“saved” a city naturally qualified for special honors akin to those paid to divinity. An early and successful candidate was the Spartan commander Lysander, whose deeds secured for him this type of apotheosis even during his lifetime. But Alexander decisively outshone heroes of such caliber since his deeds encompassed not only the Greek world but much else as well. Quite apart, therefore, from his experience at Siwa, which gave him an Egyptian passport to divinity, he qualified splendidly according to the criterion of Greek hero worship. When his cult was established in Egypt, followed by that of the Ptolemies, several of the new royal divinities were inevitably ill qualified to attract real worship. They might be said to have had divinity thrust upon them automatically.

Behind the developments in Egypt stood the long-standing dogma of the god-human, and its influence in the Hellenistic world went beyond the particular instances of divine dynasty. This dogma became prominent in the New Kingdom (1551–1070 BCE) when the claim was made that the pharaoh had a mortal mother but a divine father. His procreation was explicitly, albeit tastefully, described as a visit by the god Amun to the queen. In so doing the god was said to take on the guise of the living pharaoh, so that what was ostensibly a natural process was given a supernatural interpretation.

A story told about Nectanebo, the last pharaonic king of Egypt, gives prominence to this doctrine. The Greek work called the *Alexander Romance* relates how Nectanebo, in spite of his vaunted magical power, was defeated by the Persians and fled to Pella in Macedonia after suitably changing his appearance. A prophecy from Memphis announced that he would return to Egypt as a young man who would overthrow his enemies and conquer the world (a reference, of course, to Alexander). Furthermore Alexander’s mother, Queen Olympias, is said to have welcomed Nectanebo in Macedonia because of his fame as a magician, and he at once fell in love with her. When the queen informed him that her husband, Philip, being then away at war, was said to be beguiled by another woman, Nectanebo confirmed the rumor and told her that a god would visit her in a dream and have intercourse with her and that from this union would come a son who would avenge her on Philip. The god was to be the Libyan Amun, with golden hair and ram’s horns. Olympias duly experienced the divine visit in a dream but then declared that she wanted not merely a dream but the real thing, whereupon Nectanebo impersonated the god and had intercourse with her himself. The son who was born of the union was naturally deemed to be Alexander, thus marked out as of divine origin. Although Alexander was said to have caused the death of Nectanebo, he was also said to have recognized him as his father and to have buried him with honor. The Greek writer of this story has told it with a sense of skeptical irony, yet it points to the fact that the people of the age were engrossed with the idea of the god-human and with the possibility that the divine could break into the sphere of human life through incarnation.

**MAGIC, MYTH, AND MIRACLE.** According to the Pauline saying, it was the Jews who demanded signs (that is, wonders or miracles) while the Greeks sought wisdom. In fact, it was not only the Jews who demanded miracles; the majority of the Greeks did also, and so did the majority of other peoples. From time immemorial religion had been mingled with magic, and the power to produce miraculous events was regarded as the mark of godhead acting either in a direct intervention or through chosen intermediaries.

In considering ancient magic, one must avoid any notion of conjuring tricks made possible by sleight of hand or by various illusionary processes. Some charlatans did resort to such stratagems, but the true medium of divine power did not approach this task thus. In the oldest myths of many nations, the creation of the world itself is the result of miraculous divine actions, and the teasing thought of what lay beyond the beginning of things often produced the image of one creator god, who was unbegotten and who had to initiate a process of creation without the help of a spouse. The early Greeks who followed the Orphic teaching believed that a cosmic egg was the source of everything. This idea might appear to derive from a natural symbol, but probably it came to the Greeks from Egypt, although the Egyptians had several other theories of creation. By the Hellenistic age some Greeks had become familiar with a similar doctrine that had spread from Iran.

Strangely enough, the Greeks did not regard their supreme god, Zeus, as a creator god. Yet their myths about him are replete with miracles, especially when his many dealings with mortal women are portrayed. For instance, having fallen in love with Io, a priestess at Argos, Zeus changed her into a heifer in order to hide her from his wife Hera. Metamorphosis became a frequent medium of miraculous intervention by gods. Early in the first century CE, the Roman poet Ovid devoted a whole cycle of poems to this theme, and in the next century it was the central motif of the *Metamorphoses* of Apuleius, an entertaining and often ribald novel that nevertheless conveys a deeply religious vision.

It tells the story of Lucius of Corinth, a Greek who was changed into a donkey through a mistake made in the employment of magic. After many strange adventures in asinine form, he is restored to human form by the goddess Isis at Cenchreae, the harbor of Corinth, during the spring ritual of the Ship of Isis. The last part of the novel movingly portrays his devotion to this new religion.

Unlike the immortal gods, however, heroes are not usually invested with miraculous powers, in spite of their divine associations. Herakles achieves his great deeds with might and main, and Prometheus, while he sometimes deploys a kind of low cunning, is a culture hero intent on benefiting humankind.

Removed from the category of gods and heroes was the human purveyor of magic and miracle. At his best he had to be a knowledgeable person. Astrology was often within his

professed prowess, and the secrets of astrology were not available to any ignoramus. His attitude to the gods seems to have varied. Respect and devout loyalty characterized him in the role of their chosen instrument. Yet sometimes the magician was expected to compel the gods to act in a certain way, and a number of magical spells are extant in which the gods are fiercely threatened unless they comply. But it was important to use the correct formula and to know the functions and mythology of the deity concerned. In the Hellenistic era magic was especially used for treating disease.

Here the doctrine of demons was often basic. Regarded as intermediate between human and god, demons (spirits) were divided into good and evil categories, with the possibility that good demons could be promoted to the rank of gods. Under the influence of Iran this system was sometimes developed into a thoroughgoing dualism connoting a hierarchy of both angels and devils but with devils headed by a supreme figure of evil. This view regarded all disease as the creation of evil demons. To conquer the disease therefore demanded the defeat and expulsion of the baleful spirit that had taken possession of the victim. A person's good demon, on the other hand, acted as his guardian angel. Yet the good demon was not normally regarded as potent enough to deal with an evil demon who had entered a person. A spiritual power from outside was needed, and the first task was one of diagnosis, which meant the correct identification of the occupying demon. The magician was expected to announce the name of the hostile power and to order its expulsion in the name of a superior and beneficent power; there are familiar examples in the New Testament. Treatment of disease in both the Jewish and the pagan world was often colored by these concepts.

This was not, however, the only technique practiced by magicians and priests. Instead of a frontal attack on the demon, a mollifying approach was sometimes adopted, as when insanity was treated by the playing of soft music. A multitude of medical charms have come down to the present, and they combine popular medicine with magical rites. Central to these, very often, is the power of the spoken word of the magician himself, whose incantations are recorded, for purposes of reading and imitation, in Greek and Egyptian magical papyri. Moreover, the direct interventions of the gods of healing, particularly of Asklepios, Isis, and Sarapis, are often lauded.

In origin Asklepios was perhaps a hero; later he was raised to the rank of a divinity and became the foremost god of healing in the Hellenistic world, with temples at Epidaurus in the Peloponnese and at Athens, Rome, and Pergamum; the most celebrated of his temples was on the island of Kos, northwest of Rhodes, the home of a famous Greek medical school. Numerous inscriptions set up in the temples of Asklepios record the gratitude of worshippers for the cures obtained, which were frequently regarded as completely miraculous. Yet some of the techniques used partook of current orthodox medical practice, for example, prescribed dietetic

rules, hot and cold baths, and various types of exercise. Special use was also made of incubation, whereby the worshiper slept in the temple of the god in order to experience a visitation from him through a dream or vision; such a visitation could bring both a cure for the disease (or advice as to how a cure might be obtained) and a revelation of a spiritual nature. The grateful records do not refer often to medical prescriptions or details of diet, so one may infer that psychological processes were involved: autosuggestion, experiences of spiritual illumination, and a sense of serenity deriving from a loving relationship. The term *faith healing* could well be applied to such felicitous procedures. What is particularly impressive, as well as eminently consonant with the temper of the Hellenistic age, is the fervent personal relationship with the god that ensued and the worshiper's sense of trust and devotion. There exists, fortunately, one intimate record of these experiences in the *Hieroi Logoi* (Sacred Stories) of Publius Aelius Aristides, a rhetorician of the second century CE.

Magic is customarily divided into the categories of "black" and "white," a division that can certainly be applied to the practice of it by the Greeks. In early prototypes, such as Circe and Medea, the two aspects appear. The Homeric Circe, semidivine in origin, is a powerful magician who uses potions and salves and also teaches Odysseus to summon the spirits of the dead. Medea was the outstanding enchantress of the myths used in Greek tragedy. She enabled the Argonauts to get the golden fleece by putting the dragon of Colchis to sleep; moreover, she possessed the evil eye and could make warriors invulnerable. Orpheus was another master of magic. Son of the muse Calliope, he rendered wild beasts spellbound with his music.

The two words most often used for "miracle" were *thau-ma* ("wonder") and *sēmeion* ("sign"). Obviously the two aspects could be embraced by either word. A miraculous event that astonishes people can be pleasing or punishing in intent and can be a sign, or omen, from the gods as an expression of their power but with a similar possible duality of purpose. Religion in ancient times had a bias toward beneficent magic, its prayers normally being expressions of devotion and appeals for help. But the appeal might concern the destruction of an enemy, which could involve harsh miraculous intervention by the gods. At the same time divine intervention could inflict moral retribution on individuals. Even the kindly Isis, whose magic was mainly beneficent, sometimes inflicted blindness on sinners.

When a beneficent miracle was enacted in public, it was regularly followed by an expression of blessing or felicitation, the macarism. Thus when Isis restores Lucius from asinine to human form in the *Metamorphoses* of Apuleius (also called *The Golden Ass* and written about 170 CE), the people who see the event declare:

This is the man who has been today restored to human shape through the splendid divinity of the all-powerful goddess. Happy is he, by heaven, and thrice blessed, to

have clearly deserved, by the purity of his former life and his pious loyalty, such a wondrous favor from heaven that he is, as it were, born again and has at once pledged himself to service in the sacred rites. (11.16)

Although the priests of Isis have taken part in the miracle, as for instance in providing the garland of roses to be eaten by the ass-man, it is the goddess herself who naturally receives the acclaim.

Sometimes, nevertheless, the human agents were not averse to claiming a measure of glory. Among the rhetorical practitioners of the second sophistic movement, which flourished in the first and second centuries CE, especially at Athens, Smyrna, and Ephesus, were a few literati who combined their philosophical and oratorical gifts, which they displayed as peripatetic lecturers, with a keen interest in magic. One was Apuleius, whose interest in magic is evident in much of his work, especially the *Metamorphoses*. Early in his career, however, he was accused of using magic to gain the hand of a rich widow in marriage. Although acquitted, thereafter he was reluctant to practice any form of the art.

In the context of magic and miracle the most remarkable person in the second sophistic movement was undoubtedly Apollonius of Tyana, who lived in the first century CE and came from Cappadocia in Asia Minor. An account of his life, written about 217 CE by another Sophist, Philostratus, presents him as a wandering scholar whose travels embraced Babylon, India, Egypt, and Ethiopia. In spite of his fame, his life was ascetic and disciplined and modeled on Pythagorean ideals. In addition, however, he frequently performed miracles that included acts of healing, magical disappearances, and even raising the dead, deeds that recall the claims made for Jesus of Nazareth.

The trustworthiness of Philostratus, however, has been much impugned. He cast his life of Apollonius in the form of a Greek travel romance, which suggests a fictitious element. Further, he wrote the book at the request of Julia Domna, the second wife of the emperor Septimius Severus, so that the possibility of anti-Christian animus and parody cannot be excluded. It is likely, then, that some more modest deeds by Apollonius provided a basis for the heightened account presented. The simple asceticism of his mode of life must also have impressed people, although Philostratus exaggerates even here, as when he says that Apollonius was “a more inspired student of wisdom than Pythagoras” (1.2).

One of the faculties ascribed to Apollonius was clairvoyance. At Ephesus in 96 CE, he is said to have had a miraculous vision of the emperor Domitian being murdered in distant Rome, a vision whose validity was afterward confirmed. The event is related by both Philostratus and the historian Dio Cassius, so that its truth need not be questioned. Even the less sophisticated type of magician was expected to indulge in processes of divination that would let him foretell the future. This did not usually imply powers of prophecy in a general sense but, rather, the ability to judge and foretell the outcome of a particular problem or issue. Methods of divination

included dreams, incubation (sleeping in a temple), auguries based on observation of birds, extispicy (especially the inspection of the entrails of animals killed specifically for this purpose), and the interpretation of weather signs, not to mention the whole area of astrology. Several of these methods had been developed originally in Babylon and Egypt.

Another important divinatory method was by oracle. In the Greek tradition the personal mouthpiece of the god of the oracle was the *prophētēs*, who might be a man or a woman. He or she was thought to be possessed by a divine power, a process that Plato compared to poetic inspiration. The medium became *entheos* (“full of the god”) and was in a state of *ekstasis* (“standing out of oneself”). In the oracles the power of prophecy was linked to special sites and to particular gods. Here a paradox emerges: The Greeks are famed for their rationalism and are regarded as the pioneers of intellectual enquiry and scientific thinking, yet their belief in oracles belies this approach. To some extent, the inconsistency can be explained through social division: The credulous majority trusted oracles while the educated elite evinced skepticism, the latter trend becoming more pronounced in the Hellenistic era, as Plutarch showed in the first and second centuries CE.

The paradox reveals itself to some degree in the figure of Apollo himself. He is the god of light and reason, yet he is the dominant god at Delphi, seat of the most celebrated oracle. In his *Birth of Tragedy*, the philosopher Nietzsche contrasts Apollo and Dionysos, the one representing the cool temper of rationalism, the other the passionate surrender to ecstasy. Certainly this antithesis is at the heart of Greek thinking.

One noted feature of Greek oracles was the ambiguity of their response. Statements that could be interpreted in more than one way were often forthcoming. Among the problems posed on behalf of states were political issues, and this meant that some oracles, particularly the one at Delphi, exerted considerable influence on the states’ policies. But the Hellenistic age saw the decline of Delphi and the rising prestige of other oracles, such as those of Asklepios at Epidaurus and Rome and that of Trophonios in central Greece.

Oracles in other countries were also much frequented, such as that of Zeus Amun in Libyan Siwa, where Alexander had a significant personal experience. Sometimes the questions raised were those of individuals, reflecting the private problems of simple people: A man is anxious to know whether his wife will give him a child, a woman wants to be cured of a disease, someone asks a commercial question about the best use of property, or a man wonders whether the child his wife is carrying is his own.

In his work *On the Obsolescence of Oracles*, Plutarch (c. 46–125 CE) discusses why so many oracles in Greece have ceased to function. Various answers are supplied in a discussion presented in the form of a dialogue. The population had decreased, says Plutarch, and there is some atrophy of belief.

There is also the theory, seemingly endorsed by Plutarch himself, that in the oracles it is not the gods but beneficent demons who are at work.

Another writer who provides a revealing picture of what goes on at an oracle is Pausanias, who flourished about 150 CE. In his *Description of Greece* (9.39) he gives many details of the procedures at the oracle of Trophonios in Lebadea (modern Levadhia) in Boeotia. Regarded as relating to the hero cult, Trophonios may have been in origin a fertility god with chthonic associations; his sanctuary was built over an alleged entrance to the underworld. The person who wished to consult the oracle had to first wait quietly in the house of Agathos Daimon (“gracious divine being”), where various rites of purification and dietetic regimen were observed. Then came whippings, various offerings and sacrifices, an anointing with oil, bathing in a river, a special drink, and a prayer, after which the inquirer was dressed in a linen tunic and pulled through a narrow hole into a subterranean cave where he was terrified by snakes but able to calm them with honey cakes. Only then did he see or hear Trophonios and become enlightened concerning his future, after which priests explained his experiences. It was said that the inquirer always came out of the cave of Trophonios dejected and pale. Psychologically the treatment was rigorous and searching; modern parallels might be sought in regimes using drugs such as methedrine with stringent concomitants. In ancient times the initiations in the mystery religions provide the nearest parallel.

**UNIVERSALISM AND SYNCRETISM.** Although Alexander the Great did not establish a world state in the world as then known, his empire transcended the national states and induced a sense of cohesion and interdependence. It was in this era that the word *kosmopolitēs* (“citizen of the world”) came into vogue. The idea had occasionally appeared before this. Democritus of Abdera had said in the fifth century BCE, “To the wise every land is open; the good soul looks on the whole world as his country.” More pointed and forceful expression was given to the idea by Diogenes the Cynic (c. 400–325 BCE), founder of the Cynic sect. He came from Sinope on the southern shore of the Black Sea but spent much of his life in Athens. He was given the nickname of “the Dog,” while his followers were similarly called “Dog Philosophers” or Cynics, from the snarling way in which they and their master condemned accepted conventions and defied civilized life, embracing instead a style of extreme poverty, simplicity, and hardship. Among the conventions that Diogenes rejected was attachment to the polis, or city-state. His rejection was practical in that he wandered from one country to another without accredited citizenship or a settled home (in Athens he lived in a tub). In principle he was a kind of anarchist. He called himself a “citizen of the world,” but this did not imply any politically defined belief. It was in effect a negative claim denying the value of the city-state.

It was the Stoics, however, who succeeded in giving to this approach a more positive and meaningful basis. Initially

they were intellectually indebted to the Cynics, but Zeno of Citium in Cyprus (335–263 BCE) went far beyond them and included a religious interpretation in his cosmopolitanism. According to Zeno the whole universe is governed by divine reason, and people should therefore live in conformity with it and with the order of nature established by it. A saying of Zeno that Plutarch has recorded presents the view that people should not live in a state of division according to separate cities and peoples and differing rules of justice; rather, all people should be viewed as belonging to one state and community and sharing one life and order. Plutarch wryly adds that in writing thus in his much-admired book *The State*, Zeno was presenting a dream or ideal of a well-ordered philosophical world.

It was indeed an age when several “utopias” were written. Plato had set an example with his *Republic*, but later writers in this genre deployed a good deal more fantasy, as when Iambulus in the early second century BCE wrote of his voyage to the southern seas, where he stayed for seven years in the seven “Islands of the Sun.” He painted an idyllic picture of the islands: Their climate is perfect and their land ever fruitful; the inhabitants are all supermen and there is no distinction between slave and free; property is shared and women and children are held in common; there is no strife of any kind, and their deities are the powers of nature—the sun, the heavenly bodies, and the sky.

There were a few practical ventures, too, in utopianism. Alexarchus, brother of King Cassander of Macedonia, after being given some land on the Athos peninsula, built a big city that he called Ouranopolis (“city of heaven”), where the citizens were called Ouranidai (“children of heaven”), and the coinage was adorned with figures of the sun, moon, and stars. Rather similar was the concept implemented briefly by Aristonicus of Pergamum (in 133–130 BCE), who led a popular rising against Rome. He planned a state called Heliopolis (“city of the sun”), whose inhabitants he called Heliopolitai (“citizens of the sun”); but after some initial successes he was captured and killed by the Romans. The Greek satirist Lucian, who wrote in the second century CE, provided a witty parody of literary utopias in *A True Story*, a travel romance full of irony and burlesque, of which Swift’s *Gulliver’s Travels* is a modern descendant.

In the context of Stoic philosophy the doctrine of world citizenship was elaborated somewhat by Chrysippus (c. 280–207 BCE), who noted that the word *polis* was given two senses: the city in which one lived; the citizens and the state machinery. Similarly, he argued, the universe is a *polis* that embraces gods and human, the former wielding sovereignty while the latter obey; yet gods and humans, for all their difference in status, have a means of contact and converse since they both use reason, which is “law by nature.” In the last phrase he is overturning a contrast present in previous political thought. A later Stoic, Panaetius (c. 185–109 BCE), was more pragmatic in his approach. A world state seemed no longer within practical reach, but he continued to believe in

the general unity of all humankind. At the same time he restored to the city-state a certain secondary role, admitting its usefulness in a realistic sense while denying its claim to decide in any final sense, matters of right and wrong; such decisions were to remain in the domain of reason and nature.

It thus appears that the idea of being a citizen of the world, vague and ill defined as it often was, came to include, under Stoic inspiration, the religious concept of a ruling divine reason. Although the reality of a world state was missing, the idea of humankind as one community had a powerful spiritual effect. Whereas it cannot be assumed that everyone, or even the majority, embraced the idea fully and fervently, there are many signs that thinking people accepted it. A sharp division had existed previously in attitudes toward other nations: Pride and prejudice were clearly present in the categories of Greeks versus barbarians or Jews versus gentiles. Certain nations enjoyed more power than others since, in the empire bequeathed by Alexander, Macedonians, Greeks, and Persians were in the ascendancy until Rome took control. In religious matters, nonetheless, the great variety of national traditions was often regarded as a common heritage of humanity. This is the attitude taken by Plutarch when he argues, doubtless under the influence of Stoicism, that the gods of Egypt should be preserved as "our common heritage" and not made the peculiar property of the Egyptians. In chapter 67 of his treatise *Isis and Osiris* he states his belief that the gods of the various nations, in spite of their differing names, are essentially the same and that behind the divergent forms there is a universal reason and providence:

Nor do we regard the gods as different among different peoples nor as barbarian and Greek and as southern and northern. But just as the sun, moon, heaven, earth and sea are common to all, though they are given various names by the varying peoples, so it is with the one reason [logos] which orders these things and the one providence which has charge of them, and the assistant powers which are assigned to everything: They are given different honours and modes of address among different peoples according to custom, and they use hallowed symbols, some of which are obscure and others clearer, directing the thought towards the divine, though not without danger. For some, erring completely, have slipped into superstition, and others, shunning it like a marsh, have unwittingly fallen in turn over the precipice of atheism.

At the same time, Plutarch is occasionally ready, within the same work, to accept the Iranian doctrine about the happy end of the world, when Areimanius (Angra Mainyu), the god of evil, will be utterly obliterated by the gods who follow Horomazes (Ahura Mazda), lord of light and good. The happy final state will reflect the blessed unity of humankind: "The earth shall be flat and level, and one way of life and one government shall arise of all men, who shall be happy and speak the same language" (chap. 47). Here the universalism envisaged is somewhat colorless and depressing; it accords with Iranian sources, one of which (*Bundahishn*

30.33) declares that when the universe is renewed, "this earth becomes an iceless, shapeless plain." According to this teaching, mountains were created by the Spirit of Evil and will disappear with his overthrow; *Isaiah* 40:4 reflects the same viewpoint when the prophet announces, as part of a serene vision, that "every mountain and hill shall be made low" and "every valley shall be exalted," thus achieving the uniform flatness of Plutarch's Iranian dictum.

The union and solidarity of the human race are also a part of the Iranian teaching, for the *Dēnkard* (9–18), a Pahlavi book of the ninth or tenth century CE that probably preserves earlier ideas, prophesies a final outcome in these terms: "At the final Rehabilitation the whole of mankind will be firmly and unchangeably linked in mutual love, and this will mean that the demons will utterly despair of ever being able to harm man again. . . . Then there will be a universal joy for the whole of creation for all eternity; and fear will be no more" (trans. R. C. Zaehner, in *The Dawn and Twilight of Zoroastrianism*, London, 1961, pp. 280f.)

Stoicism may well have influenced the idea of "one government of men," but Stoic sources apparently do not mention the use of one language as a requirement of the cosmopolis. The inherited traditions vary on the question of languages. In chapter 11 of *Genesis* the story of the tower of Babel points to an original state of bliss when all people spoke one common language, and a Babylonian legend sees the multiplication of tongues as a cause of discord. Egyptian tradition, on the other hand, praised Thoth as the creator of languages and viewed his act as contributing to the rich variety of creation in general, with its many races and kinds of living beings. The Christian tradition, as in *Revelation* 7:9 with its allusion to "a great multitude of all tribes and peoples and tongues," certainly envisages a universalism in which diversity is present in unity and humanity is a "community of communities."

Whatever the variety of the traditions so freely transmitted in the Hellenistic age, in religious matters there was usually a readiness to acknowledge and respect diverging ways of belief, worship, and ritual. A process that went even beyond this was that of syncretism, a term often hailed as the hallmark of the age. In origin a Greek word, it was not used by the Greeks with the exact meaning assigned to it today. It derives from the verb *sugkretizo*, which itself derives from *Kres*, "a Cretan"; it was used politically of two parties combining against a common enemy, while the noun *sugkretismos* was used of a federation or union of Cretan communities.

In English and other modern languages the noun denotes the attempted union or reconciliation of diverse or opposite tenets or practices, especially in the philosophy of religion. The usage is also often extended to include the equation or identification of diverse deities and the combination or fusion of their cults, the latter practice being a specifically Hellenistic development. Earlier experience was indeed fully conversant with the equation of deities.

In ancient religions the most thorough process of syncretism in this sense is found in the developed phase of Roman religion, when Roman deities were identified with Greek counterparts—Jupiter with Zeus, Juno with Hera, Venus with Aphrodite, Ceres with Demeter, Mars with Ares, and so on. In some cases this conscious process found no easy counterpart: Janus, the god of the door, was a distinctively Roman concept. In other cases a Greek deity was adopted without any attempted assimilation. Thus the Greek god Apollo was worshiped in Italy by the Etruscans and was afterward much revered by the Romans, becoming a favorite god of the emperor Augustus. A simple act of comparison could lead to syncretism of this kind: One community compares its own gods with those of another; when similar powers or functions are recognized, the comparison may lead to identification. Of course, this process is valid only with polytheistic communities since monotheism rejects comparisons. Nor does the process arise when there is no contact between communities and therefore no need to make comparisons, except in instances where a plurality of deities within communities of the same culture invites an equation of functions. This may lead to assimilation and the use of one divine name instead of several. Thus it appears that among the Greek communities there were several forms of the corn mother, but eventually the name of Demeter, best known, was applied to most of them. Even so, local varieties persisted in several of the cults. The “Black” Demeter of Phigalia, a town of Arcadia, for instance, was very different from the Demeter of Eleusis. In Phigalia the Black Demeter was said to be the consort of a horse-shaped Poseidon.

In the fifth century BCE the Greek historian Herodotus indulged freely in the kind of syncretism that meant identifying the gods of different nations. In his second book, which deals with Egypt, he consistently identifies the Egyptian Osiris with the Greek Dionysos and the Egyptian Isis with the Greek Demeter. Probably this was prompted only by recognition of their similar functions, although he does refer to festivals. Later, however, in Hellenistic times, the cults of these deities influenced one another. Isis, for example, was often depicted with ears of wheat on her headdress in a manner traditionally associated with Demeter, while ivy, the plant of Dionysos, figured in the rites of Osiris. Again, the phallus was sometimes carried now in processions of Osiris in Egypt, as it had been regularly in the rites of Dionysos among the Greeks; the Egyptian tradition had previously known nothing of this. Another good instance of active syncretism was the god Sarapis, worshiped in Egypt and elsewhere under the Ptolemies. He derived from the Egyptian god Osir-Api (Osiris-Apis) but was now represented in Greek style in a form rather like that of Zeus (but with the *modius*, a measuring vessel, on his head). He was identified with Zeus and with Helios. He was not, however, a new creation; his emergence points to amalgamation and adaptation.

Increasingly in Hellenistic times, the cults of Oriental deities were introduced to the cities of the Greek world and

Italy. Such a procedure had been very difficult, and indeed dangerous, in previous ages, for the orgiastic nature of some of these cults was much feared, and all public cults were rigidly controlled by the state. But a radical change of attitude came in Hellenistic times. State control remained, but often it now actively supported foreign cults, as for instance the cult of Dionysos in Ptolemaic Egypt. When Stratonice, the wife of Seleucus Nicator in Syria, resettled the city of Bamyce as Hierapolis in about 300 BCE, one feature of the worship sanctioned there was the fusion of the great Syrian goddess Atargatis with the Hellenic goddesses Artemis, Hera, and Aphrodite. In Egypt this type of cult syncretism was furthered by the system of the *sunnaoi theoi* (“temple-sharing gods”). This was used principally to advance the claims of the Ptolemaic kings and queens as divine beings in temples throughout Egypt in the reign of Ptolemy Philadelphus and afterward; the names of the royal divinities were added as gods who shared the temple with the main deity worshiped there. The reigning Ptolemies and their wives were thus promoted to an honored position on a par with that of the traditionally accepted deities.

Usually the Greeks raised a temple in honor of one particular deity, as Athena was honored in the Parthenon at Athens, Zeus in the great temple at Olympia, and Apollo in his temples at Delphi and Delos. Yet it was very natural that associated deities, especially those connected in myth, legend, and cult, should be represented and worshiped in the same temple. Thus Artemis was honored with Apollo as his twin sister, just as Hadad was honored with the Syrian goddess Atargatis as her consort.

Hellenistic practice went a good deal further than this in the mingling of gods, which the Greeks termed *theokrasia*. One is at first surprised to read in Apuleius’s *Metamorphoses*, when he describes the preparations for the initiation of Lucius into the cult of Isis, that the high priest in charge of the rites is called Mithra and that he is linked to the initiand “by a certain divine association of constellations.” A close and friendly attitude toward Mithraism is clearly indicated, and astrological lore is also openly deployed. Furthermore, when the temple of Mithra was discovered in the Walbrook area of London by W. F. Grimes in 1954, the finest work of statuary to come to light was of the Egyptian god Sarapis. Nor does the evidence of inscriptions and literature suggest anything other than an attitude of sympathetic cooperation between these and other religions.

There was, of course, no claim of exclusiveness to prevent such an attitude, as was the case with Judaism and Christianity. Well-known instances indicate that even priesthoods of different religions could be held by the same person. Plutarch’s friend Clea, to whom he dedicated his study of the Egyptian cults, was a priestess of Dionysos and also of Isis and Osiris. Similarly, in the fourth century CE one Vettius Agorius Praetextatus was initiated into the Dionysian, Eleusinian, and Mithraic mysteries.

Popular religious practice and belief are undoubtedly best reflected in inscriptions, whether in temples, on tombstones, or on amulets, and in magical incantations. Often the gods of different countries are named together in dedications and formulaic expressions of thanksgiving. This is also true of inscriptions that are official and public in character. Thus, in an inscription dated between 50 and 35 BCE, Antiochus I of Commagene, a small kingdom north of Syria, presents an exposition of his religion. He begins by calling himself “the God, the righteous God” and “friend of Romans and Greeks,” and then declares that he has made his kingdom “the common dwelling place of all the gods.” He alludes to the ancient doctrine of Persians and Greeks and refers with reverence to Zeus-Oromasdes, to Apollo-Mithra-Helios-Hermes, and to Artagnes-Herakles-Ares. This showpiece of syncretism contains an element of political expediency: The king is eager to pander to both Romans and Greeks (the Seleucid rulers); his religion is basically Iranian but with Greek embellishments.

In contrast, the easy and fluid permutations of popular magical texts indicate a general readiness to mix varying religious traditions very freely. Two frequent names are the Greek *Zeus* and the Jewish *Iao* (*Yahveh*). In the case of *Zeus* one cannot always be sure whether the name conceals a Mesopotamian or Egyptian deity since these brief formulas rarely reveal the double personality expressed in Antiochus’s *Zeus-Oromasdes*, where the second element is obviously more important than the first. Sometimes the Jewish *Iao* is identified with Zeus or Dionysos.

Nor does the resulting fusion always refrain from a conflation of myths. Thus a magical papyrus now in Oslo (Papyrus Oslo 1.105–109) addresses the god Seth-Typhon, whose name combines Egyptian and Greek deities. The papyrus goes on to say that the god’s mother is a white sow, an allusion to an Egyptian myth about Seth and the goddess Nut. It then hails the god as “thou who dost hold in Heliopolis an iron staff with which thou didst barricade the sea and enable them to pass through.” Heliopolis here is the city of the sun god in Egypt, but the “iron staff” is apparently that of *Psalms* 2:9, “Thou shalt break them with a rod of iron,” while the words that follow allude to the passage of the Hebrews through the Red Sea. The god addressed is therefore a fusion of the deities of three nations, including the Jewish *Yahveh*, and it is *Yahveh* who dominates the last part of the invocation.

One of the results of syncretism in religion was a sense of tolerance and sympathy. People who are ready to borrow from other religions are clearly not about to condemn them. Judaism and Christianity are again the exceptions, and their fervid intolerance was a source of strength in the struggle for survival. Only very rarely does a sense of conflict and hostility appear among the adherents of the pagan religions. Plutarch sometimes inveighs against the primitive cruelties unveiled in facets of mythology; his method is fairly radical in that he is prepared to reject such elements as unworthy of the gods.

In his novel about the ass-man rescued by Isis, Apuleius is appreciative and respectful in his allusions to most other religions. Here there was almost a logical imperative operating since Isis, as he often stresses, combined the attributes of all other goddesses. Yet there are two glaring exceptions to his tolerant attitude. One is the portrait of the baker’s wife (9.14), who is described as a retailer of all the vices and as one who “scorned and spurned divine beings and instead of accepting a definite faith . . . falsely and blasphemously professed belief in a god whom she regarded as the one and only god.” The description might apply to the Jewish or Christian faith, but the list of vices corresponds rather closely to those named in *1 Corinthians* 5:11, so that a Christian allusion is a little more likely. Even more hostile is Apuleius’s withering depiction (8.24ff., 9.3ff.) of the priests of the Syrian goddess Atargatis. They are said to be addicted to homosexual practices, to crude begging, to flagrant pilfering (they steal even the golden cup from the temple of the mother of the gods), and to unscrupulous manipulation of an oracle. Doubtless the praise of Isis was heightened by this attack, and for once the age seems to be characterized by competing and conflicting religions.

In general, syncretism tended to induce a belief in pantheism. The free mingling of many varying divinities suggested to some minds that the world was full of God in some form or another. Aratus of Soli (c. 315–240 BCE), in his astronomical poem *Phaenomena*, said that “all the ways are full of God, and all the meeting-places of men, the sea and the harbors; and at every turn we all need God, for we are related to him” (the Greek has *Zeus* for *God*). The last clause was quoted by Paul in his address at Athens (*Acts* 17:28): “As some of your own poets have said, ‘We are also his offspring.’” At the same time syncretism furthered the quest for the unity of the divine. Earlier Greek philosophers had been concerned with the idea that there was one god behind the many names and forms. Now that the deities of divergent national traditions were being actively equated and fused, the idea of one divine reality was becoming still more widespread.

**THE REJECTION OF RELIGION.** It may seem a paradox that, in spite of the religious tendencies delineated, the direct or indirect rejection of religion was also a feature of Hellenistic thinking. Direct rejection was restricted to a small minority of philosophers, but its intellectual vitality is manifest, although it was not a completely new development. Several of the Sophists of the fifth century BCE had propagated a doctrine that questioned accepted religious beliefs. Before the Sophists, Anaxagoras had done the same. While he may not have plainly denied the existence of God or the gods, his belief that mechanistic laws were behind the workings of the universe excluded a divine causation or operation, even in Mind (*Nous*) was seen by him as the initiator of cosmic motion.

Among the Sophists, Protagoras was broadly in the same category. He once said concerning the gods: “I am unable

to know whether they exist or do not exist, nor what they are like in form; for the factors obstructing knowledge are many: the obscurity of the subject and the shortness of human life." The relativism of Protagoras also tended in this direction, for it was he who said, "The measure of all things is man." If Protagoras may thus be rightly classified as an agnostic, Diagoras of Melos, also of the fifth century BCE, was definitely an atheist; indeed, he was called *ho Atheos*. Like Protagoras, he was condemned for impiety, but trials and convictions for this are not always clear indications of a denial of the gods. Diagoras wrote a book in which he attacked the Eleusinian mysteries, and with these remarks he doubtless caused great offense. The main thesis of his book went a good deal further, declaring that the gods did not exist at all. What he saw as the obvious absence of divine punishment in human life was the ground for his denial. He is the first uncompromising atheist in the history of European thought.

In the Hellenistic age Euhemerus of Messene, who for a time (311–298 BCE) served Cassander, king of Macedon, can also be listed as an atheist, although his attacks on traditional religion were more of a rationalizing reductionism than a frontal assault. In his travel romance *Sacred History*, which idealized life on the island of Panchaea in the Indian Ocean, he tells of an inscribed record of the deeds of the gods Ouranos, Kronos, and Zeus. According to the record, these mighty deities had originally been human kings whom their appreciative subjects elevated to the rank of divinity. Clearly this approach could be interpreted as a defense of contemporary ruler cults, but when generalized in relation to gods everywhere, it meant that real divinity disappeared in the postulated human origins. The Greek hero cults also fitted the theory. It is easy to understand why "euhemerism" is still an influential force in the study of religions.

It is not surprising that the Cynics, who tended to oppose all established values, sometimes included religion in their abuse. Diogenes of Sinope expressed contempt for the Eleusinian mysteries. A man who could defend stealing from temples, cannibalism, and incest obviously took pleasure in destructive challenge. Yet his teacher Antisthenes, who attacked all religious conventions and the belief in a multitude of gods, maintained that there existed one God beyond all visible phenomena. The Hellenistic Cynics developed the popular and hard-hitting speech form called the *diatribē*, which combined comic effects with satire that was often abusive. Yet in spite of the Cynics, continued attacks on religious conventions, it is doubtful whether a full-fledged atheism should be ascribed to them.

Features of the Cynic tradition can be recognized in the works of Lucian (120–180 CE), who ridiculed both religion and philosophy; under the latter heading he especially attacked the Cynics, indebted though he was to them. His attacks on religion are well exemplified in his comic picture of Zeus struggling at a celestial reception desk to cope with the countless prayers of humanity. Nor does Christianity escape

his lash. He says of Christians that "the poor beggars have persuaded themselves that they will be absolutely immortal and live everlastingly, and for this reason they scorn death and willingly surrender when arrested" (*Peregrinus* 13); they are "simple-minded people," he adds, who can be easily imposed upon by any charlatan or trickster.

A certain criticism of religion emerges also in the works of the philosophers called Skeptics. Their main emphasis was on the reservation or suspension of judgment, but this was applied in a general sense to the validity of sense perceptions and thus to the uncertain claim that knowledge of things can be attained. Specific problems concerning religion were discussed by Sextus Empiricus (c. 160–210 CE), who noted the vast amount of disagreement on the subject that prevailed. The very existence of the gods or of God, the propriety or otherwise of animal sacrifices and dietetic rules, the problem of how the dead should be treated, the right attitude toward death itself—all these matters produced debate and radically differing views. He argues that relativism is inherent in these areas: "All are matters of custom." Therefore, he concludes, judgment on questions of religious belief and practice must also be suspended.

**PHILOSOPHY AND RELIGION.** The two most popular and influential philosophical schools of Hellenistic times were those of the Epicureans and the Stoics, both of which originated in the period immediately following Alexander's conquests. Both were also much affected, albeit in very different ways, by the radical political changes of the age as well as by the new international horizons. To some extent, both took up attitudes that were critical of traditional religious beliefs. Indeed, some would describe them, particularly the Epicureans, as rejecting religion, but this would be misleading.

Epicurus (341–270 BCE) was born in Samos but spent much of his life in Athens, where he bought a house with a garden (his school was eventually called "the Garden"). For him, the aim of philosophy is to secure a happy life; "pleasure is the beginning and end of living happily." Pleasure of the soul is valued above bodily pleasure, and the ideal is *ataraxia*, "freedom from disturbance."

Epicureans were often accused of profligacy, but they lived a modest and simple life of seclusion. Women and slaves were allowed into the Garden, and among the women were several courtesans (*hetairai*), who obviously became a pretext for some of the accusations made against the Epicureans of gross sexual immorality and of overindulgence in wine and food. Such charges came mainly from adherents who later abandoned the school.

In his moral doctrine and spiritual temper Epicurus paid great attention to the idea of friendship (*philia*, for which Lucretius, the Roman Epicurean, used the word *amicitia*); and there is every reason to believe that he strove to follow his noble ideal. He says of friendship: "Of all things which wisdom supplies to make life entirely happy, by far the greatest is the possession of friendship." Again: "Friend-

ship must always be sought for its own sake, although it has its origins in the need for help." And yet again: "That is also very beautiful, the sight of those near and dear to us, when to the bonds of kinship is joined a union of hearts." In his book *The Faith of Epicurus* (London, 1967), Benjamin Farrington aptly compares the saying of William Blake, "The bird a nest, the spider a web, man friendship" (p. 23), and even more appositely since its context is not far removed in time, cites the dictum of Aristotle: "Moreover friendship [*philia*] seems to hold states together and lawgivers are more concerned about friendship than about justice. For concord seems to be akin to friendship . . . , and when men are friends there is no need of justice" (p. 29; *Nichomachean Ethics* 1155a). Friendship is seen, then, not only as a personal tie between individuals but also as the motivating force of a healthy society.

If these ideas indicate the quality of Epicurus's spirituality, his precise attitude to religion must be examined. This is well expressed in his *Letter of Menoecus*, a letter to a disciple of his to whom he wished to explain the basic principles of his creed. First of all, one must believe that "God is a being immortal and blessed"; then, a little later, he says that "gods certainly exist, since our perception of them is clear." The apparent contradiction here between "God" and "gods" is familiar in previous Greek writing, especially in the works of Plato, who combines a suggestion of monotheism with the traditional polytheism.

Epicurus goes on to say that many false ideas are current about the gods, in particular the popular concept of reward and punishment whereby the injuries suffered by the wicked and the blessings enjoyed by the good are directly conferred by the gods. He then passes on to discuss death, a subject he often broaches in connection with religion. He tells Menoecus that it is important to realize that death means nothing because it deprives one of all sensation. To realize this makes mortal life more enjoyable in that the desire for immortality is removed. The fear of death and of what may follow it is groundless; the wise man will think reverently of the gods and will be entirely fearless of death. Indeed, he will preserve his peace of mind and "live like a god among men." The life of the gods, as other Epicurean writings make clear, is regarded as one of calm beatitude. They enjoy a blissful existence far away from the turmoil of the human world, free of pain and peril. They take no interest in human affairs and are content with the immortality and supreme blessedness that is theirs.

Perhaps it is Lucretius (94–55 BCE), the Roman exponent of Epicureanism, who has given the most attractive expression to these ideas, both in his depiction of the bliss enjoyed by the gods in their remote paradise and in his searing attacks on popular notions of punishments after death, which were associated with the divine control of Hades. Some of the attacks made by Lucretius on these popular misconceptions sound very much like a condemnation of religion *in toto*. After a breathlessly pathetic picture of Agamem-

non sacrificing his own daughter Iphigenia to satisfy the claims of religion, the poet declares, "So many evils was religion able to instigate" (*De rerum natura* 101).

Epicurus himself, on the other hand, is careful to point out that he regularly follows traditional religious observances: "Let it be enough to state now that the divine is in need of no mark of honor, but that it is natural for us to honor it, especially by having pious conceptions of it and secondly, by presenting to all the gods in turn the traditional sacrifices" (Philodemus, *De musica* 4.6, quoting Epicurus). At first sight a palpable contradiction occurs here. If the gods are not concerned with human life, why should human beings bother to honor them with prayer and sacrifice? Do not these religious acts imply a constant concern on both sides? To resolve this dilemma, it seems, one should ascribe to Epicurus the highest form of worship, the utterly disinterested adoration of the divine which expects nothing in return but has the joy of sharing in the divine happiness. Prayer and sacrifice enable such a worshiper to take part in the blessedness of the gods. It was said of Epicurus, "He appeals to the Completely Happy so as to strengthen his own blessedness." It could be argued that he is, therefore, receiving something from the gods, even though the gift is purely spiritual in character, and that the gods are ready to bestow it, thus belying the concept that they are a remote community of beings who have no care or concern for humanity.

Epicurus also recommended prayer because it enabled one to participate in the religious life of one's own country; he viewed it as natural and proper. This contrasts sharply with his constant advice to withdraw completely from political and public activity. But if there is a measure of inconsistency in his sanction of traditional religious rites, his condemnation of the astral religion propagated by Plato in his later years is perfectly consonant with the lofty view of the divine that Epicurus always tried to maintain. His creed is well summed up in the saying of Diogenes of Oenoanda in Asia Minor, who lived in the second century CE: "Nothing to fear in God. Nothing to feel in death."

In one respect the Stoics differed firmly from the Epicureans: They urged active participation in public life, not a retreat from it. While favoring the idea of a world state, they did not shrink from service to their own. Their basic teachings also differed. For them it was virtue, not pleasure, that was the supreme value in life; knowledge was important in the quest for virtue, but the essential thing was to live in agreement with nature since nature leads to virtue. In modern parlance, to follow nature may often imply an uninhibited pursuit of the natural instincts and their pleasures, but the Stoics' interpretation is quite different. For them the formative and guiding principle in nature is reason (*logos*), which is identified with God himself and is said to manifest itself as fate or necessity and as providence. Another special manifestation is human reason, whose guidance it is one's duty to obey. For rational beings such as humans virtue alone is the vital possession, and from virtue alone comes happiness.

Pleasure, on the other hand, is regarded as only a by-product of virtuous living and not as a proper end in itself. Like the Epicureans, the Stoics valued “freedom from disturbance” (*ataraxia*) as a desirable state, as well as “freedom from emotion” (*apatheia*) and “inward independence” (*autarkeia*). The founder of Stoicism, Zeno of Citium (335–263 BCE), was highly regarded for his integrity, and it was said of him that “he made his life a pattern to all, for he followed his own teaching.” He was succeeded as leader of the school by Cleanthes (331–232 BCE), who was followed in turn by Chrysippus (280–207 BCE). These philosophers showed varied emphases in their teachings, much more so than did the followers of Epicurus, who adhered closely to the precepts of their founding father and gave him almost divine status.

Among the Stoics, Cleanthes was the most concerned with religion. He is renowned for his beautiful *Hymn to Zeus*, where the god is addressed as the creator of the world and the universe and as a ruling spirit who continues to dwell in the whole of his creation. When this hymn is compared with previous Greek praises of the god, what is striking is the absence of any specific allusions to the mythology or cult of Zeus, and some of the mythology was quite scandalous. Instead, Zeus has become to Cleanthes an abstract figure standing for divine creativity, reason, law, and providence. He does refer to the thunderbolt of Zeus, but he links it to the Stoic doctrine of the conflagration that will end the world: “Nature’s own stroke brings all things to their end.” He also gives it a moral force, urging Zeus to use it to dispel darkness from the souls of humans.

Both Cleanthes and Chrysippus assembled arguments to prove the existence of God, giving prominence to the argument from design: The order and regularity of the heavenly bodies could not be produced by humanity, it is urged; they must have been produced by something better than humans. “And what name other than God would one give to this?” (Cicero, *On the Nature of the Gods* 2.16, quoting Chrysippus). As has been seen, in its whole view of nature and man early Stoicism assigns a built-in importance to religion. A moral earnestness is also evident in the writings of Stoics in the Roman imperial era, especially those of Seneca (5 BCE–65 CE) and Epictetus (55–135 CE), whose idea of God is practically monotheistic. In their attitude to the gods of tradition, the Stoics were often charged with a pallid reductionism. They tended to equate the gods with the functions associated with them. Plutarch, a middle Platonist not unfriendly to Stoicism, complains in the early second century CE of the facile way in which gods were labeled according to their physical associations; Osiris was thus related to natural fertility while Dionysos was explained as wine and Demeter as grain. Another kind of reductionism was employed by the Stoics to explain myths whose primitive crudities offended them, namely, a wholesale use of allegory. Plutarch himself was prepared to use this method liberally. The Platonist school that he favored continued to flourish, but it had abandoned orthodoxy in its espousal of an open eclecticism.

The philosophical creeds with their variety of religious ingredients appealed, of course, only to an educated elite. Their quiet colonnades were far removed from the rough-and-tumble of the marketplace, as was the Epicurean Garden. Many confusing cries accosted common people in the marketplace, and they often found it most satisfying, as far as religion was concerned, to follow the emotional uplift and the offer of salvation presented by the mystery religions and by Christianity.

J. GWYN GRIFFITHS (1987)

**HENOTHEISM**, a term coined from the Greek *henos* (“one”) and *theos* (“god”), was for some time used by F. Max Müller interchangeably with *kathenotheism*, derived from the Greek *kath’hena* (“one by one”). It was Friedrich Schelling (1775–1854) who first used the word *henotheism* in his study of mythology to indicate “relative, rudimentary monotheism,” which he supposed was the idea of God in prehistoric consciousness (*Philosophie der Mythologie und der Offenbarung*, 1842). F. Max Müller (1823–1900), in his attempt at “tracing the origin and first growth of human thought,” employed the word as a technical term of *Religionswissenschaft* to designate a peculiar form of polytheism that in his view was characteristic of the description of the gods in the *R̥gveda*. He observed that in the Vedas—the oldest Indian religious literature—although deities are invoked by a variety of names, such as *Agni* (“fire”), *Sūrya* (“the sun”), *Uṣas* (“dawn”), *Maruts* (“the storms”), *Prthvī* (“the earth”), *Āp* (“the waters”), and *Nadī* (“the rivers”), that are closely connected with nature, as well as by proper names, such as *Varuṇa*, *Mitra*, *Indra*, and *Aditi*, “to the mind of the suppliant” each god is “at the time a real divinity, supreme and absolute,” and not limited by the powers of any other gods. Müller called this “belief in single gods” *henotheism* or *kathenotheism*, “a worship of one god after another” (Müller, 1881, pp. 136–137). In his lectures of 1882 he noted that rather than the term *kathenotheism* the “shorter term *henotheism* has found more general acceptance, as conveying more definitely the opposition between *monotheism*, the worship of only one God, and *henotheism*, the worship of single gods” (Müller, 1896, pp. 146–147).

Müller distinguished this Vedic plurality of gods from the idea of polytheism, which, as he pointed out, derived chiefly from Greek and Roman antiquity and designated “a certain more or less organized system of gods, different in power and rank, and all subordinate to a supreme God, a Zeus or Jupiter” (Müller, 1896, pp. 145–146).

Partly in opposition to the thesis of Ernest Renan (1823–1892) that monotheism was a unique tendency of the Semitic race, Müller suggested that a “henotheistic phase” was “a peculiar phase of religion” that was found probably everywhere preceding either polytheism or monotheism (Müller, 1873, p. 142; cf. Müller, 1881, p. 414). He asserted that such a phase existed not only in India but in Greece, Italy, Germany, and elsewhere (Müller, 1879, p. 275; cf.

Müller, 1896, p. 163). Müller maintained that this henotheistic phase “tended to become a belief in *one* God, presiding over the other no longer supreme gods—*polytheism*; or a belief in one god, excluding the very possibility of other gods—*monotheism*” (Müller, 1879, p. 362; cf. Müller, 1896, p. 163). In comparing monotheism and henotheism, Müller made the following observation: “There is one kind of oneness which does not exclude the idea of plurality,” i.e., henotheism, and “there is another which does” exclude the idea of plurality, i.e., monotheism (Müller, 1881, p. 415).

The association of henotheism with the idea of “rudimentary monotheism,” however, never completely disappeared from the minds of some scholars of religion. Thus, henotheism was sometimes confused with monolatry, a term best applied to the religion of ancient Israel before it attained monotheism, when the existence of gods other than Yahveh was admitted but their worship was strictly forbidden (see *Ex. 22:20*). Friedrich Heiler (1961, p. 323) and others have pointed out, however, that monolatry—the exclusive worship of a god by a certain social group—clearly differs from the idea of henotheism expounded by Müller.

Müller’s idea of henotheism has a speculative dimension that deals with how a divine reality reveals itself to humans. He recognized in the Vedas a “breaking forth” of the awareness “that all the deities are but different names of one and the same godhead” and that “the primitive intuition of the godhead”—“the main-spring of all later religion”—“is neither monotheistic nor polytheistic. . . . God is God” (Müller, 1881, pp. 136–137 and 414–415). Thus, he asserted that “the unity of the Divine” was at the basis of the henotheistic mode of expression (Müller, 1896, p. 144). From his study of the Vedas Müller concluded that “we learn a lesson—the lesson *how gods were made and unmade*—how the Beyond or the Infinite was named by different names in order to bring it near to the mind of [hu]man [beings], to make it for a time comprehensible, until, when name after name had proved of no avail, a nameless God was felt to answer best the restless cravings of the human heart” (Müller, 1896, p. 163). However, if one disregards these metaphysical assertions, Müller’s idea of henotheism appears to be yet another term that designates a certain plurality of gods, entailing a possible confusion with such terms as *monotheism*, *polytheism*, and *monolatry*.

The idea of henotheism proposed by Müller is twofold: (1) it designates a certain developmental stage within a religion preceding polytheism or monotheism, and (2) a unique, qualitative “kairological moment,” or aspect, of human religious awareness itself (cf. Panikkar, p. 266). Heiler, for one, employs the word *henotheism* for its psychological significance, equating it with “subjective theism,” which in his view paves a way to objective monotheism (Heiler, p. 460). The primordial religious intuition that attracted Müller’s attention may be compared with one of the two modes of thinking Heidegger identifies, namely with the *besinnliches Denken*, or meditative thinking, as opposed to *rechnendes Denken*, or calculative thinking.

## BIBLIOGRAPHY

For general information on henotheism see D. W. Holsten's article "Henotheismus," in *Die Religion in Geschichte und Gegenwart*, 3d ed., vol. 3 (Tübingen, 1959). See Robert Mackintosh's article "Monolatry and Henotheism," in the *Encyclopaedia of Religion and Ethics*, edited by James Hastings, vol. 8 (Edinburgh, 1915), for an excellent account of the history of henotheism and monolatry as technical terms. Raffaele Pettazzoni gives a concise historical background for the word *henotheism* when discussing primitive monotheism in his *Essays on the History of Religions* (Leiden, 1967); therein Pettazzoni assesses the influence of Schelling on F. Max Müller. For Max Müller's writings, see *Chips from a German Workshop*, vols. 1 and 2 (1867–1875; New York, 1895–1898). Müller's *India: What Can It Teach Us?* (London, 1896) contains lectures he delivered in 1882 at the University of Cambridge. His *Introduction to the Science of Religion* (London, 1873) includes the "Lectures on the Science of Religion." Müller's article "Henotheism, Polytheism, Monotheism, Atheism" is found in his *Lectures on the Origin and Growth of Religion* (New York, 1879). *Selected Essays on Language, Mythology and Religion*, vol. 2 (1881; New York, 1978), contains many of Müller's essays from his *Chips from a German Workshop*, including "Lecture on the Vedas" and "Semitic Monotheism." For later interpretations of henotheism, see, for example, Theophile J. Meek's *Hebrew Origins* (1936; New York, 1960) and Friedrich Heiler's *Erscheinungsformen und Wesen der Religion* (Stuttgart, 1961). On the phrase "kairological moment," see Raimon (var. Raimundo) Panikkar's chapter "Silence and the Word," in *Myth, Faith and Hermeneutics* (New York, 1979). A good discussion of Martin Heidegger's contrasted modes of thinking is found in his *Discourse on Thinking* (New York, 1966).

MICHIKO YUSA (1987 AND 2005)

**HERA** was the wife of Zeus and, in literature, the most prominent Greek goddess, although her cultic importance was limited. Hera was an ancient goddess, whose name is already attested in Mycenaean times. Etymologically, a relation with the word *heros* seems probable. As the latter most likely means something like "Lord," Hera's name may be interpreted as "Lady," even if certainty is not attainable.

Zeus's first wife was called Dione, who survived only at the margins of the Greek world, yet Hera had already supplanted her in Mycenaean times—a Linear-B tablet of Pylos mentions the combination "Zeus, Hera, Drimios, the son of Zeus." The role of Hera in Homer's *Iliad*, the oldest and most detailed source in the Archaic Age, is threefold. First, she is the wedded wife of Zeus (she was also his eldest sister). Hera sits "on the golden throne" and holds the scepter, and there is no doubt about her importance. Second, the picture of the divinely consummated marriage with Zeus made Hera into a goddess of weddings and marriage throughout Greece. Third, she appears as the jealous wife par excellence, whose unruly behavior is a source of continuous concern for the supreme god. He beats her, threatens her with violence, and even penalizes her by hanging her in the sky with anvils on her feet (*Iliad* 1.566–7, 588; 8.403–5; 16.18–31).

Hera's position as the wife of Zeus most likely goes back to her prominent position in Argos. Even though her name eventually became limited to the city on the Peloponnese, it must have been her position as city goddess of one of the most powerful Mycenaean cities that made it possible for her to supplant Zeus's first wife.

**THE EDUCATION OF GIRLS AND MARRIAGE.** The education of girls was the sphere of action of several Greek divinities, including Apollo, Artemis, Aphrodite, and Hera. In the case of the latter, it is striking that virginity is often emphasized. Hera herself was worshipped as Parthenos (Virgin) in Hermione and Arcadian Stymphalos. The island of Samos was once called Parthenie (the Maidenly), and the river Imbrasos by the sanctuary was also called Parthenios. Yet this pre-matrimonial association of Hera is only dimly visible.

On the other hand, Hera's position as the goddess of marriage is clear. As Hera Teleia, she "keeps the keys of wedlock," as Aristophanes expressed it in his *Thesmophoriazousae* (973). The epithet was already explained in antiquity by a commentator on line 974 of the play: "Hera Teleia and Zeus Teleios were honored in wedding ceremonies, since they were in charge of weddings." As Teleia, Hera was the "fulfilled" woman par excellence because the Greeks saw the wedding as a girl's life's fulfillment. The relation of the epithet to the wedding also clearly appears from her temple at Plataea. Here, Hera had two statues and two epithets, Nymphenomenê (she who is led as bride during the wedding day), and Teleia (the fulfilled). The wedding of Zeus and Hera was considered to be so important that several Greek communities—such as various cities on Euboea or Cretan Knossos—claimed it took place in their area. The inhabitants of these cities would imitate the wedding near a river at the annual sacrificial festival. The Athenians, as well, remembered the marriage of Zeus and Hera in the month Gamelion, in late winter. Husbands even celebrated the central mystery of this festival, the *Hieros Gamos*, or *Theogamia*, by (rather unusually) staying home and spending an evening with their wives.

Although Plutarch (fragment 157, Sandbach) mentions that in sacrifices to Hera Gamelia the gall was not offered "so that married life might be without bitterness," the goddess's unruly and jealous behavior is often alluded to in the *Iliad*. Hera was also anything but a good mother: in a fit of rage she hurled her son Hephaistos, the divine smith, from Olympus into the sea. The close connection between Hera and Hephaistos is striking and may have something to do with the position of the goddess outside the centers of civilization, just as the smith is at the margin of the civilized and political community.

The negative picture of Hera in Greek mythology can hardly be separated from her role in Greek cult, where both her rituals and the location of her sanctuaries point to a position away from the central social order. In some rituals, this jealousy was actually closely connected to the ritual. In Boeotian Plataea, every ten years a great festival took place—the Daidala—of which the meaning is not at all clear. The myth

told how Hera had withdrawn to neighboring Euboea out of jealousy, but returned when Zeus dressed up a wooden doll as his bride and pretended to marry her. The ritual ended with the ceremonial burning of the doll, the sacrificial meat, and the wooden altar (a variant of the widespread fire sacrifices that always carry a slightly unpleasant meaning).

**HERA'S CULT ON ARGOS.** Hera's cult was especially prominent in Argos and on Samos. In Argos, Hera's sanctuary—the Heraion—can be traced from about 800 BCE. It was situated about eighteen kilometers from Argos and five kilometers from Mycenae, and does not seem to have gained importance before the last third of the eighth century BCE. It is only from around 700 BCE that traces of a stone altar are discovered. The temple proper seems to have been built only a few decades later, and it perished in a fire in 423 BCE. Hera's Argive cult was well-known for its priestesses, who seem to have served her for the entirety of their lives—a rather unusual feat in ancient Greece. The presence of innumerable fibulae shows the importance of the cult for the life of the women, who dedicated their clothes at this sanctuary. The main festival, which was called Heraia and Hecatombaia, was celebrated in the month Panamos, the first month of the Argive year. The festival thus falls within the category of New Year festivals.

During the festival there was a procession from the city to the sanctuary. The procession included Hera's priestess—who traveled the distance in an old-fashioned oxcart—as well as, most likely, the maidens who had woven the new peplos for Hera, whose presentation formed part of the festival. However, as an ancient collection of Greek proverbs says, “those in Argos who had kept their boyhood pure and blameless took up a sacred shield and led the procession: this was their honor according to ancient tradition” (Plutarch, 1.44). Evidently, the festival marked the last stage of the initiation, during which the new male citizens showed themselves to the community.

The initiatory function of Hera also appears from the many votives that represent a kourotrophic goddess. On the island of Lesbos, beauty contests took place in front of Hera's temple, and similar contests in other Greek communities demonstrate that these took place just before the formal adulthood of Greek girls. Such initiations are virtually always the prerogative of the upper class; the many dedications of figurines of Amazons on horses also seem to point to the horse-riding aristocracy. Dedications from central Italy in Hera's sanctuary show the great radius of Hera's Argive cult.

**HERA'S CULT ON SAMOS.** The second center of Hera's cult was Samos. Here the Heraion was situated about eight kilometers west of the city of Samos. The first temple was built in the eighth century BCE, and the final, impressive temple by Polycrates, the powerful ruler of independent Samos before the island was conquered by the Persians, was built at the end of the sixth century BCE. The oldest stage of Hera's cult must have been dominated by women; the typical male features—such as the dedications of miniature boats—

appear at a later time. Given the prominence of the shield in Argos, it should be noted that many miniature shields were found in the sanctuary—sure signs of male initiation. As in Argos, Hera was apparently the goddess who supervised the coming of age of the new generation of citizens, both male and female.

The most important festival of Hera was the Tonia. The myth related the capture of her statue by Etruscan pirates and its subsequent recovery. The story reflects the leaving of the temple by the statue. During the festival the statue was most likely exhibited near the holy *agnus castus*—a negative tree in ancient Greece—where it would have been washed and redressed. Coins from the Roman period show that Hera's statue was tethered; such tethered statues indicated that the relevant divinity was connected with the dissolution of the social order. It is unfortunate, however, that the exact position of the festival in the Samian year is not known, and so its precise function remains obscure.

**HERA'S CULT IN SOUTHERN ITALY.** The goddess Hera was also popular in Southern Italy, where excavations in Foce del Sele, at the estuary of the river Sele, have revealed an important sixth-century sanctuary of Hera. Many objects from the life of women have been found there, such as weights for weaving and perfume bottles. This female character is also evident in Croton, where, because of Pythagoras, the women of Croton no longer dared wear expensive clothes; instead, they dedicated them in the most prominent sanctuary of the town, the temple of Hera Lacinia.

Excavations have shown that this sanctuary in Foca del Sele received dedications from throughout the Greek world and therefore must have been held in high standing. There is little information, however, about Hera's sixth-century temple in Paestum/Posidonia, although the miniature arms found once again seem to point into the direction of initiation. In her sanctuary in Santa Venera, at the border of the urban area of Paestum, Hera was also worshipped (along with Iovia, a kind of Venus of the Italic Lucani). Though scarce, the data available points to Hera as the goddess who presided over both male and female maturation, as well as the wedding. In ways specific to local customs, this must have been Hera's function throughout Greece.

The older collections of material in Lewis Richard Farnell's *The Cults of the Greek States*, vol. I (Oxford, 1896) pp. 179–257, as well as in O. Gruppe's *Griechische Mythologie und Religionsgeschichte*, 2 vols. (Munich, 1906) II.1121–1137, keep their value. Karl Kerényi, *Zeus und Hera: Urbild des Vaters, des Gatten und der Frau* (Leiden, Netherlands, 1972); Walter Pötscher, *Hera: Eine Strukturanalyse im Vergleich mit Athena* (Dramstadt, Germany, 1987); Joan V. O'Brien, *The Transformation of Hera: A Study in Ritual, Hero, and the Goddess*

in the *Iliad* (Lanham, Md., 1993); and Reinhard Häussler's *Hera und Juno: Wandlungen und Beharrung einer Göttin* (Stuttgart, Germany, 1995), are not that helpful. The best modern synthesis is Walter Burkert's *Greek Religion* (Oxford, 1985), 131–35; 400–401, which has to be supplemented on the connection between Hera and initiation by Claude Calame, *Choruses of Young Women in Ancient Greece: Their Morphology, Religious Role, and Social Functions* (Lanham, England, 1997), 113–23. *Héra: Images, Espaces, Cultes*, edited by J. de La Genière (Naples, 1997), is an especially useful update of the archaeological evidence.

JAN N. BREMMER (2005)

**HERAKLES**, the son of Zeus and the Theban queen Alcmena, is the most prominent Greek hero, despite the fact that no poem on his labors is preserved—numerous images, several preserved tragedies, and countless allusions to his myths and cults in Greek and Latin literature attest to his importance. But although he has a mortal mother and dies himself, he is no typical hero. He lacks the close connection with a single city, or with a grave as the focus of his cult. Instead, his mythology connects him especially with the cities of Thebes and Argos, and his cult is panhellenic and makes him appear much more like a god than a hero. One can understand why the poet Pindar (c. 522–438 BCE) blurred the categories and called him a “hero god,” (*hērōs theos*; *Nemean Ode* 3.22).

**NAME.** Ancient authors, as well as some modern scholars, connected his name with that of the goddess Hera. His name takes the very common form of Greek personal names that are easily understandable as composite nouns: *Hera-kles* means “the glory of Hera,” as *Dio-kles* is “the glory of Zeus,” or *Patro-klos* “He who brings glory to his father.” In mythology, however, such a positive connection with Hera does not exist. He is, after all, the illegitimate son of her husband and a local queen, and in Homeric poetry this turned Hera into Herakles’ most bitter enemy (see, for example, *Iliad* 15.25–28). Only after his elevation into Olympus did Hera accept Herakles as an adoptive son. The ancient explanation—that it was none other than the constant persecution by Hera that set Herakles on his steady course to glory (see Pindar, *Fragment* 291)—seems rather farfetched, as is the claim that his first name had been Alcides (“strongman”). In reality, the name Alcides designates Herakles as the grandson of Alkaios, father of Herakles’ stepfather, Amphitryon. But modern explanations are not much better; the repeated effort to understand *hērōs* as “young man” rests on no firm linguistic grounds, although Herakles was, among other things, a protector of young warriors.

**MYTHOLOGY.** Zeus fell in love with the beautiful queen of Thebes, Alcmena. When her husband Amphitryon (grandson of Zeus’s son Perseus) was away on a military campaign, Zeus took Amphitryon’s shape and seduced her; in order to extend his pleasures, he interrupted the sun’s course for three days. The complications that resulted from Zeus’s disguise

were exploited in late classical drama; the preserved adaptation of a Greek tragedy for the Roman comic stage, Plautus’s *Amphitruo* (after 200 BCE), became the first in a long series of early plays in European literature.

Zeus’s ever-jealous wife Hera pursued the unborn baby. When, immediately before Herakles’ birth, Zeus declared that an offspring of Perseus would become king of Mycenae, Hera hindered Herakles’ birth in favor of that of another offspring, Eurystheus, whom Herakles would have to serve for many years. Herakles also had a twin half-brother, Iphicles, the son of Amphitryon, and this brother’s son, Iolaos, became Herakles’ devoted friend and companion.

In the service of Eurystheus, Herakles performed twelve labors. The series begins in the Peloponnesian neighborhood of Argos, the Iron Age successor of the Bronze Age site Mycenae. He killed the lion of Nemea (near Argos), a monstrous beast with a skin that weapons could not penetrate. Herakles strangled him and turned the hide into his signal armor. With Iolaos’s help, he killed the Hydra of Lerna (another town near Argos), a snakelike monster whose many heads regrew as soon as he had cut off one; he used the Hydra’s poison on the tips of his arrowheads. He caught the Cerynthian hind, a female deer with golden antlers that was living in Arcadia, and the Erymanthean boar, another Arcadian wild animal. He shot the man-eating birds that were living in the swamps of Stymphalos in Arcadia, and he cleaned the stables of Augias, king of Elis, in southwestern Peloponnese.

The other six adventures expand the geographical frame. To the south of the Peloponnese, he caught the bull that Poseidon had given as a present to the Cretan king Minos and that later was devastating the island; in the north, he tamed the man-eating wild horses of the Thracian king Diomedes. Turning east, he asked for and received the belt of the Amazon queen Hippolyte; in the far west, he abducted the cattle of Geryoneus on an island on the western shore of the Oceanus, and he received, with the help of the giant Atlas, the apples of the Hesperides (“evening girls”); and finally, he descended into the underworld and brought back the three-headed hound of hell, Cerberus. This cycle was fully established before 460 BCE, when it was represented on the temple of Zeus in Olympia.

Other exploits include his service, in female dress, at the court of queen Omphale in Lydia; his fight with death to gain back Alcestis, the wife of his host Admetus; the founding of the Olympian games; his part in a first Trojan war, which preceded the more famous Greek expedition and in which Herakles punished the treacherous Trojan king Laomedon, and a short participation in the voyage of the Argonauts; an often-represented brawl with Apollo over the Delphian tripod; and the shooting of the centaur Nessus when the beast tried to rape Herakles’ wife Deianira (with whom Herakles had a son, Hyllus). When Herakles years later abducted young Iole, with whom he had fallen in love, Deianira used the advice of Nessus to impregnate a shirt with Nessus’s blood—which was tainted with the Hydra’s poi-

son—to use as a love charm. The shirt caused so much pain to Herakles that he burned himself alive on top of Mount Oeta. After his death, he was received among the Olympian gods and married to Hebe (“youth”).

The story of Herakles, the mighty, albeit somewhat flawed, mortal who subjects himself to a much weaker person, cleanses the earth from frightful monsters, and finally is rewarded by being made a god, attracted a moralistic reading. In the allegorical interpretation of Stoic philosophers, Herakles became the exemplar of the ideal Stoic sage whose labor and dedication earns him a godlike position. In royal ideology, from Alexander the Great (356–323 BCE) to the emperor Charles V (1500–1558), Herakles more specifically became the embodiment of royal virtues. The personal motto of Charles V depicts the pillars of Herakles at the Strait of Gibraltar with the proud caption *plus ultra* (more beyond)—thus the ruler whose empire included the Americas claimed to have outdone the Greek hero. The myth of Herakles at the crossroads, created in the fifth century BCE by Prodicus, confronts the young hero with Dame Virtue and Dame Lust and makes him opt for the former, despite the latter’s many promises; the story survives well into the European Renaissance and the baroque age.

**CULTS.** In most Greek cities, Herakles had cult followers, although he had very few major sanctuaries. An open-air sanctuary on top of Mount Oeta, where myth placed the pyre in which Herakles burned himself, is archaeologically attested as early as the Archaic Age, and it was the site of an athletic contest. It is the only sanctuary of Herakles that served more than one city. He also had a major city sanctuary on the island of Thasos. Its archaeological exploration points to the importance of ritual (by definition, all-male) banquets in Herakles’ cult (myth consistently represented him as an avid eater and even more avid drinker and womanizer). He was among the foremost divine protectors of the city—a relief on a city gate represents him as an archer poised to shoot towards any evil that might approach. In many other cities, especially of the Greek East, he is connected with the military protection of the city and with the able-bodied young male citizens who constituted the city’s army; this connection is responsible for Herakles’ epithet *kallinikos* (He of the Beautiful Victory). In Athens, he presided over the coming-of-age rituals of young men, who offered him a large libation of wine.

The birth story of Herakles, with the nightly visit of the supreme god to the ruling king’s wife, derives from Egyptian royal ideology, although there are no other traces of such a claim in historical Thebes. The Dorian states of the Peloponnese, especially the Spartan royal lineages, regarded him as their divine ancestor whose son, Hyllos, was the ancestor of one of the three traditional Doric tribes. Other aristocratic and royal families claimed him as their ancestor as well, such as the dynasty of the Lydian king Croesus, or the Macedonian royal family. Such claims inevitably involved a cult whose details, however, mostly elude us.

In private cult, Herakles was addressed as a powerful protector; a very common epithet is *alexikakos* (“He Who Protects from Evil”). Like other private protectors such as Isis, he received dedications after he manifested himself in a dream. In Athens he was identified with the healing hero Pancrates (“All-powerful”), who had a small sanctuary in the city. Throughout antiquity, the entrance of houses was guarded either by a symbol of Herakles, such as his club, or a verse written on the lintel: “The son of Zeus Herakles *kallinikos* is living here: no evil may enter.”

In the course of the Greek colonization of southern Italy during the eighth and seventh centuries BCE, his cult also came to Italy, and especially to Rome, where he was worshiped as Hercules (a form of his name that presumably developed through the Etruscan name *Herclē*). In Rome he had an open-air altar, the Ara Maxima (Very Large Altar) near the spot where, in archaic times, the Tiber could be traversed in a ford; the cult dates back to the Archaic Age, as does the pediment sculpture of a temple on the nearby Forum Boarium (Cattle Market) that represents his introduction into Olympus. His connection with cattle and its transhumance through the mountains of Italy seem to be old and constant; the connection is also the backdrop to the Greek myth of Geryoneus and its Roman continuation, the killing of the local Roman cattle-rustling monster Cacus. Throughout Italy, women were excluded from Herakles’ cult (which in Greece was already concentrating on males). Other cultic roles are less well attested; somewhat by chance we learn that Herakles possessed a lot oracle in the Roman port city of Ostia.

**IDENTIFICATIONS.** Herakles is identified with a wide variety of local gods, such as the Cilician Santas/Sandon, whose cult centers on an annual fire ritual reminiscent of Herakles’ self-destruction on Mount Oeta. Most important was the identification with the Phoenician Melqart, who has his main sanctuary in Tyre and another important cult on the peninsula of Gades (Cádiz) in southwestern Spain. The Greek historian Herodotos claimed that some Greek cults of Herakles derived from Tyre’s Melqart, and a few modern scholars followed this theory and extended it to the cult of the Roman Ara Maxima, but the evidence does not seem to bear them out.

FRITZ GRAF (2005)

**HERDER, JOHANN GOTTFRIED** (1744–1803), was a German pastor and theologian, a literary critic, and a philosopher of history. The unity underlying Herder's many and varied academic endeavors, which resulted in a seemingly unending flow of publications, stems from his consistently historical approach to the topics he studied. Historical awareness sets him apart most noticeably from the prevalent thought patterns of the ahistorical Enlightenment authors of his time and makes him a pivotal figure in eighteenth-century German intellectual life.

While Herder's significance is easily established in such disciplines as literature and literary criticism, cultural history, and philosophy of history or anthropology, it is much more difficult to define the influence he has exerted through his many contributions to the development of contemporary religious thought. In part this is due to the fact that Herder's approach often is more that of a sweeping questioner than a systematic thinker, and in part this is the case because religious views underlie all of his writings, most clearly his anthropological essays. Understanding the human being as made in the image of God was what moved him, not considerations of theological orthodoxy. Herder, the forceful critic of Enlightenment rationalism in general, favored an emphasis on divine revelation in creation and Scripture over dogma and systematic theology. In his *Briefe an Theophron; Briefe,*

*das Studium der Theologie betreffend, Fünfter Theil (Letters to Theophron; Letters Concerning the Study of Theology, Part V, 1781)*, Herder states this principle when he says that "the entire purpose of Christianity is something other than erudite exegesis and dogmatism, no matter how invaluable these might be" (*Herder's Sämmtliche Werke*, XI, 194). Given his love for literature, Herder extolled the poetic power of the Bible and, in keeping with his Pietistic heritage, wanted the Bible to speak directly to the individual reader. Living faith, according to Herder, defines true orthodoxy, rather than the other way around.

**HERDER'S BACKGROUND.** Herder was a contemporary of Immanuel Kant (1724–1804) and Johann Georg Hamann (1730–1788). Like them he grew up in the province of East Prussia and studied in Königsberg (present-day Kaliningrad), where Kant was his teacher at the university and where Hamann became his friend and private tutor, introducing the young student to English language and literature, especially John Milton and William Shakespeare. Following a brief period of formal university studies (1762–1764), Herder assumed a teaching position at the German secondary school in Riga, Latvia, before he was installed in 1767 into the ministry. For the rest of his life he remained in the pastorate. He served three Lutheran churches, first in Riga (1767–1769), then in Bückeburg (1770–1776), and finally in Weimar (1776–1803), interrupted only by a study tour through the Netherlands and France in 1769–1770. Those two years of travel included a memorable voyage of five weeks on the North Sea, which he described in a catalog of new ideas and study plans published posthumously as *Journal meiner Reise im Jahr 1769* (Journal of my travels in the year 1769, 1846), and a period of extremely vigorous and intense discourse with a group of young German poets, the *Sturm und Drang* circle around Johann Wolfgang von Goethe in Strasbourg. Goethe, immediately upon his own move to Weimar in 1775, used his influence with the court there to secure for Herder a high ecclesiastical position in that small German principality. Herder's fame as a preacher never waned. He fused religiosity with his philosophy of humanism in ways that made his sermons easily understood and commonly admired.

**HERDER'S PHILOSOPHY.** Herder's first major publication, *Über die neuere deutsche Literatur, Fragmente* (On the new German literature, fragments, 1766–1767), contains his important views on language and expresses his love for idiomatic expressions and inverted word order, qualities he deemed essential to poetry. Shakespeare became his model. Shakespeare's use of Nordic mythology impressed Herder and led him to demand that one must seek to understand the cultural and intellectual environment in which a poet lived before attempting to interpret a given work of literature. The psychological-historical approach became a hallmark of Herder's criticism, whether he dealt with the poetry of the Hebrew Scriptures or with Latvian folk songs. In *Kritische Wälder* (Critical forests, 1769) Herder disputes G. E. Lessing's attempt to establish objective criteria for artistic production.

Whereas Lessing saw Homer as the world's greatest poet, Herder considered Homer merely the greatest among the Greeks, claiming instead that individual circumstances, such as national language and ethnic peculiarities, determine appropriate criteria for judgment of works of art.

With *Über den Ursprung der Sprache* (On the origin of language, 1771) Herder joined the debate as to whether language was divinely given or a human invention, attempting to show that there cannot be a satisfactory answer to that question because language and human existence are synonymous. Herder wrote this essay for a contest sponsored by the Berlin Academy and won the prize. In 1774 Herder was awarded another academy prize with his entry "Auch eine Geschichte zur Bildung der Menschheit" (Another philosophy of history). Instead of delineating the development of the human race from primitive beginnings to a sophisticated and mature present stage (a practice common among Enlightenment authors), Herder denied such absolute progress and looked upon history as a window through which one can observe humanity's progression toward the goal God has established for it. He saw no justification for his contemporaries to consider earlier epochs to be morally, aesthetically, or intellectually inferior. In fact, he had praise for the "darkness" of the Middle Ages, during which virtue, honor, and love were of the utmost importance, and he chastised his own age for lacking in those human qualities. Herder believes that history is the revelation of God's plan for mankind; he eventually defined his own understanding of this plan more and more clearly as the number of his historical investigations grew. His works *Wie die deutschen Bischöfe Landstände wurden* (How the German bishops became an estate of the realm, 1774) and *Ursachen des gesunkenen Geschmacks bei den verschiedenen Völkern da er geblühet* (Causes of the decay of taste in the various nations where it once flourished, 1775) are two examples of his many historical writings.

**HERDER'S THEOLOGY** Herder's love for biblical hermeneutics was directed mainly at the Old Testament, in which the sense of history and the beauty of poetry he found attractive are especially in evidence. His *Älteste Urkunde des Menschengeschlechts* (The oldest document of the human race, 1774–1776) offers an interpretation of the first few chapters of the Bible. Herder, the knowledgeable literary critic, builds a convincing case for an allegorical interpretation of *Genesis* 3, only to declare that such a reading is insufficient and leads merely to superficial moral teachings. Instead, he reads the account of the fall as history, maintaining, unlike many eighteenth-century theologians, the truth of original sin as an anthropological fact. His major contribution to the philosophy of history, the famous *Ideen zur Philosophie der Geschichte der Menschheit* (Ideas for a philosophy of the history of mankind, 1784–1791), seeks to establish the purpose of the human race from a Christian metaphysical point of view and to define that purpose as the practical application of humanitarian ideals.

