covered by a large wooden roof that ran the length of the ship, the hulk may have given the casual observer an impression of a floating barracks, whereas a closer inspection would reveal a structure that was more akin to a floating dungeon. Indeed, like the prisons on land, little fresh air and sunlight entered the hulks, food was scarce and of poor quality, disease was rampant, and inmates were lorded over by brutal guards who had learned their trade in the notorious Newgate Prison.

Inmates were far from idle during their time of incarceration, since they were put to hard labor at the naval dockyard in Portsmouth, dredging the Thames River and building the Royal Arsenal at Woolwich. Less fortunate were those who were transported to other prison hulks in the far reaches of the British

Photo 4 *Marine drill with bayonets on a wharf near the prison ship U.S.S. New Hampshire in the late 19th century*

Empire. Rather than banishment to a new world, these convicts would find their new conditions similar to what they had experienced in England, but with two new tropical companions to overcome: the oppressive heat and deadly fevers (usually malaria).

The American Revolution further strained an already inadequate hulk system as the British lost the ability to transport convicts to America. Those convicts who would have been sent to the American colonies and released were either held in English hulks or sent to Bermuda. This did not result, however, in the discontinuation of prison hulks in the American colonies.

Those hulks that were stationed in the American colonies prior to the American Revolution, notably in the harbors of New York, Charleston, and Savannah, continued to operate throughout the conflict and held large numbers of colonial prisoners of war and civilian rebels or patriots taken by the British. Indeed, captured American seamen were routinely given the choice between serving in the Royal Navy or going into captivity aboard a prison hulk. The most notorious were the *Jersey* and *Whitby*. These and the remaining six New York-based hulks held approximately 13,000 prisoners, while Charleston and Savannah held nearly 3,000 prisoners throughout the conflict. The end of the American Revolution was accompanied by the release of the prisoners held in the hulks and the closing of a dark chapter of British colonial history.

19TH-CENTURY DEMISE

Even though the American prison hulk experience was negative, this fact did not preclude Americans from employing hulks during the 19th century. The Gold Rush in California during the mid-1800s resulted in a large influx of both settlers and crime in places like San Francisco and Sacramento. In both cities, the town fathers sought a quick and inexpensive alternative to constructing a local jail. San Francisco, for its part, purchased the brig *Euphemia* and converted it into a floating jail, with single cells that would operate until a local land-based jail was constructed. One year later, Sacramento rented the bark *Strafford* to serve as a floating jail that would be moored on the banks of the Sacramento River.

Unlike San Francisco, Sacramento eventually purchased and converted two additional ships for use as floating jails. Since the *Strafford* would serve as a prison ship only for a year before being returned to its owners, the city purchased the brig *Stirling,* only to have it sink shortly after accepting prisoners. This necessitated the purchase of another brig, the *La Grange*, which would be moored on the American River. The *La Grange* would serve as Sacramento's longest floating jail until it sank in 1859.

As in California, the Australian Gold Rush brought forth an increase in crime in the state of Victoria. Similarly, the inadequacy of the existing gaol resulted in the purchase and conversion of five ships to serve as prison hulks in Melbourne's Port Phillip Bay. Conditions for the 700 convicts aboard these Australian prison hulks were just as desperate as they were in their British counterparts and led to their discontinuance in that country.

Perhaps the final straw was the conviction of Baxter Grundy, a lawyer, who wrote of the deplorable conditions aboard the British hulk, *Thames*, on which he was imprisoned. His passionate letters to Lord Grey contributed to the government of the day declaring an end to the use of hulks as a penal sanction in England during 1859.

20th-CENTURY REVIVAL

Nearly 150 years after the British government ordered the closure of the hulk system, the prison ship is enjoying a limited revival in England and the United States. This revival has occurred for two of the same reasons that led to the use of the prison hulk to house civilian convicts during the 18th century: increasing crime and a subsequent crisis in prison crowding. While transportation in the 18th-century context is not an option for today's courts, overcrowded correctional agencies are able to shift inmates to other correctional agencies that will rent vacant beds to them. Like the 18th century, however, this has also contributed to the use of decommissioned ships to house inmates as, yet again, a temporary measure to deal with emergency prison accommodation problems.

The New York City Department of Corrections was faced with increasing numbers of short-term inmates during the 1980s as a result of increased crime and the national "war on drugs." With its facilities at Rikers Island operating at or over capacity, two Staten Island ferries were purchased and reconditioned, each ferry to securely house 162 minimum-security inmates. Since 1987, these two prison ships have served as annexes to the Otis Bantum Correctional Center on the northern tip of Rikers Island. Expansion of their use of prison ships had also been explored by the New York City Department of Corrections, which sought Coast Guard certification of a European-built 800-person floating prison whose purchase it was exploring during 1989. By 1996, the department had reversed its stand on "floating jails" due to their single-cell design and general lack of space for support services and disposed of them.

With the cessation of hostilities between Great Britain and Argentina over control of the Falkland Islands in 1982, Britain sought to increase its military presence in the colony without the costs of building a permanent base. The solution was to order the construction of a "floating" base or barge in which to house several hundred troops and could be moved as government priorities changed. By 1985, British government policies had changed, and the five-story barge (containing accommodation, kitchen, gymnasium, and a chapel) had been declared surplus. Years later, and in the face of economic restrictions on purchasing land and building a new prison, the surplus barge was bought by Her Majesty's Prison Service to deal with prison crowding. After being refitted to meet the security and housing needs of 400 inmates, the new prison ship was named Her Majesty's Prison *Weare* and was moored in Portsmouth Harbor in Dorset in 1997.

CONCLUSION

The original prison ships or hulks were a temporary, cost-efficient expedient to the problems of prison overcrowding in England and the demands of empire building. The conditions that were present in the hulks were similar to and, in some cases, worse than those found in the land-based prisons of the time. This temporary measure evolved into an accepted penal practice over the years and an exercise in empire building as hulks were employed in various parts of the British Empire to build public works such as fortifications, harbor defenses, and naval dockyards.

Prison hulks were also employed by American cities and Australian states during the 19th century as temporary, cost-efficient expedients for the same reasons. Conditions in these latter prison hulks were similar to those in their land-based cousins. Both the United Kingdom and the United States returned to using prison ships during the last two decades of the 20th century to deal with the same conditions that were present during the 18th and 19th centuries. Unlike the conditions found earlier, though, these modern hulks complied with national standards for the safe and humane custody of inmates.

It may be that, as modern correctional agencies face the crises of increasing prison populations and decreasing funding for building new prisons, limited funds might be found for purchasing and renovating decommissioned ships as temporary measures. Indeed, if this practice continues into the 21st century, history might repeat itself as the new generation of prison and jail ships themselves become

overcrowded. Additional strain caused by the combination of overcrowding, lack of on-board services (e.g., recreational, chaplaincy, and other services), and ongoing maintenance costs will most likely contribute to prison ships falling out of use in 21st century, as they did in the 19th century.

PRISONER LITIGATION

Prisoner litigation has always provided one of the primary means of challenging prison conditions and practices as well as parole matters. Prisoners may go to court to demand a new trial, or file writs of habeas corpus to challenge their criminal convictions. Many actions require prisoners to use a grievance system and to exhaust administrative remedies before proceeding to court, but there are different rules for each state and for the federal system. Prisoners must also abide by the appropriate statutes of limitations, which restrict how long they can wait before suing about an event. Different kinds of suits are subject to different limitations periods, and if the deadline is missed, the case may be permanently barred.

Many prisoners have no option but to represent themselves, because most lawyers have little knowledge of prisoner litigation and most prisoners have no funds to pay for attorney services. Legal research for such activity is crucial, but many prisoners have, at best, limited access to legal materials. They also often lack writing skills and knowledge of court procedure. As a result, federal district courts immediately dismiss approximately 97% of pro se lawsuits filed (where the inmate represents him- or herself).

MOTIONS FOR A NEW TRIAL

A motion for a new trial may be placed after a guilty verdict has been rendered. Each state has specific procedures to be followed. Many are similar to Rule 33 of the Federal Rules of Criminal Procedure. Most jurisdictions allow a motion for a new trial based on newly discovered evidence to be filed within two years of the verdict. Motions based on other grounds must be filed within seven days of the verdict. A new trial is authorized when it would be in the interests of justice, including when the inmate did not receive counsel, if there was juror misconduct, interference of attorney–client communications, or any improper reference to past criminal conduct. A motion for a new trial based on newly discovered evidence must allege that (1) the evidence was newly discovered after trial, (2) the defendant was diligent in learning of the evidence, (3) the evidence is material to the trial issues, (4) the evidence is not merely cumulative or for impeachment purposes, and (5) the evidence would probably produce acquittal at a new trial.

ACTIONS BY STATE PRISONERS

Prisoners may bring legal claims in state courts under relevant state laws, but there are also federal statutes that allow actions for violations of prisoners' constitutional rights. For example, Title 42 U.S.C. §1983 allows a prisoner to sue for "deprivation of any rights, privileges, or immunities secured by the Constitution and laws" caused by persons acting "under color of state law," while Title 28 U.S.C. §1343(3) provides jurisdiction for a federal court to hear the case. "Persons" who may be sued under §1983 include individuals who participated in the constitutional violation, city and county governments, and their agencies. States and their agencies may not be sued because they are immune under the Eleventh Amendment. Supervisory officials who did not commit the act or were not present when they occurred also cannot be sued.

Under the doctrine of "pendant Jurisdiction," a federal court will adjudicate claims alleging violations of a state's common law, regulations, statutes, or constitution that are not of a federal nature so long as there is a nonfrivolous federal law claim arising from the same facts. A §1983 suit cannot be used as a substitute for a state court appeal.

OTHER CIVIL RIGHTS STATUTES

Under Title 42 U.S.C. §1981, individuals may sue over racial discrimination. This statute, unlike §1983, can be used alleging conduct by private parties and is not limited to actions taken under color of state law. Private conduct is also actionable under Title 42 U.S.C. §1985(3), which provides for damage actions against persons who "conspire [to] . . . deprive any person . . . of the equal protection of the laws or of equal privileges and immunities under the law." Title 42 U.S.C. §1986 provides for damage liability against anybody who, knowing of a §1985 conspiracy and having the power to prevent it, neglects or refuses to do so. Under these statutes, there must be a class-based, discriminatory purpose likely to cause ill will behind the conspirator's action, or the complaint will be dismissed (i.e., there must have been an intent to violate the statute).

POSTCONVICTION REMEDIES

State prisoners who are in custody and who have not waived or forfeited the right to present an issue may file a writ of habeas corpus (Title 28 U.S.C. §2254) to challenge their convictions after they have exhausted the appeals process. Prisoners must show that the issues in the petition were raised at trial and argued on appeal or in some state court proceeding (i.e., one may not raise a previously unargued new issue for the first time in federal court). The federal court must also find that the petitioner has exhausted all remedies available in the state courts. If any one of the issues raised in the petition was not briefed for the state courts, the federal court must dismiss the petition. A district court may dismiss subsequent petitions if it finds a prisoner failed to assert new grounds in a prior petition.

Generally, a procedural forfeiture will result in dismissal of a postconviction petition. There are two exceptions to this rule for state prisoners: (1) If a state appellate court considers an issue forfeited at the lower court level, the federal court can consider the issue as well; (2) if the prisoner can show "cause" for failing to follow a court rule and "actual prejudice" resulting from the alleged issue.

ACTIONS BY FEDERAL PRISONERS

Declaratory, Injunctive, and Damage Actions

There is no statute like §1983 for suits against federal officials who violate federal prisoners' rights. However, federal courts have always assumed they could issue commands against federal officials, and in *Bivins v. Six Unknown Federal Narcotics Agents* (1971), the Supreme Court allowed federal officials to be sued for damage. A *Bivins* action is generally regarded as the §1983 federal equivalent—a damage action for those acting under color of federal (as opposed to state) law. Generally, administrative remedies must be exhausted under either claim.

Title 28 U.S.C. §§1346(b), 2671-2680, the Federal Tort Claims Act

With the Federal Tort Claims Act (FTCA), passed in 1946, the U.S. government waived sovereign immunity for tort liability (with certain exceptions). Thus, the federal government, under the FTCA, is now liable for acts that would be common-law torts in the state where they occurred under the doctrine of *respondeat superior*. This act does not make the government liable for constitutional violations, but if the offending act involves both common-law torts and constitutional violations, one can bring an FTCA or *Bivins* action or both (even in the same lawsuit). There is no right to a jury trial or punitive damages in an FTCA action. An FTCA judgment bars any later recovery against individual officials.

An FTCA claim might ensue for a wrongful or negligent act by a federal official resulting in a prisoner's personal injury. Examples of intentional torts

are assaults, batteries, and false imprisonment. Acts or failures to act or to use such care as a reasonably prudent and careful person under similar circumstances would use and that resulted in any nonwork-related injury are examples of negligence that might lead to an FTCA lawsuit by a prisoner. There must have been a *duty* to follow a certain standard of care to protect the prisoner from unreasonable risk, a *failure* by prison personnel to perform the duty, and *actual injury*. The duty of care owed by Federal Bureau of Prisons personnel is fixed by Title 42 U.S.C. §4042, independent of an inconsistent state rule. If prison personnel were performing a "discretionary function" (under no set standard), it is a viable defense to the action. If the function was at the planning level, it is discretionary, but if it is at the operational level, it is nondiscretionary.

Title 18 U.S.C. §4126

The Federal Prison Industries' Inmate Accident Compensation System provides compensation to federal prisoners who are injured during the course of their employment in a federal prison. It is the exclusive remedy for those hurt while working in federal prisons. The guidelines and criteria are promulgated as rules by the Bureau of Prisons at 28 CFR §§301 et seq. Compensation (the minimum wage set by the Fair Labor Standards Act) will not be provided until release from prison. The Federal Employees Compensation Act (Title 18 U.S.C. §4121) is followed to determine disability and payment.

POSTCONVICTION REMEDIES FOR FEDERAL INMATES

Title 28 U.S.C. §2255, Motion to Vacate, Set Aside, or Correct a Sentence

If a prisoner appeals a sentence and loses, he or she may bring a postconviction proceeding under this statute in the court where the sentence and conviction were obtained. In order to entertain such a petition, the court must find that the prisoner is (1) in "custody," (2) that the prisoner used the ordinary appeals procedure before resorting to a postconviction remedy, and (3) that the prisoner did not waive the right to present an issue by failing to preserve it. It must be shown that the issues in the petition were raised at trial, were argued on appeal, and that that person is still in custody (incarcerated, on parole, probation, or bail) when the petition is filed. Generally, the petition will be dismissed if there has been a procedural forfeit, but there is an exception to this rule if the petitioner can show "cause" for failing to follow court rules and can show "actual prejudice" resulting from the alleged error. If the defendant has received an adverse decision on an issue raised on direct appeal, that issue cannot be relitigated in a §2255 motion unless there has been a change in a law that must be applied retroactively.

A court should grant the §2255 motion if (1) the criminal court had no jurisdiction; (2) the sentence was illegal; (3) the defendant's constitutional rights were violated, rendering the judgment subject to collateral attack; or (4) some error of a fundamental nature was committed that resulted in a miscarriage of justice. Generally, technical violations of rules relating to indictments and guilty pleas are not sufficient grounds for §2255 relief.

A defendant will receive a hearing on a §2255 motion only if the motion contains sufficient facts to show an entitlement to relief. Even if a hearing is held, a prisoner does not have a right to be present, but if a hearing is held, the court should appoint counsel for an indigent defendant. At an evidentiary hearing, the defendant must establish allegations by a preponderance of the evidence, and the federal district court will usually make findings of fact and conclusions of law for appellate review. Appellate review can only be obtained if the prisoner seeks and receives a certificate of probable cause that there is a genuine issue.

Title 28 U.S.C. §2241, Motion for a Writ of Habeas Corpus

Generally, this writ is used to challenge the way a prisoner's sentence is being carried out. It is filed in the district where the prisoner is confined. Examples of use of this writ include parole

procedures, sentence computations, segregation and transfer issues, loss of good time, or detention beyond the release date. Exhaustion of administrative remedies is almost always required before pursuit of a §2241 action, and a federal prisoner may seek this writ only where it is not covered by §2255 or where a §2255 remedy is inadequate or ineffective to test the legality of the detention or the duration of the confinement.

CONCLUSION

Although all branches of government have tried to limit prisoner litigation, inmates still have various outlets in state and federal courts to pursue nonfrivolous claims of violation of their constitutional, statutory, and common-law rights. The fact that prisoners have the right to litigate does not translate into them being successful in that pursuit. Courts traditionally defer to the government when it defends against inmate legal actions. Inmates have a difficult time understanding the procedural rules, which limits their ability to advance to consideration of the merit of their claims.

PRISONER OF WAR CAMPS

Prisoner of war (POW) camps are usually temporary and/or semi-permanent facilities designed to hold prisoners of war until the end of armed conflict. Such camps are generally located either in areas away from the front lines or in the home country of the capturing nation. They are often guarded by troops who are not fit for frontline service (those who are over age, have medical restrictions, and so forth). Civilian prisons and penitentiaries may not house POWs. The conditions of prisoner of war camps are dictated by the Geneva Convention (1864, 1906, 1929, and 1949, followed by two protocols added during 1977).

19TH-CENTURY WARS

During the American Revolution, both the British and Continental armies made use of existing jails, prisons, and guardrooms in nearby forts as well as converted warehouses to confine prisoners of war. British military commanders also employed prison hulks (decommissioned warships adapted to hold civil prisoners) that were moored in New York, Charleston, and Savannah harbors and impressment (captured American seamen were routinely given the choice between serving in the Royal Navy or going into captivity aboard a prison hulk). Nearly 11,000 of the estimated 13,000 prisoners died because of beatings, starvation, and disease.

Less than 40 years after the Revolutionary War, the United States and Britain again found themselves in battle. Prisoners taken during the War of 1812 were held under much better conditions of confinement. As in the earlier conflict, guardrooms at existing forts and civilian jails and prisons were used to confine those prisoners of war who were not paroled or exchanged. Unlike during the Revolutionary War, neither side employed prison hulks.

Guardrooms at or near existing military forts were first used to hold prisoners of war during the American Civil War. When these facilities proved inadequate to hold the increasing numbers, civilian

jails and prisons were pressed into service, but they, too, later proved inadequate to meet the demand for holding space. By the end of the conflict, five classes of facilities held prisoners of war, namely: (1) fortifications like the existing military fortifications at Fort Warren, Massachusetts, and Fort Pickney, South Carolina; (2) converted warehouse buildings such as Libby Prison, Virginia, and Gratiot State Prison, Missouri; (3) tent cities like those found at Point Lookout, Maryland, and Belle Isle, Michigan; (4) stockades such as Andersonville, Georgia, and Salisbury, North Carolina; and (5) converted jails and prisons like Elmira, New York. The operation of these five types of facilities also gave rise to a new term: "soldier prisons."

The confinement conditions in the approximately 150 Civil War prisoner of war camps varied between the North and South and between camps on both sides. Elmira in the North and Andersonville in the South stand out from the camps that were operated by both sides during the war. Andersonville was a stockade enclosure whose prisoners were forced to dig holes in the ground for shelter and forage for scraps of wood or other materials from which to construct small, above-ground shelters known as "shebangs," while Elmira consisted of numerous poorly heated wooden barracks and tents with few amenities.

Both camps suffered high rates of death and disease among their respective prisoner populations. Elmira's prisoners endured high rates of diarrhea, exposure (during the winter months), malnutrition, scurvy, and small pox that resulted in 2,963 Confederate deaths, or an average of 16 Confederate deaths per day. At Andersonville, where more 14,000 federal troops had died by 1865, prisoners of war suffered from diarrhea, dysentery, gangrene, and scurvy as well as the malnutrition that was endemic to prisoners of war on both sides. Brutality exacerbated the confinement conditions at both Andersonville and Elmira. These conditions eventually led to the courts-martial of the commandants of both camps, Colonel Frederick Eastman at Elmira and Captain Henry Wirz at Andersonville; the former was acquitted while the latter was convicted and executed.

WORLD WARS I AND II

Camps and holding facilities for prisoners of war during the First World War (1914–1918) were quite different on either side of the Atlantic. Facilities for POWs in the United States ranged from the comfortable living conditions of merchant sailors interned aboard their respective ships to the spartan conditions experienced by captured naval personnel in stockade facilities at military forts. POWs held in Western Europe were generally moved to a semi-permanent camp in the far rear areas in France or temporary camps constructed on large estates of the titled gentry in England, where they were housed in above-ground buildings that were heated, albeit not greatly; medical aid and regular food were provided.

The adoption of the third Geneva Convention (1929) formalized the treatment of prisoners of war, but had little effect on how American POW camps operated or on how enemy POWs were treated during the last four years of the Second World War (1939–1945). While this convention guaranteed (1) humane treatment and protection from acts of violence, insults, public curiosity, and reprisals; (2) the provision of necessary medical aid; (3) respect for their persons, military rank, honor, and personal property; (4) protection from torture or unpleasantness to gain military information; and (5) internment in towns, fortresses, or camps sufficiently removed from the fighting zone for them to be out of danger, such conditions were a part of POW life for those captured and held by American forces. To ensure compliance with these conditions, an inspection role for the International Committee of the Red Cross was included in the 1929 convention.

Prisoners of war taken during the Second World War were processed into long-term captivity in a similar fashion. American prisoner of war camps in both England and the United States provided conditions of confinement that included semi-permanent, heated buildings, laundry, recreation halls as well as open air recreation, and sports equipment. POWs followed their own existing rank and command structures, which, in turn, contributed to better internal discipline as well as better organized escape attempts. During the last two years of the war, many

of these same prisoners of war were either escorted for daily work or paroled to local farms where they lived, worked, and contributed to the national economy. Japanese prisoners of war were usually transferred from the island where they were captured to an immediate rear area that was often hundreds of miles away from the combat. The conditions of confinement in the rear area prisoner of war camps were similar to those experienced by American and Allied troops in the front lines of the Pacific theater.

KOREA

In the Korean War (1950–1953), POWs taken by American and Allied forces were held in the country in which they were captured, since there were no out-of-theater POW camps. Allied POW camps were operated by the host nation (South Korea) with other United Nations forces providing troops to act as perimeter guards on a rotational basis. The camps were clearly identified, medical services were provided, and provisions were made for recreation and self-government using the existing rank hierarchy of the North Korean and Chinese forces. There were reports of less than humane treatment, including acts of violence, at the hands of the South Koreans throughout the war, even though the International Committee of the Red Cross routinely inspected the POW camps.

VIETNAM

No American POW camps operated during the Vietnam War (1956–1975). Instead, prisoners of war were held in camps operated by the host state (South Vietnam) at which the Allied forces provided additional security on a rotational basis. There were no out-of-theater POW camps. In direct contravention to the Geneva Convention (1949), former colonial prisons were often expanded to hold the large numbers of captured POWs as well as those individuals accused of being Viet Cong. The conditions in these prisons became deplorable when overcrowding was exacerbated by the lack of adequate food, shelter, regular medical care, and torture at the hands of the South Vietnamese guard staff.

THE GULF WARS

During both the First and Second Gulf Wars (1991 and 2003), large numbers of Iraqi troops either surrendered or were captured by U.S. and Coalition forces in Kuwait and Iraq. Due to the relatively small size of the theater and the speed of the ground campaign, the largest type of prisoner of war facility operated by American forces was prisoner collection points (POW cages). No semi-permanent facilities of the types seen during the Second World War or Korea were operated. As during those two earlier conflicts, captured or surrendered enemy troops were passed from the capturing front-line unit through its immediate headquarters to POW cages in the immediate rear area, where they received food and medical aid and were interrogated in depth.

THE WAR ON TERROR

Large numbers of prisoners and prisoners of war were taken by American and Allied forces during the 2002 invasion of Afghanistan. The status of these individuals as belligerents, enemy combatants, or civilians has been problematic due to a blurring of these definitions by the U.S. political leadership. The U.S. military, for example, claims to have treated its Taliban prisoners in compliance with the articles and protocols of the Geneva Conventions while also providing prisoners of war in its in-theater POW camps with food, medical aid, and other necessities of life required under the Geneva Conventions. Due to restrictions on monitoring, their claims cannot be evaluated.

In contrast, the transfer of suspected Al-Qaeda fighters captured in Afghanistan appears to have violated conditions of both the Geneva Conventions and the U.S. Constitution in its transfer of such persons to the American military facility at Guantánamo Bay, Cuba. The Geneva Conventions require the detaining power, which in this case is United States, to keep protected persons in an environment that is not unhealthy to them. The United States must also provide shelter of a similar standard to that of the members of its own armed forces. It must also provide tribunals to

determine POW status. None of these conditions have been met.

Refusing to define the suspected Al-Qaeda fighters as POWs raises considerable challenges under both international and U.S. law. From the standpoint of American jurisprudence, for example, the Supreme Court has ruled individuals must be accorded the due process protections of the U.S. Constitution regardless of how they arrived on American soil; the base at Guantánamo Bay is sovereign U.S. territory. Yet, as of 2003, no legal challenges either from within the United States or from outside bodies had been successful.

CONCLUSION

Prison of war camps should provide the minimum conditions of confinement under Geneva Conventions (1949). Housing, latrine, washing, recreational, and medical services are provided within the camps. The daily routine of the camps keep POWs as busy as possible, but unlike civil prisoners, they may not be put to work except for harvesting crops and other non-war-related activities. POW camps should be regularly inspected by officials from the International Federation of the Red Cross and Red Crescent Societies in order to ensure that POWs are not treated inhumanely.

PRISONER PAY

While prison labor has long been a practice in most correctional institutions, the notion that prisoners should be paid for their work is relatively new. In the early penitentiaries, prisoners were expected to work to achieve a number of correctional objectives. At that time, it was believed that hard labor was a form of punishment in and of itself; it followed, therefore, that pay for labor was forfeited with criminal conviction. Others argued that labor was an important component of prison management, since it was seen to combat individual idleness and collective restlessness during confinement. Rehabilitation was also an important concern for those who supported prison labor. Work was itself viewed as a form of rehabilitation as well as a teaching mechanism through which offenders learned valuable skills that could be used in the legitimate job market. Most recently, national focus on prisoner reentry to the outside world has lent new support to the view that prison labor endows offenders with the job skills and experience necessary for successful reentry.

HISTORY

Until the early 20th century, prisoners were commonly used as contract laborers who were leased to private businesses for a fee payable to the prison. However, following examples of widespread corruption of officials and abuse of prisoners, by the 1900s most states had banned prison contract labor. They replaced it with the public account system, in which prisons bought raw materials that prisoners used to make goods, and the public works system, in which unpaid prison labor was used to provide necessary services such as road construction or repairs. These practices were short-lived, as they were thought to be unfair to private businesses, which had to compete against the free labor of prison workers, at the same time as they exploited prison workers, who were paid nothing for their work.

Federal legislation designed to address these concerns was introduced in the early 1900s, which limited the export of prison-made goods and the use of convict labor on government contracts. A number of exceptions were carved out in the 1940s that increased demand for prison labor. Beginning in the 1950s, the state-use system, which allows prisoners to produce items for use by the prison itself and for

government agencies, often with pay, became common practice. This remains the most common form of prison work today.

INTRODUCING PRISON PAY

In 1973, President Richard M. Nixon issued an order that entitled federal prisoners to be paid for their labor, and most states followed suit with similar legislation. In 1979, restrictions on interstate sale of prison-made goods were lifted, and prisoners nationwide were required to be paid minimum wage for labor on products sold interstate. They did not have to be paid for products retained within a state or sold outside the United States.

These wage requirements laid the groundwork for a new type of prison work in the United States, the use of "free market" prison industry. Private companies employing prison labor has notably increased in recent years, with such examples as "Prison Blues," a line of prison-made clothing and furnishings from the Unigroup Correctional Industries of Oregon, which boasts annual sales in excess of $20 million and greater than minimum wages for prison workers.

THE SITUATION TODAY

Currently, all jurisdictions in the United States allow or require inmates to participate in prison labor. However, they differ in the rate of compensation to prisoners. Georgia, for example, forces inmates to work in institutional jobs and prison industries, but provides them with neither monetary compensation nor credits toward time for prison labor. Many states offer one rate of pay for institutional jobs (for example, $0.15–$1.30 an hour as a janitor) and minimum wage for jobs in prison industries. Still other states provide competitive wages to inmates employed in prison industries. For example, inmates in Iowa earn up to $12 an hour or more for labor in prison industries. Table 1 provides a sample of average wages in selected jurisdictions.

Of the states that provide higher wages to individuals employed in correctional industries, most take significant deductions for restitution and victim compensation, child and family support, and prison "rent." In Iowa, where prisoners can earn up to $12 an hour in prison industries, up to 75% of those earnings are diverted to victim restitution, child support, and rent. Several states also require mandatory savings, which range from $25 per month (Virginia) to 20% of offenders' pay (Oklahoma), which is held in a savings account and given to the offender upon release from prison. Arizona, which allows up to 80% or more in deductions, also has a provision that if an inmate escapes, wages held as savings are forfeited.

Table 1 2002 Prison Pay in Selected Jurisdictions

Location	*Rate of Pay*
Federal	$.030–$1.30/hour
Georgia	No pay to inmates
Illinois	$100–$400/month
Iowa	$0.50–$12.00+/hour
Montana	$0.31–$1.30/hour for basic work
Ranch, dairy, fire	$4.00–$6.90/hour
Active fire crew duty	$24.00/hour
New Hampshire	$0.85–$3.50/day
New York	$0.16–$0.70/hour
North Carolina	$0.13; $0.20;$0.26/hour
Plus bonuses	$3.00/ day maximum
Janitors	$0.70/day
Oklahoma	$0.35–$0.65
Oregon	$0.28–$8.00
Utah	$0.50–minimum wage
Vermont	$0.15–$1.35/hour
Plus bonuses	$0.10–$1.50/hour
Virginia	$0.24–$0.80/hour

Source: personal communication with prison industries representatives in these states.

UTILITY AND ETHICS

There is some disagreement as to the utility and ethics of prison pay. Some argue that these practices amount to coercion or forced labor, since some jurisdictions place inmates who refuse to work in corrective detention and deny credits toward early release. Opponents of prison labor argue that the use of captive labor is, by definition, exploitation. Others view it as a requirement of prison, a consequence for criminal activity, and a means to offset the high costs

of prison operations. Still others cite the benefits of labor for prisoners: providing offenders with job skills, reductions in time, and funds to assist them upon reentry. Finally, anecdotal accounts and empirical studies outline such prison benefits as reduced discipline problems, better employment options for offenders upon release, and societal benefits such as reduced recidivism by inmates employed in correctional industries.

CONCLUSION

Overall, prison work conditions and rates of pay vary widely across the nation. Some jurisdictions require inmates to work but pay nothing; others offer substantial pay for voluntary work by inmates. Inmate labor and pay is a hotly debated ethical issue. While institutional jobs are available at most correctional facilities, prison industries are more widely available in larger prisons, resulting in more opportunities for paid employment for male prisoners than female prisoners. So, while comparable wages are paid for comparable work regardless of gender, greater opportunities for prison work exist for male inmates.

PRISONER REENTRY

Prisoner reentry refers to former prisoners' transition back into society. Due to the sheer numbers of inmates who are incarcerated and high recidivism rates, the corrections system, nongovernmental organizations, and other entities are expanding efforts to help offenders reintegrate back into society on a scale greater than in the past. Many persons released from prison are not well prepared for the transition to the "outside."

According to the Bureau of Justice Statistics (Beck, Karberg, & Harrison, 2002), in 2001, approximately 592,000 people were released to the community after serving time in prison. An inmate is released from prison in one of two ways: (1) through unconditional release after time served is complete, and (2) through conditional release, such as parole. The use of parole has declined considerably over the past 30 years, with the result that the percentage of all released prisoners returned to the community through parole has dropped from 72% in 1977 to 26% in 1996. Unconditional release does not offer the same opportunities to monitor offenders in the community as does parole. Though it is generally accepted that supervision level does not necessarily lead to reductions in offending, it is not clear whether individuals without supervision integrate as well as those under unsupervised release. There is evidence, however, that parolees are less successful at completing parole now than they had been in the past.

HISTORY

Prior to the late 1970s, prisoner reentry was bound to the discretionary powers of the parole board. Ideally, the parole board was comprised of experts in the field of criminality and criminal behavior who routinely evaluated prisoners for release. A parole board considered various levels of community attachment, such as a stable family life, whether or not the offender had secured a place of employment and a place of residence, and behavioral changes indicative of rehabilitation for release. The goal of corrections at this time was to return the offender to the community as a law-abiding, constructive citizen.

In the late 1970s, both liberals and conservatives grew uncomfortable with the unchecked discretionary power of parole boards. Many states instituted stricter sentencing guidelines and invoked determinate sentencing practices in an attempt to reduce the amount of discretion available to parole boards. The rehabilitative ideology was virtually abandoned by policymakers in the 1970s. It was replaced with an emphasis on deterrence and incapacitation that continues today. Parole boards either have been abolished (15 states) or have experienced severe reductions in discretion (21 states). For instance, in 1990, 39% of inmates were released by parole board action, and 29% of inmates were released on mandatory release. By 1998, these figures had reversed, with 26% of prisoners released by parole board action and 40% by mandatory release. Also, the average time served in prison has increased from 22 months in 1990 to 27 months in 1998.

Though the use and discretion of parole boards has waned, the use of parole officers continues. Approximately 80% of released inmates will be assigned a parole officer. In 1970, parole officers averaged 45 parolees on their caseloads, whereas today the typical parole officer is responsible for approximately 70 parolees. The increase in caseload has changed the duties of the parole officer. Parole officers no longer serve as aids to successful community reintegration of parolees. Instead, they more often perform surveillance duties (such as ensuring that parolees undergo drug testing, avoid contact with known criminal associates, and maintain employment). Parole officers remand a high proportion of parolees back to prison. Between 30% and 40% of all new prison admissions are parole violators, of which nearly 20% are readmitted for technical violations.

IDEOLOGY AND PROGRAMS

One of the primary objectives of the criminal justice system is to prevent crime. The United States increasingly uses incapacitation through incarceration to achieve this objective. A major limitation to the use of incapacitation, in the present context, is the complicated process of offender reintegration into society and the risk of recidivism when reintegration fails. As noted, a significant proportion of released prisoners return to prison. With more than a half-million released offenders returning to the community each year and anywhere from 34% to 60% of released offenders recidivating, offenders who were already "punished" in the corrections system commit 170,000 to 300,000 new crimes per year. The recidivism percentages may be higher, given that those reported here are based on official data and therefore may not capture the actual amount of crime committed by released offenders. If the corrections system aims to prevent crime, recidivism among released prisoners must be a focus of intervention strategies.

Prisoner reentry refers to the security and control of offenders in the community as well as treatment and rehabilitation in areas such as education, employment, housing, social and familial issues, physical and mental health, and substance abuse programs. Prisoner reentry programs are important for three reasons. First, released offenders are at high risk for recidivism. Therefore, some type of intervention is needed. Second, released offenders have significant impediments to integrating into society, such as employment, health, substance abuse, education, and housing. Third, although treatment programs have demonstrated effectiveness, the criminal justice system offers less treatment programs to offenders now than it has in the past.

THE RISK OF RECIDIVISM

Policymakers and communities that receive an influx of released offenders must respond to concerns about public safety and the high risk of recidivism. Released offenders have proven to be at high risk for repeat offending after a correctional intervention. An estimated two-thirds of all released inmates will be rearrested within three years of their release date. An offender is most vulnerable to revert to old maladaptive habits in the period immediately following release from prison.

Adding to the problem is that many offenders are from low-income and socially disadvantaged communities. When they are released from prison, they are returned to a relatively small number of neighborhoods. Some of these communities may have as many as 15% of its young black male population incarcerated on any given day. "Recycling" or "churning" released prisoners between prison and community frustrates both policymakers and citizens alike as they attempt to find solutions to crime in these concentrated areas.

OBSTACLES TO PRISONER REENTRY

Prisoners reentering society face a number of challenges in the transition, including homelessness, physical and mental health problems, chemical dependency, civil incapacitation (elimination of voting rights and other civil services), and a number of social issues, such as family and community reconnection. It is unclear whether employment with a livable wage reduces recidivism among released offenders. The salient yet unmeasured factor in this research may be individual-level motivation to change. Still, employment is a common target for intervention in prisoner reentry programs. The need for this intervention seems great, as the percentage of unemployed parolees ranges from 60% to 90%. Past periods of incarceration reduce a person's employability. Ex-offenders must overcome stigmatization after release that can result in informal discrimination and/or formal restrictions in certain areas of the labor force. Employability is also reduced for the released offender, since time out of the job market interrupts job skill development. Reduced employability also may increase the risk of recidivism, which, in turn, may lead to incarceration.

Work-release programs began in the 1970s to give offenders the skills and training necessary to obtain stable employment. These programs generally begin shortly before an offender is to be released from prison. Earnings can be put toward a security deposit on an apartment, victim restitution, or saved for other necessary living expenses. Education is a corollary target for intervention with offenders. Generally, offenders have low education levels. Approximately 50% of parolees in a California sample are functionally illiterate (Petersilia, 1999). Vocational and educational programming (like all treatment programming) is high in need and low in availability. Only a third of released offenders receive educational training, and only a quarter of offenders receive vocational training. Even though employment skills training has some demonstrated effectiveness, this training has not kept pace with the increase in prison population.

THE NEED FOR TREATMENT

Substance abuse is of great concern in prison reentry because of its prevalence among prisoners and its correlation with criminal behavior. Between 70% and 85% of inmates report a history of substance abuse, and 50% admit that they used substances when committing their current crime. Drug treatment is generally an effective approach to reduce both drug use and recidivism. The most successful outcomes are among inmates who participate both in prison and community treatment after release. Unfortunately, however, only 10% to 13% of inmates report getting drug abuse treatment.

The comorbidity of substance abuse and mental health is a particularly strong predictor of recidivism. Inmates suffer from mental illness at a rate 2 to 4 times higher than the general population. Approximately 18% of inmates have psychological problems. In general, successful community reintegration of the mentally ill depends upon treatment in the community after release. Services for the mentally ill include substance abuse treatment, housing assistance, and improved social support.

Even though the mentally ill have many needs, treatment for this population is the exception rather than the rule. Only a fourth of parolees receive special programs for mental illness.

Inmate populations have higher rates of infection for many communicable and life-threatening diseases including HIV/AIDS, hepatitis B, hepatitis C, and tuberculosis. In 1997, released prisoners made up 20% to 26% of the total population with HIV/AIDS, approximately 30% of those infected with hepatitis C, and 38% of the total population infected with tuberculosis. While in prison, inmates have access to health care, and their health generally improves with incarceration, but medical services are often disrupted upon release from prison. A lag time in treatment or long-term inaccessibility to health care can lead to severe, life-threatening complications. The health of released offenders is a target area in prisoner reentry, not only for the well-being of the inmate but for public health as well.

Housing is an immediate need for a newly released offender, and if not present, creates a higher risk of recidivism. Upon release from prison, an offender must be able to find an apartment and have the money to secure it, which proves almost insurmountable for many offenders who do not have family support. Offenders rarely have the financial means to afford housing in the private market. Applications for housing typically require the applicant to report any criminal history. Housing may be denied based on this information. In government-subsidized housing, housing may be denied to anyone with a criminal history.

CONCLUSION

Evidence suggests that prisoner reentry is most successful when reintegration happens the first time an offender is released. Unfortunately, chronic recidivists are being created at a faster rate than successful parole completers. With the high numbers of people being incarcerated and released from prisons across the country, prisoner reentry will continue to be an important area of research and practice in American corrections.

PRISONER UNIONS

Prisoner unions advocate for fair labor conditions and improved living conditions and treatment. The first successful union was formed in Sweden in 1966. Within seven years, it grew to represent the majority of Swedish prisoners, winning wages almost equal to those on the outside, safer prison factories, and worker's compensation. In the United States, however, prisoner unions have been and continue to be strongly opposed by government and prison authorities.

HISTORY

Following prisoner work strikes in California throughout the 1960s, a small group of attorneys and ex-prisoners formed the United Prisoners' Union in

1970. By 1972, it had started to focus on litigation and legislation relating to prison unionization, responding to specific inmate problems and building membership within California's male prisons. In San Quentin State Prison, Harlan X. Washington and 15 other Muslim inmates successfully recruited not only their fellow Muslims, but also members of the Aryan Brotherhood, demonstrating the union's appeal across race lines. Washington was transferred to the prison at Soledad, where he continued to organize. In 1973, at its peak of 3,000 members, the union split into the Prisoners' Union, which confined itself to prison issues, and the United Prisoners Union, which allied itself with the more radical Bay Area groups.

In January 1976, the California Department of Corrections (CDC) and the Prisoners' Union agreed that the union would have the right to represent Soledad inmates and to organize within the prison. In turn, the CDC could suspend the union following a public hearing. However, word leaked to the press, the California Correctional Officers Association threatened to strike, and the Soledad prison authorities rejected the inmates' charter and bylaws for their first chapter. The union then petitioned the courts for the right to hold meetings. The California Supreme Court, however, ruled that prisoners' unions violated institutional security. Three years later, the court upheld the CDC's prohibition of correspondence between union members in prison and on parole.

Despite such setbacks, the Prisoners' Union was one of the groups responsible for the 1971 abolition of California's Indeterminate Sentence Law, which allowed indefinite incarceration until rehabilitation had been proven. The union continues to exist as a support for inmate grievances, although it now makes no effort to organize and hold meetings in prisons.

In 1971, men in New York State's maximum-security Green Haven Correctional Facility organized their own labor union to gain the same rights, privileges, and protections for prisoners as outside labor; to advance their economic, political, social, and cultural interests; and to promote unity between inmate laborers and workers nationwide. By 1972, organizers had gathered nearly 1,200 union membership cards from the facility's 1,800 inmates and had allied itself with the Distributive Workers of America. In response, union members were segregated and transferred to prisons further upstate, and the Public Employees Relation Board of New York (PERB) ruled that prisoners were not public employees and thus had no right to organize and collectively bargain under the Public Employees' Fair Employment Act. During this time, prisoner unions also emerged in North Carolina, Michigan, Delaware, Rhode Island, Massachusetts, Maine, Wisconsin, Washington, and the District of Columbia.

WOMEN'S UNIONS

Although most unions exist in men's prisons, women at New York's Bedford Hills Correctional Facility and Washington, D.C.'s Women's Detention Center organized their own unions with similar goals. The Bedford Hills union also petitioned the PERB for recognition. Consolidated with that of the unions at Green Haven and the male prison at Walkill, New York, the Bedford Hills union's petition for recognition was denied by the PERB.

LEGISLATING AGAINST PRISONER UNIONS

The strongest blow against prisoner unions came in 1977, with the U.S. Supreme Court's decision in *Jones v. North Carolina Prisoners' Labor Union*. The North Carolina Union was established in 1974 to attempt to improve working conditions through collective bargaining. Within a year, it had attracted 2,000 inmates from 40 different prisons throughout the state. At this point, the state intervened, prohibiting inmate solicitation of other inmates, meetings between union members, and bulk mailings from outside sources concerning the union. In response, the union filed suit and won in district court. The state then appealed to the Supreme Court, which overturned the ruling.

THE REEMERGENCE OF PRISON UNIONS

For many years following *Jones*, prisoner unions' attractiveness and effectiveness faded. However, in the 1990s, prisoner unions began to reemerge. In 1997, three men at Potosi Correctional Center organized the Missouri Prisoner Labor Union. This organization sought to repeal prisoner disenfranchisement, to enforce worker's compensation laws for prisoners, to form arbitration committees dealing with complaints about daily living and working conditions, to arrange minimum wage for all working prisoners, and to abolish the death penalty. In August 1998, the union became legally chartered by the state of Missouri. Four months later, the founders organized fellow prisoners to file 1,631 grievances in one week around food quality, law library access, inmate abuse, racism, racial profiling, prisoner rape, and the lack of African American staff. More than half of these grievances were won. Male prisoners in Texas, Colorado, and Australia have also organized unions.

CONCLUSION

Like their predecessors, organizers of prisoner unions today face administrative harassment, punitive transfers, and extended time in segregation. The emergence and continued existence of these unions testify to the growing number of inmates who are actively organizing for fair and humane treatment. Their continued success or failure will depend in part on prisoners' determination and also on the response of administrators and the courts.

Legal Case

Jones v. North Carolina Prisoners' Labor Union, 97 S. Ct. 2532 (1977).

PRISONIZATION

Donald Clemmer coined the term "prisonization" in his 1940 book *The Prison Community*. He defines prisonization as "the taking on, in greater or lesser degree, of the folkways, mores, customs, and general culture of the penitentiary" by inmates (1958, p. 299). Clemmer's ideas stimulated the development of a literature on prison socialization and culture, the basic premise of which is that, over time, incarcerated individuals will acquire the values, norms, and beliefs held and practiced by other inmates.

Prisonization is a process of assimilation into inmate society that is characterized by the adoption of a particular constellation of norms, values, and beliefs that then shape the prisoner's worldview and undermine the goals of reform. The *inmate code* isolates the prisoner from the influence of penitentiary staff by fostering the prisoner's allegiance to his fellow prisoners. Devotion to the code represents a type of solidary opposition. The new rules are distinct from both those of the institution and of the wider society. The more true someone holds to prison culture, the more he or she rejects the rules of prison authorities and those of the outside community. Stanton Wheeler summarizes, "The net result of the process [is] the internalization of a criminal outlook, leaving the 'prisonized' individual relatively immune to the influence of a conventional value system" (1961, p. 697).

According to Clemmer, prisonization plays the primary role in determining the success of the prisoner's adjustment to outside life. The learned set of values and norms that replaces the inmate's conventional beliefs and practices inoculates him or her against prosocial influences upon returning to mainstream society. The general hypothesis is that empirical research should find a negative relationship between the degree of prisonization and the success of rehabilitation. The deleterious effects of

imprisonment depend on the frequency and intensity of associations with other inmates and the length of time spent in the penitentiary setting. Putting the matter simply, the more time inmates spend with other prisoners, and the longer their sentences, the more prisonized they will become.

CRITICISMS AND ALTERNATIVE VIEWS

Although Clemmer's book provides a detailed account of how new entrants into penitentiary life become prisonized, his work has been faulted for failing to explain the preexistence of inmate culture. Clemmer, according to critics, does little more than assume that prisonization results from the "universal features" of prison life, rather than explain how they come about. One could object to such criticisms on the grounds that Clemmer's book is concerned with identifying the process of prisonization and not with the origins of the convict code. However, Clemmer does identify numerous structural elements shaping prison society, such as the antagonistic relationship between inmates and prison staff, the existence of cellhouse groups and work gangs, race/ethnic stratification, and so forth. Nonetheless, filling the gaps between socialization and prison culture has occupied many social scientists since *The Prison Community* was published, and, in the end, their research bears on the validity of the prisonization thesis.

TOTAL INSTITUTIONS

Many observers attribute prisonization to the austere realities of incarceration. Like mental hospitals and concentration camps, the penitentiary is a species of what sociologist Erving Goffman (1961) calls "total institutions." In a total institution, all activity occurs according to rigid rules and tight schedules. Shorn of responsibility for basic life choices and activities, prisoners become almost wholly dependent upon the regimen of the system. Goffman believes total institutions cause "self-mortification," and deaden people's autonomy, identity, and willpower. In a similar fashion, Ann Cordilia (1983) find that prisons "desocialize" inmates and make them reliant upon authority, while Kathryn Watterson (1996) characterizes women's prisons as a "concrete womb"—only behind prison walls do the prisonized feel secure.

THE PAINS OF IMPRISONMENT

Gresham Sykes (1958) used the idea of the "pains of imprisonment," to describe how prisoners adapt to prison life. According to Sykes, prison culture is shaped by five specific deprivations: deprivation of liberty, deprivation of goods and services, deprivation of heterosexual relationships, deprivation of autonomy, and deprivation of security. These needs are served by inmate culture. Lloyd W. McCorkle and Richard Korn (1962) describe the inmate social system as a culture based upon the "convict code," replete with its own argot and system of sanctions. More recently, James Austin and John Irwin (2001) report an affective dimension to these pains, finding among inmates feelings of powerlessness, meaninglessness, normlessness, detachment, and alienation. From this perspective, the culture of penitentiaries in which inmates are prisonized is caused by their anomic state of existence, as inmates, struggling to make sense of their world, develop their own normative and value systems.

IMPORTATION AND DEPRIVATION

Research by Sykes and others explain prison culture as having emerged from the pains of imprisonment and the structural context of the prison. In contrast to the *deprivation* thesis, proponents of the *importation model* point to the influence of exogenous factors, mainly the criminal code that exists in the outside world, as shaping prison culture and inmate society. Convicts, according to this view, have already been socialized with the values and attitudes that manifest in prison. For example, John Irwin (1980) argues that street norms are introduced into prison culture. From the perspective of the importation model, the inside of prisons is much like the outside—at least for criminals.

In their study of the history of prison gangs, Geoffrey Hunt and associates (1993) present evidence indicating that both models are historically correct. In an earlier time, the culture of the "old school" gangs, such as the Mexican Mafia, La Nuestra Familia, Texas Syndicate, Black Guerilla Family, and Aryan Brotherhood, emerged from prison life. These groups did not exist beyond prison walls. In contrast, the new prison gangs, such as Nortenos, Surenos, New Structure, Border Brothers, Crips, and Bloods, reflect neighborhood ethnic organizations that exist outside the prison institution. Consistent with the importation model, contemporary prison culture is one in which beliefs and conduct norms are introduced into prison life. These findings suggest that in today's prison climate, prior socialization to a normative system found in society might be mistaken for absorption into a preexisting prison culture. Similarly, many claim that new circumstances in prisons—overcrowding, racialization, and violence—make prisonization models less valid.

Finally, critics point out that we must be careful not to assume a monolithic process of prisonization. Thus, for example, Irwin (1980) identifies several behavioral patterns among prisoners that divide them into distinct groups. A person who is "jailing" is thoroughly prisonized. This is frequently the result of past socialization in total institutions—such individuals are typically "state-raised youth." In a second pattern, "doing time," professional criminals "play the system" by "programming" (participating in prison programs to look good). There is no significant transformation of conscience during their time in confinement. Last, inmates are "gleaning" when they genuinely try to better themselves.

CONCLUSION

To the degree that prisonization is a factor in prisons, the phenomenon creates problems for the goals of rehabilitation. Accustomed to prison culture, convicts find life on the outside challenging. Just how problematic prisonization makes reform depends on length of confinement and the degree of assimilation to prison culture. According to Clemmer, as a general rule, the longer inmates stay in prison, the more prisonized they become, the less likely they are to successfully adjust to society, and the more likely they are to recidivate after release. From Goffman's perspective, dependence upon constant surveillance and authority makes autonomous existence beyond prison difficult. A certain percentage of convicts find it impossible and make their way back from behind penitentiary walls. However, as Stanton Wheeler (1961) shows in his study of prison socialization, most prisoners undergo a "recovery process" as they approach parole or release, in which they shed the beliefs and values of prison culture and adopt values and behaviors consistent with mainstream society.

PRIVATIZATION

Private prison companies contract with state and federal jurisdictions for the custody of inmates, and, like other free market entities, economic profit is their objective. Currently in the United States there are two main companies who run most of the private facilities: Corrections Corporation of America (CCA) and Wackenhut Corrections Corporation. As with businesses in other industries, these companies are multinational, operating prisons all around the world. Though there is a fair amount of resistance to the privatization of corrections, both from within the penal system and outside, the involvement of private corporations in U.S. corrections is becoming increasingly more common.

HISTORY

Aspects of confinement have been privatized for several centuries and can be traced back to Virginia in 1607, when convicts were transported to America for labor through a contract system between early American agricultural entrepreneurs and the British government. During the 1800s, several early U.S. penitentiaries were privately operated, such as Louisiana's first state prison and New York's Auburn and Sing Sing prisons. In addition, during these decades, several states allowed private contractors to supervise inmates engaged in private sector labor activities under a policy of convict leasing.

Near the beginning of the 20th century, public confidence in privatized corrections waned as a pressure mounted from prison reformers and religious groups. These efforts laid the foundation for legislation eventually banning the use of inmates for private interests. By the end of the 1920s, U.S. prisons were all under government control, and privatization came to an end.

Despite the establishment of a few private correctional facilities for juveniles in the 1970s, adult prisons remained under state and federal government control until 1985, when Kentucky contracted with Corrections Corporation of America to take over the operation of a state prison. During the late 1980s and throughout the 1990s, the number and size of private prisons increased significantly, taking the form both of private companies assuming control of existing public facilities and of these firms building and then operating new facilities as for-profit entities. Finally, in the late 1990s, the federal government began contracting with private prison firms. In 1997, the first contract between the Federal Bureau of Prisons and a private prison corporation, Wackenhut, was signed, providing the company with $88 million in exchange for running the Taft Correctional Institution in California.

The rated capacity for private, secure adult correctional facilities in 1987 was approximately 5,000. At the end of the 1990s, this had increased to more than 140,000, an eightfold amplification. Even with this capacity, most private prisons routinely incarcerate only minimum- and medium-security-level inmates. During this decade, there was a steady move away from private facilities designed primarily to house minimum-security prisoners in dormitory-style housing units to cell-based institutions capable of holding prisoners with medium- to maximum-security classifications. At the same time, the typical private facility moved from a capacity of 500 or fewer prisoners to a capacity of 1,500 or more.

CONTEMPORARY ISSUES

At the turn of the 21st century, there were more than 155 private adult facilities in operation in the United States. At midyear 2002, 32 states, the District of Columbia, and the federal prison system held 86,626 inmates in privately operated prisons. This number accounts for 5.8% of all state prisoners and 12.3% of all federal inmates.

The use of private prisons is not distributed evenly throughout the country. Among the states, Texas holds 10,764 inmates in more than 40 private facilities, and California has 4,452 inmates in 22 private prisons. Five states—New Mexico (44%), Montana (33%), Alaska (32%), Oklahoma (29%), and Wyoming (28%)—have at least 25% of their prison population housed in private facilities. Instead, northeastern states have placed only 1.8% and midwestern states only 2.9% of their inmates

in private prisons. In contrast, 6.2% of inmates in western states, and 8.1% of those in southern states are imprisoned in for-profit institutions. Various states, such as Colorado, Oregon, Wisconsin, Indiana, and Missouri, also allow offenders to be transferred to private facilities in other states.

There are no centralized, available statistics on the number of women incarcerated in private prisons. However, Corrections Corporation of America, the dominant domestic private prison company, provides gender-related information on their Web site (www.correctionscorp.com). CCA operates four institutions exclusively for women, with a total rated capacity of nearly 2,220. Based on rated capacity, just over 3% of CCA private prison beds are for women; the overwhelming majority are intended for men. These proportions are below those reported for the overall U.S. incarcerated population and may or may not be representative of all private prisons in the United States or throughout the world.

STRUCTURAL FOUNDATIONS

Three social factors combined over the past two decades to make the federal and state governments look upon privatization with favor. First, the punitive shift toward longer and stricter sentences in U.S. crime control policy, beginning in the mid-1980s, resulted in an unprecedented growth in the U.S. prison population. At the end of 1985, there were just over 744,000 people in adult correctional facilities. In comparison, by the end of 2001, there were more than 1.4 million prisoners. The incarceration rate in the United States has grown from 313 per 100,000 citizens in 1985 to 686 per 100,000 at year-end 2001.

Second, voters during the late 1980s and early 1990s become unwilling to support bond initiatives and tax increases for new prison construction and operation. The costs of incarcerating a steadily increasing number of offenders are high and continue to grow. The total cost of state and local incarceration in fiscal year (FY) 1980 was in the neighborhood of $3.1 billion. By the end of FY 2000, this cost was more than $40 billion. It is noteworthy that corrections expenditures represent a considerable part of states' budgets, with 1 out of every 14 general fund dollars spent on prisons during the year 2000. Of this $40 billion, it is estimated that $24 billion was allocated for incarcerating nonviolent offenders. Yet, voters would not approve necessary additional funding for this enterprise. These rejections are consistent with voting patterns during the past decade, where general tax increases are time and again rejected. One of the most notable examples is California, where voters recently defeated numerous bond initiatives for new prison construction, most by double-digit margins.

Third, a series of court orders to reduce prison overcrowding also led governments to consider privatizing parts of the penal system. In 1993, 40 different state prison systems were under court order to reduce population density. States that believed they could not manage to construct enough new facilities themselves often turned to private companies.

These factors—the rapid growth in prison population causing tremendously increased costs to house inmates, the lack of voter support for increasing tax revenue income for corrections, and court orders to reduce overcrowding—forced various states and the federal government to search for innovative ways to handle this crisis. State governments bear the largest burden, because they are the primary financial supporters of prison expansion, supplying more than $40 billion annually, compared with the nearly $20 billion spent by the federal government. Most state budgets must be balanced and cannot run at a deficit.

CURRENT TRENDS

Recent data demonstrate a leveling off in the number of state-level private adult correctional facilities. This trend could be due to economic downturns in the early 21st century or the slowing of annual growth in state inmate populations. Since the year 2000, no states have negotiated new private prison contracts, and several (such as North Carolina and Arkansas) have reduced involvement with the private prison industry. Others, including North Carolina, Montana, and California, passed legislation prohibiting the import of out-of-state inmates.

Even though state-level private prisons appear to be on the decline, the use of for-profit facilities by the U.S. federal justice system is expanding. As a result of recent federal legislation requiring mandatory minimums and increased prison sentences for drug offenders, federal prisons were operating at 33% over capacity by the middle of 2001. In fact, from 1990 to 2001, the federal prison population grew from 65,526 inmates to nearly 157,000, making it the third largest prison system in the country, when compared with state-level systems. If growth rates remain the same, the federal system will be the largest in the United States by year-end 2003. This rapid growth motivated the federal justice system to search for immediate solutions for housing inmates. For example, in 2001 the Bureau of Prisons awarded Corrections Corporation of America a contract for more than 3,300 beds, with an estimated value of $760 million over a 10-year period.

THE PRIVATE PRISON INDUSTRY

In 2002, even though 13 companies ran private prisons in the United States, two large firms dominated the industry: Corrections Corporation of America (CCA) and Wackenhut Corrections Corporation. CCA controls more than 52% of the domestic private prison market, while Wackenhut runs just over 22% of the domestic industry and more than 55% of international market share. No other firm owns more than 9% of the private prison market.

Since CCA is the dominant domestic private prison company, it is important to review some of its characteristics. This corporation was established in 1983 and currently runs the sixth largest prison system in the United States, with only Texas, California, the federal government, New York, and Florida having larger systems. CCA operates more than 60 facilities across the country and houses nearly 60,000 inmates, while boasting that 95% of their private prison contracts with government agencies are renewed.

In 1997, CCA claimed the average daily incarceration cost was $30.51 per inmate and the per diem operating cost has been kept between $30 and $32 per inmate since the origins of the company. However, according to reports, the level of compensation stipulated in contractual agreements with government entities has risen from $32.71 per inmate in 1987 to $42.72 in 1997. With 10.5 billion billable days in 1997, the corporation had revenues of more than $460 million and a net profit of more than $400 million. Their stock price soared in the late 1980s through the late 1990s, increasing nearly 1,500% in value. However, the closing value of CCA stock in 2001 was down more than 50% from its peak. This decline in stock value appears to correlate with the leveling of state prison populations and reluctance on the part of many states to enter into contracts for additional private prisons.

THE DEBATE

Private prisons are controversial. Proponents suggest that private facilities could result in cost reductions of 10% to 20% for government agencies, savings that would ultimately be passed on to taxpayers. Typically, states contract with a company to house a particular number of inmates for a per diem amount. Exactly how much is paid to private prison corporations is difficult to discern, since many of these contractual agreements are not available for public inspection. Nevertheless, for the sake of example, a particular private prison organization may agree to house 1,000 inmates at a cost of $45 per day per inmate. The government pays the company $45,000 per day for taking custody of these inmates over a certain number of years. The corporation provides housing and services for the inmates, while attempting to keep the daily average cost below $45 per inmate. Every sum the corporation saves when housing and providing for the inmate population becomes profit.

Proponents of private prisons also argue the profit motive creates incentive to buy goods and services, including those involved with construction, at the lowest possible price, thereby saving money. These supporters claim government agencies are fettered with bureaucratic "red tape," slowing and possibly blocking progress due to massive amounts of paperwork and required approvals for purchasing goods and implementing services. For

example, in the early 1990s, CCA built a detention center for the Immigration and Naturalization Service (INS). The project was completed in less than six months at a cost of $14,000 per bed. The INS estimated federal government contractors would have taken well over two years to complete the facility at a cost of $26,000 per bed.

Finally, those in favor of private prisons further argue the desire for efficiency encourages quality services from subcontractors. Contracts can be cancelled for poor performance. Similarly, threats of civil lawsuits keep private prison companies alert, with special attention to legal stipulations, all while minimizing cost.

In contrast, opponents of prison privatization claim the profit motive encourages for-profit prison corporations to cut corners in order to save money and increase profitability. Thus, they point out that staff at private prisons earn considerably less than their counterparts in state facilities, since one of the easiest ways private companies reduce costs is by lowering the salaries of prison workers. Private corrections officers also enjoy fewer benefits, such as overtime pay, worker's compensation claims, sick leave, and health care insurance. Using lower-paid and less well-trained staff may, in turn, lead to reduced security and programs for inmates.

In addition, critics point out, there is no incentive for private prisons to agree to the early release of inmates. If the private prison industry receives a daily amount for each inmate, obviously it is more profitable if prisoners remain in the facility for their full sentences as opposed to receiving early release under parole. Even though government parole boards make the final decision about who is released, staff members could be encouraged to generate numerous, often questionable, misconduct reports to taint an inmate's parole case. There have been cases where institutions have held inmates over for just a few days after their release date to collect extra sums.

Concerns also exist over the transparency of the contractual arrangements and the amount of political influence private prison companies exert on sentencing policy. Contracts between governments and private companies often are not publicized, and citizens have no say in approving or disapproving of this revenue distribution designed to expand the correctional system. State legislatures can move appropriations from other state-sponsored activities to pay private prison contracts without taxpayer knowledge or consent. Similarly, CCA and Wackenhut are major financial contributors to the American Legislative Exchange Council (ALEC), which is a Washington, D.C.-based public policy organization supporting conservative legislators. More than 40% of all state legislators are members of this organization. ALEC develops model legislation advancing conservative principles, such as longer prison sentences and privatization of correctional facilities.

There also is a concern over the lack of public oversight for money allocated to private prisons by legislatures. While most prisons traditionally are financed through voter-approved, tax-exempt general obligation bonds that are backed by tax revenues, private prisons follow a different route. For-profit prison corporations build prisons using privately generated revenue from investors. State governments then enter into long-term contracts with private prisons without voter approval. Yet, taxpayers still are liable for expenses incurred by the government through these contracts.

Regarding claims of more efficiently run and higher quality operations, recent research finds private prisons are, at best, equal to public facilities. A 1998 report conducted by Abt Associates, Inc. (1998, p. 56), found "no compelling evidence of superiority," while Austin and Coventry (2001, p. 36), when reviewing studies comparing programs in private and public prisons, find "no definitive research evidence that . . . the quality of confinement is significantly improved in privately operated facilities." This report further claims the rate of major incidents is higher in private than in public facilities. Troubling cases of inmate abuse or escapes were reported in New Jersey, Texas, Ohio, and Louisiana private prisons, which may be the result of poorly trained staff along with substandard working and living conditions inside these institutions.

Finally, some critics wonder whether it is appropriate for private interests to imprison citizens. Should a company be given the authority to deprive

individuals of liberty and engage in the legally sanctioned exercise of coercion? Or, does such a responsibility belong solely to the government and therefore should not be contracted out, like garbage collection or road maintenance, to private interests?

DO PRIVATE PRISONS SAVE MONEY?

A common argument in favor of privatization is that it will save taxpayers at least 10% on the total cost of corrections. Then again, as long as the total number of needed cells increases, the total cost to taxpayers increases. For example, even if taxpayers are asked to pay 90% of a $50 billion corrections tab to incarcerate 2 million people, it will cost the public $45 billion. However, a change in correctional policy, whereby only 1 million people are incarcerated at a cost of $25 billion, would save the public $20 billion even if the taxpayers fund 100% of the cost. The public may be told that privatization saves $5 billion; yet, the increasing demand on the correctional system is costing an additional $20 billion.

In 1996, the U.S. Government General Accounting Office conducted an analysis of five states (California, New Mexico, Tennessee, Texas, and Washington), comparing costs of private prisons with public facilities. This study found no significant support for the claim that private prisons save taxpayers money. In fact, the most optimistic finding in this comparison was a 1% cost savings from the use of private prisons in some instances.

Since most cost-saving measures in private prisons result from lower labor costs, increasing the use of private prisons could undermine state and federal employment in public correctional systems. Those currently working in these systems might lose their jobs if existing facilities are converted to private prisons. Similarly, future employment possibilities in public corrections, along with higher wages and attractive benefit packages, might be eliminated if the use of private prisons expands.

OUTSIDE THE UNITED STATES

Private prisons are an American phenomenon; even so, international use of them is increasing as companies are exploring possibilities for opening prisons in South America, the Pacific Rim, and other European countries. A small number of for-profit prisons already exist in Canada, the Netherlands, New Zealand, and Scotland. Further, Australia, England, and South Africa have numerous private prisons housing between 6,000 and 7,000 inmates. However, the United States has more than 20 times more inmates in private facilities than any of these countries, and more than six times more than all other countries combined.

CONCLUSION

Even though state-level use of private prisons appears on the decline, data demonstrate that federal contracts with private prisons are expanding dramatically, and every indication shows this trend will continue for some time. Furthermore, the number of private prisons operated outside the United States is growing in countries such as the United Kingdom, Australia, and South Africa, with possible sites in other countries being considered and pursued.

Numerous interest groups, such as The Sentencing Project, Good Jobs First, and Citizens Against Private Prisons, actively advocate against private prisons. Formal political opposition to the use of private prison corporations also exists. For example, as of 2001, California allowed only privately owned community correctional centers and not adult prisons; Michigan allowed only for-profit juvenile facilities. New York and Illinois completely prohibit private correctional facilities. Further, two bills were introduced in the Missouri Legislature in 2001 and 2002, respectively, prohibiting privately operated prisons. These proposals remained in committee and were not discussed in the General Assembly.

On the federal level, in 2001, Representative Ted Strickland of Ohio introduced the Public Safety Act into the House of Representatives, and Senator Russell Feingold of Wisconsin initiated a companion bill into the Senate. These acts would prohibit the placement of federal prisoners in private prisons

and deny federal funding to states contracting with for-profit prison companies. The bill was sent to the House Subcommittee on Crime and the Senate Committee on the Judiciary in May 2001. To date, this is the last action taken. This type of state and federal legislation, which eventually will emerge for debate and passage or rejection, illustrates that privatization of prisons in the United States continues to be a central and controversial issue in American correctional policy.

PRIVATIZATION OF LABOR

The private exploitation of penal labor first occurred in ancient civilizations as part of a larger system of slave labor supplied to states, municipalities, and religious bodies as well as private individuals. During the fourth and fifth centuries B.C., the Greeks occasionally used slavery (personal and public) as a criminal sanction. Since then, the employment of prisoners by private individuals and companies has assumed several distinctive forms. Though today it is more common for inmates to be without work entirely than to work for someone else's profit, the privatization of their labor continues.

HISTORY

Private industrial contracting started with merchant capitalists in 16th-century European workhouses. Beginning in the 17th century, English felons were transported first to the American and later to the Australian colonies, where private employers were granted or bought leases on their labor. Tradesmen, merchants, shipbuilders, and iron manufacturers also purchased convicts, who were cheaper than slaves; other convicts, principally women, served as house servants and cooks. They were also usually required to offer sexual services as well. The French transported its convicts to Guiana and New Caledonia, primarily for the profit of the state, but also for private employers. Beginning in the 18th century, convicts worked at North African and Spanish American presidios in mining, textile, and agricultural work.

The private control of prison labor in America began in the colonial period. In the 18th century, the crime of theft was punished by restitution through compulsory labor under indenture. This form of punishment was soon replaced by forced labor in houses of correction, however. From 1790 until 1829, American penitentiaries operated under a "piece-price" form of the contract system. In this system, prison authorities supervised prisoner workers while merchant capitalists furnished raw materials and arranged to acquire the finished products at an agreed-upon price per unit. Massachusetts introduced the contract system as early as 1807. The

rise of the merchant capitalist after 1825 rapidly spread the piece-price system to congregate prison factories using modern power machinery. Gradually, merchant capitalists began offering contracts through which they leased the labor of prisoners, directly controlling and supervising the workers at the prison shops. This type of contracting reached its high point in the period from 1835 to 1885, when it predominated in American prisons outside of the South.

Criticism of contracting mounted in the 1870s, however, with prison reformers objecting to the pernicious and corrupting influence of entrepreneurs on the daily prison regime. While there was some debate about their profitability, prison factories also came under intense pressure from the emerging labor union movement and from small manufacturers. Together, they formed "anti-contract" associations to lobby state legislatures. Considerable opposition to free market prison industry led to the gradual abandonment of most contracting and convict leasing by the 1890s. Many penologists and reformers also opposed the contract and piece-price systems. But not long after the diminution of contracting, these same reformers were bemoaning the lack of meaningful work in prisons—illustrating the essential paradox of prison labor: It is both oppressive and liberating. By the start of the 20th century, many state prisons under the state-use system had deteriorated into large-scale idleness and unrelieved boredom, and productive labor was completely done in by Depression-era legislation—the 1935 Hawes-Cooper Act and the Ashurst-Sumner Act of 1940—outlawing the interstate commerce of prison-made goods.

CONVICT LEASING AND RACE

The South during Reconstruction presented ideal conditions for coerced labor, since it suffered from chronic labor shortages. Prisoner exploitation through the convict lease system helped the South make a transition from slavery to capitalist agriculture and early industrialization. At the same time, the lease functioned culturally as a symbol of the ongoing white supremacy. Through "Black Codes" that regulated all aspects of the lives of black Americans and, later in the century, through Jim Crow legislation, criminal justice systems became the handmaiden of plantation owners and unscrupulous industrial entrepreneurs. Georgia overcame agricultural labor shortages between 1868 and 1936 through forced labor, and everywhere in the South prisons were part of a continuum of coercion that ran from sharecropping and tenant farming to peonage and to the convict labor lease.

The convict lease system was also used as a strikebreaking device because it provided replacement workers. One of the most notorious convict strikebreaking incidents was the Tennessee Coal Company lockout of union workers in 1891, which led to riots by union miners. After having served as a bridge to the new economy, the convict lease lost its function and profitability by the end of the 19th century. The depression of 1892, mounting social criticism, and agricultural technology converged to doom convict leasing in most of the South by the turn of the century. From then through World War II, Southern states replaced private leasing with public-works-and-ways and state prison farms.

CONVICT LEASING AND WOMEN

While few black women and almost no white women were convicted of offenses in the 19th and early 20th centuries, those who were unfortunate enough to be sentenced to the penitentiary or lease camps experienced harsh treatment. Women prisoners were usually segregated from men in most Southern states, yet they shared buildings and could see and hear the male prisoners. In 19th-century Georgia lease camps, women were chained to men in the bunkhouses and were subjected to continual sexual assault.

CONTEMPORARY PRIVATIZATION

Normalization and Repatriation

Post–World War II rehabilitation penology and the "treatment" approach exercised considerable influence on the structure and operations of prisons,

with most state governments operating generally inefficient industrial systems for state-use, institutional maintenance, and vocational education. As early as the 1960s, however, the liberal medical model of "correctionalism" came under intense criticism in academia, from the left and the right of the political spectrum. One group of critics of the rehabilitation model argued that it had a deleterious effect on prison industries, resulting in poor quality, make-work, overassignment, and lack of accountability. Vocationally oriented work programs using the "treatment ethic" deprived prisoners of the opportunity to gain self-worth through the work ethic required by private industry. Many more state prisoners were languishing in complete idleness.

The reintroduction of private contracting in prison industry was part of a larger and radical transformation of the U.S. political economy that was underway by the mid-1970s. Neoconservative policy greatly transformed the relation of the state to private interests, fostering the breakdown of philosophical and legal barriers between government and business. While acknowledging the existence of social problems, neoconservatives argue that community and voluntary agencies and the business sector could do a better job of delivering public services. Initiated in the late 1970s by President Jimmy Carter and given momentum under President Ronald Reagan, privatization and efficiency norms gained public policy dominance over "welfare state" solutions to social problems.

A law-and-order campaign conducted at a time when most states were experiencing severe fiscal crises and taxpayer revolt gave added impetus to a widespread privatization and commercialization movement. This was an ideal opportunity for criminal justice privatization: The private policing business burgeoned from the 1970s on, and private prison companies were formed to finance, build, and operate state and federal jails and prisons. Although a recession would not normally be an auspicious time for prison industrial proposals, union wages were still high, and the working class was more immediately concerned with the overseas flight of manufacturing jobs. Minnesota led the way with private industrial production for the open market as early as 1973. In 1979, Senator Charles Percy of Illinois introduced the Justice System Improvement Act, which repealed Depression-era limitations on the interstate commerce in prison-made goods. This legislation led to the quick implementation of "joint venture" programs in seven states, beginning with a Free Venture model in Connecticut, and quickly followed by Minnesota. A second phase of the Percy legislation established Prison Industry Enhancement programs (PIEs) that encouraged state and local governments to place prisoners voluntarily in "realistic" work environments and pay them a local prevailing wage for similar work, although there had to be assurances that free workers would not be displaced. Other provisions and restrictions called for various salary deductions for victim compensation, taxes, and room and board (if the states so chose), the total sum of which should not exceed 80% of the hourly wage.

The Free Venture Program, which became the model for many subsequent PIE programs, sought to "normalize" prison work by providing wage incentives and workers' compensation. But it required prisoners to meet or exceed free-world production standards, including a full workday. Normalization was promoted by a school of criminologists, led by Gordon Hawkins (1983), who distanced themselves from the treatment model and sought to harness privatization under the "justice as fairness" perspective, a penal philosophy based on utilitarian principles that encourages prisoner volition and responsibility. Many important political and business leaders promoted the Free Venture doctrine. While a faction of businesses was interested exclusively in the profit-making potential of prison labor contracting, other corporate executives (from the monopoly sector) saw privatization of prison industry as a civic opportunity. The late Chief Justice of the United States, Warren E. Burger, and former Attorney General Edwin Meese III were strong supporters of the PIE programs. Burger advanced the philosophy behind privatization in an article in the *Public Administration Review* (1985), where he called for "turning warehouses into factories with fences" in order to help stem the relocation of industry overseas.

By the late 1980s, private prison industry had reached a plateau. Labor union criticisms mounted, and inmate lawsuits over pay and working conditions were being upheld in state courts. State officials became secretive and defensive about their joint venture contracts. But the record tight labor market of the late 1990s reinvigorated the privatization movement, with a second wave of support under the banner of "repatriation." The search for products that are mainly imported is an old appeal, used as far back as the 1880s to fight globalization. In the United States today, more than 30 states permit free enterprise contracting. And with 80,000 prisoners working in joint venture industries and annual sales in the hundreds of millions of dollars, the economic impact of private contracting is small yet not insignificant. Prisoner contract workers are employed in manufacturing, assembly, and service jobs for a wide variety of companies (more than 150), including multinationals Nike, TWA, Dell, Microsoft, and Target. An unusual Joint Venture Initiative, Prison Blues produces a line of denim clothing in Eastern Oregon Correctional Facility, with retail distribution in the U.S., Asian, and European marketplaces. Women working for the private sector are heavily concentrated in light manufacturing and in telemarketing, especially in the South and Southwest. In Florida, PRIDE Enterprises operates as a nonprofit general manufacturing and services management company that forms business partnerships that in 1998 operated in 22 state correctional institutions and generated more than $81 million in sales, from which $1.2 million went to the state and nearly $300,000 to victim restitution. While the United States has an extensive operation of joint ventures, other countries that share the U.S. free market doctrine—especially New Zealand—have contracts with large corporations. Austria, the Scandinavian countries, and Australia come closest to equating prison workers with the free market. Japan, on the other hand, remains extensively involved in private contracting and subcontracting of prison industries. But workers are extremely repressed. In Mexico, the new *maquiladora* sweatshop prisons could crowd out the petty entrepreneurial economy characteristic of most Mexican prisons.

CONCLUSION

To what extent is the prison labor privatization initiative more political and ideological than economic in inspiration? The industry has many deficiencies and drawbacks, not least of which are poor training, high turnover, questionable morale, security priorities, and workday interruptions for various appointments and visitation. On the other hand, employers need not worry about unions, sick leave, Social Security taxes, disability insurance, vacation, or a host of other free-world labor obligations. State coffers are often used to build new production facilities or modify existing buildings and in other ways subsidize private operations. This is not exactly a free market fundamentalist's idea of laissez-faire, and a faction of pure marketers call for open competition and the elimination all government market preferences and restrictions, while applying labor laws and allowing unionization.

At the federal level, this pure market approach was reflected in the McCollum bill (HR 2558), the Prison Industries Reform Act of 1999, which sought to eliminate mandatory sourcing, but allow the Federal Prison Industries to sell its products on the open market. An opposing bill also was presented that would prohibit subcontracting with the private sector altogether. This controversy inspired a national conference on inmate labor force participation (ILFP) in May 1999 at George Washington University, which invited several internationally prominent economists to examine the economic costs and benefits of ILFP, aside from any criminal justice considerations. The conferees came to the general consensus that repatriation is viable and can be greatly extended without undue harm to free labor wages. But there are concerns other than profitability, of course.

Opponents argue that prison labor competition is inherently unfair, and others see private contracting as little more than wage slavery. Can prison work provide valuable experience and training and at the same time be profitable for investors? What about prisoners' wages? Can the pay ever be decent and not violate the less eligibility principle? The debate tends toward extremes, with "true believers" at one end of the spectrum who see enormous potential of prison industries as an alternative to foreign-based

production, and "realists" at the other end who see absolutely no potential in profitable penal industry. Since privatization of prison labor might represent the only hope for meaningful prison industry, the best potential and wisest policy course might be a middle course of somewhat subsidized and protected industry. In any event, the prison labor problem is an enduring paradox.

PROBATION

Probation is one of the most widely used sanctions in misdemeanor and felony courts, yet its purpose and methods of operation are largely unclear to most citizens. Probation is often called an "alternative to incarceration," but in recent years it has more likely been used as an adjunct to jail and prison terms. Originally, probation diverted alcoholic men and women from local jail sentences and offered them a chance to reform themselves under the guidance of a volunteer overseer. Historically, probation cases have come to involve increasingly serious offenses, including various degrees of felony crimes. Nowadays, probation officers have caseloads that comprise a diverse group of offenders who have committed a wide range of offenses.

ORIGINS

Ever since the Middle Ages, sanctions have been developed to mitigate the harshness and punitiveness of usual penalties such as corporal punishment, death, and social exclusion. Benefit of clergy, judicial reprieve, sanctuary, and abjuration are examples of such sanctions. Others include royal pardons, lenient interpretation of statutes, and even lessening the value of stolen property to lower the appropriate penalty. Over time, courts started rewarding offenders who showed good behavior with less restrictive sanctions. By the 19th century, efforts were being made in England and later in the United States to use volunteers, often associated with religious or temperance groups, to care for and supervise persons convicted of either minor offenses or offenses serious enough to attract jail or prison terms. This practice eventually became known as "probation."

Probation in the United States is typically dated to August 1841, when Boston philanthropist John Augustus (1784–1859) began asking the Boston Police Court to release into his custody and care criminals who were ordinarily placed behind bars because of their alcohol-influenced and -related behavior. Augustus believed that he could help these men and women improve their lives more effectively than would a period of incarceration. Augustus described his first case this way:

> I was in court one morning, when the door communicating with the lock-room was opened and an officer entered, followed by a ragged and wretched looking man, who took his seat upon a bench allotted to prisoners. . . . The case was clearly made out, but before sentence had been passed, I conversed with him for a few moments, and found that he was not yet past all

> hope of reformation. . . . He told me that if he could be saved from the House of Correction, he never again would taste intoxicating liquors; there was such an earnestness in that tone, and a look expressive of firm resolve, that I determined to aid him; I bailed him, by permission of the Court. (Augustus, 1939, pp. 4–5)

Augustus asked this man to sign a pledge to stop his drinking and found him employment, and the man became sober. Later, Augustus returned to court with the man, whose appearance impressed the court. Instead of receiving the usual jail sentence, he was fined one cent, plus court costs. Within six months, Augustus was responsible for the release of 17 other persons for similar crimes. Ten of these paid their fines, and Augustus himself paid the fines of those who were too poor to do so.

The following year, 1842, Augustus began bailing out persons charged with other offenses. He also started working with women, who quickly became a major portion of his caseload. In 1843, he extended his work to municipal court, and three years later turned his efforts to juvenile offenders. By 1858, Augustus had bailed out 1,946 defendants—1,152 men and boys and 794 women and girls.

Despite Augustus's efforts, probation was not quick to catch on. Instead, American states had begun to invest in the penitentiary as a means of penalizing behavior it found unruly and criminal. Not until 1878, approximately 20 years after Augustus's death, did Massachusetts become the first state to pass legislation authorizing the use of probation. Maryland followed suit in 1894. By 1900, probation laws had been approved in Vermont, Rhode Island, New Jersey, New York, Minnesota, and Illinois. Historian David J. Rothman argues that it was not until the Progressive era that probation became a "popular courtroom disposition." He observes, "In 1900, only six states provided for probation. In 1915 alone, 33 states created or extended the procedure; and by 1920, every state permitted juvenile probation and 33 states, adult probation" (Rothman, 1980, p. 44). In 1956, Mississippi became the last of the original 48 states to give legislative approval to probation. Subsequently, Alaska and Hawaii also did so when each became a state.

CHARACTERISTICS OF PROBATIONERS

Probation is the most commonly applied sanction in the United States Thus, according to the most recent report by the Bureau of Justice, at year-end 2002 nearly 4 million men and women were on probation (Harrison & Beck, 2003). This total figure represents a rate of 1,854 probationers per 100,000 adult U.S. residents, or the equivalent of 1 in every 54 adults. Half of these people had been convicted of a felony, 49% of a misdemeanor, and 1% of other infractions. Twenty-four percent were on probation for a drug law violation, and 17% for driving while intoxicated.

As with prison, probation is not applied evenly across the country or among the community. Thus, women make up about 20% of those people on probation, while 1 out of 3 probationers are black. Washington State had the highest rate of people on probation, while New Hampshire had the lowest. Though the numbers of people sentenced to probation increase every year, they are growing at a rate considerably slower than the nation's prison population.

PURPOSES OF PROBATION

Probation is a criminal sanction applied to persons convicted of crimes as a method of monitoring, supervising, and improving their subsequent behavior in local communities. Since John Augustus, the key purposes of probation have included diversion, rehabilitation, and social control.

Diversion suggests that probation is used as an alternative to incarceration. This should meant that it is not simply a sanction that does not involve serving time in jail or prison, but is instead one that uses community-based interventions for persons who, without the benefit of probation, would have been incarcerated. While a good case can be made that Augustus's efforts aligned themselves with this purpose, the early—as well as subsequent—history of probation suggests that probation lost touch with its original purpose as it gained support and was used more widely. As Rotman (1995) observes, "Judges, in practice, tended to give sentences of probation to those who in an earlier period would

have been given a suspended sentence or let off with a verbal warning; in effect, probation became a supplement to incarceration [rather] than an alternative to it" (p. 182). Still, with troublesome levels of jail and prison crowding and occasional budget crises at the start of the 21st century, probation is still a means through which offenders can be diverted from incarceration, with less cost to local, state, and federal governments.

Rehabilitation is a process by which offenders with specific problems, such as alcohol or drug addiction, change their behavior and thinking and improve their economic well-being, living conditions, and social life. Probation serves this purpose either by providing direct assistance to offenders or by acting as a liaison between offenders and useful resources. Probation officers are often required to prepare presentence reports (PSRs) or investigations (PSIs) that not only inform courts about offenders' criminal and social histories, but also about resources available in the community to address particular matters. These reports can serve as rehabilitation plans. They can also provide the informational basis for court decisions that place offenders under probation supervision rather than penal confinement.

Social control suggests that probation is intended to monitor and keep surveillance over offenders on its caseload. Diverse strands of probation reform over the years give primacy, in practice if not in theory, to controlling, as opposed to rehabilitating, offender behavior. In the mid-1930s, for example, Harvard Law School professor Sheldon Glueck observed, "The characteristic feature of probation, that which distinguishes it from the other crime-treating institutions thus far invented, is that it enables the offender to remain in the community, but at the same time to be under control and guidance" (Glueck, 1933, p. 4). In recent years, social work perspectives in probation practice have long given way to such reforms as justice models approaches suggested in the mid-1980s (see McAnany et al., 1984) and, more bluntly, to strategies that include such technology as electronic monitoring and alcohol and drug detection devices. In nearly all these cases, humanitarian concerns, which thread their way through the history of probation, have been sacrificed to law enforcement interests. This trend is even evident in recent efforts—a growing industry of sorts—to incorporate program services through risk/need classification instruments and research-based program effectiveness studies.

Probation also has other purposes, including crime prevention, deterrence, and victim services, and periods of probation supervision can serve several of them simultaneously. In recent years, for instance, many probation officers or probation agencies have explored the use of restorative justice techniques that heal or repair the conflicts and consequences that result from criminal activity that harms people or communities in one fashion or another. Proponents of restorative justice recognize that probation agencies, in the wake of victim rights agitation starting in the 1980s, have either begun to address the needs of crime victims or have included crime victims in decision-making processes that concern the development of probation policies and professional standards and practices.

PROBATION AND INCARCERATION

Probation, at least in the United States, was initially used as an alternative to incarceration. As the practice of probation slowly spread across the country, and as it was applied to a broader and increasingly more serious set of offenders, probation was used less as an alternative to incarceration, but more as an alternative to other, often less stringent options, such as conditional discharges, fines, and so forth. As probation changed its focus, a struggle emerged, and is present today, about the ability of this sanction to effectively counter the use of incarceration.

In the mid-1950s, Marjorie Bell, a longtime official of the National Probation and Parole Association, made the following observation about probation's potential as an alternative to incarceration:

> I once asked the warden of a state penitentiary how many of its inmates might in his opinion have become law-abiding without entering the prison gates, if they had instead been kept under the supervision of the court which convicted them. After a thoughtful moment, the

> warden answered, "*Nearly half of them* could have done well on the outside if they were on probation.'" (Chute & Bell, 1956, p. vii; emphasis in original)

But can probation focus its resources on offenders who generally receive jail or prison terms, and not on offenders who ordinarily receive lesser sanctions? Notable efforts on this account have included California's probation subsidy programs in the 1960s, community corrections acts in states such as Minnesota and Kansas in the 1970s and 1980s, and New York State's Classification/Alternatives legislation of 1984. Each of these measures shared similar mechanisms of attaching state funding that required local probation agencies to provide community-based services for offenders instead of sending them to state prisons.

THE FUTURE OF PROBATION

Probation practices, especially over the past 35 years, have undergone significant challenges and reformations. Partially because probation is rarely at the center of deliberative program and policy development, it is susceptible to changing political opinion. Still, probation survives because of the sizeable caseload probation officers manage, the number of professionals employed in this field, its legislative authorization, the variety of initiatives and tasks historically subsumed under its wings, and the length and tradition of its service to consumers, communities, and constituents. The future of probation will undoubtedly depend on the actions and activism of professional and political forces. While it would be intriguing to see what probationers might contribute to the shape of probation services, little evidence exists that such a "bottom-up" movement is likely. All in all, probation agencies have been far less influenced through the political mobilization of probationers than prisons have been affected by the constructive actions of prisoners.

In this general context, it is likely that probation will experience periods of change that may include some of the following:

- *Labor unionization*. Probation officers have the most to gain or risk when probation practices are altered one way or another. Probation officers, like security staff in jails and prisons, have an economic interest in probation's maintenance as a governmental agency. Labor unionization, especially in the face of prospects of increased privatization, may expand, not just in number but also in content. Economic interests, some of which are quite reasonable, may be addressed not simply through salary negotiations, but also through improvements in the work probation officers do, including the ability of probation officers to offer information and services that allow for the diversion or deinstitutionalization of men and women in the criminal justice system.

- *Consumer involvement.* Probationers are clearly consumers of probation's services, but so too are communities, including law-abiding citizenry, local business and civic concerns, and neighborhoods where probationers may or may not live. At various points in probation's history, these constituencies have been involved—often very involved—with probation work. The Volunteers in Probation initiative, which Michigan Municipal Court Judge Keith J. Leenhouts (1925–) began in 1959 and later mobilized through the National Council on Crime and Delinquency, is one example. It is useful to remember, too, that John Augustus was a volunteer service provider to the court. Such business, community, and volunteer groups can establish important assistance to courts looking to reduce reliance on incarceration.

- *Privatization.* Probation services, particularly at the misdemeanor level, have been privatized in some places, with Los Angeles being one example. Again, John Augustus was "a private agent" for reform. Similarly, other private (mostly nonprofit, but some for-profit) agencies have spearheaded efforts to provide probation-like services to assist courts and communities in reducing reliance on incarceration. The best contemporary example is the National Center on Institutions and Alternatives, lead by former Massachusetts Youth Commissioner Jerome G. Miller, which used "client specific planning" to present judges with sentencing plans the focused on the ability of jurisdictions to coordinate and mobilize its resources for community-based sanctions instead of imprisonment.

- *Research and training.* Organizations such as the American Probation and Parole Association, the International Community Corrections Association, and the National Institute of Corrections (a branch of the U.S. Department of Justice) have been leading advocates of evidence-based approaches to criminal sanctioning practices and, through annual conferences, regional or national workshops, and site visits, have been active in establishing training opportunities for local and state agencies and governments to become familiar with risk-sensitive and outcome-effective programs that pass empirical muster.

- *Reinventing probation.* Probation has always had to struggle for its place within criminal justice. In recent decades, political changes have foisted upon probation, often with its own acquiescence, a variety of name changes. Nowadays, probation is frequently blended, without much guidance, into such "new practices" as community corrections, community punishment, community penalties, or community control. According to the Reinventing Probation Council, a non-official 14-member group of leading academics and probation officials that met for two years in the late 1990s to study and make recommendations about the future of probation, "Either probation will be at the political and intellectual core of future policy-oriented efforts to promote public safety and offender rehabilitation in America, or it will continue to be widely marginalized, mischaracterized, and under funded" (Reinventing Probation Council, 1999, p. 1). Seven strategies, based on probation experiences in such cities as Boston, Spokane, and Phoenix, emerged from the group's determination to suggest successful probation reforms: public safety; working in the community; developing partners in the community; the rational allocation of scarce resources; enforcing conditions and penalizing violations; performance-based initiatives; and strong and steady leadership. The report concluded with a vision of change for probation:

> Probation will change when those who run probation departments are held accountable for achieving—or failing to achieve—specific outcomes. The paramount outcome for probation is public safety. However, there are other valued outcomes that must be addressed if probation is to be successfully reengineered. These outcomes include equality of justice, punishment, crime prevention, and a restorative commitment to victims and communities. These outcomes express the public's expectation that the justice system is doing its job. These are the outcomes that matter and that require ongoing and careful measurement by probation practitioners. (Reinventing Probation Council, 1999, p. 9)

CONCLUSION

The foundation of probation remains secure in the criminal justice system. Despite attempts such as the intermediate sanctions movement of the late 1980s and early 1990s to establish penalties "between probation and prison" (see Morris & Tonry, 1990), no one is likely to suggest abolishing probation. The core dilemma for probation is not a matter of life or death, but rather a matter of form, philosophy, and substance.

Probation is an important societal response to criminal offending. At its core, probation officers are charged with the task of meeting, talking, and moving forward with the boys and girls, and the men and women, who come to them on order from local, state, and federal sentencing courts. They are as much advisors and architects as monitors or supervisors. How probation officer meetings, conversations, and planning processes occur with those persons sent to them depends on a variety of professional and political circumstances.

Probation has grown, developed, and survived over the course of 160 years. While its continued existence seems certain, even with challenges posed by tenets of retributive or restorative justice, probation will likely remain, and may emerge from the current period of punitive "law and order" as a stronger framework for intervening in the lives of those who break the law and are convicted of doing so. In the process, criminal justice systems will learn to rely less on incarceration and more on community-based resources.

PROFESSIONALIZATION OF STAFF

Certain occupations or careers such as law and medicine are thought to hold a "professional" status in our society. Generally an occupation is considered to have gained professional status when the following elements are present: a specialized body of knowledge is developed and maintained; practitioners undertake a training period during which that body of knowledge is studied, learned, and tested; members are recognized by the community and their clients as having authority in their field; the profession operates autonomously and develops a culture maintained through associations; and it develops, maintains, and enforces a code of practice and/or a code of ethics and behavior.

Since the late 1970s and following significant changes in staff recruitment and training in the 1980s, corrections officials have increasingly sought to be perceived as professionals. However a number of barriers remain in place before the professionalization of corrections may be complete. Correctional employment is often poorly paid and has minimal educational requirements. It is also potentially a dangerous occupation, usually with monotonous routines. It may also be thought to involve questionable ethical practices. Until such factors change, the status of correctional employees as professionals will continue to be questioned.

HISTORY

The history of the professionalization of correctional staff is linked to changing views regarding punishment and prisons. During the 1960s and 1970s, for example, increased overview by external agencies regarding the conditions of imprisonment drew attention to the conditions and treatment of prisoners and staff behavior. An awareness of how staff were treating prisoners increased the demand for staff accountability. Many correctional centers modified their organizational structures and began to monitor staff–prisoner interaction. Staff composition also changed at this time, as more teachers, counselors, and psychologists were employed. Female correctional staff began to be employed in male prisons, where their presence was thought to "soften" the all-male environment and assist in more humane ways of managing prisoners.

As the conditions of imprisonment and the administration of punishment shifted, the working

culture and expectations of correctional staff began to change as well. Moving beyond their previous task of merely locking and unlocking prisoners, correctional staff began to perceive themselves as having a wider and more "professional" role in the management of prisoners. In an effort to achieve the professionalization of the workforce, correctional agencies sought to change recruitment practices, revise orientation programs for new officers, and provide in-service training for those staff already present in institutions. Training began to emphasize the humane treatment of prisoners and introduced new techniques of prisoner management that stressed the need for staff to exercise their authority in ways consistent with the new reforms in the administration of punishment.

BARRIERS TO IMPLEMENTATION

Despite some considerable gains, there were a number of barriers to achieving the professionalization of correctional staff. The reforms often were imposed from outside the institution, frequently mandated by court orders. Consequently, many of the new approaches often were not supported by the employees. Instead they were seen as a threat to the security of the institutions and to the safety of both prisoners and staff.

Many of the barriers also existed at an organizational level. While there were changes in the recruitment practices of correctional departments to attract more highly educated staff, the actual job of front-line correctional worker was not substantially modified. Officers were not granted more autonomy nor given voice in the management of prisoners. Instead, they found that emphasizing the human services aspects of their occupational roles might lead to sanctions. Correctional departments and organizations themselves tended to remain rigidly hierarchical, with paramilitary rank structures. Such organizational structures were not supportive of any self-controlling, autonomous decision making on the part of staff, as the rhetoric of professionalization had emphasized. Nor were these organizational structures conducive to changes to the organizational culture of the workforce that would support the modified staff recruitment.

IMPLICATIONS

There remains some work to be done within corrections in order to develop a professionalized correctional workforce. While there is no doubt that the administration of punishment requires specialized expertise and knowledge, correctional administrators must examine some of the continuing organizational structures that hinder professionalization.

The realities of work in correctional institutions must be fully examined in order to determine the degree to which they meet the demands for formal systems of training and accreditation. They must also be analyzed to see how they have developed and maintained standard codes of ethics and practice. Professional autonomy for correctional staff operating in secure environments requires an examination of the ways it differs from the operation of professional autonomy in other occupations. Adequate strategies for the implementation of organizational reforms must focus on the structures of the organization as well as the nature of the staff operating within those structures.

Public stigmatization of the work of correctional staff continues to make the achievement of full professional status very difficult. Without the widespread acknowledgment of the specialized knowledge and expertise of correctional staff as well as respect for the contributions of that work within the wider community, the internal organizational recognition of professionalism among correctional staff remains problematic. Finally, current trends in criminal justice, particularly those related to the rapid expansion of penal populations that tend to result in the mere warehousing of inmates, also mitigate against the professionalism of staff. Overworked staff in overcrowded institutions are often unable to undertake the individualized management of prisoners in their care. Instead, they effectively revert to their historical role as those who merely lock and unlock prison cells.

CONCLUSION

The professionalization of correctional staff requires that their work be recognized as demanding specialized expertise and skills, occupational training, acknowledged authority, and ethical

standards of practice. Currently, correctional officers often work in an uncertain, sometimes dangerous environment that is characterized by set organizational structures, a capricious political climate, increasing workloads, and diminishing resources. Even though there has been substantial progress made toward the professionalization of the correctional workforce over the past three or four decades, there remain a number of serious issues that need to be addressed before corrections can be considered professionalized.

PROTECTIVE CUSTODY

Celebrity and other high-profile offenders as well ordinary inmates fearful for their lives are sometimes held in protective custody during part or all of their sentences. While in protective custody, prisoners are usually placed in housing units that are separate from the larger institution. In official publications, a variety of terms, including *administrative segregation* or *detention, dissociation, isolation, seclusion, protective custody,* and *solitary confinement*, are used interchangeably to describe these restrictive environments. People are usually placed on segregation to ensure the safety of inmates and others, to protect institutional property, and to guarantee the security and orderly running of the facility. Segregation from the general inmate population for reasons other than disciplinary ones is not considered punitive in nature, although it can have detrimental effects on an inmate's chance of parole, admission to a halfway house, and security classifications.

WHO IS ASSIGNED TO PROTECTIVE CUSTODY?

Placement in protective custody, administrative segregation, or administrative detention can be voluntary and involuntary. If an inmate is classified as a protective custody case and segregated from others, it is likely that he or she was threatened or actually assaulted while in the general population. He or she may be an inmate informant or may have been pressured to participate in nonconsensual sex. Some former law enforcement officers, or people who held legal positions outside of the institution, are also placed in protective custody. Individuals may have previously worked in sensitive positions within the institution, such as prison dog caretaker. Finally, high-profile prisoners are also sometimes held in protective custody. Take, for example, Yolanda Saldivar, who was convicted of the murder of Tejano music singer Selena. National media attention covered Saldivar's 1995 trial, sentencing, and arrival at a Texas state prison. She is currently housed in protective custody in an isolated portion of the unit for both her safety and the security of the institution.

CONTROVERSIAL USES OF PROTECTIVE CUSTODY

Historically, institutions segregated minorities, homosexuals, those with mental illnesses, or the terminally ill from other inmates in order to limit them from participating in prison activities and to control the threat of prison riots. However, following numerous lawsuits and challenges, this use of administrative detention, with some exceptions, has been greatly reduced.

In a number of court cases in the 1960s and 1970s (see *Washington v. Lee,* 1996, 1968; *McLelland v.*

Siegler, 1971; *Taylor v. Perini,* 1976, 1977, 1979; and *Thomas v. Pate,* 1974), the Supreme Court ruled that racial segregation can only be used to maintain security, discipline, and order within jails. Since then, institutions have reduced the use of racial segregation unless there is a compelling reason for the separation. When racial segregation does occur, documentation must be kept detailing the reasons for it.

Unlike minorities, it is more common for prisons to place homosexual or bisexual prisoners on protective custody than in previous years. This may be because these inmates are more likely to request protective custody than heterosexuals. It may also be because they are targeted for sexual relationships more often than those inmates perceived to be heterosexual.

Although some prisons house the mentally ill in restrictive units, few use this practice on a continual basis. Research demonstrating that mental illness is specifically tied to suicide rates and that those inmates with mental illness who are housed in special housing units have higher levels of suicide has encouraged institutions to provide alternative means for dealing with the mentally ill. Such individuals are usually now kept in the general population, if possible, while those suicidal are sometimes kept in the medical infirmary or in specially created suicide watch cells.

Lastly, prisons have reduced the number of terminally ill inmates housed in special housing units. Inmates with acquired immunodeficiency syndrome (AIDS) and asymptomatic human immunodeficiency virus (HIV) are commonly left in the general population until their diseases become so debilitating that they require constant and daily care. At that point, they may be placed in medical units, infirmaries, or hospices rather than protective custody.

HOW LONG ARE PEOPLE IN PROTECTIVE CUSTODY?

Typically, institutions have policies that dictate upper limits of time that anyone may remain in protective custody in order to combat psychological and psychiatric issues that prevail as a result of the segregation. If the length of segregation needs to exceed the time limitation set forth in prison policy (e.g., inmates awaiting transfer to another institution or cases of long-term protection of celebrity inmates), the institution must fully document why the inmate's segregation from the general population violates the retention policy. Usually, an administrator at the institution will also review the documentation and make a decision as to whether it is safe to return the individual to the general population. In addition, the prison conducts periodic reviews of the case and the relevant documentation to determine if protective segregation is still warranted.

In federal prisons, a psychiatric or psychological assessment is provided to people housed in administrative custody for more than 30 days. These assessments are used to determine whether people are adjusting to their surroundings and whether they pose any threats to themselves or others. They are also used to determine whether the threat to the inmate still exists. Once an administrator decides that the reasons for protective custody have ceased to exist, the inmate may be released to the general population. Only individuals in need of long-term protection or cases in which there are exceptional circumstances involving institutional security threats or investigations are exempt from the assessment process.

LIFE IN SEGREGATION

Inmates who are housed in administrative segregation units are generally given the same privileges as the general population so long as the institution has the staff to accommodate them. Inmates in restrictive units are housed in solitary cells, typically with solid steel doors and decreased cell floor space. Cells may also include concrete beds with thin mattresses and steel sinks and toilets. In cases of the psychotic or the suicidal, men and women may be placed in a padded cell, with no toilet, sink, or bedding, that is visible from all sides by institution staff. Inmates usually eat and exercise alone, although they may sometimes associate among others also segregated. They are rarely allowed contact visits and do not have access to the same level of

programs, services, and privileges offered to the general population. Programming liberties vary by institution, security, and staffing needs, but may include participation in educational services; library privileges; access to social services, counseling, and religious services and guidance; recreation; and visiting, telephone, and correspondence rights. Commissary and retention of personal property are also provided when possible. Restrictions on these privileges are generally based on security issues and resources.

CONCLUSION

Few inmates are housed in protective custody, and those who are remain segregated for short periods of time. The goal of all prisons is to keep individuals as independent as possible within a safe community structure. Protective custody is provided only for the extreme cases where other alternatives are not available.

PSYCHIATRIC CARE

Psychiatric care for inmates should be available in all penal facilities. It typically involves screening, assessment, and treatment for a mental illness or mental disorder by a mental health expert, usually a psychiatrist or psychologist. Treatment generally falls into three broad categories: emergency care for prisoners experiencing acute crisis or disorientation; specialized care in mental health units or facilities; and a broad range of therapeutic services including medication, therapy, and counseling. Psychiatric treatment is particularly problematic in prisons because of the constant tension between care and custody.

HISTORY

Psychiatric care for prisoners can be traced back to at least the 19th century. As the number of prisoners increased, new systems of categorization and management were introduced to aid in their management. Convicts deemed to be "mad" were seen as disruptive and threatening to the good running of the institution. Attempts were therefore made to separate them out from the general population. "Alienists," or nascent psychiatrists, claimed special expertise in their ability to identify a new category: criminal lunatics or the criminally insane. While this helped to extend the power of psychiatrists into the legal domain, the actual care provided to this population

was quite limited and problematic. Fundamentally, there was a philosophical contradiction between *criminality*, implying responsibility for one's action, and *lunacy*, suggesting a loss of reason and therefore absence of responsibility. This conundrum meant that opinion varied as to whether criminal lunatics should be punished or treated.

Regarded as troublesome by both prison wardens and asylum keepers, "criminal lunatics" were often shunted between prisons and asylums or kept in separate temporary, makeshift, and hazardous quarters within prisons and asylums. Many feared that inmates feigned madness in order to escape the harshness of prison. At the same time, there was concern that brutal prison conditions created madness. Some of these problems appeared to be solved with the creation of purpose-built institutions for the "criminally insane." However, many prisoners considered to be mentally ill were not admitted to these establishments. Furthermore, institutions for the criminally insane were plagued by an overriding concern with security that often undermined treatment attempts. Even when treatment was administered, it was often invasive and potentially harmful. Common therapies for the treatment of madness included blood-letting, leeching, purging, vomiting, and restraint.

THE REHABILITATIVE IDEAL

During the 20th century, psychiatry grew in power and influence. Following World War II, it appeared to offer a way out of the impasse created by mentally disordered offenders by suggesting that *all* prisoners suffered from an illness that caused them to commit crimes. As such, many argued that prisoners should be treated or cared for through different psychiatric and/or psychological interventions rather than be punished. This view, referred to as the "medical model" of crime, became institutionalized through the rehabilitative ideal that was introduced into prison policy and practice during the 1950s.

A wide array of psychiatric interventions were used with the prison populations, including drug therapy, individual and group counseling, therapeutic communities, conditioning, psychosurgery, and electroconvulsive treatment. Experiments with mind-altering drugs, such as LSD, were also conducted inside U.S. and Canadian prisons. Some of these were undertaken for the Central Intelligence Agency with the purpose of developing mind-control technology. Many of these practices were condemned as harmful and ineffective. Critics further argued that the dangers imposed by psychiatric practice were masked by claims that it was scientific and benevolent. These concerns contributed toward the withdrawal of some forms of psychiatric treatment and the larger decline of the rehabilitative ideal in prisons. Skepticism toward psychiatric care within prisons reflected a broader anti-psychiatry movement that likened much of psychiatric care to cruel and unusual punishment. Indeed, according to this view, psychiatric care is an oxymoron.

DEINSTITUTIONALIZATION AND IMPRISONMENT

The anti-psychiatry movement is considered to be partially responsible for the deinstitutionalization of psychiatric facilities that began in the mid-1960s. At this time, large mental hospitals were closed down or scaled back, and inmate populations were quickly reduced. The new availability of antipsychotic medications also contributed to this process. In theory, patients were to be treated through medication and "care in the community." In practice, however, funds and resources for mental health services in the community have been woefully inadequate. Consequently, a large number of people with mental health problems who would have earlier been hospitalized are now living in the community without support and job opportunities. Their vulnerability on the street, along with recent legal changes making it more difficult to divert offenders into noncorrectional treatment programs, have contributed to their incarceration. As such, many argue that prisons, and particularly jails, have become the new mental hospitals.

The closing of mental health facilities is also thought to have contributed significantly toward the rising prison population. For example, a task force led by the American Psychiatric Association

(2000a) found that approximately 20% of all inmates have serious mental disorders and that up to 5% are actively psychotic. Such statistics, however, must be interpreted carefully, since there are numerous problems in defining and measuring mental disorder. For example, the American Psychiatric Association's (2000b) *Diagnostic and Statistical Manual of Mental Disorders* is frequently used to inform psychiatric evaluations within prisons. However, this tool has been criticized on a number of grounds, including its reliability and validity. Furthermore, statistics typically include but do not make explicit those who enter the prison with no mental health problems but who deteriorate during their imprisonment. Finally, prison statistics may mask transcarceration: the movement of individuals back and forth between the mental health and criminal justice systems. Despite these cautions, there is a general consensus that a considerable and increasing number of prisoners suffer from mental health problems and that they are receiving inadequate care. The introduction of telepsychiatry, in which prisoners are assessed and sometimes treated through a videoconference, has recently been introduced as a means of meeting resource demands in a cost-efficient way.

CUSTODY VERSUS CARE

The main purpose of any prison is to punish and limit the freedom and autonomy of those it contains. Security, rather than care, is the major concern. Attempts to provide care to prisoners is therefore always limited and undermined by this fact. Furthermore, interventions, however progressive, are always at risk of becoming coopted by the prison regime as a means of control or regulation rather than care. Psychiatrists and other mental health professionals are thus often caught between a duty of care to patients and a duty to the institution.

The conflictual nature of the role of prison psychiatry creates particular problems for care, including the voluntary nature of psychiatric treatment, informed consent, and confidentiality. A key principle in clinical practice is that persons considering treatment should be informed about the nature of treatment and have the right to refuse such treatments. However, prisoners do not enter correctional facilities voluntarily. Furthermore, depending upon the circumstances and jurisdiction, they may not have the right to refuse assessment and/or treatment. Even in situations where prisoners are entitled to say no, their unwillingness to engage in treatment may be used against them such as during their parole hearing. Thus, the degree to which prisoners can consent to treatment without coercion is a continual concern.

The question of consent is compounded by the fact that correctional mental health staff cannot guarantee to prisoners that their discussions will remain confidential. There are various occasions when a staff member must report a conversation to security and the administration. This is particularly true if the nature of the discussion suggests that the prisoner poses a threat to others, themselves, or the security of the institution. The issue of confidentiality is also a concern during group therapy, where disclosure may make them vulnerable to other inmates.

PSYCHIATRIC CARE OR PSYCHIATRIC ABUSE?

The authority and power afforded psychiatry, disagreements over definitions and criteria for defining mental illness, as well as the priority of security over clinical concerns, create a situation in which psychiatric care within correctional facilities is always open to abuse. The most well-known example of the psychiatric abuse of inmates was the incarceration of political dissidents in the USSR, reported to have been widespread from the 1960s to the 1980s. Here, political dissidents were arrested on criminal charges and subjected to compulsory psychiatric examination. Once it was determined that the prisoners were unfit to stand trial for reasons of insanity, they were removed to a special forensic psychiatric hospital by court order. In this way, the diagnosis of a mental illness was used to bypass normal legal procedures for assessing guilt or innocence, thus allowing the state to detain individuals against their will and enforce treatment. In this context, psychiatric treatment was

used to punish rather than care for inmates. The use of psychiatry for political ends remains a concern within Russia and elsewhere.

Since the terrorist attacks in New York City on September 11, 2001, the issue of political imprisonment within the United States has gained public attention. Concern surrounds not only suspected terrorists held in camps at the American naval base in Guantánamo Bay, Cuba, but also political prisoners confined in various American institutions. Psychiatric care is central to the treatment of these prisoners in at least two different ways. First, there is concern that psychiatric knowledge and technologies may be used to subdue, intimidate, punish, and/or torture inmates. Second is the fear that these same methods create severe mental health problems and that prisoners are left without adequate support in alleviating distress. A previous and relatively well-publicized instance of this was the High Security Unit at the women's federal correctional institution in Lexington, Kentucky, which employed methods of sensory deprivation in its underground prison. While this institution was closed down in August 1988, many of the techniques it employed are now used more widely with political and nonpolitical prisoners. For example, sensory deprivation is central to supermaximum control units, where prisoners are kept under constant surveillance while isolated in their cells 23 or more hours per day. Additionally, lights remain on 24 hours a day, but there is no natural lighting, and human contact is minimized.

GENDER, RACE, AND SEXUALITY

An issue related to psychiatric abuse within prisons is the overprescription of antipsychotic or mood-modifying medication. For example, a survey of U.S. state public and private adult correctional facilities in 2000 reported that approximately 10% of inmates received psychotropic medication (U.S. Department of Justice, 2001). Although this survey did not provide a gender breakdown, other research indicates that women prisoners are more likely to receive psychotropic medication than men. This may reflect the fact that women prisoners are more likely to be diagnosed with and treated for a mental disorder. A similar trend is apparent in the general population. However, the degree to which this represents "real" gender differences or is a product of sexist diagnosis and treatment is a matter of much debate. It is also important to recognize that sexist and sexually abusive practices within prisons may contribute to mental health problems among inmates. Similarly, racism within the prison regime, including psychiatry, may contribute to mental health problems and inadequate psychiatric care. Additionally, mental health practices may pathologize gay, lesbian, bisexual, and transgender prisoners because of their sexuality.

CONCLUSION

Within prisons, psychiatric care is a double-edged sword. While it carries the potential for creating a more humane regime and easing the distress of inmates, the prevailing concern with security leaves psychiatry open to harm. Furthermore, its status as benevolent, curative, and scientific may mask abusive practices and more generally serve to legitimate the use of prisons. Nonetheless, prisoners are themselves very aware of such contradictions and have long been active in both resisting perceived psychiatric tyranny and demanding adequate psychiatric care. Their action has extended to a number of successful legal cases at both ends of the spectrum.

PSYCHOLOGICAL SERVICES

Psychological services offered in prisons perform a dual function: they are aimed at the rehabilitation of prisoners and at the same time toward prison management. The past three decades have evinced drastic changes in the numbers of psychologists working in prisons and in the kinds of work that they do with prisoners. Currently, most prison psychologists offer a number of services, including assessment, treatment, training, and consultation.

HISTORY

Psychology as a discipline emerged during the 19th century. However, prior to that time, shelter for the mentally disordered was provided through religious institutions and asylums. It was the introduction of psychoanalysis at the end of the 19th century that marked the beginning of "talking cures" for mental disorders. Moving away from strict punishment, prison psychology was introduced in the 20th century and has gone through many transformations, from psychotherapy to behavior modification to present-day, less ambitious attempts at behavior change.

Prison psychologists were introduced in large numbers during the early 1970s. As the prison population in the United States has grown since the 1980s, the approach and role of psychologists and other mental health professionals has had to change dramatically. These days, correctional institutions are employing more psychological professionals than they have in the past, from an estimated 600 masters- and doctorate-level psychologists working in corrections in the early 1980s, to more than 2,000 in U.S. prisons and jails today.

Educational and training requirements for psychologists were less rigorous in the past, while today doctoral level training is the expected norm. Earlier approaches that emphasized individual psychotherapy have now given way to differentiated and highly focused approaches that are based on theoretical and research foundations. In particular, cognitive-behaviorally based programs for sex offenders and violent offenders, which emphasize victim empathy and address cognitive distortions and denial, appear promising.

PRISONER REHABILITATION

Psychologists believe that crime is caused by specific traits in an individual, including personality, impulsivity, and intelligence. Prison psychologists generally pay some attention to environmental factors, including parental supervision and discipline, home environment, and parental criminality. Irrespective of what tradition they have been trained in, whether it was psychoanalytic, behaviorist, or humanist, most psychologists take into account the impact of multiple factors on criminal behavior, and many have an eclectic approach to assessment and treatment.

Aside from working with the general population in state and federal prisons, psychologists may be employed in long-term and short-term mental health units or special needs units in prisons and in other facilities associated with prisons, or work in state hospitals that house mentally disordered offenders. Prisoners who are housed in these specialized units can be suffering from major mental disorders, may be guilty but mentally ill, or less frequently, may be not guilty of a crime by reason of insanity. Those suffering from severe disorders may remain in long-term institutions for many years.

All mental health professionals undertake a variety of tasks in prisons, including assessment, direct treatment, and administration. Most assessments are aimed at determining intellectual ability, personality characteristics, risk assessment, and symptom assessment. Prison psychologists treat offenders for mental illnesses, in addition to administering and interpreting numerous standardized tests for use by the

correctional institutions and parole authorities. The most widely used psychological instrument in corrections is the Minnesota Multiphasic Personality Inventory (MMPI, MMPI-2).

Psychological services offered to prisoners include everything from substance abuse treatment to suicide intervention to behavior modification to social therapy, with a great deal of overlap in the services offered both individually and in groups. Prisoners have a number of problems. As a result, few psychologists specialize in the treatment of any one type of offender or problem. Instead, they must treat a range of issues, including depression, anger problems, psychotic symptoms, anxiety, and adjustment issues. Psychologists working in mental health or special needs units usually merely aim to help prisoners to the degree that they are able to function, and then transfer them back to their host institution.

In addition to direct treatment services, psychologists are involved in a variety of other functions that fall under the purview of treatment. Depending upon the type of prison and the nature of programs offered, they may be involved in prisoner advocacy, volunteer activities, victim–offender reconciliation, or any other clinically related consultation. However, due to limited resources allocated to mental health services, small numbers of psychologists deal with large numbers of prisoners: The average psychologist-to-inmate ratio is 1 to 750.

Finally, those working in correctional psychology spend a great deal of their time on administrative tasks. Administrative work consumes as much as one-third of their work time, and involves dealing with institutional demands, supervision of staff, and report writing. However, in surveys prison psychologists often indicate that they are interested in spending much less time on administration and report a desire to spend more time providing therapy to prisoners, in staff training, and on research.

INSTITUTIONAL DIS/ORDER

The services offered by psychologists and other mental health personnel, while predominantly aimed at inmate rehabilitation, can also serve institutional needs. It has been found that "prisons and jails are bettered managed, more stable and experience less disruption and violence when mental health services effectively reach the inmate population" (Carlson et al., 1999, p. 438). A growing body of research indicates that therapeutic communities or treatment units, which use peer pressure and modeling to reinforce positive and control negative behavior, have beneficial effects on the prison environment, prisoner behavior, and lowered staff absenteeism. Thus, while mental health professionals may be motivated by a desire and commitment to offender rehabilitation, the prison administration also benefits from their services through more orderly institutions.

BARRIERS

Psychologists and other mental health professionals who work in prisons and similar institutions face a variety of obstacles in offering rehabilitative services to prisoners. A primary issue stems from the fact that prisoners are, in effect, involuntary clients. They are in prison against their will and are expected to participate in programs and services directed toward their rehabilitation. However, the prisoners themselves often reject such services for several reasons. First, the targeted problem areas are identified by the institution. Thus, prisoners may feel that such issues do not exist, or if they do, are in fact not problematic to them or are beyond their control to change. For example, while a prison psychologist may identify a problem of impulse control in a prisoner convicted of assault, the prisoner may regard such behavior as normal and necessary for survival.

Second, most meaningful personal change requires that a therapeutic alliance be created between the therapist (psychologist/psychiatrist/psychiatric social worker/nurse) and the client (prisoner). An alliance of this nature demands that trust exist between the therapist and client, which is difficult or nearly impossible to achieve in a setting where the administration expects disclosure of all information pertaining to prisoners. Hence, prisoners cannot be certain that disclosures made within the therapeutic setting of the relationship with the

therapist will remain private. Psychologists and others working in such positions are often faced with the dilemma of deciding who in fact their client is: the institution or the individual?

Finally, the institutional setting itself is not conducive to rehabilitation. The harsh and cold environment of the prison works against the development of helpful, trusting relationships, as suspicion and wariness characterize many of the relations between prisoners and prison staff, psychological professionals included. The deprivations of prison life create situations where survival is at times difficult, thus hindering attempts at changing long-standing problems or beliefs that may have had an impact on criminal behavior.

PRISONER MOTIVATION

Prisoners' resistance to change or rehabilitation may manifest itself in many ways. Mental health professionals are at times forced to earn their credibility among prisoners and may be "tested" over time. While ultimately cooperation in therapeutic and educational programming is part of the institutional goal of rehabilitation, psychologists and other mental health professionals may have cause to question a prisoner's motivation when they do decide to participate. Prisoners may participate in programs for a variety of reasons: out of boredom, in order to be freed from other activities, to gain early release, or out of a desire to change. Given that these motivations are difficult to discern, it is likely that some prisoners demonstrate an outward willingness to engage in the therapeutic process that may not be sincere. Although prisoners may not recognize the therapeutic utility of participation in therapeutic activities, they may nonetheless benefit from their involvement.

MULTIDISCIPLINARY TEAMS

Psychologists and other mental health professionals generally work in multidisciplinary teams in institutions. However, given that team members emanate from many different backgrounds and experiences, there are likely to be competing priorities, which may in turn hinder the aim of rehabilitation. Problems may be further intensified by a need to cooperate among a range of staff from these differing backgrounds, experience, and approaches. In addition, individuals on multidisciplinary teams may have diverse and conflicting opinions regarding the purpose of imprisonment—rehabilitation, education, support, punishment, deterrence, retribution, incapacitation—that will greatly impact their goals and objectives when working with prisoners. At times, security and operational interests may compete with rehabilitation and take precedence, particularly when prisons are overcrowded and when overall security is threatened. Conversely, mental health professionals may have a beneficial effect on the other members of a multidisciplinary team. Given their therapeutic approach to intervention with prisoners, skilled psychologists may likely exert a positive influence on the attitudes of more punishment-oriented staff members.

SPECIAL NEEDS PRISONERS

Prison psychologists have to deal with a large number of prisoners presenting special needs. These may include, but are not limited to, those individuals who suffer from severe mental, emotional, or physical disabilities or those who pose a security threat to themselves and/or other prisoners. Individuals of this type may be suffering from mental disorders or have intellectual handicaps or substance abuse problems. They may also have been convicted of sex and/or violent offences. These prisoners may spend various amounts of time in special needs units within prisons.

America's prisons and jails contain large numbers of persons suffering from mental disorders. In fact, 16% of all inmates (roughly 191,000) in state adult correctional facilities are identified as mentally ill, according to a recent Justice Department report, which also found that 79% of such prisoners were receiving therapy or counseling. Most state correctional facilities offer specific services for prisoners who present with symptoms of mental disorder, including: psychiatric screening and assessments, 24-hour mental health care,

therapy or counseling by trained professionals, psychotropic medications, and access to community mental health services on release. However, given the high prevalence of prisoners suffering from mental disorders, at times it is difficult for institutions to meet their needs, and this group can become disenfranchised and marginalized within the prison setting.

There are few specific psychological services for the intellectually handicapped offender. Such individuals have difficulty in prisons, as their disabilities often go undetected in the general prison population due to the fact that many of them are only mildly mentally retarded. As a result of their limited intellectual abilities, such offenders are often the target of practical jokes and are highly susceptible to prison culture and inmate manipulation. Consequently, they have problems adjusting to rules and regulations and often avoid participating in therapeutic programs due to a desire to hide their deficiencies.

Many prisoners are heavy substance abusers, and heavy substance abusers are disproportionately likely to be engaged in criminal activities. Many state, federal, and county correctional institutions offer substance abuse programs to address these specific needs. Additionally, specialized services are offered in federal and state prisons to address the unique challenges presented by sex offenders and violent offenders, which specifically focus on cognitive-behavioral approaches. Thus, there are a variety of fragmented services that exist in both federal and state institutions specifically aimed at special needs offenders.

RACE AND GENDER

Given the disproportionate representation of African Americans, Hispanics, and other minority groups in the U.S. prison system, it is important that prison psychologists are sensitive to issues of race, class, and oppression. Such factors may compromise the results of standardized tests for intelligence and personality, for example, since these tests have been developed for the majority, and they may not accurately reflect the experiences or education of minorities. Likewise, due to the importance of a shared understanding of culture, background, and experiences in constructing a therapeutic relationship, there is a need for minority psychologists.

The problems of women prisoners are likely to be diverse and complex, reflecting their histories of physical and sexual victimization, pregnancy and gynecological problems, obesity, dental problems, mental health issues, chronic health problems, and drug and alcohol misuse. Incarceration often exacerbates such difficulties, while geographic isolation from family and friends in prisons far from their homes negatively impacts family and social relations. Psychological services offered to women prisoners must take into account the important treatment needs common to female offenders, and where possible, offer gender-specific services that are designed to address these issues. Consequently, it is essential that prison psychologists working with women prisoners be sensitive to issues of gender in their work.

CONCLUSION

Currently, a variety of programs and services exist, offered by psychologists and other mental health professionals working in state, federal, and county institutions, in order to facilitate the rehabilitation of prisoners and ease their reintegration into society upon release. The challenges presented in offering these services in such environments, coupled with prisoner resistance, force prison psychologists to find creative means in adapting therapeutic services to a largely involuntary population. Prison psychological services will continually need to evolve to meet the changing needs of the prison population.

PSYCHOLOGISTS

Prisons and jails are among the largest employers of psychologists in the United States. Psychologists working in prisons and other correctional institutions are sometimes referred to as "correctional" or "forensic" psychologists. These psychologists are involved in classifying, profiling, assessing, managing, and treating prisoners. They also provide institutional reports and carry out research and evaluation. Some prison psychologists deliver consultative services, such as counseling and personnel interviews, to other staff; others offer advice during hostage negotiations or other crises. Correctional psychologists typically qualify as clinical psychologists first, and then specialize in forensic-related work. Many of them belong to professional organizations and governing bodies such as the American Psychological Association, the American Psychology-Law Society, the American Association for Correctional Psychology, the American Academy of Forensic Psychology, and the American Board of Forensic Psychology.

HISTORY

To understand the role of psychologists within prisons, it is useful to first consider psychology and its historical development more generally. Psychology has its roots in two disciplines—physiology and philosophy, in which the former led to psychologists' interest in the brain and nervous system, while the latter inspired their concern with human thinking, emotion, and behavior. Psychology is said to have emerged as a separate discipline in 1879, when Wilhelm Wundt, who trained in philosophy and medicine, opened the first psychological laboratory in Leipzig, Germany. Here, Wundt set out to investigate the mind through the application of scientific methods using a process termed "introspection." This involved the careful training of researchers who then analyzed their own thinking (sensations, images, and emotional reactions) under laboratory conditions.

Wundt's approach was challenged in the early 20th century. Critics were particularly concerned with the subjective nature of introspection, because its accuracy could not be verified by another person. In 1914, American psychologist John B. Watson argued that introspection should be replaced with "behaviorism." This form of psychology allowed more than one person to observe and measure another's behavior under scientific conditions.

Psychology has since expanded into a number of different branches with varying theoretical and treatment orientations. However, the influence of Wundt and Watson can be seen today in two important psychological approaches: *cognitivism*, which is concerned with mental processes, and *behaviorism*, which focuses upon observable behavior. Each leads to different treatment strategies. The former involves methods such as therapy, which attempt to address cognitions, and the latter uses techniques designed to modify behavior, such as conditioning. Although these two models have generally been regarded as competing and irreconcilable, recent attempts have been made to merge them into a new type of psychology referred to as *cognitive behavioralism.* This approach, which essentially argues that a person's thinking or cognition affects their emotions and behavior, is central to a number of current prison programs. Such programs underpin "what works" initiatives—purportedly evidence-based correctional policy and practices—in the United States, Canada, the United Kingdom, and elsewhere.

PRISON PSYCHOLOGY

Psychologists first became involved in prisons in the field of classification. Using psychometric tools designed to measure individual differences, they sought to manage prisoners more rigorously than before. The data collected from these different measures also informed different kinds of research, such as the prediction of parole success.

In addition to such management strategies, psychologists sought to reform individual offenders. Though initial rehabilitative or treatment efforts consisted mainly of general "guidance" and teaching, psychologists came to offer detailed courses and programs of therapy in many institutions. Psychologists promoted the belief that prisoners could be reformed, and offered various treatments to help them achieve this. The guiding philosophy and practice of rehabilitation adopted by corrections led to the introduction of numerous behavioral and cognitivist strategies into prisons, such as individual counseling, group counseling, therapeutic communities, drug therapy, conditioning, aversion therapy, and token economies. Such methods were strenuously challenged in the 1970s on a number of ethical and methodological grounds. Overall, it was argued that they were harmful and ineffective. The most influential critique was made in 1974 by Robert Martinson, whose examination of numerous studies led to the broad conclusion that "nothing worked" to reduce reoffending. Although the claims associated with Martinson's research have since been criticized on several grounds, especially that its conclusions are overstated, the overall effect of the numerous challenges to rehabilitation was its waning within prisons, both as a philosophy and as a practice, particularly in the United States.

CORRECTIONAL PSYCHOLOGISTS TODAY

Despite a general move away from the goals of rehabilitation, psychologists did not disappear from correctional facilities. On the contrary, they are often the primary mental health care providers, offering both individual and group therapy. Psychologists usually participate in institutional programs like drug rehabilitation and anger management programs, and they continue to be involved in classification, assessments, management, reporting, research, and evaluation. Indeed, a psychologist may be one of the first people prisoners meet during the admissions process as they evaluated for housing, employment, and security. While many inmates complain of difficulties they face in gaining access to psychologists for mental health services, others oppose treatment and therefore are resistant to it. The criticism of limited access to psychologists reflects inadequate resources, along with an apparent increase in mental health problems among inmates, purportedly resulting from the closure of mental hospitals (and consequent diversion of populations into prison), overcrowding, and increasingly punitive regimes. Inmates may refuse treatment because they do not think they have a mental health problem or because they anticipate it will bring them harm. It could also be a manifestation of the role conflict correctional psychologists occupy as both helpers and social controllers.

PSYCHOLOGY AS A METHOD OF GOVERNANCE

Though psychology is usually thought of as a helping discipline, a number of writers have recently suggested that it has been crucial in broader attempts to control or govern the conduct of citizens living within Western liberal democracies. This has been achieved through the construction of methods encouraging people to monitor their own thoughts and behavior so as to fit with established norms. Those who are unable to act in socially acceptable ways are provided with various psychological strategies. People are thus governed in ways that appear compatible with liberal democratic assumptions. However, those who cannot conform or refuse to conform are placed within prisons and other institutions where they are either reformed or contained and punished, depending upon the outcome of psychological assessments measuring their dangerousness and reformability. In this way, psychology legitimates prisons by pathologizing inmates, promising methods of reform, and claiming the ability to assess treatability.

CONCLUSION

Psychologists have long occupied a central role within correctional facilities, albeit not without considerable controversy. The future of forensic psychology will be shaped by changes within both the academic discipline of psychology and the broader political climate.

PUERTO RICAN NATIONALISTS

Between 1980 and 1985, 30 Puerto Rican nationalists were accused of conspiring to overthrow the U.S. government in Puerto Rico using armed force. A few others were arrested and prosecuted in the mid-1990s. According to government officials, the nationalists were supporters of the Armed National Liberation Front (FALN), which they claimed was responsible for staging more than 130 bomb attacks on political and military targets in the United States. Most of these attacks occurred in New York and Chicago between 1974 and 1983 and left six people dead and several wounded. Ten of the 14 men and women arrested between 1980 and 1983 received sentences ranging from 50 to 90 years, an average of 70.8 years for the convicted men and 72.8 years for the convicted women. These prison terms were 19 times longer than the average sentence given out the same year for crimes such as murder and rape.

THE TRIALS

When captured, the Puerto Rican nationalists declared themselves to be combatants in a war to liberate Puerto Rico, and they asked to be treated as prisoners of war. They further argued that the U.S. courts did not have jurisdiction to prosecute them as criminals and petitioned instead for their cases to be handled by an international court. The U.S. government did not recognize either demand.

Of those arrested in the 1980s, none were found guilty of murder, bombing, or hurting a person. Instead, some were charged with illegal possession of weapons and explosives, robbery, and transportation of a stolen vehicle after brief trials in Chicago.

Perhaps because no solid evidence existed linking the accused to specific crimes, most of the Puerto Rican radicals were convicted on sedition charges on the grounds that they did not recognize the authority of the U.S. government. This charge allowed federal prosecutors to treat all defendants as coconspirators, regardless of what specific acts they had committed.

The trials themselves were relatively short. However, before they got to court, some detainees were held in preventive detention for as long as three years without bail. Of those arrested in the 1980s, 13 refused to participate in their trials, arguing that they did not recognize U.S. legal jurisdiction over their cases. As a result, most of the accused neither put up a defense nor appointed a lawyer.

THE PRISONERS

Most of the accused were students, teachers, or involved in some other professional occupation. Several of them were active in Puerto Rican neighborhood projects and cultural affairs in Chicago, Illinois, where the trials took place. All of the prisoners were arrested as young men and women, with most aged in their late twenties or thirties. Many also had young families.

Jose Solis-Jordan, who was found guilty of bombing a U.S. Army recruitment office in 1979 by a federal jury in Chicago, provides a good example of the background and treatment of the other activists. Three FBI agents claimed that Solis, a professor at the University of Puerto Rico and father of five, confessed to carrying out the bombing. However, they did not present a written statement signed by the accused nor a valid audio- or videotape proving that he made such a confession. Instead, Rafael Marrero, a paid FBI informant, provided the main testimony against Solis. Marreo's story was bolstered by a fabricated confession that one of the police officers later admitted writing, and by an alleged English translation of a largely inaudible tape of a conversation in Spanish. Marrero, who was actively involved in an operation against members of the Puerto Rican independence movement, admitted to receiving $119,000 and complete immunity from the FBI. The impartiality of the case was further compromised by the absence of any Latinos on the jury and by the fact that the jury's foreperson was an employee of the Justice Department.

RELEASE

On September 10, 1999, after more than a decade in federal prisons, 11 of the prisoners were granted a presidential pardon by then-President Bill Clinton and released from prisons in Indiana, California, Connecticut, Oklahoma, and Illinois. Among those receiving a presidential pardon were five women (Alejandrina Torres, Dylcia Pagan, Alicia Rodriguez, Carmen Valentin, and Ida Luz Rodriguez) and six men (Alberto Rodriguez, Edwin Cortez, Ricardo Jimenez, Luis Rosa, Elizam Escobar, and Adolfo Matos). Some Puerto Rican nationalists (Antonio Camacho Nigron, Jose Solis-Jordan, Oscar Lopez, Juan Segarra Palmer, and Carlos Alberto Torres) remain behind bars.

According to former Attorney General Janet Reno, "The President reviewed the matter and obviously concluded that the sentences imposed for the crimes committed were out of proportion to sentences for similar offenses for others." White House officials also noted that Clinton acted upon a review led by former White House Chief Counsel Charles F. C. Ruff, and the advice of politicians and human rights advocates, such as South Africa's retired Anglican Archbishop Desmond Tutu and Coretta Scott King, widow of civil rights leader Martin Luther King, Jr. Their release was supported by former President Jimmy Carter, 10 Nobel Peace Prize winners, every Puerto Rican member of Congress, the Puerto Rican Bar Association, and a host of other groups and individuals.

Each of the prisoners who accepted the presidential pardon was required to sign statements in which they agreed to renounce violence, not to possess weapons, not to join any organization advocating violence, to stay away from each other, and to obey all the statutory conditions of parole. The federal government would closely monitor their actions, statements, and contacts. The FBI and the Justice

Department, two agencies that strenuously opposed their release, were given the authority to oversee the prisoners' parole, which includes random drug testing. If these prisoners violate their parole, the charges will be reinstated against them.

CONCLUSION

Though journalistic accounts on Puerto Rican nationalists are numerous, there is little empirical research on Puerto Ricans in prison. As a result, their story is largely unknown. Indeed, this case suggests that the experiences of Puerto Ricans in the criminal justice system need to be analyzed more carefully, to become a more explicit and better-documented part of academic literature and public discussions of U.S. prisons today.