While Herder continued to write about many aspects of the arts and letters and devoted himself (frequently in co-

operation with Goethe) to careful study of the natural sciences, during his Weimar years he published with increasing frequency works specifically on religion. His book *Maran Atha, das Buch von der Zukunft des Herrn* (Maran Atha: The book of the coming of the Lord, 1779) represents Herder's poetic explanation of *Revelation*, one of the books in the Bible that rationalistic theologians found quite unacceptable. He wrote *Briefe, das Studium der Theologie betreffend* (Letters concerning the study of theology, 1780–1781) to serve as a handbook for students of theology, offering exegetical insights into the Old and New Testaments. Herder had become much more orthodox during his Bückeburg years, although questions of dogma never occupied a place of great importance in his scheme of thought. The study *Vom Geist der Ebräischen Poesie* (On the spirit of Hebrew poetry, 1782–1783) views the Old Testament as the greatest poetry given to humankind and therefore as a revelation of the ultimate truth. Pietistic influences were in part responsible for this view. Such influences were strong in Herder's youth and were renewed through his conversations and correspondence with Countess Maria Eleanora of Schaumburg-Lippe in Bückeburg and the Swiss pastor Johann Kaspar Lavater (1741–1801), both Pietists. Although Herder in *Gott: Einige Gespräche* (God: Some conversations, 1787) appears to embrace the ideas of Barukh Spinoza (1632–1677), there is widespread agreement that he was not a Spinozist because of his decisive disagreement with the deists. Rather, it is agreed that he used Spinoza's thoughts to clarify his understanding of God. Herder saw God as existing in the world, yet he refused to limit God's existence to this world. This was Herder's method in most of his writings. He reacted critically to what others had written and offered his own insights, yet he rarely presented his ideas in a systematic fashion. His was the role of a fruitful critic more than that of a builder of a complete worldview. The fact that others have seized upon his ideas and developed them constitutes his contribution and his significance.

**SEE ALSO** Pietism.

#### BIBLIOGRAPHY

The standard edition of Herder's works is *Herder's Sämtliche Werke*, 33 vols., edited by Bernhard Ludwig Suphan, Jakob Balde, Carl Christian Redliche, Otto Hoffman, and Reinhold Steig (Berlin, 1877–1913; reprint, Hildesheim, 1967). A comprehensive and up-to-date analysis in English of Herder's contribution is Robert Thomas Clark's *Herder, His Life and Thought* (Berkeley, Calif., 1955), regarded as an authoritative account of Herder's far-reaching ideas. Rudolf Haym's *Herder nach seinem Leben und seinen Werken*, 2 vols. (Berlin, 1880–1885) deserves and receives continued admiration. A helpful study of Herder's theological position is Michael F. Möller's *Die ersten Freigelassenen der Schöpfung: Das Menschenbild Johann Gottfried Herders im Kontext von Theologie und Philosophie der Aufklärung* (Frankfurt am Main, Germany, 1998). On Herder's life as a minister of the church, there is useful information in Eva Schmidt, ed., *Herder im geistlichen Amt* (Leipzig, Germany, 1956); and in Wilhelm-Ludwig

Federlin's *Vom Nutzen des geistlichen Amtes: Ein Beitrag zur Interpretation und Rezeption Johann Gottfried Herders* (Göttingen, Germany, 1982). A detailed summary of Herder's hermeneutical work is in Thomas Willi's *Herders Beitrag zum Verstehen des alten Testaments* (Tübingen, Germany, 1971).

FRIEDHELM K. RADANDT (1987 AND 2005)

## HERESY

*This entry consists of the following articles:*

AN OVERVIEW  
CHRISTIAN CONCEPTS

### HERESY: AN OVERVIEW

The term *heresy* derives from the Greek *hairesis*. In classical Greek this word has a variety of meanings, all based on the verb *haireo*: "seizure" (of a city), "choice," "election," and "decision or purposive effort." This last meaning is the starting point for the Hellenistic and Christian use of the term to mean "doctrine," "school," or "received opinion," emphasizing the idea of a free decision or free choice of a doctrine or doctrinal authority. The word thus becomes a technical term for a philosophical school, a party, or a religious doctrinal system and its adherents. The term is applied to Stoics, Pythagoreans, Sadducees, Essenes, Pharisees, and Christians (see *Acts* 5:17, 24:5, 24:14, 26:5, 28:22). Neither in Greek nor in Hellenistic Jewish usage does the word have a negative, derogatory sense; it is an entirely value-free designation.

This situation changes with dramatic suddenness, however, with the rise of Christian literature. The New Testament already uses *hairesis* in a negative sense (see *1 Cor.* 11:19, *Gal.* 5:20, *2 Pt.* 2:1); the word therefore conveys suspicion, according to Heinrich Schlier. The semantic development in the direction of "sect, division, erroneous teaching" that is thus initiated continues in the early church; *hairesis* becomes a technical term for "heresy" and is applied primarily to the gnostics but also to Greek and Jewish "sects." (The older meaning of "doctrinal opinion, received view" is inflected, not completely but in large measure, in the direction of "erroneous teaching, false belief.") As Schlier says, "Hence the concept does not owe its meaning to the development of an orthodoxy. The basis of the Christian concept of *hairesis* is to be found in the new situation created by the introduction of the christian *ekklesia*. *Ekklesia* and *hairesis* are material opposites" (Schlier, 1964, vol. 1, pp. 182–183).

Despite this, the concept of heresy acquired sharp definition only gradually from the second century on; its distinction from the concept of schism took even longer. Furthermore, the process here described was not entirely comparable to the development in Judaism, although there was a strict temporal parallelism: From the end of the first century *hairesis* and the corresponding Hebrew word *min* were used in the derogatory sense of "heresy" and were applied to Christians and Gnostics, among others. One presupposition of this development was the emergence of rabbinical orthodoxy after Jamnia (c. 100).

This brief history of the term, the details of which are fascinating but cannot be presented here, shows in archetypal fashion the characteristic elements in the Christian understanding of heresy. This understanding was already present in the New Testament and did not have to wait for the coming of the later orthodox great church, although because of the "apostolic" authority the church had acquired in regard to doctrine, scripture, and episcopal office, the distinction between heresy and orthodoxy came to be more clearly drawn as the church developed, thus allowing the opposition to emerge with full clarity.

**SCHOLARLY THEORIES ABOUT HERESY.** The science of religions borrowed the term *heresy* from Christian usage as fixed in canon law and, as a result, has been very much influenced by the history of the Christian church. The traditional view of "orthodoxy" and "heresy" as equivalent to "true" and "false" was first challenged by Martin Luther in his disputation with Johannes Eck at Leipzig (1517), where he let himself be drawn into saying that even councils (of the church) can err, as they did in the case of Jan Hus. Luther and his disciples, though themselves branded as heretics by Rome, did not further develop this aspect of their critical revision of church history. As a result, the opposition of orthodoxy and heresy reappeared within Protestantism itself (the terminology used by the early church in dealing with heretics served as justification). Only after the appalling experience of the seventeenth-century religious wars were minds ready for another view of the matter.

In his *Unparteiische Kirchen- und Ketzerhistorie von Anfang des Neuen Testaments bis 1688* (Impartial History of the Church and Heresy from the Beginning of the New Testament to 1688, published in 1699), Gottfried Arnold (1666–1714), a German Pietist theologian, attempted to show that Christian truth is to be found among heretics, schismatics, and sectarians (mystics), and not in the great church itself or in orthodoxy. Although Arnold simply offered a kind of inverted church history in which heresy, especially the views of the mystics, and not orthodoxy was given the seal of approval (by "impartial" Arnold meant "nonconfessional"), his book exercised an important and mellowing influence and blazed a trail for the ensuing period. Among his successors were J. L. von Mosheim (*Ketzergeschichte*, 1746–1748), C. W. F. Walch (*Historie der Ketzerzeiten*, 1762–1785), F. C. Baur (*Die christliche Gnosis*, 1835; *Lehrbuch der christlichen Dogmengeschichte*, 1847, 1858; *Das Christentum und die christliche Kirche der ersten drei Jahrhunderte*, 1853, 1963), Adolf von Harnack (*Lehrbuch der Dogmengeschichte*, 1886, 1909), and Adolf Hilgenfeld (*Die Ketzergeschichte des Urchristentums*, 1884).

Toward the end of the nineteenth century, the work of the Religionsgeschichtliche Schule paved the way for a still more penetrating historical view of heresy and orthodoxy, not only because early Christianity came to be understood and interpreted in the context of its environment, but also because the barrier raised by the canon (considered to be the

New Testament) was dismantled, and the New Testament was increasingly recognized as presenting only some of the many theological concepts and ideas of early Christianity. It became increasingly difficult to make a distinction between heresy and orthodoxy. The multiplicity of competing statements of faith regarding the “saving event” in Jesus Christ and its theological explanation showed ever more clearly that at the beginning of the church’s history neither heresy nor orthodoxy was sharply defined or patent; both were concepts developed later.

This view of the matter has been presented most notably by Walter Bauer in his well-known book *Rechtgläubigkeit und Ketzerei im ältesten Christentum* (1934; *Orthodoxy and Heresy in Earliest Christianity*, Eng. trans. of 2d ed., 1971). A critical study of the early sources for the history of Christianity in Egypt, Syria, Asia Minor, and Greece shows that in these ancient Christian centers the Gnosticism later judged to be heresy was evidently regarded as Christianity. An orthodoxy came into being as the result of a lengthy historical and theological process. From a confrontation with other doctrines and practices something emerged that was to be regarded as the orthodox doctrine and practice: a canon, an episcopal office that drew its legitimacy from succession to the apostles (who were subsequently promoted to be the founders of the principal episcopal sees), baptism, imposition of hands, and eucharist.

**A MORPHOLOGY OF HERESY.** This understanding of the origin of heresy and orthodoxy derived from the history of the Christian church is to a great extent valid for the history of religions. Bauer’s thesis is therefore important also for the general study of religions. To that extent the unreflective, traditional concept of heresy is no longer applicable today; it must yield its place to the historical insight that *heresy* and *orthodoxy* are relative terms for religio-historical processes of quite different kinds. In any case the history of religions has no room for a theological and dogmatic judgment of these processes. It uses the concepts as purely historical categories or, better, as umbrella terms that make it possible to manage, in some degree, the multiplicity of contents presented by the history of religions. The history of religions cannot indeed bring about a revision of historical writing that would discard concepts that bear the mark of history. It can, however, exert a very healthy influence on the discussion of this subject by giving a critical presentation of historical events and causes that have led to oppositions between heresy and orthodoxy, which, in turn, have so often had tragic consequences. From the standpoint of comparative religion, an understanding of the applicability of the concept of heresy can shed light on the concept itself.

**Religions in which heresy does not appear.** Strictly speaking, it is possible to speak of “heresy,” “schism,” or “sect” only in connection with a certain type of religion, namely, religions founded by an individual or, as this author prefers to call them, “confessional religions.” For in all the ancient popular religions that were not explicitly traced back

to a founder or that did not have their own canonical document containing a revelation (as, for example, do Zoroastrianism and Judaism) there was no such thing as a “schism” or a “heresy” in a strict and specifically religious sense. This is to be accounted for by the fact that in these religions the particular religion or cult of the gods was coextensive with the people as a whole, that is, religion and national community were inseparable. An “apostasy” from the official cult binding on all meant a withdrawal from the nation; in other words, apostasy brought exclusion from the civic community (for the Germanic community this meant “outlawry”). Furthermore, the idea of a binding confession in the sense of a kind of rule or norm of faith was wholly alien to such a national or popular religion. As a result, divergent views on, for example, the nature of the gods or similar subjects did not immediately lead to a break with tradition and thus to divisions. Popular religions were therefore essentially tolerant and as long as there was no attack on the central cultic life showed themselves liberal toward the cults of other gods.

For illustration of this spirit one need only recall the *interpretatio* of foreign gods, a tested means of adapting and of establishing equivalences. Communities or associations were of course to be found within popular religions, but they were for the most part simply specific manifestations of religio-social life, as, for example, the mysteries based on the ancient cults of the gods. There was no place for “orthodoxy” and “heresy” in the mysteries; indeed, a person could become an initiate in several mysteries. Nor do the groups and associations found in the religions of illiterate tribes form an exception to this rule. When there are no fixed norms set down in the doctrine of an exclusive community there is no room for “heresy.”

In this world of national and tribal religions there was, however, an area that served as a very sensitive touchstone of orthodoxy in a broad sense of the term: the area of cult or worship. Here there was indeed the basis for a parting of the ways. It can be said that in a national or popular religion heresies and schisms in the narrow sense did not arise, because the necessary presupposition was lacking, but that on the other hand an individual could bring about a reordering, restructuring, or reformation, which then led to the founding of an entirely new religion or to a new cult. The occasion for such an innovation was almost always a radical critique of the traditional cult and of the sacred tradition closely connected with it. Zarathushtra (Zoroaster), the Buddha, and Muḥammad are the outstanding examples of this phenomenon. In the case of the Buddha, it is true, his community was initially only one philosophico-ascetical group among others. Also to be mentioned here is the pharaoh Akhenaton (Amunhotep IV), who failed in his attempt to introduce monolatry into Egypt.

There was still another area in national or popular religions in which divisions and formations of schools could arise: the area of philosophy, in Greece or ancient India, for example. The formation of new philosophical schools repre-

sented an “apostasy,” or deviation from a doctrine; in fact, the Greco-Christian concepts of “heresy,” “schism,” and “sect” were derived precisely from this area of ancient cultural life. The concepts belong primarily to the philosophical and not the religious tradition. It is remarkable how ingenious Hinduism has been in reincorporating the “heresies” that spring from attitudes toward the Vedas. Hinduism is a popular religion (it may be said to be the only Indo-European one still in existence) that has a religious authority, namely the Vedas, as its guiding principle. As a result, a distinction is made between “orthodox” heretics and radical negators such as the Jains, Buddhists, and Sikhs. It is clear from this that the formation of heresies or schisms is connected with an authoritative revelation, whether this takes the form of a canonical document or a person.

**Religions that give rise to heresy.** Turning to religions that have a founder, one finds a radically different situation. (These “confessional religions” are not, it should be noted, identical with “world religions,” and it is better to avoid the unfortunate term *revealed religions*, because it has too many theological associations.) All of the religions in question—Judaism, Zoroastrianism, Buddhism, Christianity, Manichaeism, and Islam—lay claim in one way or other to a normative doctrine. This does not from the outset always take the form of a fixed confession of faith, but there is at least a definite conception of faith and doctrine or, better, a central nucleus of doctrine that is used to separate “true” from “false” and that has taken written form in a sacred canon (thus “religions of the Book”). Such doctrines are, for example, monotheism or Yahvistic henotheism in Israel; the ethical dualism of Zarathushtra; the Buddha’s knowledge and practice that lead to deliverance; faith in Jesus of Nazareth as the Christ; the ontological and anticomic dualism of Mani; the confession of Allāh and of Muḥammad as his messenger.

The historian of the “confessional religions” mentioned above is familiar also with their slow maturation from preliminary stages and their development of a central doctrinal core that then became a distinguishing orthodoxy or orthopraxis. Orthodoxy is not present from the beginning as a fixed quantity (Islam is no exception here, though it might seem such at first glance). It is always a secondary development, establishing itself in the confrontation of divergent interpretations of the founder’s “original teaching.” Walter Bauer’s thesis regarding the slow development of Christian orthodoxy from a number of divergent but, in the beginning, equally acceptable trends in early Christianity is to a large extent valid for the history of religions in general. Orthodoxy is in every case an interpretation of the doctrine or message that the founder has left behind and that frequently shows a lack of internal harmony, to say nothing of the fact that it is usually transmitted only in oral form. On the one hand, it is this state of the founder’s teaching that leads to a struggle among the groups that subsequently form within the religious community. Local and social differences also play a

part. On the other hand, while the preaching of a founder is indeed open to numerous interpretations in matters of detail, the fact is that once the tradition originating with him has been fixed in writing, his teachings as a whole take on a particular shape and form. The result is a certain uniformity among all his followers in regard to the basic norms of doctrine, belief, and behavior.

**How heresy develops.** In those religions that give rise to the development of heresy, a number of stages mark the process. Even in the lifetime of a founder there may already be disagreements on matters of doctrine or behavior (e.g., between the Buddha and Devadatta on questions of asceticism). The many-sidedness and occasional lack of clarity in the founder’s teachings lead, especially after his death, to the formation of groups in the original community (groups that initially had more or less equal standing). In the struggle among these groups, one group emerges—often as the result of a compromise—that interprets and transmits the founder’s heritage in an “orthodox” way. As a result, a point is reached at which there can be heresies or the formation of sects in the strict sense of these terms. (It has been seen in the case of the Christian concept of heresy that the existence of a “church” plays a normative role even before the rise of an “orthodoxy.”)

It is difficult at times to determine how one particular movement is able to establish itself as orthodox. In most cases this movement or school preserves the heritage of the founder in a balanced and fully satisfactory way. In some cases only a rough determination of orthodoxy is reached; the result is the continued existence of groups with equal standing (as in early Indian Buddhism and the later Buddhism of East Asia; also in earlier Zoroastrianism as opposed to the official Zoroastrianism of the Sasanids). Islam too may be mentioned in this context because there is no “church” with an attendant hierarchy. The consensus of scholars who act as representatives of the community of believers becomes a regulating agency (the same holds for Judaism). Ideally, however, it is for the caliph as head of the community (*ummah*) to suppress heretics (*kāfirs*) and innovators (*mubtadi*’).

A tense opposition between “orthodoxy” and “heresy,” “church” and “sect,” marks the entire history of the founded religions and is also one of their fruitful major themes. Using the history of the Christian church as an example, Ernst Troeltsch has very impressively described this process as one of conflict between the institutional principle and the principle of voluntarism, both of which are contained in the gospel.

**Causes of the rise of heresy.** In parallel fashion it is possible to distinguish the following causes that lead to some typical forms of heresy:

1. *Dogmatico-theological questions* understood as problems of doctrinal tradition and their interpretation (personal factors may at times play a role here, e.g., the apostasy of disciples). This cause is admittedly seldom found in a pure form

(as Troeltsch established in connection with Christianity), but it is a main factor in almost all confessional religions (think of Jewish Christianity or Marcionism). Doctrinal questions supply the ideological backbone of almost all heresies and sects (e.g., Mazdaism or the Islamic Shī'ah sects); every "heresy" seeks doctrinal justification as an expression of its immediate self-consciousness.

2. *Questions of lifestyle* or, if the reader will, of ethics and morality (in any case, problems of practice). Frequently these are directly connected with the questions mentioned above or else are consequences of divergent doctrines. In most instances sects follow a "radical" line and thus tend to extremism (e.g., in questions of asceticism or discipline in religious orders, as in Buddhism and also in Christianity).

3. *Questions of ritual and cultic observance.* Once again, these are usually connected with doctrinal problems but rarely in "book religions" as distinguished from "cultic religions." Even Christianity, a book religion, has known such cases: The controversy over the date of Easter in the second century, for example.

4. *Social problems*, which are closely connected with moral and ethical problems. Socio-revolutionary movements come under this heading. Marxist analysis and more recent sociological analyses have shed a great deal of light on this area, showing that a good many heresies have been the expression of critical situations in society (e.g., medieval heretical movements in Christianity and Islam, or the recent "religions of imminent salvation" in nonliterate cultures). Following Troeltsch, English sociologist of religion Bryan R. Wilson has interpreted modern sectary movements within Christianity, especially in the Anglo-American world, as expressions specifically of social protest and has once again shown that periods of social unrest are privileged times for the rise of sects. Social tensions and pressures in a society that is sustained and given its impress by an "established church" lead to movements of religious protest directed against state and church as a single undivided power. In the Middle Ages such movements appeared as "critical" manifestations within feudalism and asserted themselves most clearly in "heretical" movements (Bogomils, Albigensians, Waldensians, and so on). The important part played by this sort of background should not, however, lead one to interpret every religious sect or heresy as a crypto-revolutionary movement. There is good reason to reject the old ahistorical underestimation of such causes, but one should not replace it with a one-sided overestimation of them.

5. *Political causes.* These are often closely connected with the social causes described above, because the politico-religious ambitions of a stratum or class usually also involve social interests that can lead to divisions within an established religion of the type being discussed here. In Islam, for example, the vast majority of Shī'ī and other sects or heresies are religio-political movements that have been sparked by concrete disputes concerning, for instance, the position of

the community leader. Or, they are simply a consequence of the overall structure of Islam.

6. *Cultural, anthropological (racial), and ethnic factors* that are evident in Islam, in the history of the Eastern Christian church, and, to some extent, in Buddhism, for example, are factors that do not, of course, operate in isolation. Also to be mentioned under this heading is the continued influence of past forms of religion, the various forms of "paganism," for instance, which either give the impulse to emerging heresies and divisions or at least supply them with ideological material. Striking examples are Gnosticism, Manichaeism in the Iranian world, and the rise of the Nusayriyah and the Druze in the Islamic world.

7. *The figure of a charismatic leader* often plays a role that should not be underestimated in the separate or combined operation of these various factors. The leader has an important part in shaping a heresy and its further course. The leader can develop from the founder of a sect into the founder of a new religion.

**A HISTORICAL EXAMPLE: GNOSTICISM.** One of the most striking examples of a heresy that had its own original worldview but on encountering another religion (Christianity) became part of its history, is Gnosticism, or Gnosis. In it one is confronted with a cosmopolitan or ecumenical form of religion that is largely parasitical in character. By way of lay intellectuals it made its way into the Christian community as early as the time of Paul or, to put it differently, it attached itself to certain Christian ideas. The result was a development that turned a pre-Christian religious movement into a Christian heresy or, more exactly, a distinct movement or sect in the church. There can be no doubt of this in view of the different roles played in Gnostic systems by the spiritual man who founds a Gnostic sect and by Jesus Christ as authoritative bringer of revelation, and in view, too, of Gnosticism's very different soteriology. But before the point was reached at which Gnosticism became a heresy or sect, it was in many places the church itself, with its own scriptural tradition and exegesis. It is known from numerous Gnostic writings that the Gnostics regarded themselves as the real Christians and intended to be the true church. To Celsus, of course, the Gnostics were Christians. There were groups of Gnostics who formed tightly knit churches, as the letters of Paul, the *Gospel of John*, and the Nag Hammadi writings show in their different ways; even Irenaeus, a father of the church, admits this. Gnosticism was therefore not natively an anti-Christian or antiecclesial movement. Its entire exegesis of scripture disproves this interpretation. It was turned into such by the heresiologists, who, like Paul before them, initiated a process of elimination to which Gnosticism finally fell victim.

The reaction of Irenaeus provides a good mirror in which to study this development. He equates gnosis with paganism; in fact, he attacks the Gnostics as worse than the pagans, a view fully justified from a historical standpoint. He sees them as imitators of the pagans and yet not as genuine *pagani* but rather heretics of the Christian age who disagree

with the church on the real origin of things and on true Christian doctrine. Unlike Hegeppus and Hippolytus, Irenaeus knows nothing of an earlier prehistory of gnosticism and is familiar only with Simon Magus as founder and first heretic. To a great extent, Irenaeus's view of the matter determined the course followed by subsequent heresiologists: They knew Gnosticism only as a Christian heresy (a conception that only slowly yielded its place to another during the nineteenth and twentieth centuries).

It was in the confrontation with gnosticism (including Marcionism) that ecclesial orthodoxy took form. Scholars have always realized that this process of distinction and separation was of radical importance, but they have not always understood what the process meant for both sides. It is more than a simple coincidence that to a great extent both the church and the Gnostic "heretics" used the same arguments in their disputes, especially the arguments from tradition and from the unbroken line of witnesses. Both sides made use of the same proofs, as a study of Irenaeus and the texts of the Christian Gnostics shows; these proofs were those of apostolic authority, scriptural exegesis, and tradition. Tradition provided the Gnostics with an impregnable fortress: the secret tradition that is for practical purposes identical with liberating knowledge and that has been entrusted solely to spiritual persons or initiates, and is completely kept from the ignorant (see, for instance, the *Gospel of Thomas*). Recent studies have shown that on certain points of his terminology for the church, Irenaeus was dependent on the gnostics; for example, *diadoche* and *paradosis*, used in connection with the principle of succession, were already current terms among the gnostics. This is why Irenaeus was unable to get the better of the Gnostics with arguments of this kind, even though he repeatedly attempted to do so.

Irenaeus's principal weapon, however, was the concept of gnosis itself: "Irenaeus uses the concept of gnosis to distinguish between Church and heretics by focusing the entire dispute on the fundamental and always presupposed attitude of the human person to revelation and God" (Norbert Brox, *Offenbarung, Gnosis und gnostischer Mythos bei Irenaeus von Lyon*, Salzburg, 1966, p. 170). Another and quite different way of attaining true gnosis, a way essentially different from that of the Gnostics, is available to human beings: the way of humble knowledge of the order of salvation that is attested in scripture, handed on by the apostles, and described in the church's teaching and preaching and that is explained, of course, by Irenaeus himself. True (ecclesiastical) gnosis thus becomes a standard by which heretical gnosis is shown to be an erroneous figment of the imagination. This example makes clear the complicated way in which the distinction between heresy and orthodoxy was achieved and how the two could not become distinct without having first fertilized one another.

Similar processes are to be seen at work in other sectors of the history of religions. Islamic orthodoxy took over to a large extent the philosophical terminology, though classified

as heretical, of the Mu'tazilah who had assimilated the Hellenistic heritage. Both Shi'is and Sunnis developed their own *sunnah* or religio-legal tradition and claimed justification for it in Muhammad (in the case of the Shi'ah, by way of 'Alī, Fātimah, and their sons as the Prophet's spokesmen). In Zoroastrianism the problems of monotheism and dualism, which had their basis in the theology of Zarathushtra, led alternately to orthodoxy and heresy, a process in which the civil authorities played a part. Thus the religion of the god of time (Zurwān) was dominant in the later Arsacid and early Sasanid periods as the accepted interpretation of the Zoroastrian tradition. Later on, however, especially once the Zoroastrian religion had been outlawed, this form became a heresy to be bitterly opposed, and modern Persis even reject as non-Zoroastrian a dualist interpretation of the message of Zarathushtra. Thus it is made repeatedly clear that the relation between heresy and orthodoxy is one of interplay that does not permit historians of religion to pass any clear value judgment on the matter; rather they see in this situation clear evidence of the dynamism and vitality of religion.

Revised Bibliography

## HERESY: CHRISTIAN CONCEPTS

Heresy is one of the most explosive terms in Christian vocabulary. Although the term has served a constructive role in Christian self-definition almost from the first days of the movement, modern sentiments have tended to view this label as offensive, unhelpful, and unnecessary.

The problem is that terms of self-definition are coined to describe perceptions of boundaries from the viewpoint of insiders, and, in the customary use of the terms, from the perception of the winners. The terms, then, are not neutral and unbiased, nor do disinterested observers determine their use. The debates between heretics and the orthodox are disputes over the adequacy and accuracy of a tradition's essential boundaries by those who have a vested interest in the tradition. The losers will protest any label that marks them as outsiders. Such disputes are customary in the process of self-definition of ideologically defined systems.

In religious communities, the inside is frequently labeled *orthodox*, which in the Christian tradition has tended to identify Roman Catholic (including its breakaway subspecies, Protestant) and Eastern or Greek Orthodox churches. In the discussion that follows, this broad tradition will be identified by the term *church*. This use of the word *church* is somewhat problematic, for both the heretic and the orthodox claim the title as rightfully theirs. But scholarship has been unable to come up with acceptable neutral replacement terms. Since the Catholic and Orthodox churches have rep-

resented the majority of Christians throughout most of Christian history, and since they are heirs of the early tradition that began to distinguish between orthodoxy and heresy, the application of the label *church* to these churches is appropriate.

The word *heresy* (Greek, *hairesis*) occurs nine times in the New Testament; the word *heretic* occurs once. The term *heresy* occurs elsewhere throughout early Christian literature, in Jewish writings of the period (LXX, Philo, Josephus), and in wider Greek literature. Its earliest meaning was choice; it came to mean party or school and sometimes, more pejoratively, a faction or sect. Ecclesiastical use took the term even further in that negative direction, where it came to be used almost exclusively for heresy or heretical group. But whatever the nuance, from neutral to hostile, *hairesis* primarily distinguished groups from others of similar kind; in each of its uses, the idea of boundaries is clear, if not central.

Modern discussions of heresy routinely point out that the Greek term for heresy originally simply meant choice. Some have implied, based on a common fallacy that a word's etymology is the best clue to its meaning, that the negative connotation the term *heresy* came to carry in Christian use is a betrayal of the original neutral sense of the word. But the meaning of a word is more accurately determined by its use in context, not in some etymological quest. Thus, a word means whatever it is made to mean by a particular community. The concern to downplay the negative meaning that Christian use has given the term *heresy* reflects the modern agenda, which generally finds the term distasteful; it does not uncover a supposedly right or better meaning of the term.

Heresy is one of several conditions labeled by the church as hazardous. Schism, apostasy, and belief in another religion or in no religion are others. Heretics, apostates, and schismatics are more closely related to the church than others, for they had at one time been insiders. Heretics still consider themselves insiders, although the church rejects them for having willfully rejected some essential element of faith. Apostates, like heretics, were once insiders, but they have rejected the faith, willfully and in toto. They chose to be outsiders, and they are so counted by the church. Schismatics had also once been insiders. Unlike heretics and apostates, however, schismatics have not rejected essential elements of the faith either in part or in full; rather, they have rejected the recognized authoritative apparatus and discipline of the church in some way. Pagans (or heathens or infidels) and atheists, unlike the other three groups, are not defined in terms of a past association with the church. The church's most difficult labeling has been whether to judge a group as schismatic or heretical; all the other categories are clear.

**THE EARLY ASSESSMENT OF HERESY.** From the early church's viewpoint, heresy and heretics were as dangerous a foe as the church would encounter, for heresy targeted the essentials by which the group's self-understanding had significance and substance. From the earliest Christian writers who addressed perceived dangerous deviations in beliefs, unmis-

takably sharp language was used routinely. Those who distorted the truth were "ravening wolves," according to the author of *Acts* (20:28–31). Ignatius of Antioch (c. 35–c. 107) called teachers of error "tombstones and sepulchers" (*Letter to the Philadelphians* 6.1). Their beliefs were "not the planting of the Father" (*Letter to the Philadelphians* 3.1); rather, they were "wicked offshoots, which bear deadly fruit" (*Letter to the Trallians* 9.1). The fate of heretical teachers and their followers is "unquenchable fire" (*Letter to the Ephesians* 16.2).

By the latter part of the second century, numerous books attacking Christian heretics circulated. The best known of these was written by Irenaeus, Bishop of Lyons. His massive treatise against Gnosticism, *Detection and Overthrow of the Pretended but False Gnosis* (more often referred to simply as *Against Heresies*), became a template for other refutations of heresy.

The church claimed to possess "the faith that was once delivered to the saints" (*Jude* 1:3)—the true apostolic faith. Early Christian leaders recognized the need to trace heresy to another source, one more hostile and foreign to the circle of Jesus and the apostles, for if the heretics could successfully press their claim that their traditions stemmed from Jesus or the apostles, the heretics might be the faithful bearers of truth and the church itself the heretic. Christian heretical groups understood this principle as keenly as the orthodox did, and they made every effort to locate their traditions in *Letter to the Ephesians* teaching or that of Jesus' close associates. The Gnostics, for example, spoke of secret knowledge that had been handed down privately by Jesus to a few select disciples, and finally to the Gnostics. But the church countered, tracing Gnostic heresies back to the arch-heretic Simon Magus, who according to early Christian tradition was condemned by Peter himself (*Acts* 8:9–25).

The church, largely through its antiheresy writers, presented a strict schema of the relationship between orthodoxy and heresy. Orthodoxy came first; heresy, a deviation from the truth, came later. As Origen, the leading theologian of the third century, declared: "All heretics at first are believers; then later they swerve from the rule of faith." That view was taken up in Bishop Eusebius's *Church History*. His work, which covered Christianity's first three hundred years, informed Christian understanding for centuries after that.

**TOOLS AGAINST HERESY.** Given that heresy was perceived to endanger the essence of Christian faith, the church quickly developed tools by which to identify and curb heresy. During the second century, four tools began to be refined: canon, creed, clergy, and councils. By the fourth century, these had reached a fairly stable structure.

**Canon.** The canon (scripture) was the collection of approved writings judged to have authoritative status. By the end of the first century, many of Paul's letters had been collected and were in distribution. By the end of the second century, a collection not unlike the present New Testament was

in wide use. Two concerns prompted the establishment of a canon. Some groups, such as the Marcionites, rejected documents that were treated by the church as authoritative. Other groups, such as the Gnostics, promoted new documents to support their novel theological positions, and they presented these documents as authoritative. Against such interests, the church approved a formal canon, which specified the books that had authoritative status and from which the church could distinguish orthodox from heretical beliefs. The claim was that the church's canon had apostolic authorship or authority.

**Creed.** The creed (from the Latin *credo*, "I believe") was a condensed statement of essential beliefs, and in substance and structure reflected the Rule of Faith referred to in second- and third-century writings. The interrogatory form of the creed ("Do you believe. . .") appears to have been the earlier, being used as a test of the orthodoxy of a candidate prior to baptism; from the mid-fourth century, the declaratory form ("I believe. . .") became more familiar. The primary creed (Niceno-Constantinopolitan, or more simply Nicene) was established by the councils at Nicaea (325 CE) and Constantinople (381 CE), and confirmed at Chalcedon (451 CE). The creed helped to consolidate the core beliefs of widely dispersed churches, and it provided a condensed test by which to distinguish the heretic from the orthodox.

**Clergy.** By the early second century, principal authority was being consolidated in the hands of the local bishops, under whom were presbyters (priests) and deacons. Toward the end of the century the concept of apostolic succession was developed. This linked the bishops in a line back to the apostles; through this line of bishops the truth was passed on and guaranteed. The church argued that those outside the bishop's church could make no comparable claim or offer such certain guarantee.

**Councils.** Bishops frequently met in councils to regulate the faith. Creeds were approved there, and individuals were frequently tried and condemned as heretics at the sessions. Bishops were expected to enforce the council's judgment against people in their own territories who confessed the condemned belief. The effectiveness of this repression often depended on which side a bishop or the emperor supported. The Arian-Nicene conflicts of the fourth century illustrate that a decision by a council did not always bring about immediate conformity.

These early tools were so effective that they continued to be used as the principle machinery for identifying and confronting heresy well into the modern period.

**TREATMENT OF HERETICS.** In the early centuries, the charge of heresy would have brought social stigma within the Christian circle, but little else. The earliest punishment for heresy was excommunication, which meant that heretics were excluded from the fundamental rite of the church, the Eucharist. Such exclusion was often, in itself, the most effective tool by which to recover erring members.

In the early 300s, Emperor Constantine converted to Christianity. The state and church became allied in common cause, and the power of the church increased considerably. Under a Christian empire, the charge of heresy brought serious legal jeopardy, as well as social stigma. In the interests of consensus, Constantine called the first Ecumenical (universal) Council at Nicaea in 325 CE to deal with what came to be known as Arianism, part of the broader trinitarian controversy. This debate focused on the relationship of the Son (Logos) to the Father. Arianism, the loser in the debate, came to be viewed as the archetypical heresy. Many of the beliefs that were condemned as heresy following the Arian controversy were responses to questions that arose from the Arian debate; most therefore dealt with some question about the nature of Jesus (Monophysitism, Nestorianism, Monothelism, together referred to as the Christological controversies).

The Christian state treated heretics much the same as the pagan state had treated all Christians prior to Constantine's conversion. In each case, the condemned faced serious legal jeopardy, with potential loss of property, and exile or execution. Heresy was pronounced a capital crime in 380, and by the 1200s burning at the stake had become the common fate of heretics.

At times, the interests of the church and state clashed, and sometimes the political leaders were more sympathetic with the theologically losing side (the heretics), which then placed the orthodox in jeopardy. But, in theory, church and state saw themselves with common interests and allied in a common cause. In the modern period, few church-state alliances exist, and individuals now judged as heretics are at risk of excommunication by the church, but little more.

It may seem that the church was often involved in the suppression of heretics. In theory, however, it was difficult for someone to earn the label "heretic." One must not only have held a heretical belief; one must have held it willfully and obstinately. To distinguish between degrees of heresy, the church spoke of objective (material) heresy and the more serious kind, formal heresy.

**MEDIEVAL HERESIES.** After the great trinitarian and Christological controversies of the fourth and fifth centuries, the fight with heresy subsided, as such beliefs were largely vanquished (as with Arianism) or were located in lands no longer under the church's control (as with Monophysitism and Nestorianism, which largely had come under the new Muslim empire in the 600s). Muslims became the more serious threat to both eastern and western Christians.

By the 1100s the western church and papacy were at the height of their power. At the same time, scholastic speculation flourished as Europe became reacquainted with lost elements of classical learning, new reformist monastic orders and lay movements challenged the norm, and a sense of truth and error was sharpened from European Christendom's conflict with Islam. Crusades against the Muslim infidels in the Holy Land were easily turned to crusades against Christian

heretics within Europe as a developing medieval consensus brought a reinvigorated scrutiny of ideas.

The medieval approach to heresy differed from ancient practice. Suspect beliefs were simply associated with some ancient error, which had already been stamped as heretical by the ancient church. Such was the case with the dualism of the Cathars in southern France, condemned as a revival of Gnostic and Manichaean ideas rejected by the church a thousand years earlier. Once a contemporary belief had been linked to an ancient heresy, the church could act to suppress the group that espoused such views without engaging in the kinds of debates by which the ancient church had worked out boundaries between orthodoxy and heresy.

The zeal against heresy and the techniques employed by orthodox authorities varied from place to place. The Spanish Inquisition and the crusades against the Cathars mark what are viewed as the most notorious aspects of the medieval church's suppression of heresy (with witnesses coerced and confessions gained under torture). Other efforts included the establishment of the Dominican order in the early 1200s; its mission was to correct heretical beliefs by focused and informed preaching. Shortly after the rise of Protestantism, the Catholic Church formed the Congregation of the Holy Office (now called the Congregation for the Doctrine of the Faith) to deal with heresy. To help check the spread of heretical ideas, it developed an Index of Forbidden Books (which had force from 1559 to 1966).

**HERETICS RECONSIDERED.** The charge of heresy was frequently brought against reforming critics of the church, as well as against those whose theological stances departed from the core of Christian faith. Such treatment often emboldened the critics, who charged that the ecclesiastical elite were the real heretics and enemies of Christ. Indeed, the fourteenth-century English reformer John Wyclif spoke of the pope as antichrist, as did various monastic reformers. Many were burned at the stake for such opinions.

In the early 1500s the situation changed with the rise of Protestantism. Although the church quickly labeled Protestants heretics, the political environment worked in their favor. Local princes, often in sympathy with the Protestant cause, protected the reformers from the usual fate of heretics, and Emperor Charles V, a zealous Catholic, had too many political worries to focus his attention on an insignificant monk such as Martin Luther. Within two decades of Luther's initial protest in the early 1500s, many of the nations and principalities of Europe had Protestant governments. These lands became zones of safety for the new Protestant heretics. This marks the beginning of a pluralism that broke apart the Western medieval consensus. Only in the older, ecclesiastically uniform society had there been sufficient power in the mere labeling of heresy to guarantee effective action against such beliefs.

Interestingly, Protestantism retained, largely intact, the concept of heresy held by the Catholics, for Protestants were

as keenly aware of the importance of boundaries. Although at points they disagreed with Catholics as to what constituted heresy, Protestants generally used the same tools by which Catholics had marked off boundaries. Protestants accepted the canon (though they excluded the Apocrypha), and they retained the Creed. The developed hierarchical structure of the church posed more difficulty, particularly regarding the authority of the bishop of Rome, though with some modification Protestants retained clergy and councils, for they feared heresy as much as Catholics did, and they needed appropriate tools to suppress it. John Calvin's approval of the burning of Michael Servetus for Arian-like beliefs and the general Protestant suppression of Anabaptists suggest that the Catholic and Protestant understandings of heresy differed very little. Further, both Catholics and Protestants agreed with the early church's labeling of the ancient Christian heretics. They differed only in regard to which early heresy they accused the other side of espousing.

Some within the Protestant movement developed a more sympathetic reconsideration of groups that had fallen under the judgment of the church. In 1699, Gottfried Arnold, a German Pietist, put forward a daring reassessment of the past in his *Impartial History of the Church and Heresy from the Beginning of the New Testament to 1688*. Emphasizing practical piety over dogma, Arnold reversed the labels: those previously branded as heretics were approved; their orthodox oppressors stood condemned. Some later histories reflect his influence.

**Early Christianity reconsidered.** More significant challenges to the church's use of the term *heresy* came in the 1800s and 1900s. Although the challenges were quite diverse, all provided grounds for challenging the church's claim that its faith had remained unchanged from the beginning. This muted the church's dismissal of supposedly heretical beliefs on the grounds that heretical beliefs were not identical with the faith of the apostles, for the church's own beliefs were found to reflect development and change.

Four modern reconstructions of Christianity's early period were influential. First, Ferdinand Christian Baur and the Tübingen School argued that second-century Christianity reflected a synthesis of opposing first-century Petrine and Pauline interpretations of the Christian message. Second, theories of Max Weber and Ernst Troeltsch allowed orthodoxy to be treated by many as an unfortunate institutionalization of Christianity, contrary to the spirit of Christianity's original charismatic structures. Third, Walter Bauer argued that in many areas of the Roman Empire the so-called heretical forms of Christianity came first. For Bauer, the concept of an original apostolic orthodoxy was a fiction of the church at Rome, which that church developed in the second century to extend its influence throughout the empire. Fourth, under Bauer's influence, scholars began to speak of the multiple forms of Christianity in the first century, tracing trajectories from each of these into later centuries. That gave heresy roots as ancient as orthodoxy could claim.

These reconstructions challenged the traditional definition of orthodoxy—what was believed everywhere by everyone at all times—expressed by Vincent of Lerins in the 400s. If Christianity never had an original uniform message that preceded all other interpretations of the Christian message, then the terms *orthodoxy* and *heresy* appear to lose their power as markers of the inside and the outside. Orthodoxy would become, as Bauer contended, merely the heresy that won out. All beliefs would seem to have an equal claim to authenticity within the Christian circle.

**The label *heresy* reconsidered.** Many modern scholars object to the use of the term *heresy*, finding it problematic for numerous reasons. First, high stakes are connected to the labeling, for those outside the church are considered to be in deadly error and damned. That judgment seems too uncompromising in the modern world, where societal consensus is rarely achieved and where diversity is the norm and toleration is applauded. Second, the use of the label has shifted over time and place, raising questions about the validity of the application of such a term as a reliable boundary marker for what the church claims to identify: truth from error. Third, the labeling is one-sided, and those marked as heretics have routinely protested, for their perceptions of the boundaries are different, and they claim to be as much a part of the Christian inside as anyone else. Fourth, even though the church framed its debate against heresy in terms of truth and error, it is clear that the labeling of heresy was frequently usurped in the interests of political or social agendas, for common cause against movements of protest or rebellion was often more easily marshaled if the action was seen primarily as a suppression of heresy.

Modern scholars, both ecclesiastical and secular, are rarely interested in the accuracy of the various claims to truth and accusations of error that have marked the Christian discussion of orthodoxy and heresy. Rather, they are curious about the process and players in labeling and drawing of boundaries, and they usually emphasize the political and social aspects in the suppression of heresy, which undeniably were there. In this context, sociological theories of deviance may be particularly illuminating. Matters of social control, power relationships, consensus, and the labeling of normality and deviance are intelligible to both the church and its scholarly critics, for the church's drawing of boundaries to mark off heresy parallels in many ways the drawing of boundaries that most societies engage in to mark off deviance.

In illuminating Christian treatment of heresy, the paradigm of deviance works best, however, for the period of the imperial church and later. For the initial stages of Christian self-definition, the church's fixation on truth and error remains something of an enigma. The modern discussion has shown little capacity to appreciate this interest, which the church has always claimed marked one of its primary concerns.

**CONCLUSION.** The term *heresy* carries the weight of two millennia of Christian use. It is used less often now, as the Chris-

tian church has come to recognize the shifting boundaries of orthodoxy over the ages and the excesses that the regulation of belief has fostered. Increasingly, the tendency has been to expand the inside, to admit a wider pluralism within the boundaries of authentic Christianity. The devastating religious wars of the 1600s, the relativizing influences of the Enlightenment of the 1700s, the ecumenical efforts of the 1800s and 1900s, and modern scholarly reconstructions of earliest Christianity have led many Christian groups to emphasize the commonalities rather than the differences among Christian communities. The positions espoused by the World Council of Churches (founded in 1948) and by Vatican II (1962–1965) reflect the new attitudes.

In the modern period, heresy is out of vogue. Without broad social consensus, the charge of heresy is neither effective nor feared; it brings no legal jeopardy and little, if any, social stigma. In this context, Christianity struggles to maintain a balance between absolute relativity, where concepts of truth and error have little substance, and dogmatic certitude, which has a tainted past.

#### BIBLIOGRAPHY

For a general introduction to heresy in the Christian tradition, see G. R. Evans, *A Brief History of Heresy* (Oxford, 2003). For a more full treatment of specific heresies from an orthodox viewpoint, see Harold O. J. Brown, *Heresies: The Image of Christ in the Mirror of Heresy and Orthodoxy from the Apostles to the Present* (Garden City, N.Y., 1984); reprinted as *Heresies: Heresy and Orthodoxy in the History of the Church* (Peabody, Mass., 1998). Maurice Wiles examines the history of Arianism, the quintessential heresy that resurfaced from time to time in Christian thought, in his *Archetypal Heresy: Arianism through the Centuries* (Oxford, 1996). For medieval heresies, see Jeffery Burton Russell's *Dissent and Order in the Middle Ages: The Search for Legitimate Authority* (New York, 1992). Most books on the Protestant Reformation will address the problem of heresy in some way. A solid analysis of the issues is provided in Euan Cameron's *The European Reformation* (Oxford, 1991). The adaptation of Christianity to the modern world is carefully discussed in Jaroslav Pelikan's *Christian Doctrine and Modern Culture (since 1700)*, vol. 5 of *The Christian Tradition: A History of the Development of Doctrine* (Chicago and London, 1989). The other volumes in this series are also useful in a study of the Christian concepts of orthodoxy and heresy. The most influential work challenging the traditional view of the character of earliest Christianity is Walter Bauer's *Rechtgläubigkeit und Ketzerei im ältesten Christentum* (Tübingen, Germany, 1934), particularly its English translation, *Orthodoxy and Heresy in Earliest Christianity*, edited by Robert A. Kraft and Gerhard Krodel (Philadelphia, 1971). H. E. W. Turner's *The Pattern of Christian Truth: A Study in the Relations between Orthodoxy and Heresy in the Early Church* (London, 1954) is the most

substantial reply to Bauer. For works on the early church reflecting the influence of Bauer, see Robert Wilken, *The Myth of Christian Beginnings* (Garden City, N.Y., 1971, reprint 1980); and Gerd Lüdemann, *Heretics: The Other Side of Early Christianity*, translated by John Bowden (Louisville, Ky., 1996). James M. Robinson and Helmut Koester extended Bauer's theories by tracing trajectories from the first century into later centuries in *Trajectories through Early Christianity* (Philadelphia, 1971). For the application of sociological theories of deviance to the problem of heresy, see John Barclay, "Deviance and Apostasy: Some Applications of Deviance Theory to First-Century Judaism and Christianity" in *Modelling Early Christianity: Social-Scientific Studies of the New Testament in its Context*, edited by Philip F. Esler (London and New York, 1995), pp. 114–127; and Sheila McGinn, "Internal Renewal and Dissent in the Early Christian World" in *The Early Christian World*, edited by Philip F. Esler (London and New York, 2000), vol. 2, pp. 893–906.

THOMAS A. ROBINSON (2005)

**HERMENEUTICS.** The term *hermeneutics* is derived from the Greek verb *hermēneuein* ("to interpret") and refers to the intellectual discipline concerned with the nature and presuppositions of the interpretation of human expressions.

**INTRODUCTION.** The Greek term has etymological associations with the name of the Greek god Hermes, the messenger of the gods and the deity of boundaries. Some have seen this association as reflecting the inherently triadic structure of the act of interpretation: (1) a sign, message, or text from some source requires (2) a mediator or interpreter (Hermes) to (3) convey it to some audience. So considered, this deceptively simple triadic structure implicitly contains the major conceptual issues with which hermeneutics deals: (1) the nature of a text; (2) what it means to understand a text; and (3) how understanding and interpretation are determined by the presuppositions and beliefs (the horizon) of the audience to which the text is being interpreted. Serious reflection on any of these three issues reveals why interpretation is itself a philosophical issue and a subject of interpretation.

Since interpretation is fundamental to all the intellectual disciplines—to the natural sciences as well as the humanities—one might have expected hermeneutics to have arisen earlier in Western culture than it did. Although there were many controversies within Judaism and Christianity concerning the interpretation of the Bible—just as pre-Reformation humanists were concerned with the exegesis of the texts of antiquity—it was not until the middle of the last century that modern hermeneutics was born. Friedrich Schleiermacher (1768–1834) is generally acknowledged to be the founder of modern hermeneutics, but it was Wilhelm Dilthey (1833–1911) who first dreamed of developing a foundational discipline for the cultural sciences (*Geisteswissenschaften*) that would render their conclusions as objective and as valid as those of the natural sciences.

Dilthey's dream was overtaken by the rapid emergence and proliferation of the many specialized disciplines that are now recognized and preserved by the organizational structure of the modern university—art history, anthropology, economics, history, the various literatures, political science, psychology, philosophy, and so on. Each of these disciplines rapidly developed its own intellectual interests and normative procedures for the presentation and adjudication of arguments within them. Methodologies rather than hermeneutics dominated intellectual life.

In recent years, however, powerful intellectual currents have brought hermeneutics once again to the fore, so that interest in it has burgeoned among literary critics, sociologists, historians, anthropologists, theologians, philosophers, and students of religion. These currents include (1) new theories of human behavior in the psychological and social sciences in which human cultural expressions are regarded as manifestations of unconscious and instinctual drives or as reflections of class interests; (2) developments in epistemology and the philosophy of language that have led to claims that what counts as reality for a given culture is a function of the linguistic structures superimposed on experience; and (3) the arguments advanced by philosophers such as Ludwig Wittgenstein and Martin Heidegger that all human experience is basically interpretative, and that all judgments take place within a context of interpretation mediated by culture and language behind which it is impossible to go. Underlying all these currents is the assumption that human consciousness is situated in history and cannot transcend it—an assumption that raises important questions concerning the role of cultural conditioning in any understanding.

It would be an error, however, to conclude from this new interest in hermeneutics that Dilthey's dream of a universal foundational discipline for the cultural sciences is about to be realized. Even a superficial glance at the contemporary intellectual scene reveals little agreement concerning how hermeneutics is conceived or how the discipline should proceed. The intellectual disciplines constituting the modern university have themselves been fractured into parties, each of which has its own method and mode of interpretation. In psychology, for example, there are behaviorists, cognitive psychologists, Freudians, Jungians, and Gestaltists, just as in the social sciences there are functionalists, structuralists, ethnomethodologists, and Marxists.

Paradoxically, it is just this proliferation of parties that partially accounts for the resurgence of interest in hermeneutics in the early twenty-first century. Diversity and conflict of interpretations historically have provided the stimulus and the urgency for acquiring understanding and agreement. Dilthey pointed out, for example, how the rise of modern hermeneutics was itself closely connected with the post-Reformation debates among Protestants and Catholics over the interpretation of Scripture, just as Schleiermacher's own attempt to establish a universal hermeneutics was admittedly prompted by the attempt to overcome misunderstanding.

The incommensurate perspectives that disciplines may adopt concerning the same object (such as a text, language, or human nature) raise profound questions about the nature of human conceptualization, objectivity, understanding, explanation, and translation. Hence it is not surprising that, for many intellectuals, hermeneutics is increasingly coming to occupy the role that epistemology did a few decades ago.

The problems of hermeneutics are more unavoidable in the scholarly study of religion than in many other academic disciplines, for reasons both conceptual and historical. Conceptually, religions themselves may be regarded as communities of interpretation, so that the scholarly study of them takes the form of an interpretation of an interpretation. Since the scholarly interpretation of religion most often rests on different assumptions than the religious interpretation itself, the religious participant frequently regards the scholar's interpretation as reductionistic and alien. Hence there is a perennial debate among scholars of religion regarding the degree to which the scholarly interpretation of religion must do justice to the believer's own point of view.

Historically, the scholarly study of religion—as well as the rise of modern hermeneutics—is closely associated with the religious tradition of liberal Protestantism. Indeed, liberal Protestantism might be said to have emerged through a series of bitter hermeneutical debates concerning the application of historical-critical methods to the Christian Bible. These debates illustrate the phenomena discussed at the beginning of this paragraph, since orthodox Christians regarded the application of these methods to the Bible as an alien mode of interpretation. Liberal Protestantism resolved the issue by defining the essence of religious faith as experience rather than doctrine or historical belief.

Schleiermacher, the founder of hermeneutics as well as of liberal Protestantism, was particularly influential in articulating the outlines of this compromise. He regarded the various religions as culturally conditioned forms of an underlying and universal religious sensibility. Thus he not only moved the locus of faith from belief to experience, but also laid the foundations for a descriptive science of religion to which Rudolf Otto (1869–1937), Joachim Wach (1898–1955), and others were to contribute. This close connection between liberal Protestantism and the scholarly study of religion partially accounts for the fact that liberal theologians have been particularly sensitive to theories of interpretation.

Many scholars would insist that, to answer the many questions arising from the activity of interpretation, it is important to have a hermeneutical theory. Others, however, would insist that the great mistake distorting all modern hermeneutics is precisely the lust for some such theory. Rather than prejudice the issue from the outside by describing alternative hermeneutical theories, this article shall roughly delineate four ways in which modern hermeneutics may be conceived, each of which is dominated by a distinctive question:

1. What is it to understand a text and what are the conditions of its possibility?

2. How are the cultural sciences distinct in method and form from the natural sciences?
3. What are the conditions that make any sort of human understanding possible?
4. How can one resolve certain conceptual puzzles associated with concepts like *understanding* and *meaning*, and how might such a resolution help one to understand the task of interpretation?

Each of these questions, and the conception of hermeneutics it yields, often overlaps with the others, and a theorist of one type may also deal with issues characteristic of another. Nevertheless, these four ways are sufficiently distinctive to be a useful heuristic device for organizing what follows.

**HERMENEUTICS AS INQUIRY INTO THE INTERPRETATION OF TEXTS.** Modern hermeneutics had its origins in attempts to solve problems and conflicts concerning the interpretation of texts; Schleiermacher is usually regarded as the originating figure. Although there were debates before his time concerning the difference between sacred and profane interpretation, it was Schleiermacher whom Dilthey properly called the “Kant of hermeneutics,” because Schleiermacher argued that Scripture required no special type of interpretative procedure, and grasped that the fundamental issue was to develop the basic grammatical and psychological conditions necessary for the understanding of any text whatsoever. It was Schleiermacher again who saw that the nature of language was the crucial theoretical issue confronting hermeneutical theory, because one could gain access to another person's meaning only through the medium of language.

**Authorial Intention.** Schleiermacher's hermeneutical theory is organized around two foci: (1) the grammatical understanding of any characteristic modes of expression and the linguistic forms of the culture in which a given author lived and which conditioned that author's thinking and (2) the technical or psychological understanding of the unique subjectivity or creative genius of that author. Both these foci reflect Schleiermacher's own indebtedness to Romantic thinkers who had argued that any individual's mode of expression, however unique, necessarily reflects a wider cultural sensibility or spirit (*Geist*). A correct interpretation requires not only an understanding of the cultural and historical context of an author, but a grasp of the latter's unique subjectivity. This can be accomplished only by an “act of divination”—an intuitive leap by which the interpreter “relives” the consciousness of the author. By seeing this consciousness in the larger cultural context, the interpreter comes to understand the author better than the author understands himself or herself.

Schleiermacher's hermeneutics have not had a great influence on secular literary criticism in either England or the United States, although most literary criticism until the 1920s generally assumed that the aim of interpretation was to discover the intention of the author. In the last several decades, however, most literary criticism has been built on the assumption—classically enunciated by T. S. Eliot in his essay

“Tradition and the Individual Talent” (1919) but argued on other grounds by Freudians, Marxists, New Critics, structuralists, and deconstructionists—that a literary text has its own afterlife independent of the author, and that to understand it has little or no relationship to understanding the author’s intentions when writing it. In recent years, however, some critics have rediscovered Schleiermacher and reaffirmed his view that some form of authorial intent must be the foundation of a theory of objective meaning. E. D. Hirsch, Jr., for example, has argued in *Validity in Interpretation* (1967) that, if interpretation is to avoid pure subjectivity and arbitrariness, there must be some criteria for determining the correct meaning of a text. This in turn, says Hirsch, requires some theory of determinate meaning. Anyone concerned with objectivity will be driven logically to some discriminating norm, and “the only compelling normative principle that has ever been brought forward is the old-fashioned ideal of rightly understanding what the author meant” (p. 26). This has led Hirsch and others to deal with the many problems this position raises. However, while this view represents the common sense of most laypersons, it is not now widely shared by most literary critics, who have developed hermeneutical theories rejecting authorial intent as the norm of meaning.

#### Schleiermacher and the Interpretation of Religion.

So far as the interpretation of religion is concerned, Schleiermacher’s influence is to be found less in his hermeneutical theory, which is dominated by the problem of recovering the author’s meaning, than in his views that (1) religiosity is an essential and *a priori* aspect of human nature and (2) language is the medium of all understanding. The first assumption has elicited many attempts to develop what Paul Ricoeur has called a “regional hermeneutics”: rules governing the interpretation of religious expressions as a unique and autonomous type. One of the earliest and most influential of these attempts was Rudolf Otto’s analysis of the “numinous” in his famous book *Das Heilige* (1917; Eng. trans., *The Idea of the Holy*).

Less explicitly indebted to Schleiermacher, but based on the same assumption of the universality of human religiosity, was the very influential work of Mircea Eliade. He argued that the basic structure of religiosity can be seen most clearly in archaic religions in which human life is regarded as part of a living cosmos. Profound connections are said to exist between the rhythms of human and cosmic life. Myths and religious symbols are systems of micro-macrocosmic correspondences and analogies. Human fecundity, for example, is seen as recapitulating the pattern of divine fecundity. All human activities are thus sanctified and made meaningful. This assumption led Eliade to explore the many variants of certain recurring symbols in the world’s religions, as for instance the sacred tree, stones, snakes, fish, and water.

**HERMENEUTICS AS FOUNDATION FOR THE CULTURAL SCIENCES.** A second way of thinking about hermeneutics is to regard it as providing a foundational discipline for the cultural in contrast to the natural sciences. This discipline would

presumably establish the boundary lines separating the various generic types of interpretation—literary, artistic, philosophical, legal, religious, and so forth—and would establish the methods and normative canons of objectivity and validity for each type. It would, in short, be a universal hermeneutics. Wilhelm Dilthey is generally regarded as the most important exponent of this view of hermeneutics, and the Italian historian of law Emilio Betti is perhaps its best-known contemporary advocate. Although profoundly influenced by Schleiermacher—at an early age he wrote a prize essay on Schleiermacher’s hermeneutics, and later a monumental biography of him—Dilthey rejected Schleiermacher’s assumption that every work of an author is an outgrowth of an implicit principle contained in the author’s mind. Dilthey considered this assumption to be profoundly antihistorical, because it does not sufficiently take account of the external influences at work or the author’s development. Moreover, Dilthey thought that a universal hermeneutics required the elaboration of epistemological principles that would serve the cultural sciences in the way that Kant’s principles accounted for Newtonian physics. If Kant developed a “critique of pure reason,” then Dilthey devoted his life to a “critique of historical reason.”

**Cultural versus Natural Sciences.** Dilthey’s hermeneutics quite obviously rests on a sharp distinction between the methods of the cultural and those of the natural sciences. The distinctive method of the cultural sciences is understanding (*Verstehen*), whereas that of the natural sciences is explanation (*Erklärung*). The natural scientist explains events by employing universal laws, whereas the historian neither discovers nor employs such laws but, rather, seeks to understand the actions of agents by discovering their intentions, purposes, wishes, and character traits. Such action is intelligible because human actions, in contrast to natural events, have an “inside” that others can understand because they too are persons. Understanding, then, is the discovery of the “I” in the “Thou,” and it is possible because of a shared universal human nature.

Insofar as Dilthey’s hermeneutics rests on understanding as a distinctive act that requires an imaginative identification with past persons, one can discern the influence of Schleiermacher. But Dilthey developed an elaborate and complex theory of experience (*Erlebnis*) and its relationship to various forms of expression that constitutes nothing less than the philosophical anthropology and epistemology he thought necessary to establish hermeneutics as a foundational discipline of the cultural sciences. Dilthey was never able to complete this enterprise in a way satisfactory to himself or others, and its complexities defy any brief exposition here. Suffice it to say that it contained a sophisticated analysis of the temporality of experience and the way in which human experience is bound together by units of meaning that are subconscious and prereflective. These meanings become objectified in human expressions. He held that one’s knowledge of one’s own experience as well as of the experience of others

is available only through these objectified expressions. Consequently, one comes to know human nature through historical knowledge, that is, through understanding the varieties of objectified forms in which humanity has expressed its own experience of life. Ultimately, history is the variety of ways in which human life has expressed itself over time. Indeed, one can grasp one's own possibilities only through historical reconstruction and understanding. Through understanding (*Verstehen*) of the life-expressions (*Lebensäußerungen* and *Erlebnisausdrücke*) of past persons, one comes to understand the humanity of which one is a part.

**Weber and Wach.** Like Dilthey, the German sociologist Max Weber (1864–1920) was preoccupied with establishing the objectivity of the results of the cultural sciences, but he was even more interested in the status of generalizations in political economy and sociology. His work therefore stands at the juncture between the humanities and the social sciences. He was interested in the logical relationships between understanding and explanation. Though sympathetic to Dilthey's attempts to establish the autonomy of understanding, he was also interested in generalizations about human collective actions—generalizations he hoped could be made as objective and scientific as those in the natural sciences. His analysis and classification of types of social actions, and his delineation of ideal types, are attempts to solve these conceptual problems. Unlike Dilthey, he was especially interested in the interpretation of religion. His *Sociology of Religion* (1904–1905) is one of the great works in the comparative study of religion, and his *Protestant Ethic and the Spirit of Capitalism* (1922), although now dated in important respects, is one of the influential books in modern sociology.

The significance of Dilthey and Weber for hermeneutics lies primarily in (1) their minimalization of the concern for recovering the author of the text, and their extension of hermeneutics to cover all forms of cultural expression and actions; (2) their efforts to work out the logic of understanding as an activity unique to the cultural sciences; and (3) their attempts to ground the possibility of understanding in some theory of the structure of human nature and its expressions (Dilthey) or of types of social action (Weber).

The hermeneutical theories of Schleiermacher, Dilthey, and Weber deeply influenced the work of Joachim Wach, a German sociologist of religion who immigrated to the United States in 1935. Wach wanted to establish the interpretation of religion as an objective descriptive discipline free of the normative claims of Christian theology. For him as for Dilthey, the proper starting point for such a discipline was the establishment of the necessary conditions for understanding (*Verstehen*). Wach, like Schleiermacher, believed that *Verstehen* generally requires a type of empathy, but that in religion it specifically presupposes a basic "sense for religion" that Wach then explicated in terms of Schleiermacher's notion of an inherent religious propensity in human nature. Wach argued that religions are the expressions of this sense for religion. The challenge of religious studies, then, is to de-

velop a logic of the forms of religious expression, a theory of religious symbolism and language. Wach himself concentrated on arranging and classifying the forms of religious expressions—for example, the theoretical, practical, and sociological, which he then further subdivided and explored.

The attempt to construct a universal hermeneutics for the cultural sciences inevitably leads the theorist to propound some theory of human nature and its expressions. Having uncovered the radically different forms of consciousness and belief exemplified in history, for example, Dilthey then thought it important to develop a psychology that would account for this diversity of worldviews while affirming the "unity of human nature" that made it possible for an interpreter in one culture to understand a person in a strange and different culture. But, it may be asked, how can the appeal to some abstract principle such as the "unity of human nature" aid an interpreter who is actually confronted with cultural expressions so different and strange that a sympathetic act of understanding seems impossible? Dilthey never solved this problem.

**Psychological Theories.** The degree to which one's hermeneutics is a function of one's view of human nature is most dramatically illustrated by modern psychological theories such as those of Freud and Jung. Here human expression and behavior are explained and understood in terms of unconscious psychical forces. As Paul Ricoeur has shown, Freud's theory of the unconscious led him not only to broaden the theory of human expressions so as to include dreams and slips of the tongue as "texts" but also to propose a hermeneutics in which art and religion were also seen as containing unconscious meaning. According to Freud, for example, religion is best understood as the expression of unconscious wishes rooted in infantile helplessness and molded by the "family romance" in which Oedipal sexual wishes play an important role. Consequently, religion is regarded as a collective neurosis and evaluated negatively. Thus not only does Freud's hermeneutics reject "authorial intent" as a superficial category, but it proposes a different meaning for the classical hermeneutical dictum that the interpreter can better understand an author than the author understands himself. For Schleiermacher and Dilthey, this dictum meant that the interpreter better understands the cultural and linguistic context that conditions the author, and of which the author is unaware. For Freud, this dictum means that the interpreter has the theoretical key to unlock the unconscious meanings of which no past author could possibly be aware. The interpreter understands more scientifically the unconscious drives, instincts, and mechanisms of repression that determine a given form of expression. Texts are semiotic codes for which the scientific interpreter alone holds the key.

**HERMENEUTICS AS REFLECTION ON THE CONDITIONS OF ALL UNDERSTANDING.** Given the way in which reflection on understanding necessarily drives one to consider basic epistemological and anthropological issues, it should not be surprising that the philosophy of Martin Heidegger (1889–

1976) has been so influential at the turn of the twenty-first century. In *Being and Time*, Heidegger, although profoundly influenced by Dilthey, argues that Dilthey was finally unable to overcome the subjectivistic tendencies of Western thought since Descartes—tendencies that have led to a peculiar dilemma in epistemology, and to a seductive preoccupation with the cognitive ideals of the natural sciences and technology. Crucial to Heidegger's analysis is the argument that human beings already find themselves in a world made intelligible to them by virtue of what he called "the forestructure" of understanding, that is, the assumptions, expectations, and categories that one prereflectively projects on experience and that constitute the "horizon" of any particular act of understanding. An analysis of "everydayness" reveals that what is regarded as problematic as well as intelligible becomes so only against the backdrop of the tacit, prereflective understanding one already possesses. In all explanation one discovers, as it were, an understanding that one cannot understand; which is to say, every interpretation is already shaped by a set of assumptions and presuppositions about the whole of experience. Heidegger calls this the hermeneutical situation. He means that human existence itself has a hermeneutical structure that underlies all one's regional interpretations, even those in the natural sciences. One's prereflective understandings are modified and corrected as they become more self-conscious in the encounter with texts, objects, and other interpretations.

Heidegger's thought has been influential in several directions, two of which are important for religious studies: the interpretation of religion and the conception of hermeneutics generally. Rudolf Bultmann (1884–1976), a German New Testament scholar and theologian, saw in Heidegger's analysis of human existence the conceptual basis for an exegesis of the New Testament whereby its basic religious insights could be extracted from the mythical thought-forms of the first century, in which it was originally expressed. To the complaint that this exegesis employed modern presuppositions, Bultmann replied that all exegesis is determined by certain philosophical presuppositions; the only question is whether these are correct. He believed Heidegger to be correct because Heidegger had discovered the inherent historicity of human existence; that is, how it is essentially constituted by acts of decision rooted in a self-understanding oriented toward the future. Moreover, Heidegger had shown that genuine historical understanding requires the encounter with past expressions of human self-understanding that can modify one's own. In this sense, the act of historical understanding has an element that resembles the act of appropriation of a religious message. Although Bultmann was primarily interested in the implication of Heidegger's work for the interpretation of the New Testament understanding of faith, the same hermeneutical procedure could be employed on other religious phenomena, as Hans Jonas has done in his well-known work *The Gnostic Religion* (1958).

It is Hans-Georg Gadamer (1900–2002), however, who in a major work, *Truth and Method* (1960), has done more

than any other thinker to reconceive hermeneutics along Heideggerian lines. His theory also involves a criticism of previous conceptions of hermeneutics such as those of Schleiermacher and Dilthey. The difficulty with Schleiermacher's hermeneutics, apart from its limitation to the interpretation of texts, is that Schleiermacher (and Dilthey too) assumed that the historical and cultural distance of the interpreter from the phenomena being interpreted necessarily occasions misunderstanding. Gadamer argues, following Heidegger, that interpretation also assumes a context of intelligibility, and that the presuppositions and assumptions—one might say prejudices—of the interpreter are precisely what enable understanding as well as misunderstanding. Consequently, one's own assumptions and beliefs are not necessarily barriers to understanding but preconditions of it. The quest for a presuppositionless understanding is futile. Every text or object is interpreted from some standpoint in a tradition that constitutes the horizon within which anything becomes intelligible. This horizon is continually modified as it encounters objects, but there is no final and objective interpretation.

Gadamer has been criticized by Emilio Betti for destroying any possibility of distinguishing between a subjective and a universally valid interpretation. Betti argues that texts and cultural expressions have meanings independent of the interpreter's opinions, and that the interpreter can provide no canon for distinguishing right from wrong interpretations. Gadamer replies that the task is not to provide norms and rules for interpretation but to analyze the inherent structure of understanding itself—an analysis that reveals interpretation to be as Gadamer describes it.

**HERMENEUTICS AS AN ANALYTIC AND MEDIATING PRACTICE.** There is a fourth way of thinking about hermeneutics that is less easily characterized than the others, because it involves no theory of hermeneutics. Those who think in this fashion are not interested in establishing rules for the interpretation of texts nor in providing foundations for the cultural sciences. Their aims appear to be more piecemeal: to analyze, to clarify, and if possible to resolve conceptual issues surrounding *explanation* and *interpretation* in the various contexts in which they are employed; to establish the logical connections between *meaning*, *truth*, and *validity*; to discover the various normative uses of language; to ascertain what is meant by *rationality* and *irrationality*, especially as it bears on the possibility of translation and the problem of relativism. No one of the various thinkers who think and work in this way may necessarily discuss all these problems systematically, yet the various proposed solutions often bear directly on those problems normally associated with classical hermeneutical theory. For example, some thinkers concerned with the philosophy of science, such as Mary Hesse, have argued that no sharp distinction can legitimately be drawn between explanation and interpretation, since explanations in the natural sciences are as interpretative as those in the cultural sciences. Or again, some philosophers have argued that, since there is no realm of the given to which theories can corre-

spond, the attempt by philosophers since Kant to formulate epistemological theories is a mistake. There is no one right or wrong way to interpret anything, including texts, hence the quest for agreement is not a desideratum.

Generally, this type of thinking about hermeneutics owes much to the writings of Ludwig Wittgenstein (1889–1951), whose later works deal extensively with issues such as “What does it mean to understand?” and “How does one know that another person is in pain?” It was characteristic of Wittgenstein’s approach that no simple summary of his views can be given, since he argued that the function of a philosopher is to analyze carefully the concrete uses in specific contexts of words like *understanding*. He believed that it was a mistake to attempt to provide a general theory of understanding. The mind easily becomes bewitched by such general theories, and this bewitchment is itself the source of most philosophical difficulties and illusions. Instead, one should look at how such words are actually employed and embedded in concrete practices. A few students of religion have argued that this approach has important implications for the interpretation of religion. For example, it has been asserted that the hermeneutical theory of Joachim Wach has excessively constricted interpretation by superimposing a single model upon it.

Although Wittgenstein’s philosophy is often said to be alien to Heidegger’s, there are affinities at surprising points, not the least of which is the notion that explanation and interpretation make sense only within a horizon of presuppositions, practices, and assumptions that individuals’ culture mediates to them—their tradition, so to speak. Wittgenstein, like Heidegger, also saw the human situation itself to be hermeneutical. But unlike Heidegger, he did not think this fact justified the construction of an ontology. Rather, he felt it should be the occasion for the painstaking exploration of the concrete forms of discourse—“language games”—in which human beings engage. There can be only regional explorations of the grammar governing specific forms of expression. Presumably, then, the interpretation of religion ought to devote itself to carefully mapping and exploring those characteristics of the distinctively human form of life one calls religious: its structure, presuppositions, and forms of expression.

#### BIBLIOGRAPHY

- Bauman, Zygmunt. *Hermeneutics and Social Science*. New York, 1978. A discussion of the significance of hermeneutics when conceived as inquiry into the nature and objectives of historical knowledge and of the social sciences. There are chapters on Marx, Weber, Mannheim, Husserl, Schutz, and Heidegger.
- Bernstein, Richard J. *Beyond Objectivism and Relativism: Science, Hermeneutics, and Praxis*. Philadelphia, 1983. A very useful

critical discussion and overview of the debates concerning relativism in recent philosophy, with special attention to the philosophy of science and the hermeneutical tradition represented by Gadamer.

- Betti, Emilio. *Teoria generale della interpretazione*. 2 vols. Milan, 1955. Translated into German by its author as *Allgemeine Auslegungslehre als Methodik der Geisteswissenschaften* (Tübingen, 1967). A criticism of the hermeneutics of Gadamer and the Heideggerian tradition, and a defense of the classical position on objectivity in interpretation. A shorter manifesto is to be found in his *Zur Grundlegung einer allgemeinen Auslegungslehre* (Tübingen, 1954).
- Bultmann, Rudolf. “Is Exegesis without Presuppositions Possible?” and “The Problem of Hermeneutics.” In *New Testament and Mythology and Other Basic Writings*, selected, edited, and translated by Schubert M. Ogden. Philadelphia, 1984. Characteristically lucid attempts by a famous New Testament critic to deal with the problem of objectivity from an existentialist perspective influenced but not determined by Heidegger.
- Dilthey, Wilhelm. *Gesammelte Schriften*. 18 vols. in 20. Stuttgart, 1957–1977. Volumes 5–7 are especially important for understanding Dilthey’s view of historical understanding.
- Eliade, Mircea. “Methodological Remarks on the Study of Religious Symbolism.” In *The History of Religions: Essays on Methodology*, edited by Mircea Eliade and Joseph M. Kitagawa with a preface by Jerald C. Brauer, pp. 66–107. Chicago and London, 1959. A statement of the hermeneutical principles governing research on religious symbols by an influential historian of religion.
- Eliade, Mircea. *The Sacred and the Profane: The Nature of Religion*. New York, 1959. A more general work on the nature of religion.
- Eliot, T. S. *Selected Essays*. New York, 1950. This volume brings together a number of Eliot’s influential writings, including the essay “Tradition and the Individual Talent” (1919), which debunks the “fallacy” of authorial intention.
- Ermarth, Michael. *Wilhelm Dilthey: The Critique of Historical Reason*. Chicago, 1978. A fine scholarly discussion of Dilthey’s attempt to provide theoretical foundations for the human sciences in the light of the exigencies of his own life and the intellectual crisis of the time.
- Gadamer, Hans-Georg. *Truth and Method*. New York, 1975. Perhaps the most influential book in hermeneutical theory of the late twentieth century. Beginning with a critique of aesthetic theory, Gadamer engages in a far-reaching critique of Schleiermacher and Dilthey before exploring the implications of Heidegger’s thought for hermeneutics.
- Heidegger, Martin. *Being and Time*. New York, 1962. Regarded by many as one of the most influential philosophical works of the last century, especially as regards hermeneutics.
- Hirsch, E. D., Jr. *Validity in Interpretation*. New Haven, Conn., 1967. A modern statement of the classical view that the aim of literary interpretation is truth and agreement.
- Norris, Christopher. *Deconstruction: Theory and Practice*. New York, 1982. A useful introduction to the literary theories of deconstructionist critics, especially Jacques Derrida, that reject the assumptions of classical hermeneutical thought.
- Palmer, Richard E. *Hermeneutics: Interpretation Theory in Schleiermacher, Dilthey, Heidegger, and Gadamer*. Evanston, Ill.,

1969. After a useful classification of six modern definitions of hermeneutics and a discussion of the debate between Betti and Gadamer, the author discusses the four major theorists of the title. Contains a very helpful bibliography.

Ricoeur, Paul. *Hermeneutics and the Human Sciences*, Cambridge, 1982. With roots in the French phenomenological tradition, Ricoeur has exerted a significant influence on Protestant theology and hermeneutical theory through his analysis of religious symbolism and his examination of the hermeneutical significance of Freud's view of human nature.

Robinson, James M., and John B. Cobb, Jr. *The New Hermeneutic*. New York, 1964. A collection of essays by German and American theologians dealing with the hermeneutical developments in the Bultmannian school as represented by Gerhard Ebeling and Ernst Fuchs.

Schleiermacher, Friedrich. *Hermeneutics: The Handwritten Manuscripts*. Edited by Heinz Kimmerle, translated by James Duke and Jack Forstman. Missoula, Mont., 1977. An English translation of the various handwritten manuscripts found after Schleiermacher's death, including aphorisms dated as early as 1805 and formal addresses as late as 1829. There is an extremely helpful introduction by Heinz Kimmerle tracing the development of Schleiermacher's thought on interpretation.

Toulmin, Stephen. *Human Understanding*, vol. 1, *The Collective Use and Evolution of Concepts*. Princeton, N.J., 1972. Intended to be the first of three volumes. The author interprets conceptual change in the sciences as rooted in "changing populations of concepts and procedures" that function within intellectual communities. Especially useful for its discussion of the way in which, since Kant, two paradigms of knowing have dominated the Western mind: relativism and formalism.

Wach, Joachim. *Das Verstehen: Grundzüge einer Geschichte der hermeneutischen Theorie im 19. Jahrhundert*. 3 vols. Tübingen, 1926–1933. A massive three-volume history of the problem of hermeneutics that, unfortunately, has yet to be translated. Primarily descriptive and historical, it nevertheless reflects the influence of Schleiermacher and Dilthey.

Weber, Max. *The Methodology of the Social Sciences*. Glencoe, Ill., 1949. Contains some of Weber's methodological essays dealing with the problems of objectivity and value-freeness in the social sciences and the logic of the cultural sciences.

Weber, Max. *Economy and Society: An Outline of Interpretative Sociology*. 2 vols. Berkeley, Calif., 1978. This unfinished masterpiece of Weber contains his *Katagorienlehre*, his basic theory of types and categories of social and economic action, as well as his sociology of religion. There is an extremely useful introduction by Guenther Roth.

Wittgenstein, Ludwig. *Philosophical Investigations*. 2d ed. Oxford, 1958. Although not directly concerned with hermeneutics as traditionally understood, the revolutionary view of language proposed here has had a profound effect on modern philosophy generally. The analysis of *meaning* and *understanding* cannot be ignored by anyone dealing seriously with these issues.

Wood, Charles Monroe. *Theory and Religious Understanding: A Critique of the Hermeneutics of Joachim Wach*. Missoula, Mont., 1975. A published doctoral dissertation; an eminent-

ly readable critique of Wach and, by implication, of the classical hermeneutical tradition from a Wittgensteinian point of view.

VAN A. HARVEY (1987 AND 2005)

**HERMES** was recognized in Mycenaean tablets, and his nature was described in early Greek poems as that of a clever mediator among the gods or between gods and men, or as an archetypal messenger. Hermes gave the kings of Mycenae the scepter of Zeus (Homer, *Iliad* 100–108) and the lamb with the golden fleece, a fatal pledge of royalty for the Pelopides (Euripides, *Orestes* 995–1000). The ancient authors show the Peloponnesus as the most ancient and important environment where Hermes' cult had developed, but inscriptions and monuments show him worshiped everywhere in the Greek world. The Homeric *Hymn to Hermes* describes him as the son of Zeus and the nymph Maia, locates his abode in a cave of Cyllene, and ascribes to him the invention of the lyre, made from a tortoise shell.

Hermes is also reported to have stolen fifty sacred cows from Apollo's herd—he hid the theft by forcing the cows to walk backwards in order to produce reversed tracks. Hermes then discovered a means to light a fire, ritually sacrificed two of the cows, then returned to his cave. Apollo discovered the thief in spite of all Hermes' tricks, but his wrath was assuaged when he saw the lyre and accepted it in exchange for the two cows Hermes had sacrificed. This trade was considered to be the beginning of commerce.

Apollo granted Hermes the power of prophecy known to three sacred women at Delphi, and Zeus made him the lord of every herd and the only messenger to Hades (Homeric *Hymn to Hermes* 550–572). The same myth also appears in the *Ichneutai* of Sophocles (fr. 314 Radt) and a Persian version of a Hellenistic novel, the *Vamiz and Adhra* (see Hägg, 1989). Hermes' symbol is the herald's staff and his speed is symbolized by little wings on his boots and cap. The ancestry of the Attic priests Kerykes (literally, "heralds") descended from Hermes (e.g., Pausanias 1.38.3).

Hermes was also worshiped by shepherds (Semonides, fr.18 Diehl; Homer, *Odyssey* 14.435–436); Pan, the god of sheep farming, was his son. Statues of Hermes often depict him with a ram. In addition, Hermes granted fertility to cattle and was thus often represented as a phallus (Paus. 6.26.5) or as a phallic stele called a *herma*. Like Hercules, Hermes stole cattle from the world of gods in order to take them to the world of humans.

Hermes was worshiped by travelers, whom he protected and guided, and he was the focus of a cult in which heaps of stones where piled near roads (Hesychius, s.v. *hermaioi lophoi*). The mythic origin of these heaps was the trial of Hermes, who was judged by the gods after he had killed Argos, the Argive cowherd, causing Io, a priestess of Hera who had been transformed into a cow, to run away from the herd.

Hermes was charged for this murder, but he was carrying out an order of Zeus when he killed Argos, and the gods voted to acquit Hermes by throwing stones, forming the first hermaic heap. Thus, Hermes was called the Argiphontes (Killer of Argos). The murder of Argos was another crime that caused the passage of cattle from the herd of a god (Hera in this case) to the world of humans. In fact, the temples of Hera at Argos and in other towns owned sacred cows, which were used for sacrifices. The astuteness of Hermes and his friendship with humans earned for him the character of a trickster, a clever inferior god who gave people every means of civilization (Burkert, 1984). Hermes was venerated as a giver of fortune—the adjective *hermaios* meant gainful and the noun *hermaion* referred to an unexpected piece of luck.

The cave of Hermes was a passageway to the netherworld. In the *Odyssey* (24.1–14) Hermes acts as the psychopomp and leads by his staff the souls of the Proci through the cave to the doors of Helios and the asphodel meadows, abode of deceased souls. As messenger of the underground realms, Hermes is often appealed to in curse tablets, or *defixiones*, together with Hades and Persephone. Hermes was sometimes considered an inferior or servant god (Aeschylus, *Prometheus* 954, 966, 983) and his cult included subordinate people and even slaves (Athenaeus 14.636 B), although free people and kings (e.g., Odysseus in Homer, *Odyssey* 10.275–306) were helped by him as well.

Hermes played a role in the rituals that preceded weddings; together with the nymphs, Pan, and Aphrodite, he was worshiped by brides (Torelli, 1977, p. 166). At Samothracia, Hermes was identified with one of the Kabeiroi (*Scholium* to Apollonius Rhodius 1.916), and Herodotus (2.51) maintains that the Athenian phallic *hermae* derived from a Samothracian tradition. Hermes was also worshiped in the mysteries of Andania in Messenia (*Sylloge Inscriptionum Graecarum* 736). By the spring of Salmakis, near Halicarnassos, Hermes and Aphrodite were thought to be the parents of a beautiful boy who was beloved by the nymph of a spring; the boy refused the spring's love, but when he entered the water of Salmakis she embraced him and together they transformed into Hermaphroditos (Ovidius, *Metamorphoses* 4.285–388).

According to Apollodorus (3, 28) and many Greek statues, the child Dionysos was entrusted to Hermes to protect him from the wrath of Hera. Hermes became increasingly important in the education of youth; his image and that of Heracles were the most frequently dedicated in gymnasia. The feature of Hermes as the *hermeneus*, the divine interpreter and god of wisdom, underwent much development after the teaching of Plato (*Cratylus* 407 E–408 B). Thus Hermes became the medium between gods and humans, a medium often thought of as the Logos, the word of god (Diogenes of Babylon, *Stoicorum Veterum Fragmenta*, III, 234–235), the divine revelation, and even the donor of language to humans.

Hermes' image and mythology were lent to the Roman and Italic god Mercurius, who was called Turms in Etruria.

The Falisci worshiped him as Titus Mercus, the Campani as Mirikus. His name indicates that Mercurius was the god of the *merx*, the wares, a god to whom *mercatores* (merchants) were especially devoted. In this capacity, Hermes was normally depicted as holding a money bag. The character of the ancient Mercurius cult in Rome was plebeian; his temple near the Circus Maximus was dedicated in 495 BCE by the plebeian centurion Laetorius (Livius 2, 27, 5–6), and his festival was celebrated on May 15. At Mercurius's spring near Porta Capena, merchants ritually purified themselves and their wares (Ovidius, *Fasti* 5.663–692). The cult was entrusted to the fraternity of the Mercuriales, who were guarantors of commercial law, as the Fetiales were of the law of war.

In the second and first centuries BCE the community of Italic merchants at Delos organized a cult of thanks to the Hermaistai, a body of six magistri (Bruneau, 1970, pp. 585–589). Colleges of Mercuriales were often engaged in the cult of the emperor. In a private cult, Hermes was worshiped and represented in the Lararia. He was thought to be the father of the two Lares, born of Lara, a nymph whom Hermes raped as he led her to the netherworld. Hermes was also reputed to be the lover of the prophetic nymph Carmenta, and with her the father of Evander. People seeking profits threw stones into heaps at crossroads in honor of Mercurius (Martin of Bracara, *Correction of the Peasants* 7). In imperial times Hermes' staff also became a symbol of peace (Gellius 10, 27, 3) and reason (Julian, *Contra Heraclion* 234 B; Ammianus 25, 4, 14).

Hermes granted his image, his name, and his myth to a number of local gods of other cultures so that they could be reconceived in a Greek or Roman fashion. A local Hermes was recognized by Herodotus (5, 7) as the god worshiped by Thracian kings. Among the Germans, Mercurius (identified with Wodan) was worshiped with human sacrifices (Tacitus, *Germania* 9). Among the Gauls, Mercurius was widely worshiped (Caesar, *De bello Gall.* 6, 17, 1), and the Church Fathers condemned human sacrifices in his honor (Minucius Felix, *Octavius* 6, 1; Tertullianus, *Apology* 9; *Scorpiace* 7). The personality of the Roman Mercurius, god of roads and merchants, perhaps also concealed the figure of Teutates, ancient god of the community, who introduced civilization.

In the eastern provinces of the Roman Empire the tendency toward a solar henotheism, supported by Chaldaeans and Stoics, gave Hermes the solar character we find particularly at Baalbek-Heliopolis. Here Mercurius Heliopolitanus was worshiped in a triad composed of him, Jupiter, and Venus; and Hermes was seen as a solar god who protected cattle and vegetation. Hermes was also identified with the morning star, the messenger of the sun called Azizos at Edessa (Julian, *Hymn to Helios* 34). In the Mithraic religion the planetary god Mercurius protected the first initiatic grade and was symbolized by the raven, considered to be the herald of the sun god. The initiates of this grade served as waiters at sacred dinners, according to the function of the god in Olympus.

In Egypt Hermes was identified with Thot, the god of wisdom and the scribe of the gods. Later in imperial times, a new god, Hermanubis, was created in order to identify Hermes with Anubis, who prepared the dead for their travel to the netherworld. Like Hermes, both Thot and Hermanubis hold a herald's staff.

ATTILIO MASTROCINQUE (2005)

**HERMES TRISMEGISTOS.** Identified with Hermes in the *Histories* of Herodotos (fifth century BCE), the Egyptian god Thoth was sometimes called *aa aa ur* (or *paa paa paa*). In the Egypt of the Ptolemies at the beginning of the second century BCE, this epithet was rendered approxi-

mately as *megistos kai megistos theos, megas Hermēs* ("greatest and greatest god, great Hermes") or, more succinctly, as *Hermes Trismegistos* ("thrice greatest Hermes"; Mahé, 1978–1982, vol. 1, p. 1; vol. 2, p. 469).

Because this meaning soon became obscured, the title was reinterpreted in various ways. According to the eighth-century historian George Syncellus, who in part is confirmed by Augustine (354–430 CE), Manethon (third century BCE) supposedly taught that *trismegistos* is the surname of the second Hermes, son of Agathodemon (the Hellenized name of the god Khnum or Kneph) and the father of Tat (another version of Thoth), who is said to have transcribed the teachings of Thoth, the first Hermes, and stored them in Egyptian sanctuaries (Nock and Festugière, 1945–1954, vol. 3, p. 163). These teachings, which had been engraved on tablets by the first Hermes, his grandfather, before the flood, were supposedly discovered and made available in Greek by Ptolemy II Philadelphus (308–246 BCE). Later, a tradition preserved especially by Hermias of Alexandria (fifth century CE) justifies the title *trismegistos* on the basis that Hermes, after three successive reincarnations in Egypt, had "remembered himself" and "recognized himself" (Mahé, 1978–1982, vol. 2, pp. 474–475), a factor that had to be connected to the Hermetic doctrine of rebirth (i.e., *palingenesis*; cf. *Corpus Hermeticum* 13 and Nag Hammadi codex 6.57–59). It must be noted that the title *trismegistos* is bestowed also by Osiris upon Agathodemon (*Fragments Hermetica* 32B).

Thus, that literature in Greek, translated supposedly from the Egyptian (*Corpus Hermeticum* 16.2), that claims to be the teachings of Thoth, the first Hermes, and of his disciples or descendants is called Hermetic. In addition to the names already cited, Hermes Trismegistos converses also with his master Poimandres-Nous ("intellect"; cf. *Corpus Hermeticum* 1.11) and with his disciples Ammon and Asclepius (*Asclepius* 1), grandson of Asclepius-Imhouthes (*Asclepius* 37), himself the son of Ptah-Hephaistos (*Stobaei Hermetica* 23.6). In addition, Isis discusses with her son Horus a revelation from the first Hermes that was given to her by her grandfather Kamephis (*ibid.*, 23.33), probably distinct from Kneph-Agathodemon (Nock and Festugière, 1945–1954, vol. 3, p. 164).

#### INVENTORY AND CHRONOLOGY OF HERMETIC LITERATURE.

To Thoth, the inventor of writing, the ancient Egyptians attributed all sorts of books, especially magical writings, secret techniques employed in temple workshops (e.g., the gilding of statues or the dyeing of fabrics), and theological writings recopied or composed by the priests in the "house of life" (*pransh*; Nag Hammadi codex 6.61.20). Thus the Greek Hermetica that have come down to the present can be divided into two categories: works of occult sciences and philosophical works.

1. Among the works of occult sciences, A.-J. Festugière (1942–1953, vol. 1, pp. 77, 240, 283) distinguishes three kinds: (1) astrology, beginning in the third or second century BCE, (2) alchemy, beginning in the second or first century

BCE, and (3) magic, recorded in papyri of the fourth to seventh centuries CE that reproduce sources obviously much more ancient. The interested reader may turn to Festugière (*ibid.*) for a thorough exposition of this occult literature in all its abundance and great complexity.

2. The philosophical works were originally grouped as collections of the discourses of Hermes with his various disciples or of them among themselves. Of this undoubtedly very abundant literature, still preserved are only some fragments and the texts of a few discourses that have come down to the present through subsequent intermediaries. These may be grouped into chronological order as follows:

- (1) *Fragmenta Hermetica* 1–36 (Nock and Festugière, 1945–1954, vol. 4): various fragments quoted in Greek, Latin, or Syriac by several authors, from Tertullian (second-third century CE) to Bar Hebraeus (1226–1286). To these fragments should be added the Papyri Vindobonenses Graecae 29456r and 29828r (Oellacher, 1951; Mahé, 1984), as well as an Armenian fragment (Mahé, 1978–1982, vol. 2, p. 346; parallel with John Malalas, in Scott, 1924–1936, vol. 4, p. 233) and several Syriac fragments (Brock, 1983, 1984, with some Greek parallels).
- (2) *Asclepius* 1–41 (Nock and Festugière, 1945–1954, vol. 2): a Latin adaptation of *Logos Teleios*, finished probably after 320 and before 410.
- (3) Nag Hammadi codex 6 (Mahé, 1978–1982): codex 6 of the Nag Hammadi collection (c. 340–370 CE), containing Coptic translations of three treatises:
  - (a) Nag Hammadi codex 6.6, preserved without title and currently called *The Discourse on the Eighth and Ninth*;
  - (b) Nag Hammadi codex 6.7, *The Prayer That They Spoke*, parallel to *Asclepius* 41 and to the Papyrus Mimaut (Greek) of Paris;
  - (c) Nag Hammadi codex 6.8, without title, a fragment of *Logos Teleios* parallel to *Asclepius* 21–29 and to three Greek quotations cited by Lactantius around 320, Cyril of Alexandria around 435, and Joannes Stobaios around 500. The allusions of John Lydus (sixth century CE) to this same text can hardly be regarded as mere quotations.
- (4) *Stobaei Hermetica* 1–29 (Nock and Festugière, 1945–1954, vols. 3–4): fragments or treatises quoted in Greek by Joannes Stobaios in his *Florilegium*, which he compiled around 500 for the education of his son.
- (5) *Definitions of Hermes Trismegistos for Asclepius* (Mahé, 1978–1982, vol. 2), translated from Greek into Armenian, probably in the second half of the sixth century CE. *Definitions* 10.7 repeats *Stobaei Hermetica* 19.1; *Definitions* 11 is an interpolation drawn from Nemesius (c. 390 CE).
- (6) *Corpus Hermeticum* 1–14 and 16–18 (Nock and Festu-

gière, 1945–1954, vols. 1–2): a compilation of Hermetic treatises done after Stobaios and before Michael Constantine Psellus (eleventh century BCE). The connection of *Corpus Hermeticum* 18 to Hermetism is debated.

The Arabic Hermetic writings described by Louis Massignou (in Festugière, 1942–1953, vol. 1, pp. 384–400) are mostly original compositions without any direct ties to the Greek Hermetica.

Outside of *Asclepius*, the Middle Ages knew nothing of the philosophical works of Hermes except for some fragments mentioned by a very few Hellenists: *Corpus Hermeticum* 1–14 was translated into Latin by Marsilio Ficino in 1463; *Corpus Hermeticum* 16–18 and a part of the *Stobaei Hermetica* were published shortly thereafter in the sixteenth century; Nag Hammadi codex 6.6, 6.7, and 6.8 were discovered in 1945 but were not made available to scholars until 1970; *Definitions of Hermes Trismegistos for Asclepius* was published for the first time in 1956 in Yerevan, Armenia.

As for dating the composition of the various treatises, the *Logos Teleios* (*Asclepius*, Nag Hammadi codex 6.7, 6.8) is scarcely older than the third century CE. Most of the Greek texts seem to have been written in the second century BCE, yet they rest upon even older sources. Indeed, it is sometimes a case of works or compilations that longer survives such as the *Sayings of Agathodemon* (*Corpus Hermeticum* 10.25, 12.1, 12.8), the *General Discourses* (*Corpus Hermeticum* 10.1, 10.7, 13.1; *Stobaei Hermetica* 4a.1; *Stobaei Hermetica* 6.1; Nag Hammadi codex 6.63.2; *Papyri Vindobonenses Graecae* 29456r and 29828r), the *Diexodica* (*Fragmenta Hermetica* 30; *Asclepius* 1 corr.; Nag Hammadi codex 6.63.3 corr.). In addition, the cited Papyri Vindobonenses Graecae, copied at the end of the second century CE, reveals that at that time a collection of the *logoi* of Hermes to Tat, comprising at least ten treatises, had already been made. Going further, Strabo, on a visit to Egypt in 24–20 BCE, mentions some Hermetic literature that was not only astrological but also philosophical (Festugière, 1942–1953, vol. 1, p. 78). Finally, because *Corpus Hermeticum* 1.31 contains precise allusions to Jewish liturgy, it probably precedes the expulsion of Jews from Egypt after the revolt of 115–117. Yet because *Definitions of Hermes Trismegistos for Asclepius* 9.4 is the source of *Corpus Hermeticum* 1.18, it dates at the latest from the first century CE and could well go back even further (Mahé, 1978–1982, vol. 2, p. 278).

**ORIGINS AND ORIENTATIONS OF THE PHILOSOPHICA OF HERMES.** Although the distinction between the Hermetic writings on the occult sciences and the philosophical works is easily supported by their differences in tone and content, the break is not total between the two genres. The prayer of *Asclepius* 41 (Nag Hammadi codex 6.7) also appears at the end of a magical formula for union with the sun (Mahé, 1978–1982, vol. 1, p. 141), and the magical papyri often contain invocations or myths comparable to those included in the philosophical writings (Festugière, 1942–1953, vol. 1, pp. 296–308; compare with the prayers of *Corpus Herme-*

*ticum* 5, 13, and Nag Hammadi codex 6.6, and with the myths of *Corpus Hermeticum* 1, *Asclepius*, and *Stobaei Hermetica* 23). Furthermore, the alchemical writings contain sentences also found in the philosophical writings (Mahé, 1978–1981, vol. 2, pp. 309–310). Finally, certain philosophical treatises contain magical words and symbols (Nag Hammadi codex 6.56.17f., 6.61.10f., 6.62.10f.), while *Stobaei Hermetica* 6 (to Tat, on the decans) is hardly distinguished from an astrological text except by its parenetic epilogue.

Composed in different periods by different authors, the Hermetic philosophical works do not present a consistent teaching. They can be divided according to two tendencies: The one, which is the greater part, is optimistic; the other inclines toward a rather pessimistic and Gnostic dualism (such as *Corpus Hermeticum* 1, 4, 13; or some passages of *Asclepius*). Furthermore, the origin of this literature poses a complex problem. It cannot be conceded that the Greek texts are translations of ancient Egyptian writings. Indeed, nothing that is directly comparable has been preserved either in hieroglyphic or in demotic Egyptian. The documents that Eve A. E. Reymond calls “ancient Egyptian Hermetic writings” (Reymond, 1977) are simply secret writings that show no verbal parallels or perhaps even no lexical affinities with the Greek *Hermetica* (Mahé, 1978–1982, vol. 2, pp. 478–481).

Moreover, the content of the Greek writings betrays a composite origin in which Egyptian inspiration combines with Hellenic and Jewish influences. Festugière has shown how the decline of Greek rationalism led to disguising traditional philosophical teachings as divine revelations attributed to sages of Egypt or the Orient. Thus, the philosophy of Trismegistos reflects the fundamental themes of Alexandrian Hellenism concerning anthropogony, the origin and final ends of the soul (Festugière, 1942–1953, vol. 3), and the opposition between the cosmic god (*ibid.*, vol. 2) and the unknown god of gnosis (*ibid.*, vol. 4). In addition, many specific arguments are borrowed from Greek philosophy. Thus, *Stobaei Hermetica* 1 illustrates a maxim of Protagoras (fifth century BCE), repeated by Plato (*Timaeus* 28c), that it is impossible to say anything about the divine essence. *Stobaei Hermetica* 2A interprets, with the help of the doctrine of the four elements, the Platonic dogma that nothing exists by itself on earth. *Stobaei Hermetica* 3.1 cites *Phaedrus* 245c and elaborates, along with *Stobaei Hermetica* 4–5, a physical theory of forces and movement, of a very Hellenic inspiration.

The influence of Judaism is equally certain. This is revealed by the use of a vocabulary that is characteristic of the Greek Bible. Thus, God is termed *kurios kai pater* (“lord and father”) in *Corpus Hermeticum* 5.2 and 13.21, *Asclepius* 26, Nag Hammadi codex 6.73.24, and *Fragmenta Hermetica* 23. However, these Judaic influences are unequally distributed: They are very strong in some treatises, sporadic elsewhere, and nonexistent in some. Thus *Corpus Hermeticum* 1 (*Poimandres*) contains not only a cosmogony inspired by the

*Book of Genesis* (likewise *Corpus Hermeticum* 3) but also an apocalyptic scheme comparable to that of the Slavonic *Apocalypse of Enoch* (2 *Enoch*). It also contains allusions to the Eighteen Blessings in the Jewish liturgy as well as to the recitation of the Shema’ (*Dt.* 6:4–9). *Corpus Hermeticum* 13 and Nag Hammadi codex 6.6 are close to the same traditions. Comparison has also been made of the myth of the fall of souls in *Stobaei Hermetica* 23 (*Korē Kosmou*) to that of the fall of the angels in the Ethiopic *Apocalypse of Enoch* (1 *Enoch*), which may also have influenced *Asclepius* 25 (Nag Hammadi codex 6.73.1f.). All these indications point to the influence of the canonical books of the Bible as well as of the apocryphal writings that were current among certain heterodox Jewish circles; some of these may have had Gnostic tendencies, judging from *Corpus Hermeticum* 1; others, perhaps Essene, if indeed a tie can be seen between *Stobaei Hermetica* 23 and 1 *Enoch*. In addition, the Papyri Vindobonenses Graecae, cited earlier, bear on the front the discourse of Hermes with Tat and, on the back, the *Book of Jannes and Jambres*, an apocryphal text or pseudepigraphon of the Old Testament.

The analogies between the teachings of Hermes and those of the Jewish exegete Philo Judaeus (d. 45–50 CE) could be explained by Alexandrian scholarly traditions rather than by reciprocal influence. Indeed, the orientations of the two authors are distinct. Philo could not endorse pantheism, immoderate esteem for astrology, theurgy, or the praise of statues and idolatry, all of which are often expressed in Hermetic writings (Mahé, 1978–1982, vol. 2, pp. 318–320). Apart from some allusions to divine mercy in *Corpus Hermeticum* 13.3, 13.8, 13.10 (cf. *Ad Titum* 3.5), a treatise highly influenced by Judaism, the God of Hermetism—“innocent” like that of Plato—sometimes sees to it that the guilty are punished, but, unlike the biblical God, hardly ever thinks to pardon them.

Underlining the importance of Hellenic and Jewish influences in the *Hermetica* does not amount to denying Egyptian inspiration. Contrary to the statement by Festugière (1942–1953, vol. 2, pp. 30f.), it is not Platonic dialogue that lies at the origin of the Hermetic *logoi* but rather the collection of ancient Egyptian wisdom (*sbayt*) sayings (*mtrw*) that were formulated as the teachings of a “father” to his “son,” because scribal and other intellectual functions were hereditary at that time. In the same way, the oldest Hermetic writings are some gnomologies such as *Stobaei Hermetica* 6 or *Definitions of Hermes Trismegistos for Asclepius*. Subsequently, the sentences (which might be either connected to one another simply by conjunctions, or provided with commentaries, or illustrated by myths, or inserted into prayers) give rise to the Hermetic *logoi*. In these the disciple, generally called “my son,” sometimes timidly interrupts the master whom he calls “my father.” *The Wisdom of Any* (thirteenth century BCE) contained already the start of such a dialogue.

As in many Egyptian hymns, the Hermetic God is at once “One and All”; he (or some derivative entity) is also “his

own father” and “his own mother.” He artistically designs the body of man (*Corpus Hermeticum* 5.6–7) with the same care as that of Khnum in the texts of Esna (Mahé, 1978–1982, vol. 2, pp. 291–294). In *Stobaei Hermetica* 23.32 Isis receives from the primordial god Kamephis the gift of the “perfect black,” (*to teleion melan*), namely Egypt (*Kah nkēmē*, “black earth”); in *Stobaei Hermetica* 23.42, the lions are termed “sleepless,” an ancient Egyptian tradition (Nock and Festugière, 1945–1954, vol. 3, p. ccvi).

**NEW WRITINGS DISCOVERED AT NAG HAMMADI.** Along with Greek and Jewish influences, several passages of the writings discovered at Nag Hammadi bear the stamp of authentic Egyptian inspiration. Nag Hammadi codex 6.8 (parallel to *Asclepius* 21–29) opens with an evocation of the carnal union of man and woman presented, in accordance with Egyptian paganism, as a proper image of divinity. The refusal, expressed next by Trismegistos, to call “statues” the truly living gods fashioned by men calls to mind the belief in *ba*, the soul of idols. Then comes a prediction by Hermes to Asklepios: Someday, under the pressure of foreign invaders, the Egyptians will cease to adore their gods, who will depart from them. Formerly the image of piety, the country, full of barbarians and emptied of its ancient inhabitants, will become the image of impiety. The soil of Egypt and the waters of the Nile will be impotent in the face of these misfortunes. Because Egypt is “the image of heaven” and “the temple of the universe,” these human disorders will lead to a cosmic catastrophe: People will cease to adore the world and to respect the soul and will invert their values and ally themselves with the bad angels. Therefore the balance of elements will be upset, and evil will triumph until the Demiurge punishes the guilty and creates the world anew, as it was “the first time.” Then returning from the desert of Libya, the gods of Egypt will enter the great “city by the sea,” which lies at the head of Egypt on the side of the sunset.

Without excluding the specific influence of foreign, Jewish, and perhaps Iranian apocalypses, one might see a similarity between this prediction and ancient Egyptian oracles: *Iouper* (twenty-second to eighteenth century BCE), *Neferty* (c. 2000 BCE), *Demotic Chronicle* (third century BCE) and, during the Hellenistic age, the Greek *Oracle of the Lamb* (under Ptolemy III, c. 246–221 BCE) and the *Oracle of the Potter* (c. 130 BCE). Contrary to Jewish traditions, Hermes here is not an ecstatic visionary. He speaks calmly under the influence of wisdom alone. His vibrant praise of Egypt calls to mind *Stobaei Hermetica* 24.11–15, where Egypt, “our most holy country,” is located at the heart of the earth; it is represented, after the image of the god Geb, as a man lying on his back facing the sky. References can be made as well to Nag Hammadi codex 2.122, where Egypt is referred to as an image of paradise. This Egyptian patriotism is countered by the defiance of Philo and other Jews, for whom Egypt is a symbol of idolatry, ignorance, or concupiscence of the flesh (Mahé, 1978–1982, vol. 2, pp. 85–88). The end of Nag Hammadi codex 6.8 is a description of Hades that was not included in *Asclepius*, meaning that the former was

entirely unknown before the discovery of the codex. It is essentially an adaptation of Platonic myths in *Gorgias*, *Phaedo*, and the *Republic* about the journey and judgment of the soul, giving Hades an aerial location. This has some similarities to Jewish apocalyptic, while the Egyptian element is practically nonexistent. After being examined by the Great Demon seated between heaven and earth, the righteous soul goes to its proper resting place, while the evil soul is handed over to be tormented by strangler demons, who scourge it and cast it in the celestial sea where fire and ice mass together. Yet God is innocent of these torments.

In contrast with Nag Hammadi 6.8, Nag Hammadi 6.6 is a Gnostic treatise very similar to *Corpus Hermeticum* 13, but with a more Egyptian setting. An anonymous disciple reminds Hermes of his promise to carry out his initiation by bearing his thought to the Ogdoad and then to the Ennead, that is, to the eighth and the ninth heavens (as in *Corpus Hermeticum* 1.24–26). In the course of a conversation on spiritual regeneration, the disciple learns to recognize his “brothers” and to pray to the “Father of the All.” Then the two conversants invoke “the invisible god whom one addresses in silence.” Chanting the seven vowels that correspond to the heavenly spheres, they reach the seventh, a symbol of piety according to the divine Law, and exchange a kiss. The power of light then descends upon them, and the first vision of the Ogdoad takes place, if not only for Hermes, at least in an incomplete manner for his disciple. The latter then directs a hymn to his father, during which takes place a second vision, more complete than the first, because the disciple sees the Ogdoad, the Ennead and the One who creates in spirit. He salutes his father with the title *trismegistos*. Then he promises to maintain secrecy and utters a thanksgiving to God, the end of the All, who has allowed him to know Him and to see himself. Next he chants the seven vowels over again and concludes his prayer. Trismegistos orders him to write everything in hieroglyphics on a stela that is to be placed in the open court of the temple of Hermes in Diospolis beneath a specific constellation. The stela will be surrounded by eight guards—the males having the faces of frogs (like the self-generating divinities of the Ogdoad at Hermopolis) and the females having the faces of cats (a solar symbol)—as well as by the “nine of the sun.”

In the imprecatory formula of the conclusion, a celestial hierarchy emerges to guard over the writing: the Unbegotten, the Self-begetting, the Begotten, and the Seven Ousiarchs (i. e., the planetary gods penetrated by the demiurgic spirit). This hierarchy also appears in the report of Hippolytus (second to third century CE) on the Perates, in the *Mysteries of Egypt* by Iamblichus (c. 250–300), and in other writings from Nag Hammadi such as the *Gospel of the Egyptians* (Nag Hammadi codex 3.54). A comparison with the exegesis of *Genesis* 1–8 in *Corpus Hermeticum* 1.1–18 reveals a complex syncretism in which the Unbegotten, the Self-begotten, the Begotten, and the Seven Ousiarchs are identified, respectively, with the Creator, Adam, Seth, and the seven generations

from Seth to Noah (cf. *Genesis* 5.1–29) on the one hand and with the heavenly spheres on the other hand. Thus, reaching the Ogdoad means not only escaping planetary Heimarmene and subjection to the Law but also recovering the likeness and the glorious condition of Seth, the first man who was begotten in the form and image of the Self-begotten (i.e., Adam), who in turn was made in the image of the Unbegotten Creator. Just as God beholds himself in the Self-begotten, according to *Eugnostos the Blessed* (Nag Hammadi codex 3.74–76), the disciple of Hermes is regenerated by the vision of himself, which makes him similar to the primordial man. This Jewish background of the Hermetic *palingenesia* strongly contrasts with the Egyptian setting of the dialogue.

*The Prayer That They Spoke* (Nag Hammadi codex 6.7), represented in codex 6 as the part following Nag Hammadi codex 6.6 yet preserved in other contexts in *Asclepius* 41 and in the *Papyrus Mimaut*, concludes with the formula “Once this prayer was said, they kissed one another and went to eat their food that was pure and without any blood.” One can question at this point whether any Hermetic brotherhoods existed, and Nag Hammadi codex 6.6 and 6.7 leave little doubt about it: Indeed there were gnostics influenced by Judaism who invoked Hermes Trismegistos. They formed communities like the one described in *Corpus Hermeticum* 1.27–31, in which fraternal meals were held, the kiss of peace was exchanged, and initiations were conducted into the mystery of regeneration as described in *Corpus Hermeticum* 13 and Nag Hammadi codex 6.6.

However, it should not be overlooked that philosophical Hermetism originated in scholarly traditions before the gnostics ever thought of laying claim to it, and that it continued to develop independently of these same Gnostics. Thus, *Definitions of Hermes Trismegistos for Asclepius*, a collection of philosophical definitions, served as a source before 115 CE for *Corpus Hermeticum* 1, a Gnostic treatise, and, in the third century, for the *Logos Teleios* with a very different orientation.

As a place of confrontation for the religious beliefs of ancient Egypt, for Greek philosophy, for Judaism, and for gnosis, the philosophical writings of Hermes do not stand for a single doctrine, and they are not the “bible” of any religion. Instead, they reflect the varied spiritual currents in Alexandria during the first three centuries of the common era. Their relative unity is due mainly to their literary genre, in which the ancient gnomic sources always remain recognizable even when the same sentence is commented upon differently in one treatise as compared to another. The poignant fervor and brilliant stylistic success make certain passages, especially prayers, outstanding testimonials to the spiritual concerns of late paganism.

## BIBLIOGRAPHY

### Texts

*Corpus Hermeticum*, 4 vols., edited by Arthur Darby Nock and A.-J. Festugière (1945–1954; 2d ed., Paris, 1954–1960), with a French translation, is to be preferred to any other edition. Walter Scott’s *Hermetica*, 4 vols. (Oxford, 1924–1936), is of interest for its commentaries, but the English translation is based upon texts that are often distorted by arbitrary corrections.

For Nag Hammadi codex 6.6, 6.7, and 6.8 and *Definitions of Hermes Trismegistos for Asclepius*, see my *Hermès en Haute-Égypte*, 2 vols. (Quebec, 1978–1982). It provides a critical edition of the three Hermetic treatises from codex 6 of Nag Hammadi and of their Greek and Latin parallels arranged in a synopsis. The critical edition of the *Definitions* in volume 2 of my *Hermès en Haute-Égypte*, based on the most conservative branch of the manuscript tradition, differs markedly from the Armenian text that H. Manandian published, with a Russian translation by S. Arevsatian, in *Banber matenadarani* 3 (1956): 287–314. Other Armenian Hermetic fragments are published in my *Hermès en Haute-Égypte*, vol. 2.

Nag Hammadi codex 6.6, 6.7, and 6.8 can also be read in Douglas M. Parrott’s *Nag Hammadi Codices V, 2–5, and VI, with Papyrus Berolinensis 8502, 1 and 4*, “Nag Hammadi Studies,” vol. 11 (Leiden, 1979), edited with the collaboration of James Brashler et al. for the Coptic Hermetica. The same volume also contains an English translation of *Asclepius* 21–29 and of parallel Greek fragments by George W. MacRae, based on the text of Nock. The Coptic text is excellent, and its English translation is reliable, but the editors have not always drawn all the consequences from the comparisons that occur with Greek and Latin texts. The edition by Martin Krause and Pahor Labib, *Gnostische und hermetische Schriften aus Codex II und Codex VI* (Glückstadt, 1971), is reliable neither in text nor in translation.

Papyri Vindobonenses Graecae 29456r and 29828r have been edited by Hans Oellacher in his “Papyrus- und Pergamentfragmente aus Wiener und Münchner Beständen,” in *Miscellanea Giovanni Galbiati*, vol. 2 (Milan, 1951), pp. 182–188. A new edition with my own corrections and comments has been published in *Mémorial A.-J. Festugière* (Geneva, 1984), pp. 51–64.

Syriac Hermetic fragments are included in Nock and Festugière’s *Corpus Hermeticum*, 2d ed., vol. 4, *Fragments Hermetica* (Paris, 1960), and in Sebastian Brock’s “A Syriac Collection of Prophecies of the Pagan Philosophers,” *Orientalia Lovanensia Periodica* 14 (1983): 203–246, and “Some Syriac Excerpts from Greek Collections of Pagan Prophecies,” *Vigiliae Christianae* 38 (1984): 77–90.

On Hermetism and the occult sciences, see Festugière’s *La révélation d’Hermès Trismégiste*, vol. 1 (Paris, 1950), which also contains (pp. 384–399), a catalog of Arabic Hermetic literature by Louis Massignon.

Eve A. E. Reymond’s translation *From Ancient Egyptian Hermetic Writings*, “From the Contents of the Libraries of the Suchos Temples in the Fayyum,” pt. 2 (Vienna, 1977), seems to bear no direct relation to the study of Hermetism. It is, instead, a collection of demotic esoteric writings that are very deteriorated and difficult to identify; it was severely reviewed by Wolfgang Brunsch in *Wiener Zeitschrift für Kunde des Morgenlandes* 73 (1981): 167–177.

See also *Index du Corpus Hermeticum* by Louis Delatte et al. (Rome, 1977) and "Index of Coptic Hermetica" in volume 2 of my *Hermès en Haute-Égypte* and in Prescott (1979).

### Studies

A.-J. Festugière's *La révélation d'Hermès Trismégiste*, 4 vols. (Paris, 1950–1954), remains the fundamental work. However, focused above all on Hellenism, it underestimates Egyptian and Judaic influences. Its excessively rationalistic approach does not penetrate far enough into the mythological intentions of the texts. One can make the same evaluation of the collection of articles in *Hermétisme et mystique païenne* (Paris, 1967) by the same author.

Jean Doresse's "L'hermétisme égyptianisant," in *Histoire des religions*, edited by Henri-Charles Puech, vol. 2 (Paris, 1972), pp. 430–497, briefly surveys the principal monuments of Hermetism (writings in the occult sciences and philosophy, archaeological materials, and iconography). Its main interest lies in the connections to Egyptian civilization and with the respective positions of philosophical Hermetism and gnosticism. He points out the landmarks for the spread of Hermetism in antiquity to Rome and India and in the Middle Ages throughout the Muslim world and the West. The bibliography is very useful.

On the Egyptian inspiration, Richard Reitzenstein's *Poimandres* (1904; Stuttgart, 1966) is always suggestive but ought to be used with prudence. One might rather follow the lines given by Ph. Derchain in "Sur l'authenticité de l'inspiration égyptienne dans le *Corpus Hermeticum*," *Revue de l'histoire des religions* 161 (January–March 1962): 174–198, and F. Daumas's "Le fonds égyptien de l'hermétisme," in *Gnosticisme et monde hellénistique*, edited by Julien Ries (Louvain, 1982), pp. 3–25.

On Jewish influences, C. H. Dodd's *The Bible and the Greeks* (1935; London, 1964) is still fundamental for the influence of the Greek Bible. It can be completed with Birger A. Pearson's "Jewish Elements in *Corpus Hermeticum I*" in *Studies in Gnosticism and Hellenistic Religions*, edited by Roelof van den Broek and Maarten J. Vermaseren (Leiden, 1981), pp. 336–348; and four essays by Marc Philonenko: "Le Poimandres et la liturgie juive," in *Les syncrétismes dans les religions de l'antiquité*, edited by Françoise Dunand and Pierre Lévêque (Leiden, 1975), pp. 204–211; "Une allusion de l'Asclépius au livre d'Henoch," in *Christianity, Judaism and Other Greco-Roman Cults*, edited by Jacob Neusner, vol. 2, *Early Christianity* (Leiden, 1975), pp. 161–163; "La plainte des âmes dans la Kore Kosmou," in *Proceedings of the International Colloquium on Gnosticism* (Stockholm, 1977), pp. 153–156; and "Une utilisation du *Shema* dans le Poimandres," *Revue d'histoire et de philosophie religieuses* (1979): 369–372.

On the connections of Hermetism with gnosis and mystery religions, Hans Jonas's *Gnosis und spätantiker Geist*, vol. 1, *Die mythologische Gnosis*, 3d ed. (Göttingen, 1964), and Gilles Quispel's *Gnosis als Weltreligion* (Zurich, 1951) make penetrating analyses of the *Poimandres*. Karl-Wolfgang Tröger's *Mysterienglaube und Gnosis in Corpus Hermeticum XIII* (Berlin, 1971) perceives a dualist treatise in *Corpus Hermeticum* 13 but places it at the edge of Gnosticism. Tröger considers Nag Hammadi codex 6.6 as a "mysterium" but admits to the existence of Hermetic communities. Gerard van Moorsel's

*The Mysteries of Hermes Trismegistus* (Utrecht, 1955) usefully describes the process of interiorization or spiritualization in the mystery practices of the Hermetica.

A history of the research on Hermetism and a discussion of the studies on the subject are outlined in my *Hermès en Haute-Égypte*, vol. 2, pp. 3–43, in which I also attempt to study the range of problems posed by this literature.

JEAN-PIERRE MAHÉ (1987)  
Translated from French by Paul C. Duggan  
Revised Bibliography

**HERMETISM** designates the pagan corpus (written for the most part in the region of Alexandria) of the so-called *Hermetica*, which contains the pagan writings called *Corpus Hermeticum* (second and third centuries CE) attributed to the legendary figure Hermes Trismegistos (also Trismegistus), otherwise called Mercurius. *Neo-Alexandrian Hermetism* (henceforth often referred to as *Hermetism* also) designates the various philosophically and/or esoterically oriented adaptations and commentaries which that corpus has given rise to, particularly in the modern period (i.e., from the Renaissance up to the present time). Neo-Alexandrian Hermetism constitutes one of the modern esoteric currents and is the subject of most of this article. The term *Hermeticism*, which is more vague, frequently has been used as a synonym for *esotericism* and *alchemy*.

The *Corpus Hermeticum* had a strange destiny. In the Middle Ages, besides the *Asclepius*, only a few rare extracts were known, and yet their supposed author Hermes Trismegistos, clouded by an aura of mystery, never ceased to be a subject of great interest. Not until the dawn of the Renaissance did the writings come back to light, a rediscovery that gave rise to a considerable amount of interest.

**LATE ANTIQUITY AND THE MIDDLE AGES.** The *Corpus Hermeticum* (henceforth referred to as *C.H.*) was written in the second and third centuries CE. It is a collection of eighteen treatises (I–XVIII). Annexed to it is the *Asclepius* (originally known in Greek as *Logos Teleios* and translated into Latin in the fourth century), which in early periods was falsely attributed to Apuleius of Madaura. Unlike the *C.H.* proper, the *Asclepius* has survived in an ancient Latin translation only (the original Greek version has never been found; a large part of it in Coptic translation surfaced only as late as the twentieth century, in the Nag Hammadi Library). The first (numbered I) of these eighteen treatises is the most famous. It deals

with the creation of the world, whereas the rest are devoted to the soul's ascension through the celestial spheres and its divine sojourns, a process supposed to bring about the regeneration of the human being. Hermetism is characterized by an eclectic mentality, a philosophical attitude that favors the concrete and eschews ontological dualism. Philosophically, it stresses the positive, symbolic value of the universe. This can be seen, for example, in the treatise in which Nous (Mind) addresses Hermes, who is taught how to reflect the universe in his own spirit, seizing the divine essence of nature and impressing it on the interior of his soul. This process is made possible by the fact that the human being possesses a divine intellect. The predominate theme is the world as a mirror of the divine and object of contemplation (God is known through the contemplation of the world). Hence the focus of the *C.H.* (and of many of the *Hermetica*, for that matter) on the particular, the *mirabilia*, often to the detriment of the abstract and the general. The *C.H.* invites the reader to undertake the work of regeneration through a reascent, which can be accomplished either by means of the intellect via a connection with intermediary spiritual intelligences (such as intermediate spirits) that are used as spiritual ladders, or by theurgical means, or by both. Explicit in Hermetism is a belief in an astrological cosmos, often viewed as the scene of an initiatory journey.

The long trail of the Christian interpretation of philosophical Hermetism originates in the fourth and fifth centuries, namely with the works of Lactantius and Quodvultdeus on the one hand, and Augustine on the other. These men represent two opposing paradigms of response to the *Asclepius*. In his *Divinae institutiones* (304–313), Lactantius cited numerous fragments from the *Asclepius*. He devoted several laudatory lines to Hermes Trismegistos and detected in him a herald of Christ's coming. Lactantius interpreted the created world (the second god of the Hermetic hierarchy) as the Word made flesh. Augustine, although in agreement with Lactantius about the antiquity of Hermes Trismegistos (he lived "a long time before the wise men and philosophers of Greece"), in his *De civitate Dei* (415–417 CE, *City of God*, VIII, 13–26) he condemned the *Asclepius* because of passages that discuss magical processes intended to animate the statues of gods by making spirits descend into them. Augustine denied that *daimones* (demons) could be regarded as necessary mediators between gods and mortals, and he strongly distinguished Hermetic teachings from "true religion." Despite the unquestioned authority of Augustine, Lactantius's views generally prevailed in the Middle Ages, because the *Tractatus adversus quinque haereses* (c. 430) by Quodvultdeus, bishop of Carthage, who stood in Lactantius's wake, was included in a collection of works written by Augustine and therefore falsely attributed to the latter. Clement of Alexandria also mentioned (*Stromateis* 6.4) Augustine, to whom he attributed a great number of philosophical works.

Hermetism seems to have all but disappeared from the scene of Latin culture in the centuries between the dissolu-

tion of the Roman Empire and the twelfth century. But from the twelfth century on it resurfaced thanks to the few texts that had survived. Alan of Lille (c. 1128–1203) made frequent use of cosmological Hermetic elements. In his *Summa Quoniam homines* and *Contra haereticos*, he extols the Egyptian sage Hermes's knowledge about the unity of God. The *Glosae super Trismegistum* may be attributed, if not to Alan himself, then to someone who stood close to him. In this work, the author proposes that Mercurius, more than other philosophers, reflected upon the mysteries of the heavenly realities. Two texts in the thirteenth century were the subjects of much commentary. First, the *Liber viginti quattuor philosophorum*, attributed to Mercurius, contains a summary of definitions of God, as formulated by an assembly of twenty-four sages. It is in part the work of a Christian, who endeavors to demonstrate the congruence of Neoplatonic and Hermetic teachings with those of the Bible and of Catholicism. Second, the *Liber de sex rerum principisi* (written sometime between 1147 and 1175) deals with divine and natural causality and establishes a concord between the Platonic tradition and Arab sources.

Toward the end of the twelfth century, Hermetism underwent some changes. First, a number of theological and cosmogonical pseudo-epigraphs attributed to Mercurius surfaced. Second, translations from the Arabic and the Greek appeared that heralded a different kind of Hermetic literature characterized by an impressive number of writings devoted to forms of operational knowledge—that is, to practices like magic, astrology, alchemy, botany, medicine, and divination. This new trend developed alongside philosophical Hermetism without conflict, except in the works of William of Auvergne. This latter, bishop of Paris (1228–1249), was one of the most erudite theologians in such matters. Well-versed in the literature from Greece and Islam, he sharply criticized Hermetism, taking sides with Augustine against Lactantius (see, for example, his *De Legibus*, 1228), at least with regard to “magical” knowledge.

In the same period, Michael Scot in his *Liber introductorius* (1228–1235) and in his commentary on Giovanni Sacrobosco's *De sphaera* attests to the circulation of the *Asclepius*. Toward the middle of the thirteenth century, Roger Bacon (in his *Opus maius* and *Metaphysica*, both completed in 1267) displayed strong Hermetic leanings and showed himself to be an insightful reader of the *Asclepius*. Similarly, Albertus Magnus (Albert the Great) tried to harmonize the philosophical elements of the *Asclepius* and the image of Hermes, in whom he saw the *magus* who has unveiled the secrets of nature and discovered the correspondence between heaven and earth (see for example his *Liber de intellectu et intelligibili*, 1260; *De animalibus*, c. 1260; *De causis et processu universitatis*, 1263–1267). In the fourteenth century Thomas Bradwardine, the famous mathematician and theologian at Merton College (Oxford), in his *De causa Dei* (1335–1344) cites Hermes as the first authority among the philosophers.

Among the authors of the fifteenth century, Nicholas Cusanus demonstrates a good knowledge of many of the

available texts. His first reference to Mercurius appears in his *Sermo I* (1430), in which, drawing on Lactantius, he credits Hermes with the real knowledge of the divine Word. Moreover, his Christian interpretation of Hermetism is confirmed by numerous autographic glosses placed in the margins of his copy of the *Asclepius* (MS Bruxelles, Bibliothèque Royale 10054–10056). On several occasions in his *De docta ignorantia* (1440) he extols the Hermetic doctrine of God as “one and everything.”

Finally, another famous text has to be mentioned within this short summary. It is the *Tabula Smaragdina* (*The Emerald Tablet*, or *The Smaragdine Table of Hermes*, henceforth referred to as *T.S.*), also attributed to Hermes Trismegistos. Originally written in Greek (the original version is lost), its earliest extant version (934 CE) is in Arabic, set within a small alchemical and philosophical treatise entitled *The Book of the Secrets of Creation*. *T.S.* has lent itself to innumerable discussions and esoteric commentaries. Hugo Sanctelliensis, bishop of Tarazona (Spain) translated it into Latin from the Arabic for the first time in the twelfth century, along with the *Liber de secretis naturae et occultis rerum causis quem transtulit Apollonius ex libris Hermes Trismegisti*.

**THE REDISCOVERY OF HERMES TRISMEGISTOS IN THE RENAISSANCE.** In Florence in 1450, Cosimo de' Medici the Elder (the ruler of Florence and a great patron of letters) entrusted Marsilio Ficino with the creation of a Platonic academy. One of their intentions was to have the available writings of Plato translated into Latin. Then, around 1460, an event occurred that assured the sudden, unprecedented influence of the Hermetic texts. A monk, Leonardo da Pistoria, brought to Florence a Greek manuscript containing fourteen treatises that constituted most of what would later be called the *C.H.* These treatises had already been gathered together in the eleventh century, and it was in that form that the Byzantine Platonist Psellus had known them. Da Pistoria, who had found the document in Macedonia, presented it to Cosimo de' Medici. The latter, having deemed it more urgent to translate the *C.H.* into Latin than Plato's works, assigned the task to Ficino. His translation of the fourteen treatises (*C.H.* I–XIV) was finished in 1463 and printed at Treviso in 1471 under the title *Mercurii Trismegisti Pimander Liber de potestate et sapientia Dei*, or *Pimander*, together with a prefatory argument (*Argumentum*) by Ficino himself. In his *Argumentum*, Ficino also called attention to the *Asclepius*, which he considered as “the most divine” of this kind of literature (an edition had just been printed in Rome in 1469 as an insert in Apuleius's *Opera*). By 1505 the *C.H.* and the *Asclepius* had been combined in a great number of editions. Later, a series of other Hermetic texts, the so-called *Stobaei Anthologium* (compiled c. 500 CE by Johannes Stobaeus of Macedonia) was added to that corpus (part of the *Anthologium* was published in Venice in 1536, another part in Zurich in 1543, and the rest in Antwerp in 1575).

The *C.H.* (often published under the title of the first treatise, *Poimandres*, rendered as *Pimander* since Ficino's

1471 translation) and the *Asclepius* enjoyed considerable success. Up to 1641, no fewer than twenty-four editions appeared, not counting partial ones or translations into other European languages. They became a central element in Renaissance culture and were most popular among the learned and prominent members of society. Anthony Woodville's English translation of a few of these texts in the anthology *The dyctes or sayengis of the philosophers* (Westminster 1477, the first dated book in the history of English printing), published by William Caxton, bears witness to the early, albeit discreet, presence of the *C.H.* in England. Woodville's anthology was later incorporated into other anthologies.

As had been the case prior to that period, the Hermetic treatises were considered the expression of a philosophy that had been transmitted over the sweep of centuries. Ficino called the philosophy *prisca philosophia*. Later it would be called, albeit in a slightly different sense, *philosophia perennis*. This term was introduced by an Italian Augustinian and Vatican librarian, Agostino Steuco (*De perenni philosophia*, Lyon 1540, new ed. 1590). Although staunchly attached to the Church's magisterium, he too tried to reconstruct the ancient philosophy as a foundation for restoring Christian unity. The *C.H.*, the *Asclepius*, and Hermes Trismegistos were thus thought to belong to a far distant past, namely to the age of Moses or even earlier. Although pagan in character, they were considered to foreshadow Christian truths and so to give new depth to the Christian revelation. In his *Argumentum*, Ficino describes a "genealogy of wisdom"—explicitly referred to as *prisca theologia*—consisting of six main figures: Mercurius (Hermes) Trismegistos, Orpheus, Aglaophemus (an Orphic teacher of Pythagoras), Pythagoras, Philolaus, and Plato. That list was later to undergo various changes depending on the author who presented it. Giovanni Pico della Mirandola's *Oratio de hominis dignitate* (1486) begins with a reference to the "Magnum, O Asclepi, miraculum" passage of the *Asclepius* (*Ascl.* 6). Pico combined the Hermetic philosophy with the Qabbalah, which he believed had been entrusted to Moses on Mount Sinai.

On Palm Sunday of 1484, Giovanni da Correggio, in bizarre dress and in strange company, appeared in Rome. On the banks of the Manara he put on a crown bearing the inscription "This is my son Poimandres, whom I have chosen" and made a speech in which he called himself the "angel of Wisdom, Poimandres, in the most sublime manifestation of the Lord Jesus Christ." Then, making his way to the Vatican, he deposited diverse objects on the throne of Saint Peter. In 1496 he turned up again in Florence and then in Lyons. Lodovico Lazzarelli, who saw in Giovanni a new and divine prophet whom he considered as his mentor, has left a vivid description of this event in a manifesto titled *Epistola Enoch*, published probably in Milan c. 1490. Another text by Lazzarelli, *Crater Hermetis* (complete title: *A Dialogue on the Supreme Dignity of Man, Entitled the Way of Christ and the Mixing-Bowl of Hermes* which he wrote probably between 1492 and 1494 (it remained unpublished until Lefèvre d'Étaples

edited it in 1505) is a fictitious conversation (very much in the form of the dialogues contained in *C.H.*) between Lazzarelli, who plays the role of the initiator, and Ferdinand I of Aragon and his prime minister Giovanni Pontano, who are cast in the role of pupils. *Crater Hermetis* may be among the most interesting examples of Hermetic-Christian syncretism written during the Renaissance. It is certainly one of the important Hermetic texts of its time, if not for its direct influence, then at least with regard to the depth and originality of its contents.

In 1482, Lazzarelli, convinced of the equality of the Bible and the Hermetic writings, dedicated to Correggio a manuscript he had just completed. The manuscript consisted of three parts, each one opening with a dedicatory preface. The first part contained Marsilio Ficino's translation of the *Pimander* (1471, i.e., *C.H.* I–XIV). The second contained the *Asclepius*. The third contained the first Latin translation, by Ficino, of *C.H.* XVI–XVIII—that is, three extra treatises which he had apparently discovered in a separate manuscript (unfortunately not preserved). He titled these treatises *Diffinitiones Asclepii ad regem Ammonem*. Lazzarelli appears to be a pure example of a Christian Hermetist in the Renaissance (in addition to being one of the first noteworthy authors instrumental in the early development of a Christian Qabbalah). Strangely enough, Frances A. Yates almost passed over him in her ground-breaking books published in 1964, and not until recently have scholars (in particular, Claudio Moreschini and Wouter J. Hanegraaff) done him justice.

Jacques Lefèvre d'Étaples's first edition of his *Pimander* (Paris, 1494) contains, besides Ficino's translation, a series of commentaries (*Argumenta*) of his own (long attributed to Ficino). The second edition (Paris, 1505) was augmented with both the *Asclepius* and Lazzarelli's *Crater Hermetis* (in an abridged version). Interestingly, it was the first time that the *Asclepius* had been published with the *C.H.* Also at this time, Symphorien Champier, an admirer of Ficino and disciple of Lefèvre d'Étaples, did not hesitate to derive all of Greek philosophy from Hermes. He considered the famous passage from the *Asclepius* on magic and animated statues to be an interpolation by Apuleius and thus not to be attributed to Hermes. He goes as far as to include into the tradition of *prisca theologia* the doctrines of the Druids and elements drawn from the Qabbalah. His *Liber de quadruplici vita: Theologia Asclepii Hermetis Trismegisti discipuli cum commentariis . . .* (Lyon, 1507) contains Lazzarelli's translation of *Diffinitiones Asclepii*, among other texts, but Champier substituted a commentary of his own for Lazzarelli's prefaces.

As exemplified by Lefèvre and Champier, the French were generally much more cautious than their Italian or German counterparts regarding the "magical" elements of the *C.H.* and the *Asclepius*. This tendency to downplay the magical in favor of a more noble, essentially philosophical interpretation can be seen also in Pontus de Tyard, bishop of Châlons (*Deux discours*, 1578). Indeed, almost all French adherents of the *prisca theologia* dealt with Hermetism from the

perspective of Christian apologetics. This is reflected, for instance, in Gabriel du Préau's *Mercure Trismégiste ancien Theologien & excellent Philosophe, de la puissance & sapience de Dieu . . . Auecq' un Dialogue de Loys Lazarel poëte chrestien intitulé le Bassin d'Hermès* (Paris, 1549; new ed., 1557), the first edition in French of *C.H.* I–XIV, of the *Asclepius*, and (as the title indicates) of Lazzarelli's *Crater Hermetis*. Du Préau's book also contains abundant commentaries of his own, some of which were designed to establish parallels between the narrative of creation according to Moses and that of *C.H.* I (*Pimander*).

The French Catholic scholar Adrien Turnèbe published the first edition of the *C.H.* (Paris, 1554) in the original Greek, based on the manuscript used by Ficino and accompanied by the latter's Latin translation, as well as by Lazarelli's translation of the additional treatise. A preface by Angelos Vergerius emphasizes the resemblances of Hermetism to Christianity. In the wake of such scholarly publications, François Foix-Candale, bishop of Aire, near Bordeaux, authored another edition in 1574 (*C.H.* I–XIV, accompanied by some other hermetic texts). Five years later he produced very extensive commentaries of his own in French in his *Le Pimandre de Mercure Trismégiste: de la Philosophie Chrestienne, Cognoissance du Verbe Divin . . .* (Bordeaux, 1579, new ed., Paris, 1587), in which the Hermetic texts serve as topics for meditation on a variety of questions, such as the Soul of the World, the spirits of the elements, and the celestial bodies. Among various sources, Foix drew on the *philosophia occulta* of the Renaissance, and his book foreshadows some of the themes that Christian Theosophy would develop from the seventeenth century onward.

Ficino's *Opera omnia* also appeared in this decade (1576). Six years later at Anvers the Huguenot Protestant Philippe du Plessis-Mornay (called the Pope of the Huguenots) published his famous book *De la vérité de la religion chrestienne . . .* (Antwerp, 1581), written at a time when William of Orange was trying to establish religious tolerance at Anvers. Du Plessis-Mornay employed Hermetism in fashioning a religious position that stood above all religious conflicts, and which was close to that of Erasmus—but with an additional esoteric dimension. He compared the *C.H.* with the Zohar and made mention of Orpheus, Zarathushtra, and the sibyls, but especially of Hermes, “the source of them all.” As is common among the French, his Hermetism is mystical and theological. This work was published several times in a Latin translation and proved to be influential in the development of Protestantism in France. Translated into English by Sir Philip Sidney and Arthur Golding in 1587, it is among the main expositions of Hermetism in the tradition of Ficino.

Along with Foix, some other important sixteenth-century authors, such as Giorgio Bruno, and Agrippa, must be counted as influential in later Hermetism and esoteric literature. Francesco Giorgio (or Zorzi), who belonged to the Order of Friars Minor, authored *De Harmonia Mundi totius*

*Cantica tria* (Venice, 1525; Paris, 1545, 1546; French translation by Guy Lefèvre de la Boderie, Paris, 1578) and *In Sacram Scripturam Problemata* (Venice, 1536; Paris, 1622). These two works represent an original construction aimed at making Ficino's Hermetic *prisca theologia* coincide with Neoplatonism, Qabalah, astrology, and even alchemy. *De Harmonia Mundi* would enjoy a lasting success in several milieus, in particular among the representatives of most esoteric currents. Heinrich Cornelius Agrippa and Guillaume Postel would be among his enthusiastic followers.

Giordano Bruno recommended a “new” philosophy founded on Hermetism. In his works he makes frequent use of the Hermetic texts (notably in *Spaccio della bestia trionfante*, 1584). In contrast to that of Ficino and the French, his Hermetism represented an aggressive return to Hermetic magic. Unlike most other Hermeticists of his time, Bruno was not a Christian and did not identify the *intellectus* and *Filius Dei* of the *C.H.* with the second person of the Trinity, and thus he did not share the hope nursed by others that general acceptance of Hermetism might effect a religious reconciliation. In fact, Bruno did not desire a reformed Christendom, but rather a return to the cults or beliefs of ancient Egypt as described in the *C.H.* and particularly in the *Asclepius*. In 1591 he tried to win over to his views Clement VIII in Rome, but his radical interpretations led him to the stake in 1600.

In Germany, some of Sebastian Frank's works attest to an interest in Hermetism. His *Die Güldin Arch* (Augsburg, 1538) presents itself as a collection of biblical sayings and paraphrases, together with extracts from “illuminated pagans and philosophers” such as Hermes Trismegistos. In Basel (1542), Frank translated into German both the *Asclepius* and *C.H.* I–XIV and included long commentaries dealing mostly with commonalities between the Bible and Nature. It remains unpublished; the manuscript is preserved in the Stadtbibliothek Augsburg. In the second half of the sixteenth century, Valentin Weigel, the father of Germanic Theosophy (of which Jakob Boehme was to be the greatest exponent at the beginning of the seventeenth century), cites the name of Hermes Trismegistos more than that of any other author of his time—more than Dionysius the Areopagite, Plato, or Augustine. Like Agrippa, however, Weigel invokes this prestigious name more often than he utilizes the Hermetic texts themselves. Traces of Hermetic influence are also noticeable in Copernicus, who cites Hermes in reference to the sun considered as the visible God. Another German, Henricus Cornelius Agrippa focused on the esoteric side of Hermes Trismegistos. Besides quite a few passages in his famous *De Occulta Philosophia* (1533), several writings of his are devoted to a hermeneutics of the *C.H.*, particularly its third treatise: *Oratio in praelectionem Hermetis Trismegisti de Potestate et Sapientia Dei* (Cologne, 1535; an “oratio” given at the University of Pavia in 1515); *Liber de triplici ratione cognoscendi Dei* (1516); and *Dehortatio gentiles theologiae* (c. 1526, a text that, unlike his other two, distances him from Hermetism).

Despite the presence of a famous name like Agrippa, the Germanic countries in general had little part in the golden age of European Hermetism, which lasted approximately from Ficino to Kircher. Agrippa wrote his main works before the Reformation, and Kircher composed his main ones in Rome. This may be due in part to the fact that during this period humanism made only slight progress in those countries, hampered as it was by the barrier that Lutheranism had erected against it. Therefore, neo-Alexandrian Hermetism, by its very nature a legacy of ancient Greek literature, remained mostly a subject of study for the humanists, even after the *C.H.* had been translated into Latin by the Italian Ficino. As a consequence, over that period almost all the noteworthy commentators of the *C.H.* were French and Italian.

Not until the last two decades of the sixteenth century did two other authors of importance emerge. First, the Italian Capuchin Hannibal Rossel, whose *Pymander Mercurii Trismegisti* at six volumes (Cracovia 1585–1590) is not so much a commentary on the *C.H.* as an encyclopedic roll-call of a variety of philosophical themes, along with a presentation of *C.H.* I–VII and the *Asclepius*. This work was popular enough to require a second issue, this time in one volume (Cologne, 1630). Second, Francesco Patrizi's *Nova de universis philosophia* (Ferrara, 1591) contains *C.H.* I–XIV (as established by Turnèbe and Foix de Candale), the *Asclepius*, *C.H.* XVI–XVIII (*Diffinitiones Asclepii*), the medieval so-called *Theologia Aristotelis*, and a new Latin translation of these texts. In the dedicatory preface, Patrizi asked Pope Gregory XIV to place the *C.H.* on the academic curriculum as an alternative philosophy. Indeed, he sharply criticized Aristotelian philosophy and wanted it to be ousted from Jesuit-run colleges. Patrizi portrayed the true magus as one who is devoted to God, and true *prisca magia* as the true religion. He claimed that a single treatise from the *C.H.* contained more philosophy than all of Aristotle, thereby advocating the study of Plotinus, Proclus, and the early Fathers while discouraging the study of the Scholastics. In the spirit of the Counter-Reformation, he took up the question of a new catechism and recommended the study of the *C.H.* to the Jesuits. He went so far as to suggest to the pope that Hermetic Platonism be assigned in all Christian schools as an aid to converting the Lutherans. In 1592, Clement VIII, won over to some of his ideas, called him to Rome to hold the chair of Platonic philosophy at the University La Sapienza, but once there, Patrizi incurred the displeasure of the Inquisition and his book was placed on the Index. Other reform-minded books followed, such as Mutius Pansa's *De Osculo, seu consensus ethnicae et Christianae philosophiae tractatus* (Marburg, 1605)—the “kiss” mentioned in the title being that which Hermetism and Christianity are supposed to exchange.

Religious Hermetism is Gnostic and irenic by nature. This partly accounts for the fact that in the 1590s, the Puritanism then flourishing in England weakened the theological syncretism that had favored such tendencies. With Edward

VI, the English Protestants had already begun to break with the past, going so far as to destroy books and libraries. Under the reign of Mary, a Hispano-Catholic intolerance went even further in that direction. Puritan Anglicanism under Elizabeth lost all trace of Erasmian tolerance, and Hermetism suffered accordingly, at least in the official milieu of the Anglican Church and the universities. It continued to develop within private circles, however, such as those that formed around Sir Philip Sidney and Queen Elizabeth's astrologer, John Dee. In addition to Sidney and Dee, who were enthusiasts of Hermeticism and esoteric literature, is Richard Hooker, who often cited the *C.H.* in his work *The Laws of Ecclesiastical Polity*, which began to appear in 1593. Hooker, however, did not identify himself with the Hermetic tradition as such.

Any overview of neo-Alexandrian Hermetism must also give attention to the *T.S.*, a short text that circulated in a Latin translation as early as the twelfth century. Its first printed edition, also in Latin and titled *Tabula Smaragdina*, appeared in a compilation of alchemical texts, *De Alchemia* (Nurnberg, 1541). Its brevity permits us to quote it here in full:

True it is, without falsehood, certain and most true. That which is above is like to that which is below, and that which is below is like to that which is above, to accomplish the miracles of one thing. And as all things were by contemplation of one, so all things arose from this one thing by a single act of adaptation. The father thereof is the Sun, the mother the Moon, the Wind carried it in its womb, the earth is the nurse thereof. It is he father of all works of wonder throughout the whole world. The power thereof is perfect. If it be cast on to the earth, it will separate the element of earth from that of fire, the subtle from the gross. With great sagacity it doth ascend gently from earth to heaven. Again it doth descent to earth, and uniteth in itself the force from things superior and things inferior. Thus thou wilt possess the glory of the brightness of the whole word, and all obscurity will fly far from thee. This thing is the strong fortitude of all strength, for it overcometh every subtle thing and doth penetrate every solid substance. Thus was this world created. Hence will there be marvellous adaptations achieved, of which the manner is this. For this reason I am called Hermes Trismegistos, because I hold three parts of the wisdom of the whole world. This is which I had to say about the operation of Sol is completed. (Linden, 2003, pp. 27–28)

In the sixteenth century, this rather enigmatic prose poem caused torrents of Hermetic, alchemical, and theosophical ink to flow (Faivre, *Annuaire*. . ., 1985–1997). To mention only a few remarkable commentaries in the esoteric literature of that time, the “*T.S.* tradition” was illustrated and enriched by such authors as Johann Trithemius (see his correspondence with Germain de Ganay in 1505) and Gérard Dorn (*Artificii chymistici*, 1569; often re-edited as *Physica Trismegist*; foreshadows the advent of the Theosophical movement).

**HERMETIC DEVELOPMENTS AND REAPPRAISALS (1614–1706).** Isaac Casaubon, a Protestant minister in Geneva, set out to prove (in a chapter of his *De rebus sacris ecclesiasticis exercitationes XVI*, London, 1614) that the *C.H.* had not been written prior to the second or third centuries CE and was therefore a forgery of the early Christian era. Although Casaubon's name has long been attached to that new dating, recent research (see especially Purnell, 1976; Mulso, 2002) has shown that similar "discoveries" had already been made by other philologists as early as the 1560s. Nonetheless, the claim that the *C.H.* had been erroneously dated could only deal a heavy blow to its authority, since the authority of a text, even at that time, was highly dependent upon its age. But the Hermetic current did not disappear for all that; indeed, from then until now, many esoterically oriented authors and readers have preferred to ignore or to downplay the significance of the new dating of the Hermetic writings.

One of the first highly sympathetic exegetes of the *C.H.* in early seventeenth-century Germany was Heinrich Noll (*Theoria Philosophiae Hermeticae, septem tractatibus*, Hanover, 1617; *Theoria Philosophiae Hermeticae*, Copenhagen, 1617; and *Panergii Philosophici Speculum*, 1623, an initiatic novel). In Italy, Livius Galante, who authored *Christianae theologiae cum platonica comparatio* (Bologna, 1627) is noteworthy. Furthermore, a number of translations of the *C.H.* into European languages appeared. A few extracts were presented in German in "Verba Hermetis in Pimandro" (a section of the anonymous *Occulta Philosophia*, vol. II, Frankfurt, 1613). More importantly, under the title *Sestien boecken* . . . (Amsterdam, 1643; new ed., 1652), Abraham Willemsz van Beyerland published a Dutch version of sixteen treatises of the *C.H.*, based on Patrizi's text. Beyerland, a theosopher who was also a translator of Jakob Boehme, added long, theosophically oriented commentaries of his own. His translation was used by the first translator into German (1706).

John Everard did the first translation of the *C.H.* in English (*The Divine Pymander of Hermes Mercurius Trismegistus, in XVII Books. Translated formerly out of the Arabick into Greek* . . . , London, 1650; new ed., 1657). This Anglican minister, a preacher at Kensington, had already produced in 1640 a detailed commentary (preserved at the Bodleian Library in Oxford) on the *T.S.* He also authored short translations from similar texts and some works of his own (see his *Some Golden Treasures*, London, 1653). The title, and the preface signed J.F., attest to the ignorance of the editor, not least because he claimed that these books were originally in Arabic. The preface deals mostly with the legendary figure of Hermes Trismegistos. Everard's book was very influential in the development of Hermetism in England.

Along with Paracelsianism, Hermetism became part of a medical debate principally represented by one of its proponents, the Dane Olaus Borrichius (Olaf Borch), who composed a vibrant apology for Hermetism and alchemy (*Hermetis Aegyptiorum, et chemicorum sapientia*, Copenhagen, 1674; see also his *De Ortu et progressio chemiae*, Copenhagen,

1688, which contains a detailed history of alchemical literature). *Hermetis Aegyptiorum* was meant as a counter-attack against the German Hermann Conring, in whose *De Hermetica Aegyptiorum vetere et paracelsicorum nova medicina* (Helmstedt, 1648; new ed., 1699) Hermetism and Paracelsianism had come in for their share of harsh criticism. Along these lines, Johann Heinrich Ursinus (in *De Zoroastre bactriano, Hermete Trismegisto, Sanchoniatone Phoenicio, eorumque scriptis, et aliis, contra Mosaicae scripturae antiquitatem*, Nürnberg, 1661) also tried to demonstrate that the *C.H.* was merely a collection of texts plagiarized from Christian sources. Both Conring's and Borrichius's works are of a particular interest because they depend not only on Paracelsianism and Hermetism, but also on alchemical literature. Nevertheless, the *C.H.* was rarely the object of commentaries in the alchemical discourses of the seventeenth century, although Hermes Trismegistos often appeared as the tutelary figure of that science, for instance in Michael Maier's *Symbola Aureae Mensae Duodecim Nationum* (Frankfurt, 1617).

In contrast, the *T.S.* continued to trigger a lot of alchemical commentaries. See, for example, Jacques Nuyssement (*Traictez . . . du Vray Sel*, 1621) and Athanasius Kircher (in volume 2 of his *Oedipus Aegyptiacus*, Rome, 1653; and *Mundus Subterraneus*, Rome, 1664–1665). The German translation (by Johan Schaubert) of the *T.S.* appeared in 1600. Isaac Newton's commentaries on that text are highly developed and appear in the great quantity of alchemical manuscripts he left to posterity (King's College, Cambridge), and they have recently been the object of a number of scholarly studies. Wilhelm Christoph Kriegsmann produced another most original, albeit fantastic, "philological" commentary (*Hermetis Trismegisti . . . Tabula Smaragdina*, 1657).

Throughout the period and ever since, the tendency in Hermetic literature has been to blend Hermetism not only with alchemy, but also with Jewish or Christian Qabbalah, Rosicrucianism, and the *philosophia occulta* inherited from the Renaissance. Stellatus's (that is, Christoph Hirsch's) *Pegasus Firmamenti, sive introductio brevis in Veterum Sapientiam* . . . (n.p., 1618) associates Rosicrucianism with Hermetism, Paracelsianism, pansophy, and alchemy. Opponents of Hermetism also often grouped these currents together. Two examples may serve to illustrate this. First, one year after the new edition of Zorzi's (Giorgio's) *Problemata* (1622), the famous Catholic priest Marin Mersenne, bent on orthodoxy and a famous opponent of such orientations, published his *Observationes et emendationes ad Francisci Giorgii Veneti Problemata* (Paris, 1623) in opposition to Giorgio's work, as well as Hermetism, Rosicrucianism, and the works of Robert Fludd. The second example is Lutheran minister Ehregott Daniel Colberg's *Das Platonisch-Hermetisches [sic] Christenthum* . . . (2 vols., Leipzig, 1690 and 1691; new ed., 1710), which settles scores with the *C.H.* as well as with Rosicrucianism, theosophy, and mysticism, reproaching them for encouraging self-divinization of the human being.

Within esotericism, the Englishman Robert Fludd, particularly in *Utriusque cosmi historia* (Oppenheim, 1617–1621), was instrumental in propagating the “magical” tradition that had been represented by Paracelsus, Agrippa, John Dee, and the Rosicrucian manifestoes of 1614–1615. Fludd did not seem to know about Casaubon’s philological criticism, or at least he pretended not to. He gives as much weight to the *C.H.* and the *Asclepius* as to *Genesis* or the *Gospel of John* (on almost every page of his works one can find a quotation from Ficino’s Latin translation) in, for example, explaining the creation of the world, of which he gives a “chemical” description that draws on *Pimander* (*C.H.* I). He also frequently associates Hermetism with the Qabbalah, in an original synthesis.

Not surprisingly, the *C.H.* and its supposed author Hermes Trismegistos aroused the interest of the Cambridge Neoplatonists. They generally accepted Ficino’s idea of an uninterrupted transmission of ancient wisdom from Moses to Hermes and passing through Zarathushtra, Pythagoras, Plato, and Orpheus. Among the main representatives of that philosophical school, Ralph Cudworth dealt most extensively with the *C.H.* (at least more so than did Henry More). His *The True Intellectual System of the Universe* (London, 1678) contains a lengthy commentary on its treatises, with a particular emphasis on cosmogony. In contrast to Casaubon, Cudworth stressed the presence of Egyptian elements, believing that the *C.H.* could well have preserved certain authentic Egyptian teachings. He also considered that in treating the *C.H.* as one single text (whereas it is actually a collection) arguments that discredit the great age of some treatises do not need to discredit the rest of them (least of all the *Asclepius*).

With Woodville and others (Shumaker, 1972, pp. 236–247; Shumaker, 1988), Hermetism had already made its way into English culture in general. For example, John Milton cites Hermes Trismegistos three times (*Il Penseroso*, lines 87ff.; *Ad Joannem Rousum*, line 77; *De Idea Platonica*, lines 33ff.), and one finds many relevant passages in Edmund Spenser’s *The Faerie Queene* (London, 1590–1596). This process continued well into seventeenth-century England, as documented by works of celebrated authors such as Robert Burton (*The Anatomy of Melancholy*, Oxford, 1621), Sir Thomas Browne (*Religio Medici*, 1643), and Sir Walter Raleigh (*History of the Word*, 1614) who were not Hermetists but who gave its ideas a voice, albeit a modest one. Robert Burton mentions Hermes no fewer than thirty times, along with Ficino, Pico, Paracelsus, and Campanella, but he leaves the impression that mention of these names is merely a show of erudition in the context of an enlarged humanism. Sir Thomas Browne, a skeptical scholar as well as contemplator of the infinite, often evokes the famous Hermetic image of the sphere whose center is everywhere and circumference nowhere. But he is in no way convinced that the ancient wisdom was superior to the modern. It was merely in his capacity as a collector of information and propagandist

that he cited Hermes Trismegistos: “The severe schools shall never laugh me out of the Philosophy of Hermes, that this visible world is but a Picture of the invisible” (*Works*, ed. Keynes, 1928–1931, vol. 1, p. 17). Indeed, “where I cannot satisfy my reason, I love to humour my fancy.” One finds similar references in the works of William Gilbert (*De magnetete*, 1600) and Henry Reynolds (*Mythomystes*, 1632).

The *C.H.* became part of many discourses marked by Egyptomania. Typical of that trend are works of the Jesuit Athanasius Kircher, notably *Oedipus Aegyptiacus* (Rome, 1652–1654; see also his *Prodromus coptus*, Rome, 1636), in which he assigns almost as much importance to Hermes Trismegistos and the *C.H.* as Fludd does. Kircher’s *Oedipus Aegyptiacus*—one of the first works to stir the Egyptomania that swept Europe over the next three centuries—is replete with quotations borrowed from Ficino’s translation, particularly from the *Asclepius*. Kircher readily associates Qabbalah and Hermetism and, like Ficino, sees Hermes as the inventor of the hieroglyphs. Following the example of Renaissance Hermetism, he interprets hieroglyphs as truths about God and the world, especially since Hermes Trismegistos was supposed to have originally written in hieroglyphs. Not surprisingly, most of the hieroglyphs that Kircher referred to were demystified when Jacques-Joseph Champollion deciphered them in 1824 (this was perhaps the second blow, after Casaubon’s, delivered to the Egyptian myth). Kircher, however, was not a great admirer of the Hermetic literature and regarded Paracelsus, the Rosicrucians, and Robert Fludd with great suspicion. He used the *C.H.* to make Catholicism palatable, mostly with a view to deterring his readers from Protestantism.

Interestingly, the French Jesuits and theologians involved in missionary activities in the Far East, particularly in China, shared a project similar to Kircher’s, though not from an Egyptophile perspective (Walker, 1972, pp. 194–230). Apart from Rapine, these Catholic priests were not interested in Hermetism itself but used it as a tool for converting people to Catholicism. It was a matter of demonstrating that Confucius’s teachings, for example, as well as those of Western pagan philosophers—primarily Plato and Hermes Trismegistos—were compatible with monotheism. This missionary program is exemplified by Paschal Rapine’s *Le Christianisme naissant dans la gentilité* (Paris, 1655–1659), Paul Beurrier’s *Perpetuitas fidei, ab origine mundi*. . . (Paris, 1666; French ed., 1680); Daniel Huet’s *Demonstratio evangelica* (Paris, 1678; several re-editions); Philippe Couplet’s *Confucius Sinarum philosophus* (1687), and several writings by Joachim Bouvet around 1700, notably his correspondence with Leibniz.

**THE PERIOD OF THE ENLIGHTENMENT AND OF ROMANTICISM.** Like Everard’s English version, the first complete German translation of the seventeen treatises of the *C.H.* was to prove influential on later esoteric literature. Its author, who had had at his disposal the editions of Patrizi and Beyerland, signed himself Aletophilus (perhaps a pen name for Wolf

Metternich) and titled his work *Hermetis Trismegisti Erkännnüsz der Natur und des darin sich offenbahrenden Grossen Gottes* . . . (Hamburg, 1706; new edition, 1855). His long introduction to the book, in which he shows himself to be a Paracelsian, is noteworthy. He endorses the main legends surrounding the *C.H.* and tries to marry Hermetism with alchemy, extolling the Egyptian elements of the text over the Greek ones.

The *T.S.* exerts a strong influence on Aletophilus's book and, not surprisingly, on numerous other alchemical treatises of the period. Three other German works with long commentaries on the *T.S.* stand out: Ehd de Naxagoras's *Aureum Vellus* (2 vols, Frankfurt, 1731–1733); the anonymous *Vernünfftige Erklärung der Smaragdenen Tafel* . . . (s.l., 1760); and above all Hermann Fictuld's *Turba Philosophorum* (s.l., 1763). This latter work, which blends alchemy and theosophical outlooks, is one of the most important esoteric exegeses in the history of the *T.S.* tradition.

The Enlightenment also saw new German translations of the *C.H.* First came Dietrich Tiedemann's (*C.H.* I–XVIII), titled *Poemander, oder von der göttlichen Macht und Weisheit* (Berlin and Stettin, 1781). It was published three years after the first German translation of the *Asclepius*, at the press of Friedrich Nicolai, one of the most celebrated representatives of the German Enlightenment. Tiedemann's commentaries reflect the intellectual tenor of the Enlightenment and are replete with comparisons between the *C.H.* and Plato, Gnosticism, and Jewish Qabbalah.

Alongside these translations appeared more erudite studies. Some were Hermetic in character, like Hermann van der Hardt's "Poemander" (inserted in his book *Antiquitatis Gloria*, Helmstedt, 1737), a long paraphrase of *C.H.* I in which, for example, Jacob's dream (*Gen.* 28) is compared to Hermes's vision in *C.H.* I, 1. Other studies were more scholarly. The two that stand out are Johann Albrecht Fabricius's *Bibliotheca Graeca* (Hamburg, 1705–1728, see vol. I, 1708, lib 1, chapters VII–XII; new enlarged ed., 1790) and Jacob Brucker's *Kurze Fragen aus der hermetischen Historie* (Ulm, 1730–1736) and *Historia critica philosophiae* (Leipzig, 1743; see vol. I, chapters I–IV). Brucker's works provide a wealth of information on theosophical, alchemical, and Rosicrucian literature, including the *C.H.* and all that Brucker knew about the *Hermetica* in general (see notably *Historia critica philosophiae*, vol. I, lib 3. Brucker deals with works appearing as late as the beginning of the eighteenth century. He was not a proponent of any of these currents, but his very detailed—albeit not always unprejudiced—presentation ensured their continued influence, all the more so since the book of 1743 quickly became essential to most good libraries all over Europe.