Q

QUAKERS

Quakers, or Friends, as they are also known, are a religious association and sect of Protestantism. For well over 400 years, American and British Quakers have pioneered major prison reform and opposed the death penalty. As part of their reformist intentions, they helped to create the prison itself, in the form of the penitentiary, to replace earlier, more brutal forms of corporal and capital punishment. Quakers' participation in prison reform calls attention to the connections among spiritual, religious, and cultural practices in punishment. Their activism reminds us that punishment itself is a complex social institution that cannot be understood simply as crime control or labor market regulation.

HISTORY

Following the restoration of the British crown and resurgence of the Anglican Church in 1660, Quakers in England became increasingly subject to religious persecution and imprisonment. For nearly 20 years, Friends made frequent visits to jails and other places of confinement to offer both moral and material support to their incarcerated brethren. These experiences of confinement and state repression led many Quakers to become involved in prison reform.

Quakers helped to transform American punishment practices, outlawing torture and corporal punishment and restricting the use of the death penalty. William Penn's constitution for Philadelphia introduced principles of reform as the primary goal of punishment. Then, in 1787, prominent Quakers created the Philadelphia Society for Alleviating the Miseries of Public Prisons to provide food to local jail inmates and to lobby for large-scale reform and institution building. Later renamed the Pennsylvania Prison Society, the association urged major changes to the existing Walnut Street Jail, where the warden sold liquor to inmates, confined young offenders and female inmates with male convicts, exposing them to sexual exploitation, and failed to provide adequate food and clothing. Building on these efforts, the Prison Society worked in conjunction with other Protestants, architects, social reformers, and legislators to set out their ideas for the creation of the penitentiary. This new institution was meant to provide a new form of punishment, in which solitary confinement and hard labor gradually replaced execution and bodily mutilation in the United States.

At the same time as the emergence of the penitentiary in America, British Quakers, particularly evangelicals, were urging Parliament to restructure punishment in the United Kingdom as well. Elizabeth Fry, a Quaker minister and social reformer, raised the issue of prison reform to the national level with her campaigns to improve women inmates' poor living

conditions. In 1813, Fry exposed the unsanitary and overcrowded conditions of Newgate Prison, a women's prison brimming with poverty, filth, and to Fry, "moral degradation" (in Barbour & Frost, 1988, p. 318). She opened a school inside the prison to teach women and their children to read and sew. Fry also established the Association for the Improvement of Female Prisoners, read the Bible to inmates, delivered sermons, and encouraged Quakers and social reformers to visit inmates. She was instrumental in having female wardens introduced to run separate women's facilities.

THE PENITENTIARY

American Quakers played a key role in the shift away from public execution, corporal punishment, and torture in the late 18th and early 19th centuries. They also developed the Eastern State Penitentiary in Pennsylvania, which quickly became the model for similar institutions in the United States and Europe. In order to reform inmates, the penitentiary isolated them in individual cells. Solitary confinement, Quakers believed, would encourage inmates to meditate upon their sins, recognize their errors, and seek redemption. Quakers combined these monastic elements with the hard labor of earlier workhouses to instill discipline in criminal offenders. They believed that the dual strategy of solitary confinement and hard labor would reform inmates and smooth their eventual reintegration into society.

Despite the widespread support for isolation regimes in the United Kingdom, United States, and Europe, solitary confinement was soon replaced as the dominant model of punishment by the "silent congregate system." Not only was solitary confinement cost prohibitive, requiring the design and construction of special single-cell institutions, it also led to the mental and physical deterioration of inmates. Rather than bringing about spiritual redemption, solitary confinement increased rates of suicide, madness, and even death.

CONCLUSION

Today, Quakers continue prison activism by opposing the death penalty, promoting prison reform, and educating the public about prison conditions. In contrast to their predecessors, contemporary Quakers oppose the use of isolation and solitary confinement. As a result, Quakers in the United States are currently involved in protesting the use of "control units" in supermaximum secure prisons, which they consider to be modern-day forms of torture, subjecting inmates to prolonged isolation, sensory deprivation, physical and mental pain, and violence. In addition to preventing inhumane treatment of inmates, Quakers also campaign to shut down private prisons to prevent states and corporations from profiting from punishment. Opposed to mass incarceration as the response to crime, Quakers work with former prisoners to create community-based alternatives as a way to address both criminality and victimization.

R

RACE, CLASS, AND GENDER OF PRISONERS

Race, class, and gender powerfully influence our life chances, shaping where we go to school, work, and reside, whom we marry, and how long we live. They intersect in numerous complex ways, both within the prison and outside. Prisoners are disproportionately likely to be poor, male, and members of minority groups, particularly African American and Latino(a). To that extent, the penal population does not reflect the outside community at all.

U.S. SOCIETY AND THE PENAL POPULATION

In 1997, Erik Olin Wright estimated that 50% to 60% of the U.S. population were working class, since they were employees who neither owned nor controlled capital. Members of the owner class made up about 15% of the population, while capitalists employing 10 or more people represent 1% to 2% of U.S. citizens. The remaining percentages Wright divided among various professional-managerial class fractions.

Of the 281,421,906 persons the U.S. Census Bureau counted in 2000, 75.1% were white, 12.5% were Hispanic or Latino, and 12.3% were black or African American. American Indian and Alaska Native represented about 1%, Asians 3.6%, and Native Hawaiian and other Pacific Islanders represented around 0.1%. In April 2000, women comprised just over half of the U.S. population (U.S. Census Bureau, 2000).

In contrast, most prisoners are either jobless or working poor. Although African Americans comprise just over 12% of the U.S. population, nearly half of those incarcerated in prisons are black. Finally, women make up on average only about 7% of the nation's confined, meaning that about 93% of the prison population are men.

CLASS

Sociologists typically divide capitalist society into four classes: (1) The *capitalist class* owns productive capital, seeks profit in the market, and buys labor power. Such people may run factories or some other kind of industry. (2) The *professional-managerial class* is the most privileged of the employee classes. These individuals, such as CEOs of corporations, do not own significant capital, but they control labor power. In contrast, (3) the *working class* owns no significant capital and sells its labor power for wages. Workers, like factory employees on an assembly line, only marginally control labor power. Finally,

(4) the *industrial reserve* is comprised of workers who cannot sell their labor. This group of people is also sometimes referred to as an "underclass."

The dynamic of capitalism, or capital accumulation, underpins the historical development of the United States. Striving to maximize profit and gain competitive advantage, capitalists use strategies of wage suppression, mechanization and automation, and scientific management to reduce production costs. Increasing output per worker throws more people into the industrial reserve or forces them into low-wage labor markets. The business cycle exacerbates labor market volatility.

Social scientists have long noted the connections between systems of punishment and economic structure. In *Capital*, written during the 1860s, Karl Marx (1867) describes the plight of the industrial reserve. He theorizes that class structure and economic processes are major determinants of crime and punishment. Studies by Georg Rusche and Otto Kirchheimer (1939), Richard Quinney (1980), and Jeffrey Reiman (2004) support Marx's thesis. Punishment under capitalism, these scholars propose, reflects the needs and interests of dominant social classes. Private control of property gives elites the structural capacity to shape the direction of the law and state activities. If popular forces and rapid social change threaten class privilege and system legitimacy, the coercive arm of the state expands and intensifies its activities. Likewise, empirical studies find that the strains of impoverishment and marginalization increase the likelihood that members of the working class will resort to street crime and suffer coercive controls.

During the past 30 years, prisons have been filling with people drawn from the ranks of the poor. Inmates in prisons and jails are mostly illiterate, likely high school dropouts, and are either jobless or working at low-wage jobs at the time of their arrests. We find further evidence of the class character of criminal punishment in the categories of offenses for which the state punishes individuals. About half of those incarcerated in state prisons in the mid-1990s were there for crimes against property or for violating statutes regulating the morality of the working class, for example, the war on drugs. The capitalist state has historically used drug controls to control workers; the most well-known case was the constitutional prohibition against alcohol. Industrialists who desired a sober workforce were out front in campaigning for alcohol prohibition. Elites have likewise pursued prohibitions against heroin, marijuana, and more recently cocaine, with clear class interests behind them.

Who will *not* face prison for socially harmful behavior also reflects the class character of punishment. A number of scholarly papers and books exposes activities by the upper classes amounting to hundreds of millions of dollars in theft and fraud. Moreover, corporate activities result in considerable personal injury and loss of life. Yet, the state administratively segregates affluent offenders and conventional criminals. The most notable contemporary instance of the special treatment corporate offenders enjoy is the Enron bankruptcy debacle. Enron, a natural gas pipeline company, engaged in illegal accounting practices. In the summer of 2003, executives of Citigroup and J. P. Morgan, major bankers of Enron, avoided jail time by settling with the federal government for $300 million. Government lawyers acknowledged that bank executives knew of and participated in Enron's illegal conduct. Such privileges for the well-to-do are reminiscent of practices in medieval Europe, where elites could avoid corporal punishment by paying fines.

RACE

After the Civil War, *de jure* separation of races in formal residential and occupational segmentation and a system of status offenses known as "Jim Crow" replaced racial slavery. Strict labor rules passed by Southern governments, known as "Black Codes," compelled many African Americans to return to the plantations. Although Congress overturned Black Codes in 1866, state-sanctioned race oppression in the forms of convict leasing programs and chain gangs were widespread by the end of Reconstruction in 1877. More than 90% of convict laborers were black. Alongside criminal controls, state legislatures passed comprehensive segregation laws. The Supreme Court officially sanctioned

Jim Crow in 1896 with *Plessy v. Ferguson*. American apartheid would last several decades.

A string of court decisions and civil rights legislation during the 1950s and 1960s dismantled Jim Crow. However, de facto racial organization reproduces racialized statuses and material group disparities. Racial segregation in the post-civil rights period still possesses the essential characteristics of a racial caste system based on hereditary and ascribed statuses with a high degree of endogamy, as marriage within one's own racial group remains the norm. Thus, in the wake of the civil rights struggles, a new articulation of racial caste emerged, one manifest in ostensive race neutrality and repressive criminal justice policies. Although the state and culture of the United States have become less overtly racist in formal law and language, institutional racism remains a major part of American social life.

With the shift in racial policy, the numbers of African Americans in U.S. prisons and jails drastically increased, while the proportion of white men in prison declined. Between World War II and the early 1970s, the proportion of blacks in prison averaged about 30%, up from about 20% in 1928. At year-end 2002, 45% of all male inmates in state and federal penitentiaries were African American. According to statistics published by the Bureau of Justice in 2000, 10.4% of African American males between the ages of 25 and 29 are in prison, compared to 1.2% of comparable white males. Imprisonment on this order of magnitude harms family and political life. Prisons deprive millions of African American families of their fathers, brothers, and sons. Due to disenfranchisement policies in various states, millions of African American men find themselves controlled by laws they played no role in forming.

African Americans are not the only racial group experiencing overrepresentation in America's correctional institutions. Nationally, more than 60% of prisoners are from racial and ethnic minority backgrounds. Statistics published by the Justice Bureau show that 2.4% of Hispanic males between the ages of 25 and 29 are in prison. At year-end 2002, Latinos, mostly male, comprised 18.1% of prisoners under state and federal jurisdiction. Discriminatory patterns appear differently depending on jurisdiction and region. Because of the history of relations between Native Americans and the federal government, American Indians are overrepresented in federal prison statistics. For example, some 60% of juveniles in federal custody are American Indian. In Alaska, where 16% of the state population is Native American, one-third of state prisoners are American Indian (Harrison & Beck, 2003).

GENDER

The turn toward mass incarceration has not bypassed women. Although men are 15 times more likely than women to be imprisoned in federal or state correctional facilities, the rate at which women are being admitted to U.S. prisons has nearly doubled since 1980. By 1997, seven times more women were incarcerated at state and federal facilities than in 1980. At year-end 2002, nearly 1 million women were under some form of correctional supervision. Around one-tenth of those persons were in prison. Women now constitute 6.8% of all prison inmates. The three largest jurisdictions—Texas, California, and the federal system—incarcerate a third of this number. During 2002, the number of female prisoners rose 4.9%, more than double that of men (2.4%) (Harrison & Beck, 2003).

Incarceration of women is often particularly harmful to families. Imprisoned women are mothers to about 1.5 million minor children. Seven in 10 women under correctional supervision have minor children. Poor and minority women are more likely to be punished than middle-class white women. For example, nearly two-thirds of women on parole are white, while nearly two-thirds of those confined in jails and prisons belong to a racial or ethnic minority. Nearly one-third of women admitted to prisons are on public assistance at the time of arrest, and only 4 in 10 women in state prison report full-time employment. Well over one-third have incomes of less than $600 a month.

The typical profile of a female prisoner in America is a single mother, young, impoverished, and poorly educated, with at best minimal work experience and job skills. Physical and sexual abuses mark her past, and she abuses drugs and alcohol. If not incarcerated

Gender, Race, and the War on Drugs

A twenty-one year old African American woman was sentenced to 15 years and 8 months for a nonviolent, mitigating role in a drug conspiracy with her live-in boyfriend. The young woman worked two jobs and attended school full time. Fifteen minutes after arriving home from a long sixteen-and-a-half-hour shift at the community hospital, she was thrown to the floor, staring into the deep barrels of guns pointed at her head by the police and ATF squad. All she could do was wonder, baffled and bewildered, as she lay there in astonishment. During the trial that followed, there was no evidence that she conspired to be involved with the illegal sales of drugs. However, the prosecution made it seem like the woman, living in a low-budget apartment with Rent-a-Center furniture, was living the life of a kingpin and worked only to support her boyfriend's drug sales. In reality, her only "conspiracy" was arriving home 15 minutes before the raid of the police and the ATF squad.

How could this happen? When Congress passed these drug laws, did they think of the innocent people that would be involved? According to statistics, more than 85% of people arrested for conspiracy are given sentences ranging from 10 years to life without the possibility of parole. How is it possible that kingpins are serving less time than people who are considered minor participants? What can be done to change these laws? Yes, there are organizations trying to change the course of the war on drugs, but no one seems to care about the women and men already locked up for simply knowing a person.

Arrested and convicted, I sit here to tell this story. All of this happened to me seven years ago. I didn't kill anyone, kidnap anyone, blow up the World Trade Center, or conspire to make terrorist threats or attacks. My only crime was being in a romantic relationship. It is so unfair what has happened to me—each night my boyfriend would come home as if he were on his last dollar, making sure that the evidence of his sins was not seen by me. I now sit here in a federal prison camp directly across the street from John Walker Lindh, an American who aided the Taliban in Afghanistan, who received only four years and four months more time than I did. Other people are coming and going with two months to a year for a similar "crime" to mine, and I can't help but feel envious and jealous knowing that they will be home soon with their families while I am sitting here. I have tried every appeal, I have tried to write to the judge and the prosecution, and I have tried for a clemency, but there has been no hope for me. I am now 29 years old. When I should be home married and having children, I have missed a great big chunk out of my life. I sit here between three slabs of cement and wonder when my day will come.

for prostitution, petty theft, or simple possession, she is likely a prisoner because of her involvement with a man arrested for drug dealing. In exchange for a reduced sentence, his testimony against her led to her conviction and incarceration.

MAINSTREAM EXPLANATIONS

Assuming that rising crime rates account for all or most of the increases in prison population, mainstream social scientists have tried to explain why crime rates rose for the general population during the period of prison expansion. The researchers have given special attention to the situation African Americans face. Researchers cite Federal Bureau of Investigation (FBI) statistics to support an argument that the growth in the number of African American prisoners is the result of increasing rates of crime that disproportionately involve blacks. *Uniform Crime Report* (UCR) data show a slow but steady climb in rates of street crime throughout the 1950s and 1960s, followed by a steep and unstable increase during the 1970s. By 1980, the crime rate was double its 1970 level. The UCR also shows blacks committing proportionately more street crime given their representation in the population than other ethnic groups. According to the FBI, blacks consistently accounted for nearly 50% of violent crime arrests and for more than 30% of property crime arrests during the 1980s, a period of rapid prison growth. Victimization data compiled by the U.S. Justice Department support the UCR finding, although the disproportionality is much less.

Observers marshal these figures to support two major explanations. In one account, rooted in a New Liberal orientation, residential segregation, industrial segmentation, and large-scale domestic trends such as white flight concentrate blacks

trends such as white flight concentrate blacks in criminogenic inner-city environments. Living in these conditions leads to overrepresentation in crime for two reasons. First, blacks (and Latinos) tend to dominate various forms of street crime and the sex and drug trades. Second, ordinary policing is concentrated in impoverished minority neighborhoods where crime rates are higher. The other explanation, issuing from conservative quarters, implicates cultural traditions in the creation of criminogenic environments. Attributed characteristics of black culture, for example, include negative attitudes toward learning and achieving, lack of self-reliance, poor labor force attachment, an inability to delay gratification, promiscuity, and violent tendencies. Conservatives point to the black family structure as the main culprit. Female-headed households are overrepresented among black families. According to conservatives, liberal welfare policies during the 1950s to 1970s fostered a culture of dependency. These developments combined with liberal permissiveness in criminal justice policy to drive up crime rates among blacks.

There is reason to doubt the assumption that underpins both arguments—the belief that *crime causes punishment*. First, since the UCR is the product of police departments, it more likely reflects police behavior rather than actual crime patterns. Growth in UCR statistics during the 1970s and 1980s reflects a combination of policing practices and better reporting and superior computer record keeping by law enforcement. Data from the National Crime Victimization Survey (NCVS) indicates that crime remained stable or declined during this period. Since the NCVS is a scientifically conducted survey and the UCR is not, there is good reason to accept its findings over those of the UCR. Second, leaving aside drug offenses, levels for the three crimes for which people are most often incarcerated—namely, murder, robbery, and burglary—remained relatively stable between the mid-1970s and mid-1990s. Third, the relationship between demographic trends and incarceration is contradictory. After 1990, incarceration rates should have declined, since the proportion of those of prime incarceration age declined as a proportion of the population. Yet, incarceration skyrocketed.

What then explains the dramatic rise in the prison population? First, the state has criminalized more behaviors, especially drug offenses. The state has expanded criminal categories, especially those that encompass the behaviors of minorities, which creates more criminals and increases the likelihood of more nonwhite prisoners. For example, in 1986 Congress passed the Anti-Drug Abuse Act of 1986, establishing severe mandatory sentences for crack cocaine possession. The bill made sentences for crack cocaine possession 100 times greater than those for powdered cocaine. This was with the knowledge that the only real difference between crack and powder cocaine was the race of the people using them: African Americans are more likely to use crack cocaine. Before mandatory minimums for crack offenses, the average federal sentence for blacks was 11% higher than for whites. Four years after the changes in drug sentencing laws, the average federal sentence was 49% higher for blacks. By 1997, African Americans were accounting for 84% of the defendants convicted of crack cocaine offenses. Second, there has been a trend in the likelihood of imposing sanctions on defendants and lengthening prison terms.

THE RACIAL ECONOMY OF MASS INCARCERATION

During political wrangling over civil rights in the 1950s and 1960s, the domestic economy, affected by the government's response to the Great Depression, World War II, the Cold War, and globalization, underwent dramatic restructuring. As domestic changes in industry and the expanding state sector created opportunities for educated and skilled whites, industrial reorganization transformed labor markets, racializing the industrial reserve. By the 1960s, the proportion of unskilled labor in the workforce had declined to historic levels. Since blacks were concentrated in the labor-intensive industrial sectors dependent upon unskilled labor, the effects were for them devastating. At the

end of the Great Depression, black unemployment was only a little greater than white unemployment. By the 1960s, black unemployment had risen to more than twice that of whites. Growth in mechanization and automation was occurring side by side with capital migration from inner cities to the suburbs and from the North to the South. Federal, state, and local authorities facilitated disinvestments by rewarding businesses that relocated firms out of the central cities with tax breaks, subsidized loans, and assistance in organization and infrastructure. The resulting "Rust Belt" contained at its core an impoverished peripheral zone with high rates of joblessness and job instability.

As a consequence of these forces—the changing needs of capital, growing structural unemployment, domestic macroeconomic reorganization, ghettoization, and white flight from the cities—already impoverished and marginalized black communities became even more desperate and isolated. Whites in their suburban dwellings, cut off from the plight of the city, turned against social programs that benefited urban areas. This emerging national profile offset the gains blacks made on political and legal fronts during the civil rights struggles. Political elites and the corporate media depicted black discontent and urban distress as a problem of law and order. Governments expanded the criminal justice system at all levels and charged law enforcement with the task of cleaning up the crisis of political legitimacy. A series of severe economic crises in the 1970s and 1980s fueled the drive for mass incarceration. Class, caste, and crisis intersected to fill an expanding penal capacity with millions of human beings of color. To be sure, politicians did not plan much of this. Present circumstances, largely driven by impersonal forces, emerged over a period of decades. Nonetheless, elites devised and implemented criminal justice policy with knowledge of racially disparate outcomes (Tonry, 1995). Moreover, racial politics motivated many policymakers.

CONCLUSION

In the United States, where more than 2 million individuals are incarcerated, certain minority groups and persons living in poverty are at much greater risk of being counted among those in prisons and jails. If the U.S. criminal justice system is a barometer of inequities in the United States, and much research indicates that it is, then this nation's inequities are great indeed. The toll of incarceration on the individual, as well as on the family and the community, is incalculable.

Recent trends in incarceration do not bode well for the future. If the United States had continued to imprison individuals at the rate it did in the period 1980–1993, critics pointed out, nearly two-thirds of black men (about 4.5 million) and one-fourth of Latinos (about 2.4 million) between the ages of 18 and 34 would be incarcerated by the year 2020. Though in recent years the rate of incarceration has slowed considerably, there are signs that imprisonment is again picking up its pace, and further growth in prison populations will at any rate worsen the situation of those groups upon whom the burden of incarceration falls most heavily. Moreover, while officials of local depressed markets believe prisons promise economic growth, the weight of massive custodial structures on society, especially in light of the fiscal crises confronting many states, may eventually become too great to sustain.

The vast majority of those entering prison today will one day return to society. Given the negative effects of incarceration on persons and communities—prisonization, stigma, constrained education and job opportunities, restricted political participation, family disruption, and lost time—this manner of dealing with lawbreakers is both practically and ethically problematic. Since people who enter prison are among the most deprived of U.S. citizens, incarceration further hobbles those whom society has already disadvantaged. Even if the criminal justice system could achieve equity in terms of race and class, the United States must still face the long-term negative consequences, the growing fiscal burden, and the moral impropriety of mass incarceration.

Legal Case

Plessy v. Ferguson, 163 U.S. 537 (1896).

RACIAL CONFLICT AMONG PRISONERS

Racial conflict among prisoners is an enduring feature of the U.S. prison system, although the form and substance of race relations vary according to historical period, region, facility type, and inmate characteristics. Additionally, race relations differ according to gender. Women's prisons have historically experienced less racial violence and fewer overt racial conflicts than have facilities housing men. Nonetheless, race is a major organizing principle of the relationships and social networks within both men's and women's prisons. Scholars have concluded that racial conflict is neither the "natural" outcome of persons of different races and ethnicities living together, nor is it an intrinsic feature of the inmate social order. Instead, racial conflict among prisoners results from the confluence of external social, political, and economic events and the unique interpersonal and organizational dynamics that characterize prison life.

HISTORY

The South

Historical studies suggest that penal policy in the South emerged in response to changes in the political, economic, and social status of African Americans. In turn, prison policies (both formal and informal) shaped relationships among inmates and contributed to a system of racial divisions and alliances that endures today. For example, the end of the Civil War ushered in a new penal regime in most Southern states known as the "convict lease

Race Relations

Race relations in federal prison nowadays are pretty tame. It is not like the 1960s or '70s when skin color defined who you were. It is still like that to a point, but it is much more lax and depends on what prison you are in, but in most of the federal joints I've been in race relations are pretty good.

There is still self-imposed segregation. Usually black people sit with other black people, white with white, and Hispanic with Hispanic, but you will see it a lot more often these days that there will be a black and white in a cell together or a black and Hispanic. And with the triple bunks you might see one of each in a cell. The chow hall is still pretty segregated with a white side and a black side, even though it is unofficial of course, but it is not unheard of for a white to go on the black side or vice versa.

I've heard of race war horror stories, but in the 10 years of my incarceration I have never seen or experienced one. Most of the violence I have seen is perpetrated by people of the same race or gang-related stuff. A lot of dudes are closet racists, but nothing is really out in the open. Like you might hear a white guy talk about a black inmate to another white guy and call him a nigger to the white guy, but the white dude will never say it to the black guy's face. And you do hear black dudes talking about crackers in general, but hardly ever will a black man call a white man cracker to his face unless it is in jest.

With so may people in prison today and the majority of them first-time nonviolent offenders, race relations are pretty good. The intensity of the race wars of the past are rarely seen. It might also stem from the more professional attitude of the guards and the constant presence of informers. The feds are infested with rats, it seems. And rats are colorblind.

Seth Ferranti
FCI Fairton, Fairton, New Jersey

system." Scholars point to this system as one of the first to formally legitimate differential treatment on the basis of race. It also set the stage for racial conflict and violence among inmates. Under the convict lease system, former slaves found guilty of violating the Black Codes (a restrictive set of laws that applied only to African Americans) were sentenced to a form of penal servitude. Instead of serving time in a penitentiary like inmates in most Northern jurisdictions, convicts in the South became forced laborers on public works projects or were hired out to private employers, in some cases serving their sentences on the same plantations they had previously worked as slaves. In Southern states, where 85% to 95% of the convict population was black, convict leasing preserved the labor arrangements and racial caste system of slavery.

Formally, the convict lease system established racially segregated housing and work assignments. While black inmates were subjected to hard labor and harsh conditions, white convicts were typically assigned clerical and supervisory work. Informally, the system generated alliances between white inmates and prison staff, and fueled resentment among African Americans. Over time, the informal alliance that existed between white inmates and the all-white prison staff was formalized and expanded. Guards were outnumbered by their charges working in the fields, and uprisings were not uncommon given the harsh conditions and guards' frequent use of torture and brutality. To broaden their base of control, prison administrators in Mississippi, Louisiana, Texas, and Arkansas expanded the power and privileges of white inmate supervisors, known as "trustees" or "shooters." The trustees were provided with separate housing and given various privileges, including access to liquor and narcotics. In addition, trustees carried loaded shotguns and were encouraged to use force to control black prisoners. In exchange for these privileges, prison staff demanded loyalty from the trustees. As it evolved, this formal alliance between prison staff and white inmates became known as the "trustee" or "building tender" system. It was a style of penal control that not only pitted the interests of white inmates against those of black inmates, but one that fostered racial hatred and empowered white inmates to use violence against black inmates.

The building tender system endured in Southern prisons through the first half of the 20th century, and prisoners continued to be segregated according to skin color. In some prisons, entire cellblocks

were racially homogenous. In most, white and black inmates lived in integrated cellblocks but were assigned to separate cells. When in 1970 the entire Arkansas prison system came under judicial scrutiny for inhumane and brutal conditions, prison administrators suggested that inmate-on-inmate violence had emerged in reaction to integration attempts. In reality, racial conflict and violence among inmates predated integration efforts. In Arkansas in particular, white inmates used torture, extortion, and murder to maintain control over a predominantly black inmate population. Subsequently, the real origins of racial conflict and violence in Southern prisons can be traced directly to the racial hierarchies and violent control policies of the convict leasing and building tender systems.

The North and West

Although prisons in Northern states from the early 1900s through the 1950s did not follow the trustee model, segregation and racial discrimination were the norm. White inmates received better work assignments and were assigned to live with other whites. During recreation and meal times, white and black inmates spent their time in racially exclusive groups. As in the South, select groups of white inmates were empowered within this system by the administration and were used to keep black inmates "in their place." Correctional officers ignored and at times participated in verbal and physical assaults launched by white inmates against African Americans and Latinos. At other times, they granted white inmates various favors in exchange for their efforts to maintain order.

During the 1960s, as the number of African Americans and Latinos behind bars grew, the dominance of white inmates was repeatedly challenged. Bitter and at times violent disputes ensued over racial harassment, territory, and control of contraband markets. In California's Soledad Prison, the inmate social order splintered into several racial/ethnic factions. Close friendship groups known as "tips" tended to be intraracial and were based on friendships and associations from inmates' pre-prison lives. Larger groups or "cliques" served to network various tips based on shared subcultural orientations and interests. Cliques were often interracial in nature and served to mediate racial disputes among different tips within the network. Although white inmates retained various sets of privileges within prison, they did not dominate other inmates the way they once had. In several instances across the country, the tip-clique system proved so successful in resolving racial conflicts that prisoners engaged in multiracial "unity strikes" that emphasized their common interests as prisoners.

By the early 1970s, the relative stability of the tip-clique system of inmate social organization gave way to mounting hostilities and racial antagonisms. Scholars contend that the erosion of this system was the result of several factors. Internally, the inmate population was changing. Younger inmates increased in number and rejected the norms associated with the convict code and the tip-clique system. In addition, white inmates were no longer a numerical majority in most prisons. The increasing numbers of black and Latino prisoners put white inmates on the defensive and led many into white supremacist organizations. Externally, the success of the prisoner rights movement and judicial intervention contributed to a power vacuum within the prison. Guards accustomed to running the prison with the help of inmate informants and enforcers were angered by the militancy of black, Latino, and Native American inmates and were unsure how to proceed in light of court rulings that ended the old system of control. Many withdrew, and others assisted white inmates in forcibly challenging the gains of African Americans, Latinos, and Native American inmates. Notably, much of the racial violence that emerged during this period was retaliatory in nature. In 1971, for example, correctional officers at Indiana Reformatory wounded and killed 48 African American inmates who had staged a peaceful sit-in protesting brutality, racism, and alliances between white inmates and correctional officers. The 1971 riot at Attica Correctional Facility in New York emerged following repeated attempts by African American and Puerto Rican

prisoners to peacefully protest harsh and degrading conditions, brutality, violence, and racism.

After Attica, racial conflict and violence increased in prisons across the country. Informal patterns of racial segregation were hardened, and the tip-clique system ended. In response to the chaos that followed in the wake of a changed social order and fragmented control policies, inmates joined gangs to ensure their own protection and to acquire illicit goods and services. The rise of racially identified gangs like the Aryan Nation, Mexican Mafia, and Black Guerilla Family ushered in a new era of race relations—one that was characterized by unprecedented levels of violence, rivalry, and hatred.

RACE RELATIONS IN MEN'S PRISONS TODAY

The predatory and violent character of gang activity during the 1980s and 1990s changed the way most male prisoners do time. Inmates do "gang time," which demands intense loyalty to one's own group, a tolerance for and participation in taking advantage of weaker or unaffiliated inmates, a willingness to use violence—even murderous violence—to uphold the honor of both the individual and the gang. In many institutions, gang membership has become a prerequisite for survival. And, since most prison gangs are racially exclusive, racial identity and gang affiliation are conflated in prison culture. Racial disputes can quickly become gang disputes, and gang disputes are frequently racialized.

The current era in men's prisons is marked by a renewed emphasis on security, surveillance, and isolation. Maximum-security and supermax facilities have restricted inmates' access to one another and to correctional staff—many inmates in these facilities are on 23-hour lockdown in single cells. Meals and recreation time are spent alone. This has reduced gang violence, although racial hostilities and conflicts among inmates persist. A recent study of white, black, and Latino men incarcerated in Texas found that the majority of those surveyed regard race relations as a significant problem in the prison system.

RACE RELATIONS IN WOMEN'S PRISONS

Very little has been written about race relations in women's prisons. This may be due, in part, to the lack of overt racial conflict and incidence of violence in women's prisons. It is also the byproduct of scholarly neglect of women's experiences in prison more generally. Studies of pseudofamilies existing in women's prisons during the 1950s and 1960s suggest that romantic and fictive kin relationships were primarily, though not exclusively, intraracial. A study of the Bedford Hills Women's Correctional Facility during the 1970s reported that inmates socialized in the yard, cafeteria, and housing units in racially exclusive groups. Although interracial friendships and sexual relations were frequent, racial tensions were severe and persistent enough to inhibit the formation of multiethnic, multiracial coalition groups. Verbal and physical altercations were frequent between Latina and African American inmates—so much so that Latinas began to subdivide along color lines and were further fragmented by nationality, class, and language. A 1983 survey of women inmates in Minnesota found that while black and Native American inmates regarded the prison environment as racially discriminatory and unsafe, they nonetheless had friendships that crossed racial/ethnic boundaries. Finally, a recent ethnography of women's experiences in a Delaware prison found that friendships are based primarily on pre-prison affiliations and alliances (McCorkle, 2003). These friendship groups reflect the racial composition of inmates' neighborhoods. In most cases, groups are not racially exclusive but have a preponderance of either white or African American inmates. Sexual relationships and romantic friendships, on the other hand, are frequently interracial. Despite these preliminary studies, it remains unclear what factors contribute to racial conflict in women's facilities or why women's facilities seem to have fewer racial problems than men's facilities.

CONCLUSION

Contrary to popular media accounts, racial conflict among inmates is not a new phenomenon. Rather,

its legacy has endured throughout the history of the American prison. To be sure, the nature of race relations and the structure of racial conflict have undergone remarkable changes. In the past, race relations among inmates were organized vertically. That is, prison staff created a social order that pitted the interests of inmates against one another and facilitated racial hatred and violence as a primary means to maintain control and preserve a racialized social order. Today, the vertical dimension of race relations exists in a much weaker form. The formal alliance between white officers and inmates was ended by the courts, and the alliance that remains is no longer able to dominate prison life the way it once had. Despite positive changes in the way prisons are run, racial conflict and violence remain. Such conflict has contributed to the rise of racially identified gangs and the emergence of supermax facilities. Both of these developments are unfortunate, since they impede opportunities for inmate reform and rehabilitation. In order to improve the situation, research is needed to better understand the inmate social order and the factors that aggravate or ameliorate racial division, tension, and conflict.

RACISM

Throughout U.S. history, people of color have been arrested, charged, convicted, and incarcerated at far higher rates than the general population. Racial disparities in the use of imprisonment as a means of social control took root in the North in response to the abolition of slavery and in the South in response to emancipation. Racism in prisons manifested itself not only in disproportionate rates of incarceration of people of color, but also in racial stratification within the prison world. Until the 1960s, nonwhites were barred from employment in many prison systems, and white inmates were treated as belonging to a superior caste inside prisons.

At the beginning of the 21st century, race continues to play a key role in prisons, where two-thirds of all inmates are people of color, yet two-thirds of their keepers are white. Inmate social structure is to a considerable extent defined by race, especially in men's prisons, where raced-based groups vie for power. Prisons, in turn, play an important role in racial dynamics in the nation as a whole. They provide fertile grounds for the inculcation and eventual exportation of racist ideologies among both inmates and employees. Furthermore, by locating hundreds of new prisons in rural areas, the prison boom of the late 20th century has helped bring about the depopulation of young black men from urban areas and a concomitant revitalization of white rural

economies. This forced migration, combined with disenfranchisement of inmates, creates an advantage for rural areas at the expense of urban areas in allocation of federal funds and electoral power.

PRISONS AND ABOLITION IN THE NORTH

Overrepresentation of people of color, especially women of color, has been a defining feature of U.S. prisons at least since the birth of the modern penitentiary in the late 18th century. In 1790, Walnut Street Jail was transformed from Philadelphia's city jail into what is generally considered to be the first state prison. Ten years earlier, the Pennsylvania legislature had passed *An Act for the Gradual Abolition of Slavery*, the first such enactment in the nation. Even though Philadelphia was home to a vibrant free black community, the largest at that time in the country, many white Philadelphians continued to view their fellow citizens of African descent as inferiors.

Blacks constituted less than 3% of the population in Pennsylvania, and never more than 6% of the population in Philadelphia throughout the 45 years that Walnut Street served as a state prison. Yet, as abolition progressed in the state, their proportion of the prison population rose steadily from 15% to nearly 50% (reaching 70% among female inmates) by the time Walnut Street was closed in 1835. (See Figures 1 and 2.)

Eastern State Penitentiary, a successor to Walnut Street Jail, was perhaps the most important of all early prisons in the United States. One observer at the time reported that the first inmate admitted to the prison was a "light skinned Negro . . . born of a degraded and depressed race" (quoted in Mauer, 1999, p. 3). Not only was the first male inmate admitted to the prison black, but so were all four of the first women. During the 19th century, the inmate population at Eastern State Penitentiary ranged between 20% and 50% black. The keepers, meanwhile, remained entirely white. Throughout the North, prisons and abolition advanced in step during the early years of the republic.

PRISONS AND EMANCIPATION IN THE SOUTH

In the South, prisons barely existed at all prior to the Civil War. Florida, South Carolina, and North

Carolina had none. Other Southern states built prisons on a much more modest scale than the North. Georgia, for example, had only 43 prisoners in 1850, all of them white; whereas Massachusetts, with a comparable population, had 1,236 prisoners. The slave master, not the prison warden, was the primary instrument of social control in the South.

After the war and emancipation, Southern states enacted "Black Codes" that made specific crimes applicable only to blacks. Almost overnight, Southern inmates changed from nearly all-white to nearly all-black as prisons became key institutions in the reimposition of white control. By 1899, for example, the prison population in Georgia had soared from 43 to 2,201 state inmates, of whom 1,953 were black and only 248 were white.

CONVICT LEASE AND PLANTATION PRISONS

In the decades after the Civil War, Southern states developed a new system of racial and social control that combined prisons and slavery. Convict lease was a system in which thousands of men, women and children, almost all of them black, were convicted of crimes (often petty or contrived) and then leased to white entrepreneurs who put them to work in plantations, mines, roads, and in other dangerous and debilitating occupations for which free white employees were considered unsuited.

The profits from convict leasing were phenomenal. Unlike slaves, convicts represented no capital investment. As one satisfied employer put it,

> Before the war we owned the Negroes. If a man had a good nigger, he could afford to take care of him; if he was sick get a doctor. . . . But these convicts, we don't own 'em. One dies, get another. (Cable, quoted in Oshinsky, 1996, p. 55)

The annual mortality rates for convicts—males and females, adults and children—were shockingly high. In the late 1800s, Mississippi averaged 14% inmate mortality per year. In 1870, Alabama reported that 40% of all its convicts died. The average life span of an inmate in Texas was seven years. For those sentenced to work on the North Carolina Railroad, it was one or two years. Forced labor in the hellish turpentine camps of North Florida was worse than a death sentence. Bank presidents and cattle barons, cotton planters and politicians, men like Nathan Bedford Forest, first Grand Wizard of the Ku Klux Klan, made fortunes off the lease of inmates, nearly all of whom were former slaves or descendents of slaves.

When even the Southern establishment could no longer endure the excesses of convict lease, the plantation prison was born. This type of prison differed little from the slave plantation except that, as with convict lease, the life of the prisoner, unlike that of the slave, represented no capital expenditure and thus was worthless. Harsh conditions for black prisoners on some of the great plantation prisons in the 20th century, places such as Parchman and Angola, have been immortalized in film and song.

SEGREGATED PRISONS IN THE NORTH

Meanwhile, in the North, people of color continued to be incarcerated in disproportionate numbers, in prisons that were formally segregated, with guards and administrators who were almost all white, under conditions that were openly racist. Most Northern prisons remained segregated in law and in practice until well into the 1960s. At the time of New York's Attica uprising in 1971, for example, black and white inmates were still required to drink from separate buckets, go to separate barbers, and play on separate ball teams, all under the control of an entirely white officer corps. Indeed, most prison systems, North and South, barred people of color from prison employment until the mid- or late 1960s. In 1969, when nearly half of all inmates in the United States were people of color, more than 95% of officers in adult prisons were white.

POST-CIVIL RIGHTS ERA

The incarceration rate in the United States, which had remained fairly stable for the first seven

decades of the 20th century, abruptly and rapidly increased in the post-civil rights era. Fueled by widely disparate treatment of drug users based on race, incarceration rates for black and Hispanic Americans soared. By 1995, non-Hispanic black adults were nine times more likely to be in prison than non-Hispanic white adults, while Hispanic adults were four times more likely to be in prison than non-Hispanic whites. By the end of the century, 13.1% of all black men in their late twenties and 4.1% of Hispanic men were in prison or jail, compared to only 1.7% of white men of the same age. The U.S. Department of Justice estimated that an astonishing 1 of every 4 black males and 1 of every 6 Hispanic males would go to prison in their lifetimes compared to only 1 in 23 white males. In some inner-city areas, half of all young black males were behind bars or on probation or parole, profoundly influencing the economic and social structures of their home communities.

In order to house more than a million new inmates, state and federal governments rushed to build hundreds of new prisons across the nation. The prison boom came at time of faltering rural economies in the United States. Attracted by the prospect of thousands of secure government jobs, with health benefits and retirement (a rarity in agricultural areas), rural communities lobbied aggressively for each new prison. As a result, many new prisons were built in areas where the potential workforce was virtually all white at the same time that the number of nonwhite inmates was reaching historic highs nationally.

RACE RELATIONS WITHIN PRISONS

Race has always played a central role in the social organization of the prison community, structuring relations among inmates and between inmates and officers. De jure racial segregation among inmates has been replaced in many prisons by de facto segregation imposed by race-based gangs. White supremacist inmate groups like the Aryan Brotherhood, and their counterparts among black and Hispanic inmates, often wield enormous influence within the prison world. Such groups offer protection for inmates willing to swear allegiance to racist and violent gang codes. Racist groups outside of prisons, in turn, have come to view prisons as fertile recruiting grounds for new members.

In addition to racial polarization among inmates, rural prisons in many states have experienced problems with white supremacist activity among employees. Prisons in which inmates are mostly urban men of color while the officer corps and surrounding communities are almost entirely white and rural appear to be especially susceptible to the development of racial stereotyping and antagonism on the part of employees and inmates.

The cumulative impact on race relations nationally of immersing millions of inmates and employees in the racially polarized prison world has not been systematically studied, although it may become of increasing interest as hundreds of thousands of inmates incarcerated during the prison boom are released back into society.

PRISONS AND THE DISTRIBUTION OF ELECTORAL POWER

A more subtle impact of the prison boom has been a shift of electoral power from urban black and Hispanic communities to rural white communities. Inmates in 48 states are not permitted to vote, yet for purposes of legislative districting, they are counted as residents of the prisons in which they are incarcerated. As hundreds of thousands of inmates of color were forcibly transplanted from urban communities to rural prisons in the latter part of the 20th century, surrounding communities saw their official population figures rise, while the number of eligible voters remained static or declined. In Florence, Arizona, for example, 13,600 of the town's 17,000 official residents are incarcerated and cannot vote. Nonvoting inmates constitute substantial proportions of many rural legislative districts, such as Connecticut's 59th General Assembly district, where 13% of the population is behind bars. The practice of counting large numbers of disenfranchised people of color as residents (albeit involuntary) of rural white communities where they

are incarcerated, thus augmenting the political representation of those communities, recalls the earlier practice in the United States of counting three-fifths of all slaves toward the electoral base of their white masters.

Prisons also inflate census figures for the number of people of color living in rural communities, and deflate average adult incomes in those communities. Both sets of figures help redirect federal and state money from the home communities of inmates, which are disproportionately black and urban, to prison host communities, which are disproportionately white and rural.

CONCLUSION

Three great eras in civil rights in the United States—abolition in the North, emancipation in the South, and the civil rights movement of the 1960s—have all been followed by dramatic expansions in the use of prisons. In each case, prisons have undermined the advances made in the political, social, and economic status of people of color, especially African Americans.

In 1970, fewer than 100,000 nonwhites were in prison in the United States. The civil rights movement had secured unprecedented protection under the nation's laws for all Americans, including universal voting rights for all citizens with only one exception: those convicted of a crime. Thirty years later, prison has become a rite of passage for people of color in America, especially black men. Mass incarceration has been accompanied by significant loss of voting and other civil rights and economic devastation for urban communities that export large numbers of inmates. As millions of people are cycled through the racially polarized world of prisons, racial antagonisms in the nation may be effected for years to come.

RAFTER, NICOLE HAHN (1939–)

Nicole Hahn Rafter, a professor of law, policy, and society at Northeastern University, is known most widely for her early work on the history of women's prisons. She has also written about gender roles in criminal justice, eugenics and criminality, the history of criminology, crime in the cinema, and criminal justice knowledge.

BIOGRAPHICAL DETAILS

Rafter did her undergraduate work at Oberlin College and at Swarthmore College, where she earned a bachelor's degree in 1962; a year later, she obtained a master's degree in teaching at Harvard University. In the mid-1970s, she enrolled in the School of Criminal Justice at the State University of New York, Albany, where, in 1978, she received her doctorate. Her dissertation on the defective delinquency movement in New York State (Rafter, 1978)

marked her entry into two general areas of research—women's prisons and eugenics—that would dominate her professional research and public service contributions throughout her career.

PARTIAL JUSTICE

Rafter's research on women's imprisonment documents the pre-reformatory developments of the early 1800s and extends through the 1980s. Rafter's major study, *Partial Justice*, published in 1985, chronicles the historical development of prisons for women in three states—New York, Ohio, and Tennessee—until 1935. In this book Rafter analyzes the role of gender and ethnicity in shaping women's treatment, neither of which had been addressed in prior studies of the history of prisons. In an appendix, she describes the expansion of women's prisons in all regions of the country between 1935 and 1980, while in a second edition of the book, published in 1990, she enlarges her coverage to include developments in the use of women's prisons through the 1980s.

According to Rafter, when separate women's prisons were originally built, they were meant to serve as alternative institutions. Over the years, however, they have come to represent a failure to find adequate alternatives to institutionalization.

Rafter described three stages of women's prison development. In the first stage, from 1790 to 1870, women were often incarcerated under conditions that resembled those of male prisoners. In the second period, between 1870 and 1935, women reformers developed new models of reformatory care for female offenders. As a result, institutions designed specially for women were built in Indiana, Massachusetts, and New York in the late 1800s. Between 1870 and 1935, 20 new women's reformatories were built in 18 states: In the Northeast, reformatories were built in Massachusetts (1877), New York (1887, 1893, 1901), New Jersey (1913), Maine (1916), Connecticut (1918), and Pennsylvania (1920). In the North Central region, reformatories started in Indiana (1873), Ohio (1916), Iowa (1918), Kansas (1918), Minnesota (1920), Nebraska (1920), Wisconsin (1921), and Illinois (1930). In the South, reformatories opened in Arkansas (1920), North Carolina (1929), and Virginia (1932), and in the West in California (1933). While these prisons seemed to focus on the women in custody, patterns of unequal and inferior treatment arose. This period also marked the end of the reformatory movement.

In the third stage, from 1935 to 1980, women's prisons were formally integrated into the larger systems of prisons across the country. New prison buildings for women were constructed in 20 states throughout the Midwest (Missouri and Michigan), the South (Arkansas, Florida, Georgia, Kentucky, Louisiana, Maryland, Oklahoma, South Carolina, Tennessee, Texas, and West Virginia), and the West (Arizona, Colorado, Nevada, New Mexico, Oregon, Washington, and Wyoming).

CONCLUSION

In December 1999, in a keynote address at the National Symposium on Women Offenders in Washington, Rafter argued that there should be fewer prisons for women in the future. Those that exist should be small and house mainly violent women. Property and public order offenses should no longer result in confinement, and more use should be made of alternatives to incarceration, such as community- or intensive-treatment programs. She also stated that female offenders should be offered rehabilitative services, since many public expenses could be saved through closing women's prisons and diverting or decarcerating drug-involved women. Optimistically, she concluded her talk by predicting that "we will be rehabilitating again, picking up where the first prison reformers started about 1820, and hopefully doing the job better this time around" (Rafter, 2000, p. 78).

RAGEN, JOSEPH E.

For 25 years (1936–1961), Joseph E. Ragen was warden of the Illinois State Penitentiary at Joliet. The penitentiary was a complex of two maximum-security prisons, Joliet and Stateville, and a 2,200-acre prison farm. These facilities were designed to house approximately 3,500 prisoners, but the population frequently exceeded 5,000. In the 25 years Ragen served as warden, there were no reported or acknowledged escapes from Stateville, no riots or major disturbances at any of the prisons, and few deaths.

While prison riots swept across the United States in the 1950s, Ragen's complex remained calm and its factories continued to produce millions of dollars per year in food and manufactured goods. The orderliness and productivity of his administration had an international reputation; Ragen was a frequent host to European corrections officials. He was also an autocratic ruler whose policies and practices drew criticism at the time of his administration and now, in our more democratic era, would not be tolerated.

BIOGRAPHY

Ragen was born in 1895 in rural Southern Illinois, and it is doubtful he ever finished high school. He was the son of a county sheriff and served in the Navy during World War I. After the war he returned home to work for his father as a deputy sheriff. In 1926, Ragen was elected sheriff. Four years later, he was elected county treasurer. In 1933, he was appointed as warden of the Southern Illinois Penitentiary at Menard.

Ragen held the Menard position for only three years (1933–1936), but during this time he earned a reputation as an effective administrator. He was also appointed as the Superintendent of Prisons for the State of Illinois. This position required him to conduct regular inspections of all the state prisons, and it allowed him to become familiar with the Joliet-Stateville complex. In 1936, after a series of escapes and disturbances at the complex, the governor forced the resignation of the warden and appointed Ragen to replace him.

AUTONOMY

Ragen had what modern wardens would consider an astonishing degree of autonomy in running the Joliet-Stateville complex. He hired and fired at will and made all the rules. No one (including newspaper reporters he considered unfriendly to his regime) entered the complex without his approval, inmates were forbidden to form clubs or associations, all of the inmates' mail was carefully censored, and for many years inmates were forbidden to write or send writs to the courts. This type of control was possible largely because there was no strong, central prison authority in the state, no unions, and the federal courts at the time had little interest in prison conditions.

By carefully cultivating political relationships and providing lavish meals at his Stateville warden's residence, Ragen also ensured that legislators would not exercise their political or oversight authority. He had a similar relationship with all six governors under whom he served; there would be no interference in any of his management or personnel decisions. At the time the Illinois civil service had an elaborate patronage system, in which correctional officers obtained and kept their jobs through political connections. The one time a governor tried to exercise his authority, Ragen and his fiercely loyal key staff resigned. Within six months

there were serious problems at the prison. Under pressure from the press and legislators, the governor conceded and Ragen returned.

During most of Ragen's tenure, prison officers had remarkably low salaries and worked six days a week. Turnover rates were high, but Ragen maintained an active recruiting campaign focused mainly on the hiring of uneducated, rural, Southern Illinois white men. As the percentage of urban, African American prisoners rose, tensions between officers and inmates grew. By the time Ragen retired, a volatile situation had developed, as a result of strained race relations, that subsequent wardens had problems managing.

ORDER

Ragen was a strict disciplinarian with what some might consider an obsessive preoccupation with cleanliness and order. After a tour of Joliet and Stateville, one of his favorite reporters (Gladys Erickson) wrote, "Neatness and order around the twin prisons seems to have gone beyond the natural, to have become a fetish" (1957, p. 235). Foreign visitors marveled at the punctuality and precision of large inmate movements. Among award-winning, formal gardens, thousands of inmates marched in tight formation. They did so on a schedule that some claimed was so precise one could set a watch by it.

Ragen believed that the safety and security of any prison depended on discipline, cleanliness, and order. He personally inspected all aspects of the prison by regularly touring the 64 acres inside the Stateville walls, the Joliet prison, and the prison farm. Ragen walked miles every day; there were few details that escaped his attention.

Inmate disciplinary action in the Ragen era was not limited to the relatively short stays in segregation that characterize prisons today, yet nor did he have the luxury of being able to send unruly inmates off to a supermax (i.e., total lockdown) prison. Instead, he could place individuals on disciplinary segregation for years at a time. There are also allegations that Ragen allowed officers to beat inmates who in any way threatened discipline or order.

PRODUCTIVITY

One of Ragen's cardinal rules was that all inmates must work. In the early days of his administration, they did so by cleaning up the three prisons, planting flower and vegetable gardens, and hauling coal. However, there was still not enough work to keep all inmates employed. This may have been an important reason why Ragen became a pioneer in establishing large correctional industries. By the mid-1950s, the cannery Ragen built had an annual production rate of more than 300,000 gallons of fruit and vegetables. Other productive industries he established included a textile mill, furniture factory, sheet metal plant, and clothing factory.

CONCLUSION

Ragen was an autocratic prison warden who earned an international reputation for running clean, orderly, and productive prisons. He ruled with an iron hand in an era that did not provide staff or inmates legal protection. Many other wardens at the time had almost as much autonomy, but they did not accomplish as much, nor did they leave such a remarkable legacy. Modern prison wardens are, and should be, constrained by laws that protect staff and inmates, but there are still some lessons they could learn by studying the history of Ragen's administration. Inmate idleness ought to be recognized and dealt with as a threat to institutional safety and order. Likewise, by walking around and having a good grasp on the minor details of prison life, management may do a better job. And finally, the difficulties later wardens had in establishing order at Stateville-Joliet indicates the importance of attention and respect for populist efforts to build humane, democratic penal institutions.

RAPE

Many criminologists argue that prison rape and sexual coercion are "central defining characteristics of the prison experience" (Hensley, 2001, p. 62), although the exact number of sexual assaults of inmates in prison is unknown. In men's prisons, assaults tend to be perpetrated by prisoners against one another as part of establishing "inter-male dominance hierarchies" (Sabo, Kupers, & London, 2001, p. 11). In women's prisons, most sexual assaults occur when (male) staff abuse female inmates. In male and female institutions, rape is underreported and denied for many of the same reasons as it is outside of prison: guilt, shame, and fear of retaliation. It may also be underreported if it was thought to be deserved or to be, in fact, consensual sex.

Prisoner subculture dictates that aggressive penetrative activity is *not* homosexual, while receptive-penetrated activity is considered as such. While in prison, "the guys are not as concerned about whom you are in bed with so much as who is in charge, that is, who is doing the [expletive], the penetrating, who is the Man, who is 'normal'" (Tucker, 1981). The phrase "homosexual rape" is thus misleading, since the overwhelming majority of prisoner rape victims and perpetrators are heterosexual and resume heterosexual behavior when they are released from incarceration.

STATISTICS AND LIMITATIONS

It is difficult to estimate the number of prison rapes for many reasons. First, the Federal Bureau of Investigations' *Uniform Crime Report* does not include crimes committed in a correctional context. It also defines rape as necessarily involving a female victim. About half the states do not collect statistics on prison rape, and the remaining numbers involve substantial undercounts even of violent rape because staff do not record occurrences adequately. Estimates based on a compilation of previously published surveys suggest some 80,000 unwanted sexual acts take place behind bars in the United States every day, with a total of 364,000 prisoners raped every year. This includes approximately 196,000 adult males raped in prisons, 123,000 adult males raped in jails, 40,000 boys raped in juvenile and adult facilities, and 5,000 women raped in prisons (Donaldson, 1995; Stop Prison Rape, 2001a). Other research concludes the number of men raped behind bars is 20% to 30%, with a high number of repeat victimizations (at the extreme involving 50–100 incidents per victim) and a significant number (up to 80%) of incidents involving multiple perpetrators or groups.

Most statistics include only forcible rape and exclude or undercount sexual coercion. Although such conduct is frequently seen as consensual, "survival-driven" sexual activity is based on the calculation that it is better to submit to one person's sexual demands in exchange for protection than to be vulnerable to rape from varied perpetrators. In women's prisons, sex between prisoners and guards is typically viewed as consensual even though structural power differences between keeper and captive create an inherently coercive setting.

GETTING "TURNED OUT" AND "HOOKING UP"

Frequently, young men entering a correctional setting will be tested to see whether they are capable of maintaining their "manhood" and thus avoid being penetrated and turned into a "woman." Getting "turned out"—or coerced into sexual activity—is an extremely degrading and humiliating experience that causes physical injuries and psychological problems. It may also result in HIV transmission. Many men never tell anyone about their abuse, preferring to suffer in silence than expose their pain.

One strategy some men use to avoid sexual victimization is to "hook up" with another inmate. In exchange for sexual favors, "Punks" will often pair off with a "Man" or predatory "Wolf" for protection from gang rapes or repeated threats of rape.

An individual may enter into such a relationship to end harassment, to maintain addictions to nicotine or drugs, to secure materials such as soap or food, or to pay for services from jailhouse lawyers. If a Punk is hooked up with a Man, then his chances of being attacked are greatly reduced. Inmates who tire of fighting may hook up with a stronger inmate and exchange sex for protection. The resulting relationships do not reflect consensual homosexuality as much as survival-driven behavior, resulting in a situation where the Punk may be "loaned" out or even traded for contraband items, to pay debts, or as favors to friends. The Punk is often sexually enslaved and sometimes forced into prostitution.

Men who wish to avoid being turned out or who desire to undo its effect must often use violence. Sometimes, they must even take on the characteristics of the perpetrator themselves. One Texas inmate explained,

> It's fixed where if you're raped, the only way you [can stop the abuse is if] you rape someone else. Yes I know that's fully screwed, but that's how your head is twisted. After it's over you may be disgusted with yourself, but you realize you're not powerless and that you can deliver as well as receive pain. Then it's up to you to decide whether you enjoy it or not. (Human Rights Watch, 2001)

PUNKS AND QUEENS

When an inmate is assaulted he is usually labeled as a Punk, who is understood to be weak and unmasculine. Punks tend to be younger, smaller, and less experienced in personal combat or confinement situations than the average prisoner; they also tend to have been arrested for nonviolent or victimless offenses, to be middle class and belong to ethnic groups that are in the minority in the institution.

From a sociological perspective, rape functions as a violent rite of passage to convert "men" into Punks, to create hierarchies of power and control, to meet part of the demand for sexual partners, and to establish claims to masculinity. The number of Punks tends to rise with the security level of the institution:

> In a minimum-security prison, rape is uncommon because few "men" want to assume the risks involved and the separation from females tends to be short or release imminent; in a maximum-security prison rape is far more prevalent because the prisoners are more violent to begin with, are more willing to take the risks involved, and feel a more intense need for sexual partners. (Donaldson, 1993)

Gresham Sykes (1958) noted that one of the pains of imprisonment was a deprivation of heterosexual contact. In this situation, men have to define "manhood" without women and do so by emphasizing the worst aspects of the male gender role—aggression, domination, emotional coldness. The victims are symbolically transformed into women and even take on the "womanly" functions of the relationship. Punks will often do household chores that mimic those of the traditional female such as laundry, making the bunk, making coffee, or cleaning the cell. The Punks are often forced into roles that range from nurturing wife to that of overworked "whore."

Unlike the Punks who are forced into "womanly" roles, the Queens are effeminate homosexuals whose sexual behavior behind bars is not markedly different from their patterns "on the street." Sexually they are strictly receptive (penetrated) and are generally as feminine in appearance and dress as the prison administration allows. Most prisons and jails house Queens in protective custody or segregation to help protect them from sexual assaults. Their separation from the general population is also viewed as a means of preventing consensual sex between willing partners, since most institutions have specific rules prohibiting sexual contact between inmates. Some believe that the removal of the Queens from the general population increases the frequency of rape among the remaining population. The Queens also suffer sexual assault, but can potentially use their sexual powers and feminine "charms" to play stronger inmates off one another to find the least exploitative relationship among the limited available options.

EFFECTS OF RAPE

Long after their bodies have healed, rape victims remain traumatized, shamed, and stigmatized. The psychological effects of prison rape can last a lifetime and often lead to substance abuse, domestic

violence, antisocial behavior, and much worse. When a man is raped he will most often feel vulnerable, powerless, and angry. Like other rape victims, men will feel shame, humiliation, self-worthlessness, or self-contempt. They may blame themselves for what happened. Men may also believe that others are questioning their sexual identity. In the aftermath of a rape, the male victim may endure nightmares and sleep disturbances and be unable to concentrate. A male rape survivor may also subscribe to the unfounded belief that his sexual orientation has been compromised or even transformed by this involuntary experience, which can serve as a catalyst for suicidal behavior. Indeed, sexual assault is a leading cause of suicide in confinement where suicide is the leading cause of death. Suicidal impulses are so common among men who have recently experienced their first or second rape that any such victim should be presumed suicidal until a mental health professional determines that this is not the case.

Prison rape can potentially turn nonviolent offenders into individuals with a high propensity for violence:

> The suppressed rage resurfaces and may be accompanied by violent behavior, obsession with vengeance or with the rape experience itself, belligerence towards all holders of power (including institutional staff), disturbing sexual fantasies, phobias, substance abuse . . . and aggressive assertion of masculinity, including the commission of rape on others. (Donaldson, 2001, pp. 7–8)

One inmate commented, "When I came out of prison, I remember thinking that others knew I had been raped just by looking at me. My behavior changed to such cold heartedness that I resented anyone who found reason to smile, to laugh, and to be happy" (Human Rights Watch, 2001). Some victims perpetuate the vicious cycle by becoming rapists themselves in a misguided attempt to "regain their manhood" in the same manner in which they believe it was "lost."

Other important effects include the possibility that rape will result in a sexually transmitted disease or AIDS. The prison infection rate of HIV is six times higher than the national average, so sexual contact carries a much higher risk of AIDS. Even if the prisoner does not contract AIDS, "the fact that any rape may be a death sentence plays up the major psychological terror involved in rape" (Lehrer, 2001, p. 1).

WOMEN'S PRISONS

Most of the sexual assault and abuse of female prisoners is sadly at the hands of officers, who have been hired to maintain a safe and rule-abiding environment. Abuse takes the form not only of direct assault but also manipulation and coercion into sexual activities based on promises of goods or services, or the threat of losing privileges, not seeing their children, unfavorable work assignments, or a transfer to a higher-security facility. Related concerns include male guards fondling female inmates during frisks and pat-downs, as well as observing them in the shower and while using the bathroom—all of which are especially acute problems given the high number of female inmates who have experienced previous sexual abuse.

While some sexual contact may appear to be consensual, even initiated by the inmates, it takes place in the context of power difference between guard and inmate. Indeed, Sykes (1958) notes that a pain of imprisonment is a deprivation of autonomy, which reduces the inmate to a dependent, childlike status. Thus, Amnesty International (1999) notes, "Sexual relations between staff and inmates are inherently abusive of the inmates and can never be truly consensual, even if initiated by inmates, simply because of the considerable difference in power between the parties."

JUVENILE FACILITIES

"Stop Prisoner Rape" claims that the rate of sexual abuse of inmates in juvenile facilities is higher than in adult facilities, with much of the abuse at the hands of the staff. It is in these facilities, or "gladiator schools," where the impressionable young boys come to view rape and sexual assault as the "way of life behind bars." This is often where young boys learn to prove their "manhood" or have it "taken"

from them. It can be said that the problem of rape in correctional settings begins here.

CONCLUSION

The general public has a "radical lack of concern" for prison conditions (Sabo et al., 2001, p. 135), including rape. Indeed, typically prison rape is the subject of jokes about picking up soap in the shower or titillating movies about the pent-up sexuality of female captives. At least some prison guards and administrators ignore inmate rape, while one sample of Texas correctional officers found 46% who believed that some inmates deserved to be raped (Hensley, 2001, p. 58). In some extreme cases, rape can become a "management tool" to punish prisoners who step out of line, break a potentially strong inmate leader, coerce prisoners or crime suspects, create snitches, silence dissidents, and divide inmates "into perpetrators and victims, thus diminishing the likelihood of united resistance" (Sabo et al., 2001, p. 12). For example, some officers in Corcoran State Prison in California notoriously used as an informant the "Booty Bandit," an inmate who was a psychopath and a serial rapist. He was the guards' resident enforcer, who told corrections investigators that any time supervisors needed an inmate to be "checked," they could call on him. Depending on his mood, he said, he would either rape or beat them. He got extra food and tennis shoes in return.

At a time when the prevailing rhetoric is "tough on crime," many people do not see a problem with sexual violence or anything else that makes prison a worse place to be; they feel that rape is either deserved or helps to create less comfortable prisons to which criminals will not want to return. However, rape is a violation of human rights (Human Rights Watch, 1996, 2001). In prison it occurs disproportionately to people who have committed the least serious crimes. The feelings of rage and inadequacy experienced by rape victims is likely to outweigh the modest rehabilitative potential of prison and may even return people to the free world who are more likely to engage in violence.

RECIDIVISM

Recidivism refers to the return of an offender to criminal behavior following conviction, diversion, or punishment. The reasons that people reoffend vary. The degree to which any particular factor may

cause someone to commit another crime is unclear, but the following list comprises seven general theories about why offenders return to criminal practices.

WHAT CAUSES RECIDIVISM?

1. Incorrigibility

Proponents of this view suggest that offenders are beyond reform, and as such, most sanctions, particularly less onerous ones, will not deter them from future offending. Many politicians subscribe to this philosophy and campaign on justice platforms that are aimed to "get tough on crime." They argue that offenders make a rational choice to commit crimes and will reoffend if they are not punished severely enough.

2. Failure of the Sanction

Others believe that individuals will commit further crimes if their original punishment was inappropriate and did not act as a deterrent. Sentences may be too lenient and fail to make people recognize their wrongdoing. They may also be too harsh, which can cause offenders to disassociate from societal norms and react criminally. Some sanctions may not be an appropriate match for the type of offense or offender, such as a long term of imprisonment for a first-time, minor offender instead of an alternative measure.

3. Failure of Support in Reintegration

Offenders, particularly those who have served lengthy sentences in prison, may have difficulty reacclimating themselves upon release. With technological advances, shifts in public policy or ideals, political changes, and so on, the outside world may be significantly different from the one they previously knew. If offenders cannot adjust to the new norms of an ever-changing society, they may engage in illegal practices in an attempt to satisfy their needs. Recidivism then, is provoked not by the offender nor by the sentence imposed, but rather by the difficulties an individual has reintegrating into society, and the ineffectiveness of support mechanisms that are available to him or her.

4. Failure of Programs

A program, whether in a prison or as part of parole or probation, will only be effective if offenders participate in it fully. Without a commitment to the goals of the program, people may reoffend. For example, if an individual convicted of drinking and driving is sentenced to a 12-step program as a condition of parole, this program can only aid in reducing recidivism if he or she is a willing participant. Similarly, if a program is not effective in meeting the needs of offenders, then it may not prevent reoffending. Using the same example, if the same 12-step program is poorly run or is understaffed and underfunded, it may cause recidivism.

5. Peer Pressure and Other Social Provocations

Even if offenders are given appropriate sanctions, are willing to change their behavior, and are active in a sound rehabilitative program, they may still return to criminal activity due to outside social influences such as peer pressure. For example, even if a young offender is placed in a drug rehabilitation program and wants to remain drug free, he or she may still reengage in drug use if pressured to by friends. In this case recidivism is directly related to social stimulus outside the control of the criminal justice system.

6. Economic Stress

A traditional goal of North American culture is to obtain economic wealth and stability. Proponents of this perspective would suggest that people will use illegitimate means to attain goals when they are denied legitimate ways of achieving them. If offenders are unable to support themselves upon release, or if they feel pressured by their low socioeconomic status, they may reengage in illegal behavior. As such, recidivism occurs, not as a consequence of a failed program rehabilitation program or because an individual does not recognize his or her wrongdoing, but because of the offender's failure to meet economic goals within a broader capitalist system.

7. Mental Health

Finally, some believe that the mental health of an offender can be one of the most important predictors of recidivism. The mentally ill may not respond to any punishment, including imprisonment, rehabilitative programs, or any other measure taken in response to their crime. As such, their tendency to reoffend may continue until their mental health problems are addressed.

MEASURING RECIDIVISM

Perhaps the most controversial issue related to recidivism is the difficulty of measuring its existence. The estimates of recidivism rates vary considerably. In the United States and Canada, for example, recidivism has been estimated at anywhere from 40% to 80%. What accounts for these different rates?

One factor is the form of measurement used. In modern studies, three techniques are regularly employed. First, criminologists examine rearrest figures. This strategy allows relatively easy access for the collection of information (through detailed police and Federal Bureau of Investigation records). The data also often include previous offender records of arrest and conviction, and an arrest often results in conviction and imposition of a new sentence. However, while this measurement does have advantages, some suggest that it is not a true measure of recidivism. People who are arrested are not necessarily convicted or even indicted. Accordingly, inconsistencies may arise, especially with small-scale studies. These inconsistencies may account for disproportionate or inaccurate recidivism figures.

A second approach taken by scholars is to examine reconviction rates. This measure has the advantage of being a direct measurement of recidivism whereby a formal determination of guilt is made by a court. Moreover, state and federal data are readily available for researchers to study, and reconviction often results in an offender making a guilty plea, thereby reaffirming a pattern of recidivism. However, this measure also has its limitations. In order for a finding of guilt to occur in a trial, a specific burden of proof must be reached. While this legal requirement is an important safeguard of due process and justice, it sometimes results in inaccurate recidivism rates. In other words, an absence of a finding of guilt does not necessarily mean that an arrested individual did not commit a crime. The burden of proof simply may not have been met. Accordingly, recidivism based on reconviction may not accurately represent the actual rate of reoffending.

A final measure of recidivism is that of resentence to prison. This piece of data relies on state and federal corrections to provide data on incarcerated offenders. Recidivism, in this method, is based on how many people who are currently incarcerated have previously been convicted of other crimes. This measurement has the distinct advantage of being extremely detailed, with data available on the arrest, the conviction, the length of sentence, the previous sentence, as well as an assessment of the effectiveness of previous sanctions on recidivism. However, this measure also only reveals recidivism in cases where there is a period of incarceration. Because many convictions result in alternatives to incarceration, this method will also underestimate the reoffending rates.

TRENDS

Despite the widely divergent recidivism figures that different studies have provided, some trends have almost uniformly been concluded:

- In the majority of cases, recidivism occurs within the first year of release, and nearly all recidivism occurs within three years of release or completion of sentence.

- Property offenses are the most common recidivism offenses. More than three-quarters of property offenders have previously been convicted of a property crime. Drug offenses, breaking and entering, and common assault are also frequently recurrent.

- Violent criminals are least likely to recidivate. Fewer than half of people convicted of homicide, sexual assault, and rape are convicted of another crime after their release from prison.

- Age is an important factor in reoffending rates. The earlier an offender is punished, the more

likely he or she is to recidivate. As a result, young offenders are also the most frequent recidivists.

- Men are more likely to reoffend than women in nearly every criminal category of offense, even when initial male-dominated offending patterns are taken into account.
- While recidivism for the same offense is common for certain types of crime (e.g., prostitution), recidivism can often occur with a different type of offense.
- The number of times an individual has been arrested is a good predictor of whether or not he or she will reoffend. Those with only one arrest are less than half as likely to recidivate as those who have been arrested on more then 10 occasions.
- Roughly one-third of recidivists have been previously sentenced to a term of imprisonment.
- People who reoffend are more likely to receive stiffer penalties, especially in cases where they committed the same offense. Recidivists are three times more likely to receive a sentence of imprisonment than first-time offenders.
- There is little variation in rates of recidivism among different states or provinces.
- Recidivists are often sentenced to longer terms of probation than first-time offenders.
- Due to a number of factors, including education level and socioeconomic status, African Americans and Latino/as are more likely to recidivate than whites in nearly every category of crime.

POLITICS OF RECIDIVISM

Recidivism rates are often used by politicians and academics alike to justify criminal justice policy and practices of punishment. Politicians and judges who follow the "Get tough on crime" doctrine routinely point to high rates of reoffending as a reason to increase sanctions placed on first-time offenders and recidivists alike. By using this philosophy, increasingly tougher sanctions and policies have been imposed, such as the "Three-Strikes" policy introduced first in California.

Conversely, many academics see high rates of recidivism not as a reason to impose stiffer sanctions but rather as a failure of the current system to deal accurately and effectively with offenders and reduce crime. Accordingly, they use recidivism rates to demonstrate that alternatives to imprisonment are necessary to deter crime, instead of the increase that some politicians espouse.

Finally, prison, parole, and probation officials are also concerned about reoffending rates. In particular, they suggest that recidivism demonstrates the lack of funding and other support mechanisms necessary for any of their programs or institutions to be effective. They reason that with better economic support, recidivism rates would significantly decrease.

CONCLUSION

Recidivism as a theoretical construct is a fairly simple idea: Some people will reoffend after they have been convicted, treated, and/or punished for a crime. Numerous quantitative studies have documented the extent of reoffending throughout the country, while various theoretical perspectives have demonstrated that it is a vital component to understanding criminal justice. However, determining why people reoffend and measuring how often they do so proves to be much more difficult. Further, the politicizing of the causes and implications of recidivism has led to even more confusion on how to reduce or eliminate this problem. Until these issues are rectified or somehow resolved, high rates of recidivism will continue.

RECREATION PROGRAMS

Many prisons and jails in the United States provide some kind of recreational activities, including a range of sports like basketball, football, soccer as well as pastimes like fresh-air exercise, games, social activities, and television viewing. Recreational programming is meant to provide inmates with physical, mental, and emotional outlets to enhance their well-being.

Prison recreation programs offer numerous benefits to inmates and correctional staff alike. Many people believe that they reduce the likelihood of riots and rule infractions. They also occupy inmates, giving them much needed mental, physical, and emotional release and reducing the boredom of daily life in prison. Sport can reduce tension and stress while promoting good health and well-being. It is thought to prevent major diseases like cancer, cardiovascular diseases, and diabetes. Finally, recreational activities like masonry, carpentry, shop, and other technical skills may help inmates find employment once they return to the community. Some prisons provide inmates with a certificate of completion that can be used on the outside for proof of experience in that area.

HISTORY

Early penitentiaries did not offer leisure activities, since it was believed that prisoners could only be reformed through constant labor and religious reflection. By the mid-19th century, however, inmates in many institutions were allowed to assemble after chapel service or to be released into the yard for free time for about one hour of fresh-air exercise. In 1876, Elmira Reformatory in New York became the first institution to offer a variety of recreational and leisure programs, including organized sports, social clubs, drama and arts, and many others. While most inmates elsewhere were limited to using the yard, library, and auditorium, Elmira provided a blueprint for what could be possible.

It was not until the 1960s that leisure activities became part of mainstream prison life. Even then, the American Correctional Association took an additional decade to revise its standards to include recreation programs as part of the therapeutic and rehabilitative ideal. These days, most recreational activity is offered through the prison's education department.

BENEFITS

For their supporters, prison recreation programs provide constructive ways for inmates to use their spare time while also endowing them with skills that may help prevent them from reoffending. When inmates are completely idle, like anyone else, they will become bored. They may also feel frustrated or aggressive, and become violent toward themselves or others. A number of activities like football, softball, and basketball are specifically designed to help reduce the stresses of incarceration by providing physical stimulation. Other, courses, like art, writing, and music, provide more creative outlets.

Recreation promotes mental and emotional stimulation as well as teaching skills through the prison's law library, painting, arts and crafts, music, or technical activities like masonry, carpentry, horticulture and barbering, creative writing, and educational classes. Some prisons have music bands that perform for the prisoners or provide opportunities for incarcerated artists to sell their artwork. They also offer "hobby clubs," which can consist of activities such as yoga, aerobics, cycling, or swimming, or games like checkers and chess to encourage both physical and mental stimulation. Recreation increases discipline and creativity, increases self-esteem, and improves positive socialization skills, which all help reduce reoffending.

CONTROVERSY

Some critics argue that prisoners should not be allowed to have access to recreational activities because they are in prison to be punished. In response to a perception that recreation is "soft" on offenders, the federal system and some states have either banned weightlifting in prisons or will no longer replace equipment once it falls apart. Other prison systems do not allow free weights, but still have machines where the weights are not removable. Several states, such as South Carolina, Arizona, Mississippi, Wisconsin, and Georgia, have "no frills" prison bills that ban weightlifting. Such legislation also cuts out or limits other activities like cable television, computers, legal research materials, and many other amenities that inmates use for recreation.

Sport and Leisure Programs

Whether initiated by the department of corrections as a formal program, or by concerned and dedicated prisoners who volunteer their time to develop informal activities, sport and leisure programs serve as a release for prison tensions as well as an incentive for better behavior. Programs allow prisoners to exert pent-up emotions and energy in nonviolent and productive social interaction, work as a team, or develop and improve themselves and strive for excellence (what John Irwin has called "gleaning," or making the most of "doing time"). This is conducive to maintaining rules and regulations, and reduces behaviors that might make prisoners dangerous to themselves and others.

Sport and leisure programs sometimes create incentives for participation as well as developing skills. Prisoners develop pride in winning in sporting events, or in improving themselves in writing, acting, public speaking, or even winning a game of Bingo. Programs also awaken skills or encourage prisoners to renew their interest in developing previous skills. This allows for a smoother transition back into society.

Although most correctional systems, such as Illinois, recognize the importance of sport and leisure programs, they are nonetheless continuously cutting them back because of budget crunches. This robs the prisoners of incentive programs that aid them through their incarceration as well as ease their transition back to society.

Geoffrey Truss
Dixon Correctional Center, Dixon, Illinois

GENDER

Women's correctional facilities usually offer a slightly different range of recreational programs than men's prisons. Many countries, including Canada, develop women's prison programs differently from those for men. Aerobics, yoga, cooking contests, sewing, crochet, hair dressing opportunities, theatre, arts, and music are all common. Women are not as frequently offered weightlifting or carpentry courses. While women's programs and recreation stress cognitive skills, men's programs tend to be more therapeutic in nature.

CURRENT PRACTICES

It is difficult to generalize about recreation programs in the United States because of the enormous diversity in state policy. Alaska, for example, has a strong tradition of recreational activities. Depending on their security level, inmates in Alaska are allowed to have computers, compact disc players, videocassette recorders, coffeepots, hot plates, and other electrical appliances in the cell. They also receive instruction in bodybuilding, karate, and judo to prevent violence. In contrast, Louisiana prohibits equipment or programs like karate, judo, martial arts, free weights, and weight machines.

California has for many years run a vibrant "Arts-in-Corrections" program in the state prison system. Currently, however, due to expenses, this program is in the process of being phased out. Coordinated through the prisons' education departments, the program has introduced practicing artists, writers, poets, and musicians to the penal population. Resident artists are based in correctional facilities for varying amounts of time, during which they run courses, work with inmates to put on plays, or do individual tutoring. New York, Massachusetts, and Texas all offer some version of an arts program that is based on the California model.

CONCLUSION

Recreation programs have come far from their origins in fresh-air exercise to include a range of activities from competitive sports, to art, craft, and music, and also yoga and meditation. These days recreation is a vital aspect in almost all prisons. Advocates for prison recreation argue that recreation is used as a therapeutic tool, and it may reduce recidivism. The benefits and skills that inmates obtain from exercise, such as time management, wellness, stress relief, and anger management, will assist them in the community as well.

REHABILITATION ACT OF 1973

Called the "equal rights amendment for the disabled," the 1973 Rehabilitation Act was enacted to ensure equal treatment of the physically disabled (§101, 29 U.S.C. 721). Similar in wording to the Equal Rights Amendment, the Rehabilitation Act extended protection under the Fourteenth Amendment to the physically disabled. As a result, physically disabled inmates can file suits charging violations of the Eighth and Fourteenth amendments if a correctional agency does not provide facilities and programs to the physically impaired that are available to the general inmate population. Constitutional questions of equal rights are raised.

REHABILITATION ACT 1973

In 1988, Congress passed the Civil Rights Restoration Act of 1987 (Public Law 100-259, 3/22/88). The Restoration Act subjects most state prisons to the mandate of Section 504 of the Rehabilitation Act of 1973. The Restoration Act was passed to overrule the Supreme Court's decision in *Grove City College v. Bell* (1984), which held that only the specific program within an institution that received federal funds, not the entire institution, was required to comply with the antidiscrimination mandate of Section 504. Prior to the passage of the Restoration Act, if a state or county department of corrections received federal funds but did not specifically utilize those funds for the particular correctional institution at issue, that correctional facility was not required to comply with Section 504. Following the passage of the Restoration Act, however, this "program specificity" exemption created in *Grove City College v. Bell* (1984) is no longer applicable. Under the Restoration Act, the fact that specific prisons or prison programs are not the actual recipients of federal financial assistance received by the applicable department of corrections should be irrelevant for purposes of determining whether prison officials are subject to the mandate of Section 504.

The 1968 Architectural Barriers Act and the Architectural and Transportation Barriers Compliance Board established minimum guidelines and requirements for standards for accessibility and usability of federal and federally funded buildings and facilities by physically disabled persons. These

guidelines and requirements are issued pursuant to the Rehabilitation, Comprehensive Services, and Developmental Disabilities Amendments of 1978 (the 1978 Act), amending the Rehabilitation Act of 1973. These guidelines when followed allow consistent and adequate treatment of physically disabled inmates in state correctional systems.

SECTION 502

Section 502 of the Rehabilitation Act of 1973 created the Architectural and Transportation Barriers Compliance Board (ATBCB) to enforce the Architectural Barriers Act of 1968. The ATBCB's primary goal is to ensure compliance with standards prescribed under the 1968 Architectural Barriers Act and to ensure that public conveyances, including rolling stock, are usable by handicapped persons. Its other functions are to:

- Propose alternative solutions to barriers facing handicapped persons in housing, transportation, communications, education, recreation, and attitudes
- Determine what federal, state, and local governments and other public or nonprofit agencies and groups are doing to eliminate barriers
- Recommend to the president and Congress legislative and administrative ways to eliminate barriers
- Establish minimum guidelines and requirements for standards prescribed under the Architectural Barriers Act
- Prepare for adequate transportation and housing for handicapped persons, including proposals to cooperate with other agencies, organizations, and individuals working toward such goals (Access America)

Federal buildings or federally funded facilities covered by the act must at least meet the federal minimum standards for access. For example, there must be audible and visual warning signals to aid blind and deaf people. There must be at least one primary entrance that is ramped or level, wide restroom doorways, and elevators must be accessible for wheelchair users. Section 502 of the act requires certain buildings and facilities designed, constructed, altered, or leased with federal funds after accessibility standards are issued (generally September 1969) to be accessible to and usable by physically handicapped persons.

Not all federally funded buildings and facilities are covered by the Architectural Barriers Act. The act covers most post-1968 buildings and transit stations designed, constructed, altered, or leased by the federal government and most of those involving federal loans or grants.

SECTION 504

As part of the Rehabilitation Act of 1973, Congress enacted Section 504, which provides that:

> No otherwise qualified handicapped individual in the United States . . . shall, solely by reason of his handicap be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance.

Section 504 is the first civil rights law protecting the rights of handicapped persons and reflects a commitment to end discrimination on the basis of handicap.

The Section 504 regulation prohibits discrimination against *qualified handicapped persons*, thereby ensuring them of an equal opportunity to participate in and benefit from programs and activities receiving federal financial assistance. Section 504 protects only *qualified* handicapped persons from discrimination on the basis of handicap.

The definition of "handicapped individual" for purposes of Section 504 is "Any person who (i) has a physical or mental impairment which substantially limits one or more major life activities, (ii) has a record of such an impairment, or (iii) is regarded as having such an impairment."

The definition of "qualified handicapped person" is stated in terms of:

- Employment
- Preschool, elementary, secondary, and adult education services

- Postsecondary education services, and
- Health and social services

Section 504 of the same 1973 act prohibits discrimination on the basis of physical or mental handicap in most federally assisted programs or activities. Each federal department and agency providing financial aid must prohibit discrimination in its programs. The Department of Justice coordinates 504 compliance. Section 504 requires that direct or indirect recipients of federal funds make their programs accessible to handicapped persons. The regulation requires only that programs conducted by the organization be accessible.

Because Section 504 only prohibits discrimination against handicapped persons by recipients of federal financial assistance, some prisons may fall outside the scope of the act. Whether a state or county correction facility will be viewed as a recipient of federal financial assistance needs to be determined. State and local governments regularly receive federal grants, entitlement funds, and other federal assistance to be utilized within and among their correctional departments and facilities.

The regulations by the U.S. Department of Justice pursuant to Section 504 define the term "federal financial assistance" as including:

> Any grant, cooperative agreement, loan, contract (other than a direct Federal procurement contract or a contract of insurance or guaranty), subgrant, contract under a grant or any other arrangement by which the Department provides or otherwise makes available assistance in the form of:
>
> 1. Funds;
> 2. Services of Federal personnel;
> 3. Real and personal property or any interest in or use of such property, including:
>   i. Transfers or leases of such property for less than fair market value or for reduced consideration; and
>   ii. Proceeds from a subsequent transfer or lease of such property if the Federal share of its fair market value is not returned to the Federal Government.
> 4. Any other thing of value by way of grant, loan, contract or cooperative agreement. (28 C.F.R. 42.540(f) (1987))

In such cases, state or local prison facilities receiving such assistance should usually qualify as recipients of federal financial assistance within the meaning of Section 504.

DIFFERENCES BETWEEN SECTIONS 502 AND 504

The key difference between Sections 502 and 504 is that Section 502 applies only to buildings and facilities—physical structures or environments—created or altered since 1969, while Section 504 applies to federally funded programs. Program accessibility can be assured through a variety of means other than structural change. Structural change is required if it is the only way to attain access to a program. Meeting state, institutional, or federal licensure requirements does not assure compliance with Section 504 or obviate the responsibility to comply with the regulations of Section 504.

CONCLUSION

The 1968 Architectural Barriers Act and the Architectural and Transportation Barriers Compliance Board established minimum guidelines and requirements for standards for accessibility and usability of federal and federally funded buildings and facilities by physically disabled persons. These guidelines are relevant to correctional systems that deal with physically disabled inmates. These guidelines and requirements were issued pursuant to the Rehabilitation, Comprehensive Services, and Developmental Disabilities Amendments of 1978 (the 1978 Act), amending the Rehabilitation Act of 1973. These guidelines, when followed, allow consistent and adequate treatment of physically disabled inmates in state correctional systems.

Legal Case

Grove City College v. Bell 465 U.S. 555 (1984)

REHABILITATION THEORY

Rehabilitation has long been a contentious topic in the fields of both criminology and penology. The term "rehabilitation" itself simply means the process of helping a person to readapt to society or to restore someone to a former position or rank. However, this concept has taken on many different meanings over the years and waxed and waned in popularity as a principle of sentencing or justification for punishment. The means used to achieve reform in prisons have also varied over time, beginning with silence, isolation, labor, and punishment, then moving onto medically based interventions including drugs and psychosurgery. More recently, educational, vocational, and psychologically based programs, as well as specialized services for specific problems, have typically been put forward as means to reform prisoners during their sentence.

HISTORY

Ideas of rehabilitation through punishment were first embodied in the penitentiaries, built during the Jacksonian era of the late 19th century. Reformers hoped that felons would be "kept in solitude, reflecting penitently on their sins in order that they might cleanse and transform themselves" (Irwin, 1980, p. 2). Initially, under the Pennsylvania system, it was believed that solitary confinement, accompanied by silent contemplation and Bible study, was a means to redemption. This approach was later transformed in the Auburn system into one of discipline and labor, also performed in silence. Through hard work and a strict disciplinary regime, prisoners were meant to meditate over why they chose a criminal path in order to amend their ways. Disciplinary infractions were met with corporal punishments. At this time, prisoners were responsible for their own rehabilitation, since the causes of crime were thought to result from individuals' inability to lead orderly and God-fearing lives.

In the latter part of the 19th century, the penitentiary gave way to the reformatory, which attempted to rehabilitate offenders through educational and vocational training, in conjunction with quasi-military regimes. Reformatories introduced a system of classification of prisoners that allowed for their individualized treatment. Prisoners progressed through graded stages contingent on their conduct and performance in programs. They could even work toward early release. Reformatories, although developed around the concept of rehabilitation, continued to advocate physical punishment for nonconformity and later regressed to more punitive regimens consistent with the reemergence of retribution at that time.

MEDICAL MODEL

The medical model of intervention as a form of rehabilitation emerged at the turn of the century in response to the perceived ineffectiveness of early means of reform that used labor and physical punishments to change people's behavior. New "scientific" disciplines like psychiatry, psychology, and criminology proposed that the causes of crime and deviance could be linked to biological, physiological, or psychological defects of the individual. Criminals were viewed as products of

socioeconomic or psychological forces beyond their control. In turn, crime was seen to be a "sickness," and the object of corrections then was to "cure" the offender. The emergent Federal Bureau of Prisons in the 1930s endorsed the medical model in its approach to rehabilitation, thus legitimizing its use in corrections. It was during that time that the classification of prisoners became more refined, and the medical model provided what was then considered a "state of the art" clinical orientation to the diagnosis and treatment of offenders (Welch, 1996, p. 75).

The medical model led to the introduction of therapeutic personnel, such as psychiatrists, psychologists, and clinical social workers, into prison settings. While this model initially appeared to be more humane than previous penal practices, this was not always the case. Instead, extraordinarily invasive and even illegal procedures took place in many correctional institutions, including psychosurgery, electroconvulsive therapy, and surgical and chemical castration, all in the name of rehabilitation. Other forms of treatment included various "talk" therapies such as psychotherapy and psychoanalysis. Given that the nature of many of these interventions was open-ended, prisoners could be imprisoned indefinitely if it was determined that they had not been "rehabilitated."

The medical model ultimately fell out of favor due to the convergence of a series of events. The inhumane nature of many of these practices, accompanied by an increasing concern with prisoners' rights and a dearth of evidence on the effectiveness of interventions, led many experts to critique the rehabilitative ideal. At the same time, in response to an increase in crime across the country, opponents argued that the medical model was too soft and ineffective. For many, the death knell of the rehabilitative ideal finally came about from the publication of an article by Robert Martinson in 1974. In what turned out to be a politically important essay that had a swift and discernible effect on policy, Martinson concluded that "with few and isolated exceptions, the rehabilitative efforts that have been reported so far have had no appreciable effect on recidivism" (1974, p. 25). As the title of his article suggested, he appeared to be arguing that "nothing works."

Even though Martinson himself later retracted his earlier conclusions regarding rehabilitation programs, and his original essay was found to have serious methodological flaws, the academic community and both the political left and right embraced his message at that time. His message was attractive to liberals since it could be used to argue against the use of imprisonment and to abolish indeterminate sentencing. For conservatives, rehabilitation programs were thought to "coddle" criminals, since they allowed for early release. For them, Martinson's argument permitted the introduction of harsher regimes of punishment. Finally, an emerging social science also played a large role in vilifying rehabilitation, since researchers found that prisoners who "participated in a wide range of rehabilitation programs were rearrested at the same rate as those who did not" (Irwin & Austin, 1997, p. 64).

POST-MARTINSON ERA

Penal policy in the United States, following Martinson, no longer sought to rehabilitate prisoners. Thus, the U.S. Supreme Court, in *Misretta v. U.S.* in 1989, upheld federal sentencing guidelines that removed the goal of rehabilitation from serious consideration when sentencing offenders. Future sentencing practices would only have to consider the crime, with little concern for factors such as amenability to treatment or social and familial history. However, in spite of this political climate, some people continue to believe in the importance and possibility of rehabilitation in incarceration policy and practice. For example, the language of the mission statement of the Federal Bureau of Prisons reflects a strong emphasis on societal protection and safe and humane confinement, while still promoting "work and other self-improvement opportunities to assist offenders in becoming law-abiding citizens" (Federal Bureau of Prisons, 2002). Although not couched in medical or rehabilitative terminology, the federal prison system continues to offer a variety of programs directed toward this end, including work, occupational and vocational training, parenting classes, recreation and wellness activities, and substance abuse treatment.

Current efforts in some states also indicate that the tide may be turning once again toward rehabilitation as renewed efforts are being seen through revamped educational and vocational training. This type of programming differs greatly from that seen in earlier periods and is now much more closely linked to training for specific types of employment, as evidenced by existing programs in Oregon, Pennsylvania, Ohio, and Washington State. For example, the Oregon State Correctional Institution in Salem teaches advanced computer training, through which prisoners build customized computers for state agencies. A central notion behind this form of rehabilitation is that prisoners will be equipped with skills upon release that will allow them to earn competitive salaries and avoid criminal activity in the future. Officials declare that these efforts have had a positive impact on recidivism, as the percentage of admissions who were returning parolees in 2000 was 25%, down from 47% in 1995. Nonetheless, the critiques of such programs echo earlier ones, with some expressing concern that such efforts are wasting money and that such training may infringe on the labor market.

Recent research has also indicated that some rehabilitative efforts do in fact have some effect on recidivism. A series of meta-analyses of the outcomes of correctional rehabilitation programs on recidivism has revealed that those that achieve the greatest reductions use "cognitive behavioral treatments, target known predictors of crime for change, and intervene mainly with high-risk offenders" (Cullen & Gendreau, 2000, p. 110). However, it must be noted that using recidivism as a means of assessing the effectiveness of rehabilitative programs may be somewhat misleading. Rates of reoffending tell very little about the efficacy of rehabilitation programs, per se, as they could well ignore improvements that may have occurred in other areas, because much crime remains undetected, and because reoffending behavior may have little to do with areas targeted by initial programming efforts.

INCENTIVES

Prisoners are, in essence, involuntary clients of intervention efforts. They have not freely chosen to participate in rehabilitation programs, and they are unlikely to do so without the benefit of incentives that the prison administration offers them in exchange for participation. These include such considerations as early parole, better living conditions, and increased inmate pay. While prisoners have the right to refuse to participate in intervention programs, the idea of early release is so appealing that many cooperate simply as a means to an end. For the prison administration, the implicit coercion involved in this process is outweighed by the fact that the prisoner attains a benefit in exchange for cooperation. However, this thinking ignores the fact that rehabilitation cannot take place by force, and in the long run, "sham" cooperation will not result in any lasting change.

CRITICAL PERSPECTIVE

Abolitionist literature notes that prisons at best do nothing to reform offenders and at worst play a central role in reproducing crime. From a radical point of view, rehabilitation is seen as an attempt by those in power to impose a repressive system of social control over vulnerable individuals. Such a critical perspective rejects the positivistic view of crime that focuses on individuals while ignoring greater social conditions of disadvantage. What is challenged is the notion that the offending behavior stems from a defect in the personality of the prisoner, who is considered amenable to change or rehabilitation within the prison environment.

Correctional institutions strip inmates of all of their familiar social and cultural supports around which their personal identity had previously been centered. Any program of rehabilitation within prison must first overcome these devastating processes. Some, like David Rothman (1973), reject the possibility of rehabilitation outright, due in part to the relative powerlessness of the prisoner to give or withhold consent to such efforts and because of the incongruous nature of the environment within which it is offered.

WOMEN AND MINORITIES

Historically, the special needs of women and minority groups in prisons have been largely ignored. For

women, rehabilitative programming, in the form of educational and vocational opportunities, has rarely taken into account gender differences and in most cases paralleled that of men's programming. While women are offered similar educational opportunities as men, many of the vocational programs for women prisoners offer training in areas such as cosmetology and hairdressing, reflecting gender-role stereotypes. Given the relatively small numbers of women's prisons, women are frequently sent far from their homes and families, which can increase the strain of imprisonment. While each state is different in terms of population and services, the smaller numbers of women prisoners result in fewer overall rehabilitative services being offered to them.

Generally, no specific rehabilitation programs are geared toward Hispanic (or Latino/a), African American, and American Indian prisoners. However, formal and informal support groups based on ethnicity often develop, are largely composed of volunteers, and serve to provide a strong means of support for prisoners who may feel culturally and spiritually isolated.

In Canada, the federal correctional service has attempted to meet the needs of Native Canadian Indians or Aboriginal offenders, who are largely overrepresented in their federal institutions. As part of correctional programming, Aboriginal offenders are offered a variety of spiritual and healing initiatives while incarcerated. For example, this includes access to spiritual Elders who offer ritual ceremonies such as smudging and sweat lodges inside the institution. Nonetheless, critics of these efforts indicate that the prison administration offers them only sporadically, makes little separation between distinct tribal customs, and does not accord them the same respect as other religious practices.

CONCLUSION

The concept and practice of rehabilitation continues to evolve and change in correctional institutions. While the state and the public have a vested interest in prisoners leaving prison as no more of a social burden than when they went in, if rehabilitative efforts are to have any real impact, they must take into account the lessons of the past. These include considerations of individual needs, sensitivity to race, gender, and culture, and an awareness of the many limitations the prison environment imposes in offering opportunities for change.

Legal Case

Misretta v. U.S. No. 87-7028. (1989). 488 US 361.

RELIGION IN PRISON

Religious people and institutions have greatly influenced the treatment of offenders in correctional

institutions. Churches were among the first institutions to provide asylum for accused criminals. The establishment of prisons and penitentiaries followed religious tenets that encouraged offenders to do penance for their crimes and to reject a criminal lifestyle while being isolated from others. Correctional chaplains were among the earliest paid noncustodial staff and were the first to provide education and counseling for inmates. Currently, many inmates practice their religion on an individual basis or within the structure of an organized religious program. Religious programs are commonplace in jails and prisons, and research indicates that one in three inmates participates in some religious program during his or her incarceration.

LEGAL ISSUES

The First Amendment of the U.S. Constitution states that "Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof." Because of this amendment, state and federal correctional institutions must provide inmates with certain legal rights concerning the practice of religion. Among these rights are the opportunity to assemble for religious services, attend different denominational services, receive visits from ministers, correspond with religious leaders, observe dietary laws, pursue name changes, and obtain, wear, and use religious paraphernalia. None of these rights, however, may supersede the security considerations of the institution.

Many of the leading court cases that provide current guidelines for the practice of religion in American prisons were decided during the 1960s and 1970s. Until then, legal issues related to religious inmates were rarely brought before the courts. Among the most important cases during this period were *Fulwood v. Clemmer* (1962), *Cooper v. Pate* (1964), and *Cruz v. Beto* (1972). In the *Fulwood* (1962) case, the U.S. District Court for the District of Columbia ruled that correctional officials must recognize the Muslim faith as a legitimate religion and not restrict those inmates who wish to hold services. In *Cooper v. Pate* (1964), the courts recognized that prison officials must make every effort to treat members of all religious groups equally, unless they can demonstrate reasonableness to do otherwise. In *Cruz v. Beto*, which at the time was the first case about religion in prison to reach the Supreme Court, it was determined that Buddhist prisoners were entitled to practice their faith in comparable ways to those in the major Western religious denominations.

Not all court cases related to religion have been decided in favor of inmates. In 1977, for example, a federal court ruled in *Theriault v. Carlson* that the First Amendment does not protect so-called religions that are obvious shams, that tend to mock established institutions, and whose members lack religious sincerity. This case was one of the first to find against inmates' religious rights.

Courts have a difficult task when they are asked to decide between the legitimate interests of inmates and the correctional facility. As a result, the courts now rely on a "balancing test" that helps them decide how conflicting issues should be weighed. The U.S. Supreme Court came up with this test in 1987 in the case *Turner v. Safley*. It consists of four questions:

1. Is there a valid connection between the regulation restricting a religious practice and a legitimate correctional interest?
2. Are inmates allowed other ways of exercising their right?
3. How much will allowing the inmates to exercise their right affect others in the correctional facility?
4. Are there available alternatives that accommodate both interests?

The Supreme Court ruled in *Turner v. Safley* that future cases involving inmates and their constitutional rights should use the balancing test, and that correctional facility rules that limit inmates' constitutional rights are generally acceptable if they are reasonably related to legitimate correctional interests. This Supreme Court ruling was affirmed later in 1987 in another important religion case, *O'Lone v. Estate of Shabazz* (1987), when it was determined that depriving an inmate of attending a religious

Religion and Rehabilitation

There is a common, but grossly mistaken, public perception that prisoners "find religion" to manipulate parole boards. In general, this is simply false. Religion is essential to the growth and development of prisoners. Religion is also a fundamental means to eradicating criminal behavior and rehabilitating prisoners. Religion provides stability and structure to people who come from broken homes. People who did not get the opportunity to group up in structured environments often discover a foundation on which to build a better life.

Not only does religion offer a positive structure for living, but it also teaches self-discipline, which is a prerequisite to success. Self-discipline is also necessary if one is to overcome adversity upon release.

Whether by choice or through ignorance, some correctional systems fail to capitalize on the beneficial attributes of religion and the favorable results it generates. Further, some correctional systems and individual prisons refuse to officially recognize particular religious affiliations that they judge "unconventional."

Unfortunately, religious tolerance isn't always a reality in prison. Administrators profess to provide avenues that foster spiritual growth and development, but these avenues often tend to be limited to Christianity and/or Islam. However, the First Amendment protects the rights—even of prisoners—to worship the god or goddess of choice, and failure to recognize the power of all forms of spirituality to improve prisoners' lives is short-sighted and counterproductive. Institutional religious intolerance creates an oppressive atmosphere that is not conducive to the overall development of the convict. When the spiritual and the secular are not in harmony, chaos is inevitable. Unfortunately, chaos dominates in prisons, and that may be one reason why religion and its benefits are not emphasized in the pursuit of rehabilitation.

John Rowell
Dixon Correctional Center, Dixon, Illinois

service for "legitimate penological interests" was not in violation of the First Amendment.

The *Turner* test stood until 1993, when Congress drafted a law called the Religious Freedom and Restoration Act (RFRA) to restore certain religious freedoms to all Americans. The act was passed and signed into law in November 1993. Under RFRA, restrictions on religious freedoms in prisons and jails would be upheld only if the government could show that the restrictions served a "compelling government interest." Further, RFRA required that the religious restriction in question must be the "least restrictive means of furthering that interest." However, in 1997, in the case *City of Boerne v. Flores,* the U.S. Supreme Court ruled that RFRA was unconstitutional because it did not maintain the separation of powers necessary in the federal government. With this ruling, most correctional authorities returned to the guidelines outlined in the *Turner* test.

After the decision in the *City of Boerne v. Flores* case, the U.S. Congress enacted the Religious Land Use and Institutionalized Persons Act (RLUIPA) to protect religious practices. The RLUIPA, like RFRA, prohibits state and local governments from placing a "substantial burden" on inmates, including pretrial detainees, in the exercise of their religion unless the restriction furthers a compelling governmental interest and is the least restrictive means of achieving the government's correctional objective. Unlike RFRA, however, the use of RLUIPA for noncorrectional matters is limited to programs that receive federal funding and if the religious burden affects various forms of commerce.

CHAPLAINCY, RELIGIOUS GROUPS, AND PRACTICES

Most of the direct influence of religion in corrections has been accomplished through the work of correctional chaplains. The term "chaplain" is believed to be derived from the Latin term *capella*, meaning "cloak." In the fourth century, the modern meaning developed from a story told about a soldier named Martin, who shared his cloak with a beggar. That night Martin dreamed Christ came to him in a dream, and he soon resigned from the army to serve as a "soldier of God." Martin of Tours was later canonized by the Catholic Church, and his cloak became a religious relic and was enshrined in a *chapel.* The word *chaplain* came to mean the

"keeper of the cloak" and now calls for those who are religiously motivated to care for those in need. Chaplaincy work was probably created informally during the early years of the Christian Church but became formalized in the late 1400s when the religious Order of Misericordia was founded to provide assistance and consolation to those condemned to death. In 1733, the British Parliament authorized magistrates to appoint chaplains to all prisons.

Early prison chaplains in the United States held positions of relative importance, since they were part of a penal system created by religious groups. They were responsible for visiting inmates, providing services and sermons, and also served as teachers, librarians, and record keepers. Because of the limited budgets of correctional institutions, the early chaplains were often called upon to be the sole educator in many American prisons. The "schooling" often consisted of the chaplain standing in a dark corridor with a lantern hanging from the cell bars, extolling the virtues of repentance.

Chaplains are not always welcome in correctional facilities. Many prison administrators, especially during the development of the reformatory, considered them only a hindrance to running a prison. To some they became unnecessary when teachers, psychologists, and other professionals took their place in the correctional work group. To many, the chaplains were naïve and easily manipulated by the inmates, sometimes prone to bickering among themselves, and with little ability to bring any real change in inmates. During the 1920s and 1930s, the Clinical Pastoral Education Movement emerged and changed prison chaplaincy for the better. The movement started to apply the principles, resources, and methods of organized religion to the correctional setting. This resulted in the development of competent professional chaplains who were able to meld with the rehabilitation ideas that surfaced from the 1930s through the 1960s.

The chaplain of today is typically an educated and multiskilled individual who is generally accepted by those who live and work in correctional facilities. Chaplains serve a variety of functions. Their main purpose is to administer religious programs and provide pastoral care to inmates and institutional staff. In the past, this meant that the common duties were to provide religious services, counsel troubled inmates, and advise inmates of "bad news" from home or from correctional authorities. More recently, their role of has been expanded to include coordination of physical facilities, organizing volunteers, facilitating religious furlough visits, contracting for outside religious services, and training correctional administrators and staff about the basic tenets, rituals, and artifacts of nontraditional faith groups. In the case when an individual or small group of inmates wish to practice a religion that is not familiar to a current chaplain, a contract chaplain, outside volunteer, or spiritual advisor who specializes in that faith perspective may be brought into the institution to minister to inmates. Chaplains, contract chaplains, volunteers, and spiritual advisors are also referred to as "faith representatives."

RELIGIOUS VOLUNTEERS

Religious volunteers also have a long history in corrections that can be traced back to the beginning of prisons. In the past 200 years, many religious groups have entered correctional facilities to provide religious services to inmates. One of the most famous advocates for volunteers in corrections was Maud Ballington Booth, the daughter-in-law of William Booth, who founded the Salvation Army. Today, volunteers are vital to religious programs, and without them inmate participation would surely be limited. Faith representatives are able to minister to the large number of inmates within a variety of faith traditions.

RELIGIOUS GROUPS, PROGRAMS, AND PRACTICES

The specific religious groups vary from prison to prison and state to state. Nearly all state and federal correctional institutions provide support for at least some of the four traditional faith groups—Catholic, Protestant, Muslim, and Jewish. As the United States has become more diverse, however, there are a number of nontraditional faith groups that have surfaced in correctional facilities. These include variations of the four traditional groups, in addition to Hindus, Mormons, Native Americans, Buddhists, Rastafarians, Hispanic religions (Curanderismo,

Santería, Espiritismo), Jehovah's Witnesses, and Christian Scientists. Two of the newest faith groups to enter correctional facilities are Wicca and Satanism.

The religious programs and practices of faith groups differ according to the beliefs of the group, inmate interest, amount of time and space available in the prison, competence of the religious staff, and the support of the correctional authorities. It is not uncommon for a large prison to have numerous religious services on a daily basis. In contrast, jails may limit religious practice to a single service for all denominations called a "multifaith service." Institutions, particularly those of high security, may also use "cell-by-cell" ministry, whereby the chaplains from different denominations visit inmates individually as requested. In many facilities, inmates choose to practice their faith in a more private manner and do not attend any formal services. In this case, the inmates may even develop their own "personal religion" that consists of a combination of traditional and nontraditional faith perspectives.

RELIGION AS A "CON GAME"

It is very difficult to determine why prisoners become involved with religion when incarcerated, since religious belief and practice is a very individual matter and may be exacerbated by the psychological complexities of living in prison. One common belief about why inmates practice religion while in prison is that many inmates "find religion" for manipulative purposes, as a "con game." It is thought that inmates hope prison administrators and parole authorities will view their religious practice as an attempt to become moral, prosocial, and law-abiding citizens and then reward them with earlier parole. For decades the correctional literature and popular media have cultivated this somewhat cynical belief of religion in prison. Correctional officers often support this "religion for early parole" viewpoint. They base their impressions on personal experience of witnessing inmates who have professed to be religious, but who have then acted to the contrary or who have returned to the institution for another crime.

Research has indicated that in addition to using religion for parole release, inmates may practice religion while in prison for a variety of other self-interested reasons. They may try to influence the chaplain or warden to improve their living conditions (e.g., special food, transfer to another prison wing or institution), to meet up with and exchange contraband from other inmates at religious functions, to meet volunteers, and to gain protection from other inmates. The last reason is particularly troubling for correctional officials, because it is known that many inmates believe that they need to be part of a group that can provide physical protection from other inmates. Inmates who practice religion for this reason assume that some religious groups provide the protection necessary to avoid such difficulties.

Some feel that fellow inmates participate in religious programs for a "psychological crutch." These skeptics believe that religion serves to placate individual inmates who were "weak" or need assistance in dealing with the difficulties of prison life. They claim the practice of religion may enhance self-esteem and good feelings, but only because those involved could not find these things without this "crutch."

RELIGION AS A MEANS OF REFORM

However, not all inmates, correctional officers, and staff think negatively of the intentions of religious inmates. Because serious religious involvement promotes self-introspection and concern for others, many believe that inmates can acquire a number of positive aspects from the practice of religion in prison. These characteristics include psychological peace of mind, hope for the future, positive self-concept, and improvements in self-control and intellectual abilities. Inmates also can use religion to help change their behavior. Following the principles and discipline that is required in the serious practice of religion can teach inmates self-control. Having self-control helps inmates avoid confrontations with other inmates and staff, and it helps them comply with prison rules and regulations.

In recent years there has been an increased interest on the topic of religion in corrections and in finding out whether the practice of religion in corrections has had any positive impact on inmates. Some research evidence is present that supports the view that the practice of religion helps to control inmate behavior during incarceration. Other studies have found that inmates who are very active in religious programs are less likely to be rearrested after release from prison, and that their likelihood of success can be enhanced by postrelease religious involvement. The recent interest in the topic is encouraging, and hopefully will allow more definitive dialogue about the impact of religion in corrections. But at this juncture, religious practice appears only to change some inmates in some cases. Thus, to determine the sincerity of religious practice and its long-term impact is a daunting task.

Religion and Coping

To many inmates, the initial process of incarceration is an overwhelming and unbearable process that leaves them searching for the slightest glimpse of light at the end of the tunnel. Without hope or faith in someone or something, it is easy to find oneself walking down a cold and ghostly path that leads to a place of no understanding. At this point one yearns for the indescribable hope that religion provides and turns to religion as a great source of inner peace, support, and hope.

A solid support system is sought by everyone in society, but this need is amplified tenfold for the incarcerated. Scripture yields some very strong and assuring words to a person who, over time, has found that their support system has dwindled down to those that truly love and care. Comforting words are invaluable to someone that is, for example, going through a divorce and is forced to watch helplessly as their family falls apart. These unbearable feelings propel many to God in search of comfort and understanding.

Critics are quick to label an inmate's religious practices as sanctimonious. There is some truth in that classification—some people do come to the Christian religion to search for a miracle in the form of a time cut or a faithful partner, and as time passes by and these miracles fail to happen, these people feel betrayed and blame the very thing their faith resides in. However, many people will endure all the anguish, grief, and pain in order to experience the joy, love, and laughter which religion can bring. What better place to be touched by God and seek eternal forgiveness than in prison?

It takes a strong will and determination to endure within these walls, but I give unending thanks to the divine intervention that gives strength to the struggling human being.

Americo Rodriguez
Cleveland Correctional Institution, North Carolina

CONCLUSION

With the growth of the American correctional system, and the continuing ethnic and cultural diversification of society, the face of religion in prison may soon change. As correctional facilities become crowded and correctional budgets grow, one of the areas that often suffers from economic cutbacks is programs designed to rehabilitate inmates. In this event, even more pressure is placed on chaplains and religious programs to provide added mental health assistance to inmates. For example, as counseling programs are trimmed, support for those with various forms of mental illness or those with HIV/AIDS may fall in the hands of faith representatives. Also, as prisons become more crowded and job requirements become more complex, correctional officers and other staff will surely turn to religious

Photo 1 *Religious service in Vance unit, Texas*

leaders and volunteers to help them deal with the psychological stress of working in prisons. The call for more secure prisons, as manifested in the development of the supermaximum prisons where inmates are isolated from other inmates and staff up to 23 hours a day, will mean the reduction of group religious practices. This will result in the need for more cell-to-cell ministry and may also cause an increase in individual forms of "spirituality" and religious practice.

With the increased need for sensitivity toward diversity, faith representatives will also be asked to develop and implement programs aimed at reducing racial conflict and improving multiculturalism. This issue is significant to faith representatives who will need to be well versed in a variety of faiths and cultural perspectives. Finally, as the prison population grows, more inmates are also eventually released back into society. Thus, programs aimed at the successful reintegration of inmates back into the community will need the assistance of religious personnel to find employment and promote positive family relationships. Whatever the changes in corrections and larger society, it is likely that because of the historical and legal foundation of religion in corrections that it will continue to be an active part of prison life and programming.

RELOCATION CENTERS

Relocation centers, also known as *internment camps,* were permanent detention centers established to incarcerate U.S. citizens and permanent resident aliens of Japanese ancestry from California, the western halves of Washington and Oregon, and southern Arizona during World War II. President Franklin D. Roosevelt authorized this practice on February 19, 1942, subsequent to the bombing of Pearl Harbor by Japan on December 7, 1941. He did so by granting authority over the entire western region of the United States to the military in Executive Order 9066, creating Military Area #1. More than 100,000 Japanese Americans, both citizens and legal residents, were sent to one of 15 assembly centers to then be transported to one of 10 relocation centers. The relocation centers were occupied from May 1942 until March 1946.

Initially, plans for evacuation of suspected persons had included people from all three Axis nations, Germany, Italy and Japan. However, those plans changed when it was realized that incarcerating people like the mother of baseball hero Joe Dimaggio would be unacceptable to the American people. In 1942, there were 58,000 Italian and 22,000 German resident aliens in the Pacific states

and untold numbers of second- and third-generation citizens of German and Italian descent.

In 1988, the Congress of the United States, pursuant to the directives of the Civil Liberties Act of 1988, acknowledged that all who were interned in the relocation centers had had their civil rights violated. They also apologized to the Japanese American community on behalf of the people of the United States. The act established a fund to educate the public to prevent the recurrence of any similar event and made restitution to those who were interned.

HISTORY

The internment of the Japanese flowed from a history of discrimination that had much of its basis in economic and cultural differences. Many Japanese arrived in the United States in the 1890s to work for the railway and mining industries. Like the Chinese before them, they encountered extensive anti-Asian sentiment. For example, in 1913, California enacted legislation that limited land leases by both Chinese and Japanese to three years and prohibited ownership of land by Japanese resident aliens. That same year, the U.S. Supreme Court ruled in *Takao Ozawa v. United States* that Japanese were "aliens ineligible to citizenship." Japanese-born parents were also prevented from serving as guardians for their minor children's (who were citizens) ownership of land.

California nativists, a political group who worked to limit immigration, established a Japanese Exclusion League and enlisted support in the eastern United States. In March 1924, a three-man delegation went to Washington to lobby for anti-Japanese legislation. Its leader, Valentine S. McClatchy, testified before the Senate Committee on Immigration, and rationalized the anti-Japanese position seconded by Senator Phelan and Attorney General of California, Ulysses S. Webb, as follows:

> The Japanese are less assimilable and more dangerous as residents in this country than any other of the peoples ineligible under our laws. . . . With great pride of race, they have no idea of assimilating in the sense of amalgamation. . . . They have greater energy, greater determination, and greater ambition than the other yellow and brown races ineligible to citizenship, and with the same low standards of living, hours of labor, use of woman and child labor, they naturally make more dangerous competitors in an economic way. . . .

In response to such pressure, Congress passed the Immigration Act of 1924, establishing quotas for immigrants from most nations and barring Japanese as well as Chinese. Though the immigration disallowed new male immigrants, men who were citizens or legal residents could bring Japanese brides to the United States. As Japanese men brought brides to the United States and then began having families, the Japanese communities grew, particularly in agricultural areas outside urban centers. By 1940, 90% of the truck farms, small family farms that provided most of the fruits and vegetables for the region, around Los Angeles were owned or leased by Japanese. They raised most of the commercial flowers and did most of the landscape gardening in southern California. Japanese Americans also maintained a sizable fishing colony at Terminal Island in San Pedro Harbor, California. Their economic success continued to fuel the anti-Japanese sentiments within California.

WHO WAS INTERNED IN 1942?

Of the Americans interned during WWII, about one third were *Issei*, the Japanese term for "first generation," who were born in Japan, immigrated between the 1890s and 1920s, and were legal residents in 1941. Such people were ineligible for citizenship because of immigration laws. All others were citizens, second-generation Japanese Americans (*Nisei)*, or third generation (*Sansei),* who were children during World War II. Almost 6,000 babies were born in the relocation centers to imprisoned parents. In addition, a few hundred non-Japanese Americans chose to accompany relatives to the camps.

Photo 2 *Guards standing watch at a relocation center for Japanese Americans, c. 1942*

WORLD WAR II DETENTION PLAN

In the beginning of WWII, the government authorities explored a voluntary relocation plan wherein the *Issei* (legal resident aliens) and *Nisei* (citizens) would move outside the restricted military zone established by Executive Order 9066, the entire west coast area. However, this voluntary resettlement was not welcomed by Americans living in the interior, who felt it would be unsatisfactory and possibly incomplete. They believed that if the Japanese were so dangerous they need to be moved from their homes, then they were too dangerous to live in the heartland of the United States.

The government then developed a mandatory mass evacuation plan to be carried out by the U.S. Army. According to this arrangement, Japanese Americans were to be transported to their assigned relocation centers after first evacuating to assembly centers. When evacuees entered a relocation center from the assembly centers, they left the Army jurisdiction created by Executive Order 9066 and came into the custody of the War Relocation Authority (WRA), established by President Roosevelt on March 18, 1942, by Executive Order 9102. This order directed the WRA to formulate and execute a program to provide shelter, subsistence, clothing, medical attention, educational and recreational facilities, as well as private and public opportunities for the internees.

WHEN WERE PEOPLE INTERNED?

Compulsory mass evacuation began on March 30, 1942, less than four months after Pearl Harbor was attacked. Most of those interned gathered first in assembly centers, to which Japanese Americans voluntarily reported. This process was not easy for them. Quick sale of assets could not always be accomplished at a fair price, and since many of the men had already been incarcerated, many households were comprised only of women and children. Also, the bank accounts of all Japanese were frozen, so there was no money for traveling. Even so, fewer than 10% of the internees were taken from their homes.

Sixteen assembly centers were established, 13 in California, one in Washington (Payslip), one in Oregon (Portland), and one in Arizona (Mayer). Two of the centers in California were converted race tracks, one was a rodeo arena, and nine were fairgrounds. The movement from their homes to the assembly centers was extremely swift. In contrast, the transfer to the relocation centers was often a six-month process. The assembly centers operation was extended to over seven months, and two assembly centers were converted to relocation centers.

One hundred seventy-five groups of 500 persons, who were allowed to bring only what they could carry with them, were moved aboard 171 special trains. By early May, the first evacuees began to arrive at relocation centers from the assembly centers. By June 5, when movement of evacuees from their homes in Military Area #1 into assembly centers was completed, the transfer to relocation centers was well underway. By June 30, 1942, more than 27,000 people were living at three relocation centers. Three months later, all 10 relocation centers except Jerome, Arkansas, had opened, and 90,000 people had been transferred. By November 1, transfers had been completed, and at the end of the year, the centers had the highest population they would ever have, 106,770 persons.

WHAT THE CAMPS WERE LIKE

All of the camps were located in remote areas with extreme weather conditions, both in winter and summer. The 10 relocation centers were located at

the following sites: Amache (Granda), Colorado; Gila River, Arizona; Heart Mountain, Wyoming; Jerome, Arkansas; Manana, California; Minidoka Idaho; Poston (Colorado River), Arizona; Rowrer, Arizona; Topaz (Central Utah), Utah; and Tule Lake, California.

The camps were designed in block arrangements that contained 14 barracks, one mess hall, one recreation hall, laundry, and men's and women's lavatories. Other structures included warehouses, car and equipment repair buildings, school, canteen, library, hospital, post office, and a religious services site. Space was allocated in the 20- by 100-foot barracks based on the number of people in a household. Often, several families resided in the same barracks. The buildings were wood and tar paper construction. Openings between the boards resulting from shrinkage of the green lumber were closed by the residents with pieces of cardboard in efforts to keep out the weather, insects, and dust.

Interned Japanese formed work groups that manufactured camouflage nets and ship models used for training for Navy personnel. The internees also cultivated vegetables and fruit for both camp and commercial consumption. They were paid for their work while confined, but the pay was significantly lower than the Geneva Convention specified. During this time, two landmark legal cases were brought against the United States concerning the internment: *Hirabayashi v. United States* (1943), and *Korematsu v. United States* (1944). The defendants argued that their Fifth Amendment rights had been violated by the U.S. government because of their ancestry. In both cases, the Supreme Court ruled in favor of the U.S. government.

CONCLUSION

The majority of evacuees remained in the relocation centers until after December 1944, when the mass exclusion orders were revoked. The last of the centers at Tule Lake was closed in March 1946. No evidence of wrongdoing nor any legal process was required to intern these Japanese Americans. Prior to the order of evacuation, there were no instances of suspected espionage on the west coast. The official records documenting espionage during the entire period of World War II reflected that 10 people were tried and convicted of espionage, none of them Japanese. On a sign posted outside the Mindora Relocation Camp in Mindora, Idaho, the sentiments of the Japanese prisoners who lived there are etched in a sign: "Victims of war time hysteria, these people, two-thirds of whom were United States citizens, lived a bleak and humiliating life in tar paper barracks behind barbed wire and under armed guard."

On September 12, 2001, Japanese American Citizen League (JACL) National President Floyd Mori, recalling the experiences of Japanese Americans, stated:

> We urge citizens not to release their anger on innocent American citizens simply because of their ethnic origin, in this case, Americans of Arab ancestry. While we deplore yesterday's acts, we must also protect the rights of citizens. Let us not make the same mistakes as a nation that were made in the hysteria of WWII following the attack at Pearl Harbor.

Nonetheless, as George W. Bush's administration's continues forcibly to register and detain men and teenagers from specified Middle Eastern and North African countries, it seems that Mori's words are not being heeded. Though the detainees' lawyers have challenged the government to produce any evidence of criminal behavior or a link to international terrorist groups among their clients, there has been no response to date.

RESISTANCE

Prisoner *resistance* refers to the tactics, strategies, and practices prisoners employ to contest the conditions and/or implications of incarceration. Premised on a Foucaultian belief that power is not a possession but rather a relational and negotiated dynamic, resistance studies analyze how prisoners, in spite of being confined, oppressed, and denied choices, nonetheless assert agency as they struggle to further their interests. Examination of prisoner resistance reveals a wide range of innovative tactics that can be classified along the axis of individual/collective, passive/violent, and everyday/exceptional.

COLLECTIVE RESISTANCE

The most well-known strategy of collective resistance is the riot. Though often triggered by a relatively minor incident, disturbances such as the infamous 1980 New Mexico State Penitentiary riot, in which 33 prisoners perished, often erupt into violence. In some extreme cases, prisoners attempt to assume control of the institution to publicize conditions and negotiate concessions. Although riots certainly draw public attention to prison conditions, this tactic may reinforce rather than undermine the institution's dominance. Prison disturbances rarely result in substantive changes to prison conditions and are frequently counterproductive, leading to sanctions and justifying enhanced regulatory measures to prevent future uprising. They also reinforce the belief that prisoners are violent, dangerous individuals who require a punitive carceral environment devoid of even basic privileges.

Less dramatic, although perhaps more effective, are the many peaceful forms of collective resistance. Foremost among these is the use of litigation by prisoners to acquire their constitutional or civil rights. Although the American judiciary's willingness to intervene has decreased substantially since the Ragen era and has been further undermined by the 1996 Prison Litigation Reform Act, prisoners continue to employ both state and federal constitutional guarantees, including the protection against cruel and unusual punishment (U.S. Constitution, Eighth Amendment) and the right to due process (U.S. Constitution, Fourteenth Amendment). Challenges to racial, gender, and religious discrimination have also used the provision guaranteeing equal protection under the law (U.S. Constitution, Fourteenth Amendment) and civil rights legislation. Alternately, prisoners can appeal to national or international organizations such as Amnesty International or the United Nations to mobilize support against penal excess. For example, Human Rights Watch has drawn international attention to the widespread sexual assault of women prisoners by male guards in U.S. state prisons.

Collective resistance to prison conditions can also take the form of peaceful political action. These may be well-organized symbolic demonstrations such as the annual "Prison Justice Day" (August 10), when, in a day of fasting, work stoppage, and commemorative services, prisoners in many parts of the United States and Canada remember those who have died in prison and make a stand for prisoner rights. Alternatively, collective resistance may take the form of spontaneous prisoner movements in response to the implementation of a new policy or practice. For example, Mary Bosworth (1999) recounts how women prisoners in

one British prison, after unsuccessfully attempting to challenge the introduction of new, extremely coarse toilet paper through theft and protest, were able to successfully draw on their gender identity and needs as women to pressure the institution to reverse its decision.

Finally, collective resistance includes the work of prison authors who assume narrative authority and speak to the experiential reality of imprisonment. Employing a range of genres, including in-house magazines, the penal press, academic magazines like *The Journal of Prisoners on Prison*, and autobiographical or analytic accounts of prison life, such as Victor Hassine's (1996) book, *Life Without Parole: Living in Prison Today,* these authors challenge the hegemonic official discourse of prisons and raise public consciousness through their writings.

INDIVIDUAL RESISTANCE

Not all resistance is collective. Prisoners also operate in their own, personal interests as they employ tactics to assert their agency and contest the conditions of their incarceration. These tactics may include exceptional dramatic acts such as assaults on staff, suicide, and (particularly in the case of women) starvation and self-injury. Sometimes resistance is literally scripted onto a prisoner's body. Not only is the act of acquiring tattoos an open challenge to prison directives, but the extensive tattoos that decorate many prisoners' bodies speak to countercultural allegiance. Some, such as "guilty until proven innocent" articulate and assert an antiestablishment discourse.

While exceptional acts can be powerful statements, the power relations characteristic of prison and the vulnerability of prisoners may render subtle everyday acts of resistance such as education, withdrawal, passive nonengagement in rehabilitative programs, illicit sexual relations, substance use, the fostering of subversive worldview and prisoner culture more viable, prudent strategies for retaining autonomy and asserting agency. For many prisoners, identity politics become the basis for, and tactic of, these everyday acts, such as demanding special meals in keeping with their religious beliefs.

CONCLUSION

It is important to remember the limits of resistance. Care must be exercised not to impose meaning and political significance by defining all acts by disempowered prisoners as resistance without attending to questions of intent, meaning, and subjectivity (Bosworth & Carrabine, 2001). Moreover, we must appreciate that while prisoners' capacity to resist is necessarily shaped by their imprisonment, the strategies employed are in turn conditioned by their access to resources including cultural capital, social status, legal advice, economic resources, position within prison hierarchies, as well as their individual characteristics including their gender, race, nationality, and institutional location. For instance, prisoner associations founded on religious or ethnic affiliation, such as Native brotherhoods, Native sisterhoods, and the Black Muslims, provide individuals with emotional support, the basis for identity politics, and emerge as a common voice to further the rights of Aboriginal and Muslim prisoners.

RESTORATIVE JUSTICE

Restorative justice provides an alternative framework to the adversarial-retributive justice model for

dealing with offenders. In restorative justice models, victim needs are central, offenders are held accountable, and the government is a secondary player in the process of restoring victims, offenders, and communities to a state of wholeness. Emerging in its contemporary form in the 1970s, restorative justice gained widespread recognition in the 1980s, and by the 1990s became part of mainstream correctional policy and practice in the United States and countries around the world. Today, restorative justice has converged with the notion of community justice to become an alternative way of thinking about and responding to crime.

Proponents of restorative justice argue that community members should play a crucial role in dealing with the aftermath of crime, enhancing public safety, and furthering the goals of social and criminal justice. Strategies that have become central restorative justice paradigms include victim–offender mediation and reconciliation, family group conferencing, peacemaking and sentencing circles, and surrogate encounter programs. A challenge for the future is to determine how restorative programs, policies, and practices can meaningfully function within the retributive framework of U.S. corrections and better meet the needs of victims, offenders, and citizens.

HISTORY

The term "restorative justice" was coined by Albert Eglash in a 1977 article, "Beyond Restitution: Creative Restitution," in which he identified three types of justice: retributive, distributive, and restorative. Ideas of restorative justice gained widespread recognition in the 1980s, and by the 1990s had been integrated into some mainstream correctional policy and practice in the United States, Canada, New Zealand, Australia, Great Britain, and other countries around the world.

Support for restorative justice arose from multiple forces, including public dissatisfaction with the criminal justice system, the victims' rights movement, feminist critiques of patriarchal justice, peacemaking, and critical criminology, and the shift toward community justice endeavors such as community policing and community corrections. Rising crime rates, a fairly widespread belief that the correctional system was ineffective in reducing recidivism, and public discourse and activism by victim's rights organizations laid the groundwork for acceptance of a new model of justice.

DEFINITION OF RESTORATIVE JUSTICE

Unlike the adversarial-retributive model upon which the U.S. criminal justice system is based, proponents of restorative justice view crime as harm that must be repaired through a holistic process involving victims, offenders, and citizens. In this endeavor, the government is charged with preserving order while the community is responsible for restoring peace. Restorative justice aims to address the natural antagonism among the rights, needs, and interests of offender and victims through programs, policies, and practices that work to restore victims, offenders, and communities harmed by crime.

Central features of the restorative justice model include the definition of crime as a harm; focus on problem solving, resolution through dialogue, negotiation, restitution, and reparation; community involvement and social action; recognition of victim rights and offender accountability; holistic understanding of the offender; reintegration rather than stigmatization, possibilities for repentance and forgiveness; and direct involvement of participants. The following table summarizes primary differences between the retributive and restorative models:

Retributive	*Restorative*
Crime = legal violation	Crime = harm
Wrongs create guilt	Wrongs create obligations
Debt abstract/punitive	Debt concrete/reparative
Blame/retribution central	Problem solving central
Victims needs ignored	Victims needs central
Offender stigmatized	Offender reintegrated
State monopoly on response to wrongdoing	Victim, offender, citizen roles recognized
Battle/adversarial model normative	Dialogue/reconciliation normative

Related concepts and terms sometimes used synonymously with restorative justice include "community justice," "relational justice," "indigenous justice," "balanced justice," "responsible justice," "transformative justice," and "real justice." The notions of restorative and community justice have converged in recent years, and some now refer to "restorative community justice" as a paradigm shift reflecting the trend toward increased community involvement in different stages and components of the justice process incorporating multiple theories (e.g., routine activities, restorative justice, balanced justice, reintegrative shaming) and practices (community policing, conferencing, circles, juvenile and adult intensive community aftercare) with the goal of restoration, improvement of quality of life in communities through government–community partnership, and active involvement of victims, offenders, and citizens in the justice process.

CURRENT PRACTICE

Today, three distinct (though increasingly blended) models—victim offender conferences, family group conferences, and circles—dominate the practice of restorative justice. Family group conferences (FGC) originated in New Zealand in the 1980s and are the primary means of justice for dealing with juveniles there. Circles (sometimes called peacemaking circles) emerged from First Nation communities in Canada. Victim–offender mediation (VOM), reconciliation programs (VORP), and conferences (VOC), of which there are more than 1,000 worldwide, are the most widespread. These programs, which began in the 1970s in the United States and Canada, bring together the victim and the offender with a trained mediator to talk in order to somehow resolve and heal the hurt caused by the offense. The perpetrator may also be asked to provide some kind of financial reparation. VOM and VORP, conferences, and circles are offered at different stages of the criminal justice process including diversion, sentencing, community supervision, and institutional programs. Other programs and practices sometimes referred to as restorative generally include victim impact panels, victim awareness programs, and community reparative boards, whereby citizens are involved in working out reparative agreements (usually with nonviolent offenders).

Although VOM and VORP are considered the most widespread application of restorative justice, restorative justice is not just mediation. Sometimes it is not desirable or possible to bring the victim and offender together. For example, it may be that such an encounter would further harm the victim. Likewise, both parties are not always willing or interested in doing so. When this happens, conferencing or peacemaking circles that enable offenders and citizens to discuss issues of accountability and understanding without the victim present can occur.

Unlike victim–offender mediation or reconciliation programs, family group conferencing and circles involve a large and diverse range of people in the attempt to deal with an offense. Conferencing, for example, can include victims and offenders and their family members, as well as unrelated victims and offenders. Circles generally involve victims, offenders, family members, community members, and facilitators who, arranged in a circle, pass a "talking piece" to assure that each person gets a chance to speak without interruption.

RESTORATIVE JUSTICE AND CORRECTIONS

Restorative justice has emerged as a central issue for corrections in the 21st century and has been formally included in the mission and vision statements of a number of state departments of corrections (e.g., Minnesota, Washington, Oregon, Vermont) and correctional agencies throughout the United States. It has also been incorporated in Canada, New Zealand, Australia, Great Britain, and elsewhere. The application of restorative justice principles to correctional practice entails using the community to deal with some of the consequences of crime (including victim and offender needs), enhancing public safety, and furthering the goals of social and criminal justice.

Restorative correctional programs, practices, and policies provide opportunities for victim and community participation in surveillance,

treatment/rehabilitation, reentry/reintegration of offenders, and for offenders to take steps to make amends and/or repair harms resulting from their crimes. Correctional practices embodying the principles of restorative justice exist across the correctional continuum in community and custodial contexts. However, determining whether a program or practice is restorative is a matter of some debate. Howard Zehr (2002, p. 55) suggests that restorative justice models can be viewed along a continuum from fully restorative to pseudo- or nonrestorative and proposes six questions to assess the extent to which a program, policy, or practice is fully, mostly, partially, potentially, or pseudo-restorative:

1. Does the model address harms, needs, and causes?
2. Is it adequately victim oriented?
3. Are offenders encouraged to take responsibility?
4. Are all relevant stakeholders involved?
5. Is there an opportunity for dialogue and participatory decision making?
6. Is the model respectful to all parties?

From this perspective, conferencing, circles, surrogate encounter programs, and reparative boards can be considered fully restorative, while victim impact panels in a correctional setting (generally involving a one-way presentation of information) can be considered partially restorative. Community service, work crews, and offender reintegration programs can be considered potentially restorative, but unless such programs are consistent with the fundamental principles of restorative justice—involving all stakeholders, collectively identifying and addressing needs, harms, and obligations in an attempt to make things as right as possible, then such programs could in fact be pseudo-restorative. For example, a recent development in Washington State is the implementation of the "victim wrap-around process" whereby a committee of victim advocates, victims of crime, community members, and state correctional officials develops a supervision plan for offenders released into the community. However, for the protection of victims, offenders are not part of the process. Is this practice fully, partially, potentially, or pseudo-restorative? While the victim is seen as central to the process, the exclusion of the offender may place the practice on the pseudo- or nonrestorative end of the continuum.