Toward the end of the eighteenth century, Hermetism started at the top rung of the literary ladder in Germany with two texts by Johann Gottfried Herder. First, in *Über die älteste Urkunde des Menschengeschlechts* (Riga, 1774) he claimed he had found in ancient traditions, particularly in

Hermes Trismegistos, keys capable of unlocking a number of mysteries and retrieving a long-lost knowledge. Second, "Hermes und Pymander" (in the journal *Adrastea*, 1801) is a dialogue (inspired by *C.H.* I) between Poimandres and his disciple discussing new scientific discoveries (including those by Isaac Newton) as well as spiritual and material light and the Soul of the World.

In Italy, although Hermetism had all but ceased to exert its presence as an esoteric current, it was still occasionally the object of publications (see for instance an 1820 reprint in Bologna of an edition of the *C.H.* that Carlo Lenzoni published in 1584). In the United States, Ralph Waldo Emerson's *The Dial* (in particular the issues published from 1842 to 1844), a journal expressing the views of the Transcendentalist movement in the United States, published (in vol. IV) a number of "ethnic scriptures," as it called them, including extracts from Everard's translation of the *C.H.* Hermetism seems to have left its imprint, albeit a mostly indirect one, on a number of authors of pre-Romantic and Romantic literature in England and the United States (Tuveson, 1982). Frans von Baader, the main German theosopher in the Romantic period, although not strongly interested in Hermetism or alchemy, nonetheless made frequent use (notably from 1809 to 1839) of some verses from the *T.S.*, commenting on them and merging them with his theosophical approach. The middle of the nineteenth century saw new scholarly studies such as B. J. Hilgers's *De Hermetis Trismegisti Poimandro commentario* (Bonn, 1855) and Gustav Parthey's study of the Greek text of *T.S.*, *Hermetis Trismegisti Poemander* (Berlin, 1854).

**HERMETISM IN THE OCCULTIST CONTEXT.** The occultist current flourished from around 1850 to around 1920 and drew upon the esoteric literature of earlier centuries. Hermetism is part of the referential corpus of the occultists. Marie Ragon de Bettignies's widely disseminated *Maçonnerie occulte, suivie de l'Initiation hermétique* (1853) blends Masonic symbolism, alchemy, mythology, and Hermetism. But the presence of Hermetism within the occultist current appears to be rather limited, except in England. In France, for instance, such important representatives of occultism as Stanislas de Guaita or Papus rarely referred to Hermetism. They did, however, devote many pages to their understanding of the *T.S.*, which they, like so many other representatives of the current, took to be one of the most essential referential documents in Western esotericism and Hermetism (see Stanislas de Guaita's *Le Serpent de la Genèse*, Book II, Paris, 1897). In Italy, the occultist Giuliano Kremmerz authored a long series of commentaries titled "Commento alla Tavola di Smeraldo" (in *Commentarium per le Academia Ermetice* . . ., Bari, 1910).

In Germany, the new edition of Aletophilus's translation of the *C.H.* (1706), along with a new introduction, appeared as *Hermetis Trismegisti Einleitung ins höchste Wissen* (Stuttgart, 1855) in the semi-popular series *Das Kloster* directed by J. Scheible, which from 1849 to 1860 offered new

German editions of texts by Agrippa, Trithemius, Nostradamus, Paracelsus, J. B. Van Helmont, Eliphas Lévi, Catherine Crowe, and many others. Louis Ménard's *Hermès Trismégiste: Traduction complète précédée d'une étude sur l'origine des livres hermétiques* (Paris, 1866, several new editions) influence should not be underestimated. It is a new French translation of *C.H.* I–XIV (relying on Parthey's Greek edition), *Asclepius*, *Kore Kosmou* ("The Virgin of the World," part of Stobaeus's *Anthologium*), and Patrizi's version of the *Diffinitiones Asclepii* (*C.H.* XVI–XVIII). The book also contains a long but sober introduction of 112 pages in which Ménard places these texts in the perspective of a comparative approach to religions. Triggered in part by Ménard's book, a flurry of new English editions of Hermetic treatises appeared, mostly in England and the United States, accompanied by esoterically oriented presentations and/or commentaries. Most of them have little scholarly value, but they are representative of the occultist current, and many were produced by people with a reputation in that field.

The first on this list is a reprinting of Everard's translation by the Rosicrucian Publishing Company in Boston (*Hermes Trismegistus: His Divine Pymander. Also, the Asiatic Mystery, The Smaragdine Tablet, and the Song of Brahm*, repr. Toledo, Oh., 1889). Its editor was the famous Rosicrucian Paschal Beverly Randolph. The strongly Rosicrucian-oriented "Prefatory Note" is signed by Alfred E. Giles and Flora Russell (who also give there a reprinted version of the *Asiatic Mystery*; one of Randolph's Rosicrucian manifestoes). The "Song of Brahm" is a poem by Ralph Waldo Emerson.

There followed a new reprinting of Everard's translation by the Rosicrucian Hargrave Jennings (Madras, 1884, in the *Secret Doctrine Reference* series), who devoted most of his own prefatory text to Hermes Trismegistos and alchemical literature. This book contains the first public mention of the esoteric society the Hermetic Brotherhood of Luxor. Almost at the same time there appeared in the same series one of the most influential books of that publishing enterprise, namely *The Virgin of the World of Hermes Mercurius Trismegistus* (London and Madras, 1885), edited by Anna Bonus Kingsford and Edward Maitland, which contains an English version of *Kore Kosmou*, here titled "A Treatise on Initiations" (in fact, a new translation of the *Asclepius*), "The Definitions of Asclepius" (i.e., *C.H.* XVI–XVIII), plus further extracts from Stobaeus's *Anthologium*. In their translation and long introductions, Kingsford and Maitland drew heavily on Ménard's book. They saw in the Hermetic texts a survival of ancient Egypt and believed in a connection between them and Christianity, it being understood that Christianity itself represents, as they say, "a development from or reformulation of a doctrine long pre-existent." Along these lines, they considered their edition to be part of "the revival of Occult Science and Mystical, or Esoteric, philosophy." A new edition of Kingsford and Maitland's anthology soon followed (Bath, 1886), with an appendix on alchemy taken from Mary Anne Atwood's *A Suggestive Inquiry into the Hermetic Mystery*

(1850). The appendix was introduced by the famous John Yarker, author of many works in such domains, particularly in esoteric Freemasonry.

Given the number of such books, it is hardly surprising that Hermetism found expression in several esoteric periodicals. For example, we find *Kore Kosmou* (presented anonymously and in a different translation) in *The Occult Magazine* (Glasgow, see issues of 1885–1886). In 1894, William Wynn Westcott, who along with MacGregor Mathers had created the fringe-Masonic Hermetic Order of the Golden Dawn in 1887, inserted into the second volume of his series *Collectanea Hermetica* (London, 1893–1896) the Everard version of the *C.H.*, here titled *The Pymander of Hermes, with a Preface by the Editor*. Westcott's preface, more enthusiastic than critical, emphasizes the commonalities between Hermetism, Freemasonry, and Christianity.

On the scholarly side, *The Theological and Philological Work of Hermes Trismegistus, Christian Neoplatonist, Divine Pymander and Other Writings of Hermes Trismegistus* (Edinburgh, 1882), edited by John D. Chambers, reflects a new scientific approach. But it was mostly George R. S. Mead's enterprise that paved the way for deeper and more extensive scholarly research. Three years before breaking with the Theosophical Society, of which he was a prominent member, the society published in three volumes his *Thrice Greatest Hermes: Studies in Hellenistic Theosophy and Gnosis* (London and Benares, 1906; German trans., Leipzig, 1909). Never before had such a complete ensemble of the *C.H.* been gathered together, accompanied by copious notes, excerpts from *testimonia* of the Fathers of the Theosophical Society, and serious historical studies. Mead distanced himself markedly from the English-speaking occultists by displaying a great deal of objectivity in dealing with his material. That said, he did not disguise the fact that he was an esotericist ("To translate 'Hermes' in Greek," he writes in the introduction, "requires not only a good knowledge of Greek, but also a Knowledge of . . . gnosis."). Like his contemporary Arthur E. Waite, Mead was both a scholar and a full-fledged esotericist. His work, even more than Chambers's, heralds the development of twentieth-century critical research.

The last decades of occultism saw more Hermetically oriented publications, of which a few examples follow. *The Shepherd of Men: An Official Commentary on the Sermon of Hermes Trismegistos* (San Francisco, 1916) is by A. D. Raleigh, who called himself Hierophant of the Mysteries of Isis. Although the title of his book implicitly refers to the famous text of Late Antiquity, *The Shepherd of Hermas*, Raleigh's discourse is pervaded by the idea of a perennial philosophy and is blended with a fantastic history of human races, echoing some of the Theosophical Society's teachings. More situated within "classical" Hermetism is the thin volume *The Divine Pymander of Hermes Trismegistus* (n.l., 1923), which presents a short selection drawn from the Everard, Chambers, and Mead editions, along with some commentaries. It is in fact one of the "manuals" published by the Shrine of Wisdom,

which was a ritual Order that ran a publishing house and a journal. The Shrine of Wisdom was largely inspired by the works of the Platonist Thomas Taylor.

In closing, a final volume must be mentioned: Manly Palmer Hall's oversized folio *An Encyclopaedic Outline of Masonic, Hermetic, Qabbalistic and Rosicrucian Philosophy* (Los Angeles, 1928) is another product of late occultism and one of the most popular *summae* of Western esoteric traditions. Hermetism is almost ubiquitous in that strange encyclopedia.

**SURVIVAL AND DEBATES IN THE SECOND HALF OF THE TWENTIETH CENTURY.** Most of the editions of and commentaries on the Hermetic texts published during the height of occultism were reprinted in the second half of the twentieth century, which did not lack for original publications, although they were fewer in number. Among them are *The Gospel of Hermes, edited and translated from the Greek and Latin Hermetica*, introduced by Duncan Greenless and published in 1949 by the Theosophical Publishing Company. More famous is Jan van Rijckenborgh's *De Egyptische oer- gnosie en haar roep in het Eeuwige Nu . . .* (Haarlem, 1960–1965), an interpretation of the *C.H.* in the light of the teachings of an initiatory order (the Lectorium Rosicrucianum, of which he was the founder). In his book, ancient Gnosticism, neo-Catharism, Paracelsianism, and Boehmism are blended in an original way. Since its first publication, van Rijckenborgh's book has gone through countless reprints and translations, sponsored worldwide by the Lectorium Rosicrucianum. Noteworthy is the space he devotes to the *T.S.* He uses the text to support the tenets of his own teachings and does not hesitate to claim that it was written ten thousand years ago.

Thus, neo-Alexandrian Hermetism, as one of the several esoteric currents in modernity (i.e., from the Renaissance until the present), has naturally found itself historically intertwined with alchemy, Christian Qabbalah, Rosicrucianism, occultism, and other esoteric movements. In this respect, it is interesting to see how far and in which directions these relationships have developed. For example, despite their commonalities, Hermetism and Christian theosophy (which appeared later, at the beginning of the seventeenth century) have had few contacts and little influence on each other. One reason is that Hermetism, originally a branch of humanism, remained mainly dependent upon ancient sources, notably Greek ones, whereas the theosophical current is rooted in Paracelsus and Jakob Boehme, who represent a German, "barbaric" trend all but devoid of erudite leanings. Even long after the Renaissance, the foremost representatives of theosophy, such as Louis-Claude de Saint-Martin or Franz von Baader, practically never drew on the Hermetic writings. Although Titus Burckhardt, who stood within the so-called perennialist current (or Traditionalist School) has authored one of the most interesting commentaries of the *T.S.* (in his *Alchemie—Sinn und Weltbild*, Olten/Frieburg, 1960), Hermetism cannot be said to have merged with that perennialist

current. Other representatives of the perennialists, (such as René Guénon and Frithjof Schuon) do not show much interest in Hermetism (or other Western esoteric currents, for that matter).

Hermetism, considered over the sweep of a little over five centuries, is of great interest to the historian of ideas (and of literature), not least because it reflects the various contexts within which it has taken on ever-changing aspects. It is impossible to define it as a set of fixed, unchanging beliefs. Rather, its manifold manifestations evince a spiritual attitude that contains within itself a principle of constant readjustment. Not surprisingly, it has flourished in times and countries hospitable to religious tolerance. Although its representatives have been people desiring to reform religious systems, the reforms they had in mind were not dogmatic in character and very rarely were designed to overthrow established churches. They rather tended to enrich the churches by prompting them to return *ad fontes*, that is, both to ancient foundational texts and to specific forms of meditation. Far from stressing a war between Good and Evil or Light and Darkness, as is often the case in Christian thought, their discourses have expressed a generally optimistic conception of the inborn powers of humankind, which are able to liberate and expand individual consciousness.

Hermetism continues to thrive. One of the prominent members of the Lectorium Rosicrucianum in the Netherlands, Joost R. Ritman, has founded a library in Amsterdam, the Bibliotheca Philosophica Hermetica (open to the public since 1984), which is by far the richest in the world in terms of esoteric literature, including manuscripts from the early Renaissance to the present, not to mention a wealth of more ancient materials. This institution is especially noteworthy because Hermetic literature in the proper sense represents its fundamental core, as demonstrated not only by its holdings, but also by its exhibitions and publications. Its editorial board includes such reputable scholars as Frans A. Janssen and Carlos Gilly.

Furthermore, Hermetism is occasionally revived by philosophers who see in the *C.H.* the paradigm of an alternative philosophy able to enrich mainstream philosophy with new insights, or to replace it. For example, Ralph Liedtke's book *Die Hermetik. Traditionelle Philosophie der Differenz* (Paderborn, 1996) calls for a return to older modes of thinking. The author considers the contents of the *C.H.* to be one of the best possible introductions to a desirable and drastic reappraisal of mainstream contemporary trends in philosophy. The philosopher Françoise Bonardel, who brings together Hermetism and alchemy into one common perspective, sees in a "fertile Hermetism"—and in an attitude of mind that she calls *hermésienne* (hermesian)—"much more than a system of representation among others," for "the amazing continuity of Hermetic thought bears witness to the fecundity of a gnosis which is timeless because it is inherent in an ever reactualized hermeneutics" (Bonardel, 2002, pp. 179–180). And so, just as Renaissance Hermetism brought about re-

forms within the Catholic Church, it has become a means of “reforming” philosophy. Also, efforts are made to use it as a method for the fruitful completion or enrichment of psychology. For example, Lietaert Pierbolte (*Poimandres . . . vertaald met een transpersonalistische beschouwing*, Deventer, 1974) presents *C.H. I* in Dutch and explains why it should be used as a method for practicing the kind of transpersonal psychology that he advocates. Moreover, in a manner reminiscent of the New Age movement, the *T.S.* is occasionally interpreted and commented on as a practical guide to spiritual growth. See, for example, Dennis William Hauck’s *The Emerald Tablet: Alchemy for Personal Transformation* (Harmondsworth, U.K., 1999).

The number of scholarly works on Hermetism increased considerably over the twentieth century and include research by such distinguished historians and philologists as Richard Reitzenstein, Walter Scott, A. D. Nock, A. J. Festugière, Gilles Quispel, Roelof van den Broek, Jean-Pierre Mahé, and Brian P. Copenhaver. Frances A. Yates’s book *Giordano Bruno and the Hermetic Tradition* (1964) has been highly instrumental in calling attention to the importance and significance of Hermetism in the history of the Renaissance. Although not without precedent, many scholars whose research is dedicated to Renaissance Hermetism stand in its wake. Even when they do not endorse Yates’s views, they are directly or indirectly indebted to her writings. Yates’s book has paved the way for an ongoing academic recognition, even institutionalization, of modern Western esotericism as a specialty in its own right. In addition, it has caused a flurry of debates, first over what Robert S. Westman (1977) called the “Yates Thesis” (concerning the relation between Hermetism and the scientific revolution), and more recently over what Wouter J. Hanegraaff (2001) has referred to as “the Yates paradigm.” As Hanegraaff pointed out, Yates’s book contains a “grand narrative” based on two main assumptions: First, the existence of what she calls “the Hermetic Tradition,” understood as a more or less autonomous tradition based upon a covert reaction against both Christianity and the rise of scientific worldviews. Second, however paradoxical it may seem, the extent to which the tradition of “magic”—which she sees as essentially non-progressive—has been an important factor in the development of the scientific revolution. Now, even if neither of these two tenets has proved resistant to close scrutiny, the opinions that gave rise to the “Yates paradigm” will probably cause more ink to flow.

ANTOINE FAIVRE (1987 AND 2005)

## HERMITS SEE EREMITISM

**HEROES.** It is commonly said that whereas in the twentieth century impersonal forces were believed to make history, in the nineteenth century heroic individuals were believed to make history.

**THE "GREAT MAN" VIEW OF HISTORY.** The epitome of this nineteenth-century outlook was the English writer Thomas Carlyle (1795–1881). His *On Heroes, Hero-Worship, and the Heroic in History* (1841) celebrates eleven disparate figures grouped into six categories:

- the hero as divinity (Odin)
- the hero as prophet (Mahomet [Mohammed] Muhammad)
- the hero as poet (Dante, Shakespeare)
- the hero as priest (Martin Luther, John Knox)
- the hero as man of letters (Samuel Johnson, Jean-Jacques Rousseau, Robert Burns)
- the hero as king (Oliver Cromwell, Napoleon).

Carlyle opens his book with a statement that has come to epitomize the "Great Man" view of history: "For, as I take it, Universal History, the history of what man has accomplished in this world, is at bottom the History of the Great Men who have worked here" (Carlyle, 1897, p. 1). Yet for Carlyle heroes are themselves at the mercy of history. He praises heroes for, above all, their insight into the course of society rather than for the direction they impose on it. Heroes ultimately subordinate themselves to history, the course of which is set by God. Furthermore, the period determines the category of hero needed and even possible. Still, Carlyle is crediting heroes with great accomplishments.

Carlyle's concern with outward accomplishment sharply distinguishes his conception of heroism from that of the German philosopher Friedrich Nietzsche (1844–1900) in Part 1 of his *Thus Spoke Zarathustra* (1883–1885). The

achievement of Nietzsche's *Übermensch*, or "overman," is personal, not societal. Rather than praising the *Übermensch* for changing his society, Nietzsche praises the society that produces him.

Carlyle's most vitriolic contemporary critic was the pioneering English sociologist Herbert Spencer (1820–1903), for whom the attribution of decisive events to the talents of individuals rather than to the fundamental laws of physical and social evolution is a hopelessly primitive, childish, romantic, and unscientific viewpoint. In Spencer's famous summary phrase in *The Study of Society*, "Before he [the great man] can re-make his society, his society must make him" (Spencer, 1874, p. 35).

Spencer's metaphysical counterpart in the rejection of the influence of great men on history was the German philosopher G. W. F. Hegel (1770–1831). In the introduction to his *The Philosophy of History*, Hegel, unlike Spencer, does praise the hero, but for embodying the World Spirit in its predestined course of development. Whereas Hegel, writing before Carlyle, would have commended Carlyle for emphasizing the hero's "insight," he would have belittled Carlyle for making the hero the cause rather than the manifestation of change.

The twentieth century spawned still stronger skepticism toward the impact of heroes, even in the face of the seemingly all too real impact of dictators like Adolf Hitler (1889–1945) and Joseph Stalin (1879–1953). Defenders of heroism nevertheless remain. Best known is American philosopher Sidney Hook (1902–1989), author of *The Hero in History*. Hook argues for a sensible middle ground between crediting heroes with everything, which he assumes Carlyle to be doing, and crediting them with nothing. Unlike Carlyle, for whom heroes can be men of letters as well as of action, Hook is concerned only with heroes of action. He distinguishes between "eventful men," whose actions happen to change history, and "event-making men," whose actions are intended to change history. Eventful men have no special insight, and someone else in their place might have done the same. By contrast, Hook's event-making men, like all of Carlyle's heroes, alone have the insight to make the decisions they do. For example, Hook concedes that no one could have prevented World War I but he also asserts that it was not inevitable that World War I would be fought the way it was. Despite his use of the term "men," Hook includes females in both groups—for example, Catherine II of Russia (1729–1796) as an event-making woman. Because only event-making men and women act on the basis of their talents, only they deserve the epithet "hero."

**HEROES AND GODS.** For Carlyle, heroes are not merely celebrated but "worshiped." Yet he does not mean literal worship. His heroes are not gods. Of the eleven discussed in *On Heroes*, the sole exception is Odin, who after death was deified by his followers. Carlyle attributes the deification partly to the boundlessness of his followers' reverence but also to the loss of records that would have kept Odin tethered to hu-

manity. For Carlyle, subsequent heroes have remained mere humans because records have survived. Consequently, the hero as a divinity is gone forever.

Aptly, Carlyle uses the term “mythic” synonymously with “divine”: “were there no books, any great man would grow *mythic*” (Carlyle, 1897, pp. 25–26). For even if most heroes are not divine, those heroes whose stories constitute myths are. Hero myths are stories about divine heroes—divine in effect, whether or not formally. To be sure, in the academic study of myth it is conventional to distinguish mere heroes, however glorious, from gods. Folklorists in particular categorize the stories about most heroes as legends rather than myths. Yet contrary to convention, heroism can blur the line between the human and the divine—not by demoting gods to humans but by elevating humans to gods. More precisely, heroism, when recounted in myth, retains the distinction between the human and the divine but singles out the hero for making the leap from the one to the other.

Usually, the gap between the human and the divine is insurmountable, especially in Western religions. The most egregious sin in the West is the attempt by humans to become gods, epitomized by the vain efforts of Adam and Eve and of the builders of the Tower of Babel. The hiatus between the human and the divine applies as fully to polytheistic religions as to monotheistic ones. For ancient Greeks, those who dared to seek divinity were killed for their hubris. Those who directly challenged the gods were often consigned to eternal punishment in Tartarus.

Still, the West permits exceptions. In the ancient world the grandest exception was Herakles (Hercules), who, while born to Zeus, was still mortal. Herakles nevertheless accomplished superhuman feats of strength, outmaneuvered death in his last three great feats, and was rewarded with immortality by Zeus for his industry. Yet to some ancient writers such as Herodotos (c. 484—between 430 and 420 BCE) Herakles’ very stature meant that he had been born a god. Greeks did establish cults to worship human heroes, but only after their deaths, when heroes had transcended ordinary constraints (see Farnell, 1921). The grandest exception to the division in the West between humanity and divinity is, of course, Jesus. Yet even his capacity to be at once fully human and fully divine is taken to be a paradox, and a paradox difficult to maintain in practice. Throughout its history, Christianity has often veered between making Jesus merely an ideal human being, as in the Victorian period, and making him a sheer god, as in ancient Gnosticism.

Rather than trying to dissolve the gap between the human and the divine, hero myths transform humans into virtual gods by conferring on them divine qualities. The qualities can range from physical attributes—strength, size, looks—to intangible ones such as intelligence, drive, and integrity. One measure of the humanity of Carlyle’s heroes is the limit of their power: to the extent that they cannot alter history, they are merely human. The difference between humans and gods may be of kind: often, gods can fly, can

change shape, and live forever. Or the difference may be of degree: typically, gods are bigger, stronger, sexier, and smarter than humans. But so great is the difference of degree that it still puts divinity beyond the reach of most. While anyone can aspire to become a Hollywood star, the few who make it are not coincidentally called “gods” and, as “stars,” reside in a heaven far above us. Carlyle himself acknowledges the divine aura of his human heroes and even deems hero worship the source of all religion, including Christianity.

**MODERN HEROES.** Some heroes, or kinds of heroes, fit only certain periods. For example, it is hard to imagine an aristocratic hero like medieval Spain’s Don Juan surviving into the twentieth century. Other heroes do survive, either because their appeal continues or because they are protean enough to adapt to the times. Herakles, the greatest of ancient heroes, was by no means confined to the crude image of him as Rambo-like—the title character in a series of Hollywood films from the 1980s who appeared to be all brawn and no brains—but on the contrary has been depicted as the embodiment of wisdom, the exemplar of virtue, a tragic hero, a glutton, and even a romantic lover (see Galinsky, 1972).

In the twentieth century, as in prior centuries, not only were traditional heroes transformed, but new heroes and new kinds of heroes emerged. If distinctively nineteenth-century heroes were the romantic hero (Lord Byron’s Childe Harold) and the bourgeois hero (Gustave Flaubert’s Emma Bovary), distinctively twentieth-century heroes include the ordinary person as hero (Arthur Miller’s Willy Loman), the comic hero (Philip Roth’s Alexander Portnoy), the schlemiel as hero (Isaac Bashevis Singer’s Gimpel the Fool), and the absurd hero (Samuel Beckett’s Vladimir and Estragon). Far from divine, the contemporary hero is hopelessly human—mortal, powerless, amoral. The present-day hero is often lowly even within the human community—more the outsider than the insider, more the loser than the winner, more the villain than the savior. The contemporary hero is not a once-great figure who has fallen but a figure who never rises. Sisyphus, not Oedipus, let alone Herakles, epitomizes contemporary heroism. Yet Sisyphus is still to be commended for never giving up. Persistence replaces success, survival replaces achievement. Today’s hero, for example, is heroic in persisting without success. Because contemporary heroes scarcely reach the stature of gods, their stories scarcely constitute myths.

Yet it would surely be extreme to argue that traditional heroism has died out. Present-day heroes in sports, entertainment, business, and politics are admired for their success, not for their mere persistence, and the acclaim conferred on them often reaches the same divine plateau as in times past. They are “idolized” and “worshiped.” At most, the notion of heroism as persistence has arisen alongside the traditional notion of heroism as success.

**THEORIES OF HERO MYTHS.** The distinctiveness among theories of hero myths is that they profess to know the nature of all hero myths. Like theories of myth generally, theories

of hero myths claim to answer the main questions about the myths: what is their origin, what is their function, and what is their subject matter?

The study of hero myths goes back at least to 1871, when, in *Primitive Culture*, the pioneering English anthropologist E. B. Tylor argued that many of them follow a uniform plot, or pattern: the hero is exposed at birth, is saved by other humans or animals, and grows up to become a national hero (vol. I, 1871, pp. 254–255). In 1928 the Russian folklorist Vladimir Propp, in *Morphology of the Folktale*, sought to demonstrate that Russian fairy tales follow a common biographical plot, in which the hero goes off on a successful adventure and upon his return marries and gains the throne. Propp's pattern skirts both the birth and the death of the hero.

Of attempts not merely to delineate patterns but also to determine the origin, function, and subject matter of hero myths, the most important have been by the Viennese psychoanalyst Otto Rank (1884–1939), the American mythographer Joseph Campbell (1904–1987), and the English folklorist Lord Raglan (1885–1964). Rank later broke irreparably with Sigmund Freud (1956–1939), but when he wrote *The Myth of the Birth of the Hero* (1909), he was a Freudian apostle. While Campbell was never a full-fledged Jungian, he wrote *The Hero with a Thousand Faces* (1949) as a kindred soul of C. G. Jung (1875–1961). Raglan wrote *The Hero* (1936) as a theoretical ally of J. G. Frazer.

**Otto Rank.** For Rank, following Freud, heroism deals with what Jungians call the first half of life. The first half—birth, childhood, adolescence, and young adulthood—involves the establishment of oneself as an independent person in the external world. The attainment of independence expresses itself concretely in the securing of a job and a mate. The securing of either requires both separation from one's parents and mastery of one's instincts. Freudian problems involve a lingering attachment to either parents or instincts. To depend on one's parents for the satisfaction of instincts or to satisfy instincts in antisocial ways is to be stuck, or fixated, at a childish level of psychological development.

Rank's pattern, which he applies to thirty hero myths, is limited to the first half of life. It goes from the hero's birth to his attainment of a "career":

The hero is the child of most distinguished parents, usually the son of a king. His origin is preceded by difficulties, such as continence, or prolonged barrenness, or secret intercourse of the parents due to external prohibition or obstacles. During or before the pregnancy, there is a prophecy, in the form of a dream or oracle, cautioning against his birth, and usually threatening danger to the father (or his representative). As a rule, he is surrendered to the water, in a box. He is then saved by animals, or by lowly people (shepherds), and is suckled by a female animal or by a humble woman. After he has grown up, he finds his distinguished parents, in a highly versatile fashion. He takes his revenge on his father, on

the one hand, and is acknowledged, on the other. Finally he achieves rank and honors (Rank, 2004, p. 61).

Literally, or consciously, the hero, who is always male, is a historical or legendary figure like Oedipus of Greek mythology. The hero is heroic because he rises from obscurity to the throne. Literally, he is an innocent victim of either his parents or, ultimately, fate. While his parents have yearned for a child and abandon him only to save the father, they nevertheless do abandon him. The hero's revenge, if the parricide is even committed knowingly, is, then, understandable: who would not consider killing one's would-be killer?

Symbolically, or unconsciously, the hero is heroic not because he dares to win a throne but because he dares to kill his father. The killing is definitely intentional, and the cause is not revenge but sexual frustration. The father has refused to surrender his wife—the real object of the son's efforts. Too horrendous to face, the true meaning of the hero myth becomes shielded by the concocted story. Rather than the culprit, the hero becomes an innocent victim or at worst a justified avenger. What the hero seeks is masked as power, not displayed as incest. Most of all, who the hero is becomes some third party, a historical or legendary figure, rather than either the creator of the myth or anyone stirred by it. Identifying himself with the literal hero, the myth maker or reader vicariously revels in the hero's triumph, which in fact is his own. He is the real hero of the myth.

Literally, the myth culminates in the hero's attainment of a throne. Symbolically, the hero gains a mate as well. One might then conclude that the myth fittingly expresses the Freudian goal of the first half of life. In actuality, it expresses the opposite. The wish it fulfills is not for detachment from one's parents and from one's antisocial instincts but, on the contrary, for the most intense possible relationship to one's parents and the most antisocial of urges: parricide and incest, even rape. Taking one's father's job and one's mother's hand does not quite spell independence of them.

The myth maker or reader is an adult, but the wish vented by the myth is that of a child of three to five. The fantasy is the fulfillment of the Oedipal wish to kill one's father in order to gain access to one's mother. The myth fulfills a wish never outgrown by the adult who either invents or uses it. That adult is psychologically an eternal child. Having never developed an ego strong enough to master his instincts, he is neurotic. Since no mere child can overpower his father, the myth maker imagines being old enough to do so. In short, the myth expresses not the Freudian goal of the first half of life but the fixated childhood goal that keeps one from accomplishing it.

**Joseph Campbell.** Whereas for Freud and Rank heroism is limited to the first half of life, for Jung it involves the second half—adulthood—even more. For Freud and Rank, heroism involves relations with parents and instincts. For Jung, heroism in even the first half involves in addition relations with the unconscious. Heroism here means separation

not only from parents and antisocial instincts but even more from the unconscious: every child's managing to forge consciousness is for Jung a supremely heroic feat.

The goal of the uniquely Jungian second half of life is likewise consciousness, but now consciousness of the Jungian unconscious rather than, as in the first half, of the external world. One must return to the unconscious, from which one has invariably become severed, but the ultimate aim is to return in turn to the external world. The ideal is a balance between consciousness of the external world and consciousness of the unconscious. The aim of the second half of life is to supplement, not abandon, the achievements of the first half.

Just as classical Freudian problems involve the failure to establish oneself in the outer world in the form of working and loving, so the distinctively Jungian problems involve the failure to reestablish oneself in the inner world in relation to the unconscious. Freudian problems stem from excessive attachment to the world of childhood; Jungian problems are the result of excessive attachment to the world one enters upon breaking free of childhood: the external world.

Just as Rank confines heroism to the first half of life, so Campbell restricts it to the second half. Rank's scheme begins with the hero's birth; Campbell's, with his adventure. Where Rank's scheme ends, Campbell's begins: with the adult hero ensconced at home. Rank's hero must be young enough for his father and in some cases even his grandfather still to be reigning. Campbell does not specify the age of his hero, but the hero must be no younger than the age at which Rank's hero myth therefore ends: young adulthood. While some of Campbell's own examples are of child heroes, they violate his scheme, according to which heroes must be willing to leave behind all that they have accomplished at home, and violate even more his Jungian meaning, according to which heroes must be fully developed egos ready to encounter the unconscious from which they have largely become separated. Campbell's heroes should, then, be adults.

Rank's hero must be the son of royal or at least distinguished parents. The hero of the egalitarian Campbell need not be, though often is. Whereas Rank's heroes must be male, Campbell's can be female as well, though Campbell inconsistently describes the hero's initiation from an exclusively male point of view. Finally, Campbell's scheme dictates human heroes, even though many of his examples are of divine heroes. Rank's pattern, by contrast, readily allows for divine as well as human heroes.

Whereas Rank's hero returns to his birthplace, Campbell's marches forth to a strange new world, which the hero has never visited or even known existed. This extraordinary world is the world of the gods, and the hero must hail from the human world precisely to be able to experience the distinctiveness of the divine one. The hero enjoys physical relations with the goddess and marries her—the reason the hero must here be male. He clashes with the male god and defeats him—the reason the hero must here be male. Yet with both

gods he becomes mystically one and thereby becomes divine himself.

Whereas Rank's hero returns home to encounter his father and mother, Campbell's hero leaves home to encounter a male and a female god, who are neither his parents nor necessarily even a couple. Yet the two heroes' encounters are seemingly akin. But in fact they are not. Because the goddess is not the hero's mother, sex with her does not constitute incest. And the conflict with the male god is resolved.

When Campbell writes that myths "reveal the benign self-giving aspect of the *archetypal* father," he is using the term in its Jungian sense (Campbell, 1972, pp. 139–140). For Freudians, gods symbolize parents. For Jungians, parents symbolize gods, who in turn symbolize father and mother archetypes, which are components of the hero's personality. A male hero's relationship to these gods symbolizes not, as for Freud and Rank, a son's relationship to other persons (his parents) but the relationship of one side of a male's personality (his ego) to another side (his unconscious). The father and the mother are but two of the archetypes of which the Jungian, or collective, unconscious is composed. Archetypes are unconscious not because they have been repressed but because they have never been conscious. For Jung and Campbell, myth originates and functions not, as for Freud and Rank, to satisfy neurotic urges that cannot be manifested openly but to express normal sides of the personality that have just not had a chance at realization.

By identifying himself with the hero of a myth, Rank's myth maker or reader vicariously lives out in his mind an adventure that, if ever directly fulfilled, would be acted out on his parents themselves. While also identifying himself—or herself—with the hero of a myth, Campbell's myth maker or reader vicariously lives out in the mind an adventure that even when directly fulfilled would still be taking place in the mind. For parts of the mind are what the myth maker or reader is really encountering.

**Lord Raglan.** As a Frazerian, Lord Raglan focuses on the relationship between myth and ritual. Myth provides the script for the ritual, which is the killing and replacement of the king, in whom the soul of the god of vegetation resides and whose soul is thereby transferred to his successor. The soul is then transferred to the body of the next king. The incumbent is killed either at the first sign of weakness or at the end of a fixed term so short as to minimize the chance of illness or death in office. The king is killed to preserve or restore the state of health of the god and thereby of vegetation: as the king goes, so goes the god, and so goes vegetation.

Venturing beyond Frazer, Raglan equates the king with the hero. Raglan turns Frazer's theory of myth in general into a theory of hero myths in particular. Moreover, Raglan introduces his own detailed hero pattern, which he applies to twenty-one hero myths. That pattern extends all the way from the hero's conception to his death. In contrast to Rank's and Campbell's patterns, it therefore covers both halves of life:

1. The hero's mother is a royal virgin;
2. His father is a king, and
3. Often a near relative of his mother, but
4. The circumstances of his conception are unusual, and
5. He is also reputed to be the son of a god.
6. At birth an attempt is made, usually by his father or his maternal grandfather, to kill him, but
7. He is spirited away, and
8. Reared by foster-parents in a far country.
9. We are told nothing of his childhood, but
10. On reaching manhood he returns or goes to his future kingdom.
11. After a victory over the king and/or a giant, dragon, or wild beast,
12. He marries a princess, often the daughter of his predecessor, and
13. Becomes king.
14. For a time he reigns uneventfully, and
15. Prescribes laws, but
16. Later he loses favor with the gods and/or his subjects, and
17. Is driven from the throne and city, after which
18. He meets with a mysterious death,
19. Often at the top of a hill.
20. His children, if any, do not succeed him.
21. His body is not buried, but nevertheless
22. He has one or more holy sepulchres (Raglan, 1990, p. 138).

Clearly, parts one to thirteen correspond roughly to Rank's entire scheme, though Raglan himself never read Rank. The victory that gives the hero the throne is not, however, Oedipal, for the vanquished is not necessarily his father. Parts fourteen to twenty-two do not correspond at all to Campbell's scheme. The hero's exile is loosely akin to the hero's journey, but for Raglan there is no return. For Rank, the heart of the hero pattern is gaining kingship—or other title. For Raglan, the heart is losing kingship. Wherever Campbell's heroes are kings, the heart is their journey while king.

Campbell's hero can be any adult. Raglan's hero must be not only a male but also a king. Campbell's hero must—or should—be human. Raglan's hero can be either divine or human.

For Rank, heroes are heroic because they dare to serve themselves. For both Campbell and Raglan, heroes are heroic because they willingly or unwillingly serve their communities. Heroes serve their communities by their sacrificial deaths. Myths describe the lives—and deaths—of ideal kings. For Campbell, heroes in myth serve their communities by their return home with knowledge of the divine world. Without Raglan's hero, the community would die; without Campbell's, it would remain benighted.

**René Girard.** In *Violence and the Sacred* (1972) and many subsequent works, the contemporary French literary critic René Girard (1923–) offers an ironic twist to the theory of Raglan. Whereas Raglan's hero is heroic because he is willing to die for the sake of the community, Girard's hero is killed or exiled by the community for having caused the present ills of the community. Indeed, the "hero" is initially considered a criminal who deserves to die. Only subsequently is the villain turned into a hero, who, as for Raglan, dies selflessly on behalf of the community. The transformation of Oedipus from reviled exile in Sophocles' *Oedipus the King* to revered benefactor in Sophocles' *Oedipus at Colonus* evinces the transformation of outcast into saint. Even though Girard, and also Raglan, are vehemently anti-Freudian, both use Oedipus as their fullest example.

The change from criminal to hero is for Girard only the second half of the process. Originally, violence erupts in the community. The cause is the inclination, innate in human nature, to imitate others and thereby to desire the same objects as those of the imitated. Imitation leads to rivalry, which leads to violence. Desperate to end the violence, the community selects an innocent member to blame for the turmoil and usually kills the victim. The scapegoat can range from the most helpless member of society to the most elevated, including the king or queen. Whereas for Raglan myth directs or inspires the killing of the hero, for Girard myth is created after the killing to hide it. The myth first turns the scapegoat into a criminal who deserved to die but then turns the criminal into a hero, who has died willingly for the good of the community. The scapegoat can even become a criminal and a hero simultaneously. For the figure blamed for the turmoil is also credited with ending it, albeit by death or exile. But the criminal can also become even more of a hero thereafter.

ROBERT A. SEGAL (2005)

**HESCHEL, ABRAHAM JOSHUA** (1907–1972), was a Jewish scholar and philosopher of religion. Born and raised in Warsaw, Heschel received his training in the methods of modern scientific research in Berlin, and wrote most

of his mature works in the United States. Heschel was born into an intensely traditional Hasidic milieu: He was descended on his father's side from Dov Ber of Mezhirich, successor of the BeSHT (acronym of the Ba'al Shem Tov, Yisra'el ben Eli'ezer), founder of the Hasidic movement that flourished among eastern European Jews in the eighteenth century; Avraham Yehoshu'a Heschel, known as "the Apter *rebbe*"; and Yisra'el of Rizhyn. On his mother's side, he was descended from Levi Yitshaq of Berdichev and Pinhas of Korets.

As a youth, Heschel received traditional training in Talmud and rabbinic lore, in which he excelled, and immersed himself in the world of Jewish mysticism, the literature of Qabbalah. Having decided to acquire a modern Western education, he enrolled in a secular Yiddish *Realgymnasium* in Vilna (now Vilnius), and in 1927 he moved to Berlin, where he attended the Hochschule für die Wissenschaft des Judentums and the University of Berlin. His doctoral dissertation (1933), dealing with the phenomenon of prophetic consciousness, was published in 1936 (*Die Prophetie*). After teaching Talmud at the Hochschule, he was appointed Martin Buber's successor at the Central Organization for Jewish Adult Education in Germany and the Jüdische Lehrhaus in Frankfurt in 1937. After his deportation in October 1938 with the rest of the Polish Jews then resident in Germany, Heschel taught for eight months at the Institute for Jewish Studies in Warsaw. He was enabled to leave Poland before the Nazi invasion only by a call to join the faculty of the Hebrew Union College in Cincinnati, Ohio.

Heschel reached the United States, via England, in 1940, and after five years on the faculty of the Hebrew Union College, he taught at the Jewish Theological Seminary of America in New York as professor of ethics and mysticism, until his death. In the last decade of his life, he became actively involved in a number of public issues. He participated in negotiations with Cardinal Bea concerning the formulation of a declaration on the Jews, which emerged from Vatican Council II, and he also took part in the civil rights movement, opposition to the Vietnam War, and the campaign to enable Russian Jews to emigrate from the Soviet Union.

Heschel's philosophy of religion developed under the influences of his traditional Jewish upbringing and the challenges of modern secular philosophy, science, and psychology. He was impressed by the works of the neo-Kantian philosophers, such as his teacher Heinrich Maier (*Philosophie der Wirklichkeit*, Tübingen, 1926), and by the phenomenologists Edmund Husserl and Max Scheler. But against the neo-Kantians he defended the claim of traditional Judaism that God is more than a postulate of reason. From the phenomenologists he learned to analyze the constitutive traits and structures of experienced reality, without reducing them to alien categories that can distort their unique character. Already in his early work on prophecy, later expanded into his English book *The Prophets* (1962), he asserted that the phenomena of biblical prophecy should not be forced into the

categories of Aristotelian metaphysics. The “divine concern” of the living God of the Bible, who takes a passionate interest in his creatures, is the key to Heschel’s philosophy of religion.

Heschel rejected the construction of a “religion of reason” in the spirit of the neo-Kantian philosopher Hermann Cohen, because such would substitute philosophy for religion; he rejected the analysis of “religious experience,” as in Schleiermacher and Rudolf Otto, because it would replace religion with the psychology of religion; and he criticized the “reconstruction” of traditional Judaism to conform to modern naturalism in the manner of Mordecai M. Kaplan, because it would transform religion into the sociology of religion. If religion is *sui generis*, it must be studied on its own terms, and the interpreter must focus on the preconceptual, ineffable reality of lived religion and on the dynamic relationship between God and humankind disclosed in the classical documents of Judaism and the lives and experiences of pious men.

Heschel consciously adopted a dual approach in his work both as a scholar who pursued historical research in the sources of classical Jewish thought and as an original and imaginative contemporary philosopher and theologian. This approach enabled him to formulate his own thought as an authentic interpretation of his Judaic heritage in all its richness. Heschel’s scholarly studies, in addition to his seminal work on prophecy, included a biography of Moses Maimonides, published in 1935; various articles on medieval philosophy, Qabbalah, and Hasidism; and a work written in Hebrew on the doctrines of revelation in Talmudic thought, of which two volumes were published in 1962–1965 and a third still awaits publication. A two-volume work on the life and thought of Menahem Mendel of Kotzk, the “Kotzker rebe,” and an English volume about Mendel and Kierkegaard (*A Passion for Truth*) appeared posthumously.

The second strand of Heschel’s work, in which he tried to offer his contemporaries a theology based on the application of the insights of traditional sources to the problems of modernity, is chiefly developed in *Man Is Not Alone* (1951) and its successor volume, *God in Search of Man* (1955). Here religion is defined as an answer to ultimate human questions. Because modern humanity is often estranged from the reality that informs genuine faith, Heschel thought it was futile to present merely traditional answers to these questions. Hence, he tried first and foremost to recover the significant existential questions to which Judaism offers answers, confronting his readers with the living God of the Bible. To the religiously sensitive person, God is an “ontological presupposition,” the ultimate reality, which is later crystallized by discursive thought into the concept of a power, a principle, a cause, or a structure.

Heschel described three ways in which humans can reach an awareness of God. The experience of wonder leads beyond mere facts to an awareness of the grandeur and mystery of reality. Wonder as curiosity becomes the starting

point of science that looks beyond given facts (data) to the laws they exemplify. Wonder as “radical amazement” points to the ground and power that stand behind all facts and perceptions of facts. This “evocative” approach to reality results in a panentheistic outlook: Through created things one becomes aware of the God who is within, but who is also beyond all finite existence.

A second approach to awareness of God is reached by delving into the recesses of one’s own being, realizing that the self is not a discrete, independent, and self-sufficient entity, but part of something greater and more comprehensive than the individual. This approach tends toward a quasi-mystical view, but it stops short of mystical absorption in the godhead, by emphasizing God as the subject of reality and humans as the object whose dignity and worth are derived from their awareness that they are the goal of divine concern and expectation.

In a third way to God, humankind becomes aware of the voice and word of God. The “holy dimension,” discovered by reacting responsively and responsibly to this address, characterizes the biblical view of revelation. By observing the commandments of the transcendent God, Israel entered this holy dimension of challenge and guidance, and by obediently responding to the divine imperative, humanity experiences itself as the object of divine address and concern. The ability to respond to the divine challenge is the root of human freedom; the failures and successes of Israel in responding to God’s call constitute the drama of Jewish history as interpreted by faith. Thus the Bible is not so much human theology as God’s anthropology.

Because of Heschel’s stress on faith as a response to God’s demands, he opposed both the scholastic attempts to identify the biblical God with the Greek notion of “being,” and the modern process philosophies that describe the deity as the power that makes for goodness, the *nisus* of the universe, or the moral dimension of reality. His own concept of “divine pathos” makes the idea of concern, or directed attention, the central category of biblical thought. Aristotle’s Unmoved Mover must give way to the biblical idea of the Most Moved Mover. Humankind responds to divine pathos with sympathy, and by this act of identifying with divine aims, overcomes its egocentric predicament without having to suppress its own needs. A religious person, by acts of empathy with divine goals, converts divine goals and ends into consciously acquired and deeply felt personal needs. Humans, who share “transitive,” outgoing concern with God, not only must have needs but must also be needed, in order to attain true fulfillment.

Heschel’s philosophy is shot through with polarities; the pair he calls “pattern and spontaneity” (*geva’*, *kavvanah*) are basic to life and liturgy and produce a creative tension between, on the one hand, the prescribed and regulated observance of the commandments (*mitsvot*) and, on the other, the novel and individual way in which a Jew ought to respond to the unique experiences of existence. Time and space stand

in a similar dialectical relation where things are frozen processes; life is a unity frozen in the process of gathering the past into itself in memory and faithfulness and of reaching into the future in hope, expectation, and anticipatory celebration. The Sabbath, whose celebration is a weekly commemoration of creation, the renewal of the divine-human covenant, and a foretaste of future redemption, is an edifice in time.

Heschel's latest work on the Kotzker *rebe* mirrors his awareness of the tension between mystery and meaning, between natural and crisis theology, between sacramentalism and utopianism—or, in the language of Qabalah, between the world of unification ('*alma' de-yihuda'*) and the world of separation ('*alma' de-feruda'*). Perhaps Heschel's most important theme is that God is in need of humankind and that humanity's deepest fulfillment can be found by participating in the divine concern.

#### BIBLIOGRAPHY

The fullest exposition of Heschel's theology is found in his two major books, *Man Is Not Alone: A Philosophy of Religion* (New York, 1951) and *God in Search of Man: A Philosophy of Judaism* (New York, 1955). His major contribution to biblical theology is *The Prophets* (New York, 1962). His work on Talmudic doctrines of revelation in the schools of Yishma'e'l and 'Aqiva' is *Torah min ha-shamayim be-aspaqlaryah shel ha-dorot*, 2 vols. (New York, 1962–1965). *Man's Quest for God* (New York, 1954) contains essays and addresses on prayer and symbolism. Heschel's views on the nature of time can be found in *The Sabbath: Its Meaning for Modern Man* (New York, 1951). *The Earth Is the Lord's* (New York, 1950) deals with the life and spirituality of eastern European Jewry; *Israel: An Echo of Eternity* (New York, 1969) treats the meaning of the land and the State of Israel. *The Insecurity of Freedom* (New York, 1966) is a collection of essays dealing with contemporary topics. *A Passion for Truth* (New York, 1973) discusses the life and thought of Menahem Mendel of Kotzk, and is largely based on the more scholarly and magisterial two-volume work written in Yiddish and published as *Kotzk: In gerangel far emeskeit* (Tel Aviv, 1973).

*The Circle of the Baal Shem Tov: Studies in Hasidism*, edited and introduced by Samuel H. Dresner (Chicago, 1985), contains a collection of scholarly papers by Heschel, originally published in periodicals and festschriften, and mostly written in Hebrew or Yiddish. *Between God and Man: An Interpretation of Judaism from the Writings of Abraham J. Heschel*, rev. ed. (New York, 1976), is an anthology of Heschel's writings that I have edited, organizing his thought in a systematic form. My introductory essay attempts to present an exposition of Heschel's life and philosophy, and the volume contains a full bibliography of Heschel's books and articles and of translations of books and articles into other languages. It also gives a select list of writings on Heschel until 1975.

John C. Merkle's *The Genesis of Faith: The Depth Theology of Abraham Joshua Heschel* (New York, 1985), written by a Roman Catholic theologian, is the most detailed and thorough book-length study of Heschel's theology in English. The Fall 1973 issue (vol. 28) of the quarterly journal *Conservative Judaism* is exclusively devoted to Heschel's life and thought and con-

tains a number of important articles. Albino Babolin's *Abraham Joshua Heschel: Filosofo della religione* (Perugia, 1978), written in Italian by a Catholic professor of the University of Perugia, is an important exposition of Heschel's thought and its critics.

**HESIOD** (Gr., Hēsiodos; fl. c. 730–700 BCE) was one of the earliest recorded Greek poets. The earlier of his two surviving poems, *Theogony*, is of interest to students of Greek religion as an attempt to catalog the gods in the form of a genealogy, starting with the beginning of the world and describing the power struggles that led to Zeus's kingship among the gods. The cosmogony begins with Chaos ("yawning space"), Earth, and Eros (the principle of sexual love—a precondition of genealogical development). The first ruler of the world is Ouranos ("heaven"). His persistent intercourse with Earth hinders the birth of his children, the Titans, until Kronos, the youngest, castrates him. Kronos later tries to suppress his own children by swallowing them, but Zeus, the youngest, is saved and makes Kronos regurgitate the others. The younger gods defeat the Titans after a ten-year war and consign them to Tartaros, below the earth, so that they no longer play a part in the world's affairs.

This saga of successive rulers is evidently related to mythical accounts known from older Hittite and Babylonian sources. Hesiod's genealogy names some three hundred gods. Besides cosmic entities (Night, Sea, Rivers, etc.) and gods of myth and cult, it includes personified abstractions such as Strife, Deceit, Victory, and Death. Several alternative theogonies came into existence in the three centuries after Hesiod, but his remained the most widely read.

Hesiod's other poem, *Works and Days*, is a compendium of moral and practical advice. Here Zeus is prominent as the all-seeing god of righteousness who rewards honesty and industry and punishes injustice.

Also attributed to Hesiod was a poem that actually dated only from the sixth century BCE, the *Catalog of Women*, which dealt with heroic genealogies issuing from unions between gods and mortal women. It enjoyed a status similar to that of the *Theogony*, but it survives only in fragments.

## BIBLIOGRAPHY

Hesiod's theological thinking is explored in a careful and sensitive way by Friedrich Solmsen in *Hesiod and Aeschylus* (Ithaca, N.Y., 1949). There is much fresh insight in the chapter on Hesiod in Hermann Fränkel's *Early Greek Poetry and Philosophy* (Oxford, 1975). The divine genealogies and the Oriental background to the "succession myth" are fully discussed in my book *Hesiod: Theogony* (Oxford, 1966). For a discussion of the other poems, see my *Hesiod: Works and Days* (Oxford, 1978) and *The Hesiodic Catalogue of Women: Its Nature, Structure, and Origins* (Oxford, 1985).

*Revised Bibliography*

**HESTIA**, the Greek goddess of the domestic and communal hearth, is closely allied to the Roman goddess Vesta. Hestia, the eldest child of Kronos and Rhea, was swallowed by her father at birth, and was the last to emerge from the patriarchal "womb" when Zeus liberated his siblings. The motif of first and last recurs frequently in the traditions associated with her. She receives the first and last libation offered at every feast, no matter what divinity is being honored. Although she was an original member of the Olympian Twelve, there is a tradition that at some point she yielded her place to Dionysos—a tradition but, typically, no story. Indeed, there are almost no stories about this least anthropomorphic of the major Greek divinities.

Hestia's name also served as a common noun designating the hearth and its fire; most essentially, she was the fire at the center of Olympus, of the city-state, the family home, and the soul. She was worshiped not at specially designated temples but at the family hearth; in the Classical period altars originally dedicated to her were rededicated to Zeus Ephesios ("Zeus of the hearth"). Her tranquillity and apparent passivity were understood to be inherent to her character and not externally imposed; her virginity was deliberately chosen. Hestia is represented as shunning all adventure or entanglement. Though she had no children of her own, she bestowed her dispassionate and nondiscriminating motherly love on all alike, but especially on motherless orphans. Though Vesta in Rome was attended by virgins chosen before they were six, the Greek goddess's attendants were most typically elderly women who had once been married. Hestia represented the stability and continuity of communal and familial existence; a new colony was established by bringing a log from the mother city's hearth, a new home by lighting a log brought from the daughter's family hearth.

Hestia was often paired with Hermes: She always self-same, he a shapeshifter; she homebound, he a wayfarer; she ultimately trustworthy, he a trickster. That she was replaced on Olympus by Dionysos suggests the significance of their

complementation: Life in his realm had meaning at the extreme, whereas life in hers had meaning at the center. Hestia embodied the Greek recognition of the sanctity to be found in the most ordinary and familiar things, those too easily ignored, too readily devalued.

#### BIBLIOGRAPHY

The most important classical sources are Hesiod's *Theogony* and the Homeric hymns to Hestia and Aphrodite. The most extended modern scholarly discussion is in Lewis R. Farnell's *The Cults of the Greek States*, vol. 2 (1896; New Rochelle, N.Y., 1977). An interesting psychological exploration by Barbara Kirksey, "Hestia: A Background of Psychological Focusing," can be found in *Facing the Gods*, edited by James Hillman (Irving, Tex., 1980).

**HEVAJRA.** The term *Hevajra* is a name of the central male deity of the *maṇḍala* described in the text of that name, the *Hevajra Tantra*. The image of Hevajra, which was relatively common in Indian Buddhist art from the tenth century onward, is that of a yogin. Dark blue in color, he is depicted naked yet covered with numerous ornaments, most noticeably a skull garland, skull staff (*khaṭvāṅga*), ritual scepter (*vajra*), and bell, and with his dreadlocks tied up in the impressive crest preferred by Indian renunciant yogins. An idealized image of a yogin, it is naturally the case that the tradition that gave rise to these images, and also the associated textual and ritual practices, originated among the communi-

ties of renunciants, who constituted what might be termed the "*siddha* movement" and who from the eighth century onward were an important influence on the development Buddhist Tantric traditions.

The *Hevajra Tantra*, while a Buddhist scripture with identifiably Buddhist elements, was heavily influenced by this movement. Composed by the late eighth century, the *Hevajra Tantra* exhibits the charnel-ground culture of the *siddha* movement, with its emphasis on transgressive practices, particularly in the areas of sexuality and food consumption. Classified as a "*Yoginī*" or "Mother" Tantra, it also places great emphasis upon female deities, although it is arguable to what extent, if any, this translated into increased respect for women. Like most Tantras, the majority of the text deals with ritual, with great focus placed upon magical rites employing *mantras*, often for worldly purposes such as affecting the weather. It is also noticeable for its employment of songs written in the Apabramśa dialect, as well as its prescription of a "coded language" (*sandhyā-bhāṣā*) for use by yogins and *yoginīs* in their Tantric feasts. This has been a topic of great interest for scholars, past and present. In traditional Indian and Tibetan Buddhist contexts, the *Hevajra Tantra* played an important role in the development of Tantric hermeneutics, and it thus made an important contribution to Buddhist scholarship from the ninth century onward. This "coded language," which has been previously translated as "twilight language," has also been a serious object of study since the mid-twentieth century, and its interpretation has inspired some controversy.

The *Hevajra Tantra* and its ritual and meditative traditions focus upon a *maṇḍala* as its central iconographic feature. The *maṇḍala* also functions as the premier site for its ritual practices, such as consecration (*abhiṣeka*) ceremonies, and its meditative practice, since many meditations in the tradition require that the adept either visualize himself or herself within the *maṇḍala*, or view the *maṇḍala* as existing within his or her body. While there are many different types of *Hevajra maṇḍalas*, probably the best-known version is the relatively simple "skull cup-bearing" (*kapāladharin*) *maṇḍala*, so called because it centers upon Kapāladharī Hevajra, who in this form has sixteen arms, each of which holds a skull cup. He is depicted as being in sexual union with his consort, Nairātmīyā. They are in turn surrounded by a circle of eight *yoginīs*: Gaurī, Śavarī, Caurī, Caṇḍalī, Vetālī, Ḍombinī, Ghasmarī, and Pukkasī. Because the central deity couple are said to be "nondual," it is described as being a nine-deity *maṇḍala*.

The Hevajra tradition is particularly noted for its theory of the four joys (*caturānanda*) achieved via sexual union in the context of Perfection Stage meditation practices that involve focused attention upon the subtle body, and the manipulation of "winds" of vital energy and "drops" of subtle sexual fluids within this body's channels. Of greatest importance is the fourth of these, the "natural joy" (*sahajānanda*). The concept of the "natural" *sabhaja* state became an impor-

tant element in the discourse of the *siddha* movement in India, and it has retained its significance to this day among communities of Tantric Buddhists, particularly in Nepal, Tibet, Mongolia, and elsewhere in the diaspora.

The *Hevajra Tantra* was translated into Chinese by Dharmapāla (963–1058) in 1055 CE, but like other Buddhist Tantras that were translated into Chinese at this time, its practice does not appear to have taken root in China. It was, however, successfully transmitted to Tibet. It was one of the central teachings that the Tibetan scholar Mar pa (Marpa, 1002/12–1096) received from the Indian saint Nāropa (c. 966–1040), and Mar pa in turn passed it on to his famous disciple Mi la ra pa (Milarepa, 1028/40–1111/23), whose disciples would found the Bka' brgyud (Kagyu) orders of Tibetan Buddhism, which continue to transmit the *Hevajra* tradition as one of their central teachings. It was also transmitted to Tibet by one of Mar pa's contemporaries, the translator-scholar 'Brog mi (Dok-mi, 992–1072), who studied at Vikramaśīla in Northeast India with Ratnākaraśānti (c. eleventh century). He in turn instructed Dkon mchog rgyal po (Könchog Gyalpo, 1034–1102), one of the founders of the Sa skya (Sakya) school of Tibetan Buddhism. The *Hevajra Tantra* would become one of the central teachings of the Sa skya school, and it provides the basis for its "Path and Fruit" (*lam 'bras*) system of Perfection Stage yoga.

The Sa skya school also played an essential role in the dissemination of Buddhism to the Mongols. During the Yuan dynasty, the Mongols achieved hegemony over Tibet and appointed the Tibetan Sa skya Paṇḍita (Sakya Paṇḍita, 1182–1251) to be their governor of Tibet in 1249. His nephew, the Sa skya lama 'Phags pa (Pakpa, 1235–1280), became a friend and advisor of Kublai Khan (1216–1294). Tibetan interactions with the Mongols continued for centuries following the collapse of the Yuan dynasty in 1368 CE, and the *Hevajra Tantra* was among the many texts and traditions successfully transmitted to the Mongols.

DAVID B. GRAY (2005)

**HIERODOULEIA.** Contemporary scholarship uses the questionable expression "sacred prostitution" to refer to a sexual rite practiced in the ancient Near East. In the temples of Ishtar, Astarte, Mā, Anahita, and Aphrodite, for example, women, often virgins, offered themselves sexually to strangers. Sometimes the temples were staffed by such "sacred prostitutes." Their actions were ritual components of the cult of the goddess in question. In ancient Greece, the word for such women was *hierodoulē*, or "sacred servant." The term used here, *hierodouleia* ("sacred service"), refers to the ritual.

This survey will exclude practices associated with such terms as *bacchanalia*, *saturnalia*, and *orgy*, which refer to the temporary loosening of sexual restraints that occurs frequently in many societies all over the world during certain festivals, rites of passage, and other types of religious observances. In the current state of scholarship on the topic of cultic sexual activity, it would be premature to try to establish any correlations between such practices and the more institutionalized forms of cultic sexual activity.

The present discussion is limited to the institution of hierodoulēs, as distinct from profane or exclusively commercial prostitution. The distinction between the two imposes itself on the basis of both historical and ethnographic evidence. One of the earliest existing legal written documents for the ancient Near East is the Babylonian Code of Hammurabi, which specifies a severe punishment for a female hierodoulē who goes to a tavern (the word *tavern* is considered by scholars to be synonymous with the word *brothel*). More than three thousand years later, the female servants-cum-courtesans (*devadāsīs*) of the temple of Jagannātha in Puri, Orissa (India), are forbidden still even to walk in the streets frequented by common prostitutes.

The Babylonian evidence indicates that a distinction between cultic and profane sexuality is both ancient and persistent. It is very possible that the distinction became blurred or perhaps even totally obliterated in the minds of most Westerners because in the Hebrew scriptures the term used for the cultic sexual activity of both male and female temple servants—*znh*, "to prostitute oneself"—is also used to refer to apostasy (*Hos.* 2:7, 4:15; *Jer.* 2:20, 3:6, 3:8; *Ez.* 16:15, 23:3, 23:19; *Is.* 57:3). Sexual cultic activity became for the monotheist Yahvists synonymous with abandoning the wor-

ship of Yahveh and turning to false gods. Apostasy in the Bible is considered to be the worst of sins, hence terms referring to cultic sexual activity—*prostitution*, *harlotry*, and *whoredom*—took on extremely negative connotations.

This attitude toward cultic sexual activity seems not, however, to have always existed or to have been established easily. Authors of the Hebrew scriptures mention the existence and activity of hierodoulēs, both male (*qodesh*) and female (*qedushah*), even in the Temple at Jerusalem. Scholarly research has detailed the efforts of the prophets throughout the history of the ancient Israelites to oust such a custom from their midst. It seems to have been finally eradicated only after the fall of Jerusalem (586 BCE) and the Babylonian exile. The eventual triumph of a monotheist Yahvistic religion took place in a polytheistic cultural environment radically different in its religious orientation. According to the Old Testament scholar Walter Kornfeld, the disappearance of this institution was of primary importance to the establishment of the Yahvistic religion. Cultic sexual activity was an essential aspect of religions that venerated a mysterious life-power manifesting itself in a cyclic manner, following the rhythms of nature, which was most often conceived of as feminine. This configuration contrasts markedly with religions that revere a single masculine god who reveals himself at specific moments in history. However, this female life power seems to have survived in altered form in the mystical Jewish tradition in the form of the Shekhinah, the female presence of God. In medieval cabalistic Jewish circles, sacred ritual sexual union between husband and wife was performed to bring about the reunification of the male aspect of God and the Shekhinah.

Some form of cultic sexual activity was practiced by temple servants of both sexes in most of the cultural areas of ancient West Asia. In Mesopotamia the earliest evidence (mostly textual) comes from Sumer, where the cult of the goddess Inanna (Ishtar) was prominent and was associated with such activity. In a hymn written about 2300 BCE by the high priestess of the moon god at Ur and called the *Exaltation of Inanna*, that goddess is referred to as “the hierodule of An” (An was the highest god of Sumer). Other Sumerian texts show that temples to Inanna had at their service many temple prostitutes. The goddess Inanna transformed herself into the Semitic Ishtar with the Akkadian conquest of Sumer during the third millennium BCE, and the women who carried out the sexual aspect of that goddess’s cult were called *ishtaritu*. Given the characterization of Inanna as a hierodoulē, it is likely that the women temple servants were considered to be living embodiments of the goddess. Such a conjecture is reinforced by ethnographic evidence on the *devadāsīs* (female servants of a deity) of India.

In Puri, the *devadāsīs* of the temple of Jagannātha are considered to be the living embodiments of Jagannātha’s wife Lakṣmī. Lakṣmī is a goddess of prosperity, abundance, and well-being, and the *devadāsīs* who, laden with precious ornaments, dance and sing twice daily in the temple are the

visible signs of the goddess’s wealth. Their sexual activity as courtesans links them to well-being, since erotic pleasure is considered one of the foremost expressions of that state. They represent the auspiciousness of the married state and embody the active sexuality of the non-widowed wife.

The textual evidence from Mesopotamia seems to point toward a similar identification between the hierodoulē and the married woman. Both wore a veil in imitation of Ishtar, who is always represented wearing a veil. In India also, both *devadāsīs* and married women cover their heads with the end of their sari, a gesture often described as wearing a veil. In paragraph 127 of the Code of Hammurabi, hierodoulēs are said to be protected from molestation in the same way as a married woman. Another parallel between the institution in Mesopotamia and in India is that in both, the consecrated women live in their own houses. Even though the *devadāsīs* are concubines of the king and the priests, they cannot be said to be part of a male establishment. They invite whom they please to their own houses. The *devadāsīs*, like the *ishtaritu*, are not supposed to procreate; they adopt girls to succeed them. In paragraph 178 and subsequently, the Code of Hammurabi speaks only of the adopted children of the temple servants. Similarly, the prosperity and abundance for which the *devadāsīs* stand are the general prosperity of the land and the well-being of the realm: they are specifically not meant to be fertile. The *devadāsīs* are well versed in the *ars erotica* as well as in music, dance, and literature: a wealth of textual evidence in India depicts them as often extremely well educated not only in the arts but in philosophy as well. In Indian epic literature (c. third century BCE–third century CE), the courtesans embody the wealth, refinement, and culture of the prosperous and well-ruled city.

A similar role is played by a harlot in the *Epic of Gilgamesh*, one of the oldest and most widely diffused works from ancient Mesopotamia (some of its versions date from the beginning of the second millennium BCE). Gilgamesh, the ruler of the city of Uruk, abuses his people; a goddess named Aruru creates a half-man, half-animal creature named Enkidu to subdue Gilgamesh. Enkidu lives in innocence with the animals in the forest. A harlot is sent to humanize him; she makes love to him and teaches him how to behave as a human being. He is brought into the city of Uruk and eventually tames Gilgamesh, who ceases to mistreat his people. Thus the active sexuality of the prostitute results in well-being for the inhabitants of Uruk.

This story has a close parallel in the myth of Ṛṣyśṛṅga, in Indian literature. This sage, who had a horn on his forehead, was born of a female doe who drank the seed a sage had spilled in a pond. Ṛṣyśṛṅga grows up in his father’s forest hermitage, eating berries and roots and never seeing other human beings. In a neighboring kingdom, a terrible drought plagues the realm because of the misconduct of the king. The king is advised that the only way to save the inhabitants from starvation is to bring Ṛṣyśṛṅga into the city. Only the city courtesans are able to do this. One of them cleverly seduces

the horned forest dweller, introducing him not only to erotic pleasure but to cooked food, clothes, and other refinements of city life. When she and *Ṛṣyśṛiṅga* enter the city, rain pours from the sky, to the great joy of the people. The active sexuality of the courtesan is—as in the Mesopotamian example—the instrument that safeguards the well-being of the king and the community.

In both stories, the courtesan represents human culture and is able to transform a semi-wild creature into a civilized human being. The similarity between the two stories may be a result of the archaeologically well-established fact of extensive contacts between ancient Mesopotamia and the Indus Valley civilization of Northwest India (c. fourth to second millennium BCE). Even though more than a millennium separates the end of the Indus Valley civilization from the earlier portions of the epics, scholars have traced many features of later Hindu civilization to the earlier, pre-Aryan, agrarian Indus Valley civilization. The hypothesis that temple prostitution may be one such historical continuity from the earlier period must be entertained, especially in view of the striking similarities between the ancient Mesopotamian practices and the Indian institution.

Another complex of ideas embodied in cultic sexual activity is that of the transference to the king of the fertile power of the goddess. The king, both in ancient Mesopotamia and in Hindu India, was regarded as the guarantor of the fertility of the land and its people, and in general of the prosperity and well-being of the realm. In order to carry out this function, the king had to receive this power from a woman. In ancient Mesopotamia the power was transferred through the sacred marriage (*hieros gamos*) ritual, one of the most widely documented rituals for a period of over two thousand years. The earliest accounts come from Sumer in the early third millennium BCE. Essentially, the rite consisted of ceremonial and public intercourse between the king, representing the goddess's consort Dumuzi (the Akkadian Tammuz), and a representative of Inanna, most likely a high priestess, head of the temple hierodules. The point of the intercourse is not procreation but the assurance of abundant crops and the goddess's endorsement of the king's ability to rule.

In Puri, the king, who before the Muslim and British conquests ruled a large empire (until the second half of the sixteenth century), through the coronation ritual is symbolically infused with female generative powers. More literally, the *devadāsīs*, who are the living embodiments of Lakṣmī, infuse the king with the fertile powers of the goddess. This is accomplished in the sexual act when the woman's sexual fluids, containing her power of life (*śakti*), enter the man's body via his sexual organ. In the Hindu case, the sacred marriage rite is carried out not literally but symbolically during the king's coronation and every year afterward.

Besides cultic sexual activity carried out by females, ancient Mesopotamian texts speak of male hierodoulēs who represented the goddess's consort Dumuzi. These men were

eunuchs who dressed in women's clothes and engaged in cultic homosexual activity. Dumuzi and his transformations into the Phoenician/Canaanite Baal, the Syrian/Greek Adonis, the Phrygian and Lydian Attis, and the Egyptian Osiris were consorts/sons of the goddess. The Mesopotamian Inanna similarly transformed herself into the corresponding figures of Asherah, Astarte/Aphrodite, Cybele, and Isis.

Common to the mythology of these deities is the theme of the self-castration of the male god and his subsequent death and stay in the underworld, from which the goddess rescues him, bringing him back to life. The death of the god often corresponds in the myth to the barrenness of nature, whose fertility is restored by the goddess's reunion with her consort. An early Babylonian hymn likens Tammuz to plants that quickly fade. This theme is carried down through the millennia and finds expression in the Greek ritual celebrating the death of Adonis, called the Adonia, during which female courtesans sowed certain seeds in baskets that they placed on the rooftops. There the plants quickly germinated and grew in the summer heat but just as quickly faded, since their roots had no time to grow strong. These "gardens of Adonis" metaphorically represent the young god's sterility, since the plants wilt before they can bear fruit, thus echoing in concrete ritual action the mythical theme of the god's self-castration. Certain Roman authors (Servius, Ovid) report that in the Phrygian and Lydian (Asia Minor) cult of Cybele and Attis, male devotees castrated themselves during certain festivals while in a state of trance brought about by dance and music. They then became temple servants of the goddess, wore women's clothes, and engaged in cultic homosexual activity.

The cult of Cybele was brought to Rome in 204 BCE by official decree. Following military difficulties with their enemy Hannibal, the Romans consulted the sibylline oracles, who admonished them to bring the image of the West Asian goddess (a black stone) to Rome. This was done with great ceremony, and the goddess was installed on the Palatine hill. Her eunuch priests, called Galli by the Romans, followed the customs of their cult of origin in Asia Minor. The cult of Cybele in Rome survived until the fifth century CE.

The interdiction against transvestism in the Hebrew scriptures (*Dt. 22:5*) is understood by most scholars as being part of the larger movement against fertility cults. The fact that sterile transvestite eunuchs are symbolically linked to the seasonal renewal of the earth's fertility is attested in several of the myths concerning Ishtar and Tammuz. It is also confirmed ethnographically by a similar phenomenon in India, that of the male transvestites generally known as *hijras*. For these transvestites, found all over North and South India, self-castration is a caste duty (*dharma*). It is carried out in a ritual context: the neophyte is seated in front of a picture of the goddess Bahuchara Mata and repeats her name while the operation is being performed. This constitutes the traditional initiation into the *hijra* community. In the myth about this goddess, she cuts off one of her breasts, offering

it in place of her body to bandits who would ravish her. By castrating themselves and dressing as women, her devotees achieve a special identification with her.

Most *hijras* are homosexual prostitutes; their most important religio-cultural function is to sing and dance in houses where a male child has been born. The *hijras* confer fertility, prosperity, and health on the child and its family. The *hijras'* connection to the fertility of the land—and not only to that of the people—is preserved in one of the stories they tell, a story strikingly similar to that of the seduction of the ascetic R̥syśringa by a courtesan. Drought was plaguing a kingdom, and only the personal visit by the king to two *hijras* visiting his city was able to bring about the rains. The parallelism between the institution of the *hijras* and the sacred eunuchs of the ancient eastern Mediterranean is remarkable. As in the case of the parallelism with female cultic sexual activity, the existence at some period in history of contact between the two areas cannot be excluded.

The institution of the transvestite *hijras* and that of the female temple courtesans exhibit the seemingly paradoxical link between sterility and general fertility. The *devadasis* and, according to the available evidence, the ancient West Asian female hierodoulēs are not supposed to procreate; they adopt children but do not give birth to them. The eunuchs have sacrificed to the goddess their reproductive capacity. Their sexual activity is sterile. A study of the rituals and myths of the courtesans of the temple of Jagannatha in Puri leaves no doubt that it is their sexual activity that ensures general well-being and prosperity. The evidence concerning the *hijras* and the ancient West Asian sacred eunuchs points to a similar conclusion. The sacrifice of one's reproductive capacity is symbolically akin to death; the link is particularly clear in the myths of the self-castration of Tammuz, Adonis, and Attis, which is soon followed by death. The paradox of general fertility brought about by the sexual activity of persons who have sacrificed their own fecundity may have to be understood as one symbolic expression of the widespread sacrificial theme of renewed life through death.

The ancient eastern Mediterranean/West Asian region and the Indian subcontinent are not the only areas of the world where sexual cultic activity is practiced. Unfortunately, the reports by ethnographers on the subject are rather spotty, and not enough information is available to attain a satisfactory understanding of these practices. Some form of sacred prostitution has been reported for various groups in West Africa. A. B. Ellis, in *The Ewe-Speaking Peoples of the Slave Coast of West Africa* (London, 1890), reports that in Dahomey the female priestesses who have been dedicated to a deity are considered to be his wives; they do not marry, and they engage in prostitution. They are known as *kosi*, a term derived from *kono*, meaning “unfruitful,” since a person so dedicated and any child born to her are lost to their natal lineage and belong to the deity. These women wear a special type of dress and cover their breasts, unlike other women, a peculiarity they share with ancient Indian courtesans, the

only women with covered breasts in the painted frescoes of the Ajanta caves (c. seventh and eighth centuries CE). The priestesses of the python god Dangbi are distinguished from those of other deities by having their own organization. Through a trance possession by the python god, any female can join this organization. Her person then becomes sacred and inviolate. These women live together in separate houses and are accorded great personal freedom.

Farther to the east, among the Ibo in what is today Nigeria, the earth goddess had an important shrine in the town of Nguru. Amaury Talbot noted (in *Some Nigerian Fertility Cults*, Oxford, 1927) that about three hundred women had been given to the shrine as virgins. They practiced cultic sexual activity, mostly with sterile men who came to the shrine to pray for increased virility. These women were not supposed to procreate; any child born to them was exposed.

Farther to the west, Ellis reports (in *The Tshi-Speaking Peoples of the Gold Coast of West Africa*, London, 1887) the existence of a form of sacred prostitution among the coastal tribes of what is today Ghana. The gods are served by both priests and priestesses. The priests marry, but the priestesses do not, since they are, as in India, considered to be married to the deity. These women dance, enter into trance, and prophesy. They have sexual relations with men of their own choice, who are reported to live with the priestesses for the duration of the relationship. The ethnographic record is spotty on the subject, and these African examples are probably not the only instances of institutionalized cultic sexual activity on that continent.

The presence of both transvestite males engaging in homosexual activity and of women who were sexually free has been reported for pre-Conquest Mesoamerica and for Borneo. In the capital of Teocolhuacán, on the Gulf of California in northwestern Mexico, founded by descendants of the Toltec, temples had attached to them male transvestites and women who engaged in some form of cultic sexual activity. In Borneo, several groups have initiated priests and priestesses into some form of prostitution. Among the Posso-Todjo Toraja, the Olo Nyadju, the Olo Dusun, and the Kayan, most of the initiated priesthood are women. The members of the priesthood receive their ritual knowledge from spirits of the sky world. Both priests and priestesses have specialized knowledge of garden magic and of healing. Priestesses conduct the ghosts of the dead, especially those of chiefs, to the land of the dead. They also perform ceremonies concerned with house building. The priests dress as women and act as homosexual prostitutes, and the priestesses act as public prostitutes.

In addition to forms of cultic sexual activity that are practiced regularly by certain men and women, there are cases in which sexual activity is engaged in only during a certain period. The North African Awlad Nā'il tribe descends from a famous sixteenth-century saint. The women of the tribe are priestesses of saints' shrines. At puberty they go into towns and practice prostitution until they have accumulated

a satisfactory dowry. They then return to their villages and marry; no opprobrium whatsoever is attached to their method of accumulating wealth. Edmond Doutté reports (in *Magie et religion dans l'Afrique du Nord*, Algiers, 1908) that when the French colonial administration tried to interfere with such practices, the whole population protested vigorously, insisting that to eradicate or curtail the custom would be detrimental to the production of abundant harvests. This example could represent a historical continuity, since Augustine (*City of God* 2.4) reports that the Semitic mother goddess was worshiped in North Africa under the names of As-tarte and Tanit. During their festival days, female devotees engaged in sacred prostitution. Similarly, Herodotus notes (1.199) that in Paphos (on Cyprus) women used to prostitute themselves in the service of Adonis/Tammuz before marrying, and Justin writes that they did this to accumulate money for a dowry.

The North African premarital exchange of sexual services for wealth is similar to a custom observed in the Palauan archipelago in the western Pacific (part of the Trust Territory of the Pacific Islands). After attaining puberty, young girls are sent by their mothers to serve as concubines in the men's clubhouse of another village for three months to a year. In payment for their services, the men send money to the girls' families. This system of temporary prostitution generates an important network of economic exchanges between villages. The institution is also viewed as a form of magical protection for the village in which the women take up temporary residence. This is conveyed in Palau by placing on the gable of the men's house a statue of a nude female prominently displaying her genitalia. The myth explaining the origin of such a figure states that the woman was a concubine in the men's house and therefore from another village. The men from her natal village are classified as her brothers, and for them to gaze on her nakedness would be a grave sin. The men's clubhouse on which such an image is displayed is therefore protected from raids by the men from the villages of its resident female visitors.

A comparative study of institutions involving cultic sexual activity by males and females, on either a permanent or semi-permanent basis, has not been undertaken. The subject is not free from a negative bias, in all likelihood rooted in the ancient association between apostasy and cultic sexual activity.

#### BIBLIOGRAPHY

A useful summary statement of research on the topic of hierodouleia is an article by Walter Kornfeld in volume 8 of the *Supplément to the Dictionnaire de la Bible*, entitled "Prostitution sacrée" (Paris, 1972); the article covers only the ancient eastern Mediterranean/West Asian area. In a book edited by Carl Olson entitled *The Book of the Goddess Past and Present* (New York, 1983), there are some excellent articles relevant

to this topic; in particular, Judith Ochshorn's "Ishtar and Her Cult" (pp. 16–28) deals specifically with the hierodules; Renée Salzman's "Magna Mater: Great Mother of the Roman Empire" (pp. 60–67) has excellent information on Cybele's Roman cult and her eunuch priests; and Steve Davies's "The Canaanite-Hebrew Goddess" is a good introduction to the topic of goddess worship by the ancient Israelites. A general reassessment of the terms usually translated as "prostitute" (mostly "secular prostitute") in the ancient Near East is provided in Julia Assante's "The Kar.Kid/Harimtu: Prostitute or Single Woman? A Reconsideration of the Evidence," *Ugarit-Forschungen* 30 (1998): 5–96; and Gonzalo Rubio's "¿Virgenes o meretrices? La prostitución sagrada en el Oriente antiguo," *Gerión* 17 (1999): 129–148 deals more specifically with cultic prostitution in the ancient Near East. On the Greek rituals of the Adonia carried out by the courtesans of Aphrodite's temple, Marcel Détiénne has written an innovative and fascinating work entitled *The Gardens of Adonis* (Atlantic Highlands, N.J., 1977).

On the Shekhinah as the female life force, see Gershom Sholem's chapter "Shekhinah: The Feminine Element in Divinity" in *On the Mystical Shape of the Godhead: Basic Concepts in the Kabbalah* (New York, 1991). On the sexual ritual itself see Seymour J. Cohen, ed. and trans., *The Holy Letter: A Study in Jewish Sexual Morality* (Northvale, N.J., 1994).

As for ethnographic studies of contemporary practices, for Eastern India see Frédérique Apffel-Marglin, *Wives of the God-King: The Rituals of the Devadāsīs of Puri* (Oxford, 1985). For South India, consult Saskia Kersemboom—*Story Nityasumangali: Devadāsī Tradition in South India* (Delhi, 1987). For a historical look at women's role in South Indian temples see Leslie Orr's *Donors, Devotees, and Daughters of God: Temple Women in Medieval Tamilnadu* (New York and Oxford, 2000). On the reform movement in India that led to the eradication of this institution, see Kay K. Jordan, *From Sacred Servant to Profane Prostitute: A History of the Changing Legal Status of the Devadāsīs in India* (Delhi, 2003). For a comprehensive study of courtesans in Indian literature through the ages, one must consult Moti Chandra's *The World of Courtesans* (Delhi, 1973). Johann Jakob Meyer's work on women and sexuality in the epics, *Sexual Life in Ancient India*, 2 vols. (London, 1930), is a classic. A reliable ethnographic study of male transvestites (*hijras*) in India is Serena Nanda's *Neither Man nor Woman: The Hijras of India* (Belmont, Calif., 1990, 1999).

FRÉDÉRIQUE APFFEL-MARGLIN (1987 AND 2005)

**HIEROPHANY** (from Greek *hieros*, "sacred," and *phainein*, "to show") is a term designating the manifestation of the sacred. The term involves no further specification. Herein lies its advantage: It refers to any manifestation of the sacred in whatever object throughout history. Whether the sacred appear in a stone, a tree, or an incarnate human being, a hierophany denotes the same act: A reality of an entirely different order than those of this world becomes manifest in an object that is part of the natural or profane sphere.

The sacred manifests itself as a power or force that is quite different from the forces of nature. A sacred tree, for

instance, is not worshiped for being a tree. Neither is a sacred stone adored, in and of itself, for its natural properties as a stone. These objects become the focus of religious veneration because they are hierophanies, revealing something that is no longer botanical or geological, but “wholly other.”

**FORMS OF HIEROPHANY.** The forms of hierophanies vary from one culture to another. The matter is complicated for, throughout the course of history, cultures have recognized hierophanies everywhere in psychological, economic, spiritual, and social life. There is hardly any object, action, psychological function, species of being, or even entertainment that has not become a hierophany at some time. Whatever humans come in contact with can be transformed into a hierophany. Musical instruments, architectural forms, beasts of burden, and vehicles of transportation have all been sacred objects. In the right circumstances, any material object whatever can become a hierophany.

The appearance of the sacred in a hierophany, however, does not eliminate its profane existence. In every religious context some objects in the class of things that convey the sacred (e.g., stone, trees, human beings) always remain profane. No single culture contains within its history all the possible hierophanies. In other words, a hierophany always implies a singling-out. Not all stones are held to be sacred in a culture; only some are venerated, or one, because their properties make them fitting vehicles of the sacred. A hierophany separates the thing that manifests the sacred from everything else around it, from all that remains profane.

The sacred appears in cosmic form as well as in the imaginative life of human beings. Cosmic hierophanies cover the spectrum of cosmic structures. Supreme gods of the sky, such as Num, the sky divinity of the Samoyeds, or Anu, the Babylonian *shar shame* (“sky king”), reflect or share the sacredness attributed to the sky. So do the sovereign gods of the sky who display their power through storm, thunder, and lightning, such as the Greek god Zeus, his Roman counterpart Jupiter, and Yahveh, the Hebrew supreme being.

The sacredness of the earth is an important source of hierophany. Worship of Pachamama, mother goddess of the earth, is an ancient and widespread phenomenon in the South American Andes. Local soil is a sacred presence in countless cultures around the globe. The earth is often an important character in myths about the earliest times of creation. Such is the role of Papa (“earth”) in Maori creation accounts and of Gaia in the Greek myths presented by Hesiod. Frequently the earth, as a hierophany of sacred being, appears as the creative partner of a heavenly being. Such a divine couple, deified sky and earth, figured prominently in the mythologies of Oceania, Micronesia, Africa, and the Americas.

The sun became a powerful manifestation of the sacred in central Mexico (among the Mixtec), in the Peruvian Andes (among the Inca), in ancient Egypt, and elsewhere. Furthermore, important cultural heroes who figure largely in

the mythic history of various societies (e.g., among the Maa-sai of Africa, the Turco-Mongols, and Indo-Europeans) often have essential ties to the sun’s powers.

In many cultures, the fertility of animals and plants is presided over by the sacredness of the moon. Above all others, the hierophanies of the moon convey the sacredness of life’s rhythms: rainy seasons, ocean tides, sowing times, the menstrual cycle. Among Pygmy groups of central Africa, for instance, the moon, called Pe, is the fecund source of new life. Women celebrate her sacredness with drinking and dancing feasts held at the time of the new moon. Through the metamorphosis it undergoes each month, the moon displays its powers of immortality and its ability to regenerate a form of life that even includes the experience of death. Women and snakes become epiphanies of the moon’s sacred power through their periodic loss of life in the form of blood and skin. Menstruation sometimes is perceived not only as a shedding of blood but as a shedding of the “skin” that lines the uterus each month or of the “skin” that envelops the body of a new child if conception occurs that month. Snakes are sometimes thought to shed not only skin but also “blood”: Snake venom is viewed as a species of blood that is “shed” (that is, transmitted from fang to victim) when a snake bites its prey or when venom is consumed in festival brew.

Human physiology itself can become a manifestation of the sacred. Divine kings and the mystical bodies of shamans, transformed by their contact with sacred realities, can themselves become transparent vehicles of sacred powers. Even the breath, soul, blood, pulse, semen, and body warmth of ordinary human beings can be seen as signs of the presence of supernatural forces. In certain yogic traditions, for example, a woman embodies *prakṛti*, the eternal source and limitless creative power of nature. The ritual nakedness of this *yoginī* makes possible the revelation of a cosmic mystery.

Ordinary items such as roots, herbs, and foods may also manifest the sacred in one tradition or another, as may manufactured items, such as swords, ropes, and puppets. Techniques and skills themselves, the processes of manufacture, reveal sacred powers. Ironworking, spinning, and weaving are frequently sacred activities, carried on by consecrated persons in holy places and periods.

The cosmogonic myths of tribal peoples, the Brahmanic tradition of South Asia, the mystical writings of Nichiren and Teresa of Ávila, the enthronement ceremonies of the king in ancient Babylon, the agricultural festivals of Japan, the ritual costumes of dancing shamans in Siberia, the symbolic fixtures of the Borobudur stupa, and initiation rites in various traditions are all hierophanies. They express some modality of the sacred and some moment in its history. Each one of these hierophanies reveals an aspect of the sacred as well as a historical attitude that humans have taken toward the sacred.

**STRUCTURE AND DIALECTIC OF THE SACRED.** At the most general level of analysis, there exists a structure common to

all hierophanies. Whenever the sacred is manifest, it limits itself. Its appearance forms part of a dialectic that occults other possibilities. By appearing in the concrete form of a rock, plant, or incarnate being, the sacred ceases to be absolute, for the object in which it appears remains a part of the worldly environment. In some respect, each hierophany expresses an incomprehensible paradox arising from the great mystery upon which every hierophany is centered: the very fact that the sacred is made manifest at all.

This characteristic structure of manifestation and limitation is common to all hierophanies. The dialectic of appearance and occultation of the sacred becomes a key to understanding religious experience. Once all hierophanies are understood as equivalent in this fundamental respect, two helpful starting points can be found for the study of religious experience. In the first place, all appearances of the sacred, whether sublime or simple, can be seen in terms of the same dialectic of the sacred. In the second place, the entire religious life of humankind is placed on a common footing. Rich and diverse as it is, the religious history of human life evidences no essential discontinuity. The same paradox underlies every hierophany: In making itself manifest, the sacred limits itself.

**THEOPHANY AND KRATOPHANY.** Although *hierophany* is an inclusive term, one can distinguish different types of hierophany. They depend on the form in which the sacred appears, and the meaning with which the sacred imbues the form. In some instances, a hierophany reveals the presence of a divinity. That is, the hierophany is a theophany, the appearance of a god. Theophanies differ widely from one another in form and meaning, depending upon the nature of the divine form appearing in them. A glance at the gods in the pantheon of South Asian mythology or in Aztec mythology shows that divinities can differ markedly in revealing various divine forms of the sacred, even within the same culture. Needless to say, theophanies from different cultures (e.g., Baal, the storm god of the ancient Semites; Viracocha, the creator god of the Inca; and Amaterasu, the Japanese deity of the sun and ancestress of the imperial line) manifest quite different modalities of the sacred. In the form of divine persons, theophanies reveal the distinct religious values of organic life, cosmic order, or the elementary forces of blood and fertility, as well as of purer and more sublime aspects.

A second type of hierophany may be termed a kratophany, a manifestation of power. Kratophanies preserve the sacred in all its ambivalence, both attracting and repelling with its brute power. The unusual, the new, and the strange frequently function as kratophanies. These things, persons, or places can be dangerous and defiling as well as sacred. Corpses, criminals, and the sick often function as kratophanies. Human beings in powerful or ambivalent circumstances (such as women in menses, soldiers, hunters, kings with absolute power, or executioners) are hedged around with taboos and restrictions. People approach sacred foods with etiquette and manners designed to ward off defilement,

sickness, and pollution. The precautions that surround saints, sacrificers, and healers stem from fear of confronting the sacred. Kratophanies emphasize the extent to which the manifestation of the sacred intrudes on the order of things. Kratophanies also bring out the contradictory attitude displayed by human beings in regard to all that is sacred. On the one hand, contact with hierophanies secures, renews, and strengthens one's own reality. On the other hand, total immersion in the sacred (or an improper encounter with it) annihilates one's profane existence, an essential dimension of life.

In any case, a hierophany (whether in the form of a theophany or kratophany) reveals the power, the force, and the holiness of the sacred. Even the forces of nature are revered for their power to sanctify life; that is, to make fertility holy. The forces of nature that appear in divine forms or in certain objects make reproductive life partake of the unbounded power and plenty of the sacred.

**IMPACT ON SPACE AND TIME.** Hierophanies directly affect the situation of human existence, the condition by which humans understand their own nature and grasp their destiny. For example, hierophanies alter the fundamental structures of space and time. Every hierophany transforms the place in which it appears, so that a profane place becomes a sacred precinct. For Aboriginal peoples of Australia, for example, the landscape of their native lands is alive. Its smallest details are charged with the meanings revealed in myth. Because the sacred first appeared in those places (to guarantee a food supply and to teach humans how to feed themselves), they become an inexhaustible source of power and sacrality. Humans can return to these places in each generation, to commune with the power that has revealed itself there. In fact, the Aboriginal peoples express a religious need to remain in direct contact with those sites that are hierophanic. One may say that the hierophany, connected with the transformed place of its appearance, is capable of repeating itself. The conviction is widespread that hierophanies recur in a place where the sacred has once appeared. This explains why human habitations and cities are constructed near sanctuaries. Ceremonies of consecration, ground-breaking, or foundation-laying for temples, shrines, sacred cities, capitals, and even bridges and houses, frequently repeat or echo acts of fundamental hierophanies, such as the creation of the world. At times they even provoke a sign indicating the location of a hierophany (e.g., the release of an animal and the sacrifice of it on the spot where it is later found; or geomancy). These rituals of foundation and construction ensure that the site will perpetuate the presence of a hierophany that first appeared within the bounds of a similarly structured location and event. The precincts for festival and ceremony are frequently consecrated for the occasion in this way. Thus, for example, the Yuin, the Wiradjuri, and the Kamilaroi, Aboriginal groups of Australia, prepare a sacred ground for their initiation ceremonies. The ground represents the camp of Baiame, the supreme being.

Hierophanies also transform time. A hierophany marks a breakthrough from profane to magico-religious time. Just as spaces sacralized by a hierophany may be reconstructed through acts of consecration, so the acts of hierophany are repeated in the sacred calendar of each year. Rituals that repeat the moment of a hierophany recreate the conditions of the world in which the sacred originally appeared, and at that moment when the sacred manifests itself again in the same way, extraordinary power overwhelms the profane succession of time. New Year ceremonies are among the most striking examples of the periodic recreation of the world in a state as fresh, powerful, and promising as it was in the beginning. Any fragment of time (e.g., the phases of the moon, the transitions of the human life cycle, the solstices, the rainy seasons, the breeding cycles of animals, the growth cycles of plants) may at any moment become hierophanic. If it witnesses the occurrence of a kratophany or theophany, the moment itself becomes transfigured or consecrated. It will be remembered and repeated. The rhythms of nature are evaluated for their power as hierophanies; that is, for signs of the power to renew and recommence cosmic life. Furthermore, hierophanic moments of time are not limited to cosmic rhythms of nature or biology. In the Judeo-Christian tradition, for example, human history is transfigured into a theophany. The manifestation of God in time guarantees the religious value of Christian images and symbols such as the cross, the holy mountain of Calvary, and the cosmic tree.

**IMPLICATIONS FOR THE STUDY OF SYMBOLIC LIFE.** The transfiguration of so many objects into symbols of something else, some sacred reality, has repercussions for understanding the nature of symbols. The study of hierophanies penetrates the meaning of the symbolic life and uncovers the function of symbolism in general. Humans have an innate sense of the symbolic, and all their activities imply symbolism. In particular, religious acts have a symbolic character. From the instant it becomes religious, every act or object is imbued with a significance that is symbolic, referring to supernatural values and realities.

Symbols relate to the sacred in several ways. Sometimes symbolic forms become sacred because they embody directly the spirit or power of transcendent beings (e.g., stones that are the souls of the dead, or represent a god). In these cases the hierophany is effected by a symbolism directly associated with the actual form (i.e., a form apprehended by religious experience, rather than empirical or rational experience) of stone, water, plant, or sky.

At other times the meaning of a religious form may derive from symbolism that is less clear. Religious objects become hierophanies in a less direct way, through the medium of symbolic existence itself. They acquire a religious quality because of the symbolism that imbues them with religious meaning. That is, they become sacred because of their location within a symbolic system. Their sacrality depends upon a consciousness able to make theoretical connections between symbolic expressions. In such cases, the hierophany is

effected by the transformation of concrete forms into a nexus of cosmological principles and powers.

For example, the symbolism that has surrounded the pearl throughout history works to transform it into a “cosmological center” that draws together key religious meanings associated with the moon, women, fertility, and birth. The symbolism of the pearl is quite ancient. Pearls appear in prehistoric graves and have a long history of use in magic and medicine. Careful inspection of myths of pearls in many cultures reveals that water imbues pearls with its generative force. Pearls were included in ritual offerings to river gods. Some pearls have magical power because they were born of the moon. The pearl is like a fetus, and for this reason women wear pearls to come in contact with the fertile powers of hidden creative processes within shells, in amniotic waters, and in the moon. Pearls have also been used in the cure of illnesses associated with the moon. Placed in tombs, pearls renewed the life of the dead by putting them in contact with the powerful regenerative rhythms of the moon, water, and femininity. Covered in pearls, the dead are plunged once more into the cycle of birth, life, death, and rebirth—the career of living forms intimately bound to the moon. In sum, the pearl becomes a hierophany when humans become aware of the cosmological pattern of water, moon, women, and change.

This kind of sacred symbolism has its origins in theory; specifically, a theory of symbols. What gives the sacred object in question (e.g., a pearl) its rich and full religious meaning is the framework of symbolism surrounding it. This is triggered by an awareness of the wider symbolic universe. This conclusion has importance for understanding the role of human reflection in the origin of certain hierophanies. An object becomes sacred, becomes the locus of a hierophany, when humankind becomes aware of the cosmological pattern of principles (e.g., water, moon, change, the cycle of death and birth) centered in it. The theoretical links make possible the experience of the full range of sacrality. The form draws its full meaning from the symbolism that surrounds it and of which it is a part. In fact, symbols extend the range of hierophanies. Objects not directly the locus of a hierophany may become sacred because of their envelopment in a web or pattern of symbolism.

Two related statements should now be made separately. The first consideration is that hierophanies can become symbols. In this respect, symbols are important because they can sustain or even substitute for hierophanies. However, symbols play an even more startling and creative role in religious life: They carry on the process of hierophanization. In fact, the symbol itself is sometimes a hierophany; that is, it reveals a sacred reality that no other manifestation can uncover. A hierophany in its own right, symbolism affords an unbroken solidarity between humankind (*homo symbolicus*) and the sacred. Extending the dialectic of hierophanies, symbolism transforms objects into something other than what they appear to be in the natural sphere. Through symbolism any

worldly item may become a sign of transcendent reality and an embodiment of the sacredness of an entire symbolic system. Indeed, one may say that symbolism itself reflects the human need to extend infinitely the process of hierophany. Looking upon the remarkable number of forms that have manifested the sacred throughout the broad history of religions, one concludes that symbolic life tends to identify the universe as a whole with hierophany and thereby opens human existence to a significant world.

#### BIBLIOGRAPHY

Mircea Eliade is most responsible for the use of the term *hierophany* and for its interpretation as manifestation of the sacred in religious studies. See Eliade's *Patterns in Comparative Religion* (New York, 1958) for an analysis of the variety of coherent symbolic forms of hierophanies and for an argument concerning the dialectic of the sacred underlying them (especially in the final chapter). His *The Sacred and the Profane: The Nature of Religion* (New York, 1959) discusses the impact of a hierophany on the structures of space and time. Adrian Marino's *L'herméneutique de Mircea Eliade* (Paris, 1980) delineates how this understanding of hierophany fits into a general science of culture. Alejandra Siffredi's "Hierofanías y concepciones mítico-religiosas de los Teheulches meridionales," *Runa* (Buenos Aires) 12 (1969–1970): 247–271, exemplifies the application of the concept of hierophany to the ethnography of individual cultures. Michel Meslin's "Le merveilleux comme théophanie et expression humaine du sacré," in *Le sacré: Études et recherches*, 2d ed., edited by Enrico Castelli (Paris, 1974), pp. 169–177, makes a widely comparative application of the term *theophany*. Bruce Lincoln's "Revolutionary Exhumations of Spain, July 1936," *Comparative Studies in Society and History* 27 (April 1985): 241–260, shows how the logic of the dialectic of the sacred embodied in this theory of hierophany can be extended even to include what Lincoln terms "profanophany." The use of the term *hierophany*, and the concomitant theory of the sacred, has provoked spirited debate in religious studies. Reactions, both receptive and critical, can be found by consulting the works cited in Douglas Allen and Dennis Doeing's *Mircea Eliade: An Annotated Bibliography* (New York, 1980).

**HIEROS GAMOS**, Greek for "sacred marriage," "sacred wedding feast," or "sacred sexual intercourse," is the technical term of a mythical or ritual union between a god and a goddess, more generally a divine and a human being, and most especially a king and a goddess. The term has had its widest use in the study of kingship in the city cultures of the ancient Near East. The fundamental symbolism however is that of the union of man and woman, a set of opposites as general and as readily available as the opposites east and west, north and south, sky and earth. The latter, sky and earth, are often presented as endowed with sexual characteristics and are therefore inseparable from this subject.

It is useful to state in this introductory orientation that a lingering Victorian prudishness in twentieth-century scholarship, embarrassed and at the same time fascinated by sexual symbolism, has occasionally singled out *hieros gamos* configurations for undue attention. It has done so with euphemisms, adumbrations, and unwarranted explanations, oblivious to the fact that in most civilizations other than those of nineteenth- and twentieth-century Europe and America, sexual references are not matters for this sort of secretiveness. (Typically, in learned translations textual passages with descriptions of pudenda, intercourse, harlots, courtesans, and so on, were translated into Latin until at least the middle of the twentieth century.) It is essential nevertheless to understand sacred marriage symbolism in advanced cultures in the first place as a variation on much older, very general symbolic expressions. The rather mechanistic and blanket explanation of sacred marriage rites as a stimulus or magic for bringing about fertility in people, animals, and fields, in the wake of scholarship by Wilhelm Mannhardt (1831–1880) and James G. Frazer (1854–1941), cannot do full justice to the poetry, profundity, dramatic quality, and complexity of the documents.

**ANCIENT ROOTS.** The French prehistorian André Leroi-Gourhan (b. 1911) was led to the conclusion that certain signs and figures in the art of Paleolithic hunter cultures that stretched from Spain and France into Siberia form a coherent whole in their expressions, in both signs and representations. Among these expressions is the polarity of female and male symbols, for instance, the bison (female) and the horse (male). The American prehistorian Marija Gimbutas has collected a large number of art objects discovered in eastern Europe, dated from c. 7000 to 3500 BCE, hence before the rise of the earliest civilizations in the Near East, and in that large collection the vast majority of objects is conspicuously related to female forms, conjunctions of male and female, and parturition. Details of interpretation are difficult to assess, but researchers are aided by the wide distribution of identical

or comparable symbolizations in later cultures, of which the meaning is clearer; they allow one to see general patterns. These very ancient signs and images presuppose articulate languages and mythologies. Moreover, with respect to the subject under discussion, it may be safely inferred that “sexual” and “marital” topics were focal points in religious expression.

Mention must also be made of the fact that next to a sexual union between heaven and earth, of the type of Ouranos and Gaia in Hesiod’s *Theogony* and Dyaus and Prthivi in the Vedic texts, there exists documentation of supreme beings that are often called “bisexual.” Such a being is both one and two, male and female at the same time. Being two in one, divinities of this type are more properly called “androgynous” than “bisexual.” The ancient Mexican supreme being is Ometecuhtli-Omecihuatl (“father-mother”). The figure of Apna-Apha (“our-mother-our-father”) occurs in a place on Kisar, an island in the Moluccas. The Konyak Nagas of Assam know a supreme being Ga-Wang (“earth-sky”). It is noteworthy that in several of these cases the female or earth element is mentioned first and seems to be the more important aspect, and also that in a number of myths earth and sky are said to have been one in the beginning, and the act of creation consisted in separating the two.

All these imageries from prehistory and from a variety of tribal cultures are essential for an understanding of the *hieros gamos* symbolism as a particularly fertile imagery in several cultures, each with its own historical impulses and developments that, like the earlier symbolisms, have their focus in the fullness of existence. What sets the later *hieros gamos* apart from its earlier forms is a more highly developed dramatic expression and a tangible association with (political and economic) power.

**AGRICULTURE AND SEXUAL SYMBOLISM.** The invention of agriculture, the novelty of a community’s life henceforward depending on grain or rice, represents a tremendous change. Scholars have become reluctant to exaggerate the significance of this change because of the recent work on prehistory; they are now inclined to see more than mere “hunting magic” in prehistoric art forms and to detect in them much more articulateness and subtlety. Hence the sudden emergence of agriculture may appear less as a break with the past and more as a radical transformation. Tilling the soil is an act performed on the (female) earth. Archaic digging sticks are commonly depicted as phalli. Quite literally, the work of the farmer is a sexual ritual. The process of generation, though certainly not unknown before, now becomes a process in which all forms of existence and the preserving and safeguarding of life itself are at stake. The seasons take on a new significance, and the great goddess is the one who rules over the calendar, that is, over time, as well as over the material world.

In the protohistorical civilization of the Indus valley such a goddess played a role, and the artifacts make clear that she and others elsewhere were associated or identified with

the physical expression of vegetational power. The goddess’s power is not necessarily linked with a male partner, and even when she is so linked (as is Devi, the great goddess of Hinduism, with Śiva), her uniqueness, or her transcendental character, is not diminished. She is the one inexhaustible source of all that is. Agricultural production has obviously made its marks on religious expression, yet it would be unwarranted speculation to see even in her a figure completely different from the prehistoric female forms of thousands of years earlier, such as the so-called Venus of Willendorf or the Venus of Lespugue, or to deny all continuity with the past.

The goddess’s power is expressed in her ability to generate all by herself; her characteristic function is that of *generatrix* (Przyluski, 1950), and the participation of a male is secondary or irrelevant. Comparison to “ordinary” motherhood is misleading. One is dealing with a religious symbol, and her giving birth by herself points to what in abstract language would be her essential transcendent reality. Typically, a Vedic text (*Rgveda* 10.125) refers to the goddess Vāc (Speech) as the queen of the land and bringer of treasures, but also as the first to partake of the sacrifice (i.e., before the other deities) and as the one who really moves when any of the principal gods move. In other words, she is the ultimate ruler even over the divine world.

How can such absolute transcendence be grasped? Here the “classical” marital symbolism of the Neolithic and agricultural world, with its own prehistoric roots, makes its force felt. The farmer’s work is the outer circle of a series of concentric circles. In the symbolic expressions sexual and marital imagery form the center.

The economic change brought about by agriculture is the one aspect most immediately visible to a modern spectator. No doubt it is significant that for the first time staple food could be stored. (One understands at once that, from an economic standpoint, this is the birth of a true notion of capital, for without some degree of permanence, “capital” remains a hazy concept.) The ability to store grain creates the conditions necessary for larger communities. These facts are all of significance for the historian, yet they are abstract inferences from situations of which archaeological finds, ancient art objects, icons, temples, and myths speak directly and concretely. For example, in the culture of ancient Greece, grain was stored in vessels that were half buried in the earth, and such vessels were the place where divinities of the earth (chthonic deities) appeared.

The acts of a great goddess, the divine character of the earth, the significance of women, the ritual nature of work on the land and its bond with sexual involvement all amount to a new, total experience of the everyday world and its ultimate foundation. How novel this entire symbolism was can be seen from the frequency and the ferocity with which outsiders have tried to destroy it. The expansion of Indo-European tribes (c. 3000 to 1500 BCE) religiously pastoral rather than agricultural in orientation, set civilization back considerably (Gimbutas, 1982). Various nomadic raids in

Northwest India and also much later conquests by Muslim invaders, who, like the Indo-Europeans, were basically pastoral in their religious orientation, made havoc of temples; the invaders were particularly provoked by sensual imagery (which for Muslims included the unveiled faces of goddesses and nymphs sculptured in sanctuaries).

In its turn, agricultural life itself became established and traditional; sexual rituals persisted. These latter have rightly drawn the attention of well-known scholars (such as Mannhardt, Frazer, J. J. Meyer, and many others) not only to rites in ancient societies but also in continuing folk customs. The power of naked women to increase the harvest is attested by a number of cultic ceremonies. Images of prehistoric, proto-historic, and traditional goddesses show the ancient significance of nudity, as do those of fully dressed goddesses alternating with trees with dense foliage (Przyluski, 1950). Prosperity and abundance are symbolically integrated in the dynamic of ritual life. Mannhardt and Frazer have recorded many instances where the sex act itself was believed to be an effective magic. The explanation of "magic" makes sense if only one bears in mind that it owes its existence to a coherent vision of this world and its divine complement.

Perhaps many older, prehistoric images of goddesses or perhaps many prehistoric artistic designs interweaving male and female characteristics anticipated comparable ideas and hopes. Whatever the likelihood of this suggestion, there is no doubt that full-fledged agricultural societies, even at a very early date, were in a special position to focus on certain aspects of the symbolism.

**EARLY CITY-STATES AND HIERODOULOI.** The *hieros gamos* as a royal ritual is the creation of early city-states built on the wealth provided by agriculture. Far from putting an end to the "primitive" village cults, they expanded and stylized them with forms that were derived from, and were variations of, earlier symbolism. One of these is the sexual union of the king and a "priestess" as an episode in the lengthy ancient Babylonian Akitu (New Year) festival. The model for this rite is already given in Sumerian myths and temple customs. It is true that existing knowledge of religious practices among the common people of the ancient Mesopotamian world is inadequate, but it is known that in this world the main ritual procedures for the entire populace were carried out through the mediation of rulers and religious specialists of various kinds. Around 2100 BCE King Gudea had a temple built for the god Ningirsu, who had appeared to him in a dream. Among the rites performed in the new temple was the sacred wedding ceremony of the god and his consort Baba, lasting seven days. Apparently such a marriage was an expected part in the liturgy for each one of the important deities already present in Sumerian culture, as it was later in Babylonian cults, and still later throughout Assyrian and also West Semitic cults.

The *hieros gamos* rite, attached to the New Year festival and celebrated in various cultic centers, symbolized the union of the king of the city and the city's goddess, repre-

sented sometimes by the king's consort, more often by a *hierodoulē*, a female servant of the sanctuary, a "priestess." (It may be misleadingly derogatory to translate the Sumerian or Akkadian terms as "sacred prostitute.") Many bloody sacrifices were offered, functioning, as has been suggested, as wedding gifts, but certainly losing none of their proper sacrificial value, involving humankind in activities brimming with the risks of encountering the divine world and venturing its existence in the time to come on this encounter. The entire wedding in the ritual is a replica, a visible counterpart, of the celestial union. Not only was the *hierodoulē* the personification of a goddess, but also the king might be said to represent a god, if only some qualifications are made.

An early prototype of the ritual is the Sumerian story of the goddess Inanna and her relation to Dumuzi. The latter is depicted as a shepherd boy with whom the supreme, all-powerful goddess fell in love. In the drama the goddess descends into the netherworld for reasons that are not altogether clear but are certainly related to her ambition to perfect her rule by extending it even over the realm of the dead. She is defeated in her attempt, and her "elder sister," Ereshkigal (the queen of the great below) makes no exception in her case; she fixes "the look of death" on Inanna. Inanna cannot escape unless a substitute is found. She vows to find one. In her absence, Dumuzi, her love, spends his time with all the paraphernalia of wealth and power, occupying the throne. Although Inanna had no intention of consigning him to the netherworld in her place, she now fixes "the look of death" on him and orders the demons to take him away and torture him. The story ends in a compromise, whereby Dumuzi will be on earth for half the year, and the other half in the realm of death.

It is this type of mythological configuration that served as a model for the Sumerian-Akkadian kings, and it is this type of mythology with its many themes, subthemes, and variations that formed the pattern of kingship and religion in the entire world of the ancient Near East. *Ezekiel* 8:14 is one of the texts in the tradition of Israel strongly opposed to most of the religious customs connected with the *hieros gamos*; it tells of women who (ritually) bewailed the fate of Tammuz (Dumuzi) at the gates of the temple. A considerable number of details make it not at all unlikely that also the gospel story of Jesus Christ owes some of its features to the myth of the dying shepherd-god (Kramer, 1969). Dumuzi (Tammuz) is not really presented as a god, and originally he was no god but rather a (human) king whose marriage to the great goddess (Inanna-Ishtar) was required to confer a sacred certainty, a future, and wealth on his land.

It is clear that kingship demanded a sacred foundation that could be provided only through the omnipotence of the great goddess. However, the complexity of the story of Inanna and Dumuzi, even in summary, allows one to see more than a utilitarian purpose, or a mere generalization on an ideology of kingship. The sacred marriage, far from being a mere cerebrally thoughtout, politically effective ceremony, is

a manner of coming to terms with the extreme agonies of human existence: defeat vis-à-vis death, the ultimate frustration of any attempt to amass power or wealth, in spite of the necessity to do so. Both the certainty of death and the uncertainty of power and wealth are not only facts of life; they are experiences in the ultimate drama, to be relived each year. The king's place, and through his mediation, humankind's place in the relationship to the goddess and her partner, allow for an initiation into the mystery of existence. Obviously, this is much more than a clarification concerning a destiny after death or an explanation or stimulus for the sowing and reaping of grain, or a comment on the life and death cycle of cereals.

In Babylonian religion, the rule of the supreme god Marduk, just like that of his divine partner Ishtar (the Akkadian name of Inanna), is not limited to one area. Although the goddess's myth shows her as not altogether successful in her journey to the netherworld, she does return and her rule is emphatically presented as universal. In contrast, in the earliest myths, Dumuzi remains associated with pastoral life, and the impression is given that rule on earth has its limits; this same impression is also given in later times. Such rule, however, must have its basis in the *hieros gamos*.

That the certainty of rule over the land and its wellbeing is of the utmost concern is borne out by the king's determination of destiny. Just as the god Marduk's rule was established when he received the "tablets of fate" (in the *Enuma elish*, the most famous creation myth), the king shows himself as king in fixing the rules and regulations that keep the universe functioning properly. The ritual by which he does so is complex, but it is related to the Akitu festival, and the sacred marriage itself is to be regarded as a "third form for the determination of destiny" (Pallis, 1926). Clearly, the union with the goddess is of paramount importance for rule on earth.

**THE POWER AND LOVE OF THE GODDESS.** It has been seen that the one most striking theme in the mythology and rituals of the sacred marriage is the power of the goddess. It is associated with war and destructive anger but also with irresistible life and with love. This mythology is the root of much love poetry, even in traditions that, with Israel, rejected its symbols and rituals. The words of the *Song of Songs* 8:6, "love is strong as death," derive their force and meaning from the same revolutionary reorientation in the history of humankind that created the *hieros gamos* symbolism.

Although the Mesopotamian imagery of the sacred marriage is the earliest on record, comparable symbolisms have arisen in other religions (e.g., Mexico and India)—always in an agricultural context and in a tropical or temperate region more or less close to the equator. Contrary to ideas that dominated scholarship for a long time, supreme goddesses are not primarily mothers but lovers. When supreme male deities come to the fore, such as Marduk in Babylon or Viṣṇu and Śiva in Hinduism, the devotee turns generally not to the male but to the female partner of the couple, from whom

flows grace, and who in her loving relation provides the perfect bridge. In the devotional experience of Vaiṣṇavism (the religion of the distinctly royal, masculine, yet compassionate god Viṣṇu), the devotee calls instinctively on Lakṣmī (Śrī), Viṣṇu's consort, who is depicted in Hindu literature as accessible, even more accessible than Viṣṇu himself. Through many waves of cultural history and religious change the very early experience of the great goddess's love is still tangible.

Perhaps most noteworthy, in Mahāyāna Buddhism, most especially in Tibet, the goddess Tārā has preserved her popularity, in spite of the traditional prominence of the male element in Buddhism, in which according to an almost general consensus only a final birth as a man can open the way to *nirvāṇa*. Tārā however is ranked on the same level as the *bodhisattvas*, those who are prepared to enter *nirvāṇa* but decide not to do so and decide instead to assist the as yet unsaved world. Again, through the female, bliss is most accessible.

#### BIBLIOGRAPHY

For a large collection of pictures that may lead to a reasonable assessment of pre-agricultural religion and of pre-agricultural goddesses and symbolisms of male and female, see Marija Gimbutas's *The Goddesses and Gods of Old Europe, 6500–3500 B. C.: Myths and Cult Images* (Berkeley, Calif., 1982). Information on the spread and the forms of the prehistoric female statuettes can also be found in *La préhistoire* by André Leroi-Gourhan and others (Paris, 1965). For discussion of problems and theories on interpretation, see Leroi-Gourhan's *Les religions de la préhistoire (paléolithique)* (Paris, 1964) and *Le geste et la parole*, vol. 1, *Techniques et langage* (Paris, 1964), and vol. 2, *La mémoire et les rythmes* (Paris, 1965).

The major study on the Sumerian *hieros gamos* myths and rituals is Samuel Noah Kramer's *The Sacred Marriage Rite* (Bloomington, Ind., 1969); to the French translation, *Le mariage sacré* (Paris, 1983), Jean Bottéro added a valuable appendix, "Le hiérogamie après l'époque 'sumérienne.'" For an excellent general account of Babylonian religion, and the significance of myth and ritual in it, see Jean Nougayrol's "La religion babylonienne," in *Histoire des religions*, edited by Henri-Charles Puech, vol. 1 (Paris, 1970), pp. 203–249. S. A. Pallis's *The Babylonian Akitu Festival* (Copenhagen, 1926) is the classic study of the New Year ceremonies of which the *hieros gamos* forms a part. Thorkild Jacobsen's essay on Tammuz (Dumuzi) in his *Toward the Image of Tammuz and Other Essays on Mesopotamian History and Culture*, edited by William L. Moran (Cambridge, 1970), is an effort to show the religious experience concerning Tammuz in a human environment, thus making it understandable to moderns. Of interest for the continuation of ritual drama into art forms and entertainment is Theodor H. Gaster's *Thespis: Ritual, Myth, and Drama in the Ancient Near East*, 2d ed. (Garden City, N.Y., 1961). A collection of essays edited by S. H.

Hooke, *Myth and Ritual* (Oxford, 1933), is only indirectly of importance for the *hieros gamos*, but it does call attention to the New Year festival and other general patterns over the entire area of the ancient Near East.

Helpful in order to see reflections of Mesopotamian ritual in Israel is Raphael Patai's *Man and Temple in Ancient Jewish Myth and Ritual*, 2d ed. (New York, 1967). Walter Burkert's *Structure and History in Greek Mythology and Ritual* (Berkeley, Calif., 1979) discusses, among other things, the relationship between ancient Near Eastern and Greek images and mythical themes. Jean Przyluski's *La grande déesse: Introduction à l'étude comparative des religions* (Paris, 1950), although criticized especially on linguistic grounds, is an indispensable study on the symbolism of great goddesses from the Aegean to Southeast Asia.

On South Asia, J. J. Meyer's *Sexual Life in Ancient India*, 2 vols. (London, 1930), and *Trilogie altindischer Mächte und Feste der Vegetation*, 3 vols. in 1 (Zurich, 1937), contain a wealth of material on literary and folkloristic customs pertaining to the function of women, goddesses, and marriage. For a description of a classical Hindu sacred wedding, see C. J. Fuller's "The Divine Couple's Relationship in a South Indian Temple: Mīnākṣī and Sundarēśvara at Madurai," *History of Religions* 19 (May 1980): 321–348, and for the symbolism of Tārā, see Stephan Beyer's *The Cult of Tara: Magic and Ritual in Tibet* (Berkeley, Calif., 1973).

Mircea Eliade's *Patterns in Comparative Religion* (New York, 1958) and *A History of Religious Ideas*, vol. 1, *From the Stone Age to the Eleusinian Mysteries* (Chicago, 1978), with extensive bibliographies, respectively present the large context of religious phenomena necessary for an understanding of "The Earth, Woman, and Fertility" (chapter 7 of the former) and the function of the great goddess and the *hieros gamos* in humankind's historical religious development. Raffaele Pettazzoni's *The All-Knowing God* (London, 1956) provides many data and relevant bibliographic references on supreme beings, including valuable information on androgynic and female deities. Geo Widengren's *Religionsphänomenologie* (Berlin, 1969) has helpful references to works on *hieros gamos*.

Finally, Walter M. Spink's *The Axis of Eros* (New York, 1973) is an interesting attempt to envisage all of the world's art—with many striking reproductions of erotic expressions from early, obviously "religious" works to modern, supposedly "secular" forms—in one coherent view.

## HIGH GODS SEE SUPREME BEINGS

**HIJIRI** are Japanese lay ascetics and influential antagonists of priests and monks. The role of the *hijiri* in Japanese folk religion is far more important than that of the ministers of the official religions (priests and monks in Shintō and Buddhism, respectively). The *hijiri* is in many ways the spokesman of the common man. *Hijiri* are the forerunners of the lay leaders of modern Japanese sects, who are considered to embody the spirit of that traditional role. The concept of *hijiri* dates back to the earliest known period of Japanese history, when the *hijiri* (lit., "he who knows the sun") determined and appointed the years, months, and days, and must have been connected with an unofficial and spontaneous cult of the sun goddess Amaterasu. The *hijiri* gradually came to be considered a sage, the one who, like the sun, let the light of his knowledge shine on others. He must have been a charismatic leader, endowed, like a shaman, with supernatural powers and natural skills.

The transmission of Daoism and Confucianism to Japan expanded the meaning of *hijiri* to include the Chinese ideas of the *xian*, the mountain ascetic and hermit, the *shengxian*, the virtuous hermit, and the *shengren*, the holy one or "ultimate man." As the one who is believed to reconcile in himself the opposites of *mu* and *wu*, of nonbeing and being, life and death, male and female, the *hijiri* was considered to live in happiness in the hereafter.

The introduction of Buddhism into Japan in 538 added still other meanings to the notion of *hijiri*. In Buddhism a *hijiri* became in the eyes of the laity the sacred and highly respected antagonist of its official ministers, the monks in their hierarchical ranks. He was believed to be the ideal *ubasoku* (Skt., *upāsaka*, "layman"). In the *Nihonshoki*, one of the oldest Japanese chronicles, two prominent Buddhist lay leaders, the Korean king Song (sixth century) and the Japanese prince regent Shōtoku Taishi (574–622), are depicted as *hijiri*. After Shōtoku Taishi's death the monk Eji cried, "He was verily a great *hijiri*" (Kamstra, 1967, p. 424). As *hijiri*, these leaders combined the old Japanese idea of the wise man and the Chinese ideas of the virtuous, ascetic, and ultimate man with that of the holy *upāsaka*.

A few decades later, people who showed special skill also came to be called *hijiri*. One finds *go no hijiri*, experts in *go*; *waka no hijiri*, experts in *waka* (Japanese poems); and *sake no hijiri*, experts in producing *sake* (rice wine). From the eighth century on, the *hijiri* gradually became protectors of the common people against the *goryōshin*, the angry spirits of those who did not die like decent people. In doing so, they

followed patterns of life different from those of monks and priests: they did not settle down, but wandered in the mountains and from village to village and city to city. They followed one of three kinds of religious and magical practices: *nembutsu* (invocation of the name of the Buddha Amida), Shugendō (mountain asceticism based on Tantrism and Shintō shamanism), and *yin-yang* magic. The most prominent of these three groups were without any doubt the *nembutsu-hijiri*. They served not only to protect against the threat of angry spirits but also performed memorial rites to the spirits of the dead consisting of the recitation of the most powerful *sūtras*. Sometimes they chanted these texts while dancing the *nembutsu* dance. *Hijiri* who gave up their wandering life and settled down lost claim to the title. Some fell to the lowest classes and became producers of bamboo wares, stage actors, or puppet performers. From the fourteenth century onward, the name *hijiri* was also applied to laymen who performed special tasks in Buddhist temples or monasteries. Some of these lay *hijiri* (*zoku hijiri*) served as bell ringers, gardeners, Buddha hall keepers, pagoda keepers, and grave keepers.

#### HILDEBRAND SEE GREGORY VII

**HILDEGARD OF BINGEN.** Few medieval figures enjoy as much popularity in the contemporary Western world as the German Benedictine abbess Hildegard of Bingen (1098–1179). Her influence reflects the combination of authentic discovery and creative misreading that so often characterizes modern appropriations of religious figures from history. She appears in some ways to be very much a twelfth-century phenomenon in her rationalistic optimism, her persistent interest in questions of cosmology, and her openness to the use of art in the service of theological truths as well as her exaltation of virginity and assertion that women are the weaker sex. Hildegard was a visionary, a theologian, a musician, and a correspondent of popes and princes. She founded two religious houses for women and undertook a number of preaching tours.

In her theological writings Hildegard felt able to explore distinctively feminine aspects of the revelation, which is apparent in her imaginative and repeated use of feminine imagery to express the dynamic and creative qualities of God, who is often depicted as a nurturing mother or as Wisdom. Hildegard had an ability to bring her experience as a woman to bear on some of the major moral and doctrinal themes of the day, and she was happy to reinterpret Christian Scripture from a female perspective without any hint that she might be departing from orthodox readings. The fact that Hildegard had the freedom to develop in this way is a reminder of the extent to which she belongs to the twelfth century—before the period of the increased centralization and clericalization of the church and the rise of the universities that characterized the century that followed.

**HILDEGARD'S LIFE.** Little of Hildegard's background is known, but her biographer records that from her earliest years she possessed an unusual visionary gift of being able to foretell the color of a calf in its mother's womb. This may have prompted Hildegard's parents to offer their tenth child to the nearby Benedictine monastery of Disibodenberg as an oblate. The eight-year-old Hildegard was placed in the care of a noblewoman, Jutta von Spanheim, and together with their servants, Jutta and Hildegard formed the nucleus of the women's community at Disibodenberg.

Hildegard's visions continued throughout her adolescence, but it was not until several years after Jutta's death in 1136, when Hildegard was the *magistra* (leader) of the women's community, that she received what she took to be a divine command to disclose the content of her visions. She confided in the provost of the community, a monk named Volmar, who had responsibility for the nuns' spiritual welfare. Volmar was to play an important role in Hildegard's life, encouraging and supporting her, often in the face of sceptical opposition, and acting as her amanuensis. The sense that she was guided by God through her visions was a pivotal feature of Hildegard's spiritual life. When she resisted the divine command, she became sick and was forced to take up her pen, recording not only her visions but letters of instruction, admonishment, and encouragement both to ordinary people and to the secular and religious leaders of her day.

By 1150 Hildegard's community of nuns had outgrown their cramped quarters on Mount Disibodenberg, and they moved to Rupertsberg in the Rhine Valley opposite the town of Bingen. Here, free of the overweening authority of the abbot, Kuno, Hildegard flourished and produced many of the splendid liturgical works that illustrate her vision of the female monastic vocation, with gorgeously dressed virgins occupying the place of honor while singing and giving glory to God. At the age of sixty, following an illness that preceded most of Hildegard's major decisions and after nearly fifty years enclosed in a convent, Hildegard embarked on the first of four preaching tours. In 1165 Hildegard established a second community of Benedictine nuns on the opposite bank of the Rhine at Eibingen, and the successors of this commu-

nity continue to publish Hildegard's works, sing her anthems, and live according to her inspiration. Hildegard's feast day is celebrated on September 17, the anniversary of her death.

**HILDEGARD'S CONTRIBUTIONS.** Hildegard's personality appears at once complex, appealing, and exasperating. She was imperious toward kings and popes but not free of self-doubt, often taking to her bed for long periods when thwarted or uncertain which way to move. She was deeply touched by God but not free of social snobbery (the communities she founded admitted only highborn women) and possessed a love of finery and dramatic liturgical performance. Her letters reveal her to be both wise and insecure, demanding loyalty and devotion, and peevish when she felt betrayed. Although essentially a conservative figure, indebted to the spirit of orthodoxy and deeply committed to her work as a theologian with a moral and spiritual message, Hildegard also transcended the parameters of her age. Of particular resonance in the twenty-first century is her emphasis on the fertility and fecundity of God, expressed in the recurrent image of *viriditas* or "greenness," a term that encompasses the natural world as the living body of God, the life of the church, the saints in heaven, and the grace given to individual believers.

Although Hildegard has been espoused as an "ecological saint" and in her native Germany is followed for her herbal cures, she is also widely known and appreciated through her musical compositions. For Hildegard, music was not peripheral to the religious life; rather, it invoked the harmony of the celestial spheres. In addition to over seventy liturgical pieces, she wrote an operatic psychodrama composed as part of a healing process for a distressed sister. Two of Hildegard's visionary manuscripts were richly illustrated (although probably not by her hand), and artists have drawn inspiration from the imagery—verbal and pictorial—expressed in these works. It has been suggested that Hildegard's visions are typical of a migraine sufferer, which may also explain her frequent illnesses, but Hildegard's genius is misunderstood if the medium of her visions is confused with the profound and inspirational nature of her theology and art. Hildegard is recognized as a local saint of the Catholic Church, acclaimed by the popular devotion of the people of the Rhineland, and continues to inspire countless people from many nations who rediscover the breadth, beauty, and majesty of her work.

#### BIBLIOGRAPHY

Hildegard's visionary works include, *Scivias* [Know the ways], *Liber vitae meritorum* [The book of life's merits], and *Liber divinorum operum* [The book of divine works]. The modern German translations of these texts are published by Otto Müller Verlag (Salzburg, 1954, 1972, 1965). Adelgundis Führkötter and Angela Carlevaris, *Hildegardis—Scivias. Corpus Christianorum: Continuation mediaevalis*, vols. 43 and 43A (Brepols, Belgium, 1978), provides a modern critical edition of *Scivias*; and Mother Columba Hart and Jane Bishop, trans., *Hildegard of Bingen: Scivias*, Classics of Western

Spirituality series (New York, 1990), provides an English translation of *Scivias*. For an abridged English translation of *Liber divinorum operum* that also includes some of Hildegard's letters and songs, see Matthew Fox, ed., *Hildegard of Bingen's Book of Divine Works* (Santa Fe, N. Mex., 1987). P. Dronke's *Poetic Individuality in the Middle Ages* (Oxford, 1970) includes a critical edition of Hildegard's "opera," the *Ordo virtutum* [Play of virtues]. B. Newman's *Saint Hildegard of Bingen Symphonia* (Ithaca, N.Y., 1987) is a critical English edition of another of Hildegard's major musical works. For anthologies of Hildegard's work, see Fiona Bowie and Oliver Davies, *Hildegard of Bingen* (London, 1990); and Mark Atherton, *Hildegard of Bingen: Selected Writings*, Penguin Classics (London, 2001).

Secondary works in English include Charles Burnett and Peter Dronke, eds., *Hildegard of Bingen: The Context of Her Thought and Art* (London, 1998); Sabina Flanagan, *Hildegard of Bingen 1098–1179: A Visionary Life* (London, 1989); Barbara Newman, *Sister of Wisdom: St. Hildegard's Theology of the Feminine* (Berkeley, Calif., 1987); and Barbara Newman, ed., *Voice of the Living Light: Hildegard of Bingen and Her World* (Berkeley, Calif., 1998).

FIONA BOWIE (2005)  
OLIVER DAVIES (2005)

**HILDESHEIMER, ESRIEL** (1820–1899), was a German rabbi and founder of the Orthodox Rabbinical Seminary in Berlin. Hildesheimer was born in Halberstadt, Germany, and was educated in the first Orthodox school in Germany to include secular subjects in its curriculum. He continued his studies with Jacob Ettlinger and Isaac Bernays, rabbis who combined their traditional observance with a receptivity to contemporary thought. Both men encouraged Hildesheimer's interest in secular learning, and under their influence he went on to the universities of Berlin and Halle; from the latter he received in 1846 a Ph.D. for a study of the Septuagint. Hildesheimer emerged from his early years as a staunch opponent of Reform Judaism and a major proponent of the modern Orthodox philosophy of *torah 'im derekh erets*, Samson Raphael Hirsch's slogan that affirmed the worth of modern Western culture and traditional Jewish study and belief.

Hildesheimer's first opportunity to realize his ambitions for the creation of a "cultured Orthodoxy" came in 1851, when he became rabbi of the Jewish community in Eisenstadt, Hungary (now in Austria). There he established the first *yeshivah* in the modern world to have a secular component in its regular course of study. This innovation earned Hildesheimer the wrath of many Orthodox traditionalists in Hungary, and as a result he returned to Germany in 1869. In Berlin he became rabbi of the separatist Orthodox congregation Adass Jisroel. In 1873, with the opening of the Orthodox Rabbinical Seminary, Hildesheimer realized his dream of a school that would train rabbis committed to both Jewish Orthodoxy and *Wissenschaft des Judentums* (the modern scholarly study of Judaism). This institution gained

Hildesheimer a position of leadership among Orthodox Jews, and his institutional accomplishments mark him as a major architect of modern Jewish Orthodoxy.

Hildesheimer himself produced a number of scholarly works; the most prominent is a critical edition (1890) of *Halakhot gedolot*, an important geonic work. In addition, he founded in 1870 a German-language newspaper, *Die jüdische Presse*, for the dissemination of his views. His opinions on contemporary issues are also reflected in his *Gesammelte Aufsätze* (1923), a collection of his major polemical/apologetic essays. His Jewish legal rulings, *Teshuvot Rabbi 'Esri'el* (1969–1976), have appeared in two volumes.

DAVID ELLENSON (1987)  
*Revised Bibliography*

**HILLEL** (c. 50 BCE–early first century CE), Jewish sage and teacher. Although several modern scholars claim that Hillel, known as "the Elder," had Alexandrian roots, there is no reason to doubt the Talmudic tradition that he was a native of Babylonia. Hillel was a disciple of Shema'yah and Avṭalyon, who preceded Hillel and his colleague Shammai as the two leading teachers, or "pairs" (*zugot*), in Jerusalem. The Jerusalem (Palestinian) Talmud reports (*Pes.* 6.1, 33a, where Hillel is called "the Babylonian") that Hillel was designated *nasi'* (patriarch, i.e., head of the court) in recognition for having been able to resolve a difficult question of Jewish law on the basis of a tradition he heard from Shema'yah and Avṭalyon. The later patriarchs were regarded as descendants of Hillel, who in turn was said to have been a scion of the house of David (J.T., *Ta'an.* 4.2, 68a). Most scholars do not take the latter claim seriously, as Davidic ancestry is also assigned to the Hasmonaeans, Herodians, Jesus, Yehuda ha-Nasi', and the Babylonian exilarchs. It is possible that Hillel is to be identified with Pollio (Pollion), the Pharisee who appears in

the *Jewish Antiquities* (15.3, 15.370) of Josephus Flavius (37/8–c.100), but this may be a reference to Avṭalyon.

Talmudic tradition portrays Hillel as a great spiritual leader who embodied the qualities of humility, patience, peace, love of Torah, and social concern. Many of the well-known sayings attributed to Hillel in Mishnah *Avot* (chaps. 1 and 2) emphasize these ideals. For example: "Be of the disciples of Aaron, loving peace and pursuing peace, loving people and bringing them near to the Torah." "A name made great is a name destroyed." "If I am not for myself who is for me? And when I am for myself, what am I? And if not now when?" "Do not separate yourself from the community." "Do not judge your fellow until you are in his position." A popular tradition (B.T., Shab. 31a) illustrates Hillel's forbearance and contrasts it with the impatience of Shammai, who often appears as his foil. Shammai is said to have rebuffed a heathen who demanded of him: "Make me a proselyte on condition that you teach me the entire Torah while I stand on one foot." When approached by the same heathen Hillel responded, "What is hateful to you do not do to your fellow man. That is the whole Torah, the rest is commentary. Go and learn it." This negative formulation of what eventually circulated as the Golden Rule, like many of Hillel's sayings, has parallels in ancient literature (e.g., *Tb.* 4:15), so the intention is not simply to relate the uniqueness or essence of Judaism. Here Hillel appears as the teacher par excellence; in one utterance he conveys that the central ideals of Judaism are easily delineated, but the path to their fulfillment can be discerned only through further study and commitment.

Several social *taqqanot* ("enactments") are associated with Hillel. The most important of these is the *prozbul*, a legal instrument that enabled creditors to claim their debts after the sabbatical year though biblical law (*Dt.* 15.2) prohibited it (*Shevi'it* 10.3). The biblical law was intended to protect the poor in an agricultural society. In later times, when the economy depended upon the free flow of credit, people would refrain from lending as the sabbatical year drew near because they feared the money owed them would not be collectible. By means of the *prozbul*, creditors transferred their bonds to the court, thereby retaining the right to collect after the sabbatical year.

Hillel's interest in the intention of the biblical text and its practical application to daily life may be the reason he is credited (Tosefta *San.* 7.11) with the promulgation of seven exegetical principles (*middot*), several of which were known to have existed earlier. These principles were expanded to thirteen by the second century tanna Yishma'e'l ben Elisha' (*Sifra'*, intro.). While there are very few instances where Hillel (or for that matter, Beit Hillel, the school of thought named after him) is reported to have employed these principles (see B.T., *Pes.* 66a; J.T., *Pes.* 6.1, 33a), their importance increased in the later tannaitic and amoraic periods.

Hillel's significance has been assessed in various ways, all of which acknowledge that he was a pivotal figure in Judaism during the late first century BCE and the early first centu-

ry CE. Joseph Klausner, Alexander Guttmann, and Judah Goldin have regarded the sage as responsible for establishing the importance of intellect and interpretation along with tradition. David Daube has suggested that Hillel created the basis for the development of Jewish law, narrowing the differences between the Pharisees and Sadducees by showing how the oral law is inherent in the written. Jacob Neusner has credited Hillel with the transformation of the Pharisees from a political party to a society of “pious sectarians” committed to “table-fellowship,” that is, to the meticulous observance of tithing laws and the eating of everyday meals in a state of ritual purity.

## BIBLIOGRAPHY

### Life and Work

Nahum N. Glatzer's *Hillel, the Elder: The Emergence of Classical Judaism* (New York, 1956) is a popular account which suggests that Hillel was influenced by the early *ḥasidim* (pietists). All of the traditions pertaining to Hillel (and Shammai) are critically evaluated in Jacob Neusner's *The Rabbinic Traditions about the Pharisees before 70*, 3 vols. (Leiden, 1971). Solomon Zeitlin has written several monographs on Hillel, which are summarized in volume 2 (pp. 100–118) of his *The Rise and Fall of the Judean State: A Political, Social, and Religious History of the Second Commonwealth* (Philadelphia, 1967). For an interesting assessment of the “standing on one foot (Hebrew: *regel*)” theme in light of Latin, *regula* (“rule”), see R. Jospe, “Hillel's Rule,” *Jewish Quarterly Review* 81 (1990), 45–57. For recent discussions of the traditions and sayings of Hillel, see the separate articles by Chana Safrai and Shmuel Safrai in James H. Charlesworth and Loren L. Johns, eds., *Hillel and Jesus, Comparisons of Two Major Religious Leaders* (Minneapolis, 1997). Also of interest in this volume is Philip S. Alexander's “Jesus and the Golden Rule.”

### Exegetical Method

Hillel's exegetical principles and their relationship to Hellenistic rhetoric are discussed in David Daube's “Rabbinic Methods of Interpretation and Hellenistic Rhetoric,” reprinted in Alan Corré's *Understanding the Talmud* (New York, 1975), pp. 275–289. It should be noted that the similarities discerned by Daube and others do not necessarily prove that Hillel derived his principles from the Hellenistic schools. Also noteworthy is Judah Goldin's “Hillel the Elder,” *Journal of Religion* 26 (October 1946): 263–277. For Hillel's approach to the Oral Law and to biblical exegesis, see Daniel R. Schwartz, “Hillel and Scripture: From Authority to Exegesis” in *Hillel and Jesus, Comparisons of Two Major Religious Leaders* (Minneapolis, 1997; see above).

STUART S. MILLER (1987 AND 2005)

**HILLĪ, AL-** (AH 648–726/1250–1326 CE), more fully Jamāl al-Dīn Abū Maṣū'ir al-Ḥasan ibn Yūsuf ibn 'Alī ibn al-Muṭahhar, known as 'Allāmah (“great scholar” or “sage”) al-Ḥillī after Hillah, a great center of Shī'ī learning in southern Iraq; hence, a number of famous scholars are known as al-Ḥillī.

Al-Ḥillī studied first with his father and then with his famous maternal uncle, Najm al-Dīn Abū al-Qāsim Ja'far ibn Sa'īd al-Ḥillī, known as “the Foremost Scholar” (al-Muḥaqqiq al-Awwal), as well as with a number of other Shī'ī and Sunnī scholars. His mentor in philosophy and theology was the controversial astrologer, theologian, and philosopher Naṣīr al-Dīn Ṭūsī (d. 1274).

Al-Ḥillī wrote in all the religious and rational sciences, as well as in biography, Arabic grammar, and rhetoric. He was the first to apply the scientific study (*'ilm*) of the *ḥadīth* (“traditions”) to Shī'ī tradition, and his methodology remains normative in Shī'ī *ḥadīth* scholarship. The method, however, earned him the hostility of the Akhbārī scholars, who accepted all the traditions in the four Shī'ī *ḥadīth* collections as sound.

The majority of al-Ḥillī's works, numbering over one hundred, or according to some accounts five hundred, have been lost. Among his ten published works, all of them standard textbooks in jurisprudence and theology, is *Sharḥ Tajrīd al-I'tiqād*, a commentary on *Tajrīd al-I'tiqād* (Divesting the creed [of all details]), a Shī'ī creed by Ṭūsī. This commentary has superseded all other works on Shī'ī dogmatics. Al-Ḥillī's treatise *Al-bāb al-ḥādī 'ashar* (The eleventh chapter) is an important creed and has been translated into English. It was appended to another of his important works, *Minḥāj al-ṣalāh fī ikhtisār al-Miṣbāḥ* (The Proper way to abridge *The Lamp*), an abridgement of Abū Ja'far Ṭūsī's *Miṣbāḥ al-mutahajjid* (The lamp of the vigilant [in the night prayers]).

Around 1305 al-Ḥillī traveled to Persia, where he engaged in many debates with leading Sunnī scholars. Under his influence the eighth Il-khanid sultan of Persia, Öljeitü Khudā-Banda, who had been first a Christian, later a Buddhist, and then a Ḥanafī Sunnī Muslim, was converted to Twelver Shiism. Under Öljeitü the names of the twelve Shī'ī imams were inscribed on mosques, and coins were struck in their names. Thus for the first time, however briefly, Twelver Shiism was officially recognized as the state religion of Iran.

'Allāmah al-Ḥillī, a contemporary of Ibn Taymīyah and other noted Sunnī scholars, was both admired for his great learning and attacked and vilified as a leading and influential Shī'ī scholar. He was honored by being buried at Najaf in the shrine of 'Alī, the first Shī'ī imam (and not, as William M. Miller, Dwight M. Donaldson, and S. Husain Jafri mistakenly assert, in Mashhad, Iran: “al-Mashhad al-Ghurawī” is an honorific title for the shrine of 'Alī in Najaf). Al-Ḥillī's tomb in Najaf is well known and often visited by pilgrims.

## BIBLIOGRAPHY

The best general works for information on al-Ḥillī are Edward G. Browne's *A Literary History of Persia* (London, 1924; reprint, 1978), vol. 3, pp. 356 and 406, and vol. 4, p. 54; and Dwight M. Donaldson's *The Shi'ite Religion: A History of Islam in Persia and Iraq* (London, 1933), especially pages 268–269 and 296–297. Al-Ḥillī's *Eleventh Chapter* has been

translated by William M. Miller as *Al-Bābu al-Hādi 'Ashar: A Treatise on the Principles of Shī'ite Theology* (London, 1928).

MAHMOUD M. AYOUB (1987)

**HINCMAR** (c. 805–882) was an archbishop of Reims. He was born in northern France and sent as a boy to be educated at the Abbey of Saint-Denis near Paris under its famous abbot, Hilduin. Hincmar entered the monastic community at Saint-Denis and together with Hilduin spent some long periods at the court of Louis I (r. 814–840). In 845 he was chosen—no doubt with the approval of Charles II (r. 840–877), the son of Louis I—to fill the archepiscopal see of Reims, which had been vacant since the deposition of Ebbo (835). Claiming to have been unjustly deposed, Ebbo had reoccupied his see for a time and had performed ordinations during this period; he and his supporters introduced struggles and complications into Hincmar's career that persisted even after Ebbo's death (851), particularly with respect to the clerics Ebbo had ordained.

A man with a forceful personality and unbounded energy, Hincmar seemed to thrive on controversy; one finds him enmeshed in all the important struggles of his time. The temperate nature of his language and actions gained him more enemies than friends. On the political level he sided with Louis I and Charles II against the emperor Lothair I (r. 840–855) and his son Lothair II, king of Lorraine (r. 855–869). The emperor, part of whose territory came under Reims's jurisdiction, supported Ebbo and attempted to depose Hincmar. With regard to Lothair II, Hincmar strongly opposed the king's repudiation of his wife Theutberga in order to marry his concubine, and he wrote the well-known treatise *De devortio Lotharii et Teutbergae* to clarify all the doctrinal and canonical issues involved.

As archbishop, Hincmar attempted to reorganize his diocese, to recover ecclesiastical possessions that had been alienated, and in particular to bring all his diocesan bishops into obedient submission to his jurisdiction. This last effort led to a bitter and implacable conflict with his own nephew, also named Hincmar, bishop of Laon, against whom he wrote a treatise called the *Opusculum LV capitulorum*. The archbishop likewise interjected himself into the theological controversies of his day, taking the monk Gottschalk to task on the question of predestination in his treatise *Ad reclusos et simplices* and challenging the monk Ratramnus on the formula *trina deitas* in the treatise *De una et non trina deitate*. On the question of predestination, Hincmar sought an ally in John Scottus Eriugena (fl. 847–877), who also wrote on this matter. But the replies of several other contemporary theologians, Lupus (of Ferrières), Prudentius (of Troyes), and Florus (of Lyons), show that Hincmar's theological speculations were not viewed as altogether sound.

Hincmar's vast literary output reflects all aspects of his activities. That he was a man of great learning is reflected in

the splendid library he accumulated at Reims—many of whose books still survive—and in the scriptural, patristic, and other sources quoted in his treatises. His knowledge of civil and canon law is noteworthy; it is evident especially in his treatises on the divorce question and against his nephew, Hincmar of Laon. Only a fraction (about eighty letters) of his vast correspondence has survived, and several of his treatises are also lost, in particular two treatises on the question of images. Even in his own day he was accused of producing forgeries to support the causes he sponsored. His most recent biographer, Jean Devisse, has not succeeded in eliminating the doubts of scholars on this score. Hincmar is one of the first writers to quote the pseudo-Isidorian decretals, forgeries also dating from his time but almost certainly produced in the camp of his opponents, especially Ebbo and his supporters.

The section of the *Annales Bertiniani* from 861 to 882, which Hincmar composed, has earned the admiration of modern historians. In these pages, Hincmar demonstrates his penetrating mind and his ability to comment shrewdly on contemporary personages and events.

#### BIBLIOGRAPHY

The works of Hincmar, first published by Jacques Sirmond (Paris, 1645), were reprinted in *Patrologia Latina*, edited by J.-P. Migne, vols. 125–126 (Paris, 1879). In view of the survival of manuscripts of a quasi-autograph nature, exhibiting changes and erasures, one must regret the lack of modern critical editions. Hincmar's poems were edited by Ludwig Traube in *Monumenta Germaniae Historica, Poetae*, vol. 3 (Berlin, 1896), pp. 409–420; and the Annals by Felix Grat and others in *Annales de Saint-Bertin* (Paris, 1964); an edition of the letters was begun by Ernst Perels in *Monumenta Germaniae Historica, Epistolae*, vol. 8 (Berlin, 1939), part 1.

The recent work on Hincmar by Jean Devisse, *Hincmar, archevêque de Reims, 845–882*, 3 vols. (Geneva, 1975–1976), is likely to daunt many readers. Henri Platelle provides a lucid analysis of Devisse's argument in *Mélanges de science religieuse* 36 (1979): 113–137. See also Hubert Silvestre's "Jean Devisse," *Scriptorium* 34 (1980): 112–119; and J. M. Wallace-Hadrill's "History in the Mind of Archbishop Hincmar," in *The Writing of History in the Middle Ages*, edited by R. H. C. Davis and J. M. Wallace-Hadrill (Oxford, 1981), and chapter 5 of Wallace-Hadrill's *The Long-Haired Kings* (New York, 1962).

PAUL MEYVAERT (1987)

**HINDI RELIGIOUS TRADITIONS.** Forty percent of India's billion-strong population speaks some form of Hindi as a first language, with the great concentration extending across north India from Rajasthan in the west to Bihar in the east. Urdu, Hindi's sister tongue, is spoken by tens of millions more, and is distinguished from Hindi chiefly by its preference for expressions derived from Persian and Arabic. Urdu is a tongue with Muslim associations, while Hindi has a Hindu flavor that is intensified by vocabulary

adopted directly from Sanskrit. The membrane between the two languages is by no means impermeable, however, and the religious situation is similar: many of the practices surrounding Muslim holy men (*pirs*), for example, closely resemble those associated with their Hindu counterparts (gurus, *sants*, etc.).

Hindi speakers, who see themselves as occupying the geographic center of Hindu culture—what in earlier times was called the Middle Country (Madhyadeśa), where Aryan culture in India flourished—often suppose that regional distinctiveness is something characterizing other areas of the subcontinent more than their own. Local and regional identities are indeed strong in India, even within the Hindi-speaking area; nonetheless, there is a core of religious literature and tradition that sets the Hindi region apart from other areas of India and makes it possible for people whose personal religious emphases vary widely to communicate as members of a single, if large and complex, family.

**THE BHAKTI CORE.** This core is defined by a corpus of devotional (*bhakti*) poetry generated from the fifteenth to the seventeenth centuries and associated with such names as Kabīr, Mīrā Bāī, Sūrdās, Tulsīdās, and Nānak. In the compositions of these singer-saints and others contemporary with them, various dialects of Hindi came into their own as media suitable for religious expression. Doubtless, earlier poetry also served as the focus for popular piety, but it seems to have remained largely oral; what survives in writing from the fourteenth and earlier centuries is largely in the nature of epic and romance, touching only obliquely on matters of faith. With but a few exceptions, religious texts apparently remained the province of those versed in Sanskrit and the Jain Prakrits: if there were vernacular texts, they have now been lost.

A written tradition of religious literature in the vernacular began to build in the fifteenth century with adaptations of the great Sanskrit epics, the *Mahābhārata* and the *Rāmāyaṇa*. The earliest were composed by Viṣṇudās at the court of Gwalior in 1435(?) and 1442. A century and a half later writers began giving vernacular form to the Sanskrit *Bhāgavata Purāṇa*. The most prestigious medium of literary expression in the western Hindi regions was Braj Bhāṣā, the language spoken from Gwalior northward throughout the Braj region, where the god Kṛṣṇa is said to have spent his youth. To the east, an alternate tradition held sway: Avadhi, the dialect spoken in Avadh, the natal region of the divine king Rāma. Avadhi too played host to vernacular adaptations of Sanskrit works, by far the most influential among them being the *Rāmcaritmānas* (Spiritual lake of the deeds of Rāma) of Tulsīdās, composed toward the end of the sixteenth century. A third major linguistic strand in the religious literature of medieval north India is less regional in character and less associated with myth and legend than either Braj Bhāṣā or Avadhi. Because it apparently had its home in a marketplace environment that made it accessible to Hindi speakers of various classes and regions, it typically contains a great mixture of dialectal forms and varies accord-

ing to where it was spoken. Such language, which sometimes comes tolerably close to the *kharī bolī* that is the basis of modern standard Hindi, is difficult to describe, but insofar as it was productive of a religious literature it is often simply called *sādhukkarī bhāṣā*, “what holy men speak.” In *sādhukkarī bhāṣā* the events of daily life and personal experience play an important role.

Anthologies of vernacular religious poetry, extant examples of which date back to the end of the sixteenth century, can be found in each of these three dialects; often an anthology contains more than one. Collections as different as the massive *Kartāpur Pothī* compiled at the time of Guru Arjun (1604) and the much smaller anthologies prepared for individual merchants or princes suggest by their linguistically diverse contents that songs composed as far west as the Punjab and as far east as Bihar could be considered part of a single network.

Within this overarching tradition, a more or less distinct thematic milieu is associated with each of the three major dialects. Much of the religious poetry in Braj Bhāṣā is devoted to Kṛṣṇa; Rāma is often addressed and described in Avadhi; and in *sādhukkarī bhāṣā* one finds a mixed agenda appropriate to the multiformity of the language: important traces of devotion to Śiva and Śakti, for example, sometimes lurk behind a predominantly Vaiṣṇava facade. Sūrdās, Nanddas, and a host of other poets native to the Braj region composed their Kṛṣṇa lyrics naturally enough in Braj Bhāṣā, as did Tulsīdās when he wrote his *Śrīkṛṣṇāgītavalī* (A series of songs to Kṛṣṇa); Mīrā Bāī, traditionally understood to have been a princess of Rajasthan, seems often to have done the same. Braj Bhāṣā was also deemed appropriate as a medium for the praise of Rāma, but when Tulsīdās began crafting his epic *Rāmcaritmānas*, Avadhi presented itself as a ready tool. Avadhi had already established itself as a fit vehicle for epic or elegiac themes such as those that fill the story of Rāma, and in a similar way Braj Bhāṣā, through its identification with the amorous Kṛṣṇa, came to be seen as the most graceful medium for love poetry in Hindi. *Sādhukkarī bhāṣā*, associated especially with such figures as Gorakhnāth, Kabīr, Ravidās, and Dādū, expressed its eclectic character in anthologies of poetry associated with the *sant* tradition, those “good folk” who preached allegiance to no particular form of God other than that transmitted through the charisma of one’s *gurū*. In the language of *sants* such as Kabīr, the designation *Rāma* had less to do with the *avatāra* of Viṣṇu who was an exemplary king bearing that name than with the totality of the divine presence.

Historians of Hindi literature have usually accepted a tripartite linguistic and theological division in categorizing medieval devotional poetry. They typically present the first two as divergent expressions of *saguṇa bhakti*—the Kṛṣṇaite and the Rāmaite—and the last as *nirguṇa bhakti*. According to the *saguṇa* (“with qualities”) persuasion, God can appropriately be worshiped through divine attributes and forms that make themselves felt in the phenomenal world, hence

through myth and image. According to the *nirguṇa* (“without qualities”) persuasion, the purpose of the religious life is to discard such earthbound symbols and attain a purer apprehension of the divine; this teaching is at the heart of the message of poets such as Kabīr and Nānak.

To overemphasize this tripartite taxonomy, however, is to ignore what binds together this whole array of poet-saints and all who venerate their names. Tradition has recognized these ties by affirming a series of connections—imagined or otherwise—between individual saints. To an extent these links reaffirm the individual dialects and religious traditions to which this article has referred, but they also create confluences between them that have a tendency to draw the group into a single stream. In *sant* poetry, some of these ties are claimed in verses attributed to the saints themselves: Ravidās makes mention of Nāmdev and Kabīr; Dādū adds Ravidās’s name to the list; and Eknāth and Tukārām, the Maharashtrian poet-saints, in turn acknowledge Dādū. Other connections emerge in hagiologies as old as the *Bhaktamāl* of Nabhadās (c. 1625) and the *Caurāsīvaiṣṇavan kī vārtā* (c. 1650) attributed in its final form to Gokulnāth. The former depicts Kabīr, Ravidās, and Pīpā as pupils of a common *gurū*, Rāmānand, and the latter draws the catholic Sūrdās into a chain of sectarian poets such as Kṛṣṇadās and Khumbhandās, who were pupils of Vallabha. Other relationships seem to have been postulated later on, such as the tradition that Nānak met Kabīr, that Tulsīdās encountered Sūrdās, or that Mīrā Bāī embraced Ravidās as her *gurū*. And repeated patterns in the biographies of poet-saints on both sides of the *nirguṇa-sagūṇa* line—a miraculous and undesired access to wealth, for example—draw these figures into even closer proximity.

Such associations at the level of hagiography echo others that figure in the poetry itself. For all their differences of perspective, the *bhakti* poets seem united in their conviction that one must cultivate personal experience as a way to approach God; hence they downplay and often ridicule the preoccupations of ritual religion. Furthermore, all the *bhakti* poets, with the occasional exception of Tulsīdās, seem to consider both sexes and all strata of society as potentially worthy devotees. Finally, they share a common mode of discourse. Poets as different as Sūrdās, with his tender affection for Kṛṣṇa as a child, and Kabīr, with his predilection for trenchant social criticism, unite in dedicating a significant proportion of their creative efforts to poems in the *vinaya* (“humble petition”) genre. These songs of petition and complaint are occasioned primarily by the experience of being separated from God (*viraha*), and although the desire to see God (to have *darśan*, “sight”) may seem natural from a *sagūṇa* perspective such as Sūr’s or Tulsī’s, one also encounters it in poems attributed to Kabīr and Nānak. Indeed, these twin themes of *viraha* and *darśan* are persistent in *bhakti* poetry throughout the subcontinent.

**THE PRESERVATION OF THE TRADITION.** It is a measure of the extent to which the *bhakti* poets of the Hindi area define

a regional sensibility that their works have become important elements in curricula used in the early twenty-first century in the public schools of north India. But the religious impact of the poets is felt even more keenly outside the classroom.

**Performance.** Every autumn, in the period surrounding the festival of Daśahrā or Vijayamadaśamī, when Rāma’s victory over the demon Rāvaṇa is celebrated, Tulsīdās’s *Rāmcaritmānas* becomes the basis for dramas (*rāma līlās*) depicting salient events in the life of Rāma. The most famous of these *rāma līlās* is performed on the grounds of the palace of the maharaja of Banaras and extends over a period of thirty-one days, drawing pilgrims from far and wide; equally well-attended *rāma līlās* are celebrated in cities and towns wherever Hindi is spoken. In a similar way, the weeks leading up to Kṛṣṇa’s birthday Kṛṣṇa Janmāṣṭamī, which comes in August or September in the monsoon season, witness the performance of verses by Sūrdās and other Braj Bhāṣā poets in musical dramas depicting the life of Kṛṣṇa, particularly his childhood and youth. These *rasa līlās* emanate from the Braj region, which is a great center of pilgrimage, especially during the rainy months of Śrāvaṇ and Bhādrapad.

Though the *Rāmcaritmānas* typically becomes the basis for large public performances only in autumn, it serves as the focus of private devotions all year round: often individuals and religious associations engage brahmins to chant it uninterruptedly from start to finish, or do so themselves. Likewise, one can sing the songs of Kṛṣṇa in devotional groups at any time. Indeed, such *bhajan* (“singing”) groups provide much of the informal religious life with which Indian villages and cities pulse. The Indian film industry—whose primary medium is Hindi—has adopted many traditional *bhajans* into its films, making them familiar not just in Hindi-speaking areas but throughout the country and beyond. It is difficult to say whether the public consciousness of religious literature in Hindi is now shaped more by schoolbooks and cheap religious pamphlets, by performers and itinerant preachers, or by the many films depicting religious themes, or again by a television series such as Rāmānand Sāgar’s hugely successful *Rāmāyaṇ* (1987–1988), which was principally based on the *Rāmcaritmānas* and is available worldwide on cassette.

**Communities and orders.** Much of the religious life of north India over the past half millennium has been defined by the religious communities, both householder and ascetic, that were established to channel the religious fervor of the medieval period. These provide access to the *bhakti* tradition in both its *sagūṇa* and *nirguṇa* modes, with the Gauḍīya, Vallabha, Nimbārka, Haridāsī, and Rādhāvallabha *sampradāyas* (“sectarian traditions”) devoted primarily to Kṛṣṇa; the Rāmānandī order devoted especially to Rāma; and the Kabīr, Ravidāsī, Dādū, and Sikh Panths spreading the message of the *sants*.

Among the Kṛṣṇaite groups, the most influential have probably been the Gauḍīya and Vallabha *sampradāyas*. The former looks to the ecstatic saint Caitanya (1486–1533) as

its founder—a Bengali who established temple and monastic lineages not only in his native region but in Braj and Orissa as well. The Caitanyaite influence on Braj has undoubtedly had much to do with elevating the worship of Rādhā, Kṛṣṇa's favorite among his milkmaid loves (*gopīs*), to a status almost on a par with his own: she is his consort, consubstantial with him. Other lineages that have their centers in Braj (the Rādhāvallabha, Haridāsī, and Nimbārka *sampradāyas*) share in this adulation of Rādhā, which finds expression in the poetry of such saints as Hit Harivaṁś, Haridās, and Vṛindāvandās.

The Vallabha Sampradāya, which traces its history to the sixteenth-century theologian Vallabhācārya, appears to have attained institutional definition somewhat later than the Gauḍīya Sampradāya, but was very successful in doing so. Though patronized early in its history by Mughal rulers, it was forced to flee the Braj area during the period when Aurangzeb occupied the throne; it transferred its center to Nāthdvārā in western Rajasthan. Partially in consequence of the proximity of Nāthdvārā to the west, Gujaratis have become among the most influential devotees in the Vallabhite fold, and their mercantile connections make them an important force across North India. Vallabha, in sympathy with the general sensibilities of the *bhakti* movement, questioned the propriety of clerical and monastic institutions, feeling that true faith admitted of no boundaries between religious specialists and ordinary people. Vallabha's progeny, however, developed a ritual style sufficiently elaborate, and a following sufficiently prosperous, to transform their homes into grand temples possessing some of the most detailed ceremonial traditions in all of Hinduism. One of the salient aspects of this style is its careful attention to hymnody: through *dhrupad* (a style of classical music) the Sampradāya has preserved a tradition of performing *bhakti* poetry that is otherwise obsolete in modern India.