Variations of VOM, VORP, and VOC have emerged that extend the concept of encounter and mediation to meetings between surrogate victims and incarcerated offenders in institutional corrections contexts. For example, a program developed by Howard Zehr in Graterford Prison in Pennsylvania in the early 1990s involved encounters between members of the "Lifers" and family members of homicide victims interested in engaging in dialogue and asking questions of offenders. The program provided a forum for victims who were unable to meet with the offenders in their cases to ask questions of surrogate offenders for the purpose of healing and/or understanding. Other programs involve bringing together unrelated victims, offenders, and citizens in prison settings to read educational material on restorative justice, engage in "storytelling" and seminar-style discussions about the impact of crime, offender accountability, the needs of participants, and concrete ways to engage in the restorative process (Helfgott et al., 2000). Restorative justice is increasingly being applied to correctional settings involving adult violent offenders.

More restorative justice-oriented correctional options are available today than ever before. While victim–offender mediation (specifically with juvenile property offenders), victim impact in sentencing and parole decisions, and the use of restitution and community service as a sanction have existed for many years, newer programs and practices such as surrogate encounter programs in custodial settings, victim–offender reconciliation involving violent offenders, community reparative boards, peacemaking circles, and conferencing offer creative and hopeful alternatives to the traditional correctional options of the retributive model. These restorative correctional options enable the principles of the restorative justice model to be applied, in whole or in part, across the continuum of correctional contexts with different types of offenders.

ISSUES AND CHALLENGES

Central issues for the future of restorative justice include determining how and if restorative and community justice-oriented programs and practices can meaningfully function within the larger adversarial-retributive justice framework, accumulating empirical research on the effectiveness of the range of restorative justice-oriented programs with different types of offenders across correctional contexts, and ensuring that victim needs are met and that victims and their families are not further harmed by restorative correctional endeavors.

In the United States, restorative correctional practices are hindered by the dominant adversarial-retributive model. A fundamental issue is how and if restorative programs, policies, and practices can be implemented within the retributive framework. Proponents of the restorative justice model have been criticized for minimizing or discounting the fundamental differences between the retributive and restorative justice paradigms. Critics argue that conflicting principles and practices of the two paradigms make it impossible to implement restorative justice within the retributive justice framework, that restorative justice-oriented programs implemented within the existing criminal justice system are not truly restorative, that the restorative justice model is idealistic and utopian, and that some programs operating under the guise of restorative justice are actually harmful to victims and/or do not voluntarily solicit victim involvement (e.g., in the case of domestic violence and/or sexual assault where there are power or control issues between the victim and the offender that may be exacerbated by the restorative process).

Others suggest that despite the praises that surround restorative justice, little empirical research exists to support its benefits. Kathy Daly (2002) argues that the "real" story about restorative justice is much more qualified than the mythical one. She suggests that there are limits to "repairing harm," that restorative justice approaches are less successful than advocates suggest in terms of their ability to enhance understanding and sincere meaningful dialogue between victims and offenders, and that restorative and retributive justice models are not necessarily as divergent as restorative justice advocates contend.

Another criticism is that many programs and practices based on restorative justice principles are not cost effective and/or have not proven to reduce recidivism. However, others suggest that the goal of restorative justice is not to reduce cost or recidivism, but to do the right thing. Recidivism reduction may be a byproduct but not the fundamental objective of the restorative process, and the multidimensional goals of restorative justice may be best measured through personal and interpersonal offender development, offender adaptation and reintegration, victim healing, and citizen and victim fear of crime. Assessing the impact of restorative justice-oriented correctional options depends on the accumulation of empirical data. While much of the information regarding the impact of restorative justice programs has been anecdotal, there is a growing body of empirical research suggesting that these restorative correctional options enhance understanding between the polar groups affected by crime, reduce fear of crime among victims and citizens, provide opportunities for victim healing and offender accountability, and (in some cases) reduce offender recidivism. However, the exact number of restorative justice-oriented programs in existence remains unknown, and there is a lack of systematic data on the direct impact of these programs on recidivism and program costs/benefits when high-risk violent and sex offenders and their victims are involved.

Other questions that have been raised regarding the application of restorative justice include: What if one party refuses to participate? Is victim participation truly voluntary? In cross-cultural situations (where victims, offenders, and citizens come from different cultural backgrounds), how will different conceptions of restoration be resolved? What happens in situations where no "community" can be defined? Does implementation of the restorative justice model blur or dissolve the distinction between civil and criminal law? These and other questions and challenges remain at the forefront of discourse and exploration of the restorative justice model.

RACE AND GENDER ISSUES

Fundamental to restorative justice is the notion that the restorative process involves cultural plurality and community or citizen ownership of the justice process. This means that any program, policy, or practice that is considered restorative necessarily involves allowing the voices and concerns of traditionally powerless stakeholders to be heard, acknowledged, and addressed.

Some argue that restorative justice offers a forum through which the needs of women and minority racial/ethnic groups and indigenous populations can be better addressed. However, critics contend that restorative justice programs do no better and in some situations may actually do worse than the traditional criminal justice system in terms of dealing with imbalances of power.

For example, there is disagreement about whether restorative justice is an appropriate response to domestic violence and sexual assault. Restorative justice proponents suggest that the restorative approach gives female victims of domestic and sexual assault a safe forum through which to express their needs, rights, and interests. Others argue that these sorts of crimes are so extreme that they should be handled in the formal criminal justice system through a punitive response. Feminists argue that if domestic violence and sexual assault are dealt with restoratively, these matters may return to the private sphere to be dealt with behind closed doors rather than a serious, public social problem deserving of a formal and severe criminal justice response.

Another concern is that restorative justice may worsen social injustice. Braithwaite (2002) suggests that even when restorative justice is maximally culturally plural, tensions exist between restorative justice and social justice. For example if facilitators are trained to assure plurality in the restorative justice process, would indigenous Elders who have not been trained or certified be excluded from presiding over indigenous justice processes? Furthermore, cultural plurality and equalizing power imbalances is a complex task in situations where the offender is from one culture/race/gender and the victim is from another. In such situations the victim–offender dynamic is supplanted by the male–female, Indigenous–white, African American (or Hispanic, Asian, Native American, etc.–white), minority–majority culture. For example, in a restorative justice program where offenders are disproportionately racial/ethnic minorities from disadvantaged socioeconomic backgrounds and victims and citizens are disproportionately white and socioeconomically advantaged, who has the weaker voice? How can the needs of all parties, in particular the victim, be addressed while ensuring plurality and promoting social justice?

An additional concern is that restorative justice has been misrepresented as a peacemaking or "feminine" justice. Daly (2002, p. 66) argues that using gender dichotomies (or any dichotomies) to describe principles and practices of justice will always fail, because justice must deal with "the messy world of people's lives." If women are viewed as the peacemakers or caretakers, and responses to crime become increasingly restorative, then the burden of justice will fall on women who tend to do more of the restoring than men (Braithwaite, 2002). Care or peacemaking approaches may not be appropriate for some offenders and may further victimize some victims. Relegating femaleness to peacemaking, caring, and restoration and maleness to conflict, punishment, and retribution is a response to crime and injustice that makes crime and punishment the business of men and victimization and restoration the business of women—a false dichotomy that reinforces the harm and power imbalance restorative justice seeks to repair.

CONCLUSION

Restorative justice offers an alternative to the adversarial model of justice, a new framework for envisioning correctional interventions, and a range of options to enhance public safety and offender change. It is unclear whether the restorative justice paradigm will succeed in supplanting the retributive "Get tough" approach to crime and corrections. However, the grassroots nature of the restorative model and the convergence of the restorative and community justice frameworks have resulted in

widespread implementation of a range of programs and practices founded upon the principles of restorative justice. Given that restorative justice-oriented programs and practices have been developed and exist independently of governmental agencies through the efforts of religious and nonprofit community organizations and individuals within academic, social service, and/or other noncriminal justice organizations, it is likely that these efforts will continue to impact corrections and to provide alternative correctional options in the United States and around the world. The accumulation of empirical findings on the range of restorative programs and practices in corrections, the evolution of restorative justice into community justice, and continued discourse and action exploring the role of community in crime, justice, and corrections will likely continue to play an important role in future correctional policy and practice.

RIKERS ISLAND JAIL

HISTORY

The City of New York purchased Rikers Island in 1884 for $180,000. At that time, the island measured 87 acres. Before it became the penal colony it is today, Rikers, along with Hart Island, was used as a base for the U.S. Colored Troops, the African American soldiers who fought during the Civil War. In the 1930s, Rikers Island became the headquarters for the New York City Department of Corrections, replacing the department's antiquated facilities at Blackwell's Island (now Roosevelt Island).

Rikers opened as a jail in 1933 with only two facilities: the Rikers Island Penitentiary and the Rikers Island Hospital. During the 1930s and into the 1940s, the inmates housed at Rikers, many of whom were there because of problems with narcotics, worked as farm laborers on the island. The theory at Rikers was that hard work and fresh air would help prisoners reform. Consequently, inmates worked at jobs such as growing farm produce for other institutions, raising the numerous

pigs that also lived on Rikers Island, and unloading coal and other materials from barges that came to the island. Prisoners also laid railroad tracks and waterlines, and expanded the island to 415 acres through landfill.

THE RIKERS ISLAND BRIDGE

In 1966, the Rikers Island Bridge was constructed under Mayor John Lindsay. The 5,500-foot bridge cost the city more than $9,000,000. Previously, the only access to the island was by ferry. The bridge allowed easier access for staff, prison visitors, other agency personnel, lawyers, emergency staff and equipment, professional service staff, college and university staff engaged in research, and the many civic groups interested in correctional agency operation. The bridge, located at the foot of Hazen Street and 19th Avenue in Astoria, connected Queens to the southern portion of Rikers Island. It provided both lanes for cars and buses and a walkway for pedestrian traffic. The bridge was seen as much more economical than ferry service, despite its initial cost, because of money saved on ferry maintenance.

RIKERS ISLAND TODAY

The Rikers Island complex is made up of 10 separate jails. Five Division One facilities are maintained on the island. The first is the James A. Thomas Center, which is the original Rikers Island Penitentiary, built in 1933. Previously referred to as the House of Detention for Men, this facility was recently renamed in honor of the DOC's first African American warden, James A. Thomas. Today it serves as a maximum-security, single-cell facility, with a maximum capacity of 1,200.

The second jail, the George Motchan Detention Center, opened in 1971. Originally known as the Correctional Institution for Women, this building housed women and the nation's first jail-based nursery. In 1988, with the opening of a new women's facility, the building was converted to a facility for men. Another Division One jail is the Adolescent Reception and Detention Center, opened in 1972 with a maximum capacity of 2,500 inmates. It currently houses adolescent male detainees ages 16 to 18.

A fourth jail, the Rose M. Singer Center, opened in June 1988, with a maximum capacity of 800 inmates. This center replaced the Correctional Institution for Women. It was later expanded through the use of modular housing and now can hold up to 1,700 female detainees and sentenced inmates. Like its predecessor, this women's facility has a nursery, which houses up to 25 newborns. The fifth Division One facility is the George V. Vierno Center, opened in 1991 with a total capacity of 850. With an addition in 1993, its maximum capacity was expanded by 500. This facility houses detainees awaiting trial.

In addition to the Division One facilities, Rikers also has five Division Two facilities. The North Infirmary Command (NIC) is composed of two buildings, one of which was the original Rikers Island Hospital built in 1932. The NIC's total capacity is 500. It is used for housing the sick as well as general population inmates. In addition, inmates who require extreme protective custody because of notoriety or the nature of their cases are also housed there. A special dormitory has been created to house AIDS and AIDS-related cases.

In 1964, the second Division Two facility, the Eric M. Taylor Center, was opened under the name of the Correctional Institution for Men. The facility was expanded in 1973 and has a current capacity of 2,250. It houses, in dormitory style, adolescent and adult male inmates sentenced to terms of one year or less. These men constitute the ground crews, facility maintenance, and industrial labor force on Rikers Island. Another facility, the Anna M. Kross Center, completed in 1978, has a total capacity of 2,400. This facility is composed of 40 housing areas spread over 40 acres of the island. The facility also houses a Methadone Detoxification Unit for detainees and the department's Mental Health Center, which was established in 1962.

In June 1985, the Otis Bantum Correctional Center was opened, with a 2,000 inmate capacity. It has two annexes, the Harold A. Wildstein, opened in March 1987, and the Walter B. Keane, opened later in 1987, which are former Staten Island

ferries, each with a 162-bed capacity. Finally, the West Facility, an 800-bed facility, opened in the fall of 1991. Part of the West Facility was converted into the department's Communicable Disease Unit, in which 140 specially air-controlled housing units are reserved for male and female inmates with contagious diseases such as tuberculosis.

INMATE POPULATION

Of the inmates held at Rikers, two-thirds are pretrial detainees who have been charged with, but not convicted of, a crime. These detainees are those who have been arrested but cannot afford to pay bail, which for many is $500 or less. The jails at Rikers house those convicted of misdemeanor offenses, as well as those convicted of felonies who are awaiting transfer to other prisons. The inmate population is 92% black or Hispanic, even though blacks and Hispanics make up only 49% of the city's population. Ninety percent of the inmates lack a high school diploma or a general equivalency diploma, and 80% have a history of substance abuse. Thirty percent are homeless, and 25% have been treated for mental illness. Twenty percent of the inmates are female, and of the remaining 80% of the male population, 10% are HIV-positive. Most important, of those inmates released from Rikers Island, about 75% return in less than one year.

CONCLUSION

Today, Rikers Island remains the main base for the New York City Department of Corrections. The facility now has the capacity to hold up to 17,000 inmates, as well as housing the DOC's transportation division, other support operations including a central laundry, a central bakery, a firehouse, a hospital, a court house, and three high schools, in addition to the K-9 and Marine Units of the Department of Corrections. Despite the fact that Rikers Island, with a yearly operating budget of $860,000,000, is located in the East River, only about 100 yards from LaGuardia Airport, many New Yorkers are not aware of its location.

RIOTS

The American Correctional Association (1996, p. 17) identifies three categories of collective violence in prison: (1) an incident, (2) a disturbance, and (3) a riot. A *riot* is said to have occurred when a significant number of prisoners control a major portion of the facility for a considerable period of time. A *disturbance* is a step down from a riot; there are fewer prisoners involved, and the administrators do not lose control of any part of the institution. In turn, an *incident* is less severe than a disturbance, with only a few prisoners involved and no occupation of any part of the facility. While this way of thinking about riots is a little vague, it does have the advantage of highlighting the ways in which the problem of order is a daily feature of institutional life.

HISTORY

Ever since the birth of the modern prison, prisoners have been involved in riots. The first recorded prison riot in the United States took place in 1774, in a prison that had been built in 1773 over an abandoned copper mine in Simsbury, Connecticut. It has been estimated that more than 1,300 riots occurred in American correctional institutions in the 20th century. To make sense of the sheer volume of these events, the social scientist Robert Adams (1992) has distinguished the following four phases in the history of prison riots in Britain and the United States.

1. Traditional Riots

According to Adams, the riots of the 19th and early 20th centuries were mainly impromptu mutinies by fugitive prisoners trying to escape the harsh conditions of their confinement in an era guided by the twin doctrines of religious reformation and hard labor. It has been estimated that most of the riots that occurred in the United States between 1865 and 1913 involved escape attempts and often resulted in the deaths of one or two prisoners. Of course, the historical record here is especially poor, as the experiences and motives of the rioters largely remain undocumented. However, as early as 1815, Massachusetts prison guards "were exhorted to think of the prison as a volcano filled with burning lava, which, if not restrained, would destroy both friends and foes," suggesting that prisoners were difficult to control (Teeters & Shearer, 1957, pp. 228–229).

2. Riots Against Conditions

The ascendancy of the rehabilitative ideal from the turn of the 20th century to the early 1960s provides a different context in which prison unrest occurred. A major wave of prison riots swept across the United States from April 1952 (more than 40 during an 18-month period), numbering more than had taken place in the previous 25 years. Response to such disturbances was significant in three key respects. First, the riots did not undermine faith in rehabilitation. In fact, the disorder was taken as firm evidence that more resources should be allocated to the reform endeavor. Second, the rioters were viewed not as rational actors with legitimate grievances, but as insane thugs. One penal expert explained that "the ringleaders are reckless and unstable men . . . of the type generally placed in the vague but convenient category of 'psychopath'" (cited in Useem & Kimball, 1989, p. 10). Third, the riots of this period were largely spontaneous demonstrations over living conditions that challenged abuses of power.

3. Consciousness-Raising Riots

The riots from the mid-1960s to the mid-1970s possessed clearly defined political agendas that sought to relate the oppression prisoners experienced inside with that of other groups in the urban ghettoes and the Third World. Prisoners engaged in such collective resistance during this period could rely on hitherto unknown levels of support beyond the walls as a result of the civil rights movement and rising expectations of social entitlements. That it was the general nature of power, rather than specific abuses which the riots of this era targeted, was made abundantly clear in the Folsom Prison riot of 1970. The prisoners at Folsom produced a "Manifesto of Demands and Anti-Oppression Platform," which announced that it "is a matter of documented record and human recognition that the administrators of the Californian prison system have restructured the institutions which were designed to socially correct men into *THE FASCIST CONCENTRATION CAMPS OF MODERN AMERICA"* (cited in Fitzgerald, 1977, p. 203; emphasis in original).

4. Post-Rehabilitation Riots

The collapse of the rehabilitative ideal has led to a fragmentation of penal discourse and its associated form of opposition. According to some, most riots are now based on self-interest and predatory individualism. While this characterization is open to dispute, the paradox is nevertheless illustrated by the two most infamous prison riots in U.S. history. The riot at Attica in 1971 was widely regarded as a political struggle against oppression, racism, and injustice, whereas that of the Penitentiary of New Mexico in 1980 is usually read as an example of the "Balkanization" of prisoner society.

TWO PRISON RIOTS

Attica, 1971

No other prison riot is as notorious as the uprising at Attica in 1971, in which 43 people died at the remote upstate New York maximum-security prison between September 9 and 13. During the 15 minutes it took state police to retake the prison, 39 were killed, including 10 hostages slain by the assault force, and a further 80 were wounded in the indiscriminate hail of gunfire. Attica was not

unlike most maximum-security prisons at the time. It was overcrowded with some 2,200 inmates when the riot took place. Its population had become increasingly young, urban, and black; more than half the prisoners were African American. By contrast, staff were predominantly white and from local rural communities. Officers were also mainly conservative in their politics, whereas minority inmates were influenced by the radical manifestos promoted by the Black Panther Party and the Black Muslims. Racism, suspicion, and mistrust between staff and prisoners were mutual.

Though it became convenient for staff and the administration to blame revolutionary prisoners for the riot, such simple condemnation disguises chronic management failures that existed at the time. Antiquated communication systems, incoherent rules for prisoners and staff, as well as intense conflicts over reform between liberal and conservative forces in the state all contributed to the environment in which the riot occurred. Additionally, prisoners had become well versed in the arts of collective protest, having successfully engaged in a sit-down strike for extra pay a year earlier and marked George Jackson's murder by San Quentin prison guards with a silent fast in the mess hall in August 1971.

In the days immediately before the riot, there were a number of clashes between guards and prisoners that should have alerted the authorities that tension was rising. However, no riot control plan was drawn. When a disturbance began on the morning of September 9 involving 20 or so prisoners, conflict expanded so rapidly that in just over an hour 1,281 prisoners and 40 hostages were able to occupy D Yard, during which time three prisoners were killed by other prisoners in the chaos. In the next couple of hours, inmate leaders took control and laid the foundations for an inmate society, with a degree of formal organization, democratic participation, and political principle unprecedented in prison riots.

With the stage set clearly for negotiations, the commission investigating the riot tried to discover why a peaceful resolution failed and a bloodbath ensued. A significant factor was that no single negotiating strategy was pursued, which led to vacillation, mistrust, and rumor. Discussions began with Commissioner Oswald pursuing direct negotiations with inmate leaders who had drawn up a list of demands, which included a "complete amnesty," federal government intervention, and "transportation" to a non-imperialistic country. Oswald rejected the "amnesty" demands and left an ad hoc observers' committee (including a journalist and radical lawyer) to mediate with inmate leaders who no longer trusted the state administration, not least because prison official had spread false rumors to the media, which included announcing that hostages had been murdered. The edgy stalemate continued for four days, until Oswald concluded that nothing more was to be gained from these talks and issued the prisoners an ultimatum, which was promptly rejected, and the state police were ordered to retake the prison. Yet, in the final analysis, the main reason the prison was stormed with such overwhelming force was to preserve order in a geopolitical sense. Attica was front-page news, and the prisoners' radical statements were reaching a global audience. This situation led the New York State Governor, Nelson Rockefeller, to believe that "an inmate victory at Attica would be treason to the authority and prestige of the United States around the world, from Cuba to Vietnam" (Useem & Kimball, 1989, p. 37).

Penitentiary of New Mexico, 1980

If the riot at Attica symbolizes the political struggles that occur among prison inmates, staff, and administrators, the rebellion at New Mexico stands as an extreme instance of primeval barbarism among prisoners. During the 36 hours of the riot's duration, 33 prisoners were murdered, an additional 200 prisoners were mutilated, burnt, and raped, 90 were given drug overdoses, and 12 staff members were beaten, stabbed, and raped (Adams, 1992, pp. 94–95). Even these shocking figures do not adequately convey the apocalyptic horror unleashed at the institution, leading most commentators to describe the riot as quite unlike any other in terms of senseless human brutality. Yet in emphasizing the difference of this event, it is important not to overlook the similarities with other riots. The riot was different from that at

Attica. However, this was not because the prisoners were psychologically disturbed monsters but because the social context in which the riot took place was different.

A significant factor in shaping the kind of riot that occurred at New Mexico was that in the 10 years leading up to the riot the prison changed from a relatively well-run institution to one that was out of control. From around 1975, the state corrections system underwent a series of organizational changes that undermined the prison's ability to function. Following allegations of corruption, which included inmates using community contact programs to smuggle drugs into the prison, a new administration came to power in 1975 and set about ending rehabilitation programs, cracking down on the drug trade, and abolishing the inmate council. Taken together, these changes effectively ended an era of consensus. The subsequent introduction of the notorious "snitch" system is an indication of how far internal control had deteriorated.

The snitch system involved coercive (as opposed to voluntary) informing. If prisoners refused to snitch, officers would falsely tell other inmates that they had informed anyway. In this environment, inmate solidarity was corroded as mistrust generated a climate of hate, fear, and intimidation. Although the organizational changes were ostensibly efforts to tighten up the prison, they in fact led to an erosion of security. In the two months before the riot, the administration had learned of up to a dozen separate plans to seize territory and capture hostages. The authorities responded to the escalating tension not by strengthening security measures but by instigating further procedural reorganizations. For instance, "intelligence sharing" meetings were now held where the dangers of a takeover and hostage seizure were discussed, but no precautions were drawn up to militate against such occurrences.

The riot began over a fight between two drunken prisoners and a prison officer who lost his keys to a group of inmates that enabled entry to other sections of the prison, including the pharmacy. Consequently, what would have been a minor altercation spread rapidly through an understaffed institution where cliques of amphetamine-fueled inmates sought revenge against snitches. The first set of killings set a template of retribution. In one instance, a prisoner was beaten with steel pipes and then knifed to death. Another prisoner, who had barricaded himself in his cell, was shot in the face with a grenade launcher stolen from the control center (Useem & Kimball, 1989, p. 105). These murders set a precedent for revenge, and subsequently prisoners competed with each other to produce the most imaginative modes of murder and torture, which included burning, castration, disembowelling, decapitation, and raping informants and other pariahs, including convicted child molesters. The riot lasted 36 hours and ended primarily because of mass defections, so that when state police recaptured the institution only 100 or so exhausted participants remained.

EXPLAINING PRISON RIOTS

Clearly, prison riots are disturbing, complex, and diverse events that raise profound questions about human action, social structure, historical context, and political reasoning. Not unsurprisingly, several theories exist to explain them, out of which the following three main perspectives can be summarized.

Disorganization

The central assumption of this view is that society functions through control mechanisms that check irrational behavior and promote consensus. Such regulatory mechanisms include the family, religion, and community ties, which socialize the individual into conformity. If disorder occurs, it is seen as a result of a breakdown or disorganization in the mechanisms that engender solidarity.

A classic example of this approach is Gresham Sykes's (1958) monograph on the Trenton maximum-security prison, *The Society of Captives.* In his book, Sykes claimed that the authorities maintained order through a system of power sharing with inmate leaders. It was only as a result of the administration attempting to regain control of the institution, through curbing the abuse of official rules, cracking down on the illegal economy, and tightening security that the prison experienced a spate of

riots in 1952. A more recent example is Mark Colvin's (1992) analysis of the New Mexico riot in 1980, in which he argues that the riot was a consequence of organizational breakdown and the fragmentation of the inmate society.

Deprivation

Deprivation theories (including rising expectations, grievance dramatization, and relative deprivation) emphasize the ways in which violent protest is rational action pursued by the oppressed. What unites these analyses is the implication that there is a relationship between a precipitating event and a reservoir of grievances. One proponent of this view is Vernon Fox (1973). His "powder keg" theory maintains that inhuman conditions make the prison a time bomb waiting to explode, which can be sparked by a relatively trivial incident that ignites a savage uprising (for instance, a drunken fight at New Mexico). This has many similarities to the accounts advanced by some journalists and officials who often attest that riots are caused by bad conditions, overcrowding, understaffing, poor security, and the toxic mix of inappropriate prisoners.

However, as Michael Cavadino and James Dignan (2002, p. 19) point out, if this is the case, then riots would only occur in the British context in local prisons (institutions that hold inmates on short sentences and allocate those serving longer sentences to other facilities) and remand centers (jail), where these factors are particularly prevalent. Yet prior to 1986, major disorder was almost entirely in the "dispersal" prisons, which are not overcrowded or understaffed and where security is at a maximum. Since 1986, the pattern has been reversed, with most major riots occurring in local prisons and remand centers. Again this account faces difficulties in explaining these incidents, because these institutions lack the toxic mix of prisoners held to be important factors propelling disorder.

Legitimacy

Bert Useem and Peter Kimball's (1989) examination of nine prison riots in the United States provides a fresh understanding of prison disorder as it introduces the issue of legitimacy as crucial to structuring institutional stability. They argue that well-managed prisons perpetuate conformity, whereas breakdowns in administrative control render imprisonment illegitimate in the eyes of the confined. They claim that prisoners do not

> riot merely because they are deprived of the amenities available outside of prison—for punishment is the purpose of prison—but because the prison violates the standards subscribed to concurrently or previously by the state or by significant groups outside of the prison. (Useem & Kimball, 1989, p. 219)

Their study anticipated Lord Woolf's conclusion that the 25-day occupation of Strangeways prison in Manchester, England, was due to widely shared feelings of injustice, and the explicit argument is that there are variable conditions under which the confined accept or reject custodial authority. It is difficult to underestimate the significance of Woolf's report in English prison management. Not only does it mark a decisive break with previous government understandings of prison unrest, but it is also universally regarded as the most important examination of the prison system in the past 100 years. The recipe of reform Woolf advocated is widely understood as one which will take the prison system out of the 19th century and into the 21st.

CONCLUSION

The concept of legitimacy locates the study of prison riots in the broader problem of order familiar to social and political theorists. By doing so, it establishes that there are no simple answers to the question of why prisoners rebel in the ways that they do. In fact, it raises the pressing issue of how such matters as age, class, gender, race, religion, and sexuality challenge a universalizing notion like legitimacy. Perhaps the unsettling conclusion to be drawn from this review of prison riots is that they ought to happen more often. Explaining why they do not involves recognizing that prisons typically generate diverse forms of social order in spite of frequently illegitimate distributions of institutional power.

To take the issue of gender, it is clear that prison riots are overwhelmingly concentrated in male prisons, which suggests that forms of "protest masculinity" are significant elements structuring the incidence of unrest. However, it is also important to recognize that women can and do seriously disrupt institutional regimes. For instance, historically "outbreaks of 'smashing up,' where girls would seriously damage their rooms and their contents" (Cox, 2002, p. 98) were not uncommon in the interwar period in Britain, while research in contemporary prisons has further indicated the versatile ways in which women resist institutional power. So while gender differences might structure the sheer amount of unrest, it is essential not to overstate the distinctions between the ways in which women and men experience imprisonment, as this can serve to reinforce stereotypes (such as, men are "active" and women are "passive").

It is also the case, especially in the U.S. context, that the politics of race and racism play important roles in determining the character of prison unrest. Perhaps this is nowhere better illustrated than at Attica, where the inmate leaders were drawn from the Black Muslims, Black Panthers, and Young Lords, while the ferocious storming of the prison was fired by counterrevolutionary zeal and a hunger for violence among the assembled rural, white troops. In more recent years, the "Balkanization" of inmate society combined with the phenomenon of mass imprisonment of minority urban males has had major implications for post-rehabilitation prison riots, the full social and financial costs of which have yet to be estimated—a long overdue task that is now more urgent than ever.

ROSENBERG, ETHEL (1915–1953) AND JULIUS (1918–1953)

Ethel and Julius Rosenberg were both convicted of conspiracy to commit espionage against the United States for the Soviet Union in 1950. They were executed three years later. To this day, controversy rages as to whether they were actually guilty.

BIOGRAPHICAL DETAILS

Ethel Greenglass was born September 18, 1915, in New York City. She graduated from high school at the age of 15 and went on to become a clerk for a shipping company. She was fired from this position four years later because of her active engagement as the organizer of a strike of 150 women workers. Her

activism at work and her interest in politics lead Ethel to join the Young Communist League.

Julius Rosenberg was born on May 12, 1918, in New York City to Polish immigrants, Harry and Sophie Rosenberg. He graduated from high school at the age of 16 and went on to study electrical engineering at the City College of New York. While attending college, Julius joined the Steinmetz Club, which was the campus branch of the Young Communist League. Ethel and Julius met and married in 1939.

In 1940, Julius was hired as a civilian employee of the U.S. Army Signal Corps and was promoted to the position of inspector in 1942. Also in 1942, the Rosenbergs became full members of the American Communist Party. One year later, however, in 1943, they both left the Party. Even so, Julius was fired from the Signal Corps in 1945 when his past membership in the Communist Party emerged. Julius then worked at the Emerson Radio Corporation before forming G&R Engineering Company with David Greenglass (Ethel's brother), Bernard Greenglass, and Isadore Goldstein in 1946. Prior to running the small machine shop in New York City, David Greenglass had worked at Los Alamos Laboratory in New Mexico as a machinist for the U.S. government on the Manhattan Project that was engaged in developing the first atomic device.

ACCUSED OF ESPIONAGE

In 1950, the government arrested David Greenglass and accused him of spying for the Soviet Union when he worked on the Manhattan Project in Las Alamos. The Soviet Union had detonated their first atomic bomb a year before, at the height of the U.S. offensive against Korea. Many in the administration felt that this maneuver had lead to the Communist aggression in Korea.

Greenglass was offered a plea bargain for a lesser sentence for himself if he agreed to confess and turn in others involved in the spy ring. Greenglass told the federal prosecutors and the Federal Bureau of Investigation that he was recruited to obtain information about the development of the atomic bomb by Julius Rosenberg. As a result, Julius Rosenberg was arrested on July 17, 1950, and Ethel Rosenberg was arrested a little over a month later on August 11, 1950. They were both accused of providing information about the atomic bomb to Soviet agents during World War II, in 1944 and 1945.

THE ROSENBERG TRIAL

The Rosenbergs denied any involvement in espionage against the United States and maintained their innocence throughout the trial. The main evidence against them arose from the testimony of Ethel's brother David Greenglass, who, given his own self-interest in this case, may not have been the most reliable source of information. Even so, the jury found the Rosenbergs to be guilty, and Judge Kaufman sentenced them to be executed in the form of electrocution.

There were several attempts during the next two years to appeal their death sentences. Ultimately, however, each new appeal was rejected. Four justices of the Supreme Court were willing to stay the Rosenbergs' executions, but 5 concurring votes are required. The Rosenbergs were executed on June 19, 1953, at Sing Sing Prison in upstate New York. They became the first couple to be put to death, and the first to be executed by the federal government for espionage in the United States.

CONCLUSION

Over the years, numerous scholars have criticized David Greenglass's testimony. In 2001, Greenglass himself made an astonishing confession that his trial testimony and that of his wife, Ruth Greenglass, concerning Ethel Rosenberg's role in the conspiracy was untrue. Consequently, it remains unclear whether or not the Rosenbergs were actually Soviet spies or just victims of the virulent anti-Communism of the times.

ROTHMAN, DAVID J.

David J. Rothman is known to criminologists for his writings in social history. In *The Discovery of the Asylum: Social Order and Disorder in the New Republic* published in 1971, Rothman wrote about the poor, orphaned, insane, and criminal during the colonial and Jacksonian periods in the United States. In *Conscience and Convenience,* published in 1980, Rothman extended his account into the Progressive era. In these studies he produced a new kind of analysis by focusing on the socially marginalized who had been previously ignored by historians and other academics.

Rothman is currently the Bernard Schoenberg Professor of Social Medicine and Director of the Center for the Study of Society and Medicine at the Columbia College of Physicians and Surgeons, Professor of History at Columbia University, and Chair of the Open Society Institute program on Medicine as a Profession. He publishes widely on bioethics, medicine, the medical profession, organ trafficking, and death.

THE PRISON

In *Discovery of the Asylum,* considered a classic account of prison history, Rothman asks a very straightforward question: Why the prison? Why not some other form of punishment? Why do we lock up criminals and institutionalize the insane? Why do we segregate and isolate the deviant and the vulnerable? Why did the prison replace the public whipping and execution of criminals? These questions appear so simple that we can easily underestimate their sophistication and significance. However, they are designed to challenge our very assumptions about the naturalness and logic of the prison. Even though humanitarians, state legislators, and elites turned away from capital punishment in the early 19th century, Rothman suggests that the prison was not the only viable alternative.

Rothman explains the emergence of the prison and other forms of confinement in the Jacksonian period (1820s–1830s) as an attempt to restore social order to a traditional society altered by revolution and democracy. The new republic experienced unprecedented social changes that increased both social mobility and dislocation. In post-revolutionary America, the nation's population and capitalist economy quickly expanded, people left family farms and moved into cities and migrated to the western territories in record numbers. The subsequent social and economic shifts undermined the social hierarchies of the colonial era and weakened the informal social controls of the family and church. At the same time, political authority moved away from the local community as states centralized their decision-making powers. These social and political shifts required a new response to crime as previous colonial forms of punishment—banishment, community policing, local justice—no longer made sense and lost their legitimacy.

Rothman explains that, as Americans broke away from English rule, they experienced a heightened sense of optimism about the new democratic society's ability to solve the problems of crime, poverty, insanity, and other signs of disorder. Reformers and legislators no longer blamed crime on the offender's sinful soul but rather thought crime

to be a consequence of an unstable environment, overflowing with corruption. The prison would not only isolate offenders from temptation, but its well-ordered routine, discipline, and organization would serve as a model for the larger society, a society in need of social stability and social order.

WHY THE PRISON FAILS YET IS NOT ABOLISHED

Burdened with these lofty goals and expectations, the prison failed. It not only failed to restore social stability, it failed to reform offenders. By turning his attention to post-1850s America, Rothman details how the penitentiary became a custodial warehouse where conditions were often brutal, unsanitary, and overcrowded. Yet, despite its deterioration, the basic idea of the prison, that is to say, the confinement of offenders in institutions, persisted well into the 20th and 21st centuries.

In *Conscience and Convenience* Rothman examines why the prison survived as such a popular form of punishment, despite the introduction of alternatives such as probation, parole, indeterminate sentencing, and individualized treatment. He finds that even though Progressive reformers were highly critical of the Jacksonian reformers' near-exclusive reliance on confinement, their own innovations merely complemented rather than replaced the prison. Progressive ideals about curing crime and rehabilitating offenders could not counter ingrained punishment practices, nor the growing institutionalization of custody, which was favored by criminal justice administrations in charge of the prison.

CONCLUSION

Rothman, like Michel Foucault in France and E. P. Thompson in the United Kingdom, linked his academic interests to major social and political upheaval throughout the 1960s. As antiwar activists, civil rights protestors, and other social movements began to question legitimacy of the state itself and the exercise of power in democratic societies, so did academics. By focusing his intellectual attention on state power, Rothman produced a major paradigmatic shift in scholarship. He offers a new way of thinking and writing about history that necessarily places power dynamics and questions of inequality at the heart of the analysis. This view continues to influence students of punishment today and how we understand the prison.

RUBY, JACK (1911–1967)

Jack Ruby killed Lee Harvey Oswald while Oswald was being transferred from the Dallas police headquarters to a more secure place of confinement. At the time, Oswald stood accused of assassinating John F. Kennedy on November 22, 1963. The manner in which Ruby was able both to possess a weapon in police custody and to gain access to such a high-notoriety offender as Oswald raised numerous questions about the management of penal institutions and those awaiting trial. For that reason Jack Ruby remains an important figure in the history of the U.S. penal system.

BIOGRAPHICAL DETAILS

Jack Ruby was born Jack Rubenstein on March 25, 1911, in Chicago, Illinois. He was the fifth child of eight born to Joseph and Fannie Rubenstein. Ruby's father, Joseph Rubenstein, was born in Poland and

was a carpenter by trade. He entered the United States in 1903 and joined the carpenters union in 1904. Ruby's mother, Fannie Rubenstein, also born in Poland, followed her husband to the United States in 1904.

Ruby reportedly completed the eighth grade at the age of 16 in 1927, before dropping out of school. From there, he returned to life on the streets of Chicago in his lower-class neighborhood, hustling and selling "scalped" tickets to various sporting events with his friends. Between 1933 and 1937, Ruby and several of his Chicago friends moved to Los Angeles and San Francisco in search of work, before returning to Chicago.

RUBY MOVES TO DALLAS

Ruby moved to Dallas, Texas, in 1947, where he tried, without success, to manage several nightclubs and dance halls. Over the years, he entered into multiple partnership agreements with acquaintances, only to find that he was not making enough profit to pay his monthly rent and taxes. Ruby never married and earned barely enough money in his business ventures to support himself. From time to time he would borrow money from friends and other family members to make ends meet. Ruby was reported by many, especially his employees, to have a violent temper and resort to physical violence in matters of confrontation.

During his 16 years in Dallas, Ruby had several encounters with the Dallas Police Department. The Warren Commission that was set up after Ruby killed Oswald found that Ruby was arrested eight times between 1949 and November 24, 1963. The offenses and charges were minor in nature. Some charges were never filed, and Ruby was released on the same day, while others were either dismissed or resulted in a minimal monetary fine.

RUBY'S ARREST

On November 24, 1963, Ruby was arrested one more time, joining Lee Harvey Oswald, accused assassin of President John F. Kennedy, in the basement garage of the Dallas police headquarters. Just as Oswald was being moved from this location, Ruby shot and killed him. The killing was unintentionally broadcast on live television since the media were filming Oswald's transfer.

Ruby was subsequently tried for and convicted of the murder of Oswald. He was sent to prison, where he died of lung cancer on January 3, 1967, while awaiting a retrial. Little is known or written about his prison years other than that his cell was isolated from the rest of the prisoners and maintained with full-time security.

CONCLUSION

To date, there is no clear answer as to why Ruby killed Oswald on that Sunday morning. Instead, three main themes or theories surround Ruby's involvement. Some propose that Ruby had Mafia connections and was hired to kill Oswald. Others argue that Ruby acted completely alone because of his dedication to the president. Finally, and most controversially, still others propose that there was a governmental conspiracy and cover-up. Ruby himself claimed to have killed Oswald because he was upset and distraught over the president's assassination. Whatever his motivation, Ruby's actions demonstrated the potential risks of dealing with high-notoriety offenders and the need for substantial security in police lockups.

RUIZ v. ESTELLE

A federal class action lawsuit that twice reached the Supreme Court, *Ruiz v. Estelle* began in 1972 as a hand-printed inmate complaint and evolved into one of the most important prisoner rights cases in American history. Bitterly contested at every stage, the case pitted jailhouse lawyers and their advocates against one of the most entrenched, well-respected prison establishments in the nation, the Texas Department of Corrections (TDC). The result was a revolution in Texas punishment: a capacious construction program combined with a bureaucratic overhaul of a labor regime handed down from slavery. Yet when *Ruiz v. Estelle* finally came to a close 30 years after it began, it left behind an uncertain legacy.

BACKGROUND

In the decades before *Ruiz*, Texas had assembled a uniquely regimented and economical penal system. With its punishment and gang labor traditions rooted in slavery and convict leasing, the state operated plantation prisons that were oriented more toward profit than rehabilitation. After World War II, a modernizing overhaul diversified prison industries and expanded educational programs. However, under a triumvirate of powerful directors—Oscar Bryon Ellis (1948–1961), George John Beto (1962–1972), and Ward James Estelle, Jr. (1972—1983)—the TDC most distinguished itself with an aggressive "control model" of inmate management.

Relying on unbendable rules, a paramilitarized, fiercely loyal guard force, and a prodigious network of inmate snitches and enforcers, known as "building tenders" (BTs), Texas prisons stood out as perhaps the most predictable and authoritarian in the nation. In an era of increasing prison disorder, this achievement attracted international accolades and propelled Ellis and Beto to the presidency of the American Correctional Association in 1958 and 1969. When a repeat armed robber named David Resendez Ruíz began drafting his fateful lawsuit, therefore, he was taking on what many wardens regarded as the "number one [prison system] in the nation" (MacCormick, 1977, 12).

Though the Ellis control dynasty proved politically popular and remarkably resilient, a number of factors gave jailhouse lawyers, or writ-writers, momentum in the early 1970s. First, in the aftermath of the 1971 Attica rebellion and pathbreaking prisoner rights cases like *Cooper v. Pate*, federal judges were abandoning the "hands-off doctrine." Second, partly in reaction against the civil rights movement, Texas politicians were pioneering a retributive shift in criminal justice policy that would place enormous strain on the TDC, expanding the prison population and forcing cash-strapped administrators to rely more on BTs, who became de facto convict guards. Into this volatile mix stepped an eclectic group of activists who would eventually upend the TDC. They included dogged inmate writ-writers, notably Ruiz and his mentor Fred Arispe Cruz, the most prolific of the convict litigants; a handful of radical prisoner advocates, namely Frances T. Freeman Jalet, an anti-poverty attorney from New York who began assisting Texas prisoners in 1967; and finally federal judge William Wayne Justice, a homegrown Texas liberal who had already outraged many whites with aggressive rulings in a school desegregation case.

TRIAL AND RESISTANCE

The case began when Ruiz filed a petition in Judge Justice's east Texas district court seeking redress under the 1871 Civil Rights Act for constitutional violations at the Eastham Farm, where Ruiz had been confined before joining other writ-writers on the disciplinary "eight-hoe squad" at the Wynne Farm. Disturbed by the steady stream of convict complaints pouring across his desk, Justice decided to consolidate Ruiz's writ with others and thereby adjudicate the Texas prison system as a whole. He invited William Bennett Turner, formerly of the National Association for the Advancement of Colored People, to serve as lead attorney, and directed the U.S. Justice Department to investigate,

thus orchestrating one of America's most contentious civil rights lawsuits from the bench.

At issue were alleged violations of both the Eighth and Fourteenth amendments, involving physical safety, living and work conditions, summary punishments, and access to the courts. Yet through six years of acrimonious pretrial wrangling—during which time the state harassed writ-writers, denied every charge of wrongdoing, and aggressively appealed—it became clear that more was at stake than mistreatment or legal principle. Because the TDC had achieved such national renown, the case became a battleground for the future of corrections in America, with plaintiffs and defendants disagreeing about fundamental issues like the purposes of punishment, even the norms of civilization. In legal briefs, both sides presented inverted portraits of the TDC. After touring various facilities together, an expert witness for the defense pronounced Texas's control model the "best in the world . . . superior to any other state system," while the reviewer for the prisoners called Texas's plantations "probably the best example of slavery remaining in this country" (Crouch & Marquart, 1989, p. 125).

Extending from October 1978 to September 1979, the exhaustive trial proved equally divisive. Defense attorneys spotlighted the TDC's virtues—its low cost and strict discipline—while plaintiffs portrayed a barbaric throwback in which dehumanized inmates slept on the floor, endured racist harassment, and toiled endlessly on backbreaking field gangs. Depicting a climate of terror, which they claimed undergirded the TDC's famously well-ordered exterior, they described ritualized beatings, rapes, even murders—all committed with impunity by prison officers and BTs. One prisoner summed up his prison experience as, "Slavery, man. Human slavery" (Krajick, 1978, p. 17).

Shaken by 11 months of harrowing testimony, Judge Justice sided squarely with the plaintiffs and declared Texas's entire prison system unconstitutional in December 1980. "It is impossible . . . to convey the pernicious conditions and the pain and degradation which ordinary inmates suffer within the TDC units," he concluded in a passionately worded 248-page opinion (*Ruiz v. Estelle,* 503 F.Supp. 1265 (S.D.Tex.1980)). Having lost faith in top TDC officials, Justice appointed a special master, Vincent M. Nathan, to oversee compliance, and he issued extraordinarily detailed instructions to ease overcrowding, professionalize health care, improve living conditions, abolish the BT system, and guarantee inmates access to the courts. Likening his exacting ruling to a wake-up call, Justice later remarked, "Old hands in the mule business say that the best way to get a mule's attention is to hit it hard, right between the eyes" (Crouch & Marquart 1989, p. 117).

Director Estelle, by contrast, dismissed the judge's treatise as "a cheap dime store novel" (Martin & Ekland-Olson, 1987, p. 176). Determined to resist in the tradition of states' rights, he and his administrators undermined the special master, continued the BT system under a new name, and fought vigorously on appeal. Yet when the Fifth Circuit Court of Appeals upheld most of Justice's ruling in 1981, and as the TDC's legal bills mounted, Estelle began losing allies. Legislators lambasted the TDC as "accountable to no one" (Crouch & Marquart, 1989, p. 139). A top TDC attorney, Steve J. Martin, broke ranks, and members of the Board of Corrections began asserting their authority for the first time in decades. Finally, in October 1983, Estelle resigned, bringing the once-revered Texas control model to an inglorious conclusion.

COMPLIANCE AND AFTERMATH

After Estelle's departure, a shell-shocked TDC moved haltingly toward compliance. Appeals continued to bounce among federal courts, and Justice once held the state in contempt for foot-dragging. Nonetheless, under a rapid succession of new directors, the agency gradually began reshaping its plantation prisons into a constitutional penal system. Long-serving officers lost their jobs and building tenders their privileges. Out-of-state bureaucrats formalized procedures, revamped work and disciplinary practices, and stripped wardens of their authority. To cope with overcrowding, officials temporarily erected tent cities, while legislators funded

a gargantuan construction program. Signaling the start of a new era, both sides signed a court-sanctioned consent decree in 1985. "I want to inform our staff that the war is over," declared Robert Gunn, the new corrections board chair. "The side of reform has won" (Crouch & Marquart, 1989, p. 146).

As often happens in prison politics, however, the triumph of reform brought unexpected consequences. Amid thousands of new hires, many of them women and people of color, TDC's insular *esprit de corps* fissured, breeding resentment among old timers. Veterans complained about voluminous paperwork and dangerous working conditions. Indeed, as staff morale plummeted, assaults on guards shot up by 565% between 1983 and 1985. Among prisoners, *Ruiz* had equally unsettling effects. As the BTs' monopoly on force collapsed, the most aggressive convicts filled the void. Fueled by a proliferation of prison gangs, fights, stabbings, and homicides all intensified after 1979, culminating in a 1984–1985 bloodbath, during which 693 inmates were stabbed and 52 murdered.

In response to this carnage, policymakers haphazardly settled on a course of action that would remake Texas prisons and influence corrections nationwide. Although they could have adopted any number of strategies to comply with Justice's orders, including an expansion of parole, reliance on smaller facilities, or an emphasis on rehabilitation, state leaders instead chose to build and punish their way out of crisis. In this respect, they joined a retributive revolution sweeping the country. To quell inmate-on-inmate violence, the state institutionalized administrative segregation on an unprecedented scale, locking down 17,000 inmates in 1985 and throwing up a series of high-tech supermaxes, in which inmates would languish 23 hours a day in isolation cells. To cope with overcrowding, which lawmakers exacerbated by enacting ever-harsher criminal sanctions, the state embarked on one of the grandest public works projects of the 20th century, building more than 100 prisons in just 20 years.

This breakneck expansionism created problems of its own, thus prolonging *Ruiz*'s remedy phase. After extensive new hearings, Justice concluded in 1999 that Texas's prison system remained cruel and unusual: its health care system still inadequate, its protections for weaker inmates still insufficient, its officer corps still molded by a "culture of sadistic and malicious violence," and its sprawling network of supermaxes, the largest in the nation, functioning as "virtual incubators of psychoses" (*Ruiz v. Johnson,* 37 F.Supp.2d 855 (S.D.Tex.1999)). Following another round of refinements, Justice remained dubious of Texas's commitment to constitutionality; so did David Ruiz, who returned to prison in 1984 and continues to conduct legal work from a cramped isolation cell near Huntsville. In the lockdown climate of a new, more conservative age, however, Justice and the plaintiffs he empowered finally relented. Hamstrung by the 1996 Prison Litigation Reform Act and pressured by the Fifth Circuit to drop the case, the venerable judge, who had devoted much of his career to *Ruiz*, closed the case on June 17, 2002.

CONCLUSION

As the most comprehensive, hard-fought prisoner rights case in American history, *Ruiz v. Estelle* had a profound and lasting impact. Assessing its legacy, though, is a challenging task. On one hand, Texas prisoners today are less likely to endure grueling field duty, assaults by staff, and negligent medical care than their counterparts before *Ruiz*. On the other, their sentences tend to be longer, chances for early release harder to come by, and terms in solitary harsher and more frequent. Most starkly, Texas prisons today operate on a different scale than their predecessors. Whereas the state's 14 prisons confined 16,000 inmates and subsisted on a $19.5 million budget in 1972, by 2002 Texas's 114 facilities were locking up 146,000 persons and devouring $2.5 billion a year. This makes Texas's prison system the largest in the United States and one of the largest in the world. *Ruiz v. Estelle* helped build this punishment colossus, even as it mandated improvements and overthrew one of America's most powerful prison cliques. As such, the landmark case illuminates both the promise and perils of court-ordered penal reform.

RUSH, BENJAMIN (1747–1813)

Dr. Benjamin Rush was one of the most prominent charter members of the Philadelphia Society for Alleviating the Miseries of Public Prisons, later known as the Pennsylvania Prison Society. Founded in 1787 by 37 distinguished and successful Philadelphia citizens, including Benjamin Franklin, the society was formed to address the problems of criminal punishment and incarceration in the new nation. Dr. Rush's signature topped the list of charter members entered on the first page of the minutes of the society's initial meeting.

BIOGRAPHICAL DETAILS

Rush was born outside of Philadelphia in 1747. His early boarding school experience under the tutelage of Reverend Samuel Finley combined with his college years at the College of New Jersey (Princeton), presided over by Presbyterian minister Samuel Davis, to imbue in him a religious fervor that emphasized the need to serve the common good and that attributed many of society's problems to moral failings. At the University of Edinburgh in Scotland, where he was influenced by the rationalist ideas of the Enlightenment with its skepticism of religion and strong belief in science, Rush earned his medical degree in 1768.

After medical school, Rush returned home in 1769 and became a professor of chemistry at the College of Philadelphia. In 1791, when the college merged with a university, he was appointed professor of medicine and clinical practice. He was considered one of the most influential physicians in the United States. During the yellow fever epidemic in Philadelphia in 1793, which killed an estimated 6,000 people, Rush worked tirelessly to develop a successful treatment and visited scores of sick people on a daily basis. In 1796, he wrote an important and graphic account of the yellow fever epidemic and described treatment options.

POLITICS, MEDICINE, AND PENAL REFORM

Dr. Rush did not limit his activities to the field of medicine. He was deeply involved in the politics of his time and was very influential. In 1776, he signed the Declaration of Independence, and in 1787, he was a member of the Constitutional Convention in Philadelphia. He served as president of a society that advocated the abolition of slavery, was a founder of the Philadelphia Bible Society, and a vice president of the American Philosophical Society. He also received honors from several European leaders for his contributions to medicine.

A year before the founding of the Philadelphia Society for Alleviating the Miseries of Public Prisons, Pennsylvania introduced new legislation that significantly reduced the use of corporal punishment and replaced it with hard labor to be performed in public. Known as the "wheelbarrow laws," prisoners wore distinctive garb and were weighted down with balls and chains, which they

carried with them from location to location. Many reformers were outraged by the new laws, including Rush, who wrote his first political pamphlet, *An Enquiry Into the Effects of Public Punishments Upon Criminals and Upon Society.* He argued that public sanctions increase an offender's propensity to commit crime by robbing him of his self-respect and encouraging a spirit of revenge. The Pennsylvania Prison Society was formed just two months after Rush read his pamphlet at a meeting in Benjamin Franklin's home of the Society for Promoting Political Inquiries.

Rush, who had a mentally ill son, invented the tranquilizer chair, which used straps to fasten the arms, hands, legs, and feet and an apparatus that held the head. A receptacle under the seat caught excrement. Rush believed that by totally confining an overly excited person in a tranquilizer chair, he or she could avoid a breakdown of their moral faculties. The chair was used to treat the mentally ill as well as criminals. Rush also favored using solitary confinement as a remedy for curing overstimulated minds. His advocacy on behalf of solitary confinement to treat the mentally ill influenced the members of the Pennsylvania Prison Society. Although the separation of prisoners was not a new notion in 1787, having been part of John Howard's platform in England, Dr. Rush's support, formed on what he believed were scientific principles, contributed significantly to its appeal. Not only did separation strengthen an offender's opportunity for religious transformation, it also had a basis in science.

In its first petition to the state legislature in 1788, the Pennsylvania Society protested public punishments and declared for the first time the principle of solitary confinement with labor. Prisoners were to be assigned to separate cells, where they lived and worked 24 hours a day, doing penance for their crimes. They were isolated from each other and from their keepers. That principle eventually became known as the Pennsylvania system and was the core of much of the society's work for the next 50 years. At the society's request, in 1790, the Pennsylvania legislature passed legislation that adopted the solitary system. It was first instituted in the Walnut Street Jail in Philadelphia and later in the Eastern State Penitentiary.

CONCLUSION

Rush's contributions to the Prison Society were numerous but perhaps most important was the ideology he articulated. He synthesized the differences between the members of the Pennsylvania Prison Society who were inspired by religious convictions and those who were motivated by rationalism. Rush applied medical principles to treat criminal behavior, which he believed was caused by diseases of the moral faculty, defined as the ability to know and choose between virtue and vice. An offender's moral faculty could be improved through moral remedies. Vice associated with idleness could be cured with a job. Other vices could be cured by removing the offender from bad companions or by a regular routine that occupied an overstimulated mind. Benjamin Rush was 65 years old when he died in 1813.

S

SAN QUENTIN STATE PRISON

San Quentin, California's oldest correctional facility, was erected in 1852. Along with Folsom State Prison, built in 1880 outside the state capitol of Sacramento, San Quentin was constructed to meet the punishment needs of San Francisco's criminal justice system. The Bay Area, which realized successive waves of immigration, internal and external, from 1850 onward, became a crossroad for travel and expansion in the Pacific region and developed a reputation for lawlessness, quick wealth, and prolific sin unequaled anywhere in the western United States.

Before construction of a permanent correctional facility, the state confined offenders to a 268-ton prison bark, *The Waban,* anchored in the San Francisco Bay. However, the influx of prospectors following the discovery of gold in 1849, Pacific Rim peoples seeking work in the expanding industrial infrastructure of California after the Civil War, and the fallout from successive ore strikes in Alaska and the Yukon created a serious need for a large and efficient penal institution. San Quentin met the multiple needs of the region, housing unprecedented numbers of inmates for the time, females as well as males until 1934, and utilizing inmate labor in public and private ventures. Today San Quentin is the site of a large, sophisticated, and profitable prison industries complex attracting small manufacturing firms, telemarketing, and state contractors.

San Quentin has held a variety of well-known criminals: Caryl Chessman, the alleged "Blue-Light Bandit," whose execution in 1960 stirred global controversy; Charles Manson, the mastermind of the infamous Tate-LaBianca murders in 1969; and George Jackson, the celebrated black militant and writer, shot dead by correctional officers in 1971. San Quentin has also been the site of seminal changes in American penology; it was a leader in the national execution binge of the 1930s, put into practice California's celebrated indeterminate sentencing laws following World War II, and instituted the well-known "bibliotherapy" rehabilitation movement of the 1950s and '60s.

During the 1960s and early '70s, California prisons were the scene of militant political movement among its inmate populations—who maintained a symbiotic relationship with that state's campus radicals, antiwar activists, and political revolutionaries—with San Quentin functioning as the flagship institution in part because of its close proximity to the University of California-Berkeley and the city of San Francisco.

More recently, it was the focus of the nation's shift to the "new penology" of tougher sentencing laws and an incapacitation philosophy in the 1980s, as well as the destination for many men serving

sentences under the Three-Strikes Laws for habitual offenders. Finally, mental health practitioners at San Quentin were instrumental in developing the California Personality Inventory (CPI) that measures and evaluates the socialization of inmates.

THE FACILITY

San Quentin remains an impressive structure situated on 432 acres occupying a small peninsula jutting into San Pablo Bay, approximately 12 miles north of downtown San Francisco and adjacent to San Raphael in Marin County. The "Q," as it is called, currently houses approximately 5,700 inmates in a variety of security settings ranging from open dormitories with and without secure perimeters to a maximum-security unit with condemned prisoners. Its monumental three-sided facade faces the bay and encloses a complex of buildings, including an inmate reception center, exercise yards, chapel, school, and trades shops. It has an annual operating budget of $120 million and a staff of 1,550.

Prisoners employed in the extensive prison industries program at San Quentin manufacture furniture, mattresses, and clothing. They also receive vocational training in dry cleaning, electrical, graphic arts and printing, plumbing, metalwork, and landscaping. Men may also enroll in basic adult education, high school equivalency/GED, and instruction in English as a second language, while many detainees are active in community service (bicycle repair, eyeglass recycling, victim awareness, computer repair for schools), youth diversion programs, religion practice, drug treatment, and 12-step programs.

POPULATION CHARACTERISTICS

The population of the Q has always been shaped by the ethnic diversity of the state. It was the only facility of its kind to house significant numbers of Asian Americans and immigrants in the 19th and early 20th centuries. African Americans did not constitute a numerous group in San Quentin until the post–World War II period. However, the ethnic composition of the facility has changed considerably since the 1980s. African Americans now make up 33% of the total, Latinos/as (increasing steadily since 1982) about 42%, with whites and Asians Americans totaling 24% on average. Two successive policy changes in California law have caused a momentous change in the population of San Quentin: changes in state drug statutes in the 1980s and employment of tough two-strike and three-strike laws beginning in the spring of 1994.

Of those committed to correctional custody in California on two-strike offenses, more than 69% are nonwhite (37% African American and 32% Latino/a). For those incarcerated on three-strikes offenses, 70% have been persons of color (44% African American and 26% Latino/a). Of the 41,000 incarcerated on habitual offender statutes in California between mid-1994 and the end of 1998, 68% were convicted of drug or property offenses, with an average age of 34 years. San Quentin's inmate demographics reflect this trend, as an overwhelming majority of prisoners are black or Latino males in their late thirties, doing very long sentences. The mean time served for drug or property crimes for two-strike offenders has tripled from 1.25 years to 3.6 years and increased by a factor of more 25 times, from 1.25 years to 26 years in prison for those convicted of a third strike.

As one of California's largest facilities and one equipped to handle the most serious offenders, San Quentin has been seriously burdened with long-term inmates, holding populations that are twice the designed bed capacity, a condition that will cost taxpayers in the state $3.5 billion, up from $98 million under the old laws. The cost of providing correctional supervision at the Q has also witnessed a significant increase. The entire San Quentin correctional is represented by the powerful California Correctional Peace Officers Association (CCPOA), which has taken a political hard line on incarceration in the state and at the same time increased their average salary from $24,000 to approximately $45,000 annually.

THE DEATH PENALTY AT SAN QUENTIN

California's most active execution facility is located at San Quentin, where 418 of the state's 510

(506 men and 4 women) executions have been held. As of this writing, 608 men await execution on San Quentin's death row (and 14 women at Valley State Prison for Women at Chowchilla, California). A variety of methods have been used at the Q from hanging (up to 1942), to lethal gas (1942–1992), lethal gas or injection (1992–1994), and subsequently only lethal injection. Its famous two-ton, eight-sided gas chamber, manufactured by Eaton Metal Products of Denver, Colorado, features two stainless steel chairs and four observation windows. Since the resumption of executions in 1992, California has executed 10 persons, while 35 have died awaiting execution, with 13 having committed suicide.

CONCLUSION

San Quentin has always been on the cutting edge of American corrections, introducing new execution methods, handling high-profile prisoners, and employing the foremost penologists. The Q continues to be a proving ground for innovation in penology while maintaining close connections with the state's educational, economic, and judicial institutions. Sadly, the racial composition of the population at San Quentin reinforces the theory that prisons are constructed in part to mediate ethnic differences and resolve cultural conflicts as much as they are commissioned to protect the public.

SANTERÍA

Santería ("way of the saints") is a syncretistic religion that combines, or fuses, the elements, beliefs, practices, and rituals of African slaves, Roman Catholicism, and French spiritism as espoused by Allan Kardec. It is properly referred to as *Regla de Ocha* ("the rule of the orisha") and by other regional variants such as *Lukumi* and its Brazilian name *Candomble Jege-Nago*.

HISTORY

The historical roots of Santería can be traced to 16th-century Cuba, where slaves were imported from modern-day Haiti and the Dominican Republic and from later African nations, primarily Nigeria and the Congo. Subjected to the harsh realities of the slave trade, these individuals were forcefully baptized into Roman Catholicism and prohibited from openly practicing their native religion, which involved the worship of God, or *Olorun*, and lesser deities, or *orishas*. Noticing similarities between their native orishas and the various Catholic saints, and in an effort to retain their distinct religious belief system, the slaves created a new and complex religion in which each orisha was equated with a specific saint from the Roman Catholic faith. For example, the orisha Agayu is equated with Saint Christopher and the concept of fatherhood; while the guardian and provider of wisdom is Orula, who is associated with Saint Francis of the Roman Catholic Church.

Later, the works of Allan Kardec, a 19th-century French educator and philosopher, gained widespread

readership and following among the Cuban people. By 1890, Kardec's belief in a spiritual hierarchy, where saints could be invoked through a medium and ascend to a higher spiritual level, was assimilated into the existing philosophy, beliefs, and practices of Santería. Kardec's belief that human invocation of the spirits could be accomplished through the use of hypnosis, or being placed in a trance state, was incorporated into Santerían practices and rituals as a way for followers to receive direct guidance from the orishas.

Isolated Santerían practices were documented in the United States during the 1950s and 1960s. However, the emergence of Santería gained widespread attention and an increased following as a result of the Mariel boat lift of 1980, in which more than 100,000 Cubans entered the United States. Many of these Cuban refugees were later detained on federal immigration charges, thus importing the practice of Santería into the federal prison system. Today, Santería is more common in large urban areas with ethnically diverse populations that include greater numbers of Cuban, Caribbean, and Latin American immigrants. Followers of Santería can be found among members of all social classes; however, the practice is more prevalent among individuals residing in the more impoverished inner-city districts, barrios, and ghettos. Santería is practiced by both males and females. Unlike many other religions, females exert an equal role both as worshippers and as leaders. While priests are referred to as *santeros* and priestesses are called *santeras*, both are referred to by the gender-neutral term *olorisha*.

BELIEFS AND PRACTICES

The basic principles and centrally important practices of Santería revolve around the followers' relationships with the orishas. Historically, prior to being imported into Cuba as slaves, the African Santerían recognized between 400 and 700 unique orishas. Today's Cuban followers worship 16 orishas, with many American practitioners recognizing only 7 orishas, which are collectively referred to as the "seven African powers." The role of the orishas within the Santerían belief system is to rule over and act as guardians of the forces of nature and human activities. For example, Elegba acts as the intermediary between the human and spiritual worlds; as the gatekeeper, this orisha must be contacted first before communication with the other orishas is permitted. Ogun is the owner of war, labor, and technology; Oya is the ruler of the winds; and Oshun is the guardian of streams and rivers, embodying love and fertility.

Key or vital activities of Santería include divination, or communication with the orishas, and appeasing or praising the orishas through organized and individualized prayer and festivals. Divination typically occurs when a follower or believer of Santería desires spiritual healing or counseling to address a particular problem, such as a financial crisis, or to manage more personal issues such as love or friendship. Olorisha are consulted who call upon the orishas through a variety of methods, which may involve the manipulation of nuts, cowrie shells, or other sacred objects. Through these objects and the olorisha's interpretation, the orishas manifest themselves and offer the appropriate solutions and remedies.

Perhaps the most controversial aspect of Santería involves the use of offerings and animal sacrifices in order to praise the orishas, to purify followers of their sins, and to provide the orishas with sustenance to ensure their continued effectiveness. These animal sacrifices most commonly occur during birth, marriage, and death rites, as well as during the initiation of new members and at an annual celebration. Specific animal sacrifices and offerings are associated with each orisha. For example, sacrifices of dogs or male roosters are offered for Ogun, while ducks and goats may be used to offer gratitude to Yemaya, the orisha associated with maternity. Followers only eat the meat after the symbolic ashes are consumed by the appropriate orisha, with the animal's blood being sprinkled on stones that symbolically represent the orisha's head.

As with animal sacrifices and offerings, each orisha is worshiped and honored with a specific dance and drumbeat during celebratory, or *bembe,* festivals that occur at the *centros* or communal gathering place. Through the use of dance

movements, the pantomiming of symbolic actions, and the appropriate bata drumbeats, followers attain an altered state of consciousness or lapse into a trance state. This state becomes a vehicle for communication between the spirit world of the orisha and the human world, with the orisha possessing the dancer. During this trance state, the orisha communicates spiritual advice and warnings, through the dancer, to other festival participants and attendees.

Plants, herb, and weeds, collectively referred to as *egwe,* are a predominant component of the religion, serving both medicinal and ceremonial purposes. The olorishas, knowledgeable about which plants and herbs correspond to each of the orishas, use these to prepare special mixtures that tap into the "ache" or mystical religious properties of the plants and herbs. The ache of the plants and herbs is believed to possess healing powers that can be effective for curing certain diseases associated with gastrointestinal, respiratory, and skin disorders. The tranquilizing properties of many of these plants and herbs are believed to be useful for alleviating pain associated with headaches and for relieving the discomfort of childbirth.

Plant and herb preparations are employed during group ceremonies and are typically used to cleanse and prepare individuals prior to making contact with the orishas and to purify other sacred objects, such as beads and knives, which will be used during the ceremony. Special plant and herb mixtures are also used on individuals during initiation ceremonies and are prescribed for fumigating and cleansing homes to remove and prevent negative spiritual influences. Some of the mixtures are retained in special bottles, as the ache is thought to remain potent and viable for years.

Daily prayers and private rituals are often performed before domestic altars that contain statues or icons of various Roman Catholic saints, candles and flowers that signify devotion, and various water receptacles that denote the strength and purifying effects of water. Herbs from previous group ceremonies can be found that are indicative of their continuing healing and restorative properties during individual worship. As with other aspects of the religion, each altar reflects the unique colors, objects, and characteristics associated with specific orisha as revealed through the religion's strong oral tradition of recounting orisha-specific myth and folklore.

CORRECTIONAL ISSUES

The most common interface between Santería and the correctional system occurs within the context of inmate religious preferences and practices and prison administration and security concerns. Correctional administrators, and subsequently the courts, are faced with balancing the inmates' constitutionally protected freedom of religion with safety and security issues within the jail or prison. They must also answer legal questions such as: Is Santería a protected religion under the First Amendment? and Can correctional policy define religious practices and paraphernalia that are associated with Santería, such as animal sacrifices, clothing, beads, icons, and inmate-constructed shrines or altars, as prohibited behaviors and contraband?

Many state correctional systems, as well as the Federal Bureau of Prisons, accept Santería as an approved or authorized religion, granting believers the same rights and privileges that are extended to members of other religions. Santerían inmates are permitted to use prison chapels for communal worship, receive authorized religious literature, and possess religious artifacts as long as the items are on the institution's list of materials that inmates are allowed to possess. While the practice of Santería is limited by institutional restrictions and safeguards, it is not shown differential or preferential treatment when compared to any of the more widespread religions such as Christianity, Judaism, or Islam.

CONCLUSION

Santería, like other religions, enables its practitioners to worship and communicate with deities in an effort to better understand their existence, their relationship with nature, to facilitate the resolution of personal problems, and to explain and adapt to current events and situations. These functions are

achieved both personally and collectively, as a group. Parallels between the imported slaves, who developed the religion, and incarcerated inmates can be found that demonstrate the functional uses of Santería to assist its followers in coping with undesirable conditions. Behind prison walls, Santería may be employed as a means for removing guilt, to ask for assistance with a pending legal appeal, to invoke the orishas for self-protection, or to maintain the safety of family and friends in the community. Santería may also serve the collective purpose of reaffirming the practitioners' national racial and ethnic identity.

SATANISM

Cited as everything from a manifestation of mental illness to a cause of mass murder, *Satanism* is a greatly misunderstood and maligned moral philosophy. This confusion is a result of competing definitions of Satanism, a multitude of groups claiming to be Satanists, and a greater number accused of being Satanic. Satanism is best understood as the "literal or symbolic worship of Satan" (Taub & Nelson, 1993, p. 525). Specifically, Satanism is premised on the opposition to Judeo-Christian values and is an unapologetic gesture of defiance and outrage against the hypocrisy of the modern world. In most prison systems in the United States, Satanism is a recognized religion, and its believers are thus entitled to the same freedom to practice their faith as members of other religious groups.

HISTORY

Suspicions of Satanic activity date back to the first century C.E., when the Roman authorities accused early Christians of kidnapping and sacrificing children to the devil. Since then, a number of disparate groups, including Jews, Reformation-era Protestants, Gypsies, decadent poets, Native Americans, physicists, Freemasons, Wiccans, homeopaths, Scientologists, and rock musicians have similarly been accused. Most of these accusations are attributable to ethnocentric or myopic Christian hegemony that views non-Christian groups or activities as serving Satan.

ORIGINS

While some contend that Satanism began in 14th-century France with Templar Knights, and others point to 18th-century Britain's "Hellfire Club," most scholars cite Scot occultist Aleister Crowley (1878–1947) as the first Satanist. Crowley set the stage for Satanism with the founding of Crowleyanity and publication of *The Book of the Law* in 1904. While Crowleyanity was pantheistic, prescribing worship of numerous gods and preternatural beings (including Satan), it was Crowley's dictum, "Do What Thou Wilt Shall be the Whole of the Law," that foreshadowed Satanism's development in late 1960s America.

The Church of Satan (CoS), the foremost Satanic group, was founded by occultist and former criminology student, Anton Szandor LaVey (1930–1997) in San Francisco on *Walpurgisnacht* (a Wiccan sabbath), April 30, 1966 (Wolfe, 1974). Declaring it I *Anno Satanas* (Satanic era, year one), LaVey outlined a philosophy more relativistic and pragmatic (perhaps Machiavellian) than metaphysical. This is seen in several of LaVey's (1967, p. 1) Eleven Satanic Rules of the Earth (most notably, I. Do not give opinions or advice unless you are asked; II. Do not tell your troubles to others unless you are sure

they want to hear them; III. When in another's lair, show him[/her] respect or else do not go there; VIII. Do not complain about anything to which you need not subject yourself. And, XI. When walking in open territory, bother no one. If someone bothers you, ask him[/her] to stop. If [s/]he does not stop, destroy him[/her].).

Satanism is more about personal gratification and self-actualization than the worship of incarnate or spiritual "evil." This point is illustrated by Diane Taub and Lawrence Nelson in their use of the term "atheistic Satanist" (1993, p. 526) to describe the majority of Satanists who view "Satan" simply as a symbol or externalization of human qualities. The sardonic and satirical critique of human folly that constitutes Satanism's core is evidenced in several of LaVey's (1969, p. 25) Nine Satanic Statements (I. Satan represents indulgence, instead of abstinence! II. Satan represents vital existence, instead of spiritual pipe dreams! III. Satan represents undefiled wisdom, instead of hypocritical self-deceit! IV. Satan represents kindness to those who deserve it, instead of love wasted on ingrates! VI. Satan represents responsibility to the responsible, instead of concern for psychic vampires! And, VIII. Satan represents all of the so-called sins, as they all lead to physical, mental, or emotional gratification!).

SATANISM, CRIME, AND PANIC

Concern over Satanism's connection to criminality (from relatively minor acts of vandalism through heinous acts of murder) has long existed, but reached a zenith in the mid-late 1980s. This heightened concern was based not on an increase in the frequency or criminality of Satanic practices, but rather on the rise and increased political influence of the Religious Right and child protection, anticult, and victims' movements. Many accusations of egregious Satanic crimes (torture, ritualized sexual abuse, murder) are more attributable to media sensationalism and the Christian convictions of criminal justice personnel than to evidence, and they do not stand up to rigorous legal investigation and scholarly scrutiny.

SATANISM IN PRISON

Most prison systems recognize Satanism as an official religion. It should, therefore, be protected by the same constitutional guarantees as other faiths. However, while religious freedom is constitutionally guaranteed, and reaffirmed in Title 42 USC §2000bb-1 and Federal Bureau of Prisons Policies §548.10, §548.13, and §548.16, incarcerated Satanists regularly have their rights violated. In the past several years, inmates in Arkansas, Colorado, Kentucky, New Mexico, South Dakota, and South Carolina have brought suits against correctional departments for confiscating or denying them access to reading materials and religious artifacts and preventing them from conducting rites. Prison officials usually prevail by citing their denials as in keeping with "compelling interest" and "institutional security," despite the fact that there is no evidence that Satanism violates either.

CONCLUSION

As a moral orientation, Satanism shares much in common with the political economy of capitalism in 21st-century America. Included among the similarities are the aggrandizement of self, material success and accumulation, personal gratification, and rank individualism. Hence, Satanism, far from being a dark underground religion based on spiritual evil and blood sacrifice, is a relatively conservative ideology that eschews some conservative ideals, such as abstinence and the "family values" of the Christian and political right, and embraces others, including the Protestant work ethic, patriotism, and law and order.

SECTION 1983 OF THE CIVIL RIGHTS ACT

Section 1983 of the Federal Civil Rights Act protects individuals from abuse by governments and their employees. The law reads in part:

> Every person who, under color of any statute, ordinance, regulation, custom, or usage, of any State or Territory or the District of Columbia, subjects, or causes to be subjected, any citizen of the United States or other person within the jurisdiction thereof to the deprivation of any rights, privileges, or immunities secured by the Constitution and laws, shall be liable to the party injured in an action at law, suit in equity, or other proper proceeding for redress, except that in an any action brought against a judicial officer for an act or omission taken in such officer's judicial capacity, injunctive relief shall not be granted unless a declaratory decree was violated or declaratory relief was unavailable. For the purposes of this section, any Act of Congress applicable exclusively to the District of Columbia shall be considered to be a statute of the District of Columbia.

The measure permits individuals to bring civil suits against officials who through "the color" of state law either violate or enable others to violate the civil rights of private parties. Section 1983 is the primary conduit through which prison and jail inmates file individual and class action suits against correctional systems.

HISTORY

This provision began as Section 1 of the Ku Klux Klan Act of April 20, 1871, "An Act to enforce the Provisions of the Fourteenth Amendment to the Constitution of the United States, and for other Purposes." The measure later became Section 1979 of the Revised Statutes before becoming Section 1983 in 42 United States Code. Sometimes known as the "Anti-lynching law" or the "Third force bill" for enforcement of the Fourteenth Amendment's due process, equal protection, and privileges and immunities clauses, the measure became law after extensive congressional debate. Because many state officials in the South aided and abetted the terrorist actions of the Ku Klux Klan, President Ulysses Simpson Grant and members of Congress believed that the measure was necessary to protect individual citizens during the era of Reconstruction.

Section 1983 ultimately became one of the most significant federal laws in existence. A number of landmark cases such as *Brown v. Board of Education, Reynolds v. Sims,* and *Roe v. Wade* began under Section 1983. Although there were fewer than 300 Section 1983 cases during 1961, by the year 2000 parties were filing more than 30,000 cases under the provision. Section 1983 permits individuals to litigate a wide array of civil rights claims concerning a diversity of issues such as jails and prisons, race and gender discrimination, voting, state employment, abortion, mental and physical health, and abuse by law enforcement officers.

"COLOR OF STATE LAW" AND IMMUNITIES

Section 1983 claims may be filed against "persons" who act "under color of state law" (this also pertains to actors in any "Territory or District of Columbia"). The Eleventh Amendment to the U.S. Constitution prohibits individual lawsuits against state governments. However, individuals may sue state officers who act in an official capacity and thereby essentially bring an action against the state. Municipalities and other local governments as well as their employees are generally subject to Section 1983. Beginning with the case *Bivens v. Six Unknown Federal Narcotic Agents* in 1971, the U.S. Supreme Court has

also interpreted the civil rights measure to protect individuals, including prison inmates, from abuses by federal employees. While Section 1983 does not serve as a source of substantive rights, it enables individuals to litigate civil rights and liberties granted by the U.S. Constitution and federal statutes.

FROM "HANDS-OFF" TO "HANDS-ON"

Inmates rarely used the measure during the lengthy "hands-off" era prior to 1964, when the judicial system rarely heard cases against prison administrators. Separation of powers considerations in which courts deferred to the expertise of executive branch officers, and federalism concerns that discouraged national government intervention in state affairs, promoted the hands-off doctrine. For most of the century that followed enactment of what is now Section 1983, the public in general expressed little concern for the plight of those confined in prisons and jails. By the end of the 20th century, however, numerous social, political, and legal changes had occurred that successfully eroded the hands-off doctrine.

Beginning with the case of *Monroe v. Pape* in 1961, the U.S. Supreme Court interpreted Section 1983 as granting federal courts original jurisdiction over claims alleging violations of federal constitutional rights by state or local officials. Although *Monroe* did not pertain to correctional facilities, the case nevertheless signaled that the Supreme Court was willing to intervene on behalf of parties injured by state governments. Three years later, in *Cooper v. Pate,* the Court directly approved the use of Section 1983 on behalf of state prisoners and began the demise of the hands-off period. In *Cooper,* the high tribunal ruled that an Illinois inmate possessed the right to challenge state restrictions on his rights to worship as a member of the Muslim faith. Inmates in other states soon followed by successfully litigating their claims under Section 1983, as the federal judiciary effectively abandoned the hands-off doctrine. By 1970, a judge had ruled that state correctional facilities in Arkansas violated the federal constitutional rights of inmates. A few years later, penal systems in Mississippi and Alabama were under federal orders. The judiciary's increasing willingness to accept Section 1983 claims related in large part to the national civil rights movement and the fact that African Americans represented a substantial proportion of inmates in many penal institutions. At the century's end, however, courts had supervised facilities in almost every state through cases filed by inmates of all races, both male and female, under Section 1983. Women used the law, with some success, to protest gender discrimination and sexual harassment by administrators and staff.

ATTEMPTS TO LIMIT PROLIFERATION OF CASES

The number of Section 1983 cases filed in federal district courts by state prisoners increased from only 218 in 1966 to more than 3,300 in 1972 and to nearly 42,000 by 1996. Congress has made two attempts since 1980 to slow the flow of Section 1983 lawsuits brought by inmates. In 1980, Congress passed the Civil Rights of Institutionalized Persons Act (CRIPA). That measure permitted state correctional agencies to seek certification of grievance procedures through the U.S. Attorney General and federal courts. Inmates were required to exhaust federally certified state grievance procedures before they could file lawsuits against state correctional officers. CRIPA was largely unsuccessful, because few states desired federal certification and few federal judges displayed an interest in such certification.

During 1996, Congress passed the Prison Litigation Reform Act (PLRA). The PLRA requireds indigent inmates to pay filing fees and court costs, to exhaust available administrative remedies, and to prove physical injuries in order to receive damages. Prisoners can no longer bring lawsuits *in forma pauperis* if they have previously filed three or more federal actions that were dismissed as frivolous or malicious, or failed to state a claim on which relief could be granted. During the period immediately following the PLRA, the measure appeared to be reducing the number of inmate actions in federal courts. In 1999, for instance, the number of suits dropped to around 25,000. Some researchers, however, predict a greater number of Section 1983 claims in the future due to the projected growth of state prisoner populations.

INMATE CLAIMS

Federal courts decide a number of cases through the Section 1983 procedural mechanism. Usually substantive claims involve violations of the First, Fourth, Fourteenth, and Eighth Amendments to the U.S. Constitution. Hence, Section 1983 allows prisoners to oppose institutional restrictions on religious practices and official censorship of correspondence and publications under the First Amendment. They may also litigate Fourth Amendment claims surrounding cell and visitor searches and other privacy matters. Under the Fourteenth Amendment's due process clause, Section 1983 permits lawsuits concerning inmate disciplinary privileges and procedures as well as access to legal assistance within correctional facilities. The measure enables prisoners to challenge the total conditions of their confinement, including the quality of medical treatment, overcrowding, and related matters through class action suits under the Eighth Amendment's prohibition against cruel and unusual punishment. In order to prevail under the Eighth Amendment the U.S. Supreme Court requires that prisoners prove "deliberate indifference" on the part of correctional officials.

CONCLUSION

Although many commentators have recently detected a growing tendency for the federal courts to defer to the judgment of correctional officials, it is clear that Section 1983 has led to a significant transformation in the management of penal institutions. The civil rights measure has also altered the relationship between the federal judiciary and state prisons and jails. Inmates continue to litigate under a federal statute initially designed to control the Ku Klux Klan during the post–Civil War era.

SECURITY AND CONTROL

The primary two missions of any correctional agency are to protect the public and to maintain a safe and orderly environment within the prison itself. Correctional administrators have a variety of security techniques at their disposal to help them attain both goals. Even so, prisons are becoming more difficult to manage because, in response to the demise of rehabilitation and the advent of the "Get tough"

movement, inmates serve longer sentences with few incentives to maintain good behavior.

Photo 1 *View of the control station and half of the unit*

CLASSIFICATION

One of the primary means by which prisons try to maintain order is through a system of classification. Correctional classification uses risk assessment to assign inmates to an appropriate security level and custody grade. Their security level indicates the physical design of the institution to which they will be sent and thus how protected the community will be from them. Institutions vary across a number of parameters, including types of perimeter barriers and whether or not they have gun towers, mobile patrols, and housing detection devices. They also operate with specific inmate-to-staff ratios and various forms of internal security. Individuals are assigned to an appropriate institution based on the number and types of architectural barriers that must be placed between them and the outside world to ensure that they will not escape and that they can be controlled.

In contrast to their security level, prisoners' custody classification determines the level of supervision needed so that they do not represent a danger to staff and to other inmates. Their security level also determines the types of privileges they may have inside the prison facility. The assignment of an inmate to a particular institution is based upon the level of security and supervision the inmate requires, as determined by the classification instrument.

PRISON SECURITY BY LEVEL OF PRISON

Prisons are classified and designated by security levels that identify the type of institution required to house inmates based on their final classification score. Since there is not a national design or classification standard for security level and custody status of a correctional facility, there is no consistency in how the two are designated from state to state. However, the main types are (1) supermaximum-security, (2) maximum-security, (3) medium-security, and (4) minimum-security prisons.

Supermaximum ("supermax") prisons are the highest security level of confinement. Not all states have such institutions. The supermax prison can be a freestanding facility or a distinct unit within a facility that provides for the management and secure control of inmates who have been officially designated as exhibiting violent or seriously disruptive behavior. These inmates have been determined to be a threat to safety and security in traditional-high security facilities, and only through separation, restricted movement, and limited direct access to staff and other inmates can their behavior be controlled. The inmates eat and exercise alone, are never allowed contact visits, and are entitled to a few hours a week of solitary recreation in an outdoor exercise yard that is surrounded by a chain-link fence.

Maximum security is either the highest or second highest custody level assigned to an inmate,

Photo 2 *View of the control station*

depending on whether the correctional system has a supermaximum secure level as well. People with this level are thought to require extremely high levels of security and staff supervision. Maximum-secure institutions generally hold prisoners serving long sentences and are designed to confine individuals who pose a severe threat to public safety, correctional staff, and other inmates and therefore impose strict limitations on the freedom of inmates. These prisons are normally surrounded by high stone walls or strong chain fences. They are designed to prevent escapes and to deter inmates from harming one another. Many maximum-secure facilities have electronic detection devices, powerful spotlights, and gun towers strategically placed in the corners or in central locations so that correctional officers have an unobstructed view into virtually every corner of the facility. These prisons have sliding cell doors that are remotely operated from a secure control station, with sanitary faculties in each cell. Inmates in them have virtually no privacy and are typically in their cells 23 hours a day. During the other hour, they may be allowed to shower and/or exercise in the cellblock or an exterior fenced perimeter.

Medium security is the second highest custody level assigned to an inmate and requires the second lowest level of security and staff supervision. Institutions of this security level generally hold inmates who have committed less serious crimes; they are therefore less restrictive and regimented than maximum security prisons. They are typically surrounded by a single or double fence perimeter topped by barbed or razor wire. The area between the fences may contain electronic anti-intrusion devices with infrared or motion sensors that warn correctional staff of an escape attempt. There are also strategically located gun towers and correctional staff on foot or in vehicles who provide "roving security" around the perimeter fences.

There is less supervision and control in medium-security prisons than in maximum-security ones. These facilities often use congregate housing or dormitory-style living arrangements, which contain a group toilet and shower. The inmates sleep in a military-style double bunk and have an adjacent metal locker for storage of uniforms, undergarments, shoes, and personal items. Each dormitory is locked at night, with a correctional officer providing direct supervision of the inmates and their sleeping area.

Minimum-security prisons are the least restrictive and generally house the least violent offenders, long-term felons with clean disciplinary records and good behavior, and people who have nearly completed their sentences. These prisons have far more relaxed perimeter security, usually a chain-link fence surrounding the building that is inspected on a regular basis, but have no armed watchtowers or roving patrol. There is less supervision and control of inmate movement than at medium-security prisons. The institutions usually have nonsecure dormitories that are routinely patrolled by correctional officers. As with medium-security dorms, there is a group toilet and shower area adjacent to the sleeping quarters, which contain double

bunks and lockers. The primary focus of these institutions is reintegration of the inmate back into the community; therefore, a significant portion of the agency's rehabilitation programs, such as education and work release, are allocated to these facilities.

PHYSICAL DESIGN

A prison's physical appearance and security provisions mirror its population's characteristics. The *radial design* is the oldest design. In it, cellblocks and program buildings are arranged in a wheel-shaped configuration with corridors radiating like spokes from a control center at the hub. The main disadvantage of this design is that all inmate traffic and movement comes to one point in the prison. The congestion that results presents a dangerous situation, particularly in high-security prisons. Another design, known as the *telephone pole design*, places cells in rows down the cellblock-long central corridor that serves as the means for prisoners to go from one part of the prison to another. The telephone pole design provides correctional administrators with the ability to house inmates with different classification security and custody levels in the same facility, and is instrumental in controlling prison violence since inmates have limited contact with each other. While this design appears quite secure from outside the prison, on the inside there are numerous corners and places that are hard to monitor and ideal for various types of violence. In the event of a riot or a hostage-taking situation, it is easy for inmates to barricade the corridor and take control of the prison and difficult for correctional staff to regain control of the prison.

The *campus design* is primarily used for minimum-security prisons and a few medium-security prisons. These institutions allow some freedom of movement; buildings are separated and spread out over several acres within a secure perimeter, and inmates are allowed to move from one building to another, walking outside instead of within a corridor. As such, there is little problem of congestion, as people move through the prison fairly freely. The campus design is known as such because it resembles a small-to-moderate-size college and has large dormitory wings that are clustered in areas resembling local neighborhoods in a subdivision.

The most recent prison design is known as the *courtyard style* and is normally used in maximum-security prisons. In it, buildings are attached to a corridor that runs around the prison, leaving a courtyard in the middle. This design provides prison administrators the flexibility of keeping inmate movement within the corridor or across the courtyard while allowing some outside movement. All institutional units, including housing, education, medical, prison industry, and dining, face a central and often expansive courtyard. All doors except those providing entrance to administrative areas open to the courtyard. The courtyard design is especially useful when inmates of varying classification levels need to be housed at the same location. Inmates of the same classification share the same courtyard. A disadvantage is that all individuals in a given courtyard unit must share the same area, no matter how high the units are stacked.

PERIMETER CONTROLS

Perimeter controls of the prison are integral to the maintenance of its security and control. Perimeter controls refer to the physical barrier of the prison or simply an area in which inmates are not allowed to enter; they rely on an institution's security level, perimeter barriers, detection devices, gun towers, and mobile patrol. The outer layer of the prison is the wall or fence that is designed to keep inmates inside the facility and reduce the passage of contraband into the prison. Usually these structures include detection devices that will set off an alarm and alert correctional staff of any escape attempts. At various points through the perimeter are towers that are staffed by an armed correctional officer who watches inmate movement, to prevent an escape by breech of the fence. Mobile patrol officers in vehicles continuously drive around the perimeter to monitor movement around the perimeter and respond to escape attempts if necessary.

ACCOUNTABILITY OF INMATES

Correctional officers' ability to locate and identify inmates at any point in time of the day to ensure that they are where they are supposed to be is integral to

the maintenance of a secure and safe prison environment. In order to ensure that order is maintained, institutions follow a routine schedule of activities on a regular basis. All inmates are closely supervised and a system of restricted movement is implemented to reduce the likelihood of anyone going to places other than their assigned locations. Inmates are monitored during all out-of-cell times. Staff members are expected to view each inmate on a regular basis, and each correctional agency has procedures for counting inmates at various times of the day.

There are three types of prison counts: official, census, and random. *Official counts* are scheduled points in the day when inmates are counted to ensure that they are all present. The *census counts* are less formal. They are usually conducted by work and program supervisors or by correctional officers at the beginning and end of each work period to ensure that each work or program detail has the right amount of inmates. *Random counts* can be done at any time and are beneficial since inmates know when the official and census counts will be done.

Another way in which inmate movement is restricted is through controlled movement, which is an alternative to total individual movement or unregulated mass movement. During movement call, inmates have a certain amount of time (usually 10 minutes) to go from one location to another. At the end of the movement time, all doors are locked and inmates are expected to be at their designated and assigned areas. Anyone who is not will be subject to disciplinary action. The work and program assignments of inmates also aid in the security of the institution by keeping inmates active, helping to pass time, and providing a process by which inmates are under the supervision of staff responsible for that program or work activity.

The control of contraband, or any item the inmate is not authorized to have, is another element of inmate accountability since illicit items may undermine the maintenance of a safe and secure prison environment. Prison officials reduce the amount of contraband in the correctional environment by searching the inmates, their housing areas, and their work areas. The personal search includes a frisk (or "pat-down"), strip search, or internal body cavity search. The *pat-down search* is an external inspection of a fully clothed inmate. A prisoner's living and work areas may also be searched on a periodic basis. As well, the *strip search*, which is more intrusive, is a visual inspection of the naked body and its cavities from all angles. Finally, there is the *internal body cavity search*, which requires special permission and is only conducted by medical personnel.

CONCLUSION

Maintaining a safe and secure prison involves the integration of several elements within a prison. The first component is a functional classification system. This contributes to institutional safety and efficiency by seeking to ensure that inmates are assigned to housing commensurate with their security needs. The prison security level, architectural design, and perimeter controls reduce the risk of disturbances and escapes as well as being techniques to ensure accountability of inmates at all times. All of these security measures function together to minimize violence, disruptions, and escapes from a correctional facility, thereby allowing correctional administrators to maintain security and control in the prison setting.

SELF-HARM

The study of self-harm among prisoners has received little attention as an important health concern, especially for women. Part of the problem is a definitional agreement over what kinds of behaviors constitute self-harm. Based on quantitative studies, traditional definitions of self-harm have emphasized physical forms of self-mutilation, such as slashing, cutting, burning, and suicide which are then classified according to a typology based on the perceived seriousness or lethal nature, or life-threatening nature, of the action. Some prison researchers suggest that this type of categorization is particularly limiting for young offenders who often use a highly lethal method like hanging but have no intention of wanting to end their lives.

More recent qualitative research based on the personal narratives of prisoners, and of women inmates in particular, suggest that self-harm involves a broader range of behaviors than the direct physical forms of self-injury commonly cited by researchers. The women reported eating disorders, substance abuse, destructive (violent) domestic relationships, extensive piercing, and slashing as examples of their self-harm. This research also indicates that self-harm and suicidal acts are not synonymous and that women do not intend to kill themselves but rather use self-harm as a way of coping and surviving deep emotional pain and distress often rooted in experiences of childhood sexual abuse. Recognizing the broad diversity and origins of self-harmful behaviors is critical to ensure effective services and appropriate evaluation of intervention strategies for prisoners who self-harm.

PREVALENCE

There has been little epidemiological research on the prevalence of self-harm in prisons. As a result, little is known about the relationships among self-harm and race/ethnicity and social class, age, and other social correlates. There is, however, a growing literature on self-harm that has identified a significant gender difference. The incidence of self-harm among both women and men is much higher in prison populations than in the general public, although women in general have a greater incidence of reported acts. There is also considerable anecdotal evidence that supports a relationship between self-harming behaviors and bullying among incarcerated young, male offenders.

The studies on racial differences in self-harming behaviors are mixed. A review of this literature shows that black prisoners (male and female adults) are underrepresented in comparison to whites, while others argue that the differential statistics reflect discrepancies in reporting. Studies also show that Hispanics as compared to whites are overrepresented. There is little research on the relationship between social class and self-harm. Prison statistics demonstrate that there is an overrepresentation of self-harming behaviors among the working class, yet this reveals little since the impoverished social classes are disproportionately represented in prison. The conditions of incarceration and their contribution to feelings of powerlessness, loss of control, and isolation contribute to an individual's level of emotional distress, and in general, constitute added risks for self-harming behavior for all prisoners.

EXPLANATIONS

There is a growing consensus in the empirical literature that prisoners turn to self-harm as a way of coping with emotional pain and distress. Incarcerated women and men may not have the usual systems of supports and coping strategies. They may also experience incarceration differently from one another. The increased feelings of powerlessness and lack of control experienced by incarcerated men are exacerbated by abuse and violence from other inmates. In this situation, self-harm may become one means of dealing with the threat to their physical security. The lower incidence of self-harm among male compared to female prisoners is usually explained by ideas of gender. Men are socialized to turn their anger, blame, or frustration outward, tending to engage in physical and sexual acts of aggression and assaults against others. Women, by contrast, have a greater tendency to turn their feelings inward against themselves and are more likely to commit self-inflicted, harmful acts such as slashing and substance abuse.

For incarcerated women, feelings of emotional distress are exacerbated by their past histories of

childhood abuse as well as their adult experiences of violence and abuse, especially sexual abuse. The relationship between childhood experiences of sexual abuse and self-harm is strongly supported in the research literature, although there has been less attention paid to the impact of adult experiences of violence. Self-harm represents an important coping strategy to survive these traumatizing effects, and in this respect, serves critical survival functions.

CORRECTIONAL RESPONSES

Frequently, when prisoners hurt themselves, they are dealt with as though they had attempted suicide. In most cases, this type of activity is responded to by physical intervention. The most common strategies used by prisons include the use of restraint garments, restraint chairs, segregation, cell camera monitoring, and medication. Research indicates, however, that such measures, notably segregation, neither prevent nor reduce incidences of self-harm and in fact are more likely to increase it. Research on young women in detention, for example, shows that the majority of self-harming behaviors occurred when they were in segregation or alone. Women are often retraumatized by their treatment in prison, as it tends to replicate their past experiences of abuse and violence, and may trigger greater incidences of self-harming behaviors as a way of coping.

In addition to implementing physical measures to prevent and control women's self-harming behavior, much prison programming for women who self-harm is based on dialectical behavior therapy. This choice of therapy within correctional institutions is related to the assumption that many women who hurt themselves have Borderline Personality Disorder. This is an official psychiatric diagnosis that is characterized by such traits as extreme emotionality, impulsivity, aggressive behavior, confused identity, self-injurious behavior, and suicidal ideation. Persons diagnosed with Borderline Personality Disorder are also viewed as manipulative.

Dialectical behavioral therapy is based on cognitive behaviorism, and its approach is to teach offenders to think differently or prosocially, since it is believed that they have cognitive inadequacies or thinking deficits. Prison researchers in Canada and in Britain have examined the potential risks of prison programming based on cognitive behavioralism and dialectical behavioral therapy, especially for women prisoners. Several areas of concern with this approach to self-harm have been identified, including the tendencies to individualize crime, pathologize prisoners, and ignore issues of racism, sexism, classism, poverty, and heterosexism as well as the social-structural context of crime. Simply, this approach abstracts women from the social context of their lives and does not consider their underlying histories of physical and sexual abuse, their particular socioeconomic circumstances, and personal experiences of sexism and racism, all of which contribute in significant ways to women's use of self-harm as a coping mechanism.

CONCLUSION

With the dramatic increase in the number of women incarcerated not only in the United States, but in Canada and the United Kingdom, there has been a growing concern with the limitations of a male-oriented medical model underlying prison programming and services, especially in meeting women's mental health needs. Research in several countries documents the serious impact of imprisonment on women's mental health, including an increase in self-harming behaviors. With the significant growth in the number of women prisoners, attention to women's health needs, particularly self-harm, is becoming a critical challenge for correctional facilities.

Future policies and practices on women's self-harm in prison require more holistic, woman centered approaches in developing appropriate programs and services. Research emphasizes the importance of policies that incorporate an understanding of women's self-harm within the context of past experiences of abuse and violence and to address current issues related to racism and discrimination, poverty, sexism, and domestic violence. Unless these realities are addressed, women will remain particularly vulnerable to inflicting self-harmful kinds of behaviors as a way of coping with their emotional distress both within and beyond prison walls.

SENTENCING REFORM ACT 1984

The passage of the Sentencing Reform Act (SRA) of 1984, which mandated the creation of the U.S. Sentencing Commission and led to the adoption of the U.S. Sentencing Guidelines, marked a fundamental change in the federal government's approach to crime and criminal justice policy. The bipartisan initiative prospectively ended the use of indeterminate sentencing and parole release within the federal system and has substantially influenced the method and mode of prosecution, defense and, ultimately, punishment for those charged with federal crimes.

BACKGROUND

From the early 20th century until roughly 1970, the federal sentencing system, like that of virtually all states, followed an indeterminate model that was ostensibly structured around offender rehabilitation. Congress established statutory penalties for criminal offenses with wide sentencing ranges that afforded judges substantial discretion to impose what they deemed appropriate punishments accounting for the unique nature of an individual defendant, the particular circumstances surrounding the offenses, and other relevant variables. Sentences of imprisonment were of indefinite length and were largely governed by correctional officials within the Federal Bureau of Prisons (BOP) and parole officials within the U.S. Parole Commission. The former rewarded inmates for positive institutional adjustment by liberal grants of "good time" credits and, correspondingly, penalized poor adjustment by removing or disallowing time credits. The Parole Commission convened periodically and employed a system of written, arguably objective guidelines to determine whether an offender's rehabilitative efforts and likelihood of recidivism warranted release and, if so, under what conditions. Under this system, an offender deemed rehabilitated and worthy of release could serve as little as one-third of the original sentence imposed.

A major benefit of the indeterminate sentencing model was the flexibility it provided to match limited prison resources (e.g., beds and programming) with offenders' needs. In particular, sound management enabled correctional officials to regulate systemic growth and resultant overcrowding. Indeed, the federal prison population remained relatively constant for the 50 years preceding 1975.

The 1970s ushered in a nationwide chorus of criticism for indeterminate sentencing and its underpinning assumption, namely that following an appropriate period of supervision and treatments,

offenders could be rehabilitated and safely reintegrated into the community. During this period, sentiment grew that rehabilitative programming was simply not effective in either protecting against risk of future public harm or reducing re-offense rates. Additionally, civil rights advocates, such as the American Friends Service Committee, charged that indeterminate sentencing caused unwarranted disparities among comparable defendants, namely with regard to race. Disparities were also cited among the differences in sentence lengths between judges, categories of offenses, and geographical regions. Conservative thinkers, such as James Q. Wilson, concurrently argued that indeterminate sentencing resulted in unduly lenient sentences.

One of the most prominent calls for sentencing reform came from Judge Marvin E. Frankel, whose seminal work *Criminal Sentences: Law without Order* (1974) decried the absence of rules and uniform standards in sentencing. Judge Frankel advocated the abolition of indeterminate sentencing and the creation of sentencing guidelines by independent, authoritative bodies of judges, academics, and practitioners. A notable convert to Judge Frankel's ideas was Senator Edward Kennedy (D-Massachusetts), who first introduced federal legislation seeking to implement a guidelines system in the late 1970s. Senator Kennedy was particularly troubled by allegations that indeterminate sentencing led to gross racial disparities. Whereas numerous states, including Minnesota, Pennsylvania, Washington, and Oregon, abolished indeterminate sentencing in favor of guidelines systems developed and overseen by administrative sentencing commissions in a timely manner, it took years of debate and compromise before Congress passed and the president approved a bill enacting such changes in the federal system. (SRA, as amended, is codified at 18 U.S.C. §§3551–3559, 3561–3566, 3581–3586 and 28 U.S.C. §§991–998.)

A subprovision of the Comprehensive Crime Control Act of 1984, the Sentencing Reform Act replaced indeterminate sentencing and parole with a "truth in sentencing" determinate model that requires federal offenders to serve their full sentences minus up to 54 days of credit per year (approximately 15%) for good institutional behavior. To this end, the SRA called for the creation of the U.S. Sentencing Commission, an independent agency in the federal judicial branch comprised of seven voting members known as commissioners. Commissioners are appointed by the president and confirmed by the Senate. At least three commissioners must be federal judges, and no more than four may belong to the same political party. The U.S. attorney general and the chair of the U.S. Parole Commission, or their designees, serve as *ex officio* members, meaning that they are not required to undergo the confirmation process and do not vote.

SENTENCING COMMISSION AND GUIDELINES

On September 10, 1985, President Ronald Reagan nominated Judges William W. Wilkins (Chairperson), George MacKinnon, and Stephen Breyer, who was later appointed Supreme Court Justice; Professors Ilene Nagel, Michael Block, and Paul Robinson; and former U.S. Parole Commissioner Helen Corrothers to serve on the first Sentencing Commission. Pursuant to the SRA, the commission's stated purpose was, and remains, to establish policies and practices that (1) assure that the goals of just punishment, deterrence, incapacitation, and rehabilitation are met; (2) provide certainty and fairness in sentencing by eliminating disparities among similarly situated defendants while maintaining sufficient flexibility to permit individualized sentences that account for mitigating or aggravating factors not considered in the formation of general sentencing practices; and (3) reflect the advancement in knowledge of human behavior as it relates to the criminal justice process. The commission is further charged with evaluating the sentencing guidelines' effect on the criminal justice system, recommending modifications of substantive criminal law and sentencing procedures, and establishing a research and development program on sentencing issues.

Faced with various competing interests and philosophies, the first commission began the guidelines creation process by analyzing voluminous amounts of past sentencing data along with the elements of federal crimes and the Parole

Commission's guidelines and statistics. Through this review, the commission was able to identify both broad and specific distinctions that became the basis for the guidelines. The commission then considered both historic sentence length data and congressional dictates in devising a 43-row, six-column matrix of penalties that measures the severity and characteristics of a given offense of conviction against an offender's past criminal history. Sentences for individuals with the same offense level and criminal history intersect at a sentence range—the bottom end of which may differ from the top by no more than six months or 25%, whichever is greater.

The initial Federal Sentencing Guidelines were submitted to Congress on April 13, 1987, and took effect on November 1, 1987. Soon thereafter, legal challenges were filed on behalf of defendants disputing, among other things, the Sentencing Reform Act's constitutionality. In 1989, the Supreme Court decided *Mistretta v. United States*, which upheld the constitutionality of the Sentencing Commission as a judicial branch agency. Since that time, more than 500,000 defendants have been sentenced under the guidelines. Because the guidelines are designed to embody a "heartland" of criminal offenses, judges ordinarily impose a sentence from within an offender's recommended guideline range unless the court identifies an extraordinary or atypical factor that the commission failed to consider. In those instances, courts may depart from a guideline range to impose a penalty higher or lower than that recommended, though such deviation can be reviewed by a court of appeals. In all cases, sentencing judges must provide the reasons for the sentence imposed.

CRITICISMS

Because the SRA and commission arose during the burgeoning "Get tough on crime" era of the mid-1980s, observers criticized the first commission as striving to satisfy the legislative and executive branch's respective political agendas rather than insulating themselves from such external pressures. Special concern was raised about the stripping of traditional judicial discretion and the corresponding shift in power to prosecutors, whose charging and plea decisions as well as exclusive ability to request sentencing departures based on assistance to federal authorities substantially impact a defendant's election to pursue his right to trial or to cooperate against alleged criminal cohorts. Opposition to the guidelines has remained nearly constant since 1987 and can be found in all sectors of the federal justice system and to include judges, defense attorneys, and probation officers. Equally as notable, numerous states considered enacting guidelines systems and sentencing commissions after the federal government explicitly repudiated the federal guidelines as a model to emulate.

Many criticize the federal guidelines system because of the guidelines manual's length and legalistic complexity and the lack of uniformity in sentencing practices across judicial districts and circuits. They also point to inconsistencies in prosecutorial plea and departure recommendation practices, the ever-expanding scope of offense categories covered, and the persistence of socioeconomic and racial disparities.

COMPLEXITY AND INFLEXIBILITY

In response to legal interpretations, legislative directives, and emerging trends, the Sentencing Commission regularly submits guideline amendments to Congress for approval. This amendment process has helped create a guidelines manual that, with appendices, totaled more than 1,500 pages in 2001 and that determines the majority of sentences imposed.

Although permissible, departures from a given guideline range are controlled by a rigid framework of considerations. For instance, when weighing the appropriateness of departing from an offender's prescribed sentencing range, courts are forbidden to rely on race, sex, national origin, religion, or socioeconomic status—all factors that were available in the pre-guidelines era. Reliance on other considerations, such as age, educational and vocational skills, physical and mental health, employment history, and family or community ties is either discouraged or deemed irrelevant.

The most common and easily obtainable method of downward departure is based on an offender's cooperation with government investigations of others. Because the prosecutor is the only individual with the power to request such a departure, many have criticized this avenue for deviation from the guidelines, as it grants excessive power to the prosecutor and removes judicial discretion. Moreover, many critics contend that such departures are often used not to reward cooperation, but as a surreptitious method to circumvent an offender's recommended guideline sentence when all concerned parties (the prosecutor, the defense, and the judge) perceive it as too rigid, arbitrary, unjust, or severe.

MANDATORY MINIMUMS

The most significant departure from the guidelines comes not from limited judicial autonomy but, rather from congressionally created mandatory sentences that establish minimum penalties for drug offenses, possession of weapons, and repeat offenders. An oft-referenced example is the mandatory minimum penalties attendant on crack cocaine convictions (e.g., a conviction for possession of five grams of crack cocaine carries a minimum five-year term of imprisonment). Interestingly, countless practitioners and scholars, even those at the Sentencing Commission, argue that such statutory minimum penalties do not achieve their intended aim of increasing sentencing severity and uniformity. This is due to inconsistent prosecutorial charging decisions and opportunities for sentences below the given penalty where cooperation is provided.

CONTINUED RACIAL DISPARITY AND A GROWING PRISON POPULATION

Legislative history suggests that the statutory goal of avoiding unwarranted sentence disparities among similarly situated defendants was and is the most important goal of the federal guidelines. The vast majority of analytical evaluations, case studies, and other evidence, however, suggest that the guidelines have failed in avoiding unwarranted disparities. This is due in large part to informal mechanisms to circumvent the guidelines when they are disliked by prosecutors, defense attorneys, and judges. With regard to racial disparity, a careful review of demographic data from the Federal Bureau of Prisons reveals that 41% of federal offenders incarcerated during 2001 were African American.

In addition, despite the SRA's mandate that the federal sentencing guidelines minimize the likelihood of prison overpopulation, the guidelines' drafters predicted the prison population would triple within a decade. Indeed, the impact of the sentencing guidelines and mandatory minimum penalties on the federal prison population is unmistakable. In 1987, there were 48,300 individuals under federal correctional supervision. Ten years later, the figure had risen to 112,973, and BOP estimates place the 2007 supervision population at 205,000, a fourfold increase within 20 years.

CONCLUSION

It is debatable whether the Sentencing Reform Act of 1984 has fulfilled the designs of its original sponsors. While offering a level of predictability to the extent that most penalties are set forth in an inclusive, written volume and are safe from modification by correctional or parole authorities, the federal guidelines system lacks true uniformity and consistency, partly due to institutionalized discontentment with the system's steadfast rigidity. Yet, because both guideline amendments and the repeal of mandatory minimums require congressional approval, the prevailing political climate shall control any effort toward meaningful reform.

Legal Case

Mistretta v. United States, 488 U.S. 361 (1989).

SEX–CONSENSUAL

Prisoners are not allowed to have sex while they are incarcerated, except through limited conjugal visitation programs. There are a variety of ways that people cope with this hardship. They may accept a period of celibacy, enter into homosexual relationships, or engage in consensual sexual activity with other inmates or staff. The focus here is on consensual sexual activity between inmates.

RESEARCH STUDIES

Few scholarly studies have examined consensual sex (i.e., voluntary sexual contact between two or more inmates) in prison. Instead, substantial attention has been devoted to rape and sexual coercion behind prison walls, even though this actually comprises a minority of the sexual activity within prison. The small amount of research that does exist has produced conflicting evidence of the prevalence of consensual sexual activity in prisons. In male institutions, for example, studies of prevalence have yielded a wide range of inmates reporting consensual sex—from 2% to 65%. Studies of female institutions have reported rates of up to 86%.

There are numerous problems in conducting research that attempts to examine sexuality in prison. First, many studies are based on prisoner surveys or interviews. Unless the entire population of a prison, or even of a prison system, is examined, there is always a problem of unrepresentative sampling. In addition, prisoners who admit to homosexual sexual activity, consensual or otherwise, may be stigmatized. They may be labeled as weak or easy victims and thus may be afraid of being truthful, despite guarantees of anonymity or confidentiality from researchers. Finally, it is difficult to establish meaningful measures of sexual behavior. It is tempting simply to classify sexual acts as consensual when the inmate voluntarily participates, and as nonconsensual when the sexual activity is forced. However, this dichotomy leaves many questions unanswered, including what sexual acts—consensual or not—are involved and how to understand whether a prisoner agrees freely to sexual activity or not.

The latter point is particularly important. For instance, in male prisons, inmates may create partnerships based on one man providing sexual favors to another in return for protection. While the prisoner may voluntarily establish this type of relationship, he may do so only out of fear for his own safety, making it less than consensual. Likewise, in female prisons, many inmates develop relationships, but not all have a sexual component. Attempts to measure sexuality must be considered separately from inmate relationships.

CONSENSUAL SEX IN PRISONS

Women's Prisons

More research has focused on consensual sex in women's prisons, partially because some observers believe that it is both more prevalent and more accepted. In female institutions, sexual activity between prisoners sometimes (but not always) develops as part of an emotionally driven relationship that may be part of a larger make-believe family (or pseudofamily), in which the participants play a variety of roles. The make-believe family and the sexual relationships that emerge in female prisons have been documented in some of the earliest, now classic, studies of female incarceration. The role of both the make-believe family and the relationships (some sexual, some not) that develop within female correctional institutions have been identified as hallmarks that define the female prison experience.

However, it is important to note that the prevalence and importance of pseudofamilies may be exaggerated. For instance, studies of women's prisons in the 1980s have suggested that, in both the United States and Great Britain, the make-believe family is not the defining characteristic it once appeared to be. In fact, it is now thought that limiting the study of women's prison culture to pseudofamilies may obscure other important issues. In addition, contemporary women's prisons may be less conducive to the development of make-believe families due to changes in prison design, broader cultural changes, and changes in the prison environment.

Perhaps more telling is Karleen Faith's (1993) research, in which she interviewed female inmates who were previously subjects in a study describing pseudofamily organization. Faith found that the inmates themselves believed that the concept of familial social organization was inaccurate. Critics of the pseudofamily research paradigm suggest that it may reflect gender stereotypes or biases.

Men's Prisons

In men's prisons, a variety of sexual practices may emerge. Previous research on homosexual inmates leads to the conclusion that gay male inmates are more likely to be involved in sexual activity. However, as indicated, the research produces widely varied results, and for that reason should not be considered conclusive. Some men do partner with another inmate, for example, trading sex for protection. Others participate in more fleeting sexual encounters.

In 1995, Saum and her colleagues studied the prevalence of consensual sexual activity in prison and compared that to inmate perceptions of prison sexuality. Approximately one-quarter of the inmates reported having seen an act of consensual sex, while one-half reported hearing about an act of consensual sex. However, most inmates believed that consensual sex happened on a daily basis in prison. This suggests that perceptions of consensual sexual activity may reflect exaggeration rather than the actual number of events. In fact, when asked about their sexual experiences, more male inmates in the sample reported having consensual sex with females (staff, visiting guests, and visiting inmates) than with males during their past year in prison. However, as noted, it is possible that this finding stems from inmates wishing to conceal their homosexual sexual experiences and/or to overstate their heterosexual sexual experiences due to the stigma associated with homosexuality.

CONDOMS

If consensual sex occurs between some men in prison, should penal administrators provide condoms to prisoners? The main argument in favor of providing

condoms is that they could stem the spread of sexually transmitted diseases such as HIV/AIDS or hepatitis C that are present in the prison environment. In the long run, this could reduce medical costs for a correctional institution (and outside prison walls when inmates are released), particularly as treatment for HIV/AIDS is quite expensive and prisons must provide adequate health care, as the Supreme Court ruled in *Estelle v. Gamble*. However, making condoms available would also incur immediate costs over the short term, since institutions must buy them. In addition, sex in prison, depending on the jurisdiction, is prohibited by institutional rules or by law. Finally, some believe that providing condoms encourages sexual activity or at least sends the message that prison sex is (tacitly or overtly) acceptable—an attitude that is not popular in a "Get tough" era of criminal justice policy. The policy of condom distribution is controversial and has been adopted by only a handful of jurisdictions.

CONCLUSION

It is clear from the literature that further research is necessary on consensual sex in prison. Until more studies have been conducted, it is difficult to make any definitive statement about consensual prison sex. Discussions of the specific nature of homosexual relationships within prison, as well as rape, conjugal visits, and sexual relations with staff further illuminate the broad issue of prison sex.

SEX OFFENDER PROGRAMS

The assessment, treatment, and supervision of sex offenders is perhaps the most controversial of all correctional endeavors. Few people in society do not feel revulsion when such issues are raised and, as a consequence, it has been easy for the general public to be convinced that sex offenders are untreatable or even beyond redemption. As a result, many people have called for more official control in the form of tougher laws, harsher sentences (including civil commitment), and fewer opportunities for community reintegration and restoration.

At present, sex offenders comprise anywhere from 15% to 25% of a typical correctional population, with an expectation that these numbers will increase in the future. Although there is growing acknowledgment that the incidence of offending by women is underestimated, the vast majority of sex offenders are male.

EFFECTIVE CORRECTIONAL INTERVENTIONS

In their seminal volume *The Psychology of Criminal Conduct*, Don Andrews and Jim Bonta

(2003) present a list of "dos and don'ts" for treatment providers. While the entire list is beyond the scope of this entry, the authors distill much of it down to a few simple rules that, when followed, substantially increase the likelihood that an intervention will succeed. These rules are encapsulated in the principles of *risk*, *need*, *responsivity*, and *professional discretion*. Effective programs are those that match treatment intensity to offender risk and needs while attending to the characteristics of the population to be treated (e.g., cognitive abilities, mental health issues, personality, and learning styles). Last, programs must be managed by well-trained and experienced providers who are able to make sensible adjustments to curricula or other aspects of treatment and supervision as needed.

ASSESSMENT

Like other groups of offenders, sexual offenders are best assessed using a variety of methods. Their needs should be evaluated as early as possible in their sentences, to devise a comprehensive treatment plan. Assessments typically include a semi-structured clinical interview, accompanied by various psychometric indices (e.g., sex history questionnaires, personality scales, measures of deception/malingering, and other tools designed to identify areas in need of remedial programming), actuarial risk assessment tools, and psychophysiological evaluation of sexual preferences and interests. Such tests enable clinicians and correctional workers to estimate an individual's risk and treatment needs. In turn, these factors are used to determine the program assignment that will be most effective. For example, if an offender is placed in a high-intensity program, the intent is to eventually place him at a lower-intensity level or to arrange follow-up treatment depending on his ability to manage his risk. Most sex offenders require some degree of maintenance programming, which can be initiated in an institutional setting but is best carried into the community on conditional release.

The measurement of sexual interests and preferences was first introduced to sex offender assessment in the early 1960s, when Czech sexologist Kurt Freund adapted his phallometric test to the evaluation of pedophilia. This test, originally designed to identify homosexuals for exclusion from military service, measures penile physiology while the subject attends to various audiovisual stimuli. The intent is to establish the individual's sexual likes and dislikes by comparing responses to "normal" stimuli with responses to "deviant" stimuli. Although the test suffers from a lack of universal standardization and academic disputes over methodology, most in the field acknowledge its utility in identifying sexual deviance.

Assessment of sex offender risk underwent radical changes during the 1990s with the introduction of actuarial measures. These indices are the result of exhaustive meta-analytic reviews of potential risk factors and, when used appropriately, can significantly increase predictive abilities above clinical judgment alone. Examples of actuarial measures used with sex offenders are the STATIC-99, Sex Offender Risk Appraisal Guide (SORAG), and Minnesota Sex Offender Screening Tool-Revised (MnSOST-R). In general, these scales measure the same basic pool of risk variables, with slight variations. Although considerable debate continues over which tool is best, the most important point is that use of a clinically informed, actuarial approach has been shown to consistently outperform unstructured clinical judgment alone.

TREATMENT

Disorders of sexual behavior were introduced to the psychological mainstream around the turn of the 20th century by such authors as Sigmund Freud and Richard von Krafft-Ebing, with modern attention to the issue beginning in the mid-1960s. Generally, the treatment of sex offenders has developed alongside behavioral science. For example, when psychology favored psychodynamic approaches, so did sex offender treatment methods. Similarly, as psychology changed focus to behaviorism, cognitivism, and cognitive-behaviorism, so too did sex offender treatment methods. Indeed, the importance of employing sound therapeutic methods in the treatment of sex offenders within a cognitive-behavioral framework

has been strongly supported in the literature. However, a degree of eclecticism endures, with some treatment programs continuing to use traditional behavioral approaches (e.g., satiation, covert sensitization) or other techniques (e.g., art or music therapy).

The single most important development in the treatment of sex offenders came when students of Alan Marlatt adapted the relapse prevention (RP) method for substance abusers to sex offenders. This method decrees that if offenders can become more aware of the cognitive and behavioral antecedents to offending, they can learn to employ adaptive coping strategies to manage situations that place them at risk to offend. As a result, individuals learn to lead a balanced, self-determined lifestyle that does not include thoughts or behaviors that lead to sexual offending.

Relapse prevention programming for sex offenders typically consists of two phases. In the first phase, individuals engage in a process of self-evaluation and behavioral analysis that breaks their thoughts and behaviors down into component parts, allowing for reworking and eventual rebuilding of the offender's approach to the world around him. The aim of this phase, typically offered in an inpatient or prison setting, is to develop internal controls for managing behavior. The second phase of the RP model, external supervision, is primarily offered in community settings where risk factors are present and must be managed by the offender. This phase presents an opportunity for offenders to practice skills developed in Phase 1, with the assistance of trained case managers and maintenance service providers. The benefit of the supervision aspect is that lapses can be identified early and coping skills applied before risk escalates and options for remediation are eliminated in favor of reincarceration.

Recently, problems with the RP model as applied to sex offenders have resulted in the proposition of an alternative model based on self-regulation theory. In brief, this approach allows for a greater range and breadth of motivating factors for sexual offending than the RP model, as well as for variations in the pathways to offending that an offender may follow. For example, under the RP model, sex offenders were presumed to be induced to offend primarily as a result of negative psychological or social states, activated by situational cues beyond their control. Offenders were also assumed to be motivated to avoid offending at all times. By contrast, the self-regulation model allows for the influence of positive affective states, such as anticipation of offending and sexual gratification, as motivations for offending, and for active rather than solely incidental or passive decision making by the offender during the offense process. As such, this model captures dynamics of sexual offending behavior not previously acknowledged and places greater emphasis on internal control of behavior. Importantly, the self-regulation model suggests that treatment must vary according to the unique motivations and dynamics of the individual offender, which is consistent with the principles of effective correctional treatment delineated earlier.

TREATMENT EFFECTIVENESS

One of the enduring issues in regard to sex offenders concerns treatability. Perhaps the most important point to make here is that there is no known cure for sex offending; contemporary rehabilitative programs strive to decrease reoffending. Recent evidence has clearly shown that treatment programs that adhere to the general principles of effective interventions can reduce sex reoffending from 17.4% to 9.9% and general reoffending from 51% to 32%.

SUPERVISION

Community supervision is the most controversial aspect of the correctional management of sex offenders. Currently, many jurisdictions are in the process of increasing measures of official control, whether in the format of lengthy or lifetime probation, specialized orders of prohibition, sex offender registries or simply contemplation of indeterminate sentencing or civil commitment. Concurrent with these approaches, sex offender service providers continue to work with offenders within the RP or self-regulation framework. Community-based initiatives must attend to the nuances of individual cases, rather than applying generalized means of social control. A recent report by Robin Wilson et al. (2000) strongly suggests that community sex offender risk

management is best accomplished when case management staff monitor community activities in collaboration with treatment staff who attend to adapting skills acquired in the institution to real-life situations in the community. The key is to employ a team approach, including all who have a vested interest in the offender's continued abstinence from offending.

One of the difficulties for the long-term maintenance of sex offender risk is, What happens when the correctional controls are no longer applied (i.e., the offender reaches sentence completion), but risk remains? This question has been answered to a degree in an innovative, restorative approach taken by Canadian Mennonites. In the Circles of Support and Accountability (COSA) model, high-risk offenders are "circled" by a group of four to six trained volunteers who provide support to the offender and maintain a degree of offender accountability to the community. A crucial aspect of the COSA model is the inclusion of volunteer professionals (e.g., psychologists, police, medical staff) who in turn provide support to the community volunteers. Recent research suggests that this approach has helped to reduce recidivism by more than 50%. An additional benefit has been that the community has become empowered to deal with risk in its midst and, in the process, has become more educated about the nature of risk and what they as ordinary citizens can do about it. Interestingly, contrary to the popular punitive sentiment toward sex offenders, the central philosophy of the COSA model is that society has a responsibility not only to members of the community but also to provide help, resources, and support to offenders in their efforts to lead prosocial, nonoffending lives.

FUTURE DIRECTIONS

The described methods used in assessing, treating, and supervising sex offenders are comprehensive but are by no means complete. Considerable research and refinement continues as we strive to better manage the risk posed by these most troubling of offenders.

With respect to assessment, the evaluation of risk has clearly been radically influenced by the proliferation of actuarial measures. However, even the best of these instruments boasts only moderate predictive accuracy and is centered largely on static/historical variables. Future iterations of risk assessment indices will need to bolster accuracy levels while reflecting continued advances in our understanding of the dynamics of sex offending.

With respect to treatment, most providers continue to view cognitive-behavioral methods as most likely to be successful. Although revisions of the popular relapse prevention method will continue, as noted, it is not likely that this is where the greatest programming difficulties will be found. These will occur in ensuring that effective interventions exist for so-called special groups of offenders (e.g., "deniers," women, juveniles, developmentally delayed persons, Aboriginals) and in addressing other culturally sensitive concerns. Maintaining offender commitment to the change process is also in need of further research and program refinement, as is the attention paid to the manner in which treatment is delivered (i.e., therapist selection and characteristics and treatment intervention methods).

Notwithstanding the advances noted in the preceding, community supervision of sex offenders will continue to dominate political and popular discussion. With each horrific case of serial sexual abuse or the rape/murder of a child, society becomes increasingly hardened against the reintegration and restoration of sex offenders. Public education is a key factor in calming community fears; however, the current means by which these messages are disseminated is in great need of review. This is clearly evidenced in the paradox of heightened fear while rates of offending and reoffending continue to decline. Researchers, clinicians, and case managers know that sex offender risk can be safely managed using structured, clinically informed actuarial risk assessment, effective intervention methods, and long-term monitoring of risk that promotes collaboration between official and community partners. The Circles of Support and Accountability initiative provides the best current example of how the community can take a pivotal role in maintaining safety in its midst while inspiring teamwork among clinicians, law enforcement, corrections officials, and politicians.

SEX OFFENDERS

Sex offenders are most frequently classified in terms of whether their victims are adults or children, and in the case of the latter, whether their victims are intrafamilial or extrafamilial. Those who offend against children are among the most despised of all offenders both outside and within prison walls, where they often require protective custody. Offenders who choose extrafamilial child victims arouse the greatest fear and anger among the public. Those with adult victims tend to be less harshly viewed both outside and within prisons, where prisoner sexual assault is not uncommon. Reports of sex offenses by women are rare, and female sex offenders arouse little public concern.

TERMINOLOGY

In discussing sex offenders, several distinctions are useful. The term "legal sex offender" refers to anyone convicted of a sex-related offense. The term "paraphiliac" refers to anyone considered to have a *paraphilia,* a category in the psychiatric *Diagnostic and Statistical Manual* (DSM) that refers to intense, recurring sexual urges and fantasies relating to children or other nonconsenting persons, specific body parts or nonhuman objects, or the suffering or humiliation of oneself or others. Not all "legal sex offenders" are paraphiliacs and not all paraphiliacs are legal sex offenders. The term "clinical sex offender" refers to those individuals whose offending is motivated by one or more paraphilias and who, in addition, may have other mental disorders or a personality disorder such as psychopathy.

PENAL POLICY

Sex offender policy has long been marked by differences of opinion as to whether sex offenders are primarily legal or clinical offenders and whether the primary emphasis in control should be on treatment, punishment or incapacitation. Historically, penal policy for sex offenders can usefully be discussed in terms of three major policy models: clinical, justice, and community protection.

The *clinical model* stresses the importance of diagnosis and prediction in order to determine which sex offenders are sufficiently mentally disordered that they require treatment and confinement for indeterminate periods in order to prevent them from offending. The sexual psychopath statutes enacted in 25 American states between the 1930s

and 1960s typify the clinical model. These statutes permitted the indeterminate civil confinement of accused or convicted clinical offenders. Sexual psychopath statutes came under severe criticism during the 1960s and 1970s because of the absence of the procedural safeguards guaranteed to other accused and convicted offenders, the absence of effective treatment, and the failure to reduce recidivism.

By the 1980s, most of the sexual psychopath statutes had been abolished or considerably modified. Legislative reforms were based on a justice model with legally prescribed fixed penalties for offenses and due process guarantees for all offenders. One consequence of this policy shift was that some of the most serious sex offenders, who would likely have been civilly committed for long periods, had to be released after serving their sentences no matter how dangerous they were considered to be.

It was in this context that crime victim advocates and the public responded to a series of horrific predatory sexual offenses against children in the late 1980s and early 1990s. The highly publicized fate of child victims such as Jacob Wetterling, Megan Kanka, and Polly Klaas led an angry public to demand measures that prioritized community protection over treatment and just deserts. In 1990, Washington State passed its comprehensive Community Protection Act, establishing mandatory registration for all sex offenders, community notification based on assessments of risk, and postsentence civil commitment for those individuals found to be sexually violent predators. By the end of the 1990s, every state had passed legislation creating a sex offender registry (the Jacob Wetterling Law) and procedures for notifying communities of the whereabouts of sex offenders (Megan's Laws), and about 15 states had passed sexually violent predator laws. In addition, the federal government mandated the FBI to set up a national sex offender registry to link the registries of individual states and enable the tracking of sex offenders across state lines. Constitutional challenges to the Sexually Violent Predator Laws in Kansas and Washington were both defeated.

A consequence of the community protection approach was an increase in the number of sex offenders in prison or under other correctional controls. By 1998, approximately one-third of prisoners in some states were sex offenders. As of October 2001, the estimated number of sex offenders registered in the United States was 388,319, with California leading the way with 87,000 registrants.

TREATMENT PROGRAMS

In keeping with the heightened emphasis on public safety, and the poor record of treatment programs using psychotherapy and behavioral conditioning, treatment programs for sex offenders now emphasize relapse prevention rather than cure. In the relapse prevention model, offenses are viewed as the outcome of a sequence of cognitive, emotional, and behavioral components. Offenders are taught to identify and address "offense-specific" targets such as cognitive distortions, fantasies, denial, and minimization, and "offense-related" targets such as inappropriate anger, substance abuse, and deficient social skills. In some cases, hormonal treatment may be provided as well to reduce sexual desire.

CONCLUSION

Reviews of recent research on offender treatment have found that the cognitive-behavioral relapse prevention approach is consistently more effective than behavioral treatment and nonspecific mental health treatment in reducing recidivism. Despite the promising results of cognitive-behavioral treatment, the emphasis on incapacitative and surveillance measures for sex offenders continues to grow, as indicated by the establishment of sex offender registries and other community protection measures in countries including Canada and the United Kingdom.

SEXUAL RELATIONS WITH STAFF

The inherently unequal power relationship between staff members and inmates makes it impossible for inmates to consent freely to sexual relations. Correctional professionals have certain fiduciary responsibilities toward inmates in terms of control over their safety and well-being, and sexual intimacy constitutes a breach of these responsibilities. The kind of inequality that exists between prisoners and staff members legally renders any purported consent moot, even in those cases where the less equal partner is the initiator of the sexual relationship. Just as no circumstances exist in the United States in which an adult may legally have sex with a child regardless of how willing the child might be, staff members may not legally have sex with inmates under any circumstances. Anyone familiar with the field of prison studies knows, however, that sexual interactions between staff and inmates *do* occur. Experts commonly refer to this problem as "staff sexual misconduct."

Staff sexual misconduct may be broadly defined as any sexual behavior between inmates and staff, ranging from assaults such as rape and molestation to exploitative conduct such as trading sexual favors from prisoners for contraband items or extra privileges. It also includes so-called consensual situations such as staff-inmate love affairs. As of 2003, sexual relations of any sort between officers and the confined have been criminalized in all but three states (Vermont, (Oregon, and Alabama) in the United States.

HISTORY

In the early 19th century, when women were incarcerated in the same institutions as men, they were supervised by male guards. However, this practice ended in the mid-19th century, following a large-scale reform movement that arose partly in response to pervasive sexual abuse. Critics like Rhoda Coffin, Hannah B. Chickering, Josephine Shaw Lowell, and Abigail Hopper Gibbons called for separate prisons for females, to be staffed entirely by women. The possibility of homosexual abuse by staff in same-sex prisons apparently did not occur to anyone, or at least was never articulated. The first truly separate prison for women run by women was opened in Indiana in 1863.

Once separate prisons for men and women were established, the problem of staff sexual abuse of women inmates disappeared from written discussions. In fact, discussions of any type of sex in prison were rare in the early 20th century. One exception was an article exploring "unnatural relationships" between black and white females in girls' institutions (Otis, 1913). As it turns out, this article was the beginning of what was to become an academic preoccupation with consensual homosexuality between women prisoners that lasted well into the 1960s. Little or no attention was paid to whether homosexual abuse by staff in women's prisons was also occurring, despite clear anecdotal references to it. By comparison, research on sex in men's prisons focused from the beginning on *coerced* sexual relations between inmates. There were periodic references to male staff participation in—and even encouragement or management of—these sexual activities, but the emphasis was still clearly on inmate-on-inmate sexual coercion.

In the 1980s women were allowed to guard male prisoners for the first time. The reintroduction of cross-sex supervision was the product of successful lawsuits brought by female correctional professionals seeking equal employment opportunities in men's prisons. Once women were entitled to work in men's prisons, male staff could also be deployed in women's prisons. The reintroduction of male staff into female prisons coincided with a sudden

increase in complaints by female inmates about staff sexual misconduct. Some male inmates also complained and filed lawsuits over their loss of privacy due to supervision by women officers.

COURT CHALLENGES, LEGAL CHANGES

In 1994, the Supreme Court recognized in *Farmer v. Brennan* that "being violently assaulted in prison is simply not 'part of the penalty that criminal offenders pay for their offenses against society'" (511 U.S. 825, 834, 1994, quoting *Rhodes v. Chapman*, 452 U.S. 337, 347, 1981). Despite evidence that cross-sex supervision may facilitate sexual misconduct, the courts have consistently supported equal employment access for correctional staff over inmate concerns about privacy. While male inmates have been more likely to file suit over cross-sex supervision and staff sexual misconduct, the women who have done so have been slightly more successful in gaining the sympathies of the courts. In some cases, this is because the misconduct situations have been so egregious, the news coverage alone (detailing, for example, staff-led "prostitution rings" and forcible rapes of inmates) would have compelled correctional departments to make policy changes regardless of whether legal suits were pending.

It has not always been clear, however, what policy changes should be made to solve such problems. Countries such as Canada and most of the European nations have addressed the dilemmas of misconduct by strictly limiting cross-sex contact in custody. Indeed, under the United Nations Standard Minimum Rules for the Treatment of Prisoners (Standard Minimum Rules), male officers are forbidden to hold contact posts over female prisoners. U.S. correctional staffing policy in many ways seems to fly in the face of international trends, but due to legal protection of equal employment opportunity, it is not likely to change any time soon.

THE DYNAMICS OF STAFF SEXUAL MISCONDUCT

Confusion about appropriate remedies for staff sexual misconduct often relates to a widespread failure to understand its dynamics. A commonly proposed solution has been to seek better staff, since it is often assumed that inadequate staff members have somehow led to the problem. The hiring demands and fiscal limitations of most correctional departments make that solution difficult to achieve. That is, corrections has traditionally been plagued by high levels of employee turnover at the custodial ranks. The modest salaries compared to the rest of the criminal justice system make the goal of increasing staff credentials in order to attract a higher caliber of recruits to the profession unlikely. More important, however, the problem of staff sexual misconduct cannot be reduced to a few bad guards overstepping the bounds of ethical practice. Instead, sexual relations between staff and inmates reveal the complex interpersonal relations that exist in many institutions and the difficulty officers often have in negotiating them.