Membership in both the Gauḍīya and the Vallabha *sampradāyas* involves initiation at the hands of one of their spiritual leaders. Such initiation is open on an ascriptive basis to anyone who seeks it, though family traditions usually determine the teaching heritage with which a person becomes allied. Another restriction pertains to social status. Normally, membership in these communities is confined to members of caste society; Dalits (formerly "Untouchables"), despite the thrust of some *bhakti* teachings, are usually not welcomed and do not seek to belong.

Membership patterns are significantly different among communities whose allegiance is to the *nirguṇa* side of the *bhakti* tradition. The theological emphasis on turning away from particular characteristics and forms attributed to God appears to go hand in hand with questioning the legitimacy of similar distinctions in society. Among *nirguṇa* poets, Kabīr and Ravidās made especially sharp comments about caste, owing in part, no doubt, to their own humble origins; the communities that have formed in their names continue to appeal to a largely lower-caste clientele. With Ravidās this

is overwhelmingly true: over the past century—particularly in the Punjab but now elsewhere as well—his name has served as a rallying point for communal pride among the *camār* (leatherworking) caste to which he belonged. Ravidās temples, educational institutions, and community centers have been established, and poetry ascribed to him serves as an essential component of Ravidāsī teaching. The institutional heritage of Kabīr, the Kabīr Panth, is more complex and wide-ranging, embracing both monastic institutions and lay groups. It extends from a center in Kabīr's own city, Banaras, eastward into Bihar, and as far west as Gujarat. Although the Kabīr Panth has a predominantly lower-caste membership, merchant castes also play an important role, particularly in the Dharmadāsī branch.

Mercantile castes have exercised an even greater influence over the development of the Sikh Panth, the community that traces its origins to Nānak, since each of its ten *gurūs*, including Nānak himself, belonged to merchant (*khatrī*) families. The Sikh community is by no means restricted to *khatrīs*, however, and its leadership has been shared at least equally by the Punjabi farming and landowning caste called *jāt*. Whereas Kabīr and Ravidās groups often revere their *gurūs* in image form, ensconcing them at the center of their ritual lives, the Sikh community has, at least since the time of the tenth *gurū*, eschewed any such practice. In Sikh worship, the functions that otherwise would cluster around an image or *gurū* are diverted to a book—the *bhakti* anthology that took shape in the *Goindvāl Pothīs* and ultimately emerged as the *Ādi Granth*. For that reason the *Ādi Granth* is referred to as a *gurū* in its own right, the *Gurū granth sahib*. Through it, Sikhs come in daily contact with the words of the *nirguṇa bhakti* saints who stand at the fountainhead of their tradition.

Each of the communities mentioned so far, with the possible exception of the Ravidāsīs, can trace its origins directly to the medieval *bhakti* period, sometimes claiming an individual poet as its founder. But the *bhakti* heritage extends as well to groups whose institutional associations with the medieval saints are harder to establish. Prominent among these is the Radhasoami Satsang, a *nirguṇa* tradition that came into focus in the mid-nineteenth century and has since splintered into a number of *gurū*-centered communities, some with a sizable international constituency. Radhasoami is quite influential in North Indian life: many government bureaucrats count themselves members; its publications are numerous; and when large convocations are held at its center in Beas, Punjab, hundreds of thousands of pilgrims attend. Radhasoami's history features the establishment of several visionary communities, such as the one at Beas, part of whose impetus was to leave behind the encumbrances of caste as members gathered to lead a common life in the presence of a living *gurū*. Curiously, this seemingly plain-spoken egalitarian message from the *bhakti* tradition went hand in hand with an esoteric interpretation of other *bhakti* themes: the traditional importance of listening to the truth within, for

example, was transmuted into a doctrine of the *gurū* as the incarnation of an eternal sound-current. When one seeks the roots of this kind of thinking, one is drawn back, through the Dharmadāsī branch of the Kabīr Panth, to the apotheosis of Kabīr himself as a primordial, supernatural force. Here, as in other aspects of the *nirguṇa bhakti* tradition, the demythologizing fervor that was expressed in the fifteenth and sixteenth centuries seems to have created a vacuum that was filled by remythologizing later on.

**HINDI TRADITIONS IN A LARGER PERSPECTIVE.** To sketch the religious traditions that have Hindi as their linguistic medium is scarcely to portray the full dimensions of the religious life of Hindus resident in North India. This article has said little about rituals pertaining to days, weeks, months, years, or the life cycle; about the panoply of religious specialists from brahmins to curers to ascetics; about the pantheon revered in various areas; about temple architecture and practice; or about how one's experience of religion is conditioned by one's sex, age, or position in the caste hierarchy, one's urban or rural locale, or one's proximity to a major religious center. Often, one or another of these factors affects patterns of individual piety more profoundly than the specifically "Hindi" traditions discussed here, and often what matters most does not hold constant across the whole Hindi region or the entire social spectrum. In the Hindi area as elsewhere, Hinduism resists easy generalizations. One can, however, point to certain motifs that seem particularly significant in North Indian religion, as contrasted with other areas of the subcontinent.

In the realm of ritual, for example, one might observe that it is somewhat more acceptable in North India than elsewhere for a young man to take on the sacred thread just prior to his marriage; elsewhere, there is greater insistence on keeping these two major rites of the life cycle separate and distinct. As for festivals, Holī, the spring first-fruits celebration that falls in March or April, assumes a bacchanalian intensity one might more easily associate with Gaṇeśa Caturthī in Maharashtra or Dūrgā Pujā in Bengal. Among religious specialists, one might mention the historically formative role played by the iconoclastic Nāth order, with its mixed ascetic and householder membership. The Nāth Sampradāya, which regards Gorakhnāth (c. eleventh century?) as its most important preceptor, was particularly influential in laying the basis for the *sant* tradition as it spread across North India in the early medieval centuries. It is associated with a particular form of yoga that assumed the potential immortality of all and questioned the efficacy of traditional forms of temple and Brahmanic ritual.

This discussion has already touched on several points relating to the pantheon, but it might be stressed in addition that while all of India has tended in recent centuries to shorten the distance between the great and local gods by focusing increased attention on intermediary figures such as the elephant divinity Gaṇeśa, North India has led the way in expanding the significance of his monkey cousin,

Hanumān. In Hanumān, servant of Rāma, superhuman strength and superhuman devotion unite, making this god the very personification of efficacious *bhakti*; at the same time, he remains peculiarly accessible and unthreatening because he belongs to a subhuman species. The *Hanumān cālīsā* (nineteenth century?), dedicated to him, is one of the most frequently recited texts in North India, and many Hindi speakers turn first to the monkey god in times of peril and stress.

Like all of India's major regions, North India has its own set of pilgrimage places: Puṣkar and Nāthdvārā in Rajasthan; Badrināth and Gaṅgotrī in the Himalayas; Mathurā and Vṛndāvana in Braj; Ayodhyā in Avadh; and Hardvar, Prayāga, Banaras, and Gayā stretching along the Ganges from west to east. What is striking about several of these places, however—certainly Vṛndāvana, Prayāga, Ayodhyā, and Banaras—is that they attract pilgrims not merely from the Hindi-speaking regions but from all over India. Three among these—Vṛndāvana, Ayodhyā, and Banaras—gain their national reputation because they are perceived as the homes, the primary residences, of three great gods in the pantheon: Kṛṣṇa, Rāma, and Śiva. Banaras benefits additionally from its special association with the Ganges, holiest of India's waters; the Jumna (Yamunā), sister to the Ganges and for Hindus a goddess like her, contributes to the status of Vṛndāvana. Prayāga owes its special sanctity to the fact that it marks the confluence of these two rivers; every twelve years it plays host to the most populous of all Hindu festivals, the Kumbha Melā. Participants in the Kumbha Melā come from all corners of the subcontinent to bathe in the confluence of the Ganges, the Jumna, and the invisible Sarasvatī at the auspicious moment when the sun passes into the house of Aquarius; all caste groups, all major religious organizations, and all ascetic orders are represented.

The Kumbha Melā suggests what is perhaps the most distinctive feature of regional religion in the Hindi-speaking area: in some of its most important respects it is pan-Indian as well. One can find at Madurai "the Mathurā of the south" or in the Godavari a Ganges transposed to central India, but never the reverse; the songs of Mīrā Bāī are known all over India in a way that the Tamil lyrics of her south Indian counterpart Āṅṅāl can never be. The fact that Hindi rivals English as a lingua franca for modern India is not the only cause of the tendency among Hindi speakers to feel that the religion they practice somehow sets the Hindu paradigm; it is that history and mythology have made them before all others host to the gods. Kṛṣṇa and Rāma lived where they live, and when Śiva descended from the Himalayas to the plain, his feet first touched a place where Hindi is spoken. Successive invasions and movements of population have complicated and transformed the religious landscape of North India more than most areas of the subcontinent, but nothing can alter the Hindi region's special claim that the gods were there first.

#### BIBLIOGRAPHY

An excellent, up-to-date resource for the study of devotional literature in medieval Hindi dialects is Ronald Stuart McGregor's *Hindi Literature from Its Beginnings to the Nineteenth Century* (Wiesbaden, 1984). Parshuram Chaturvedi's compendious *Uttarī Bhārata kī sant paramparā* (Allahabad, 1964) provides a more ample but often less critical overview of saints and communities of the *nirguṇa* persuasion, and Prabhu Dayal Mital's *Braj ke dharmā-sampradāyō kā itihās* (Delhi, 1968) does the same for *sagūṇa* traditions based in Braj. In regard to Avadhi and its Rāmaite traditions, one might mention Camille Bulcke's *Rāma-kathā: utpatti aur vikās* (Allahabad, 1950) and a series of pioneering articles by Richard Burghart that explore topics relating to the Rāmānandī sect: "The Founding of the Ramanandi Sect," *Ethnohistory* 25 (Spring 1978): 121–139; "Wandering Ascetics of the Rāmānandī Sect," *History of Religions* 22 (May 1983): 361–380; and "The Disappearance and Reappearance of Janakpur," *Kailash* 6 (1978): 257–284. The definitive study of performance traditions associated with Tulsīdās *Rāmcaritmānas* is Philip Lutgendorf's *The Life of a Text* (Berkeley, Calif., 1991), and a sense of the Śūfī *premākhyān* tradition in Avadhi can be had in Aditya Behl and Simon Weightman's translation of Manjhan's *Madhumālātī* (Oxford, 2000).

For sectarian traditions associated with Tulsīdās, Sūrdās, Kabīr, Nānak, Mīrā Bāī, and other *bhakti* saints, see Richard K. Barz, *The Bhakti Sect of Vallabhācārya* (Faridabad, 1976); W. M. Callewaert and Bart Op de Beeck, *Devotional Hindī Literature* (Delhi, 1991); J. S. Hawley and Mark Juergensmeyer, *Songs of the Saints of India* (New York, 1987); Lucy L. Rosenstein, *The Devotional Poetry of Svāmī Haridās* (Groningen, 1997); Rupert Snell, *The Eighty-Four Hymns of Hita Harivamśa* (Delhi and London, 1991); Heidi Pauwels, *In Praise of Holy Men* (Groningen, 2003); Gurinder Singh Mann, *The Making of Sikh Scripture* (New York, 2001); Hew McLeod, *Sikhism* (London, 1997); Parita Mukta, *Upholding the Common Life* (Delhi, 1994); Linda Hess and Shukdev Singh, *The Bījak of Kabir* (San Francisco, 1983); David N. Lorenzen, *Kabir Legends and Ananta-Das's Kabir Parachai* (Albany, N. Y., 1991); J. S. Hawley, *Sūr Dās: Poet, Singer, Saint* (Seattle and Delhi, 1984); W. M. Callewaert and Peter Friedlander, *The Life and Works of Raidās* (Delhi, 1992); Alan W. Entwistle, *Braj, Centre of Krishna Pilgrimage* (Groningen, 1987); and W. L. Smith, *Patterns in North Indian Hagiography* (Stockholm, 2000). Radhasoami is described in Lawrence A. Babb, *Redemptive Encounters* (Berkeley, 1986) and Mark Juergensmeyer, *Radhasoami Reality* (Princeton, 1991), and the larger *sant* context emerges in Karine Schomer and W. H. McLeod, eds., *The Sants* (Berkeley and Delhi, 1987). David Gordon White analyzes the Nāth tradition in *The Alchemical Body* (Chicago, 1996).

A fine description of the religious universe of a village at the southeastern extremity of the Hindi-speaking region is Lawrence A. Babb's *The Divine Hierarchy* (New York, 1975); a complementary study of a village farther north is Susan Snow

Wadley's *Shakti: Power in the Conceptual Structure of Karimpur Religion* (Chicago, 1975). The religion of Dalits in the Punjab, including their veneration of Ravidās, is the subject of Mark Juergensmeyer's *Religion as Social Vision* (Berkeley, 1982). The ambience of pilgrimage in Banaras (Varanasi) and Vṛndāvana is described in Diana L. Eck's *Banaras: City of Light* (New York, 1982) and my *At Play with Krishna* (Princeton, 1981). In *Beyond Hindu and Muslim* (New York, 2000), Peter Gottschalk describes the intersecting religious worlds of Muslims and Hindus in a village in Bihar.

JOHN STRATTON HAWLEY (1987 AND 2005)

**HINDUISM.** Hinduism is the religion followed by about 70 percent of the roughly seven hundred million people of India. Elsewhere, with the exception of the Indonesian island of Bali, Hindus represent only minority populations. The geographical boundaries of today's India are not, however, adequate to contour a full account of this religion. Over different periods in the last four or five millennia, Hinduism and its antecedents have predominated in the adjacent areas of Pakistan and Bangladesh and have been influential in such other regions as Afghanistan, Sri Lanka, Southeast Asia, and Indonesia. But in these areas Hindu influences have been superseded or overshadowed by the influences of other religions, principally Buddhism and Islam. This account will treat only of Hinduism as it has taken shape historically in the "greater India" of the Indian subcontinent.

**INDUS VALLEY RELIGION.** There are good reasons to suspect that a largely unknown quantity, the religion of the peoples of the Indus Valley, is an important source for determining the roots of Hinduism.

The Indus Valley civilization arose from Neolithic and Chalcolithic village foundations at about the middle of the third millennium BCE as a late contemporary of Egyptian and Mesopotamian riverine civilizations. It engaged in trade with both, though mostly with Mesopotamia. Reaching its apogee around 2000 BCE, it then suffered a long period of intermittent and multifaceted decline culminating in its eclipse around 1600 BCE, apparently *before* the coming of the Aryan peoples and their introduction of the Vedic religious current. At its peak, the Indus Valley civilization extended over most of present-day Pakistan, into India as far eastward as near Delhi, and southward as far as the estuaries of the Narmada River. It was apparently dominated by the two cities of Mohenjo-Daro, on the Indus River in Sind, and Harappa, about 350 miles to the northwest on a former course of the Ravi River, one of the tributaries to the Indus. Despite their distance from each other, the two cities show remarkable uniformity in material and design, and it has been supposed that they formed a pair of religious and administrative centers.

The determination of the nature of Indus Valley religion and of its residual impact upon Hinduism are, however, most problematic. Although archaeological sites have yielded many suggestive material remains, the interpretation of such

finds is conjectural and has been thwarted especially by the continued resistance of the Indus Valley script, found on numerous steatite seals, to convincing decipherment. Until it is deciphered, little can be said with assurance. The content of the inscriptions may prove to be minimal, but if the language (most likely Dravidian) can be identified, much can be resolved.

At both Harappa and Mohenjo-Daro, the cities were dominated on the western side by an artificially elevated mound that housed a citadel-type complex of buildings. Though no temples or shrines can be identified, the complex probably served both sacred and administrative functions. A “great bath” within the Mohenjo-Daro citadel, plus elaborate bathing and drainage facilities in residences throughout the cities, suggests a strong concern for personal cleanliness, cultic bathing, and ritual purity such as resurface in later Hinduism. Indeed, the “great bath,” a bitumen-lined tank with steps leading into and out of it from either end, suggests not only the temple tanks of later Hinduism but the notion of “crossing” associated with them through their Sanskrit name, *tīrtha* (“crossing place, ford”).

A granary attached to the citadel may also have involved high officials in ceremonial supervision of harvests and other agricultural rituals. Terracotta female figurines with pedestal waists, found especially at village sites, reveal at least a popular cultic interest in fertility. They are probably linked with worship of a goddess under various aspects, for while some portray the figure in benign nurturing poses, others present pinched and grim features that have been likened to grinning skulls: These are likely foreshadowings of the Hindu Goddess in her benign and destructive aspects.

But most controversial are the depictions on the seals, whose inscriptions remain undeciphered. Most prominently figured are powerful male animals. They are often shown in cultic scenes, as before a sort of “sacred manger,” or being led by a priestly ministrant before a figure (probably a deity and possibly a goddess) in a peepul tree, one of the most venerated trees in Hinduism. Male animals also frequently figure in combination with human males in composite animal-human forms. With female figures seemingly linked to the Goddess and males associated with animal power, it has been suggested that the two represent complementary aspects of a fertility cult with attendant sacrificial scenarios such as are found in the animal sacrifice to the Goddess in post-Vedic Hinduism. In such sacrifices the Goddess requires male offerings, and the animal represents the human male sacrificer. Most interesting and controversial in this connection is a figure in a yogic posture who is depicted on three seals and a faience sealing. Though features differ in the four portrayals, the most fully defined one shows him seated on a dais with an erect phallus. He has buffalo horns that enclose a treelike miter headdress, possibly a caricatured buffalo face, wears bangles and necklaces or torques, and is surrounded by four wild animals. Some of these associations (yoga, ithyphallicism, lordship of animals) have suggested an identification

with the later Hindu god Śiva. Other traits (the buffalo-man composite form, association with wild animals, possible intimations of sacrifice) have suggested a foreshadowing of the buffalo demon *Mashāsura*, mythic antagonist and sacrificial victim of the later Hindu goddess *Durgā*. Possibly the image crystallizes traits that are later associated with both of these figures.

The notion that features of Indus Valley religion form a stream with later non-Aryan religious currents that percolate into Hinduism has somewhat dismissively been called the substratum theory by opponents who argue in favor of treating the development of Hinduism as derivable from within its own sacred literature. Though this “substratum” cannot be known except in the ways that it has been structured within Hinduism (and no doubt also within Jainism and Buddhism), it is clear that a two-way process was initiated as early as the Vedic period and has continued to the present.

**VEDISM.** The early sacred literature of Hinduism has the retrospective title of *Veda* (“knowledge”) and is also known as *śruti* (“that which is heard”). Altogether it is a prodigious body of literature, originally oral in character (thus “heard”), that evolved into its present form over nine or ten centuries between about 1400 and 400 BCE. In all, four types of texts fall under the *Veda-śruti* heading: *Samhitās*, *Brāhmaṇas*, *Āraṇyakas*, and *Upaniṣads*. At the fount of all later elaborations are the four *Samhitās* (“collections”): the *R̥gveda Samhitā* (*Veda* of Chants, the oldest), the *Sāmaveda* and *Yajurveda Samhitās* (*Vedas* of Melodies and Sacrificial Formulas, together known as the “liturgical” *Samhitās*), and the *Atharvaveda Samhitā* (the youngest, named after the sage *Atharvan*). These constitute the four *Vedas*, with some early sources referring to the “three *Vedas*” exclusive of the last. The material of the four was probably complete by 1000 BCE, with younger parts of the older works overlapping older parts of the younger ones chronologically. The *Samhitās*, or portions of them, were preserved by different priestly schools or “branches” (*śākhās*) through elaborate means of memorization. Many of these schools died out and their branches became lost, but others survived to preserve material for literary compilation and redaction. The subsequent works in the categories of *Brāhmaṇa*, *Āraṇyaka*, and *Upaniṣad* are all linked with one or another of the Vedic schools, and thus with a particular Vedic *Samhitā*, so that they represent the further literary output of the Vedic schools and also the interests of the four types of priests who came to be associated differentially with the ritual uses of the four *Samhitās*. It is from the *R̥gveda* that Vedic religion in its earliest sense must be reconstructed.

Although the urban civilization of the Indus Valley had run its course by the time of the arrival of the Aryans in about 1500 BCE, the newcomers met heirs of this civilization in settled agricultural communities. The contrast between cultures was striking to the Aryans, who described the indigenous population as having darker skin, defending themselves from

forts, having no gods or religious rituals but nonetheless worshipping the phallus. As small stone phallic objects have been found at Indus Valley sites, this is probably an accurate description of a cult continued from pre-Vedic Indus Valley religion that prefigures the later veneration of the *liṅga* (phallus) in the worship of Śiva. In contrast to this predominantly agricultural population, the invading Aryans were a mobile, warlike people, unattached to cities or specific locations, entering Northwest India in tribal waves probably over a period of several centuries. Moreover, their society inherited an organizing principle from its Indo-European past that was to have great impact on later Indian civilization in the formation of the caste system. The ideal arrangement, which myths and ritual formulas propounded and society was to reflect, called for three social “functions”: the priests, the warriors, and the agriculturalist-stockbreeders. Early Vedic hymns already speak of three such interacting social groups, plus a fourth—the indigenous population of *dāsa*, or *dasyu* (literally, “slaves,” first mythologized as demon foes of the Aryans and their gods). By the time of the late *R̥gveda*, these peoples were recognized as a fourth “class” or “caste” in the total society and were known as *śūdras*.

Most crucial to the inspiration of the early Vedic religion, however, was the interaction between the first two groups: the priesthood, organized around sacerdotal schools maintained through family and clan lines, and a warrior component, originally led by chieftains of the mobile tribal communities but from the beginning concerned with an ideal of kingship that soon took on more local forms. Whereas the priests served as repositories of sacred lore, poetry, ritual technique, and mystical speculation, the warriors served as patrons of the rites and ceremonies of the priests and as sponsors of their poetry. These two groups, ideally complementary but often having rival interests, crystallized by late Vedic and Brahmanic times into distinct “classes”: the *brāhmanaṣas* (priests) and the *kṣatriyas* (warriors).

Although the *R̥gveda* alludes to numerous details of ritual that soon came to be systematized in the religion of the *Brāhmanaṣas*, it brings ritual into relief only secondarily. The primary focus of the 1,028 hymns of the *R̥gveda* is on praising the gods and the cosmic order (*ṛta*), which they protect. But insofar as the hymns invoke the gods to attend the sacrifice, there is abundant interest in two deities of essentially ritual character: Agni and Soma. Agni (Fire) is more specifically the god of the sacrificial fire who receives offerings to the gods and conveys them heavenward through the smoke. And Soma is the divinized plant of “nondeath” (*amṛta*), or immortality, whose juices are ritually extracted in the *soma* sacrifice, a central feature of many Vedic and Brahmanic rituals. These two gods, significantly close to humankind, are mediators between humans and other gods. But they are especially praised for their capacity to inspire in the poets the special “vision” (*dhī*) that stimulates the composition of the Vedic hymns. Agni, who as a god of fire and light is present in the three Vedic worlds (as fire on earth, lightning in the

atmosphere, and the sun in heaven), bestows vision through “illumination” into the analogical connections and equivalences that compose the *ṛta* (which is itself said to have a luminous nature). *Soma*, the extracted and purified juice of the “plant of immortality,” possibly the hallucinogenic fly agaric mushroom, yields a “purified” vision that is described as “enthused” or “intoxicated,” tremulous or vibrant, again stimulating the inspiration for poetry. The Vedic poet (*kavi*, *ṛṣi*, or *vipra*) was thus a “seer,” or seer, who translated his vision into speech, thus producing the sacred *mantras*, or verse-prayers, that comprise the Vedic hymns. Vedic utterance, itself hypostatized as the goddess Vāc (Speech), is thus the crystallization of this vision.

Vedic religion is decidedly polytheistic, there being far more than the so-called thirty-three gods, the number to which they are sometimes reduced. Though the point is controversial, for the sake of simplification one can say that at the core or “axis” of the pantheon there are certain deities with clear Indo-European or at least Indo-Iranian backgrounds: the liturgical gods Agni and Soma (cf. the Avestan deity Haoma) and the deities who oversee the three “functions” on the cosmic scale: the cosmic sovereign gods Varuṇa and Mitra, the warrior god Indra, and the *Aśvins*, twin horsemen concerned with pastoralism, among other things. Intersecting this structure is an opposition of Indo-Iranian background between *devas* and *asuras*. In the *R̥gveda* both terms may refer to ranks among the gods, with *asura* being higher and more primal. But *asura* also has the Vedic meaning of “demon,” which it retains in later Hinduism, so that the *devaasura* opposition also takes on dualistic overtones. Varuṇa is the *asura par excellence*, whereas Indra is the leader of the *devas*. These two deities are thus sometimes in opposition and sometimes in complementary roles: Varuṇa being the remote overseer of the cosmic order (*ṛta*) and punisher of individual human sins that violate it; Indra being the dynamic creator and upholder of that order, leader of the perennial fight against the collective demonic forces, both human and divine, that oppose it. It is particularly his conquest of the *asura* Vṛtra (“encloser”)—whose name suggests ambiguous etymological connections with Varuṇa—that creates order or being (*sat*, analogous to *ṛta*) out of chaos or nonbeing (*asat*) and opens cosmic and earthly space for “freedom of movement” (*varivas*) by gods and humans. Considerable attention is also devoted to three solar deities whose freedom of movement, thus secured, is a manifestation of the *ṛta*, a prominent analogy for which is the solar wheel: Sūrya and Savitṛ (the Sun under different aspects) and Uṣas (charming goddess of the dawn). Other highly significant deities are Yama, god of the dead, and Vāyu, god of wind and breath. It is often pointed out that the gods who become most important in later Hinduism—Viṣṇu, Śiva (Vedic Rudra), and the Goddess—are statistically rather insignificant in the Veda, for few hymns are devoted to them. But the content rather than the quantity of the references hints at their significance. Viṣṇu’s centrality and cosmological ultimacy, Rudra’s destructive power and outsiderhood, and the this-

worldly dynamic aspects of several goddesses are traits that assume great proportions in later characterizations of these deities.

Although it is thus possible to outline certain structural and historical features that go into the makeup of the Vedic pantheon, it is important to recognize that these are obscured by certain features of the hymns that arise from the type of religious “vision” that inspired them, and that provide the basis for speculative and philosophical trends that emerge in the late Veda and continue into the early Brahmanic tradition. The hymns glorify the god they address in terms generally applicable to other gods (brilliance, power, beneficence, wisdom) and often endow him or her with mythical traits and actions particular to other gods (supporting heaven, preparing the sun’s path, slaying Vṛtra, and so on). Thus, while homologies and “connections” between the gods are envisioned, essential distinctions between them are implicitly denied. Speculation on what *is* essential—not only as concerns the gods, but the ritual and the *mantras* that invoke them—is thus initiated in the poetic process of the early hymns and gains in urgency and refinement in late portions of the *Rgveda* and the subsequent “Vedic” speculative-philosophical literature that culminates in the Upaniṣads. Most important of these speculations historically were those concerning the cosmogonic sacrifices of Puruṣa in *Rgveda* 10.90 (the *Puruṣasūkta*, accounting for, among other things, the origin of the four castes) and of Prajāpati in the Brāhamaṇas. Each must be discussed further. In addition, speculations on *brahman* as the power inherent in holy speech and on the *ātman* (“self”) as the irreducible element of personal experience are both traceable to Vedic writings (the latter to the *Atharvaveda* only). This article shall observe the convergence of all these lines of speculation in the Upaniṣads and classical Hinduism.

**RELIGION OF THE BRĀHAMAṆAS.** The elaboration of Vedic religion into the sacrificial religion of the Brāhamaṇas is largely a result of systematization. The first indication of this trend is the compilation of the liturgical *Samhitās* and the development of the distinctive priestly schools and interests that produced these compendiums. Thus, while the *Rgveda* became the province of the *hotṛ* priest, the pourer of oblations and invoker of gods through the *mantras* (the term *hotṛ*, “pourer,” figures often in the *Rgveda* and has Indo-Iranian origins), the newer collections developed around the concerns of specialist priests barely alluded to in the *Rgveda* and serving originally in subordinate ritual roles. The *Sāmaveda* was a collection of verses taken mostly from the *Rgveda*, set to various melodies (*sāmans*) for use mainly in the *soma* sacrifice, and sung primarily by the *udgātṛ* priest, who thus came to surpass the *hotṛ* as a specialist in the sound and articulation of the *mantras*. And the *Yajurveda* was a collection of *yajus*, selected sacrificial *mantras*, again mostly from the *Rgveda*, plus certain complete sentences, to be murmured by the *adhvaryu* priest, who concerned himself not so much with their sound as with their appropriateness in the ritual, in which he became effectively the master of cere-

monies, responsible for carrying out all the basic manual operations, even replacing the *hotṛ* priest as pourer of oblations. A fourth group of priests, the *brāhamaṇas*, then claimed affiliation with the *Atharvaveda* and assumed the responsibility for overseeing the entire ritual performance of the other priests and counteracting any of their mistakes (they were supposed to know the other three Vedas as well as their own) by silent recitation of *mantras* from the *Atharvaveda*. As specialization increased, each priest of these four main classes took on three main assistants.

The Brāhamaṇas—expositions of *brahman*, the sacred power inherent in *mantra* and more specifically now in the ritual—are the outgrowth of the concerns of these distinctive priestly schools and the first articulation of their religion. Each class of priests developed its own Brāhamaṇas, the most important and comprehensive being the *Satapatha Brāhamaṇa* of one of the *Yajurveda* schools. The ritual system was also further refined in additional manuals: the *Śrautasūtras*, concerned with “solemn” rites, first described in the Brāhamaṇas and thus called *śrauta* because of their provenance in these *śruti* texts, and the *Gṛhyasūtras*, concerned with domestic rites (from *gr̥ha*, “home”), justified by “tradition” (*smṛti*) but still having much of Vedic origins. The *Śrautasūtras* were compiled over the period, roughly, from the Brāhamaṇas to the Upaniṣads, and the *Gṛhyasūtras* were probably compiled during Upaniṣadic times.

The domestic rites take place at a single offering fire and usually involve offerings of only grain or ghee (clarified butter). Along with the maintenance of the household fire and the performance of the so-called Five Great Sacrifices—to *brahman* (in the form of Vedic recitation), to ancestors, to gods, to other “beings,” and to humans (hospitality rites)—the most prominent *gr̥hya* ceremonies are the sacraments or life-cycle rites (*saṃskāras*). Of these, the most important are the rites of conception and birth of a male child; the Upanayana, or “introduction,” of boys to a *brāhamaṇa* preceptor or *guru* for initiation; marriage; and death by cremation (*Antyeṣṭi*, “final offering”). The Upanayana, involving the investiture of boys of the upper three social classes (*varṇas*) with a sacred thread, conferred on them the status of “twice-born” (*dvija*, a term first used in the *Atharvaveda*), and their “second birth” permitted them to hear the Veda and thereby participate in the *śrauta* rites that, according to the emerging Brahmanic orthodoxy, would make it possible to obtain immortality.

The *śrauta* rites are more elaborate and are representative of the sacrificial system in its full complexity, involving ceremonies that lasted up to two years and enlisted as many as seventeen priests. Through the continued performance of daily, bimonthly, and seasonal *śrauta* rites one gains the year, which is itself identified with the sacrificial life-death-regeneration round and its divine personification, Prajāpati. In surpassing the year by the Agnicayana, the “piling of the fire altar,” one gains immortality and needs no more nourishment in the otherworld (see *Satapatha Brāhamaṇa* 10.1.5.4).

*Śrauta* rites required a sacrificial terrain near the home of the sacrificer (*yajamāna*), with three sacred fires (representing, among other things, the three worlds) and an upraised altar, or *vedī*. Nonanimal sacrifices of the first varieties mentioned involved offerings of milk and vegetable substances or even of *mantras*. Animal sacrifices (*paśubandhu*)—which required a more elaborate sacrificial area with a supplemental altar and a sacrificial stake (*yūpā*)—entailed primarily the sacrifice of a goat. Five male animals—man, horse, bull, ram, and goat—are declared suitable for sacrifice. It is likely, however, that human sacrifice existed only on the “ideal” plane, where it was personified in the cosmic sacrifices of Puruṣa and Prajāpati. The animal (*paśu*) was to be immolated by strangulation, and its omentum, rich in fat, offered into the fire. *Soma* sacrifices, which would normally incorporate animal sacrifices within them plus a vast number of other subrites, involved the pressing and offering of *soma*. The most basic of these was the annual Agniṣtoma, “in praise of Agni,” a four-day rite culminating in morning, afternoon, and evening *soma* pressings on the final day and including two goat sacrifices. Three of the most ambitious *soma* sacrifices were royal rites: the Aśvamedha, the horse sacrifice; the Rājasūya, royal consecration; and the Vājapeya, a *soma* sacrifice of the “drink of strength.” But the most complex of all was the aforementioned Agnicayana.

A thread that runs through most *śrauta* rituals, however, is that they must begin with the “faith” or “confidence” (*śrāddha*) of the sacrificer in the efficacy of the rite and the capacity of the officiating priests to perform it correctly. This prepares the sacrificer for the consecration (*dīkṣā*) in which, through acts of asceticism (*tapas*), he takes on the aspect of an embryo to be reborn through the rite. As *dīkṣita* (one undergoing the *dīkṣā*), he makes an offering of himself (his *ātman*). This then prepares him to make the sacrificial offering proper (the *yajña*, “sacrifice”) as a means to redeem or ransom this self by the substance (animal or otherwise) offered. Then, reversing the concentration of power that he has amassed in the *dīkṣā*, he disperses wealth in the form of *dakṣiṇās* (honoraria) to the priests. Finally, the rite is disassembled (the ritual analogue to the repeated death of Prajāpati before his reconstitution in another rite), and the sacrificer and his wife bathe to disengage themselves from the sacrifice and reenter the profane world.

In the elaboration of such ceremonies and the speculative explanation of them in the Brāhmaṇas, the earlier Vedic religion seems to have been much altered. In the religion of the Brāhmaṇas, the priests, as “those who know thus” (*evamvids*), view themselves as more powerful than the gods. Meanwhile, the gods and the demons (*asuras*) are reduced to representing in their endless conflicts the recurrent interplay between agonistic forces in the sacrifice. It is their father, Prajāpati, who crystallizes the concerns of Brahmanic thought by representing the sacrifice in all its aspects and processes. Most notable of these is the notion of the assembly or fabrication of an immortal self (*ātman*) through ritual ac-

tion (*karman*), a self constructed for the sacrificer by which he identifies with the immortal essence of Prajāpati as the sacrifice personified. And by the same token, the recurrent death (*punarṁṛtyu*, “redeath”) of Prajāpati’s transitory nature (the elements of the sacrifice that are assembled and disassembled) figures in the Brāhmaṇas as the object to be avoided for the sacrificer by the correct ritual performance. This Brahmanic concept of Prajāpati’s redeath, along with speculation on the ancestral *gr̥hya* rites (*śrāddhas*) focused on feeding deceased relatives to sustain them in the afterlife, must have been factors in the thinking that gave rise to the Upaniṣadic concept of reincarnation (*punarjanman*, “rebirth”). The emphasis on the morbid and transitory aspects of Prajāpati and the sacrifice, and the insistence that asceticism within the sacrifice is the main means to overcome them, are most vigorously propounded in connection with the Agnicayana.

In the Brāhmaṇas’ recasting of the primal once-and-for-all sacrifice of Puruṣa into the recurrent life-death-regeneration mythology of Prajāpati, a different theology was introduced. Though sometimes Puruṣa was identified with Prajāpati, the latter, bound to the round of creation and destruction, became the prototype for the classical god Brahṁā, personification of the Absolute (*brahman*) as it is oriented toward the world. The concept of a transcendent Puruṣa, however, was not forgotten in the Brāhmaṇas. *Śatapatha Brāhmaṇa* 13.6 mentions Puruṣa-Nārāyaṇa, a being who seeks to surpass all others through sacrifice and thereby become the universe. In classical Hinduism, *Nārāyaṇa* and *Puruṣa* are both names for Viṣṇu as the supreme divinity. This Brāhmaṇa passage neither authorizes nor disallows an identification with Viṣṇu, but other Brāhmaṇa passages leave no doubt that sacrificial formulations have given Viṣṇu and Rudra-Śiva a new status. Whereas the Brāhmaṇas repeatedly assert that “Viṣṇu is the sacrifice”—principally in terms of the organization of sacrificial space that is brought about through Viṣṇu’s three steps through the cosmos, and his promotion of the order and prosperity that thus accrue—they portray Rudra as the essential outsider to this sacrificial order, the one who neutralizes the impure forces that threaten it from outside as well as the violence that is inherent within. Biardeau (1976) has been able to show that the later elevation of Viṣṇu and Śiva through yoga and *bhakti* is rooted in oppositional complementarities first formulated in the context of the Brahmanic sacrifice.

**THE UPANIṢADS.** Several trends contributed to the emergence of the Upaniṣadic outlook. Earlier speculations on the irreducible essence of the cosmos, the sacrifice, and individual experience have been mentioned. Pre-Upaniṣadic texts also refer to various forms of asceticism as performed by types of people who in one way or another rejected or inverted conventional social norms: the Vedic *muni*, *vrātya*, and *brahmacārin*, to each of whom is ascribed ecstatic capacities, and, at the very heart of the Brahmanic sacrifice, the *dīkṣita* (the sacrificer who performs *tapas* while undergoing the *dīkṣā*, or consecration). These speculative and ascetic trends

all make contributions to a class of texts generally regarded as intermediary between the Brāhmaṇas and Upaniṣads: the Āraṇyakas, or “Forest Books.” The Āraṇyakas do not differ markedly from the works that precede and succeed them (the *Bṛhadāraṇyaka Upaniṣad* is both an Āraṇyaka and an Upaniṣad), but their transitional character is marked by a shift in the sacrificial setting from domestic surroundings to the forest and a focus not so much on the details of ritual as on its interiorization and universalization. Sacrifice, for instance, is likened to the alternation that takes place between breathing and speaking. Thus correspondences are established between aspects of sacrifice and the life continuum of the meditator.

An *upaniṣad* is literally a mystical—often “secret”—“connection,” interpreted as the teaching of mystical homologies. Or, in a more conventional etymology, it is the “sitting down” of a disciple “near to” (*upa*, “near”; *ni*, “down”; *sad*, “sit”) his spiritual master, or *guru*. Each Upaniṣad reflects the Vedic orientation of its priestly school. There are also regional orientations, for Upaniṣadic geography registers the further eastern settlement of the Vedic tradition into areas of the Ganges Basin. But the Upaniṣads do share certain fundamental points of outlook that are more basic than their differences. Vedic polytheism is demythologized, for all gods are reducible to one. Brahmanic ritualism is reassessed and its understanding of ritual action (*karman*) thoroughly reinterpreted. *Karman* can no longer be regarded as a positive means to the constitution of a permanent self. Rather, it is ultimately negative: “the world that is won by work (*karman*)” and “the world that is won by merit (*puṇya*)” only perish (*Chāndogya Upaniṣad* 8.1.6). The “law of karma” (*karman*) or “law of causality” represents a strict and universal cause-effect continuum that affects any action that is motivated by desire (*kāma*), whether it be desire for good or for ill. Thus even meritorious actions that lead to the Vedic heaven “perish,” leaving a momentum that carries the individual to additional births or reincarnations. The result is perpetual bondage to the universal flow-continuum of all *karman*, or *saṃsāra* (from *saṃ*, “together” and *sr*, “flow”), a term that the Upaniṣads introduce into the Vedic tradition but that is shared with Jainism and Buddhism. As with these religions, the Upaniṣads and Hinduism henceforth conceive their soteriological goal as liberation from this cycle of *saṃsāra*: that is, *mokṣa* or *mukti* (“release”).

*Mokṣa* cannot be achieved by action alone, because action only leads to further action. Thus, though ritual action is not generally rejected and is often still encouraged in the Upaniṣads, it can only be subordinated to pursuit of the higher *mokṣa* ideal. Rather, the new emphasis is on knowledge (*vidyā*, *jñāna*) and the overcoming of ignorance (*avidyā*). The knowledge sought, however, is not that of ritual technique or even of ritual-based homologies, but a graspable, revelatory, and experiential knowledge of the self as one with ultimate reality. In the early Upaniṣads this experience is formulated as the realization of the ultimate “connection,”

the oneness of *ātman-brahman*, a connection knowable only in the context of communication from *guru* to disciple. (Herein can be seen the basis of the parable context and vivid, immediate imagery of many Upaniṣadic teachings.) The experience thus achieved is variously described as one of unified consciousness, fearlessness, bliss, and tranquillity.

Beyond these common themes, however, and despite the fact that Upaniṣadic thought is resistant to systematization, certain different strains can be identified. Of the thirteen Upaniṣads usually counted as *śruti*, the earliest (c. 700–500 BCE) are those in prose, headed by the *Bṛhadāraṇyaka* and the *Chāndogya*. Generally, it may be said that these Upaniṣads introduce the formulations that later Hinduism will develop into the *saṃnyāsa* ideal of renunciation (not yet defined in the Upaniṣads as a fourth stage of life) and the knowledge-path outlook of nondualistic (*advaita*) Vedānta. Even within these early Upaniṣads, two approaches to realization can be distinguished. One refers to an all-excluding Absolute; the self that is identified with *brahman*, characterized as *neti neti* (“not this, not this”), is reached through a paring away of the psychomental continuum and its links with *karman*. Such an approach dominates the *Bṛhadāraṇyaka Upaniṣad*. *Avidyā* here results from regarding the name and form of things as real and forming attachment to them. The other approach involves an all-comprehensive Absolute, *brahman-ātman*, which penetrates the world so that all forms are modifications of the one; ignorance results from the failure to experience this immediacy. In the *Chāndogya Upaniṣad* this second approach is epitomized in the persistent formula “*Tat tvam asi*” (“That thou art”).

The later Vedic Upaniṣads (c. 600–400 BCE) register the first impact of theistic devotional formulations, and of early Sāṃkhya and Yoga. Most important of these historically are two “yogic” Upaniṣads, the *Śvetāśvatara* and the *Kaṭha*, the first focused on Rudra-Śiva and the second on Viṣṇu. Each incorporates into its terminology for the absolute deity the earlier term *puruṣa*. As Biarreau has shown in *L'hindouisme* (1981), they thus draw on an alternate term for the Absolute from that made current in the *brahman-ātman* equation. The *Puruṣa* of *R̥gveda* 10.90 (the *Puruṣasūkta*) is sacrificed to create the ordered and integrated sociocosmic world of Vedic man. But only one quarter of this *Puruṣa* is “all beings”; three quarters are “the immortal in heaven” (*RV* 10.90.3). This transcendent aspect of *Puruṣa*, and also a certain “personal” dimension, are traits that were retained in the characterization of *Puruṣa-Nārāyaṇa* in the *Śatapatha Brāhmaṇa* and reinforced in the yogic characterizations of Rudra-Śiva and Viṣṇu in the previously mentioned Upaniṣads. The Upaniṣadic texts do not restrict the usage of the term *Puruṣa* to mean “soul,” as classical Sāṃkhya later does; rather, it is used to refer to both the soul and the supreme divinity. The relation between the soul and the Absolute is thus doubly defined: on the one hand as *ātman-brahman*, on the other as *puruṣa-Puruṣa*. In the latter case, the *Kaṭha Upaniṣad* describes a spiritual itinerary of the soul’s ascent through yogic

states to the supreme Puruṣa, Viṣṇu. This synthesis of yoga and *bhakti* will be carried forward into the devotional formulations of the epics and the Purāṇas. But one must note that the two vocabularies are used concurrently and interrelatedly in the Upaniṣads, as they will be in the later *bhakti* formulations.

**THE CONSOLIDATION OF CLASSICAL HINDUISM.** A period of consolidation, sometimes identified as one of “Hindu synthesis,” “Brahmanic synthesis,” or “orthodox synthesis,” takes place between the time of the late Vedic Upaniṣads (c. 500 BCE) and the period of Gupta imperial ascendancy (c. 320–467 CE). Discussion of this consolidation, however, is initially complicated by a lack of historiographical categories adequate to the task of integrating the diverse textual, inscriptional, and archaeological data of this long formative period. The attempt to cover as much of this span as possible with the name “epic period,” because it coincides with the dates that are usually assigned to the formation and completion of the Hindu epics (particularly the *Mahābhārata*), is misleading, because so much of what transpires can hardly be labeled “epic.” On the other hand, attempts to define the period in terms of heterogeneous forces operating upon Hinduism from within (assimilation of local deities and cults, geographical spread) and without (heterodox and foreign challenges) either have failed to register or have misrepresented the implications of the apparent fact that the epics were “works in progress” during the whole period. The view one takes of the epics is, in fact, crucial for the interpretation of Hinduism during this period. Here, assuming that the epics already incorporated a *bhakti* cosmology and theology from an early point in this formative period, this article shall try to place them in relation to other works and formulations that contributed to the consolidation of classical Hinduism.

The overall history can be broken down into four periods characterized by an oscillation from disunity (rival regional kingdoms and tribal confederacies on the Ganges Plain) to unity (Mauryan ascendancy, c. 324–184 BCE, including the imperial patronage of Buddhism by Aśoka) to disunity (rival foreign kingdoms in Northwest India and regional kingdoms elsewhere) back to unity (Gupta ascendancy, c. 320–467 CE). The emerging self-definitions of Hinduism were forged in the context of continued interaction with heterodox religions (Buddhists, Jains, Ājīvikas) throughout this whole period, and with foreign peoples (Yavanas, or Greeks; Śakas, or Scythians; Pahlavas, or Parthians; and Kūṣāṇas, or Kushans) from the third phase on. In this climate the *ideal* of centralized Hindu rule attained no practical realization until the rise of the Guptas. That this ideal preceded its realization is evident in the rituals of royal paramountcy (Aśvamedha and Rājasūya) that were set out in the Brāhmaṇas and the Śrautasūtras, and actually performed by post-Mauryan regional Hindu kings.

When one looks to the component facets of the overall consolidation, these four periods must be kept in mind, but with the proviso that datings continue to be problematic: not

only datings of texts, but especially of religious movements and processes reflected in them, and in surviving inscriptions. Most scholars ordinarily assume that when a process is referred to in a text or other document, it has gone on for some time.

**Śruti and smṛti.** Fundamental to the self-definition of Hinduism during this period of its consolidation is the distinction it makes between two classes of its literature: *śruti* and *smṛti*. *Śruti* is “what is heard,” and refers to the whole corpus of Vedic literature (also called Veda) from the four Vedas to the Upaniṣads. *Smṛti*, “what is remembered” or “tradition,” includes all that falls outside this literature. Exactly when this distinction was made is not certain, but it is noteworthy that the six Vedāṅgas or “limbs of the Veda” (writings on phonetics, metrics, grammar, etymology, astronomy, and ritual) are *smṛti* texts that were composed at least in part during the latter half of the Vedic or *śruti* period. The ritual texts (Kalpasūtras) are subdivided into three categories: Śrautasūtras, Gṛhyasūtras, and Dharmasūtras. Whereas the first two (discussed above under Brahmanic ritual) pertain to concerns developed in the Vedic period, the Dharmasūtras focus on issues of law (*dharma*) that become characteristic of the period now under discussion. Dates given for the composition of these texts run from 600 to 300 BCE for the earliest (*Gautama Dharmasūtra*) to 400 CE for the more recent works. Both Gṛhyasūtras and Dharmasūtras were sometimes called Smārtasūtras (i.e., *sūtras* based on *smṛti*), so it seems that their authors regarded them as representative of the prolongation of Vedic orthodoxy (and orthopraxy) that the *smṛti* category was designed to achieve. As the term *smṛti* was extended in its use, however, it also came to cover numerous other texts composed in the post-Upaniṣadic period.

This *śruti/smṛti* distinction thus marks off the earlier literature as a unique corpus that, once the distinction was made, was retrospectively sanctified. By the time of the *Manāva Dharmasāstra*, or *Laws of Manu* (c. 200 BCE–100 CE; see *Manu* 1.23), and probably before this, *śruti* had come to be regarded as “eternal.” Its components were thus not works of history. The Vedic ṛṣis had “heard” truths that are eternal, and not only in content—the words of the Vedas are stated to have eternal connection with their meanings—but also in form. The works thus bear no stamp of the ṛṣis’ individuality. Such thinking crystallized in the further doctrine that the Vedas (i.e., *śruti*) are *apauruṣeya*, not of personal authorship (literally, “not by a *puruṣa*”). They thus have no human imperfection. Further, it was argued that they are even beyond the authorship of a divine “person” (*Puruṣa*). Though myths of the period assert that the Vedas spring from Brahmā at the beginning of each creation (as the three Vedas spring from Puruṣa in the *Puruṣasūkta*), the deity is not their author. Merely reborn with him, they are a self-revelation of the impersonal *brahman*. In contrast to *śruti*, *smṛti* texts were seen as historical or “traditional,” passed on by “memory” (*smṛti*), and as works of individual authors

(*pauruṣeya*), even though mythical authors—both human and divine—often had to be invented for them.

*Smṛti* texts of this period thus proclaim the authority of the Veda in many ways, and nonrejection of the Veda comes to be one of the most important touchstones for defining Hinduism over and against the heterodoxies, which rejected the Veda. In fact, it is quite likely that the doctrines of the eternality and impersonality of the Veda were in part designed to assert the superiority of the Veda over the “authored” and “historical” works of the heterodoxies, whose teachings would thus be on a par with *smṛti* rather than *śruti*. But it is also likely that the *apauruṣeya* doctrine is designed to relativize the “personal” god of *bhakti*. In any case, these doctrines served to place a considerable ideological distance between *śruti* and *smṛti*, and to allow *smṛti* authors great latitude in interpreting *śruti* and extending Hindu teachings into new areas. *Smṛti* thus supposedly functioned to clarify the obscurities of the Veda. But the claim that *smṛti* texts need only not contradict the Veda left their authors great freedom in pursuing new formulations.

**Varnāśramadharmā (“caste and life-stage law”).** The most representative corpus of *smṛti* literature, and the most closely tied to the continued unfolding orthodox interests of the Vedic priestly schools, is that concerned with *dharma* (“law” or “duty”). As a literary corpus, it consists of two kinds of texts: the Dharmasūtras (600/300 BCE–400 CE), already mentioned in connection with the *śruti/smṛti* distinction, and the Dharmasāstras. The most important and earliest of the latter are the *Mānava Dharmasāstra*, or *Laws of Manu* (c. 200 BCE–100 CE), and the *Yājñavalkya Smṛti* (c. 100–300 CE). But other Dharmasāstras were composed late into the first millennium, to be followed by important commentaries on all such texts. The main focus of these two classes of texts is fundamentally identical: the articulation of norms for all forms of social interaction, thus including but going far beyond the earlier Sūtras’ concern for ritual. Four differences, however, are noteworthy: (1) Whereas the Dharmasūtras are in prose, the Dharmasāstras are in the same poetic meter as the epics, *Manu* in particular having much material in common with the *Mahābhārata*. (2) Whereas the Sūtras are still linked with the Vedic schools, the Sāstras are not, showing that study and teaching of *dharma* had come to be an independent discipline of its own. (3) The Sāstra legislation is more extended and comprehensive. (4) The Sāstras are more integrated into a mythic and cosmological vision akin to that in *bhakti* texts, but usually ignoring *bhakti* as such, with references to duties appropriate to different *yugas* (ages), and the identification of north central India as the “middle region” (*madhyadeśa*) where the *dharma* is (and is to be kept) the purest.

The theory of *varnāśramadharmā*, the law of castes and life stages, was worked out in these texts as a model for the whole of Hindu society. There is little doubt that it was stimulated by the alternate lay/monastic social models of the heterodoxies, and no doubt that it was spurred on by the

incurſions of barbarian peoples—frequently named in these texts as *mlecchas* (those who “jabber”)—into the Northwest. The model involves the working out of the correlations between two ideals: first, that society conform to four hierarchical castes, and second, that a person should pass through four life stages (*āśramas*): student (*brahmacārin*), householder (*gṛhasthīn*), forest dweller (*vānaprasthīn*), and renunciant (*saṃnyāsīn*). The first ideal is rooted in the *Puruṣasūkta*. The second presupposes the *śruti* corpus, because the four life stages are correlated with the four classes of *śruti* texts. Thus the student learns one of the Vedas, the householder performs domestic and optimally also *śrauta* rituals of the Brāhamaṇas, the forest dweller follows the teachings of the Āraṇyakas, and the *saṃnyāsīn* follows a path of renunciation toward the Upaniṣadic goal of *mokṣa*. But although all the life stages are either mentioned (as are the first two) or implied in the *śruti* corpus, the theory that they should govern the ideal course of individual life is new to the Dharmasūtras. Together, the *varṇa* and *āśrama* ideals take on tremendous complexity, because a person’s duties vary according to caste and stage of life, not to mention other factors like sex, family, region, and the quality of the times. Also, whereas a person’s development through one life ideally is regulated by the *āśrama* ideal, the passage through many reincarnations would involve birth into different castes, the caste of one’s birth being the result of previous *karman*. A further implication is that the life stages can be properly pursued only by male members of the three twice-born *varṇas*, as they alone can undergo the Upanayana ritual that begins the student stage and allows the performance of the rites pertinent to succeeding stages.

Each of these formulations has persisted more on the ideal plane than the real. In the case of the four *āśramas*, most people never went beyond the householder stage, which the Sūtras and Sāstras actually exalt as the most important of the four, because it is the support of the other three and, in more general terms, the mainstay of the society. The forest-dweller stage may soon have become more legendary than real: In epic stories it was projected onto the Vedic *ṛṣis*. The main tension, however, that persists in orthodox Hinduism is that between the householder and the renunciant, the challenge being for anyone to integrate into one lifetime these two ideals, which the heterodoxies set out for separate lay and monastic communities.

As to the four *varṇas*, the ideal represents society as working to the reciprocal advantage of all the castes, each one having duties necessary to the proper functioning of the whole and the perpetuation of the hierarchical principle that defines the whole. Thus Brāhamaṇas are at the top, distinguished by three duties that they share with no other caste: teaching the Veda, assisting in sacrifice, and accepting gifts. They are said to have no king but Soma, god of the sacrifice. In actual fact the traditional *śrauta* sacrifice counted for less and less in the *brāhamaṇa* householder life, and increasing attention was given to the maintenance of *brāhamaṇa* purity

for the purpose of domestic and eventually temple rituals that, in effect, universalized sacrifice as the *brāhamaṇa's* *dharma*, but a sacrifice that required only the minimum of impure violence. This quest for purity was reinforced by *brāhamaṇas'* adoption into their householder life of aspects of the *saṃnyāsa* ideal of renunciation. This was focused especially on increasing espousal of the doctrine of *ahiṃsā* (non-violence, or, more literally, “not desiring to kill”) and was applied practically to vegetarianism, which becomes during this period the *brāhamaṇa* norm. *Brāhamaṇas* thus retain higher rank than *kṣatriyas*, even though the latter wield temporal power (*kṣātra*) and have the specific and potentially impure duties of bearing weapons and protecting and punishing with the royal staff (*daṇḍa*). The subordination of king to *brāhamaṇa* involves a subordination of power to hierarchy that is duplicated in contemporary rural and regional terms in the practice of ranking *brāhamaṇas* above locally dominant castes whose power lies in their landed wealth and numbers. *Vaiśyas* have the duties of stock breeding, agriculture, and commerce (including money lending). Certain duties then distinguished the three twice-born castes as a group from the *śūdras*. All three upper *varṇas* thus study the Veda, perform sacrifices, and make gifts, whereas *śūdras* are permitted only lesser sacrifices (*pākayajñas*) and simplified domestic rituals that do not require Vedic recitation.

Actual conditions, however, were (and still are) much more complex. The four-*varṇa* model provided the authors of the *dharma* texts with Vedic “categories” within which to assign a basically unlimited variety of heterogeneous social entities including indigenous tribes, barbarian invaders, artisan communities and guilds (*śreṇis*), and specialists in various services. Susceptible to further refinement in ranking and regional nomenclature, all such groups were called *jātis*, a term meaning “birth” and in functional terms the proper word to be translated “caste.” Thus, although they are frequently called subcastes, the *jātis* are the castes proper that the law books classified into the “categories” of *varṇa*.

To account for this proliferation of *jātis*, the authors asserted that they arose from cross-breeding of the *varṇas*. Two possibilities were thus presented: *anuloma* (“with the grain”) unions, in which the husband’s *varṇa* was the same as his wife’s or higher (in anthropological terms, hypergamous, in which women are “married up”), and *pratiloma* (“against the grain”) unions, in which the wife’s *varṇa* would be higher than the husband’s (hypogamous, in which women are “married down”). Endogamous marriage (marriage within one’s own *varṇa*) set the highest standard and was according to some authorities the only true marriage. But of the other two, whereas *anuloma* marriages were permitted, *pratiloma* unions brought disgrace. Thus the *jātis* supposedly born from *anuloma* unions were less disgraced than those born from *pratiloma* unions. Significantly, two of the most problematic *jātis* were said to have been born from the most debased *pratiloma* connections: the Yavanas (Greeks) from *śūdra* males and *kṣatriya* females (similar origins were as-

cribed to other “barbarians”) and the *caṇḍālas* (lowest of the low, mentioned already in the Upaniṣads, and early Buddhist literature, as a “fifth caste” of untouchables) from the polluting contact of *śūdra* males and *brāhamaṇa* females. It should be noted that a major implication of the prohibition of *pratiloma* marriage is the limitation for *brāhamaṇa* women to marriages with only *brāhamaṇa* men. This established at the highest rank an association of caste purity with caste endogamy (and the purity of a caste’s women) and thus initiated an endogamous standard that was adopted by all castes—not just *varṇas* but *jātis*—by the end of the first millennium.

This accounting of the emergence of *jātis* was integrated with further explanations of how society had departed from its ideal. One is that “mixing of caste”—the great abomination of the *dharma* texts and also of the *Bhagavad-gītā*—increases with the decline of *dharma* from *yuga* to *yuga*, and is especially pernicious in this Kali age. Another is the doctrine of *āpad dharma*, “duties for times of distress” such as permit inversion of caste roles when life is threatened. A third doctrine developed in the Dharmaśāstras identifies certain duties (*kalivarjyas*) as once allowed but now prohibited in the *kaliyuga* because people are no longer capable of performing them purely. Through all this, however, the ideal persists as one that embraces a whole society despite variations over time and space.

**The four puruṣārthas (goals of humankind).** The theory that the integrated life involves the pursuit of four goals (*arthas*) is first presented in the Dharmaśāstras and the epics, in the latter cases through repeated narrative illustrations. The development of distinctive technical interpretations of each *artha*, or facets thereof, can also be followed during the period in separate manuals: the *Arthaśāstra*, a manual on statecraft attributed to Candragupta Maurya’s minister Kauṭilya but probably dating from several centuries later, on *artha* (in the sense now of “material pursuits”); the Kāmasūtras, most notably that of Vātsyāyana (c. 400 CE), on *kāma* (“love, desire”); the already discussed Dharmasūtras and Dharmaśāstras on *dharma*; and the Sūtras of the “philosophical schools” (*darśanas*) insofar as they are concerned with the fourth goal, *mokṣa*. Early sources often refer to the first three goals as the *trivarga*, the “three categories,” but this need not imply that the fourth goal is added later. The Dharmaśāstra and epic texts that mention the *trivarga* are focused on the concerns of the householder—and, in the epics, particularly of the royal householder—these being the context for the pursuit of the *trivarga*. The fourth goal, *mokṣa*, is to be pursued throughout life—indeed, throughout all lives—but is especially the goal of those who have entered the fourth life stage of the *saṃnyāsin*. The *trivarga-mokṣa* opposition thus replicates the householder-renunciant opposition. But the overall purpose of the *puruṣārtha* formulation is integrative and complementary to the *varṇāśramadharmā* theory. From the angle of the householder, it is *dharma* that integrates the *trivarga* as a basis for *mokṣa*. But from the angle of the *saṃnyāsin*, it is *kāma* that lies at the root of the *trivar-*

ga, representing attachment in all forms, even to *dharma*. Paths to liberation will thus focus on detachment from desire, or its transformation into love of God.

**Philosophical “viewpoints” (darśanas) and paths to salvation.** As an expression of Hinduism’s increasing concern to systematize its teachings, the fourth goal of life (*mokṣa*) was made the subject of efforts to develop distinctly Hindu philosophical “viewpoints” (*darśanas*, from the root *drś*, “see”) on the nature of reality and to recommend paths to its apprehension and the release from bondage to *karman*. Six Hindu *darśanas* were defined, and during the period in question each produced fundamental texts—in most cases *sūtras*—that served as the bases for later commentaries.

In terms of mainstream developments within Hinduism, only two schools have ongoing continuity into the present: the Mīmāṃsā and the Vedānta. And of these, only the latter has unfolded in important ways in the postsynthesis period. Nonetheless, all six have made important contributions to later Hinduism. It must thus suffice to discuss them all briefly at this point in terms of their basic features and major impact, and reserve fuller discussion of the Vedānta alone for the period of its later unfolding.

Of the six schools, two—Mīmāṃsā and Vedānta—are rooted primarily in the Vedic *śruti* tradition and are thus sometimes called *smārta* schools in the sense that they develop *smārta* orthodox currents of thought that are based, like *smṛti*, directly on *śruti*. The other four—Nyāya, Vaiśeṣika, Sāṃkhya, and Yoga—claim loyalty to the Veda, yet are quite independent of it, their focus instead being on rational or causal explanation. They are thus sometimes called *haituka* schools (from *hetu*, “cause, reason”).

Of the *smārta* schools, the Mīmāṃsā is most concerned with ritual traditions rooted in the Vedas and the Brāhmaṇas, whereas the Vedānta is focused on the Upaniṣads. It is notable that both sustain Vedic orientations that reject (Mīmāṃsā) or subordinate (Vedānta) *bhakti* until the Vedānta is devotionalized in its post-Śaṅkara forms. Beginning with Jaimini’s *Mīmāṃsā Sūtra* (c. 300–100 BCE), Mīmāṃsā (“reflection, interpretation”) provides exegesis of Vedic injunctive speech, in particular as it concerns the relationship between intentions and rewards of sacrifice. Great refinement is brought to bear on issues relating to the authority and eternalness of the Veda and the relationship between its sounds, words, and meanings. Vedic injunctions are taken literally, the many Vedic gods are seen as real although superfluous to salvation (there is an anti-*bhakti* stance here), and it is maintained that the proper use of injunctions is alone enough to secure the attainment of heaven (not a higher release, or *mokṣa*, as propounded by all the other systems, including *bhakti*). Mīmāṃsā persists in two subschools, but only in small numbers among brahman ritualists.

As to the Vedānta (“end of the Veda,” a term also used for the Upaniṣads), the foundational work is Bādarāyaṇa’s *Vedānta Sūtra*, or *Brahma Sūtra* (c. 300–100 BCE), an exege-

sis of various Upaniṣadic passages in aphoristic style easily susceptible to divergent interpretations. These it received in the hands of later Vedantic thinkers.

The *haituka* schools are notable for their development, for the first time within Hinduism, of what may be called maps and paths: that is, maps of the constituent features of the cosmos, and paths to deliverance from bondage. Emerging within Hinduism at this period, and particularly in the schools least affiliated with the Vedic tradition, such concerns no doubt represent an effort to counter the proliferation of maps and paths set forth by the heterodoxies (not only Buddhism and Jainism, but the Ājīvikas). They allow for a somewhat more open recognition of the deity of *bhakti* (Sāṃkhya excepted) than do the *smārta* schools, though none of the *haituka* schools makes it truly central.

Nyāya and Vaiśeṣika, systems first propounded in Gautama’s *Nyāya Sūtra* (c. 200 BCE–150 CE) and Kaṇāda’s *Vaiśeṣika Sūtra* (c. 200 BCE–100 CE), were quickly recognized as a hyphenated pair: Nyāya-Vaiśeṣika. Nyāya (“rule, logic, analysis”), emphasizing logic and methods of argumentation as means to liberation, was viewed as complementary to Vaiśeṣika (“school of distinct characteristics”), which advanced a theory of atomism and posited seven categories to explain such things as atomic aggregation and dualistic distinction between soul and matter. At least by about the fifth century, when the two schools had conjoined, Nyāya logic and Vaiśeṣika cosmology served to provide influential arguments from design for the existence of God as the efficient cause of the creation and destruction of the universe and liberator of the soul from *karman*.

Far more influential, however, were the pair Sāṃkhya (“enumeration”) and Yoga. The foundational texts of these schools may be later than those of the others, but they are clearly distillations of long-continuing traditions, datable at least to the middle Upaniṣads, that had already undergone considerable systematization. Thus Patañjali’s *Yoga Sūtra* is from either about 200 BCE or 300–500 CE, depending on whether or not one identifies the author with the grammarian who lived at the earlier date. And Īśvarakṛṣṇa’s *Sāṃkhyakārikās* probably date from the fourth century CE. Even though Sāṃkhya’s “atheism” and its soteriology of the isolation (*kaivalya*) of the soul (*puruṣa*) from matter (*prakṛti*) have been modified or rejected in other forms of Hinduism (both doctrines may link Sāṃkhya with Jainism), Sāṃkhya’s cosmology and basic terminology have become definitive for Hinduism at many levels: not only in the Vedānta, but in *bhakti* and Tantric formulations as well. In fact, given the preclassical forms of theistic Sāṃkhya founded in the Upaniṣads and the *Mahābhārata* and their use in *bhakti* cosmologies, it may well be that the atheism of the classical Sāṃkhya results from a rejection of *bhakti* elements from a fundamentally theistic system. Sāṃkhya thus posits *puruṣa* without a transcendent, divine *Puruṣa*, and its *prakṛti* is also abstract and impersonal.

In any case, a number of Sāṃkhya concepts became basic to the Hindu vocabulary, only to be integrated and reinterpreted from different theological and soteriological perspectives by other schools. These include the concepts of the evolution and devolution of *prakṛti*, the sexual polarity of *puruṣa* as male and *prakṛti* as female, the enumeration of twenty-three substances that evolve from and devolve back into the *prakṛti* “matrix,” the concept of matter as a continuum from subtle psychomental “substances” to gross physical ones (in particular the five elements), and the notion of the three “strands” or “qualities” called *guṇas* (*sattva*, goodness, lucidity; *rajas*, dynamism; *tamas*, entropy), which are “braided” together through all matter from the subtle to the gross.

Meanwhile, whereas Sāṃkhya provides the map to be “known,” Yoga defines the path by which *puruṣa* can extricate itself from *prakṛti*. The “eight limbs” of Yoga (an answer to the Eightfold Path of Buddhism?) represent the most important Hindu formulation of a step-by-step (though also cumulative) path to liberation. The first two “limbs” involve forms of restraint (*yama*) and observance (*niyama*). The next three involve integration of the body and senses: posture (*āsana*), breath control (*prāṇāyama*), and withdrawal of the senses from the dominance of sense objects (*pratyāhāra*). The last three achieve the integration of the mind or the “cessation of the mental turmoil” that is rooted in the effects of *karman*: “holding” (*dhāraṇā*) to a meditative support, meditative fluency (*dhyāna*), and integrative concentration (*samādhi*) through which the freedom of *puruṣa* can be experienced.

The classical Yoga of Patañjali, known as *rājayoga* (“royal yoga”), diverges from the Sāṃkhya in acknowledging the existence of God (Īśvara). But Īśvara is a focus of meditation, not an agent in the process of liberation. The use of the term *rājayoga*, however, suggests that by Patañjali’s time the term *yoga* had already been used to describe other disciplines or paths, resulting in a situation where the terms *yoga* (“yoke”) and *mārga* (“path”) had become interchangeable. One will thus find *rājayoga* mentioned later along with the more generalized “yogas,” or “paths,” that become definitive for Hinduism through their exposition in the *Bhagavadgītā* (c. 200 BCE): the paths (or yogas) of *karman* (“action”), *jñāna* (“knowledge”), and *bhakti* (“devotion”).

**Classical bhakti Hinduism.** The consolidation of Hinduism takes place under the sign of *bhakti*. And though Mīmāṃsā ritualism and Vedantic and other “knowledge” trends continue to affiliate with an “orthodox” strain that resists this synthesis, or attempts to improve upon it, classical *bhakti* emerges as constitutive henceforth of mainstream Hinduism, including forms of devotional sectarianism.

Intimations of *bhakti* developments are registered as early as the late Vedic Upaniṣads, and in inscriptions and other records of syncretistic worship of Hindu deities (Viṣṇu and Śiva) alongside foreign and heterodox figures in the early centuries of the common era. However, the heterogeneity and scattered nature of the nontextual information available

on the emergence of *bhakti* during this period have allowed for conflicting interpretations of the salient features of the process. But rather than reweave a fragile developmental web from supposedly separate sectarian and popular strands, it is better to look at the texts themselves to see what they attempted and achieved. It should be noted, however, that to the best of existing knowledge it was achieved relatively early in the period of consolidation, for the *Bhagavadgītā*—the text that seals the achievement—seems to be from no later than the first or second century BCE (it is cited by Bārdarāyaṇa in the *Vedānta Sūtra*), and possibly earlier. Of course, continued unfolding occurred after that.

The achievement itself is a universal Hinduism that, following Biardeau’s discussion of *bhakti* in “Études de mythologie hindoue” (1976), one may designate as *smārta*. It inherits from the Brahmanic sacrificial tradition a conception wherein Viṣṇu and Śiva are recognized as complementary in their functions but ontologically identical. The fundamental texts of this devotional *smārta* vision are the two epics—the *Mahābhārata* (c. 500 BCE–400 CE) and the *Rāmāyaṇa* (c. 400–200 BCE)—and the *Harivaṃśa* (c. 300–400 CE?). These works integrate much Puranic mythic and cosmological material, which later is spun out at greater length in the classical Purāṇas (“ancient lore”), of which there are said to be eighteen major and eighteen minor texts. The epics and Purāṇas are thus necessarily discussed together. But it should be recognized that whereas the *smārta* vision of the epics and the *Harivaṃśa* is fundamentally integrative and universal in intent, the Purāṇas are frequently dominated by regional and particularistic interests, including in some cases the strong advocacy of the worship of one deity (Śiva, Viṣṇu, or the Goddess) over all others. It is thus tempting to think of the period of Purāṇa composition (c. 400–1200 CE?) as one that extends the integrative vision of the fundamental texts but develops it in varied directions. Still, as it is not clear that instances of Puranic theological favoritism are motivated by distinct sects, it is misleading to speak of “sectarian” Purāṇas.

Taken together, then, the *Harivaṃśa* and the *Mahābhārata* (which includes the *Bhagavadgītā*) present the full biography of Kṛṣṇa, and the *Rāmāyaṇa* that of Rāma. The *Harivaṃśa* (Genealogy of Hari—i. e., Kṛṣṇa), the more recent of the texts concerning Kṛṣṇa, presents the stories of his birth and youth, in which he and his brother Balarāma take on the “disguise” (*veśa*) of cowherds. Thus they engage in divine “sport” (*līlā*) with the cowherd women (*gopīs*), until finally they are drawn away to avenge themselves against their demonic uncle Kaṃṣa, who had caused their exile. The *Mahābhārata* (Story of the Great Bhārata Dynasty) focuses on Kṛṣṇa’s assistance to the five Pāṇḍava brothers in their conflicts with their cousins, the hundred Kauravas, over the “central kingdom” of the lunar dynasty (the Bhārata dynasty) at Hāstīnapura and Indraprastha near modern Delhi. Both texts incorporate telling allusions to the other “cycle,” and because both stories must have circulated orally

together before reaching their present literary forms, any notions of their separate origins are purely conjectural. The *Rāmāyaṇa* (Exploits of Rāma) tells the story of Rāma, scion of the solar dynasty and embodiment of *dharmā*, who must rescue his wife Śīta from the demon (*rākṣasā*) Rāvaṇa. Though each of these texts has its special flavor and distinctive background, they become in their completed forms effectively a complementary triad. Indeed, in the “conservative” South, popular performances of Hindu mythology in dramas and temple recitations are still dominated by three corresponding specializations: *Mahābhārata*, *Rāmāyaṇa*, and *Bhāgavata Purāṇa*, the latter (c. 800–900 CE?) enriching the devotional themes of the *Harivaṃśa* in its tenth and eleventh books and in effect replacing it as representing the early life of Kṛṣṇa.

The *smārta* universe in these texts is structured around Viṣṇu, and more particularly around his two heroic incarnations, Rāma and Kṛṣṇa. Thus other deities are frequently represented as subordinated to or subsumed by these figures. But there is also recognition of Viṣṇu’s complementarity with Śīva: some passages that stress mutual acknowledgment of their ontological unity, others that work out the interplay between them through stories about heroic characters who incarnate them, and scenes in which Viṣṇu’s incarnations do homage to Śīva. It should be clear that efforts to find “tendencies toward monotheism” in such texts involve the reduction of a very complex theology to distinctly Western terms. The same applies to those Purāṇas that are structured around Śīva or the Goddess rather than Viṣṇu but are still framed within the same cosmology and the same principles of theological complementarity and subordination.

This *smārta* vision is not, however, limited to one theological conundrum, for it extends to encompass Śīva and Viṣṇu’s interaction with other major figures: the god Brahmā, masculine form of the impersonal Absolute (*brahman*), now subordinated to the higher “personal” deities; the Goddess in her many forms; Indra and other *devas* (now “demigods”); their still perennial foes, the demons (*asuras*); and of course humans, animals, and so on. It also presents an overarching *bhakti* cosmology in which the yogic supreme divinity (Śīva or Viṣṇu) encompasses the religious values of *saṃnyāsa*, *tapas*, knowledge, and sacrifice, and introduces the view that taken by themselves, without *bhakti*, these values may be incomplete or even extreme “paths.” Further, it incorporates the *smārta* social theory of the Dharmasūtras and the Dharmaśāstras, and works out its implications within the cosmology. The details of this *smārta* vision are best discussed, however, in relation to the Hindu chronometric theory that is presumed and first articulated in these texts and then further developed in the Purāṇas.

Time is structured according to three main rhythms, hierarchically defined, the longer encompassing the lesser. Most down-to-earth is the series of four *yugas* named after four dice throws, which define a theory of the “decline of the *dharmā*”: first a *kṛtayuga* (“perfect age”), then a *tretāyuga* and

a *dvāparayuga*, and finally a degenerate *kaliyuga* (“age of discord”). A *kṛtayuga* lasts 4,000 years, a *tretāyuga* 3,000, a *dvāparayuga* 2,000, and a *kaliyuga* 1,000, each supplemented by a dawn and twilight of one-tenth its total. A full four-*yuga* cycle thus lasts 12,000 years and is called a *mahāyuga* (“great *yuga*”). These are not human years, however, but divine years, which are 360 times as long as human years. Thus a *mahāyuga* equals 360 times 12,000, or 4,320,000 human years, and a *kaliyuga* is one-tenth of that total. A thousand *mahāyugas* (4,320 million human years) is a *kalpa*, the second major time unit, which is also called a “day of Brahmā.” Brahmā’s days are followed by nights of equal duration. Brahmā lives a hundred years of 360 such days and nights, or 311,040 billion human years, all of which are sometimes said to pass in a wink of the eye of Viṣṇu. The period of a life of Brahmā, called a *mahākalpa*, is the third major temporal rhythm.

Working backward now, one may observe the *modus operandi* of Viṣṇu and Śīva (and of course others) as it is envisioned in the *smārta* Hinduism of the texts.

First, at the highest level, Viṣṇu and Śīva are great yogins, interacting with the rhythms of the universe in terms of their own oscillations between activity and yogic concentration (*samādhi*). At the *mahāpralaya* (“great dissolution”), the deity (usually Viṣṇu in these early texts, but just as often Śīva or the Goddess in later Puranic ones) oversees the dissolution of the universe into the primal *prakṛti* in accord with the cosmological theory of Sāṃkhya-Yoga. This ends the life of Brahmā, but it is also to be noted that it marks the restoration to its primordial unity of *prakṛti*, which—as feminine—is regarded mythologically as the ultimate form of the Goddess. From a Śaiva standpoint, the male (the deity as Puruṣa) and the female (the Goddess as Prakṛti) are reunited at the great dissolution of the universe, a theme that is depicted in representations of the deity as Ardhānarīśvara, “the Lord who is half female.” Their union is nonprocreative and represents the unitive experience of the bliss of *brahman*. Creation then occurs when the deity (whether Śīva or Viṣṇu) emerges from this *samādhi* and instigates the renewed active unfolding of *prakṛti*.

The coincidence of the death of Brahmā with not only the dissolution of the universe but the reintegration of the Goddess and her reunion with Śīva is highly significant. The Goddess is an eternal being, worthy of worship because—like Viṣṇu and Śīva—she outlasts the universe and can bestow *mokṣa*. Brahmā, ultimately mortal and bound to temporality, is worshiped not for *mokṣa* but rather—and mostly by demons—for earthly power and lordship. Stories that portray Śīva’s severing of Brahmā’s fifth head and refer to the “head of Brahmā” (*brahmaśiras*) as the weapon of doomsday, are perhaps mythic echoes of this ultimate cosmological situation wherein the coming together of Puruṣa and Prakṛti coincide with his death.

The primary creation has as its result the constitution of a “cosmic egg,” the *brahmāṇḍa* (“egg of Brahmā”). Fur-

ther creation, and periodic re-creations, will be carried out by Brahmā, the personalized form of the Absolute (*brahman*). Insofar as the *brahman* is personalized and oriented toward the world, it is thus subordinated to the yogin Puruṣa, the ultimate as defined through *bhakti*. Moreover, the activity of Brahmā—heir in his cosmogenic role of the earlier Prajāpati—is conceived in terms of sacrificial themes that are further encompassed by *bhakti*.

It is at this level that the three male gods cooperate as the *trimūrti*, the “three forms” of the Absolute: Brahmā the creator, Śiva the destroyer, and Viṣṇu the preserver. Within the *brahmāṇḍa*, Brahmā thus creates the Vedic triple world of earth, atmosphere, and heaven (or alternatively heaven, earth, and underworld). These three samsaric worlds are surrounded by four ulterior worlds, still within the *brahmāṇḍa*, for beings who achieve release from *saṃsāra* but still must await their ultimate liberation. These ulterior worlds are not henceforth created or destroyed in the occasional creations or destructions. As to the triple world, Brahmā creates it by becoming the sacrificial boar (*yajñavarāha*) who retrieves the Vedas and the earth from the cosmic ocean. The destruction of the triple world is achieved by Śiva. As the “fire of the end of time,” he reduces it to ashes, thus effecting a cosmic funerary sacrifice. And Viṣṇu, the god whom the Brāhmaṇas identify as “the sacrifice,” maintains the triple world while it is sustained by sacrifices, and also preserves what is left of it after the dissolution when he lies on the serpent Śeṣa (“remainder”) whose name indicates that he is formed of the remnant of the previous cosmos, or more exactly of the “remainder” of the cosmic sacrifice. This form of Viṣṇu, sleeping on Śeṣa, is called Nārāyaṇa, a name that the *Śatapatha Brāhmaṇa* already connects with the Vedic Puruṣa, the “male” source of all beings. When Viṣṇu-Nārāyaṇa awakens, Brahmā—who in some fashion awakens with him—recreates the universe. Through all these myths the earth is a form of the Goddess, indeed the most concretized form she takes as a result of the evolution of *prakṛti* (earth being the last of the evolutes emitted and the first to dissolve).

Thus the greater universe whose rhythms are integrated within the divine yoga of Viṣṇu and Śiva encompasses an egg of Brahmā, which encloses a triple world whose rhythms form a round sustained by the divine sacrificial acts of the *trimūrti*. This pattern is transposed onto the third temporal rhythm, that of the *yugas*. Thus the characteristic religious virtues of the *yugas* are as follows: *dhyāna* (“meditation”) or *tapas* (“asceticism”) in the *kṛtayuga*; *jñāna* (“knowledge”) in the *tretāyuga*; *yajña* (“sacrifice”) in the *dvāparayuga*; and *dāna* (“the gift”) in the *kaliyuga*. Thus the two *śruti*-based ideals of knowledge and sacrifice are enclosed within a framework that begins with yogic meditation as a divine *kṛtayuga* activity and ends in the *kaliyuga* with the devotional gift. *Bhakti* thus encompasses knowledge and sacrifice.