For example, some staff complain that it is the inmates who make sexual overtures. While this defense oftentimes strains credulity, it may sometimes be true. Even highly ethical staff may fail to handle such initiatives properly if they are not trained to understand and deal with inmate overtures and the dynamics of cross-sex supervision.

The limited amount of research available on staff sexual misconduct suggests that there are several common patterns. Avery Calhoun (1996) suggests several useful categories for thinking about this issue. There certainly are situations in which staff take forced sexual advantage of inmates, either by outright *raping* them or by using *routine work situations* (such as a pat search or medical examination) inappropriately to observe, harass, or assault inmates. Because prisoners do not enter these sexual interactions willingly, they are most likely to complain about them.

Staff and inmates may also engage in *sexual bartering*, in which sexual contact is traded for valued items or privileges, and *pseudo-love situations*, in which sexual contact is related to what either the staff member or inmate or both view as a mutual love relationship. Inmates are more likely to become involved in these last two relationships willingly, in some cases even initiating them themselves, despite

the fact that they cannot legally consent to such sexual interactions. As a result, prisoners rarely complain about these last two sexual alliances and, in fact, often deny that they exist even when such relationships are exposed by others.

While it is easy to understand why inmates might wish to enter into bartering or pseudo-love relationships with staff, considering what they have to gain, it may be more difficult to understand why staff would be willing to become involved in such behavior, particularly since it could result in sanctions ranging from dismissal to imprisonment. Chris Rasche (2003) has noted that explanations for staff sexual misconduct have tended to fall into four major schools of thought. First, *blame the men explanations* take their starting point from the fact that most staff sexual misconduct appears to be heterosexual and perpetrated by men. Otherwise normal gender relations and socialization in the United States create peculiar adaptations in the unnatural world of the prison. Many men in America are still socialized to treat women in general as sex objects—that is, they are raised to believe that attractive women should be lusted after and pursued sexually by normal men. Guided by this principle, some men have difficulty refraining from that behavior even when they are supposed to be professionals, especially if the women under their control behave seductively, as women inmates sometimes do. Such staff members need training in gender sensitization as well as sexual misconduct dynamics in order to behave professionally.

Second, *blame the staff explanations* point primarily to negative or inadequate attributes of correctional staff themselves, regardless of sex, in terms of their inherent qualities or attitudes that lead to bad behavior. That is, negative attitudes toward women or inmates, positive attitudes toward rape myths, and individual negative qualities (such as lack of ethical restraints) may be viewed as predisposing staff toward misconduct in the absence of meaningful training to the contrary.

Third, *blame the inmate explanations* highlight the negative attributes of inmates, in terms of either their inherent qualities or their situational dilemmas of being in highly restrictive and oppressive environments, as reasons for efforts to seduce staff. Women are viewed as particularly manipulative and seductive, especially vulnerable to sexual abuse, and likely to be so desperate for attention or intimacy that they attempt to lure male staff. Male inmates are seen as just behaving as men, only more manipulatively and seductively.

Finally, the *blame the institutional context explanations* suggest that misconduct between staff and inmates results from the unnatural situation in which they both find themselves. That is, the enormous power differentials between staff and inmates, and the fact that staff spend long workdays in the same environment with inmates—who are imprisoned precisely because they cannot behave properly—leads to situations in which a variety of abuses are likely to take place. Sex becomes one more dimension of this abuse. If staff members are not properly trained to understand this unnatural situation, they will be unprepared to confront the inherent stresses it contains. Merely exhorting staff to avoid sexual misconduct for fear of criminal penalty is insufficient preparation for the realities of daily staff-inmate interactions. Reports issued by Human Rights Watch and Amnesty International also criticize grievance procedures that require a woman inmate to inform the officer that she is lodging a complaint. This requirement exposes her to retaliation by the officer and may deter women from making a complaint. The problem of staff sexual misconduct is also exacerbated in cases where the department of corrections conducts cursory investigations or administers weak punishments to offending staff.

CONCLUSION

Currently, prevention efforts in most jurisdictions appear to consist of exhortations to staff against sexual misconduct during both basic and in-service training, though increasing numbers of facilities also have informational programs in place for inmates that explain sexual misconduct and how to report it. A few jurisdictions, most notably the states of Michigan and Pennsylvania, have adopted in-depth gender-sensitizing training for all staff who work

with female inmates. Post facto responses include improved reporting procedures for both staff and inmates, increased administrative penalties for staff who engage in misconduct, and criminalizing such misconduct in virtually all states. While cross-sex supervision will probably not go away in the United States, sexual misconduct might be diminished by a combination of meaningful gender-sensitive preventative training and criminal sanctions that are actually exercised when misconduct incidents occur. As jurisdictions find that such approaches are less expensive than responding to lawsuits, presumably such countermeasures will increase.

SING SING CORRECTIONAL FACILITY

Sing, Sing, meaning "stone upon stone" in a local Native American dialect, is the state of New York's maximum-security facility for men at Ossining (formerly the town of Sing Sing, New York). Construction by convict laborers from Auburn Penitentiary was begun in 1826, when the facility was originally named "Mount Pleasant State Penitentiary." Sing Sing, as it came to be known after 1859, is one of several maximum-security units maintained by the state of New York, along with facilities at the Midstate Correctional Center in Auburn, Attica Correctional Center near Buffalo, and Clinton Correctional Center in the town of Dannemora outside of Plattsburgh, the last being the largest.

As with all penitentiaries, Sing Sing was designed to rehabilitate and reform offenders. However, it soon became a social response to and a repository for the successive waves of immigrants who flooded into the New York City area beginning with the Irish in 1850, continuing with the Eastern and Southern Europeans through the end of the 19th century, and notably the Italians, after 1900. The prison continues to house minority inmates and is dominated now by African Americans and Latinos.

PHYSICAL LAYOUT

Sing Sing is located about 35 miles north of downtown Manhattan, in Westchester County. The entire facility, which began as a single cellhouse constructed from locally quarried stone, now covers 56 acres in a hillside on the east bank of the Hudson River.

The modern facility also houses the Tappan medium-security unit with a capacity of housing 550 inmates. Across a commuter railroad track and up the hill are maximum-security section A and B cellblocks and accompanying yards. They are classic rectangular, tiered cellblocks, stacked four and five stories high respectively, both more than 500 feet long. They hold more than 1,300 prisoners and are reputed to be the largest free-standing cellblocks in the world.

The complex has two exercise yards, a baseball field, chapel, gym, powerhouse, laundry, hospital, and a special housing unit for extremely dangerous inmates. Sing Sing's location on the river, and the dread the prison inspired, led to the use of if the slang phrase "up the river," meaning a person was never to be seen again. Sing Sing is also thought to be the source of the euphemism "the big house," referring to the massive A and B cellblocks but

in wider parlance alluding to any maximum-security institution.

HISTORY

Early in its history, Sing Sing used a variety of means to discipline its inmates, including floggings, solitary confinement, heavy weights, iron collars, and the ball and chain, as well as cold baths to punish unruly or recalcitrant inmates. Hard labor in nearby marble quarries, in addition to prison industries that produced textiles, tools, clothing, brushes, cooperage, prefabricated windows and doors, and mattresses, were fixtures until the Great Depression. The facility was always expensive to maintain and run, which required the inmates to produce marketable goods to help relieve the economic burden of their own incarceration. However, by the 1930s, businesses in New York began to complain that convict labor produced goods with an unfair cost advantage, and the state restricted production to items for its own consumption.

Photo 3 *Warden examining mail in front of convicts in the Sing Sing State library.*

IMAGE

Sing Sing became infamous as the archetypal U.S. penitentiary after Warden Lewis Lawes (1914–1940) opened the facility to Warner Brothers film studio for a number of feature-length movies in the 1930s. James Cagney's *Angels With Dirty Faces* (1938), *Each Dawn I Die* (1939), *Castle on the Hudson* (1940), and others all used prison as a set. Studio head Jack Warner contributed the present gymnasium to the prison as a token of his gratitude. Lawes was in many ways an innovative and tolerant administrator who encouraged inmate input into the running of the institution, even while he frowned on the idea of a democratically managed facility. He invited outsiders into the institution; encouraged major league baseball teams to visit and play games against an inmate squad known as the Black Sheep, which was very good for some years; and generally pushed an ideology of moral responsibility as a means to rehabilitation. Lawes's long tenure at Sing Sing was atypical of superintendents. During his career he became a high-profile administrator, publishing five nonfiction books during his tenure; advocated education as the means to keeping young men from committing crimes; and took a strong stance against the death penalty.

More recently, Sing Sing has come to be an informal training facility for correctional officers within the larger New York penal system. Ted Conover's recent book, *New Jack* (2000), paints a picture strangely similar to the 19th-century depiction of a facility without a clear mission or goal that follows a complex and often self-defeating set of rules.

THE DEATH PENALTY

By 1916, Sing Sing had become the state's central execution site. A new execution facility was built at a cost of $268,000 and isolated from the rest of the institution, equipped with its own kitchen,

infirmary, and a morgue for autopsies connected to death row. New York would execute more people than any other state in America during that time, claiming the lives of 614 inmates between 1891 and 1963, and, as such, became the flagship for capital punishment in the Western world. Many high-profile criminals were put to death at Sing Sing, including gangster Louis "Lepke" Buchalter and Ethel and Julius Rosenberg. The death house, designated "15-Building," also witnessed the executions of Edward Haight and Norman Roye, both age 17, two of a dozen teenaged men electrocuted at Sing Sing between 1940 and 1959.

CONCLUSION

New York's Victorian-era penitentiaries, although slated for deactivation several times, have all been pressed back into service as empty prison beds in New York State have become rare, despite the construction of 50 new prisons in the state since 1975. While Sing Sing's status was downgraded in 1973, making it a reception center for classification and transport of new inmates to their permanent locations, by 1982 it was reinstated as a maximum-security institution in hopes of relieving the crush of inmates coming into the Department of Corrections. Overcrowding has in large part been due to the draconian "Rockefeller Drug Laws," which have increased prison populations nearly 600% during the past 20 years. Sing Sing has become the repository for many of those inmates.

Sing Sing's inmates throughout the 1990s and into the new century are overwhelmingly nonwhite, roughly 30% Latino and 60% African American, with the remaining 10% Caucasian. By contrast, the correctional staff is largely white, drawn from the semirural setting of the town of Ossining and the greater New York City area, but has a larger percentage of nonwhites than the other maximum-security units. The facility has since 1980 experienced its worst period of gang activity and violence to date, with a major riot in 1983. The effects of the Rockefeller drug statutes and the increase in African American and Latino incarceration rates in New York have increased the power of street gangs within Sing Sing, and as of 2003, the major rivals are the Latin Kings and the Bloods. The long-range plans of the New York Department of Corrections include keeping Sing Sing open and functioning as a maximum-security facility well into the 21st century. Although no location has to date been selected for the resumption of executions, lawmakers in Albany have indicated that due to New York's reinstatement of the death penalty in 1996, Sing Sing may again be a site for lethal injections.

SLAVERY

Understanding the history of slavery may help explain the current overrepresentation of African American women and men in U.S. prisons. Scholars like Loic Wacquant and David Oshinsky point to continuities in the treatment of African Americans from slavery to the present, identifying the prison as a modern version of the "peculiar institution" that serves to criminalize color. The connections are, of

course, not entirely direct or linear, but rather exist in cultural ideas of race and economic inequalities that shape the wider U.S. society.

OVERVIEW

Native Americans were the first slaves in the United States before factors such as the lucrative nature of the African slave trade, the unsuitability of Native Americans for the labor-intensive agricultural practices, their susceptibility to European diseases, and the proximity of avenues of escape led to the transition to an African-based institution. Between 1450 and 1900, between 10 and 20 million Africans were uprooted from their homes and shipped across the Atlantic Ocean—the notorious "Middle Passage." As the name suggests, the Middle Passage was the middle leg of a three-part voyage that began and ended in Europe. The first leg between Europe and Africa's "slave coast," cargo (such as iron, cloth, brandy, firearms, and gunpowder) were exchanged for Africans. The ship then set sail for colonies in North America, South America, and the West Indies, where slaves were exchanged for sugar, tobacco, or some other product. The final leg brought the ship back to Europe.

Though many of the first colonies in America initially depended on the work of indentured laborers, a system of "perpetual servitude" utilizing slaves was soon adopted to ensure a reliable labor force. Virginia and Maryland were the first states to legalize slavery, in 1661 and 1663, respectively. With the success of tobacco planting, African slavery soon became the foundation of the Southern agrarian economy. In 1672, the king of England chartered the Royal African Company to bring the shiploads of slaves into trading centers like Jamestown, Hampton, and Yorktown.

There are important distinctions to be made between Euro-American and African slavery. Under slavery in Africa, slaves retained some social and individual rights like marriage and the freedom to raise a family. Rarely were the children of those prisoners placed into slavery. They were also usually allowed to speak their language and to worship their gods. In contrast, efforts were made to strip Africans captured and taken into the New World of all their personality and humanity—they could not even bear their own names. Another characteristic that set American slavery apart was its racial basis. Although there were black, mulatto, and American-born slave owners in some colonies in the Americas, and many whites did not own slaves, chattel slavery was fundamentally different in the Americas from other parts of the world because of the racial dimension. By the mid-18th century, in America all slaves were Africans, and almost all Africans were slaves. The Atlantic slave trade was different from African slavery insofar as it was the first form of slavery motivated solely by commercial incentives. It was a highly profitable capitalist invention to provide cheap labor.

Ultimately, the African slave trade and slave labor transformed the world. In Africa, for example, the slave trade stimulated the expansion of powerful West African kingdoms. In the Islamic world, African slave labor on plantations, in seaports, and within families expanded the commerce and trade of the Indian Ocean and Persian Gulf. In the Americas, slave labor became the key component in trans-Atlantic agriculture and commerce supporting the booming capitalist economy of the 17th and 18th centuries, with the greatest demand in the Americas coming from Brazil and the sugar plantations of the Caribbean.

Throughout most of the colonial period, opposition to slavery among white Americans was rare. Settlers in the 17th and early 18th centuries came from sharply stratified societies in which the wealthy savagely exploited members of the lower classes. Lacking later generations' belief in natural human equality, they saw little reason to question the enslavement of Africans. Early attempts to curtail slavery in the national capital failed. In 1805, Congress defeated a resolution to achieve gradual emancipation in the district. This law would have designated the territory's slave children free when they reached maturity. This would have major consequences for the future of the city. In 1808, when the external slave trade became illegal, the domestic slave trade assumed new economic importance. However, while slave importation was outlawed,

some 250,000 slaves were illegally imported from 1808 to 1860.

In January 1865, Congress passed the Thirteenth Amendment, which ended slavery forever. It became part of the Constitution in December 1865. The Thirteenth Amendment reads as follows:

1. Neither slavery nor involuntary servitude, except as a punishment for crime whereof the party shall have been duly convicted, shall exist within the United States, or any place subject to their jurisdiction.
2. Congress shall have power to enforce this article by appropriate legislation.

Other rights of blacks were also recognized. During Reconstruction (from 1865 to 1877), Republican legislators passed ambitious laws and approved major constitutional amendments. The Civil Rights Act of 1865 recognized the citizenship of blacks, their right to sue and be sued, to make contracts, to testify in court, and to own and dispose of property. The provisions of this act were incorporated into the Fourteenth Amendment because of fears that the Supreme Court would declare it unconstitutional. In 1868, the Fourteenth Amendment to the Constitution was ratified, granting citizenship to any person born or naturalized in the United States and thus making slaves citizens. In effect, the Fourteenth Amendment provided blacks protection by the federal government from the abrogation of rights by the Southern states. The most significant changes enfranchised African American men; in 1870, the Fifteenth Amendment was ratified, granting African American men the right to vote.

THE CONTROL OF SLAVES AND FREED BLACKS

Slavemasters gave a great deal of attention to molding the character of the "ideal" slave. Some elements included imposing strict discipline and instilling a sense of the slave's own inferiority, a belief in the master's superior power, acceptance of the master's standards, and, finally, a deep sense of helplessness and dependence. To mold a docile labor force, planters resorted to harsh, repressive measures

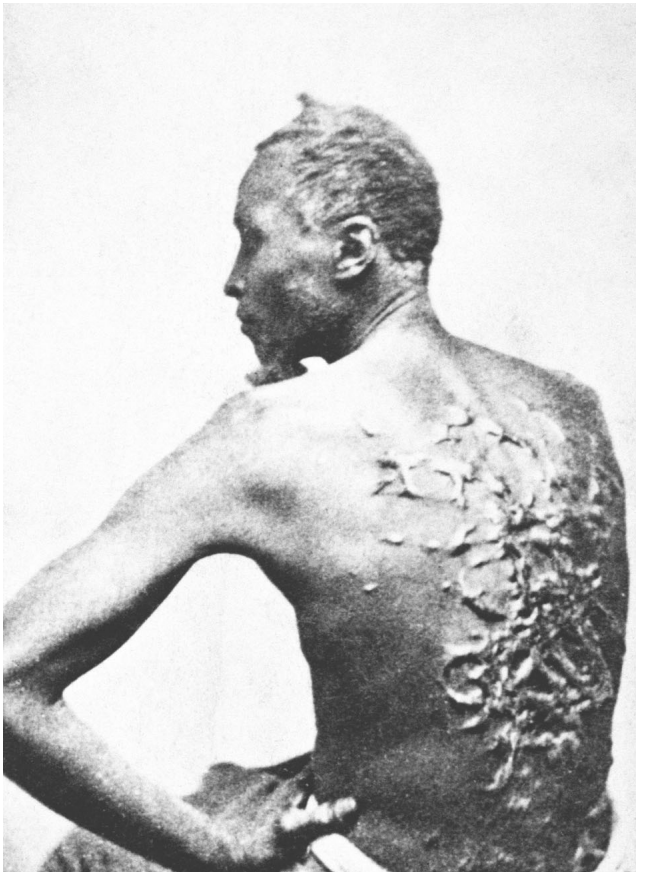

Photo 4 *The scars from a whipping on a slave's back, Baton Rouge, Louisiana, 1863*

that included liberal use of whipping and branding. The lives of enslaved persons were severely circumscribed by not only plantation owners and slavemasters but also the law.

Slave Codes and Slave Patrol

Citizenship in America was granted to people by the Constitution based upon their status as human beings. The U.S. Constitution considered the slave to be three-fifths of a human, and thus neither human nor citizen. Instead, slaves were considered chattel, or movable property. Similarly, women in America were considered the property of their husbands or fathers. White women were considered human and property, but black women were considered property but less than fully human.

"Slave codes" refer to an extensive body of state law developed from the 1660s to the 1860s. Slave codes defined the life of the slave from birth

until death. They also articulated the criminal law and procedures to be applied against enslaved persons. The purpose of the codes was to uphold chattel slavery and define the socially accepted boundaries for slave behavior. These codes made slavery a permanent condition that was inherited through the mother.

Considered property themselves (similar to real estate), slaves could not own land nor be party to a contract. Since marriage is a form of a contract, no slave marriage had any legal standing. Free white women who married black slaves could be treated as slaves during the lives of their spouses, although in some states children born of these unions were regarded as free. The slave codes also regulated the movements and employment of free blacks and often required them to leave the state after emancipation. The slave codes also empowered white slave owners to exercise their own form of plantation-style justice.

The slave codes also established slave patrols. Slave patrols in the United States can trace their roots to the Caribbean, where every island had laws for the pursuit, capture, and punishment of runaway slaves. Virginia established slave patrols as early as 1727. South Carolina adopted the first comprehensive slave code after the 1739 Stono Rebellion, the first major rebellion by slaves in South Carolina and the deadliest one on American soil in the 18th century. By 1750, every Southern colony had a slave patrol.

Slave patrols (which were precursors to the American police force system) were charged with enforcing the slave code and were given the authority to stop, search, whip, maim, and even kill any slave who violated the slave code. In the beginning, slave patrols were made up of people from all walks of life in the South, including wealthy land- and slave-owning aristocrats. Later they were comprised of groups of largely poor and uneducated white men who were organized and operated as paramilitary organizations. Service in the patrols was required by law. As Southern cities grew, some replaced the slave patrols with police groups, while others had the slave patrols take on the duties of police groups, which included breaking up nighttime gatherings, hauling in suspicious characters, and capturing lawbreakers.

Slaves charged with crimes in Virginia were tried in special non-jury courts created in 1692. The purpose of the courts was not to guarantee due process but to set an example speedily. The courts could resort to hideous punishments to reassert white authority. Offending slaves were hanged, burned at the stake, dismembered, castrated, and branded, in addition to the usual whippings.

The slave code and laws at the time also offered little protection to black women who were raped. If a white man raped a black female slave, it was not considered a crime, nor was the murder of a woman who was enslaved. If a black man who was enslaved raped a black enslaved woman, it was not considered a crime. He could, however, be exiled or put to death if the slave was the mistress of the white slave owner or was valuable to the productivity of the plantation. Hence, the physical and emotional trauma associated with the rape of an enslaved person was of no consequence. If a white female victim was raped by a white male, the law allowed 10 to 20 years in prison, whipping, or death if the victim was a minor. If a white woman was raped or if an attempted rape occurred by a black male, the punishment was death or castration.

The Black Codes of 1865

After slavery was abolished in 1865, white Southerners created the "black codes" to replace the slave codes and establish a means of controlling and restricting the freedom of former slaves, and to compel African Americans to work. Laws differed across the post–Civil War South but embodied similar kinds of restrictions. Blacks found without lawful employment or business could be arrested and charged with vagrancy. Black codes also dictated the conditions of employment, dictating blacks hours of labor, duties, and choice of occupation. Blacks who unlawfully assembled themselves or went to places specifically reserved for whites could be subject to imprisonment and fines. The black codes, which threatened punishment, including incarceration, could be seen as another means of legally reenslaving newly freed slaves. Laws under the black codes criminalized gun possession, voting, assembly after sunset, and desertion from work. They regulated blacks' civil and legal rights,

from marriage to the right to hold and sell property. By 1866, federal officials, deciding that the codes were too harsh and that blacks should be subject to the same penalties and regulations as whites, suspended the black codes.

Jim Crow Laws

As noted earlier, after 1865, African Americans gained some rights through the addition of the Thirteenth, Fourteenth, and Fifteenth Amendments. However, when Reconstruction ended in 1877, whites in the North and South became less supportive of blacks' civil rights. Furthermore, several Supreme Court decisions overturned Reconstruction legislation by promoting racial segregation, thus setting the stage for Jim Crow laws. Most significantly, in *Plessy v. Ferguson* (1896), the Supreme Court ruled that "separate but equal" accommodations were constitutional. This paved the way for Southern states to pass laws that restricted African Americans access to schools, restaurants, hospitals, restrooms, and other public places. By 1915, Jim Crow laws began to lose their strength, and several Supreme Court rulings that undermined segregation (such as *Brown v. Board of Education* [1954], which established that separate could not be equal) began to provide the momentum for the civil rights movement.

SLAVERY AND THE CREATION OF PRISONS

As soon as slavery was abolished, the locus of control and labor of former slaves moved to the criminal justice system. Before the Civil War, blacks were overrepresented in prisons everywhere except the South; in the South, slavery was the preferred means of controlling black people rather than imprisonment. After the Civil War, the Jim Crow laws made newly freed blacks vulnerable to incarceration for minor offenses. Consequently, the black imprisonment rate rose dramatically in Southern states. Throughout the country, virtually all women held in reformatories (intended to be more benevolent and therapeutic institutions) were white. By contrast, the population of women held in custodial institutions (known for their degrading conditions) or prison camps was overwhelmingly black.

Sociologist Loïc Wacquant (2000) contends that not one but several "peculiar institutions" have successively operated to define, confine, and control African Americans in the history of the United States after the abolition of slavery. The first historic form of oppression for Africans was *chattel slavery.* Slavery was the backbone of the Southern economy (and arguably, the American economy), sustained by the plantation. This created the matrix of racial division from the colonial era to the Civil War.

The second "peculiar institution," the *Jim Crow system*, legally enforced discrimination and segregation. Jim Crow anchored the predominantly agrarian society of the South for a full century, from the close of Reconstruction to the civil rights revolution. Thus, while slavery had been abolished, the enslavement of the "freed" men and women continued through legislation that impeded their ability to enjoy the full benefits of citizenship in America.

America's third "peculiar institution" for containing the descendants of slaves in the Northern industrial metropolis is the *ghetto*. The Great Migration of 1914–1930 and ongoing migration from then into the 1960s caused the urbanization and proletarianization of African Americans, rendering them partially obsolete. The obsolete status was caused primarily by the concurrent transformation of economy by the protest of blacks against continued caste exclusion that climaxed during the urban riots. The reaction to the acts of liberation through rioting caused blacks to once again be placed on a plantation in the form of the prison industrial complex. In fact, after the riots of the 1960s, prison populations rose by 200%; prison occupants were disproportionately male and of African descent.

The fourth institution Wacquant identifies is the *prison industrial complex* that was formed by the remnants of slavery, Jim Crow, and the ghetto. Wacquant suggests that slavery and mass imprisonment are "genealogically" linked. One cannot understand the latter—its timing, composition, and onset along with the ignorance or acceptance of its detrimental effects on those it targets—without

returning to the former as historic starting point for the creation of the prison industrial complex.

CONCLUSION

The history of slavery may help explain the current overrepresentation of African American women and men in U.S. prisons. Following emancipation, the prison became the new locus of control of former slaves. Though certain aspects of race relations have undoubtedly improved since then, due to civil rights and affirmative action laws, then as now, laws serve to perpetuate social and economic differences that disproportionately affect minorities. Consequently, those interested in racial issues in contemporary penal issues need to consider the ongoing legacy of slavery today.

Plessy v. Ferguson, 163 U.S. 537 (1896).

SNITCH

The term *snitch* refers to individuals who supply information to government agents and prison officials in the furtherance of criminal investigations and prosecutions. Also known as informers, there are two basic types: the "incidental" informer and the recruited "confidential" informer. *Confidential informants* are those who have an ongoing relationship with policing agents and who provide information on a variety of criminal activity over an extended period of time in return for payment. Confidential informants are recruited due to their ability to provide details as a result of their access to criminal activity. *Incidental informants* are those who work with authorities on one particular incident. They may receive compensation, but many provide information out of a sense of justice and they usually do not provide ongoing assistance to authorities.

While snitches exist both in and outside of jails and prisons, the correctional setting is unique in its opportunity to host snitching for several reasons. First, jails and prisons are places where high concentrations of criminal offenders have been gathered. Thus, the opportunity to learn about or observe illegal activity is high. Second, individuals who are incarcerated have an increased incentive to provide information to authorities in order to receive early release or special treatment by correctional staff in exchange for their assistance. Third, snitches can provide valuable information to correctional administrators by alerting them of situations that may lead to rioting or otherwise serve to threaten facility security.

HISTORY

Government authorities have used snitches in varying capacities throughout history. By 1275, an organized use of informants was in place throughout England. An early "approver system" allowed those accused of a felony or treason to come forth and provide information on others in return for pardon. This system was eventually abandoned due to abuse and frequent corruption. Those accused had little to lose by coming forth, and many provided false implications against others in hopes of gaining freedom. The

approver system also provided opportunity for blackmail when individuals threatened to make false accusations unless they were paid to be silent.

In place of the approver system, a "common informer system" was adopted that allowed any person, not just those charged with a crime, to come forward to provide information to authorities. Those assisting authorities were entitled to a portion of any fine imposed on the wrongdoer. But soon this system too experienced problems of false accusations and blackmail.

By the end of the 19th century, professional police forces were in place throughout most of Western Europe and the United States. In all systems, informants became an integral part of police investigations. In both France and England, the establishment of specialized criminal investigative units carried forward government reliance on snitches. Today, the use of snitches in the United States is more common than ever. With increasing complexity of criminal activity and the unique insight snitches provide, their use has become commonplace in contemporary criminal justice systems.

SNITCHES AND THE PRISON SUBCULTURE

In most incarcerated populations, those who snitch are despised and occupy a low status within the inmate subculture. Names such as "rats," "stool pigeons," "stoolies," or "finks," given to snitches by other prisoners, symbolize this disdain. The repercussions for those identified as snitches can be severe. Some are placed in special custody by correctional staff to prevent violent attack from other inmates. In extreme cases where the threat to the inmate and his or her family is likely to be carried out, the snitch may be relocated and enrolled in a witness protection program with a new identity.

PREVAILING PROBLEMS

One of the ways offenders may reduce their term of incarceration is to provide information to authorities in exchange for a sentence reduction. Those who possess no useful details sometimes fabricate evidence about others. Some gather evidence by researching newspaper and magazine articles, while others receive information from other inmates. Jail informants may also enlist other snitches to corroborate their manufactured tales so as to enhance the credibility of their testimony for the government. Barry Scheck and colleagues (2000) provide illustration of this in a letter that a snitch had written to a fellow inmate stating,

> Go for the jugular—you're going to have to be bullshitting a little bit, . . . You're sitting on a smoking row—used properly, you could cut your time way down. . . . Make sure you call me. I'll do your research.

They also discuss the culture of snitches in the jailhouse scene, citing jokes common among snitching circles, such as, "Don't go to the pen—send a friend" and "Trouble? You better call 1-800-HETOLDME" (p. 129).

CONCLUSION

The practice of snitching has existed since the earliest forms of organized correctional and judicial systems. For authorities, the benefits of using snitches are many: they provide agents the ability to understand and forecast criminal activity, identify culprits, and streamline the investigative process. However, the use of snitches has long been plagued by abuse and corruption. From the beginning, the benefits of informant systems have often been undermined by participants who have extorted the process for self-gain, and contemporary systems provide no exception. In spite of this, correctional and other justice authorities have become dependant on the unique form of insight that snitches provide and their continued use appears certain.

SOLITARY CONFINEMENT

Inmates are placed in solitary confinement for one of three reasons: (1) as a punishment for violating an institutional rule, (2) to protect the security of the institution, or (3) to protect inmates from others in the institution who may wish to harm them. Over the decades, various terms, such as "segregation," "special handling units," "supermax units," "treatment centers," and "dissociation," have been used to label solitary confinement. Solitary confinement is also commonly referred to as "the hole," a euphemism created by inmates.

Placing inmates in solitary is always controversial, since research suggests that it may be detrimental to the physical and mental health of inmates. The constitutionality of solitary confinement, with respect to the Eighth Amendment against cruel and unusual punishment, has also been questioned. However, other studies indicate that solitary confinement does not harm individuals and can be a useful tool for prison management.

HISTORY

The roots of solitary confinement may be found in the Pennsylvania prison system of the late 18th century. The Pennsylvania system required that all prisoners were kept in total isolation from one another for the duration of their confinement, in contrast to the Auburn system, in which individuals worked together all day but were not permitted to talk to or to contact one another. The Pennsylvania system was created by Quakers who felt that criminal reform could best occur through isolation from bad influences and time spent alone in penitence. Thus, prisons were created in which each inmate was housed in a separate cell large enough for a bed and workspace. All prisoners had their own walled yard for solitary exercise, and meals were served to them alone in their cells. Communication among the prisoners or between prisoners and guards was forbidden.

Although the Pennsylvania system was created with good intentions, the Quakers' solitary system had many troubling effects. Insanity and suicide rates were high among those held in the solitary cells, and prisons built along this model were expensive to operate. Such difficulties eventually led to its abandonment in North America in favor of the Auburn system of imprisonment. Prisons today are a mixture of the two systems. While they are primarily run like the Auburn penitentiary, allowing for communication and contact between prisoners, the use of solitary confinement as a punishment and managerial tool remains.

CURRENT USES

As stated, solitary confinement these days is generally used for one of three purposes. First, it is utilized as a punishment for the violation of an institutional rule, in what is usually known as *disciplinary* or *punitive segregation*. Second, prisoners may be placed in solitary confinement to ensure order in the institution. When this happens, the confinement is usually referred to as *administrative segregation*. Finally, inmates may request to be placed in solitary confinement for their own protection. This practice is called *protective custody*. In the U.S. federal system, regulations have been set in place by the Federal Bureau of Prisons (BOP) to govern the use of these three forms of solitary confinement. Similar legislation exists in Canada under the Corrections and Conditional Release Act. Strategies governing this practice vary in the different states of the United States.

Disciplinary Segregation

If a prisoner violates institutional rules or commits a criminal offense while in prison, such as the assault of a member of the prison staff or another inmate, he or she may be sent to solitary confinement for punitive segregation. Individuals facing this punishment have the right to a hearing to determine their guilt and the suitability of their treatment, similar to a criminal trial on the outside. They are entitled to representation by a staff member in such a hearing or they may represent themselves. They may also call witnesses to testify in the matter on their behalf. Hearings for minor offenses are presided over by an assigned staff member, who may be the warden or a senior officer. Hearings for serious disciplinary offenses must be conducted by an independent disciplinary hearing officer (DHO). The DHO is trained to conduct disciplinary hearings and is neither a member of the institutional staff nor a warden. If the inmate is found guilty of the offense, the DHO will impose a sanction from a list of options outlined by the BOP. Solitary confinement, in the form of disciplinary segregation, is one of the available sanctions.

The time for which an inmate can be sent to punitive segregation is limited to a specific number of days set out by the BOP, which vary according to the severity of the offense committed. There are four levels of institutional offenses: greatest, high, moderate, and low moderate. Greatest level offenses may be subject to up to 30 days in disciplinary segregation. Prisoners found guilty of a high-level offense may also receive 30 days, while those who are convicted of a moderate-level one can receive 15 days solitary confinement. Low moderate offenses are not subject to segregation as a sanction unless the offense is the second committed within six months. Repeated low moderate offenses may result in a punishment of seven days in segregation. Upon expiration of the "sentence," inmates must be returned to the general prison population unless they have committed further offenses for which they have been given a sanction of segregation.

A segregation review official (SRO) is required to review the status of prisoners confined in disciplinary segregation every seven days and to hold a formal review hearing every 30 days they are confined in segregation. The SRO has the power to suspend the segregation sanction if it is found that such confinement is no longer necessary to punish or deter the inmate or to protect the security of the institution. However, if a prisoner's time in segregation is drawing to a close and it is found that returning him or her to the general population would pose a threat to the security of the institution, the SRO may remand the inmate to administrative segregation following release from disciplinary segregation. Institutional staff must conduct a psychological or psychiatric assessment of the segregated inmate every 30 days to ensure his or her fitness to remain so confined. Inmates found to be suffering from psychological or psychiatric illness are removed from segregation and referred to the mental health unit of the institution.

Administrative Segregation

Administrative segregation, while governed by similar policies, tends to be used much more liberally in practice than disciplinary segregation. It may be used (1) to confine an inmate who has committed a disciplinary offense and is awaiting a hearing, (2) to confine an inmate who is considered to be a threat to the security and order of the institution, or (3) to protect an inmate from other individuals in the institution who may harm him or her, were he or she to remain in the general population. While an inmate is confined in administrative segregation, the inmate's case is reviewed by the SRO every seven days, and a formal review hearing is held every 30 days. Prisoners in administrative segregation, like disciplinary segregation, are assessed every 30 days for psychological or psychiatric illness. Administrative segregation is generally limited to a maximum of 90 days, but it may be extended in special circumstances by the warden or the SRO.

CONDITIONS

The Federal Bureau of Prisons has established regulations for the conditions of solitary confinement units. Inmates in both disciplinary and administrative

segregation units are expected to receive the same minimum standards of cleanliness, hygiene, and nourishment that are granted to the general population. They are entitled to a minimum of five hours of exercise time per week, as well as the opportunity to use the showers at least three times per week. Unfortunately, reports from inmates, legal representatives, and even institutional staff have confirmed that these requirements often are not met. Inmates in solitary confinement are often kept in substandard conditions and are denied their rights to exercise time, adequate food, warmth, clothing, and hygiene supplies.

Prisoners held in administrative segregation are also entitled to participate in the same programs, religious celebrations, and visitation as the general prison population. These privileges are often denied them by prison officials who cite the threat to institutional security or lack of staff as the reason. It appears that there is some disparity between the BOP regulations regarding solitary confinement and the reality. The conditions of solitary confinement in U.S. prisons have recently become a topic of debate, in light of the Eighth Amendment right to be protected from "cruel and unusual" punishments.

SOLITARY CONFINEMENT AND THE EIGHTH AMENDMENT

The Eighth Amendment of the U.S. Constitution states that "excessive bail shall not be required, nor excessive fines imposed, nor cruel and unusual punishments inflicted" (U.S. Constitution, Amendment VIII). The use of solitary confinement has long been challenged as a violation of the constitutional rights of prisoners. Solitary confinement has been challenged in Canada under the auspices of the Charter of Rights and Freedoms, which also contains a provision against "cruel and unusual" punishment. Cases brought in the United States in particular have been based on the notion that solitary confinement may be detrimental to inmates' mental health, causing hallucination, depression, hypersensitivity, and suicidal tendencies.

The courts have generally held that solitary confinement does not, per se, constitute cruel and unusual punishment, but in specific cases the conditions in which inmates are held have been deemed to violate constitutional or charter rights. The official criteria for determining the constitutionality of prison conditions were established by the U.S. Supreme Court in *Rhodes v. Chapman* (1981). According to this case, (1) the punishment must be proportional to the infraction; (2) the conditions cannot involve "wanton and unnecessary" infliction of pain; and (3) the conditions must be sufficient to provide prisoners "the minimal civilized measures of life's necessities." Even given these criteria, shocking conditions, such as lack of proper clothing, food, and opportunities for personal hygiene, have been deemed not to constitute a violation of the Eighth Amendment.

PSYCHOLOGICAL IMPLICATIONS

There have been relatively few studies of the effects of solitary confinement on inmates. However, the federal government's requirement that all inmates housed in solitary confinement be assessed every 30 days for psychological deterioration is implicit recognition that solitary confinement may be expected to have some negative repercussions. In the late 1970s, Stuart Grassian, M.D., interviewed 15 inmates who had been housed in solitary confinement at the Massachusetts Correctional Institution at Walpole. The interviews were conducted as testimony for a suit that was being brought against the conditions in which these inmates were held. Grassian (1983) reported that the use of solitary confinement carried risks to the mental health of the inmates, and he found evidence that time spent in solitary confinement resulted in perceptual distortions, hallucinations, hypersensitivity, paranoia, difficulties with thinking, concentration, and memory, problems with impulse control, and other psychopathological symptoms.

However, a similar study conducted by Peter Suedfeld et al. (1982) found that solitary confinement, as it is practiced in U.S. and Canadian prisons, was not detrimental to the psychological health of inmates. Suedfeld et al. (1982) did acknowledge that "individuals who were completely unable

to adapt to [solitary confinement] and became psychotic were obviously not included" (p. 335). Despite this significant omission in their sample, they report that their findings show that the ability to adapt to periods of solitary confinement differs among individuals, and that solitary confinement is not universally aversive. And so, the debate over solitary confinement continues. It is clear that further research into the psychological implications of solitary confinement is needed.

WOMEN

The use of solitary confinement in women's prisons is governed by the same regulations that apply to men's prisons. However, it appears that both administrative and disciplinary segregation are used more liberally with women than with men, often for incidents of a minor nature that would not generally merit time in solitary confinement. This may occur because there are fewer women in prison and therefore more space is available in confinement units, or because incidents that take place in women's prisons are generally qualitatively less severe than in men's prisons. Whatever the reason, feminist criminologists have criticized the apparent overuse of solitary confinement in women's prisons as an exercise of power over the female inmates. Claims of sexual abuse and harassment by male guards while in solitary confinement are common, suggesting that the opportunity for abuse is increased by separating women from the others and confining them in cells that are often under constant surveillance.

CONCLUSION

Virtually every prison in North America is equipped with a segregation or special handling unit for the administration of solitary confinement. In recent years, however, entire supermax prisons have sprung up dedicated to segregation principles. Pelican Bay State Prison in California was built in 1990 and is entirely automated, so inmates have no contact with the guards or other prisoners. At the touch of a button, guards can eavesdrop on or talk to an inmate in any cell via intercom. The inmates are confined to their cells for 23 hours a day, the other hour spent alone in a small, concrete-walled exercise pen.

Facilities similar to Pelican Bay have also been built in New York, Oklahoma, Illinois, and other U.S. states. Solitary confinement is slowly becoming a mainstream rather than an alternative form of imprisonment. Prison administrators and guards who favor the use of segregation as a prison design argue that the use of solitary confinement makes prison management easier and more cost effective. Psychologists, on the other hand, claim that imprisonment in special handling units and supermax facilities can have serious, psychologically destructive consequences. Remembering the abject failure of the Pennsylvanian solitary system, it seems that the use of solitary confinement in North America has come full circle.

SPECIAL HOUSING UNITS

Special housing units (SHU) are parts of prisons where inmates can be held in solitary confinement away from the general population. Prisoners are placed in SHU for many reasons. They may be moved into SHU as a punishment or as a means to safeguard those who are a danger to themselves or to others. They may also be placed there if they are too vulnerable to remain in the general prison population. SHU is sometimes referred to as "solitary confinement," "administrative segregation," "isolation," or "the hole." Most inmates in SHU have extremely limited contact with other human beings, and many can expect to serve their entire sentences away from the general population.

SHU can be used to curtail privileges, preserve order and control, safeguard inmates, modify insubordinate behaviors, and hinder escapes. Inmates housed in SHU are confined 23 hours out of the day in a small, dark cell that is usually windowless. One hour per day is allotted for recreation in a caged or concrete area of approximate size. The cells are sparsely furnished with a mattress (no bed frame), sink, and toilet. SHU inmates are under the surveillance of officers at all times, either through windows in their cell doors or through closed-circuit cameras. Research has shown that SHU may lead to psychological deterioration, particularly for those with preexisting mental illness.

HISTORY

Solitary confinement was a common form of punishment in the beginning of the 19th century and was a major component of the reformist ideas of the Quakers. Reformers and prison administrators alike commonly believed that inmates in isolation would reflect on their misdeeds, repent for their behavior, and transform themselves into productive human beings. At that time, prisoners served their entire sentences in complete isolation.

Auburn Correctional Facility in New York State was the first facility to change to a "work by day" and "solitary by night" prison. This new model of prison management arose in response to problems inmates suffered in solitary confinements. Some, after living in complete isolation, committed suicide and self-harmed; many others appeared to suffer from mental breakdowns. Occurrences like these were enough to cause many countries to reject solitary confinement as a form of discipline. Between 1854 and 1909, German studies also showed that psychotic disturbances (i.e., delusions, hallucinations, violent behavior, and amnesia) were associated with the mandatory segregation of inmates.

Even though many facilities abandoned complete isolation for all of its prisoners, solitary confinement continued to be used to segregate specific inmates from the rest of the prison population. In the 1980s, Marion, a federal prison for men in Illinois, became the first prison comprised entirely of SHU inmates. This confinement design then served as a model for all other prison systems.

RESEARCH

Most studies have found that solitary confinement has profound psychological effects on the incarcerated. Isolation can lead to anger, hostility, aggression, destructive behavior, high levels of anxiety and tension, lack of self-insight, submissiveness, fatigue, limited ability to communicate and concentrate, difficulty thinking or remembering, violent fantasies, emotional and cognitive impairments, hypersensitivity to external stimuli (overly sensitive to smells and noises), suicidal ideations, paranoia, perceptual disorders (hallucinations and delusions), and other forms of mental illness. Many inmates become totally dependent on the prison structure. They do not know how to set limits for themselves, because they are not allowed to make any of their own decisions. Many are no longer able to initiate behavior of any kind. Inmates may also leave SHU more violent then when they entered. Others may leave more passive but unable to initiate behavior or communicate effectively with others. Solitary confinement has also been found to create abnormal effects on the

brain (limited cognitive functioning), the nervous system (increased sensitivity to stimuli), and the endocrine gland response system (an increased biochemical response producing adrenaline, which can cause aggressiveness or anxiety). Similarly, inmates held in SHU are generally more distrustful, self-centered, manipulative, and socially immature than those who are not placed under these conditions.

Despite such findings, many studies on the effects of solitary confinement have been criticized for serious methodological weakness, including the use of voluntary subjects, time limitations, reactivity, and small sample sizes. It is apparent that more research still needs to be conducted to assess the severity of both long-term and short-term effects of solitary confinement. Moreover, some inmates housed on SHU units may already be suffering from mental illnesses that contributed to their behavioral problems. Similarly, negative symptoms associated with solitary confinement appear to increase with time, suggesting that brief spells in isolation may not harm individuals. The length of time in isolation for inmates is a considerable factor in determining the psychological impact of SHU.

WHAT HAPPENS TO INMATES?

Many prisons have SHU units that are designed especially for disciplinary problems. Individuals placed in these housing units have usually committed serious rule infractions, and as a form of punishment, they are sentenced to SHU for a determined amount of time by the prison's administration. If an inmate is repeatedly in trouble or has committed a very serious infraction like assaulting correctional staff, he or she may be forced to serve his or her entire sentence in SHU. However, some inmates have been placed in SHU for trivial reasons such as speaking up against injustices, filing grievances, or being a jailhouse lawyer.

SHU units are typically separated from the rest of the prison population. Some prisons may have an entire building devoted to SHU, while others house SHU inmates in the basements of existing correctional buildings. Still others have created prisons comprised entirely of SHU inmates (known as "supermax" facilities). These SHU facilities are supposed to be reserved for the most dangerous prisoners (typically known gang members or members of organized crime families) that prison officials, for safety reasons, cannot afford to place within the confines of general population. Even so, research suggests that most supermax facilities in fact hold a range of offenders, many of whom may not be dangerous at all. Individuals in these places are isolated all day, every day, either until their sentences are completed or until they are transferred back to a mainline institution. These prisoners are deprived of virtually all human contact, touch, or affection for years.

Despite numerous concerns over the long-term effects of supermaximum secure prisons, the security measures they utilize are being adopted in SHU units in an increasing number of locations. Thus, some departments of corrections like New York State have added more SHU cells to already existing facilities in an attempt to create supermax units inside the larger prison structure.

All inmates in SHU for disciplinary reasons are severely restricted in their daily activities. Many will have limited contact with others. Indeed, some SHU units have been specifically created to avoid almost all human contact. Most SHU inmates are locked in very small cells (approximately 14 feet by 18 feet), with no windows, for 23 out of 24 hours a day. They are allowed one hour of recreation per day, by themselves, in a caged or concrete area, and most are only allowed to shower three times per week. The cells are very sterile in appearance, consisting only of a mattress, a toilet, and a sink. Some inmates may be allowed to have writing and/or reading materials, but most are not allowed to hang anything on their walls, including pictures and family photographs.

Inmates in SHU may be allowed to make phone calls home on a limited basis; some may have no phone privileges. They are usually not allowed to shop in commissary or eat in the mess hall; instead, their meals are served to them daily through a slot in the cell door. Often they may not watch television, listen to the radio, or participate in any facility activities, including special events, educational or vocational programming, support groups, or employment.

The only time they are allowed out of their cells is for recreation, showers, or medical visits. Whenever SHU inmates leave their cells, they must be escorted. They are usually subjected to strip searches and/or naked visual checks.

In New York State, inmates in SHU who misbehave (e.g., throw feces, urine, blood, semen, or food or refuse to follow direct orders) may be punished further through dietary restrictions by being fed "the loaf." The loaf consists of whole wheat, flour, potatoes, cabbage, milk, yeast, sugar, salt, and margarine, and is considered by dietitians to be very nutritious. Before inmates are placed on this dietary restriction, they are evaluated medically. They cannot be fed the loaf for more than one continuous week. It is reserved for a very small percentage of prisoners who are housed in SHU and refuse to comply with prison rules and regulations.

There is no time limit in New York for how long an inmate can remain in SHU. Other facilities may have committees that periodically review SHU sentences, but essentially the length of a person's SHU sentence is determined solely by prison officials. Since SHU inmates are completed isolated, they are at the mercy of prison staff. Prisoners have reported that they have been mistreated and brutalized by the officers, often for petty offenses.

PROTECTIVE CUSTODY

Inmates placed on protective custody may be housed on special housing units. This type of segregation can be mandated or voluntary and is typically used for protective purposes, such as inmates who are targets for sexual assaults, are snitches, or are mentally disturbed. These inmates may be placed in SHU because they are too vulnerable to remain in the general population. Facilities that do not have SHU units may be able to provide protective custody only for a limited period of time. Once this time period has passed, if the inmate still wishes to remain segregated from the mainline population, he or she may be transferred to larger facility that has the capacity for SHU housing.

In men's facilities, openly gay, bisexual, transgendered, and transsexual inmates may be housed on special units to prevent their being physically and sexually abused by other prisoners. These individuals could be in danger if they were forced to live in the general population. Other inmates may request to be administratively segregated because they have an enemy in the facility, have a problem with a particular correctional officer, or are facing retaliation by one or several gang members.

Most inmates in protective custody are allowed to receive mail, shop, and engage in some outside recreation. Nonetheless, they are usually not allowed to work, participate in educational or vocational programs, or partake in group therapy sessions. Like all SHU inmates, they must be escorted everywhere they go, and they must follow a restricted shower schedule. Some facilities allow these inmates to associate with others housed on the unit, but due to safety concerns, most of these inmates are also locked in their small cells 23 hours per day.

Research on inmates residing in protective custody has shown that many experience nervousness, nightmares, sleep disturbances, depression, talking to self, hallucinations and delusions, irrational anger, apathy, and a reduction in emotional abilities. Other studies have found that protective custody inmates have a higher risk for recidivism, lower IQ, more anxiety, and more problems with social adjustments.

SEXISM AND RACISM

People of color are disproportionately represented in the U.S. prison system. Hence it is no surprise that they are also disproportionately represented in SHU populations. For example, more than 80% of SHU inmates in California, the nation's largest prison system, are people of color. It appears that this trend is mirrored in other prison systems across the country. These inmates, who entered prison as socially and economically disadvantaged, are released back into economically depressed communities without the means to successfully reintegrate into conventional society, since most of those who are held in SHU are not given vocational or educational programming, are mentally ill, and have been deprived of human contact for years.

Women prisoners confined to SHU may face additional issues of sexism. Some female facilities have SHU housing within their prison system. Other states, like California, have a prison—Valley State Prison for Women (VSPW)—that is specifically devoted to housing female SHU inmates. Their SHU population is more than 60% women of color. In VSPW, the women must be in full view of the officers at all times, even while they are using the toilet. They are strip searched whenever they leave or reenter their cell, even if they have not had contact with another individual. Most women in prison have a history of sexual and physical abuse, and since male officers are almost always present during these searches, many inmates complain that they are forced to relive traumatic experiences. Research has shown that women are placed in SHU for far less serious offenses than their male counterparts, including suicide attempts, becoming pregnant and refusing to have an abortion, and claims of sexual or physical abuse by staff.

CRUEL AND UNUSUAL PUNISHMENT?

Some may argue that the conditions of solitary confinement and, by extension, special housing units constitute cruel and unusual punishment, but so far the courts have not agreed. Typically, courts will consider only physical and hygienic conditions for an Eighth Amendment claim. Most have left discipline up to the discretion of prison officials, and they will only step in when there are constitutional issues at stake. The question still remains whether solitary confinement leads to psychological deterioration that, in turn, amounts to cruel and unusual punishment. Courts have held the following solitary confinement conditions constitutional: being confined naked or with only underwear; being confined without toiletries or personal articles; being confined with raw sewage and human excrement covering the cell floor. In *McCord v. Maggio* (1990), an inmate was forced to sleep in a solitary cell in which human waste seeped through the pipes onto the floor and onto his mattress. A federal court decided that this issue was security related, and they failed to find it unconstitutional.

It usually takes an extreme case for the courts to find a constitutional violation. A federal court found a possible constitutional violation in one case when an inmate who was denied medical care was kept naked in a cell without light, water, bedding, or a mattress. He was constrained in leg irons, belly chains, and handcuffs. During mealtime, his food was thrown on the floor of his cell, which was strewn with human waste, bugs, and broken glass. In a similar case, another federal court found a constitutional violation when a male inmate was housed in solitary without a mattress or lights, in a cell that had dirty blankets, rats, roaches, lice, and human waste.

The Supreme Court has said that solitary confinement is deemed to be cruel and unusual if the circumstances of solitary confinement produce a significant harm or danger, and that prisons officials are aware of this danger and choose to ignore it. This is often a very difficult case to prove; most of the guidelines set forth by the court deal with the physical conditions of solitary confinement, not the psychological conditions of it. Without proper guidelines, psychological abuses are basically left unattested.

CONCLUSION

If the courts are to rule in favor of inmates in SHU who claim that they are suffering from psychological problems as a result of their confinement, researchers will need to conduct studies that are more methodically sound. Most studies on solitary confinement conducted little if any follow-up on subjects released from SHU units. There were no results reporting the long-term effects of isolation. Studies that did show psychologically damaging factors associated with solitary confinement failed to address the duration of these effects. Will SHU cause the newly released to develop long-term problems that will inhibit their successful reentry into the community? The research does not answer this question.

Furthermore, many samples were not divided into subgroups. Voluntary and involuntary solitary confinement groups, first timers and repeat offenders, those with a previous history of mental health

problems and those without—all need to be accounted for independently in order to conduct an in-depth and worthwhile analysis. Since solitary confinement differs from one facility to another (e.g., with different privileges, different treatment by correctional officers, and so on), comparison studies can also produce spurious results.

It is evident that better studies, taking these factors into account, need to be conducted to reach any substantial conclusions. This may be asking for an impossible task. The literature suggests that solitary confinement inmates do experience different psychological symptoms than do nonsolitary confined inmates. It is difficult to say, however, if these symptoms are directly related to solitary confinement or SHU. SHU also appears to be used as a dumping ground for the mentally ill who are unable to adhere to prison rules. As a result, their functioning deteriorates even further. Alternative treatments, focusing on mental health disorders, are probably a more viable option than solitary confinement if rehabilitation is to be a likely outcome.

We need to know how long and under what conditions SHU will produce psychologically damaging effects those with a history of mental illness and in those who have sound mental health. Confinement to SHU could effect an inmate's successful reintegration back into the community, and it could significantly effect rates of recidivism. If solitary confinement produces more embittered and hostile inmates, this makes them more dangerous when released. How can inmates who may have served many years in isolation successfully transition back into the community? The gaps in the research still leave many questions unanswered. Until there is consensus in the field and a focus on different contributing factors, we may not know these answers. Until there is hard empirical data, the courts may still refuse to address this issue.

Legal Case

McCord v. Maggio, 910 F.2d 1248, 1249 (5th cir, 1990).

STAFF TRAINING

As with most other jobs, new correctional staff undergo period of training before they enter the institutions where they will work. As attempts have been made to professionalize the career of corrections, training has become more detailed and continuous. These days, most officers are expected to participate in job-skills sessions throughout their tenures. The effectiveness and level of such courses, however, are often contentious.

HISTORY

Little attention was given to correctional training in the United States until the 1960s. As late as 1966,

more than half the correctional systems had no organized training, and most correctional agencies had no central unit for planning and implementing it. It was not until Congress established the Law Enforcement Assistance Administration (LEAA), with primary responsibility for administering a massive grant program to support state and local criminal justice training, that a national effort began to provide instruction for line staff in correctional institutions and prisons.

By the end of the 20th century, correctional staff training was being provided in every state and the Federal Bureau of Prisons. Classes are offered by state and local correctional agencies, state academies, multistate academies, The Federal Bureau of Prisons' Management and Specialty Training Center, the National Institute of Corrections, the National Academy of Corrections, the Office of Juvenile Justice and Delinquency Prevention, and the Bureau of Justice Assistance.

Often, private contractors conduct direct training programs and market self-training packages. Professional associations also play an important role in developing and implementing staff courses for corrections. These associations include the American Correctional Association, National Sheriffs' Association, American Probation and Parole Association, American Jail Association, International Association of Correctional Training Personnel, and Training Resource Center at Eastern Kentucky University.

TRAINING PROGRAM STANDARDS

The American Correctional Association (ACA) published the first standards for staff instruction in late 1970s. These standards addressed three areas: administration and management, physical plant, and academy operations. They set out the requirements for standardized competency-based curriculum training of at least 120 hours during the first year of employment, plus an additional 40 hours each subsequent year. Finally, they mandated preservice, inservice, and specialized training, with courses responsive to position requirements, professional development needs, current correctional issues, and new theories, techniques, and technologies.

The ACA policy for corrections adopted in 1991 call for correctional agencies to provide ongoing instruction, because it is essential to maintain work standards, refine skills, expand knowledge, avoid burnout, and keep up to date with changes in correctional philosophy, policies, and procedures. The policy supported "providing opportunities for, and encouraging participation in training and education that promotes personal and professional growth [for] maximizing agency productivity and employee satisfaction" (Morton, 1991, p. 77).

GOALS AND OBJECTIVES

Increasingly the emphasis in staff courses is placed on the development of the whole person who is capable of contributing significantly to the accomplishment of organizational goals and objectives while at the same time satisfying personal needs. Modules include developing knowledge and skills for critical thinking, cognitive behavior, problem solving/decision making, stress management, conflict resolution, negotiation, arbitration, and relapse prevention. Lessons often address a range of learning styles and prepare correctional staff for roles as leaders, planners, team players, facilitators, organizational change agents, motivators, coaches, and mentors. Recognizing the impact of rapid changes in society, international relations, technology, and the rising mix of diverse populations in American corrections institutions, correctional organizations are also implementing programs on diversity and technological innovations.

The Federal Bureau of Prisons has a wide range of course offerings, including comprehensive programs in all disciplines and job specialities within the bureau. Preservice training is offered in specialized areas, including self-defense and firearms, interpersonal communications, supervision, correctional law, inmate personality profiles, suicide prevention, managing diversity, female offenders, and stress management. In addition, the National Academy of Corrections offers special programs for correctional personnel, addressing both job-specific needs and areas such as cognitive approaches to changing offender behavior, special

needs offenders, cultural diversity, and stress management. The academy has also developed and implemented special initiatives to help smaller correctional agencies build the capacity to conduct in-house training. Finally, states also offer a number of training options.

PROGRAM DELIVERY

Correctional training programs are implemented in a variety of ways. For example, by 1993, all 50 states had installed some form of videoconferencing equipment in their criminal justice programs. The National Institute of Corrections (NIC) makes wide use of distance learning programs, interactive training programs combining satellite teleconferencing with local on-site training activities managed by NIC-trained facilitators. In addition to traditional lecture-discussion, instructional strategies include videotaped lessons, audiotaped lessons, self-study programs, videoconferencing, teleconferencing, computer conferencing, and interactive video. Automated systems capable of translating written or spoken words to facilitate training non-English-speaking staff, as well as virtual reality techniques, also exist to help train correctional officers and others to respond to escapes, medical emergencies, and disturbances. The Internet, DVDs, CD-ROMs, and the interactive video disk (IVD) round out the use of technological innovations. All have transformed the learning process into a more interactive one.

CONCLUSION

These days, training of staff employed in correctional institutions and prisons is an integral component of correctional systems at local, state, and federal levels in the United States. Preservice and in-service instruction of all correctional staff is based on standards and policies adopted and monitored by the American Correctional Association and International Association of Correctional Training Personnel. Such an emphasis on learning ensures that staff will be kept abreast of changing views about punishment and treatment and encourages staff to take pride in their jobs, leading to an increased sense of professionalism.

STATE PRISON SYSTEM

Prisoners in the United States may be held in county jails, state prisons, or federal facilities. County jails are used primarily to hold defendants

during court proceedings and those who have been sentenced to a period of less than a year. State prisons usually house people who have been found guilty of state felonies and are sentenced to prison to serve a year or more. Federal prisons incarcerate persons found guilty of violating federal or military law. State prisons are also sometimes referred to as "penitentiaries," "correctional institutions," "reformatories," "detention centers," or "work camps."

HISTORY

In 1790, the Walnut Street Jail in Philadelphia provided the first separate housing of long-term prisoners in a cellblock called the "penitentiary house." The Pennsylvania legislature then authorized two new prisons: the Eastern State Penitentiary (also called Cherry Hill) in Philadelphia and the Western Penitentiary in Pittsburgh. Western opened in 1826, while Eastern began accepting prisoners in 1829. In the Pennsylvania system, prisoners entered and exited the prison wearing hoods to conceal their identities. They were isolated in large "outside" cells where they worked, ate, and slept alone, doing penance for their crimes. The prisons had interior corridors or gangways with the cells on the outside walls, each with a door to a small exercise area.

The state of New York developed the "Auburn" or "congregate" system with the opening of Auburn Penitentiary in 1817. In contrast to the segregation of prisoners in the Pennsylvania system, the Auburn system housed prisoners in small "inside" cells arranged on tiers with corridors along the outside walls. The convicts were marched every day to the mess hall for meals and to work sites. Auburn was infamous for enforcing strict and harsh discipline. The prisoners wore striped uniforms and were required to walk in lockstep, with each man holding the shoulder of the convict in front of him while maintaining absolute silence. Convicts were disciplined with flogging, beatings, and confinement in "the hole"—in solitary confinement.

The Auburn system was widely adopted across the country because of the economic efficiency it provided to house more prisoners in less space. Large penitentiaries were built in which hundreds of prisoners were concentrated in huge cellblocks. This allowed for prisons to develop vocational and industrial work programs at which the convicts would spend their day hours and then return to their cells.

States developed specialized prisons to incarcerate different populations. The first reformatory for young men was Elmira Reformatory, opened in 1876 in New York. The idea of separating young from older men spread, as 17 more states opened reformatories between 1876 and 1913. At the same time, many states opened separate prisons for women.

Following the Civil War, Southern states did not build Pennsylvania- or Auburn-style penitentiaries. Instead they developed a brutal convict lease system in which former slaves were imprisoned and then rented back to plantation owners. Convicts were also kept on large prison farms (e.g., Angola in Louisiana) and used as labor in mines and on chain gangs to drain swamps and build roads.

In the 20th century, Northern states built large industrial prisons where convicts worked in factories. During the Great Depression (1929–1940), federal and state government passed legislation prohibiting state prisons from producing merchandise that competed with free labor. The Federal Bureau of Prisons retained an exception whereby prisoners could produce items for government use. Federal prisoners manufactured and assembled goods for the military during World War I and II.

Today, states operate prisons of various design and security level. Over the years many of these prisons have been the scenes of riots and uprisings, for example, California's Folsom Penitentiary (1927 and 2002), New York's Attica Correctional Facility, (1971), Michigan's Jackson Penitentiary (1953 and 1983), the West Virginia Penitentiary (1986), the New Mexico Penitentiary (1993), and the Lucasville, Southern Ohio Correctional Facility (1993). Despite the new designs and correctional philosophies, the violence continues unabated.

POPULATION CHARACTERISTICS

At year-end 2003 there were more than 1,500 state prisons in operation across the country, with more than 1.2 million prisoners confined within them.

A closer examination of prison statistics shows that the likelihood of being confined is not distributed evenly among the population. Thus, 12% of African American males in the United States are incarcerated, compared to 4% of Hispanic males and 1.7% of white males. These percentages mean that there are approximately 5,000 African American prisoners per 100,000 in the community, compared to 1,700 Hispanics per 100,000 and 700 whites per 100,000. For men age 30, the rate of incarceration for African Americans is nearly nine times that of European Americans.

State prisons vary greatly, ranging from "big house" or "mainline" penitentiaries that incarcerate several thousand convicts to minimum-security camps with a few hundred men or women. California and Texas operate the largest state prison systems, together making up nearly 25% of the national state prison population. As of 2003, for example, the California Department of Corrections had more than 180,000 persons in prison. This included 32 state prisons ranging from maximum to minimum custody, 37 camps, 12 community correctional facilities, and 5 prisoner mother facilities. The prisoner population is 94% male, 6% female; 29% white, 29% black, 36% Hispanic, and 6% "other." One year earlier, in 2002, the Texas Department of Criminal Justice incarcerated more than 130,000 prisoners. The state of Texas operates or funds more than 100 prisons, state jails, private, and psychiatric facilities. Nine of these institutions are reserved for women, while the state jails may hold both males and females.

WOMEN IN PRISON

Women are the fastest growing segment of the prison population. At present, they comprise approximately 6% of the state prison population. A number of states, including Connecticut, have only one penal facility for women. These establishments hold all females under sentence and awaiting trial. Other states with large populations may have many different types of penal facilities. California has five prisons for convicted female felons, and Texas has nine prisons for women. Whereas in the past all women's facilities were small, a number of new penal institutions now have populations of more than 3,000 women.

Wherever they are located, the experiences of female prisoners are often very different from those of male prisoners. For example, most women are incarcerated in prisons that include minimum-, medium-, and maximum-security classifications. The majority of women in these facilities live in dormitories, a smaller number in cellblocks, with a few in solitary confinement or on death row. Security level is usually decided by institutional behavior rather than criminal offense or length of sentence. For example, younger prisoners may be assigned higher security classifications, regardless of sentence. Older women, even those with violent offenses, may be in minimum-security dormitories.

California, Texas, and New York have some women's prisons with separate security classifications. For example, California has new medium-security prisons for women with security features identical to those in men's prisons. New York has long operated a maximum-security prison for women at Bedford Hills. Though studies suggest women are less violent than men while in prison, this may change. As more female prisoners serve longer sentences, and larger and more secure prisons are constructed, their conditions of confinement, including levels of stress and violence, may come to resemble those experienced by male prisoners.

Depending upon the state, female prisoners generally have less access than males to prison rehabilitation programs, since states have been less inclined to fund programs for females. Traditionally, women have had only highly gendered programming, such as family, clerical, and domestic servant vocational programs. Today, a number of facilities have expanded programs to include construction trades and factory work.

PRISON CELLS, SECURITY, AND CONSTRUCTION FEATURES

Most state correctional systems are overcrowded. As a result, their prisons currently hold more men or women than their legal population capacities

allow. In such institutions, prisons officials often double-bunk cells, move four prisoners into two-person rooms, or install beds or simply mattresses on the floor along cellblock corridors or hallways. They also turn recreational and program space into ad hoc dormitories, with beds placed in gymnasiums and classrooms. In some prisons, with the hallways lined with beds, there may be no space for prisoners to exercise indoors or participate in education, vocational training, counseling, or prerelease programs.

Depending on the level of overcrowding, prisoners may be confined in cells alone or with one or more cellmates. In maximum- (e.g., San Quentin State Prison in California) and medium-security prisons (e.g., Racine Correctional Institution in Wisconsin), the cells may range from approximately 40 to 80 square feet. Each cell may have beds, a combination toilet and sink, foot lockers for personal possessions, and a small desk or table and chair. Cells are constructed of cement and steel. They may be rooms with concrete walls and steel doors, or cages with bars. In minimum-security prisons, prisoners may live in dormitory-style rooms with one or many prisoners. Some dormitories are constructed of concrete blocks with steel security doors, with hundreds of prisoners sleeping on bunk beds. The prisoners use communal showers and are locked in at night.

The dramatic increase in the numbers of people incarcerated in the United States has created a boom in prison construction. Hundreds of new prisons have and are being built. These correctional facilities, both urban and rural, range from minimum to supermaximum security. Traditionally, "minimum security" refers to camps with no fences. In comparison, medium-security facilities have heavy razor wire fences, and maximum-security facilities feature both fences and a wall.

Today, even people who have been convicted of nonviolent offenses have been sentenced to longer sentences. Many of these prisoners, some of them serving their first prison sentence, begin serving 1- to 10-year sentences in minimum-security facilities. As prison sentences lengthen, many camps have been fenced in to stem the increasing problem with escapes, called "walk-aways." Convicts who violate minimum-security regulations are transferred to medium security.

Medium-security prisons, traditionally known as "reformatories" (e.g., Kentucky State Reformatory) for young adult prisoners, and as "gladiator schools" by prisoners, have added security features including double fences, gun towers, and internal control architecture that resembles higher-security institutions. The old reformatories, built in the early 1900s, were built to be "junior penitentiaries" with cellblocks of cages, industrial workshops, and some vocational and educational programs.

There are two styles of new construction medium-security institutions. The first style (e.g., Green River Correctional Complex in Kentucky) is built of steel and concrete, with a yard and separate buildings for administrative offices, factories, recreation and programs, and housing convicts. The housing units are separate buildings, with individual "pods" that house a few hundred prisoners each and are usually one or two floors tall. These units organize prisoners into disciplinary steps, with each building representing a different level of privilege. For example, there may be a building for reception and departure (R&D), a unit for new prisoners, and additional units for ascending levels of good behavior. In addition, each prison may have special cellblocks, called "administrative segregation" or "special housing units" (SHU) for disciplinary violators ("the hole"), protective custody (PC), medical prisoners, gang isolation, or drug therapy. Prisoners are moved from one unit to another as they are evaluated, disciplined, or isolated as decided by the prison administration.

The second style is a cheaper version built with minimal consideration for the daily needs of prisoners. Many states are attempting to save on construction costs by building new medium-security prisons of fabricated steel and concrete, with little stone or brick. The buildings may resemble large farm sheds or large metal pole barns with few windows on a concrete foundation. These penal facilities act as human warehouses, consisting of little more than security perimeters and housing units. The institution may have no recreational yard or gym, factories, or programs. The prisoners live in vast dormitory-style

housing units with hundreds of men sleeping on bunk beds stacked two high and arranged a few feet apart. Prisoners refer to these hastily constructed institutions as "bus stops," "pig pens," or "dog kennels," because of the chaotic confusion of living for years in huge open dormitories. Many medium-security prisoners are transferred to maximum-security institutions for disciplinary infractions.

Maximum-security prisons can be divided into three separate categories: the old "big house" penitentiaries (e.g., Kentucky State Penitentiary), New Generation facilities (e.g., California State Prison, Corcoran), and supermaximum institutions (e.g., Wisconsin Secure Program Facility). The big house penitentiaries (e.g., Attica in New York, Jackson in Michigan, Joliet and Statesville in Illinois, Waupun Correctional Institution in Wisconsin), many of them built in the late 19th or early 20th century, are fortress-like structures, enclosed by walls 30 to 50 feet high, with buildings made of stone, brick, concrete, and steel, containing massive cellblocks, some five tiers high. These ancient prisons are still operating, even as they are supplemented by the construction of modern penitentiaries.

The New Generation penitentiaries may appear, from a distance, like factories, except they are enclosed by heavy security fences and gun towers. There are no tall walls. The double or triple chain-link perimeter fence is layered with rolls of razor wire that may carry an electric current and includes remote sensors and video cameras to alert the guards of attempted escapes. Inside, these correctional institutions may have a dining hall and "yard," and limited space designated for convict employment, recreation, or education. The housing units, like the first style of medium-security prisons, are "pod" construction, which is expensive and requires separate structures, each with its own staff offices. Some of these pods may have separate rooms for one or two convicts, each with a metal door, half-bath, and communal showers at the end of each tier. Trustee prisoners may have keys to their rooms. In comparison, disciplinary prisoners may be locked in their rooms and fed meals through the door slot (*wicket*). Unit construction of concrete block walls and cement floors is generally considered by prisoners to be an improvement over traditional cellblocks of multiple iron cages.

In addition, medium- and maximum-security prisons may have special cellblocks, units, or dormitories for prisoners with chronic or acute problems, for example, the elderly, medical or mentally disabled, or sexually deviant. Some prison systems have separate hospital prisons (e.g., California Medical Facility) for elderly or ill convicts. Some prisons have entire cellblocks occupied by prisoners who have HIV or AIDS, are mentally retarded or mentally ill, or are homosexual. Nationally, there appears to be a trend to incarcerate homeless and vulnerable populations that local governments no longer want to provide with community medical or mental health services.

Virtually every secure facility has an isolation unit or disciplinary cellblock in which disruptive, difficult to manage, aggressive, or escape-risk prisoners are kept, sometimes for months or years. Many of these convicts are men who have served many years in prison. Typically, this population, many of them prisoners serving long sentences, represents less than 1% of the total population but can have a major impact on the prison system in general. Within this population is a small subset of prisoners who are the most violent and difficult to manage, even in the confinements of a secure segregation unit. The management of this relatively small number of prisoners has consumed a tremendous amount of resources and effort due to the serious potential threat they pose to staff and other prisoners.

States have recently turned to "supermax" units or institutions (e.g., Pelican Bay State Prison in California) to control the most disruptive or potentially troublesome prisoners. The conditions of confinement in these prisons are more restrictive than death row. Supermax prisons have no educational or vocational programs, with prisoners provided only limited visiting time with family, phone communication, and access to the law library and confined for the duration of their stay in austere 60–80-square-foot cells. These are lockdown facilities, with no convict movement; prisoners are kept locked in their cells 23 to 24 hours a day. Inside these correctional dungeons, prisoners are kept as "isolated

animals," subject to severe sensory deprivation. The convicts are expected to deteriorate over time, be systematically broken, and in the end, surrender what secrets they may know to prosecutors, become informers, moderate their resistance to imprisonment, or have mental breakdowns.

LENGTH OF SENTENCES

In all state prison classification systems, the time to be served, not the crime committed, is the most important factor for deciding where a person will be housed: maximum, medium, or minimum security. The first lesson a new prisoner learns is that he or she must do distinct stretches of time differently. Depending upon the length of sentence and the security level, the prisoner must modify his or her demeanor and daily behavior and adapt to the specific cultural requirement of each institution. As they are moved from one security level to another, prisoners experience dramatic changes in administrative rules, regulations, attitudes toward prisoners, and operational procedures. The convict code, culture, and prisoner attitude toward prison administrators changes according.

JOBS

Prisoners do not have a choice in determining what jobs they will do or whether they will work at all. Recent reports suggest that one-quarter of the entire prison population is idle and is not participating in any meaningful work or education programs. Typically, those who are employed work at menial labor for little or no "prison pay." Some of the jobs include kitchen work, barbering, working as dorm or cellblock orderlies, maintenance, laundry, or prison industries. The bulk of prisoners are occupied doing field, cafeteria, maintenance, or factory labor. Some prisons have hog or dairy farms, canneries, furniture shops, computer repair shops, or factories that manufacture prison apparel.

Most state prisons reserve clerical jobs for trustee prisoners with at least some college education. Generally, they are at least expected to know how to type, file, write correspondence, and keep records. Convicts may work as clerks in prison administrative, medical, or educational, vocational, or industrial offices. These "inmate clerks" may also manage laundry, commissary, or kitchen services.

In some southern states, prisoners labor in large agricultural and road repair operations. Other convict work crews are used to pick fruit, cotton, or sugarcane on farms or clean highway rest areas. They may be guarded by correctional officers on horses or in pick-up trucks. If prisoners try to flee, officers have permission to use deadly force. Some states still use chain gangs, where prisoners are chained together, wear striped suits, and are forced to perform hard labor.

EDUCATION AND VOCATIONAL PROGRAMS

Prisoners may participate in the few programs designed to assist or enhance their ability to succeed upon release, such as education, vocational training, prison industry, substance abuse treatment, or counseling programs. All state prisons provide limited educational programs to prisoners, including adult basic education (8th grade) and general equivalency diploma/GED (12th grade) programs. Since the abolition of Pell grants for prisoners in 1994, very few prisons offer college courses. Vocational training is usually closely related to work performed for the prisons, for example, car repair, welding, carpentry, brick masonry, painting, electrical, or plumbing. Only a few convicts in each prison are assigned to these maintenance and training programs.

SERVICE ORGANIZATIONS

Some prisons allow convicts to organize service clubs such as Alcoholics Anonymous, Narcotics Anonymous, Toastmasters, Kiwanis, Ice Breakers, or Lifers. These clubs may serve noble purposes and allow prisoners to feel that they are contributing something positive to the outside world. Individuals in these organizations may raise money for charity, purchase gifts for orphans, and contribute free labor

to church construction and repair. State prisons may also have religious organizations that enable prisoners to participate occasionally in community and service activities.

RELIGIOUS AFFILIATIONS

All state prisons offer various religious services for prisoners. No prison is allowed to discriminate against an established religious affiliation. Prisons usually have a chapel where services are held on different days. Some prisons may have a "no pork" or kosher food menu available for Muslim or Jewish prisoners. Local religious groups may provide volunteers who enter the prison to attend services and visit with prisoners.

RETURNING HOME

People leaving prison are usually released empty-handed, with little or no "gate money." They attempt reentry to the free world with few prospects for success. As ex-convicts, they may have difficulty finding employment. Many return to communities that are blighted by high rates of crime and unemployment. A large percentage of released prisoners will violate technical parole rules and be returned to prison during the first three years on the street. Some number of former state prisoners who served long sentences or multiple stretches behind bars will become derelicts who live in homeless shelters, cheap hotels, or under bridges and suffer from alcoholism, drug addiction, or mental illness. A smaller number who may receive support from families or friends will serve out their parole successfully and never return to prison.

CONCLUSION

State prisons now incarcerate more than 1.2 million men and women. Life inside these penal institutions is generally harsh, brutal, and dull. Many states devote few resources to rehabilitation or reformation of prisoners while in prison, or reintegration of ex-felons when they return home to the community. Given that approximately 97% of those currently incarcerated will one day be released, the problems within the nation's state correctional facilities are destined to be passed onto the broader community.

STATEVILLE CORRECTIONAL CENTER

Stateville Correctional Center in Lockport, Illinois, about 60 miles southwest of Chicago, is the best-known, most visible, and most violent prison in the state. During its 80-year history, it has housed such infamous criminals as Nathan Leopold, Richard Loeb, and Richard Speck, was the execution site of John Gacy, and has provided the backdrop for many movies scenes, including *Weeds, Bad Boys,* and *Natural Born Killers*. The imposing limestone Level 1 (or maximum security) facility takes up 26 walled acres in the middle of well-manicured grounds. Stateville's notoriety stretches beyond Illinois because of its unusual architectural design. "The 'Ville," as prisoners call it, or "Statesville," as outsiders tend to mispronounce it, is often confused with the much older but smaller Joliet maximum-security facility 5 miles away on the west side of the city of Joliet.

Stateville also has a Level 7 (or minimum security) "honor farm" about 1 mile from the main structure. Although the unwalled farm no longer produces agricultural products, it was a primary source of prison food in Stateville's early years, making the institution nearly self-sufficient. According to Stateville historians, Illinois Governor Dan Walker eliminated the agricultural, dairy, and pig-raising activities after wondering why the prison should be teaching farming when most of the prisoners came from the inner city of Chicago. Later, Walker was himself indicted for fraud and served time in federal prison. In the recent past, the farm offered programs such as auto body repair and education, but currently it houses low-security inmate workers for the main institution.

The combined daily population of the Level 1 and Level 7 units is about 2,596. The maximum-security unit, with a rated housing capacity of 1,506, houses about 2,200, with the remainder in the level 7 honor farm. In 2004, a new reception and classification center opened adjacent to the main compound, replacing Joliet.

HISTORY

At the turn of the century, Illinois's three maximum-security prisons—Joliet (opened in 1858, closed in 2002), Pontiac (1871), and Menard (1878)—and the medium-security institution in Vandalia (1921) were no longer sufficient to house a growing male prisoner population. Stateville was the product of the Illinois Penitentiary Commission, appointed in 1907 to develop a maximum-security prison near Chicago.

The architect of Stateville, W. Carlzo Zimmerman, visited the larger prisons in the United States and Europe. In his design, he was impressed especially by Jeremy Bentham's 19th-century Panoptical model. The Panopticon prison, a circular, multitiered, open structure with a guard tower in the center, was designed to provide a single officer with visual access into every cell and prisoner. Systematic surveillance of prisoners was thought to make prison control more effective and efficient by increasing discipline. At the same time, the architectural design meant that the prison required minimal numbers of staff to run it.

Construction, using mostly inmate labor, began in August 1916, and the facility was opened on March 9, 1925. The 33-foot-high walls with nine original guard towers were build on 64 acres, surrounded by another 2,200 of what was then farmland and prairie. The original buildings were comprised of an administration building in the front, connected a dining hall, four four-tier Panopticon units (C house, D house, E house, and F house), and one long, four-tier cellhouse (B house) divided lengthwise into two separate units, each of five tiers. According to prison historians, the long cellhouse replaced a planned fifth Panopticon structure because the state ran out of money.

VIOLENCE

While it may not be "the world's toughest prison" as Joe Ragen (1962), Stateville's notorious warden, called it, the institution earned a reputation for violence against both staff and inmates. Although there have been no officer fatalities in the past decade, eight correctional officers were murdered by prisoners between 1920 and 1992. During this time, fights, riots, and "hits" have taken the lives of dozens of prisoners. Violence and corruption by staff toward prisoners, once relatively common, have been dramatically reduced in the past two decades. Today, such incidents are extremely rare. When it does occur, the officers are prosecuted. In 2002, for example, two officers were indicted for beating an inmate, and in 2003, three staff were indicted for smuggling drugs and cell phones and for trading sex for drugs.

Stateville was also the site of various medical experiments on prisoners. In the most infamous example, during World War II antimalarial drugs were tested by infecting inmates. The efficacy of the drugs was determined by the degree of the prisoners' recovery. While there is no public record of how many prisoners became ill or died, it is clear that there was significant long-term sickness, even among those who were "cured" (Alving et al., 1946, p. 5).

THE DEATH PENALTY

Between 1928 and 1962, Stateville housed one of the state's three electric chairs and executed 13 of the 98 prisoners condemned during that period. Although there were no executions in Illinois between 1962 and 1990, Stateville become the only death chamber in Illinois until a new supermaximum facility in Tamms was opened. After executions were resumed in Illinois in 1990, 11 prisoners were executed in the institution before the execution chamber was moved to Tamms.

ESCAPES

Although escapes from Stateville were fairly common in the first decade of its existence, they have been relatively rare in the past 60 years. The most notorious, in 1942, occurred when gangster Robert Touhy and six companions drove a garbage truck through the walls. Since then, the bulk of the escapes have been "walk-aways" or escaping while in transit from the prison to another location. However, in the early 1980s, four prisoners scaled the wall on New Year's Eve, concealed by construction, when guard towers were understaffed. The most creative escape occurred in 1987 during the filming of the movie *Weeds*, when a prisoner disguised himself as a movie technician and rode out with movie personnel. Nonetheless, Stateville generally remains secure.

ARCHITECTURE

Stateville was originally designed to hold five Panopticon cellblocks, but financial constraints limited construction to four, with the fifth replaced by a long rectangular cellhouse. During massive renovations in the early 1980s, the state tore down all but one of the massive Panopticon roundhouses in 1982, preserving one, F House, as part of the institution's history. It is the last remaining Panopticon cellhouse in the United States, and reputedly the last one functioning in the world.

As more efficient technological advances continue to influence prison design and operation to

control prisoners, Stateville has shifted from the "big house" model of large cellblocks to smaller structures. The former B house, five tiers within a 420-foot structure, was once reputedly the longest cellhouse in the world (a claim disputed by Jackson, Michigan's similar structure). However, in the 1990s, as a means to control prisoners' movement and keep them more closely confined, the building was remodeled, transforming the building into four units, Units B and E (145 cells each) and Units C and D (140 cells each).

TRANSFORMATIONS

In his classic book on Stateville, Jim Jacobs (1977) traces the dramatic organizational and other changes occurring in the prison that resulted from broader social influences. The first, *anarchy* (1925–36), reflected the early days in which there was considerable chaos, no administrative leadership, poorly trained staff, idle inmates, and routine violence. Following public and political criticism, an era of *charismatic dominance* (1936–61) emerged under the authoritarian leadership of Joe Ragen. A strict disciplinarian of both staff and prisoners, Ragen imposed control, formality, and enforced staff professionalism. His ability to "keep the lid on" resulted in near-total institutional autonomy, and he was subject to virtually no external pressures or oversight. Although this model of administration may have been effective for the time, it was not appropriate for the changing social and political climate of the 1960s.

When Ragen left the institution in 1961 to become Illinois Director of Public Safety, the forerunner to the Department of Corrections, he created a leadership vacuum that Jacobs labels *drift* (1961–70). The decade of the 1960s was characterized by lack of vision, bureaucratic confusion, and dramatic social changes outside the walls. Ironically, in Ragen's new position as Director of Illinois Prisons, he contributed to the institutional autonomy that he had created at Stateville by attempting to gain centralized control over the five adult institutions that comprised the Illinois system at that time. Ragen's style was unworkable in the era of civil rights, changing racial consciousness, and changing prisoner demographics. The dramatic emergence of prisoner litigation, which allowed prisoners to sue their keepers in federal court for poor conditions, mistreatment, or violations of constitutional rights, further eroded administrative authority. The introduction of a more formally bureaucratic and rehabilitation-oriented ethos further conflated the problems of how to bring Stateville into line with the changing times. Jacobs describes this era as a phase in which Ragen's patriarchal style, based on traditional authority, was moving toward the more rational-legal style that characterizes formal organizations. But, despite a succession of wardens, Stateville's administrative drift led to a period of *crisis* (1970–75) characterized by low staff morale, the intrusion of outside forces, the strong influence of street gangs, and a lack of mission. However, these problems were endemic to the Illinois Department of Corrections (IDOC) in general, and Stateville simply typified the extremes of the problems.

From 1975 to 1982, a period of what Jacobs called *restoration* emerged. This time was characterized by an attempt to regain control of the institution by increasing security, developing a more professional and trained staff, and increasing a variety of educational, vocational, and other programs. However, restoration was inhibited by the continued highly politicized nature of IDOC and the tenuous nature of wardens' job security. The leadership problems came to a head in 1980, when the warden was replaced after a chop-shop scandal with roots in the prison's auto repair program.

Between 1982 and 1985, Stateville began to modernize, beginning with architecture and a shift to a form of unit management. Two new K-style units were opened, housing primarily inmates in protective and disciplinary custody. Inmates are also housed in Unit G, a medium-security building. Once called "the honor dorm" before the term *honor* fell out of favor among administrators, Unit G houses up to 205 prisons in rooms with two to five beds.

Over the next decade, three of the four Panopticon roundhouses were torn down. In 1996, a graphic tape of mass murderer Richard Speck was

released to the media, which showed Speck having sex with an inmate and snorting what appeared to be cocaine. Although what was revealed in the tape led to public outrage and legislative hearings, it also led to dramatic changes in laws and policies, resulting in the building of a supermaximum prison, reduction in inmate privileges in all institutions, and a revamping of Stateville's mission. Educational, vocational, and other programs were eliminated, and Stateville became an institution designated primarily for warehousing long-term violent felons.

FUTURE

The future mission of Stateville remains uncertain. Over the short term, it will presumably continue to house long-term inmates. The closing of the old Joliet prison reduces space available for maximum-security inmates, and as of this writing a new maximum-security prison in Thompson remains unused because of budget cuts. The costs to continue to renovate a nearly century-old prison are becoming prohibitive, and it may well be that Stateville will eventually be closed and replaced with a more modern institution.

STATUS OFFENDERS

Within the juvenile justice system there is a category of offenses known as *status offenses*. These are offenses that apply to youths; that is, if they were to be committed by an adult, they would not be considered criminal. The following offenses are usually included within the status offense category: (1) running away, (2) truancy, (3) curfew violation, and (4) a catch-all category of behavior known variously as "incorrigible," "unmanageable," "beyond control," and the like. In some states, offender categories like PINS (persons in need of supervision) and CHINS (children in need of supervision) are substituted for the offense categories.

Some states, such as Montana, have statutes where incorrigibility is subsumed under YINS (youth in need of supervision), which is defined as a child who "habitually disobeys the reasonable and lawful demands of his [or her] parents or guardian, or is ungovernable and beyond their control" (Bortner, 1988, p. 96). In other states, a child who "is in danger of leading an idle or immoral life," who is a "wayward child," who "endangers the morals of himself or others," or "who associates with vagrant, vicious or immoral persons" can be brought before the juvenile court (Bortner, 1988, pp. 98–100).

Status offenders are often treated more harshly than their more delinquent counterparts. Throughout the history of the juvenile justice system, a large

percentage of those detained and committed to institutions have been status offenders, often reaching as many as one-fourth or more of the total population. Recent figures show that while the percentages of those detained and committed to juvenile training schools who are status offenders has declined in recent years, these offenders nevertheless constitute a significant proportion of the incarcerated youth in the United States.

Status offenses have generated a great deal of debate over the years. Many have charged that they should be ruled unconstitutional on the grounds of "void for vagueness." It is, after all, difficult to determine precisely the meaning of "habitual disobedience," "lawful parental demands," or "being in danger of leading an idle or immoral life." More specifically, many feel that these laws violate the Eighth Amendment, because punishment ensues from status rather than behavior. Still another argument is that such laws deny children equal protection because they apply only to children. Further, it is proposed that status offenders are denied due process in that they are deprived of liberty "in the name of treatment" (Bearrows, 1987, pp. 184–185).

GENDER

The early history of the juvenile court reveals a large discrepancy between the treatment of status offenders and those who committed regular crimes, especially when the offenders were girls. Studies of early juvenile court activity reveal that nearly all of the girls who appeared in these courts were charged with the specific status offenses of "immorality" or "waywardness." The sanctions for such misbehavior were extremely severe. For example, the Chicago Family Court sent half the girl delinquents but only a fifth of the boy delinquents to reformatories between 1899 and 1909. In Milwaukee, twice as many girls as boys were committed to training schools. In Memphis, females were twice as likely as males to be committed to training schools.

In Honolulu during 1929–1930, more than half the girls referred to juvenile court were charged with "immorality," which meant there was evidence of sexual intercourse; 30% were charged with "waywardness." Evidence of immorality was vigorously pursued by both arresting officers and social workers through lengthy questioning of the girls and, if possible, with males with whom they were suspected of having sex. Other evidence of "exposure" was provided by gynecological examinations that were routinely ordered in most girls' cases. Doctors, who understood the purpose of such examinations, would routinely note the condition of the hymen. Girls were twice as likely as males to be detained for their offenses, and on average spent five times as long in detention as their male counterparts. They were also nearly three times more likely to be sentenced to the training school. Indeed, half of those committed to training schools in Honolulu well into the 1950s were girls. These trends continued into the 1970s, after which the movement toward the deinstitutionalization of status offenders began, reducing some of these discrepancies.

PARENS PATRIAE

This "double standard" within the juvenile justice system is not a recent phenomenon, for it dates back as far as the 19th century, when females were consistently committed to "houses of refuge," "reform schools," and "training schools" at rates far in excess of their male counterparts. This tendency stemmed from the philosophy of *parens patriae*, which requires the state to act as a "substitute parent" if the actual parents or guardians were unable or unfit to take care of their children. *Parens patriae* originated in early English society as a means for the king to intervene on behalf of children whose parents had died, mostly among the well-to-do. In America, the practice shifted to the state intervening in cases of mostly poor and/or minority youth. The doctrine was challenged in the case of *Ex Parte Crouse*.

Filed in 1838, *Ex Parte Crouse* arose from a petition of *habeas corpus* filed by the father of a minor, Mary Ann Crouse. Without her father's knowledge, Crouse had been committed to the Philadelphia House of Refuge by her mother on the grounds that she was "incorrigible." Her father argued that the incarceration was illegal because the young woman

had not been given a jury trial. The justices of the supreme court of Pennsylvania rejected the appeal, saying that the Bill of Rights did not apply to juveniles. Based on the *parens patriae* doctrine, the ruling asked, "May not the natural parents, when unequal to the task of education, or unworthy of it, be superseded by the *parens patriae* or common guardian of the community?" (Pisciotta, 1982, p. 411).

The ruling assumed that the Philadelphia House of Refuge (and presumably all other institutions like it) had a beneficial effect on its residents. It "is not a prison, but a school," and because of this, not subject to procedural constraints (Sutton, 1988, p. 11). Further, the aims of such an institution were to reform the youngsters within them "by training . . . [them] to industry; by imbuing their minds with the principles of morality and religion; by furnishing them with means to earn a living; and above all, by separating them from the corrupting influences of improper associates" (Pisciotta, 1982, p. 411). The only evidence cited were statements by those in charge of the refuge. Subsequently, evidence came forth that contradicted such claims, and houses of refuge were eventually closed.

THE SITUATION TODAY

The Juvenile Justice and Delinquency Prevention Act of 1974 (JJDPA) required that states receiving federal delinquency prevention money begin to divert and deinstitutionalize status offenders. Despite erratic enforcement of the provision and considerable resistance from juvenile court judges, girls were the beneficiaries of the reform effort. Incarceration of young women in training schools and detention centers across the country fell dramatically.

Nonetheless, there is considerable evidence that status offenders are still being harshly sanctioned. Even more disturbing are recent efforts to roll back the modest gains made in more equitable and appropriate treatment of status offenders or—even worse—to repeal the whole initiative. Just how deep the anti-deinstitutionalization sentiment among juvenile justice officials was became manifest during House hearings on the extension of the act in March 1980. Judge John R. Milligan, representing the National Council of Juvenile and Family Court Judges, cited extreme worst-case scenarios and said that

> the effect of the Juvenile Justice Act as it now exists is to allow a child ultimately to decide for himself whether he will go to school, whether he will live at home, whether he will continue to run, run, run, away from home, or whether he will even obey orders of your court. (Chesney-Lind & Shelden, 1998, p. 140)

The juvenile justice officials were successful in narrowing the definition of status offender in the amended act, so that any child who had violated a valid court order would not be covered under the deinstitutionalization provisions. The change, never publicly debated in either house, effectively gutted the act by permitting judges to reclassify a status offender who violated a court order as a delinquent. This meant that any girl who ran away from a court-ordered placement (a halfway house, foster home, or the like) could be relabeled a delinquent and locked up. Critics called this practice "bootstrapping," where status offenders were magically turned into "delinquents" when they were issued criminal contempt citations, referred or committed to secure mental health facilities, or referred to "semi-secure" facilities after they committed a second status offense.

One study of the impact of these contempt proceedings in Florida described them as disadvantageous to female status offenders. While they found only a weak pattern of discrimination against female status offenders compared with male status offenders, when considering "contempt citations," the pattern did not hold. Females referred for contempt were more likely than those referred for other criminal offenses to be petitioned to court, substantially more likely to be petitioned to court than males referred for contempt, and far more likely than males to be sentenced to detention. The typical female offender in the study had a probability of incarceration of 4.3%, which increased to 29.9% if she was held in contempt, a

circumstance that was not observed with the males. The researchers concluded that

> the traditional double standard is still operative. Clearly neither the cultural changes associated with the feminist movement nor the legal changes illustrated in the JJDP Act's mandate to deinstitutionalize status offenders have brought about equality under the law for young men and women. (Frazier & Bishop, 1990, p. 22)

CONCLUSION

Despite some gains since the passage of the Juvenile Justice and Delinquency Prevention Act (such as a decline in the number of girls in detention centers and training schools), studies of juvenile courts show that juvenile justice is far from gender blind, particularly in the treatment of status offenders. As juvenile courts begin their second century, it is unfortunately still all too easy to find evidence that girls coming into the system are receiving a special, discriminatory form of justice. According to the latest survey of youths in correctional institutions, while a total of 7% of all those committed are status offenders, female status offenders constitute 23% of all females committed, compared to only 4% of all males committed. Within private facilities, the percentage of females who are status offenders is even higher at 45%, compared to only 11% of the males; for public facilities, these percentages are 1% and 9% respectively. In other words, females are about eight times more likely than males to be committed for a status offense in all facilities, nine times more likely to be found in public facilities, and about four times more likely to be committed to private institutions (U.S. Department of Justice, 1999, p. 199). They are even found, in disproportionate numbers, in adult jails.

″STOP PRISONER RAPE″

"Stop Prisoner Rape" (SPR) is a nonprofit human rights organization that seeks to end sexual violence against men, women, and youths in all forms of detention. Founded by survivors of prisoner rape in 1979, SPR has worked to shed light on the dangers of sexual abuse in prison and has helped survivors to access resources and connect with one another.

Through advocacy, education, and outreach, SPR seeks to address the systemic causes of prisoner rape. As the only nationwide organization focused solely on sexual violence in correctional facilities, SPR shoulders a great responsibility to help lead the efforts to end this widespread human rights abuse.

CONSTITUENCY

SPR's constituency includes the more than 2 million men, women, and minors incarcerated in the United States in prison, jail, and INS detention, a population drawn disproportionately from low-income groups

and marginalized racial and ethnic minorities. SPR opposes all forms of sexual violence in detention, including the much-neglected problem of prisoner-on-prisoner rape in men's facilities as well as the sexual abuse of women that is typically committed by guards and other corrections officers. Children in detention are also extremely vulnerable to abuse, and as states try growing numbers of juveniles as adults, the risk of sexual abuse becomes much greater. With survivors of prisoner rape on its board of directors, SPR remains in close contact with its constituency, and its work seeks to address their concerns.

SPR believes that prisoner rape affects society beyond prison. Upon release, rape survivors may bring with them emotional scars, sexually transmitted infections, and learned violent behavior that continues the cycle of harm.

PROGRAMS

In the course of its work, SPR has identified several systemic problems that create or exacerbate conditions that promote sexual violence inside prisons: widespread indifference, a code of silence that allows abuse to go unchecked, few guidelines or incentives for sound policy, and a lack of posttrauma services for survivors. SPR's current programs are designed to address these serious systemic problems through advocacy, education, and outreach.

SPEAKING OUT

For more than 20 years, SPR has been an outspoken voice for reform when few others have had the courage. In 1993, SPR submitted an amicus brief in the case of *Farmer v. Brennan* (1994), now the controlling U.S. Supreme Court precedent on prisoner rape. SPR has also helped survivors file damage claims, provided referrals for expert testimony, and encouraged class action suits against negligent institutions. Through the Prison Rape Education Project, SPR has distributed prevention material to inmates as well as corrections staff.

RECENT ACCOMPLISHMENTS

- *Federal Legislation Advocacy Project.* For the Senate Judiciary Committee's hearing on the Prison Rape Reduction Act of 2002, SPR pushed legislators toward admitting the oral testimony of Bob Dumond, an expert from SPR's Board of Advisors, and Linda Bruntmyer, a mother of a victim of prisoner rape. In response to a request from Senator Edward Kennedy's office, SPR submitted analysis of early drafts of the legislation as well as written testimony to the Senate Judiciary Committee once the act was drafted.

- *The 7Up campaign.* SPR made national headlines by succeeding to convince 7UP to pull a multimillion dollar ad campaign that made jokes about rape in prison.

- *"Not Part of the Penalty: Ending Prisoner Rape" conference.* Along with Amnesty International, Human Rights Watch, the ACLU National Prison Project, and others, SPR hosted the first national conference on prisoner rape, attended by nearly 100 lawyers, academics, and activists. There SPR built a listserv, which provides more than 200 subscribers with relevant, up-to-date information about rape in detention.

- *www.spr.org.* SPR's expanded Web site now generates more than 100,000 page views each month and hosts a legal research tool, press page, news articles, survivor stories, and appeals for action.

- *Legal research tool.* SPR created a comprehensive catalog of federal case law, law review articles, and legislation, as well as a nationwide listing of the correctional systems' policies on sexual abuse.

CONCLUSION

For more than 20 years, SPR has provided information and encouragement to survivors of prisoner rape and has worked to publicize the fact that sexual assault plagues numerous detention institutions. SPR will continue to employ education, outreach, and advocacy to combat the systematic horror of prisoner rape.

Legal Case

Farmer v. Brennan, 511 U.S. 825 (1994).

STRIP SEARCH

Authorities in most U.S. prison systems force inmates to submit to *strip searches* when they arrive at correctional facilities and when they return from contact visits, or from being transported to or from court. Some even insist on this procedure when prisoners move from one section of a penal institution to another. Most institutions also require inmates to strip for full body searches when officials "shake down" their cells for contraband. During such searches, inmates are made to remove their clothing, bend over, spread their buttocks, and expose their genitals. Officers may also look into their ears, mouth, hair, and underarms. Officers, wearing plastic gloves, may inspect any body cavity when suspecting the concealment of contraband. Uncircumcised inmates may also be asked to peel back the foreskins on their penises for inspection.

For obvious reasons, strip searches can be used for purely vindictive or punitive reasons, and correction officials around the country have been accused of using them to humiliate, demean, or violate the personal privacy and modesty of inmates. Recent research suggests that strip searches are overutilized in many prisons and jails and that their use makes little difference to the levels of contraband that end up inside correctional facilities. Despite this evidence and adverse legal judgments, corrections administrators persist in requiring strip searches on a general and systematic scale.

ARE STRIP SEARCHES CONSTITUTIONAL?

State and federal courts have diverged widely on the constitutionality of prison strip searches and body cavity searches. The U.S. Supreme Court, in *Bell v. Wolfish* (1979), upheld by a split decision the use of strip and body cavity searches to preserve institutional security among inmates charged with or sentenced for serious crimes. The Court placed some limitations on strip searches, however, stating that individuals charged with minor offenses (i.e., misdemeanors and some nonviolent felonies) cannot be strip searched unless officers have reasonable suspicion that they are concealing contraband.

The rules laid down in *Bell v. Wolfish*, rather than settling the law, have generated an immense stream of litigation since 1979. Inmates have sued for being searched by officers of the opposite sex; for being searched in an offhanded, unprofessional, or derogatory manner; and being subjected to full body examinations before and after visiting with lawyers and clergy. State high courts and federal circuit courts have ruled in different and sometimes conflicting ways. Nonetheless, jurisprudence in most jurisdictions clearly prohibits or disfavors strip searches by female officers of male inmates when male officers are present and strip searches of female inmates by male officers under most circumstances. Similarly, strip searches in the presence of more than two officers or in the presence of other inmates, visitors, or staff are disallowed, and those conducted under unprofessional, disrespectful, or demeaning circumstances are also restricted.

STRIP SEARCHES IN JAILS

Federal courts have laid down slightly different rules for jails and prisons, in part because the Due Process Clause of the U.S. Constitution protects pretrial detainees from being punished prior to conviction. Jails and pretrial detention centers also house inmates charged with minor crimes who have

little motivation to smuggle contraband or conceal weapons on their persons. The U.S. Supreme Court's decision in *Bell v. Wolfish*—which continues to define the constitutionality of unclothed examinations—established greater protections for inmates charged with minor offenses. Only when such inmates are reasonably suspected of concealing contraband on their bodies can jail officials force them to undergo strip or body cavity searches.

Despite relatively clear-cut rules regarding detention intake centers, jail officials in many states have persisted in performing systematic strip searches of all arrestees, regardless of charge. Jail administrators across the United States have paid many millions of dollars in settlements and judgments for strip searching inmates booked on minor traffic charges and other misdemeanors. New York City alone has paid some $50 million for sanctioning unconstitutional strip searches.

Although the threat of inmates carrying weapons and other banned materials is very real in some contexts, jail officials have generally discovered that amounts of contraband found inside jail facilities are unchanged when they discontinue strip searches of all arrestees. The obvious implication is that strip searches on such a systematic scale are unnecessary for the preservation of institutional security.

EMERGING CONTROVERSIES

Like other areas of prison law, the constitutional rules governing strip and body cavity searches are constantly shifting. On occasion, prisoners are not the only ones who may be strip searched. Correctional officials and visitors have also been asked to submit to such examinations in a variety of contexts, and controversies involving such searches have found their way into the courts. Visitors have challenged rules at some institutions requiring them to submit to body examinations before or after contact visits with inmates. In general, most courts have indicated that visitors retain greater expectations of privacy and Fourth Amendment protections than inmates have, and that correctional officials seeking to strip search them must first obtain a search warrant or have probable cause to believe they are concealing or smuggling contraband.

Other emerging controversies involve the rights of correctional workers to work around inmates of the opposite sex. Both male and female guards have argued that the Constitution's Equal Protection Clause establishes their right to be employed in assignments that include conducting strip searches of both male and female inmates. Decisions emerging from these questions have yet to be settled into a well-defined rule of law.

CONCLUSION

Most authorities, including the U.S. Supreme Court, have expressed discomfort when deciding on issues of nudity and exposure of body parts to examination by prison officials. Long-standing traditions of strip searching inmates as part of prison socialization continue, however, and there are no signs that either correctional institutions or the courts are inclined to drastically limit their use in the near future. Nonetheless, courts have increasingly recognized that inmates' privacy rights can outweigh the interests of correctional administrators in some circumstances. Strip search policies are becoming increasingly controversial as America's transition to a mass incarceration society draws a growing percentage of the population into correctional institutions.

Legal Cases

Bell v. Wolfish, 441 U.S. 520 (1979).
Forts v. Ward, 621 F.2d 1210 (2d Cir. 1980).
Kennedy v. Los Angeles Police Department, 887 F.2d 920 (9th Cir. 1989).

SUICIDE

Suicide, the act of intentionally killing oneself, in jail typically occurs within the first 24 hours of detention. In prison it may occur at any time. Victims often are under the influence of drugs or alcohol and are placed in isolation. They are usually young and often have been arrested for nonviolent, alcohol-related offenses. Most suicides are by hanging and occur at night. Suicides are far more common among jail (remand) inmates than those who have been sentenced.

EXTENT

Not all jurisdictions in the United States report the number of suicides committed by inmates housed in prisons and jails. Further, official figures that are based on the outcomes of coroners' inquests may be inadequate and underestimate the true occurrence of deaths in custody, since not all fatalities are ruled as suicide. With these limitations in mind, based on the most recently available reported figures, suicide is the second leading cause of death in jails and the third leading cause of death in prisons throughout the United States. Suicide rates in jails and prisons are at least four times higher than those in the free population. In 1998, 176 inmates housed in state and federal correctional facilities killed themselves. In 1999, 324 inmates housed in the nation's federal and state prisons did the same. Despite this increase in raw numbers, the actual rate of deaths due to suicide in both jails and prisons has declined over time. In 1997, for jails the rate was 54 per 100,000 inmates, and for prisons the rate was 17.8 per 100,000 inmates.

In the United States, suicide rates are higher among inmates housed in control units or special housing units than those housed in the general population. Rates of suicide in state prisons also vary widely. States with smaller inmate populations and the seven jurisdictions with dual systems, where pretrial and sentenced inmates are combined, reported higher rates of suicide than elsewhere.

To put the U.S. figures in perspective, it is useful to examine suicide in other penal systems. To that end, in 1999 Greek prisons reported 112 suicides per 100,000 prisoners, while in Canadian prisons the rate was 40 suicides per 100,000. Italian prisons reported a suicide rate of 93.5 per 100,000 inmates for 1996 and 112 per 100,000 inmates for 1997. In England and Wales, for 1996 the average suicide rate was 116 per 100,000 inmates, while in Scotland in 1993 it was 128 per 100,000. Finally, in Australia in 1996 the average suicide rate was 155 per 100,000.

GENDER

Canada in 1996 surveyed its remand population and found that 20.7% of the males and 30.4% of the females reported a history of suicide attempts. Those attempting suicide were likely to be suffering from a mental illness and/or have a substance abuse problem. Great Britain surveyed its inmate population in 1998 and found that 27% of the male remand prisoners and 44% of the female remand prisoners claimed to have tried killing themselves during their lifetimes. Further, 7% of male sentenced prisoners and 15% of female sentenced prisoners reported having attempted to kill themselves in the 12 months immediately preceding the interview.

As these figures suggest, women tend to self-injure at disproportionately high rates in prison. Paradoxically, scholars suggest that the rate of suicide among female prisoners may be seriously underestimated because coroners assume that women are less likely than men to attempt suicide and conclude that the deaths were accidental. That is, while it is recognized that more women "cut up"

or otherwise injure themselves, this activity is not usually interpreted as a serious attempt to take their own lives.

SUICIDE RATES IN JUVENILE FACILITIES

National data regarding the incidence of suicide in juvenile facilities is insufficient. The Juvenile Residential Facility Census collected by the Office of Juvenile Justice and Delinquency Prevention reported 30 deaths of youth in custody in 2000. Of these, 7 (23%) were suicides. The most recent nationwide survey on juvenile suicides in secure custody facilities was conducted in 1989 and concluded that rates of youth suicide in juvenile detention facilities and correctional facilities were four times greater than they were in the general population. Clearly more research needs to be done in this area.

SUICIDE AND SELF-HARM

Rather than regarding attempted suicide and self-injury as different from completed suicides, current belief is that they should be viewed as part of a continuum, since their motivation, causes, and prevention are commonly shared. Indeed, the profile of the suicide attempters and completers is similar. A disproportionate number are male, between the ages of 20 and 34, and single. About one-third have a prior history of psychiatric treatment, but most evidence serious drug and alcohol problems, personality disorders, and self-reported anxiety and depression. Those serving life sentences are overrepresented, as are those with prior convictions. Not surprisingly, many have a history of prior suicide attempts or self-injury.

Current researchers caution against the use of a single profile of the "suicidal prisoner." They suggest using a typology that includes prisoners sentenced for (or facing) life in prison, the psychiatrically ill, and prisoners with poor coping abilities. The profiling of individuals with these characteristics, however, does not identify all suicidal prisoners. The suicidal prisoner's profile varies depending on the correctional environment and the inmate population.

CAUSES

The causes of jail suicide are due partly to the environment of the institution itself and the state of crisis that a person brought to the jail for detention is experiencing. Jails themselves often induce feelings of fear, shame, uncertainty, and isolation. Persons arrested and held in jail may be under the influence of drugs and alcohol or may be experiencing extreme guilt or shame over their arrest or the crime they have committed. They may have a current mental illness or a prior history of suicidal behavior.

The causes of prison suicide are believed to be somewhat different. Three main reasons prisoners take their own lives include a lack of strong social bonds and support, lack of meaning, and suffering. Several features of prison life may be crucial for the onset of suicidal thoughts for prisoners. These include bullying, boredom and lack of activity, isolation, and the breakdown of relationships. Those who take their own lives often have feelings of uncontrollability, helplessness, and powerlessness. Suicide and attempts at suicide are extreme forms of poor coping evidenced by vulnerable prisoners.

PREVENTION

The National Commission on Correctional Health Care has proposed standards to reduce the levels of suicide in U.S. jails and prisons. A plan for suicide prevention should include identification, training, assessment, monitoring, housing, referral, communication, intervention, notification, reporting, and review. A primary and consistent recommendation for preventing suicide occurrence is to avoid isolating inmates. Suicide attempts and rates are higher among inmates who are segregated from others, especially those housed on death row and in control units.

Another important tool in suicide prevention is to have comprehensive suicide screening procedures in place. Several suicide screening instruments are available and include the Suicide Risk Scale, Emotional and Suicidal Tendency Scale, Suicide Probability Scale, Hopelessness Scale, and the Scale for Suicide Ideation. There is some criticism

that these scales yield significant numbers of false positives (inmates wrongly identified as at risk) and false negatives (inmates who were not identified but are at risk).

It is imperative that correctional, medical, and mental health staff be provided with suicide prevention training. Better communication among these same staff can reduce suicide. The success of efforts to prevent deaths in prisons and jails will ultimately depend upon the ability of staff in correctional institutions to identify those who are vulnerable. They must then be trained in providing these individuals with adequate supervision and ways to reduce the emotional distress vulnerable inmates experience. This will enable officers to help prisoners enhance their coping abilities.

CONCLUSION

Rates of suicide are higher among jail and prison inmates than they are in the free population. More specifically, rates of suicide are higher for those housed in control units than among those housed in the general population. Rates of suicide are lower in correctional facilities in Canada and the United States compared to European nations. The causes and motivations of self-harm and suicide are increasingly thought to be the same and to include feelings of shame and fear, isolation, lack of meaning, and suffering. To prevent suicide and self-harm, it is recommended that inmates not be isolated, that screening tools be used to identify suicide risks among inmate populations, and that correctional and medical staff be trained in suicide prevention.

SUPERMAX PRISONS

Supermaximum secure prisons, commonly referred to as *supermax,* are used to hold those individuals whom prison authorities regard as the most dangerous and troublesome in the penal system. The last decade of the 20th century saw an increasing use of such facilities, which merge the 19th-century practice of long-term solitary confinement with 21st-century technology. This combination subjects prisoners to unparalleled levels of isolation, surveillance, and control and has the potential to inflict significant amounts of psychological harm.

Different prison systems employ different terminology to refer to supermax-like conditions. For example, the program at the Marion Federal Penitentiary, regarded by some as having given rise to the supermax design, was referred to as the "control unit." The new federal supermax facility in Florence, Colorado, is known as "ADX" (for "administrative maximum"). Arizona's supermax units are called "special management units" or "SMUs"; in California they are known as "security housing units" or "SHUs"; Florida has labeled its units "close management" or "CMs"; in Texas they are "high security units"; and Washington State

employs the term "intensive management unit" or "IMU." Although penologist Chase Riveland (1999) correctly concluded that "there is no universal definition of what supermax facilities are and who should be in them" (p. 4), these units have enough distinctive features in common to be analyzed as a separate penal form.

At the start of the 1990s, Human Rights Watch (1991) identified the rise of supermax prisons as "perhaps the most troubling" human rights trend in corrections in the United States and estimated that some 36 states either had completed or were in the process of creating some kind of "supermaximum" prison facility. By the end of the decade, the same organization estimated that there were approximately 20,000 prisoners confined to supermax-type units in the United States and expressed even more pointed concerns about their human rights implications. Most experts agree that the use of such units has continued to increase significantly and that the number of supermax prisoners is considerably higher than these early estimates.

HISTORY

Supermax confinement represents a modern version of the long-standing practice of placing prisoners in solitary confinement or punitive segregation. The earliest prisons employed solitary confinement on a widespread and long-term basis. Yet, this practice was abandoned in virtually all jurisdictions by the last decade of the 19th century. In 1890, U.S. Supreme Court Justice Miller summarized the preceding hundred years of experience with this kind of punishment by noting, "There were serious objections to it . . . and solitary confinement was found to be too severe." The severity of this form of imprisonment included the "semi-fatuous condition" into which many prisoners fell, "after even a short confinement" in solitary, and the fact that some prisoners "became violently insane, [and] others still committed suicide." Miller noted that even those prisoners who had withstood the ordeal often "did not recover sufficient mental activity to be of any subsequent service to the community" once they were released (*In re Medley*, 1890, p. 168).

By the late 19th and early 20th centuries, most jurisdictions in the United States had restricted their routine use of solitary confinement to relatively brief periods of punishment—often measured in days or weeks—that were imposed in response to specific infractions of prison rules. Prisoners in solitary or isolation continued to be physically segregated from the rest of the prison population and, typically, to be excluded from most or all of the normal programming, routines, opportunities, and collective activities available in the mainline institution. But in expectation and in practice, prisoners eventually were to be moved back into mainline prison populations once their term in solitary had been completed.

Two specific developments—both in the federal prison system in the United States—served as precursors to the modern supermax prison form. The first occurred in the 1930s, when Alcatraz Island was converted into a highly isolated facility where the most notorious and presumably most dangerous prisoners were confined, many for the duration of their sentences. Alcatraz lasted for 30 years, until it was closed in 1963, amid controversy. In the early 1970s, Marion Federal Penitentiary created a highly restrictive "control unit" in response to prisoner disruptions. Although the control unit failed to abate the problems at the prison, it was retained. Eventually, control unit-like conditions were extended to the entire institution in the form of a permanent "lockdown" at Marion. The control unit, and eventually the Marion Penitentiary itself, in some ways, filled the role that Alcatraz had played earlier. The control unit was significant also because of the more advanced security and surveillance mechanisms that were introduced to achieve higher levels of institutional control over prisoners.

In the late 20th century, however, a number of changes in correctional policies and overall conditions of confinement led to the more widespread use of the emerging supermax prison form, not just at Marion but in the much more populous state prison systems as well. For one, dramatic increases in the incarceration rate and the length of typical prison sentences combined with the abandonment of the rehabilitative ideal to create a "corrections crisis" in

the United States. Many prison systems—especially those in the United States—were beset with unprecedented levels of overcrowding and widespread prisoner idleness. A deemphasis on programming meant that prison administrators lacked positive incentives to manage the inevitable tensions and conflicts that were created within their institutions. In addition, the punitive political and correctional agenda that had achieved prominence in the waning decades of 20th century supported the use of harsh and forceful mechanisms of social control. Supermax prisons emerged in this context—as punitive mechanisms implemented to buttress what were perceived as increasingly tenuous forms of institutional control.

SUPERMAX CONDITIONS

Supermax conditions are marked by the totality of the isolation, the intended duration of the confinement, the reasons for which it is imposed, and the technological sophistication with which it is achieved. Supermax facilities house prisoners in virtual isolation and subject them to almost complete idleness for extremely long periods of time. These prisoners rarely leave their cells, with at most one hour a day of out-of-cell time the norm. They eat all of their meals alone in the cells, and typically no group or social activity of any kind is permitted. When prisoners in these units are escorted outside their cells or beyond their housing units, they typically are first placed in restraints—chained while still inside their cells (through a food port or tray slot on the cell door)—and sometimes tethered to a leash that is held by an escort officer.

Prisoners in supermax are rarely if ever in the presence of another person (including physicians and psychotherapists) without being in some form of physical restraints (e.g., ankle chains, belly or waist chains, handcuffs). They often incur severe restrictions on the nature and amounts of personal property they may possess as well as their access to the prison library, legal materials, and canteen. Their brief periods of outdoor exercise or "yard time" typically take place in caged-in or cement-walled areas that are so constraining they are often referred to as "dog runs." In some units, prisoners get no more than a glimpse of overhead sky or whatever terrain can be seen through the tight security screens that surround their exercise pens.

Supermax prisoners are often monitored by camera and converse through intercoms rather than through direct and routine interaction with correctional officers. In newer facilities, computerized locking and tracking systems allow their movements to be regulated with a minimum of human contact (or even none at all). Some supermax units conduct visits through videoconferencing equipment rather than in person; there is no immediate face-to-face interaction (let alone physical contact), even with loved ones who may have traveled great distances to see them. In addition to "video visits," some facilities employ "telemedicine" and "telepsychiatry" procedures in which prisoners' medical and psychological needs are addressed by staff members who "examine" and "interact" with them over television screens from locations many miles away.

Supermax prisons routinely keep prisoners in this near-total isolation and restraint for extremely long periods of time. Unlike punitive segregation in which prisoners typically are isolated for relatively brief periods of time for specific disciplinary infractions, supermax prisoners may be kept under these conditions for years on end. In addition, many correctional systems impose supermax confinement as part of a long-term strategy of correctional management and control rather than as an immediate sanction for discrete rule violations.

THE POPULATION

Supermax prisons are usually justified by reference to the alleged dangerousness of the prisoners who are housed there—the "worst of the worst," as correctional administrators like to characterize them. Thus, the increased use of this distinctive prison form is linked to the contention that an especially dangerous or "new breed" of disruptive prisoner now inhabits the modern maximum-security prison. In fact, there is little or no data to support these contentions. Instead, many prisoners are placed in supermax not specifically for *what* they have done but rather on the basis of *who* they are judged to be

(e.g., "dangerous," "a threat," or, especially, a member of a "disruptive" group).

In many states the majority of supermax prisoners have been given "indeterminate" terms, usually on the basis of having been officially labeled by prison officials as gang members. An indeterminate supermax term often means that these prisoners will serve their entire sentences in isolation unless they "debrief" by providing incriminating information about other alleged gang members. These practices have resulted in a significant overrepresentation of racial and ethnic minorities in supermax prisons, and what analysts have described as an "overclassification" of supermax prisoners.

In addition, the percentage of mentally ill prisoners in supermax appears to be much higher than in the general prison population, with scholars estimating that approximately 30% of them suffer from "severe mental disorders." This overrepresentation of the mentally ill likely results from the fact that some mentally disturbed prisoners engage in disruptive behavior that prison officials punish rather than treat. It may also indicate that supermax conditions themselves are severe enough to exacerbate and perhaps even create psychological disturbances in persons subjected to them.

Because women constitute a relatively small percentage of the prisoner population, and because separate supermax prisons are extremely costly to construct and operate, there are few if any women's supermax prisons per se. However, many women's prisons do operate supermax-like units, where prisoners are subjected to the same unprecedented levels of social isolation, deprived conditions of confinement, and restricted movement. The same is true for juveniles, with the additional concern that, as increasing numbers of juveniles are processed by the adult criminal justice system and incarcerated in adult correctional facilities, their numbers in adult supermax units and prisons will undoubtedly increase.

EFFECTS OF SUPERMAX CONFINEMENT

Numerous empirical studies have documented the harmful psychological consequences of living in supermax facilities. The evidence is substantial and comes from personal accounts, descriptive studies, and systematic research on solitary and supermax-type confinement, conducted over a period of four decades, by researchers from several different continents who have diverse backgrounds and a wide range of professional expertise. Specifically, case studies and personal accounts of mental health and correctional staff who work in supermax units indicate a range of similar adverse symptoms to occur in prisoners, including appetite and sleep disturbances, anxiety, panic, rage, loss of control, paranoia, hallucinations, and self-mutilations. Moreover, direct studies of prison isolation have documented an extremely broad range of harmful psychological reactions. These effects include increases in the following potentially damaging symptoms and problematic behaviors: negative attitudes and affect, insomnia, anxiety, withdrawal, hypersensitivity, ruminations, cognitive dysfunction, hallucinations, loss of control, irritability, aggression, and rage, paranoia, feelings of hopelessness, lethargy, depression, a sense of impending emotional breakdown, self-mutilation, and suicidal ideation and behavior. Self-mutilation and suicide are also more prevalent in isolated prison housing like supermax confinement, as are deteriorating mental and physical health (beyond self-injury) and other-directed violence such as stabbings, attacks on staff, property destruction, and collective violence. In fact, many of the negative effects of solitary confinement are analogous to the acute reactions suffered by torture and trauma victims, including posttraumatic stress disorder (PTSD).

In addition to the serious nature and wide range of adverse symptoms that have been repeatedly reported in a large number of empirical studies, it is important to estimate their *prevalence* rates—that is, the extent to which prisoners who are confined in supermax-type conditions suffer its adverse effects. One study found that three-quarters or more of a representative sample of supermax prisoners reported suffering from ruminations or intrusive thoughts, an oversensitivity to external stimuli, irrational anger and irritability, confused thought processes, difficulties with attention and often with

memory, and a tendency to withdraw socially, to become introspective and avoid social contact. An only slightly lower percentage of prisoners reported a constellation of symptoms that appeared to be related to developing mood or emotional disorders—concerns over emotional flatness or losing the ability to feel, swings in emotional responding, and feelings of depression or sadness that did not go away. Finally, sizable minorities of supermax prisoners reported symptoms that are typically only associated with more extreme forms of psychopathology—hallucinations, perceptual distortions, and thoughts of suicide.

A number of significant transformations occur in many long-term supermax prisoners that, although they are more difficult to measure, may be equally if not more problematic for their future health and well-being and the health and well-being of those around them. Many prisoners gradually lose the ability to initiate or to control their own behavior or to organize their personal lives. Others may begin to lose the ability to *initiate* behavior of any kind—to organize their own lives around activity and purpose—because they have been stripped of any opportunity to do so for such prolonged periods of time. Chronic apathy, lethargy, depression, and despair often result.

The absence of regular, normal interpersonal contact and any semblance of a meaningful social context leads prisoners to report a feeling of unreality in supermax confinement. Because individual identity is socially constructed and maintained, the virtually complete loss of genuine forms of social contact and the absence of any routine and recurring opportunities to ground thoughts and feelings in a recognizable human context leads to an undermining of the sense of self. For some prisoners, total social isolation leads, paradoxically, to social withdrawal. That is, some prisoners recede even more deeply into themselves than the sheer physical isolation of supermax requires. They move from initially being starved for social contact to eventually being disoriented and even frightened by it. Finally, the deprivations, restrictions, totality of control, and prolonged absence of any real opportunity for happiness or joy fills many prisoners with intolerable levels of frustration that, for some, turns to anger, and then even to uncontrollable and sudden outbursts of rage.

LEGAL REGULATION

Because supermax prisons are of relatively recent origin, their constitutionality—the question of whether the conditions of confinement in this new prison form represent "cruel and unusual punishment"—has been tested in only a few important legal cases. The first of these cases, *Madrid v. Gomez* (1995), addressed conditions of confinement in California's Pelican Bay Security Housing Unit. Although the judge found that overall conditions in the supermax units were "harsher than necessary to accommodate the needs of the institution" (p. 1263), he concluded that he lacked any constitutional basis to close the prison or even to require significant modifications in many of its general conditions. Instead, he barred certain categories of prisoners from being sent there because of the tendency of the facility to literally make them mentally ill or to significantly exacerbate preexisting mental illness. Those who were already mentally ill and others who were at an unreasonably high risk of suffering a serious mental illness as a result of these extreme conditions (including prisoners diagnosed as chronically depressed, brain damaged, and developmentally disabled) were not allowed to be sent to Pelican Bay. Finally, the judge emphasized that the record before him pertained to prisoners who had been in supermax for no more than a few years, and that longer-term exposure might lead to a different result.

In the second significant case to examine conditions of confinement in supermax-like settings, *Ruiz v. Johnson* (1999), a federal district court reached even more sweeping legal conclusions than the judge had in *Madrid*. The court ruled that its administrative segregation units were operating at below constitutionally required minimum standards. In particular the judge found that the "extreme deprivations and repressive conditions of confinement" in the administrative segregation units constituted cruel and unusual punishment "both as to the plaintiff class generally and to the subclass of mentally ill inmates housed in such confinement" (p. 861).

Indeed, he concluded that "more than mere deprivation," the prisoners in these units "suffer actual psychological harm from the almost total deprivation of human contact, mental [stimulation], personal property and human dignity" (p. 913).

The third and most recent case, *Jones 'El v. Berge* (2001), presented a somewhat narrower issue but resulted in a similarly strong ruling. In this case, a federal district court in Wisconsin granted a prisoner's motion for injunctive relief on the grounds that seriously mentally ill prisoners were at risk of irreparable emotional damage if the state continued to confine them in its supermax facility. The court concluded that the "extremely isolating conditions" of the prison could cause an adverse psychiatric reaction in relatively healthy individuals who had suffered from mental illness in the past, "as well as prisoners who have never suffered a breakdown in the past but are prone to break down when the stress and trauma become exceptionally severe" (pp. 1101–1102). The judge ordered several prisoners to be removed from the supermax facility. In addition, she required mental health professionals to evaluate several categories of prisoners among those who remained and, if any one of them were determined to be seriously mentally ill, ordered that they be transferred out of supermax.

CONCLUSION

Despite a range of academic studies documenting the serious and potentially long-lasting psychological harm it may inflict, and several judicial opinions criticizing the risks it entails and significantly limiting its use, the supermax prison form persists. The legal threshold for finding conditions of confinement unconstitutional has been set especially high in the United States during the last several decades. Supermax prisons per se continue to come very close to this threshold and, in the case of mentally ill prisoners (and, in *Ruiz*, for prisoners in general), to have crossed it. As the empirical record about the psychological effects of this kind of confinement continues to be augmented, and the consequences of long-term confinement in these units becomes clearer, other courts may reach different and perhaps even more sweeping conclusions about the legality of supermax. To be sure, these cases are litigated in terms of particular conditions of confinement that exist at specific institutions—rather than being directed at "supermax" as an abstraction or in general. But the particular conditions are always understood in the larger context of knowledge about effects and consequences. As that knowledge is more widely disseminated and its implications are more fully appreciated, other courts, confronted with different sets of supermax conditions, may decide to issue more detailed orders that require even more elaborate levels of regulation and reform.

SYKES, GRESHAM

Gresham Sykes is remembered largely because of his classic study, *The Society of Captives* (1958), in which he examined the social system of the prison environment. This book was one of the first comprehensive attempts to study the role of the prison from a sociological perspective. In it, Sykes expanded the body of knowledge surrounding prison research to include not only the role of authority but also that of the incarcerated in the creation of an "operating social system" (Sykes, 1958, p. vii).

THE SOCIETY OF CAPTIVES

The Society of Captives is based on Sykes's study of the New Jersey State Maximum Security Prison in Trenton, in which he sought to establish how social order was created and maintained from the perspective of the administrators as well as the inmates. Sykes examined the underlying philosophical goals of imprisonment, as well as how these beliefs translated into the social organization of the prison. In researching the social structures created and maintained by inmates, Sykes identified certain deprivations that inmates suffer when incarcerated in prisons. According to him, these "pains" are a direct result of the imprisonment of inmates. While society's goal is to separate and punish the offenders for their actions, the mere act of imprisonment itself inflicts pain upon the incarcerated individual. Sykes is careful to point out that these "pains" involve a psychological reaction to the deprivations experienced during incarceration.

In all, Sykes (1958, pp. 65–77) identified five "deprivations" that all inmates suffer during their incarceration: losses of liberty, goods and services, heterosexual relationships, autonomy, and security. The deprivation of *liberty* involves not only the physical loss of freedom but also the psychological loss of contact with family, friends, and the community. The loss of *goods and services* again extends beyond the mere restriction of inmates to certain physical items to encompass the feelings associated with the loss of control over the selection and utilization of such goods and services. When access to *heterosexual relationships* is halted, Sykes argued, inmates often experience an identity crisis, become more aggressive, and begin to internalize feelings of worthlessness. The fourth deprivation identified by Sykes involves issues of *autonomy*. Inmates are expected to adhere to a number of rules governing conduct without questioning them. The loss of control and freedom leads to an increased loss of self-identity, which can have a tremendous psychological impact on the inmates. The last deprivation that Sykes discusses involves *personal security*. The simple placement of inmates in a prison often makes them arguably susceptible to victimization, either by fellow inmates or by correctional officers (Sykes, 1958, pp. 65–77).

SOLIDARY OPPOSITION

Sykes furthered his ideas about the "pains of imprisonment" in a joint effort with Sheldon Messinger in "The Inmate Social System" (1960). In this work, Sykes and Messinger examined how inmates deal with the "pains of imprisonment." They suggest that, in an effort to alleviate the effects of incarceration, inmates turn to each other to form a type of "solidarity." They termed this response "solidary opposition." In their view, as inmates collectively form a cohesive unit, governed by inmate codes of conduct, the effects of imprisonment become "less severe" (Sykes & Messinger, 1960, p. 11). Sykes expanded his research to address how inmates react to the deprivations they experience in prison. The exploration of the possible methods used by inmates to mitigate the effects of incarceration is an important contribution to the study of prisons. The idea of solidary opposition has lead to the further studies regarding the

methods utilized by inmates to mitigate the effects of prisonization, especially those that involve inmate cohesiveness.

CORRUPTION OF AUTHORITY

In addition to concentrating on how inmates cope with incarceration, Sykes was one of the first researchers to address the influence of corruption in authority in the prison system, which he did in several of his works. Specifically, in an article entitled "The Corruption of Authority and Rehabilitation" (1956), he argues that correctional officers do not always abide by the prison organization's rules. In fact, through their interactions with inmates, they are often compelled to break or bend these rules. Underlying the actions of these officers, Sykes notes, is the inherent inconsistencies of the prison. Correctional officers are charged with the task of upholding the primary goals of prison: punishment of the offender and protection of the public. However, the officers are somehow expected to effect a moral change in their prisoners, despite the fact that these individuals are unwilling residents. Furthermore, they are expected to interact with these individuals on a daily basis without forming personal relationships with the prisoners. The inherent inconsistencies of the social reality of the prison and the expectations of correctional officers often result in the deviations from the rules of the prison by officers in order to achieve social order within the institution. Such deviance, according to Sykes, can be classified into three types: friendship, reciprocity, and default. These types of corruption occur in the relationships that exist between correctional officers and inmates. The recognition that those in authoritative possessions within a prison oftentimes do not follow the organizational structure set forth by their rules and regulations has been a fundamental concept in the study of prisons.

CONCLUSION

The contributions that Sykes has made to prison research continue to shape this field even today. While his achievements are notable, Sykes's research into the social realities of prisons is not without limitations, especially when considered in light of contemporary issues. Specifically, his research focused exclusively on males, meaning that is it not feasible to generalize his findings to cover all prisoners. Sykes's research is also dated. Much of the fieldwork upon which Sykes based his theory was conducted several decades ago. Thus, the conditions in prisons that facilitated the corruption of authority or the use of solidary opposition do not necessarily exist in today's correctional institutions. Due to the "Get tough" measures that have permeated correctional institutions during the past 20 years, modern prisons have implemented much stricter regulations, regulations that have dramatically reduced the opportunities for inmates to form "solidary opposition." Finally, much of the solidarity that is achieved in today's prisons falls along racial or gang-related, lines a topic that is missing from his analysis. Nonetheless, much of Sykes's work, particularly his 1958 study *The Society of Captives,* continues to be read today.

T

TATTOOING

Prisoners have tattooed themselves for centuries. They used to be forcibly tattooed as well. For example, in the 17th and 18th centuries New Hampshire officials branded or tattooed criminals, and in 1818 the Massachusetts legislature passed a law that required all repeat offenders to be tattooed to indicate their status as habitual criminals. Other countries have used similar measures. England, for instance, practiced tattooing as punishment for centuries. By the early 19th century, authorities in imperial Russia routinely tattooed the harshest criminals to identify them visibly for law enforcement authorities.

In prison, as in society at large, most tattoos take on symbolic meaning as expressions of identity. The criminal seizes on the tattoo's original intention as a deviant identifier used by the authorities and, through inversion and transgression, inverts the mark to designate association with an antisocial subculture that asserts and symbolizes power and control over its own identity. The tattoo, in effect, becomes a strategy of resistance for the convict against the hegemony of the state and its surrogate, the prison. The outlaw thus transforms the negative meaning of the tattoo and makes it a source of status, power, and pride.

Whereas a tattoo artist in the free world creates his or her work with the most sanitary and up-to-date machinery, the prison tattooist relies on handmade machines, needles, and sometimes even glass. As a result, the prison tattoo tests the individual's pain threshold, once again raising his or her status. Finally, many convict tattooists will not tattoo another prisoner who has not already been marked, especially if that person is a short-termer—that is, someone who will get out of prison in the near future. Convict tattooists recognize the symbolic identity commitment of their artwork and frequently refuse to contribute to other convicts' acceptance of self- and group definitions of deviance.

GANG TATTOOS

Before the advent of prison gangs, prison tattoos usually signified a generalized deviant subculture. Following the emergence of ethnic gang cultures in prison in the last half of the 20th century, the meanings of prison tattoos became much more complex. Gang tattoos usually indicate membership in subgroups of the prison and are frequently used as a secret language understood only by the initiated. In some instances, such tattoos can indicate a sequence of career moves within the gang organization. For instance, certain Hispanic gangs in California prisons

have a strict hierarchical structure that mimics military rankings. A specific tattoo, recognized immediately by members of the gangs and others who have been socialized to the prison culture, illustrates each rank. Through these nonverbal body art expressions, convicts can tell a gang member's status in the gang, criminal specialty, and number of kills. For these convicts, tattoos are visual proof of a firm commitment to convict status and to the deviant self-identity.

ICONOGRAPHY

Scholars have not conducted extensive study of the iconography of prison tattoos in the United States, as has been done in some other countries, such as Russia. Yet a number of conventional tattoos—or "flash," in the parlance of tattoo parlors—are common among U.S. prisoners. These include designs featuring eagles, panthers, crucifixes, hearts with women's or men's names, dragons, snakes, and skulls and crossbones. Convict and gang-related tattoos often have specific meanings. Tears under the left eye, for example, can symbolize either the number of murders committed or time served. Many prisoners of Mexican descent have tattoos of the Virgin of Guadalupe on their backs as a defense against sexual assaults. Prison gangs such as the Aryan Brotherhood and their offshoots (e.g., the National White People's Socialist Party and Aryan Warriors) sport a variety of "white power" symbols, including the swastika. These tattoos bind gang members by ideology and kinship both in prison and after release.

HEALTH AND SAFETY ISSUES

Prison tattooing poses a serious public health problem. Most prison tattoos are created using methods that are primitive at worst and only satisfactory at best. For example, in the "hand plucking" technique of tattooing, the tattooist wraps a sewing needle in a string and dips it into ink. He or she then sticks the needle into the skin over and over until a line and finally an image is formed. To be sure, more advanced tattooing technology is available in prison, but few tattooists guarantee sanitary or bleach-disinfected instruments. Therefore, the chance that tattooing will spread diseases such as HIV and hepatitis is high. Most states prohibit tattooing in prisons because of such public health concerns.

CONCLUSION

Prohibitions, however, have certainly not ended the practice of tattooing in prisons. The overwhelming force of the tattoo as a symbolic affirmation of both group identity and self-identity and as a resistance against the hegemony of state authority continues to override any regulatory prohibitions. Most important, the tattoo communicates status, physical strength, aggressiveness, and toughness. Given the significance that convicts, both male and female, accord such traits, prisoners will likely be decorated with tattoos as long as they can find ink.

TELEPHONE POLE DESIGN

A prison built according to the *telephone pole design* has several wings or buildings constructed parallel to one another that are connected by a central corridor or passageway that divides the institution into two halves. From above, the layout of such a prison resembles the top of a telephone pole. Each of the parallel buildings houses a different area of the institution. Some of the buildings contain cells, whereas others are dedicated to the facility's school, shops, dining hall, and support programs. This style of prison architecture was most popular in the United States at the end of the 19th century and the beginning of the 20th century, although institutions were built according to this design until the 1970s.

THE DESIGN

Prison architecture always reflects in part larger societal ideas about the purpose of punishment. Thus, as ideas about incarceration change, so too does the design of penal institutions. In the first penitentiaries of the Pennsylvania and Auburn systems, incarceration was thought to lead to personal reform through a combination of solitary religious contemplation and labor. In these early penal institutions, prisoners did not move very far from their cells for the duration of their confinement. In the Pennsylvania system, for example, people spent their entire sentences alone in their cells. In the Auburn system, they labored together in silence in large halls adjacent to their cells. Gradually, however, it became more common for inmates to move from one part of the prison to another for classes, work, or rehabilitation programs. For this to happen, prison architects had to come up with a new design.

The telephone pole design allows inmate movement to occur under strict controls. All traffic from one area of the prison to another must pass through the central corridor, which is continuously monitored. Furthermore, areas within the institution are usually separated from one another by gates that staff members must lock and unlock. Guards control which inmates come into the central corridor and which are permitted in the different areas of the prison.

Because of the level of control over inmate movement that this design offers, as well as the way in which it holds all prisoners indoors, the telephone pole design is commonly used for maximum-security prisons in the United States and other parts of the world. Prisons constructed according to this design are also frequently used to house inmates according to classification levels. Different areas can be designated for those who are under special protection or for those who, as a group, have more privileges than other prisoners.

EXAMPLES

Completed in London in 1891, Wormwood Scrubs Prison in London is believed to be the first telephone pole design prison. It had four parallel buildings containing 1,244 cells. Interspersed between but also parallel to these cell buildings were workshops and a building containing a kitchen and a bathhouse. The workshops, cell buildings, and kitchen-bath building were all connected by means of a narrow passageway that cut through the center of each building. Although Wormwood Scrubs was older, Fresnes-les-Ringis, a French prison built in 1898, is considered to be the inspiration for many of the telephone pole-style prisons built after it. Francisque-Henri Poussin designed Fresnes-les-Ringis to have six five-story buildings with cells to hold a total of 2,000 inmates. As is typical of prisons built in the telephone pole style, the cell buildings were connected by a central hallway that bisected each building. In Poussin's design, the chapel, service facilities, and administration buildings were also connected by corridors, but they were sited away from the buildings containing cells.

Several prisons in the United States that were built in the early 20th century followed the Fresnes

design. For example, the state prison at Stillwater, Minnesota, erected in 1913–1914, had several parallel buildings of cellblocks and a building with dining facilities and a chapel that were connected by a central corridor. However, at Stillwater the main prisoner work buildings were not connected; thus the prison was not built in true telephone pole style.

Other prisons in the United States were built after Stillwater following this basic design, with most or all of the main prison buildings erected parallel to one another with long central passageways between the buildings. Examples include Kilby State Prison, opened in Montgomery, Alabama, in 1922; and Graterford, opened outside of Philadelphia, Pennsylvania, in 1928. Perhaps the most famous, the Federal Penitentiary at Lewisburg, Pennsylvania, which opened in 1932, was designed in the telephone pole style by Alfred Hopkins. Lewisburg was one of the first prisons specifically built to house inmates in different sections according to security level. Maximum-security inmates were held in inside their cells at all times, whereas medium-security inmates could pass through the prison to work and other programs.

The telephone pole design was the most popular prison design for high- and medium-security prisons in the United States and other parts of the world between 1940 and 1970. El Reno, a federal reformatory in Oklahoma, the federal penitentiaries at Terre Haute, Indiana, and at Marion in Illinois are three federal institutions built in the telephone pole design. Dozens of state prisons for men were also built using the telephone pole design, including Soledad in California, the New Mexico Penitentiary at Santa Fe, Somers in Connecticut, Jackson in Georgia, Holman and Mt. Meigs in Alabama, Massachusetts Correctional Institution, Oregon State Correctional Institution, Connecticut Correctional Institution at Osborn, and Marion and Lebanon Correctional Institutions in Ohio.

In the United States, the telephone pole design was not reserved for men's prisons alone. The Women's Institution at Canon City, Colorado, which opened in 1968, and the well-known correctional center for women, opened in 1971, on New York City's Rikers Island were also of this design. Telephone pole-style prisons may also be found in Asian and Latin countries. Yonago Prison opened in Japan in 1923, and the Cidade Penitentiary near Rio de Janeiro, Brazil, was completed in 1942. Other such prisons can be found in Argentina, Ecuador, Paraguay, and Venezuela, although in these countries the design is referred to as "double comb" or "fish spine" (Johnston, 1973, pp. 48–49).

CHALLENGES TO THE DESIGN

Prisons built according to the telephone poll design were originally valued because of their security features and the way in which they enabled the classification and housing of inmates. However, in the 1970s critics began to argue that the design leads to the problem of *overdetermination.* Nagel (1973) describes overdetermination as

> the condition in which everything—decisions, space, movement, and responsibility—is clearly or narrowly defined. All activities are scheduled. Social contacts are predetermined. The physical setting is limited and monotonous. The context is highly, explicitly, predictable, regimented, and offers little real choice. (pp. 40–41)

Critics of the telephone pole design asserted that although the strict controls it offered made it easy for staff to manage inmates and maintain their authority, the monotony and lack of personal accountability for prisoner actions inherent in the design did little to help prisoners prepare for their eventual release.

Similarly, prison reformers pointed out that inmates housed in telephone pole-style prisons tended to be cut off from the world, given that they rarely if ever went outside. They were unable to appreciate seasonal changes, temperature shifts, and other everyday aspects of life, and, as a result, many became deeply institutionalized. When such people were later released, they found it hard to readjust to life outside the facility. Concerns about such effects of the prison design ultimately led to new forms of penal architecture, including campus-style prisons and other New Generation designs.

CONCLUSION

In its most basic form, the telephone pole design has one long corridor that allows inmates to move from one area to another. Cross-arms, or rectangular areas that house prisoner cells, education facilities, shops, dining halls, and support facilities, are built perpendicular to the long corridor. Although the first telephone pole-style institution dates back to Wormwood Scrubs, built just before the 20th century in England, prisons built according to this design proliferated in the United States and other parts of the world between 1932 and 1970. The design is thought to work well for classifying inmates and controlling their movements, but critics argue that it tends to overinstitutionalize inmates, making it difficult for them to adjust to life outside prison when they are released. Nonetheless, many prisons of the telephone pole style still exist at the beginning of the 21st century.

TERMINATION OF PARENTAL RIGHTS

Depending on the length of their sentences and the nature of their crimes, some prisoners have their parental rights terminated so their children can be put up for adoption. While the termination of parental rights (TPR) is sometimes necessary to ensure that children have stability, consistency, and permanence in their home environments, it is never a simple task. Each decision to terminate parental rights has far-reaching consequences for the parent, the children, and the adoptive family. Juvenile courts and agencies that provide child and family services are often faced with the time-consuming, emotional, and complicated duty of removing children legally from their biological parents and placing them permanently in safe homes.

DEFINITION

When parental rights are terminated, the legal parents' statutory ties to the child are completely dissolved. All rights of the parents to visit, communicate with, make decisions for or about the child, and to obtain information about the child are eliminated. The parents also no longer have any legal responsibility to care for the child medically, physically, emotionally, mentally, or financially. The child becomes the responsibility or ward of the state and is cared for by child welfare agencies through foster care. The goal of the child welfare agencies and the juvenile court shifts from reunification of the child with the biological or legal family to the child's placement with and/or adoption by a new family.

The termination of parental rights may be voluntary or involuntary. Voluntary TPRs happen when the biological or legal parents choose to place their children into the custody of the state and to sever their legal responsibilities to those children. A parent may do this by contacting the local child and family services department or the juvenile court and asking that the child be removed from the home. The parent may then verbally ask that a petition be filed in the juvenile court to terminate parental rights. A parent may also voluntarily terminate his or her parental rights by contacting a private adoption agency and following the agency's procedures for TPR. The private agency will work with the juvenile court to petition for a TPR hearing. In either circumstance, the parent will be required to appear in juvenile court while the court listens to the evidence presented and decides if TPR is in the best interest of the child.

Involuntary TPRs are much more problematic. They typically take place because of abuse or neglect issues and include lengthy involvements by

juvenile courts and agencies providing child and family services. An involuntary TPR may take place if a child welfare agency has made all reasonable efforts to preserve the family and has determined that reuniting the child with the biological or legal family is impossible. Reunification may be impossible if the parent refuses to work with the child welfare agency, when the problems leading up to the child's removal are not curable, and when intensive in-home services cannot be provided or are provided and fail. Federal guidelines require that an involuntary TPR take place if a child has spent 15 of the previous 22 months in foster care. Involuntary TPR is also necessary when a child is subjected to aggravating circumstances such as torture or chronic or severe abuse, when a parent's parental rights over another child have been involuntarily terminated, when a parent has killed or tried to kill another child, or when the court finds that a child is an abandoned infant.

During court proceedings involving an involuntary TPR, the agency pursuing the TPR presents evidence regarding the efforts authorities have made to work with the family, the parents' cooperation, the parents' condition, the current status of the family, the behaviors of the child and/or the parents, the progress made, any significant changes, and the effects of foster care on the child. The parents of the child may hire an attorney and present evidence opposing the termination. Usually the court appoints an attorney for the child (i.e., *guardian ad litem*), to advocate for the child's best interest. Attorneys also represent the juvenile court and the child welfare agency during the court process.

INVOLUNTARY TERMINATION OF PARENTAL RIGHTS OF PRISONERS

In addition to the factors listed, a parent who is incarcerated as the result of a felony conviction may also have his or her parental rights terminated if the juvenile court views the length of the parent's incarceration as detrimental to the child's stability and permanence in a suitable home. If the child's only available provision for care while the parent is incarcerated is in a foster home, the state will often terminate parental rights on the grounds that the parent is deficient in providing adequate care for the child. In such a case, the juvenile court and the child welfare agency do not have to demonstrate that reasonable efforts have been made to reunite the child with the family; rather, they may proceed immediately with a TPR petition.

CONCLUSION

Concerns about the termination of parental rights often center on the problem of identifying exactly whose parental rights need to be terminated. To free a child for adoption, the rights of every person with a direct legal relationship to the child must be terminated. This sometimes includes biological parents, legal parents, named or alleged parents, and unknown parents. A legal parent may be an adoptive parent (mother or father) or a man who was married to the child's mother at the time of the child's conception or birth although he did not impregnate the child's mother. An alleged or putative parent is someone who has identified him- or herself or has been identified by the mother as the parent of the child, whose name is affixed to the birth certificate, who acknowledges the child as his or her own, or who has contributed financially to the support of the child. When unknown parents are involved, the child welfare agency and the juvenile court must publish a public record of the intent to terminate parental rights and must complete a thorough investigation into any records that may identify the child's parents. Identifying all of the parties and successfully terminating the parental rights of each can be difficult for the juvenile court to accomplish. However, successful TPRs and adoptions cannot take place until all legal requirements regarding these individuals are complete.

A second common concern about the termination of parental rights is whether such action is actually in the best interest of the child. The court must determine whether another alternative—such as placement with a relative or continued services to the family—would be sufficient to provide the child with the same level of permanence as TPR. Determining the child's best interest and deciding

on a plan that will ensure the child's overall well-being and healthy mental, physical, moral, and emotional development are the responsibilities of the juvenile justice system.

TERRE HAUTE U.S. PENITENTIARY DEATH ROW

The U.S. Penitentiary (USP) in Terre Haute, Indiana, operated by the Federal Bureau of Prisons (BOP), was originally constructed in 1940 and was designated in July 1993 as the site for conducting executions of men sentenced to death under federal law. According to the BOP, Terre Haute was chosen as the site for executions because of its central geographic location and because it is a high-security prison housing the most dangerous federal inmates. Renovation of a wing of the prison to serve as the Special Confinement Unit (SCU) for inmates sentenced to death began in August 1993 and was completed in May 1996. There is no corresponding facility for female inmates, and, as of November 2002, there were no female inmates in the federal system serving federal death sentences.

SPECIAL CONFINEMENT UNIT

The Special Confinement Unit was designed to house a maximum of 50 men, although the number of inmates with federal death sentences has not reached that level. When the SCU was first activated in July 1999, 20 individuals previously housed at various federal and state prisons were moved to the SCU. As of November 2002, 24 men were serving federal death sentences. Each cell in the SCU has a 13-inch television that provides regular television programming as well as educational and religious programming. Inmates have access to medical and psychological services, indoor and outdoor recreation, an industrial workshop for prison jobs, attorney and family visiting rooms, and library services within the unit. A videoconferencing system is available in the unit to provide face-to-face contact between inmates and the courts if necessary. To the greatest extent possible, residents in the SCU have the same privileges as other prisoners at USP Terre Haute, including access to the prison commissary.

EXECUTION FACILITY

The execution facility at USP Terre Haute is a separate building (2,135 square feet) with witness rooms, the execution room, and various utility rooms. Construction of the execution facility started in 1994 and was completed in 1995. It includes four separate witness rooms, one each for community witnesses, government witnesses, media witnesses, and inmate witnesses. Each federal execution is

conducted, on a date and time determined by the director of the Federal Bureau of Prisons, by a U.S. marshal chosen by the director of the U.S. Marshals Service. The designated marshal and the warden of USP Terre Haute select any additional personnel needed to conduct the execution, not necessarily personnel from USP Terre Haute. All Department of Justice employees have the right to decline to participate in an execution if they have moral or religious objections. Lethal injection, the method of execution most commonly employed by U.S. states, is the method used at USP Terre Haute.

HISTORY OF FEDERAL EXECUTIONS

Prior to 2001, the U.S. government had not executed an inmate in 38 years, since Victor Feguer was hanged in 1963 at the Iowa State Penitentiary in Fort Madison. Feguer had been convicted of a federal kidnapping charge. With the establishment of the SCU and the execution facility at USP Terre Haute, the U.S. Department of Justice brought the enactment of death sentences under direct federal supervision. The 34 federal executions of civilians prior to 2001 had occurred at various federal, state, and county facilities, and a variety of execution methods had been employed, including hanging, electrocution, and gassing. The executions that probably received the most media and other attention prior to 2001 were the executions of Julius and Ethel Rosenberg in 1953 for conspiracy to commit espionage. The husband and wife were electrocuted at Sing Sing Prison in New York. Ethel Rosenberg is one of only two women who have been executed by the U.S. government. The other federal execution of a woman also occurred in 1953, when Bonnie Brown Heady was gassed to death at the Missouri State Penitentiary for kidnapping and murder.

RECENT EXECUTIONS AT USP TERRE HAUTE

Timothy McVeigh was the first person executed by the federal government following the reintroduction of the death sentence into federal law in 1993. McVeigh was convicted of bombing the Alfred P. Murrah Federal Building in Oklahoma City, Oklahoma, on April 19, 1995. In the explosion, 168 individuals were killed, including 19 children. McVeigh was executed on June 11, 2001. The McVeigh case, and the subsequent execution, attracted massive media coverage. Despite preparations by the Bureau of Prisons and the Department of Justice for a large protest, only 150 or so demonstrators appeared at USP Terre Haute on the day of McVeigh's execution, according to ABC News. About 50 of those demonstrated in support of the execution, whereas the rest opposed it.

The second execution at USP Terre Haute occurred eight days later, on June 19, 2001. Juan Raul Garza, a 44-year-old Mexican American, was executed for his role in three drug-related murders in 1993. The Garza execution did not receive the same level of national press coverage as the McVeigh execution.

CONCLUSION

The execution facility and the Special Confinement Unit at Terre Haute fulfill the current needs of the federal system. No additional facilities are anticipated. The warden who presided over the executions of McVeigh and Garza, Harley Lappin, became only the seventh director of the Bureau of Prisons since 1930 when he was sworn in on April 4, 2003.

Author's Note: The opinions expressed are those of the author and do not necessarily represent the opinions of the Federal Bureau of Prisons or the Department of Justice.

THERAPEUTIC COMMUNITIES

Therapeutic communities are typically drug-free residential settings that treat drug abuse and addiction in various predetermined stages. They exist in prisons, hospitals, and the community at large. As individuals pass through each level of treatment in a therapeutic community, they attain increased levels of personal and social stability; this, in turn, allows them to learn social norms and improve their social skills.

Therapeutic communities are different from other drug treatment approaches in the range of people involved in the treatment process. Unlike in other kinds of programs, in a therapeutic community the addict, other program members, and staff are thought to be equally important to recovery. Using a reward and punishment system, the participants interact in ways that influence each other's attitudes and behaviors related to drug use. Individuals in treatment are considered to be the main contributors to their own recovery, but they also are required to assume partial responsibility for the recovery of others in the program.

The ultimate goal of a therapeutic community is to help individuals recognize the dangers of addiction by identifying, expressing, and managing feelings while learning personal and social responsibility. In addition to gaining employable skills, this involves creating a lifestyle of drug abstinence and the elimination of violent antisocial behavior. Currently, two-thirds of the persons admitted to therapeutic communities in the United States have ties to the criminal justice system, either because they are on probation or parole or because they are awaiting trial (this figure does not include participants who are currently incarcerated). Some prisons operate on-site therapeutic communities as a drug rehabilitation strategy.

HISTORY

The first therapeutic communities were established in hospitals in England during the 1940s by psychiatrist Maxwell Jones; the programs were established to help war veterans who were having problems locating and maintaining employment. In 1958, recovering alcoholic Charles Dederich adopted the approach in treating narcotics addicts in the San Francisco area, establishing the well-known Synanon drug treatment program. Synanon declined in the late 1970s after critics alleged that religious undertones in the program gave it a cult-like status. Regardless, similar communities continued to emerge for drug abusers and addicts, such as Phoenix House, Odyssey House, and Daytop Village.

In 1975, the Therapeutic Communities of America (TCA), a nonprofit association dedicated to promoting therapeutic communities, was established. Still in existence today, TCA represents more than 400 substance abuse treatment programs. TCA members provide detoxification, residential care, case management, education, vocational services, and medical services. TCA is attempting to increase the effectiveness and efficiency of substance abuse programs. The organization seeks to promote cooperation among therapeutic communities as well as to educate the public about the need for and the benefits of substance abuse treatment. It also seeks to educate policymakers about the value of therapeutic communities.

Officials introduced the first therapeutic community in a U.S. federal prison at the Federal Correctional Facility in Danbury, Connecticut, in 1966. That same year, New York's Clinton Prison started looking into doing the same. However, it was not until the Anti–Drug Abuse Act of 1986, which allocated federal funds for drug treatment from the Bureau of Justice Assistance and other agencies, that interest in therapeutic communities for prisons was really stimulated. In the late 1990s, this interest grew when the Office of National Drug Control Policy and TCA joined forces to develop a set of operating standards for prison-based therapeutic communities. The eventual plan is to put

120 standards across 11 program domains into a format for use by national accrediting organizations.

STRUCTURE OF THERAPEUTIC COMMUNITIES

Therapeutic communities are usually stand-alone institutions that provide residential facilities separate from drug-related environments. The typical day for participants in these types of communities begins at 7:00 A.M. and ends at 11:00 P.M. It includes scheduled house meetings, job assignments, seminars, individual counseling, and some personal time. Individuals in the program must adhere to strict behavioral norms. In line with social learning approaches, these norms are reinforced with rewards and punishments to encourage participants' development of self-control and social responsibility. In a therapeutic community, individuals go through a hierarchy of progressively important roles. As they attain increasingly important roles, they are granted greater privileges. Group sessions focus on altering negative patterns of behavior through confrontation, games, and role-playing.

To highlight the goal of responsibility with a community-centered ideology, therapeutic communities use a specific three-stage process. Stage 1 occurs within the first 30 days of an individual's stay. During this period, staff members gradually introduce the new resident to policies and procedures and try to establish a sense of trust with him or her. Then the new resident makes a personal assessment of self, circumstance, and need. This is the initial point at which the drug user or addict starts to understand the nature of his or her problem and make a commitment to recovery.

Stage 2 is primary treatment. At this point, staff members implement a structured model of prosocial attitudes. Interventions are conducted to alter the individual's behaviors related to drug use. These interventions usually address the individual's social, educational, familial, psychological, and vocational needs.

Stage 3 is reentry. At this point, staff and other participants help the individual to integrate back into larger society. Ideally, a therapeutic community graduate exits the program drug free and enrolled in a school or employed. In order to facilitate readjustment to the community, most programs offer some form of aftercare. Postresidential services include, but are not limited to, individual therapy, family counseling, educational support, and vocational instruction. Aftercare may also include involvement in other programs, such as Alcoholics Anonymous or Narcotics Anonymous.

Therapeutic communities do not have any predetermined length of treatment and, in fact, tend to have a high dropout rate. Participants who complete all three stages achieve the best results. However, even members who do not complete their programs gain some benefit, particularly those who remain in their communities for at least 90 days. In one study, researchers who compared treatment results for cocaine addicts found that in the year following care, participants in therapeutic communities were less likely to return to drug use than those who had taken part in other drug treatment programs.

Many strategies exist to try to encourage people to complete the three stages of treatment offered in therapeutic communities. From family or employer support to court mandates, participants are often pressured to continue. In addition, studies have found that good relationships between participants and staff members and a focus on the education component of the program often inspire people to continue. Likewise, programs try to bolster participants' self-esteem or even to alter their cognitive structures to encourage them to stay. In this strategy, which tends to be most successful with participants who have low education levels, participants take part in intense teaching sessions that emphasize appropriate expectations concerning treatment.

SPECIFIC POPULATIONS

Therapeutic communities provide services to a variety of specific populations with substance abuse problems. As noted, not including those programs in correctional settings, two-thirds of the individuals admitted to therapeutic community programs have some kind of tie to the criminal justice system. Most

have multiple drug addictions and mental health problems ranging from depression and anxiety to posttraumatic stress disorder. Nearly half of those admitted to therapeutic communities are African American. The high level of representation of African Americans in this population relates to their corresponding numbers in the criminal justice system, which refers a large proportion of program prospects.

Nearly one-third of those admitted to therapeutic communities are women, and mixed-gender and women-only communities exist. Research suggests that therapeutic communities exclusively for women have specific benefits because they focus on services that only women need. Some women's programs also let children stay in the facilities with their mothers. When women feel as though their needs are being met, they are more likely to stay and finish the program.

Since the late 1980s, special therapeutic communities for HIV-infected drug addicts have been established in various parts of the United States. These programs often combine therapeutic communities with nursing home services. These modified therapeutic communities offer accelerated program entry, a higher percentage of staff assistance, and more attention to issues of grief and burnout. Such treatment is thought to reduce not only drug use but also risky sexual behavior.

THERAPEUTIC COMMUNITIES IN PRISONS

Prison environments can make addict rehabilitation difficult. The availability of drugs, violence related to inmate gangs divided along racial lines, and the frustration that accompanies confinement can hinder personal change and reform. Unlike other prison drug treatment programs, on-site therapeutic communities offer an escape from the typical prison subculture by providing an area where individuals are isolated from the general inmate population. They allow participants to separate themselves from drugs, violence, and other norms and values that hinder addict recovery in correctional facilities.

As with programs in the community, the clinical staff members of prison therapeutic communities, usually former drug abusers, were rehabilitated in therapeutic community settings themselves. Because this is the case, staff members can relate to inmates who are drug abusers or addicts; their shared experience is thought to foster a sense of community. As with other therapeutic communities, those in prison emphasize that the problem is the person and not the drug. Substance abuse is merely a symptom of a life filled with antisocial behavior. With the inmate separated from an invalidating environment, the objective is to change negative patterns of behavior that inspire drug use. The mutual self-help aspect of other programs is also present in prison therapeutic communities. In jobs, groups, meetings, recreational activities, and social time, inmates constantly transmit to each other the messages and expectations of their group-driven therapy. The rules of the therapeutic community prohibit inmates from engaging in violence, theft, and drug use. If an inmate participates in such activities, he or she will immediately be expelled from the program and must return to the general population. As might be expected, the threat of this punishment can be a potent deterrent, as inmate participants often view the therapeutic community as the safest place to finish their time.

CURRENT PRACTICE

Several drug treatment programs based on the therapeutic community model currently exist in prisons in the United States. They include Stay'n Out in New York and the Delaware KEY program. The Stay'n Out program, which started in 1977, uses a modified hierarchical therapeutic community model; the program operates in both men's and women's prisons. Residents live in two housing units separated from the general inmate population. They have contact with other inmates only when off site, including visits to the cafeteria, infirmary, and facility library. Staff members give participants a range of jobs, from cleaning bathrooms to enforcing rules of conduct. As an individual performs well, he or she is promoted to a better job. The program also includes a typical schedule of therapy, education, and group meetings. Research that has compared Stay'n Out to other forms of prison drug

treatment has found promising results, suggesting that prison-based therapeutic communities can be effective in reducing recidivism.

The Delaware KEY program, which began in 1988, includes many of the traditional components of a therapeutic community, such as a hierarchical structure, seminars, individual counseling, and resident job functions. It integrates other programs as well, such as Alcoholics Anonymous and Narcotics Anonymous. At group meetings, 10 or more inmates share thoughts and feelings to generate bonds of trust and a sense of community. In these groups, the use of psychodrama is important to explore unresolved conflicts and bring the members closer together. As with other therapeutic communities, the goal is to assist participants in obtaining a responsible, drug-free lifestyle. The program is a two-year continuum of treatment available for both men and women. Unlike other prison-based programs, the KEY program makes a large effort to extend to work release and aftercare. One study found that of inmates who participated in the entire program, 57% remained arrest free and 36% were drug free 42 months following release, in contrast with figures of 25% arrest free and 4% drug free for inmates who did not take part in the program. Recently, prisons in European countries, Asia, and Latin America have started using models based on the KEY program. The cross-cultural effectiveness of the therapeutic community model is yet to be determined.

CONCLUSION

Among the various kinds of programs that exist to treat drug abuse and addiction, one of the most popular is the therapeutic community. As stand-alone facilities, therapeutic communities offer tremendous benefits. In addition to helping participants gain employable skills, they encourage a lifestyle of drug abstinence and the elimination of violent antisocial behavior. With the support of organizations such as the Therapeutic Communities of America, it appears that therapeutic communities are here to stay. This seems especially likely given recent adaptations of the model to care for specific populations, such as women with children and HIV/AIDS-infected drug abusers and addicts.

Although therapeutic communities care for a wide range of individuals, most people currently admitted to therapeutic communities in the United States have some connection to the criminal justice system. Moreover, drug treatment programs in prisons are relying increasingly on therapeutic community models. Regardless of the programs' success, the number of inmates who are likely to be rehabilitated through prison-based therapeutic communities is questionable. Not all inmates can benefit from therapeutic communities in prisons because the programs that prisons offer are usually brief and intense, lasting only six months to a year. To complete all three stages of the program, including reentry, an individual must be released back into society at the appropriate time, but he or she may not qualify for release from prison at that time. The inmate instead must either return to the general prison population or start over in the therapeutic community program. Back in the general population, the inmate will lose the protection of the therapeutic environment. If the inmate starts the program over, he or she will have no goals to achieve, having already completed every stage of the program except reentry. Regardless of this problem, prison-based therapeutic communities have promise. It is also important to note, however, that not all inmates with drug problems want to participate in therapeutic communities.

THIRTEENTH AMENDMENT

The Thirteenth Amendment to the U.S. Constitution prohibits chattel slavery but allows slavery as a punishment for crimes. Approved in 1865, the amendment reads:

> Section 1. Neither slavery nor involuntary servitude, except as a punishment for a crime whereof the party shall have been duly convicted, shall exist within the United States, or any place subject to their jurisdiction.
>
> Section 2. Congress shall have power to enforce this article by appropriate legislation.

This language is identical to that of the Northwest Ordinance, which abolished slavery in the Northwest Territory in 1787. Unlike the Fourteenth Amendment, which was also adopted as a result of the Civil War and Reconstruction, the Thirteenth Amendment has rarely been the subject of litigation.

HISTORY

The Thirteenth Amendment was a product of the complex politics of the Civil War era. Although President Abraham Lincoln's Emancipation Proclamation of 1862–1863 aided many African American slaves in their quest for freedom, his executive order was largely a political, diplomatic, and military maneuver designed to weaken the rebellious slave states and to dissuade European governments from assisting them. Lincoln did not free slaves in the loyal states of Missouri, Kentucky, Maryland, and Delaware. Nor did his proclamation release them in areas controlled by Confederate military forces.

The possibility of amending the U.S. Constitution to outlaw slavery was first raised in December 1863 by the Republican congressmen James Ashley of Ohio and James Wilson of Iowa. Democratic Senator John Henderson of Missouri, a former slave owner, proposed a comparable amendment in January 1864. Republican Lyman Trumbull of Illinois became the measure's sponsor in the Senate, where the Judiciary Committee, which he chaired, favorably reported the amendment on February 10, 1864. The full Senate overwhelming approved the amendment by a vote of 38 to 6 on April 8 of the same year. However, the proposal encountered much more opposition in the House of Representatives. Although a majority of the House's members favored it, the Thirteenth Amendment did not receive the requisite two-thirds margin during 1864.

That same year, Lincoln was campaigning for a second term as president. The Thirteenth Amendment played a significant role in his subsequent success as he made clear to opponents of the amendment that it would end chattel slavery but guarantee few other civil rights to freed African American slaves. As a result, Democrats, who were more tolerant of slavery than their Republican counterparts, came to favor abolition as a means of reuniting the union and removing slavery as a divisive issue. Lincoln won reelection, and a number of representatives who had formerly opposed the Thirteenth Amendment switched their positions. On January 31, 1865, the measure received support from more than two-thirds

of the House's membership. Lincoln signed the proposed constitutional alteration, and the U.S. State Department submitted it to the states for ratification. Illinois was the first state to approve. When Georgia became the 27th state to ratify, on December 6, 1865, the amendment was officially added to the U.S. Constitution. Slavery, except as a punishment for crime, was officially proscribed in the nation's organic law.

ENFORCING THE THIRTEENTH AMENDMENT: LIMITED SCOPE

Congress relied on the enforcement clause of the Thirteenth Amendment to justify the extension of the Freedmen's Bureau Act and to pass the Civil Rights Act in 1866, both of which granted African Americans legal rights of contract, property ownership, and access to the courts as witnesses and civil litigants. These acts did not, however, require states to grant voting rights to former slaves. Congress eventually disbanded the Freedmen's Bureau and revised the Civil Rights Act in a manner that largely rendered the latter ineffective.

Over time, the U.S. Supreme Court limited the scope of the Thirteenth Amendment. However, the Court has on occasion employed the Civil Rights Act of 1866 to protect African Americans from discrimination at the hands of private parties. In the 1968 case of *Jones v. Alfred H. Mayer Co.,* for instance, the Court concluded that the Thirteenth Amendment's enforcement clause cloaked Congress with "power to pass all laws necessary and proper for abolishing all badges and incidents of slavery." Hence the Civil Rights Act prohibited individuals from refusing to sell homes to African Americans. Using similar reasoning, in 1976 the Court ruled that a private, nonsectarian school could not refuse to admit African Americans as students. By and large, however, the Fourteenth Amendment, adopted in 1868, has served as a far more important mechanism for federal enforcement of civil rights and liberties within individual states.

The Thirteenth Amendment has rarely protected the legal rights of workers. Congress in 1867 predicated an antipeonage (debt-servitude) act on the amendment, but it failed to prevent the existence of the practice until well into the 20th century. Decisions by the U.S. Supreme Court upheld the law but made enforcement difficult. Forced labor conditions among migrant workers in certain areas of the country persisted even late in the century. Nor did the Thirteenth Amendment's prohibition against involuntary servitude protect the rights of free workers.

Nonetheless, a number of legal activists have advocated using the Thirteenth Amendment in support of or in opposition to various controversial social, political, and economic practices. Thus many scholars have maintained that the amendment may be used to uphold abortion rights, protect battered women, defend affirmative action policies, oppose speech codes, and protect the rights of juveniles. Up to the present time, however, such advocacy has met with little success. The Thirteenth Amendment remains less important as a practical legal tool than as a symbol of liberty and an expression of contempt for the now-discredited institution of chattel slavery.

CORRECTIONS PRACTICES: SLAVERY OR LABOR?

The authors of the Thirteenth Amendment never seriously considered abolishing slavery as a punishment, given that the prevailing correctional theory of the time regarded hard labor during incarceration as desirable from the standpoint of punishment, rehabilitation, and economics. Almost all state penal systems followed the Auburn system of penal discipline, which required able-bodied inmates of all races and genders to labor in order to pay for institutional expenses. Whether leased to private employers, working on state account, or producing for governmental consumption, involuntary servitude was a defining feature of incarceration for convicted felons. State and federal restrictions against the sale of convict-produced goods, as well as judicial intervention, have lessened but not removed hard labor as a penal disciplinary tool.

Perhaps the convict lease system that characterized Southern state penal systems following the

Civil War is most often associated with the concept of "penal slavery." Former slave states contracted prisoners, and sometimes entire correctional institutions, to private employers, who utilized convict labor on railroads, in mines and turpentine forests, and on plantations. In the states of the Deep South, most convict plantation laborers were African Americans. Many, in fact, were former chattel slaves or their descendants. Working in a gang labor fashion, under armed guard, and frequently singing work chants to maintain a steady pace, convict laborers presented a picture that eerily resembled the antebellum slavery that the Thirteenth Amendment had ended. When states ultimately abolished the convict lease system, they frequently acquired prison farms, where convicts, regardless of race or gender, continued to work outdoors under the threat of force. Some states used prison chain gangs to build roads. Convict leasing, although most conspicuous in the Southern states, existed elsewhere as well. Prison gang labor continues through the present day, although prisoner litigation and judicial intervention have ameliorated some of the worst abuses.

In fact, about 4% of the nation's prison inmates currently work in gangs on prison farms and plantations in states such as Texas, Louisiana, and Arkansas. Partly as a response to growing public tolerance for increasingly harsh punishment policies, a few states have placed some inmates in chain gangs that labor on public works outside of prison walls. More than 50% of all prison inmates in the United States, male and female, perform a variety of skilled and unskilled tasks within penal institutions. For instance, some participate in kitchen and dining hall work, or landscaping or custodial jobs; others do maintenance carpentry and painting. Inmates also serve as vehicle drivers and mechanics. Correctional facilities assign some residents to prison laundries, libraries, and clerical duties. Approximately 6% of all inmates labor in prison industries.

Critics of prison labor contend that many inmates are victims of the state slavery permitted by the Thirteenth Amendment. They charge that the realities of such labor, especially in factories and fields, result in abusive punishment rather than the rehabilitation espoused by some prison labor proponents. According to one source, three states do not compensate inmates, although prisoners may receive reductions in time served as payment in kind. Inmates who are paid typically receive wages that are considerably lower than the federal minimum wage. Prisoners employed by private contractors generally receive higher wages than those who work at state-operated facilities. In 2001, inmates employed by privately operated prison industries received average wages that ranged from approximately $22 per day to nearly $35 per day. The average pay for those working in nonindustrial jobs at both private and governmental prisons ranged from 93¢ to nearly $5 per day.

THE CASES FOR AND AGAINST PRISON LABOR

Critics of the growing prison-industrial complex in the United States further argue that prison slavery on behalf of private contractors enriches certain corporate interests at the expense of both low-wage inmate laborers and free workers. Because contractors normally do not pay for workers' compensation or unemployment insurance and are relieved of the costs of medical and other benefits for the workers, they are attracted to prison labor. In some instances, prison industry has displaced free workers. Rehabilitation advocates note that the type of labor in which inmates engage while incarcerated often does not exist away from prison. Hence discharged felons are unable to locate jobs similar to those they performed while confined, despite the training they may have received while engaging in prison labor.

Proponents of inmate labor, however, argue that most prisoners desire to work and that the psychological impact of idleness is a more serious social problem than prison slavery. They believe that, regardless of the lack of job opportunities outside the prison walls, even menially employed or unpaid inmates may acquire positive work habits that will benefit them after release. Wages from their labor enable them to send money to their families, compensate victims, and save money for their eventual return to free society. In addition, many prison labor

advocates argue that inmate employment reduces incarceration costs and permits at least a few prisoners to pay taxes with their earnings.

CONCLUSION

Judicial intervention in response to the prisoners' rights movement that occurred during the second half of the 20th century has in many respects improved the plight of detained and convicted individuals. Even so, the Thirteenth Amendment to the U.S. Constitution upholds penal slavery. Consequently, inmates and their attorneys depend on other federal constitutional provisions, notably the Eighth and Fourteenth Amendments, to mitigate punishment permitted by the Thirteenth.

THREE PRISONS ACT 1891

The Three Prisons Act, passed by the 51st U.S. Congress on March 3, 1891, authorized the establishment of the first three federal prisons. The act was an important milestone in the U.S. prison reform movement of the 19th century. Its passage laid the foundation for the federal prison system, even though the Federal Bureau of Prisons did not officially come into being until 1930.

HISTORY

Prior to 1789, there were few penal facilities of any kind in the new United States. In 1776, Congress mandated that prisoners charged with federal crimes could be confined in the few county or state facilities available. At the time, the only facility of any size was the Walnut Street Jail in Philadelphia, and it was there that the first federal prisoners were held. The Judiciary Act of 1789 created the U.S. Marshals Service, which was given responsibility for finding prison space for federal prisoners.

It was not until the late 1800s that the federal government became involved in corrections in any meaningful way. When the U.S. Department of Justice was created in 1871, the position of general agent was established, which eventually evolved into the superintendent of prisons, who was in charge of all federal prisoners. At the time, there were simply not enough federal offenders to justify the cost of constructing and maintaining separate federal prisons, and, in accordance with the Judiciary Act of 1789, the federal government paid fees to state and county institutions to house the small number of offenders convicted of violating federal laws.

The federal government had operated several Army stockades and Navy brigs to house military

offenders, but there were no real federal prisons at this time. The U.S. government did, for a short time, operate a penitentiary in Washington, D.C., primarily for local convicts, but this had been long abandoned by the time of the Three Prisons Act. The U.S. Penitentiary for the District of Columbia had opened in 1831 in Washington, D.C., with 150 cells for men and 64 for women, along with workshops for making shoes and brooms. It closed in 1862, however, and the prisoners were transferred to various state prisons.

Gradually, the practice of incarcerating federal offenders in state prisons and local jails became increasingly problematic, in large part because of the growing population of federal offenders. Many state prisons were already crowded with their own prisoners, and they simply did not have enough space to keep taking in federal prisoners. In any case, conditions in many state prisons were so squalid that Congress and the Justice Department opposed sending any new federal inmates to them. Finally, in 1887, when the federal government ended convict leasing, it eliminated many of the economic incentives for state and local institutions to house federal inmates, and the institutions began to refuse to accept such inmates. As a result, the federal government had to come up with a new solution.

THE ACT ITSELF

The Three Prisons Act laid the foundation for a new federal prison system. In the act, Congress established three penitentiaries:

> one north, the other south of the thirty-ninth degree of north latitude and east of the Rocky Mountains, the third site to located west of the Rocky Mountains, and the same to be located geographically as to be most easy of access to the different portions of the country.

The act also specified how much these facilities should cost to build, stating that "the plans, specifications, and estimates of such sites and buildings shall be previously made and approved according to law, and shall not to exceed the sum of five hundred thousand dollars each" (§1).

Reflecting concerns at the time about convict labor, Section 2 of the act appropriated $100,000 "to be expended under the direction of the Attorney General, in the fitting of workshops for the employment of the prisoners." The act also mandated that the goods and supplies produced by the prisoners must be reserved exclusively for use by the federal government and manufactured without the use of machinery, and that the inmate laborers should work only inside the prison. Federal convicts were not to work for private companies.

LEAVENWORTH, 1895

Although the Three Prisons Act mandated the establishment of three institutions, and appropriations were made for the purchase of sites or construction in 1891, it was not until 1895 that the 53rd Congress voted to convert the old military prison at Fort Leavenworth into the first federal civilian prison. The site was chosen primarily because a prison already existed there and could be taken over easily.

James W. French, warden at the Indiana State Prison, was appointed the first warden for Leavenworth. A year later, the Judiciary Committee of the U.S. House of Representatives recommended that the inadequate and run-down facility be replaced through the use of inmate labor. In 1898, the federal government purchased 700 additional acres at Leavenworth, and a new building was constructed, large enough to house 1,200 men. Because it was built by unskilled prisoners utilizing labor-intensive methods of construction, the project took several years to complete. R. W. McClaughry, who worked in the Pennsylvania and Illinois penal systems for a number of years, was appointed to be the warden of Leavenworth in 1899.

ATLANTA, 1902

In April 1896, Congress appropriated funds for the second of the three authorized prisons. Although competition for prospective new prison sites developed quickly, the new mayor of Atlanta, Georgia, James G. Woodward, declared that having the new prison built in his city would be a major goal of his administration. Unlike Leavenworth, where the

federal government obtained the site at no cost, choosing a location in Atlanta meant that the tract would have to be purchased. Land owned by the Southern Railway Company was obtained for the new prison, and construction began in early 1900. Because no prison labor was available, private contractors were used.

The initial plan for a large facility made up of two wings with 380 cells to house 760 prisoners eventually expanded to four wings and 1,200 cells. Samuel J. Hawk, former warden at the West Virginia Penitentiary, a facility that had been used to house some federal prisoners in the past, was appointed warden of Atlanta on July 1, 1901. Although construction was to continue for several more years, the first prisoners arrived on January 30, 1902, and by the summer of that year the population reached 350.

McNEIL ISLAND, 1909

It had been the practice for each new state to take over the former territorial prisons within its jurisdiction, and in 1899 the old territorial prison on McNeil Island in Washington was ordered transferred to the new state administration. Governor Elisha Perry was notified but declined to accept ownership on behalf of the state, and the U.S. Department of Justice continued to operate the facility. Prior to gaining statehood, Washington had built a prison at Walla Walla and did not see any need to take over the former territorial facility. In 1891, with the passage of the Three Prisons Act, the question of locating a federal prison west of the Rocky Mountains surfaced. Although neither Congress nor the Department of Justice ever stated that McNeil Island was the prison west of the Rocky Mountains authorized by the Three Prisons Act, it eventually became the third federal institution so designated.

On July 1, 1909, the old territorial prison on McNeil Island was formally recognized as a federal prison; it was granted its own budget, and prison employees gained civil service status. But the facilities were in decline, and the institutions at Leavenworth and Atlanta received most of the attention and funding from the federal government. It was not until 1922 that a new cellblock and dining facilities were completed at McNeil Island and the original 1875 building was demolished. The federal prison was closed in 1981 and again became a state correctional facility.

CONCLUSION

On May 14, 1930, the U.S. Congress passed and President Herbert Hoover signed into law an act that formally established the Bureau of Prisons to oversee federal penal institutions. Noted penologist Sanford Bates, commissioner of corrections in Massachusetts, was appointed the bureau's first director. At this same time, new federal facilities were authorized, including a new prison in Lewisburg, Pennsylvania (opened in 1932), and a prison hospital in Springfield, Missouri (completed in 1933), and several prison camps were also in operation. This act continued the work that the Three Prisons Act had started almost 40 years previously.

THREE-STRIKES LEGISLATION

In the 1990s, "Three-Strikes Laws" (from the baseball phrase, "Three strikes and you're out") requiring long-term sentences for repeat offenders were enacted in more than half of U.S. states. Proponents of Three-Strikes Laws contend that

they reduce crime by deterring and selectively incapacitating the most dangerous and criminally active offenders. Opponents argue that the laws exacerbate racial disparities in sentencing, overburden the courts and correctional institutions, result in disproportionate sentences for nonviolent offenders, do not deter offending, and are infrequently applied to the dangerous and violent offenders for whom they were originally intended. The future of Three-Strikes Laws will depend on appellate court decisions, research and analysis concerning their costs and benefits, and trends in public sentiment and politics.

HISTORY

In December 1993, Washington State became the first jurisdiction to enact legislation known as "Three strikes and you're out." California followed in 1994, and by the late 1990s more than 26 U.S. states and the federal government had also introduced similar laws. Prior to the introduction of three-strikes legislation, habitual offender statutes existed in most states but were rarely applied.

The impetus for the change in sentencing practices arose, in part, from public outrage over cases in which offenders with prior felony convictions committed heinous violent crimes. Three-Strikes Laws coincided with the "Get tough" trend and adoption of punitive sentencing practices across a range of issues, including firearms enhancements, mandatory minimums for drug offenses, boot camps, and truth-in-sentencing legislation. In the state of Washington, the 1988 murder of 29-year-old Diane Ballasiotes by a sex offender on work-release, and in California, the murders of 18-year-old Kimber Reynolds in 1992 and 12-year-old Polly Klaas in 1993 by repeat violent offenders were cited as the rationale for enactment of three-strikes legislation. Politicians and lawyers argued that the public believed that existing laws did not protect them. This concern, whether based in reality not, led to the expansion of Three-Strikes Laws across the nation and the adoption of three-strikes principles as part of federal sentencing policy.

FEATURES OF THREE-STRIKES LEGISLATION

Three-Strikes Laws abandon rehabilitation as a purpose of punishment in favor of deterrence, incapacitation, and "just deserts." The laws are sometimes justified by the "6% solution," which hypothesizes that incarcerating a small number of dangerous offenders will significantly reduce the crime rate and enhance public safety. This theory is derived from criminologist Marvin Wolfgang's cohort studies of career criminals in the 1940s and 1950s, in which 6% of the studies' sample of offenders were found to be responsible for more than 50% of total crime. Based on this finding, Three-Strikes Laws should enhance public safety by identifying and incarcerating those who are inclined to reoffend, but scholars dispute the veracity of Wolfgang's research and its contemporary relevance.

Despite similar terminology, Three-Strikes Laws take different forms across the various state and federal criminal justice systems. All of the laws require longer periods of incarceration for offenders convicted of violent crimes, but the crimes that count as "strikes," the numbers of strikes required before someone is "out," and the meanings of "out" vary. California's legislation is the most expansive, allowing strike three to be any felony and doubling the sentence for a second strike. Washington State has a narrower "strike zone" but includes nonviolent offenses such as treason, promoting prostitution, drug-related felonies, and attempts. Across the states, "out" can mean an enhanced sentence with a set minimum or maximum, life with the possibility of parole, or life without the possibility of parole. "Out" in Washington is life without the possibility of parole. In California, "out" is a sentence of 25 years to life. Georgia, South Carolina, and Montana mandate a sentence of life without the possibility of parole after two violent felony convictions, and Washington added a two-strikes sentencing provision for sex offenders in 1996. Other variations on such laws include four-strikes provisions and ranges of sentencing options that are left to the discretion of the courts.

IMPACT

Since 1993, more than 7,000 offenders have been sentenced under California's Three-Strikes Law, the most sweeping and frequently used in the country. Other states have sentenced far fewer, and many states have not significantly applied their three-strikes legislation. As of August 2002, 206 offenders had been sentenced under the state of Washington's (the nation's oldest) Three-Strikes Law. Differences in the laws have resulted in various types of offenders being sentenced across the states. In Washington, few (7%) of the three-strikers have been nonviolent offenders, whereas in California most (60%) have been sentenced for property and drug offenses.

Studies of the impacts of Three-Strikes Laws on the criminal justice system have found that these laws disrupt court efficiency with increased trial rates, clogged dockets, and divergent prosecutorial policies (e.g., differential interpretation and application of the law by prosecutors across counties within states). Findings suggest that Three-Strikes Laws may actually increase the homicide rate and contribute to a growth in rates of offender suicides, escapes, assaults, and attempted murder of law enforcement officers because offenders have nothing to lose. Researchers have found that Three-Strikes Laws are used disproportionately to target nonviolent and minority offenders with no measurable effect on crime rates. With the exception of California, the laws have not had any significant impact on prison populations, because many violent offenders sentenced under Three Strikes would have received lengthy prison sentences even prior to the law. However, the cost of caring for the aging prison populations resulting from Three-Strikes Laws, particularly in California, is projected to increase dramatically in the future, leading some to suggest that "we may be incarcerating ourselves into an epidemic" (King & Mauer, 2001, p. 12).

Since the inception of three-strikes legislation, situations have arisen in which prosecutors, judges, and juries have been unwilling to prosecute and convict because of the law's perceived unfairness. This has been an issue primarily in California because of the law's breadth. In a California case in 2000, two jurors who had no problem finding the defendant guilty of burglary said that they could not live with themselves if they complied with the judge's order to validate the man's two prior convictions. Both jurors were replaced with alternates, and the defendant (37-year-old Steven Bell) was convicted and sentenced to 25 years to life for bicycle theft.

The most significant change to date in California's Three-Strikes Law came as the result of the 1996 decision in *People v. Superior Court* giving judges some authority to dismiss allegations of prior felonies in second- and third-strike cases "in the interest of justice." At issue in this case was whether or not a court's striking a prior felony on a prosecutor's motion would violate the doctrine of separation of powers, which provides that any one power (legislative, executive, and judicial) of the state government may not exercise either of the others, to ensure that too much power does not fall into the hands of a single person or group. The court concluded that allowing judges to consider prior felonies as "strikes" is constitutional in the interest of justice, that such dismissal requires consideration of the constitutional rights of the defendant and the interests of society, and that the decision is retroactive, allowing reconsideration of a prior three-strike sentence on appeal or filing of a habeas corpus petition. This decision, returning limited discretion to the judicial branch, allows prosecutors and judges to drop prior felonies in some cases so that they are omitted from consideration as "strikes" under the California law.

Because three-strikes legislation has not had any significant impact on a large number of offenders, prison systems, recidivism, or crime rates, many critics and researchers consider these laws symbolic, with little instrumental value. According to Austin, Clark, Hardyman, and Henry (1999), three strikes is "much ado about nothing and is having virtually no impact on sentencing practices" (p. 131). Studies on the origins of public support for three-strikes legislation suggest that even the source of support for these laws is symbolic, founded on social distance, lack of understanding, and perceived lack of moral and social cohesion rather than on the instrumental goal of crime control. Politicians and victims' rights advocates who

promoted Three-Strikes Laws relied on public fear of crime and frustration over not being able to protect children and others from violent recidivists. The abduction and murder of Polly Klaas by Richard Allen Davis and the subsequent media furor depicting Davis as a poster-boy superpredator had a powerful impact on voters, many of whom saw three-strikes legislation as a way to gain control over an out-of-control situation. However, in practice, particularly in California, where the range of offenses that may be defined as "strikes" is so broad, the law is underapplied to violent predatory offenders and overapplied to many offenders whom few supporters of the legislation originally expected would be sentenced under Three Strikes. Studies conducted in the years following enactment of the legislation have shown that when citizens learn the details of Three-Strikes Laws and hear about cases in which nonviolent offenders are sentenced to life or life without parole, they are less supportive of the sentencing policy.

Three Strikes

The three strikes and you're out law wasn't designed for people who unwisely commit a crime, like mine for instance. I was convicted of an attempted second degree robbery, which under the SRA [Sentence Reform Act] is classified as a class "C" offense, just at the border of being a misdemeanor. Under normal circumstances, the penalty for such an offense is 13–24 months, with the statutory maximum being 5 years.

The three-strikes law was designed for the most serious violent offenders. For instance, heinous murderers, rapists, child molesters, first degree robbery with a weapon, etc. Yet most of the people who have been affected by this law are petty criminals, that can't amount in comparison to a murder or a rape. A murderer gets less time than a three-striker who committed a class "C" offense. The crime just doesn't fit the time in any form or fashion.

Clearly the three-strikes law is a miscarriage of justice. In this case justice needs to be restored. I'm hurt to the bottom of my soul to bear the burden of being classified as a three-strikes offender. I've been rejected, deprived of my freedom, my family, and redemption, for an offense that doesn't warrant such treatment. Animals get better treatment than three strikes!

Monroe Correctional Complex,
Washington State Reformatory

RESPONSES

Supporters of the mandatory sentencing policy contend that Three-Strikes Laws reduce crime by deterring and selectively incapacitating the most dangerous and criminally active offenders. Opponents argue that the laws do not deter violent convicted felons from reoffending, inadvertently result in disproportionate sentences for nonviolent offenders, exacerbate racial disparities in sentencing, inappropriately apply to female offenders, and overburden courts and the correctional system.

Numerous constitutional challenges to three-strikes legislation have been raised on grounds that the laws violate the Fifth Amendment's protection against double jeopardy, the Eighth Amendment's protection against cruel and unusual punishment, the Fourteenth Amendment's equal protection clause, and ex post facto constitutional provisions. In California, a number of cases have highlighted how the laws penalize relatively minor offenders. Controversial cases in which nonviolent individuals have been sentenced under Three Strikes include that of Jerry Williams, whose "third strike" was grabbing a slice of pizza from some children. Likewise, Gregory Taylor, a homeless ex-convict who tried to pry open the kitchen door of a church where he had been fed in the past to steal some food, was sentenced to 25 years to life. Critics argue that the inability of the courts to incapacitate the most dangerous offenders selectively and efficiently is fundamentally at odds with the intent of the law.

Three-strikes sentences raise the problem of "false positives," where individuals who might not recidivate are imprisoned because of what some consider an arbitrary measure of their dangerousness (number of strikes or felonies). A more complex area of concern about these laws is that of racial disparities

in sentencing. Minority offenders' felony records are likely to be inflated as a result of selective police patrol practices and racial disparities in pretrial, prosecutorial, and plea-bargaining practices. Such factors increase minority offenders' risk of being prosecuted under Three-Strikes Laws, contributing to the disproportionate numbers of African American and Hispanic women and men behind bars.

Research has shown that the criminal behavior of most offenders declines after age 30 (known as the "burnout phenomenon"), suggesting that it makes little sense to incapacitate offenders beyond age 38 (the average age of three-strikers) because most at this stage of the life cycle will naturally desist from committing crime. Finally, there is little evidence that Three-Strikes Laws effectively deter violent crime, which results from a broad range of causes and motivations. It is unclear whether the threat of third-strike sentencing might deter individuals from committing violent acts, given the subjective and emotional nature of some crimes.

Significantly fewer women than men are sentenced under Three-Strikes Laws. As of June 2002, only 3 (1.5%) women in Washington State and 69 (1%) women in California had been sentenced under the law. Feminist criminologists argue that Three-Strikes Laws were not intended for and should not apply to female offenders, who generally do not commit violent predatory crimes. Some critics suggest that because women tend to be their children's primary caregivers and many children with incarcerated mothers end up in the foster care system, sentencing women under Three-Strikes Laws has harmful effects that extend well beyond the sentenced offenders. To support the view that Three-Strikes Laws should not apply to women because of their different needs and circumstances, sentencing guidelines would need to allow the courts to consider gender as an element in determining the nature and impact of crime.

SUPREME COURT CHALLENGES AND SUPPORT

In November 2002, the U.S. Supreme Court heard two California cases involving three-strikes offenders (Leandro Andrade and Gary Ewing) who had received sentences for minor thefts (of videotapes in one case and golf clubs in the other). At issue was whether the sentencing under the California Three-Strikes Law constituted cruel and unusual punishment when the courts "struck out" the offenders for nonviolent crimes. On March 5, 2003, the Supreme Court upheld Andrade's sentencing, concluding that it did not violate the Eighth Amendment and that recidivism is a serious public safety concern that has long been recognized as a legitimate basis for increased punishment. The Court also ruled on the Ewing case. Justice Sandra Day O'Connor wrote in her opinion that the U.S. Supreme Court does not sit as a "superlegislature" and that "Ewing's sentence is justified by the State's public-safety interest in incapacitating and deterring recidivist felons, and amply supported by his own long, serious criminal record" (*Ewing v. California,* 2003, pp. 15, 17). Citing evidence that California's recidivism has been reduced by 25% and that for the first time since the 1970s there are more parolees exiting California than entering, the Court acknowledged that legislatures enacting Three-Strikes Laws have made a deliberate policy choice to enhance public safety by incapacitating habitual offenders.

The U.S. Supreme Court's landmark decision resolves a primary legal question that is likely to make future challenges beyond state legislative systems more difficult. The Court's decision to uphold California's Three-Strikes Law on the basis of public safety underscores the original intent of the law and the right of individual states to enact sentencing policy that balances defendants' constitutional rights with public safety interests. The Court's decision may close the door to further federal challenges and open it for further expansion of Three-Strikes Laws (and other variants of laws aimed at habitual offenders) to a greater number of states and to a broader class of offenders. In the view of three-strikes advocates, and now the U.S. Supreme Court, Three-Strikes Laws reflect a focused state strategy that is necessary to control career criminals, ensuring public safety through long-term incarceration of habitual offenders.

CONCLUSION

It is unclear what the future holds for three-strikes legislation. Despite the recent U.S. Supreme Court ruling, challenges to Three-Strikes Laws will likely continue. Questions remain concerning whether these laws do in fact have any impact on crime and recidivism rates and, if so, whether their impact is sufficient to justify the use of long-term or even (in some states) lifelong incarceration as a means of achieving public safety.

People v. Superior Court, 13 Cal. 4th 497 (1996).

Ewing v. California, 123 s. ct. 1179 (2003).

TRANSGENDER AND TRANSSEXUAL PRISONERS

Transgender and *transsexual* people are individuals whose sex (physical) and gender (self-identity and social identity) are not always congruent. Although the number of transgender or transsexual ("trans") prisoners in correctional systems across the United States is small, this population is of interest because these individuals are at a substantially high risk of assault and/or self-harm.

DEFINITIONS

Though similar, transgenderism and transsexualism are not quite the same. Transsexualism, technically known as *gender dysphoria,* is a recognized medical condition in which an individual who was defined as belonging to one sex at birth later expresses a very strong desire to live as a member of the opposite sex. Individuals diagnosed as transsexual often seek hormonal and surgical intervention to assist them in living as members of the opposite sex. Transgenderism is a much vaguer concept, which may refer to individuals who merely refuse to identify socially and politically with one or the other gender. Transgender individuals may also be preoperative transsexuals. In either case, transsexualism and transgenderism are distinct from, and should not be confused with, homosexuality.

Hormone therapy for transsexuals has the effect of reducing some of the secondary sex characteristics of their birth sex and increasing the characteristics of their identified sex. For example, an individual declared female at birth who is taking male hormones will exhibit increased musculature, deepening of voice, and beard growth. An individual declared male at birth who is taking female hormones will exhibit some feminization and possibly breast development. Most transsexuals undergo some form of hormone therapy, which is generally continued for life.

Transsexuals who wish to change their appearance more may undergo a number of different surgical sex-reassignment procedures. Individuals declared male at birth who seek to live as women may exercise such surgical options as breast augmentation, the removal of the penis and testicles, and the creation of a vagina and labia. These surgeries have a relatively high success rate. Those who have been declared female at birth but wish to live as men may elect to have a hysterectomy and/or mastectomy. The surgical procedures currently used to create a penis (phalloplasty) are complex and are often not successful. Many transsexual individuals live in their reassigned sex with little or no surgical intervention.

TRANS OFFENDERS

Trans people may come to the attention of police more than other members of society for several reasons. One factor may be that some, particularly those identified as male at birth who are living as females, may be visibly recognizable as "different." Identification paperwork that is incongruent with outward appearance may also arouse police suspicion. It has been suggested that the social stigmatization of transsexualism, which often leads to an inability to hold regular employment and drug use, combines with the need to self-fund expensive hormone treatment and surgery to contribute to the relatively high proportion of trans people involved in crime, particularly prostitution. These factors, added to transgender and transsexual individuals' unusually high risk of self-harm and sexual assault, make prison policy regarding trans inmates a particularly important area for consideration.

MANAGEMENT OF TRANS PRISONERS

Several interrelated issues are involved in the management of transgender and transsexual prisoners. The major issues include the choice of institution and access to hormonal or surgical intervention.

Choice of Institution

Most correctional institutions require that a prisoner be classified as male or female. In the case of trans prisoners, this is not a simple matter. The decision as to whether an individual should be categorized as male or female for prison purposes depends on the policy of the particular institution, taking into account the needs of the individual as well as those of other inmates. In some jurisdictions, legal issues arising from antidiscrimination laws and laws that allow individuals to have the sex noted on their birth certificates altered must also be considered.

It is generally recognized that a prisoner who exhibits any female characteristics, whether genital or otherwise, is at a much greater risk of sexual assault and self-harm in a male institution than are other prisoners, even when placed in protective custody. On the other hand, a transgender prisoner placed in a female institution is at much lower risk of sexual assault or self-harm and poses little risk to female inmates if the transgender prisoner does not have a functioning penis (because, for example, for a female-to-male transsexual, penis construction surgery has not been undertaken or has not been successful; or, for male-to-female transsexual, the penis has been removed or rendered impotent as a result of hormone therapy).

Most departments of corrections will place individuals designated female at birth into female institutions, even if they have undergone extensive hormone therapy, had some surgical intervention, and appear male. Transfer of such inmates to male institutions would be considered only if successful phalloplasty had been performed.

For those prisoners born male who are living as females, decisions concerning placement are usually made on a case-by-case basis, taking into account the individual's current stage of transition. In some cases, placement decisions may need to be reviewed during the period of incarceration, particularly if a person is serving a long sentence or is able to commence hormone therapy or undertake surgery while in prison.

Access to Hormonal or Surgical Intervention

Some individuals enter the correctional system having already been diagnosed as transsexual and having commenced a program of hormone therapy (and possibly having had surgical intervention). Sudden cessation of hormone therapy can have serious medical consequences. Deliberate indifference by prison officials to a prisoner's serious medical need constitutes cruel and unusual punishment, a violation of the Eighth Amendment to the U.S. Constitution. Generally, hormone therapy commenced prior to imprisonment is continued, subject to appropriate medical supervision.

Other individuals may seek to initiate hormone therapy for the first time while they are in prison. In a number of cases, U.S. courts have held that the law does not require prison officials to administer hormone therapy, although in other cases the courts have reached the opposite conclusion. Internationally, there is an increasing move toward correctional institutions' recognition of the right of transsexuals to live in their chosen gender roles. Many institutions in countries around the world, including Australia, make hormone therapy available to prisoners in accordance with appropriate medical diagnoses and supervision.

The issue of whether surgical intervention is appropriate in a prison context is controversial. Many argue against allowing it on the basis that part of the approval process for such surgery is a "real-life test." For those individuals already approved for sexual reassignment surgery prior to imprisonment, or those serving long sentences, the situation may be different.

CONCLUSION

Transgender and transsexual prisoners constitute a small proportion of the total prison population in any country. Due to the scarcity of research on this group, their exact numbers are unknown. As individuals who fit into neither accepted gender easily, they pose considerable challenges to the daily operations of penal institutions. Such institutions need to be aware of the specific needs of transgender prisoners, given that numerous documented cases indicate that trans individuals are at high risk of self-harming, particularly in situations where they feel unable to access appropriate hormonal or surgical therapy.

TRUSTEE

Jail and prison *trustees* are inmates who have been given limited responsibilities as workers in detention or penal institutions. Generally, individuals are granted trustee status after they have demonstrated good behavior or have served a specified portion of their sentences. In exchange for working as trustees, inmates are awarded additional privileges, "good time" credit, or small amounts of monetary compensation.

The employment of inmate trustees is a pragmatic means for an institution to save money and is,

in part, inspired by the scholarship of criminologist Gresham M. Sykes. In his classic work *The Society of Captives* (1958), Sykes suggests that institutions can best rehabilitate prisoners by minimizing the influence of convict leaders over them. Trustees, who are usually handpicked by prison administrators, are thought to neutralize the effects of prison subculture and to offer an alternative vision of social control that is more in keeping with that of the bureaucratic chain of command.

HISTORY

One of the most notorious uses of inmate trustees occurred in the Texas prison system during the late 1960s and 1970s. The Texas "building tender" system, started by superintendent Dr. George Beto, relied extensively on inmate trustees to control other inmates. This strategy of governance effectively turned the operation of many prison buildings over to the supervision of deputized inmate trustees, especially at night. Selected inmates were even permitted to carry weapons and were rewarded for "keeping things quiet." In one Texas prison, the weekend staff consisted of only a dozen correctional officers who supervised groups of trustees who made counts, searched cells, frisked other inmates, and administered discipline.

Other states, including Arkansas and Mississippi, emulated the Texas model throughout the 1960 and 1970s. Most of the guards in the Arkansas system were simply inmates who had been issued guns. Only two nonconvict guards kept watch over 1,000 Arkansas inmates at night. In Mississippi, 150 trustees armed with rifles maintained security over the rest of the prisoners. At least one state prisoner in Mississippi was shot by an armed trustee acting in a custodial capacity in 1971.

Despite some initial successes in reducing prisoner disorder in these three systems, a number of problems also resulted from their reliance on inmate trustees. Inmate trustees with supervisory duties were often accused of trading institutional privileges for personal favors. Their discipline was often arbitrary and brutal, and fair hearings were virtually nonexistent, given that wrongdoers were shielded by their coworkers and superiors. During the 1970s, Arkansas inmates who needed medical attention had to bribe the trustees in charge of sick call to see a nurse or doctor. Murders and rapes in Arkansas prisons escalated, and shakedowns of cells turned up hundreds of weapons and other contraband. In response, one federal court described the Arkansas prison system as "a dark and evil world completely alien to the free world" (*Hutto v. Finney,* 1970, p. 381).

The trustee systems in Texas, Arkansas, and other, mostly southern, states were effectively ended by the U.S. Supreme Court's decision in *Hutto v. Finney* (1978) and lower federal court cases such as *Ruiz v. Estelle* (1982) and *Guthrie v. Evans* (1981). The *Ruiz* litigation in Texas ultimately cost the state of Texas more than a billion dollars in fines, attorney fees, and institutional reforms. Since this wave of cases, most prisons have decreased their reliance on trustees in security and custodial positions.

TRUSTEES TODAY

Currently, inmate trustees often work as janitors or serve as staff members in prison food service, laundry service, commissaries, libraries, building maintenance programs, or groundskeeping details. In facilities that operate farms or ranches, trustees perform agricultural chores. Some institutions also employ trustees to maintain and repair equipment and vehicles or to perform work outside prison boundaries. Trustees are no longer armed or given control over other prisoners.

CONCLUSION

Trustees continue to be the subject of some litigation and controversy because of their dual role as both inmate and staff member. Critics of trustee programs assert that trustees undermine the justice and fairness of penal administration by allowing certain prisoners greater privileges than others. Supporters argue that work as a trustee can help a jail or prison inmate learn skills and stay active as

part of his or her overall rehabilitation and self-development. Thus, despite some lingering concerns, many penal institutions and a number of courts in the United States have decided that qualifying inmates may become trustees for part of their sentences.

TRUTH IN SENTENCING

The phrase *truth in sentencing* refers to an approach to sentencing that became popular in the United States in the 1990s. It requires that all offenders sentenced to correctional institutions serve a certain portion of their time, usually 85%. As a practice, it represents a move away from indeterminate sentencing and toward a determinate model. Indeterminate sentencing assigns a convicted offender a range of time to serve. Release may occur at any point after the minimum of the range and before the maximum time is served. Determinate sentencing strategies—including truth in sentencing—assign a convicted offender a set amount of time that must be served.

HISTORY

Before truth in sentencing, it was possible for offenders to be released from confinement prior to their maximum release date. Usually this was accomplished through one of two mechanisms: "good time" credit, in which the sentence was reduced as a reward for the prisoner's good behavior; and parole, in which the offender was granted early, supervised release at the discretion of a parole board. It is estimated that, prior to the enactment of truth-in-sentencing legislation, violent offenders served approximately half of the time to which they were sentenced.

Since the 1980s, criminal justice policy in the United States and elsewhere has been driven by a "Get tough" mentality, which has resulted in a push for more punitive and, supposedly, less arbitrary sentencing. In addition to truth in sentencing, other reforms that have been introduced include guideline sentencing and mandatory minimum sentencing, as demanded by Three-Strikes Laws. The general idea behind all of these practices is that the early release mechanisms of good time credit and parole are soft on crime, and that offenders should be required to serve most, if not all, of their full sentences.

The first state to impose truth in sentencing was Washington, in 1984. However, the general move toward truth in sentencing in the United States largely stems from the Violent Crime Control and Law Enforcement Act of 1994. In that act, the federal government made grant funds available to states where individuals convicted of murder, forcible rape, robbery, and aggravated assault (the four violent crimes indexed in Part I of the Federal Bureau of Investigation's *Uniform Crime Reports*) were required to serve 85% or more of their prison sentences. Qualifying states received grant funds that they could use for new prison construction to accommodate the potential increase in the prison population. Following the passage of this law, many states quickly incorporated truth in sentencing into their provisions, although some researchers have suggested that they would probably have changed their sentencing guidelines anyway, regardless of

Sentencing

I am writing regarding the personal impact that the 3-strikes law has had on my life. I was sentenced to life without parole for committing second-degree robbery. In Washington State, Robbery 2 is a Class B offense, which generally carries up to 10 years incarceration.

I regret my actions and the emotional pain I have caused others. It's my understanding that 3-strikes was sold to the voters by saying it would lock up "the worst of the worst forever." I look around myself daily and see rapists, murderers, and armed offenders who have release dates. That bothers me because I have never committed an armed crime or a sexual offense, but have the ultimate sentence of until I die. The Washington Sentencing Guidelines Commission report dated December 2001 states Robbery 2 should be removed as a strike because the behavior displayed doesn't merit the life sentence.

Getting tough on crime was the campaign theme of the 1990s. I hope that getting smart on crime and sentencing will become a trend. It will cost between 20 and 30 thousand dollars per year to incarcerate me for life without parole. Politicians need to get smart on crime and punishment, otherwise D.O.C. budgets will continue to grow and drain monies from much needed services such as elderly care and schools.

The 3-strikes sentence is grossly disproportionate to the offense I committed. Some time was in order, along with treatment. But "forever"... ?

Steve Dozier
Washington State Reformatory

the grant money. To date, close to $2 billion has been appropriated to these grants.

It is important to note that states vary in their truth-in-sentencing guidelines. Some apply only to violent offenders, whereas others apply to all offenders, regardless of their crimes, who have been sentenced to correctional institutions. In addition, a small minority of states have gone so far as to impose a requirement that the full sentence (100%) be served.

EFFECTS

Those who argue in favor of truth in sentencing claim that it provides a guaranteed determinate sentence, thus reducing perceptions of inequality and notions that the criminal justice system is soft on crime. They believe that victims and prosecutors are likely to support such practice. In addition, they suggest that truth in sentencing creates a greater incapacitation effect of imprisonment, given that violent offenders who once served 50% of their time now must serve 85%. Some scholars have argued that incapacitation reduces crime and has been shown to be effective in cost-benefit analyses.

The impact of truth-in-sentencing policies on prison populations is less clear. The consequences may be positive, as some research has shown that it does not dramatically increase the prison population. It may also, however, be negative, in that it leads to prison crowding. For instance, research in Australia found that truth-in-sentencing provisions led to prison population increases in New South Wales, but not in Victoria. Likewise, in the United States, some scholars have suggested that truth in sentencing may lead to crowding, whereas others argue that it does not affect the incarceration rate.

Obviously, when the prison population grows, the state must shoulder the cost of adding prison beds or risk institutional crowding. Given that truth-in-sentencing policies raise the average time that an offender spends in prison from approximately 50% to 85% of his or her sentence, it is reasonable to suspect that prison populations will grow as a result. However, it is also important to realize that under indeterminate sentencing, an offender who is not deemed rehabilitated and suited for release could be required to serve 100% of his or her sentence—although this rarely happened in the previous system.

Aside from potential crowding, truth in sentencing may also have other negative effects. It is possible that eliminating good time credit and parole may provide prisoners with fewer incentives to abide by institutional rules. This can lead to a greater number of rule infractions and lessen the ability of prison staff to control the inmates. Also,

there are impacts on the criminal courts. Judges may feel that reforms moving toward determinate sentencing limit the discretion they have traditionally had in the sentencing process. Truth in sentencing may also lead to increased plea bargaining, as accused persons may feel less inclined to plead guilty if they know their sentences will be determinate. Finally, it may increase the costs of a state or federal prison system. Even if the rate of incarceration or the size of the prison population remains constant, inmates who originally would have served 50% of their time are now serving at least 85%. All other things being equal, that represents a 35% increase in time, and thus an increase in cost, to hold inmates who now fall under truth-in-sentencing provisions. Of course, there is also the possibility that judges could become more lenient in sentencing in response to the new provisions. Finally, truth in sentencing will contribute to the aging of the American prison population by extending the time inmates spend in a facility.

CONCLUSION

Truth in sentencing has proven to be popular despite a number of problems identified by researchers. As the population of those incarcerated continues to outpace the number of places available in the nation's correctional facilities, however, criticism of long-term determinate sentences, particularly for first-time offenders, is growing. Given the relatively recent development of this sentencing strategy, future study will be necessary to verify its utility and outcomes.

TUCKER, KARLA FAYE (1959–1998)

Karla Faye Tucker was convicted and sentenced to death in Texas in 1983 for the murders of her ex-lover, Jerry Lynn Dean, and his companion, Deborah Thornton. Tucker's case sparked a worldwide debate regarding clemency and the death penalty, women and capital punishment, religious conversion in prison, rehabilitation, and retribution.

Karla Faye Tucker's life history resembles that of many women who come into conflict with the law. She dropped out of school before completing grade seven and worked as a prostitute until a few months before the murders. Drugs were a prominent feature of her life prior to her incarceration. According to Tucker, she was injecting heroin by the age of 11 and was never without drugs from age 10 until four months before her 24th birthday, when she was inca cerated. She claimed that she had been on a three-day drug and alcohol binge prior to the murders.

THE INCIDENT

On June 13, 1983, in Houston, Texas, Tucker and her boyfriend at the time, Daniel Ryan Garrett, broke

into Jerry Lynn Dean's apartment with the intention of stealing his motorcycle. Dean was asleep on a mattress on the floor, and Tucker immediately sat on him and woke him. She wrestled with him until Garrett intervened by hitting Dean over the head with a hammer. Tucker turned on the lights and saw Dean lying face down on the mattress. Tucker then struck Dean with a pickaxe more than 20 times in the back. It was then that Tucker noticed someone else was beneath the bed covers. Realizing that Deborah Thornton was lying next to Dean, Tucker turned the pickaxe on her. At the murder scene, investigators found the pickax still embedded in Thornton's chest.

Following the murders, Tucker and Garrett resumed their daily lives in Houston and occasionally boasted about what they had done. Eight months later, they were turned in to police by Daniel Garrett's brother, Doug. Doug Garrett had tape-recorded Tucker saying that she had been sexually aroused every time she swung the axe that killed Jerry Lynn Dean. She later recanted that statement, saying she had only spoken that way to impress him. Both Tucker and Garrett were convicted and sentenced to death. Garrett died in prison of liver disease in 1993.

LIFE IN PRISON

Tucker became a Christian soon after she was imprisoned. Following her participation in a prison ministry program, she read the Bible for the first time and, she claimed, realized the full impact of her actions and immediately began to repent. During her 14 years on death row, she passionately embraced Christianity and hoped to share her newfound beliefs with other prisoners. In 1995, Tucker married (by proxy) a prison ministry worker, Dana Brown. In television interviews, the articulate, born-again Christian appeared to be a gentle woman who had been transformed and rehabilitated.

PLEAS TO SAVE HER LIFE

As Tucker's execution date neared, many who had previously been considered staunch supporters of capital punishment, including prominent figures from the religious right, called for the commutation of her sentence because of her religious conversion and repentance. Tucker's case also attracted support from human rights groups, anti-death penalty groups, feminist organizations, and thousands of individuals, including Pope John Paul II, the Reverend Pat Robertson, Bianca Jagger (representing Amnesty International), and even some relatives of Tucker's victims. Hundreds gathered outside Tucker's prison to protest her execution. Her cause also attracted support from around the world, with appeals for clemency from the United Nations and the European Parliament. Her supporters claimed that Tucker, then 38, was not the same woman who had committed the brutal murders nearly 15 years earlier. Aside from her conversion to Christianity, her apparent rehabilitation and her virtually spotless disciplinary record in prison convinced supporters that she should be spared the death penalty. Tucker tried to convince key government figures that she was no longer a threat to society. She sent a letter to then-Texas Governor George W. Bush and the Texas Board of Pardons and Paroles to plead that her death sentence be commuted to life in prison. Tucker also appeared on national television from the Mountain View Prison in Gatesville, Texas, where she was being held, to try to gain public support for her cause.

Throughout the debate, Tucker's detractors, including Texas officials, argued that her repentance should not entitle her to special consideration. They claimed that numerous inmates experience similar religious conversions, and they argued that such a conversion is not a legitimate basis for a pardon from the death penalty. Tucker's critics noted that if her sentence were to be commuted to life, she could have been eligible for parole five years later.

CONCLUSION

Tucker's case drew an unusual amount of attention and sympathy, and many argued that it was because of her gender. Tucker claimed the opposite, indicating that the gender issue was forcing officials to use her case to set an example, demonstrating that Texas would not allow a woman to be spared the death penalty.

On February 2, 1998, the eve of Tucker's execution, in a vote of 16–0, the Texas Board of Pardons and

Paroles rejected her request to have her death sentence changed to life in prison. Tucker's last chance to avoid the death penalty lay with the U.S. Supreme Court, which considered her petition for a stay of execution and denied the request. On February 3, 1998, Karla Faye Tucker was executed by lethal injection. She became the first woman to be executed in Texas since 1863 and in the United States since 1984. The controversy surrounding her execution rages on.

U

UNICOR

UNICOR is the name given to the industrial work program operated by the Federal Bureau of Prisons. UNICOR factories produce many different items that are sold to the federal government. Workers in these factories are paid at higher rates than are workers in other prison jobs.

Work has been a key part of the prison experience in the United States since the establishment of penitentiaries in the 19th century. During the 1930s, however, commitment to prison labor fell precipitously because of the Great Depression. To avoid competing with workers in the free labor market, most U.S. states and the federal government passed legislation that banned prison-made products from interstate commerce. Bucking the trend, the U.S. Congress established Federal Prison Industries (FPI) on June 23, 1934, "to provide job skills training and employment for inmates serving sentences in the Federal Bureau of Prisons." FPI, given the trade name UNICOR in 1978, has remained a key part of prison labor organization in the federal system ever since.

CURRENT PRACTICE

Approximately 26% of the prison population is currently employed by FPI. These prisoners work in one of five areas, roughly defined as "metals," "textiles," "furniture," "electronics," and "graphics/services," where, among other things, they produce "missile cable assemblies, kevlar military helmets, executive office furniture, prescription eyewear, metal prison security doors, military uniforms and data entry of patent and trademark documents" (UNICOR, 2000, p. 14).

To avoid competition with private industry, all goods produced in FPI factories are sold to the federal government rather than on the open market. Although the majority of products are sold to the U.S. military, other federal agencies—such as the FBI, the Bureau of Prisons, and the FDA—may purchase desks, stationery, uniforms, and other items made by prison labor. Some UNICOR factories recondition old computers, and some recycle trash.

Recently, UNICOR has been experimenting with subcontracting agreements with other companies that sell to the federal government. In 1999, UNICOR also began to produce items for the commercial market that would otherwise be made overseas. UNICOR trades with private companies to obtain raw materials, services, supplies, and equipment for its prison factories.

According to supporters, prisoners' work in UNICOR factories has a variety of positive effects. For example, prisoners employed through FPI have lower reconviction rates after release and are more law abiding while incarcerated than are other prisoners. They also contribute financially to court-ordered restitution programs through a

mandatory arrangement whereby 50% of FPI wages are set aside for this purpose.

PROBLEMS

Despite these arguments, however, UNICOR has its critics. First, there are many more applicants to FPI factories than there are jobs because these jobs pay the best wages prisoners can earn. This means that there is generally a long waiting list for employment in any facility. Also, most FPI factories are located in men's facilities, leaving women prisoners with fewer opportunities to earn the higher wages associated with UNICOR jobs or to gain the experience and job skills they offer.

Another issue that raises concern for some is the close relationship between UNICOR and the U.S. Department of Defense. More than 60% of sales from UNICOR are made to the U.S. military for a range of different services, from uniforms to helicopter cables and wiring used in weaponry. Because the military then sells some of its products overseas, items produced by prisoners may fall into the hands of violent regimes. Although prisoners may choose whether they are prepared to support the military in this way, the financial attraction of UNICOR employment must surely influence their decisions. In addition, prisoners at the second most secure facility in the federal system, USP Marion, have no ability to make up their own minds. Some time spent employed in the FPI factory is a prerequisite of transfer out of Marion, and the factory manufactures cables for the Department of Defense.

Finally, ever since it was established, UNICOR has been criticized for its inefficiency. In a lengthy and biting assessment of the Federal Prison Industries, sociologist Christian Parenti (1999) points out that even though UNICOR "is guaranteed a labor supply at absurdly low wages, is given direct subsidies, and has a guaranteed market," it is "an economic basket case." Moreover, it is less efficient than other providers and its products are more expensive. UNICOR products cost the Department of Defense, on average, "13 percent more than the same goods supplied by private firms," and 42% of FPI orders arrive late, "compared to an industry-wide average delinquency rate of only 6 percent." Finally, Parenti notes that when orders are filled, the products delivered are often of poor quality. For example, "a 1993 report found that UNICOR wire sold to the military failed at nearly *twice* the rate of the military's next worst supplier" (p. 232).

CONCLUSION

Prisoners, as a group, tend to have little legal work experience. Studies have found that, nationwide, up to 40% of all offenders were unemployed or marginally employed prior to arrest and that 83% of probation and parole violators were unemployed at the time of violation. Training inmates in employable skills through prison industry programs like UNICOR may offer them some alternatives after release. However, unless prison jobs are paired with employment opportunities in the community, they may prove to be little more than a management tool to maintain prison discipline.

UNIT MANAGEMENT

During the 1970s, the U.S. Bureau of Prisons (BOP) revolutionized prison administration by developing the practice known as *unit management*. Unit management has at its heart the notion that a decentralized

organization is better able than a centralized one to respond quickly to changes in the environment. At the time, the BOP had three primary goals: to reduce tension and violence in many institutions, to protect weaker inmates who were vulnerable to more predatory inmates, and to deal with substance abusers.

Under the auspices of the Narcotic Addict Rehabilitation Act of 1966 (NARA), the BOP opened many units to treat and provide programs for inmates with a history of heroin abuse. When many of these began to prove to be successful, the units were broadened to include inmates not sentenced under NARA. Thus, beginning around 1970, various institutions began to implement programs that followed the pattern of the NARA units. From that beginning, the subsequent development of unit management has proven to be one of the more successful policy implementation stories in the history of corrections. It is a concept that has changed corrections (Houston, 1999; Levinson, 1999).

UNIT MANAGEMENT DEFINED

There may be as many definitions of unit management as there are agencies that have implemented it. However, most definitions speak to the tasks of unit management rather than provide any explicit descriptions (see, e.g., Pierson, 1991; Webster, 1991). According to the Bureau of Prisons, a *unit* is a small, self-contained, inmate living and staff office area that operates semiautonomously within the larger institution. The essential components of a unit are as follows:

- A small number of inmates (50–120) who are permanently assigned together
- A multidisciplinary staff (unit manager, case manager(s), correctional counselor(s), full- or part-time psychologist, clerk-typist, and correctional officers) whose offices are located within or adjacent to the inmate housing unit and are permanently assigned to work with the inmates of that unit
- A unit manager who has administrative authority and supervisory responsibility for the unit staff
- A unit staff that has administrative authority for all within-unit aspects of inmate living and programming
- Inmates who are assigned to a unit because of age, prior record, specific behavior typologies, need for a specific type of correctional program (such as drug abuse counseling), or random assignment

According to Levinson (1999), the following guidelines are critical to a unit's success: An effective unit must have the support of top management; there must be a unit plan; the unit manager must be on the same level as other department heads on the organization chart; and the unit manager must have administrative and supervisory authority over staff working in the unit. As Levinson points out, the primary objective of correctional management is to decrease the likelihood of disturbances. Unit management is the most effective tool to accomplish that objective. The key to a tranquil institution is unit staff's ability to supervise inmates effectively and to play the primary role in inmate classification and reclassification.

ADVANTAGES

There are many advantages to unit management. It allows unit staff to take as much responsibility as they wish or are able to handle. It makes staff achievements visible, enabling the unit manager to recognize subordinates' good work. Further, the work itself is considered more satisfying than that associated with other kinds of management strategies. Shared decision making and participation in the policy process are also advantages. In short, staff feel that they are involved in the total workings of the institution. In addition, surveillance of inmates is increased due to staff being in the unit from 8:00 A.M. to 9:00 P.M. on weekdays and on weekend day shift in addition to regular unit officers, and inmates have easier access to staff.

The multidisciplinary nature of unit management improves communication between staff and inmates and allows for discussion during staff decision making regarding both classification and organizational issues. According to a 1975 BOP report, other advantages include the following:

- Unit management divides the inmate population into small, well-defined, and manageable groups whose members develop a common identity and close association with each other and with their unit staff.

- Unit management increases the frequency of contacts between staff and inmates and thus the intensity of their relationships, resulting in (1) better communication and understanding between individuals; (2) more individualized classification and program planning; (3) more valuable program reviews and program adjustments; (4) better observation of inmates, enabling early detection of problems before they reach critical proportions; (5) development of common goals that encourage positive unit cohesiveness; and (6) generally a more positive living and working environment for inmates and staff.
- Decisions are made by the unit staff who are closely associated with the inmates, which increases the quality and swiftness of decision making.
- Program flexibility is increased because staff can develop special areas of emphasis to meet the needs of the inmates in each unit, and programs in a unit may be changed without affecting the total institution.

DISADVANTAGES

Unit management has at least three disadvantages that may account for the hesitancy to adopt this strategy that some states and institutions have shown:

- Unit management is expensive, at least in the short term. Some agencies perceive the need to increase staffing at the unit level as an expense they do not wish to bear. However, once unit management is implemented, substantial savings are realized through reductions in vandalism and savings on overtime, to name just two positive outcomes.
- Implementing unit management takes time and resources. It is not an idea that an administrator can implement simply by writing a memorandum or through wishful thinking.
- Unit management threatens the established order. Many correctional institution executives and supervisors do not want their position of authority challenged or changed, and they view unit management as a threat to their current status.

THE UNIVERSALITY OF MANAGEMENT PRINCIPLES

Reasons for the success of unit management can be found in the literature on business and public management. Attempts to improve the performance of organizations and workers can be traced to the movement known as *scientific management,* originated by Frederick Taylor (1960 [1947]). Taylor's approach, which was intended to improve the performance of workers, was basically a "shop-level" orientation. That is, Taylor believed that scientific management required a change in thinking on the part of workers, who needed to pay attention to details in order to bring "science and the workman together." Taylor's contribution was that he was able to use scientific methods to improve the performance of the average worker.

Scientific management gave way to the *classical school of management,* in which the focus changed from the shop to the structure of the organization. Henri Fayol (1984) made the most important contribution to this school of thinking when he identified his general principles of management:

- Division of work
- Authority and responsibility
- Discipline
- Unity of command
- Subordination of individual interests to the general interests
- Remuneration of personnel
- Centralization
- Scalar chain (chain of command)
- Order
- Equity
- Stability of tenure for personnel
- Initiative
- Esprit de corps

Shortly after World War II, the *human relations school of management* arose, which focused on concern for the people in the organization. In the 1950s, the classical school and the human relations school came together to forge an approach to management that recognized both the need for structure and a concern for people. Decentralization and unit management are the culmination of the joining of these two approaches.

Another innovation that prepared the way for unit management was the BOP's development and implementation of the use of treatment teams. Paul

Keve (1991) notes that the Bureau of Prisons was slow in developing anything other than rudimentary classification procedures, and it was not until the early 1930s that the classification committee was developed. In the early 1960s, the BOP, based on the research of Glaser (1964), created a new position termed *correctional counselor;* the correctional counselor was assigned to a team that included a case manager, a teacher, and a psychologist (if available). This was an exciting and groundbreaking innovation in that it pushed decision making down to the lowest possible level, paving the way for unit management.

The beginnings of correctional unit management can be found at the National Training School for Boys in Washington, D.C., and FCI Englewood, Colorado, where each boy was assigned to a certain living unit and to work with a specific team made up of a case manager and a psychologist. Both efforts were deemed to be successful, but with a change in administration, the idea was dropped. Finally, with the opening of the Kennedy Youth Center at Morgantown, West Virginia, in 1969, an entire institution was devoted to unit management. In the meantime, the NARA units were proving to be successful, and gradually more and more institutions were converted to unit management, with the penitentiaries being the last to be converted.

As the BOP opened new institutions, they were designed with unit management in mind, and older institutions were retrofitted to accommodate unit management. In nearly all instances, unit staff offices were located in the unit, along with the unit secretary. In the meantime, many states were beginning to pay attention to this new approach to managing prisons. The concept grew slowly at first, but it eventually gained speed, and by 1996, 27 U.S. states reported in a survey that they had implemented unit management in some, if not all, institutions (Houston, 1999). Unit management has also gained prominence abroad, and to date Australia, Denmark, Germany, and South Africa have implemented unit management, in addition to the private corrections companies of Security Group 4 and Corrections Corporation of America.

UNIT MANAGEMENT IS EFFECTIVE PRISON MANAGEMENT

Rensis Likert (1967) found that participants in his study said they would like to work for organizations with the following three characteristics: supportive relationships, group decision making and group methods of supervision, and high performance goals.

Supportive Relationships

In prison management, the elements of danger and authority cause staff to look to each other for support on the job, and working in proximity to one another brings mutual interests to light. Some unit managers are very good at nurturing these relationships through staff meetings and other formal unit meetings. Unit management is also an excellent vehicle for resolving conflict among staff and for bringing group pressure to bear on any staff members who may not be carrying a full share of the workload. However, the need for such pressure is rare.

Group Decision Making and Group Methods of Supervision

As relatively small, autonomous entities, units are excellent vehicles for shared decision making. The treatment team makes case management decisions on an almost daily basis, and unit staff make some organizational decisions as well. All staff should contribute to deliberations, and a unit management approach provides the vehicle for effective group decision making.

High Performance Goals

Unit staff members constitute a preexisting work group that naturally focuses on problems and the quality of service in the unit. All the unit manager has to do is listen. The power of unit staff to accomplish tasks within the unit is so great that with effective leadership, they automatically establish high performance goals and relentlessly pursue those goals.

THE SUCCESS OF UNIT MANAGEMENT

The primary advantage of unit management is that it enables staff members to follow each inmate closely, as they physically see him or her on a daily basis and interact on a more equal level as individual human beings. In addition, decisions are made on the unit, inmates have a say in many of those decisions, and there is an added element of flexibility in programming. Thus a proactive approach has, in many instances, brought institutions with formerly unruly and mutinous inmates under control. Roy Gerard (1991) has developed what he calls the "Ten Commandments of Unit Management," which closely follow the essential components listed previously. The most important of these "commandments" is the one that directs the warden to place the unit manager on the same level as other department heads on the organization chart. If the warden does so, Gerard asserts, the institution will be able to implement unit management successfully.

Much of the research on unit management has been somewhat discreet, but clearly unit management is an effective strategy through which to manage a prison. Initially, the Bureau of Prisons conducted many research projects that found that unit management is successful in controlling the behavior of inmates and in attending to issues that staff find important. In one of the earliest inquiries into the effectiveness of unit management, Rowe et al. (1977) found that inmate assaults on other inmates in intermediate adult BOP institutions decreased after implementation of unit management. On the other hand, assault rates appeared to increase in institutions where unit management was used in units housing younger, more violent offenders. The researchers surmised that assaults are more likely to be reported or observed in functional units because there is better surveillance and better inmate-staff rapport.

Another indication of institutional tension is overtime pay, not only during disturbances but also during more tranquil periods. Overtime pay and abuse of sick days can also be used as an indicator of staff morale. Rowe and his colleagues found that young adult institutions showed a significant reduction in overtime pay after unit management was implemented. In intermediate adult institutions, when the relationship of unit management to overtime pay was adjusted for the impact of density, the relationship was reduced to near zero. Overall, overtime pay decreased from $11.55 per 100 inmate-man days before unit management to $2.21 per 100 inmate-man days after bureauwide implementation of unit management.

Further research conducted by the BOP using Rudolf Moos's Correctional Institutions Environment Scale found that unit management was successful. For example, at the FCI Milan, Michigan, the proportion of staff who felt they were involved in decision making rose from 31% to 42%. The proportion of staff who perceived increased order rose from 48% to 65%, and the proportion who felt they served as role models for inmates rose from 23% to 37%. Inmates also perceive that unit management is a better way to manage an institution. In the FCI Milan study, the proportion of inmates reporting increased staff contact rose from 40% to 67%, and whereas pre-event data indicate that only 26% of inmates believed that staff contact was important, postevent data indicate that 45% stated that staff contact is important. Inmates also reported that living conditions improved under unit management, and an increased number saw the value of counseling programs. Escapes also declined after the implementation of unit management, and at the same time furlough guidelines were liberalized.

To date, however, the most recent and complete evaluation of unit management was conducted by the Ohio Department of Rehabilitation and Corrections in 1991. In that study, the central office staff completed interviews and on-site reviews at 20 of the department's 22 institutions. The report concludes that, with few exceptions,

> we have found [unit management] to be both an effective and efficient means of addressing the concerns of managing an expanding inmate population, while remaining sensitive to community expectations and the responsibilities we share with our legal system. Since the transition to unit management, we have observed a marked improvement in the overall operation of our institutions.

Overall, the Ohio study found that there was improvement in a variety of areas. Specifically, escapes decreased, inmate accountability increased, noncustody staff became more involved in custody procedures, inmate assaults decreased, and inmate needs were addressed more quickly. Clearly, unit management made a difference in Ohio.

A more recent evaluation of unit management was conducted in North Carolina's Division of Prisons (Houston, 1999). In 1985, North Carolina began to implement unit management in several new institutions that were to go online in the next few years. Since that time, about half of the institutions within the state's Division of Prisons have implemented unit management. Although not all of them conform to the definition of unit management as advanced by Gerard (1991) and Levinson (1999), they do have a form of unit management that has served the division well. The North Carolina evaluation concluded that the unitized institutions are able to deal effectively with a tougher population, promote a more tranquil institutional environment, and simultaneously promote prisoner program completion.

CONCLUSION

Unit management allows prison administrators to place more staff in inmate living areas, allows for greater recognition of inmate accomplishments, and encourages increased dialogue between staff and inmates. In a unit management system, prisoners feel they are a part of the management process, not victims of it, and the result is a workforce that is committed and willing to take additional responsibility. In the end a safer, more tranquil institution is realized, thus better serving taxpayers, staff, and inmates.

USA PATRIOT ACT 2001

The U.S. legislation known as the Patriot Act became law on October 26, 2001, a little more than one month after the September 11, 2001 terrorist attacks on the World Trade Center and the Pentagon. The Patriot Act does not directly address or revise any areas in corrections other than specifying terms of imprisonment for particular crimes. However, it does modify the enforcement of U.S. law. The result may be a larger population of political and/or Muslim prisoners

in U.S. correctional institutions, although this remains to be seen.

The full title of the Patriot Act is Uniting and Strengthening America by Providing Appropriate Tools Required to Intercept and Obstruct Terrorism (USA PATRIOT) Act of 2001. The act has 10 sections, or "titles," each of which maps out a specific topic. These titles are as follows: Title I, Enhancing Domestic Security Against Terrorism; Title II, Enhanced Surveillance Procedures; Title III, International Money Laundering Abatement and Anti-Terrorist Financing Act of 2001; Title IV, Protecting the Border; Title V, Removing Obstacles to Investigating Terrorism; Title VI, Providing for Victims of Terrorism, Public Safety Officers, and Their Families; Title VII, Increased Information Sharing for Critical Infrastructure Protection; Title VIII, Strengthening the Criminal Laws Against Terrorism; Title IX, Improved Intelligence; and Title X, Miscellaneous.

The stated purpose of the Patriot Act is to empower the government to detect and suppress terrorism. Parts of the act expand the government's powers in the areas of surveillance and intelligence gathering. The bill also toughens penalties for those who assist terrorists.

THE EFFECTS OF THE PATRIOT ACT

The federal government's response to the September 11 attacks on New York City and Washington, D.C., changed the nature of law enforcement in the United States. In particular, since that time, the government has tried to make it more difficult for undocumented foreigners to enter the country. It has also treated those who do manage to cross the border more harshly. Prior to September 11, 2001, federal, state, and local law enforcement authorities acted largely as separate entities, communicating little with each other. Since that time, however, work has been under way to coordinate all law enforcement efforts across the United States.

Before September 11, 2001, political offenders such as members of the Weathermen, a self-described revolutionary communist organization that was active in the 1960s, were housed in the same penal institutions as criminal offenders. Since the Al Qaeda attacks, however, the U.S. government's treatment and definition of those charged with terrorist acts has changed. An example of this can be seen in the establishment of Camp X-Ray at the U.S. naval base in Guantánamo Bay, Cuba, where about 300 suspected Taliban and Al Qaeda members are being held. Unlike other offenders, these detainees have no definite legal status. They are not prisoners of war, and they have not been charged with crimes. They are also being held not within the U.S. correctional system but, rather, in a camp administered by the U.S. military. Most unusual is the fact that it is unclear when, or even whether, they will stand trial.

As the Patriot Act is still somewhat new, and possibly temporary, its effects on U.S. corrections remain unclear. Some tentative forecasts, none of which are mutually exclusive, can be made, however. One is that the "war on terrorism" will have little effect on day-to-day correctional operations because the U.S. military will continue to handle most detainees. Another prediction is that the expansion of the definition of antigovernment activities will specify a new class of lawbreaker, thereby altering the nature of the U.S. prison population. A phenomenon of this kind occurred when the federal government strengthened drug laws and created new categories of drug offenders who would not have been incarcerated 20 or 30 years ago.

As of January 2004, 173,641 men and women were incarcerated in the U.S. federal prison system. The largest sectors of this population were low-security inmates (39%), those serving sentences of 5 to 10 years (29%), and those classified as drug offenders (54.7%). A total of 85 people (0.1%) were incarcerated for offenses against national security. With the new license that the Patriot Act has granted to law enforcement, some change in this profile is possible, although it may not be precisely enumerated and, as such, is likely to be difficult to measure. For example, the Guantánamo Bay inmates were not represented in the 2004 figures because they have no official designation as federal prisoners. Still, they were incarcerated by the U.S. government. This leads to questions about how future inmates

convicted of terrorist or antigovernment crimes will be counted and whether international and domestic offenders will be treated differently. Will state and federal departments of corrections eventually receive new mandates to incarcerate and quantify national security offenders?

OTHER CONTROVERSIAL ISSUES

According to the U.S. Department of Justice (n.d.),

> In passing the Patriot Act, Congress provided for only modest, incremental changes in the law. Congress simply took existing legal principles and retrofitted them to preserve the lives and liberty of the American people from the challenges posed by a global terrorist network.

The act's supporters claim that it increases the government's ability to respond to terrorism and to organize information among local, state, and federal agencies, thereby making these organizations more efficient.

Although Congress passed the act almost unanimously in 2001, many serious criticisms have been raised about it in the years since. By 2004, a number of cities, communities, and states had passed resolutions against the act on the grounds that it violates civil liberties. In 2003, the city of Arcata, California, went so far as to pass a law banning voluntary compliance with the act. Librarians and bookstore owners in particular have been vocal against the act, specifically Section 215, which compels them to provide information in secret about what patrons read and what information they view on the Internet. Other records—including financial, travel, video rental, phone, and medical records—are also subject to government searches. Prior to the Patriot Act, law enforcement officials required warrants and probable cause to access these types of records. In July 2003, the American Civil Liberties Union filed a lawsuit over Section 215. A similar section, 505, allows the U.S. attorney general to use a "national security" letter to force holders of U.S. citizens' personal records to provide those records secretly to the government. The subject whose records are being examined does not have to be suspected of any criminal activity. Another controversial section, 213, allows police to search citizens' homes and property without prior notice. Before the Patriot Act, police were required to "knock and announce" before executing a search warrant. In 1978, U.S. law was changed to allow secret, unannounced searches in cases in which foreign powers were suspected of terrorism. The Patriot Act expanded the use of these warrants to all criminal investigations.

From June to December 2003, inmates from a variety of Bureau of Prisons institutions filed 162 complaints against the BOP, claiming civil rights abuses related to the Patriot Act. The Office of the Inspector General (OIG) determined that 17 of these complaints merited investigation. These complaints included allegations of excessive force against and verbal abuse of inmates, denial of access to prison law libraries, denial of the right to telephone calls, unreasonable prison cell searches, and solitary confinement for no apparent reason. As of January 2004, the OIG was also investigating a Muslim inmate's allegations of verbal abuse by correctional officers, as well as increased discrimination and anti-Islamic sentiment. The inmate said that he was transferred to another correctional facility in retaliation for filing complaints against correctional officers at his prior facility. Yet another OIG probe was reviewing a man's allegations that he was abused by agents of the Federal Bureau of Investigation and Immigration Service detention officers from his arrest in March 2002 until his deportation the following April (U.S. Department of Justice, Office of the Inspector General, 2004). Given that the Patriot Act, specifically Section 102, contains prohibitions against the violation of the civil rights of Arab and Muslim Americans, these types of issues will likely continue to be a source of concern for corrections officials.

THE FUTURE OF THE PATRIOT ACT

The future of the Patriot Act is murky. Although the act was passed quickly, a "sunset" requirement was written in, setting an expiration date of December 31, 2005 for several of the act's surveillance provisions. Many of the act's political proponents have, in turn, supported the Domestic Security Enhancement Act

of 2003, popularly known as Patriot II, which would expand and extend many of the government powers granted by the original Patriot Act. However, in January 2004, a federal judge ruled that a particular section of the original act—one prohibiting the provision of "expert advice or assistance" to groups designated as foreign terrorist organizations—was unconstitutional, marking the first time any part of the act was struck down. Other judicial challenges are expected to follow.

CONCLUSION

Although the Patriot Act specifies no direct, immediate modifications to corrections in the United States, some side effects may emerge as the criminal justice system is amended to assist in the security and legal challenges brought about by the threat of terrorism. The most obvious of these possible effects is an increase in the numbers and types of inmates in correctional facilities. Less obvious is how the role of corrections may change, with a possible increase in politically motivated domestic offenders and with the U.S. military shouldering the burden of incarcerating international offenders. As the struggle with terrorism continues, such questions will certainly continue to confront the U.S. criminal justice system.

U.S. MARSHALS SERVICE

The U.S. Marshals Service was established through the Judiciary Act of 1789, which was signed into law by President George Washington. The same act established the federal judicial system. The first duties of the Marshals Service were to support the federal courts within their districts and to carry out the orders issued by the president, Congress, or federal judges. These duties remain in effect today. Originally, as part of their activities U.S. Marshals were expected to serve writs, summonses, subpoenas, and warrants as well as handle prisoners. Additionally, they controlled payments for salaries, fees, and expenses for the judiciary and associated trials as well as ensured the security of prisoners, the appearance of witnesses, and the availability of a jury pool. The Marshals Service was also involved with a variety of local-level activities on the behalf of the federal government when no provisions had been made on a local level for the collection of taxes or the enforcement of the law. The members of the Marshals Service in these early days were truly civil servants.

As the nation grew, so too did the duties of the Marshals Service. At the same time the influence of the service lessened in the East as cities developed and local law enforcement agencies were put into place, the western frontier was expanding. Without formal governance, the new territories lacked effective and efficient means of law enforcement. Without law enforcement, settlers were not likely to inhabit these territories. Therefore, as the United States expanded westward, it was the U.S. Marshals Service and its deputies that made settlement possible. Later, when the U.S. Army began to build forts in the new territories, the Marshals Service continued to move further west, aiding both the Army and the settlers.

The classic conception that most Americans have of a marshal and his deputies in the "Wild West" is relatively accurate. The marshals had the final word on the execution of the law in all territories of the

United States. They had jurisdiction over the judicial districts they served as well as such areas as "Indian country," where there were no other federal officials of any kind.

THE MARSHALS SERVICE AND NATIVE AMERICANS

The presence of U.S. marshals in the lands reserved for Native populations is still a point of contention among various Native American groups. Not only were the marshals charged with maintaining law and order, they were also responsible for upholding the terms of the treaties the U.S. government had made with Native Americans.

It is clear today that the treaties the federal government made with Native Americans were never enforced. When U.S. Army troops entered the Black Hills of South Dakota, federal law went with them. Once settlement by Americans began, so too did the jurisdiction of the Marshals Service. The result was the propagation of Manifest Destiny in the face of legally binding treaties.

This situation was further complicated by the establishment of the Oklahoma Territory as "Indian country." Clearly this land was reserved for the Native population, but judges from surrounding districts regularly sent deputies into the territory to apprehend offenders (whether of European descent or Native). Although the Marshals Service maintained its commission to carry out orders of the courts, in this situation the courts were acting against established federal treaties with the Native population. Most treaties with Native groups included acknowledgment of the sovereignty of the Native population (including in the criminal justice process); this issue is still controversial today.

CHANGING DUTIES

Although many of their original tasks have been taken over by other groups, U.S. marshals are still involved with the security of the courts. The Marshals Service's Judiciary Security Program maintains the security of all federal courts, judges, witnesses, jurors, and other persons connected with the operation of the courts. Currently there are 2,000 sitting federal judges at nearly 800 locations nationwide. Their security requires not only the physical presence of individual U.S. marshals in their courtrooms, but also investigation by marshals of all threats against the courts or persons associated with the courts.

The U.S. Marshals Service also apprehends criminals through its Fugitive Investigations Program. It maintains a "15 Most Wanted" list of those persons the service deems to be America's most dangerous criminals. Realizing that cooperation with other agencies can increase its effectiveness, the Marshals Service has been involved in investigations in conjunction with the Drug Enforcement Administration (DEA), the Immigration and Naturalization Service (INS), Customs, and a variety of state agencies. In 2000, the U.S. Marshals Service made 55% of all federal felony arrests in the United States. The service has also cleared 145 of 157 fugitives it has listed as "most wanted" since 1983.

In addition to the Marshals Service's responsibility for providing security for the federal courts and all persons involved in those courts, the agency's Prisoner Services Program is charged with the protection and security of prisoners during the judiciary process. Through cooperation with local, state, and federal facilities, the Marshals Service houses almost 40,000 detainees throughout the nation. Because the service uses facilities paid for by local funds, it has contracts with roughly 1,200 state and local governments to rent space in their jails. If jail beds are needed in locations where local agencies are unable to comply, the Marshals Service appropriates funds to improve local jails under its Cooperative Agreement Program.

In addition to housing prisoners, the Marshals Service provides them with any needed medical care. In its efforts to contain the rising costs of health care, the Marshals Service has implemented a variety of health care plans that can cover a wide range of prisoner needs, up to and including organ transplants.

The Marshals Service's duty of protecting prisoners regularly involves transporting them

between venues, and in some cases involves extraditing them from other nations and various jurisdictions. The Marshals Service also oversees the Justice Prisoner and Alien Transportation System (JPATS) with a fleet of its own aircraft and land vehicles as well as leased vehicles. JPATS operates largely at no cost to the U.S. government because it uses vehicles and other assets seized by the Marshals Service to carry out its duties. JPATS transports an average of 250,000 prisoners per year. Other law enforcement agencies also use JPATS to transport prisoners, paying fees to the Marshals Service. The use of JPATS results in transportation savings of roughly 25% compared with commercial fares, and with greater security for both the prisoners and guards.

Beyond transporting prisoners between venues, JPATS also transports deported persons out of the United States and extradited criminals from and to other nations. The Marshals Service plans these trips carefully in order to minimize costs. This involves the coordination of the transport of extradited criminals, deportees, and federal prisoner transfers; "paying" transport from state or local agencies; and seven JPATS operation hubs.

One of the more controversial duties of the Marshals Service is the maintenance of the Federal Witness Security Program (WITSEC). Although WITSEC is administered by the U.S. Department of Justice, U.S. marshals maintain the actual security of the witnesses.

Additionally, the Marshals Service is responsible for the management of all assets seized by agencies of the Department of Justice. Currently, such assets are valued at $1 billion. The centralization of asset management is intended to maximize the return from government auctions of real estate, airplanes, and other motor vehicles. Property seized by the DEA, the INS, and other federal agencies is turned over to the Marshals Service for safekeeping. Once the related prosecution is over, the Marshals Service releases the property to the owners, releases any funds to the appropriate agency or agencies, or puts the property up for auction. The proceeds from the auction pay for the cost of running the auction, and the remaining funds are distributed to the appropriate agency or agencies.

Perhaps the Marshals Service's least widely known responsibility involves its Special Operations Group. Members of this group are on call 24 hours a day to take direct action when a federal law has been violated or when federal property is endangered. Such instances might involve terrorist activities, threats to nuclear facilities, threats to air control operations, or damage to federal buildings. Additionally, this branch of the Marshals Service provides security when certain missiles are transported between bases or to points of embarkation. These operations can also include the transportation of nuclear waste or nuclear-related materials. Although such operations involve members of the U.S. military, the Marshals Service has authority over the operations.

CURRENT SIZE AND BUDGET

The description of programs may give the impression that the U.S. Marshals Service is a large agency, but in fact it has a staff of only 4,017. Even given its relatively small size, the Marshals Service has made more than 20,600 felony arrests and cleared more than 28,055 felony warrants. Additionally, the Marshals Service protects 16,250 people in the Federal Witness Security Program. Of those, 7,160 are actual witnesses to crimes or are informing on their fellow criminals. Roughly 10 new witnesses enter WITSEC each month, not including family members.

This small force is obviously very busy and effective. In fiscal year 2000, the Marshals Service's budget request was $1,163,654,000; of that, $1,096, 593,000 was actually enacted by the federal government. The fiscal budget for 2000 included salary and expenses; $359,970,000 was requested, and $330,973,000 was enacted. The Marshals Service requested $550,232,000 for federal prisoner detention, and $525,000,000 was enacted. With regard to the Marshals Service's work toward the reduction of violent crime, $209,620,000 was requested and $209,620,000 enacted. To support the agency's ongoing Cooperative Agreement Program, $35,000,000 was requested and $25,000,000 enacted. Finally, for

new construction and facility expansion, $8,832,000 was requested and $6,000,000 enacted.

CONCLUSION

Perhaps the most enduring aspect of the U.S. Marshals Service is its ability to adapt to the changes the United States has gone through since 1789. As federal, state, and local law enforcement groups developed and assumed some of the responsibilities of the Marshals Service, the agency did not fade away. Instead, it became more active in cooperative law enforcement activities with agencies such as the FBI, DEA, INS, Customs, and the Bureau of Alcohol, Tobacco and Firearms. The Marshals Service's involvement in such cooperative law enforcement activities provides task forces with broader jurisdiction to pursue criminal activities.

V

VAN WATERS, MIRIAM (1887–1974)

The innovative and controversial penologist Miriam Van Waters began her career in the juvenile court movement of the Progressive era, wrote highly popular books about juvenile delinquency in the 1920s, and served for 25 years as superintendent of the Massachusetts Reformatory for Women at Framingham (1932–1957). Van Waters repeatedly triumphed over conservative critiques of her progressive correctional model, which emphasized inmate self-government, recreation, and maternal ties between staff and the women she called "students."

BIOGRAPHICAL DETAILS

Van Waters's reformist ideas originated in the social gospel message of her father, George Browne Van Waters, a progressive Episcopalian clergyman. Her commitment to child saving had strong roots in her experiences as the eldest of five siblings. A graduate of St. Helen's Hall in Portland, Oregon, Van Waters earned BA (1908) and MA (1910) degrees in psychology at the University of Oregon. While she was studying at Clark University, where she completed a doctorate in anthropology in 1913, her visits to Judge Harvey Baker's juvenile court in Boston influenced her rejection of prevailing theories of inherited defect in favor of social and familial explanations of criminality. Van Waters first worked with troubled youth at the Boston Children's Aid Society and then became superintendent of the Frazer Detention Home in Portland.

JUVENILE JUSTICE

Diagnosed with tuberculosis in 1915, Van Waters gave up her dreams of reforming juvenile justice, but after a long period of recovery in Oregon and Southern California, she revived her career in 1917, becoming superintendent of the Los Angeles County Juvenile Hall. In 1920 she became a "referee," or informal judge, at the L.A. Juvenile Court, where she served until 1930. She also founded El Retiro, an experimental school for troubled girls that combined maternal concern and firm authority to treat the "so-called delinquent." At Juvenile Hall and El Retiro, Van Waters rejected solitary confinement, emphasized medical and social services, and instituted clubs, classes, and self-government. Drawing on the settlement house model, she also helped found a residence for young working women graduates of El Retiro. Her two popular books about delinquent youth (*Youth in Conflict,*

1925, and *Parents on Probation,* 1928) established her national reputation. In 1929, Van Waters was elected president of the National Conference of Social Workers.

Repeatedly embroiled in local politics and accused of exceeding her authority, Van Waters counted on the influence of middle-class women's clubs and her wealthy patrons, Chicago philanthropist Ethel Sturges Dummer and New Jersey reformer Geraldine Livingston Thompson. A network of female professional colleagues with whom she lived also helped her raise the neglected child she had met in 1929, when the girl was seven years old and a ward of the juvenile court; she renamed the child Sarah Ann Van Waters and later adopted her. In the face of renewed opposition, Van Waters left Los Angeles in 1931 to investigate juvenile justice for the Harvard Crime Survey and the National Commission on Law Observance and Enforcement. In her national evaluation of girls' reformatories, she criticized inadequate and punitive institutions and praised those that were education based.

FRAMINGHAM

In 1932, Van Waters became superintendent of the Massachusetts Reformatory for Women in Framingham, which housed up to 400 women sentenced largely for "crimes against public order," such as drunkenness and prostitution. Despite the conservative climate of Depression-era corrections, Van Waters abolished uniforms and silence rules, established musical and theater clubs, and allowed cultural excursions and home visits. "The goal of the modern institution," she told a reporter, "must be to have institutional life approximate outside normal life as nearly as it can" (quoted in Freedman, 1996a, p. 188). To create a "child-centered institution," she made a new mothers' cottage central to rehabilitation. Education, psychological and spiritual counseling, and paid work through an indenture program were made possible by a legion of college interns, local volunteers, and special funds created by Geraldine Thompson. Superintendent Van Waters served as a surrogate mother and charismatic healer, instituting what she called "Christian penology," a faith in individual worth and recovery. Many inmates responded loyally, and in turn Van Waters hired some of them to serve on staff as models of rehabilitation.

Although political opponents continually challenged her quest for total authority at Framingham, Van Waters enjoyed strong support among women's groups, liberal clergy, and powerful reformers, including Eleanor Roosevelt, who would visit the institution whenever the superintendent came under fire. After World War II, however, the Cold War attack on liberalism encouraged those critics who resented Van Waters's penchant for operating beyond the letter of the law. In 1949, prompted by publicity over an inmate suicide, the Massachusetts commissioner of corrections dismissed Van Waters from office, citing her work-release system, her practice of hiring former inmates, and her alleged tolerance of homosexuality at the institution. Van Waters appealed her dismissal, and a series of dramatic public hearings focused national attention on her maternalist policies and the charges that she was soft on criminals, tolerant of homosexuals, and politically subversive. A gubernatorial commission reinstated Van Waters, but for the remainder of her career, her reforms came under closer state scrutiny and did not survive the changing inmate populations of the next decades.

CONCLUSION

Van Waters suffered an aneurysm in 1956 and retired the following year. She moved into a Framingham household with two former inmates and continued to pursue the reforms that had been her lifelong work. She had been a founding member and later president of the American League to Abolish Capital Punishment, and in retirement she championed death row inmates. She also maintained extensive correspondence with imprisoned men and women. Miriam Van Waters died at age 86 at her home in Framingham.

VIOLENCE

Researchers classify prison violence into two types: interpersonal and collective. Interpersonal violence occurs in the everyday framework of prison life and includes inmate-on-inmate violence, inmate-on-staff violence, and staff-on-inmate violence. This violence takes many forms and includes physical, psychological, economic, and social victimization. Usually it does not challenge the smooth functioning of the prison as an organization. Collective violence, on the other hand, disrupts the normal social patterns within the institution. Typically, it takes the form of riots and disturbances. One other form of prison violence that is often excluded from discussions of the topic is intrapersonal violence—that is, acts of self-harm, such as suicide attempts and completions.

TYPES OF PRISON VIOLENCE

Collective Violence

The American Correctional Association defines a prison riot as an incident in which administrators lose control of a significant number of inmates (15 or more) in a significant area of a penal institution for a significant period of time. Riots often result in property damage and/or personal injuries. They are more likely to occur in maximum-security prisons, in larger prisons, and in older facilities; when there is decreased contact between warden and inmates; when inmates feel that their living conditions are inadequate; and in punitive/administrative segregation units within prisons. In the 20th century, more than 1,300 riots occurred in American prisons.

Historically, the root causes of prison riots have varied; they have included dissatisfaction with living conditions, racial tensions, rage, conflicts between inmates or between inmates and correctional staff, and legal status. As the nature of prison confinement has changed and the type of authority that correctional administrators may exercise over inmates has altered, so too have perceptions of the motives and causes of prison riots changed. During the 1940s and 1950s, prison riots were seen as expressions of inmate frustration and as a collective response to brutal and crowded living conditions. The inmate subculture was unified in opposition to prison authorities.

In the 1960s, race became a major cause of prison riots in the United States, as Black Muslim inmates demanded the ability to practice their religious beliefs while incarcerated. As black citizens in the free community demanded equal citizenship, so did black citizens confined in the nation's prisons. Integration of black and white inmates in prisons, especially in the South, aggravated already heightened racial tensions, and race riots occurred. During the height of the prisoners' rights movement, between 1971 and 1983, a total of 260 prison riots took place in 35 U.S. states. California reported 80 riots, Florida reported 34 riots, and Virginia reported 18 riots during this period. In most of these disturbances no hostages were involved, and no injuries occurred; most lasted less than 12 hours.

The two most violent prison riots in U.S. history took place at Attica State Prison in New York in 1971 and at New Mexico State Penitentiary in 1980. At Attica, 43 individuals were killed, 39 of whom died during state officials' attempt to regain control of the prison. The New Mexico riot resulted in the deaths of 33 inmates at the hands of other prisoners. The riot at Attica was the result of increasing political awareness on the part of prison inmates, who organized and raised concerns regarding their political and civil rights. However, the riot at the New Mexico prison grew out of inmates' rage over the prison administration's use of a system of inmate informants to maintain control of the inmate population. The destruction of parts of that facility and the targeting of inmates

believed to be "snitches" for the administration are further evidence of that motive.

More recent large riots have occurred at the U.S. Penitentiary in Atlanta, Georgia, in 1987 and at the Southern Ohio Correctional Facility in Lucasville in 1993. According to the most recent census of state and federal prisons, a total of 317 prison riots were reported in state and federal confinement facilities between July 1, 1994, and July 30, 1995 (Stephan, 1997). This report defines a riot as any incident that has five or more inmates participating, that requires the intervention of additional or outside assistance, and that results in serious injury or significant property damage. Other disturbances (incidents in which fewer than five inmates participated, that did not require intervention of additional or outside assistance, or that did not result in serious injury or property damage) numbered 1,808. Fires numbered 816.

Interpersonal Violence

In 1995, 3,311 inmate deaths were reported in state and federal prisons. Of these, 82 were reported as homicides by other inmates and 113 were attributed to unknown causes, such as accidents or homicides. The number of assaults between inmates numbered 25,948. Rates of assault varied by institution, from a low of 9.96 per 100 inmates to a high of 32.6 per 100 inmates (Stephan, 1997, p. 13). The overall rate of assault was 28.4 per 1,000 for state prison inmates and 12.4 per 1,000 for federal prison inmates. More recent figures indicate that in 1999, the number of assaults between inmates housed in U.S. state and federal prisons was 31,314. Of these, about 26% required medical attention, and 6% were referred for prosecution.

In a recent survey of 1,566 prisoners in Great Britain, 19% of the adults and 30% of young offenders reported that they were assaulted in the preceding month. Threats of violence were somewhat higher, with 26% of adults and 44% of young offenders reporting that they were threatened in the preceding month (O'Donnell & Edgar, 1996, p. 2). Another study in Great Britain recently found that rates of prison rule violations were higher for female prisoners (256 offenses per 100 prisoners) than for male prisoners (159 offenses per 100 prisoners) (Home Office, 2001, p. 35).

Rape and Sexual Assault

Stephen Donaldson (1993), cofounder of the organization Stop Prisoner Rape, asserted that approximately 300,000 men are sexually assaulted each year in U.S. jails and prisons. The victims of these sexual assaults tend to be young, physically small, convicted of less serious crimes, serving their first prison sentences, and heterosexual. Those who commit the assaults do so largely to demonstrate their power and dominance over other individuals. Studies suggest that sexual abuse in prisons may result from direct threats of violence and more subtle forms of coercion, fear, and intimidation. Sexual harassment (whistling, sexualized comments, groping) is also part of the process of coercion. Donaldson, who was himself a rape survivor, recommends strategies male prisoners can use to deal with the threat of rape; these include requesting protective custody from the prison administration and pairing up with a sexual predator for protection against further victimization by other sexual aggressors.

Little research has been conducted concerning inmate-on-inmate sexual abuse among women. Rates of sexual coercion among women inmates are reportedly lower than rates among men. Further, sexual pressuring and harassment among women prisoners are more common than sexual assault.

Psychological Violence

Psychological violence can include harassment, intimidation, and ostracism. No data have been reported on the extent of this type of violence in U.S. prisons, and rarely do inmates report such incidents to staff. A study of young offenders in Scotland, however, found that 29% were bullied during their current incarcerations, and in Great Britain more than half of young offenders and 26% of adults surveyed reported that they were bullied (Power, Dyson, & Woziniak, 1997).

VICTIM RESPONSES TO VIOLENCE

A potential victim of violence may often try to fight back against a perceived aggressor. Researchers have identified several rationales for such responses on the part of potential victims. For example,

responding to sexual advances aggressively may help to define the victim's sexual identity as heterosexual. Also, showing the willingness to use violence demonstrates to the rest of the inmate population that the victim believes in the convict code of resolving problems without asking for staff assistance. Violence shows the victim's "toughness," so that others will not seek to harm him or her. Potential victims may use violence preemptively in cases where they perceive that their aggressors are likely to use force; that is, the victims act first to alter this occurrence. Finally, violence appears to be effective in some cases, given the values of the prison social world.

SELF-HARM

Not all inmate violence is directed at others—some inmates hurt themselves intentionally. They may engage in self-mutilation, suicide attempts, or other self-destructive behaviors, such as destroying their own cells or swallowing toxic substances or objects. Such actions are often stress related and occur more frequently among inmates who are female, who are younger, or who have limited coping skills. Those with mental health problems also tend to self-injure more frequently than do inmates without such problems.

INMATE-ON-STAFF VIOLENCE

In 1995, more than 14,165 federal and state prison staff members were injured by inmate assaults in the United States; 14 of these assaults were fatal (Stephan, 1997, p. 13). In 1999, the number of assaults increased to 16,152. Of these assaults, 15% required medical attention, and the perpetrators in 10% were referred for prosecution. In 1999, 33 correctional staff members died in the line of duty. A study of disciplinary infractions in correctional institutions in Quebec, Canada, in 1996 reported 162 assaults against noninmates, of which 154 were correctional officers (Ouimet, 1999, p. 27).

STAFF-ON-INMATE VIOLENCE

For much of U.S. correctional history, prison staff were allowed to use whipping, flogging, and other physically brutal means to control inmates and maintain institutional order. The prisoners' rights movement of the early 1970s and the subsequent willingness of the federal courts to recognize that constitutional rights do not end for citizens when they are convicted of crimes and confined in correctional facilities have greatly curtailed the use of physical violence on inmates by correctional staff.

Hamm, Coupez, Hoze, and Weinstein (1994) found in their Prison Discipline Study that 62.1% of their inmate respondents reported having observed correctional staff physically beating inmates. Unauthorized physical violence by correctional officers does continue, and the news media occasionally report on this issue. Recent media reports of unauthorized or excessive use of force by correctional officers include stories about 14 inmates who were beaten at Hays State Prison in Georgia and about 43 inmates wounded and 7 killed at the California State Prison in Corcoran.

Human Rights Watch (1996) has reported findings based on interviews conducted with female prisoners who experienced sexual abuse by male prison employees in five states (California, Georgia, Illinois, Michigan, and New York) and the District of Columbia. The Human Rights Watch study documented custodial sexual misconduct by male correctional employees that included rape, sexual assault, sexual abuse, verbal degradation, and sexual harassment. Male employees used physical force, threats, promises of preferential treatment, and denials of goods and privileges to force women prisoners to engage in sexual acts. Women who were first-time offenders, those who were younger, and those who were mentally ill were particularly vulnerable to sexual abuse. The sexual abuse of women inmates by male prison employees is perpetuated by the practice of permitting male employees to serve in positions that involve constant physical supervision of female inmates, an institutional subculture that encourages correctional workers to protect each other, and inadequate protections for women inmates who file complaints against staff.

GROUP VIOLENCE

Traditional prison gangs originated in state and federal prisons in the 1950s and 1960s. These included

the Aryan Brotherhood, Mexican Mafia, Nuestra Familia, Black Guerrilla Family, Texas Syndicate, Dirty White Boys, Gypsy Jokers, and Mexikanemi. In the 1960s and 1970s, such groups were made up of adult criminals who were organized into complex hierarchies, with rank differentiation among members and powerful, criminally sophisticated leaders. The members of prison gangs could smuggle drugs into the institution and engage in other crime while incarcerated. Gang members used violence to further their criminal pursuits, and their violent acts were directed outward, toward their enemies, such as deadbeat inmates who failed to pay drug and gambling debts. Gangs also sometimes directed their violence at their own members to instill discipline and control. At that time, street gangs in prisons generally comprised younger inmates whose groups had relatively simple hierarchies, less status differentiation, and less defined leadership.

Today, however, the distinctions between prison gangs and street gangs in prison have blurred. Gangs, now sometimes referred to as inmate disruptive groups (IDGs) or security threat groups (STGs), are defined as groups of inmates whose affiliation in prison is based on race, ethnicity, geography, ideology, or a combination of these factors; who seek one another's protection; and who have a common economic objective, such as control of contraband distribution. Most often, gangs control the operations of drug distribution, gambling, loan sharking, prostitution, extortion, and debt collection. They also protect their own members from other hostile groups.

Studies suggest that prison gangs exist in 40 U.S. states and in the federal prison system. More than 39 major groups have been identified. According to the findings of a 1999 survey of adult state correctional institutions conducted by the National Gang Crime Research Center, 25% of all male inmates and 7.5% of all female inmates confined in state prisons are gang members (Knox, 1999). The incentives for joining a gang are lower in women's prisons, given that drugs and other contraband are less prevalent and serious incidents of physical violence are rare.

Correctional administrators use a number of diverse strategies to deal with gangs. First, they identify who actually belongs to a gang, and then usually they try to separate rival gang members in housing areas and work assignments. Most institutions also attempt to restrict the possession and display of gang symbols and closely monitor the mail and telephone correspondence of known gang members. Finally, suspected and known gang leaders are often housed in supermaximum secure units away from the general prison population to prevent them from continuing to run their organizations while behind bars.

CAUSES OF PRISON VIOLENCE

Just as there are many kinds of prison violence, there are many causes for such activity. The importation model posits that inmates bring into the prison a value system that contains the belief that violence is an appropriate means of solving problems, and so they will continue to resort to violence while confined. The deprivation model, in contrast, argues that aggression and violence in prison are the natural outgrowths of the stressful and oppressive conditions imposed within the prison environment.

Institutional-level factors believed to contribute to prison violence include the size of the inmate population, type of housing, visit patterns, extent of prison programming, management style of staff, and the stringency of rule enforcement. Individual-level factors contributing to violence include the following inmate characteristics: demographic background (age, race, gender, socioeconomic status); prior experiences with incarceration, violence, and mental health problems; degree of participation in prison programs; attitudes; gang membership; coping abilities; and level of social support both within and outside the prison.

CONCLUSION

Violence within prisons is as old as prisons themselves and is caused by many factors. Given that almost all inmates will one day be released back to the community, it is in everybody's interest to prevent them from becoming violent while incarcerated. Current conditions, however, including the high levels of overcrowding that exist in most U.S. prisons, often make it hard for staff to manage the prison population, seek out the perpetrators of violence, and bring them to justice.

Recent court decisions have placed responsibility for the safety of inmates in the hands of prison authorities. Prison officials can be found liable under the Eighth Amendment to the U.S. Constitution for failing to protect an inmate from violence at the hands of other prisoners if the officials do not act when they know of a substantial risk of serious harm (*Farmer v. Brennan,* 1994). However, in order to prove that the institution is responsible in such a case, the plaintiff (the injured inmate) must demonstrate that the defendants (correctional staff) had actual knowledge of a substantial risk to the inmate and that they disregarded that risk.

Legal Case

Farmer v. Brennan, 511 U.S. 825; 114 S.Ct. 1970 (1994).

VIOLENT CRIME CONTROL AND LAW ENFORCEMENT ACT 1994

The most far-reaching piece of legislation intended to combat crime in the 20th century was signed into law on January 25, 1994, by the 103rd Congress of the United States. The Violent Crime Control and Law Enforcement Act of 1994, also

known as the Crime Control Act, includes provisions and appropriations for policing, community programs, public safety, gun control, mandatory minimum sentencing, drug abuse prevention, prisons, gang programs, programs for juveniles, and domestic violence prevention. The federal government sought to establish an omnibus bill that would not only arrange funds for the improvement of law enforcement methods and institutions but also provide stricter penalties for the violation of laws.

PUBLIC SAFETY AND POLICING

Since the enactment of the Crime Control Act, U.S. cities and states have increased their law enforcement efforts with the help of appropriations from the federal government. With the stated purpose of controlling and preventing violent crime, the comprehensive law authorized $8.8 billion over six years for grants to add an additional 100,000 police officers to the streets nationwide.

By May 1999, 100,500 law enforcement officers and corresponding personnel had been financed. It was estimated that between 84,700 and 89,400 would be deployed by 2003. However, due to the departure of some officers before others could be trained and employed, the federally funded increase in policing levels may have peaked in 2001 between 69,000 and 84,600. It was further estimated at that time that these levels would fall to 62,700–83,900 in 2003.

VIOLENT OFFENDER INCARCERATION AND "TRUTH IN SENTENCING"

In the 1980s, a conservative crime control stance and the war on drugs led to massive prison overcrowding in the United States. In an effort to relieve the overcrowding of the past two decades, a number of states released some habitual violent offenders on account of good behavior or due to early release rules. In order to curb this strategy of prison management, Title II of the Crime Control Act imposed mandatory sentences, obligating violent or sexual offenders to serve at least 85% of their sentences. The Crime Control Act also includes provisions based on the "Three strikes and you're out" doctrine, which dictates that under Three-Strikes Laws, any person convicted of three violent felonies or drug trafficking crimes should receive a mandatory life sentence.

STRENGTHENING THE FIGHT AGAINST VIOLENCE TOWARD WOMEN

Each year in the United States, approximately 2.1 million women are raped and/or otherwise physically assaulted by an intimate partner. Date rape and physical or sexual assault by a current or former husband, cohabiting partner, or boyfriend accounted for 64% of women who were victimized and/or stalked since age 18. Of the women victimized by rape and physical assault, 33% sought and received medical treatment. In addition, approximately one million women are stalked in the United States each year. Most stalking cases involve victims and offenders who are known to each other, and, of those, 30% of the female victims seek psychological counseling as a result of their experience.