The distinctive feature of the rhythm of the *yuga* cycle is that it is calibrated by the rise and fall of *dharma* in the triple world. Beings who have achieved release from the triple

world oscillate between the four higher worlds, enduring periodic destructions of the triple world and awaiting the great dissolution of the universe that will dissolve the egg of Brahmā (coincident with his death) and result in a vast collective ultimate liberation of reabsorption into the supreme Puruṣa. Needless to say, this is to occur only after an almost incalculable wait. But beings who have attained these ulterior worlds are no more affected by *dharma* than the yogic deity beyond them. The maintenance of *dharma* within the triple world thus engages the deities in their third level of activity, that of “descent.” In classical terms this is the theory of the *avatāra*. Though the term is not used in the epics or the *Harivaṃśa* in its later, specialized sense, these texts are suffused by the concept and its *bhakti* implications, which include narrative situations wherein the divinity looks to all concerned, and sometimes even to himself, as a mere human. The programmatic statement of the *avatāra* concept (without mention of the term itself) is thus stated by Kṛṣṇa in the *Bhagavadgītā*: “For whenever the Law [*dharma*] languishes, Bhārata, and lawlessness flourishes I create myself. I take on existence from eon to eon [*yuga* to *yuga*], for the rescue of the good and the destruction of evil, in order to establish the Law” (4.7–8; van Buitenen, trans.).

The classical theory of the ten *avatāras*—most of whom are mentioned in the epics and the *Harivaṃśa*, but not in a single list—is worked out in relation to Viṣṇu. One thus has the following “descents” of Viṣṇu in order of appearance: Fish (Matsya), Tortoise (Kūrma), Boar (Varāha), Man-Lion (Narasimha), Dwarf (Vāmana), Rāma with the Ax (Parasurāma), Rāma of the *Rāmāyaṇa*, Kṛṣṇa, the Buddha, and the future *avatāra* Kalki, who will rid the earth of barbarian kings and reestablish the *dharma* at the end of the *kaliyuga*. There are various attempts to correlate appearances of the *avatāras* with distinct *yugas* and even *kalpas*, but the one feature that is consistently mentioned in these formative texts is that Kṛṣṇa appeared at the interval between the last *dvāparayuga* and *kaliyuga*, and thus at the beginning of the present age. It is likely that the theory was first formulated around Kṛṣṇa and Rāma along with the Dwarf (the only form to be associated with Viṣṇu in the *śruti* literature) and the apocalyptic Kalki. But in actuality, the *avatāra* theory is more complex. In the epics and in living Hinduism, Viṣṇu does not descend alone. In the literature, his incarnations take place alongside those of other deities, including most centrally Vāyu, Indra, Sūrya, the Goddess, and—at least in the *Mahābhārata*—Śiva. And in localized temple mythologies throughout India, one hears of *avatāras* of Śiva and the Goddess as well as of Viṣṇu. In devotional terms, the *avatāra* is thus a form taken on earth (or, better, in the three worlds) by any one of the three deities found at the ultimate level of cosmic absorption, where all that remains beside the liberated beings who join them are the eternal yogic deities Viṣṇu and Śiva and the primal Goddess.

The classical concept of the *avatāra*, structured around Viṣṇu, remains, however, the chief Hindu use of the term.

Its formulation in the epics and the *Harivaṃśa* is thus constitutive for succeeding eras of Hinduism, in which it will only be enriched but not essentially changed by later *bhakti* theologies. Looking at these texts comprehensively, then, with the *Gītā* as the main guide, one can outline its main contours. Against the background of the vast, all-embracing *bhakti* cosmology, the involvement of the yogic divinity on earth takes place completely freely, as “sport” or “play” (*līlā*). Still, the god takes birth to uphold the *dharmā* and to keep the earth from being unseasonably inundated in the waters of dissolution under the weight of adharmic kings. The *avatāra* thus intercedes to uphold the system of *varṇāśramadharmā* and to promote the proper pursuit of the four *puruṣārthas*. Because he appears in times of crisis, a central concern in the texts is with the resolution of the conflicts between ideals: renunciation versus householdership, *brāhmaṇa* versus *kṣatriya*, killing versus “not desiring to kill” (*ahiṃsā*), *dharmā* versus *mokṣa*, *dharmā* versus *kāma* and *artha*, and conflicts between different *dharmas* (duties) such as royal duty and filial duty. But though the texts focus primarily on the two upper castes, the full society is represented by singular depictions of figures who evoke the lowest castes and tribal groups. It is also filled in with figures of real and reputed mixed caste.

Confusion of caste is a particularly prominent issue in the *Mahābhārata*, where it is raised by Kṛṣṇa in the *Gītā* as the worst of ills. Most significantly, the *Mahābhārata* and the *Harivaṃśa* identify a particularly pernicious form of caste confusion among the barbarian (*mlecchā*) peoples of the Northwest (the Punjab), mentioning Yavanas, Śakas, and Pahlavas among others as enemies of the *dharmā* and causes for such “mixing.” The fact that events of the period from 300 BCE to 300 CE are projected into the distant past indicates that part of the *bhakti* synthesis was the articulation of a mythical theory of historical events. One may thus look at these *smṛti* texts as posing a model for the revival of Hinduism in accord with “eternal” Vedic models, with the descent of the *avatāra*—and indeed of much of the Vedic pantheon along with him—guaranteeing the periodic adjustment of the sociocosmic world to these eternal norms. Furthermore, the tracing of all Hindu dynastic lines back to the defunct if not mythical “lunar” and “solar” dynasties provided the model for the spatial extension of this ideal beyond the central lands of Aryavarta where the *dharmā*, according to both *Manu* and the *Mahābhārata*, was the purest.

But the focus of the *avatāra* is not solely on the renovation of the *dharmā*. He also brings to the triple world the divine grace that makes possible the presence, imagery, and teachings that confer *mokṣa*. The epics and the *Harivaṃśa* are full of *bhakti* tableaux: moments that crystallize the realization by one character or another of the liberating vision (*darśana*) of the divine. Most central, however, is the *Bhagavadgītā*, which is both a *darśana* and a teaching.

The *Bhagavadgītā* (Song of the Lord) takes place as a dialogue between Kṛṣṇa and Arjuna just before the outbreak of the *Mahābhārata* war. Although he is the third oldest of

the five Pāṇḍavas, Arjuna is their greatest warrior, and Kṛṣṇa’s task in the *Gītā* is to persuade him to overcome his reluctance to fight in the battle. Fundamental to the argument is Arjuna’s requirement to fulfill his *dharmā* as a *kṣatriya* rather than adopt the ideal—unsuitable for him in his present life stage—of the renouncer. Thus the *Gītā* champions the theory of *varṇāśramadharmā* as upholding the sociocosmic order.

Kṛṣṇa presents his teaching to Arjuna by revealing a sequence of “royal” and “divine” mysteries that culminate in his granting a vision of his “All-Form” (*Viśvarūpa-darśana*) as God, creator and destroyer of the universe. In this grand cosmic perspective, Arjuna is told that he will be but the “mere instrument” of the deaths of his foes, their destruction having now come to ripeness through Viṣṇu’s own agency in his form as cosmic time, or *kāla* (*Bhagavadgītā* 11.32–33). Arjuna thus recognizes this omniform deity as Viṣṇu in this climactic scene.

On the way to this revelation, however, Kṛṣṇa acknowledges the three paths (*yogas*) to salvation: action, knowledge, and devotion. These are presented as instructions by which Arjuna can gain the resolute clarity of insight (*buddhi*) and yogic discipline by which to recognize the distinctions between soul and body, action and inaction, and thus perform actions—including killing—that are unaffected by desire. Ritual action and knowledge are set forth as legitimate and mutually reinforcing paths, but incomplete unless integrated within and subordinated to *bhakti*. Kṛṣṇa thus presents himself as the ultimate *karmayogin*, acting to benefit the worlds out of no personal desire. He thus bids his devotees (*bhaktas*) to surrender all actions to him as in a sacrifice, but a sacrifice (*karman*) no longer defined in Vedic-Mīmāṃsā terms as a means to fulfill some personal desire. Kṛṣṇa also presents himself as the object of all religious knowledge, the highest *Puruṣa* (*uttamapuruṣa*) and supreme self (*paramātman*), beyond the perishable and the imperishable, yet pervading and supporting all worlds (15.16–17).

One other facet of the *bhakti* synthesis to which the *Gītā* alludes is the transition from traditional Vedic sacrifice (*yajña*) to new forms of offering to the deity (*pūjā*, literally, “honoring”). This corresponds to the theory that the “gift” is the particularly appropriate religious practice for the *kaliyuga*. Thus Kṛṣṇa says: “If one disciplined soul proffers to me with love [*bhakti*] a leaf, a flower, fruit, or water, I accept this offering of love from him. Whatever you do, or eat, or offer, or give, or mortify, make it an offering to me, and I shall undo the bonds of *karman*” (9.26–27; van Buitenen, trans.). The passage probably refers to domestic worship of the “deity of one’s choice” (*iṣṭadevata*). But it is also likely to allude to temple worship, for it is known from inscriptions and literary sources from the third to first century BCE that sanctuaries existed for Vāsudeva and Keśava (presumably as names for Kṛṣṇa and Viṣṇu), as well as for other deities. By the beginning of the Gupta period, around 320 CE, temple building was in full swing, with inscriptions showing con-

struction of temples for Viṣṇu, Śiva, and the Goddess. Temples were built at sites within cities, as well as at remote holy places, and sanctuaries at both such locations became objectives along pilgrimage routes that are first mentioned in the *Mahābhārata*. From very early if not from the beginning of such temple worship, the deities were represented by symbols and/or iconic images.

Certain aspects of temple construction and worship draw inspiration from the Vedic sacrifice. The plan of the edifice is designed on the ground as the *Vastu-puruṣamaṇḍala*, a geometric figure of the “Puruṣa of the Site” (*vāstu*), from whom the universe takes form. The donor, ideally a king, is the *yajamāna*. The *sanctum sanctorum*, called the *garbhagrha* (“womb house”), continues the symbolism of the Vedic *dīkṣā* hut: Here again the *yajamāna* becomes an embryo so as to achieve a new birth, now taking into his own being the higher self of the deity that he installs there in the form of an image. The temple as a whole is thus a Vedic altar comprising the triple world, but also an expanded image of the cosmos through which the deity manifests himself from within, radiating energy to the outer walls where his (or her) activities and interactions with the world are represented.

But the use of the temple for ordinary daily worship involves radically non-Vedic objectives. The Vedic sacrifice is a means for gods and humans—basically equals—to fulfill reciprocal desires. *Pūjā* rites are means for God and human-kind to interact on a level beyond desire: for humans to give without expectation of reward, or, more exactly, to get back nothing tangible other than what they have offered but with the paradoxical conviction that the deity “shares” (from the root meaning of *bhakti*) what is given and returns it as an embodiment of his or her grace (*prasāda*). God is thus fully superior, served as a royal guest with rites of hospitality. Basically four moments are involved: offerings, taking sight (*darśana*) of the deity, receiving this *prasāda*, and leave-taking by circumambulation of the *garbhagrha* and the image within. The offerings are the *pūjā* proper and comprise a great variety of devotional acts designed to please the deity, some of which may be worked into a daily round by the temple priests, who offer on behalf of others.

Finally, one last element of the consolidation of Hinduism achieved by early Gupta times is the emergence of the Goddess as a figure whose worship is recognized alongside that of Viṣṇu and Śiva and is performed with the same basic rites. Indeed, it is possible that aspects of *pūjā* ceremonialism are derived from non-Vedic *śūdra* and village rites in which female deities no doubt figured highly, as they do in such cults today. The two epics, the *Mahābhārata* and the *Rāmāyaṇa*, reflect themes associated with the Goddess in the portrayals of their chief heroines, Draupadī and Śita, but the *Harivaṃśa* is probably the first text to acknowledge the Goddess as such. There she takes birth as Kṛṣṇa and Balarāma’s “sister” (actually she and Kṛṣṇa exchange mothers). Some of her future demon enemies are mentioned, and there is also reference to her having numerous places of worship and a

cult that apparently included animal sacrifice. Thus the Goddess is integrated even within the texts of the early *smārta* Hinduism that are centered on Viṣṇu. But the text that registers her full emergence is the *Devīmāhātmyam* (Glorification of the Goddess). Probably from about 400–600 CE, it was included in the *Mārkaṇḍeya Purāna*. Here the Goddess is recognized under all her major aspects, as primal matter embodied in the universe yet beyond it, incarnate in many forms, cause of the joys and miseries of this world and of liberation from it, the power (*śakti*) enabling the roles of the *trimūrti*, yet higher than the gods and their last resort in the face of certain demons, most notably the buffalo demon Mashāśura, her most dedicated and persistent foe through cults and myths both ancient and current. This emergence of the Goddess is registered more fully in the development of Tantric Hinduism.

**TANTRIC HINDUISM.** *Tantra* is literally “what extends.” In its Hindu form it may be taken, according to its name, as a movement that sought to extend the Veda (whose pedigree it loosely claimed) and more particularly to extend the universalistic implications of *bhakti* Hinduism. However, although it was quick to integrate *bhakti* elements and to influence *bhakti* in nearly all its forms (late Puranic, popular, and sectarian), its earliest and most enduring forms “extend” Hinduism in ways that were directly opposed to the epic-Puranic *bhakti* synthesis. Nonetheless, it is still formulated within the same cosmology.

Early Tantrism developed most vigorously, from the fourth to sixth centuries CE, in areas where Brahmanic penetration had been weakest: in the Northwest, in Bengal and Assam in the East, and in the Andhra area of the South. These are areas where one must assume non-Aryan influences in general, and more particularly probably also tribal and folk practices involving shamanism, witchcraft, and sorcery, and, at least in the East and South, a cult of the Goddess. As Tantrism gained currency in succeeding centuries throughout India, the shamanistic and magical features were assimilated to yogic disciplines, while the elevation of the Goddess gave full projection on a pan-Indian scale to roles and images of the Goddess that had been incorporated, but allowed only minimal scope, in the early orthodox *bhakti* and even earlier Vedic sacrificial traditions. The earliest extant Tantric texts are Buddhist, from about the fourth to sixth centuries. Hindu Tantric texts include Vaiṣṇava *Samhitās*, Śaivāgamas from a slightly later period, and Śākta Tantras (exalting the Goddess as Śakti, or Power) from perhaps the eleventh century on. But from its start Tantrism represented a style and outlook that placed the Goddess at the center of its “extensions” and to a certain extent cut across sectarian and religious distinctions, whether Hindu, Buddhist, or even Jain.

Though Hindu Tantra thus asserts its Vedic legitimacy, its stance is intentionally anti-Brahmanic. It was especially critical of Brahmanic concepts of hierarchy, purity, and sexual status, all of which had been reinforced by the orthodox

*bhakti* synthesis and which were in particular bound up with a theology that viewed the supreme divinity as a male (a Puruṣa, whether Śiva or Viṣṇu) whose ultimate form was accessible only beyond the rhythms of the cosmos and its hierarchy of impure and pure, gross and subtle worlds. For Tantrics, dualities were artificial and their experience was the result of delusion. On the analogy of the union between Śiva and Śakti, which in Puranic devotional terms is conceivable only at the end of the *mahāpralaya*, or great dissolution of the universe, Tantric practice (*sādhana*) addresses itself to experiencing the unity of *puruṣa* and *prakṛti* (*puruṣa* being both “soul” and deity, *prakṛti* being both “matter” and Goddess), male and female, pure and impure, knowledge and action, and so on. Most important, all this takes place here and now, not only in this world, where *prakṛti* and *puruṣa* on the macrocosmic scale are one, but in the human body, where their microcosmic embodiments can be experienced. The body thus becomes the ultimate vehicle for liberation, the dissolution of opposites taking place within the psychophysical continuum of the experience of the living adept, who realizes beyond duality the oneness of *brahman*.

In terms of practice, Tantra’s rejection of Hindu orthodoxy is even more decisive. And practice is clearly exalted above theological or philosophical formulation. Two types of Tantra are mentioned: “left-hand” and “right-hand.” The Tantric rejection and indeed inversion of orthodoxy is most pronounced in the former, as the right-hand Tantra interprets the most anti-Brahmanic practices of the left metaphorically, and also includes under its heading a wide variety of ceremonial rituals assimilated into *bhakti* Hinduism that are simply non-Vedic. These include the use of non-Vedic *mantras* as well as *yantras* and *maṇḍalas*, aniconic and non-Vedic geometric devices used for visualization and integration of divine-cosmic forces. Adepts come from all castes, but low-caste and even tribal practitioners and teachers are especially revered. The goal of liberation within the body takes the specific form of seeking magical powers (*siddhīs*), which in orthodox forms of Hinduism are regarded as hindrances to spiritual achievement. Under the tutelage of a guru, who embodies the fulfillment sought and its transmission and who is thus all-important, the *siddhīs* are sought through yoga disciplines that show the impact of Tantra through their anatomical analysis of the “subtle body” (*liṅga śarīra*). First practiced is *haṭhayoga*, the “yoga of exertion or violence,” that is, rigorous physical discipline geared to coordinating the body’s “ducts” or “channels” (*nāḍīs*) and “energy centers” (*cakras*). This is followed by *kuṇḍalinīyoga*, which awakens the dormant *śakti*, conceived as a coiled-up “serpent power” in the lowest *cakra* between the genitals and the anus, so that it (or she) can pierce and transform all the *cakras* (usually six) and unite with Śiva in the “thousand-petaled *cakra*” in the region of the brain.

Beyond these practices, “left-handed” Tantrics pursue in literal fashion the ceremonial of the “five *m*’s” (*pañcamākaraṇapūjā*). That is, they incorporate into their cul-

tic practice five “sacraments” beginning with the syllable *ma*: fish (*matsya*), meat (*māṃsa*), parched grain (*mudrā*, regarded as an aphrodisiac), wine (*madya*), and finally sexual intercourse (*maithunā*). It is likely that most if not all of these practices involve the incorporation of elements of the cult and mythology of the Goddess, who already in the *Devīmāhātmyam* delights in meat and wine and is approached by lustful demons for sexual intercourse. Tantric texts stress that these practices are to be carried out within a circle of adepts and supervised by a male and female pair of “lords of the circle” who insist on strict ritual conventions that guard against an orgiastic interpretation. Classically, the male is to retain his semen at the point of orgasm, this being a sign not only of profound dispassion but an actualization of the nonprocreative union of Śiva and Śakti at the dissolution of the universe of dualities.

It is interesting to note that, although their historical validity is debated by scholars, there are strong Indian traditions suggesting that Śaṅkara’s philosophical nondualism had practical Tantric repercussions.

**ŚAṅKARA’S ADVAITA VEDĀNTA AND SMĀRTA ORTHODOXY.** The Advaita (nondualist) interpretation of the Vedānta can be traced back at least to Gauḍapāda (c. 600 CE), but it is Śaṅkara (c. 788–820) who established this viewpoint as the touchstone of a revived *smārta* orthodoxy. Born in a small Kerala village, Śaṅkara spent his alleged thirty-two years as a vigorous champion of the unity of Hinduism over and against intra-Hindu divisions and the inroads of Buddhism and Jainism. He toured India, setting up monasteries (*mathas*) near famous temples or holy places at each of the four compass directions, and appointed a disciple at each center to begin a line of renunciant “pontiffs.” And he wrote works of great subtlety and persuasiveness, including commentaries on the Upaniṣads, the *Brahma Sūtra*, and the *Bhagavadgītā* that inspired contemporaries, disciples, and authors of later generations to write additional important works from the perspective that he developed.

An essential feature of Śaṅkara’s argumentation is that lower views of reality must be rejected as they are contradicted or “sublated” by higher experiences of the real. Finally, all dichotomous formulations must be abandoned upon the nondual experience of the self (*ātman*) as *brahman*. The world of appearance is sustained by ignorance (*avidyā*), which “superimposes” limitations on reality. *Māyā* (“illusion” or “fabrication”), itself neither real nor unreal, is indescribable in terms of being or nonbeing. It appears real only so long as *brahman* is not experienced. But it is empirically real relative to things that can be shown false from the standpoint of empirical observation. *Māyā* is thus said to be more mysterious and unknowable than *brahman*, which is experienced as being, consciousness, and bliss (*sat-cit-ānanda*).

As philosophy, Advaita is thus a guide to *mokṣa*, which is experienced when the ignorance that results from superimposing *māyā* on *brahman* is overcome. Liberation arises with

knowledge (*jñāna*), but from a perspective that recognizes relative truth in the paths of both action and *bhakti*. Practically, Śaṅkara fostered a rapprochement between Advaita and *smārta* orthodoxy, which by his time had not only continued to defend the *varṇāśramadharmā* theory as defining the path of *karman*, but had developed the practice of *pañcāyatanapūjā* (“five-shrine worship”) as a solution to varied and conflicting devotional practices. Thus one could worship any one of five deities (Viṣṇu, Śiva, Durgā, Sūrya, Gaṇeṣa) as one’s *iṣṭadevatā* (“deity of choice”). As far as *varṇāśramadharmā* was concerned, Śaṅkara left householder issues largely aside and focused instead on founding ten orders of *saṃnyāsis* (the *daśanāmi*, “ten names”), each affiliated with one of the four principle *mathas* he founded. But traditional orthodox views of caste were maintained. According to Śaṅkara, as *śūdras* are not entitled to hear the Veda, they cannot pursue knowledge of *brahman* as *saṃnyāsis*; rather they may seek *mokṣa* through hearing the *Mahābhārata* and the Purāṇas. Four of the ten *saṃnyāsi* orders were thus restricted to *brāhamaṇas*, and it does not seem that any accepted *śūdras* until long after Śaṅkara’s death. *Bhakti* sectarian reformers were generally more liberal on this point. As to the god (or gods) of *bhakti*, Śaṅkara views the deity (Īśvara) as essentially identical with *brahman* and real relative to empirical experience. But by being identified “with qualities” (*saguṇa*), God can be no more than an approach to the experience of *brahman* “without qualities” (*nirguṇa*). Viewed from the experience of the self as *nirguṇa brahman*, which “sublates” all other experiences, the deity is but the highest form of *māyā*. Clearly, *bhakti* traditions could not rest with this solution. But it should be noted that in opposing Śaṅkara and abandoning the universalist vision of the epic-Puranic devotional synthesis, the sects turned their backs on the main impulses that had attempted to sustain the unity of Hinduism.

**SECTARIAN HINDUISM.** The elaboration of *bhakti* Hinduism continued to unfold in the later Purāṇas, linking up with the temple and pilgrimage cultus and with local and regional forms of worship. It thus established itself until the time of Śaṅkara as the main expression of Brahmanic orthodoxy and the main shaping force of popular Hinduism. But though it proclaimed a universal Hinduism, it gave little weight to the problem of the immediate accessibility of salvation. While caste hierarchy was to remain in effect on earth to assure, among other things, the pure temple worship of the gods by the *brāhamaṇas*, the ultimate release that the Purāṇas promised was almost infinitely postponed. It is possible that their postponement of a collective liberation was a kind of purification process for liberated souls and thus a prolongation of the concern for *brāhamaṇa* purity on earth. In any case, the remoteness of salvation and the defense of caste purity and hierarchy in the Puranic devotionalism of Brahmanic orthodoxy were probably incentives for the development of alternate forms of *bhakti*. These emerged in sectarian traditions, in movements led by saint-singers who inspired vernacular

forms of *bhakti* revivalism, and more generally in local and regional forms of Hinduism.

**Sectarian traditions.** Sectarianism and *bhakti* revivalism are movements of separate origins that converge for the first time in the eleventh and twelfth centuries in the Tamil-speaking area of South India. There the fusion was accomplished in the traditions of the Śrī Vaiṣṇavas and the Śaiva Siddhānta, sects whose names indicate their distinctive theological preferences for Viṣṇu and Śiva. Henceforth, sectarianism and *bhakti* revivalism continued to interact and produce hybrid forms as they spread over all of India.

Generally speaking, sects followed a reformist impulse, and in most of them one can identify the emergence of the *guru* as a new type of figure: not the transmitter of an “impersonal” Vedic teaching, but one who takes inspiration from the personal deity of the sect, with whom he may even be identified. Traditional hierarchy was generally respected, but with the proviso that within the sect divine grace was not limited by caste boundaries. Nonetheless, as groups formed around masters and their teachings, they took on many of the characteristics and functions of castes (endogamy, interior ranking), and certain sects formulated their stands with particularly positive attitudes (the northern school of Śrī Vaiṣṇavas) or negative attitudes (Līṅgāyats and Vīraśaivas) toward *brāhamaṇas*. Sects distinguish themselves over and against each other by many means, and often quite passionately: by bodily markings, forms of yoga discipline, worship, theology, and in particular by their choice of supreme deity, whether Śiva, Viṣṇu, Śakti, or, in the North, Kṛṣṇa or Rāma. Nonetheless, they generally participate in wider Hindu activities such as pilgrimage, festival, and temple worship (the Līṅgāyats are an exception) and draw upon fundamental Hindu belief structures. Thus most sects acknowledge other deities as subordinate to the supreme deity of the sect. In particular, most have worked out ways of encompassing the relation of the God and the Goddess at some fundamental theological level. Persistently the supreme deity is identified both as the ultimate *brahman* and also as in some way personal. The sects also frequently define various stages of divine descent or interaction with the world, various stages of the soul’s ascent, and various types of relation between the soul and God. Thus the sects elaborate upon the epic-Puranic cosmology while modifying and refining the theological and soteriological terms. It is only against this background that their formulations are intelligible.

From the historical vantage point, one may note that the consolidation of the separate strands of sectarianism and *bhakti* revivalism occurs after, and is no doubt in part a response to, the growing success of Śaṅkara’s Advaita Vedānta. Prior to Śaṅkara, sectarian groups had centered primarily around distinctive ritual traditions that were increasingly influenced by Tantrism: not only in forms of worship and theological formulation, but also, in some Śaiva sects, in actual practice. Thus the Vaiṣṇava Pañcarātras and Vaikhānasas and the Śaiva Pāsupatas (all mentioned first in

the late *Mahābhārata*) between the fifth and tenth centuries produced their Saṃhitās and Āgamas to regularize the construction of temples, iconography, and *pūjā* ceremonialism. Some Pāśupatas and Kāpālikas (a Tantric Śaiva sect) also incorporated forms of abrupt anticonventional behavior modeled on Śiva's character as the great yogin ascetic. With the exception of the Pañcarātras, who elaborated an influential doctrine of the emanations (*vyūhas*) of Viṣṇu that paralleled the cosmogonic theory of evolution in the Sāṃkhya system, the theological formulations of these movements were apparently among their secondary concerns.

**Saint-singer tradition.** Whereas the early sectarian movements were able to spread their impact from north to south using Sanskrit as their medium, the *bhakti* revivalist movement began in the South, drawing on Tamil. Like the sectarian movements, the saint-singers developed their traditions along Vaiṣṇava and Śaiva lines. The sixty-three Nāyaṇmār (or Nāyaṇārs) promoted the worship of Śiva, while the twelve Ālvārs similarly honored Viṣṇu. Part of the revivalist motivation was provided by the earlier spread of Buddhism and Jainism in the South, both of which lost considerable following as a result of the efforts of the Nāyaṇmār and Ālvārs, as well as those of their contemporary Śaṅkara.

Some of the most renowned among these two companies of saint-singers have left songs that they composed at the temples of Viṣṇu and Śiva, praising the form and presence of the deity therein, the place itself as his manifestation, and the communal attitude of worship generated there through pilgrimage and festival. Though they honor the deities in terms familiar from Puranic myths, the stories are set in the local terrain. The emotional side of *bhakti* thus draws from deep Tamil traditions, including a revival of classical Tamil poetic conventions involving the correlations between different types of landscape, different divinities, and different types of male-female love. In the hands of the saint-singers, erotic love in particular was drawn on as a metaphor for devotional feelings that stressed the feminine character of the soul in relation to the deity and idealized a softening of the mind or heart that could take the forms of “melting” into the divine, ecstatic rapture, divine madness, and possession.

Following the advent of Śaṅkara, most of the sectarian and revivalist movements found common cause in their devotionalist stance against Advaita nondualism and continued to develop for the most part interdependently. Thus, most formatively, the songs of the Ālvārs were collected in the ninth century for eventual use by the Śrī Vaiṣṇavas. And the poems of the Nāyaṇmār—supplemented by the songs of Māṇikkavācakar, who apparently lived just after the list of sixty-three Nāyaṇmār had been set (ninth century)—were collected to form parts of the canon of the Śaiva Siddhānta. However, the revivalist and sectarian strains could also at times follow somewhat independent courses. The saint-singer tradition continued to take Śaiva and Vaiṣṇava forms among the Liṅgāyats and the Haridāsas of Karnataka, and also to be associated there with sects (the Liṅgāyats them-

selves and the Brāhma Saṃpradāya or Dvaita Vedānta tradition of Madhva, respectively). But its spread through Maharashtra, the Hindi-speaking areas of North India, and through Bengal was most focused on Viṣṇu, or more accurately on his forms as Rāma and Kṛṣṇa, who in turn, in the Hindi and Bengali areas, became the deities of different sects. In the case of Kṛṣṇa, erotic devotional poetry opened new dimensions on the theme of Kṛṣṇa's love-play with his “new” consort, Rādhā (her name does not appear before the twelfth-century Sanskrit *Gītāgovinda* by the Bengali court poet Jayadeva). In Hindi and Bengali poems, not only are the emotions of motherly love for the baby Kṛṣṇa and erotic love for the youthful Kṛṣṇa explored, but they are tied in with a classical theory of aesthetic appreciation (*rasa*).

As to the sects, the impact of Śaṅkara's Advaita is evident at many points. Although Śaiva monasticism may predate Śaṅkara by about a century, his establishment of *mathas* around India was highly influential. Certain post-Śaṅkara sects thus adopted institutionalized forms of “monastic” renunciation, either like Śaṅkara setting their *mathas* alongside the temples (Śrī Vaiṣṇavas, Dvaita Vedāntins, Śaiva Siddhāntins) or in opposition to the whole temple cultus (Liṅgāyats). Vaiṣṇava sects also assume henceforth the mantle of new “Vedāntas” in order to seek Vedic authority for their advocacy of *bhakti* theologies over and against Śaṅkara's nondualism and in their efforts to subordinate the path of knowledge to that of *bhakti*.

Most distinctive and most important theologically among the Vaiṣṇava schools are those of Rāmānuja (c. 1017–1137) and Madhva (1238–1317), both of whom attempted to refute Śaṅkara's interpretations of the Upaniṣads, the *Brahma Sūtra*, and the *Bhagavadgītā* with their own commentaries on those texts. The more prolific Madhva also wrote commentaries on the *R̥gveda* and the epics. Rāmānuja, drawing on the ceremonialism and theological formulations of the Pañcaratra sect as well as on the revivalist poetry of the Ālvārs, developed for the Śrī Vaiṣṇavas the first *bhakti* sectarian repudiation of the Advaita. In his “qualified nondualistic Vedānta” (*viśiṣṭādvaita vedānta*), he argued that Viṣṇu-Nārāyaṇa is the ultimate *brahman*, his relation to the world and souls being “qualified” as substance to attribute. World and souls are thus real, as of course is God—all in opposition to Śaṅkara's view that there is no reality other than *brahman*. For Rāmānuja the three paths not only culminate in *bhakti* but are crowned by *prapatti*, “surrender” to God or “falling forward” at his feet. Criticizing both Śaṅkara and Rāmānuja, Madhva's “dualistic Vedānta” (*dvaita vedānta*) stressed the absolute sovereignty of God and the fivefold set of absolute distinctions between God and souls, God and the world, souls and souls, souls and the world, and matter in its different aspects—all of which are real and not illusory.

On the Śaiva side, the most distinctive sect is the Kashmir Śaiva, or Trika, school, established in the ninth century, with possibly earlier roots. It is nondualist, but from the standpoint that all is essentially Śiva. As pure being and con-

sciousness, Śiva is aware of himself through reflection in the universe, which he pervades as the *ātman* and in which he is manifest through his *śakti* (power, or female energy, personified as the Goddess). The universe is thus an expression of Śiva's aesthetic experience of his creative awareness as self and his delight in unity with his Śakti. "Recognition" of Śiva as the *ātman*, and experience of the self through *spanda* ("vibration")—an attunement to the blissful throbbing waves of divine consciousness in the heart—are among the means to liberation. One of the foremost systematizers of this school was Abhinavagupta (c. 1000 CE), who developed the view that states of aesthetic appreciation (*rasas*, "tastes") are modes of experiencing the divine Self. Though favoring *śantarasa* (the *rasa* of peacefulness), Abhinavagupta's theories influenced the North Indian medieval devotional poetry that explored *bhakti* itself as a state of *rasa*, with such powerfully evocative modes as love of Kṛṣṇa in the relationships of servant-master, parent-child, and lover-beloved. This type of devotional intensity reached its peak in the person of the Bengali saint Caitanya (1486–1533), founder of the Gauḍiyya Vaiṣṇava sect, whose ecstatic dancing and singing enabled him to experience the love of Rādhā and Kṛṣṇa. Popular tradition regards him as an *avatāra* of Kṛṣṇa, a form assumed by Kṛṣṇa to experience in one body his union with his Śakti.

**POPULAR HINDUISM.** The main current of living Hinduism is popular Hinduism. It has been affected by every change the tradition has gone through and may fairly be assumed to have ancient roots, in some aspects traceable to Indus Valley religion, in others to *sūdra*, village, and tribal forms of religion that were never more than alluded to—and then negatively—in the ancient and classical sources. *Bhakti* and Tantra are two movements within Hinduism that draw inspiration from this broad current, and popular Hinduism today remains dominated by *bhakti* and Tantric expressions.

It is, however, perilous to look at popular Hinduism from the perspective of what it might have once been: that is, to attempt to isolate or reconstruct its Dravidian, pre-Aryan, or non-Brahmanic components. Although hypotheses about pre-Aryan and non-Aryan forms of popular Hinduism are certainly worth pursuing, they must be informed and restrained by a sound understanding of the comprehensive structures through which both popular and Brahmanic forms of Hinduism are integrated at the popular level. Aspects of popular religion that might look non-Aryan turn out on closer examination to involve Vedic prolongations. Nor are recent constructs such as sanskritization, brahmanization, or kṣatriyazation—all useful up to a point, but stressing only the adoption by low-caste groups of high-caste models—adequate to account for the multivector process that must have occurred for a long time as it continues to occur today.

Amid the bewildering variety of popular Hindu rites, customs, and beliefs, two broad structures can be identified that clarify this overall integration. One involves the working out of the implications of *bhakti* in relation to temple worship; the other involves the working out of the implications

of the caste system in relation to local forms of worship more generally. As they function, the two structures are intimately related.

Generally speaking, whether one defines a locality in large terms (a region, a former kingdom) or small terms (a city, town, or village), one will find two types of divinities: pure and impure. The pure divinities are forms taken locally—*avatāras*—of the great gods Viṣṇu and Śiva. Sometimes the Goddess is also purified to this rank, often with a myth explaining her change from violent to peaceful habits (as with the alleged conversion of the goddess Kāmākṣī at Kanchipuram, Tamil Nadu, by Śaṅkara). And in certain regions Śiva's sons Murukan/Skanda (in Tamil Nadu) and Gaṇeśa (in Maharashtra) also assume this role. In their temples, these gods are offered pure vegetarian food by brahmins. Today, all castes can worship in such temples, thanks to temple entry legislation by the postindependence government; formerly, low castes were excluded. These castes still maintain their own temples where impure gods are served with nonvegetarian offerings, that is, sacrifices of male animals, usually cocks and goats but occasionally water buffalo. Legislation prohibiting buffalo sacrifices has so far had mixed results.

Whereas worship of pure gods—especially at remote pilgrimage sites—is focused ultimately on renunciation and liberation, that of impure gods is dominated by down-to-earth concerns. One thus finds among the general category of impure gods lineage deities (*kuladevatās*), caste deities, and village deities (*grāmadevatās*). The first are usually but not always male, and some are deities for brahmin as well as low-caste lineages. Caste deities and village deities are usually female, and the category may overlap where the deity of a locally dominant caste becomes also the village deity. Where the village deity (usually a goddess) is the deity of a vegetarian caste or has had her cult purified to bring it into accord with high-caste standards, she frequently has one or more male assistants—impure demons converted to her cause and frequently lineage gods themselves—who handle the animal sacrifice (real or symbolic) for her, often out of her line of sight.

Nonetheless, though opposing principles are each given their play, it is their overlap and interrelation that is most striking. Low castes worship the pure gods in their temples. And high castes acknowledge the power of the impure deities, not only as *kuladevatās*, but through selective (pure) means of participation in festivals sponsored by lower castes. Through the universalization of *bhakti*, the impure gods are sometimes also the prototypes for the demons whose deaths at the hands of the pure deities transform them into their devotees. These local myths have their roots in Puranic mythologies, and the sacrificial practices they evoke involve at least in part prolongations and reinterpretations of the Vedic animal sacrifice.

The second issue—working out of the implications of the caste system in relation to local forms of worship—has

thus already been touched upon, but with the focus of issues of purity and impurity as defined by brahman and low-caste involvements. There remains the issue of the role of the *ksatriya*, or more particularly the king, as the ruler of the land. The caste system has traditionally functioned in locally defined territories, “little kingdoms,” where the local ruler had certain roles to perform. No matter what his actual caste, whether high or low, pure or impure, he had to function as a *ksatriya*. In his ceremonial status, he performed the role of *jajmān*, engaging him at the core of a system of prestations and counterprestations with other castes as a sort of patron for those who perform services for him. Most significantly, this title derives from the Vedic *yajamāna*, “sacrificer,” and prolongs not only the *yajamāna*’s function as patron of other castes (particularly brahmins, who offer sacrifices for him), but that of “sacrificer” itself. The model of the king as *jajmān* on the regional territorial level has its counterpart in the village in the person(s) of the leader(s) of the locally dominant caste, who assumes the role of *yajamāna* at village festivals. When, as was until recently widely the case, the village festival involves the sacrifice of a buffalo, it thus occurs within a continuum that includes the royal buffalo sacrifice traditionally performed in connection with the pan-Hindu festival of Dussera, and the mythology of the goddess Durgā and the buffalo demon Mashāsura that is traceable to the *Devimāhātmyam* in the *Mārkaṇḍeya Purāna*. There are many local and regional transformations of this pattern, but a basic theme is that the Goddess, who personifies victory, acts for the *yajamāna* and the kingdom or village in her conquest over demonic forces (impure barbarians, drought, diseases) that threaten the welfare of the local terrain over which she, as goddess, presides.

**HINDU RESPONSES TO ISLAM AND WESTERNIZATION.** Self-conscious Hindu responses to influences from the West were first worked out in the classical period in the epics, the Dharmaśāstras, and the Purāṇas. It seems that military dominance by “barbarian” peoples in that period provided one of the incentives for the articulation of Hindu orthodoxy. Islamic rule and Western rule in India have provided similar incentives, but this often goes unmentioned as historians place their emphasis on what is supposedly new. A full accounting of the impact of almost ten centuries of Islam and five centuries of Western presence in India would have to deal not only with their distinctive new influences but also with the ways in which traditional Hindu models have been revived and applied in new and adaptive ways, often on the folk and popular level. That, however, can only be alluded to here.

Islamic influence on Hinduism has many dimensions, all difficult to assess. From the time of the raids of Mahmud of Ghazni into Northwest India (977–1030) into the period of Mughal dominance, Hindus had to deal periodically with outbreaks of violence and iconoclastic zeal. Regional defense of Hindu traditions against Islam—first by the Rajputs in Rajasthan, then by the Vijayanagar rulers and their successors in South India (1333–eighteenth century), and finally

by the Marathas in Maharashtra and the South (late sixteenth century–1761)—clearly fostered the Hindu ideal of the territorial kingdom, big or “little,” as a model for the protection of ongoing Hindu values. Under the Muslim rulers, in fact, many Hindu chiefs and petty rajas were left in control of their local realms so long as they paid tribute and supplied military support. In these circumstances, conservative and puritanical tendencies seem to have gained momentum in orthodox Hinduism, particularly in regard to caste and the purity of women. Nonetheless, one finds numerous cases where Muslim themes and figures have been integrated into popular Hindu myth and ritual, but usually in ways that indicate Muslim subordination to a local or regional Hindu deity.

While orthodox, popular, and domestic forms of Hinduism thus drew in on themselves, however, Hindu sectarian traditions multiplied, particularly in the period of the breakup of the Delhi sultanate (1206–1526). Notable at this time were Caitanya in Bengal, and two exemplars of the North Indian *sant* (holy man) tradition: Kabir (c. 1440–1518, from Banaras) and Nānak (1469–1539, from the Punjab). These two latter figures both preached a path of loving devotion to one God that combined aspects of Islamic Sufism and Hindu *bhakti*. They thus formulated probably for the first time in terms partly Hindu an exclusivist monotheism like that found in the Abrahamic traditions of Islam, Christianity, and Judaism. Over and against the direct experience of this one God, all else was mediate and external, whether the practice were Muslim or Hindu. Thus not only caste but idol worship was rejected by these teachers. But though their syncretistic poetry remained highly popular, it did little to change the Hindu practices it criticized. Nānak’s work in particular provided the foundation for the Sikh tradition, an increasingly non-Hindu and non-Muslim movement on its own. Nor did the syncretistic interests of the great Mughal emperor Akbar (ruled 1555–1605) do much to encourage theological synthesis, despite the popularity of his, for the most part, religiously tolerant rule. Akbar’s successors on the Mughal throne abandoned his policies and pursued expansionist goals that aroused resistance from the heirs of the Vijayanagar and the Rajput kingdoms, and especially from the Sikhs and the new power of the Marathas. The seeds of a nationalist vision of Hinduism may be traced through these movements and back to the imperial ideal of the epics.

Under the British, certain reform tendencies initiated under Muslim rule were carried forward, freshly influenced by Christian missionary activity and Western education. Most notable were the reform movements of the nineteenth century. The Brāhmo Samāj was founded in 1828 by Raja Ram Mohan Roy (1772–1833, from Calcutta). In an early treatise Roy wrote an attack on idolatry that showed Muslim influence, but by the time he founded the Samāj he had been more affected by Christianity, and particularly by the Unitarians. Roy thus introduced a kind of deistic monotheism and a form of congregational worship to go along with a rejection of idolatry, caste, sacrifice, transmigration, and *karman*. The

Ārya Samāj, founded in 1875 by Swami Dayananda Sarasvati (1824–1883, from Kathiawar), denied authenticity to Puranic Hinduism and attempted a return to the Vedas. Showing that the Vedas lent no support to image worship and various social practices, he went further to assert that they were monotheistic. As regards caste, he championed the *varṇa* theory as an ancient social institution but denied that it was religious. Both movements split into rival camps.

The Ramakrishna Mission, established on the death of its founder Ramakrishna (1834–1886) and carried forward by his disciples, most notably Vivekananda (1863–1902), is more representative of traditional Hindu values. Strong *bhakti* and Tantric strains converged in the mystical experiences of Ramakrishna and were held in conjunction with an initiation into Advaita Vedānta and experiences of the oneness of all religions through visions not only of Hindu deities but of Jesus and Allāh. For many followers, this humble priest of Kālī has thus come to be regarded as an *avatāra*, in the tradition of Caitanya. Vivekananda, Western-educated and keenly intellectual, attended the World's Parliament of Religions in Chicago in 1893, lectured widely, and established the Vedānta Society of New York. When he returned to India as a recognized champion of Hindu self-pride, he helped to organize the disciples of Ramakrishna into the pan-Indian Ramakrishna Mission. The first such teacher to gain prominence in India by popularity gained abroad, he thus inadvertently set up a pattern that has been followed by many prominent gurus and swamis in the twentieth century. Notable among them are Swami A. C. Bhaktivedānta (1896–1977), founder of the Hare Krishna movement (ISKCON) as an outgrowth of the Bengal Caitanya tradition, and Swami Muktananda (1908–1982), exponent of *siddhayoga* teachings that draw on Kashmir Saivism.

An earlier figure, one who attracted a large Western following without ever leaving India, was Śrī Aurobindo (1872–1950), whose career spanned nationalist political activism in Bengal (up to 1908), followed by the establishment of an ashram (hermitage) in Pondicherry for the teaching of a type of integral yoga that stressed the “evolutionary” progress of the soul toward the divine. One must also mention Mohandas K. Gandhī (1869–1948), whose reputation upon returning to India in 1915 after twenty-one years in England and Africa was not that of a guru but a champion of Indian causes against social and economic discrimination. As he took on more and more ascetic and saintly aspirations, however, Gandhī sought to combine an ideal of dispassioned and nonviolent service to humanity, modeled on the *Bhagavadgītā*'s doctrine of *karmayoga*, with work for Indian *svarāj* (“self-rule”).

Although sometimes referred to as a Hindu renaissance, the effect of the various reformers since the nineteenth century has been to a certain extent more ideological than religious. Where they founded religious movements, these attracted only small followings. But their religious views—that

Hinduism is essentially monotheistic, that caste is not essentially Hindu, that Hindu tolerance does not deny the truths of other religions, that Hinduism is in accord with modern science, and so on—have had major influence on a Western-educated, largely urban elite that, at least for now, controls the media and the educational processes of contemporary India. It remains to be seen how this new vision of unity will square with the traditionally diverse Hinduism of the vast population of the countryside.

#### BIBLIOGRAPHY

Three introductions to the whole Hindu tradition deserve recommendation: Thomas J. Hopkins's *The Hindu Religious Tradition* (Encino, Calif., 1971) is strongest in the early period (a second edition is expected); Madeleine Biardeau's *L'hindouisme: Anthropologie d'une civilisation* (Paris, 1981) is strongest on the classical period and popular traditions; and J. L. Brockington's *The Sacred Thread: Hinduism in Its Continuity and Diversity* (New York, 1981) is strongest on medieval and modern Hinduism. On Indus Valley religion, a balanced and visually informative presentation is found in Robert E. Mortimer Wheeler's *Civilizations of the Indus Valley and Beyond* (New York, 1966). On pre-Upaniṣadic Vedic religion as a whole, see Jan Gonda's *Vedic Literature: Samhitās and Brāhamaṇas* (Wiesbaden, 1975), vol. 1, no. 1 of his *History of Indian Literature*. On Indo-European continuations in early Indian religion, see Georges Dumézil's *The Destiny of the Warrior*, translated by Alf Hiltebeitel (Chicago, 1970). On Ṛgvedic religion, see Wendy Doniger O'Flaherty's *The Rig Veda: An Anthology* (Harmondsworth, England, 1982) for a selection of important hymns; Jan Gonda's *The Vision of the Vedic Poets* (The Hague, 1963), for an account of the Vedic poetic process; Arthur A. Macdonnell's *Vedic Mythology* (1897; reprint, New York, 1974), for the classic account of Vedic myth; and R. Gordon Wasson's *Soma: Divine Mushroom of Immortality* (New York, 1968), for his interpretation of the *soma* plant. On the Brāhamaṇas

and Vedic ritual, see Sylvain Lévi's *La doctrine du sacrifice dans les Brāhmaṇas*, 2d ed. (Paris, 1966), for a classic study focused on the mythology; Madeleine Biardeau and Charles Malamoud's *Le sacrifice dans l'Inde ancienne* (Paris, 1976), especially the essay by Malamoud on the place of the ritual honoraria (*dakṣiṇās*) in the sacrificial round; and Arthur Berriedale Keith's *The Religion and Philosophy of the Veda and Upanishads*, 2d ed. (Westport, Conn., 1971), for a solid overview. On the Upaniṣads, Paul Deussen's *The Philosophy of the Upaniṣads*, 2d ed., translated by A. S. Gelden (New York, 1966), is still the standard comprehensive study. On the classical Hindu period as a whole, Madeleine Biardeau's study in *Le sacrifice* (cited above) and *Cosmogonies purāṇiques*, (Paris, 1981), vol. 1 of her *Études de mythologie hindoue*, are indispensable for their integrative treatment. On *dharma* literature, see Pandurang Vaman Kane's monumental *A History of Dharmasāstra*, 5 vols. (Poona, 1930–1962), which covers far more besides, and Robert Lingat's *The Classical Law of India*, translated by J. D. M. Derrett (Berkeley, Calif., 1973), an invaluable overview. On caste, see Louis Dumont's *Homo Hierarchicus*, translated by Marc Sainsbury, rev. ed. (Chicago, 1970), discussing his own and others' theories. On the six philosophical systems, for the most authoritative overview see Surendranath Dasgupta's *A History of Indian Philosophy*, 5 vols. (Cambridge, 1922–1955). On classical *bhakti* and its mythology in the epics and Purāṇas, in addition to the works above by Biardeau, see also her important "Études de mythologie hindoue," parts 1 and 2, *Bulletin de l'École Française d'Extrême Orient* 63 (1976): 111–263, and 65 (1978): 87–238. My own *The Ritual of Battle: Krishna in the "Mahābhārata"* (Ithaca, N. Y., 1976) and Jacques Scheuer's *Śiva dans le Mahābhārata* (Paris, 1982) explore complementary roles of the major deities in the *Mahābhārata*; see also the classic study of E. Washburn Hopkins, *Epic Mythology* (1915; reprint, New York, 1969). On Puranic materials, see *Classical Hindu Mythology: A Reader in the Sanskrit Purāṇas*, translated and edited by Cornelia Dimmitt and J. A. B. van Buitenen (Philadelphia, 1978), a representative selection with interpretative introductions; and Wendy Doniger O'Flaherty's *Śiva: The Erotic Ascetic* (Oxford, 1973), on major themes in the mythology of Śiva, and *Women, Androgynes, and Other Mythical Beasts* (Chicago, 1980), on relations between the sexes and between humans, gods, and animals in the myths. On temple architecture and symbolism, see Stella Kramrisch's *The Hindu Temple*, 2 vols. (Calcutta, 1946). For a sound and highly readable translation of the *Bhagavadgītā*, and an important introduction, see *The Bhagavadgītā in the Mahābhārata* translated and edited by J. A. B. van Buitenen (Chicago, 1981). On Tantra, see Agehananda Bharati's *The Tantric Tradition* (London, 1965) and Sanjukta Gupta, Dirk Jan Hoens, and Teun Goudriaan's *Hindu Tantrism* (Leiden, 1979). For an incisive presentation of Śaṅkara's nondualism, see Eliot Deutsch's *Advaita Vedānta: A Philosophical Reconstruction* (Honolulu, 1969). On Yoga and asceticism, see Mircea Eliade's *Yoga: Immortality and Freedom*, 2d ed. (Princeton, N.J., 1969); see also G. S. Ghurye's *Indian Sadhus*, 2d ed. (Bombay, 1964) with discussion of monastic orders. On sectarian Hinduism, see R. G. Bhandarkar's *Vaiṣṇavism, Śaivism, and Minor Religious Systems* (1913; reprint, Varanasi, 1965), still a classic overview. On *bhakti* revivalism, see V. Raghavan's *The Great Integrators: The Saint-Singers of India* (Delhi, 1966). On popu-

lar Hinduism, Henry Whitehead's *The Village Gods of South India*, 2d ed., rev. & enl. (Delhi, 1976), is the essential documentary introduction; Marie-Louise Reiniche's *Les dieux et les hommes: Étude des cultes d'un village du Tirunelveli Inde du Sud* (New York, 1979) and Lawrence A. Babb's *The Divine Hierarchy: Popular Hinduism in Central India* (New York, 1975) are important regional studies with significant anthropological insights; David D. Shulman's *Tamil Temple Myths: Sacrifice and Divine Marriage in the South Indian Śaiva Tradition* (Princeton, N.J., 1980) discusses local temple versions and inversions of the classical *bhakti* myths. On reform movements and modern Hinduism, see John N. Farquhar's *Modern Religious Movements in India* (New York, 1915), on nineteenth-century figures, and Agehananda Bharati's *Hindu Views and Ways and the Hindu-Muslim Interface* (Delhi, 1981), for an interesting inside-outside anthropological view.

Revised Bibliography

**HINDUISM IN SOUTHEAST ASIA.** Śaiva, Vaiṣṇava, and other sectarian traditions involving the worship of the many gods and goddesses that fall under the rubric of what is today called *Hinduism* have existed in parts of Southeast Asia for over two thousand years. Most of these early Hindu traditions have died out, but the dominance of their presence is attested by a legacy of architecture and performing arts, and to a lesser extent, proper names, manuscripts, and rituals. Small pockets of Hindus from early migrations, as well as descendants of more recent migrations, still live in Southeast Asia. Many of the early kingdoms in Southeast Asia, starting in the first half of the first millennium CE, adopted and adapted the specific Hindu texts, theologies, rituals, architecture, and forms of social organization that were suitable to their times and conditions. These traditions especially their relationship to the sacrality of the land and social structures indicates that Hinduism was characterized by transnational features, which adds nuance to our understanding of the cultural features that were carried by Hindu migrants.

The many areas where Hindu and Mahāyāna Buddhist culture coexisted, peacefully for the most part, included Champa (central and southern areas of Vietnam), Kambuja (Cambodia), Sri Vijaya, Yavadvipa (Indonesia, Java, and possibly Malaysia and other countries), Suvarṇa Dvīpa ("the gol-

den island," a name identified with many places), Sri Kshetra (Burma/Myanmar), as well as Thailand and Laos. Although Hindu traditions thrived in all these countries, there were perhaps more Hindu dynasties and a greater degree of state-sponsored Hinduism in Cambodia than in other kingdoms. By about the fifteenth century, with the increasing popularity of other traditions, such as Theravāda Buddhism in Cambodia and Islam in Indonesia, the explicit practice and acknowledgment of the Hindu traditions died out.

The boundaries of most kingdoms fluctuated through the centuries. At the height of its power, for instance, the Kambuja Empire included a major part of Southeast Asia from present-day Myanmar (Sri Kshetra) to central Vietnam (Champa), from the southern Chinese province of Yunnan, all the way down to the Malayan peninsula.

George Coedes (1880–1969) and other scholars called the process by which Hindu and Buddhist cultures and worldviews were transplanted in Southeast Asia *Indianization*. Hindu and Buddhist traders, priests, and an occasional prince traveled to Southeast Asia beginning in about the second half of the first millennium BCE (or earlier) and eventually migrated there. The term *Indianization*, however, should be used with caution; although one can certainly speak about many features of "Indian" culture that took root and still linger in the area, there was a dynamic interaction between local traditions and those brought by Indian traders and migrants. While there was considerable Sanskritization and Brahmanization, the depth of the influence of these traditions for the people is still a matter of scholarly dispute. The most pervasive areas of influence seem to have been in the dissemination of architecture, rituals, and narratives such as the *Rāmāyaṇa* and the *Mahābhārata*. Many of the traditions, especially those of the epics, are still performed, but the stories are situated in the context of Buddhist traditions.

**SOURCES OF KNOWLEDGE.** Our knowledge of Hindu traditions in Southeast Asia is based on archaeological sources, icons, inscriptions, temple architecture, texts, and performing arts. Archaeological evidence, including icons of several deities, coins, jewelry, and the like, has been of utmost importance. Most informative are the elaborate Sanskrit inscriptions that mark donations, consecrations of temples and icons, and dedications of public works. Some of the longest Sanskrit inscriptions are found in this region, particularly in Cambodia. The inscriptions are in many Sanskrit meters and reveal an excellent knowledge of Sanskrit literature and literary conceits. Dating of these inscriptions has been problematic, but some of the early ones in the Mi Son temple complex in Vietnam may date to as early as the third century CE. A late fifth-century inscription in the kingdom known as Funan (southern Cambodia and Vietnam) describing Queen Kulaprabhavati's endowment of monies to a hermitage may be one of the earliest inscriptions in Cambodia. Inscriptions have been found in Thailand, Indonesia, Vietnam, and Bali. The rise and decline of Sanskrit as the medium for these inscriptions follow trends that are seen in India. In many cases,

as in Cambodia, the Sanskrit inscriptions are followed by records in a local language. Most books and manuscripts in Cambodia have been destroyed over the centuries, but many stelae carry inscriptions.

Chinese texts, including travelogues and descriptions by visiting political missions, also provide extensive information on cities, everyday life, royal processions, and so on. Theatrical performances in Thailand and Indonesia introduce us to the world of Kakawin poetry, said to be descended from the *kāvya* style of literature in India. Manuscripts, copied through the generations in Indonesia, give us various versions of the Hindu epics and stories from the Purāṇas. Temple architecture and iconography also inform us of the depth and pervasiveness of Hindu culture in Southeast Asia, as well as the areas in India from which the migrants may have come.

**ORIGIN STORIES.** Several founding stories, especially those of the Khmer people, speak about the union of an Indian ancestor with a *nāga* woman. The term *nāga* in Indian (Buddhist, Hindu, and Jain) narratives refers to a semi-divine group of people associated with serpents. Some stories depict them as being descended from serpents, or as having some of their mythical powers. The term *nāga* also referred to a community of people in India during the time of the Buddha. Early Chinese accounts (c. 230 CE) speak of a man from India named Hundien meeting a woman, Liu Ye, who ruled over the land. After a battle, Hundien (Kaundinya?) married the princess. Another story traces the people of Cambodia to the royal holy man Kauṇḍinya who is said to have married the local *nāga* princess, Soma. This version of the story, which some scholars consider a distinct narrative, is recounted in a temple inscription in Mi Son (Champa), which probably dates to around the third century, or perhaps much later. This inscription tells of Kauṇḍinya receiving a javelin or a spear from Asvathamman (the son of Droṇa, a teacher of the princes in the *Mahābhārata*) and throwing it into the air, thus marking his territory. He eventually married Soma, daughter of a *nāga* king. A later Cambodian story that does not turn up until the classical age (c. ninth century CE) tells of a legendary sage Kambu who married a celestial woman called Mera. Some scholars derive the word *K(h)-mer* from the names of these parents. The country born (Skt., *ja*) from the union of Mera and Kambu was called Kambuja.

In these stories, a male ancestor from India marries a divine or local princess; the name Soma ("moon") suggests the alliance between the male ruler from the solar lineage and the woman from a lunar lineage. The solar and lunar dynasties were prominent in Hindu narratives, and almost every Hindu king traced his ancestry to these lines. Some of these stories are connected with the Pallava dynasty, which was in power in the Southeast part of India (Tamil Nadu), particularly near the city of Kanchipuram. Other stories, like those of the *nāga* origin, are strikingly similar to those found near Kashmir.

**ORIGINS OF THE MIGRANTS IN INDIA.** It is difficult to categorically state the various places in India from which the Hindu migrants in Southeast Asia came. Speculations on places of origin in India are based on fragmentary sources, including inscriptions, histories of maritime expeditions, and stylistic similarities between architecture and sculptures. There seem to have been both sea routes and land routes from India to Southeast Asia.

Two areas that seem to have had regular and extensive contact with Southeast Asia are Kanchipuram (near Chennai, South India) and the areas traditionally known as Kalinga (modern Orissa), farther north on the east coast of India. The temple towers of Angkor Wat (or Vatt), for instance, are strikingly similar to those found in Orissa, particularly the Brahmeshwar Temple (built circa 1061 CE by Queen Kolavati) near Bhubaneswar. The area between Orissa and Andhra Pradesh near the lower Kṛṣṇa River also seems to have been a place from which there was active contact with Southeast Asia.

Kanchipuram was an important city in South India for several centuries. The Angkor Wat, for instance, is a three-storied, west-facing temple dedicated to Viṣṇu, similar to the Vaikuntha Perumal temple, built in the eighth century in Kanchipuram. The temple in Cambodia replicates some of these features and combines it with the architecture of Kalinga. The area around Kanchipuram also has several temples with icons of Viṣṇu similar to those in Cambodia.

More speculative are theories pointing to other areas near Kashmir as the source for certain aspects of Hindu culture in Southeast Asia. Some Hindu origin stories are similar to those of Kashmir and Nepal. In addition, there are striking similarities in the sculpture and texts of the Chalukya empire (northern Karnataka, c. sixth century CE) and some Southeast Asian cultures.

There are hundreds of place names in Southeast Asia that are similar to names in India.

There were many areas in India that could have been the land of origin for the migrants who settled in Southeast Asia. Hinduism seems to have been global or at least transnational. There seems to have been regular contact with traders, sailors, pilgrims, and migrants, and therefore continuing links between South and Southeast Asia.

**EARLY HISTORY AND ASPECTS OF HINDU CULTURE IN SOUTHEAST ASIA.** Historians believe exchanges of goods and ideas between India and Southeast Asia may have begun as early as 350 BCE; such an exchange had certainly been established by the first few centuries of the Common Era. Traders, their families, and eventually priests came and settled in these lands and eventually intermarried with the local people. The cultures of India may have spread in this way all over Southeast Asia. Some scholars, however, insist that local kingdoms exercised a great deal of control over what they imported from India, that Indian court culture was not a dominant culture imposed from outside on a passive Southeast Asian

land, and that local rulers invited Indian *brahmins* to serve them and selected what they wanted of Indian culture. It is certainly true that although there was extensive cultural influence from India, some important features of Indian life—including the dietary culture and the caste system—never took hold in Southeast Asia.

Indian migration to Southeast Asia occurred in small waves, with the migrants following land and sea routes. These new people came with their narratives and literary traditions, a knowledge of construction techniques and the religious principles behind the engineering of temples, as well as public waterworks, performing arts, astronomy and astrology, and statecraft. Small groups of settlers seem to have shared their traditions through the invitation or request of the local elite. Some of these were adopted by the local people, some modified, others jettisoned.

Archaeological data from the Oc Eo area of the Mekong Delta shows evidence of settlements from before the beginning of the Common Era. Chinese texts speak about a state called Funan occupying a part of Cambodia and southern Vietnam. While there are Chinese descriptions of this kingdom from about the third century CE, it may have been in existence as much as two centuries before that. Historically, evidence of early Indianization in Southeast Asia is offered by Sanskrit inscriptions, including an inscription in Champa (at Vo-Canh in the Khanh-Hoa province of modern Vietnam), which dates to the third century CE. Here, the author refers to himself as the delight of the family of Srimar, a king who established a dynasty in Champa in the second century CE.

By the fifth century CE, several small Hindu and Buddhist kingdoms were established in the Indonesian archipelago. The Srivijaya kingdom, based in Palembang in south Sumatra, was very powerful for a while, controlling key trade routes and extending its empire to Thailand in the north and West Borneo in the east. It was largely Buddhist, but Hindu dynasties flourished in central Java. In the Sanjaya (Mataram) kingdom, one of the best known and largest Hindu temples—the Loro Jonggrang at Prambanan (near Yogyakarta)—was built in the ninth century CE. Hindu dynasties ruled in Bali after the ninth century CE.

Clear Indian influence is evident in the names of places and royalty. Many of the early kings in this region had Hindu Sanskrit names, such as Rudravarman, Bhavavarman, or Jayavarman. Almost all the early kings in Southeast Asia bore names ending with the royal *varman*, as was the custom in India, where, according to the *dharmas*, names of *kṣatriyas* should end with *varman*. There is also evidence of women rulers; the earliest may have been Queen Kulaprabhavati in southern Cambodia in the fifth to sixth centuries CE. Queen Jayadevī ruled in Cambodia in the early eighth century. The earliest capital in Cambodia was called “Hari hara alaya”—the sacred abode of Hari (Viṣṇu) and Hara (Śiva). Some of these names have lingered and have been modified in Southeast Asia.

Coronation and consecration rituals referred to in the inscriptions seem to follow Hindu texts. In Cambodia, after the time of Jayavarman II (early ninth century), we hear about the “*devarāja* [god-king] cult.” Hiranyadama, the royal *gurū*, apparently conducted this rite, and it seems to have established Jayavarman’s legitimacy. The Sdok Kak Thom inscription (c. 1052) gives many details about the concept of *devarāja* and associates it with a particular temple (Rong Chen) and with specific kings. The concept of *devarāja* involved the concept of the king (*rāja*) as a divine being (*deva*), perhaps centering the royal power in a particular icon of Śiva (a *liṅga*) and divine power in the kings. Perhaps only kings whose hereditary legitimacy was in doubt emphasized the *devarāja* concept.

**HINDU DEITIES IN SOUTHEAST ASIA.** Śiva, Viṣṇu, and the goddess Lakṣmī were all popular in Southeast Asia, but in addition, Hari-Hara, an amalgamation of Viṣṇu and Śiva, was revered, particularly in Cambodia. Hari-hara, who is seen in reliefs in the Badami caves (c. sixth century CE, Northern Karnataka in India), became popular after the seventh century. He is mentioned in many inscriptions in Cambodia, and is represented in numerous icons. Icons of Brahmā, Viṣṇu, Śiva, Hari-Hara, Gaṇeśa, Skanda, Nandi (a bull sacred to Śiva), Garuḍa (the eagle mount of Viṣṇu), the nine planets worshiped by Hindus, and other deities have been found all over Southeast Asia. The invocations in inscriptions also express reverence to amalgamated deities like Ardhanārīśvara (a combination of Śiva and the goddess Pārvatī). Several incarnations of Viṣṇu are carved in temples.

Śiva was perhaps the best known deity in all of Southeast Asia. In Cambodia, Śiva is usually depicted with two wives, Umā and Gaṅgā. Rivers in Cambodia were eventually considered to be holy like the Ganges, such as, after the eleventh century, the rivers flowing from the hill Phnom Kulen to irrigate Angkor. The sacrality of these rivers was stated on carvings made on rocks on their banks, which emphasized the identification of such rivers as the Kbal Spean with the Ganges. While Śiva worship, particularly as represented by the creative symbol of the *liṅga*, was popular, the worship of Viṣṇu also flourished across the region. Knowledge of the Indian Vaiṣṇava texts, including the two epics, was widespread, at least among the elite. Long after Śaivism and other forms of Hinduism disappeared from Cambodia as living religions, knowledge of the *Rāmāyaṇa* thrived through the performing arts. Starting with the endowments of Queen Kulaprabhavati in the late fifth century, many endowments were made to temples of Viṣṇu in Cambodia. The walls of many temples are carved with scenes from the *Rāmāyaṇa* and the *Purāṇas*, and scenes from the *Rāmāyaṇa* are carved on the walls of the Prambanan temple near Yogyakarta, Indonesia.

Most temples in Southeast Asia emphasize one deity but consecrate many others in the same place. Śiva, Viṣṇu, and Devī are commonly represented all in the same building. Women seem to have had an important role in consecrating deities in temples; both in Bakong and later in the temple

at Bantei Srei in Cambodia, women were involved in the consecration. The Prambanan temple in Yogyakarta, Indonesia, has temples to Brahmā and Viṣṇu, but the main shrine is dedicated to Śiva.

Mahāyāna temples included stupas, along with Buddhist and Hindu deities. Thus, there is a stupa at the center of Preah Khan (near Siem Reap), which was constructed by Jayavarman VII (a Mahāyāna king), as well as a very large Śiva *liṅga* on the western side of the structure. There is also a magnificent panel of Viṣṇu on Ananta, with Lakṣmī at his feet. Similarly, at the Bayon, which was built by the same king, there are many panels depicting Viṣṇu, Lakṣmī, and Śiva.

**ARCHITECTURE.** Hindu traditions have been showcased most prominently in Southeast Asia through architecture. There are hundreds of temples in every country, the most famous being the Loro Jonggrang temple (c. mid-ninth century), popularly known as the Prambanan temple, in Indonesia, and the Angkor Wat (mid-twelfth century) in Cambodia.

The Prambanan temple complex is about 20 kilometers east of Yogyakarta, Java. It is variously attributed to a king of the second Mataram dynasty, Rakai Pikatan, or to Bali-tung Maha Sambhu. There are well over 250 smaller temples in the Prambanan complex, which is spread out on the Prambanan plain. The main temple to Śiva is about 47 meters high. Viṣṇu had his own shrine (as did Gaṇeśa) and is represented in the carvings of the *Rāmāyaṇa* found throughout the complex. A princess, Loro Jonggrang, who is sometimes identified with Durgā, is also enshrined in this complex. Śiva’s temple is flanked by shrines to Viṣṇu and Brahmā. While Brahmā, the minor creator deity, is seldom worshiped in temples in India, there are several icons of him in Southeast Asia. Worship of the three deities (Viṣṇu, Śiva, and Brahmā) probably came to Southeast Asia before Brahmā was reduced to a minor deity in the subcontinent. In India, sculptures depicting Brahmā survived long after he lost his importance in the texts.

All the major buildings in the Angkor area of Cambodia emphasize Hindu principles of construction. Many of them are theologies in stone. Some of the early temples were built on a square or a rectangular foundation; in others, the innermost shrine was to be a square. Temples to Śiva frequently stand on artificial hills of five levels; the number five, associated with the five-syllabled *mantra* “Om namaḥ śivāya,” is prominent in all constructions to this deity. The Bakheng, in Cambodia, has 108 towers; from any side, only thirty-three towers are visible. This is said to remind one of the thirty-three *devas* or celestial beings that the *Bṛhadāraṇyaka Upaniṣad* speaks of—describes eight *vasus*, eleven *rudras*, twelve *ādityas*, plus Indra and Prajāpati. Recent studies have shown that the details of the measurements of Angkor Wat correspond to various Hindu deities and their stars, as well as to the Hindu calendar.

Many Cambodia kings built Hindu temples in conjunction with irrigation systems, reservoirs, and the management of water reserves, although the issue of water management is a contentious topic among scholars. Udaya aditya-varman constructed a vast reservoir on the western side of Angkor (the western Baray); it is about 5 miles wide and 1½ miles in length. A temple to Viṣṇu was later built in the center of this area. Angkor functioned as both a sacred temple city and as the administration point of a vast irrigation system.

Sūryavarman II (r. 1131–c. 1150) built Angkor Wat and dedicated it to the Hindu god Viṣṇu. The term *angkor* comes from the Sanskrit word *nagara* (city), and the Buddhists who occupied this building in later centuries called this a place of worship or *wat*, a word derived from the Sanskrit *vatika* (garden). It was one of hundreds of temples built by the Khmers. Angkor Wat, regarded as the highest achievement of Khmer architecture, covers an area of 1,500 by 1,300 meters (4,920 by 4,265 feet) and is surrounded by a vast moat that is 180 meters (590 feet) wide. Balustrades in the shape of giant *nāgas* line the causeway leading to the temple. The Angkor Wat temple, which is built on three levels, has five main towers representing the five peaks of Mount Meru. There are, of course, extensive sculptures throughout the complex.

Viṣṇu is the presiding deity of Angkor Wat. There are many bas reliefs depicting stories from Sanskrit texts, including the *Bhāgavata Purāna*, *Harivaṃśa*, and *Rāmāyaṇa*. Scenes from the *Rāmāyaṇa* appear on the northern side of the western wall. The reliefs on the entire north wall and the north part of the east wall depict stories of celestial beings and gods fighting various demons. The largest bas relief in the world, on Angkor Wat's eastern wall, depicts a story that seems to be the most popular in all of Hindu and Buddhist Cambodia, although it is relatively unknown in India—the story of the churning of the ocean of milk and Viṣṇu's incarnation as a tortoise. The reliefs on the south wall depict various hells and heavens as described in the *Purāṇas*. Near the front entrance, symmetrical to the *Rāmāyaṇa* relief, there is a battle scene from the *Mahābhārata*. Returning to the western wall, we first see the brave warriors on their chariots in the battle scene. It culminates with a striking relief of Bhīṣma, an elderly general lying on a bed of arrows with the five Pāṇḍava brothers near him. The story refers to the time when Bhīṣma instructed Yudhiṣṭhira, the eldest of the brothers.

Reliefs of Viṣṇu reclining on his serpent Ananta are common in Southeast Asia, and narratives from the *Rāmāyaṇa* are seen in many temples in Thailand, Indonesia, and Cambodia. References to the churning of the ocean of milk appear in stylized panegyrics, as well as in art. For instance, such kings as Indravarman I (877–889) were compared to Viṣṇu with Sri Lakṣmī, the goddess of good fortune. In South India the story of the churning of the ocean of milk is commonly rendered in dance, but rarely in sculpture. The narrative, found in the *Purāṇas*, describes how the *devas* and

the demons, consummate enemies, came together to churn an ocean of milk in search of the nectar of immortality. Viṣṇu, who is glorified in this story, initiated the action and then helped by taking the form of a tortoise upon whose back Mount Mandara, used as a churning rod, rested. The snake Vāsuki served as a rope, and after the rising of initial poison, which Śiva swallowed to protect the participants, various treasures emerged. Lakṣmī also appeared and chose Viṣṇu as her husband. Compared to the thousands of sculptures in India relating to Rāma or Kṛṣṇa, the more important incarnations of Viṣṇu, the tortoise incarnation is marginal except in the performing arts.

Many temples in Southeast Asia had an astronomical and calendrical function. Scholars have shown that the positioning of the Angkor Wat temple is coordinated with very precise astronomical configurations, and the measurements correspond to cycles in the Hindu calendar. In some cases, there is also a numerical correspondence, as between the numbers of celestial beings and demons in the large panels and calendrical calculations.

**SOCIETY.** Sectarian affiliation was flexible among the Hindus, and family members may have followed different sectarian traditions—Śaiva and Vaiṣṇava—in considerable harmony. Many inscriptions, especially in Cambodia, indicate that royalty traced their descent both in matrilineal and patrilineal lines. Importance was given to biological ancestry, and pride was taken in important and learned ancestors who are spoken of as *brahmins* and who were learned in the Vedas. The title *vrahmana* (Skt., *brāhmaṇa*) is also attached to some names in Khmer. However, although great respect was shown to *brahmins* in Cambodian (as well as Thai) culture, the caste system as we know it in India did not exist here. New castes were created by kings, who had the power to assign caste names to subjects. Thus, the caste system existed for *brahmins* and royalty, but beyond that we do not know whether it had much currency. It appears that although the caste (*varṇa*) system existed in Cambodia, the castes were probably largely ceremonial orders, and did not apply to the common people.

There seems to have been a strong matrilineal tendency in Cambodia, but it is not possible to say whether it was a local phenomenon or was imported from South India. The Sdok Kak Thom inscription, for instance, which is one of the most important sources of Cambodian culture, speaks of many generations of kings and priests through a mostly matrilineal descent. Many women apparently held royal office, and they certainly sponsored many pious and charitable projects. The inscriptions also describe many queens—Indra-lakṣmī, Kambuja-rāja-lakṣmī, and Jayaraja-devī—who wielded considerable power. Both men and women made claims to the throne.

It is not clear how the Hindu traditions died out in the many kingdoms of Southeast Asia. Theravāda Buddhism had a strong presence in Thailand, and, after several wars, Buddhism became the religion of Cambodia. Islam became a

dominant presence in Indonesia after the fourteenth or fifteenth century. Small pockets of Hindus have lived continuously in some regions like Bali. Although there is a sense of cultural amnesia among Indian Hindus about the spread of Hindu traditions, the Hindu legacy is evident all over Southeast Asia. Hindu narratives are depicted in the performing arts throughout the region. Sanskritized names are still prevalent, even among Muslims in Indonesia. Brahmanical rituals prevail during coronation celebrations in Thailand. Histories of Hinduism will have to take this transnational aspect of the religion into consideration when assessing the region's culture and legacy.

#### HINDU PHILOSOPHY SEE INDIAN PHILOSOPHIES

**HINDU RELIGIOUS YEAR.** The religious celebrations of the Hindu year appear to be countless, and thus the main difficulty in presenting them here is selecting a pattern that is sufficiently comprehensive to take into account their intricacy. The difficulty is met at two levels. First, diversification occurs not only across broad regional areas, but throughout subregions as well. Second, villagers of a particular locality will share only a part of the series of annual festive observances, most of which vary according to caste, family custom, and sectarian bias. Moreover, even for a festival acknowledged to be pan-Indian, local variations occur concerning the date and the particulars of ritual and mythological background.

Very often, in order to highlight sociological factors, anthropological studies give mere chronological listings of localized festivals. From that perspective, however, the meaning of rituals and of their dating is left open to question. One must be content either with the functionalistic explanation of a fictitious solidarity supposedly reinforced by festivals, or with the obvious general purpose of every ritual, prosperity.

More sophisticated views have been elaborated to account for the multiplicity of local traditions in relation to the Sanskritic-Brahmanic "great tradition" (Srinivas, 1952; pp. 213–228) as well as for the "processes of universalization and parochialization" that McKim Marriott has found to be "generally operative in Indian civilization" (1955, p. 218). Although these theories were initially expressed with careful qualifications, later scholars have sometimes cited them in an almost mechanical manner: The relationship between the "great" and "little" traditions has been reduced to the nineteenth-century pseudohistorical understanding of an irreconcilable dichotomy between Brahmanic religion and the so-called autochthonous tribal, Dravidian (or even pre-Vedic) ones.

With the structural studies of myths and rituals, a renewed interest has grown for the study of Hindu symbolism and, as an outcome, for the study of the Indian calendrical system. When one observes the popular use of intricate almanacs (*pañcāṅga*), one cannot but ascertain the all-inclusive character of the Hindu conception of time in relation to efficient activity and hence to religious celebrations.

**THE HINDU CONCEPTION OF TIME.** The year is the main unit of time in so far as it is equivalent to a day of the gods. From this unit, time computation expands in two ways. The small units, that is, from the year downward, depend on astronomical considerations and directly concern humans in this world. The great units given by the Puranic cosmogonies are on the scale of the gods and have nothing to do with astronomy. However, the eschatological speculation of the cosmogony not only teaches that time is basically cyclical in the very periodical succession of creation-degradation-resorption, but it also institutes a homology among the cosmic periods, the levels of ultimate values, and the divine manifestation for this world (Biardeau, 1981, p. 173). In other words, humankind is at the very center of the cosmos. Because a human is the only being able to act with a goal in mind, by ritual activity at the level of what is at issue on the earth, humans alone are capable of sustaining the whole sociocosmic structure with its two poles, that is, liberation from transmigration and ultimate resorption into the Absolute, as well as the very continuation of this world.

Thus to refer to this world Hindu thought uses the term *karmabhūmi* “earth of (ritual) activity (or of transmigration)”; such activity cannot be but efficacious if the proper actions are observed at the right time and the right place. The principle of appropriateness, which is especially emphasized in the Hindu medical texts, remains at work insofar as every important undertaking of daily Hindu life is related to an astronomical conjunction. It is not a mere question of choosing a good date but of selecting a conjunction of time in which two or more specified astronomical phenomena meet and combine their effects; thus, one is reminded that time is not only cyclical but that it also introduces a rupture in its apparent continuity.

**THE HINDU CALENDRIAL SYSTEM.** The Hindu calendar combines the solar year with a lunar year, both systems being synchronized by adding or deleting lunar time units. A solar month begins with the *saṃkrānti* (“entry”) of the sun from one *rāśi* (zodiacal sign) to another (the twelve *rāśis* have almost the same names as the zodiacal signs of the Western system). Because this system disregards the precession of the equinoxes, the vernal equinox, which is supposed to occur when the sun enters Meṣa, or Aries, takes place around the thirteenth day of April. In the same way, the great *saṃkrānti* of mid-January marks the Indian winter solstice and thus the beginning of the solar year, when the sun’s course is northward (*uttarāyana*); from mid-July its course is southward (*dakṣiṇāyana*). The distinction between the two halves of the year is one of the important structural oppositions of the Hindu conception of time.

For the lunar months, the waxing and waning of the moon provides the major opposition between a bright and a dark fortnight. The very name of the full moon, *pūrṇimā*, conveys an idea of fulfillment; moonlight gives people strength, and the time of the full moon is thus auspicious for offering sacrifices to the gods. On the contrary, the dark half

of the lunar month and the new moon, *amāvāsyā*, “when the sun and moon ‘dwell together,’” are more ambiguous and are often devoted to ancestor worship. Each lunar day (*tithi*) of a fortnight is named in order by a numeral. Some of them are consecrated to a specific god: For example, the fourteenth of each dark fortnight in a year is consecrated to Śiva, but among them, that of February–March is the most important and has been sometimes mythically associated with a *nakṣatra*, or lunar constellation. For in conjunction with the synodical revolution of the moon, the zodiacal belt, already divided into twelve *rāśis*, is also divided into twenty-seven segments, each taking the name of a *nakṣatra* and each deemed to be ruled by a specific (Vedic) deity with a specific influence. Each lunar month is named for the *nakṣatra* that appears (though sometimes with a slight astronomical variation) to be in regular conjunction with the full moon. When the months are solar months, they have been given either the names of the lunar months, as in Tamil Nadu or Bengal, or those of the *rāśis*, as in Kerala. Whichever the case, both solar and lunar cycles with their related elements are taken into consideration. However, there is a great diversity of regional calendrical systems; sometimes a particular holiday is celebrated on different dates in different regions. The variations derive from several factors: Not only do lunar and solar months coincide, but, depending upon the region, the lunar month is known either as “ending with the full moon” (*pūrṇimānta*) or as “ending with the new moon” (*amānta*). Furthermore, each region has several almanacs based on different textual traditions. As in the Western system, the seven planets (including the sun and the moon) are correlated with the days of the week; to the seven are added two mythical bodies, Rāhu and Ketu, which are said to cause eclipses. In addition, planets interfere at sporadic intervals throughout the year.