To combat these dismal statistics and to thwart the rise in this type of intimate violence, the Violence Against Women Act (VAWA) was incorporated into the Violent Crime Control and Law Enforcement Act of 1994 under Title IV (P.L. 103-322). This part of the Crime Control Act provides for law enforcement and prosecution grants to states under Chapter 2 of the Safe Streets Act. The act states that the grants are

> to assist States, Indian tribal governments, and units of local government to develop and strengthen effective law enforcement and prosecution strategies to combat violent crimes against women, and to develop and strengthen victim services in cases involving violent crimes against women.

The involvement of the federal government in what was once considered a state and local law enforcement problem elevated the issue to one of national concern. In addition to imbuing state and local authorities with greater powers to fight domestic violence, VAWA specified federal domestic violence crimes to be prosecuted by the U.S. Department of Justice. For instance, it is a federal

crime to force or coerce an "intimate partner" to cross state lines if the force or coercion leads to injury in violation of a valid protection order. The best illustration of this type of crime can be found in the case of *United States v. William Romines* (W.D. Virginia). In violation of a Tennessee order of protection, Romines visited the home of his ex-wife and then dragged her and their son into a car and threatened to kill them. He was captured after a high-speed chase in Virginia. Convicted under the federal statutes, Romines received a 12-year sentence.

As a designated grouping of laws and legal processes targeting perpetrators with guns, VAWA offers a stringent method of attacking and curtailing a significant number of violent crimes against women, including rape, assault, and stalking. As a companion to VAWA, 18 U.S.C. §922(g)(8) was enacted. It makes the act of possessing a firearm while subject to a valid protection order a federal crime. The protection order must state that the defendant poses a threat to the physical safety of the victim or that the defendant is prohibited to use any force that would cause injury to the victim. Unfortunately, law enforcement officers are not subject to this law. In *United States v. Robert Goben* (D. South Dakota), a protection order prevented the defendant from harassing or threatening his estranged wife. Later found with a loaded .22 caliber revolver, he was sentenced to 12 months.

To strengthen the law preventing known domestic violence perpetrators from owning guns, 18 U.S.C. §922 (g)(9) was enacted in September 30, 1996. Its pertinent part reads, "It is a federal crime to possess a firearm after conviction of a qualifying state misdemeanor crime of domestic violence." In *United States v. William Smith* (N.D. Iowa), Smith was indicted for owning a firearm. The indictment charged that Smith was convicted of assaulting the mother of his child in 1994, and in 1996, he shot the same victim with a .380 caliber pistol. On May 16, 1997, the district court upheld the constitutionality of this statute, leaving Smith no choice but to plead guilty to the Section 922(g)(9) charge.

Crimes such as stalking and traveling from state to state to harass an intimate partner, as well as violating a protection from abuse order, are also strictly forbidden under federal law. Under the provisions of the Interstate Domestic Violence Statute, a separate act implementing the VAWA, a person who crosses state lines with the intention of injuring an intimate partner and causes such harm is guilty of a felonious federal act. In *United States v. Michael Casciano* (N.D. New York), a Massachusetts protection order prevented the defendant from stalking or harassing his former girlfriend. When the girlfriend moved to New York, Casciano followed and continued to stalk her and harass her on the telephone. In one night he called her approximately 40 times. Casciano was sentenced to 37 months.

DRUG COURTS

Title V of the 1994 Crime Control Act provided $1 billion in funding for drug courts in an effort to force criminals out of the cycle of addiction before they return to the streets. The goal of these courts is to recondition behavior and defeat offenders' ongoing dependency on substances, which may cause other violent crimes, leading, in turn, to longer prison sentences. Participant offenders are subject to mandatory periodic drug testing and mandatory substance abuse treatment. Those who fail to show satisfactory progress in their treatment regimens are subject to graduated sanctions. Participation is limited to nonviolent offenders.

In 1996, the drug court in Brooklyn, New York, was touted as the country's largest drug court. It was created with the help of a $1 million federal grant provided under the 1994 Crime Control Act and $5.5 million from the U.S. Department of Health and Human Services. The court sentenced as many as 7,000 drug offenders yearly to treatment instead of prison and monitored them closely in order to get them off drugs. By 2001, almost 700 drug courts were operating in the United States, and 430 additional courts were being planned with further funding authorized by Congress. Efforts were also being made to expand to juvenile, family, and tribal drug courts.

Research has shown that offenders' drug use and criminal behavior are substantially reduced while they are participating in drug court. Also, criminal behavior is lower after program participation,

especially for graduates. There are also substantial cost incentives for jurisdictions to use drug courts. In the short term, reduced jail/prison use, reduced criminality, and lower criminal justice system costs translate into $10 in savings for every $1 spent on drug court. Some observers object to the use of drug courts, however; their criticisms range from concerns about forcing individuals into treatment when they may not really need it to concerns about incorrect assessment of participants by poorly skilled workers, abbreviated treatment, and lack of motivation on the part of drug defendants.

THE DEATH PENALTY

In 1994, pursuant to the Crime Control Act, the federal death penalty was extended to include more than 60 different offenses. Under this new authority, and in conjunction with Title VI of the Crime Control Act, the U.S. Justice Department authorized federal prosecutors to seek the death penalty against 61 defendants. Of these 61 men and women against whom the U.S. attorney general approved government recommendations for use of the death penalty, 12 were white, 7 were Hispanic, 2 were Asian, and 40 were African American. In other words, 80% of those approved for capital prosecution by the attorney general to date have been members of minority groups.

Because of criticism leveled against the capital case prosecution record compiled by the Clinton administration, on January 19, 1995, Attorney General Janet Reno unveiled the Department of Justice's death penalty guidelines and procedures to be used in determining an offender's eligibility for death penalty prosecution. Before seeking a death sentence, U.S. attorneys and the Department of Justice must follow certain guidelines in making their recommendations under federal law. A three-level review process now governs the way in which federal capital defendant cases are selected for eligibility. This review is governed by a January 1995 directive titled *United States Attorneys' Manual* (§9–10.000). In pertinent part, it dictates that after seeking input from and conducting a face-to-face meeting with defense counsel, the U.S. attorney must send a written recommendation, supported by extensive documentation, to the attorney general. The Death Penalty Committee meets in person with defense counsel and hears arguments against imposition of this extraordinary penalty.

Germane to the broad scope of the law is that federal law reigns supreme. Therefore, according to the directive, jurisdiction resides with the federal government when its interests are more substantial than the interests of the state or local authorities. This requirement is relevant where such considerations include (1) the extent to which the criminal activity extends beyond a single local jurisdiction or state, (2) the relative ability and willingness of state authorities to prosecute effectively, and (3) whether state or federal agencies were primarily involved in the investigation. The regulations also provide a caveat to authorities, specifying that the unavailability of the death penalty in the state where the crime was committed cannot, in and of itself, substantiate federal capital prosecution. This scenario is best illustrated by the October 2002 sniper case in which two men went on a homicidal shooting rampage for several weeks in Washington, D.C., Maryland, and Virginia. In the end, the state of Virginia was given the first opportunity to prosecute the men, one of whom was a juvenile, not solely because the death penalty was available there, but because Virginia had two or more victims and therefore a substantial interest in their prosecution. Guidelines under the Department of Justice regulations further specify that U.S. attorneys must consult with and give defense counsel an opportunity to be heard before deciding to request death penalty authorization from the attorney general. The Justice Department also maintains an elaborate record-keeping system to determine the equitableness of the decisions and the fairness of the overall outcomes.

The Crime Control Act, which made the death penalty available for almost all federal homicide offenses, also authorizes employment of the death penalty in cases involving civil rights murders, murders of federal law enforcement officials, and murders of U.S. nationals on foreign soil, and in cases of rape and child molestation, which may or may not include murder, to name just a few.

TITLE XI, FIREARMS: ASSAULT WEAPONS AND GUN CONTROL

There is little doubt that the approximately 20,000 different gun control laws that are currently in existence in the United States, ranging from federal to state to local, have little effect on crime or on efforts to curtail gun-related injuries and homicides. Nevertheless, a fierce campaign waged by several legislators and influential lobbyists dramatically increased the need for comprehensive overriding federal gun control legislation to regulate the approximately 200 million currently existing firearms.

Title XI of The Crime Control Act is one such piece of legislation. It seeks to control the possession and use of firearms in general and of assault weapons in particular. As a corollary, the act institutes 18 as the minimum age to purchase or possess handguns or their ammunition, subject to limited exceptions. It prohibits manufacture, transfer, or possession of semiautomatic assault weapons and makes it illegal to transfer or possess any weapon that permits the attachment of large-capacity ammunition feeding devices unless lawfully owned prior to the enactment of the Crime Control Act.

The U.S. Defense Department loosely defines assault weapons as those that are capable of both automatic fire and semiautomatic fire. Firearms that require the depressing of the trigger each time to fire a bullet fit the technical definition for assault weapons. Once the trigger has been depressed, a successive bullet will be automatically loaded into the chamber, and the weapon will be ready to fire once the trigger is depressed again. Accordingly, the speed at which such a gun can fire is determined by how fast the user can pull the trigger.

The Crime Control Act bans a variety of semiautomatic weapons. In particular, it bans the manufacture of 19 named military-style assault weapons. The prohibition includes assault weapons with specific combat features, copied models, and high-capacity ammunition magazines that can hold more than 10 rounds. This means any semiautomatic rifle with a detachable magazine and two or more of the following: (1) a folding or telescoping stock, (2) a pistol grip that "protrudes conspicuously" beneath the rifle's action, (3) a bayonet mount, (4) a flash suppressor or a threaded muzzle designed to support one, and (5) a grenade launcher. Additionally, a handgun is banned if it is semiautomatic with a detachable magazine and has two or more of the following: (1) a magazine that attaches outside the grip; (2) a threaded muzzle capable of accepting a barrel extender, flash suppressor, forward handgrip, or silencer; (3) a barrel shroud; (4) a manufactured weight of 50 ounces or more when the pistol is unloaded; and (5) is a semiautomatic version of an automatic firearm. Also banned is any semiautomatic shotgun with two or more of the following: (1) a folding or telescoping stock, (2) a pistol grip that "protrudes conspicuously" beneath the shotgun's action, (3) a fixed magazine with a capacity of more than five rounds, and (4) the ability to use a detachable magazine.

CONCLUSION

The Violent Crime Control and Law Enforcement Act of 1994 represents the most extensive action the federal government has taken to curtail the escalation in violent crime since the end of Prohibition. In 1994, the same year the bill was enacted, violent crime rates began to decline for both males and females. In 2001, the Bureau of Justice Statistics reported that violent crime rates reached the lowest levels ever recorded. Homicide rates have likewise decreased recently to levels last seen in 1967. Rape rates have generally declined since 1991, although they remained the same in 2000 and 2001.

Although some observers attribute the steady reduction in violent crime in the United States to the enactment of the omnibus Crime Control Act, others believe that it relates to cyclical factors that are beyond the control of government or the criminal justice system. Whatever the reason, one thing appears to be true: the federal government has taken a tough stance on crime and is not likely to relax its strict control anytime soon.

VISITS

Under normal circumstances, most individuals held in prisons and jails may expect to enjoy some kinds of visits from some of their family members and friends. Ultimately, however, the penal institutions in which they reside have discretion over whether or not these visits occur. Visits are, in other words, a privilege and not a right. As the federal courts in the United States have made clear, "There is no inherent, absolute constitutional right to contact visits with prisoners" (Palmer & Palmer, 1999, p. 39). These same courts, however, have also established that the discretionary authority of prison officials may be limited if it can be shown that the officials engaged in a "clear abuse of discretion" (p. 37). In particular, the courts have protected the "inmate's right to an attorney's assistance in perfecting appeals of conviction or protesting prison conditions" (p. 46). They have also recognized, in most circumstances, prisoners' First Amendment right to freedom of religion, which means that prisoners may receive regular visits from appropriate clergy.

HISTORY

The first prisons in the United States did not allow prisoners to be visited by anyone, save the occasional prison chaplain. Even prisoners' contact with other inmates and guards was limited. In fact, when the first modern prison was established in the United States in the early 19th century, there was a strong emphasis on the nearly "total isolation" of the prison population (Walker, 1998, p. 80). The philosophy behind this approach was twofold. First, it was thought that such isolation would encourage prisoners to engage in sustained reflection on their misdeeds and how they might atone for their crimes once they were released back into the community. Second, prison officials hoped to protect society at large from being "infected" by the criminal class until the prisoners had the opportunity to cleanse themselves of their demons.

Within a few decades, however, "prison keepers realized that enforced solitude did not rehabilitate prisoners, but only drove them insane" (Leverson, 1983, p. 451). It also became clear that isolating prisoners did not produce a measurable degree of reform that would significantly reduce recidivism. At the same time, a movement arose within various religious communities to bring the word of God into

the prisons in an effort to make the inmates see and correct the error of their ways. Over time, then, visits by family members, friends, and various officials (primarily religious and legal) became an accepted dimension of prison life.

Visits in the Federal Prison System

Visiting in federal prison is not what it used to be. The federal system has never authorized conjugal visits, as is the policy in some state prisons, but even regular visits have become more strict since I began serving time in the 1980s. Prisoners are only allowed to visit with people whom they knew prior to their incarceration. That means federal prisoners cannot open new relationships while they serve time. If they do meet someone whom they want to visit them, the proposed visitor must lie on the visiting form, indicating that the relationship began prior to the individual's confinement, or the prisoner must persuade the warden to grant an exception to the rule. The wardens I've known are conservative and do not grant exceptions easily.

Federal prisoners are limited to a prescribed number of visiting hours each month, usually between 15 and 40. Inside the visiting room, prisoners may kiss their visitors at the start and finish of the visit, but not between those times. They may hold hands throughout the visit.

Seating is usually theater-style, in side-by-side chairs. This seating arrangement can cause neckaches for the prisoner and visitor, but it facilitates the security of the institution, which is all-important. Federal prisons offer banks of vending machines, and most have dedicated areas for children. Staff members will monitor the visits through hidden surveillance cameras and direct observation. And unless the prisoner is held in minimum security, he should expect a strip search at the conclusion of the visit, and sometimes before.

Despite all the drawbacks, I still cherish every second I spend with my wife in the prison visiting room.

FPC Florence, Florence, Colorado

TYPES OF VISITS

A prisoner can have many different types of visits. The details of such visits can vary quite a bit from one state to the next, from federal prisons to state and local facilities, and even from one prison facility to the next within a particular state. Nevertheless, some generalizations can be made. The most common kind of prison visit—that by family and friends—is probably the simplest and easiest to arrange. All institutions have set visiting hours, and all specify who may and may not be allowed to visit prisoners. Prison personnel then carefully screen those who come to see inmates. Most often these meetings are referred to as *contact visits,* which means that there can be some limited degree of physical contact between the inmate and his or her visitors (hugging, holding hands, and the like). These visits typically take place in a common area where tables and chairs are set up for visitors and inmates. Prison officials conduct various forms of surveillance over the inmates and their guests, including the presence of one or more guards in the visiting area and the use of video cameras. After having visitors, inmates will often be subject to strip searches before they are allowed to return to their cells, to ensure against the introduction of contraband into the prison.

Conjugal visits are sometimes permitted, most typically only if the inmate is legally married to the visitor. These visits, which can last from a few hours to a full day, allow for physical and emotional intimacy between the parties. Conjugal visits take place on the prison grounds, but usually occur in a separate facility that allows for a full measure of privacy for the couple. Prison officials normally restrict such visits to prisoners who have records of good conduct. A variation on the conjugal visit is extended visitation, which most often involves a visit by an inmate's spouse and their children. These visits can last from one to three days, and, again, are typically used by prison officials to encourage good prison behavior among those relatively few inmates who qualify for such visits.

Another kind of visit is the *noncontact visit,* in which no physical contact is allowed between the inmate and his or her visitors. Most typically such visits take place in booths set up in a common area. Each booth has a thick Plexiglas barrier to separate the inmate from any visitors; the parties are able to communicate verbally with one another but cannot

touch in any way. These kinds of visits occur predominantly in high-security and supermax prisons, or for prisoners being held in segregation in lower-security institutions. The inmates are denied contact with their visitors both for punitive purposes and because of concerns about security risks and possible introduction of contraband into the prison environment.

PRISON VISITS AS REHABILITATIVE

Scholars and other observers have long engaged in a spirited debate over the rehabilitative function of prison visits. Whereas some see visits as a failure on the part of prisons to be sufficiently punitive, many argue that maintaining ties with family members and friends is crucial to prisoners' ability to survive their sentences as well as their capacity to readjust to the community when they are released. Much of the support for visits comes from early sociological studies of the prison environment, such as Donald Clemmer's 1940 book *The Prison Community,* in which Clemmer argues that contact with the outside world helps prevent prisonization. Spending time with friends and family members, Clemmer and other prison sociologists such as Gresham Sykes have argued, enables inmates to cope with the pains of imprisonment. It also prevents them from becoming completely assimilated into and dependent on the penal institution, and thus unprepared to reenter the community.

More recent evidence upholds the findings of these early studies by suggesting that a program of extended visitation—when spouses and/or children visit with inmates for periods of one to three days in a homelike environment—can enhance the postrelease success of prisoners. This success includes "a higher likelihood of being employed upon release . . . , a positive parole outcome . . . , and a lower likelihood of recidivism upon release" (Gordon & McConnell, 1999, p. 121). Prisoners who have access to extended visits also tend to exhibit better behavior during their time in prison.

In practice, however, several factors have limited the impacts of such programs. First, "an overwhelming majority of the inmate population is excluded from participation in the programs," given that participation is limited to married couples, and fewer than 20% of inmates are married (Gordon & McConnell, 1999, p. 126). Second, the geographic distance between imprisoned spouses and the rest of their families may inhibit many from participating in extended visitation. Finally, given the current punitive climate in the United States, prisons are under a fair amount of pressure not to spend too much money on programs that might be viewed as soft on or somehow coddling of inmates.

FEDERAL COURT RULINGS

Just as scholars debate the rehabilitative impacts of visits, they also discuss the appropriate role of the courts in regulating the conditions at prison facilities. There is also some question about the effectiveness of court rulings when decisions are actually put into practice at the grassroots level. Nevertheless, most scholars agree that the federal courts have had at least some impact on prison conditions in the United States. The following is a brief discussion of some key federal court decisions regarding the ability of prison officials to limit prison visits.

The Sixth Circuit Court of Appeals ruled in 2002 that the visitation policy established by the Michigan Department of Corrections (MDOC) was unconstitutional. This policy denied visitation rights to prison inmates who had committed a second drug offense within prison. As the policy was implemented, however, only about 41% of such inmates received permanent visitation bans. The MDOC also placed significant limits on visits by inmates' family members and friends. Corrections officials argued that their policies on prison visits allowed them to supervise visits more efficiently and hence reduce the smuggling of drugs and weapons into the prison system. They also claimed that the prison environment is unhealthy for children, and that prison officers were not able to supervise large numbers of visits from family members effectively.

The Sixth Circuit Court of Appeals noted, in the case of *Bazzetta v. McGinnis* (2002), that prisoners

enjoy a First Amendment right to freedom of association "to the extent that [this right] does not conflict with their status as prisoners and the legitimate demands of the prison system" (p. 316). The court further held that this right consists of noncontact visits with intimate associates. As such, prison officials can indeed limit significantly the visitation rights of their wards, but they cannot eliminate those rights entirely absent some compelling penological interest. In the *Bazzetta* case, the prison officials failed to demonstrate to the court's satisfaction the security-based need for stringent limits on visits by family members.

Notably, the court struck down the prison system's permanent ban on visiting privileges for those inmates found to have violated the substance abuse policy on the basis of the Eighth Amendment, which forbids, among other things, the infliction of cruel and unusual punishment through the conditions of confinement. The court also found that this particular policy violated the inmates' substantive due process rights, given that "a complete ban on all visitors cuts the prisoner off from all personal ties, constituting qualitatively greater isolation than is imposed by a prison sentence, and is an atypical and significant hardship far beyond the expected hardships of prison" (p. 323).

The U.S. Supreme Court subsequently reversed the Sixth Circuit Court of Appeals in the case of *Overton v. Bazzetta* (2003). A unanimous Court held that as long as the MDOC's regulations "bear a rational relation to legitimate penological interests," any associational rights that prisoners may have are overridden (p. 2165). Furthermore, prisoners have alternative, albeit less than ideal, alternatives to visits. They can write letters, make telephone calls, and the like. Additionally, the Court held that MDOC's rigorous policy on excluding all visits for those prisoners who accrue two substance abuse violations does not violate the Eighth Amendment's prohibition of cruel and unusual punishment.

As the Court itself noted in the *Overton* case, this holding exhibits "substantial deference to the professional judgment of prison administrators" (p. 2167). The Court also chose to hold prison officials to a minimal level of judicial scrutiny, demanding only that prison regulations be rational. Compare this relaxed standard of review with that used by the Sixth Circuit Court of Appeals, which required that prison officials have a compelling interest in order to override the associational rights of their charges. Note also the unanimity of the Court's ruling in *Overton.* Despite the opinion of many scholars that visits help prisoners deal with incarceration and ease their transition to the community when they are released, the Court had no compunction in restricting outside contact for many women and men in Michigan.

An additional example of how the U.S. Supreme Court, especially since the early 1980s, has been disinclined to second-guess the judgment of prison administrators can be found in *Block v. Rutherford* (1984), a case in which the Court held that "a blanket prohibition on contact visits with pretrial detainees at a jail is a reasonable nonpunitive response to legitimate security concerns and does not violate the [due process clause of the] Fourteenth Amendment" (p. 3227). Similarly, in *Kentucky Department of Corrections v. Thompson* (1989), the Court ruled that prisoners do enjoy due process protections under the Fourteenth Amendment, so long as such rights are consistent with legitimate penological interests. In this case, however, the Kentucky DOC's regulations regarding limits on visiting rights granted sufficient discretion to prison officials to defeat the petitioner's claim that purely objective criteria had been set out by the DOC and then subsequently violated by prison officials.

Finally, in *Olim v. Wakinekona* (1983), the Supreme Court upheld an interstate prison transfer from Hawaii to California. The Court ruled that a prison-to-prison transfer in no way implicates a liberty interest under the Fourteenth Amendment's due process clause. Furthermore, Hawaii's prison regulations in this case placed "no substantive limitations on official discretion," and so the prisoners in question were not denied any due process rights under the Fourteenth Amendment (p. 1741).

Even during the 1960s and 1970s, when the Supreme Court "actively promoted the reform of our nation's prisons and jails," the Court's decisions on prisoner's rights were quite restrained (Fliter,

2001, p. 192). In *Pell v. Procunier* (1974), for example, the Court held that prison officials may limit the media's face-to-face access to certain prisoners if they believe that such limits will enhance a correctional facility's security. Although prisoners do enjoy a First Amendment right of free speech, they also have alternative means of communication other than face-to-face interviews with the media.

CHILDREN'S VISITS

The Bureau of Justice Statistics estimates that about 1.6 million children in the United States have fathers who are in prison. The general approach endorsed by prison administrators and courts alike has been to permit children visit their imprisoned fathers. A state appellate court in Kentucky, for example, using the "best interests of the child" test, ruled recently that fathers have, at least under that state's laws, a right to have their children visit them in prison unless a trial court finds that such visits would "seriously endanger" the children (Sims, 2000–2001, p. 934).

Nonetheless, scholars have made a variety of arguments and research has provided evidence concerning the impacts on a child of visiting an incarcerated parent. According to Sims (2000–2001), visitation with an imprisoned father can "lessen the stress of separation, . . . enable the child to maintain a healthy relationship with her father . . . [and] alleviate the fear that children have regarding their father's safety in prison" (p. 947). On the other hand, the "visiting environment in most prisons is unpleasant, depressing, and sometimes frightening" for a child (p. 947). There is also some evidence that children can suffer significant psychological and emotional harm from learning the truth about their imprisoned fathers' situation.

Since 1980, the number of imprisoned mothers in the United States has gone up by about 500%. Roughly two-thirds of the women in American prisons are mothers of children under the age of 18. Many of these same women are single parents. The vast majority of incarcerated mothers do not get to see their children. Costa (2003) estimates that "only 9% of female inmates have seen their children more than once a month" (p. 73). This is due in part to the relative scarcity of female prison facilities, which means that women prisoners are at high risk of being separated from their families by vast distances. Visiting privileges are typically granted at the discretion of prison officials, who use them as a method of maintaining control over inmates. Evidence of the psychological and emotional harm that the children of incarcerated mothers suffer when all mother-child contact is eliminated is substantial. In response, some prisons have implemented programs designed to facilitate children's overnight visits with their incarcerated mothers. So far, there are no equivalent programs for fathers.

CONCLUSION

Those who are incarcerated by the government in the United States enjoy a very limited right to receive visitors. Visits by immediate family receive some protection from the courts, but since at least the mid-1980s the federal courts have been decidedly more skeptical of prisoner rights and more deferential to the judgments of prison officials. Courts are more likely to protect the right of inmates to noncontact visits, as such visits are less likely to affect the core concerns of correctional facilities. The issue of prison visits raises a number of concerns, including questions about the bond between incarcerated parents and their children, the rehabilitative function of prison visits, the extent to which prisoners should be permitted to lead relatively normal lives while imprisoned, and the security interests that are inevitably raised in the context of contact visits.

VOCATIONAL TRAINING PROGRAMS

Vocational training programs in prisons take many forms, from computing to farming. All courses seek to provide marketable job skills to adult and young offenders. Programs are generally run by prison education departments. Research suggests that training inmates to work is one of the most promising rehabilitation tools used in the prison system. Vocational training can also ease the pains of imprisonment.

EARLY BEGINNINGS

As far back as 1790, at the Walnut Street Jail in Philadelphia, male inmates did masonry, maintenance, weaving, and shoemaking, and female inmates prepared flax and hemp, washed and mended clothes, and spun cotton, yarn, and wool. In 1803, at New York's Newgate Prison, prisoners made shoes and boots, cut nails, and engaged in blacksmithing, carpentry, and weaving. Inmate labor produced all of the sheets, pillowcases, woolen clothing, and stockings for the inmates. By 1820, the New York State Legislature authorized prison administrators to require inmates to build roads and canals. In 1828, the distribution of inmate labor at New York's Auburn Prison included workers in a tool shop, a shoemaker's shop, a tailor's shop, a weaver's shop, a blacksmith's shop, and a copper shop. The chief vocational activities in New Jersey's prisons were chair making, cordwainery, and weaving.

THE REFORMATORY MOVEMENT

The 1870s marked the beginning of the reformatory movement for youthful offenders in the United States. Unlike the earlier penitentiaries, reformatories emphasized learning to read and write, religious instruction and Bible reading classes, and good work habits and industriousness. The philosophy of the first reformatories—the Detroit House of Corrections in 1871 and the Elmira Reformatory in upstate New York in 1876—was to rehabilitate the inmates through vocational instruction and trades training. The original goal of prison vocational training in these places was to help the inmate overcome idleness and generate revenue through prison industries while developing good work habits and vocational skills. By 1882, the Elmira Reformatory was offering summer classes in plumbing, tailoring, telegraphy, and printing. In 1886, one of the first

vocational trade schools was built and opened at Elmira Reformatory. By the early 1900s, reformatories patterned after Elmira were established throughout the United States. Unfortunately, there were never enough trained civilian vocational instructors, and too many young adult inmates in the reformatories were unstable or unenthusiastic about education and work.

EMERGENCE OF MODERN INMATE VOCATIONAL TRAINING

During the 1930s, a number of federal reformatories and penitentiaries opened that laid the framework for the modern system of prison education and training in the United States. These institutions—in Atlanta, Georgia; Leavenworth, Kansas; Chillicothe, Ohio; Alderson, West Virginia; Lewisburg, Pennsylvania; and McNeil Island, Washington—particularly emphasized vocational education as a means of reducing crime and managing inmates while they were incarcerated. Approximately 10 vocational instructors were hired at each institution, and a number of new courses were developed. In 1932, for example, at the Reformatory for Women at Alderson, West Virginia, 455 female inmates (50% of the inmate population) were participating in vocational training. The federal penitentiaries at Lewisburg, Pennsylvania, and Leavenworth, Kansas, had about 30% of their inmate populations participating in vocational programs, and 75% of the inmates at the new Atlanta Penitentiary expressed interest in participating in the new vocational programs.

INNOVATIVE VOCATIONAL PROGRAMS OF THE 1970s

As a result of the 1968 amendments to the U.S. Vocational Rehabilitation Act, prison inmates became entitled to vocational assessment, training, and placement. By the early 1970s, as a result of increased funding, many state departments of corrections and the Federal Bureau of Prisons began to recognize the utility and effectiveness of vocational education for reducing recidivism. Some of the most promising programs included the IBM keypunch operator training program at the Westfield State Farm, also known as the New York State Reformatory for Women; computer programming courses at the Federal Penitentiary in Atlanta, Georgia, and the Missouri State Penitentiary in Jefferson City; an office machine technology program and a landscape gardening program at California's San Quentin State Prison; a program for training typewriter repairmen at the Maryland Correctional Training Center at Hagerstown; a program to train sewing machine repairmen set up by the International Ladies Garment Workers Union at the Federal Correctional Institution at Danbury, Connecticut; a program to train federal inmates as micro-soldering technicians mounted by the Dictograph Corporation at the Danbury Federal Institution; an industry-sponsored program in small appliance repair at the Florida School for Boys at Okeechobee; a mechanical optics course at New York's Wallkill State Prison; laboratories for training dental technicians at New York State's Auburn Prison, at the U.S. Penitentiary at Lewisburg, Pennsylvania, and at California's San Quentin State Prison; and data-processing programs at the Indiana State Reformatory, the New Jersey State Prison in Trenton, the District of Columbia Youth Center at Lorton, Virginia, and the U.S. Penitentiary at Leavenworth, Kansas.

By the 1970s, the trades included in vocation training ranged from agriculture and farming to construction trades, cosmetology, printing, welding, woodworking, cabinetmaking, data processing, and keypunching. The New York State prisons at Auburn, Wallkill, and West Coxsackie operated 42 different trades and technical courses under qualified civilian vocational instructors. At around the same time, the California state prisons at San Quentin, Folsom, Soledad, and Tracy offered training in more than 50 different trades to motivated inmates. The male inmates were being trained as auto mechanics, barbers, service station attendants, radio and television repairmen, office typewriter repairmen, auto body and fender workers, dental laboratory technicians, and optical lab technicians. In contrast, the women's prisons were training

inmates in electronic computer programming, cooking, laundry, dry cleaning, sewing and knitting, and cosmetology.

PROGRAMS FOR JUVENILE OFFENDERS, 1990s–PRESENT

Courses in the 1990s built on and expanded many of the earlier programs that had been available in the U.S. prison system. In particular, this decade saw the development of a number of model programs in the juvenile justice system that sought to instruct young offenders in marketable skills. Just two examples are discussed here.

Associated Marine Institutes

Associated Marine Institutes (AMI) is a network of community-based, noninstitutional programs for delinquent youth. The institutes, which operate in seven U.S. states and the Cayman Islands, are autonomous nonprofit organizations. They include 22 residential programs and 29 nonresidential day programs. The AMI programs involve adjudicated youth in marine research projects that instruct them in aquatic knowledge, help them to obtain a high school diploma or general equivalency diploma (GED), and counsel them in core values.

AMI conducted follow-up research on 2,741 program participants one year postrelease, and the results were as follows:

- The overall recidivism rate was 28.5% (based on a convicted law violation).
- More than half of the program participants had received a felony conviction before enrollment in the program, and the recidivism rate for these program participants was 28.7%.
- Program participants who were placed in some type of work environment upon release from the program had the lowest recidivism rate of 22.1%, participants released into a combined school/work program had a recidivism rate of 25.6%, and those released only to a school program had a recidivism rate of 35.8%.
- Only 23% of the female participants recidivated versus 29.2% of the male participants.
- Those who had been placed into the program as a condition of juvenile probation recidivated at a rate of 32.4%, whereas those who were directly committed (those who were in legal custody of the state) recidivated at a rate of 27.2%.
- Program participants who attended the nonresidential program recidivated at a rate of 31% versus a 31.6% recidivism rate for those who were in the residential program.

These results are indicators of the success of the programs as a whole, with the highest success rate for those who were placed in a work environment. The results also show very little difference in the recidivism rates of the residential and nonresidential program participants.

Gulf Coast Trades Center

The Gulf Coast Trades Center program fosters "occupational skills/academic skills coupled with work experience," according to the program's response to a survey. In addition to prioritizing academics and vocational training, the Gulf Coast program utilizes many behavioral management and counseling strategies typical of other youth treatment programs. Participants acquire vocational skills through work placement at nonprofit organizations and government agencies.

All participants in the program are between the ages of 13 and 18, and 80% of participants are male. Approximately one-fifth of the participants are white, with African American and Hispanic youths each constituting about two-fifths of the Gulf Coast population. Participants are housed in on-campus dormitories with no locked cells or physical restraints. A select group of older program participants who are unlikely to return to their family homes reside on an independent-living campus.

Supervision is structured and organized into three phases. During the first phase, which lasts for 30 days, participants attend school and work. They spend two hours every day in Gulf Coast's Learning Resource Center, where they work on basic skills, study for the GED, or earn high school credits. Students work at their own pace, using individualized plans developed and updated based on

extensive pretesting and ongoing assessments. In each vocational track, program participants must demonstrate a mastery of several dozen competencies in order to earn a vocational certificate. During the average stay of six to nine months at Gulf Coast, 80%–90% of participants earn this credential, which then allows them to participate in Gulf Coast's work experience activities.

The second phase runs for 60 days. This phase resembles a traditional probation arrangement, with strict rules and minimal privileges, in addition to strict monitoring. The final phase is a 90-day period that is the same as the second phase, with the exception of a one-hour curfew extension. After participants have completed the training programs and obtained on-the-job work experience, Gulf Coast provides extensive aftercare support, including job search and job placement assistance. Approximately half of the graduates take part in an intensive 90-day aftercare program in which program staff serve as advocates and mentors. Staff members visit these youths in their homes at least three times per week. Another 40% of graduates take part in a more moderate aftercare program, and approximately 10% do not receive aftercare support due to their location.

The most recent readjudication/reincarceration rate for Gulf Coast Trades Center graduates is 15.7% within 12 months of completing the program. This is very impressive considering the fact that 249 youths completed the program in 2000, 311 completed the program in 2001, and 262 completed the program in 2002. Compare this figure with the 37.6% recidivism rate for Texas youths released from other medium-security residential facilities during the same period.

The Gulf Coast program provides young offenders with intense in-community supervision, occupational/academic skills, basic behavioral modification techniques, and the possibility for low-wage employment with an aftercare component. This program may be effective for no reason other than that it serves the functions of "grounding" the participants and monitoring their location and activities in the community. It offers realistic vocational trades training and deterrence through the threat of harsher regulations or imprisonment.

VOCATIONAL EDUCATION AND RECIDIVISM

Education, vocational, and work programs are available in many correctional facilities throughout the United States. A 1995 survey of all state and federal adult correctional facilities found that about one-third employed inmates in prison industry, and approximately half provided vocational training. Wilson, Gallagher, and MacKenzie (2000) examined the recidivism outcomes found in 33 independent experimental and quasi-experimental evaluations of corrections-based academic education, vocational, and work programs. The results of their meta-analysis indicate that participants in such programs are employed at a higher rate and recidivate at a lower rate than nonparticipants. Assuming a 50% recidivism rate for nonparticipants, participants recidivate, on average, at a rate of 39%. The reduction in reoffending appears to be greater for vocational education programs than for prison industry and academic education programs.

CONCLUSION

Inmate vocational training programs have progressed a long way from the dark ages of penitence and the Sabbath schools of the late 1700s. During the past 30 years, a number of U.S. states have made it a priority to train inmates in marketable job skills. However, there is wide variation in vocational training opportunities from one state correctional system to another. A report published by the Bureau of Justice Statistics in January 2003 indicates that although 93.5% of federal and state prisons have vocational shops, only 5%–15% of the inmates in those prisons actually participate in training programs. In 2003, several states were able to reinstate inmate vocational programs by using federal funds allocated through the Department of Employment Security and the Workforce Investment Act grant program. More specifically, in Arizona, 1,973 inmates participated in one of the 63 vocational training programs offered within the Arizona Department of Corrections in 2003. In Illinois, the federal funding resulted in the involvement

of approximately 2,500 inmates in vocational programs in the building trades, culinary arts, commercial cleaning, horticulture, and auto mechanics.

The most promising programs are union-approved apprenticeship training programs and joint-venture partnerships between private corporations and juvenile and adult correctional facilities. Because of the budget deficits in a number of states in recent years, many vocational instructors in adult correctional institutions have been laid off. As a result, many prison vocational shops are gathering dust while inmates remain idle. In contrast, a growing number of juvenile correctional institutions are providing realistic vocational training programs, and participation in these programs has been shown to reduce recidivism rates significantly across a number of states.

VOLSTEAD ACT 1918

The Volstead Act made the manufacture, transportation, and sale of intoxicating liquors illegal in the United States. It was ratified by Congress during Prohibition on January 16, 1919, and became the Eighteenth Amendment to the U.S. Constitution. This is the only amendment to the Constitution that has ever been repealed. It was repealed on December 5, 1933, with the ratification of the Twenty-first Amendment to the Constitution.

HISTORY

The Volstead Act was the result of a long battle over temperance, much of which was fought by religious groups. The American Temperance Society, formed in 1826, began the attempt to eliminate alcohol in the United States. Many of the early temperance groups were coalitions of various church groups. They lobbied for ordinances making the manufacture, transportation, and sale of alcohol illegal. Areas that passed such laws were termed "dry" communities, cities, and counties. Many such jurisdictions still exist to this day.

The Women's Christian Temperance Union was one of the strongest proponents of temperance. Members of this and other organizations were concerned about alcohol consumption for several reasons. They viewed the elimination of alcohol as a means of achieving safer and more equitable domestic lives. Many were concerned that husbands would "drink their pay," leaving their households penniless. Some support for temperance also came from members of the nascent feminist movement and the women's suffrage movement, as these women resented their exclusion from taverns where men gathered to discuss politics, the economy, and current events. Indeed, two days after the ratification of the Volstead Act, the Nineteenth Amendment to the U.S. Constitution was also passed, giving women the right to vote.

Other parts of society began to support the temperance movement over time. Factory owners wanted a sober workforce, and progressive politicians viewed temperance as a means to a better

society for everyone. Further, the rise of spiritualism from 1850 to the 1920s increased church membership and attendance. This growth provided temperance groups with a new audience whose members were concerned with their own morality.

AFTER RATIFICATION

After the Volstead Act was passed, alcohol consumption in the United States dropped by 30%. The United States Brewers Association stated that hard liquor consumption was down 50%. Clearly, law-abiding Americans were adhering to the law. The temperance groups could not have been more pleased.

Soon, however, it became clear that while legitimate brewers and distillers were losing sales, illegitimate providers were gaining customers. Bootleggers in rural areas, smugglers, and urban winemakers stepped into the breach. Even though the Volstead Act made the manufacture, sale, and transportation of alcohol illegal, technically it was still legal to possess and drink alcohol. Further, the law had no additional enforcement requirements. It appears that the perception was that the moral basis of the law would be enough to maintain order. It was not.

With few agents to cover vast areas of interior America, thousands of miles of open borders with Canada and Mexico, and thousands of miles of coastline, the federal government faced a daunting enforcement task. Large quantities of beer and hard liquor were produced in the United States. Also, Canada was still legally producing alcohol, much of which was smuggled across the American border. Additionally, Bermuda and the Bahamas (both British colonies) provided ample supplies of alcohol that only needed to be brought ashore after a short trip. Gangs, confederations, and other organized groups helped to distribute this alcohol illegally, leading some to argue that Prohibition (via the Volstead Act) was the genesis for modern organized crime in the United States.

PROHIBITION AND ORGANIZED CRIME

Prohibition reduced the supply of alcohol but ultimately could not quell people's desire for it. Consequently, people began both to smuggle alcohol into the United States and to produce it domestically. The organized crime groups along the east coast were particularly well suited to engage in smuggling because of their geographic proximity to Canada, Bermuda, the Bahamas, and the large eastern seaboard ports. Soon, organized crime groups in the Midwest and South followed suit, illegally importing alcohol from Canada across the Great Lakes—either by boat or by sled when the lakes were frozen.

Prior to Prohibition, organized crime was largely limited to urban areas and was perpetrated by relatively small groups in ethnically homogeneous neighborhoods in Boston, New York, and Philadelphia. Gradually, these groups began to wield a limited degree of control over crucial secondary groups, such as longshoremen and teamsters. By the 1920s, the nascent organized crime organizations were well placed to aid in the distribution of illicit shipments that arrived in American ports. In turn, they were able to make a great deal of money unloading shipments and delivering truckloads to the highest bidders. They were involved not only in the transportation of illicit alcohol but also in its sale. Such profits helped these groups to grow.

A series of illicit bars and other destinations sprang up to serve the alcohol smuggled into the United States. Most important among these were clubs known as "speakeasies," where access was granted to those who knew the right people or could supply the doorman with the correct password. Beyond that, speakeasies were like any other nightclubs, serving food and providing entertainment. By 1925, there were up to 100,000 speakeasies in New York City alone. The key to any speakeasy's success was a steady supply of alcohol. Various organized crime groups opened their own speakeasies and kept them supplied with stolen or smuggled alcohol.

MOONSHINE

Organized crime groups soon found that buying alcohol in Canada, the Bahamas, or Bermuda and then shipping it into the United States and transporting it cost a lot of money. They needed a shortcut:

domestically produced "moonshine." All they required was a supply of grain, sugar, and a water source. The largest illicit distillery in the United States was located in Zanesville, Ohio—located conveniently between New York and Chicago.

In response to the increase in domestically produced alcohol, the federal government began checking large purchases of grain and sugar. To circumvent this surveillance, organized crime groups began to use molasses as a replacement for sugar, and the production of illicit alcohol continued. The change from using sugar to molasses provided an opportunity for many well-known bootleggers to earn huge profits.

During the early 1920s, America was introduced to gangsters. Johnny Torrio, Al Capone, Dion O'Bannion, the Genna brothers, Dutch Shultz, Charles "Lucky" Luciano, and George "Bugs" Moran are among the pantheon of men whose names flashed across newspapers and newsreels nationwide. All of these men (and many more) made their mark on the underworld by bootlegging alcohol. The wealth that they obtained during Prohibition was phenomenal. Al Capone is reported to have had an annual income of $26 million when he was only 26 years old.

The vast wealth that could be obtained through illicit alcohol provided organized crime with yet another opportunity to corrupt police officials, judges, and elected leaders. That corruption opened the door to additional ways to gain power and money through the support of unions and politicians. Many public officials were eager to accept bribes to ignore violations of the Volstead Act. The great experiment had grown into a seemingly insurmountable problem.

PROHIBITION AND THE GREAT DEPRESSION

The stock market crash of 1929 was the beginning of the end of Prohibition. The drastic loss of jobs and money led many people to produce "bathtub gin"—that is, produce illicit alcohol at home for sale to speakeasies. During the Depression there was a spread of localized gangs in rural areas catering to alcohol consumption. Many of these groups modeled themselves after the urban organized crime groups fighting for control of the local speakeasies, or roadhouses.

The Great Depression also forced many people from rural areas into the cities in search of work. Often the only work they could find was with organized crime groups, and these groups grew. Finally, the economic downturn also made enforcement of Prohibition even harder. Not only were all of the American borders still open, but the population was moving. The transportation of alcohol became easier as the trucks could easily blend into the sea of people moving entire households. The manufacture of illicit alcohol became easier too. As with the urbanization, many rural people needed to make money as well, and bootlegging became a viable option for them.

IMPACT OF THE VOLSTEAD ACT ON PRISONS

The violence associated with violations of the Volstead Act increased law enforcement activities across the United States. More people were sentenced to federal prisons for Prohibition violations or related offenses (e.g., murder, extortion, and hijacking) than for any other crimes. Additionally, people were sentenced to federal prisons for tax evasion as a direct result of their unreported income from illicit alcohol sales.

The rapid increase in convictions inevitably led to greater numbers sentenced to federal time. In particular, the number of women offenders grew dramatically. In response, the government initiated a large-scale building strategy, constructing new federal prisons in a number of states to help contain the growing penal population. While the new prisons were being built, several U.S. military bases were partially converted into federal holding facilities in 1930. Most of these closed within a few years once the new federal prisons were completed.

CONCLUSION

The Volstead Act was repealed in 1933, in part because of the rise of organized crime, even though

the FBI would not officially recognize the existence of organized crime until 1957. The shootings, bombings, and murders that filled the newspapers of the era helped rationalize the end of the "great experiment."

Many people see the Volstead Act as a precursor to the "war on drugs" in which the United States is engaged today. Many of the hallmarks are still with us. The organized crime groups have changed ethnicities, and the product has changed from alcohol to cocaine, heroin, and a variety of other drugs, but the demand of many people is still being satisfied by the black market. As was true of alcohol consumption during Prohibition, drug use continues in the United States despite the laws intended to stop it.

VOLUNTEERS

Volunteers in prisons in the United States include individuals and groups who, either directly or indirectly, provide correctional institutions with support in administrative, security, and programmatic capacities. Throughout the history of corrections, prisons have always needed to provide services that are beyond the capabilities of institutional resources. At all levels—federal, state, and local—volunteers provide labor that cannot be provided solely by correctional officials. Volunteers are, therefore, a crucial part of the contemporary penal experience.

TYPES OF VOLUNTEERS

Among the many different types of prison volunteers are those generally classified as administrative, staff, and programmatic. *Administrative volunteers* provide services that help states fulfill the goals of their departments of correction. For example, students interested in the criminal justice field may volunteer to work for the correctional system either in prisons or in administrative positions, such as in regional or state offices. This type of work enables such volunteers to learn skills important to their future employment while providing resources to the government. Specialists from academia may also evaluate prison programs or provide consultation to administrators on prison populations on a voluntary basis. For instance, sociologists might evaluate whether education programs help keep former inmates from reoffending. Similarly, vocational skills educators might evaluate the success of vocational or technical programs to determine which courses provide inmates with the best opportunities for employment once they are released.

Staff volunteers provide resources directly to facilities to bolster the facilities' workforces. Such volunteers might provide expertise in particular areas of vocational training or general education. For example, they may offer training in small engine repair and other vocational fields to help offenders be productive citizens when they are released. Some staff volunteers may help inmates learn to read and write; others might offer inmates courses in basic life skills. In Oklahoma institutions, for example, unpaid individuals offer tutoring to inmates on Saturdays to supplement the prison education programs. Elsewhere volunteers play in athletic group competitions with inmate teams.

Programmatic volunteers may help organize and/or directly oversee programs in the correctional system. For example, religious leaders or groups may help provide special religious services that are unavailable from the prison chaplain. Volunteers from groups such as Alcoholics Anonymous and Narcotics Anonymous may provide leadership for these programs within the prison walls for inmates. Academicians may offer programming in areas such as moral development or critical thinking abilities, which are often found lacking in offender populations. For example, one team of volunteers operated a prison program for long-term offenders that focused on helping the inmates develop the critical thinking skills needed for responding to real-life situations. Linda Collins, a volunteer featured in a 2002 *Volunteer Today* article, has operated classes for inmates in anger management, depression, communication skills, and victim impact.

Finally, *prisoners* themselves sometimes volunteer to help communities in need. For example, such volunteers often help with the cleanup needed after severe storms, help fight extreme forest fires, and provide needed manpower for other tasks. Some offenders help troubled youth by speaking to delinquent juveniles or high school students. This type of volunteerism is important to offenders, often helping them build self-esteem and a sense of belonging. Inmates have also been involved in building houses through Habitat for Humanity. This experience helps them to develop marketable skills and to establish networks of potential employment. Another example of inmate volunteers can be found in the many Speak Out programs, which enlist inmates to speak to troubled youth both inside and outside of prison settings. One of the Speak Out programs in Oklahoma's medium-security prison provides inmate speakers to talk to groups about "prison life" as well as arranges one-on-one visits with inmates for troubled juveniles, giving these young people the chance to visit with someone who has experienced the same problems they have.

Although more limited due to high offender turnover, the duties that volunteers undertake at the level of local jails are similar to those described. Volunteers serving as auxiliary jailers and officers provide many local jails with valuable assistance. Jails also need programmatic volunteers to provide services—such as religious services and drug/alcohol treatment—that would otherwise not be available to offenders.

TRAINING

Volunteers in correctional facilities usually receive training from the facilities that is aimed at ensuring their safety and well-being. Volunteers attend facility-specific orientation sessions that are designed to familiarize them with the rules and regulations of that facility. Volunteers are also instructed not to lend offenders money or become personally involved with any inmates. Facilities usually give volunteers information about what to do if they find themselves in uncomfortable situations; this might include a list of emergency telephone numbers with codes indicating a need for help.

Many state correctional systems have developed manuals detailing the roles and duties of volunteers. In addition to such manuals, volunteers usually receive specific training from the supervisors of the departments to which they are assigned concerning the duties performed in each area of the facility. Volunteers are afforded many of the same rights as paid employees in areas of training and personal development. Training may also be provided on an ongoing basis; for example, a volunteer may be required to attend retraining sessions at varying points in time.

BENEFITS

Both offenders and the administrators of correctional facilities benefit from the work of volunteers. Volunteers may offer role models and networking connections on which offenders can build once they are released. Volunteers can demonstrate to offenders that there are people who care about them as individuals who are worthy of respect and dignity. Volunteers who work in prerelease or other transitional types of programming can provide offenders with links to the outside world. For example, the

members of volunteer women's groups who work with female offenders in prison often greet the offenders when they are released and provide them with telephone numbers so that the offenders can make contact with a friendly voice once released.

The most significant beneficiaries of volunteer programs are often the volunteers themselves. Being a prison volunteer provides a student with a way to learn about correctional work firsthand. Although the work is unpaid, it provides the student with excellent opportunities to develop interpersonal communication skills, to work with individuals who may not have anyone else to assist them, and to develop a basis for future employment. Religious volunteers have the opportunity to provide services to populations that otherwise would not be able to worship as they need to. Administrative volunteers gain expertise and satisfaction from giving back to the community in which they live.

The most significant drawback to prison volunteer programs is the danger involved in working in a correctional facility. Offenders can manipulate unsuspecting and well-meaning volunteers into situations that can create serious security problems. For example, an inmate may ask a volunteer to contact or meet with a relative of the inmate outside the prison setting. This action can then result in the volunteer's being asked to transport messages between the parties (a serious breach of prison security) or to bring other types of contraband into the prison. Finally, the ultimate danger to volunteers is the possibility of being held hostage by disgruntled inmates. Careful training and constant diligence on the part of the volunteer can counter these types of situations, but dangers are always present in a correctional facility.

CONCLUSION

Volunteers play important roles in most correctional settings. Their labor, expertise, and compassion provide correctional facilities with needed resources that may not be available otherwise due to budgetary constraints. At the same time, individuals who give their time to correctional facilities commonly report high levels of satisfaction with their contact and experience.

W

WACKENHUT CORRECTIONS CORPORATION

The Wackenhut Corporation, founded in 1954 by former FBI official George Wackenhut, has grown from a small private security firm to one of the "Platinum 400" on *Forbes* magazine's list of America's Best Big Companies. Based in Boca Raton, Florida, it is one of the largest and most diversified private security corporations in the world, with more than 40,000 employees. Wackenhut provides a wide range of security related services, including uniformed security officers, investigations, and background checks.

In 1984, the company entered the private corrections business with the founding of the Wackenhut Corrections Corporation (WCC), which now manages more than 69 detention facilities and 42,000 offenders worldwide. WCC employs approximately 9,000 people in its facilities in 13 U.S. states and its international facilities in Australia, New Zealand, Canada, and South Africa. In 1997, WCC became the first private firm selected by the U.S. government to run one of its major correctional facilities when the Federal Bureau of Prisons awarded WCC management of the Taft Correctional Institution in Taft, California. For fiscal year 2002, WCC reported revenues of $568 million.

WHY WCC EXISTS

During the 1980s and 1990s, dramatically rising incarceration rates created a significant increase in the demand for prison space. National and state governments saw their corrections budgets and inmate populations skyrocket. Private corrections corporations such as WCC alleged that they could provide detention services for less money than could government entities, without sacrificing the quality of service. They argued that free market principles could be applied to prisons to make them more efficient and effective. In other words, private corrections companies such as WCC believe that a well-run private prison can operate better and for less money than an overly bureaucratic public one.

Additionally, WCC and others have argued that private prisons are more just, because they make prison supply more responsive to changes in demand. Instead of having a fixed number of prison beds, and hence a fixed number of potential lawbreakers, private contracting with WCC allows the courts flexibility in sentencing. As a result, there is less likelihood that sentencing decisions will be made on the basis of limited prison space.

WCC and its advocates have also proposed that private corrections facilities have more incentive to treat prisoners fairly than do state-run prisons. Simply stated, they believe that to ensure the renewal

of state contracts, private corporations have a vested interest in treating inmates well. If they do not, their reputation will suffer, as will their bottom line.

CRITICISMS

Critics have raised several issues in regard to private correctional corporations like WCC. First, many have argued that governments' contracting for imprisonment with private companies improperly delegates to private hands the coercive power and authority that should be uniquely held by government. That is, if people violate the laws of the state, the state should administer the punishments. If a private entity such as WCC, as opposed to the public itself, is responsible for administering punishments, profit motives may be placed ahead of the interests of the public or the inmates, or of the original reasons for imprisonment. In other words, private corrections corporations have a conflict of interest in the administration of prisons.

Opponents of private prisons also suggest that if it is true that contracting for corrections saves money in comparison to state-run prisons, the cost savings come at the expense of quality. They argue that cutting corners in the quality of corrections staff and facilities reduces public health and safety in addition to being unfair to inmates. Critics point to charges of guard misconduct, prisoner violence, and unacceptable physical conditions, such as lack of food or weather-appropriate clothing, at WCC prisons to illustrate that if private corrections companies can charge less than government facilities and still make a profit, they must sacrifice something. Critics of WCC often note that the corporation does not use unionized prison guards.

COSTS OF PRIVATE PRISONS

Research that has examined the costs of private corrections contracts with WCC and other prison contractors has returned mixed results. For example, Louisiana has estimated that in making two contracts with private prisons, the state has saved 12%–14% over the cost of running the prisons itself. Similarly, a study comparing a private prison in Minnesota with a public one in Wisconsin found a 23% savings in the private facility. On the other hand, Florida, which has a legislative provision mandating a 7% savings for private prisons operating in the state, found that for two of its private prisons the 7% savings was not realized. Also, a study that compared two public prisons with a private one in Tennessee found that the public prison cost taxpayers less per prisoner. These findings suggest that there is no clear answer to the question of whether private prisons provide economic relief to governments, which are contracting corrections largely for the purpose of relieving pressure on budgets and receiving criticism largely for their cost cutting.

CONCLUSION

Although there are compelling arguments on both sides of the private corrections issue, one thing is certain: WCC continues to win contracts from national and state governments. As long as inmate populations continue to grow beyond the capacity of governments to house them and there is strong public pressure to cut corrections budgets, it is likely that WCC and its competitors will gain an increasing share of the corrections market.

WAIVER OF JUVENILES INTO THE ADULT COURT SYSTEM

One of the fastest-growing changes within the juvenile justice system is known as *waiver* or *certification.* If a juvenile court believes that an offender is too "dangerous" or is "not amenable to treatment," the court will transfer the jurisdiction of (i.e., "waive") the youth to the adult system by, legally speaking, making the youth an adult. Generally, juvenile courts either lower the age of jurisdiction (known as *judicial waiver*) or exclude certain offenses (known as *legislative waiver*); in most jurisdictions, homicide is such an offense. Currently, every U.S. state has some provisions for transferring juvenile offenders to adult courts. In some states, only age-only provisions are used. Growing numbers of states are making the age lower and lower.

Although the minimum age for waiver of a juvenile into adult court varies across states, three states—Indiana, South Dakota, and Vermont—allow the certification of a juvenile as young as 10 years old. Despite the usual differences among state laws, most states have a variation or combination of requirements from *Kent v. United States* (1966, pp. 566–567) that meet specific age and serious crime criteria. The crime must be serious, aggressive, violent, premeditated, and done in a willful manner. Further, the crime must be against persons and result in serious personal injury. The juvenile is evaluated on his or her sophistication or maturity as indicated by external factors, such as emotional attitude and the juvenile's record and history. The evaluation must conclude that the public is adequately protected, in that if the juvenile is not treated and punished as an adult, the public would not be protected from future victimizations. All of these transfer processes authorize juvenile courts to designate delinquency cases to adult criminal proceedings.

Despite the overblown nature of this issue—politicians all over the country claim, without any supporting data, that there are "dangerous" youth everywhere who need to be certified—during 1998 (the latest year for which figures are available) only 8,100 juvenile offenders were transferred to the adult system, down from 12,100 in 1994. In 1989, only 8,000 were transferred. Also, most of those transferred have been charged with property crimes or with drug and public order crimes (64%) rather than personal crimes (36%). As a group, African Americans remain the most likely to be transferred, receiving this disposition in numbers far greater than their proportion in the general population (42% of those transferred, compared with 55% of whites). A detailed study of waivers in South Carolina, Utah, and Pennsylvania found disproportionate numbers of African American youth in two of the states. In South Carolina, 80% of those waived to adult court were black, as were 60% of those waived in Pennsylvania. In Utah, only 5% were black and 27% were Hispanic (African Americans constitute less than 1% of the population in Utah; Hispanics make up 6% of the population) (Snyder, Sickmund, & Poe-Yamagata, 2000, pp. 11, 19, 28).

The movement to transfer youth seems to be more of a political issue than a public safety one. Many local politicians are gaining votes for their "Get tough" stance on juvenile crime, using mostly anecdotal evidence to support their cause. In other cases, transfers are merely attempts to get rid of "troublesome cases" (Shelden & Brown, 2003, p. 348). In fact, transferring juveniles to adult court does not result in a reduction in crime and may even contribute to at least a short-term increase in crime.

Judicial waivers and prosecutorial discretion are often arbitrary, fluctuating from judge to judge and from jurisdiction to jurisdiction, forming no consistent pattern. For instance, one study in Florida found that juvenile waivers to adult court in the period 1981–1984 were predominantly low-risk juveniles and property offenders. These juveniles were not accused of committing violent crimes (Bishop, Frazier, & Henretta, 1989). Research has shown that legislative waivers, and particularly changes in laws governing waivers, are reflections of lawmakers' perceptions of public opinion, changing values and norms, and efforts to get tough on juvenile crime. Legislative waiver strategies attempt to reconcile the cultural conceptions of youth and choose between the boundaries of criminal activities and criminal responsibility of youth.

TYPES OF WAIVERS

There are three types of legislative waivers: discretionary, mandatory, and presumptive. All waivers must meet some aspect in any given case—a minimum age, a specified type or level of offense, serious record of previous delinquency, or a combination of these three criteria. A prosecutor may initiate a waiver by filing a motion, or else the juvenile court may do so.

Discretionary waivers (found in 46 states) specify broad standards to be applied for consideration of a waiver. Most common is when the court exercises its discretion to waive jurisdiction when the interests of the juvenile would be served. Further, some state legislation allows waivers when public safety or interest requires it or when the juvenile does not seem responsive to rehabilitation. Many states combine these standards. For instance, a waiver in the District of Columbia requires adult prosecution of a juvenile if it is in the interest of the public welfare and security, and there are no prospects for rehabilitation. In contrast, Kansas allows waivers whenever the court finds "good cause," and Missouri and Virginia allow waivers when the juvenile is not a "proper subject" for treatment. In 1997, Hawaii lowered the age limit for discretionary waivers (previously 16), adding language that allows a waiver of a minor at any age if he or she is charged with first- or second-degree murder (or attempted murder) and there is no evidence that the person is committable to an institution for the mentally defective or mentally ill.

The statutes of 14 states provide for *mandatory waivers* in cases that meet certain age, offense, or other criteria. In these states, the proceedings are initiated in juvenile court, sending the case to the adult criminal court. All states with mandatory waivers specify age and offense requirements. Ohio requires that a juvenile who commits any criminal offense at the age of 14 or higher and meets certain legislative requirements be waived to criminal court. West Virginia requires that a juvenile who is 14 and has committed specific felonies before the most recent case be waived to criminal court. Delaware and Indiana do not specify any age. In Connecticut, the law stipulates that where the mandatory waiver provision applies, the juvenile's counsel is not permitted to make any argument or file a motion to oppose transfer, arguably a violation of the right to due process. In fact, where a probable cause finding is necessary, the court makes it without notice, a hearing, or any participation on the part of the juvenile or the juvenile's attorney.

Presumptive waivers (found in 15 states) place the burden of proof on the juvenile. If a juvenile meets a specific age, offense, or other statutory criterion and fails to make an adequate argument against transfer, the juvenile court must send the case to criminal court. In some states, older juveniles are singled out, even when the offenses of which they are accused would not otherwise trigger a waiver. For example, in New Hampshire, the same crimes that would merely authorize consideration of a waiver in the case of a 13-year-old require one for a 15-year-old.

Although these provisions of juvenile transfer to criminal court are generally believed to be responses to an increase in juvenile violence (when in fact there has been no such increase), a large number of laws also include prosecution for nonviolent offenses. Most often, arson and burglary (21 states) and drug offenses (19 states) committed by a juvenile may be prosecuted in criminal court. In addition, various states authorize or mandate adult prosecution for juveniles accused of escape (Arkansas, Illinois, Michigan, Oregon), soliciting a minor to join a street gang (Arkansas), "aggravated driving under the influence" (Arizona), auto theft (New Jersey), perjury (Texas), and treason (West Virginia). Further, many states allow or require transfers for misdemeanors, ordinance violations, and summary statute violations, such as fish and game violations.

JUVENILES INCARCERATED IN ADULT PRISONS

The trend to waive juvenile offenders to criminal court coincides with the increased willingness of criminal courts and juries to sentence adult offenders to death. According to the Office of Juvenile

Justice and Delinquency Prevention, 7% of all juvenile admissions to custody in 1998 were referred directly to criminal court. The average daily juvenile population held in adult jails in 1992 was 2,527, an increase of 62% since 1983. In 1996, the one-day count of juvenile offenders held in local adult jails was 8,100, an increase of 20% since 1994. The average prison sentence for a juvenile offender convicted as an adult was about 9 years; for violent offenses, the average was almost 11 years.

Proponents of "Get tough" policies aimed at juvenile offenders see these policies as a deterrent to crime for "out of control" juveniles and as necessary to protect society, yet in reality incarcerating juveniles in adult facilities has proven to be detrimental. Failure to separate juvenile from adult offenders exposes juveniles to people with extensive criminal records, and juveniles in such situations are common targets for sexual and physical assault. Juveniles housed in adult penitentiaries and jails commit suicide at a far higher rate than do juveniles in other facilities; this applies to juveniles as young as 12 and relatively minor, nonviolent offenders. Studies have found that juveniles who are prosecuted and punished as adults are more likely to reoffend, and to do so more quickly, than are juveniles who are dealt with by the juvenile justice system (Howell, 1997).

Federal and state governments and correctional authorities have recognized that there are inherent dangers in housing juveniles with adults, yet their responses to the need to protect incarcerated children from adult inmates have been inconsistent. In 1974, the U.S. Congress passed legislation to provide a strong financial incentive for states to separate adult and juvenile offenders. In 1980, Congress reviewed the evidence of the detrimental effects of housing juveniles with adults and passed legislation requiring the complete removal of juveniles from adult jails and police lockups. However, the protection offered by the federal legislation applies only to some juveniles. States are not required to separate a juvenile inmate from adults if the juvenile is prosecuted as an adult for violating a state criminal law. In some jurisdictions, a juvenile who has committed even a relatively minor, nonviolent offense may be imprisoned with the general adult population. For instance, in 1977, a 16-year-old Native American named Yazi Plentywounds was convicted of shoplifting two bottles of beer. He was sentenced to two years at the adult state prison in Cottonwood, Idaho, because he had a prior conviction for "grand theft"—which involved breaking a shop window worth $300 in order to steal some cases of beer (Amnesty International, 1998).

CONCLUSION

Racial disparities continue to be among the most pressing problems within both juvenile and adult justice systems. Members of minority groups continue to be arrested, prosecuted, and sentenced in numbers far greater than their proportions in the general population. The "Get tough" policies of the past couple of decades have not resulted in any significant change in the overall crime rate, yet incarceration rates continue to increase. As demonstrated, the certification of youth into the adult system has had no impact on crime, but it has had negative impacts on minority youth.

Legal Cases

Kent v. United States, 383 U.S. 541 (1966).

WALLA WALLA WASHINGTON STATE PENITENTIARY

Construction began on the Washington State Penitentiary in 1886, and the first inmates were moved there in 1887. Located on 540 acres of farmland near the community of Walla Walla in eastern Washington, the penitentiary is the largest correctional institution in the state. It has a rated capacity of 1,825 inmates, but it generally houses between 2,200 and 2,500 male offenders.

Approximately 900 employees work at the institution, making it one of the largest employers in the area. Uniformed officers make up the bulk of the staff, with the prison employing 570 officers, sergeants, lieutenants, and captains. Other staff positions include medical and mental health coordinators and assistants, maintenance supervisors and workers, cooks, and stationary engineers.

INMATES

The Washington State Penitentiary holds inmates at all security levels. It is the only correctional facility in the state to house offenders who have been sentenced to the death penalty, and it also confines offenders who have been classified as maximum, close, medium, and minimum custody. As of January 2003, the minimum-security unit with a capacity of 174 inmates was holding 169 men. The four buildings in the medium-security facility—known as Adams, Baker, Blue Mountain, and Rainier—have a combined capacity of 1,147. In January 2003 they housed 822 inmates. The close-security section of the prison, with a capacity of 717, was inhabited at that time by 1,002 inmates, with an additional 549 held for emergency reasons, making a total of 1,551 men, or double the section's rated capacity.

A segregation unit in the main institution houses inmates who have violated prison rules, and the Special Housing Unit holds people in protective custody, those with mental health issues, and some who have been sentenced to death. The institution's Intensive Management Unit (IMU) has a 96-inmate capacity, but it is currently closed for renovations; all of the unit's residents have been sent to other Washington State facilities. Men who are sent to IMU do not come into direct contact with other prisoners, and they are normally allowed out of their individual cells for only one hour per day. They are not offered any work to keep them occupied. At the other end of the custody spectrum at the

penitentiary, some inmates in the minimum-security unit may work outside the institution's grounds on crews that are supervised by correctional staff.

EDUCATION, JOBS, AND PROGRAMMING

Depending on the custody level of the individual, the institution makes various education and training programs available, as well as work and recreation activities. Education is provided by the Walla Walla community college, and some of the programs include adult basic education, auto body vocational training, courses in office technology, and training in carpentry and barbering. Approximately 1,500 inmates take advantage of the opportunities to learn new skills and further their education. In addition, hundreds of volunteers and two full-time clergy schedule more than 200 separate religious programs per month.

Prisoners frequently work in positions that help to support and sustain the institution, taking jobs in food service, janitorial, and maintenance crews. Prisoners cultivate a large vegetable garden on the grounds of the penitentiary that provides thousands of pounds of fresh produce each year to supplement the institution's food supplies. This reduces the cost of feeding the population dramatically; the prison spends less than a dollar per meal and is often able to donate excess perishable foods to food banks in the local community. Other work programs in the facility include a metal plant that manufactures all license plates for the state as well as road signs and metal chair frames, and a garment factory that produces uniforms for the correctional officers and clothing for the inmates.

The penitentiary also runs KWSP, a television station, which provides an open link of communications between the inmates and the supervising staff. The TV station offers video production training for prisoners, and the station's media services are used by the Washington Department of Corrections.

CONCLUSION

The Washington State Penitentiary in Walla Walla has made a number of modernizing efforts in recent years. In this vein, the penitentiary has implemented a composting program to reduce a large proportion of the solid waste that is a by-product of the care and management of the individuals housed within its walls. The compost is then used on the grounds, specifically the garden areas, for fertilizing soil. This strategy not only saves money for the local taxpayers, it also aids in the cultivation of "on ground" foods. Despite such creative efforts, the penitentiary remains primarily a fortress of punishment, holding a large population of maximum-security offenders for many years as they serve out their lengthy sentences.

WALNUT STREET JAIL

The Walnut Street Jail has been called "the cradle" of the penitentiary in the United States because the stages in the jail's development and use mirror developments in penal philosophy, criminal statutes, and prison architecture that occurred during the formative years of the new Republic. The Walnut Street Jail was originally authorized in 1773 to serve as a jail, a workhouse, and a house of corrections for the city of Philadelphia, replacing an older jail. During the Revolutionary War, it served as a military prison, but in 1784 it was returned to its original purposes.

In 1786, the Pennsylvania legislature, reflecting Beccaria's recommendations, revised the earlier 1718 English laws, replacing capital punishment for most felonies with sentences of "hard labor, publicly and disgracefully imposed." In Philadelphia, such sentences were carried out by prisoners in chains who cleaned and repaired the roads.

Shortly after the legislation was passed, the Philadelphia Society for Alleviating the Miseries of Public Prisons was formed; its members included Benjamin Franklin, Benjamin Rush, and influential members of the Quaker community, and it was chaired by William White, the Episcopal bishop of Philadelphia. In 1788, the society recommended to the legislature that "punishment by more private or even solitary labor" be substituted for the disorderly public punishment. Legislation passed in 1789 included the provision for hard labor in solitary confinement "for more hardened and atrocious offenders" as well as allowed the use of the Walnut Street Jail for felons from other parts of Pennsylvania, providing a prison for the state. In 1790, a three-story "penitentiary house" wing was added to the Walnut Street Jail; it had 16 solitary cells, eight large dormitory rooms, and space for exercise and gardens. A state penitentiary was born.

QUAKERS AND PRISON REFORM

The Philadelphia Quakers were instrumental in the establishment of this new prison. Earlier, the work of Richard Wistar and the Philadelphia Society for Assisting Distressed Prisoners, established in 1776, reflected the Quaker practice, exemplified in the life of Elizabeth Fry, of prison visitation. The members brought food and clothing to inmates in the jail and provided both physical comfort and spiritual support. The later Philadelphia Society for Alleviating the Miseries of Public Prisons, formed in 1787, was a reform-oriented organization with ties to the work of John Howard and similar groups in England. It included in its membership leading Quakers and other members of the political elite of Pennsylvania who were concerned with issues of public order after the disruption of the Revolutionary War and early nation building. While the society stressed the need for religious services and humane oversight of conditions in the jail, a major thrust of its work was the movement from public punishment to the use of the prison, in particular the reformative value of solitary confinement, as a means of penance and punishment.

PRISON CONDITIONS

In the remodeling of the Walnut Street Jail in 1790 to add a "penitentiary house," two floors of solitary cells were constructed on arches above the ground level. Each floor had eight cells facing a corridor, with a dividing wall down the middle of the corridor to prevent communication between inmates on opposite sides. The brick cells measured 6 feet by 8 feet and were 9 feet high. Each had double reinforced iron doors and a very small iron-grated window, which was high on the exterior cell wall in order to prevent the inmate from looking down on the street. There was no bed or chair, only a mattress on the floor. Finally, each of the cells had a water tap and a privy pipe, and the stoves in the passageways provided some heat.

With the provision of eight large dormitory rooms, an exercise yard, and gardens, the inmates in the prison were required to be vocationally productive. In addition to growing fruits and vegetables, male inmates beat jute for ship caulking, did woodworking, bricklaying, and construction, and made nails; female inmates made and mended clothing and did laundry. All inmates were required to wear uniforms of the same color, and they were required to work 9 to 10 hours per day in the yard and prison shops.

By 1797, the administrators of the Walnut Street Jail established the beginnings of a classification system in which the women and children confined there were separated from the men. The most dangerous and uncooperative inmates were placed in the dark solitary confinement cells, but they were rarely whipped or given corporal punishment, as was done in punitive prisons. However, most of these inmates were not allowed to work. They had to earn the privilege to work by completing a portion of their sentence with no disobedience.

The Walnut Street Jail opened the first prison school in the United States in 1798. Inmates were taught basic skills in reading, writing, and arithmetic. By the end of 1798, books and desks were purchased for the prison school. Prior to this, prison chaplains and Quaker volunteers taught the inmates to read the Bible.

LATER PROBLEMS

Although the solitary cells were built originally for "hardened and atrocious offenders," a 1794 legislative enactment required that all persons convicted of crimes should serve a portion of their sentences in solitary confinement. With other jails in the state unwilling to assume the financial burden of a penitentiary wing, the Walnut Street Jail became overcrowded, and the solitary cells and large dormitories were filled beyond capacity. Rapid increases in Pennsylvania's general population as well as in the state's prison population, along with the increased substitution of solitary confinement as a portion of prisoners' sentences, put pressure on the facility that it could not bear. By 1818, questions were also being raised as to whether solitary confinement was resulting in mental breakdowns and mental illness among prisoners.

Once it became clear that the jail could no longer function adequately, despite questions being raised regarding the consequences of solitary confinement, the Pennsylvania legislature voted to construct two new huge penitentiaries—the Eastern Penitentiary in Philadelphia (known as Cherry Hill) and the Western Penitentiary in Pittsburgh. The Eastern Penitentiary, which opened in 1829, was operated on the principles of solitary confinement instituted at the Walnut Street Jail. Inmates arrived at the prison wearing blindfolds, and they were not permitted to leave their cells or small private exercise yards until they were released at the end of their determinate sentences. Each inmate ate, worked, and slept alone and never saw or talked to another inmate. The famous "Pennsylvania system" came into being.

Although this system was not officially abandoned at the Eastern Penitentiary until 1913, problems with it became apparent very early on. Like correctional institutions elsewhere, such as London's Pentonville Prison, the penitentiary had a high number of prisoner suicides and mental health problems. It was also very expensive to run. Ideas that had seemed so radical and reformist at the end of the 18th century when first implemented at the Walnut Street Jail proved unwieldy and inhumane inpractice.

CONCLUSION

The Walnut Street Jail is an important part of U.S. penal history, as it contained the first penitentiary. Although the Pennsylvania system of total solitary confinement was gradually abandoned in favor of the Auburn congregate system, traces of this early mode of governance can be found in today's supermaximum secure facilities and in the practice of disciplinary segregation.

WAR ON DRUGS

Although the popular phrase *war on drugs* is frequently used, it is seldom defined. At least two methods can be used to determine when a national war on drugs begins. The first involves identifying key legislation and presidential announcements. The second involves the direct measurement of changes in the allocation of criminal justice resources to the enforcement of drug laws. The United States has a history of enacting antidrug laws at both the local (city and state) and national (federal) levels of government. The following discussion focuses on the federal level, because many states have followed the federal model in enacting the laws that underlie their drug policies. Furthermore, most federal prisoners are serving time for drug offenses; approximately 60% of federal prisoners are incarcerated for drug offenses, compared with fewer than 3% who are incarcerated for violent offenses.

HISTORY

The first drug law in the United States was passed as an ordinance in 1875 by the city of San Francisco. This local legislation outlawed the smoking of opium in opium dens in response to fears that Chinese men were "corrupting" white women who visited the dens. The Harrison Act of 1914 was the primary legislative vehicle implemented by the federal government to regulate narcotics in the United States. The federal government began to control the use of cocaine in the early 1900s and that of marijuana in 1937. These laws also linked drugs to specific minority groups. For example, politicians and news reporters fanned fears that "cocainized Negroes" might become impervious to bullets or engage in wild sexual rampages. Lawmakers used marijuana charges as a mechanism for stigmatizing and deporting Mexican immigrant workers.

If presidential announcements and legislative initiatives are used as indicators of the beginning of a war on drugs, four benchmark periods are identifiable: 1972, 1982, 1986, and 1988. President Richard M. Nixon declared the initial "war on drugs" in 1972. In February 1982, President Ronald Reagan also declared a "war on drugs." Until 1985, legislators, the mass media, and the public largely ignored these declarations. The goals of these antidrug campaigns were to reduce drug use by individuals, stop the flow of drugs into the United States, and reduce drug-related crimes.

The focus changed with the federal enactment of the Anti–Drug Abuse Acts of 1986 and 1988. These acts moved away from targeting major drug dealers and providing treatment for users and toward punishing users and street-level dealers. In 1986, the amount of money spent for the direct costs of the war on drugs at local, state, and national levels was $5 billion. Just 10 years later, in 1996, the annual total expenditure for the war on drugs across all levels was approximately $100 billion, with two-thirds of that being spent on law enforcement.

Criminal justice statistics further document the federal government's increasingly harsh response to drug offenders between 1982 and 1991. During this period, the number of persons who were prosecuted for drug offenses in the federal system declined. Of those who were charged, however, the number who were convicted and incarcerated for drug offenses increased significantly. Furthermore, given the mandatory minimum sentences included in the drug laws of 1986 and 1988, federal drug offenders who had minor or no past criminal records received much longer sentences than similarly situated offenders had received prior to the Anti–Drug Abuse Act of 1986. Current U.S. drug policies punish offenses related to crack cocaine more severely—by a ratio of 100 to 1—than those involving other forms of cocaine. For example, a person who is convicted of possessing 5 grams of crack is subject to a mandatory minimum sentence of 5 years; the threshold amount for the same sentence for powdered cocaine is 100 times as much: 500 grams.

ROLE OF THE MEDIA AND POLITICS

Politics and the media have both played important roles in the development of the current drug policies. The federal drug policies contained within the acts of 1986 and 1988 resulted from intense media attention preceding and coinciding with national elections. Beginning in 1984 and continuing into 1985, the media began reporting about "rock" cocaine in Los Angeles. In 1985, there was a newspaper account of cocaine abuse in New York that was followed later that year by discussion of crack cocaine. These reports were rather obscure, and the public was not overly concerned. However, in 1986, Len Bias and Don Rogers, two well-known athletes, died, allegedly as a result of their use of crack cocaine. At that point, the media began to focus on crack as "the issue of the year." All forms of news media (e.g., newspapers, magazines, and television) began to allocate unprecedented time and attention to covering crack cocaine. It was later determined that Bias and Rogers had not died from crack use, but rather from the use of powdered cocaine. This detail, however, received minimal attention, and media and policymakers' attacks on crack cocaine continued. By the time of the elections in November 1986, at least 1,000 stories concerning crack cocaine had appeared in the national print media alone. The major television networks had aired documentary-style programs that defined crack cocaine as a national epidemic. Crack cocaine became an ideal campaign issue for politicians.

In late October 1986, only days before the national elections, Congress enacted the Anti–Drug Abuse Act (ADA) of 1986. This legislation delineated the parameters of the current war on drugs. The emphasis of the ADA of 1986 was on punishment and social control. The ADA increased prison sentences for the sale and possession of drugs, eliminated probation or parole for certain drug offenders, increased fines, and provided for the forfeiture of assets. Most of the funds made available as a result of the ADA were directed toward law enforcement, expansion of prison facilities, interdiction, and efforts to reduce the supply of drugs. Congress expedited the enactment of the Anti–Drug Abuse Act of 1986. No committee hearings were held, and little in the official record regarding the act explains how the aforementioned 100 to 1 ratio for powdered cocaine to crack cocaine was developed. The record indicates that other ratios were considered, such as 50 to 1 in HR 5484 and 20 to 1 in S2849, which was sponsored by Senate Majority Leader Robert Dole on behalf of the administration. The reasons cited for the focus on crack include the following:

The War on Drugs

The war on drugs has significantly increased the populations of prisons nationwide. The federal prison population has grown from less than 30,000 in the late 1980s to over 150,000 at present. This influx of prisoners is directly related to the war on drugs and the locking up of low-level drug offenders. There aren't a lot of kingpins inside these fences.

The mandatory minimum sentences being handed out are keeping young, nonviolent, first-time offenders locked up for a decade or more of their lives. Most drug offenders are serving more time than rapists and murderers, all because of America's grandiose war on drugs. When I was growing up in suburban America I pictured prison as a violent netherworld of corruption, but having spent the last 10 years behind these fences I can honestly say that the days when violence ruled in prison are gone, in part due to the influx of low-level drug offenders. Basically, there are a bunch of young entrepreneurs in prison now who were trying to make their American dream come true by selling drugs. Easy money, you know? But due to the government's war on drugs crusade, tens of thousands of good people are locked up for decades of their lives, wasting taxpayer money. It doesn't seem like it is going to stop, either, as the feds keep building prisons and incarcerating people at a phenomenal rate.

What kind of country declares a war on its own people? The war on drugs is a war on people—people of color, poor people, minorities, and it is moving into the suburbs and college campuses. These places used to be safe havens for the youth of America, but not anymore.

Seth Ferranti
FCI Fairton, Fairton, New Jersey

1. Congress viewed the drug problem as a national "epidemic" in 1986 and considered crack to be the leading drug.
2. Congress deliberately differentiated crack from powdered cocaine.
3. Congress believed that crack was more dangerous than powdered cocaine and so decided to treat it differently.
4. Congress wanted the sentencing to be consistent with other mandatory minimum sentencing provisions and so decided to punish *major* traffickers with a mandatory minimum sentence of 10 years and *serious* traffickers with a mandatory minimum sentence of 5 years.

In order to select the appropriate level of punishment for each drug contained in the legislation of 1986, the subcommittee ordered staff to consult with agents of the Drug Enforcement Administration and prosecutors to determine the distribution patterns for various drugs, as well as to determine the amounts that would indicate a person was working at a high level within the market. The subcommittee established the threshold amounts for crack and powdered cocaine without the benefit of hearings.

In 1987, after the national elections and passage of the ADA of 1986, the media and the public turned their attention and concern to issues other than crack and drug abuse. Polls conducted by the *New York Times* and CBS found that only 3%–5% of the public considered drugs to be the most pressing social problem. However, in the 1988 presidential election, politicians again focused on drugs, particularly crack cocaine. Congress passed a subsequent Anti–Drug Abuse Act on October 22, 1988, approximately one and a half weeks before the election. The 1988 act included more funding for treatment and prevention and established the Office of Substance Abuse Prevention as a cabinet-level post. Most of the funding continued to be directed toward law enforcement and punishment, and enhanced penalties for certain crack cocaine offenses were enacted. Most important, the 1988 act amended 21 U.S.C. §844 to make crack the only drug and form of cocaine with a mandatory penalty for the first offense of simple possession. A person who possesses more than 5 grams of a substance that contains crack is to be punished with imprisonment for at least five years. Each prior conviction for possession of crack reduces the threshold amount for which a person may receive a five-year sentence. This type of penalty is not applied to other drugs. The first conviction for possession of any quantity of any other drug, such as heroin or powdered cocaine, results in a maximum penalty of only one year. In contrast, an offender found guilty of possessing powdered cocaine can be subjected to a mandatory minimum sentence of five years only if the amount equals or exceeds 500 grams.

MANDATORY MINIMUM SENTENCING

Mandatory minimum sentencing policy has become the primary weapon in the war on drugs. This policy requires judges to hand down sentences that are no less than the sentences prescribed in the applicable laws. No matter what mitigating or unusual circumstances exist, judges cannot exercise discretion and give sentences lower than the minimums that are outlined in the laws. Mandatory sentencing schemes began in the United States in 1790 for capital offenses. They were used extensively in the Narcotics Control Act of 1956, where they were applied to a great number of drug offenses related to importation and distribution activities and provided mandatory ranges from which a judge could choose a sentence. The ultimate goal of the mandatory provisions, as set forth by the Senate Judiciary Committee for the Narcotics Control Act, was to reduce violations of drug laws through deterrence and incapacitation.

During the years subsequent to passage of the Narcotics Control Act of 1956, Congress determined that mandatory minimum sentences were not reducing the number of drug law violations. In response, the legislators enacted the Comprehensive Drug Abuse and Control Act of 1970 and repealed most of the mandatory penalties for violations of drug laws. Congress had become convinced that mandatory minimum sentencing interfered with the rehabilitation of offenders. Furthermore, the

minimums inappropriately infringed on judicial discretion and did not assist in deterrence because prosecutors felt the penalties were too severe and so avoided charging offenders with violations that would invoke the penalties.

Nonetheless, in 1984, Congress reenacted a number of mandatory minimum sentencing schemes that focused on violations of the drug laws. The changes included mandatory minimum sentences for drug offenses committed near schools and for all serious felonies. Less serious felonies had to be punished with at least one year probation. Mandatory minimum sentences or enhancements of sentences were also brought in for the use of or carrying of a firearm during the commission of certain violent offenses. These laws at the federal level followed the legislative initiatives of the states, as mandatory minimum sentences for drug offenses were already enacted in 49 of the 50 states by 1983 (U.S. Sentencing Commission, 1997, p. 9).

Several years later, Congress enacted the Omnibus Anti–Drug Abuse Act of 1988. This legislative initiative singled out crack cocaine, specifying mandatory imprisonment for simple possession of more than 5 grams and applying the same penalties as the underlying substantive act to cases of conspiracy that involve the distribution, importation, or exportation of drugs. All persons convicted in the conspiracy, regardless of their roles, were required to receive the same sentence as mandated for the substantive offense. The role of the offender convicted of a drug offense at the federal level can be considered only for the purpose of sentence enhancement. If the offender played a minor role in the crime, this information cannot be used to reduce his or her sentence.

RACE AND THE WAR ON DRUGS

One of the consequences of the most recent antidrug campaign has been its disparate impact on black and other minority men and women. Approximately 40% of the individuals admitted to state prisons for drug offenses are black, even though blacks make up only 13%–15% of all drug users. Black men and black women are arrested, convicted, and incarcerated for drug offenses at much higher rates than are whites. This disparity is not explained by black people's use of drugs because research indicates that white people use drugs at equal and greater rates.

Antidrug policies and their administration contribute to the mass incarceration of black women and men, and poor people of all races, in U.S. prisons. The penalty structure—which focuses on crack cocaine (instead of other drugs and powdered cocaine, which whites more commonly use) and relies on mandatory minimum sentencing—has led to the increased incarceration of women in general and of black men and black women in particular. Black men represent the largest number of such inmates, but black women also have been significantly affected by the war on drugs. Between 1986 and 1991, there was an 828% increase in the number of black women who were incarcerated in the United States for drug offenses. This percentage of increase surpassed that of all other demographic groups, including black men (429%), white females (241%), Latina females (328%), Latino men (324%), and white men (106%).

CONCLUSION

The Anti–Drug Abuse Acts of 1986 and 1988 were developed as political responses to heightened public concern about powdered and crack cocaine that resulted from representations by the mass media. In the 1980s and 1990s, many organizations formed to oppose the "war on drugs." Together, organizations such as the Drug Policy Alliance and Common Sense for Drug Policy have joined prison reform advocates, civil rights groups, feminist organizations, and others to reduce or eliminate prison terms for drug possession and expand and improve drug treatment. Although public attention has been somewhat diverted from crack cocaine and drug abuse in general, and public support for harsh penalties is declining, the Anti–Drug Abuse Acts of 1986 and 1988 continue to dictate the fate of tens (or perhaps hundreds) of thousands of persons convicted of drug offenses.

WILLEBRANDT, MABEL WALKER (1889–1963)

Mabel Walker Willebrandt was the highest-ranking woman in the federal government when she served as assistant attorney general of the United States from 1921 to 1929. Her division's responsibilities in the Justice Department included Prohibition, taxes, and federal prisons. While her high-profile cases before the U.S. Supreme Court and her writing, lecturing, and political campaigning earned her the title "Prohibition Portia," she made lasting contributions to the federal prison system. Willebrandt was primarily responsible for the establishment of the first federal prison for women, in Alderson, West Virginia, and the first federal reformatory for first-time young male offenders, in Chillicothe, Ohio. She successfully secured paid work for federal prisoners at Leavenworth, reformed the administrations at the federal prisons in Atlanta and Leavenworth, and pressed for the appointment of Sanford Bates as the first head of the Bureau of Prisons.

BIOGRAPHICAL DETAILS

Born in a Kansas sod hut in 1889, the only child of Myrtle (Eaton) and David William Walker, Willebrandt became a teacher in the Michigan schools at the age of 17, a school principal in California at 22, and a lawyer at 27, having funded her legal education and that of her husband (Arthur Willebrandt) at the University of Southern California. An early member of the women's legal organization Phi Delta Delta, Willebrandt was a master networker. She worked with Miriam Van Waters to promote progressive causes before the California State Legislature. While establishing a law practice, she also served as assistant police court defender in Los Angeles, representing more than 2,000 defendants. Her record won her the nomination of California's Progressive Senator Hiram Johnson and appointment by President Harding in 1921 as assistant attorney general, the second woman to hold that post. She was 32.

HER CAREER

Willebrandt and the superintendent of prisons, Heber Votaw, set three priorities: establishing a federal prison for women, developing a federal reformatory for young males, and providing employment for prison inmates. The burgeoning convictions under the Harrison Drug Act (1914) and the Volstead Act (1918) presented a crisis for the federal prison system in the 1920s. The combination of low federal funding and federal guidelines made state institutions reluctant to continue to house federal prisoners.

The numbers of women convicted under federal statutes doubled after World War I, and there was no federal facility for women. Working with Votaw, the brother-in-law of President Harding, Willebrandt galvanized women's and prison reform organizations to deal with this crisis.

At a meeting in September 1923 at the Washington headquarters of the General Federation of Women's Clubs (GFWC), representatives of 21 national organizations unanimously approved a proposal to establish a federal institution for women prisoners on the cottage plan and pledged their lobbying support. The legislation passed in June. The Alderson site was selected, and Congress approved appropriations in 1925. Mary Belle Harris, appointed by Willebrandt as the first warden, praised her at the dedication of the model cottage facility as caring and fighting for Alderson as a "mother for her child" (quoted in the *New York Times,* November 28, 1928). Harris named Alderson's academic building Willebrandt Hall.

In November 1923, at another conference at GFWC headquarters, representatives from the American Bar Association, the American Council on Education, the YMCA, and others agreed to support legislation to establish a federal reformatory for first-time male offenders. Women's groups again passed resolutions endorsing the proposal. When Congress passed the legislation in January 1925, Camp Sherman in Chillicothe, Ohio, was selected from a list provided by the War Department. Willebrandt marshaled support to win funding for both Alderson and Chillicothe from tightfisted Republican Congresses.

Willebrandt worked with the National Committee on Prisons and Prison Labor and the organizations that had gathered at the 1923 GFCW conferences for prison industries. After her first visit to the federal prison in Atlanta, Willebrandt wrote to her parents, "The terrible idleness of the institution freezes my blood" (quoted in Brown, 1984, p. 97). Responding to an intensive lobbying effort, Congress finally authorized a shoe factory at Leavenworth penitentiary.

As in her Prohibition work, Willebrandt faced problems caused by political appointments and corruption in the federal prison system. She secured the resignation of two wardens at Atlanta and one at Leavenworth and appointed professional replacements. Some of the evidence of corruption was gathered through the controversial practice of planting FBI agents inside the prisons as inmates. Criticism of this practice, made public by a warden under attack, made headlines at the same time that Willebrandt faced a storm of press criticism for her vigorous campaigning for Prohibition enforcement and for Hoover in 1928 as the presidential candidate who would enforce the law. The political controversy, as well as the opposition of key congressmen, particularly Senator Samuel Shortridge of California, who were smarting over her removal of some of their political appointments in Prohibition enforcement, thwarted Willebrandt in her major ambition to be appointed a federal judge. In the flurry of 1928 newspaper coverage, Willebrandt's personal life made headlines as her 1924 divorce was made public.

CONCLUSION

Willebrandt left the Justice Department in June 1929. In her private practice, she represented Metro-Goldwyn-Mayer and several of its stars, including Clark Gable and Jean Harlow. Her major clients included the Screen Directors Guild, aviation and radio corporations, and the grape growers' association. Willebrandt argued more than 40 cases before the U.S. Supreme Court and was the first woman to head a committee of the American Bar Association. She died of lung cancer in April 1963 in Riverside, California. Her friend Judge John J. Sirica later observed, "If Mabel had worn trousers, she could have been President" (quoted in Brown, 1984, p. ix).

WILSON v. SEITER

Inmates have been filing lawsuits in ever-increasing numbers since the federal courts made it easier for them to gain access to the courts in the 1960s. Inmates have frequently filed suits alleging that prison conditions such as overcrowded cells, inadequate restroom facilities, and unsanitary kitchens constitute violations of the prohibition of "cruel and unusual punishment" in the Eighth Amendment to the U.S. Constitution. A number of lower federal courts issued opinions in the 1970s and 1980s attempting to define the prison conditions that might constitute cruel and unusual punishment, but it was not until 1991 that the U.S. Supreme Court, in *Wilson v. Seiter,* clarified the issue by providing a definition of cruel and unusual punishment as applied to so-called conditions of confinement lawsuits.

WILSON v. SEITER

Pearly Wilson, an inmate at the Hocking Correctional Facility in Ohio, filed suit under 42 U.S.C. §1983, alleging that certain conditions of his confinement constituted cruel and unusual punishment in violation of the Eighth and Fourteenth Amendments. The conditions he cited included overcrowding, poor sanitation in bathrooms and kitchen facilities, inadequate heating and cooling, and poor ventilation. He sought an injunction as well as $900,000 in compensatory and punitive damages from prison officials. Wilson alleged that prison authorities ignored the conditions and refused to take appropriate remedial action.

The district court granted summary judgment for the prison officials on the ground that Wilson failed to establish that prison officials had acted with "deliberate indifference" to the prison conditions. The Sixth Circuit Court of Appeals affirmed the district court. In several earlier cases, the U.S. Supreme Court had used the "deliberate indifference" standard to determine when prison officials could be held liable for failing to provide adequate medical care (*Estelle v. Gamble,* 1976) or for using excessive force (*Whitley v. Albers,* 1986). Wilson's case was different in that he was claiming not that a particular act or failure to act had harmed him, but rather that prison conditions generally were so deplorable as to constitute a violation of the prohibition on cruel and unusual punishment. This is referred to as a *conditions of confinement lawsuit.*

The U.S. Supreme Court granted certiorari in the case and determined that the proper standard by which to judge conditions of confinement cases is the "deliberate indifference" standard. The decision was unanimous, but the Court split 5–4 on the rationale for the decision. The majority opinion was authored by Justice Antonin Scalia, and the concurring/dissenting opinion was penned by Justice Byron White.

THE MAJORITY OPINION

The majority opinion held that an inmate claiming that conditions of confinement constitute cruel and unusual punishment must show both the existence of an unacceptable condition *and* a culpable state of mind on the part of prison officials. There are two parts to this test—an objective component (the existence of a condition) and a subjective component (the state of mind of the prison official).

The objective component requires a showing of harm to the inmate. In the words of the Court, for a condition of confinement to violate the Eighth Amendment, it must be proven that the inmate is deprived of an "identifiable human need such as food, warmth, or exercise." This eliminated the so-called totality of conditions lawsuit, wherein inmates would allege that the sum total of a variety of minor problems amounted to a violation of the Eight Amendment's ban on cruel and unusual punishment. Now, an inmate must show that at least one condition, on its own, constitutes a violation of the ban on cruel and unusual punishment.

The subjective component requires the plaintiff to demonstrate that prison officials inflicted the harm intentionally, or at least were aware of the harm and did nothing to prevent it. The Court described this degree of knowledge as "wanton," but it is perhaps better understood as similar to the standard of care known as "recklessness" in tort law. Effectively, a prison official is responsible for a deplorable prison condition only if the official intentionally creates the condition or is aware of the condition and refuses to remedy the problem even though a remedy is available. The Court asserted that in cases where "the pain inflicted is not formally meted out as punishment by the statute or sentencing judge, some mental element must be attributed to the inflicting officer before it can qualify." The Court then applied the "deliberate indifference" standard first crafted in *Estelle v. Gamble* to conditions of confinement lawsuits.

Wilson, and the U.S. government arguing on his behalf as *amicus curiae*, sought to have the "deliberate indifference" standard limited to cases involving "short-term" or "one-time" prison conditions, such as the use of force on an inmate or the refusal of medical aid to a sick inmate—the situations where the standard had been previously applied in *Whitley* and *Estelle.* However, the majority in *Wilson* refused to limit the "deliberate indifference" standard to these instances and instead applied it to all conditions of confinement lawsuits.

THE DISSENTING OPINION

Four members of the Court agreed with the judgment in this case, but dissented on the application of the "deliberate indifference" standard to conditions of confinement lawsuits generally. These justices argued that conditions of confinement cases should not include a determination of the subjective component, as the effect of poor prison conditions on inmates is the same regardless of the state of mind of prison officials. The intent of officials should be irrelevant when the injury is based not on their direct actions (such as refusing requested medical care, as in *Estelle,* or using excessive force, as in *Whitley*) but on the existence of poor conditions within the prison. After all, the dissenting justices argued, the injury to the inmate caused by the poor prison condition is what is at issue, not whether the injury was intended by prison officials. The dissenting justices also noted that prison officials might use the "deliberate indifference" standard as a way to avoid responsibility for inhumane prison conditions, by arguing that they had done everything in their power to remedy the condition (such as overcrowding or poor facilities), but could not do more without the necessary resources.

Finally, the dissenting justices also took issue with the majority interpretation of the holding of prior cases such as *Estelle* and *Whitley.* They pointed out, particularly, that the majority failed to address the decision in *Hutto v. Finney* (1978), a prior Supreme Court case involving conditions of confinement lawsuits, which appeared to support the dissent's position that the subjective intent of prison officials is irrelevant.

RELATED CASES

Left undecided by the Court in *Wilson* were the degree and nature of the injury that must be suffered by the inmate in order for a violation of cruel and unusual punishment to occur. This issue was addressed in subsequent cases. In *Hudson v. McMillian* (1992), the Supreme Court held, in an opinion written by Justice Sandra Day O'Connor, that there is no requirement that an inmate suffer "significant injury" in order for an excessive use of force incident to be considered a violation of the Eighth Amendment. Even minor injuries may give rise to a constitutional violation if prison officials maliciously and sadistically use force to cause harm. This case involved a lawsuit by a Louisiana inmate who alleged he was the victim of excessive force that resulted in some minor injuries that did not require medical attention.

In *Helling v. McKinney* (1993), the Supreme Court, per Justice White, held that there is no requirement that an inmate be currently suffering or has already suffered an injury from conditions of confinement in order to file a lawsuit. The possibility of future injury is enough. This case involved a Nevada

inmate who filed suit against prison officials, claiming that his involuntary exposure to environmental tobacco smoke from his cellmate's and other inmates' cigarettes posed an unreasonable risk to his health.

SIGNIFICANCE OF THE CASE

Wilson v. Seiter is a significant corrections law case because it substantially limits the ability of inmates to recover damages or to obtain injunctive relief from prison officials in lawsuits involving the conditions of confinement. An inmate must establish both the existence of a deplorable condition and that prison officials manifested "deliberate indifference" to the existence of the condition. Establishing an unconstitutional condition may be relatively easy for an inmate plaintiff, but proving that prison officials were aware of the condition and chose to do nothing about it is more difficult. The majority of the Supreme Court clearly felt that injury alone should not be enough to allow an inmate to prevail—there must be individual culpability on the part of prison administrators. In many instances the deplorable prison condition will be caused not by the action or inaction of prison officials but by circumstances beyond their control, such as outdated facilities or inadequate state budgets.

WITSEC

WITSEC is the acronym for the Federal Witness Security Program. WITSEC was established by the Organized Crime and Control Act of 1970 in recognition of the government's need to provide long-term protection to witnesses in cases involving organized crime figures and groups (e.g., La Cosa Nostra, or the Mafia). Witnesses needed such protection because these groups had a history of witness intimidation and execution in order to defeat the cases against them.

HISTORY

Until 1940, few prosecutions of organized crime figures and groups had been successful. Those who were convicted were usually found guilty of federal income tax violations, cases related to immigration, and cases pursued without witness cooperation. Cases that could be prosecuted only with the cooperation of witnesses, such as those involving extortion, theft, and blackmail, were generally unsuccessful.

Another obstacle to the prosecution of members of organized crime groups was the position the FBI took with regard to such groups as the Mafia. Until 1957, the FBI denied that the Mafia existed. In 1957, a meeting of Mafia "bosses" took place in the small town of Apalachin, New York. When tens of known organized crime leaders were arrested, the FBI was forced to accept the presence of such groups. However, prosecuting the members of these groups was difficult for two reasons. First, witnesses were afraid to come forward because their protection had historically been little more than a bus ticket out of town. Second, it was well-known that the elimination of one member of a criminal group would not result in the elimination of the organization itself.

The Organized Crime and Control Act made provisions to tackle both of these problems. Most

important, it established the Federal Witness Security Program. The act details a chain of command, with WITSEC administered by the U.S. attorney general and maintained by the U.S. Marshals Service. It provides for a means to screen potential witnesses for psychological problems. Additionally, as in the case of parole and probation screenings, the program is empowered to determine a witness's eligibility with regard to his or her potential for recidivism as well as subsequent offending.

The second problem encountered in prosecuting organized crime cases, prosecuting the group as a criminal enterprise, was addressed by the Racketeer Influenced and Corrupt Organization (RICO) statute. Prosecutions under this statute rely heavily on the use of witnesses to corroborate evidence of a group as a criminal enterprise. Although it was not instituted by WITSEC or even as a result of the program, RICO has proven to be very beneficial to prosecutors of alleged organized crime groups such as La Cosa Nostra (the Mafia) and the Hell's Angels outlaw motorcycle group.

PROVISIONS OF WITSEC

Persons who enter WITSEC can fall into one of three main categories: witnesses of a criminal act, criminals who testify against their peers and colleagues, and family members of protected witnesses. The program works to protect witnesses (and their families) by relocating them to undisclosed locations. At these places, members of the U.S. Marshals Service maintain security through frequent communications with the witnesses, especially in the event of threats. Surveillance equipment as well as the physical presence of marshals who may be visibly armed may be used to thwart potential threats.

In addition to physical security, WITSEC provides for establishing the witness in an occupation. This may involve the procurement of a college degree, and several colleges and universities are known to take part in this program. Establishing a career criminal in a legitimate occupation can be difficult, given that often such individuals have no training outside of criminal enterprises. In cases where it is necessary, WITSEC provides job training. The program has two goals in establishing witnesses in occupations: First, doing so aids in recreating the witnesses (if necessary) as valued members of society; second, the program aims to help witnesses provide for themselves and their families once their testimony is no longer required and payments from the government cease.

The program also provides for the education of any minor children of witnesses. School transcripts are "cleaned," meaning that any notations of previous schools, teachers' names, and the like are removed. This enables witnesses' children to enter school without endangering the security of their households.

The protection of a witness and his or her family may be maintained for the family members' entire lives, but most witnesses leave the program after several years. The most common reason witnesses leave the program is the perception that the threats against them have been eliminated. Another reason is that witnesses and their families feel constrained by the program and wish to regain control over their lives. Witnesses may also be expelled from the program. Such expulsion is usually the result of a witness's committing additional crimes, usually felonies. Misdemeanors and similar offenses generally are not viewed as grounds for expulsion from the program.

PROTECTED WITNESSES AS PRISONERS

Due in part to plea bargains, many criminals who are protected witnesses are never incarcerated. However, some are. Usually, incarcerated protected witnesses are housed not with the correctional institution's general population, but in a segregated housing unit. Segregated (sometimes referred to as *protective custody*) housing units often have single-person cells. Because the protected prisoner population is relatively small and not subjected to the potential violence seen in the general population, these prisoners are often accorded more personal freedom than other prisoners. The combination of increased personal freedom and better living conditions results in protected witnesses being perceived as a "higher class" of prisoner. Protected witnesses are perceived as being at or near the top of the prisoner hierarchy. This accords them additional

respect and deference from other prisoners. Similar deference and respect are accorded incarcerated members of La Cosa Nostra (the Mafia) and large outlaw motorcycle groups (e.g., the Hell's Angels and the Outlaws).

In addition to other inmates' perceptions of protected witnesses, prison administrators also view protected witnesses as different from other prisoners. For example, because their status as protected witnesses hinges on their compliance with the terms of their plea bargains, they are not expected to take part in criminal or even deviant activity while incarcerated. In effect, protected witnesses are held to a higher standard of personal behavior than are prisoners in the general population. A protected witness's deviation from the expected model behavior can result in an increased prison sentence, negation of the original plea bargain, or placement into the general population.

CONCLUSION

WITSEC cases have a higher conviction rate than cases using federal task forces and various joint operations. From the 7,160 witnesses currently in the program, an 89% conviction rate has been achieved since 1971. Even so, the American public does not always wholly accept the use of protected witnesses in some cases. In the case of John Gotti, the protected witness had admitted to being involved in at least 19 murders. When this became known, a group consisting of the families of the victims of the murders in which he was involved filed a civil suit against the protected witness. In addition, law enforcement officials are not always in favor of the use of protected witnesses. In several instances, WITSEC's relocation of known offenders has caused problems. In one case, police questioned a man who had been convicted of murder but released him when the FBI returned his fingerprints with the statement that no file existed on the individual. Through WITSEC, the man's entire criminal history had been eliminated.

Ultimately, providing some offenders with witness protection appears to be necessary in the fight against organized crime. However, like many other practices in the U.S. criminal justice system, this policy is controversial and must therefore continually be justified.

WIVES OF PRISONERS

Criminologists rarely study or even acknowledge the wives (or domestic partners) of prisoners. However, the role of wives in the lives of their incarcerated partners has a significant bearing on how their partners do their time, whether family bonds will be maintained, and what circumstances their partners will face in the community when they are released. The wives themselves are affected by their involvement in the criminal justice system by virtue of their partners' incarceration, by the strains of separation on their relationships, and by societal views of them as wives of prisoners.

STIGMA

Wives of prisoners are often seen as guilty by association. The public perception of convicted criminals is overwhelmingly negative, and wives of these individuals suffer from a similar stigma. It is the rare person who can understand why a wife would remain supportive of a "bad" person, a person whom society sees as "other." Although these women are perceived as losers, in fact they endure hardships in ways that demonstrate resourcefulness, patience, flexibility, and commitment. In addition, the poverty and minority status of most prisoners and their families adds to their difficulty. They face societal stigmas of racism and classism, and they often have few resources with which to deal with the challenges incarceration presents.

Because of the stigma of incarceration, many wives of prisoners choose to live some version of a secret or double life. They may not tell employers that their partners are incarcerated for fear of losing their jobs or casting suspicion on their character. They may also not tell the truth to their landlords. Not all of their family members may know what is actually going on. They may tell some friends but not others. Some wives of prisoners do not even admit to their children where their fathers really are, saying instead that they are in school, in the military, or working out of state. Although the fear of rejection may actually be greater than any actual mistreatment these women may receive, managing secrets becomes a way of life for many of them. Because of this, they are often denied much-needed support from community members.

RELATIONSHIP REALITIES

Although there are some similarities between the lives of the wives of prisoners and those of wives in other relationships characterized by separation, such as military wives and wives of businessmen, the restraints that prison imposes on a relationship are significant. In addition to the stress of separation, prisoners' wives experience lack of privacy, lack of adequate communication channels, financial hardship, children without their father's presence, loneliness, and prison system rules and degradation. Perhaps the biggest source of tension in these marriages is jealousy. Incarcerated husbands fear that their wives will leave them for other men, and this fear drives many to be suspicious of everyone and everything. Prisoners' wives need to reassure their partners continually of their commitment to the relationship.

While incarcerated partners deal with the stresses of life inside the prison or jail, their wives are dealing with financial and family decisions, running households, visiting at the prison, working, and parenting by themselves. The challenge of sharing the life decisions that spouses make when communication must be achieved via short (and monitored) telephone calls, letters, and visits (which may be behind glass) is monumental. Sharing a life and family requires communication and ways of resolving conflict. The power imbalance that results when one partner is incarcerated often complicates matters. The person on the outside has the bulk of the resources on which the incarcerated person depends. This is not a healthy dynamic for a relationship. The pressures that prisoners' wives are under and the needs they have often clash with the pressures and needs of their incarcerated mates.

FAMILY FINANCES

Prisoners are often dependent on their wives for money and for items such as clothing, food, and cigarettes, which may be sent in packages (depending on state regulations). Wives maintaining families on the outside have the extra burdens of (possibly) exorbitant phone bills due to collect calls from their prisoner husbands; the travel costs of prison visiting, which can include bus fare or gas money, hotel costs, and food expenses; and legal fees associated with their husbands' ongoing appeals. The typical low-income family must struggle to meet these expenses. Some wives have their telephone companies block long distance collect calls to avoid the temptation of accepting calls from their husbands that result in high bills; others have their phones turned off due to failure to pay their bills. Most of the public does not realize the significant burden that accepting collect calls from prisons can place on families as a result of the high costs that the phone companies negotiate with departments of corrections. This harms the families' ability to stay in touch.

Wives of prisoners often must support two branches of their families on one income. Their children may not understand the new budget restraints, and their husbands may not be sympathetic to the stresses their wives are under. Finances are a considerable source of tension for most couples. Those couples who were comfortably middle-class before incarceration often fall into financial difficulties, a different type of adjustment for these families.

VISITING

Because of prison administrators' interpretation of their mandate to ensure public safety, prisoners'

wives (and other visitors) are subjected to restrictive visiting conditions. These may include searches, strip searches, limited visiting hours, lack of privacy, crowded and noisy visiting rooms, strict dress codes, and rules related to touching, kissing, and whether a child can sit in a father's lap. Many prison visiting rooms have no activities for children or have limits on what children can bring into the visiting room.

One barrier that wives face is the insensitivity of guards. Many wives must travel long distances with their children to get to the prison to visit, and they may also be stressed or upset; even knowing this, guards often apply rules arbitrarily, displaying their position of power through the threat of visit termination. A guard may decide that an item of clothing a wife wore on one visit is unacceptable the next. One guard might allow visitors to wait in an inner doorway to get out of the cold, whereas another may refuse such a courtesy. An officer who overlooks a hug between a couple sets a more relaxed tone, whereas one who rushes over to warn the couple of visit termination adds to pressure.

Some wives limit their visits with their incarcerated husbands because of such treatment or because their children have nightmares after being at the facility. Others visit as often as they can. The circumstances vary, but what is common for all wives of prisoners is that visiting at a prison or jail is a degrading experience.

Most states have furlough systems in which prisoners in minimum security can earn home passes for short visits with their families. Some states allow conjugal visits and other extended forms of visitation in which wives and immediate family members can visit prisoners on the prison grounds for a few nights in a separate area such as a small trailer park or in special cabins. Although such visits can enhance family unification, prison administrators often use this privilege as a means to control the family; the privilege can be taken away as a punishment. Also, the prisoner is subject to counts and inspections at any time during a conjugal visit and can be called by prison authorities at any time during a furlough.

ROLE OF THE FAMILY

The prisoner's family should be seen as an active agent of rehabilitation and a unit that can help the prisoner during incarceration and with reentry into society. Instead, the prison system generally makes it difficult for prisoners' wives to play a positive role. The punitive nature of the prison system undermines the ability of wives and their incarcerated partners to engage in their roles as spouses and parents. The carrying out of these roles is essential for bonding in families and for connecting individuals to the larger society. Through these roles, spouses share emotional support, decision making, parenting, and role modeling, and in general create the context for acting in the world. Identity building is also based on role taking. The wives of prisoners can find a sense of self in part through helping and planning for the future with their husbands, contributing to home life, and nurturing their children.

SUPPORT ORGANIZATIONS

Many agencies, such as Friends Outside, work to assist the wives and other family members of prisoners. These agencies provide information about visiting, low-cost overnight housing for visitors, clothing in cases when visiting wives have dressed contrary to institutional dress codes, transportation to prisons, and other services, such as reentry support for families once prisoners have been released, including programs for children. These agencies can be powerful sources of support for prisoners' wives and families.

CONCLUSION

Wives of prisoners are frequently degraded as a result of their association with their inmate husbands, yet they often fulfill the socialized female roles of caretaker and nurturer. In this sense, prisoners' wives who stay in their relationships are successful despite societal stigma. For most, given their gender, race, and class, their life chances may not be much better if they were not married to these particular men. They might still be in the same low-wage jobs, for instance. However, their lives are significantly negatively affected by the incarceration of their loved ones due to the additional family hardships they endure. In spite of these hardships, many wives stand up to the system. They continue

to support their partners, and many speak out about the injustice of the prison system.

Every U.S. state could examine its rules related to families of prisoners—visiting, privacy, communication, special programming—to find ways to help these families and strengthen their family bonds rather than hinder them. Through such proactive steps, states can directly support the wives and indirectly support the incarcerated men. Society would also benefit from prisons' adoption of pro-family policies. Wives of prisoners are an untapped resource. Rather than seeing them as a group to be controlled, prison administrators could treat them as the allies and rich resources they really are.

WOMEN PRISONERS

Women prisoners are no longer an invisible population in the United States. They represent a growing number of those incarcerated nationwide. In recent decades, the number of women imprisoned in state and federal prisons has increased dramatically, rising from 12,000 in 1980 to more than 96,000 in 2002. As of 2002, California, Texas, and the federal prison system held nearly 40% of all women prisoners. In California alone, the female prison population rose from 1,316 in 1980 to more than 10,000 in 2002. In the federal system, the women's prison population increased from 5,011 in 1990 to 11,281 in 2002. Although the current incarceration rate for women continues to be far lower than the rate for men (60 per 100,000 women versus 902 per 100,000 men), the number of women in state and federal prisons since 1980 has increased at a rate nearly double the rate for men. Between 1995 and 2002, the annual rate of growth in the number of female prisoners averaged 5.4%, compared with the 3.6% average increase in the number of male prisoners.

Despite these figures, there does not appear to be a corresponding increase in women's criminality. In 1998, nearly two-thirds of women in state prisons were serving sentences for nonviolent offenses. Women are arrested and incarcerated primarily for property and drug offenses, with drug offenses representing the largest source of the increase in the number of women prisoners in 1998. On the contrary, the proportion of women imprisoned for violent crimes has continued to decrease. In other words, the greater tendency to incarcerate women appears to be the outcome of larger forces that have shaped U.S. crime policy. These include the "war on drugs" and related changes in legislation (e.g., federal and state mandatory sentencing laws), law enforcement practices, and judicial decision making.

PATHWAYS TO PRISON

In order to understand or develop correctional policies and interventions that address the specific needs of women prisoners, one must examine the population's key characteristics. Women prisoners have different personal histories and pathways to crime than their male counterparts. Their most common pathways to crime emerge from their experiences of physical, sexual, and emotional abuse; poverty; and substance abuse. Women face life circumstances that tend to be specific to their gender, such as sexual abuse, sexual assault, domestic violence, and the responsibility of being the primary caregiver of dependent children.

Women offenders are often triply marginalized by their race, class, and gender. They are predominantly from low-income communities, disproportionately likely to be women of color, undereducated, and unskilled, with sporadic employment histories. Moreover, they are mostly young, single heads of households with at least two children.

African American women are particularly overrepresented in correctional populations. Although they constitute only 13% of women in the United States, nearly 50% of women in prison are African American. Black women are eight times more likely than white women to be incarcerated.

The Bureau of Justice Statistics estimates that 11 of every 1,000 women will be incarcerated at the federal or state level at some point in their lives. This probability varies by racial and ethnic membership. Thus approximately 5 of every 1,000 white women, 15 of every 1,000 Hispanic/Latina women, and 36 of every 1,000 African American women will be incarcerated at some point during their lifetimes.

OFFENSE HISTORIES

Nearly three-fourths of all women in U.S. prisons are serving sentences for nonviolent offenses, and more than 50% have one or no prior criminal convictions. They are less likely than men to have committed violent offenses and more likely to have been convicted of crimes involving drugs or property. Often, their property offenses were economically driven, motivated by poverty and by their abuse of alcohol and other drugs.

Approximately 28% of women in state prisons and 7% of women in federal prisons were serving sentences for violent crimes in 1998. Three out of four women serving prison sentences for violent offenses committed simple assault. The majority of those serving time for violent offenses had prior relationships with their victims, as intimates, relatives, or acquaintances.

In general, women are less likely to commit homicide than are men. Moreover, when women kill, they are more likely than men to do so in self-defense. Since 1980, rates of homicide by women have been declining steadily. The per capita rate of murder committed by women in 1998 was the lowest recorded since 1976. Of the 60,000 murders committed by women between 1976 and 1997, more than 60% involved a victim who was an intimate or family member of the offender. At the end of 2001, 3,581 prisoners were under sentence of death in the United States, and 51 of those prisoners were women.

PHYSICAL AND SEXUAL ABUSE

Women under correctional supervision are more likely than women in the general population to have experienced physical and sexual abuse in their childhoods and adult lives. About half of all women prisoners have been physically or sexually abused before coming to prison. Compared with imprisoned men, imprisoned women are three times more likely to have been physically abused and six times more likely to have been sexually abused since age 18. Nearly 6 in 10 women prisoners have experienced past physical or sexual abuse. More than three-quarters of women reporting abuse have been sexually assaulted.

Ironically, it is women's very victimization that often leads them to prison, as researchers routinely find that women who have been sexually and physically abused are more likely to abuse drugs. Such women in turn then become vulnerable to arrest and incarceration.

SUBSTANCE ABUSE

There appears to be a strong link between female criminality and drug use. Research consistently indicates that women are more likely to be involved in crime if they are drug users. Incarcerated women use more drugs and use them more frequently than do men. Approximately 80% of women in state prisons have substance abuse problems. About half of women offenders in state prisons had used alcohol, drugs, or both at the time of their offense. Nearly one-third of women serving time in state prisons report committing their offenses to obtain money to support a drug habit. About half describe themselves as daily users. On every measure of drug use, women offenders in state and federal prisons report higher usage than their male counterparts.

THE WAR ON DRUGS

In 1979, 1 in 10 women in U.S. prisons was serving a sentence for a drug conviction. Today, this figure is 1 in 3. Nationwide, the number of women incarcerated for drug offenses rose by 888% from 1986

to 1996. Thus much of the increase in the population of women prisoners is a direct result of the war on drugs and, in particular, of the policy of mandatory minimum sentences. The emphasis on punishment rather than treatment has brought many low-income women and women of color into the criminal justice system. People who in past decades would have been given community sanctions are now being sentenced to prison.

Although most of the attention concerning the impact of the war on drugs has focused on the criminal justice system, policy changes in the areas of welfare reform, housing, and other social policy arenas have also combined to create a disparate impact on drug-abusing women. For example, the Personal Responsibility and Work Opportunity Reconciliation Act of 1996 specifically denies federal assistance to drug felons. This act imposes a lifetime ban on receiving food stamps or assistance from a federal grant for anyone convicted of a drug felony. These provisions have had significant consequences for women in prison and their families, given that women incarcerated for drug offenses constitute a considerable portion of the female prison population.

PHYSICAL AND MENTAL HEALTH

Women frequently enter correctional facilities in poor health, and women prisoners experience more serious health problems than do their male counterparts. Their health issues are often related to poverty, poor nutrition, inadequate health care, and substance abuse. Women also have more medical problems related to their reproductive systems than do men. About 6% of the women who enter U.S. prisons are pregnant at the time. The specific health consequences of long-term substance abuse are significant for all women, but they are particularly troubling for those who are pregnant.

Sexually transmitted diseases are also a problem among women prisoners. The rate of HIV infection is higher among females than among males. Women prisoners are 50% more likely than male prisoners to be HIV-positive. Moreover, the number of women prisoners infected with HIV has increased, whereas the number of infected male offenders has decreased.

Many women enter the corrections system having had prior contact with the mental health system. As a result, women in prisons have a higher incidence of mental disorders than do women in the community. One-quarter of women in state prisons have been identified as having a mental illness. The most common diagnoses for these women are depression, posttraumatic stress disorder (PTSD), and substance abuse. PTSD is a psychiatric condition often seen in women who have experienced sexual abuse and other trauma.

Many of the women who have serious mental illness also have co-occurring substance abuse disorders. These women are likely to experience significant difficulties in correctional settings, as they may be unable to understand all that is going on around them. Such women often end up in segregation for failing to follow orders. They may also try to harm themselves.

CHILDREN

Approximately 70% of all women under correctional supervision have at least one child who is under age 18. Two-thirds of incarcerated women have children under 18, and about two-thirds of women in state prisons and half of women in federal prisons lived with their young children prior to entering prison. It is estimated that 1.3 million minor children in the United States have mothers who are under correctional supervision and more than a quarter of a million minor children have mothers in jail or prison.

Incarcerated mothers and their children face numerous problems. Mothers in prison must overcome multiple obstacles to maintain relationships with their children. Although they were often the primary caretakers of their children prior to incarceration, many of them never see their children during the period that they are confined, given that more than half of the children never visit their mothers during incarceration. Distance from the prison, lack of transportation, and limited economic resources on the part of the children's caregivers can pose barriers to visitation by children.

Grandparents, primarily maternal grandmothers, are most likely to be the caregivers of the children of women prisoners. About one-quarter of the children live with their fathers, and about 10% are in foster care or group homes. Of the children in foster care, many experience multiple foster care placements and are separated from their siblings. Inadequate family reunification services during incarceration and inability to meet contact requirements and statutory schedules for reunification, such as those required by the Adoption and Safe Families Act of 1997, put incarcerated mothers at risk of losing their parental rights.

EDUCATION AND EMPLOYMENT

In 1998, it was estimated that 56% of women in state prisons and 73% of women in federal prisons had high school diplomas. Less than half of women in state prisons were employed at the time of their arrest, compared with nearly 60% of male offenders. Most of the jobs that women prisoners held before incarceration were low-skill and entry-level jobs with low pay. Women are also less likely than men to have engaged in vocational training prior to incarceration, and they have more difficulty finding employment when they are released from prison.

CONCLUSION

In summary, the number of women in U.S. prisons has increased dramatically in recent decades. The expansion of the women's prison population has been fueled primarily by increased rates of incarceration for drug law violations and other less serious offenses. Women of color have been affected most of all.

The mass incarceration of women has led to reform efforts by activists, academics, lawyers, community-based agencies, correctional professionals, and current and former women prisoners. Advocates are calling for sentencing reforms, alternative sanctions, resistance to prison expansion, and assistance to women reintegrating back into their communities. These efforts have begun to influence correctional policy and practice in terms of the development of gender-responsive programs and services and the expansion of community-based programs for women.

In order for reformers to be successful, they must pay attention to the needs and characteristics of the women behind bars. To that end, a national profile of women prisoners reveals the following about them as a group:

- Disproportionately women of color
- In their early to mid-thirties
- Likely to have been convicted of drug or drug-related offenses
- Fragmented family histories, with other family members also involved with the criminal justice system
- Survivors of physical and/or sexual abuse as children and adults
- Significant substance abuse problems
- Multiple physical and mental health problems
- Unmarried mothers of minor children
- High school diploma or GED but limited vocational training and sporadic work histories

A review of the backgrounds of women prisoners indicates that there may be more effective ways to address their criminality in noncustodial settings. An understanding of the characteristics of women prisoners suggests the need for gender-responsive correctional policies and programs that specifically target women offenders. Community-based programs focusing on drug treatment, physical and mental health care, job training and placement, affordable housing, and family reunification may help reduce the rate of women's imprisonment.

WOMEN'S ADVOCATE MINISTRY

Women's Advocate Ministry, Inc., known as WAM, is a nonprofit organization established in 1983 to assist women newly incarcerated at Rose M. Singer Correctional Facility at Rikers Island in New York State. WAM provides advocacy and services to these women and their children. WAM offers active outreach, crisis intervention, and referral and supportive services. Staff members of the organization serve as liaisons among the women, their families, and their lawyers, in addition to providing referrals for many types of services these women may need.

HISTORY

In 1983, after having accompanied an accused woman to court and viewing firsthand the criminal justice system at work, Rev. Dr. R. Elinor Hare founded the Women's Advocate Ministry and began its crisis intervention program as a one-person effort. Initially, WAM served women in the Brooklyn criminal and supreme courts, under the auspices of the Brooklyn division of the Council of Churches of New York City. Within six months, however, demands for services were so great that the program was expanded to the courts in Manhattan and Queens, and soon thereafter to the Bronx. After 10 years of service to the organization, Dr. Hare retired in February 1993, and Rev. Annie M. Bovian replaced her as executive director.

Bovian, an ordained United Church of Christ minister, is a graduate of Harvard University School of Divinity, where she also attended Harvard Law School. She initiated the bilingual Hispanic Mother/Child Program for incarcerated mothers. In September 2001, she began a pilot program at the Westchester Valhalla Jail for Women that replicates WAM's Rikers Island program for incarcerated women and their children. In 1997, Bovian, along with Sr. Helen Prejean, author of *Dead Man Walking,* won the prestigious Lives of Commitment Award at Auburn Theological Seminary for her work with women in the criminal justice system.

SERVICES AND TARGET POPULATION

According to WAM, each year approximately 14,000 women are processed at the Rose M. Singer Correctional Facility at Rikers Island. On any given day, as many as 1,800 women are held at the jail, including pregnant women and women who have just given birth, who are housed with their newborns in the Rikers Island Health Services Nursery Program. During 1999, more than 1,000 of the women who entered the Rikers facility were pregnant, and at least 180 of them gave birth while incarcerated. Because the nursery at the facility can accommodate only 15 babies with their mothers, most of the babies must be immediately placed in foster care or with relatives, which disrupts the maternal bond. Research has indicated that family ties remain a strong factor in released prisoners' successful reentry into the community.

Throughout the years, members of WAM have directed their efforts toward supporting women prisoners and improving their possibilities of integrating back into society and staying out of the criminal justice system. WAM also educates

women about their responsibilities and rights as parents. WAM argues that women prisoners and their newborns should be placed in residential rehabilitation programs, to help them stay together as a family unit. The organization also recommends placing women who need drug treatment in residential programs that allow them to start on the road to recovery while remaining close to their families.

Over a period of 12 months, WAM served approximately 750 women going to court in New York City and more than 950 children of incarcerated mothers. Since 1993, WAM has helped 276 mothers and their children find housing, and only 8 of these women have since returned to the criminal justice system. WAM serves primarily minority women ages 18 to 35 who have been welfare recipients. Approximately 85% of the women served are low-level drug users with little or no education or job experience. Most of these women come from New York City's five boroughs. WAM is the only program in the city that provides court advocacy from arrest until the closure of a case, a period that can range from three months to three years. WAM believes it makes a difference for a woman's future if there is someone standing beside her throughout the arrest, court, and prison experiences.

In early 1998, while Rev. Annie Bovian was interviewing some new mothers in the nursery at Rikers, one of the mothers told her about her ordeal of being shackled while in labor and being taken to the hospital to give birth. A *New York Times* reporter interviewed Bovian after reading an Amnesty International article that she helped write. As a result, a member of the New York State Assembly put forth Bill No. A3292, which passed in January 2001; this legislation makes it illegal for authorities to shackle a woman who is in custody and in labor while she is being transported to the hospital to give birth.

RESOURCES AND FUNDING

WAM does not receive city, state, or federal funding. In order to connect women with the resources they need to help themselves and their children, WAM has established a strong resource and referral network of providers. To bolster its advocacy work, WAM is a member of the New York State Criminal Justice Alliance and the Coalition of Women's Prisoners. Through these memberships, WAM is able to maintain a presence in the public eye and work with groups that share its mission and have a strong commitment to the population it serves.

CONCLUSION

WAM acquires its clients by word of mouth; women are referred by the Chaplain's Office at Rikers Island, correctional officers, and inmates who have experienced the benefits of the program. WAM also reaches out to women who attend workshops given at the Rose M. Singer Correctional Facility. WAM has an affable relationship with the Department of Corrections, which helps to achieve WAM's goal of placing every woman into a program and preventing women prisoners from falling between the proverbial cracks.

WOMEN'S HEALTH

In the past decade, the number of women inmates in U.S. correctional institutions and the average length of their sentences have increased dramatically. At the same time, there has been an influx of ill and generally unhealthy women into these institutions. These women often have different treatment needs and problems than their male counterparts. In a prison system designed primarily for men, women's health needs are often not addressed by prison policies, programs, and procedures. Medical issues that relate to women's reproductive health and to the psychosocial issues that surround the imprisonment of single female heads of households are often overlooked. Women in prison complain of the lack of regular gynecological and breast exams and argue that their medical concerns are often dismissed as exaggerated.

MEDICAL SERVICES FOR WOMEN IN PRISON

Adequate provision of medical care is one of the most pressing problems facing women prisoners. A review of existing studies on health care services for women inmates reveals that (1) access to treatment for both general and drug-related health problems is limited, (2) the health care provided to women prisoners is mediocre, and (3) prison medical professionals are often underskilled. In addition to suffering many of the same illnesses as their male counterparts—HIV/AIDS, hepatitis, sexually transmitted diseases, tuberculosis, and other communicable diseases and mental illnesses—women prisoners have medical needs over and beyond the treatment of these. Women in custody have an increased incidence of chronic health problems, including asthma, gynecological disease, nutrition problems, and convulsive seizure disorders, yet the implementation of innovative in-house medical treatment has not kept pace with the diverse needs of the ever-increasing population.

Women often require more medical attention than men, and so women's prisons have to deal with greater demand for adequate health care. This is especially true for women who enter prison pregnant and require prenatal care. Their pregnancies are often considered to be high risk, and many are complicated by drug and alcohol abuse, smoking, and sexually transmitted infections (e.g., HIV, hepatitis B). These factors, when combined with poor social support and histories of abuse, put these women and their newborns at even greater risk for increased perinatal and postnatal morbidity and mortality. Firsthand accounts suggest that many pregnant women in prison do not receive regular pelvic exams or sonograms. They also receive little to no education about prenatal care and nutrition, they are unable to alter their diets to suit their changing caloric needs, and they are subjected to remaining shackled during delivery and to being denied labor support from family members. After delivery, the new mothers are not permitted to breast-feed, and they are allotted between 24 and 72 hours to bond with their infants before the babies are turned over to family members for guardianship or enter the state's foster care system. Although some model prenatal care and parenting programs do exist, there are not enough of these programs to reach the thousands of pregnant women in U.S. prisons. Those women in prison who wish to terminate a pregnancy face additional problems, because even though according to U.S. law abortion is a fundamental right of every woman, abortion is generally not very accessible to women in prison.

A host of other problems related to health care exist in women's prisons, including a lack of availability of specific medications and specialized services. Because women's prisons are relatively small institutions, policymakers find it hard to justify installing extensive medical services. Consequently, women inmates requiring greater medical attention than the prison provides must be transported to hospitals, which could enhance their access to care. However, when the prisons are located in rural areas, transporting inmates to urban medical centers can be problematic, thereby posing greater risks for the inmate-patient. Such issues have been the subject of litigation in New York and other states (see, e.g., *Todaro v. Ward,* 1977). Even when the courts uphold an inmate's petition for better

medical attention, however, prison administrators often react slowly to the court orders. In California, for example, the 1995 *Shumate v. Wilson* class-action lawsuit challenged several aspects of negligent care in women's prisons: the lack of access to doctors; the failure to provide follow-up care to chronically ill women; constant interruption of treatment involving medications such as insulin, antihypertension medicines, and protease inhibitors; and the failure to provide consistent preventive care such as Pap smears and mammograms. Yet since the *Shumate* suit was settled and the prisons found to be in compliance with all provisions of that settlement (a finding disputed by the women plaintiffs and their attorneys), women have continued to die as a result of negligent care (Talvi, 1999).

SPECIAL HEALTH NEEDS OF IMPRISONED WOMEN

Many imprisoned women are survivors of physical and sexual abuse and have lacked previous health care in their communities, two factors that put them at even greater risk for developing life-threatening illnesses such as HIV/AIDS, hepatitis C, and HPV/cervical cancer. Studies have shown that AIDS has been identified as the eighth leading cause of death among women ages 15 to 44 in the United States. Women at high risk of infection (drug abusers and the economically disadvantaged) are concentrated in prison populations, and the risk is especially serious for incarcerated women, who often receive the smallest piece of the resource pie.

In addition to the physical effects of drug use, addicted offenders may suffer from numerous psychological and emotional effects. Suicidal thoughts, suicide attempts, depression, poor conduct, and personality disorders are but a few of the possible drug-related mental health challenges that correctional mental health workers face today in working with women prisoners.

Moreover, despite being imprisoned and presumably safe from harm, in multiple prisons throughout the United States women are victims of sexual abuse by prison staff, at times during routine medical examinations. In 1999, ABC's news program *Nightline* ran an investigative series on conditions of women in prison, focusing on California's Valley State Prison (VSP). According to *Nightline,* prisoners at VSP filed, on the average, 400 medical complaints each month in 1999. One common complaint involved unnecessary and unwanted cervical exams and Pap smears. "I went to see [the prison doctor] to ask him if he could give me a blood test to see if I have arthritis. He wanted to give me a Pap smear and I didn't understand. What's that have to do with it?" one prisoner asked. Dr. Anthony DiDomenico, at the time chief medical officer at VSP, told *Nightline* host Ted Koppel: "This is a group of women that are isolated. And I've heard women tell me that they would deliberately like to get examined—it's the only male contact they get." DiDomenico's shocking taped comments provoked a storm of outrage, and he was reassigned within the California Department of Corrections.

In 1999, Amnesty International found that many women in prisons and jails throughout the United States continued to be victims of rape and other forms of sexual abuse by male staff. Women complained that staff continued to use sexually offensive language and that male staff members touched female inmates' breasts and genitals while conducting searches and watched the women while they were naked.

As the U.S. population in general ages, and as determinate sentencing policies and strict sentencing guidelines continue, inmates—in particular, women—will age within the nation's correctional facilities. Expenses stemming from medical services extend beyond the costs of medication and routine laboratory work; prison administrators will have to alter the physical features of the institutions to accommodate inmates who use wheelchairs and/or those who might require hospice services. Moreover, programmatic offerings will need to reflect the complex and diverse needs of an aging population. Training programs on how to secure Social Security benefits will be of more interest and use to the growing numbers of elderly women inmates than cosmetology or secretarial training programs.

NEEDED HEALTH CARE CHANGES

The quality of health care in prisons is as widely varied as the quality of health care in the free world. It is impossible to generalize about conditions across one state's correctional institutions, much less across the entire country. We do know, however, that health services delivery within prisons has been increasingly strained over the past decade, for two primary reasons: (1) More inmates are coming into the prisons, and (2) new inmates are less healthy than their counterparts of just a decade ago. Compared with women in the general U.S. population, a much higher percentage of women in jails and prisons have serious health problems. The street lifestyle that many female inmates have led (e.g., drug and alcohol abuse, poor diet, possibly indiscriminate sexual behavior, restricted access to medical services, and the tendency to neglect medical problems) means that when they enter prison they are likely to require medical attention and education to help them take better care of themselves when they are released back into the community (Acoca, 1998; Zaitzow, 2001).

Numerous changes in prison policies, programs, and procedures are necessary if health care in prisons is to improve. Many of these changes must occur within prison institutions to strengthen prisoner access to health care (urgent care, preventive care, chronic care, specialty care) and health education materials. Other institutional changes must address the issues of assuring patient confidentiality, facilitating prisoners in taking partnership in their health care decisions, and providing continuity of follow-up care, especially when an outside physician is consulted. Unfortunately, these types of changes may require a transformation of the prison culture. The mission of prisons may need to be redefined, correctional staff members retrained, and the health care budget reevaluated.

Changes within the institution, however, cannot be isolated from changes in the community at large. For example, to ensure continuity of care for those released from prison, changes in prison health care must be accompanied by improvements in access to health care services in the greater community. Furthermore, the general public, in the form of oversight committees or accreditation organizations, must be more involved in reviewing the standards of care within prisons. In short, the general public and public health care systems may need to reevaluate how incarceration affects public health and redefine their own mission of building and maintaining healthy communities.

Although the changes needed to improve prison health care may seem unattainable, there are ways in which health care providers, working with women prisoners, can have positive impacts on the system and the health care of all prisoners. The first step is for health care providers to develop knowledge about the institutional barriers that interfere with the provision of quality health care in prisons. Defining the obstacles, however, must be combined with an understanding of prisoners' backgrounds and the ways in which prison life fosters a milieu of fear and distrust. By evaluating and measuring these two factors, health care providers can set the foundation for successfully advocating for the health of incarcerated women. Furthermore, they will establish the groundwork for effectively designing and implementing programs that have the potential to mitigate and remove the barriers to providing quality health care in prison.

CONCLUSION

The urgency of the situation faced by women prisoners demands an all-out effort to stop the deaths and change the health care system. The passion for justice is driven by the women prisoners themselves, who, at great risk to themselves, come forward to let the world know about what goes on behind the walls. Their demands are being taken up by their family members, their advocates, and a growing community of people who support them. Some of the key demands include the abolition of the medical technical assistant position, the granting of compassionate release to women who are dying in prison, abolition of the $5.00 payment required of prisoners for medical visits, removal of the prison health care system from control of the Centers for Disease Control and Prevention, and an

independent investigation of the ongoing medical crisis in women's prisons.

There is no doubt that the provision of health-related services to inmates means an increased burden for the nation's correctional systems. Against the backdrop of the "war on terrorism" and the resulting budget cuts that have had a nationwide impact, the last thing on most people's minds is spending money on health care for prisoners. Yet tens of thousands of prisoners suffering from undiagnosed or untreated communicable diseases, chronic diseases, and mental illness are being released into communities around the nation. And thousands more are scheduled for release in the next few years.

The nation's response to this challenge will be influenced by fiscal realities, court mandates, humanitarian concerns, and public beliefs regarding the treatment deserved by inmates. It must be remembered that most prisoners are eventually released from prison and reenter the free society. Without programs to address the unique physical, emotional, sexual, and drug-related problems of female inmates and prisoners in general, our prisons will be returning high-risk (not in a criminal sense) individuals to the free community. Maintaining and improving the health status of prisoners, as well as providing preventive health care during incarceration, can substantially reduce future economic, social, and health care burdens for parolees, their families, and the state. If the government continues to disregard the explosive situation developing in prisons and within communities where released prisoners reside, there will be a health care crisis of epidemic proportions.

Legal Case

Todaro v. Ward, 565 F.2d 48 (2d Cir. 1977).

WOMEN'S PRISONS

Since the 19th century, women offenders in the United States have been held in separate women's facilities. These institutions have always been shaped by ideas of gender as well as by the pathways that lead women to them. Because there are a number of differences between women's and men's prisons, it is important to examine women's institutions separately.

EVOLUTION OF THE CONTEMPORARY WOMEN'S PRISON

In the first American prisons, women were housed in sections of men's prisons, where they suffered

from neglect and abuse. Left alone for long periods of time, denied regular exercise, education, work assignments, or religious instruction, women inmates were also particularly vulnerable to sexual assault by male officers and inmates. Much like today, most of the early women prisoners were incarcerated for crimes related to their gender and the struggles in their lives—drunkenness, petty theft, and prostitution.

The first prison for women in the United States was approved by the Indiana legislature in 1869 and opened in 1873. The Indiana Reformatory Institution for women and girls ushered in a new era of punishment. By 1917, 14 states had established similar penal institutions for women. Although the conditions in the reformatories were somewhat better than those in earlier facilities, these institutions often confined women in another way, by reinforcing traditional feminine and domestic images. Usually built in the "cottage style," reformatories housed women in relatively small buildings that were designed to replicate the ideal middle-class home. Instead of male prison guards, prison matrons supervised the inmates; the matrons were meant to serve as models of respectability, domesticity, and femininity. These reformatories sought to rehabilitate their residents through training and education in cooking, cleaning, sewing, and other conventional domestic activities.

Women sent to the reformatories were usually those who had been convicted of moral or sexual crimes that transgressed the strict standards of middle-class sexual behavior and gender role expectations. They also tended to be white. Women of color continued to be sent to the more traditional custodial prisons, which lacked any programs or separate housing for them. Their different treatment was often justified by racist beliefs that they were morally inferior and would be immune to the treatment offered in the reformatories.

After the 1930s, the establishment of separate prisons for women became the norm. Some of these prisons were built specifically for women, whereas others were originally built as male or juvenile facilities. Several decades after the first reformatories, the cottage style gave way to "campus style," which continued the use of small housing units and open green spaces. Also in this period, some jurisdictions experimented with "co-correctional" facilities. Co-correctional prisons confined women and men in the same institution and provided shared programming in education and job opportunities. Living quarters were separate, and interactions between female and male prisoners were formally controlled. This method sought to resolve some of the earlier problems faced by women in prisons by increasing their access to programs and services and promoting a more normal social environment. Critics of co-correctional facilities, however, asserted that women overall were disadvantaged by the presence of male inmates due to the increased surveillance required to control sexual activity, the tendency of male inmates to dominate desirable jobs and the informal social world of the inmates, and continued pressure for sexual arrangements. As a result, few systems today continue to use the co-correctional model.

THE MODERN PRISON FOR WOMEN

Most U.S. states have a relatively small number of prisons for women. Larger states, such as California, Texas, and New York, may have four or five women's facilities, whereas smaller states typically have one. Almost all women prisoners, however, are incarcerated far from their homes, friends, and families. They are typically distant from services that are more available in urban communities. In the 1980s and 1990s, as more women were sentenced to prison under the enhanced sanctions against drug offenders, women's prisons became increasingly crowded. In response, some states began to build new facilities for women. In doing so, they usually used designs based on men's prisons. These "New Generation" prisons typically have two types of housing: units intended to hold women who pose disciplinary problems and dormitories or rooms holding six to eight women. Rarely do women live alone in cells.

Unlike men's prisons, the majority of women's facilities in the United States encompass all classification and security levels. These institutions are often rated at an "administrative security level" and either mix women of all security levels or attempt to

establish some internal housing categories, housing women of differing security levels in separate units. With the exception of newly arrived prisoners and the small numbers held in the more restrictive special housing units (also known as "administrative segregation" or "security housing units"), most women prisoners remain in the general population. Regardless of security level classification, these prisoners work, attend school, and participate in other programs in close contact with all other inmates, whose classifications may range from minimum to maximum custody. Lifers and short-termers mingle in housing units, in work or education assignments, and in recreational areas. Given the relative rarity violence in the women's prisons, such group housing arrangements do not cause problems, as they might in men's institutions.

The disproportionate sanctioning through disciplinary procedures and commingling of women of all custody levels within a few "general purpose" facilities often results in the "overclassification" of women prisoners. Few jurisdictions in the United States have developed classification instruments that adequately assess the custody and security needs of women. As women prisoners are typically housed in these administrative-level facilities, the majority are subjected to the relatively severe custody conditions required by the presence of a small number of high-risk women. Additionally, women who represent minimal risk to the community are often "overconfined" because of the lack of community corrections and "camp" facilities for women.

The small numbers of women who are housed in higher-security housing units are usually confined to their cells and experience the most restrictive custody. In their cells for an average of 23 hours a day, they eat their meals alone and are allowed very limited recreation and visiting privileges. Only a small percentage of the total female prison population is held in special housing units, but the conditions these prisoners face are often severe.

Privacy is a scarce commodity in women's prisons. In addition to crowded conditions, shared housing units, and the need for surveillance, the presence of male staff undermines inmates' abilities to attend privately to personal hygiene and grooming. Men make up from 50% to 80% of the custody staff in women's prisons, supervising housing units and observing showers, toilets, and the rooms or cells where inmates dress. Although most prisons prohibit strip searches and body cavity searches of female inmates by male staff, Human Rights Watch has found that males have observed these procedures as they have been conducted by female staff.

SEXUAL ABUSE

Research indicates that women in prisons are often at risk of sexual abuse by prison staff. In a review of sexual abuse in selected U.S. prisons, Human Rights Watch (1996) investigators have identified four specific issues concerning sexual abuse of women prisoners: (1) the inmate's inability to escape the abuser, (2) ineffectual or nonexistent investigative and grievance procedures, (3) lack of employee accountability (either criminally or administratively), and (4) little or no public concern. The investigators bluntly state that being a woman in a U.S. state prison can be a terrifying experience.

Sexual misconduct in prisons includes sexual abuse, sexual assault, sexual harassment, physical contact of a sexual nature, sexual obscenity, invasion of privacy, and conversations or correspondence of a romantic or intimate nature. The potential abuse of power inherent in staff-inmate relationships is at the core of staff sexual misconduct. It is this inherent difference in power between staff and inmates that makes any consensual relationship between a staff member and an inmate impossible. Misconduct can take many forms, including inappropriate language, verbal degradation, intrusive searches, sexual assault, unwarranted visual supervision, denying of goods and privileges, and the use or threat of force. It is also important to note that female officers have also been found to be involved in this serious misconduct, although the more publicized pattern appears to involve male staff with female inmates. In addition, some standard procedures in correctional settings (e.g., searches, restraints, and isolation) can have profound effects on women who have histories of trauma and

abuse, often retraumatizing women who have posttraumatic stress disorder.

PRISON CULTURE FOR WOMEN

Prison sociologists look at how prisoners "do their time" in terms of prison culture. Prison culture includes the ways in which prisoners define their experience in prison, how they learn to live in prison, how they develop relationships with other prisoners and staff, and how they change the way they think about themselves and their place within the prison and the free world. The first studies of women's prison culture found a social structure based on the family and traditional sex roles, and on same-sex relations. Researchers found that the world of women's prisons was quite different from that of the male culture: prison culture among women was tied to gender role expectations of sexuality and family, and prison identities were at least partially based on outside identities and experiences.

Contemporary work examining women's prison culture suggests that little has changed. The core of prison culture among women continues to be shaped by inmates' personal relationships with other prisoners, which are both emotionally and physically intimate; by their connections to family and loved ones in the free community, or "on the street" in the language of the prison; and by their commitments to their pre-prison identities.

The prison family is one of the primary forms of social organization in the women's prison. Although some of these families are based on intimate same-sex couple relationships, the majority of these complicated prison relationships provide emotional, practical, and social connections in the uncertain world of the prison. A key element in surviving prison life is negotiating an aspect of prison culture known as "the mix." In its shortest definition, the mix is any behavior that can bring trouble and conflict, whether with staff or other prisoners. A variety of behaviors can put an inmate in the mix; research has found that the issues prisoners mention most frequently are related to "homo-secting," involvement in drugs, fights, and "being messy"—that is, involvement in conflict and trouble.

RACE AND ETHNICITY

Women who are members of minority groups are disproportionately represented in the U.S. prison population, with the percentage of African American women prisoners growing at increasing rates. In spite of this racial and ethnic composition, race relations and conflicts are not a primary feature of the social order of women's prisons. Although racial and ethnic identity is a predominant factor in men's prisons, in women's prisons the issues of race and ethnicity form a minor subtext that mediates relations among women prisoners and between prison workers. Women in prisons typically live and work in integrated housing units and job assignments and often form personal relationships that cross racial lines.

Racial and ethnic gangs have not yet appeared in women's prisons to the extent they are found in men's prisons. Although some small number of women may enter prison with some street gang or clique affiliations, the subculture of the women's prison offers little support for these pre-prison identities. Women seeking the personal and community ties found in street gangs are likely to find substitutes within prison families or other personal relationships. Unlike in some men's prisons, housing assignments in women's prisons are not routinely made based on inmates demographic or gang affiliations.

WOMEN'S SERVICES AND PROGRAMS

Given that men constitute more than 90% of the U.S. prison population, the majority of policies in most prison systems have been designed to manage the behavior of male prisoners. In spite of the increasing population of female prisoners, the male model of corrections continues to dominate. Women continue to be a correctional afterthought, as prison administrators focus on the problems presented by the male majority. Many systems lack any written policies concerning the management and supervision of female inmates or parolees. Policy areas that may affect female and male inmates differently include procedures for pat searches and strip searches; availability of commissary items,

particularly health and beauty items; allowable personal property; and transportation and restraint policies for pregnant women.

The contemporary criminal justice system has placed a low priority on the gender-related treatment needs of female offenders. The lives of female offenders are shaped by socioeconomic status as well as by women's experiences of trauma and substance abuse and their relationships with partners, children, and family. Most women prisoners have had economic and other social disadvantages that have been compounded by trauma and substance abuse histories. Women offenders are also typically undereducated and unskilled. Contemporary research has shown that these factors propel women into substance abuse, crime, and subsequent imprisonment.

Although many researchers and advocates argue that programs and services for women in prison should address such factors, rehabilitative programs for women offenders are typically based on generic programs that make few gender distinctions. In particular, there is evidence from academic research and litigation that women's prisons lack adequate or appropriate services in several areas. For example, women's prisons are deficient relative to men's prisons in the educational and vocational programs they offer. Men's prisons typically provide a greater variety of such programs and training for more skilled (and better-compensated) occupations. In contrast, women are offered a narrow range of training programs for stereotypically "female" occupations, such as cosmetology and low-level clerical work. Women in prison receive fewer institutional work assignments and lower rates of pay than do male inmates, and men have greater access to work-release programs.

Health care is similarly inadequate in many women's prisons. With health care poorly funded, both the physical and the mental health needs of women prisoners are often neglected. In addition to needing basic health care, women prisoners often have specific health problems, such as HIV/AIDS, hepatitis C, and other conditions related to their risky sexual and drug-using behavior prior to arrest. Pregnancy and women's reproductive health are also neglected by most prison systems. It has been estimated that from 25% to more than 60% of the women in U.S. prisons today require mental health services. Many women prisoners are dually diagnosed with substance abuse and mental health problems. These conditions are usually not addressed adequately in the prison environment.

A lack of appropriate substance abuse treatment has also been documented in women's prisons. The vast majority of women offenders need substance abuse services. Programs are often hampered by insufficient individual assessment; limited treatment for pregnant, mentally ill, and violent women; and the lack of appropriate treatment and vocational training. Finally, few prison programs address the high degree of violent victimization that many women prisoners have experienced, both as children and adults. This abuse has implications for their emotional and physical well-being and may be tied to drug abuse and other offending behaviors.

CONCLUSION

An understanding of contemporary women's prisons requires knowledge of the history and evolution of these institutions, the impact of public policy on women's sentencing, and the ways in which these prisons are different from those designed for male offenders. Recent research on women's prison culture, the ways in which prison services can address women's pathways to prison, and the importance of gender-responsive policy and parity in funding and program and service provision has increased attention to these often ignored institutions.

WORK-RELEASE PROGRAMS

Work-release programs permit inmates to work for pay in the community during the last few months of their confinement. Wisconsin, Vermont, and several other states began to implement work-release programs on a local level in the early 1900s. It was not until 1955, however, that the concept caught on at the state level. By 1972, every state except Mississippi and Nevada had work-release programs or were establishing such programs. At that time, approximately 60% of all inmates in work-release programs were found in a handful of states: California, Florida, Massachusetts, North Carolina, and Wisconsin. Today, although most states authorize work-release programs, only one-third of prisons operate them, and fewer than 5% of eligible prisoners participate in them. Work-release programming has declined since the 1980s, when federal funding ceased and the public's interest in rehabilitation shifted to an emphasis on "getting tough on crime." In addition, a few highly publicized and sensational failures (such as the case of Willie Horton) convinced the public that programs such as work-release threaten public safety.

OVERVIEW

Work-release programs are designed to allow inmates to develop job skills and discipline and to give them opportunities to perform meaningful community service. The types of work-release assignments vary widely. Inmates may be employed (sometimes in work crews) cleaning public spaces such as parks and fairgrounds, assembling playground equipment, installing irrigation systems, repairing streets, installing storm-drain lines, or building curbs and sidewalks. Other assignments require workers who are plumbers, electricians, carpenters, cabinetmakers, sheet metal workers, or landscapers. Inmates may work on city, state, or federal projects or for private employers who participate in work-release programs, including labor and food services.

Inmates' participation in work-release programs is considered a privilege rather than a right. In each program, inmates must meet certain requirements in order to participate. For example, in Idaho, violent offenders must be within 18 months of parole; nonviolent offenders must be within 24 to 30 months of release. Issues that may disqualify an inmate from participating in a work-release program include being convicted of sexual battery, serving multiple commitments to prison, attempting to escape in the past, and having been terminated from a community release program during the current sentence for a rule violation or disciplinary action.

The wages paid to participants in work-release programs also vary widely. Inmates in some programs can be paid as little as $2–$3 per hour, whereas others are employed for $7.50 per hour or

more. Nearly all jurisdictions with work-release programs charge participants some form of fees or require the inmates to share some costs. One-fifth of such programs charge inmates for room and board. In Florida, for example, 45% of the net pay an inmate earns while on work-release goes to reimbursing the state for room and board, 10% goes to family assistance (including child support), 10% goes to the inmate's savings account, $50 per week goes toward the inmate's personal incidentals, and any remaining amount goes into the inmate's saving account.

THE CASES FOR AND AGAINST WORK-RELEASE

Allowing nonviolent inmates to work prior to their parole or release dates offers a number of benefits for the incarcerated and for society. Released inmates have a hard time finding work, and their lack of marketable skills can lead them to reoffend. In the past, prisoners were forced to perform meaningless tasks in prison that did not prepare them for life after release. Inmates improve their chances of success after release if they have a legal way of earning money to provide for themselves. Work-release gives an inmate an opportunity to learn a trade and to learn how to manage personal finances.

The widely cited benefits of work-release programs include improving inmate behavior, ensuring that fines are paid, permitting cities and states to undertake work that would otherwise be deferred or delayed, and possibly reducing the costs of incarceration to taxpayers. Work-release programs can allow individuals to pay off or reduce fines that they would otherwise face upon release, to save some money to aid their reentry into society, and to assist their families and friends with household expenses. Also, returning to a jail in his or her home community to participate in work-release prior to release can facilitate an inmate's transition back into the community.

Most experts agree that work-release programs contribute to the rehabilitation of many inmates released each year. However, the extent to which work-release programs reduce costs and recidivism rates is not clear, as research findings are mixed. Studies of work-release programs in the state of Washington found that the programs did not significantly reduce costs and recidivism. Work-release programs are not necessarily less expensive than keeping inmates in prison; if infractions and rule violations are punished with incarceration, then the initial cost savings are reduced or eliminated. Nonetheless, the research in Washington did find that work-release programs prepared inmates for transition back into society and were associated with only negligible safety risks. Middle-aged offenders and offenders convicted of property crimes were most likely to participate in work-release. Hispanic offenders were less likely to participate than were white or black offenders. The most successful offenders in the Washington work-release programs were older white offenders who had no prior criminal records. Other findings suggest that programs that prepare inmates for employment through education, social support, job training, and prerelease placement services may be the most successful.

Critics of work-release programs frequently cite concerns about safety and the use of cheap prison labor. For example, in 1995, Virginia's work-release program was halted because a participant in the program escaped and committed a violent crime. The program was later reinstated, but on a much smaller scale. As noted, studies of Washington's work-release program and others have found that most participants complete these programs successfully. Of those who are returned to prison, the most frequent reasons are failure to abide by curfew, absconding from the program, drug possession, and other program rule infractions. New law violations account for a very small percentage of those returned. In the Washington study cohort of 965 people, no offender committed a violent felony while in the program. Fewer than 5% of the participants committed new crimes while on work-release, and 99% of those crimes were less serious property offenses, such as forgery or theft.

Trade unions and businesses have criticized the use of cheap prison labor. To avoid conflicts with union collective bargaining agreements and the private sector, work-release programs frequently

have policies that limit the use of prison work crews to specific projects. For example, an Oregon work-release program has collective bargaining agreements with police, fire, and service employees' unions that limit seasonal and temporary employment of work-release participants to six months. To avoid conflicts, the city has an administrative policy that limits the use of prison work crews to tasks on particular programs and projects for which there is minimal competition with the private sector. Inmates may also work on selected other tasks identified by the city manager, such as grounds and turf maintenance and the repair of facilities and infrastructure.

CONCLUSION

Although support for work-release programs declined in the 1980s, renewed interest in prisoner reentry since 2000 suggests a return to an emphasis on the rehabilitative value of prerelease employment in the community. Many potential problems with work-release programs can be ameliorated through careful prescreening of participants, the provision of orientation for nonprison work-site employees, good supervision and support for participating inmates, and the placement of inmates in jobs that have not been filled by nonprisoners.

Y

YOUNG LORDS

The gang known as the Young Lords formed in 1958 as an assembly of Puerto Rican adolescent males living in what was then one of Chicago's most impoverished neighborhoods. In the mid-1960s, the Young Lords redirected their energy from turf-oriented, intergang warfare to a spirited attack on the city of Chicago's urban renewal program, a gentrification effort that ultimately displaced thousands of poor minorities from the neighborhood. By 1968, the Lords had matured into a formidable and radical group taking part in the national civil rights movement, working alongside the Black Panther Party, the Young Patriots Organization, and other left-leaning groups to critique capitalism's oppression of poor people of color. In the early 1970s, the Lords and their compatriots set their sights on the American prison system in hopes of revolutionizing the treatment of prisoners through militant action. To some extent their tactics worked, but in 1975 the Chicago Young Lords disbanded under the pressure of political infighting, police suppression, and narcotics addiction among the group's membership.

ORIGINS

The evolution of the Young Lords is inextricably bound to the migration patterns and experiences of Puerto Ricans. With demand for factory labor at an all-time high in the late 1940s, U.S. companies recruited heavily from Puerto Rico, enrolling thousands of Puerto Rican farm workers in contract labor agreements. Newly arrived Puerto Rican immigrants faced many of the same barriers and challenges their European predecessors had confronted: institutional racism, dilapidated housing, concentrated poverty, inadequate health care, unsanitary living conditions, failing schools, unresponsive government agencies, and physical attacks at the hands of their new non–Puerto Rican neighbors.

In the 1950s and 1960s, gentrification and urban renewal pushed Puerto Ricans and Mexicans from their original Chicago settlement areas on the near west side into Lincoln Park, a then-slumlike neighborhood situated three miles north of the downtown business district. Many of them encountered resistance and antagonism from white ethnics who had settled in the neighborhood in earlier migration waves. In response, some formed indigenous self-support groups, such as mutual aid associations, burial societies, community trust funds, and street gangs. These homegrown organizations gave rise to a second generation of street organizations, the most prominent among them being the Young Lords.

DEVELOPMENT AND STRUGGLE AGAINST URBAN RENEWAL

The Young Lords gang was founded in 1958 when Orlando Davila and Sal de Riviero organized

themselves and their friends to defend against the violent attacks that were being perpetrated on immigrants by the neighborhood's white ethnic gangs. The group remained a turf-oriented recreational and fighting gang until the early 1960s. Around that time, the local YMCA dispatched a "detached social worker" to assist the Young Lords in overhauling the group's organizational structure and activities. The YMCA program's long-term objective was to transform the street gang into an organized, hierarchical, formal group with a prosocial agenda. This intervention solidified the gang and inculcated in its members a belief in the value of collective ideology, financial self-sufficiency, and mission. These efforts, in turn, unwittingly laid the organizational foundation for the Young Lords' later involvement in leftist political struggle.

Beginning in late 1967, the Young Lords established themselves as a political force to be reckoned with. In this period they combined militant takeovers of legitimate institutions (e.g., churches, police stations, city offices) with the development and operation of community-based organizations, such as free health clinics, child care facilities, cultural centers, and even a methadone maintenance program for heroin addicts. In late 1969, the Young Lords achieved their political zenith when they joined forces with the Black Panthers and the Young Patriots Organization (a former street gang of white ethnics) to create the original Rainbow Coalition.

INFLUENCE ON PRISONS

The militant revolutionary tactics of the Black Panther Party and the Young Lords dovetailed with the burgeoning prisoners' rights movement of the 1960s and 1970s. In these two decades, incarcerated Panthers and Lords redefined themselves as political prisoners. Deaths of imprisoned Puerto Ricans, according to the Young Lords, amounted to a form of genocide perpetrated on poor people of color by American capitalists.

The Young Lords directly supported the 19-month occupation of Alcatraz by Native Americans attempting to symbolically reclaim the island. Led by Mohawk Indian Richard Oakes, the group of 100 "Indian people" (most of whom were young urban college students) controlled the island from November 1969 until June 1971. Several incarcerated Lords also helped to orchestrate the Folsom State Prison strike of November 1970, a 17-day protest that ignited the prison labor movement and provoked a national conversation about inmate wages, working conditions, and civil rights. Finally, the Lords assisted in galvanizing the Attica uprising of 1971.

ATTICA

In the summer of 1971, several imprisoned Young Lords, Black Panthers, and radical Black Muslim Nationalists studied together in a student-led sociology course at Attica. On the basis of their experience in the class, they formed an alliance to bring about prison reform. They called themselves the Attica Liberation Faction (ALF). The ALF submitted grievances and demands to the superintendent of Attica, who responded by seeking the state prison commissioner's permission to transfer the "troublemakers" whose names appeared on the list of demands. The commissioner, Russell G. Oswald, rejected the superintendent's plea and instead began communicating directly with the ALF. Although this seemed at first to be a symbolic victory, the members of the ALF quickly grew to resent what they perceived to be Oswald's unresponsiveness and equivocation.

On September 9, 1971, in less than 20 minutes, the inmates of Attica took over the prison's main cellblocks, passageways, and yards, and took 49 hostages. Some 60% of Attica's 2,243 inmates participated in the revolt, and 75% of the insurgent inmates were either black or Puerto Rican. The ALF, led by the Black Muslims, drafted a long list of demands ranging in nature from lofty (e.g., complete amnesty for all inmates involved in the uprising) to prosaic (e.g., food and medical care). Commissioner Oswald recognized the demands and agreed to enter into negotiations with the ALF. Over the next few days, the negotiations grew increasingly heated. A

few high-ranking Young Lords traveled to Attica to serve as negotiators. However, both sides continued to dig their heels in deeper, and their equally entrenched resolve eventually led all parties to lose hope in the prospect of a peaceful, mutually agreeable outcome.

The uprising ended violently when officers of the New York State Police, accompanied by a phalanx of heavily armed prison guards, stormed the cellblocks in an effort to end the takeover conclusively. In the process, 29 inmates and 10 hostages lost their lives, and 88 others were shot. Only days after this tragedy, the governor of New York appointed a board of observers and inquirers to inspect and monitor Attica for 30 consecutive days. The board articulated several concerns, including overcrowded cells, inadequate medical care, unsatisfactory food and bathing facilities, and insufficient inmate access to legal counsel, and made corollary recommendations for change. These recommendations induced systemic change at Attica and at other prisons around the country.

CONCLUSION

By 1975, the Chicago Young Lords had more or less come to an end. The organization's demise can be attributed to several interrelated factors, including internal struggles over status and power, effective police suppression, heroin addiction among the membership, attenuated connections to local political leaders, and insufficient money, resources, amicable media outlets, and decision-making power. Other conflicts beleaguered the Chicago Young Lords as well, one of the thorniest of which was the sexism displayed by the male members.

Many of the female associates of male Lords were active in the flourishing women's rights movement and would no longer tolerate their "second-class citizenship" in the Young Lords Organization (YLO). So they created the Young Lordettes. Then Angie Navedo, a longtime YLO associate, founded Mothers and Others (MAO), a group of Latinas affiliated with YLO. MAO's mission was to counteract the "male dominated leadership of YLO and address the need for inclusion of women and children in YLO's efforts to develop the community." Navedo and her fellow MAO members kept the YLO politically, socially, and financially solvent while Jimenez and other male leaders were repeatedly jailed. But despite the existence of the Lordettes and MAO, sexism continued to weaken YLO's integrity.

Before disbanding, the Young Lords strengthened the prisoners' rights movement of the late 1960s and the 1970s, producing considerable benefits for prisoners everywhere. Assessing the group's precise impact is impossible, but it is fair to argue that the Young Lords' collaborations with other leftist political groups forced the country to consider seriously the plight of its prisoners. Many of these deliberations set the stage for positive, enduring changes in prison policy.

YOUTH CORRECTIONS ACT 1950

The U.S. Congress enacted the Youth Corrections Act (YCA) in 1950 during an era when the "rehabilitative ideal" was the main focus of the juvenile justice system. The act established a system for the treatment and rehabilitation of offenders under the age of 22 who were convicted of crimes in the federal system or in the District of Columbia. The main purpose of the legislation was to expand federal judges' sentencing discretion so that they could tailor punishment to the rehabilitative needs of individual young offenders. Juveniles who qualified under the guidelines usually had to have little or no criminal history, although certain mitigating circumstances could also be introduced. The intent was that YCA offenders would receive lesser sentences; would be kept apart from hardened criminals, either in prison facilities or on probation; and would receive training in job skills and life skills through work and academic programs, psychological counseling, and other rehabilitative programming.

The YCA guidelines established an indeterminate sentencing system for young offenders who were released from incarceration and/or probation supervision once they were determined to be rehabilitated. Beginning in the mid-1970s, when the overall philosophy and purpose of the criminal justice system shifted from rehabilitation to deterrence and incapacitation, the YCA came under attack. A rising fear of juvenile crime during the 1980s ultimately led to the repeal of YCA in 1984.

HISTORY

In 1948, the U.S. Congress passed the Federal Juvenile Delinquency Act, which provided funding for states to operate separate, specialized systems for juvenile offenders. This act was merely a formality and another indication of support for rehabilitation, as many states had already been operating separate systems for juvenile offenders.

During the 1940s and 1950s, juvenile justice research across the United States was focused on the "rehabilitative ideal." The American Law Institute, the national organization responsible for research on the criminal justice system, released a report titled "The Model Youth Correction Authority Act," which recommended indeterminate sentences for youth under a separate correctional authority. This model was based primarily on the English Borstal system of correctional programming, in which youth are housed separately from adult offenders and are provided with vocational and education training along with psychological treatment. The English Borstal system includes indeterminate sentencing, with youthful offenders being released once they are rehabilitated. The similarities between the English Borstal system and the YCA were quite evident.

LEGISLATIVE INTENT OF YCA

The legislative history of YCA indicates congressional concern with the disproportionate amount of crime committed by juveniles as compared with adults and with the high rates of recidivism for some juvenile offenders. The act sought to rehabilitate juveniles to prevent them from pursuing a life of crime.

Under YCA, a federal judge had several sentencing options: (1) to sentence the young offender to probation only; (2) to sentence the young offender to a rehabilitation program with an indeterminate sentence length not to exceed six years; (3) to sentence the young offender to a rehabilitation program with an indeterminate sentence length exceeding six years, but not exceeding the otherwise maximum sentence prescribed by law; and (4) after a thorough review of the risk posed by the offender and the benefit to be obtained from available programming, to sentence the young offender under standard adult provisions if the court found the young offender would not benefit from a rehabilitative sentence under YCA. However, the only criminal offenders explicitly excluded in YCA were those convicted of violent crimes while armed. Thus, potentially, a young offender with a first-degree murder charge could be sentenced under YCA and then released after a period much shorter than an adult sentence if the offender was determined to be rehabilitated.

In addition to the focus on rehabilitation in the sentencing provisions, legislators also wished to reduce the harmful effects on young offenders of being incarcerated with others who had more serious criminal histories. Thus the YCA required that young offenders sentenced under the proposed guidelines were to be segregated from more hardened career criminals. The best options were to keep YCA offenders in their own facilities, to place them in separate wings of general institutions, or simply to sentence them to probation programs in the community, where they were less likely to come into contact with more serious offenders.

Finally, legislators emphasized the rehabilitative ideal when they indicated that a YCA conviction would be automatically vacated, or "set aside," once a youthful offender was given a certificate of rehabilitation releasing him or her from correctional control. By including this automatic vacation of court conviction in the act's language, the legislators made clear their intent to offer YCA offenders a fresh start after rehabilitation by ensuring they would not have to endure the stigma of mistakes made in their youth.

CRITICISMS, APPEALS, AND REPEAL

Opponents criticized many aspects of YCA, from its legislative intent to aspects of its implementation in the criminal justice system. There were general complaints about lenient sentences and lack of protection for the community. There were also concerns about racial disparities and discrimination in the sentencing process. Critics cited widespread inequities in judges' discretionary sentencing under YCA as well as the disparate decisions made by criminal justice officials concerning when young offenders should be considered rehabilitated.

Many observers contended that offenders with long criminal histories were being sentenced under YCA, which, they argued, was not part of the original legislative intent. Victims' advocates argued that violent offenders were released under sentences much shorter than those they would have faced for the same charges under the adult criminal justice system. They also claimed that many YCA offenders had long criminal histories and frequently reoffended, suggesting that the act failed to protect community safety. Opponents from inside the system who were attempting to rehabilitate these YCA offenders complained that some of them showed no interest in the programming and were disruptive to those who were making attempts to reform themselves.

Supporters of YCA, however, contended that the program did protect community safety by rehabilitating offenders who otherwise may have turned to lives of crime due to the harmful effects of incarceration. They also argued that young persons should not have to cope with the label of *convicted offender* for the rest of their lives for mistakes they made in their nascent years. Some proponents claimed that failures to rehabilitate were the results of lack of proper funding of programs and of YCA offenders' being segregated from their natural support systems. In other words, as YCA offenders were segregated from adults, they were concomitantly segregated from contact with their families and other people of support in their lives; this placement so far away from their homes hindered their rehabilitation process.

Many appeals and much debate arose concerning the practice of expunging the criminal records of young offenders sentenced under YCA. Advocates for this strategy asserted that because the overall intent of YCA was to allow young offenders an opportunity to turn their lives around, expunging criminal records, and thus removing their stigmatizing effect, was just an extension of the overall YCA rehabilitative philosophy. Advocates contended that all records of young offenders' criminal offenses should be removed. Others, however, argued that the total removal of the records was more than the legislature intended; they asserted that an indication in the court record that the conviction was later "set aside" was enough to remove any harmful labeling effects.

CONCLUSION

Eventually, the opponents of YCA won. During federal legislative hearings in 1984, a package of

crime measures dealing with federal spending was proposed. In addition to the cost of rehabilitation programming, critics pointed to the growing rates of serious youth violence in the United States. They also noted that during 1976 almost 2,000 offenders were sentenced under YCA guidelines, and that the number had fallen to approximately 600 in 1983. The repeal package was passed rather quickly and easily, to the surprise of some supporters of YCA, who were unaware that repeal was part of the legislative hearings at the time.

Abandoning YCA changed the juvenile justice system in many ways. It both signaled the end of indeterminate sentencing and resurrected the process of dealing with young offenders in adult courts and institutions. Such changes have resulted in increasing numbers of young offenders serving their time in adult facilities. As a result, the repeal of YCA consolidated more punitive approaches to crime and justice, shifted the juvenile justice system away from the rehabilitative ideal, and made the treatment of young offenders more like that of adults.

Appendix

Bureau of Prison Facilities, Alphabetical by State

Appendix

The following list includes the addresses, telephone numbers, and directions for traveling to the institutions of the federal prison system. I have also included, where possible, a brief description of work, education, recreation, medical services, religion, and prerelease courses available in each facility. The prisons are ordered alphabetically. The list is as complete as possible, although some of the more recent facilities are not included and some of the entries are more detailed than others.

Most of the information has been drawn from each institution's Admissions and Orientation booklets and from the Bureau of Prisons' Web page, www.bop.gov. Some details have been added from the 1999 edition of the *Alan Ellis Federal Prison Guidebook* (Ellis & Shummon, 1999). Others come from official reports, including the Bureau's annual publication *State of the Bureau*. I have also used architectural reports and accounts of visits by foreign observers. Because of space considerations, I do not specify the source of each detail. Because much of the information is based on documents that are themselves a few years old, it is inevitable that some of the courses, work options, and other details will have changed. In particular, the figures for the current population, which are taken from the Federal Bureau of Prisons' "Weekly Population Report" listed on their Web site for February 14, 2001, are just meant as a rough guide to overcrowding in each establishment.

FEDERAL PRISON CAMP ALDERSON

Address	Federal Prison Camp Alderson Glen Ray Road, Box B Alderson, WV 24910
Location	In the foothills of the Allegheny Mountains, 270 miles southwest of Washington, D.C., 12 miles south of Interstate 64, off State Highway 3. The area is served by airports in Lewisburg, Beckley, and Roanoke, Virginia. It is also served by Amtrak and by commercial bus lines.
Contact Numbers	Tel: 304-445-2901 Fax: 304-445-2675
Judicial District	Southern West Virginia
Security Level	Minimum
Male/Female	Female
Capacity	838
Current Pop.	858
Staff	191
History/Description	Opened in April 1927, Alderson was the first federal institution for women. Prisoners are housed in cottages and dormitories.
Education	Education includes GED, ESL, adult continuing education, parenting, and correspondence classes. There are six vocational training programs, all of which lead to outside certification or accreditation: accounting clerk, administrative clerk, clerk typist, horticulture, library assistant, and office management. There are also 12 apprenticeships: HVAC, baker, bricklayer, carpenter, computer peripheral operator, cook, dental assistant, electrician, landscape gardener, painter, plumber, and power house operator. The parenting program LIFT (Linking Inmate Families Together) is designed to help inmate mothers maintain family relationships. It has two main components: an education course and a children's center, adjacent to the visiting room, where inmates and children can spend weekend days together. There are also regular workshops about child development and family skills. College classes are available through Ashland Community College.

Work	Unicor textile factory
Recreation	Indoor and outdoor activities, including pool tables and weights
Drug Treatment	One of five national residential drug treatment programs for female offenders. Alderson also offers nonresidential drug treatment, drug education, and various prisoner groups, including Narcotics Anonymous and Alcoholics Anonymous.
Visits	Visits are held Thursday through Monday from 8:00 a.m. to 3:15 p.m. Each month, inmates are given 10 visiting points. Weekday visits cost 1 point and weekend visits cost 3 points. There is a children's center for the weekend visits.
Religion	Two full-time chaplains, plus a contract rabbi and imam and a Native American sweat lodge.

FEDERAL CORRECTIONAL INSTITUTION ALLENWOOD (LOW)

Address	Federal Correctional Institution Allenwood (Low) P.O. Box 1500 White Deer, PA 17887
Location	Facility located 197 miles north of Washington, D.C., and 11 miles south of Williamsport, Pennsylvania, 2 miles north of Allenwood, on State Highway 15. The area is served by the Williamsport-Lycoming County Airport and by commercial bus lines.
Contact Numbers	Tel: 717-547-1990 Fax: 717-547-0342
Judicial District	Middle Pennsylvania
Security Level	Low
Male/Female	Male
Capacity	992
Current Pop.	1,387
Staff	217
History/Description	Opened in December 1992, this facility has a campus-style layout with dormitory-style housing. There are three separate compounds house plus a witness security unit (WITSEC). "Security is provided by the perimeter fence, detection system and armoured patrol vehicles. The units are arranged in two wings of 62 cubicles, each joined by central offices for the unit manager and staff, and a large multi-purpose room for inmate use" (Spens, 1994, p. 43).
Education	Education includes ABLE (Adult Basic Level Examination) testing, GED, ESL, adult continuing education, parenting, job search skills, and correspondence classes. The Education Department offers vocational training in drafting and computer as well as a dental assistant apprenticeship.
Work	Unicor furniture factory
Food/Commissary	Meals served cafeteria style with salad bar, drinks, and hot food. There is a coffee hour on weekends and holidays. Some food items can also be attained from the commissary. Inmate sales are made Monday through Thursday from 11:00 a.m. to 1:00 p.m. and from 4:30 p.m. to 7:30 p.m. Inmates may shop in the commissary once a week. Shopping days are determined by the last two digits of the five-digit section of the register number (e.g., in "12345-678," "45" would be the indicated number).
Recreation	Recreation includes softball, soccer, volleyball, and basketball leagues; handball courts, outdoor weight equipment, track, indoor weight/exercise area and squash ball court. The law and leisure libraries are open Monday through Saturday. There is also a Leisure Center with three music rooms, two art rooms (including ceramics, painting, and drawing), and card tables, open daily 12:45 p.m. through 8:30 p.m.
Medical	Sick call sign-up is held from 6:15 a.m. to 6:45 a.m. Monday, Tuesday, Thursday, and Friday, excluding holidays. All emergencies should be reported to a supervisor as quickly as possible; it is their responsibility to contact health services. All athletic injuries are to be reported to staff immediately. Failure to do so may result in disciplinary action.
Counseling	Individual counseling and crisis intervention are also available for personal/emotional problems and drug/alcohol abuse treatment.
Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.

HIV/AIDS	Information on services related to HIV/AIDS will be provided by the Health Services staff during admission and orientation.
Gym	The gymnasium is closed during the summer months, though it will be open in inclement weather. No hard-sole shoes permitted on the gymnasium floor.
Visits	Visiting hours 8:00 a.m. to 3:00 p.m., Thursday through Sunday and federal holidays. Every calendar month each inmate is given 12 points. Each weekday visit costs 1 point, and each weekend or holiday visit costs 2 points.
Religion	There are two full-time chaplains as well as contract and volunteer representatives of different faiths.
Release Preparation	The Release Preparation Program offers classes and information seminars concerning the personal, social, and legal responsibilities of civilian life.

FEDERAL CORRECTIONAL INSTITUTION ALLENWOOD (MEDIUM)

Address	Federal Correctional Institution Allenwood (Medium) P.O. Box 2500 White Deer, PA 17887
Location	See Federal Correctional Institution Allenwood (Low)
Contact Numbers	Tel: 717-547-7950 Fax: 717-547-7751
Judicial District	Middle Pennsylvania
Security Level	Medium; administrative
Male/Female	Male
Capacity	839
Current Pop.	1,400
Staff	301
History/Description	Opened in August 1993. “Arranged radially around the western edge of the courtyard, the entries of the four housing units of the medium security compound, Federal Correctional Institution, focus to the centre of the space, effectively minimising hidden corners. The triangular shape of the housing units promote the Bureau’s desire for increased interaction between inmates and staff. An elevated officer’s station near the entry to the dayroom affords maximum visual supervision of cells, corridors, dayrooms and support spaces” (Spens, 1994, p. 42).
Education	Education includes GED, ESL, adult continuing education, and correspondence classes. There is also a vocational training course in carpentry.
Work	Unicor furniture factory
Food/Commissary	Commissary is open from Monday through Thursday after the 4:00 p.m. count. Prisoners may shop once per week.
Recreation	Recreation includes team sports, exercise, music, and crafts
Medical	Sick call is from 7:00 a.m. to 7:30 a.m. four times a week; 24-hour emergency care is available.
Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Visits	Visiting hours are from 8:30 a.m. to 3:30 p.m. Thursday through Monday. Prisoners are entitled to five visits per month. There is a separate children’s room.
Religion	Two full-time chaplains and a contract rabbi who visits twice per month.

FEDERAL PRISON CAMP ALLENWOOD

Address	Federal Prison Camp Allenwood P.O. Box 1000 Montgomery, PA 17752
Location	Two hundred miles north of Washington, D.C., and 7 miles south of Williamsport, Pennsylvania. The area is served by the Williamsport-Lycoming County Airport and commercial bus lines.
Contact Numbers	Tel: 717-547-1641 Fax: 717-547-1504

Judicial District	Middle Pennsylvania
Security Level	Minimum
Male/Female	Male
Capacity	567
Current Pop.	734
Staff	121
History/Description	Opened in April 1952; this was originally Lewisburg camp, becoming independent in the mid-1970s. There are three housing units, two for the general population and one for prisoners in the Residential Drug Abuse Treatment Program.
Education	Education includes GED, ESL, adult continuing education, parenting, and correspondence classes. In addition, vocational training provided in horticulture (certified by the National Occupational Training Institution).
Work	Twenty-five job details, including a small Unicor warehouse. Requests to change jobs considered after a period of 45 days, 90 for Unicor.
Food/Commissary	Meals are served cafeteria style with the option of a soup and salad bar. Lunch is called according to detail assignment during the week. One piece of fresh, uncut fruit may be taken from the Food Service Department.
Recreation	Recreation includes weights, basketball, flag football, softball, tennis, handball/racquetball, soccer, boccie, volleyball, horseshoes, ping-pong, and billiards. Programs are offered in leather crafts, ceramics, and drawing/painting.
Medical	Sick calls are scheduled between 6:00 a.m. and 6:30 a.m. Monday, Tuesday, Wednesday, and Friday. If you become ill after this time, you should report to work and notify your supervisor, who will in turn notify Health Service for an appointment. New inmates who refuse medical examinations may be subject to disciplinary action. In a medical emergency you should report to your detail supervisor or a staff member on your unit. Dental services are available.
Counseling	Many counseling groups are offered, some facilitated by unit correctional counselors and others by the chief psychologist. Those given by correctional counselors include The Worried Well—Anxiety and Related Issues; Surviving Divorce: Fatherhood; Men's Issues, Eight Steps of Man, Relaxing Stress; Secrets to Successful Relationships; Depression; Adult Children of Dysfunctional Families; Men Are From Mars, Women Are From Venus; Keeping Love Alive; and Reclaiming Your Inner Child. Classes on Spirituality and Psychology, Anger Control, Psychology of Family Secrets, Empathy Groups for Inmates, and African American Cultural Issues are given by the chief psychologist. All groups are advertised on bulletin boards. There are also programs that deal with substance abuse and gambling addiction, as well as individual counseling.
Drug Treatment	Residential Drug Abuse Treatment Program, nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Visits	Visiting room hours are 8:00 a.m. to 3:30 p.m. on weekends and federal holidays and 5:00 p.m. to 10:00 p.m. Monday, Thursday, and Friday. Visitors may not arrive earlier than 15 minutes before the start of visiting hours and must arrive before the cutoff time. Visits are allocated on a point system, each inmate receiving 12 points each month. Weekend visits cost 2 points, weekdays cost 1, and visits on all federal holidays are free. Phones are available in the visiting room for visitors to arrange transportation. Arrangements can be made for handicapped visitors. Visits to inmates hospitalized in the community may be limited to immediate family members.
Religion	The Pastoral Care Department provides a number of services. They arrange for visits with members/leaders of various religious communities for inmates, provide greeting cards for inmates to send to family and friends, assist inmates in obtaining personal religious items, offer a religion library, and provide a bus service to the chapel before every religious service. The chaplain is also available for counseling and guidance.
Release Preparation	Visits relating to release preparation (i.e., with prospective employers, parole advisors, and sponsors) can be arranged and approved by the unit manager.

U.S. PENITENTIARY ALLENWOOD

Address	U.S. Penitentiary Allenwood P.O. Box 3500 White Deer, PA 17887

Location	See Federal Correctional Institution Allenwood (Low)
Contact Numbers	Tel: 717-547-0963 Fax: 717-547-6124
Judicial District	Middle Pennsylvania
Security Level	High
Male/Female	Male
Capacity	640
Current Pop.	1,085
Staff	356
History/Description	Opened November 1993. There are four housing units of two levels, with 16 cells per floor arranged around two sides of the central dayroom. In the third dayroom, recreational and counseling facilities block the units from views to the surrounding site. "The buildings of the U.S. Penitentiary form its inner security wall, the perimeter of which is completed by a continuous enclosed circulation corridor. The outer perimeter is secured by a double line of fencing with rolled barbed tape installed between the fences. A perimeter intrusion detection system is located at the inside fence and a road for patrol vehicles runs at the outside of the perimeter fence. Six guard towers, located near the corners of the security fence, maintain constant supervision over the facility and surrounding site" (Spens, 1994, pp. 41-42).
Education	Education includes GED, ESL, adult continuing education, and correspondence classes. A private vendor offers college classes in the evenings. Vocational training in the building trades and fitness center management is available to help inmates acquire marketable skills.
Work	Unicor upholstery factory and institutional maintenance jobs (i.e., Food Service, unit orderly, maintenance shop).
Food/Commissary	Self-service meals that may include salad bars and special diet programs. Commissary is open on weekdays. Prisoners may shop once per week.
Recreation	Recreation includes intramural team sports such as softball, basketball, and volleyball as well as physical fitness and weight reduction programs. There are also arts and crafts programs, and musical instruments are available in the recreation area.
Medical	Sick call from 6:30 a.m. to 7:00 a.m. Monday, Tuesday, Wednesday, and Friday. Emergency medical treatment is available 24 hours a day.
Counseling	Clinical psychologists are on staff to provide assessment and treatment for such problems as depression, anxiety, and interpersonal issues. Treatment is offered through individual and group psychotherapy.
Drug Treatment	Residential drug treatment program, nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Visits	Visiting hours from 8:00 a.m. to 3:00 p.m. from Thursday through Monday. Inmates are allocated 8 points per month. Weekday visits cost 1 point, and weekend visits cost 2 points. There is a children's room available.
Religion	There are two full-time chaplains. Contract and volunteer personnel are available to represent a variety of faiths.

FEDERAL CORRECTIONAL INSTITUTION ASHLAND

Address	Federal Correctional Institution Ashland P.O. Box 888 Ashland, KY 41105-0888
Location	In the highlands of northeastern Kentucky, 125 miles east of Lexington and 5 miles southwest of Ashland. Off State Route 716, 1 mile west of U.S. 60.
Contact Numbers	Tel: 606-928-6414 Fax: 700-358-8552
Judicial District	Eastern Kentucky
Security Level	Low
Male/Female	Male

Capacity	662
Current Pop.	1,098
Staff	329
History/Description	Opened in September 1940. Housing ranges from dormitories to regular cell blocks.
Admission and Orientation	One week
Education	Education includes GED, ESL, adult continuing education, and correspondence classes. College classes are also available though Ashland Community College and Ohio State University. Apprenticeships are offered in the following areas for one or two inmates at a time: auto body repairman, draftsman, auto mechanic, electrician, baker, machinist, cook, plumber, dental lab technician, powerhouse operator, bricklayer, steamfitter, carpenter, and painter. Vocational training programs are available in drafting, auto body, welding, auto mechanics, and woodworking.
Work	Inmates must stay on a job 90 days before requesting a new job. Work options include plumbing, painting, masonry, electrical work, cooking, baking, tailor, barber, and a Unicor furniture company.
Food/Commissary	Commissary is open on week nights. Shopping hours listed on unit.
Recreation	Recreation includes athletic and competitive activities plus weights, crafts, nutrition, and stress reduction.
Medical	Routine medical/dental care and nonemergency sick call sign-up is available Monday, Tuesday, Thursday, and Friday from 6:00 a.m. to 6:30 a.m. Health Department offers a Health Promotion Disease Prevention Program to raise awareness about health-related topics like smoking cessation, diets, stress management, exercise, and infectious diseases.
Counseling	There are three full-time psychologists and one drug treatment specialist for the Federal Correctional Institution and satellite camp. Psychology offers a range of services including evaluations, crisis intervention, personal development, and therapy.
Drug Treatment	Nonresidential program; 40-hour drug education, class; groups on relapse prevention, breaking barriers, values, and criminal thinking; and Narcotics Anonymous and Alcoholics Anonymous.
Visits	Visiting hours are 8:00 a.m. to 3:15 p.m. Thursday through Monday.
Religion	Three full-time chaplains; a sweat lodge for Native Americans.

FEDERAL PRISON CAMP ASHLAND

Address	Federal Prison Camp Ashland P.O. Box 888 Ashland, KY 41105-0888
Location	Adjacent to Federal Correctional Institution Ashland
Contact Numbers	Tel: 606-928-6414 Fax: 700-358-8552
Judicial District	Eastern Kentucky
Security Level	Minimum
Male/Female	Male
Capacity	296
Current Pop.	275
History/Description	The camp opened in 1990. It is designed to hold nonviolent offenders. Prisoners are housed in dormitories.
Education	Education includes GED, ESL, adult continuing education, and correspondence classes. College classes are also available through Ashland Community College.
Work	Work assignments include Food Service, camp clinic orderlies, education clerks and orderlies, librarians, sanitation workers, camp maintenance, unit orderlies, camp chapel, camp recreation, camp driver, power plant, machine shop, Federal Correctional Institution front-entrance orderlies, administration building orderlies, and Unicor clerks and laborers in the warehouse.

Food/Commissary	Meals are served in the dining hall from 6:00 a.m. to 7:00 a.m., from 11:00 a.m. to 12:00 p.m., and from 3:00 p.m. to 4:45 p.m. during the week. On weekends and federal holidays, they are served at the same time except that brunch from 10:00 a.m. to 11:30 a.m. replaces lunch. Commissary is open on Tuesdays.
Recreation	The recreation building contains three pool tables, cable television, and exercise equipment. Each housing unit has card tables for playing board games and has cable television.
Medical	Emergency medical care is available at all times. Sick call is from 7:00 a.m. to 7:30 a.m. on Monday, Tuesday, Thursday, and Friday. Daily pill-line hours will be posted.
Counseling	There are three full-time psychologists and one drug treatment specialist for the Federal Correctional Institution and satellite camp.
Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Visits	Visiting hours are from 8:00 a.m. to 3:00 p.m. on weekends and federal holidays.
Religion	There is one full-time chaplain in the camp.
Other	No smoking in any indoor area.

FEDERAL PRISON CAMP ATLANTA

Address	Federal Prison Camp Atlanta 601 McDonough Blvd., S.E. Atlanta, GA 30315-0182
Location	Adjacent to U.S. Penitentiary Atlanta
Contact Numbers	Tel: 404-635-5100 Fax: 404-331-2137
Judicial District	Northern Georgia
Security Level	Minimum
Male/Female	Male
Capacity	488
Current Pop.	447
Staff	The camp administrator is the senior level staff member.
History/Description	The camp was opened in 1984 next to U.S. Penitentiary Atlanta. Housing is dormitory style with two-person cubicles.
Education	Education includes GED, ESL, adult continuing education, and correspondence classes. In addition, apprenticeships include electrician, plumber, and sewing machine mechanic.
Work	You must remain on your work assignment for 180 days before you will be considered for another one. Jobs available include bus cleaning detail, electric shop, air conditioning and refrigeration, barber, commissary orderly, dental clinic orderly, Food Service, laundry, unit orderly, plumbing, recreation detail, business office, quality assurance, education aide, and law library clerk. Prisoners may also work in the Unicor textile factory, although there is a long waiting list.
Food	Meals are served in the dining room from 6:00 a.m. to 7:00 a.m., from 10:30 a.m. to 12:00 p.m., and after the 4:00 p.m. count during the week. On weekends and holidays times are the same except brunch is served from 10:45 a.m. to 12:00 p.m.
Recreation	Recreation includes indoor and outdoor activities, such as physical fitness, weight reduction programs, basketball, and hobby crafts.
Medical	Medical sick call is from 7:00 a.m. to 7:15 a.m. Monday, Tuesday, Thursday, and Friday. Dental sick call is held on the same days from 7:00 a.m. to 7:30 a.m. Pill-line hours will be posted.
Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Visits	Visiting hours are from 8:00 a.m. to 3:30 p.m. on weekends and federal holidays. Prisoners are allowed up to three adult visitors at any one time.
Religion	One full-time chaplain is available.
Other	This is a nonsmoking facility. All smoking only in outdoor areas.

U.S. PENITENTIARY ATLANTA

Address	U.S. Penitentiary Atlanta 601 McDonough Blvd., S.E. Atlanta, GA 30315-0182
Location	In the southeast quarter of Atlanta, at the junction of Sawtell Avenue and McDonough Boulevard, off Interstate 20 (Exit 26) or Interstate 285 (Exit 39). Atlanta is served by the Hartsfield International Airport, Amtrak, and commercial bus lines.
Contact Numbers	Tel: 404-635-5100 Fax: 404-331-2137
Judicial District	Northern Georgia
Security Level	High/administrative
Male/Female	Male
Capacity	2,007
Staff	713
Current Pop.	1,894
History/Description	This was the second federal penitentiary to be built in the United States; it opened in January 1902. It contains general housing units, a detention center, and a satellite camp. Housing varies from one-person cells to open dormitories. It is located about 15 minutes by taxi from the Atlanta airport.
Education	Education includes GED, ESL, adult continuing education, and correspondence classes. In addition, vocational training classes include barbering, custodial maintenance, cook, electrician, and plumber. Further information about the courses is available from the Education Department. The law library is open during nonworking hours, including weekends and holidays.
Work	Jobs include law library clerk, Food Services, mechanical services, institution hospital, education/recreation clerks and tutors, safety clerks, sanitation workers, housing unit orderlies, and a Unicor textile factory. The factory produces mailbags, battle dress uniforms, and mattresses. There is a waiting list.
Food/Commissary	Meals are served in the dining room from 6:00 a.m. to 7:00 a.m.; from 10:30 a.m. until finished; and after the 4:00 p.m. count during the week. On weekends and holidays, times are the same except brunch is served from 10:45 a.m. until finished. Prisoners are allowed to shop at the commissary once per week.
Recreation	Recreation includes indoor and outdoor activities such as team sports, physical fitness, and weight reduction programs, as well as music and hobby crafts.
Medical	Medical and dental sick call is from 6:00 a.m. to 7:00 a.m. on Monday, Tuesday, Thursday, and Friday in the dental clinic. Pill-line hours will be posted. Emergency medical care is available at all times.
Counseling	Counseling classes include stress management, anger management, and a 40-hour drug education program. Psychology Services also runs the 15-month CODE program (Challenge, Opportunity, Discipline, Ethics) for high-security offenders and "Living Free," in which prisoners are asked to review the costs and benefits of their lifestyle and develop a plan for positive change.
Drug Treatment	Residential Drug Abuse Treatment Program, nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Visits	Visiting hours are from 8:30 a.m. to 3:00 p.m. on Monday, Thursday, Friday, weekends, and federal holidays. Even- and odd-numbered inmates will be allowed visiting privileges on alternate weekends. Each prisoner is allowed five visits per month. A maximum of four adults and three children will be allowed to visit at any one time. Smoking is not permitted in the visitors room.
Religion	There is an All Faiths Chapel.

FEDERAL CORRECTIONAL INSTITUTION BASTROP

Address	Federal Correctional Institution Bastrop Box 730 Highway 95 Bastrop, TX 78602

Location	Thirty miles southeast of Austin, 8 miles south of Elgin, and 8 miles north of Bastrop. Off Highway 95. The area is served by the Robert Mueller Municipal Airport in Austin (27 miles from the facility).
Contact Numbers	Tel: 512-321-3903 Fax: 512-304-0117
Judicial District	Western Texas
Security Level	Low
Male/Female	Male
Capacity	793
Current Pop.	1,299
Staff	272
History/Description	Opened August 1979; housing is in two-person rooms and dormitories. There is a separate Residential Drug Abuse Treatment Program housing unit.
Education	Education includes GED, ESL, adult continuing education and correspondence classes.
Work	Jobs include maintenance, Food Services, and Unicor textile factory and graphics/services.
Food/Commissary	Meals served in dining room. Prisoners may shop at the commissary twice per week.
Recreation	Recreation includes intramural sports and arts and crafts. Physical fitness and weight reduction programs are also offered. Musical instruments are available in the recreation area and may be used there only. Federal Correctional Institution Bastrop is a participant in the Artist-in-Residence Program, wherein professional artists are employed for 1 year in selected institutions to establish visual or performing arts programs and to pursue their own art forms in prison settings. The program is funded jointly by the Federal Bureau of Prisons and the National Endowment for the Arts.
Medical	Sick call is from 6:30 a.m. to 7:00 a.m. Monday, Tuesday, Thursday, and Friday, except holidays. Emergency medical care is available at all times.
Counseling	Inmates have access to an on-site psychologist; a psychiatrist is available by appointment. There is also a victim impact program in which prisoners learn about the impact of crime from victims.
Drug Treatment	Residential Drug Abuse Treatment Program, nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Visits	Visiting hours from 8:00 a.m. to 3:00 p.m. Thursday through Monday.
Religion	Staff chaplains as well as contract and volunteer representatives of different faiths are available.
Pre-Release	Classes and information seminars are offered on the personal, social, and legal responsibilities of civilian life. Information sessions with U.S. Probation Officers, U.S. Parole Commission members, and other agencies and potential employers are available.

Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Visits	Visiting hours are from 8:00 a.m. to 3:00 p.m. on weekends and federal holidays.

FEDERAL CORRECTIONAL COMPLEX BEAUMONT (ADMINISTRATIVE)

Address	Federal Correctional Complex Beaumont (Administrative) P.O. Box 26015 Beaumont, TX 77720
Location	On the southeast Texas Gulf Coast, about an hour from Houston. Off U.S. 10. The street address is Route 4, Box 5000, Hebert Road, 77705. Beaumont is served by the Beaumont Port Arthur regional airport, Amtrak, and commercial bus lines.
Contact Numbers	Tel: 409-727-8187 Fax: 409-626-3401
Judicial District	Eastern Texas
Security Level	Administrative
Staff	224
History/Description	The Federal Corrections Complex at Beaumont opened a series of facilities from 1996 to 1999. Beaumont's administrative facility provides various administrative services to the Beaumont Federal Correctional Complex. These include a business office, a personnel office, a training department, and a warehouse, as well as computer services, facilities, safety, and medical services operations.

FEDERAL CORRECTIONAL INSTITUTION BEAUMONT (LOW)

Address	Federal Correctional Institution Beaumont (Low) P.O. Box 26025 Beaumont, TX 77720-6025
Location	On the southeast Texas Gulf Coast, about an hour from Houston. Off U.S. 10. The street address is Route 4, Box 5000, Hebert Road, 77705. Beaumont is served by the Beaumont Port Arthur regional airport, Amtrak, and commercial bus lines.
Contact Numbers	Tel: 409-727-8172 Fax: 409-626-3500
Judicial District	Eastern Texas
Security Level	Low
Male/Female	Male
Capacity	1,536
Current Pop.	1,946
Staff	203
History/Description	Opened in September 1996.
Admission and Orientation	Forty-hour A&O program begins the Monday after arrival. During the program, prisoners receive no visits
Education	Education includes GED, ESL, adult continuing education, and correspondence classes. In addition, there are vocational training courses.
Work	Jobs include Food Services, maintenance, and Unicor textile factory. Unicor inmates are required to complete the Basic Diesel Engine Repair Vocational Training class.
Food/Commissary	Food is served during the week in the dining hall from 6:00 a.m. to 10 minutes after the last call, from 10.45 a.m. to 10 minutes after the last call, and after the 4:00 p.m. count clears to 10 minutes after the last call. On weekends and federal holidays, meal times are from 7:00 a.m. to 10 minutes after the last call and once the 10:00 a.m. count clears to 10 minutes after the last call. The evening meal will be served at the same time as on the weekdays. Commissary is open on weekday evenings.
Recreation	Indoor recreation facilities include an exercise room equipped with various aerobic exercise equipment, pool tables, ping-pong tables, television viewing areas, musical equipment, hobby craft opportunities (leatherwork, art, etc.), and various games. Outdoor facilities include softball fields, soccer field, outdoor basketball court, handball/racquetball court, volleyball court, and boccie ball courts.

Medical	Medical care is available 24 hours a day, 7 days a week, and is provided by the University of Texas Medical Branch (UTMB). Coverage includes basic and specialist medical, dental, optometry care. A patient may be taken into the community if a specialty consultation is needed, but routine sick call triage occurs each morning at 6:15 a.m. to 6:45 a.m. Monday, Tuesday, Thursday, and Friday, except on holidays, at the Health Services Unit (HSU). Inmates who become ill after the sick call triage period should request that their work supervisor or unit officer call the HSU for an emergency appointment. Inmates will not be seen without staff advising the Health Services Unit that an emergency exists. Inmates in the Special Housing Unit will be provided routine sick call once daily by a member of the Health Services staff.
Counseling	The Psychology Department offers a wide range of programs, some of which are similar to those available in a community mental health center. These include services for those having temporary adjustment problems as well as for those having more prolonged and serious mental disorders. The department has a therapy library with material in both English and Spanish. There are books, audiotapes, and videotapes available to inmates under a structured program. A number of 6-week and 12-week courses are offered, including Written Communications, Goal Setting and Time Management, Career Counseling (Basic and Advanced), Anger Management, Stress Management (Basic and Advanced), Transitional Services, 40-Hour Drug Education, Living Free, Verbal Communications, Psychological Wellness, Victim Empathy, Nonresidential Drug Program—Commitment to Change, Fathering Group, and Breaking Barriers. Many of these groups are run in English and Spanish. Psychiatric consultation for treatments involving prescription medication is available, if necessary, following assessment by a psychologist.
Drug Treatment	Residential Drug Abuse Program (RDAP), nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous. Self-help books about drug and alcohol abuse are located in the Self Improvement Library. Transitional services for 500-hour drug abuse program graduates are provided by the Drug Treatment Specialists.
Gym	An indoor exercise room equipped with aerobic exercise equipment.
Visits	Visiting hours from 8:00 a.m. to 3:00 p.m. on Monday, Tuesday, Saturday, Sunday, and federal holidays and from 5:00 p.m. to 9:00 p.m. on Fridays. No visitors will be processed after 7:45 p.m., and all visitors will begin being processed out of the institution at 8:45 p.m. Inmates are given 12 points for visits each month, where visits on weekends or federal holidays cost 2 points and other visits only 1 point. No more than four adult visitors may visit at a time.
Religion	Two full-time chaplains.

FEDERAL CORRECTIONAL INSTITUTION BEAUMONT (MEDIUM)

Address	Federal Correctional Institution Beaumont (Medium) P.O. Box 26045 Beaumont, TX 77720-6045
Location	As above.
Contact Numbers	Tel: 409-727-0101 Fax: 409-720-5000
Judicial District	Eastern Texas
Security Level	Medium
Male/Female	Male
Capacity	1,152
Current Pop.	1,601
Staff	198
History/Description	Opened in January 1999. There are three unit teams that include 12 general population housing units.
Admission and Orientation	Inmates are given a case management and medical screening at the time of arrival. They should be immediately provided with a copy of the institution's rules and regulations, which include information on inmate rights and responsibilities. They should also be assigned to a specific unit team.
Education	Education includes GED, ESL, adult continuing education, and correspondence classes.

Work	Unicor textile factory.
Food/Commissary	Commissary times vary according to housing unit. Times are posted.
Medical	Federal Correctional Complex Beaumont Medical Services are provided by the University of Texas Medical Branch (UTMB). Medical sick call Monday through Friday 6:15 a.m. to 6:45 a.m. at the Health Services Unit (HSU). Emergency dental care can be signed up for in regular sick call. Routine dental care must be requested in writing. Emergency medical care is available at all times.
Drug Treatment	Residential Drug Abuse Treatment Program, nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Visits	Visiting room is nonsmoking.
Religion	Staff chaplains of specific faiths are available, as well as contract and volunteer representatives of other faiths. Special religious diets, holiday observances, and other worship activities are coordinated through the chaplain's office. Information about these programs is available from the chaplains.

Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Visits	Visiting hours from 8:30 a.m. to 3:30 p.m. on weekends and federal holidays. No more than three adult visitors at any one time.

U.S. PENITENTIARY BEAUMONT

Address	U.S. Penitentiary Beaumont P.O. Box 26035 Beaumont, TX 77720-6035
Location	On the southeast Texas Gulf Coast, about an hour from Houston. Off U.S. 10. The street address is Route 4, Box 5000, Hebert Road, 77705. Beaumont is served by the Beaumont Port Arthur regional airport, Amtrak, and commercial bus lines.
Contact Numbers	Tel: 409-727-8188 Fax: 409-626-3700
Judicial District	Eastern Texas
Security Level	High
Male/Female	Male
Capacity	960
Current Pop.	1,151
Staff	286

History/Description	Opened in April 1997. The prison has three units that contain a total of 12 different housing units containing double-bunked and single cells.
Admission and Orientation	The A&O program, held in the Education Department, should last for 2 weeks, during which time prisoners will be familiarized with the expectations and facilities of the prison. Incoming prisoners will be medically screened by University of Texas Medical Branch (UTMB), Galveston, Texas, staff. On arrival prisoners will be given an inmate account card that is necessary for the commissary, trust fund, and inmate telephone system. You must carry this card with you at all times.
Education	Education includes GED, ESL, adult continuing education, correspondence classes, and a variety of vocational training programs. A 6-month program in business and computers is offered by Lamar College.
Work	Unicor runs a battle dress uniform factory that is part of the Textile Group (Military). There is a long waiting list for this job.
Food/Commissary	During the week, meals are served at the following times: breakfast, 6:00 a.m. to 7:00 a.m.; lunch, 10:50 a.m. to 12:00 p.m.; and dinner, after the 4:00 p.m. count has cleared. On the weekends and holidays, breakfast is from 7:00 a.m. to 8:00 a.m. and lunch from 10:00 a.m., with dinner from 4:00 p.m. The commissary is open each Monday and Thursday from 10:45 a.m. until 12:45 p.m. for Open House, ITS sales, and access to the inmate photo credit machine only. Housing units will be permitted to shop at different times.
Recreation	Recreation includes arts and crafts as well as various forms of physical recreation. All recreation activities will normally open after the 4:00 p.m. count clears and will normally remain open until 8:30 p.m. Prior to the 4:00 p.m. count, inmates will be required to have an authorized pass with them.
Medical	Schedules for sick call will be posted. Emergency care is available at all times. Times for medication line (also called "pill line") will be posted at the hospital, housing units, and Education Department. Eyeglasses may also be requested.
Counseling	CODE (Challenge, Opportunity, Discipline, Ethics) for high-security offenders. There is also a victim impact program in which prisoners learn about the impact of crime from victims.
Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Gym	Yes.
Visits	Visiting hours from 8:00 a.m. to 3:00 p.m. Thursdays, Fridays, Saturdays, Sundays, Mondays, and federal holidays. No more than five visitors are allowed at any one time. Inmates receiving visits will be participating in a 36-point system, which translates to 36 points per month. During the weekday for every hour of visiting 1 point will be deducted. During weekends and holidays 2 points will be deducted for every hour of visitation.
Religion	Approved volunteers and contract clergy will, with the staff chaplain, offer a variety of religious services and counseling.
Release Preparation	Twelve to 18 months before release, a release preparation program will be offered by the Education Department.
Other	Incoming and outgoing mail will be read by staff. Telephones are available from 6:00 a.m. to 10:00 p.m., 7 days a week.

FEDERAL CORRECTIONAL INSTITUTION BECKLEY

Address	Federal Correctional Institution Beckley P.O. Box 1280 Beaver, WV 25813
Location	The city of Beckley is approximately 51 miles southeast of Charleston, West Virginia, and 136 miles northeast of Roanoke, Virginia. The institution's street address is 1600 Industrial Park Road. The area is served by airports in Charleston and Beckley and by Amtrak and commercial bus lines.
Contact Numbers	Tel: 304-252-9758 Fax: 304-256-4955
Judicial District	Southern West Virginia
Security Level	Medium

Male/Female	Male
Capacity	1,152
Current Pop.	1,646
Staff	349
History/Description	Opened January 1996; prisoners are housed in dormitories and in two- or three-person cells.
Admission and Orientation	At the end of the A&O program, prisoners will complete a 2-week institutional adjustment program known as BRAVE LITE. They will then be assigned to a job detail.
Education	Education includes GED, ESL, adult continuing education, parenting, and correspondence classes. Bluefield State College offers a number of vocational courses, including building, computer, and horticulture. Apprenticeships include carpentry, cook, dental assistant, and electrical maintenance.
Food/Commissary	Commissary is open from Monday through Thursday in the afternoons.
Work	Jobs include Food Service, barber, maintenance, orderly, and a Unicor upholstery factory that produces chairs.
Recreation	Recreation includes exercise bikes, team sports, and crafts. Musical instruments are also available.
Medical	Emergency medical care is available at all times. Sick line and pill-line hours will be posted.
Counseling	BRAVE (Beckley Responsibility and Values Enhancement), for those under 32 years of age, is a 6-month program designed to assess education needs, learning problems, and "social functioning." The course is designed to help individuals adjust to prison life and improve social skills. It was introduced after it was found that most of the participants involved in the 1995 prison disturbances were young men.
Drug Treatment	Residential Drug Abuse Treatment Program, as well as nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.

FEDERAL PRISON CAMP BECKLEY

Address	Federal Prison Camp Beckley P.O. Box 1280 Beaver, WV 25813

Capacity	269
Current Pop.	343
Education	Education includes GED, ESL, adult continuing education, and correspondence classes. There are also vocation courses in horticulture and apprenticeships in a variety of areas, including auto mechanics, baking, cooking, HVAC, horticulture, landscape gardening, and plumbing.
Drug Treatment	Residential Drug Abuse Treatment Program, nonresidential drug program, drug education, and a variety of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.

FEDERAL CORRECTIONAL INSTITUTION BIG SPRING

Address	Federal Correctional Institution Big Spring 1900 Simler Avenue Big Spring, TX 79720-7799
Location	Midway between Dallas and El Paso, on the southwest edge of Big Spring, at the intersection of Interstate 20 and U.S. Highway 80. The area is served by Midland/Odessa Airport, a small municipal airport, and commercial bus lines.

Contact Numbers	Tel: 915-263-6699 Fax: 915-268-6860
Judicial District	Northern Texas
Security Level	Low
Male/Female	Male
Capacity	506
Current Pop.	752
Staff	256
History/Description	Opened in June 1979. It was originally a federal prison camp, becoming a federal correctional institution in 1990.
Admission and Orientation	A 4-hour program upon commitment.
Education	Education includes GED, ESL, adult continuing education, and correspondence classes. The prison offers college-level courses using contract instructors from Howard College. Prisoners must cover their fees and maintain a 2.5 GPA. Vocational training courses are available in soldering (Unicor), commercial housekeeping, plumbing, building, masonry, electrical, HVAC, computer-aided drafting, and basic computer. Prisoners may also enroll in correspondence courses. The law library is open Monday through Friday and on Sundays. Hours will be posted. In addition, there is a leisure library and a Spanish library.
Work	Jobs include Food Service, maintenance, and a Unicor electronics factory that employs approximately 300 prisoners. There is a lengthy waiting list.
Food/Commissary	Meals are served in the dining room during the week from 6:00 a.m. to 7:00 a.m., from 11:00 a.m. to 12:00 p.m., and from 4:30 p.m. to the last call. On the weekends they occur from 6:30 a.m. to 7:30 a.m., from 10:30 a.m. until the last unit is called, and from 4:30 p.m. until the last unit is called. Commissary is open Tuesday through Friday once the 4:00 p.m. count clears until 6:30 p.m.
Recreation	Recreation includes basketball, softball, tennis, soccer, and flag football. There are also seven full-size pool tables, two ping-pong tables, three television rooms, quiet game room, music room, foosball table, and shuffleboard. Various hobby crafts are available, including ceramics, leatherwork, painting, knitting, and beadwork.
Medical	Sick call is from 6:00 a.m. to 6:30 a.m. on Monday, Tuesday, Thursday, and Friday. Prisoners with acute dental problems may sign up for dental care at the same time. Medication is distributed four times a day at various hours.
Counseling	The Psychology Department is located in the Sunset South Unit office complex.
Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Gym	Weights and aerobic equipment, including stationary bikes, rowing machines, step machines, and tread-wheels.
Visits	Visiting hours are from 8:00 a.m. to 3:00 p.m. on the weekends and on federal holidays. Prisoners are allowed no more than five visitors, including children, at any one time.
Religion	There are two full-time staff chaplains, a contract Hispanic Protestant minister, a contract imam, and a large number of other volunteer ministers and lay people from various faith groups.
Other	Stamps or prestamped envelopes may not be sent in to prisoners.

FEDERAL PRISON CAMP BIG SPRING

Address	Federal Prison Camp Big Spring 1900 Simler Avenue Big Spring, TX 79720-7799
Location	Adjacent to Federal Correctional Institution Big Spring.
Contact Numbers	Tel: 915-263-6699 Fax: 915-268-6860

Judicial District	Northern Texas
Security Level	Minimum
Male/Female	Male
Capacity	144
Current Pop.	128
History/Description	Opened in 1992; prisoners provide labor force for other nearby prisons and local federal agencies.
Education	Education includes GED, ESL, adult continuing education, and correspondence classes.
Food/Commissary	Commissary is open on Tuesday and Thursday.
Medical	Sick call 6:00 a.m. to 6:30 a.m. on Sunday, Monday, Wednesday, and Thursday.
Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Visits	Visiting hours are from 8:00 a.m. to 3:00 p.m. Prisoners may have an unrestricted number of visits. There is a separate children's room available.
Religion	One full-time chaplain. Services are also offered in Spanish.

FEDERAL PRISON CAMP BORON

Address	Federal Prison Camp Boron P.O. Box 500 Boron, CA 93596
Location	In the Mojave Desert, 37 miles west of Barstow and 75 miles north of San Bernardino. On State Highway 395, 6 miles north of Kramer Junction. The area is served by airports in Ontario, San Bernardino, and Los Angeles, as well as by Amtrak and by commercial bus lines.
Contact Numbers	Tel: 619-762-6230 Fax: 619-762-5719
Judicial District	Central California
Security Level	Minimum
Male/Female	Male
Capacity	439
Current Pop.	526
Staff	104
History/Description	Opened in 1979, the facility is located in a former Air Force Radar Station. Housing is primarily dormitory style, with some two-person rooms.
Education	Education includes GED, ESL, adult continuing education, and correspondence classes. In addition, vocational training classes include autoCAD, carpentry, EMT, fire science, typing/word processing.
Work	There is a Unicor electronics factory.
Food/Commissary	Commissary is open in the evenings on Tuesday through Thursday.
Recreation	Recreation includes weights, team sports, games, music, and crafts.
Medical	Sick call 6:30 a.m. to 7:00 a.m., Monday, Tuesday, Thursday, and Friday.
Drug Treatment	Residential Drug Abuse Treatment Program, nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Gym	Yes.
Visits	Visiting hours from 4:45 p.m. to 9:15 p.m. on Friday and from 7:15 a.m. to 3:15 p.m. on weekends and federal holidays. Each month prisoners are given 40 points; 1 hour of visit costs 1 point. There is a children's playroom and an outside playground.
Religion	One full-time chaplain and a contract rabbi and imam.

METROPOLITAN DETENTION CENTER BROOKLYN

Address	Metropolitan Detention Center Brooklyn 100 29th Street Brooklyn, NY 11232
Location	In the Sunset Park section of Brooklyn, one of the five boroughs of New York City. Brooklyn is served by LaGuardia, Kennedy, and Newark Airports; Amtrak (Pennsylvania Station); and commercial bus lines (42nd Street Port Authority).
Contact Numbers	Tel: 718-840-4200 Fax: 718-832-4225
Judicial District	Eastern New York
Security Level	Administrative
Male/Female	Male and female
Capacity	578
Current Pop.	2,457
Staff	286
History/Description	Opened January 1994.
Education	Education includes GED, ESL, adult continuing education, parenting, word processing, and correspondence classes. The parenting program for female offenders includes anger management, discipline, foster care, and coping with confinement.
Work	Inmates may apply for a limited number of paid work positions via a request to the correctional counselor.
Recreation	Recreation programs include indoor and outdoor activities and intramural sports. Physical fitness and weight reduction programs are also available.
Medical	Sick call: Monday, Tuesday, Thursday, and Friday beginning at 8:00 a.m.
Counseling	Unit staff members are available for informal counseling sessions and formal group counseling. Each unit has an assigned psychologist available to provide counseling and other mental health services. A contract psychiatrist is available by appointment.
Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Visits	Visiting hours are from 12:30 p.m. to 8:30 p.m. on Monday, Wednesday, Thursday, and Friday and from 7:30 a.m. to 3:30 p.m. on weekends and federal holidays. No more than three adults may visit at any one time and an unlimited number of children.
Religion	A full-time chaplain and rabbi are both available as well as contract and volunteer representatives of other faiths. There are many programs for Jewish prisoners. Information on religious programs is available from the chaplain and on unit bulletin boards.
Release Preparation	Standard classes. Only Unit 2 South.

FEDERAL PRISON CAMP BRYAN

Address	Federal Prison Camp Bryan P.O. Box 2197 1100 Ursuline Bryan, TX 77805-2197
Location	Ninety-five miles north of Houston and 165 miles south of Dallas. In the town of Bryan at the intersection of Ursuline Avenue and 23d Street. The area is served by Easterwood Airport in College Station, as well as by commercial bus lines.
Contact Numbers	Tel: 409-823-1879 Fax: 409-775-5681

Judicial District	Southern Texas
Security Level	Minimum
Male/Female	Female
Capacity	720
Current Pop.	667
Staff	153
History/Description	Opened in July 1989, the prison is located in a 37-acre compound. It is designed to hold short-term offenders with average sentences of 5 years or less.
Education	Education includes GED, ESL, adult continuing education, and correspondence classes. In addition, there is a 1-year certificate program in information management from Blinn College. There is also a Parenting Program taught by bureau staff that offers eight areas of study including building self-esteem, developing trust, parenting from a distance, understanding your role as a parent, and the family unit. Inmates enrolled in parenting program engage in special art classes and other activities with children on the weekend in the children's center. Contact personnel and volunteers from Texas A & M University assist on weekend. In addition, there are five occupational training programs, all of which lead to outside certification or accreditation in business technology, computer aided drafting, computer refurbishing, cosmetology, and master gardener. Plus there is an apprenticeship program that leads to outside certification or accreditation in dental hygiene. Finally, law and leisure libraries are open 7 days a week. Hours will be posted.
Work	Jobs available include Food Service, orderlies and clerks in the medical department, facilities, librarians, clerks and teacher's aides in the Education Department, clothing dispensers and clerks in the clothing room, institutional maintenance, community details, and the Unicor distribution center, which employs approximately 60 to 80 inmates in production, assembly, warehouse, and distribution of products. There is a waiting list for Unicor.
Food/Commissary	Meals are served in the dining hall. Hours will be posted. The commissary is open from 4:30 p.m. to 7:30 p.m. from Monday to Thursday.
Recreation	Various indoor and outdoor activities, including weights, team sports, aerobics, arts and crafts, health and fitness, and special activities.
Medical	Sick call is from 7:15 p.m. to 7:45 p.m. on Sunday, Monday, Wednesday, and Thursday. The institution does not have 24-hour health services. Medication is dispensed three times a day. Hours will be posted. Dental sick call is available for anyone with an emergency. Hours are from 7:30 a.m. to 7:45 a.m. Monday, Tuesday, Thursday, and Friday.
Counseling	In addition to individual therapy and crisis intervention, frequent group offerings are available in managing stress, depression, and anger, controlling impulses, relationships, self-improvement issues, assertiveness, problems related to childhood abuse, and domestic violence.
Drug Treatment	One of five national residential drug treatment programs for female offenders. The program is based on cognitive-behavior therapy. The participants are taught that they are responsible for their own behavior and the choices they make. They learn skills to improve their ability to manage their lives and to prevent a relapse. Also available are a nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Visits	Visiting hours are from 5:00 p.m. to 9:00 p.m. on Fridays and from 8:00 a.m. to 3:00 p.m. on weekends and federal holidays. There is a children's center in the visiting room.

INTENSIVE CONFINEMENT CENTER BRYAN

Address	Intensive Confinement Center Bryan P.O. Box 2197 1100 Ursuline Bryan, TX 77805-2197
Location	Adjacent to Federal Prison Camp Bryan.
Contact Numbers	Tel: 409-823-1879 Fax: 409-775-5681
Judicial District	Southern Texas

Security Level	Minimum
Male/Female	Female
Capacity	132
Current Pop.	109
History/Description	The first and only female facility of this kind, activated in July 1992 as an alternative correctional setting for women. It is like a boot camp. During the 6-month program, prisoners are housed in two dormitories that are separate from the camp inmates. Participation is voluntary.
Education	Education includes GED, ESL, adult continuing education, and correspondence classes. In addition, there is the same parenting program as at Federal Prison Camp Bryan (see above).
Work	One occupational training program: horticulture.
Other	This is a tobacco- and smoke-free institution.

FEDERAL CORRECTIONAL INSTITUTION BUTNER (LOW)

Address	Federal Correctional Institution Butner (Low) P.O. Box 999 Butner, NC 27509
Location	Near the Research Triangle area of Durham, Raleigh, and Chapel Hill, 5 miles off Interstate 85 on old Highway 75. The area is served by the Raleigh Durham Airport, Amtrak, and commercial bus lines.
Contact Numbers	Tel: 919-575-5000 Fax: 919-575-5023
Judicial District	Eastern North Carolina
Security Level	Low
Male/Female	Male
Capacity	992
Current Pop.	1,215
Staff	244
History/Description	Opened in January 1996.
Education	Education includes GED, ESL, adult continuing education, life skills, parenting, and correspondence classes. College courses through Vance Granville Community College are also available. Vocation courses include industrial sewing, office technology, and environmental housekeeping.
Work	Jobs include Food Service, maintenance, and Unicor graphics/services and a textile factory that makes shirts for the U.S. military.
Food	Food is served in a central dining area where staff, inmates, and visitors eat together.
Recreation	Recreation includes indoor and outdoor activity, weights, and crafts.
Drug Treatment	A nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Gym	The gym has a separate weight-lifting area.
Religion	There is a small chapel next to a multipurpose auditorium into which it can be opened.

FEDERAL CORRECTIONAL INSTITUTION BUTNER (MEDIUM)

Address	Federal Correctional Institution Butner (Medium) P.O. Box 1000 Butner, NC 27509
Location	As above.
Contact Numbers	Tel: 919-575-4541 Fax: 919-575-6341

Judicial District	Eastern North Carolina
Security Level	Medium/Administrative
Male/Female	Male
Capacity	513
Current Pop.	883
Staff	367
History/Description	Opened in April 1976, it provides outpatient and psychiatric care within a medium-secure facility. The low-rise concrete buildings are located in a landscaped grassy area. There are six separate housing units. The housing areas include a dayroom and an indoor recreation area with a pool table (Home Office, 1985, pp. 41-42). The population is divided into eight different housing units, each of which is named after a regional university. Clemson, Georgia Tech, and Virginia hold general population; State and Wake Forrest hold the residential drug treatment program; Duke and North Carolina are chronic mental health units; and Maryland houses a special sexual offender component. Town hall meetings are held periodically in the housing units to make announcements and discuss changes in the policy and procedures of the unit.
Admission and Orientation	First 1 to 2 weeks.
Education	Education includes GED, ESL, adult continuing education, and correspondence classes. In addition, there are vocational classes such as HVAC, building, computers, and apprenticeship programs in baking, cooking, HVAC, and optics. College-level courses taught by contract instructors from nearby community or 4-year colleges. The prisoner must pay for his own college program, but the institution will try to help him obtain funding.
Work	Institutional maintenance jobs are usually the first job assignment for every incoming prisoner. These include work in Food Service or in maintenance. There is also a Unicor optics factory with a significant waiting list.
Recreation	Recreation includes arts and crafts and indoor and outdoor activities. Musical instruments are available in the recreation area.
Medical	Sick call is 6:30 a.m. to 7:00 a.m. Monday, Tuesday, Thursday, and Friday. Emergency care is available at any time. There is a fully staffed mental health hospital. Controlled medication is distributed on daily pill line at various housing units depending on the prisoner's classification.
Counseling	Each unit has at least one psychologist. There are also a variety of volunteer-run programs. In addition, Duke and North Carolina housing units offer special assistance and counseling for those suffering chronic mental health problems, and Maryland Unit runs the 24-bed Sexual Offenders Treatment Program. Psychology services are also available to victims of sexual assault. The Habilitation Program deals with high-security inmates who have behavioral problems related to mental health issues and adjustment problems.
Drug Treatment	A 9-month Residential Drug Abuse Treatment Program is run by the Psychology Department in Duke and North Carolina housing units. This program is based on the idea of a therapeutic community. Prisoners participate in individual and group counseling and education that is offered by nine drug therapists in addition to regular unit psychologists. Also available are a nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Gym	Yes. Also houses the law library.
Visits	Visiting hours are Monday, Thursday, and Friday from 1:00 p.m. to 8:00 p.m. and Saturday, Sunday, and federal holidays from 8:00 a.m. to 3:00 p.m. Each inmate is given 16 points a month. A weekday visit counts as 1 point. A visit on the weekend or on a holiday counts as 4 points. A maximum of three adults may be present at any one visit.
Religion	Three full-time chaplains plus a contract rabbi and a Native American sweat lodge.
Release Preparation	Staff will address concerns about readjusting to the community, education, and vocational opportunities. Prisoners may also be eligible for furloughs and placement in community corrections centers.

FEDERAL MEDICAL CENTER BUTNER

Address	Federal Medical Center Butner P.O. Box 1500 Butner, NC 27509
Location	As above.
Contact Numbers	Tel: 919 575 3900 Fax: 919 575 4801
Judicial District	Eastern North Carolina
Security Level	Administrative
Male/Female	Male
Capacity	128
Current Pop.	623
Staff	248
History/Description	Opened in 2000.
Education	Education includes GED, ESL, adult continuing education, and correspondence classes.
HIV/AIDS	All hospital patients, inmates with known risk factors, and those approaching release will be tested for HIV. All other inmates are strongly encouraged to have a test upon entering the institution. A&O pack contains information about the test and about HIV/AIDS.

FEDERAL PRISON CAMP BUTNER

Address	Federal Prison Camp Butner P.O. Box 1000 Butner, NC 27509
Location	Adjacent to Federal Correctional Institution Butner (Medium).
Contact Numbers	Tel: 919-575-4541 Fax: 919-575-6341
Judicial District	Eastern North Carolina
Security Level	Minimum
Male/Female	Male
Capacity	296

Drug Treatment	A nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.

FEDERAL MEDICAL CENTER CARSWELL

Address	Federal Medical Center Carswell P.O. Box 27066 "J" Street, Building 3000 Fort Worth, TX 76127
Location	In the northeast corner of the Naval Air Station, Joint Reserve Base, 1 mile from Highway 183 and 3 miles from Interstate 30. The area is served by Dallas-Fort Worth Airport, the Fort Worth Transportation Authority, Amtrak, and commercial bus lines.

Contact Numbers	Tel: 817-782-4000 Fax: 817-782-4875
Judicial District	Northern Texas
Security Level	Administrative
Male/Female	Female
Capacity	402
Current Pop.	1,081
Staff	362
History/Description	Federal Medical Center Carswell opened in July 1994 and serves as a medical and psychiatric referral center for women. A variety of housing is available from one-person rooms to open dormitories. The institution also contains the bureau's only Administrative Unit for violent or dangerous female inmates.
Education	Education includes GED, ESL, adult continuing education, parenting, and correspondence classes. In addition, there is vocational training in "automated office technology," which includes basic computer skills such as Word Perfect and Lotus Pro; an apprenticeship program; and a 6-month parenting course. Parenting topics include parenting skills, discipline, self-esteem, substance abuse education, prenatal care, parenting from a distance, and community social services. Inmates completing "parenting from a distance" phase may record themselves on video, reading books or telling stories for their children. Women enrolled in program are eligible to hold visits with their children in the Children's Center adjacent to visiting room.
Work	Jobs include cooks, bakers, salad preparers, dishwashers, and orderlies in Food/Commissary Service; orderlies, nursing assistants, and inmate helpers in the Medical Department; electricians, plumbers, cement finishers, masons, mechanics, painters, carpenters, drafters, laborers, clerks, and HVAC in the Mechanical Service; clerks in the business office and warehouse; librarians, clerks, and teacher's aides in education; clothing dispenser and clerks in the clothing room; clerks, housekeepers, recycling, and warehouse workers in safety; landscape workers and building orderlies in institution maintenance; clerks and orderlies in the chapel; and orderlies in Receiving and Discharge and in the housing units. There is also a Unicor graphics/services factory that employs data-entry clerks.
Food/Commissary	Meals are served cafeteria style in the main dining room at the posted times. The operating funds are limited to $2.73 per inmate each day to purchase all food and supplies. Commissary is open on Monday, Tuesday, and Thursday afternoon. Inmates' day to shop in the commissary is determined by the last two numbers of the first five digits of their register number.
Recreation	Recreation includes bingo, organized and informal sports, social activities, arts and hobby crafts, physical fitness, dancing, and aerobic activities. There are also special programs and holiday activities such as tournaments, music programs, and talent shows. Other general interest courses include health education, fitness, and wellness.
Medical	The Health Services staff will provide necessary medical, dental, and mental health services to the inmate population consistent with acceptable community standards. Emergency medical service is available 24 hours a day as well as annual breast exam and Pap smear. All inmates are tested for antibodies to German measles. If no antibodies are detected, or if low antibody levels are detected, the German measles vaccine will be offered to those inmates in childbearing age. Hepatitis B vaccine is offered to inmates working in Medical and Dental Services, Hairdressing, Food Service, and the Plumbing Shop. The pharmacy operates four pill lines daily for the administration of restricted medications and two pill lines for the dispensing of medications for self-administration.
Counseling	Psychology Services has organized its program for female offenders into four tracks similar to the organization of academic course work in a college setting. Inmates, in consultation with their unit team or on referral from mental health staff, may choose an organized series of group experiences that address their primary relevant issues. There are four tracks: Abuse Recovery, Addictions, Values, and Wellness. Carswell also runs a program called SHARE (Sharing Hope About Recovery Experiences) for women with histories of substance abuse, domestic violence, or sexual assault to contact young women "at risk" in the community to try to help them avoid similar problems and cope with trauma in their lives. Finally, Carswell has a 72-bed program called CHANGE (Choosing Healthy Alternatives and New Growth Experiences), which is designed for women to discuss childhood abuse, domestic violence, sexuality, spirituality, stress management, and wellness.
Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.

HIV/AIDS	HIV testing is available upon request.
Visits	Visiting hours are from 5:00 p.m. to 9:00 p.m., Monday and Friday and from 8:00 a.m. to 3:00 p.m. on weekends and federal holidays. There is a children's center located in both the camp and in the main institution visiting rooms.
Religion	The Religious Services Department has three chaplains, contract clergy, and community volunteers. Chaplains are available for pastoral counseling. The department offers a religious reading and audio/visual library for inmate use. Free publications along with free greeting cards are available.
Release Preparation	A program of groups and classes offered to all inmates on a voluntary basis.
Other	Hygiene products are issued on the last Thursday of every month.

FEDERAL PRISON CAMP CARSWELL

Address	Federal Prison Camp Carswell P.O. Box 27066 "J" Street, Building 3000 Fort Worth, TX 76127
Location	Adjacent to Federal Medical Center Carswell.
Contact Numbers	Tel: 817-782-4000 Fax: 817-782-4875
Judicial District	Northern Texas
Security Level	Minimum
Male/Female	Female
Capacity	148

Capacity	411
Current Pop.	744
Staff	224
History/Description	Opened August 1975, it holds a number of different populations in one high-rise building.
Admission and Orientation	Inmates will be screened by psychology services and given a medical examination upon arrival.
Education	Education includes GED, ESL, adult continuing education, and correspondence classes.
Food/Commissary	Meals will be served on each unit. They will be delivered to the unit in a food cart. Certain over-the-counter medications are available for purchase at the commissary.
Recreation	Recreation includes various physical fitness courses and board games. Movies are also screened.
Medical	Twenty-four-hour coverage from physicians and physician assistants. Routine health care is provided through triage/sick call on Monday, Tuesday, Thursday, and Friday. Sign-up is from 6:00 a.m. to 7:00 a.m. Emergencies will be seen at any time. Emergency dental care is available to all inmates. Otherwise, you must sign up for dental sick call and have your problem evaluated.
Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Visits	Visiting hours vary; contact institution. Inmate may have 10 adults on visiting list who must be approved by the prison. A maximum of four may visit at any one time.
Religion	One full-time chaplain who offers services and counseling as well as a contract rabbi and a Native American sweat lodge.
Release Preparation	Inmates who are within 1 year of their release will attend an institutional prerelease program. The program includes speakers from community corrections, education, the unit team, U.S. Probation, and the Inmates System Department.

FEDERAL CORRECTIONAL COMPLEX COLEMAN (ADMINISTRATIVE)

Address	Federal Correctional Complex Coleman (Administrative) 868 N.E. 54th Terrace Coleman, FL 33521-8999
Location	In central Florida, approximately 50 miles northwest of Orlando, 60 miles northeast of Tampa, and 35 miles south of Ocala. The complex is located south of the town of Coleman, off Highway 301 on State Road 470 in Sumter County.
Contact Numbers	Tel: 352-330-3003 Fax: 352-330-0653
Judicial District	Middle Florida
Security Level	Administrative
Staff	201
History/Description	Opened in October 1995. The Federal Correctional Complex, Coleman, Florida, consists of five components: high-, medium-, and low-security institutions, a satellite camp, and an administrative area housing shared services departments. Each component operates under the direction of its respective warden, who acts in conjunction with the others when making decisions that affect the overall complex. Federal Correctional Complex Coleman's administrative facility provides various administrative services to the Coleman Federal Correctional Complex. These include a centralized business office, personnel office, training center, and warehouse, as well as Federal Prison Industries and other basic services.
Education	Education includes GED, ESL, adult continuing education, parenting, and correspondence classes. In addition, there are vocational training and apprenticeship programs in culinary arts, baking, heating/air conditioning, landscaping, and electrical (based on needs of community workforce). Law and leisure libraries open 12:00 p.m. to 8:00 p.m. Monday through Saturday and 12:00 p.m. to 3:30 p.m. on Sunday.
Work	Work opportunities and training are available in Food Service, Mechanical Services, Health Services, Education Department (librarian, teacher's aide, etc.), clothing room (laundry, shipping and receiving), maintenance (painting, landscaping), and Unicor.

Food	Meals are served during the week in the dining room from 6:00 a.m. to 7:00 a.m. at a lunch time designated by a work supervisor and after the 4:00 p.m. count clears. On the weekend the hours are from 7:00 a.m. to 8:00 a.m. and from 10:45 a.m. to 11:45 a.m., with dinner at the same time as weekdays.
Recreation	Indoor and outdoor activities, including hobby craft, basketball, softball, soccer, and handball. Other activities such as music practice and card and games room are also available. There is a fitness area with stationary bikes and step machines.
Medical	Sick call is from 7:00 a.m. to 7:10 a.m. Monday, Tuesday, Thursday, and Friday. Dental sick call is on Tuesdays and Thursdays.
Counseling	Individual and group counseling are available through Psychology Services. There is also a victim impact program in which prisoners learn about the impact of crime from victims.
Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Visits	Visiting hours are 8:15 a.m. to 3:15 p.m. Saturday, Sunday, and holidays.
Religion	Facilities for worship services, prayer and study areas, and a religious library are available. Full-time chaplains are on staff, and arrangements can be made for community volunteers of various faiths to visit.

Male/Female	Male
Capacity	1,536
Current Pop.	2,065
Staff	203
History/Description	The chief executive office of Federal Correctional Complex Coleman is the warden of Federal Correctional Institution Coleman (low security). Housing is dormitory style with two-person cubicles.
Admission and Orientation	Inmates will receive a medical examination 7 to 14 days after their arrival.
Education	Education includes GED, ESL, adult continuing education, and correspondence classes. In addition, there are apprenticeship programs and vocational training programs in business education, building maintenance (sanitation), building trades, culinary arts, and drafting.
Work	Upon completion of the admissions and orientation program, all inmates are assigned to a mandatory 90-day work detail according to the institution's needs at the time. There is a Unicor metals factory that produces furniture.
Food/Commissary	Meals are served cafeteria style. The commissary is located adjacent to the dining area.
Recreation	Recreation includes exercise yard, hobby craft center, music center, and art center plus leisure center with pool tables, hobby craft area, and a wellness research area. There is also a card and game room. The recreation yard includes flag football/soccer field, eight handball/racquetball courts, four basketball courts, four horseshoe pits, a jogging track of 1 mile, and a compound walking track. Recreational activities include but are not limited to handball, volleyball, pinochle, soccer, softball, backgammon, flag football, boccie ball, chess, basketball, dominoes, gin rummy, racquetball, shuffleboard, kickball, and badminton. Classes are offered in art, drums, wellness program, leatherwork, classical guitar, crochet, orchestra music, beadwork, accordion, and piano.

Medical	Sick call sign-up is 6:30 a.m. to 7:00 a.m. Monday, Tuesday, Thursday, and Friday, excluding holidays. Emergencies will be seen at any time. Dental services and optometrist available.
Counseling	Individual counseling, group counseling, psychological assessment, psychiatric consultation, crisis intervention, AIDS counseling, drug treatment, Alcoholics and Narcotics Anonymous.
Drug Treatment	Residential Drug Abuse Treatment Program, nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous. The "Choice and Change" course is mandatory for those inmates sentenced after September 1991 in whose offense alcohol or other drugs played a role.
Visits	Visiting hours are from 1:00 p.m. to 8:00 p.m. Monday, Thursday, and Friday and from 8:00 a.m. to 3:00 p.m. on weekends and federal holidays. Inmates are allowed visits on a point system. On the first day of each month, each inmate is given 4 points. Monday, Thursday, and Friday visits are worth 0 points; weekend and holiday visits are worth 1 point. Unused visiting points will not be carried over to the next month. Inmates are allowed four adult visitors and unlimited children in the visiting room. Seating for children may be limited.
Religion	Three full-time chaplains who offer pastoral care. Religious medallions, greeting cards, religious books, and a special religious diet called "Common Fare" are all offered through the Pastoral Care Department.
Complaints	No compensation for work-related injuries resulting in physical impairment shall be paid prior to an inmate's release.
Other	Upon arrival at Federal Correctional Complex Coleman-Low, each inmate is given an identification card. This identification card must be in the possession of the inmate at all times when outside of his housing unit. Inmates without identification cards are subject to being issued an Incident Report. The only exception is during the day when an inmate exchanges his commissary card for a recreation pass from his respective unit officer.

FEDERAL CORRECTIONAL INSTITUTION COLEMAN (MEDIUM)

Address	Federal Correctional Institution Coleman (Medium) 811 N.E. 54th Terrace Coleman, FL 33521-8997
Location	As above.
Contact Numbers	Tel: 352-330-3200 Fax: 352-330-0552
Judicial District	Middle Florida
Security Level	Medium

Capacity	1,146
Current Pop.	1,655
Staff	239
History/Description	Opened in January 1996; housing in two-person cells.
Education	Education includes GED, ESL, adult continuing education, parenting, and correspondence classes. In addition, vocational training courses are available in drafting, blueprint reading, and building maintenance/sanitation. Recent adult continuing education classes have included basic computer skills and typing.
Work	There is a Unicor furniture factory where prisoners laminate wood surfaces.
Food/Commissary	Meals are served in the dining room from 6:15 a.m. to 7:15 a.m., from 11:00 a.m. to 12:00 p.m. and from 4:30 p.m. to 5:30 p.m. during the week. On the weekend they are served from 6:15 a.m. to 7:15 a.m., from 10:45 a.m. to 12:00 p.m., and from 4:30 p.m. to 5:30 p.m. The commissary is open Monday through Thursday. Certain items, including stamps and over-the-counter medication, do not affect the spending limit per month. Prisoners may only shop once a week.
Recreation	Recreation yard, hobby craft, and music center.
Medical	Sick call 6:30 a.m. to 7:00 a.m. Monday, Tuesday, Thursday, and Friday. Medication is distributed three times a day. Hours will be posted.

Counseling	A 6-month Skills Building Program for prisoners with cognitive and social learning needs.
Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Visits	Visiting hours are from 8:15 a.m. to 3:15 p.m., Thursday through Monday and federal holidays. Prisoners are given 2 visiting points a month. Visits on the weekend cost 1 point each; visits on Monday, Thursday, Friday, or a federal holiday cost 0 points.

FEDERAL PRISON CAMP COLEMAN

Address	Federal Prison Camp Coleman 811 N.E. 54th Terrace Coleman, FL 33521-8997
Location	As above.
Contact Numbers	Tel: 352-330-3200 Fax: 352-330-0552
Judicial District	Middle district of Florida
Security Level	Minimum
Male/Female	Female
Capacity	384
Current Pop.	388
Staff	251
History/Description	Prisoners are housed in dormitories in separate units. Each unit has a number of appliances for inmate use, including washers, dryers, televisions, and microwave ovens as well as clothing irons, hair dryers and curling irons, etc.
Admission and Orientation	A&O is a 1-day program. Arriving inmates will complete intake and medical screening forms. New arrivals should receive a full physical examination within 14 days of arrival.
Education	Education includes GED, ESL, adult continuing education, parenting, and correspondence classes. In addition, there are vocational training and apprenticeship programs. Vocational training programs include culinary arts, baking, heating/air conditioning, landscaping, and electrical. In addition there are 16 apprenticeship programs: baker, cement mason, computer operator, cook, cook (hotel and restaurant), dental assistant, drafter, electrician, heating and air conditioning, horticulture, housekeeping, land management technician, landscape technician, painting, plumbing, and small engine repair. The Parenting Program helps increase the self-esteem of parents and children, communication skills, parenting influence on behavior, types of parents, and children with parents in prison. The course is taught by contract workers from Parent and Children Together, Inc. (PACT). The Law and Leisure Library is open from 12:00 p.m. to 8:00 p.m. Monday through Friday, from 12:00 p.m. to 8:00 p.m. on Saturday, and from 12:00 p.m. to 3:30 p.m. on Sunday.
Work	Unicor operates a distribution center at Coleman Camp.
Food	Meals are served in the dining room during the week from 6:00 a.m. to 7:00 a.m., from 10:45 a.m. to 12:00 p.m., and from 4:30 to 5:00 p.m. On weekends and holidays the dining hours are 7:00 a.m. to 8:00 a.m., from 10:45 a.m. to 11:45 a.m., and from 4:30 p.m. to 5:00 p.m. Prisoners will eat with others from own housing unit in a rotating order. Shopping hours in the commissary are posted on the directory at the front entrance. Prisoners are allowed a maximum of 60 stamps.
Recreation	Recreation includes various arts and crafts, intramural sports, and musical instruments. A hair care room is available with equipment for hair care, including hot combs and curling irons. No hair extensions are allowed. Sunbathing is permitted on the west side of the housing unit only from 4:00 p.m. during the weekdays and all day on weekends and holidays. Prisoners are authorized to wear shorts and sports bras while sunbathing. Television is permitted until 2:30 a.m., although after 10:30 p.m. the volume must remain low.
Medical	Medical sick call is from 7:00 a.m. to 7.10 a.m. Monday, Tuesday, Thursday, and Friday. Only emergencies and appointments will be dealt with at other times. Dental emergencies will be handled through sick call appointments. Glasses may be prescribed and will normally take 6 to 8 weeks to arrive.

Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Visits	Visiting hours are 8:15 a.m. to 3:15 p.m. on weekends and federal holidays. There is a separate children's room with a television and books. Prisoners are allowed no more than five visitors at any one time.
Release Preparation	Release courses are offered in two segments, the first by several departments within the prison and the second within your unit. The release program should prepare you for the transition back to the community.
Other	Inmates are not permitted to give one another manicures or pedicures. The A&O pack specifies that "you are not allowed to be nude at any time and that includes when you are sleeping." Smoking is forbidden in all units. Those who wish to smoke may only do so outside. Prisoners at Coleman Camp who have immediate family members in other correctional facilities may call them every 90 days if they have a "good" responsibility and clear conduct for 6 months.

FEDERAL CORRECTIONAL INSTITUTION CUMBERLAND

Address	Federal Correctional Institution Cumberland 14601 Burbridge Road, S.E. Cumberland, MD 21502-8771
Location	In western Maryland, 130 miles northwest of Washington, D.C., 6 miles south of Interstate 68, off State Route 51 South. The area is served by the Cumberland regional airport, Amtrak, and commercial bus lines.
Contact Numbers	Tel: 301-784-1000 Fax: 301-784-1008
Judicial District	Maryland
Security Level	Medium
Male/Female	Male
Capacity	768
Current Pop.	1,084
Staff	305
History/Description	Opened March 1995; facility has eight housing units with two- and three-person cells.
Education	Education includes GED, ESL, adult continuing education, and correspondence classes. In addition there is an associate's degree program in business through Allegheny College and a vocational training program in carpentry. Flyers are posted regarding new educational activities.
Work	Work includes Food Service, facilities, and a Unicor graphics/services factory that provides hands-on industrial training.
Food/Commissary	Meals are served in the dining room. A salad bar is available at lunch and dinner meals. Menus will be posted on bulletin boards in both entryways to Food Service and in the housing units.
Recreation	Recreation includes indoor and outdoor activities ranging from individualized art and craft programs to intramural team sports such as baseball, basketball, and volleyball. Weight reduction programs are also offered, and musical instruments are available for inmate use.
Medical	Requests to see the doctor should be made by cop-out. Sick call sign-up is Monday, Tuesday, Thursday, and Friday from 6:30 to 7:00 a.m.
Counseling	Psychology Services Department is open Monday through Friday from 7:30 a.m. to 4:00 p.m. on appointment basis only. Services provided include individual counseling, crisis intervention, drug and alcohol treatment, and special group programs. Among the group programs offered, the lifestyle and values program "The Price of Freedom" will be offered several times per year.
Drug Treatment	There is a drug abuse counselor who should be contacted by cop-out by those who wish to participate in the program. There is a nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.

HIV/AIDS	An HIV-education program for inmates is available periodically. HIV information is also available through Medical Services. You must have a current HIV test to be released on furlough, to a halfway house, on parole, etc.
Religion	Staff chaplains, as well as contract and volunteer representatives of other faiths, are available to inmates.

FEDERAL PRISON CAMP CUMBERLAND

Address	Federal Prison Camp Cumberland 14601 Burbridge Road, S.E. Cumberland, MD 21502-8771

Drug Treatment	Residential Drug Abuse Treatment Program, nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.

FEDERAL CORRECTIONAL INSTITUTION DANBURY

Address	Federal Correctional Institution Danbury Route 37 Danbury, CT 06811-3099
Location	In southwestern Connecticut, 70 miles from New York City, 3 miles north of Danbury on State Route 37. The area is served by Westchester County Airport (45 minutes away), New York City airports (90 minutes away), and commercial bus lines. Local taxi service is also available.
Contact Numbers	Tel: 203-743-6471 Fax: 203-312-3110
Judicial District	Connecticut
Security Level	Low
Male/Female	Female
Capacity	508
Current Pop.	1080
Staff	307
History/Description	Opened August 1940.
Admission and Orientation	One week, physical examination and educational, vocational, and psychological tests.
Education	Education includes GED, ESL, adult continuing education, parenting, and correspondence classes. In addition, there are five vocational training programs, all of which lead to outside accreditation or certification: business management, business vocational training, horticulture, building trades, and culinary arts. There are also seven apprenticeship programs, all of which receive outside accreditation or certification: carpenter, cook, dental assistant, electrician, painter, stationary engineer, and tool machine setup operator.

Work	Unicor electronic cable factory.
Food/Commissary	Meals are served from 6:15 a.m. to 7:15 a.m. at a time designated by work supervisor and after the 4:00 p.m. count (approx. 4:30 p.m.) during the week. Dorms are called on a rotating basis, based upon the safety and sanitation rating of each unit. On weekends and federal holidays, the times are from 7:15 a.m. to 7:45 a.m. and from 10:30 a.m. to 11:45 a.m., with dinner the same as weekdays.
Recreation	Recreation Department includes a gymnasium, a multipurpose room, and an outdoor recreation yard. Activities may include, but are not limited to, intramural team sports (basketball, softball, soccer, volleyball), physical fitness and weight reduction programs, calligraphy, aerobics, yoga, weight training, jogging, brisk walking, basketball, soccer, board games, bingo, live band, special emphasis programs (Black History Month), and holiday tournaments. Recreation handbooks provide an overview of all programs and sign-up procedures. Suggestions for new activities are welcomed.
Medical	Sick call sign-up is Monday, Tuesday, Thursday, and Friday from 6:30 a.m. to 7:00 a.m.
Counseling	The BRIDGE program is a residential program designed to assist inmates in recovery from trauma related to sexual, physical, or psychological victimization. There is also a 9-month nonresidential course called "New Pathways" that addresses coexisting disorders such as substance abuse and trauma along with other issues like incest, eating disorders, and domestic violence.
Drug Treatment	One of five national residential drug treatment programs for female offenders. Program is based on cognitive-behavior therapy. The participants learn that they are responsible for their own behavior and the choices they make. They learn skills to improve their ability to manage their lives and to prevent a relapse. There is also a nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
HIV/AIDS	Blood tests for HIV/AIDS may be done on a voluntary basis. You will be counseled before giving blood and again upon receipt of test results.
Visits	Special room for visiting activities with children. Visiting is weekly, using inmate volunteers and family literacy volunteers from the community.
Religion	Two full-time chaplains for camp and main institution.
Release Preparation	"Career Expo," in which local business people volunteer to meet with inmates, is part of the release preparation program. Special emphasis is placed on resume writing and job interview skills.

FEDERAL PRISON CAMP DANBURY

Address	Federal Prison Camp Danbury Route 37 Danbury, CT 06811-3099

FEDERAL CORRECTIONAL INSTITUTION DUBLIN

Address	Federal Correctional Institution Dublin 8th Street—Camp Parks Dublin, CA 94568
Location	Twenty miles southeast of Oakland. Off Interstate 580 (Hopyard/Dougherty Road exit, proceed east to the Camp Parks Army Base). The area is served by the San Francisco and Oakland airports and by commercial bus lines.
Contact Numbers	Tel: 510-833-7500 Fax: 510-833-7599
Judicial District	Northern California
Security Level	Low: administrative
Male/Female	Female and male
Capacity	810
Current Pop.	1,074
Staff	275
History/Description	Opened in July 1974; originally called Federal Correctional Institution Pleasanton.
Education	Education includes GED, ESL, adult continuing education, parenting, and correspondence classes. In addition, there are three vocational training programs, all of which lead to outside certification or accreditation: business, business accounting, and computer repair. There is also a dental assistant apprenticeship. The parenting program for female inmates is offered three nights a week in Spanish

	and English. Classes deal with issues such as family relationships, household management, sex education, parenting, literacy skills, birth control, AIDS, self-esteem, personal responsibilities as a parent, and self-discipline. This class is also offered at the satellite camp.
Work	There is a Unicor textile factory, a Unicor furniture factory, and a Unicor graphics/services factory that does data processing.
Food/Commissary	Meals are served in the dining hall during the week from 6:15 a.m. to 7:15 a.m., from 10:45 a.m. to 12:00 p.m., and after 4:00 p.m. count. On weekends and holidays times are from 7:00 a.m. to 8:00 a.m., from 10:45 a.m. to 12:00 p.m., and after 4:00 p.m. count. Prisoners may shop at commissary once per week.
Recreation	Recreation includes indoor and outdoor activities, ranging from individualized arts and crafts programs to intramural team sports such as baseball and volleyball. Physical fitness and weight reduction programs are also offered.
Medical	Sick call 6:30 a.m. to 6:45 a.m. Monday, Wednesday, Thursday, and Friday. General and holistic health care is offered at Dublin. Holistic health programs offer practical ways to reduce stress, increase self-esteem, integrate mind, body, and spirit, and foster creativity. Practitioners also teach communication and conflict resolution skills. Routine and emergency dental care is also available. Inmates are eligible for pregnancy tests, Pap smears, pelvic examinations, and breast examinations.
Counseling	There is one chief psychologist, a staff psychologist, a drug abuse treatment program coordinator, and one drug abuse treatment psychologist. A psychiatrist is available by appointment. Individual and group counseling are available. Special interest groups (e.g., sexual abuse) will be advertised and presented throughout the year.
Drug Treatment	One of five national residential drug treatment programs for female offenders. Program is based on cognitive-behavior therapy. The participants are taught that they are responsible for their own behavior and the choices they make. They learn skills to improve their ability to manage their lives and to prevent a relapse. There is also a nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Visits	Visiting hours 5:30 p.m. to 8:00 p.m. Thursday and Friday and 8:30 a.m. to 3:00 p.m. Saturday, Sunday, and legal holidays. A children's center is located in visiting room.
Religion	Full-time Catholic and Protestant chaplains conduct religious services and coordinate religious activities for all faiths. Approximately 200 outside community religious volunteers are involved with the institution. Consultants also provide religious services to those who wish to participate in Thai Buddhist, Muslim, Native American, and Jewish worship activities. The chaplains coordinate activities for the Native American Club and the Match-2 (M-2) program. This is a prison visitation program in which local citizens volunteer to make regular visits to women at the facility. The program also has a reentry component in which various businesses and employers give interviews to ex-offenders.
Release Preparation	M-2 Program. See Religion.

FEDERAL DETENTION CENTER DUBLIN

Address	Federal Detention Center Dublin 5701 8th Street Camp Parks Dublin, CA 94568
Location	Adjacent to the Federal Correctional Institution
Contact Numbers	As above.
Judicial District	Northern California
Security Level	Administrative
Male/Female	Male and female
Capacity	299
Current Pop.	295
History/Description	Opened in 1989; has two units designed to hold pretrial and holdover prisoners for the Northern District of California.

Education	Education includes GED, ESL, adult continuing education, and correspondence classes. The law library is open Monday through Friday from 7:30 a.m. to 10:30 a.m. and again from 12:30 p.m. to 3:30 p.m. The two units alternate between the early and late times.
Food/Commissary	Meals eaten in the unit dining area from 5:40 a.m. to 6:00 a.m. for court-call inmates and from 6:15 for others. Lunch is offered from 11:00 a.m. and dinner from 4:30 p.m. Inmates are entitled to shop at commissary once per week.
Medical	General and holistic health care is offered at Dublin. Holistic health programs offer practical ways to reduce stress, increase self-esteem, integrate mind, body, and spirit and foster creativity. Practitioners also teach communication and conflict resolution skills. Routine and emergency dental care is also available.
Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Visits	Thursday and Friday 4:30 p.m. to 8:00 p.m. Saturday, Sunday, and federal holidays 8:00 a.m. to 3:00 p.m. Only three adults are allowed at one time, and social visits usually may last only 1 hour, although they may be extended to 2 hours with the approval of the jail administrator.
Recreation	Outdoor recreation is run by staff three times a week.
Religion	Staff chaplains and community clergy offer a range of religious services and counseling.
Other	Pretrial indigent inmates may submit a written request to the counselor for up to three postage stamps per week. Holdover, indigent inmates may submit a written request for up to five postage stamps per month. Smoking is not permitted at this facility. All tobacco products are considered contraband.

Admission and Orientation	First week, during which time each inmate should be allowed to make up to two telephone calls to his family.
Education	Education includes GED, ESL, adult continuing education, and correspondence classes. In addition, vocational training in sales and marketing is available. There is also an apprenticeship class in HVAC.
Food/Commissary	Meals are served in the dining room from 6:00 a.m. to 7:15 a.m., from 10:30 a.m. to 11:30 a.m., and after the 4:00 p.m. count during the week. On weekends and holidays they are served from 6:45 a.m. to 7:30 a.m. and after the 10:00 a.m. count; the final meal is at the same time as it is during the week. Commissary is open every evening from Monday through Thursday.
Recreation	Recreation includes various indoor and outdoor activities such as team sports, cardiovascular equipment, weights, music, arts and crafts, an activity center with pool tables and movies.
Medical	The health care clinic is open every day from 6:00 a.m. to 10:00 p.m. A staff member is always on call after 10:00 p.m. Sick call hours are from 6:35 a.m. to 7:00 a.m. on Monday, Tuesday, Wednesday, and Friday. Dental sick call is from 7:00 a.m. to 7:30 a.m. on weekdays, and the dental clinic is open from 7:00 a.m. to 3:30 p.m. Monday through Friday.
Counseling	Services that are available include individual and group counseling, drug and alcohol treatment programs, SHARE (Sharing Hope About Recovery Experiences) classes, psychological testing, and psychotherapy.
Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Gym	Yes.
Visits	Visiting hours are from 5:00 p.m. to 9:00 p.m. on Fridays and from 8:00 a.m. to 3:00 p.m. on weekends and federal holidays. No more than six people may visit at any one time.
Religion	Two full-time chaplains offer weekly religious activities for Jewish, Catholic, Protestant, Native American, and Muslim groups.

FEDERAL CORRECTIONAL INSTITUTION EDGEFIELD

Address	Federal Correctional Institution Edgefield 501 Gary Hill Road P.O. Box 723 Edgefield, SC 29824
Location	On the border of South Carolina and Georgia, northeast of Augusta, approximately 30 miles northeast of I-20, on Highway 25. The area is served by airports in Augusta, Georgia, and in Columbia, South Carolina.

Contact Numbers	Tel: 803-637-1500 Fax: 803-637-9840
Judicial District	District of South Carolina
Security Level	Medium
Male/Female	Male
Capacity	960
Current Pop.	1,502
Staff	409
History/Description	Opened in November 1998. There are six separate units with two-person cells.
Admission and Orientation	Prisoners will be issued a hygiene kit upon arrival containing items like toothpaste and hair shampoo.
Education	Education includes GED, ESL, adult continuing education, and correspondence classes. In addition, there are vocational training and apprenticeship programs. The law library is open on Monday, Thursday, Friday, and Saturday at various hours that are posted.
Work	Jobs available include Food Service, unit orderly, and maintenance shop. There are also limited jobs available in the warehouse, the commissary, and the Unicor textile factory.
Food/Commissary	Commissary is open from Monday through Wednesday in the evening. Prisoners are allowed to visit the commissary once a week.
Medical	Sick call Monday, Tuesday, Thursday, and Friday from 6:45 a.m. to 7:15 a.m. at the pharmacy window. Those in the Special Housing Unit will have the opportunity to see a member of the medical personnel every day of the week at 8:00 a.m. as they do their rounds. Pill line is held in the general population and on the Special Housing Unit at various times each day. Hours will be posted. Dental care is available from 6:45 a.m. to 7:15 a.m. Monday, Tuesday, Thursday, and Friday at the Health Services Department.
Counseling	Individual and group counseling available as well as the "Living Free" program, which is designed to encourage prisoners to review their values, examine their options, and develop a plan for personal change.
Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
HIV/AIDS	An HIV-detection program is in place at this prison. During the year, several random tests will be completed. Those clinically suspected of having HIV will be tested. All inmates will be tested before their release.
Visits	Visiting hours are from 8:00 a.m. to 3:00 p.m. on weekends and holidays and from 5:00 p.m. to 8.15 p.m. on Friday. Prisoners are allowed to have a maximum of four adults at any one visit, with no limit on the number of children.
Pre-Release Course	Those with less than 2 years to serve will be scheduled for participation in a prerelease course. Workshops include topics such as health and nutrition, personal growth and developments, employment, personal finance, anger management, family/spiritual counseling, social security programs, and vocational rehabilitation.
Other	Disposable razors will be issued and controlled by the Special Housing Unit Officers for all prisoners in the Special Housing Unit.

FEDERAL PRISON CAMP EDGEFIELD

Address	Federal Prison Camp Edgefield 501 Gary Hill Road P.O. Box 723 Edgefield, SC 29824
Location	As above.
Contact Numbers	Tel: 803-637-1500 Fax: 803-637-9840
Judicial District	District of South Carolina
Security Level	Minimum

Male/Female	Male
Capacity	256
Current Pop.	417
History/Description	Opened in November 1998; housing is dormitory style with two-person cubicles.
Education	Education includes GED, ESL, adult continuing education, and correspondence classes.
Work	There is a Unicor warehouse.
Food/Commissary	Commissary is open on Wednesday and Thursday evenings.

FEDERAL PRISON CAMP EGLIN

Address	Federal Prison Camp Eglin Eglin Air Force Base P.O. Box 600 Eglin, FL 32542-7606
Location	In the Florida panhandle, 45 miles east of Pensacola, on Eglin Air Force Base. The area is served by Pensacola Airport and by commercial bus lines. Eglin also has an on-site airstrip.
Contact Numbers	Tel: 850-882-8552 Fax: 850-729-8261
Judicial District	Northern District of Florida
Security Level	Minimum
Male/Female	Male
Capacity	800
Current Pop.	845
Staff	137
History/Description	Opened in November 1962 under a maintenance contract with the U.S. Air Force at the old Niceville Road Prison, the camp was moved to its present location in 1969 in order to shorten the distance inmates had to be transported to job sites. It is a 28-acre compound for individuals sentenced for nonviolent offenses who serve, on average, terms of 5 years. The camp is divided into two units, each of which is run by a unit management team consisting of a unit manager, a case manager, a counselor, and a unit secretary. Housing is dormitory style.
Admission and Orientation	Two to 4 weeks.
Education	Education includes GED, ESL, adult continuing education, and correspondence classes. In addition, there are evening college courses available at the Base Education Center on Eglin Air Force Base. Inmates pay for tuition, books, and fees from their own accounts. Vocational training courses are available in diesel and outboard engine and small engine repair and apprenticeships in dental assistant, diesel mechanic, and outboard motor mechanic.
Work	There are a variety of jobs at the prison. These include a Unicor laundry that provides laundry and dry cleaning services to the various institutions at Eglin Air Force Base. Additional jobs are offered by Food Service (cooks, bakers, salad men, and orderlies), facility operations (electricians, roofers, plumbers, carpenters, etc.), the business offices (clerks), and the camp hospital (orderlies). Further opportunities are available in education (librarians, teacher's aides, and clerks), the clothing room (clothing dispensers and clerks), maintenance (sanitation workers, landscape workers, and building orderlies) and base details (roads and grounds maintenance, mower shop, and base museum).
Food/Commissary	Breakfast on weekdays is from 5:30 a.m. to 6:30 a.m., lunch from 10:30 to 11:30 a.m., and the evening meal from 2:30 to 3:30 p.m. or from after the 4:00 p.m. count to 5:00 p.m. On the weekend

	there is a "continental breakfast" from 6:30 to 7:15 a.m. followed by brunch from 8:30 to 9:30 a.m., and the evening meal once again is from 2:30 to 3:30 p.m. or from after the 4:00 p.m. count to 5:00 p.m. The commissary is open from Monday through Thursday. There is a limit of only two packets of cigarettes on a person at any time and four cartons in a person's locker.
Recreation	Recreation includes weights, hobby crafts, crocheting, lending library, aerobics, softball, volleyball, handball, boccie, horseshoes, ping-pong, bingo, weight lifting, basketball, cards, chess, checkers, and professional talent shows. There are also three inmate organizations: Toastmasters International, which strives to make excellent speakers of their members; Club Latino International, which shows films and has discussions focusing on Spanish culture; and the Association for Black Awareness, whose main goal is to promote black heritage and culture. Each club meets on certain evenings in the visiting room.
Medical	Sick call at the base is 6:15 to 6:45 a.m. and at the camp is 7:00 to 7:30 a.m. except Wednesdays. Dental sick call is provided for those suffering dental emergencies, including toothaches, swelling, broken dentures, and complications from previous treatment.
Counseling	Two licensed clinical psychologists (one clinical and one counseling) and a drug abuse treatment specialist.
Drug Treatment	Residential Drug Abuse Program, nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Gym	Yes.
Visits	From 5:00 p.m. to 9:00 p.m. Fridays and from 8:00 a.m. to 3:30 p.m. Saturdays, Sundays, and federal holidays. An unlimited amount of visiting time is granted, but only four adult visitors are allowed to visit at any one time. Requests for additional people to be added to visitors' lists should be made 3 weeks in advance of planned visit. Contact is limited to hand holding and "having one's arm around the other's waist, upper back, or shoulder."
Religion	One full-time chaplain, plus volunteers and contact clergy for additional care for all faith groups.
Release Preparation	May request release clothing. If transferred to a halfway house may be eligible for a "reasonable" gratuity determined by policy and the case manager.
Other	Smoking is prohibited inside all buildings. A photocopy machine is available for use in the law library.

FEDERAL CORRECTIONAL INSTITUTION ELKTON

Address	Federal Correctional Institution Elkton 8730 Scroggs Road P.O. Box 89 Elkton, OH 44415
Location	In northeastern Ohio, less than an hour from Pittsburgh, Youngstown, and Canton. The area is served by the international airport in Pittsburgh and by regional airports in Youngstown and Canton, Amtrak, and commercial bus lines.
Contact Numbers	Tel: 330-424-7448 Fax: 330-424-4539
Judicial District	Northern Ohio
Security Level	Low
Male/Female	Male
Capacity	1,536
Current Pop.	1,835
Staff	302
History/Description	Opened April 1997; prisoners are housed in dormitories with two-person cubicles.
Admission and Orientation	1 to 2 weeks long.
Education	Education includes GED, ESL, adult continuing education, and correspondence classes.

Work	Federal Correctional Institution Elkton has a Unicor computer recycling plant. It is also the national warehouse for cable assemblies and wiring harnesses (all military equipment). It has a Unicor data-processing plant and also a shoe repair factory.
Food/Commissary	Commissary is open on weekdays. Prisoners are allowed no more than two cartons of cigarettes at any one time.
Recreation	Recreation includes arts and crafts programs as well as intramural team sports, such as softball, basketball, soccer, and volleyball. A limited amount of sports equipment is allowed on unit; otherwise, sports and musical equipment is held in recreation department.
Medical	Times for doctor and pill lines available on unit.
Counseling	Staff psychologists and a contract psychiatrist also available.
Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Visits	Visiting hours are 5:00 p.m. to 9:00 p.m. on Monday, Thursday, and Friday and 8:00 a.m. to 3:00 p.m. on Saturday, Sunday, and federal holidays. Prisoners are allocated 4 points a month. Weekday visits cost 0 points, weekend visits cost 1 point. All visitors will be searched with metal detector.
Religion	Two full-time chaplains plus a contract rabbi and imam and a Native American sweat lodge.

Food/Commissary	Meals are served in the dining room from 6:00 a.m. to 7:00 a.m., from 11:00 a.m. to 12:00 noon, and following the clearance of the 4:00 p.m. count. On the weekends, times are the same except breakfast, which is served from 7:00 a.m. to 8:00 a.m.
Recreation	Leisure activities and recreation programs are supervised by the Education Department. Programs include team sports like softball, basketball, and volleyball, as well as arts and crafts.
Medical	Federal Correctional Institution Fairton is accredited by the Joint Commission on Accreditation of Healthcare Organizations, with local health care available 24 hours a day. Sick call occurs on Monday, Tuesday, Thursday, and Friday (except on holidays). Sign-up is between 6:15 a.m. and 6:30 a.m. A medical staff member tours the segregation unit at least once a day for sick call and medicine dispensing. Emergency dental care and routine dental treatment are both available.
Counseling	The Psychology Department offers a variety of individual and group counseling. There is also one contract psychiatrist who provides psychiatric services for those in need of psychotropic medication. In addition to various drug counseling groups, there is a self-image group. The Health Services Department offers programs on a series of issues including drug and alcohol abuse, physical fitness, smoking cessation, and stress and anger management.
Drug Treatment	Fairton offers a range of drug treatment from the drug education program to the comprehensive drug abuse program, which at Fairton is known as CHOICE. This is a 12-month residential treatment program. In addition, there are Alcoholics Anonymous and Narcotics Anonymous groups. There is a drug and alcohol surveillance program, and prisoners will be randomly tested for drug and alcohol use.
HIV/AIDS	Information about HIV/AIDS will be provided during the A&O period. Additional educational material will be made available during the inmate's sentence.
Visits	Visiting hours are from 8:15 a.m. to 3:15 p.m. Thursday through Monday.
Religion	Three full-time staff chaplains as well as contract and volunteer representatives of different faiths available.
Release Preparation	Social education (prerelease program) and career counseling. Furloughs are available for some inmates prior to release.
Other	Interlibrary loan material is provided by the Cumberland County Library. The prison library also has a computer laboratory. Bedside and funeral trips may be authorized for inmates in lower-custody categories when an immediate family member is seriously ill, is in critical condition, or has died.

FEDERAL PRISON CAMP FAIRTON

Address	Federal Prison Camp Fairton P.O. Box 280 Fairton, NJ 08320

FEDERAL CORRECTIONAL INSTITUTION FLORENCE

Address	Federal Correctional Institution Florence P.O. Box 6500 Florence, CO 81226
Location	Adjacent to ADX Florence
Contact Numbers	Tel: 719-784-9100 Fax: 719-784-9504
Judicial District	Colorado
Security Level	Medium
Male/Female	Male
Capacity	744
Current Pop.	1,224
Staff	357
History/Description	Opened in January 1993. Prisoners are housed in two-man cells.
Admission and Orientation	During the admission process, prisoners are issued an inmate account card necessary for commissary, trust fund, and inmate telephone system transactions. They must carry this card at all times. All arriving inmates will be tested for TB.
Education	The Education Department is state accredited by the North Central Association of Schools and Colleges. Education includes GED, ESL, adult continuing education, life skills, parenting, career counseling/release preparation, and correspondence classes. Vocational training courses are available in computer training, cabinetmaking, mechanical/computer-assisted drafting, building maintenance, and barbering. Apprenticeships are offered in cabinetmaking, industrial housekeeping, and landscaping in conjunction with the Department of Labor. Upon completion of these courses, prisoners receive a certificate of journeyman-level expertise.
Work	Jobs in Food Services employment include baking, cooking, dining room, vegetable preparation, pots and pans, and dish room. A Unicor furniture factory employs approximately 250 prisoners.
Food/Commissary	Meals are served during the week from 6:00 a.m. to 7:00 a.m., from 10:45 a.m. to 12:00 p.m., and after the 4:00 p.m. count. On the weekend they are served from 7:00 a.m. to 8:00 a.m., after the 10:00 a.m. count, and after the 4:00 p.m. count.
Recreation	Music, hobby crafts, basketball, volleyball, and other games.
Medical	Medical and dental sick call at 6:45 a.m. Monday, Tuesday, Thursday, or Friday. In an emergency, contact another member of staff. Pill line at various times during the day. These times will be posted.

	The BOP furnishes prescription eyeglasses to any inmate requiring them, as documented through a professional examination and prescription. Over-the-counter medications like Tylenol are available from the commissary.
Counseling	Psychology Services performs a variety of functions for the inmate population. Some of these include presenting psychoeducational classes on anger and stress management, drug education, and sexual abuse/assault prevention. Other counseling groups include People In Prison Entering Sobriety, self-image groups, and other voluntary groups. Unit staff is also available for informal counseling sessions. There is also a victim impact program in which prisoners learn about the impact of crime from victims.
Drug Treatment	There is a comprehensive Residential Drug Treatment Program housed in Mesa Unit run by the Psychology Department that is available in Spanish and English. There is also a nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Gym	Yes.
Visits	Visiting hours are Friday from 5:00 p.m. to 8:00 p.m. and Saturday, Sunday, and federal holidays from 8:00 a.m. to 3:00 p.m. Up to five adults at a time may visit one prisoner.

Judicial District	Colorado
Security Level	Medium
Male/Female	Male
Capacity	512
Current Pop.	458
History/Description	Opened in 1992.
Education	Education includes GED, ESL, adult continuing education, and correspondence classes. In addition, vocational training courses are available in culinary arts and apprenticeships are available in industrial housekeeping and landscape management.
Work	A Unicor warehouse for furniture produced at Federal Correctional Institution and U.S. Penitentiary employs approximately 35 to 45 men.
Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Visits	Visiting hours from 5:00 p.m. to 8:00 p.m. on Friday and from 8:00 a.m. to 3:00 p.m. on weekends and federal holidays. There is a children's room.

U.S. PENITENTIARY FLORENCE

Address	U.S. Penitentiary Florence P.O. Box 7500 Florence, CO 81226
Location	Adjacent to ADX Florence.
Contact Numbers	Tel: 719-784-9454 Fax: 719-784-5157
Judicial District	Colorado
Security Level	High

Male/Female	Male
Capacity	640
Current Pop.	922
Staff	310
History/Description	Opened in January 1994, U.S. Penitentiary Florence is part of a collection of facilities of varying degrees of security that are located on a site of 49 acres. According to a recent description, U.S. Penitentiary Florence "uses the direct supervision method of management with a state-of-the-art electronic security system; control activities are administered at one station. Additional security is provided by a perimeter fence, seven guard towers, and a patrol road. The building wall itself also acts as a security line, for no inmate cell window looks outside the exterior building line" (Spens, 1994, p. 71). Housing is in single and two-man cells.
Education	Education includes GED, ESL, adult continuing education, ABLE (Adult Basic Level Examination), and CASAS (Comprehensive Adult Student Assessment System) testing. College courses are available through correspondence study and from Pueblo Community College. In addition, there are vocational training classes and apprenticeships.
Work	There is a Unicor wood chair and desk drawer assembly factory.
Food/Commissary	Meals are served in the dining room during the week from 6:00 a.m. to 7:30 a.m., from 11:00 a.m. until all work details and units have been called, and upon clearing the 4:00 p.m. count until all units have been called. On the weekends there is a coffee hour from 7:00 a.m. to 8:00 a.m., lunch upon clearing of the 10:00 a.m. count, and dinner at the same time as weekdays. Commissary is open from 4:00 p.m. to 8:00 p.m. on Monday through Friday. Prisoners may shop once per week.
Recreation	The housing pods face the recreation yard. Recreation includes intramural sports, such as softball, soccer, and basketball, and hobby crafts, including ceramics, artwork, and music. Special activities are scheduled for all recognized federal holidays. Entertainment such as concerts (with inmate musicians), bingo games, and comedy nights are scheduled intermittently. Wellness and fitness programs are also available to all interested inmates.
Medical	Health Services area located opposite the housing pods. Medical and dental sick call is held at 6:30 a.m. on Monday, Tuesday, Thursday, and Friday.
Counseling	Psychology Services provides evaluation, individual and group counseling, crisis assistance, and self-help programs. Current and forthcoming psychology programs and activities are posted in Psychology Services located between the Gym and Education Department and on bulletin boards in each housing unit. Group programs typically offered on a regular basis include Values, Anger Management, Stress Management, Positive Mental Actions in Life, People in Prison Entering Sobriety, Medicine Wheel, Alcoholics and Narcotics Anonymous, Commitment to Change, Nine to Five Beats Ten to Life, Transactional Analysis, and Psychology Cinematography. The prison also offers CODE (Challenge, Opportunity, Discipline, Ethics) for high-security offenders. There is also a victim impact program in which prisoners learn about the impact of crime from victims.
Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Gym	Yes, but only in winter months.
Visits	Visiting hours are from 8:00 a.m. to 3:00 p.m. on weekends and federal holidays and from 5:30 p.m. to 9:00 p.m. on Fridays.
Religion	One full-time chaplain, monthly visits from a contract rabbi, and a Native American sweat lodge.

U.S. PENITENTIARY FLORENCE–ADX

Address	U.S. Penitentiary Florence-ADX P.O. Box 8500 Florence, CO 81226
Location	The institution is located on State Highway 115, 90 miles south of Denver, 45 miles south of Colorado Springs, and 35 miles west of Pueblo. The area is served by airports in Denver, Colorado Springs, and Pueblo, by Amtrak in Denver and Colorado Springs, and by commercial bus lines.
Contact Numbers	Tel: 719-784-9464 Fax: 719-784-5290

Judicial District	Colorado
Security Level	Administrative
Male/Female	Male
Capacity	490
Current Pop.	405
Staff	354
History/Description	Opened December 1994. There are 10 housing units, including a control unit, a high-security unit, a special housing unit, a general population unit, an intermediate/transitional unit, and a pretransfer unit. Housing is in single-man cells.
Education	Education includes GED, ESL, adult continuing education, adult basic education, and correspondence classes. Education programming and testing are done from within the inmate's cell. Most instruction is through closed-circuit TV in the inmate's cell. Eligible inmates will be allowed to enroll in one correspondence college course per semester.
Work	There are no jobs available to inmates due to the security status of the institution.
Food/Commissary	Meals are served on two trays: a hot and a cold one. There are five menu choices: regular meal, no pork, common fare, no meat, and dietary. Periodically, a food preference survey will be taken to determine the likes and dislikes of the population and to update the 35-day cycle menu.
Recreation	The Recreation Department will provide a variety of approved organized and free-form activities. Some of these activities are basketball, handball, and special holiday activities, including table games, tournaments, and contests.
Medical	Medical and dental sick call Monday, Tuesday, Thursday, and Friday. Rounds begin during the day shift and continue after 4:00 p.m. stand-up count.
Counseling	Psychology Services offers a wide variety of programs, including stress management, drug abuse programming, and anger management, through closed-circuit TV operation. Completion of any formal program is recognized with a certificate. Psychologists make rounds each week and talk with everyone but are available by request "between rounds" within 3 working days.
Drug Treatment	Drug education program via closed-circuit TV.
HIV/AIDS	Preventive educational video shown during orientation. A couple of pages of risk information in A&O pack.
Visits	Visiting times are from 8:00 a.m. to 3:00 p.m. on Thursday, Friday, Saturday, Sunday, and federal holidays. Visits are noncontact, and prisoners are entitled to five per month.
Religion	There are two full-time chaplains. Many religious services and programs are available through closed-circuit TV, which will also broadcast religious movies, studies, documentaries, and musical specials. Books are available through the chapel library. Greeting cards are also available.

FEDERAL CORRECTIONAL INSTITUTION FORREST CITY

Address	Federal Correctional Institution Forrest City P.O. Box 7000 Forrest City, AK 72335
Location	In eastern Arkansas, between Little Rock (85 miles west) and Memphis (45 miles East), and near Interstate 40. The region is served by air and rail in Memphis, and Forrest City is directly served by commercial bus lines.
Contact Numbers	Tel: 870-630-6000 Fax: 870-630-6250
Judicial District	Eastern Arkansas
Security Level	Low
Male/Female	Male
Capacity	1,536
Current Pop.	1,805
Staff	303
History/Description	Opened in April 1997. Housing is dormitory style with cubicles. A laundry room is located in each unit for inmate use.

Education	Education includes GED, ESL, adult continuing education, parenting, and correspondence classes. In addition the Education Department offers vocational training, career counseling/release preparation, and the law and leisure libraries.
Work	Food Services and maintenance, including masonry, plumbing, painting, landscaping, heating and ventilation, sheetrock and drywall repairs, welding, automotive repair, power plant operations, etc. The Unicor operation at Federal Correctional Institution Forrest City manufactures office furniture that is named "Harmony." Unicor employs approximately 300 inmates when the facility is at full capacity. There is a waiting list for jobs.
Food/Commissary	Meals served in dining room during the week from 6:00 a.m. to 7:00 a.m., from 11:00 a.m. to 12:00 p.m., and from 4:30 p.m. to 5:30 p.m. On the weekends, meals are served from 7:00 a.m. to 8:00 a.m., from 11:00 a.m. to completion, and from 4:30 to 5:30 p.m. The commissary is open Monday through Thursday from 12:00 p.m. to 2:00 p.m. and after the 4:00 p.m. count to 7:00 p.m. A prisoner's shopping day is determined by the fourth and fifth digits of his inmate number.
Recreation	A variety of activities, including music rooms, television, billiards, art studio, fitness center, and outdoor activities, including soccer, volleyball, softball, and basketball. There are intramural and varsity sports.
Medical	Sick call Monday, Tuesday, Thursday, and Friday from 6:15 a.m. to 6:45 a.m. Pill line at various times that will be posted.
Counseling	Management, emotional awareness, and personal counseling.
Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
HIV/AIDS	The Health Promotion/Disease Prevention Program offers HIV classes on a quarterly basis at the Federal Correctional Institution. The class is given by either a staff RN or a guest speaker from the local health department. This class is targeted especially for the prerelease inmates but is open to the general inmate population.
Gym	Fitness center with cardiovascular room.
Visits	The visiting room will operate Fridays from 5:00 p.m. to 8:00 p.m. and Saturdays, Sundays, and federal holidays from 8:00 a.m. to 3:00 p.m. Each inmate will be permitted five visiting points per month. One point will be assessed for each visit. Points cannot be carried over to the next month.
Religion	Family, friends, and significant others should call the chaplain's office at (870)630-6000 to report any and all emergencies pertaining to prisoners. Once the chaplain has confirmed the emergency, the prisoner will be contacted.
Release Preparation	Program offered for those 18 to 24 months away from release into the community.
Other	Smoking is prohibited in all buildings at this institution. Telephone privileges are strictly limited for those in administrative detention (once every 7 days) and disciplinary segregation (once every 30 days).

History/Description	Opened in March 1993; housing is in two-person cells. This facility's primary mission is to hold pretrial and holdover inmates as a service to the U.S. District Courts and U.S. Marshal Services for the districts of Puerto Rico and the Virgin Islands. It is adjacent to the Ft. Buchanan U.S. Army Base.
Education	Education includes GED, ESL, adult continuing education, and correspondence classes. There is also a parenting program for female offenders. This class includes parent education, social services, and visiting room activities. Community-based information is also given out to female offenders.
Food/Commissary	Food is served on units. Mealtimes during the week are at 6:00 a.m., 11:00 a.m., and after the 4:00 p.m. count. On weekends and holidays, they are at 7:00 a.m., 10:30 a.m., and after the 4:00 p.m. count.
Medical	Health Services Department is located on the fourth floor. It provides 24-hour coverage, 7 days a week. Sick call is 6:00 a.m. to 6:15 a.m. Monday, Tuesday, Thursday, and Friday. Medication can be picked up in housing units from 5:00 p.m. to 8:00 p.m.
Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Recreation	Recreation includes organized sports, games, and hobbies.
HIV/AIDS	All inmates are encouraged to volunteer for an HIV test during the initial physical examination or during sick call hours.
Visits	Visiting hours vary by unit. Times will be posted. Parenting information center available in visiting room. Special activities for women participating in parenting program. Visitors must arrive 30 minutes before the visit is scheduled to begin.
Religion	There are three full-time chaplains. Scheduled activities are posted on Religious Services bulletin boards in the housing units.

FEDERAL CORRECTIONAL INSTITUTION LA TUNA

Address	Federal Correctional Institution La Tuna P.O. Box 1000 8500 Doniphan Anthony, NM-TX 88021
Location	On the Texas and New Mexico border, 12 miles north of the city limits of El Paso, Texas. Off Interstate 10 on State Highway 20. The area is served by El Paso International Airport, Amtrak, and commercial bus lines.
Contact Numbers	Tel: 915-886-3422 Fax: 915-886-4977
Judicial District	Western Texas
Security Level	Low
Male/Female	Male
Capacity	556
Current Pop.	1,207
Staff	295
History/Description	Opened in May 1932; housing varies from two-person cells to open dormitories. It was originally called the El Paso Detention Farm.
Education	Education includes GED, ESL, adult continuing education, parenting, and correspondence classes. Also, in cooperation with El Paso Community College, the Education Department offers vocational training programs in air conditioning/refrigeration repair, automotive repair, and upholstery repair. Vocational training programs meet 6 hours daily and are considered work assignments. Air conditioning and automotive repair last 1 year, and upholstery repair lasts 6 months. Inmates will receive certificates from El Paso Community College. Primeria and Secundaria classes for Mexican inmates are also offered. Correspondence courses can also be taken.
Work	Jobs include vocational training as above, Food Services, and Unicor graphics/services. There is a brush factory that produces many types of paint brushes as well as counter and floor sweepers. Other work is offered by the facilities department, including construction, plumbing, electrical, painting, and powerhouse operations. Work for most people begins at 7:35 a.m., although those working in Food Services start at 4:00 a.m.
Food/Commissary	Meals are eaten in the dining room. The commissary is open Monday through Friday from 4:30 p.m. to 8:00 p.m.
Recreation	Television and dayrooms on each housing unit. Handball, basketball, soccer, softball, volleyball, walking/jogging, ceramics, leathercraft, painting, wellness program, aerobics, smoking cessation.
Medical	Sick call 6:00 a.m. to 6:30 a.m. Monday, Tuesday, Thursday, and Friday, except for holidays. Medication is dispensed at various times each day. Dental, safety orthopedic shoes, and eye exams also available. Emergency medical problems can be dealt with at any time.
Counseling	Various prisoner-run groups that include Alcoholics Anonymous, Parenting Program, Narcotics Anonymous, Suicide Companion Program. In addition to these groups, counseling sessions are offered once weekly by unit staff. There are also three psychologists, five drug treatment specialists, and a psychology technician who offer group and individual counseling as well as crisis intervention.
Drug Treatment	Residential Drug Abuse Program, nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous as well as a drug programming resource center self-help library.
Visits	Visiting hours, 1:00 p.m. to 7:00 p.m., Monday, Thursday, and Friday and 8:00 a.m. to 3:00 p.m. Saturday, Sunday, and holidays.
Religion	There are Catholic and Protestant chaplains as well as active Jewish, Islamic, and Native American groups. Common fare diet available.

FEDERAL PRISON CAMP LA TUNA

Address	Federal Prison Camp La Tuna P.O. Box 1000 8500 Doniphan Anthony, NM-TX 88021
Location	Adjacent to Federal Correctional Institution La Tuna.
Contact Numbers	Tel: 915-886-3422 Fax: 915-886-4977
Judicial District	Western Texas
Security Level	Minimum
Male/Female	Male
Current Pop.	149
History/Description	Located approximately one-half mile north of the main institution, the camp complex consists of an administration building, a Food Service Department, a Laundry/Clothing Issue Section, Mechanical Services shops, a medical infirmary, the commissary, the visiting room, and two dormitories. The two dormitories are divided into four wings. Two wings of each unit are nonsmoking. Each dormitory has central restrooms and shower facilities, as well as two television rooms and a large game room. Unit staff offices are on the dormitories. Prisoners are both directly sent to the camp and transferred from other federal facilities.
Admission and Orientation	The A&O program will include lectures from department heads, psychological testing, educational testing, a complete physical examination, and a tour of the camp.
Education	Education includes GED, ESL, adult continuing education, and correspondence classes. Vocational training programs include automotive repair and horticulture. Both courses are offered through El Paso Community College. Short-term classes are also offered in a variety of areas. Examples of courses presented in the past include income tax, real estate personal finance, and the stock market.
Work	Maintenance jobs include landscape, garage, powerhouse, electric shop, and construction crews. Unicor plastic molding operation makes handles for the brush factory. There is also a Unicor warehouse.
Food/Commissary	Hot meals are served in the dining room three times a day on workdays and twice daily on weekends and holidays. Breakfast is served from 6:00 a.m. to 7:00 a.m., lunch from 11:00 a.m. to 12:00 p.m., and dinner from 4:00 p.m. to 5:00 p.m. On weekends and holidays, rolls and refreshments are served between 6:00 a.m. and 7:00 a.m., followed by brunch from 10:30 a.m. to 11:30 a.m. The commissary is open Tuesdays and Wednesdays from 4:30 p.m. until last call at 7:45 p.m. Prisoners are allowed to purchase items in order, depending on their register number.
Recreation	Recreation includes intramural, extramural programs in softball, basketball, volleyball, and tennis as well as a well-supplied weight-lifting area, track, baseball field, tennis court, and two hand-ball courts. There is also a hobby craft shop where inmates are allowed to make leathercraft items.
Religion	Protestant, Catholic, Jewish, Muslim, Jehovah's Witness, and Church of Christ services are available; other activities include Gideon and Spanish Bible study as well as religious music groups.
Medical	Sick call sign-up from 6:30 a.m. to 6:45 a.m. and again from 7:00 p.m. to 7:15 p.m. Mondays, Tuesdays, Thursdays, and Fridays. Pill-call hours will be posted. In a medical emergency, contact the dorm officers or another member of staff.
Counseling	Group and individual. Marriage enrichment counseling, family planning. Unit counseling and psychology services.
Drug Treatment	Residential comprehensive drug abuse program, nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Visits	Visiting hours weekends and holidays 8:30 a.m. to 3:15 p.m.
Other	Smoking is not allowed in any area of the dormitory units.

FEDERAL PRISON CAMP LEAVENWORTH

Address	Federal Prison Camp Leavenworth 1300 Metropolitan Leavenworth, KS 66048

Capacity	398
Current Pop.	446
History/Description	Housing is in open-style dormitories, with 50 men per dormitory.
Education	Education includes GED, ESL, adult continuing education, and correspondence classes.
Drug Treatment	Residential Drug Abuse Treatment Program, nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Visits	Visiting hours 5:30 p.m. to 9:00 p.m. Tuesday through Friday, 12:30 p.m. to 9:00 p.m. Saturday, and 8:30 a.m. to 3:30 p.m. Sunday and federal holidays.

U.S. PENITENTIARY LEAVENWORTH

Address	U.S. Penitentiary Leavenworth 1300 Metropolitan Leavenworth, KS 66048
Location	Twenty-five miles north of Kansas City. On Highway 73. The area is served by Kansas City International Airport (15 miles from the facility).
Contact Numbers	Tel: 913-682-8700 Fax: 913-682-0041
Judicial District	Kansas
Security Level	High
Male/Female	Male
Capacity	1,201
Current Pop.	1,747
Staff	557
History/Description	Opened in July 1895, Leavenworth was the first federal prison facility. Housing is one- and two-man cells.
Education	Education includes GED, ESL, adult continuing education, parenting, and correspondence classes. There is also a vocational training course in graphic art design. Inmates interested in education should contact staff directly.
Work	Unicor textile factory; furniture and graphics/services.
Food/Commissary	Meals are served from 6:30 a.m. to 7:30 a.m., from 11:00 a.m. to 12:00 p.m., and from 4:30 p.m. to 5:30 p.m. Commissary is open on weekday afternoons.
Recreation	Routine sports programs are offered; hobby craft programs such as painting and ceramics are available. A pool hall and music rooms are also available for inmate use. Movies are shown in the auditorium. Special events are held from time to time and will be publicized throughout the institution. The gym is opened in inclement weather.
Medical	Sick call is from 7:00 a.m. to 7:30 a.m. on Monday, Tuesday, Thursday, and Friday.
Counseling	CODE (Challenge, Opportunity, Discipline, Ethics) for high-security offenders.

Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Gym	The gym has a basketball court and an indoor weight-lifting area.
Visits	Visiting hours 8:00 a.m. to 3:30 p.m. daily. Visitation is allotted on a point system. An inmate is given 24 points per month. Weekdays, weekend days, and holidays, 1 hour of visiting time equals 1 point. Points do not carry over from one month to another. Any portion of an hour of visiting will be counted as a full hour.
Religion	Full-time chaplains and consultants for other religions conduct weekly services. Chaplains are available through a written request or pass. A selection of books and other publications as well as greeting cards are available in the chaplain's office.
Release Preparation	Inmates nearing release who need assistance in obtaining a job, residence, or other community resource may be transferred to a community corrections program (halfway house). Eligible inmates within a year of their release are scheduled for the institutional prerelease program.

U.S. PENITENTIARY LEWISBURG

Address	U.S. Penitentiary Lewisburg R.D. #5 Lewisburg, PA 17837
Location	In rural central Pennsylvania, outside the town of Lewisburg, 200 miles north of Washington, D.C., and 170 miles west of Philadelphia; 6 miles south of Interstate 80, 2 miles off U.S. Route 15. The area is served by Williamsport Airport.
Contact Numbers	Tel: 717-523-1251 Fax: 717-524-5805
Judicial District	Middle Pennsylvania
Security Level	High
Male/Female	Male
Capacity	809
Current Pop.	1,078
Staff	548
History/Description	Opened November 1932, it was originally called the Northeastern Penitentiary. Housing is primarily in one- or two-man cells, although some are held dormitory style in one-person cubicles.
Education	Education includes GED, ESL, adult continuing education, and correspondence classes through Penn State University and Ohio University, among others. There is also an on-site college program leading to an associate's degree in business from Newport Institute. Unicor scholarships are awarded on a competitive basis to those who meet the qualifications.
Work	Unicor metals factory. On-the-job training is offered in such skill areas as tool and die, welding, drafting, and spray painting. Other jobs include Mechanical Services, which provides on-the-job training in fields such as carpentry, communications, electrical repair, painting, plumbing, steam fitting, and general building maintenance; Food Services, which provides training in the cooking and baking fields; Medical Services; the Education Department; the business office; and unit orderlies. A 1-week "vacation" may be requested after a year on a job assignment.
Recreation	Recreation includes weights, basketball, flag football, softball, soccer, tennis, racquetball, handball, volleyball, tennis, racquetball, boccie ball, cards, checkers, chess, dominoes, and table tennis. Music room operates on an enrollment basis. Approved bands are scheduled days and times to use the music room, and musical talent shows are offered throughout the year. The Arts and Crafts Department offers leathercraft, ceramics, knitting, crocheting, acrylic painting, glass painting, pencil and ink sketching, and pastel drawing. Materials are purchased through the commissary. With the exception of pen and ink sketching and crocheting, materials are restricted to the hobby shop.
Medical	Sick call is from 6:30 a.m. to 7:00 a.m.
Counseling	Psychological testing and evaluation for courts, parole boards, case management, and inmate needs are provided through staff referrals. Groups are offered in stress management, anger control, coping skills, and the development of values.
Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Visits	The visiting room is open from 8:00 a.m. to 3:00 p.m. daily. Inmates are encouraged to have their visits during the week. Visits are permitted on only one weekend day, either Saturday or Sunday. Only five visits per month are allowed, excluding attorney visits.
Religion	There are chaplains on staff, and representatives of any recognized religion may visit at an inmate's request. Provisions are made to observe special religious faith holy days. The chapel schedule is posted outside the chapel.

FEDERAL MEDICAL CENTER LEXINGTON

Address	Federal Medical Center Lexington 3301 Leestown Road Lexington, KY 40511
Location	Seven miles north of Lexington on U.S. Highway 421. Lexington is served by Blue Grass Field Airport and by commercial bus service.

Contact Numbers	Tel: 606-255-6812 Fax: 606-253-8821
Judicial District	Eastern Kentucky
Security Level	Administrative
Male/Female	Male
Capacity	1,106
Current Pop.	1,902
Staff	534
History/Description	Opened in February 1974; facility includes a 100-bed hospital. From 1986 to 1988, female political prisoners were housed in its Special Housing Unit (SHU). The SHU was closed following criticisms from ACLU and other civil liberties and human rights groups that the conditions consisted of "cruel and unusual punishment." It provides mental health services for Mariel detainees.
Education	Education includes GED, ESL, adult continuing education, and correspondence classes. In addition, there are vocational training classes in barbering, building trades, computers, and horticulture. There are also apprenticeships in baking, carpentry, cooking, dental assistance, dental lab, HVAC, and plumbing.
Work	Unicor electronics and graphics/services factory.
Food/Commissary	Commissary is open on weekday afternoons.
Recreation	Recreation includes exercise equipment, crafts, intramural sports.
Medical	Sick call, 6:30 a.m. to 7:00 a.m., Monday, Tuesday, Wednesday, and Friday. Pill line hours will be posted. There is also a hospice program for terminally ill women.
Counseling	Six full-time psychologists, mental health unit.
Drug Treatment	Residential Drug Abuse Treatment Program, nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Visits	Visiting hours are 9:00 a.m. to 3:00 p.m. on Monday, Thursday, and Friday and 5:00 p.m. to 11:00 p.m. on weekends and federal holidays.
Religion	There are three full-time chaplains, a contract rabbi and imam, and a Native American sweat lodge.

FEDERAL PRISON CAMP LEXINGTON

Address	Federal Prison Camp Lexington 3301 Leestown Road Lexington, KY 40511
Location	Adjacent to Federal Medical Center Lexington.
Contact Numbers	Tel: 606-255-6812 Fax: 606-253-8821
Judicial District	Eastern Kentucky
Security Level	Minimum
Male/Female	Female
Capacity	300
Current Pop.	159
History/Description	Prisoners are housed in dormitories.
Education	Education includes GED, ESL, adult continuing education, parenting, and correspondence classes. There are also two vocational training programs in digitalized mapping (which leads to outside certification or accreditation) and computer applications. The parenting program has three components: long-distance parenting skills, social services, and a visiting-room program. Inmates in the program are given an assortment of academic and coloring activities for them to mail home monthly. Once the course is successfully completed, they are able to record and mail a 15-minute video reading of their child(ren)'s favorite book.
Work	Jobs available include construction, garage, landscape, Food Service, Food Service warehouse, outside warehouse, camp and building orderly, education, recreation, training, garden, medical, chapel, regional office, Veteran's Administration, and Unicor metal/cardboard recycling plant.

Food/Commissary	Meals are served in the dining hall. Commissary shopping is 1 day per week, on Tuesday through Thursday afternoons.
Recreation	Recreation includes a variety of indoor and outdoor activities such as wellness classes, team sports, weight reduction, arts and crafts, and special holiday activities. There is also a beauty salon for inmates.
Medical	Medical staff is on call 24 hours a day, 7 days a week. Dental care is also available. Hours for sick call and pill line will be posted.
Counseling	An interview with a psychologist should occur by the third week at Federal Prison Camp Lexington.
Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Visits	Visiting hours from 5:00 p.m. to 9:00 p.m. on Fridays and from 8:00 a.m. to 3:00 p.m. on weekends and federal holidays. There is a special visiting room for children as part of parenting program. Born Free Ministry, Inc., a prison ministry program of the Galilean Children's Home in Liberty, Kentucky, takes care of babies born to women in prison, bringing them into the prison to visit their mothers at least once a week.
Religion	A weekly schedule of religious activities is posted on the unit bulletin board.
Release Preparation	According to A&O pack, "Inmates nearing release should receive as much individual attention as possible." Staff shall help women obtain any necessary proper identification, such as birth certificate, social security card, and driver's license, prior to release.

FEDERAL CORRECTIONAL INSTITUTION LOMPOC

Address	Federal Correctional Institution Lompoc 3600 Guard Road Lompoc, CA 93436
Location	About 175 miles northwest of Los Angeles, adjacent to Vandenberg Air Force Base. The area is served by Santa Barbara Airport (60 miles south), Santa Maria Airport (25 miles north), Amtrak, and commercial bus service.
Contact Numbers	Tel: 805-736-4154 Fax: 805-736-7163
Judicial District	Central California
Security Level	Low
Male/Female	Male
Capacity	472
Current Pop.	1,006
Staff	239
History/Description	Opened in January 1991; housing is in two-person cells. It was originally U.S. Penitentiary Lompoc camp.
Education	Education includes GED, ESL, adult continuing education, and correspondence classes; vocational training in business computing; advanced occupational classes dealing with computer operations and sanitation; and college courses.
Work	Unicor electronics and furniture factory.
Food/Commissary	Meals are served cafeteria style in the dining room during the week from 6:00 a.m. to 7:00 a.m., from 10:45 a.m. to 12:00 p.m., and from 4:45 p.m. to 6:00 p.m. Hours are the same on the weekend except that breakfast is replaced by a coffee hour from 6:30 a.m. to 7:30 a.m. Commissary is open Monday through Thursday evenings and on Friday for special purchases.
Recreation	Recreation includes weights, team sports, hobby shop, body building, fitness programs, movies, games, and special events. When lifting weights, you are required to wear steel-toed shoes. Game/card playing is allowed in the unit activity rooms. TV rooms are located in housing units and outside the Food Service area. To view any television, an FM radio is required to receive sound for television. There is a Spanish television programming room.
Medical	Sick call Monday, Tuesday, Thursday, and Friday from 6:00 to 6:30 a.m.

Drug Treatment	Residential Drug Abuse Treatment Program that takes approximately 12 months to complete; also a nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous. Programs are offered in English and Spanish.
Gym	There is a gym, in which tennis shoes must be worn.
Visits	Visiting hours are from 8:15 a.m. to 3:00 p.m. Thursday through Monday. Visits are allowed on a points system. Inmates are allotted 50 visiting points per month. On weekdays, 1 point is subtracted for each hour of visitation. Two points are subtracted for each hour on weekends and holidays. No more than four visitors are allowed at a time.
Religion	Two full-time chaplains and a contract rabbi and imam.
Release Preparation	Inmates participating in the institution's Release Preparation Program are required to complete six courses. Inmates with 24 months or less to serve are enrolled in the program. Inmates within a year of release must submit a formal release plan.

FEDERAL PRISON CAMP LOMPOC

Address	Federal Prison Camp Lompoc 3901 Klein Boulevard Lompoc, CA 93436
Location	Adjacent to U.S. Penitentiary Lompoc.
Contact Numbers	Tel: 805-735-2771 Fax: 805-737-0295
Judicial District	Central California
Security Level	Minimum
Male/Female	Male
Capacity	276
Current Pop.	275
History/Description	The Federal Prison Camp at Lompoc was activated in July 1991. It was established as a work camp to provide labor from minimum-security prisoners for the Vandenberg Air Force installation and the federal penitentiary farm. There is one warden for the entire Lompoc prison complex, with a camp administrator responsible for daily operations in the prison camp. Housing is in open dormitories.
Admission and Orientation	One to 2 weeks.
Education	There is limited education, including GED, ESL, and literacy testing. In addition, vocational training courses include building trades, meat cutting, and dairy. There is a satellite law library available for use from 9:00 a.m. to 9:00 p.m., 7 days a week.
Work	Jobs are available in the following areas: Business Office—warehouse, camp landscape, camp unit orderlies, construction, facilities operations; Farm 1—general equipment maintenance; Farm 2—ranch hand; Farm 3—field crops; Farm 4—dairy, Food Service, laundry, law library, maintenance, outside landscape, powerhouse; Unicor—cable or sign factory, and wastewater plant.
Food/Commissary	Meals are served in the dining hall at 6:00 a.m., from 11:00 a.m. to 12:00 p.m., and from 4:30 p.m. to 5:30 p.m. on weekdays and from 7:00 to 8:00 a.m., from 11:00 to 12:00 p.m., and from 4:30 p.m. to 5:30 p.m. on weekends.
Recreation	Musical instruments, arts and crafts, outdoor sports.
Medical	Medical and dental sick call 5:30 a.m. to 7:00 a.m. Monday, Tuesday, Thursday, and Friday. Pill line from 7:00 a.m. to 7:30 a.m. Emergency medical problems or injuries will be dealt with as they occur.
Counseling	Volunteer groups and staff psychologists.
Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Visits	Visiting hours 8:30 a.m. to 3:15 p.m. weekends and federal holidays. No new visitors will be allowed to begin visits after 2:00 p.m. Prisoners may have a total of 15 people on their approved visitors' list. There is a separate children's television area in the visiting area.

Religion	Full-time U.S. Penitentiary chaplains work with camp inmates. Chapel is open all day Saturday and Sunday and during several weekday evenings. There is a Native American sweat lodge in the recreation yard.
Other	Mail call on weekdays at 5:30 p.m. at camp control center. Telephones will be turned off at 10:00 p.m. each night.

U.S. PENITENTIARY LOMPOC

Address	U.S. Penitentiary Lompoc 3901 Klein Boulevard Lompoc, CA 93436
Location	See Federal Correctional Institution Lompoc
Contact Numbers	Tel: 805-735-2771 Fax: 805-737-0295
Judicial District	Central California
Security Level	High
Male/Female	Male
Capacity	980
Current Pop.	1,404
Staff	508
History/Description	Lompoc was originally a U.S. Army disciplinary barracks. It opened as an Federal Correctional Institution in July 1959 and became a U.S. Penitentiary in September 1981. The prison is adjacent to Vandenberg Air Force Base in Northern Santa Barbara County, about 5 miles from downtown Lompoc. The prison has seven housing units with double- and single-cell occupancy as well as two dormitory units.
Admission and Orientation	A&O program during first week or two. Inmates should have psychological screening within 14 days of arrival. They will be given a physical screening as they are processed through R&D.

Education	Education includes GED, ESL, adult continuing education, and correspondence classes. There are also apprenticeships and vocational training. See Education Department for details. The Education Department also runs the law and leisure libraries.
Work	Three Unicor factories: sign factory, print plant, and electronic cable factory (military equipment). There is also a Unicor Quality Assurance Department that checks products for military use.
Food	Meals are served during the week from 6:00 a.m. to 7:00 a.m., from 11:00 a.m. to 12:00 p.m., and from 5:00 p.m. to 6:00 p.m. On the weekend, meals are served from 7:00 a.m. to 8:00 a.m., from 11:00 a.m. to 12:00 p.m., and from 4:30 p.m. to 6:00 p.m. Prisoners will eat with others on the same unit. Schedule for using the commissary is unit based.
Recreation	Recreation includes arts and crafts, intramural sports and physical fitness programs. Musical instruments are also available.
Medical	Sick call 6:15 a.m. and 7:15 a.m., Monday, Tuesday, Thursday, and Friday. Acute illnesses and injuries will be dealt with either as they arise or on Wednesdays. Emergency care is available at all times. Controlled or restricted medication is handed out in pill line during the week from 6:15 a.m. to 7:15 a.m., from 11:30 a.m. to 12:15 a.m., from 4:45 p.m. to 6:00 p.m., and from 9:30 p.m. to 10:00 p.m. On the weekends it will be handed out at 7:15 a.m. (insulin only), then from 8:15 to 9:30 a.m., from 11:30 to 12:15 p.m., from 5:15 to 6:15 p.m., and again from 9:30 to 10:00 p.m. Over-the-counter medication like Tylenol and antacids may be obtained at any pill line.
Counseling	Self-image groups, as well as psychological and psychiatric counseling and treatment. CODE (Challenge, Opportunity, Discipline, Ethics) for high-security offenders.
Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Visits	Visiting hours 8:30 a.m. to 3:30 p.m. Monday, Thursday, Friday, Saturday, Sunday, and approved holidays. No more than four people are allowed per visit. The institution uses a points system to reduce overcrowding. Each prisoner is allocated 40 points at the beginning of the month. During the week, 1 hour of visit corresponds to 1 point. On the weekend, 1 hour of visit equals 2 points.
Religion	Three full-time chaplains plus 100 community contractors and volunteers offer 45 services weekly for a dozen faith groups. The chapel is open all day Saturday and Sunday, as well as on several weekday evenings. There is a sweat lodge in the recreation yard. People who wish to participate in the sweat lodge must obtain permission from the chaplain and be medically screened. The chaplains have information about travel and accommodation details for visitors. They also offer counseling.
Other	The prison uses a pass system during the week, meaning that from 7:30 a.m. to 4:00 p.m. inmates must have a pass to move from one area of the institution to another unless they are going to lunch or to an assigned detail, like work. Outside of working hours, inmates are allowed to move only during a period of "controlled movement," which begins usually 5 minutes before an hour and ends 5 minutes after the hour. Families of prisoners may telephone the institution at (805) 735-2771 in the case of a family emergency.

FEDERAL CORRECTIONAL INSTITUTION LORETTO

Address	Federal Correctional Institution Loretto P.O. Box 1000 Loretto, PA 15940
Location	In southwest Pennsylvania between Altoona and Johnstown, 90 miles east of Pittsburgh. Off Route 22, midway between Interstate 80 and the Pennsylvania Turnpike via Route 220. The area is served by Pittsburgh Airport, Amtrak, and commercial bus service.
Contact Numbers	Tel: 814-472-4140 Fax: 814-472-6046
Judicial District	Western Pennsylvania
Security Level	Low
Male/Female	Male
Capacity	473

Current Pop.	1,104
Staff	221
History/Description	Opened November 1984, the institution is housed in a former Catholic seminary.
Admission and Orientation	Two phases. Phase 1 is a 1-day program of presentations by department heads and executive staff, who provide an overview of the institution's programs, as well as information about rights and responsibilities and the disciplinary process. Phase 2, unit orientation, occurs within 5 days of arrival and will be conducted by unit staff, who provide information about unit life.
Education	Education includes GED, ESL, adult continuing education, literacy testing, ABLE (Adult Basic Level Examination), parenting, and correspondence classes in languages, history, legal research, and business. In addition, vocational training classes are available in blueprint reading, information processing, and personal fitness training. Those who successfully pass the course will receive a certificate. The parenting course is run by the Bethesda Family Services Foundation. The law and leisure libraries are open 6 days a week but closed on Saturday.
Work	Facilities jobs include drafting, electric, landscape, garage, communications, powerhouse, plumbing, welding, painting, and construction. There is a Unicor electronics cable factory.
Food/Commissary	Meals are served at 6:00 a.m., 11:00 a.m., and 4:30 p.m. during the week. On the weekend and on federal holidays they are served at 7:00 a.m., 10:00 a.m., and 4:30 p.m. Prisoners are permitted to shop at the commissary any day of the week but only once a week.
Recreation	Recreation includes varsity and intramural sports such as basketball, softball, and volleyball. There are also crafts programs in fine art, ceramics, and leatherwork, plus an outside track area for running and walking. Periodically there are contests and holiday games and activities.
Medical	Sick call from 6:30 a.m. to 7:00 a.m. Monday, Tuesday, Thursday, and Friday. Pill line occurs every day from 11:30 a.m. to 12:00 p.m. There are additional lines from 7:30 a.m. to 7:45 a.m. and 8:30 p.m. to 8:45 p.m. for medication that was ordered during sick call and/or to refill medications if noted on prescription. Dental emergencies scheduled at same time as sick call; otherwise, a dental appointment must be individually requested in writing.
Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Gym	Yes. It is located next to the visiting room. It closes at 9:00 p.m.
Visits	Visiting hours are from 5:30 p.m. to 8:30 p.m. Monday, Thursday, and Friday and from 8:00 a.m. to 3:30 p.m. on Saturday, Sunday, and federal holidays. Prisoners are permitted eight visits per month, four of which may take place on the weekend or on a public holiday.
Religion	One full-time chaplain is available for pastoral counseling 7 days a week for all inmates, irrespective of faith or denominational affiliation.
Other	Telephones are turned off between 11:30 p.m. and 6:00 a.m.

FEDERAL CORRECTIONAL INSTITUTION MARIANNA

Address	Federal Correctional Institution Marianna 3625 Federal Correctional Institution Road Marianna, FL 32446
Location	In the Florida panhandle, 65 miles west of Tallahassee and 5 miles north of the town of Marianna. Off Highway 167. Marianna is served by airports in Tallahassee; Dothan, Alabama (35 miles northwest of the facility); and Panama City (54 miles south).
Contact Numbers	Tel: 850-526-2313 Fax: 850-482-6837
Judicial District	Northern Florida
Security Level	Medium
Male/Female	Male
Capacity	805
Current Pop.	1,267
Staff	348
History/Description	Opened in December 1988; housing is in two-person cells. "Main 550-cell medium security correctional institution for men is designed with all the components necessary to establish a self-supporting community. (Double-bunk capacity is 1100.) This includes housing, administration, education, recreation, medical clinic, Food Service and dining, vocational training and industrial warehouses" (Spens, 1994, p. 65).
Admission and Orientation	All newly arrived inmates have a physical examination. Unless otherwise documented, all inmates are required to have a tetanus and PPD immunization upon arrival. All inmates will be screened by Psychology Services during admission and orientation program.
Education	Education includes GED, ESL, adult continuing education, parenting, and correspondence classes. GED classes are offered in English and Spanish. The parenting program has four phases: general parenting, family literacy education, skills for family support, and domestic violence, AIDS, and substance abuse. In addition, vocational education courses are offered in computer applications and the Adult Distributive Cooperative Program (ADCT), which provides inmates with employment skills and job training. Other vocational programs include beginning and advanced typing.
Work	Unicor: furniture and graphics/services. The factories produce executive and systems furniture. They also offer data entry services and run a computer recycling plant.
Recreation	Programs include hobby crafts, intramural sports, art, aerobics, music, health education, and physical fitness.
Medical	Sick call is 6:30 a.m. to 7:00 a.m. Monday, Tuesday, Thursday, and Friday for those in the Federal Correctional Institution and in the Shawnee Unit. Yearly influenza vaccines are offered to those "at risk," and hepatitis B vaccines will be offered to inmates working in plumbing and Health Services. Emergency dental sick-call services will be available for the Federal Correctional Institution population Monday and Friday from 6:30 a.m. to 7:00 a.m. For those on the Shawnee Unit, they are available on Thursday.
Counseling	Alcoholics Anonymous, anger management, stress management groups.
Drug Treatment	A 12-month Residential Drug Abuse Program, nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous. The nonresidential drug abuse group, called "The Road to Recovery," meets weekly at all three sites.

Visits	Visiting hours vary; please contact establishment.
Religion	Staff chaplains as well as contract and volunteer representatives are available. There is a wide range of religious programs.
Other	Each of the three facilities has a Career Resource Center (CRC) that is part of the leisure libraries.

FEDERAL PRISON CAMP MARIANNA

Address	Federal Prison Camp Marianna 3625 Federal Correctional Institution Road Marianna, FL 32446
Location	Adjacent to Federal Correctional Institution Marianna.
Contact Numbers	Tel: 850-526-2313 Fax: 850-482-6837
Judicial District	Northern Florida
Security Level	Minimum
Male/Female	Female
Capacity	296
Current Pop.	272
History/Description	Adjacent to this main institution is a self-contained minimum-security camp for low-security women or those nearing release. There is no fence around the camp. Women are housed in two-person cubicles that have beds, lockers, a desk, and a chair.
Admission and Orientation	As above.
Education	Education includes GED, ESL, adult continuing education, parenting, and correspondence classes. In addition, there are three occupational training programs, all of which lead to outside certification or accreditation: adult distributive cooperative training, computer applications program, and typing. The parenting program includes basic parenting skills, distance parenting, family literacy, and substance abuse treatment.
Recreation	As above.
Medical	Sick call daily from 6:30 to 7:00 a.m. except for Tuesdays, when only physical examinations and emergencies are seen. Only emergencies will be evaluated on weekends and holidays. You may sign up for dental care any day from 6:30 to 7:00 a.m.
Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Visits	Visiting hours vary; please contact establishment.
Religion	As above.

FEDERAL PRISON CAMP MARION

Address	Federal Prison Camp Marion Route 5, P.O. Box 2000 Marion, IL 62959
Location	Adjacent to U.S. Penitentiary Marion.
Contact Numbers	Tel: 618-964-1441 Fax: 618-964-1695
Judicial District	Southern Illinois
Security Level	Minimum
Male/Female	Male
Capacity	310
Current Pop.	332

History/Description	Opened in 1971, the federal prison camp provides prison labor maintenance and other factors needed in the adjacent penitentiary.
Education	Education includes GED, ESL, adult continuing education, and correspondence classes. In addition, there are various vocational training courses and apprenticeships available.
Recreation	Recreation includes indoor and outdoor team sports, arts, and crafts.
Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Visits	Visiting hours 8:00 a.m. to 3:00 p.m. Fridays, weekends, and federal holidays. Prisoners are allowed up to 10 visits per month, with no more than five adults allowed at any one time.

U.S. PENITENTIARY MARION

Address	U.S. Penitentiary Marion Route 5, P.O. Box 2000 Marion, IL 62959
Location	Three hundred miles from Chicago, 120 miles from St. Louis, 9 miles south of Marion. Off I-57 via Highway 148 north, east on Little Grassy Road. The area is served by the Williamson County Airport.
Contact Numbers	Tel: 618-964-1441 Fax: 618-964-1695
Judicial District	Southern Illinois
Security Level	High
Male/Female	Male
Capacity	485
Current Pop.	462
Staff	363
History/Description	Opened in June 1963 as a federal prison camp, this facility was designated as a penitentiary in January 1964. It is the smallest of the penitentiaries and is constructed primarily as one-man cell units. It is designed to hold high-security male offenders who have generally been involved in violence or escape attempts at other prisons. It is the second-highest level security facility to ADX Florence.
Education	Education includes GED, ESL, adult continuing education, and correspondence classes. There is a part-time education representative on housing units.
Work	B-Unit Unicor electronics factory produces goods for the military.
Food/Commissary	Most prisoners are fed in their cells on trays, one for hot food and another for cold food. B-Unit or pretransfer unit inmates are escorted to the cafeteria and eat together; C-Unit prisoners receive trays and eat together in their housing unit.
Recreation	All inmates in the general population and pretransfer units will be permitted a specific amount of recreation out of their assigned housing unit. Activities include art, crochet, and indoor and outdoor sports.
Medical	Medical and dental care is provided by the Health Services Department Monday through Friday. Sick-call appointments, medication refills, and requests for drugstore items must be made before 6:00 a.m. on the day you are requesting the service. Inmates who have been in the Bureau of Prisons for 2 years are eligible for a biennial physical. Those over 50 years are eligible for an annual physical.
Counseling	Part-time psychologist on housing units. Counseling also provided by uniformed staff in correctional services.
Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Gym	Yes, for inmates in general population and pretransfer units.
Visits	Inmates are allowed five visits per month. Visiting hours are 8:00 a.m. to 3:00 p.m., Thursday, Friday, Saturday, Sunday, and federal holidays.
Religion	There is a chaplain on duty each day of the week. A chaplain will visit each unit once a week. Religious materials are available upon request. Closed-circuit religious television programming is offered.

Discipline	Circulation of petitions is prohibited and will be considered a violation of inmate discipline policy.
Other	All outgoing mail except "special mail" will be unsealed and may be inspected and read by staff. Inmate cell assignments will be rotated at least every 90 days.

FEDERAL CORRECTIONAL INSTITUTION MCKEAN

Address	Federal Correctional Institution McKean P.O. Box 5000 Bradford, PA 16701
Location	In northwest Pennsylvania between Bradford and Kane, 90 miles south of Buffalo. Off Route 59, 1/4 mile east of the intersection of State Route 59 and U.S. Route 219. The area is served by Buffalo Airport and Bradford Airport.

FEDERAL CORRECTIONAL INSTITUTION MIAMI

Address	Federal Correctional Institution Miami 15801 S.W. 137th Avenue Miami, FL 33177
Location	In the southwest section of Dade County, 30 miles from downtown Miami, off the Florida Turnpike (Homestead Extension, 152nd Street exit, 2.5 miles to 137th Street [south]). Miami is served by Miami International Airport, Amtrak, and commercial bus lines.
Contact Numbers	Tel: 305-259-2100 Fax: 305-259-2160
Judicial District	Southern Florida
Security Level	Medium
Male/Female	Male
Capacity	587
Current Pop.	1,205
Staff	320
History/Description	Opened on March 26, 1976, prisoners are housed in two-person cells.

Admission and Orientation	First week spent in A&O Unit. Institution orientation is held in the chapel and will last one day.
Education	Education includes GED, ESL, adult continuing education, and correspondence classes. A parenting course is also regularly offered, and those interested may pursue correspondence courses offered at various universities. The Education Department also offers four business vocational programs in accounting, business administration, data entry, and small business management. These programs are offered through the State of Florida Department of Education.
Work	Work includes Food Service and Facilities Department, which offers a range of work relating to the construction and maintenance trades, including auto repairs, electronics, carpentry, electric, masonry, paint, plumbing, landscape, and general maintenance shops. It employs around 150 prisoners in the Federal Correctional Institution and 90 in the camp. There is also a Unicor textile factory that hems sheets, towels, washcloths, etc. It employs around 175 inmates in its cutting, sewing, folding, packing, shopping, business office, and quality assurance departments. The factory hires handicapped prisoners when positions are available. There is a waiting list for all positions.
Food/Commissary	Meals served in dining area during the week from 6:30 a.m. to 7:20 a.m., from 10:45 a.m. to 12:00 p.m., and after the 4:00 p.m. count every day. On weekends meals are served from 7:00 to 7:30 a.m. and after the 10:00 a.m. count as well as after the 4:00 p.m. count. The commissary is located next to the dining hall. Hours are posted in housing areas.
Recreation	Recreation includes various indoor and outdoor activities, such as bicycling, life-enhancement activities, and community and social recreation activities.
Medical	Sick call from 6:30 a.m. to 7:00 a.m. Monday, Tuesday, Wednesday, and Friday at the Federal Correctional Institution hospital annex building behind the lieutenant's office. Prisoners in the Special Housing Unit will have the opportunity to see a physician's assistant every day of the week. Pill call occurs four times a day, hours will be posted. Routine dental care is provided on a priority basis. The Dental Department has an open house Monday, Tuesday, Thursday, and Friday from 6:30 a.m. to 7:00 a.m.
Counseling	In addition to standard counseling services, there is also a victim impact program in which prisoners learn about the impact of crime from victims.
Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous. Courses are offered in English and Spanish.
Visits	Prisoners may be visited by no more than six people at a time, including children. Visiting hours are from 8:30 a.m. to 3:00 p.m. Thursday through Monday. Visitors arriving after 1:00 p.m. will not be allowed entry. Prisoners may have no more than 18 people on their visiting list.
Religion	There are three full-time staff chaplains: a rabbi, a Catholic priest, and a Muslim imam. A chaplain is on duty every day of the week.
Other	Transportation to the facility is available by taxi. Telephone numbers for taxis serving the area are 444-4444 and 888-8888.

FEDERAL DETENTION CENTER MIAMI

Address	Federal Detention Center Miami P.O. Box 0119118 33 Northwest 4th Street Miami, FL 33101-9118
Location	East of Miami International Airport in downtown Miami. The institution is located at the corner of N.E. 4th Street and N. Miami Avenue. Miami is served by Miami International Airport, Amtrak, and commercial bus lines.
Contact Numbers	Tel: 305-982-1114 Fax: 305-982-1357
Judicial District	Southern Florida
Security Level	Administrative
Male/Female	Male and female
Capacity	1,259

Current Pop.	1,552
Staff	311
History/Description	The Federal Detention Center is primarily a facility for holding U.S. Marshal's prisoners. Some prisoners will also be sentenced to this facility to provide labor for the work cadre. They will be housed on the fifth and sixth floors. Rules and regulations are posted in both English and Spanish in all housing units.
Education	Education includes GED, ESL, adult continuing education, parenting, typing, and correspondence classes. In addition, there are apprenticeships in a variety of areas, including hotel/restaurant, baker, and industry cook. Information about community-based social services is available.
Food/Commissary	Food is served from 6:00 a.m. to 7:00 a.m., from 11:00 a.m. to 12:00 p.m. and after the 4:00 p.m. count. On weekends there is a coffee hour from 7:00 a.m. to 8:00 a.m. The commissary is open from 7:30 a.m. to 8:00 p.m. Monday through Friday. Prisoners may only purchase 60 stamps at one time.
Recreation	The recreation deck is open 7 days a week. Exercise equipment and crafts are available.
Medical	Sick call sign-up occurs from 6:00 a.m. to 7:00 a.m. on Monday, Tuesday, Wednesday, and Friday. Medicine is dispensed on the pill line at various times throughout the day. Hours will be posted. A dentist is on duty from 7:30 a.m. to 4:00 p.m. Monday through Friday. Dental sick call is from 8:15 a.m. to 11:30 a.m.
Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
HIV/AIDS	Prior to leaving Federal Detention Center Miami you will be tested for the HIV virus.
Visits	For unsentenced (pretrial) and holdover inmates, the visiting list is restricted to immediate family members only. Those prisoners on the work cadre may include up to four of their friends and more distant family members on their visiting list. Visiting hours are posted on the bulletin boards.
Other	Prisoners may not receive sexually oriented publications about homosexuality, sadomasochism, bestiality, or those involving children. Inmates without funds may request stamps from the prison.

FEDERAL PRISON CAMP MIAMI

Address	Federal Prison Camp Miami 15801 S.W. 137th Avenue Miami, FL 33177
Location	Adjacent to Federal Correctional Institution Miami.
Contact Numbers	Tel: 305-259-2100 Fax: 305-259-2160
Judicial District	Southern Florida
Security Level	Minimum
Male/Female	Male
Capacity	260
Current Pop.	238
History/Description	Adjacent to the Federal Correctional Institution, housing is dormitory style with two-person cubicles. Each dorm has washers and dryers available for inmate's clothing. Mail call is conducted at 5:00 p.m. on weekdays.
Education	Education includes GED, ESL, adult continuing education, and correspondence classes. In addition, there are apprenticeships in areas including baker, cook, dental assistant, and horticulture. Law and leisure libraries open every day until 8:30 p.m.
Drug Treatment	Active Residential Drug Treatment Program. Inmates receive the maximum 1-year sentence reduction upon completion. There is also a nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Food	Meals served in dining hall. Clothing regulations must be observed. No smoking in the dining hall.
Recreation	Recreation commences after 4:00 p.m. count. Recreation activities include weights, basketball, softball, soccer/football, handball, volleyball, and bocce.

Medical	Sick call is Monday, Tuesday, Wednesday, and Friday from 6:30 a.m. to 7:00 a.m. Prescribed medication is distributed in the pill line from 5:30 p.m. to 6:00 p.m.
Visits	Monday, Thursday, and Friday from 5:00 p.m. to 8:00 p.m.; Saturday, Sunday, and holidays from 8:00 a.m. to 3:00 p.m.
Other	Telephone hours from 6:30 a.m. to 11:30 p.m.

FEDERAL CORRECTIONAL INSTITUTION MILAN

Address	Federal Correctional Institution Milan P.O. Box 9999 Arkona Road Milan, MI 48160
Location	Forty-five miles south of Detroit and 35 miles north of Toledo, in the town of Milan. Off U.S. 23 (exit 27). The area is served by Detroit Metro and Toledo Express airports, Amtrak, and commercial bus lines.
Contact Numbers	Tel: 734-439-1511 Fax: 734-439-0949
Judicial District	Eastern Michigan
Security Level	Low/administrative
Male/Female	Male
Capacity	1,065
Current Pop.	1,625
Staff	388
History/Description	Opened May 1933; housing is dormitory style in two-person cubicles.
Admission and Orientation	Orientation within 5 days of admission; includes meeting with and briefing by the unit officer, correctional counselor, case manager, and unit manager. In addition, new inmates will be examined for dental, medical, and psychological needs on the Tuesday following their arrival.
Education	Education includes GED, ESL, adult continuing education, parenting, and correspondence classes.
Work	Jobs include working in Food Service, Mechanical Services, Housing Units, Education/Recreation, Safety, and Unicor. The Unicor factory at Milan produces filing cabinets and other miscellaneous metal products. There is a long waiting list.
Food/Commissary	Commissary is open on Monday, Wednesday, and Thursday at various times and on Tuesday for the Special Housing Unit.
Recreation	Recreation includes weight training, seasonal leagues, local and regional competitions, and a highly rated garden program. There are also arts and crafts and a music room.
Drug Treatment	Residential Drug Abuse Treatment Program, nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Gym	Yes, open in the winter.
Religion	There are three full-time chaplains, a contract rabbi, and a Native American sweat lodge. In addition, approximately 200 volunteers from the community visit the institution regularly to present their respective religious programs. Besides regularly scheduled programs, special religious events such as choirs, seminars, films, and spiritual retreats are scheduled from time to time. A schedule of the chaplain's hours and all religious programs is posted weekly in the Education Complex and housing units. There is a chapel library as well.
Other	Town hall meetings are held weekly in each unit. These meetings are held to make announcements and to discuss changes in the policy and procedures of the unit. Inmates are encouraged to ask pertinent questions of the staff and any guests who are present. These questions should pertain to the unit as a whole rather than personal questions or problems. Personal problems will be resolved by unit staff members during the regular work hours posted in each unit.

FEDERAL PRISON CAMP MONTGOMERY

Address	Federal Prison Camp Montgomery Maxwell Air Force Base Montgomery, AL 36112
Location	On the bank of the Alabama River, at Maxwell Air Force Base. Off Interstates 65 and 85. Montgomery is served by Montgomery Regional Airport, Amtrak, and commercial bus lines.
Contact Numbers	Tel: 334-293-2100 Fax: 334-293-2274
Judicial District	Middle Alabama
Security Level	Minimum
Male/Female	Male
Capacity	960
Current Pop.	834
Staff	126
History/Description	Opened in September 1930; housing is dormitory style with two-person cubicles. It was originally called Federal Prison Camp Maxwell Field.
Education	Education includes GED, ESL, adult continuing education, and correspondence classes. There are also vocational training courses in commercial truck driving and apprenticeships in cooking. In addition, Troy State University in Montgomery offers degree programs for inmates. Inmates must maintain a GPA of 2.0 or better and pass at least five credits per quarter. College and release preparation courses are voluntary and must be completed outside the normal 7.5-hour workday.
Work	There is a Unicor graphics/services factory.
Food/Commissary	Meals are served in the dining room during the week from 5:30 a.m. to 6:30 a.m., from 10:15 a.m. to 11:15 a.m. (by work detail), and after the 4:00 p.m. count clears. Times on weekends and holidays are from 6:45 a.m. to 7.45 a.m. and after the 10 a.m. count clears, with dinner at the same time as weekdays. Commissary is open on weekdays. Prisoners may shop once per week.
Recreation	Music room, independent recreational activities, hobby crafts. For details on Recreation Department programs, see bulletin boards in the hobby craft area.
Medical	Medical/dental sick call 6:00 a.m. to 6:20 a.m. Monday, Tuesday, Thursday, and Friday, excluding holidays.
Counseling	Psychology Services is made up of one psychologist and five full-time drug treatment specialists. Individual and group therapy, personal adjustment courses, and drug abuse education classes are offered. The chief psychologist's office is located in the Custody/Medical Building on the northeast corner. Open house hours are 3:00 p.m. to 3:30 p.m. Monday through Thursday. If an emergency occurs and no psychologist is on duty, go to the unit officer or the lieutenant on duty and they will contact the psychologist. Alcoholics Anonymous and Gamblers Anonymous meet weekly in the Birmingham Unit Drug Abuse Program area. Contact your unit counselor for details.
Drug Treatment	Residential Drug Abuse Program, nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Visits	Visiting hours are from 8:00 a.m. to 3:00 p.m. on weekends and federal holidays. Visitations are conducted on an "odd/even" rotation. The last of the first five digits of your registration number determines your status. No more than four visitors are allowed at any one time. There is an outdoor area for children.
Religion	There is a full-time chaplain in charge of the Religious Services Department. Spiritual programs are flexible and include general and private worship, Bible study, spiritual development, meditation, and group discussions. The schedule of activities is posted on unit bulletin boards. Open house hours in the chaplain's office are from 3:00 to 3:30 p.m. Monday through Thursday. The chaplain is assisted by contract employees and community volunteers to make sure that all religious needs are met.
Release Preparation	Social education programs are offered to assist inmates upon release. They are volunteer courses taught by outside instructors and inmates. The Career Counseling Center provides assistance to inmates who need help with career exploration, curriculum selection, and developmental concerns. A career library is also available to inmates.

FEDERAL CORRECTIONAL INSTITUTION MORGANTOWN

Address	Federal Correctional Institution Morgantown Greenbag Road P.O. Box 1000 Morgantown, WV 26507-1000
Location	In the mountainous region of north central West Virginia, on the southern edge of Morgantown. Off State Highway 857 (Greenbag Road). The area is served by the Morgantown Municipal Airport and commercial bus lines.
Contact Numbers	Tel: 304-296-4416 Fax: 304-284-3613
Judicial District	Northern West Virginia
Security Level	Minimum
Male/Female	Male
Capacity	935
Current Pop.	1,083
Staff	195
History/Description	Opened in January 1969, this facility was originally called the Robert F. Kennedy Youth Center. It has six housing units with dormitory-style areas, cubicles, and single-room housing. New admissions usually live in the dormitory and cubicle areas before rooms become available. Assignment to a single room is based on seniority and performance on work and program assignments as well as on general conduct.
Admission and Orientation	One week. Once prisoners are medically cleared, they are assigned to Food Service for a 90-day placement.
Education	Education includes GED, ESL, adult continuing education, and correspondence classes. Work experience and apprenticeships are available in plumbing, carpentry, automotive mechanics, communications, and dental assistance. Vocational training courses are offered in drafting, graphic arts, microcomputers, business education, and welding.
Work	Unicor metals factory.
Food/Commissary	Weekday meals are served in the dining hall from 6:10 a.m. to 7:10 a.m., from 10:50 a.m. to 11:50 a.m., and from 4:30 p.m. to 5:30 p.m. The Food Service Department prepares and serves picnics on Memorial Day, the 4th of July, and Labor Day. The commissary schedule is posted in the units.
Recreation	Recreation includes indoor and outdoor activities, plus a weights room. Musical instruments are available in the recreation area.
Counseling	All inmates experiencing adjustment problems, emotional difficulties, or personal or family concerns are advised to seek assistance from the Psychology Services Department.
Drug Treatment	A 9-month, 500-hour, Residential Drug Abuse Treatment Program; also a nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Medical	Sick call from 6:45 a.m. to 7:00 a.m. 4 days a week, plus 24-hour emergency care.
Gym	Yes
Visits	Visiting hours are from 8:00 a.m. to 3:00 p.m. on Saturday for all even-numbered inmates and on Sunday for all odd-numbered inmates. They also occur Monday, Thursday, and Friday from 5:00 p.m. to 9:00 p.m. and from 8:00 a.m. to 3:00 p.m. on holidays for all prisoners.
Religion	There are two staff chaplains as well as other contract and volunteer workers.
Other	Each housing unit is equipped with telephones so prisoners can call their families and friends. Telephones are operational 24 hours a day. Fire drills are conducted quarterly on every shift for all housing units.

FEDERAL PRISON CAMP NELLIS

Address	Federal Prison Camp Nellis C.S. 4500 North Las Vegas, NV 89036-4500
Location	Fifteen miles from downtown Las Vegas on Nellis Air Force Base, Area II. Las Vegas is served by McCarren International Airport and commercial bus lines.
Contact Numbers	Tel: 702-644-5001 Fax: 702-644-7282
Judicial District	Nevada
Security Level	Minimum
Male/Female	Male
Capacity	415
Current Pop.	591
Staff	71
History/Description	Opened in February 1990, this facility is designed to provide labor for the general maintenance of the U.S. Air Force base to which it is adjacent. Housing is dormitory style.
Admission and Orientation	Approximately the first 2 weeks.
Education	Education includes GED, ESL, adult continuing education, parenting, and correspondence classes. Recent adult continuing education courses have included business, art, language arts and sciences, music, and personal development. Apprenticeship programs include dental assistant and housing maintenance. There is an education library, a law library, and an interlibrary loan service.
Work	Work includes detail on air force base as well as dorm orderly and Food Services.
Food	During the week, breakfast and dinner are served in the Red Horse Dining Hall and lunch is distributed outside. Breakfast is served in shifts from 5:00 a.m. to 5:45 a.m. and from 6:45 a.m. to 7:30 a.m. Lunch is available from 11:00 a.m. to 11:15 a.m., and dinner from 5:00 p.m. to 6:00 p.m. On the weekends, meals are served from 7:00 a.m. to 8:10 a.m., from 11:00 a.m. to 12:15 p.m., and from 5:00 p.m. to 6:00 p.m. The commissary is open from Monday through Thursday. Prisoners may have no more than four cartons of cigarettes at any one time. Certain items, including stamps, do not count against the monthly spending limit.
Recreation	Recreation includes weights, outdoor yard, movies, music appreciation, arts and crafts, board games, and team games.
Medical	Medical and dental sick call is 6:00 a.m. to 6:30 a.m., Monday, Tuesday, Thursday, and Friday. Medication is distributed twice a day.
Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Gym	Yes; also a weight room.
Visits	Visiting hours are 5:00 p.m. to 9:30 p.m. Friday and Monday and from 8:00 a.m. to 3:00 p.m. on weekends and federal holidays. Visits may occur inside or outside.
Religion	One staff chaplain, plus contract rabbi and imam.
Release Preparation	The Education Department runs a social education course to help prisoners assess career goals and develop job skills.
Other	Telephones are turned off at 11:00 p.m.

METROPOLITAN CORRECTIONAL CENTER NEW YORK

Address	Metropolitan Correctional Center New York 150 Park Row New York, NY 10007
Location	In downtown Manhattan, adjacent to Foley Square and across the street from the new federal court house. The area is served by LaGuardia, Kennedy, and Newark airports. It is also accessible via Amtrak and commercial bus lines.

Contact Numbers	Tel: 212-240-9656 Fax: 212-417-7673
Judicial District	Southern New York
Security Level	Administrative
Male/Female	Male and female
Capacity	507
Current Pop.	876
Staff	Currently there are 290 staff. A single correctional officer is assigned to each housing unit. He or she is equipped with a body alarm.
History/Description	Opened in July 1975, this was the first high-rise metropolitan correctional center to be designed by the Federal Bureau of Prisons. Inmates are assigned to 10 separate housing units. These units are virtually self-contained, resulting in little movement within the building. The cells in the housing units are equipped with bunk beds and are overcrowded. There is a shower cubicle for every eight cells; there are no baths. Two of the housing units are open dormitories rather than cells. Two cell blocks at a time are attached to more spacious dayrooms that have facilities for recreation and dining. A separate television room is attached to the dayroom, and there are telephones for inmate use (Home Office, 1985, pp. 10-12).
Education	Education includes GED, ESL, adult continuing education, parenting, and correspondence classes. There is also a biweekly parenting program for female offenders in the pretrial unit that includes interviews and one-on-one counseling for female offenders; women participate in visiting activities with their children and receive a completion certificate at end of course. There is a central library and a separate law library.
Work	One occupational training program for women: computer applications. One on-the-job training program for women: food service.
Food/Commissary	Meals are served from a central kitchen and are heated on the unit by microwave (Home Office, 1985, p. 10). Commissary is open on weekdays. Prisoners may shop once per week.
Recreation	Outdoor recreation occurs on the roof that is covered with steel antihelicopter grid netting. Prisoners are entitled to limited amount of recreation time (Home Office, 1985, pp. 14-15). Activities include team sports, fitness, yoga, and weights.
Medical	There is a seven-bed clinic with a full-time doctor and dentist (Home Office, 1985, p. 14). Medical services offers monthly educational sessions on medical issues.
Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Visits	Visiting hours vary. Hours are posted on housing units. There are special activities for women enrolled in the parenting program.
Religion	Two full-time chaplains.

FEDERAL CORRECTIONAL INSTITUTION OAKDALE

Address	Federal Correctional Institution Oakdale P.O. Box 5050 Oakdale, LA 71463
Location	In central Louisiana, 35 miles south of Alexandria and 58 miles north of Lake Charles. Off State Highway 165 on Whatley Road. The area is served by Alexandria International Airport (40 miles from the facility) and by commercial bus lines.
Contact Numbers	Tel: 318-335-4070 Fax: 318-335-3936
Judicial District	Western Louisiana
Security Level	Medium
Male/Female	Male
Capacity	820

Current Pop.	1,203
Staff	297
History/Description	Originally opened in March 1986; housing is dormitory style with two- and four-person cubicles. It closed in November 1987 and was then reopened in January 1989. There are four units.
Admission and Orientation	Within 2 weeks of arrival.
Education	Education includes GED, ESL, adult continuing education, and correspondence classes. In addition, there are vocational training courses, including food preparation, retail trades, and barber, as well as apprenticeships, including plumbing and HVAC.
Work	Food service, unit orderly, maintenance shop, or Unicor textile factory, including commercial sewing, machine repair and maintenance, quality assurance, packaging and warehousing, and clerical positions. There is a waiting list.
Food/Commissary	Meals will be served in the dining hall. Prisoners may shop once a week at the commissary. They may have no more than 30 packets of cigarettes in their possession at any one time.
Recreation	Various indoor and outdoor activities.
Medical	Dental and medical sick call from 6:15 a.m. to 6:45 a.m. Monday, Tuesday, Wednesday, and Friday. Medication is dispensed four times daily. Hours will be posted. Optometrist visits the institution once every 2 weeks on Wednesday. Health Promotion/Disease Prevention runs programs and courses in a range of health topics including diabetes, cholesterol, smoking cessation, stress management, and back pain.
Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Visits	Visiting hours 5:00 p.m. to 8:00 p.m. Thursday, Friday, and Monday as well as 8:00 a.m. to 3:00 p.m. on the weekend and on federal holidays. Prisoners are allowed eight visits per month.
Religion	Protestant and Catholic chaplains as well as contract and volunteer representatives of other faiths.

FEDERAL DETENTION CENTER OAKDALE

Address	Federal Detention Center Oakdale P.O. Box 5060 Oakdale, LA 71463
Location	See Federal Correctional Institution Oakdale
Contact Numbers	Tel: 318-335-4466 Fax: 318-335-4476
Judicial District	Western Louisiana
Security Level	Administrative
Male/Female	Male
Capacity	630
Current Pop.	907
Staff	251
History/Description	Opened in April 1990, this facility is run jointly by the Bureau of Prisons and the Immigration and Naturalization Service (INS). It holds INS detainees awaiting deportation only. Length of stay in Federal Detention Center Oakdale varies because INS detainees may require lengthy paperwork before deportation can be completed.
Admission and Orientation	Two-week A&O program.
Education	Education includes GED, ESL, adult continuing education, and correspondence classes. Recent adult continuing education classes have included Spanish and French, photography, business courses, and typing.
Food/Commissary	Meals are served in the dining hall. A detainee may not have more than 10 packages of cigarettes nor have commissary items in excess of $230 in value. The number of postage stamps is also limited. The commissary is open for sales after the 4:00 p.m. count, usually until 6:00 p.m.

Medical	Medical sick call 6:15 a.m. to 7:00 a.m. on weekdays. Emergency medical care is available at any time; urgent dental care will be evaluated in medical sick call. Prisoners can submit a written request for routine dental care. Pill-line hours will be posted.
Counseling	Various counseling options available through unit staff as well as other volunteers and professional staff. Additionally, the staff psychologist conducts the Stress Management Group, the Psychological-Educational Support Group, and the Anger Management Group. Each of these groups meets weekly.
Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Visits	Visiting hours are Friday 5:00 p.m. to 8:00 p.m.; Saturday, Sunday, and holidays 8:00 a.m. to 3:00 p.m.
Religion	One prison chaplain as well as contract and volunteer representatives of various faiths.
Other	Detainees deported to their country will be limited in the property that they may take on their trip back home. The limiting factor to all property will be that no detainee shall be allowed to bring more than what can be placed in a box measuring not more than 12 inches high by 15 inches wide and 18 inches long. All other property will be mailed to an address supplied by the detainee at the detainee's expense.

FEDERAL PRISON CAMP OAKDALE

Address	Federal Prison Camp Oakdale P.O. Box 5060 Oakdale, LA 71463
Location	Adjacent to Federal Detention Center Oakdale.
Contact Numbers	Tel: 318-335-4466 Fax: 318-335-4476
Judicial District	Western Louisiana
Security Level	Minimum
Male/Female	Male
Capacity	118
Current Pop.	92
Education	Education includes GED, ESL, adult continuing education, and correspondence classes.
Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.

FEDERAL TRANSFER CENTER OKLAHOMA CITY

Address	Federal Transfer Center Oklahoma City P.O. Box 898892 7500 MacArthur Boulevard Oklahoma City, OK 73189-8802
Location	Three miles west of Interstate 44 and 4 miles south of Interstate 40. Located at and served by the Will Rogers World Airport and commercial bus lines.
Contact Numbers	Tel: 405-682-4075 Fax: 405-680-4041
Judicial District	Western Oklahoma
Security Level	Administrative
Male/Female	Male and Female
Capacity	1,053
Current Pop.	1,417 (of whom approximately 170 are work cadre)

Staff	296
History/Description	Opened in February 1995. Primarily designed to house holdover inmates in transit to other facilities, although it also houses a permanent work cadre, INS, and parole violator inmates. Holdover inmates are usually transferred within 45 days of their arrival. While at Federal Transfer Center Oklahoma, prisoners are held in one- or two-floor housing units consisting of 30 or 59 double-bunked cells with a toilet, a sink, and a common showering facility.
Admission and Orientation	Newly arrived prisoners will be issued clothing, bedding, and towel. Clothing exchange occurs three times a week for all in the holdover unit; bed linen is cleaned once a week.
Education	For work cadre inmates, GED, ESL, and some adult continuing education courses. Provides legal materials from law library if requested by prisoners using special inmate request form. Work cadre inmates may work in the law library upon request. Leisure library materials are also available to cadre inmates in English and Spanish. There is also an interlibrary loan program.
Work	Unit orderly jobs for some holdovers, but most work done by work cadre. Food Service jobs. As with those on holdover status, there are very few job opportunities for parole violators.
Food/Commissary	Meals served in the unit from 6:00 a.m., 11:00 a.m., and immediately following the 4:00 p.m. count. Commissary privileges are available only to those on holdover status who satisfactorily perform work while in the transfer unit. They may spend only the funds earned through such labor.
Recreation	Limited recreation on units, including television and board games. Physical recreation available outside from 6:00 a.m. to 9:45 p.m.
Medical/Dental	Medical sick call on each unit between 6:00 a.m. to 7:00 a.m. on Monday, Tuesday, Thursday, and Friday. Emergency medical and dental care will be dealt with by the unit officer, who will contact appropriate staff as needed.
Counseling	Unit staff run various voluntary counseling courses for cadre prisoners, including drugs, victim impact, and anger management.
Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Visits	Visiting hours are Saturday, Sunday, and federal holidays from 8:00 a.m. to 3:00 p.m. Prisoners on holdover may only be visited by their immediate family members if they file an official request. The request will normally take at least 2 days processing time.
Religion	Chaplains visit the holdover units on a weekly basis.
Other	Smoking is only permitted on the hour on the outside recreation deck. Mail distributed on weekdays only after 4:00 p.m. count.

FEDERAL CORRECTIONAL INSTITUTION OTISVILLE

Address	Federal Correctional Institution Otisville P.O. Box 600 Otisville, NY 10963
Location	In southeast New York, near the Pennsylvania and New Jersey borders, and 70 miles northwest of New York City. The area is served by several airports, the closest of which is in Newburgh, New York. Bus and train service connect Otisville to New York City.
Contact Numbers	Tel: 914-386-5855 Fax: 914-386-9455
Judicial District	Southern New York
Security Level	Administrative
Male/Female	Male
Capacity	665
Current Pop.	1011
Staff	There are currently 320 staff. One correctional officer supervises the housing units.
History/Description	Opened in May 1980, Federal Correctional Institution Otisville is built in a “campus style” around a landscaped grassy area. Buildings are low rise and are located in a woodland setting. The central

	facilities are housed in one large building that is surrounded by separate housing units. These housing units are part three- and part two-story blocks, with the cells placed along the sides and a dayroom in the middle. There is a separate television room. Cells have toilets. There is one shower for every eight cells. Prisoners are housed according to their offense and character, and visiting to other housing units is prohibited. Access to the common grassy area is restricted through the use of a timed pass system except during free circulation periods at mealtimes (Home Office, 1985, pp. 26-31).
Education	Education includes GED, ESL, adult continuing education, and correspondence classes. There are also vocation training courses and apprenticeships available.
Work	Unicor textile factory.
Food/Commissary	Meals are served in a central dining hall that overlooks the common grassy area. Staff, inmates, and visitors dine together (Home Office, 1985, p. 28).
Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Recreation	Recreation occurs outdoors in a space of around 5 acres. Activities include team sports, arts, and crafts.
Visits	Visiting hours are from 1:00 p.m. to 8:00 p.m. on Monday, Tuesday, and Thursday and from 8:00 a.m. to 3:00 p.m. on weekends and federal holidays. Prisoners are entitled to four visits per month.
Discipline	One of the housing units with 30 rooms near to the warden's office contains segregation cells. Cells in the disciplinary unit are spartan.
Religion	Three full-time chaplains, one full-time rabbi. The prison has multiuse auditorium for religious, community, and stage activities.

FEDERAL PRISON CAMP OTISVILLE

Address	Federal Prison Camp Otisville P.O. Box 600 Otisville, NY 10963
Location	Adjacent to Federal Correctional Institution Otisville.

Recreation	As above.
Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Visits	Visiting hours are from 8:00 a.m. to 3:00 p.m. on the weekends. There is a separate television room for children.
Religion	As above.

FEDERAL CORRECTIONAL INSTITUTION OXFORD

Address	Federal Correctional Institution Oxford Box 500 Oxford, WI 53952-0500
Location	In central Wisconsin, 60 miles north of Madison. Off U.S. 51 at the intersection of County Road G and Elk Avenue. The area is served by Dane County Regional Airport and by commercial bus service in Portage and Wisconsin Dells.

Contact Numbers	Tel: 608-584-5511 Fax: 608-584-6371
Judicial District	Western Wisconsin
Security Level	Medium
Male/Female	Male
Capacity	586
Current Pop.	1003
Staff	340
History/Description	Opened October 1973. There are four housing units, some of which are privilege units with better facilities. The units have washers and dryers, and housing is in one- and two-man cells.
Admission and Orientation	Two weeks.
Education	Education includes GED, ESL, adult continuing education, and correspondence classes. Prisoners may also study for an associate's degree through University of Wisconsin-Baraboo. In addition, there is a vocation training course in janitorial services, and various apprenticeships are available, including bricklayer, carpenter, dental assistant, dental lab technician, HVAC, electrician, machinist, and welder.
Work	Work options include Food Service, maintenance shop, and the Unicor electronics factory.
Food/Commissary	Meals are served in the dining hall. Breakfast begins at 6:35 a.m. The commissary is open Monday through Friday.
Recreation	Outside recreation yard, crafts center, and arts program.
Medical	Medical and dental sick call 6:30 a.m. to 7:15 a.m. Monday, Tuesday, Thursday, and Friday. Medicine is dispensed four times a day; see hours.
Counseling	Various self-help groups, including self-image and positive mental attitude. Counseling is also available through the chaplains and the Psychology Department.
Drug Treatment	Two Residential Drug Abuse Treatment Programs, a nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Gym	Yes. The gym has a basketball court, weight-lifting room, pool table, and table game area. It also has a band room and a number of smaller music rooms for individual practice.
Visits	Visiting hours are 8:00 a.m. to 3:00 p.m. Friday through Monday and federal holidays.
Religion	Three full-time chaplains.

FEDERAL PRISON CAMP OXFORD

Address	Federal Prison Camp Oxford Box 500 Oxford, WI 53952-0500

Medical	As above.
Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Visits	Visiting hours are from 5:30 p.m. to 8:30 p.m. on Fridays and from 8:00 a.m. to 3:00 p.m. on weekends and federal holidays.

FEDERAL CORRECTIONAL INSTITUTION PEKIN

Address	Federal Correctional Institution Pekin P.O. Box 7000 Pekin, IL 61555-7000
Location	Located on Route 29 South in Pekin, approximately 10 miles south of Peoria, 180 miles southwest of Chicago, and 180 miles northeast of St. Louis. The area is served by the Greater Peoria Regional Airport, Amtrak, and commercial bus service to Peoria.
Contact Numbers	Tel: 309-346-8588 Fax: 309-477-4688
Judicial District	Central Illinois
Security Level	Medium
Male/Female	Male
Capacity	752
Current Pop.	1,247
Staff	311
History/Description	Opened in October 1994, the prison is divided into four housing units that are referred to as A Unit, B Unit, C Unit, and D Unit. Housing in these units is in two- and three-man cells. Emphasis is placed on maintaining a racial balance in each housing unit.
Education	Education includes GED, ESL, adult continuing education, and correspondence classes. Vocational training programs in welding and machine shop are also available. The law library is open from 7:45 a.m. to 8:45 p.m. Monday through Friday and from 7:30 a.m. to 3:40 p.m. on Saturday. There is also a leisure library.
Work	Unicor metals factory produces a variety of stainless steel, aluminum, and carbon steel welded objects, including prison security doors, bars, and grills for cell doors. Other institutional jobs include CMS, Food Service, compound crew, mechanical services, education and law library, and the chapel.
Food/Commissary	Meals are served in the dining room from 6:00 a.m. to 7:00 a.m., from 11:00 a.m. to 12:00 p.m., and after the 4:00 p.m. count clears on the weekdays. On the weekend or on federal holidays, there is a coffee hour from 7:00 a.m. to 8:00 a.m., brunch after the 10:00 a.m. count clears, and dinner after the 4:00 p.m. count clears. The commissary is open Monday through Thursday. Sales occur after the 4:00 p.m. count clears until 7:00 p.m. Inmates may shop once an evening.
Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Medical	Medical and dental sick call is held between 6:30 a.m. and 7:00 a.m. Monday, Tuesday, Thursday, and Friday. Emergency care is available at all times. Pill line occurs at various times throughout the day. Hours will be posted.
Recreation	Recreation includes weights, exercise equipment, music room, pool tables, metal/welding shop.
Visits	Visiting hours are Thursday, Saturday, Sunday, Monday, and federal holidays from 8:00 a.m. to 3:00 p.m. and on Friday from 1:00 p.m. to 8:00 p.m. Prisoners may be visited by up to five adults at any one time and by an unlimited number of children.

FEDERAL PRISON CAMP PEKIN

Address	Federal Prison Camp Pekin P.O. Box 7000 Pekin, IL 61555-7000
Location	Adjacent to Federal Correctional Institution Pekin.
Contact Numbers	Tel: 309-346-8588 Fax: 309-477-4688
Judicial District	Central Illinois
Security Level	Minimum
Male/Female	Female
Capacity	256
Current Pop.	257
History/Description	Housing is dormitory style with two-person cubicles.
Education	Education includes GED, ESL, adult continuing education, and correspondence classes. In addition, there are three occupational training programs, all of which lead to outside certification or accreditation: building trade, horticulture, and office technology. The Parenting Program combines community and institutional resources to offer seminars on a range of topics, including toy safety, HIV/AIDS awareness, pregnancy care, and nutrition. Classes in program include parenting young children, parenting teenagers, systematic training for effective parenting, and drug abuse resistance education for adults (DARE).
Work	The U.S. Department of Labor recently approved four apprenticeship programs that will also lead to outside certification or accreditation and which will be implemented in the near future: auto mechanic, building maintenance repairer, horticulturist, and welder.
Food/Commissary	Commissary is open from Tuesday through Thursday in the early evening.
Recreation	As above.
Drug Treatment	Courses on drug abuse resistance education for adults (DARE) as part of parenting program; also a nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
HIV/AIDS	Occasional seminars on HIV/AIDS awareness as part of parenting program.
Visits	Visiting hours are from 5:00 p.m. to 8:00 p.m. on Friday and from 8:00 a.m. to 3:00 p.m. on weekends and federal holidays. No more than five adults may visit at any one time, although an unlimited number of children are allowed. There is a separate children's room.
Release Preparation	Job interview experience through mock job fair.

FEDERAL PRISON CAMP PENSACOLA

Judicial District	Eastern Pennsylvania
Security Level	Administrative
Male/Female	Male and female
Capacity	929
Current Pop.	1,098
Staff	265
History/Description	Opened April 2000. Facility has three primary types of units: Pretrial Units, Special Housing Unit, and a Cadre Unit. Those who are sentenced to serve their time at Federal Detention Center Philadelphia will normally be housed in the Cadre Unit.
Admission and Orientation	Bilingual A&O pack.
Education	Education includes GED, ESL, adult continuing education, and correspondence classes.
Work	Work includes barber.
Food/Commissary	Meals are served on each unit. They are delivered in a food cart. Hours of dining are posted. Prisoners can purchase items from the commissary on a weekly basis.
Recreation	Recreation equipment is available in each housing unit.
Medical	Sick call is held on Monday, Tuesday, Thursday, and Friday. Prisoners sign up at their housing units. A full-time dentist is also available.
Drug Treatment	Drug education course for Cadre inmates and transitional services for Cadre inmates who have completed the Residential Drug Abuse Treatment Program elsewhere.
Visits	Pretrial and holdover inmates may visit only with their immediate family. Visiting hours and numbers of people on visiting list vary for Cadre and pretrial inmates. All prisoners are allowed up to four visitors at any time, not including infants.
Religion	Schedule of religious activities is posted in each housing unit.
Other	Typewriters are located on the housing units. Smoking is limited to certain areas of the units.

FEDERAL CORRECTIONAL INSTITUTION PHOENIX

Address	Federal Correctional Institution Phoenix 37900 N. 45th Avenue Department 1680 Phoenix, AZ 85027-7003
Location	Thirty miles north of downtown Phoenix, off Interstate 17, Pioneer Road exit. The area is served by Phoenix Sky Harbor International Airport, seven regional airports, Amtrak, and commercial bus lines.
Contact Numbers	Tel: 602-465-9757 Fax: 602-465-5133
Judicial District	Arizona
Security Level	Medium
Male/Female	Male
Capacity	740
Current Pop.	1,362
Staff	349
History/Description	Opened in April 1985, Federal Correctional Institution Phoenix is located in the Arizona desert some miles out of Phoenix. Housing units are triangular in form and are paired. There are 66 rooms in each unit on two floors. Cells are located around the sides with a dayroom in the middle. The two housing units are linked by a lobby (Home Office, 1985, pp. 54-55).
Education	Education includes GED, ESL, adult continuing education, and correspondence classes. Academic and vocational training programs; classes scheduled between 7:30 a.m. and 3:45 p.m. Inmates will be excused from work detail to attend.
Work	Work details include Food Service, mechanical services (electricians, plumbers, cement finishers, masons, mechanics, welders, painters, motor repairmen, laborers, and clerks), business office, institution hospital, education (librarians, clerks, orderlies), clothing room, and institution maintenance. There is also a Unicor electronics factory.
Food/Commissary	Meals are served during the week from 5:45 a.m. to 6:45 a.m., from 11:00 a.m. to 12:30 p.m., and from 5:00 p.m. to 6:00 p.m. On weekends and holidays the hours are the same except that breakfast is replaced by a coffee hour from 7:00 a.m. to 8:00 a.m. Commissary is open on weekday evenings. Prisoners may shop at least once per week.
Recreation	Currently, there are leagues for football, basketball, soccer, and softball that incorporate varsity and intramural and over 35 teams to provide for the greatest number of inmate participants possible. There is a weight-lifting area outdoors, and Universal machines are located at the far north of the compound. There is a quarter-mile track for walking and running on the main recreation yard. Stationary bicycles are also available. The main recreation yard is open when the signal is given over the loudspeaker and is closed in the same manner. The weight-lifting area closes at 8:30 p.m. for clean-up. Indoor recreation includes games and cards, and ping-pong and pool tables are available. Hobby craft programs include ceramics, art, and a unit art program, allowing inmates to work on small projects in their units. The recreation department also provides music rooms. Equipment on hand includes drums, congas, electric and acoustic guitars, amplifiers, keyboards, microphones, and speakers. Tournaments and special activities are scheduled for holidays.
Medical	Sick call 6:30 a.m. to 7:00 a.m. Monday, Tuesday, Thursday, and Friday.
Counseling	Psychologists are available for individual psychotherapy as needed. Group psychotherapy and personal development groups are offered. The types of groups vary according to inmate's needs and interests. Announcements for groups will be made in town hall meetings and posted on unit bulletin boards. In the instance of an emergency/crisis situation, a psychologist will see you as soon as possible, usually the same day.
Drug Treatment	Residential Drug Abuse Treatment Program. Substance abuse programs are tailored to meet individual needs and may include one or more of the following: group or individual therapy, personal development groups, talking circles, correctional counseling, consultation with chaplains, crisis intervention, self-help groups, prerelease counseling, and 12-step recovery groups. There is also a nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous. Programs are offered in English and Spanish.

Visits	Visiting hours 8:00 a.m. to 3:00 p.m. on weekends and federal holidays and from 4:30 p.m. to 8:30 p.m. on Mondays, Tuesdays, and Fridays. Each inmate is given 10 visiting points at the beginning of each month. All visits received on Saturday and Sunday cost 2 points. Total visits received Mondays, Tuesdays, and Fridays will result in the reduction of 1 point. The warden will establish if point deductions are applicable for holidays as they occur.
Religion	Two full-time chaplains.

FEDERAL PRISON CAMP PHOENIX

Address	Federal Prison Camp Phoenix 37900 N. 45th Avenue Department 1680 Phoenix, AZ 85027-7003

Education	Education includes GED, ESL, adult continuing education, and correspondence classes. In addition, horticulture and landscaping classes are offered during warm weather. Computer and electronics classes are offered as well.
Work	Unicor textile factory.

Food/Commissary	Soup, salad, and beverage bar available in the dining hall. A monitor in the dining room displays the menu each day, including calorie, fat, and sodium content. Meals are served during the week from 6:00 a.m. to 7:00 a.m., from 11:00 a.m. to 12:00 p.m., and from 4:30 p.m. to 5:30 p.m. On weekends, breakfast is replaced by a coffee hour from 7:00 a.m. to 8:00 a.m.
Recreation	Recreation includes arts and crafts such as painting and ceramics, weights, and intramural team sports in softball, basketball, and volleyball. One completed project and one uncompleted project are allowed in an inmate's room at a time. Approved completed projects may be mailed home. Musical instruments are available in the recreation area for inmate use. Inmates may receive authorization to purchase their own instruments. Electronic instruments are not allowed. Recreation areas may also be used for other sports, board games, or general fitness exercises. Outside recreation areas are open during daylight hours only.
Medical	Sick call is 6:30 a.m. to 7:00 a.m. Monday, Tuesday, Thursday, and Friday. Inmates must have their commissary ID to make an appointment. If the inmate is more than 15 minutes late, the appointment will be canceled. Inmates must be dressed in institutional khakis when visiting the Health Services Unit.
Counseling	Psychologists are available to provide counseling and other mental health services. A contract psychiatrist is available by appointment.
Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Visits	Visiting hours from 5:00 p.m. to 8:00 p.m. Monday, Thursday, and Friday and from 8:00 a.m. to 3:00 p.m. on weekends and holidays.
Release Preparation	Prerelease program offers information seminars concerning the personal, legal, and social responsibilities of civilian life. Information sessions are scheduled with probation officers, parole commission members, and other agencies and employers.

FEDERAL MEDICAL CENTER ROCHESTER

Address	Federal Medical Center Rochester P.O. Box 4600 2110 East Center Street Rochester, MN 55903-4600
Location	In southeastern Minnesota, 2 miles east of downtown Rochester. Off State Highway 296 (Fourth Street). The area is served by the Rochester Airport and commercial bus lines.
Contact Numbers	Tel: 507-287-0674 Fax: 507-287-9601
Judicial District	Minnesota
Security Level	Administrative
Male/Female	Male
Capacity	677
Current Pop.	799
Staff	465
History/Description	Opened October 1984, Federal Medical Center Rochester provides mental and physical care. It is in a former state mental hospital and offers a variety of types of housing from individual rooms to dormitories. It is the main psychiatric and medical referral center for the Bureau of Prisons. It also houses a work cadre.
Admission and Orientation	One day.
Education	Education includes GED, ESL, adult continuing education, and correspondence classes.
Work	All inmates who are medically sound are expected to work. Work includes Food Service, barber, maintenance shop, and orderlies. Unicor electronics factory run by Unisat is a satellite Federal Prison Industries Program that employs mainly mental health inmates.

Food/Commissary	Meals are served in the dining room from 6:30 a.m., at 10:30 a.m., and after the completion of the 4:15 p.m. count during the week. On the weekend, the times are the same except that lunch is served at 10:00 a.m. The commissary is open for sales on Tuesdays and Wednesdays.
Recreation	Recreation includes aerobics, crafts, and exercise equipment. There are also television rooms available in the units.
Medical	Medical Services staff at Federal Medical Center include physicians, dentists, nurse practitioners, physician assistants, nurses, and allied health care professionals such as pharmacists, radiological technicians, physical therapists, laboratory technologists, and respiratory therapists. Medical sick call occurs at various times depending on unit; hours will be posted. Dental sick call sign-up is between 7:00 a.m. and 7:30 a.m. for dental emergencies. Urgent and after-hours medical care is available at all times. Medication is dispensed twice a day. See hours. The medical personnel also offer a wide range of health promotion/disease prevention courses on wellness and other health matters.
Counseling	Mental health services through the Psychiatry and Psychology Departments are available to all inmates. These include educational groups, therapy groups, individual therapy, intensive diagnosis/assessment, and inpatient treatment. In addition, outpatient substance abuse treatment services are available.
Drug Treatment	Residential Drug Abuse Treatment Program, nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Visits	Visiting hours are from 8:15 a.m. to 3:00 p.m. from Thursday through Monday. Prisoners are allowed eight visits per month. No more than five adults may visit at any one time. There is a separate children's room.
HIV/AIDS	All new inmates will be screened for HIV.
Religion	Three full-time chaplains.
Other	Mail is distributed by the unit officer after the 4:15 p.m. count. There is no smoking inside any buildings at the Federal Medical Center. Outside smoking areas are provided.

FEDERAL CORRECTIONAL INSTITUTION SAFFORD

Address	Federal Correctional Institution Safford RR 2, Box 820 Safford, AZ 85546-9729
Location	In southeastern Arizona, 127 miles northeast of Tucson, 165 miles east of Phoenix. Off Highway 191, 7 miles south of the town of Safford. The area is served by airports in Tucson and Phoenix, Amtrak in Phoenix and Tucson, and commercial bus lines.
Contact Numbers	Tel: 602-428-6600 Fax: 602-348-1331
Judicial District	Arizona
Security Level	Low
Male/Female	Male
Capacity	421
Current Pop.	804
Staff	178
History/Description	Opened in November 1958, this was originally a minimum-security camp. Housing is dormitory style with eight-person cubicles.
Education	Education includes GED, ESL, adult continuing education, and correspondence classes. College-level courses in a classroom setting are offered through Eastern Arizona College, as well as through correspondence. Inmates are required to pay for tuition and books. No financial assistance is available. Vocational training programs available.
Work	There is a Unicor textile factory.
Food/Commissary	Meals are served in the dining hall during the week from 6:00 a.m. to 7:00 a.m., from 10:15 a.m. by rotation, and after the 4:15 p.m. count. On the weekends, times are from 6:30 a.m. to 7:30 a.m., from 11:00 a.m. to 12:00 p.m., and after the 4:15 p.m. count. Commissary is open daily after the 4:00 p.m. count. Prisoners may shop at least once per week.

Recreation	Recreation includes baseball field and walking and jogging track; weights, basketball, and volleyball; arts and crafts.
Medical	Medical and dental sick call 6:30 a.m. to 7:00 a.m.
Counseling	Psychology Services provides testing, evaluations, and individual and group psychotherapy. The department's primary focus is to promote and provide a positive learning atmosphere conducive to prosocial patterns of behavior and thinking.
Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Visits	Visiting hours 8:15 a.m. to 3:15 p.m. Saturday, Sunday, and federal holidays. Only four visitors (including noninfant children) will be allowed at once.
Religion	Full-time chaplain on staff. Books are available in the chapel library. Greeting cards are given away freely. The chapel at Federal Correctional Institution Safford was built by and for the men there.
Other	Inmate organizations include Toastmasters; the Swift Trail Toastmasters Club is a public speaking organization, and anyone interested should contact any Toastmaster or the club sponsor. The Black Culture Workshop is open to the general population regardless of race. The American Indian Association participates in a Native American sweat lodge on the weekends.

METROPOLITAN CORRECTIONAL CENTER SAN DIEGO

Address	Metropolitan Correctional Center San Diego 808 Union Street San Diego, CA 92101-6078
Location	In downtown San Diego, adjacent to the federal court house. San Diego is served by Lindberg Field Airport, Amtrak, and commercial bus lines.
Contact Numbers	Tel: 619-232-4311 Fax: 619-595-0390
Judicial District	Southern California
Security Level	Administrative
Male/Female	Male and Female
Capacity	612
Current Pop.	901
Staff	Currently there are 266 staff. A single correctional officer is assigned to each housing unit. He or she is equipped with a body alarm.
History/Description	Opened in November 1974, Metropolitan Correctional Center San Diego is a high-rise facility on a central city site. It has nine virtually self-contained housing units that have 48 cells each. The cells have sinks and toilets. There is one shower for every 6 cells. Prisoners are grouped according to their offense and character (Home Office, 1985, pp. 16-19).
Education	Education includes GED, ESL, adult continuing education, parenting, and correspondence classes. The Parenting Program for female offenders lasts 8 weeks. Parenting and Health Education are required courses for inmates in release preparation status.
Food/Commissary	Meals are prepared in advance and delivered to each floor. Meals are to be eaten in designated areas, only one piece of fruit may be taken to one's room/quad. Meals are served at approximately 6:00 a.m., 11:00 a.m., and 4:30 p.m. (after count). Commissary is open on weekdays.
Recreation	Outdoor recreation occurs on the roof, which is fitted with helicopter protection and netting (Home Office, 1985, p. 19). Cards, pool, table tennis, and other games are available in each housing unit. Television can be viewed in the evening until 10:00 p.m. in English and Spanish. Movies are provided in housing units and alternate weekly between English and Spanish. Volleyball, basketball, handball, stationary bikes, and stair steppers are available in the outdoor recreation area. There is also a leisure center located on the sixth floor in the Education Department. It is open to all housing units, and a sign-up sheet is available. Bingo, cards, and tournaments are offered there.
Medical	The sick-call sheet will be put out between 6:00 p.m. and 6:30 p.m. the night before Sunday, Monday, Wednesday, and Thursday.

Counseling	Counseling services for victims and perpetrators of sexual assault are available. Psychology Services offers crisis intervention, short-term therapy and counseling, and diagnostic evaluations. A contract psychiatrist is also available.
Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Visits	Visiting hours 4:30 p.m. to 9:00 p.m. on Monday, Thursday, and Friday and 8:00 a.m. to 2.45 p.m. on weekends and federal holidays. Prisoners are permitted a 1-hour visit on each of their approved visiting days, up to three visits with three adult visitors per visit. Visiting is allowed on an odd/even rotation based on the last number of the first five digits of the inmate's register number. The visiting schedule for inmates in the special housing unit is Tuesday, Wednesday, Saturday, and Sunday from 4:30 p.m. to 9:00 p.m.
Religion	Chaplains are available 7 days a week. A schedule of religious services and activities is posted at the chapel entrance and on unit bulletin boards.

FEDERAL CORRECTIONAL INSTITUTION SANDSTONE

Address	Federal Correctional Institution Sandstone Kettle River Road Sandstone, MN 55072
Location	One hundred miles northeast of Minneapolis/St. Paul and 70 miles southwest of Duluth. Off Interstate 35 (Sandstone exit, follow Highway 23 to Route 123 east). The area is also served by commercial bus lines.
Contact Numbers	Tel: 320-245-2262 Fax: 320-245-0385
Judicial District	Minnesota
Security Level	Low
Male/Female	Male
Capacity	376
Current Pop.	892
Staff	246
History/Description	Originally opened in April 1939. This first facility was closed in June 1949 and then re-opened in July 1959. Housing is mainly dormitory style with two-man cubicles.
Education	Education includes GED, ESL, adult continuing education, effective parenting and fitness, career counseling, and correspondence classes. There are also college classes from Cambridge Community College; various apprenticeships, including baker, cook, and dental assistant; and vocational training in auto mechanics and welding.
Work	Unicor glove factory and printing department. There is a long waiting list. The glove factory has a preindustrial training program.
Food/Commissary	Meals are served in a dining hall. Commissary is held on weekday evenings. Prisoners may shop once per week.
Recreation	Recreation includes indoor and outdoor activities such as hobby crafts, weights, intramural sports, and stress reduction courses.
Medical	Sick call 6:30 a.m. to 7:00 a.m. Monday, Tuesday, Thursday, and Friday. Medication is distributed four times a day. Hours will be posted.
Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Gym	Yes.
Visits	Visiting hours are 8:30 a.m. to 3:30 p.m. Friday through Monday and federal holidays. Prisoners are limited to eight visits per month, with no more than six visitors at any one time.
Religion	Two full-time chaplains.

FEDERAL CORRECTIONAL INSTITUTION SCHUYLKILL

Address	Federal Correctional Institution Schuylkill P.O. Box 700 Minersville, PA 17954
Location	One hundred miles northwest of Philadelphia and 46 miles northeast of Harrisburg. West of Interstate 81, off State Highway 901. The area is served by Harrisburg International Airport, Amtrak in Harrisburg, and commercial bus lines.
Contact Numbers	Tel: 717-544-7100 Fax: 717-544-7225
Judicial District	Eastern Pennsylvania
Security Level	Medium/administrative
Male/Female	Male
Capacity	729
Current Pop.	1,209
Staff	336
History/Description	Opened in December 1991, Federal Correctional Institution and Federal Prison Camp Schuylkill occupy a 600-acre site. Federal Correctional Institution Schuylkill has four separate living units, each of which is made up of two wings. The buildings in the complex are separated from each other and flank a grassy area with trees. Each wing contains televisions and other recreational facilities, including pool tables and card tables. The cells have bunk beds and toilets; showers and interview rooms are also available. Because of overcrowding, bunk beds are often placed in the association areas (Her Majesty's Prison Service, 1993, pp. 161–162)
Education	Education includes GED, ESL, adult continuing education, and correspondence classes.
Work	Unicor metals factory.
Food/Commissary	All prisoners use a central dining room for meals. The staff use a small dining room nearby and eat the same food as the prisoners. The food is reported to be excellent (Her Majesty's Prison Service, 1993, p. 162).
Medical	The prison has no inpatient facility and no nursing staff, so all nonroutine care is referred either to the medical facility at Federal Institution Rochester, or to local community services. The health care center has an emergency room and an X-ray facility. All new admissions have their medical history taken and undergo various physical examinations, including an audiogram and a dental examination, within 14 days of arrival. Checkups are provided, upon request, every 2 years or every year for inmates over 50 and just before release. Medications are distributed three times a day (Her Majesty's Prison Service, 1993, p. 83).
Counseling	In addition to standard counseling services there is also a victim impact program in which prisoners learn about the impact of crime from victims.
Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Gym/Sports	The gym is well equipped with a weights room attached, but it is not big enough for the population it serves. The prison also has a sports field with fixed tables and chairs, an additional, covered, weights area, a 300-meter running track, handball courts, basketball courts, a baseball diamond, and a soccer field (Her Majesty's Prison Service, 1993, p. 162).
Visits	Visiting hours from 8:30 a.m. to 3:00 p.m. Tuesday through Sunday. The visiting room is open with comfortable modern furniture. All prisoners are strip searched after visits, and all visitors must pass themselves and their belongings through an X-ray machine and portal (Her Majesty's Prison Service, 1993, pp. 161-163).
Discipline	For those prisoners who are punished for more severe offenses, the prison has a segregation unit with 94 cells in two wings. One wing holds prisoners under punishment; the other has prisoners in protective custody. The wing has a small secure exercise area that is divided into cages. The normal segregation cells house two inmates at a time. There is a "strap-down cell" for "difficult prisoners" that has a steel bed bolted to the floor upon which prisoners may be restrained (Her Majesty's Prison Service, 1993, p. 163).
Religion	One full-time chaplain and a contract rabbi and imam.

FEDERAL PRISON CAMP SCHUYLKILL

Address	Federal Prison Camp Schuylkill P.O. Box 700 Minersville, PA 17954
Location	Adjacent to Federal Correctional Institution Schuykill.
Contact Numbers	Tel: 717-544-7100 Fax: 717-544-7225
Judicial District	Eastern Pennsylvania
Security Level	Minimum
Male/Female	Male
Capacity	282
Current Pop.	296
History/Description	Opened in 1991, Federal Prison Camp Schuylkill houses prisoners in dormitories in bunk beds. The routine for the prisoners is very similar to that in Federal Correctional Institution Schuylkill.
Education	Education includes GED, ESL, adult continuing education, and correspondence classes.
Work	Work includes prison garden, Unicor.
Food/Commissary	Dining hours from 6:00 to 7:00 a.m., from 10:45 a.m. to 11:45 a.m., and after the 4:15 p.m. count clears during the week. On the weekend there is a coffee hour from 7:00 a.m. to 8:00 a.m. and brunch from 10:00 a.m. to 11:00 a.m., with dinner at the same time as during the week.
Recreation	Recreation includes indoor and outdoor activities such as crafts, weight room, music room, table games, softball field, basketball courts, a weight pile, handball/racquetball courts, a volleyball court, and several horseshoe pits. There is also a nature trail built by prisoners. Monthly schedules of activities and programs organized by the Recreation Department will be distributed.
Medical	Sick call is from 6:15 a.m. to 6:45 a.m. Monday, Tuesday, Thursday, and Friday.
Counseling	Psychology Services is open weekdays from 7:30 a.m. to 4:00 p.m. Priority services include court-ordered evaluations, intake screenings, treatment of major mental disorders, crisis intervention, and suicide prevention. Other services may include adjustment counseling, individual and group psychotherapy, prerelease counseling, drug and alcohol education and counseling, and other self-help, support, and educational programs.
Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Visits	Visiting hours from 8:30 a.m. to 3:30 p.m. Saturday, Sunday, and all federal holidays. Visits are limited to five per month.
Religion	There is no chapel.

FEDERAL CORRECTIONAL INSTITUTION SEAGOVILLE

Address	Federal Correctional Institution Seagoville 2113 North Highway 175 Seagoville, TX 75159
Location	Eleven miles southeast of Dallas, off Highway 175 (Hawn Freeway). The area is served by the Dallas-Fort Worth International Airport, Amtrak in Dallas and Fort Worth, and commercial bus lines.
Contact Numbers	Tel: 972-287-2911 Fax: 972-287-5466
Judicial District	Northern Texas
Security Level	Low/administrative
Male/Female	Male
Capacity	866
Current Pop.	1,101
Staff	292

History/Description	Originally opened in August 1940 as a prison for women, it closed in June 1942, reopening 3 years later as a prison for men in June 1945.
Admission and Orientation	One week. A&O pack very detailed.
Education	According to its A&O pack, Federal Correctional Institution Seagoville stresses education. It offers classes in GED, ESL, adult continuing education, including conversational Spanish, income tax preparation, office skills, and music theory, as well as a certificate course in Microsoft Office Proficiency. There is also a Parenting Program. Vocational training is offered in a range of areas, including auto mechanics, small appliance repair, and horticulture. The law library is open from Monday through Saturday at various hours. The leisure library is open similar hours and holds books in Spanish and English.
Work	Mechanical Services, Food Service, Business Office; Unicor textile factory, business office, and quality control.
Food/Commissary	Meals are served in the dining room from 6:00 a.m. to 7:00 a.m., from 11:00 a.m. to 10 minutes after last call, and following the clearance of the 4:00 p.m. count. On the weekends they are served from 7:00 a.m. to 8:00 a.m., following the 10:00 a.m. count, and following the 4:00 p.m. count. The commissary (also called the Trust Fund Sales Unit) is located in Building 4. Shopping hours are Monday through Friday after the 4:00 p.m. count until 8:30 p.m. Prisoners may shop only once per day.
Recreation	Inmate wellness program, indoor and outdoor sporting recreation, hobby crafts, music room, auditorium for musical events and movies, and the Pros and Cons Toastmasters club.
Medical	Sick call, Monday, Tuesday, Thursday, and Friday from 6:00 a.m. to 6:30 a.m. Emergency dental care can be signed up for at these same times. Medication is distributed three times each day. Hours will be posted. Over-the-counter medication, including Tylenol, aspirin, and Sudafed, may be bought at the commissary.
Counseling	Psychology Department is located in Building 9.
Drug Treatment	Residential Drug Abuse Treatment Program, nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous. Programs offered in Spanish and English.
Gym	An indoor weight-lifting/fitness equipment area.
Visits	Visiting hours are Monday, Thursday, and Friday from 2:00 p.m. to 8:30 p.m. and on the weekends and federal holidays from 8:00 a.m. to 3:00 p.m. Prisoners receive 5 visiting points per month, with a weekday visit costing 1 point and a weekend visit equivalent to 2 points. Prisoners may be visited by a maximum of four adults and four children at any one visit.
Religion	Three staff chaplains, as well as several part-time chaplains and over 100 citizen volunteers.
Release Preparation	A course is offered by the Education Department for prisoners within 24 months of release.
Other	Mail is delivered Monday through Friday after the 4:00 p.m. count at the unit officer's station. Postage stamps cannot be received through the mail.

FEDERAL DETENTION CENTER SEATAC

Address	Federal Detention Center SeaTac P.O. Box 13901 Seattle, WA 98198
Location	Twelve miles south of Seattle and 16 miles north of Tacoma, 1 mile west of Interstate 5 (200th Street exit). SeaTac International Airport is 1 mile from the facility. Amtrak and commercial bus lines also serve the area. The street address is 2425 South 200th Street.
Contact Numbers	Tel: 206-870-5700 Fax: 206-870-5717
Judicial District	Western Washington
Security Level	Administrative
Male/Female	Male and female

Capacity	677
Current Pop.	592
Staff	144
History/Description	Opened in September 1997. Sentenced inmates may be eligible for escorted trips, furloughs, or halfway house (community corrections) placements. The institution also holds pretrial, holdover, and INS inmates. Housing is in two-person cells and dormitories.
Admission and Orientation	On arrival, prisoners will be issued a "standard bed roll" consisting of bedding and towels. Once you are assigned to a unit, you will be given clothes. You will estimate your size for these clothes during R&D. Prisoners will also be issued an identification card during admission that they must carry with them at all times, except to and from the showers. Prisoners designated to serve their sentence at SeaTac will be classified within 28 days of arrival. Those who are transfers, parole violators, mandatory release violators, or supervised release violators will be classified within 14 days. Program reviews will be held every 90 to 180 days thereafter, depending on the amount of time remaining to serve.
Education	Education includes GED, ESL, adult continuing education, and correspondence classes. There is a law library with a photocopy machine and typewriters.
Work	Building, maintenance, Food Service. Pay rates from $0.12 an hour to $0.40 an hour.
Food/Commissary	Meals are delivered to each housing unit from a central kitchen. They are served during the week at 6:00 a.m., 11:00 a.m. and after the 4:00 p.m. count. On the weekends and holidays, breakfast is served at 7:00 a.m. Prisoners must submit a request for items from the commissary.
Recreation	Limited indoor and outdoor facilities available.
Medical	Medical and dental sick-call appointments are given on Monday, Tuesday, Thursday, and Friday in the medical examination room in each housing unit. Prisoners must submit a written request the evening before one of the sick call days. Emergencies should be seen immediately. Medication is distributed in pill line twice a day, after the 5:00 a.m. count and then again at 7:00 p.m. There is also a morning and afternoon insulin line.
Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Visits	Visiting hours Monday, Thursday, and Friday, 1:00 p.m. to 8:00 p.m.; Saturday and Sunday, 8:00 a.m. to 3:00 p.m.
Religion	Central chapel for whole population. Weekly Native American prayer circle in one of the housing units when chaplain is available.
Release Program	Job hunting, interview techniques, stress management, and other coping skills.
Other	Smoking is allowed only in outdoor recreation area.

FEDERAL PRISON CAMP SEYMOUR JOHNSON

Address	Federal Prison Camp Seymour Johnson Caller Box 8004 Goldsboro, NC 27533-8004
Location	Near Goldsboro, North Carolina, on Seymour Johnson Air Force Base. Off Interstate Highways 40 and 95 and U.S. 70. The area is served by the Raleigh/Durham International Airport and the Kinston Airport, Amtrak in Raleigh and Durham, and commercial bus lines.
Contact Numbers	Tel: 919-735-9711 Fax: 919-735-0169
Judicial District	Eastern North Carolina
Security Level	Minimum
Male/Female	Male
Capacity	576
Current Pop.	530
Staff	101

History/Description	Opened March 1989; housing is dormitory style with two-person cubicles. Prisoners serve as labor force for adjacent air base.
Education	Education includes GED, ESL, adult continuing education, and correspondence classes. An associate's degree in business is offered through Wayne Community College, and there are vocational and apprenticeship programs.
Food/Commissary	Commissary is open on weekday nights. Prisoners may shop once per week.
Recreation	Recreation includes a small weights area, outdoor sports, music, and crafts.
Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Visits	Visiting hours are from 8:00 a.m. to 3:00 p.m. on weekends and federal holidays. There is no restriction on the number of visits allowed. There is a separate children's area.

History/Description	The prison camp opened in 1989. Housing is dormitory style with four-person cubicles. The institution is overseen by a camp administrator who reports to the warden of the total institution.
Admission and Orientation	Newly arrived prisoners will be assigned to Unit 5(E) or Unit 6(F).
Education	Education includes GED, ESL, adult continuing education, and correspondence classes. There are also vocational training programs available, including horticulture and HVAC. Apprenticeships include dental assistant, HVAC, boiler operator, and electrical.
Work	Mechanical Services, Food Service, Business Office, and Unicor packing, shipping, warehousing, and quality control. Unicor offers postsecondary scholarships to selected inmates.
Food/Commissary	Meals are served in the dining hall at various times depending on work assignment. Commissary open 4:00 p.m. to 7:30 p.m. and sales are limited to one sale per week.
Recreation	Various indoor and outdoor activities. Two weight-lifting/fitness areas in the camp recreation area.
Medical	Sick call from 6:15 a.m. to 6:30 p.m. on Monday, Tuesday, Thursday, and Friday. Emergency care available at all times. Medicine dispensed at various times throughout the day. Hours are posted. Dental sick call from 7:15 a.m. to 7:30 a.m. on Monday, Wednesday, and Friday.
Drug Treatment	Residential Drug Abuse Treatment Program, nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Visits	Visiting hours 5:00 p.m. to 8:00 p.m. Monday, Thursday, and Friday and 8:30 a.m. to 3:00 p.m. on weekends and federal holidays. Visits are distributed according to a points system. Inmates are allocated 40 points per month, and one weekday hour visit costs 1 point, while one weekend hour visit costs 2 points. No points are charged on visits occurring New Year's Day, July 4, Thanksgiving, and Christmas.
Religion	Three chaplains who are also available for counseling services.
Other	It is against prison rules to feed birds on the compound. Unit televisions may remain on 24 hours a day.

MEDICAL CENTER FOR FEDERAL PRISONERS SPRINGFIELD

Address	Medical Center for Federal Prisoners Springfield P.O. Box 4000 1900 West Sunshine Springfield, MO 65801-4000
Location	In Springfield, at the corner of Sunshine Street and the Kansas Expressway. Off Interstate 44. The area is served by the Springfield Municipal Airport and by commercial bus lines.
Contact Numbers	Tel: 417-862-7041 Fax: 417-837-1711

Judicial District	Western Missouri
Security Level	Administrative
Male/Female	Male
Capacity	912
Current Pop.	1,145
Staff	672
History/Description	Opened in September 1933, this is the major medical, surgical and psychiatric referral center for the Bureau of Prisons and contains a 20-bed mental health unit for Mariel detainees. It was originally called the Hospital for Defective Delinquents. A range of different housing is available, from one- and two-man rooms to open dormitories.
Education	Education includes GED, ESL, adult continuing education, and correspondence classes.
Food/Commissary	Prisoners may shop once per week. Hours will be posted on unit.
Medical	Springfield houses the bureau's first prison hospice. The hospice team includes a chaplain and two nurse managers. There are two 20-bed wards, one for patients with cancer and the other for AIDS patients. The hospice is staffed with the assistance of inmate volunteers who receive 30 hours of initial training in counseling and supportive services in addition to bimonthly training sessions.
Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
HIV/AIDS	Inmates in the terminal stages of AIDS-related illnesses may be housed in the institution's hospice (see above).
Gym	Yes, with weights.
Visits	Visiting hours are from 8:15 a.m. to 3:00 p.m. from Thursday through Monday. Prisoners are given 8 visiting points per month. Weekend visits are worth 2 points, and weekday visits are worth 1 point.
Religion	Three full-time chaplains.

FEDERAL CORRECTIONAL INSTITUTION TAFT

Address	Federal Correctional Institution Taft 1500 Cadet Road Taft, CA 93268
Contact Numbers	Tel: 661-763-2510 Fax: 661-765-3002
Security Level	Low
Male/Female	Male
Capacity	1,767
Current Pop.	1,880
Staff	390
History/Description	First fully privatized federal facility. Opened in December 1997 and run by Wackenhut Corrections Corporation (WCC). According to WCC's description of the facility, both the Federal Correctional Institution and the Federal Prison Camp are made up of cubicles in open dormitories. The Federal Correctional Institution covers 75% of total program area (approx. 398,000 square feet) and is enclosed by a double security fence. Inmate housing is provided in three two-story buildings, each of which has two wings containing two units. Units are governed by unit manager, case managers, and counselors. Each wing has an officers' station overlooking 64 inmate cubicles. Adjacent to the officers' station are multipurpose spaces, TV rooms, toilets, showers, and laundry rooms.
Education	Education includes GED, ESL, adult continuing education, and correspondence classes. There are also various vocational training classes. The leisure library has a collection of Spanish books.
Food/Commissary	Meals are served in the dining room.

Work	There is a Unicor furniture factory and a Unicor ink cartridge factory.
Recreation	Recreation includes sporting activities and arts and crafts.
Medical	Sick call 6:00 a.m. to 7:00 a.m. 7 days a week. Mental health screening; full medical, dental, pharmaceutical, radiology, and mental health services.
Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Visits	Visiting hours 8:00 a.m. to 3:00 p.m. Thursday, Friday, weekends, and federal holidays. Visits on Saturday end at 9:00 p.m. A total of six visitors (adults and children) may be present at any one time.
Religion	Catholic priest, Protestant minister, and volunteers from other faith groups.

FEDERAL PRISON CAMP TAFT

Address	Federal Prison Camp Taft 1500 Cadet Road Taft, CA 93268
Contact Numbers	Tel: 661-763-2510 Fax: 661-765-3002
Security Level	Minimum
Male/Female	Male
Capacity	512
Current Pop.	460
History/Description	First fully privatized federal facility. It opened in December 1997 and is run by Wackenhut Corrections Corporation (WCC). According to WCC's description of the facility, both the Federal Correctional Institution and the Federal Prison Camp are made up of cubicles in open dormitories. The Federal Prison Camp covers approximately 80,000 square feet. It offers the same inmate services and programs as the Federal Correctional Institution. It has one two-story housing unit with two wings. Each wing holds two units of open dormitories with low partitions, holding 64 inmates per wing, per floor. The counselor's offices, TV rooms, multipurpose rooms, toilets, shower, and laundry are all shared and grouped in the central part of the building.
Work	Work includes a Unicor warehouse, Food Services, and grounds maintenance.
Medical	As above.
Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Visits	Visiting hours 8:30 a.m. to 3:30 p.m. Friday, weekends, and federal holidays. Each month prisoners are given 20 visiting points. Friday visits cost 2 points, Saturday visits cost 6 points, Sunday visits 4 points. Federal holiday visits that fall on any other day will not be deducted from the inmate's monthly total. Up to six visitors may be present at any one time.
Religion	As above.

FEDERAL CORRECTIONAL INSTITUTION TALLADEGA

Address	Federal Correctional Institution Talladega 565 East Renfroe Road Talladega, AL 35160
Location	In the foothills of northern Alabama, 50 miles east of Birmingham and 100 miles west of Atlanta, Georgia. Off Interstate 20 on Renfroe Road.
Contact Numbers	Tel: 205-362-0410 Fax: 205-315-4495

Judicial District	Northern Alabama
Security Level	Medium
Male/Female	Male
Capacity	644
Current Pop.	1090
Staff	343
History/Description	Opened in November 1979. Five different units, Gamma, Delta, Sigma, Beta, and Omega, with housing units. It contains a high-security unit for Mariel detainees within 60 days of repatriation to Cuba and a secure housing unit for Mariel detainees deemed to be disruptive elsewhere.
Admission and Orientation	One-week program, during which incoming inmates will be housed in Omega Unit. A dental exam will be part of the physical examination of all new arrivals.
Education	Education includes GED, ESL, adult continuing education, parenting, and correspondence classes. In addition, there are vocational training programs in cabinetmaking, carpentry, welding, masonry, and drafting. There are also apprenticeship programs for bricklayer, carpenter, cook, architectural drafter, wood machinist, painter, plumber, sheet metal worker, and welding technician. Recent adult continuing education courses have included typing and word processing, accounting, creative writing, and Spanish.
Work	Facility Department offers a range of employment, including automotive mechanics shop, carpenter shop, communications shop, construction shop, electrical shop, landscaping shop, construction 2 shop, plumbing shop, heating, refrigeration and air conditioning shop, utilities shop, and welding shop. There is also a Unicor furniture factory. Other avenues of employment used to support the industrial operation include the business office, quality assurance, and warehousing. There is a long waiting list for Unicor jobs.
Food/Commissary	Food served in dining room, cafeteria style. During the week, meals will be held from 6:00 a.m. to 7:00 a.m., from 11:00 a.m. to 12:00 p.m., and from 4:40 p.m. to 5:30 p.m. On the weekend and on holidays, there will be a coffee hour from 6:30 a.m. to 7:00 a.m., followed by brunch from 11:30 a.m. to 12:00 p.m. and dinner from 4:40 p.m. to 5:30 p.m. The commissary sales unit or store is located next to the laundry. It sells a variety of food items, beverages, tobacco products, and toiletry items. Each prisoner is allowed to shop once per week.
Recreation	Recreation includes indoor and outdoor activities. Cardiovascular training is available.
Religion	A variety of faith groups are represented in the chapel program, including Protestant, Catholic, Jewish, Muslim, Nation of Islam, Moorish Science Temple, Jehovah's Witnesses, and Native American. Bible studies are conducted by Prison Fellowship, Jehovah's Witnesses, and Charismatic volunteers.
Medical	Medical sick call 6:00 a.m. to 7:00 a.m. Monday through Friday. Dental sick call for those experiencing pain is from 6:30 a.m. to 7:00 a.m. at the Health Services Unit (HSU). Emergency care is available at all times. Pill line daily from 6:00 a.m. to 7:00 a.m., from 12:00 p.m. to 12:30 p.m., and from 5:00 p.m. to 5:30 p.m., except on weekends and holidays, when the morning line will occur from 8:00 a.m. to 8:30 a.m.
Counseling	Two psychologists, of whom one is assigned to Gamma and Delta Units and the other to Sigma and Beta. Both may be reached by inmate request forms in the listed units or by staff phone calls to the assigned units. Suicide prevention program, parenting program, stop smoking program, and stress management. There is also a victim impact program in which prisoners learn about the impact of crime from victims.
Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
HIV/AIDS	New arrivals will be randomly tested for HIV; all those about to be released will be tested as well.
Visits	Visiting hours 9:00 a.m. to 3:00 p.m. Sunday, Monday, Thursday, Friday, Saturday, and federal holidays. All children under 18 must be accompanied by an adult. Visiting room is nonsmoking. There is no separate children's area.
Other	Hair may be worn in any style and length an individual desires, but artificial hair pieces (wigs, toupees) are not allowed. Mail is distributed during the week after 4:10 p.m. count.

FEDERAL PRISON CAMP TALLADEGA

Address	Federal Prison Camp Talladega 565 East Renfroe Road Talladega, AL 35160
Location	Adjacent to Federal Correctional Institution Talladega.
Contact Numbers	Tel: 205-362-0410 Fax: 205-315-4495
Judicial District	Northern Alabama
Security Level	Minimum
Male/Female	Male
Capacity	296
Current Pop.	324
History/Description	Opened in 1989; housing is dormitory-style in two-person cubicles.
Education	Education includes GED, ESL, adult continuing education, and correspondence classes.
Work	There is a Unicor warehouse.
Food/Commissary	Commissary is open in the middle of the day from Tuesday through Thursday. Prisoners may shop once per week.
Recreation	Recreation includes exercise bikes, music room, and games.
Drug Treatment	Residential Drug Abuse Treatment Program, nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Visits	Visiting hours are from 5:00 p.m. to 9:00 p.m. on Friday and from 8:30 a.m. to 3:30 p.m. on weekends and federal holidays. There is no children's room.

FEDERAL CORRECTIONAL INSTITUTION TALLAHASSEE

Address	Federal Correctional Institution Tallahassee 501 Capital Circle, N.E. Tallahassee, FL 32301-3572
Location	Three miles east of downtown Tallahassee, on Highway 319 at its intersection with Park Avenue. Tallahassee is served by Tallahassee Regional Airport, Amtrak, and commercial bus lines.
Contact Numbers	Tel: 904-878-2173 Fax: 904-216-1299
Judicial District	Northern Florida
Security Level	Low: administrative
Male/Female	Female: Male
Capacity	652
Current Pop.	1,383
Staff	339
History/Description	Opened in November 1938; housing is in open dormitories.
Education	Education includes GED, ESL, adult continuing education, parenting, and correspondence classes. In addition, there are 15 apprenticeship programs, all of which lead to outside accreditation or certification: baker, butcher, cook, dental assistant, dental technician, electrician, horticulturalist, landscape management technician, landscape technician supervisor, metal fabricator, painter, plumber, quality assurance technician, refrigeration mechanic, and stationary engineer. There are also seven vocational training programs, all of which lead to outside accreditation or certification: barbering/cosmetology, business education, electronics, horticulture, masonry, small engine repair, and woodworking. The 14-week parenting program for female offenders is designed to support positive relationships between inmates and their spouses and children during and after incarceration. Topics

	covered include distance parenting, communication with children, child development, family literacy, and substance abuse. The program includes a visiting room component.
Work	There is a Unicor furniture factory.
Counseling	Program for female victims of domestic violence and physical and sexual assault.
Drug Treatment	One of five national residential drug treatment programs for female offenders. The program is based on cognitive-behavior therapy. The participants are taught that they are responsible for their own behavior and the choices they make. They learn skills to improve their ability to manage their lives and to prevent a relapse. There is also a nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Visits	Visiting hours for men are from 8:15 a.m. to 3:00 p.m. on Wednesday, Thursday, Friday, weekends, and federal holidays. For women, visiting hours are from 4:30 p.m. to 8:30 p.m. on Fridays and from 8:30 a.m. to 3:15 p.m. on weekends and federal holidays. There are special activities for mothers enrolled in the parenting program.

FEDERAL CORRECTIONAL INSTITUTION TERMINAL ISLAND

Address	Federal Correctional Institution Terminal Island 1299 Seaside Avenue Terminal Island, CA 90731
Location	On a pier in Los Angeles Harbor, between San Pedro and Long Beach. Off Harbor Parkway to San Pedro (cross the Vincent Thomas Bridge and take Seaside Avenue to the main gate). The area is served by Los Angeles International Airport and Long Beach Airport, Amtrak, and commercial bus lines.
Contact Numbers	Tel: 310-831-8961 Fax: 310-732-5335
Judicial District	Central California
Security Level	Medium
Male/Female	Male
Capacity	452
Current Pop.	1,037
Staff	318
History/Description	Originally opened in June 1938, it closed in January 1942 and was reopened in May 1955. Housing is in open dormitories, with some single- or two-person rooms available.
Education	Education includes GED, ESL, adult continuing education, and correspondence classes. In addition, there are a number of vocational training courses such as carpentry, plumbing, electrical, refrigeration, and heating/ventilation and air conditioning. Thirty-day courses are offered in contractor's licensing, home inspections, and auto air conditioning. Three-year apprenticeships are also offered.
Work	There is a Unicor metals factory.
Recreation	Recreation includes indoor and outdoor activities, including individualized arts and crafts programs and intramural team sports such as basketball, baseball, and volleyball. Physical fitness and weight reduction programs are also offered. Some musical instruments are available in the recreation area. Harmonicas may be purchased through the Recreation Department. Instrument playing is never allowed in the units.
Medical	Sick call is Monday, Wednesday, Thursday, and Friday.
Counseling	Psychology Services offers screening, crisis intervention, suicide prevention, drug abuse treatment, and individual and group psychotherapy.
Drug Treatment	Residential Drug Abuse Treatment Program, nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Visits	Visiting hours 12:00 p.m. to 7:30 p.m. Monday, Thursday, and Friday and 8:00 a.m. to 3:00 p.m. Saturday, Sunday, and holidays. Each inmate will have 40 points each month for visitation. On weekends and holidays, 1 hour is equivalent to 2 points. On Monday, Thursday, and Friday, 1 hour of visitation is equivalent to 1 point.
Religion	Staff chaplains as well as contract and volunteer representatives of many faiths are available. Spiritual and family counseling is also available through the chaplains.
Release Preparation	Standard prerelease programming.

FEDERAL PRISON CAMP TERRE HAUTE

Address	Federal Prison Camp Terre Haute Highway 63 South Terre Haute, IN 47808

U.S. PENITENTIARY TERRE HAUTE

Address	U.S. Penitentiary Terre Haute Highway 63 South Terre Haute, IN 47808
Location	Two miles south of the city of Terre Haute, which is 70 miles west of Indianapolis on Interstate 70. The institution is located on Highway 63. Terre Haute is served by Hulman Regional Airport and commercial bus lines.
Contact Numbers	Tel: 812-238-1531 Fax: 812-238-9873
Judicial District	Southern Indiana
Security Level	High
Male/Female	Male
Capacity	741
Current Pop.	1,303
Staff	510
History/Description	Opened October 1940; facility has four housing units. Housing is in two-person cells or dormitory style in two-man cubicles. Since 1994, it has held federal prisoners on death row. It also contains a reception and classification unit for Mariel detainees as they enter bureau custody.
Admission and Orientation	One day.
Education	Education includes GED, ESL, adult continuing education, and correspondence classes. In addition, specialized training programs are offered through Indiana Vocational Technical College in barber training.
Work	Jobs include Food Service, facilities, law library clerks, janitors, and a Unicor textile factory that makes towels and washcloths. There is also a Unicor mailbag repair factory.
Medical	Sick call is at 6:00 a.m. on Monday, Tuesday, Thursday, and Friday.
Recreation	Recreation includes weights, hobby crafts, indoor and outdoor activities, sports, physical fitness, and weight reduction programs. Two movies a week are shown on Fridays and Saturdays in the housing units. There is a quarter-mile paved track and a half-mile dirt track.

Drug Treatment	A 500-hour comprehensive residential drug treatment program, a nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.
Gym	Yes.
Visits	Visiting hours are from 8:00 a.m. to 3:00 p.m. on Thursday, Friday, and Monday. Prisoners may have no more than seven visits per month.
Religion	Three full-time chaplains, as well as contract and volunteer representatives of other faiths and a Native American sweat lodge.

FEDERAL CORRECTIONAL INSTITUTION TEXARKANA

Address	Federal Correctional Institution Texarkana P.O. Box 9500 Texarkana, TX 75505
Location	In northeast Texas near the Arkansas border, 70 miles north of Shreveport, Louisiana, and 175 miles east of Dallas. Off Route 59 south, on Leopard Drive.
Contact Numbers	Tel: 903-838-4587 Fax: 903-223-4424
Judicial District	Eastern Texas
Security Level	Low
Male/Female	Male
Capacity	749
Current Pop.	1,269
Staff	316
History/Description	Opened in August 1940; housing varies from two-person rooms to open dormitories.
Admission and Orientation	During admission and orientation, prisoners will be seen in the dental clinic for a full dental exam. If follow-up appointments are needed, they will be made at that time. Prisoners will also be given full physical and psychological screening at this time.
Education	Education includes GED, ESL, adult continuing education, and correspondence classes. The adult continuing education curriculum is established by results of surveys completed by the inmate population. In addition, there are vocational training courses that include HVAC, auto mechanics, and welding, and apprenticeships that include cooking, dental assistance, and plumbing.
Food/Commissary	Meals are served in the dining hall. During the Christmas/New Year holiday season, the spending limit at the commissary will increase by $50.
Work	Unicor furniture factory.
Recreation	Musical instruments (acoustic guitars, accordions, and percussion instruments) are available for use in the leisure center. Hobby craft programs in wood, leather, beads, knitting, and art are also available. The following programs are available; Walk-Run Club, Bike Club, Stair Master Club, calisthenics, yoga, and Health Promotion-Disease Prevention Program. These programs are open on a continued basis. Beginners' and intermediate acoustic guitar and art classes are available on a 12-week basis. The leisure center opens every day at 1:00 p.m. except on Thursdays, when it opens at 5:00 p.m.
Medical	Medical sick call from 6:00 a.m. to 6:30 a.m. Monday, Tuesday, Thursday, and Friday. Pill lines from 7:00 a.m. to 7:30 a.m., from 11:45 a.m. to 12:15 p.m., from 3:30 p.m. to 3:45 p.m., and from 8:30 p.m. to 8:45 p.m. Eye exams and glasses are available. Glasses usually take from 4 to 6 weeks to arrive. Emergency medical care is always available. Inmates confined in SHU will be offered sick call once a day by a health care provider. Dental services will be limited to dental emergencies only. Pill lines will be conducted up to four times a day according to a schedule that will be posted.
Drug Treatment	Nonresidential drug program, drug education, and a range of volunteer groups, including Narcotics Anonymous and Alcoholics Anonymous.

HIV/AIDS	As part of the A&O process, prisoners will receive detailed instructions about HIV and AIDS, how it is contracted, and how it is treated. The A&O pack contains more details. Prisoners who are tested will be counseled before the test and when they receive the results. If a prisoner is HIV positive, his condition will be monitored. He will remain in regular housing and work assignments unless his condition warrants a duty restriction.
Visits	Visiting hours are Friday from 5:00 p.m. to 8:00 p.m. and Saturday, Sunday, and holidays from 8:00 a.m. to 3:00 p.m.
Religion	Protestant and Catholic services are available as well as contract and volunteer representatives of other faiths.