For any given celebration, not only is a date fixed corresponding to an astral conjunction, but smaller units of time are also assigned with separate values of their own. The determination of the specific moment (*muhūrta*) for the performance of an auspicious act involves highly sophisticated calculations that must account for the fact that the different sidereal components of the date have varying durations. Additionally, there are seemingly endless values to these many combinations that induce auspicious as well as inauspicious periods when no serious enterprises—especially religious ones—can be undertaken.

It would appear, then, that in the Hindu calendrical system each segment of time derives value from its relation first to the astronomical moment and by implication to the cosmical time. Theoretically speaking, the significance of a religious event comes partly from its occurrence in conjunction with different sidereal cycles and partly from the symbolic meaning attached to each astral phenomenon. From a practical viewpoint, however, this is not so easy to ascertain. But, considering that symbolic meaning always carries several possible interpretations, the conception of time mainly

provides for a series of distinctive oppositions—such as bright and dark, pure and impure, and so forth—as a mental framework for (religious) activity.

Furthermore, the notion of a proper or auspicious time would not be so significant if it did not correspond to the notion of a proper place. If crowds gather every twelve years at Prayāga (Allahabad) in northern India or at Kumbakonam in the South for ritual bathing (and with the intent of future salvation), it is because at that very place waters of different sacred rivers are said to mix together at the very time of a special astral conjunction. In a similar way, worship throughout the course of the year takes place not at random but in a delimited space, either in the home or at the temple or at any temporary place that has been set aside according to rule for that purpose. Hinduism emphasizes the relationship of (sacred) time to (sacred) space; that is, the site of the temple or of any home inscribes in its space the same values that are represented in the conceptual square diagram of the earth. The dimensions of space and the positions of the gods are coordinated with the symbolic projections on earth of the solar and lunar cycles and of other astronomical phenomena. The definition of space thus includes a definition of time according to the specific values assigned to each orientation. Consequently, by delimiting a space—or only by facing a specific direction—for worshiping a deity at a prescribed conjunction of time, the worshiper reenacts a cosmos appropriate for his sacrificial relationship with the divine.

**STRUCTURE OF THE RELIGIOUS YEAR.** Among the diverse kinds of religious celebrations, there is but a thin line demarcating *vrata* (religious obligation usually involving a fast, a purificatory bath, and special worship) from *utsava* (festival). They share many elements, and from a list of almost fifteen hundred *vratas* and *utsavas* that Kane (1975) has compiled, twenty-two are still celebrated in various Hindu regions.

At least one-fourth of these are observed by all Hindus throughout India and Nepal. There is also some difficulty in distinguishing private from domestic observances, and popular festivals, celebrated at every level of society, are possibly associated with the temple festivals. Some of the largest temples may include in their festive calendar all the sacred days of the Hindu year and other ones as well, according to the personality of the main deity and to the myths of the place. A temple celebration may provide some Hindus for a reason to undergo a *vrata*, sometimes in connection with a pilgrimage. In small, localized temples of goddesses or subordinate male gods the date of the festival, and eventually of the *vrata*, may appear only minimally connected with the general calendrical system. Such events do conform to their proper seasons and to long-lived tradition, and therefore must be understood in relation to the specific regional pattern.

Most religious celebrations are held during the bright half of the lunar months. The full moon is sacred and is observed, if not everywhere on each month, at least in one region or another. The relatively few celebrations that fall dur-

ing the dark half of the lunar month assume special significance. The three main such festivals are dedicated to Śiva, to Kṛṣṇa, and to the Festival of Lights, Dīvalī. The significance of these sacred *tithis* of the opposed bright and dark halves of the lunar months is correlated to the structure of the solar year.

In many parts of India the New Year begins with mid-April, at the vernal equinox. In Andhra Pradesh the vernal equinox is called Yugādi (“beginning of a cosmic cycle”) and it is often held that this is the time when Brahmā begins the creation. The time of Dīvalī, however, which comes after the autumnal equinox, is also perceived as a beginning. The New Year tends to be celebrated at the balanced time of the equinoxes, whereas both solstices mark an intersection between opposing periods. If one remembers the equivalence of the year to a day of the gods, the solstices are then the metaphorical sunrise and sunset, sensitive transitions that must be manipulated carefully, particularly in the case of the sunset, which is perceived as *pradoṣa* (“break in time,” or “fault”).

Makara (Capricorn) Saṃkrānti (“transiting”) of mid-January, or the winter solstice, is a sacred date almost everywhere in India. It is especially celebrated in regions that observe solar months, such as in the southern state of Tamil Nadu, where the festival of Poṅkal combines worship of the sun, of the ancestors, and of cattle, with a ritual cooking of the new rice and prescribed gift-giving. However, even in areas that observe lunar months, the period of the summer solstice, though not marked by a special day, is the beginning of a period of intense religious activity. At this point seasons must be taken into account insofar as the summer solstice corresponds with the monsoon time of the tropical year. Even in areas with regional climatic variations (in Tamil Nadu the rains do not come from the east until October), everywhere in India the agricultural year begins with the monsoon approximately when the sun begins its apparent course southward. The very accumulation of natural events strengthens the symbolic cosmic drama at issue. Edāśī (the “eleventh day” of the bright fortnight) in July–August is recognized as the time when Viṣṇu, the king and sustainer of the world, goes to sleep for four months; that celebration is thus called the Cāturmāsya (“four months”). The celebration of Viṣṇu lying on the cobra Ananta (celebrated on the fourteenth day of the bright fortnight of September–October), is reminiscent of a *pralaya*, or a destruction of the world submerged by waters, just before a re-creation. This particular fortnight belongs to the *pitṛs* (“fathers”), and ancestors are especially worshiped at the new moon of August–September and during the dark half of September–October in a ceremony called Pitṛpakṣa, just before Navarātri. During these four months, the *asuras* (demons) threaten to take the place of the gods and the earth is left to the power of the underworld beings. Thus the *nagas*, or mythic cobras associated with water and fecundity, are propitiated on Nāga Pañcamī, the fifth day of the bright fortnight of August–September.

Because it is felt that people must protect themselves from inauspicious forces, during the full moon of August–

September the twice-born of the upper social orders (*brāhmaṇa*, *kṣatriya*, and *vaiśya*) reaffirm the close relationship to the divine that is theirs by virtue of the investiture of the sacred thread, the symbol of their second birth. In a custom observed mainly in northern India, a “thread of protection” (*rakṣābandhana*) is tied by the domestic priest to the hand of his clients, or, more commonly, by a sister to that of her brothers. During this period no marriage is allowed, for it is felt that women are the best mediators for helping to pass through this crisis time, which is crucial to the fecundity of the earth and the continuation of the sociocosmic order. Women thus propitiate different forms of the Goddess (from July to September) and undergo *vratas* for the sake of their husbands on Haritālikā, or Tīj, the third day of the bright fortnight of September–October. Śiva’s son Gaṇeśa is worshiped in the fourth of the same fortnight (with a renewed interest, since 1893, in Maharashtra), and the *ṛṣis*, the archetypal Vedic seers, on the fifth.

However, the birth of Kṛṣṇa on the eighth of the dark fortnight in August–September, and that of Vāmana, the dwarf incarnation of Viṣṇu, on the twelfth day of the bright half of September–October (the Onam festival in Kerala), foretell the final restoration of the sociocosmic order. But the main battle is left again to a feminine power, the goddess Durgā, who, after “nine nights” (Navarātri), from the first to the ninth of the bright fortnight in October–November, killed the buffalo demon. The final “victory of the tenth” (Vijayadaśamī) emphasizes the revival of dharmic kingly rule on earth. On the fourteenth of the dark fortnight in October–November light comes again with Dīvālī, which celebrates Lakṣmī, the goddess of prosperity, with lamps, festivities, and the retelling of stories about Yama, the god of death, and about the inevitable victory of the gods over the forces of evil. At last, Viṣṇu awakes from his sleep on the eleventh of the bright fortnight of November–December.

In South India, the myth of the sleeping Viṣṇu is not well known. Instead, the celebration of Śiva’s son Skanda, a favorite god in Tamil Nadu, reflects a popular myth in which Skanda is the slayer of the *asura*: On the sixth of the bright half of November–December the *mūrtis* (images) of Skanda and of the *asura* are taken out in procession, and the priest (or another participant) holds the spear and symbolically kills the demon. The next full moon, called Karttikaidīpa, duplicates the lightings of Dīvālī. Despite regional variations, the second half of the solar year seems to be perceived everywhere in India as inauspicious and dangerous; it is a period in which the gods must assent to the underground, the demonic, and the feminine powers for the very sake of the fecundity and continuation of the earth.

The first part of the year is auspicious and bright, but, as a corollary, it is unfruitful. Early in the season, during Śivarātri (on the fourteenth of the dark fortnight in February–March), Śiva bestows salvation on his devotees, even if they include hunters, who kill animals. As told by a popular tale, a hunter who spent the night of Śivarātri in a forest,

pouring water and throwing leaves of the *bilva* tree (which is associated with Śiva) on a buried *liṅga*, thus worshiped Śiva without knowing it and obtained salvation when he died. The narrative recalls that salvation through devotion to Śiva is possible for all people, even for those of the lowest social order who have no access to sacred knowledge. It is reminiscent also of the fact that Śiva himself takes the form of a hunter in some myths. As regards the Śivarātri celebration, Śiva is believed to have originally appeared as an unending column of fire, affirming his supremacy over Brahmā and Viṣṇu, thus recalling his relation to the fire of a cosmic destruction before the universal flood.

The fifth of the bright fortnight of February–March is dedicated to the beginning of spring, personified as Vasanta, the “brilliant” companion of Kāma, the god of love. The celebration of Vasanta seems to be to the season of love what the worship of the *nāgas* (six months previous, during August–September) is to fecundity.

The beginning of spring also marks the beginning of the preparations for Holī, at the full moon of March–April. Holī is a very popular festival in northern India. Often defined as the festival of the *śūdra* (members of the fourth and lowest order of Hindu society), Holī is an occasion in which normal, socially restrained behavior is momentarily forgotten; everyone engages in playful dousing with colored powder and water and shares in the bonfire that symbolically destroys all of the world’s evil. In Bengal, Holī is associated with the worship of Kṛṣṇa. Holī is not known in South India, but there the full moon of March–April is variously celebrated, either with the burning in effigy of Kāma, whom Śiva burnt with his third eye, with the marriage of particular gods, or with the worship of Skanda or other deities. The fires of Holī and Kāma are counterpart to the waters on which Viṣṇu sleeps lying upon the cobra Ananta, which occurs six months later, on the day before the full moon of September–October.

Spring merrymaking ends with the turning of the vernal equinox. Again with the bright half of April–May, a Navarātri festival of nine days is held. This festival is the counterpart of the autumnal Navarātri but is less elaborate—often only two or three days are consecrated to the Goddess. However, the birth of Rāma (an incarnation of Viṣṇu) on the ninth echoes the royal restoration of the great Navarātri for the sociocosmic order. With the two next full moons, Yama (or, in Tamil Nadu, Yama’s attendant Citragupta, who records the good and evil deeds of human beings) and the *pitṛs* (in Gujarat) are remembered. The full moon of May–June is dedicated to terrible or warrior forms of the deity (Narāśimha or Skanda). Formerly, on the third of the bright half, a fast was held in some northern areas for Akṣayya (“the inexhaustible”); whatever was given on that day was said to become inexhaustible and undecaying. The *vrata* anticipated the then threatening scarcity of food and water. On that date was also celebrated Viṣṇu’s *avatāra* as Parasurama (“Rama with the axe”), who became incarnate in order to kill all

*ṣatvīryas*, because one of them had stolen his brahman father's cow, the inexhaustible wealth without which no brahman can sacrifice. This mythical event indicates that something has begun to go wrong in the sociocosmic order.

During the oppressive heat of the last month before the summer solstice, people can do almost nothing but wait for the rains. The Ganges River (Gaṅgā) is believed to have come down to earth on the tenth of the bright fortnight of June–July for the salvation of human beings. On that day a bath in the Ganges or in a sacred river is prescribed for destroying sins. This is considered a time of cosmic crisis, for the sun is moving southward (an inauspicious direction), and monsoon floods follow the burning sun of May–June, recalling the image of a cosmic dissolution (*pralaya*) in which destruction by fire is followed by deluge. The month of June–July is called Jyestha (“eldest”); the feminine form of this name is Jyeṣṭha, indicating Lakṣmī’s “eldest” sister, Alakṣmī, the goddess of nonprosperity or misfortune. On the full moon of Jyeṣṭha women renew their series of *vratas* by worshipping the goddess Sāvitrī and the ever-growing banyan tree for a never-dying husband.

There are comparatively many more ascetic observances during the second half of the solar year than during the first, for during the first, bright half of the year the emphasis is rather on the direct relationship of human beings to deities, and most of the festivals for family gods (*kuladeva*) and locality gods (*grāmadeva*) seem to be held during that period. These particular festivities have not been taken into account here because they vary so much from region to region. Instead, this article has emphasized the structure of the Hindu religious year with its complementarily opposed halves. The author has also chosen to rely mainly upon the mythological background for these observances, which emphasizes their sociocosmic significance; on the village level, however, this meaning is not always recognized, and the rituals serve mainly pragmatic interests having to do with food, disease, fate, and so forth. From this point of view, there is a correspondence between the different significant levels. Moreover, one must not forget the importance of *bhakti*, pure devotion, which has a particular influence on worship at every level of society.

Finally, the religious calendar taken as a whole does not convey a sense of rigid sectarian bias. Emphasis on one deity or another appears to be primarily a regional matter. Vaiṣṇava devotees, of course, will give more emphasis to celebrations of Viṣṇu, and Śaiva devotees, to those of Śiva. A few exclusive sects may have their own specific festive dates more or less grafted onto the general calendrical system. But in general, the very complementarity of Viṣṇu, Śiva, and the Goddess contributes to the balance of activities throughout the religious year.

dess; Hindi Religious Traditions; Hinduism; Holī; Indian Religions, article on Rural Traditions; Kṛṣṇa; Kṛṣṇaism; Kumbha Melā; Marathi Religions; Navarātri; Śaivism; Śiva; Tamil Religions; Temple, article on Hindu Temples; Vaiṣṇavism; Viṣṇu; Worship and Devotional Life, article on Hindu Devotional Life.

## BIBLIOGRAPHY

For the calendrical system as well as for the Hindu religious year, P. V. Kane's *History of Dharmasastra*, 2d ed., rev. & enl. (Poona, 1975), vol. 5, pt. 1, is the most scholarly and complete work, although not always easy to use. See also Jean Filliozat's "Astronomie" and "Notions de chronologie," in Louis Renou and Jean Filliozat's *L'Inde classique: Manuel des études indiennes* (Paris, 1953), pp. 177–194 and 720–738. Madeleine Biardeau's *Études de mythologie hindoue*, vol. 1, *Cosmogonies puraniques* (Paris, 1981), reprinted from *Bulletin de l'École Française d'Extrême Orient* 54 (1968), 55 (1969), and 58 (1971), is the only comprehensive study of the significance of the cosmogonic time units. The conception of time in relation to the conception of space is given in Stella Kramrisch's *The Hindu Temple*, vol. 1 (1946; reprint, Delhi, 1976). For a study of the influence of seasons through Sanskrit medical texts, see Francis Zimmermann's "Ṛtu-Sātmya: Le cycle des saisons et le principe d'appropriation," in *Puruṣārtha* (Paris, 1975), vol. 2, pp. 87–105. Karen L. Merrey's paper "The Hindu Festival Calendar," in *Religious Festivals in South India and Sri Lanka*, edited by G. R. Welbon and Glenn E. Yocum (Delhi, 1982), gives useful and clear information about the calendrical system and about the correspondence between the diverse computations. For South India, see C. J. Fuller's "The Calendrical System in Tamilnadu (South India)," *Journal of the Royal Asiatic Society* (1980): 52–63, and for Nepal, Marc Gaborieau's "Les fêtes, le temps et l'espace: Structure du calendrier hindou dans sa version indo-népalaise," *L'homme* 22 (1982): 11–29, which gives an interesting interpretation of the Ca-turmasya. For the Banaras region, see Judy F. Pugh's "Into the Almanach: Time, Meaning and Action in North Indian Society," *Contributions to Indian Sociology* 17 (1983): 27–49.

For the observances and festivals of the Hindu religious year, see P. V. Kane's book and several papers in the volume edited by G. R. Welbon and Glenn E. Yocum, both cited above. Margaret Sinclair Stevenson's *The Rites of the Twice-Born* (1920; reprint, New Delhi, 1971) remains one of the most interesting studies in general and specifically of the Saurashtra (i. e., Gujarat) brahman community. For the religious year in Uttar Pradesh, see McKim Marriott's "Little Communities in an Indigenous Civilization," in *Village India*, edited by Marriott (Chicago, 1955), pp. 172–222; Oscar Lewis's *Village Life in Northern India* (Urbana, Ill., 1958); and Susan Snow Wadley's *Shakti: Power in the Conceptual Structure of Karimpur Religion* (Chicago, 1975). For Madhya Pradesh, see Laurence A. Babb's *The Divine Hierarchy: Popular Hinduism in Central India* (New York, 1975). For Karnataka, see M. N. Srinivas's *Religion and Society among the Coorgs of South India* (1952; reprint, New Delhi, 1978). For Tamil Nadu, see M. Arunachalam's *Festivals of Tamilnadu* (Tiruchitrambalam, 1980) and my own *Les dieux et les hommes: Tirunelveli* (Paris, 1979). For Nepal, see Veronique

Bouillier's *Naitre renonçant: Une caste de Sannyasi villageois au Népal Central* (Nanterre, 1979).

MARIE-LOUISE REINICHE (1987)

**HINDU TANTRIC LITERATURE.** The genre of religious literature known as Tantra exists in all traditional South Asian religions—Hindu, Buddhist, Jaina, and folk religions. The Hindu Tantras are also divided into Śaiva, Śākta, and Vaiṣṇava. The literature classed as Tantra is not a coherent group of texts, nor are the texts always comprised of any homogeneous materials. Sometimes the name *Tantra* is replaced by *Āgama*, *Nigama*, and *Samhitā*, especially when the texts want to emphasize their affinity to the Vedas. There is a convention that Śaiva Tantras are called *Āgamas*, Vaiṣṇava Tantras are called *Samhitās*, and Śākta Tantras are known as Tantras. But there is no regularity in these divisions. Therefore, Tantric literature must be defined as a theistic literature mainly focused on the cult of one or several deities.

Sometimes a single godhead is the focal point of a group of Hindu Tantras, which gave rise to the categories of Śaiva and Śākta. The meaning of the term *Tantra* is extremely vague; it can just be another name for *śāstra*—the canonical literature of religious teachings and practices. But from the angle of religious history, the word *Tantra* means a particular genre of religious literature that the *Mahābhārata* (12, 349, 64) includes among the five authentic doctrines, namely the Pāśupata and the Pāñcarātra. (This group of five doctrines includes Pāśupata, Pāñcarātra, Sāṃkhya, Yoga, and Vedāraṇyaka.)

Thus, Pāśupata and Pāñcarātra were regarded as authentic traditional religions coming down from Vedic literature. It also proves that these two religions were different from the Vedic tradition of religious practice and philosophy. These two names mentioned by the epic most probably included the two main streams of non-Vedic yet generally accepted tradition, the Śaiva and the Vaiṣṇava.

Sāṃkhya ontology and the Yoga method of meditation are widely accepted by Śaiva and Vaiṣṇava ritual literature; they mainly oppose the Vedic ritual systems and the ideology lying behind them. On the other hand, the early antagonism of traditional Vedic practitioners probably induced these religions gradually to accept some of the Vedic rituals and incorporate quite a number of Vedic *mantras*. As a result, traditional Vedic scholars like Kumārila and Śaṅkara did not completely reject the Śaiva and Vaiṣṇava ideologies.

The ritual mainly advocated by Tantric literature is a system of worship in which, by internal and external ritual acts, the worshiper intends to establish his or her identity with the deity worshiped. With a series of rituals conducted by imagination and by physical actions, such as *bhūtaśuddhi*, *prāṇa-pratiṣṭhā*, and *nyāsa*, accompanied by specific *mudrās* and *mantras*, the worshiper achieves self-apotheosis. Only

then can he or she worship the deity and, through the prolonged practice of one-pointed meditation (*samādhi*), achieve his or her soteriological goal. As support of the *samādhi*, there developed a system of iconography, image making, temple construction (and the science of their maintenance), and various classifications of worship programs, such as daily worship, periodic worship, and special worship. A deity is not only represented in image form but also as *maṇḍala*, *yantra*, and other aniconic forms. The practice of yoga also took special forms, such as *laya yoga* and *kuṇḍalinī yoga*. Esotericism is the main feature of these rituals, and the ideology underlying access to the system is also exclusive: initiation is compulsory. Tantric literature comprises all these ritual and supplementary materials.

Besides the two main streams, Śaiva and Vaiṣṇava, there are other streams worshiping deities such as Śakti as goddess, Sun, Gaṇeśa, and Skanda. However, the method of ritual worship of these deities more or less follows the earlier model. There are countless Tantras on the worship of the goddess Śakti, designated as the Śākta Tantras. Nevertheless they should be categorized as Śaiva Tantras, because the goddess Śakti is almost invariably connected with Śiva.

The Śaiva canonical texts are divided into two categories, the higher path (*atimārga*) and the *mantra* path (*mantramārga*). The higher path may have gotten its title from some of the antisocial rites and observances followed by its adherents. Originally it was entirely followed by ascetics.

There are two main branches of the higher-path literature. The first is Pāśupata texts, belonging to the sect known by that name, and the second is called the L(N)ākulīśa Pāśupata. The earliest text available is the *Pāśupata Sūtras*, which is divided into five chapters. It prescribes for its adherents a strict ascetic life and, for a limited period, somewhat antisocial behavior to attract the disapproval of society. This limited period is followed by a period of practicing meditation in total seclusion. The final stage of the practice is carried out at a cremation ground. One important compulsory item of practice is the use of ash for bathing and for a bed. The ultimate goal for the practitioner is salvation (*mokṣa*), which means a total cessation of suffering. Kauṇḍinya wrote a detailed commentary on this canonical text called *Pañcārtha Bhāṣya*.

No text of the Lākulīśa Pāśupata system has survived. However, there is no doubt of its great prevalence in the early period. It must have influenced the emergence of the later sects, the Kālāmukha, Kāpālīka, Siddha, and Nātha. Along with the original Lākulīśa sect, all these sects believe in the supreme importance of the human body; its culture (*kāya sādhana*) leads to salvation in this life as well as to supernatural powers. These later sects have produced many texts, such as the *Kaulajñāna-nirṇaya* and the *Haṭhayogapradīpikā*. It is considered that Matsyendranātha introduced the Kaula system of antinomian practices, and Gorakṣanātha the system of Haṭha Yoga.

The texts belonging to the *mantra* path, though having basically the same type of ritual system and soteriological concepts, admit both ascetics and householders. Among these texts are the canons of the Śaiva Siddhānta. These are called Āgamas and consist of ten Śiva-āgamas (such as *Mrgendra-āgama*) and eighteen Rudra-āgamas (such as *Niḥśvāsa Tantra* and *Raurava Tantra*). Important features of these Tantras are (1) Śakti, as an embodiment of supreme divine power, receives almost no attention; and (2) they do not teach esoteric rituals. The central deity is Śiva.

In the corpus of esoteric Tantras, Śakti as goddess and consort of Śiva occupies an important position. These are divided under two headings, those belonging to the seat of *mantras* (*mantra pīṭha*) and those belonging to the seat of *vidyā* (*vidyā pīṭha*). The Tantras belonging to the *mantra pīṭha* are called Bhairava Tantras. The dominant deity is Śiva bhairava (the terrifying). According to some traditions, there are sixty-four Bhairava Tantras. The *Svacchandabhairava Tantra* is one of the most important texts of this group.

The Tantras belonging to *vidyā pīṭha* are often centered on a dominant female deity, Śakti, and are divided under two headings, Yāmala Tantras and Śakti Tantras. Of these two groups of Tantras, the former teaches the cult of a couple; that is, the ferocious Bhairava and his consort Śakti, the ferocious goddess Bhairavī. *Picumata-brahma Yāmala* is one of the important Tantras of this group. It teaches secret rites of a sexual type, and the position of Śakti and her human representative, the practitioner's female partner, is exalted. Although these Tantras have moved away from strict ascetic practices, the influence of the Kāpālika tradition is quite conspicuous. The teaching is full of esoteric features; the skull cup, disheveled hair, and other symbols point to the cremation ground as the cult's ideal location.

Another interesting Tantra is the *Jayadratha Yāmala*. This introduces the cult of the goddess Kālasaṃkaraṣaṇī, the "Destroyer of Time." This deity is not terrible in form but more like a warrior goddess, adopting the Kāpālika symbolism of holding a skull cup and wearing a deerskin. The Tantra then proceeds to describe more esoteric rituals and iconography of the goddess Kālī. The text possibly represents stages of the development of Kālī's cult, including the twelve Kālīs.

Śakti Tantras are so called because of the ascendancy of Śakti over Śiva, both in the iconography and in the main *mantra* of the central deity. Here is the esoteric worship of Śakti in three hierarchic stages. The supreme one is the goddess Parā śakti. The *śakti* Parāparā stands in the middle of the hierarchy and possesses the characteristics of both the supreme Śakti and the lower *śakti*, who is the goddess Aparā śakti. The latter comes close to the empirical level. A fourth one, who is both the aggregate of all three *śaktis* and the one who transcends them all, then joins this tradition of three *śaktis*. Of the three *śaktis*, Parā is an aspect of the transcendent one. Parā heralds the advent of creation. These three śaktis constitute the core of this cult called the triadic cult

(Trika). The *Siddhayogeśvarīmata Tantra*, the *Māṛsadbhāva Tantra*, and the *Mālinīvijayottara Tantra* belong to this early triadic cult. The iconographic details of the supreme goddess Parā indicate that she is the deity who is the supreme Gnosis and is identified with self-realization.

The development of the Kaula system saw a waning of the ascetic ideology from the original Kāpālika concepts. A text like the *Kulārṇava Tantra* makes this clear. Though dominated by Śakti, the cult accepts the transcendental Śakti, Parā, to be totally united with Śiva, and the pair is enclosed by the three *śaktis* arranged in a triangle. There are two streams or lineages (*kula*) of the Kaula system, Kālikula and Śrīkula. The former presents the cult of Kālī, and the *Kubjikāmata Tantra* belongs to this stream. It deals with the cult of the beautiful goddess Śrī. The *Yoginīhṛdaya Tantra* and the *Nityaśoḍaśikārṇava Tantra* are among those that belong to this cult.

The Krama school of Śakti Tantras propagates the *kaula* style of worship of Kālī. The *Devīpañcaśataka* belongs to this school. This system later influenced many goddess cults and produced many Tantras, such as the *Mahākāla Tantra*.

Two more streams must be mentioned: the Mahāvidyā Tantras and the Cīnācāra Tantras. The *Toḍala Tantra* and the *Śaktisaṃgama Tantra* belong to the former group, whereas the *Mahacīnācāra Tantra* and the *Nīlasarasvatī Tantra* belong to the latter. The Siddha Avadhūta and the Nātha sects also continued to produce Tantras, such as the *Dattātreyā Saṃhitā* and the *Gorakṣa Saṃhitā*.

The Vaiṣṇava Tantras generally belong to the Pāñcarātra sect. According to its own tradition, these texts are divided into four categories, Āgama, Mantra, Tantra, and Tantrāntara. This early Vaiṣṇava sect focused on the Vāsudeva form of Viṣṇu as the godhead. As the name suggests, Vāsudeva is the patronymic of the god Kṛṣṇa, who was a human incarnation of Viṣṇu. The Pāñcarātra philosophy and ritual practice have influenced all Vaiṣṇava sects. The *Mahābhārata* records the sect's three main features: aversion to animal sacrifice, the acceptance of Vāsudeva as the supreme god, and unconditional loyal devotion to Vāsudeva, the only way to remove all human sufferings. There are many Pāñcarātra Tantras. The adherents of the sect hold three texts to be the earliest and the most important, the *Sāttvata Saṃhitā*, the *Jayakhya Saṃhitā*, and the *Paṇḍara Saṃhitā*. The supreme god is the transcendent Vāsudeva/Nārāyaṇa, and Lakṣmī is his inseparable Śakti. The fourfold emanation of Vāsudeva, Caturvyūha constitutes the essence of the Pāñcarātra cosmogony.

SANJUKTA GUPTA (1987 AND 2005)

**HIPPOCRATES** (460?–380? BCE) was a celebrated Greek physician, called the “father of medicine.” In spite of his reputation as the founder of scientific medicine, the embodiment of medical wisdom, and the exemplar of the ideal physician, little is known with certainty about Hippocrates’ life. There are only a few contemporary or near-contemporary references to him. He is mentioned by Plato (*Protagoras* 311b–c, *Phaedrus* 270c), Aristotle (*Politics* 1326a14), and Aristotle’s pupil Menon (in *Anonymous Londinensis* 5–6). He is said to have been a native of the island of Kos, off the southwestern coast of Asia Minor, and to have been an Asclepiad (the term may refer to a family or a guild of physicians that traced their origin to Asklepios, the god of healing, or may simply mean “physician”). He was, according to these sources, a teacher of medicine whose fame Plato compared to that of the sculptors Polyclitus and Phidias. He taught that one cannot understand the body without taking into account the whole, and he explained disease as the result of air that forms in the body during the process of digestion.

A biographical tradition that began long after his lifetime incorporated additional details, many of them anecdotal and legendary. Four short biographies are extant. The earliest is attributed to Soranus, a medical writer of the second century CE, while the others were recorded in the *Suda*, a tenth-century encyclopedia; by the twelfth-century Byzantine poet and scholar Tzetzes; and by an unknown late Latin writer. It is uncertain how much of the information they contain is trustworthy. They relate that Hippocrates learned medicine from his father Heraclides, who was a physician; that he studied under the atomist Democritus and the Sophist Gorgias; that he traveled extensively in Greece, visiting Athens, northern Greece, and the Propontis (the present-day Sea of Marmara); that he taught medical students on Kos; and that he died at an advanced age at Larissa in Thessaly, where he was buried. Additional biographical material contained in a collection of spurious epistles attributed to Hippocrates is almost certainly fictitious.

There has come down to the present, under the name of Hippocrates, a large and heterogeneous collection of medical books, the so-called Hippocratic treatises, which consist of some sixty different works, all written in the Ionic dialect.

Most of them date from the late fifth or fourth centuries BCE, but some are much later. The collection may have originated as the library of a medical school (perhaps that of Kos) that was brought to Alexandria in the third century BCE where it came to be attributed to Hippocrates. All the works are anonymous and exhibit differences of style and approach. It is widely held today that none can be attributed with certainty to Hippocrates. It is possible that he wrote some of them, but there is no agreement on which, if any, are authentic. The Hippocratic treatises are the work of many hands and represent a variety of points of view, both lay and professional. They include clinical, theoretical, and ethical writings.

The best known of the Hippocratic writings is the so-called Hippocratic Oath. Exactly when it was written is uncertain. Although the earliest mention of it is in the first century CE, it may date from as early as the fourth century BCE. There is no evidence of its use in the pre-Christian era. Those who took the oath swore by Apollo, Asklepios, and other gods and goddesses of healing to guard their life and art “in purity and holiness.” Its religious tenor and some of its injunctions (e.g., prohibition of abortions, euthanasia, and perhaps surgery) suggest that it originated among a restricted group of physicians (perhaps the Pythagoreans, a philosophical sect that emphasized moral purity, asceticism, and piety) who lay outside the mainstream of Greek medicine. The oath was later adopted by Christians, Jews, and Muslims, and (with necessary changes) it gained wide use.

According to popular Greek opinion, disease and death were sent by gods or demons. The Hippocratic writers, influenced by the pre-Socratic philosophers, for the most part rejected this supernatural etiology of disease. Hippocratic medicine was both empirical and rational. It was empirical in being based on meticulous clinical observation (its case histories remained unparalleled until the sixteenth century), and rational in rejecting magic and superstition and viewing disease as the result of natural causes. The Hippocratic treatise *On the Sacred Disease* exhibits this rational approach to medicine. The writer does not accept the traditional view that epilepsy is caused by divine possession. It is, he believes, no more sacred than any other disease, and has a natural cause. In rejecting a magico-religious etiology for a natural one, Hippocratic writers did not display an antipathy to religion. Instead, they regarded all things (including disease) as both natural and divine. Medicine itself was a divine art, in which the physician sought the assistance of the gods. “Prayer indeed is good, but while calling on the gods a man should himself lend a hand” (*Regimen* 87). The Hippocratic physicians recognized the healing force of nature (*vis medicatrix naturae*) and attempted to assist the body to heal itself.

There existed alongside Hippocratic medicine a tradition of religious healing centered in the cults of various gods, demigods, and heroes. The most notable was the cult of Asklepios, who by the fourth century BCE came to be the chief healing god of Greece, eclipsing all others as his cult spread throughout Greece. Sanctuaries of Asklepios were later estab-

lished throughout the Mediterranean world and attracted the sick, who sought miraculous healing from the god. Hippocratic medicine and temple-healing coexisted apparently without antagonism. Temple-healing by Asklepios was regarded as complementing secular medicine, particularly in chronic cases for which medicine could do little. Both secular and religious healing came from the same god, who assisted physicians as well as the sick. Asklepios was the patron of physicians. Galen called himself a servant of Asklepios, and in Athens physicians offered sacrifices to the god for themselves and their patients.

The deontological treatises of the Hippocratic collection are the earliest writings on medical etiquette. They seek to create a distinct identity for the physician and to lay down guidelines for professional conduct. In establishing a standard of behavior by defining the obligations of the physician, they created both a tradition of medical ethics and an ideal of dedicated and compassionate practice, which were subsequently adopted in late antiquity and the Middle Ages by Christian, Jewish, and Muslim physicians. They have continued to influence the Western medical tradition down to the present day and they remain the greatest legacy of Hippocratic medicine.

#### BIBLIOGRAPHY

The complete critical edition of the works attributed to Hippocrates, with French translation, remains Émile Littré's *Les œuvres complètes d'Hippocrate*, 10 vols. (1839–1861; reprint, Amsterdam, 1961). There is no English translation of the entire Hippocratic corpus. For a translation of many of the most important treatises with accompanying Greek text, see *Hippocrates*, vols. 1–4, edited by W. H. S. Jones and E. T. Withington (Cambridge, Mass., 1923–1931); vols. 5, 6, 8, edited by Paul Potter (Cambridge, Mass., 1988–1995); and vol. 7, edited by Wesley B. Smith (Cambridge, Mass., 1994).

On the problem of determining which treatises, if any, were written by Hippocrates, see G. E. R. Lloyd's paper, "The Hippocratic Question," *Classical Quarterly*, n.s. 25 (1975): 171–192; and Ludwig Edelstein, "The Genuine Works of Hippocrates," in *Ancient Medicine: Selected Papers of Ludwig Edelstein*, translated and edited by Owsei Temkin and C. Lilian Temkin (Baltimore, 1967), pp. 133–144. The volume contains several important papers by Edelstein on Hippocratic medicine, the Hippocratic Oath, the religious outlook of the Hippocratic treatises, and Hippocratic medical ethics. A good general treatment of Hippocrates and all aspects of Hippocratic medicine can be found in Jacques Jouanna, *Hippocrates*, translated by M. B. DeBevoise (Baltimore, 1999). On the Hippocratic tradition see W. D. Smith, *The Hippocratic Tradition* (Ithaca, N.Y., 1979); and Owsei Temkin, *Hippocrates in a World of Pagans and Christians* (Baltimore, 1991).

GARY B. FERNIGREN (1987 AND 2005)

**HIRATA ATSUTANE** (1776–1843) was a prominent Japanese thinker and ardent nationalist who vigorously ar-

gued for the superiority of Shintō and native Japanese institutions over all imported traditions. Atsutane was the fourth son of Ōwada Tsugutane, a member of the warrior class. As an adolescent he was trained in the reading of Chinese texts and in practical medicine. At twenty years of age he left his home province and came to live in Edo, the capital of the Tokugawa government. There, he encountered great difficulty making a living, and was finally forced to do manual labor until he was adopted by Hirata Tōbei, also a member of the warrior class. Thereafter, he went by the name Hirata Atsutane.

In spite of his difficult financial situation Atsutane continued his studies. His first book, entitled *Kamōsho* (Scoldings to a fool), was a criticism of *Bendōsho* (A discourse on the way), a work by the famous Confucianist Dazai Jun. In it, Atsutane accused Dazai of misunderstanding the ancient "way" of Japan. Taking along a handwritten draft of this book, he made a trip to see Motoori Norinaga at his home in Matsuzaka in the hope of being accepted as a disciple. However, it was only in 1803, two years after Norinaga's death, that his discipleship was formally acknowledged by the son of Norinaga. The next year he opened a small private academy in Edo and began to devote himself to writing. He produced two important works during this early period: *Shinkishinron* (A new discourse on *Kami*), a criticism of the Chinese understanding of the fate of the soul and an outline of his own conviction that the soul continues to exist after death, and *Honkyōgaihen* (Additional teachings of the central tradition), a description of ideas regarding the imperial *kami* and life after death, which reveals the influence of Christian texts Atsutane had read in Chinese translation. These works embody the basic attitudes and principles that guided his life thereafter: that truth is one, that Japan is the country in which the original *kami* was born, and that therefore all religions should be interpreted in accordance with Japanese mythology. Hirata also believed that the world of *kami* is the primary, eternal one that controls this world and for which one must prepare during this lifetime.

In 1808 he was certified by the Shirakawa family to teach Shintō priests. This gave him a source of income and made it possible for him to concentrate on teaching and writing. His writings consist of lectures on ancient Shintō, popular Shintō, Confucianism, Buddhism, *waka* poetry, and so forth. Some of his most important works were written in the period beginning in 1811. Typically, Atsutane would append several commentaries to his text in order to avoid mistakes of interpretation. For example, to *Koshi* (Ancient history) are appended two works, *Koshicho* (References to ancient history) and *Koshiden* (Commentaries on ancient history). In 1812, the year his first wife died, he wrote another important work entitled *Tama no mahashira* (The real pillar of the spirit), in which he interpreted the Japanese myth of the creation of the universe in accordance with the principles of astronomy. This methodology had first been attempted by Hattori Nakatsune in *Sandaikō* (A study of the three planets), a dis-

cussion of the relationship between mythological deities and the sun, the earth, and the moon, based on knowledge drawn from books imported from Holland. Atsutane's work was influenced by the same line of thought, a major reason why many of his followers lost influence among intellectuals in the early Meiji period.

In the early 1820s, having established an academic reputation in a somewhat narrow sense, Atsutane became interested in ancient Japanese letters and the field of demonology. His work on the latter subject is regarded today as the model that inspired contemporary studies of folk beliefs. In the late 1820s his studies turned to India and China in an attempt to identify Japan as the ideal country mentioned in the ancient texts of those countries. During this period he also tried to make himself known to certain daimyo in order to secure official patronage. In 1830 he was granted a small stipend from the Owari domain of one of the three collateral Tokugawa families.

Toward the end of his life Atsutane explored the fields of divination and metrology. He published *Kōkoku doseikō* (Japanese Metrology) in 1834, much to the consternation of the government, which wanted to maintain strict control over such matters. As a result, his stipend from the daimyo of Owari was canceled. In spite of this, Atsutane began to publish a study of the calendar in 1837, and in 1840 was again questioned by government officials. On the first day of the following year he was ordered to stop writing. He returned to his home province shortly thereafter, all efforts he had made for the freedom to move and to write having come to naught. In the years of social change that followed his death, however, his disciples increased and contributed to the establishment of the new government in the Meiji restoration a quarter century later.

#### BIBLIOGRAPHY

Hirata Atsutane's complete works are found in the twenty-one-volume *Hirata Atsutane zenshu* (Tokyo, 1977–1981). Studies of his life and thought include Miki Shotaro's *Hirata Atsutane no kenkyū* (Kyoto, 1969), Muraoka Tsunetsugu's *Norinaga to Atsutane* (Tokyo, 1957), and Watanabe Kinzō's *Hirata Atsutane kenkyū* (Tokyo, 1942).

UEDA KENJI (1987)

**HIRSCH, SAMSON RAPHAEL** (1808–1888), was a German rabbi and the foremost ideologue of Jewish Neo-Orthodoxy in the Western world. Hirsch was born in Hamburg and educated in an “enlightened-pious” family of Orthodox Jews who rejected the notion that secular culture is incompatible with traditional Jewish faith. Thus he continued his studies with Jacob Ettlinger and Isaac Bernays, rabbis who were receptive to modern culture. He studied at the University of Bonn in 1829 and, in 1830, became *Landrab-*

*biner* of Oldenburg. In 1836 Hirsch wrote his *Neunzehn Briefe über Judentum* (*The Nineteen Letters on Judaism*), which has become a classic expression of Jewish Neo-Orthodox philosophy. A year later, in 1837, he wrote *Choreb, oder Versuche über Jissroels Pflichten in der Zerstreuung* (Horeb: Essays on Israel's “duties” in the Diaspora), his major work on the nature of Jewish revelation and law. These works earned Hirsch a reputation as a champion of Orthodoxy and a steadfast opponent of Reform.

In 1841 Hirsch became rabbi of Aurich and Osnabrück in Hannover (now Lower Saxony), and in 1846 he was appointed *Landesrabbiner* of Moravia. Hirsch's affirmation of Jewish political emancipation, his wearing of a clerical gown during services, and his emphasis upon the study of the Bible (rather than exclusive concentration on the Talmud) appear to have alienated him from more traditional Orthodox elements in the Moravian community. In any event, he moved to Frankfurt, where he served as rabbi of the Orthodox Israelitische Religionsgesellschaft from 1851 until his death. Here Hirsch formulated his policy of Orthodox separatism from the rest of the Jewish community and implemented his conception of Jewish Neo-Orthodoxy through the educational and communal institutions he created.

Hirsch soon became the leading Orthodox proponent of the notion that traditional Jewish belief in the divinity and the immutability of the written and oral laws could be combined with an affirmation of Western culture. He did oppose *Wissenschaft des Judentums*, however, because he feared that it undermined traditional Jewish notions of revelation. Hirsch detested Reform for its rejection of the oral law and charged that it reformulated Judaism in accordance with the demands of the age; against Reform he argued that the contemporary era had to be viewed in light of Judaism.

Like the Reformers, Hirsch proscribed neither secular culture nor secular education. He saw Torah as increasing humanity's knowledge of the true nature of humankind, while he understood secular education as increasing humanity's understanding of God's will as it unfolds itself in both nature and history. In speaking about the relationship between religious and secular knowledge, Hirsch wrote that “both should be put on the same footing” (*Gesammelte Schriften*, vol. 2, p. 450). Hirsch popularized this educational philosophy through the saying found in *Pirquei avot* (Chapters of the fathers) 2.2, “Yafeh talmud torah ‘im derekh erets” (“An excellent thing is the study of Torah combined with worldly occupation”). While *derekh erets* literally means “worldly occupation,” Hirsch interpreted it as signifying modern culture; this saying became the rallying cry of Jewish Neo-Orthodoxy in the Western world.

In addition, Hirsch enthusiastically embraced the Jewish emancipation. He saw it as a positive development because it afforded Jews increased opportunities to fulfill their divinely ordained mission. He regarded the duty of patriotism as an obligation of love, and he charged that the Land of Israel “had seduced the people Israel from its allegiance

to God" (*The Nineteen Letters on Judaism*, translated by Bernard Drachman, New York, 1960, Ninth Letter, p. 62). Israel's union, for Hirsch no less than the Reformers, was a religious one. "Land and soil," he wrote, "were never Israel's bond of union. That function was always fulfilled solely by the common task set by Torah" (ibid., Sixteenth Letter, p. 107). Jewish separatism was justified because of the universal spiritual mission Israel was mandated by God to fulfill "until . . . humanity as a whole might turn to God and acknowledge Him as the sole Creator and Ruler" (ibid., Seventh Letter, p. 55).

A prolific author, Hirsch articulated these ideals in many other essays, articles, and books. Among the most famous are his commentaries on the siddur and the Pentateuch. In these works, Hirsch argued that the purpose of prayer and devotion is, in terms reminiscent of Kant, an educational one—that is, to prepare the individual philosophically and psychologically for the universal ethical-religious tasks of this world. Furthermore, Hirsch employed Hegelian legal categories in these works and explicated the particular laws and statutes of the Jewish religion in a way that allowed him to identify them with universal concepts and principles of rational thought.

These intellectual characteristics, the pure German literary style evidenced in his writings, his affirmation of emancipation, his embracing of contemporary German standards of aesthetics, and his positive attitudes toward secular education and culture all combined to gain him a great degree of prominence and to mark the emergence of a new type of Orthodox Jewish religious leader. He remains the most important exponent of Jewish Neo-Orthodoxy.

- AN OVERVIEW
- WESTERN STUDIES [FIRST EDITION]
- WESTERN STUDIES [FURTHER CONSIDERATIONS]

### HISTORIOGRAPHY: AN OVERVIEW

The English word *history*, as well as the French *histoire* and the Italian *storia*, stems from the Greek *historia*, which was used first to refer to a general inquiry into things and only later to refer to history as it is now understood. Germans speak of *Geschichte* (from *geschehen*, "to happen"); Chinese choose *shih* (meaning both "fact" and "history"); Hindus use terms such as *itihāsa* (tradition; lit., "verily thus it happened") and *purāṇa* (ancient lore); and Arabs alternate *tar'ikh* (derived from the word for dating events), *khabar* ("report"), and *'ibar* (derived from the verb meaning "to pass on, through, over, or beyond"). Because the meanings of these terms are bound to cultures and periods, etymological analysis does not provide a ready explanation for the universality of the writing of history.

An investigation of time as the basic dimension of human existence yields more profound insights. It demonstrates the relentless change from past to present to future and how that change leads human beings to search for elements of continuity so as to reconcile their memories of the past with their experiences of the present and their expectations for the future. History is the endeavor that reconciles change and continuity by constructing such a unity of past, present, and future. That purpose links history to religion, itself the affirmation of a continuity transcending the world and time. Indeed, the history of historiography is marked decisively by the fate of that link between religion and historiography. In the mythological stage, sacred concepts alone defined the unity in time, telling of the emergence first of the cosmos and then of human society. In the subsequent stage of traditional historiography the ever more multitudinous and complex human phenomena of the ongoing present and the expected future were linked to the sacred past (be it the mythological core or the works of Confucius, the Buddha, Jesus, or Muhammad) and thereby given meaning. In the later phases of traditional historiography, that creative pro-

cess of establishing continuity through reference to the sacred past became more complicated as human history revealed more and more of its scope and some self-regulating patterns. The less frequent direct linkage between the present and a sacred past resulted in a greater prominence of human phenomena in the world's traditional historiographies, a prominence in many cases supported by a nascent rationalist undercurrent. Finally, in modern Western civilization, that linkage snapped completely and a historiographical revolution began that challenged the very link between religion and historiography. The repercussions became worldwide.

For centuries, the mythical accounts of how the cosmos and human society were created shaped both the substance and the tenor of historical works. Therefore, it mattered whether the world was perceived as going through endlessly recurrent cycles (ancient Indian accounts) from which human beings strove to escape into a state of timelessness; or as the onetime creation by an all-powerful creator (the three monotheistic religions), which demanded of human beings lives of decision with reference to a Last Judgment at the end of time; or as depending on the mythological age mainly for the substance and legitimacy of its moral and political order (Chinese and Japanese accounts).

Of even greater import to traditional historiography were accounts of the foundation of human society, most often formulated in terms of a loss of perfection. Ancient Indian texts spoke of a decline from the Golden Age, first to one marked by a need to eat and engage in sex, shortening the human life span, and then, crucially, to one of agriculture and private property that necessitated restraints on power and violence through law and government. The process had four stages (*yugas*): the ideal stage, the *kr̥tayuga*; the beginning of degeneration in the *trētāyuga*; the *dvāparayuga*; and the present, destructive stage of *kaliyuga*. In the Jewish and Christian traditions human society resulted from an act of disobedience—Adam and Eve trying to partake of God's full knowledge. Expulsion from the Garden of Eden brought the new human world of toil and suffering but also the possibility of joy and prosperity contingent on the proper relationship between God and human beings. Chinese, Greeks, and Romans spoke of a decline in more general terms: Confucian scholars saw decay as an ever-present threat (if the proper precepts were not obeyed); Greeks knew of the five consecutive ages (or races) of declining quality suggested by Hesiod; and Greek and Roman writers repeated tales of a lost Golden Age. Each of these fundamental views left its imprint on traditional historiography.

**TRADITIONAL HISTORIOGRAPHIES.** Historiographies in the traditional manner prevailed in the West until the eighteenth century and outside of the West for two more centuries. Traditional historiography established for all events their continuity with the sacred past by authorizing what constitutes proper memory, by interpreting the why and how of events, and by using a methodology that stresses the consensus of continuing texts rather than verification measured according

to human reason. In all of this, the “authority of the past” is dominant.

**Indian traditional historiography.** Indian historiography, which has its mythological anchor in the Vedic literature, particularly the fourth Veda—the Upaniṣads—with its exhortation to focus human life on a union with the all-encompassing and changeless Absolute, gives little encouragement to record the world's changing phenomena. Indeed, it has been argued (too sweepingly) that because of this focus Indian culture lacks a historical consciousness. While no large body of ancient historical works exists, there is a body of historical material in the Vedas, the Itihāsa. Among its historical genres, the Purāṇas contained genealogies and stories of kings. The royal genealogies were kept by a special court official, the *sūta* and later the *māghada*; the genealogies traced the king and his family back to the mythological period. Other lists showed the proper priestly succession. These were important because the link to sacred antiquity gave legitimacy to priests and kings. The Itihāsa-Purāṇa tradition also contained stories with clear lessons on conduct. Narrative historiography, as epic history, found an outstanding example in the *Mahābhārata* (uncertain date; some parts extant in the seventh century) and the popular genre of *ākhyāna*. By 300 CE ancient Indian historiography had found its enduring form. From then on, largely undisturbed by the Muslim and European hegemonies, it offered chronicles of the various feudal states and biographies of outstanding persons in the form of the *carita*. All of these manifest the basic characteristics of Indian historiography: a lack of interest in precise dating; a lack of desire to distinguish clearly between legend, fantasy, and fact; a love of poetry; a preference for the idealized over the realistic; and the absence of a method for establishing the congruence of text and preceding text or of text and observable world. All of these characteristics are consistent with the emphasis on achieving union with the Absolute and reflect the resulting relative inattention to the story of human phenomena for their own sake. Thus, history was seen as the outward manifestation of an inner drama, whose logic was not to be found in mechanical cause-and-effect relationships but in *karman*, a structure by which punishments follow wrong deeds and rewards follow good ones.

Into this historiography was fitted, with some considerable modifications of the ancient tradition, both the Buddhist and Jain histories. In their basic tenor these traditions too placed strong emphasis on individuals escaping from the transient world, although they offer somewhat more encouragement for an involvement in that world. Their radically new feature was the reanchoring of history in the teachings and examples of persons who had actually lived in history. Buddhist historiography anchored in the Tripiṭaka, with its account of episodes in the Buddha's life (566–486 BCE), the formulation of his teachings, and the founding of the *saṃgha* (“community”). Thus, Mahānāma's famous *Mahāvamsa* (Chronicle of Ceylon) was written in the traditional Indian manner, but, while acknowledging the Vedic core, it stressed

the Buddha's life and teachings and the teacher Mahinda's work in Ceylon; none of this was intended to reconstruct accurately the past but to edify readers and listeners. Jain historiography varied Hindu tradition by introducing a succession of twenty-four *jinas* (saints), the last one being Vardhamāna Mahāvīra (d. 476?), and by deemphasizing some supernatural explanations in favor of rational ones.

**Chinese traditional historiography.** Given to the concrete and the particular rather than the supernatural and abstract, Chinese historiography had as its narrow mythological base the mandate of Heaven (*tian-ming*), which required the emperor to organize and maintain a social order according to moral precepts. The mandate deified the emperor without making him a god, but also sanctioned his overthrow if the order was either not maintained or failed to conform to the moral code. Heaven provided for the authority of the ruling dynasty but also for revolution and the subsequent establishment of a new dynasty. That view accorded well with the fifth-century *Chunqiu* (Spring and autumn annals) of the state of Lu. This work, comprising typical annals of military campaigns, events at court, and unusual occurrences, became in the edition attributed to Confucius an instrument of moral and social teaching. Thereafter, the dependence of the fortunes of individuals and dynasties on conformance to the moral code and its correlate political wisdom remained a theme in Chinese historiography. The close connection between the mythical mandate, history writing, the state, and the moral structure of life was maintained when, after 221 BCE, a strong imperial government emerged. Even the destruction by imperial decree (213 BCE) of all previous historical materials emphasized that link: these records fostered the survival of memories dangerous to the new order. History writing was affirmed with the establishment of a commission to collect ancient texts (136 BCE) and a "grand college" (124 BCE), and above all through the sponsorship of the Zhengshi (Standard histories). The pioneering work, the *Shiji* (Records of the historian) by Sima Tan (d. 110 BCE?) and his son Sima Qian (c. 145–85 BCE), contained composite annals (mostly court accounts), genealogical tables of the imperial family, lists of ministers of state, and a biographical section devoted to famous statesmen and scholars. Later, such histories were created by the official history office (*shi guan*). In accordance with the principle of orderly succession—the manifestation of the triumph of peace and harmony over chaos—it became the duty of each dynasty to compose the history of the preceding one, always mindful of linking authority to ancient times and of offering proper lessons from the past. Thus a stable historical record, sustaining and reflecting traditional China, spans the period to the end of the monarchy in 1911. Even Chinese Buddhism with its sense of universal equality and compassion for all human beings, its longing for release from this life, and sense of decline in human history, was adjusted in its historiography to Chinese traditionalism and—partially because of intermittent coercion by the state—never developed a true alternative to the official view of the past.

**Japanese traditional historiography.** Beginning with the early *Nihonshoki* or *Nihongi* (Chronicles of Japan; 720 CE) and its cruder predecessor the *Kojiki* (Record of ancient matters, 712 CE), Japanese historiography carried the imprint of the well-developed Chinese historiography. But while the Confucian linkage of virtue and fortune was present in them, the stronger feature was the Shintō assertion of an unbroken sequence of emperors originally descendant from the sun goddess. This sacred imperial line made superfluous the Chinese concept of the mandate of Heaven and its rationale for dynastic change. Yet, from the eleventh to the seventeenth century there were no imperial histories, because that historiography did not fit a society in which the power was held by noble families. The Japanese prose writings, the *Rekishū monogatari* (Historical tales) and the *Gunki monogatari* (Military tales), recorded the powerful lords' deeds and their relationship with the imperial family. The dominance of noble families, ruling for and through the emperor, raised the issue of legitimate authority. Works by imperial partisans, such as the fourteenth-century *Jinnō shōtōki* (Chronicle of gods and sovereigns) by Kitabatake Chikafusa, extolled the divine/human position of the emperor as the descendant of the sun goddess, a mode of thinking characteristic for the whole "loyalty to the emperor" school, which centuries later (in 1868) was instrumental in the restoration of imperial power.

Historians sympathetic to the feudal overlords found—in the Confucian manner—the dominance by feudal families legitimate if the law and thus harmony was effectively maintained and—in the Shintō manner—if a genealogical link with the imperial line could be established. In either case the traditionally sanctioned authority of the emperor remained above the rise and fall of political power. The Buddhist priest Jien's *Gukanshō* (1219) illustrates well the complexity of interpretation in Japanese traditional historiography. Although written with an ostensibly political purpose it called upon the Shintō concept of the direct divine descent of emperors, the Confucian linkage of virtue, order, and harmony, and a profusion of Buddhist organizing concepts: *kalpas* (cycles with a first half of decadence and a second one of recuperation); the tripartite scheme of True, Imitation, and Final Law (the last being the worst, when even Buddhist teachings were corrupted); and finally, interwoven into all of these, the Principles (impersonal shaping forces, one for each age). In the end all of these schemes were subject to the Buddhist doctrine of continuous universal decline despite temporary respites, a message that fit the pessimism of a difficult period. With the reemergence of a strong central (although not imperial) government under the Tokugawa shoguns (1600–1868), the Chinese historiographical model emphasizing centralized power became once more attractive and shaped the late seventeenth-century *Honchō tsugan* (Comprehensive mirror of Japan). It stressed the political lessons of history interpreted according to the now strongly encouraged Confucianism.

**Greek and Roman historiographies.** Greek and Roman historiographies were in their entirety traditional, as

they were never decisively shaped by the rationalism and skepticism of their own cultures and, of course, never by that of modernity. The Homeric epics were the mythological core of Greek historiography, and their heroic history befitted the ideals of the Greece before the city state (*polis*) and organized record keeping. The Greece of the *polis* preferred an “unheroic” history, although the lessons of honor and noble passions derived from the narratives of the struggles and tragic fates of heroes were never forgotten. The prose histories with a human dimension, often structured by crude chronologies (generation counts, lists of officeholders, priests, and priestesses), offered grand inquiries into cultures (Herodotos, c. 484–c. 425 BCE) or wished to serve the citizens of the *polis* (Thucydides, c. 460–c. 400 BCE). The Homeric gods who had so frequently and directly interfered in battles and individual lives receded soon into a lesser role, punishing those immoderately in love with money or power (Herodotos) or yielding all influence to the human drive for power (Thucydides). The exact role of the often-mentioned Tyche (fate or fortune) was never clear. Yet many traditionalist historians, despite their admiration for human deeds, still gave proper credit to the gods. The uncertain role of gods and mythology continued in Greek historiography after the latter had lost its city-state focus, in the Macedonian monarchy and subsequently in the monarchical Hellenistic states. Universal history, attempted in the fourth century BCE by Ephorus of Cyme, proved impossible in a tradition that lacked any ingredient conducive to the linking of non-Greek and Greek records into a universal history. Traditional historiography, most often local in nature, received support from the antiquarians, who composed critical histories of ancient religious legends and rituals, hoping to use the increasingly rationalist ideal of accuracy for the support of tradition.

Early Roman historiography was really Greco-Roman. One of Rome’s mythological roots reached back to Aeneas, the Trojan refugee who came to Italy and was linked genealogically to the seven legendary Roman kings. The first of these, Romulus, the founder of Rome, was also part of another mythological tradition, that of a Vestal Virgin’s two sons, of Romulus and Remus, set out to die and nursed by a she-wolf. Elaborated at great length, these mythological traditions constituted Rome’s ancient heritage. A non-mythological ritual tradition had a more direct impact on Roman historiography: the *Annales Maximi* kept for each year by the high priest (*pontifex maximus*) fixed the days when sacred law permitted business and court transactions (the *dies fasti*), and thus began a strong annalistic genre that recorded much of the public Roman life. But until the second century BCE the influence of late Greek historiography, speculative in nature and detached from Roman tradition, was overpowering. Histories in Greek predominated, reaching their peak in the *Histories* of Polybius (c. 200–118 BCE), with its cyclical philosophy of history in which each ideal government form first decays into corruption and then is replaced by another ideal form: monarchy moves to tyranny; aristocracy to oligarchy; then democracy to mob rule, where-

upon, it is implied, the cycle begins anew with monarchy. For Polybius this was a cycle only Rome could escape, because only Rome had mixed the three ideal forms in one composite constitution. Decadence also concerned Polybius’s contemporary Marcus Porcius Cato the Elder, who condemned the Greek influence as destructive of traditional “Old Rome.” This theme persisted, the idea that the “Old Rome” of tradition, where people practiced ancient religious rituals and civic virtues and rendered public service willingly, was being corrupted. But as much as the great Roman historians between 86 BCE and 120 CE (Sallust, Livy, and Tacitus) spoke of decadence, none of them suggested a truly cyclical view of history, because the gods had pronounced Rome eternal.

The Roman state and historiography alike remained linked to the traditional core, and Roman historians never speculated in an abstract manner about general forces and patterns shaping events, as some Greeks had done (e.g., Thucydides, Polybius, and the Stoic Posidonius of Apameia). In the main, Greek and Roman histories focused on individual events and deeds, which they judged according to moral precepts and public benefits. For Romans, decadence stemmed from the failure to affirm the ancient virtues; hence the importance of the Roman antiquarians, particularly Marcus Terentius Varro (116–27 BCE). Such history in support of tradition conformed to Aristotle’s dictum that history dealt only with individual phenomena and not with universals (as did poetry and philosophy); hence the firm link of history to rhetoric (as the art of persuasion) rather than to philosophy (as the endeavor to explain).

**Jewish historiography.** Jewish historiography expressed a unique sense of history—history as sacred memory, telling of God’s great acts throughout time and the Jews’ reactions to them, most importantly God’s choice of the Jews as the instrument for the fulfillment of his purpose. In the covenant that affirmed God’s choice of the Jews as the instrument for the fulfilling of his purpose, God promised Abraham to make the Jews numerous and give them land in return for their obedience and faithfulness. Joined to this was the Deuteronomist account of the pre-covenant period. God’s creation of the world; Adam and Eve’s loss of paradisiacal existence, leading to human life in its present form; and another overreaching deed, the building of the Tower of Babel toward heaven, with the subsequent sudden appearance of many languages and nations. In the world of the covenant, the Jews attempted to fulfill their demanding mission. Thus, in the kingdom period (David and Solomon), they had to translate that mission into actions that satisfied both God’s will and the needs of state policies. When as a people possessing free will they often failed, prophets recalled them intermittently to their great purpose. Then, in the time of the Babylonian exile, with no Jewish state left, the eschatological aspect of the Jewish faith (the concern with the last things) was stressed, leading to the apocalyptic views of late Jewish history (the prophet Daniel).

It was important for the fate of the Jews that an authoritative version of this whole sacred history was conveyed by the Hebrew scriptures (Old Testament), a compilation of many sources that had undergone redactions by skilled compilers (such as the Deuteronomist, Yahvist, and Chronicler) until it was put into canonical form in 100 CE. After the destruction of the Second Temple in 70 CE, Jewish historical writing became insubstantial except for Josephus's *The Jewish War* (75–79 CE) and *Jewish Antiquities* (93? CE). Jewish thought in the Diaspora (the state of being scattered) became ahistorical. The Jewish state, whose fate had offered the possibility of tracing God's will and acts in time, had disappeared. Now Jewish jurisprudence, philosophy, and Qabalah were perceived as surer guides to pious wisdom than history. But the unique Jewish sense of history, with its totally sacral concept of time, became decisive for Western civilization in its Christian interpretation.

**Christian traditional historiography.** Christian historiography also had as its basis a historical record, the biblical account (in the Old and New Testaments) of the entrance of God himself into history. Such a rupture in continuous human time at first retarded the formation of a Christian historiography, as some Christians (the chiliasts), expecting the imminent second coming of Christ, denied a historical future, while other Christians (the Marcionites), emphasizing the newness and uniqueness of Christ's first coming, rejected the Old Testament and thereby denied a meaningful past. As time went on, however, Christians accepted history as the process of universal redemption through the gradual education of mankind. Time was the space in which God worked his purpose, and the end would come when "time was fulfilled." Into that process fitted Paul's reinterpretation of Jewish Christianity in the direction of a universal Christianity and the formulation of a positive view of the Roman Empire. Rejection of the empire had come easily because of Rome's pagan mythology and religion and her persecution of Christians. The positive view of Rome pointed to a divine purpose in the Augustan empire, as its peace, order, and communications network facilitated Christian missionary work. When in 313 Christianity became tolerated and then later the favored faith, its linkage to the empire (and subsequently to other secular states) brought about a flourishing traditional historiography, one that sacralized history, wished to encompass all nations and times, and shared certain forms.

The unity of all nations and times found its grand expression in chronology. In his chronological tables Eusebius of Caesarea (c. 263–339) compiled lists of rulers and events from many ancient cultures and synchronized them with the dominant Judeo-Christian line. While his chronology prevailed in the medieval period, discrepancies in the figuring of world eras—the counting of all dates from creation, Adam, or Abraham on—arose early because scholars used different versions of the Old Testament, a work devoid of dates (years elapsed from Adam to Christ ranged from 3952 to 5500). By the late sixteenth century at least fifty different

world eras were known, a fact that prepared the way for linking faith and chronology through the presently used scheme of reckoning history from the incarnation, which preserves the sacred nature of time without insisting on the substantial unity of the past.

In early Christian historiography the world's duration was often given as six thousand years (six days of creation times one thousand, since "one day is with the Lord as a thousand years," *2 Pt.* 3:8). Each millennium formed a world age (*aetas mundi*), demarcated by prominent biblical figures or events, such as Adam, Noah, Moses, Abraham, David, the building of the Temple, the restoration of the Temple, and, always, Christ. The scheme of world ages, used by Origen, Augustine, Isidore of Seville, Bede—with or without the one-thousand-year spans—became a favored periodization scheme for world chronicles. It found a rival in the Christian adaptation of a Jewish apocalyptic vision: Nebuchadrezzar's dream about a statue and its eventual destruction by a boulder, interpreted by the prophet Daniel (2:32–41) as the successive appearance in history of four empires, followed by God's kingdom. Such a transfer of power from empire to empire (*translatio imperii*), known to ancient writers, was used by Paulus Orosius (fl. 414–417) in his *Histories against the Pagans*. He stipulated a sequence of Babylonian, Macedonian, Carthaginian, and Roman empires; the latter, blessed by Christ's life and work and being the instrument of the universal mission, would endure to the Last Judgment. Augustine (354–430) mentioned various age schemes but suggested a detachment of Christian views of history from all such rigid and earth-bound schemes in favor of a dynamic perspective: history is seen as the battlefield of the forces fueled by the love of God (City of God) and those propelled by the love of self and the world (City of the Earth). No entities or persons in this world belonged wholly to one or the other of the two communities; all of them were of a mixed state, with the separation and the victory of the good only occurring at the Judgment. Augustine's dynamic view found few adherents in medieval historiography with its usually close attachment to secular institutions. When, after 1100, cultural change accelerated in the West, some new periodization schemes followed the trinitarian pattern: the old one of "prior to the law," "under the law," and "under God's glory" or the new one after the Trinity proper—periods of the Father, Son, and Holy Spirit. In each case the most recent period was seen as the one most "advanced" and also closest to the end (Adam reborn). Joachim of Fiore (c. 1130–1202) spoke of the age of the Holy Spirit as the final one of universal brotherhood, with monks as the spiritual leaders, while Hugh of Saint-Victor (d. 1142) perceived a gradual development from natural law to written law to the time of grace, a development marked by progress from a primitive understanding of ritual and sacraments to an ever fuller sacramental union with God through Christ.

In traditional Christian historiography divine providence worked through portents, miracles, the never-ending

cycle of sin and punishment, and the divinely instituted church. Histories of the church began with Eusebius's *Church History*, which with its continuations was compiled into the widely used *Historia Tripartita* (sixth century). But as long as the church was integrated into the total life, ecclesiastical histories reached far beyond the confines of the institution proper. In the histories of the integration of new peoples into Latin Christendom (Germans, Slavs, Danes, Normans), and of Byzantium's mission to the Slavs and the peoples of the Near East, the church appeared clearly as God's means of accomplishing the universal mission. The church also was central in the histories of the Crusades, those attempts to regain the Holy Land for the Christian world, although the later Crusades already reflect the ascendancy of political and economic motives over the zeal for sacred endeavors.

The Christian view of the past was put forth in a number of often ill-defined genres. The biographies of emperors and kings, as well as the *gesta* ("deeds"), which dealt with a whole series of officeholders (abbots and bishops), gave much praise to individuals. That offense to Christian humility was justified by the inspiration the works offered for proper Christian behavior. The most prevalent genres, however, were the annals and chronicles, often difficult to distinguish from each other. Both fit well the Christian image of time rushing toward its fulfillment (the word *chronicle* derives from *chronikos*, "belonging to time"). Particularly the world chronicle, reaching from creation to the contemporary period and divided according to world ages, represented traditional Christian thinking about history at its best. It therefore was a sign of trouble when, from 1100 on, more and more world chronicles dropped the sacred story (at least up to the incarnation) and could no longer master the ever-increasing data by the usual schemes of world ages and four empires. By the fourteenth century the traditional world chronicle also was losing its nourishing base with the decline of monasticism. When its once clearly perceived structure of the human story collapsed, the world chronicle became encyclopedic and, while it was still a source of inspiration (particularly for Franciscan preachers), it conveyed more in the way of information than of a sense of the grand sacred development—a signal for severe problems to come.

**Islamic traditional historiography.** Islamic historiography had its firm anchor in the life and teachings of Muḥammad (570–624 CE). The earlier tribal society left its historiographical traces through the epic *Battle Days of the Arabs* (reports on events and persons) and the genealogical records. But Islamic historiography used also the Old Testament narrative to account for the period before Muḥammad, seen as a time of numerous corruptions of faith reversed at certain points by prophets, each of whom pronounced a new *sharī'ah* (law) and founded a new community of the faithful: Adam, Noah, Abraham, Moses, Jesus, and the final one, Muḥammad, who had to establish true Islam against the most recent falsifications of faith by the followers of Moses and Jesus.

Muḥammad's bringing of the Qur'ān constituted the center of human history, when God had communicated his will to the human race for all time. Thus, the full meaning of history was ascertainable from the *sīrah*, a biography of the Prophet. Of historical material it included the Old Testament account to Ishmael (strong on genealogies), the events in Arabia before Muḥammad (legends and genealogy of Muḥammad), and the life's work of Muḥammad (with many *maghāzī*, that is, histories of the expeditions, their leaders, purposes, and major participants). Traces of pre-Islamic elements, such as a fondness for the inclusion of poetry and narrative reports and a love for biography, appear in the sacred literature of Islam. The reliability of accounts was ascertained by *isnād*, a critical method parallel to that used in Islamic theology and law for inclusion of records into the *ḥadīth* (tradition in the specific sense of verified tradition). It concentrates on establishing an unbroken series of trustworthy transmitters and not on the verification of content. Thus, Islamic traditional historiography could not corrode the sacred core as it was linked to it in method and content.

The task of traditional historians was facilitated by the unity of the Islamic community in the caliphal state with its combined secular and religious authority. With the empire as its given scope, the time flow as its organizing principle, its chronology firmly anchored in the Hijrah (Muḥammad's emigration from Mecca to Medina, 622 CE), and with room for narrative, the annalistic chronicle became the prevalent genre of traditional historiography, reaching its highpoint in al-Ṭabarī's chronicle, the first comprehensive account of Islamic history, reaching to about 915.

While in al-Ṭabarī's history the united empire served as an integrating factor, it was that empire, with its diverse peoples and cultures (of particular impact were Iraq, Syria, and Persia), that gradually made Islamic historiography broader but less homogeneous. The continuing contacts with the outside world and the internal political disintegration also strengthened the centrifugal influences in Islamic historiography. Universal histories slowly became less the conquering story of Islam, starting from the sacred core, and more the story of various cultures, such as in the *Murūj al-dhahab* (Meadows of gold) by al-Ṭabarī's contemporary al-Mas'ūdī (d. 956?). In these histories, although they retained many elements of traditional historiography, the central principle of unity was often a philosophical idea, unconnected with the religious tradition and the unified Islamic state. The spreading doubt and uncertainty provoked a conscious traditionalism that caused a reemphasis of traditional ways in historiography but also a deemphasis of history in favor of theology and religious law, which were perceived as more stabilizing. Historians, for their part, tried to gain a broader theoretical basis for Islamic historiography. After 1000 CE, as traditional Islamic historiography was being challenged by the increasing rationalism and skepticism emanating from the study of Greek philosophy and science, histories quite often began with introductory remarks on the

theory of history that went well beyond the range of questioning permitted by *isnād*.

**The resilient non-Western traditional historiographies.** In comparison with biblically based historiographies, particularly the Christian one, other historiographies were considerably more stable. They did not reject their mythological and religious heritage, largely because their historiographical truth-finding process never assigned a truly corrective or interpretive critical role to reason. Indian historical writing did not draw a sharp line between fact and legend. Chinese (and with it Japanese) methodology expected from reason a careful refinement of the records of the past but not a reinterpretation of the past. Chinese scholars considered a record true if the sources agreed or a documented contradiction was absent (not, as in the West, if multiple independent confirmations were obtained), a standard that assured a high degree of accuracy with a minimal corrosion of tradition. This standard served historians well who strove for the consensus of an ongoing tradition and saw history as the succession of separate, identifiable, and observed events subject to no abstract concept of wholeness and with no structure of a philosophical nature. In Greek and Roman historiographies any radical challenge to tradition was checked by history's divorce from philosophy, its tie to rhetoric, and its role as public servant. Challenges to Islamic traditional historiography were more serious. After 1000, under the influence of ancient Greek philosophy and science, attempts were made to reformulate history's purpose and to construct histories of interconnected phenomena at a distance from sacred tradition. The highpoint of these attempts came with the *Kitāb al-'ibar* (History) by Ibn Khaldūn (1332–1406), which relies on human reflection, not traditional authority, searches universal history for timeless patterns in human conduct as the core to a theory of culture, and aims not at constructing a theoretical image of reality but at assisting in the realization of an ideal society in given circumstances. The *Kitāb al-'ibar* stood between traditionalism and rationalism, as would much of Islamic historiography from then on.

**THE AGE OF ANTHROPOCENTRIC HISTORIOGRAPHY.** Between the 1300s and the 1700s Christian traditional historiography disintegrated slowly but relentlessly and to a degree unprecedented in other cultures. In their quest for authentic texts, Renaissance humanists developed a sophisticated text criticism that stripped layers of later "deposits" from the original texts, beginning the diminution of the aura of ancientness that so far had given weight to tradition and preparing for the view that texts are not the manifestation of universal wisdom but merely the reflection of thought in a particular culture at a given point. Eventually, and with radical consequences, even the Bible would become the object of such critical analysis. Humanist histories also shifted their focus to the world of states and secular individuals, where the religious dimension was secondary.

In the Reformation, Protestants obliterated parts of traditional history when they rejected centuries of ecclesiastical

development as periods of religious corruption. In the bitter struggle over the true tradition, Protestants affirmed a new historical continuity by linking the present directly with the (ideal) apostolic church, while Catholics defended the continuous tradition. The geographical discoveries created a global world whose great variety of people had to be integrated into traditional universal history. At stake were the unitary origin of humankind in Adam and the central position of Jewish history in the course of world history. Thus, according to the Jesuit José de Acosta (late sixteenth century), the American Indians were linked to biblical origins by a migration across the Bering Sea. More audaciously, the seventeenth-century pre-Adamite theory of Isaac de la Peyrere separated the general (pre-Adamite) creation of all people from the subsequent story of the Jewish people beginning with Adam, a view unacceptable to Christians because it left most people without a link to Adam and biblical history.

These challenges further eroded the already weakened traditional universal history. Although that history was much cultivated at the new Protestant universities, its specifically Christian features receded gradually into ecclesiastical history. From the late sixteenth century, schemes appeared that separated human history from sacred history. The latter increasingly became ecclesiastical history and lost ground steadily to the human history that concentrated on the world's immanent concerns. In turn, human history soon experienced difficulties in structuring its accounts similar to those difficulties Christian historians had encountered when dealing with the period after Christ, a period (the sixth world age) that lacked easily identifiable biblical "markers." The new world historians, having abandoned the sacred structures although still accepting the biblical story for the early period, experimented with various structures that gave order and unity to their accounts. Finally, in the 1690s, Christopher Cellarius suggested the still popular division into ancient, medieval, and modern periods, which in effect expelled the Christian story from its central place. The sturdily traditional Roman Catholic historiography never experienced these problems because it yielded the place of honor to systematic theology and its less mutable categories and lessons.

Finally, traditional historiography was drawn into the seventeenth-century battles over epistemological questions. Francis Bacon's empiricism appreciated history as the memory of data for observation. But advocates of the new sciences, along with René Descartes (1596–1650), downgraded historiography for not being able to deliver uncontested general truths. They found history trivial because it did not deduce its insights from a few *a priori* principles. In response, the erudite historians avoided interpretations and restricted their work to establishing an unassailable record of the past through a rigorous criticism of ancient texts and documents. Churchmen, particularly the Jesuit Bollandists and Benedictine Maurists, did pioneering in order to ward off a wholesale rejection of traditional history; indeed, the Maurist Jean Ma-

billon wrote the *De re diplomatica* (1681), which remained the handbook for historical studies for two centuries.

**Adaptation and change of traditional Christian historiography.** From the 1400s to the late 1800s, Western historiography saw attempts to reconcile the traditional Christian view of history with developments that favored a secular vision of history. They included the cyclical interpretation of history, the appreciation of ages and cultures on their own merit (historicism), a simple updating of tradition, stipulations of a unitary process including God and the world, and, finally, development of a historical science that still left room for the Christian interpretation of history.

*God and the organic pattern.* The cyclical model of organic life, particularly its decadence phase, had been part of the classical tradition and recently had been revived as an interpretive view to replace the traditional Christian interpretation of history. Then, in the early 1700s, Giambattista Vico, who accepted biblical history up to the Flood, put forth a systematic cyclical view of history for the time afterward, when human society was formed through the rituals of burial and worship, and the regulation of sex. Divine providence prescribed for history a pattern of *corso* and *recorso* (“cycle” and “recurrent cycle”). Each cycle had three successive stages—the eras of gods, heroes, and men—and was characterized by its own type of life, thought, language, and arts. The last stage, although most advanced, was not superior to the others, because in a paradoxical development the more humane a society became the more subject it became to decay, making the high point of humaneness the beginning of a new barbarism as well. Also using the organic model, Johann Gottfried von Herder (1744–1803) stressed God’s special care for the *Volk*, an organic unity of people with its own language, arts, thought, and literature. History told the stories of *Völker*, none superior to the other because all were equidistant from God, although Herder eventually dropped the mere sequence of nations for a hazy developmental theme—the increase of *Humanität* (a refined civility). Herder stood at the beginning of historicism when he endowed each historical phenomenon with its own value, thus refusing to measure the value of historical ages on the scale of progress. The affirmation of the Christian tradition, including divine providence, saved early historicism from the radical relativism inherent in the assertion that each historical phenomenon must be appreciated on its own terms. In the nineteenth century, that historicism pervaded the historical science of the Lutheran Leopold von Ranke (1795–1886). But after 1850, all religious affirmations were removed from historicism, laying bare its inherent relativism and skepticism toward all schemes of meaning beyond the affirmation of the uniqueness of each phenomenon; this in turn initiated in the 1880s a fervent search for historical truth and meaning.

*Progress, a radical challenge.* The eighteenth century brought a revolution in the interpretation of universal history as the theme of historical progress triumphed over the traditional scheme of Christian universal history. In the previ-

ous century, the latter had found its last prominent advocates in Sir Walter Raleigh (1554–1618) and Jacques-Bénigne Bossuet (1627–1704). Now, as interpreted by a philosophy (as opposed to a theology) of history, world history became the story of humankind’s emancipation through the progressive ascendancy of reason. At first suppressed by ignorance and superstition, rationality increased under the pressure of human unhappiness until by the eighteenth century it reached maturity in some Western nations, a pattern that was expected to be repeated universally. Christian faith and its views on history were seen as manifestations of an earlier, less developed stage and was valued only for the church’s preservation of learning. The meaning of history was entirely immanent, anthropocentric, and entirely determined by the imagined perfect future, a total reversal of the Christian view of the meaning of history as transcendent, God-centered, and dependent on the sacred past. History was no longer the working out of God’s will leading to the transcendent kingdom of God but the demonstration of progress, with all ages being stepping stones toward the perfect future age—a secular kingdom of God (although some proponents of the progress view, such as Voltaire, were skeptical of the idea of universal perfection).

This radical challenge to the traditional Christian view of world history called forth Christian responses along the lines of either rejection or adaptation; the challenge was felt most intensely in the German-speaking world, where, in the early nineteenth century, the historical approach in the search for truth became supreme. There, romantic and idealist adaptations to the progress view were based on a fundamental reinterpretation of God’s relationship with the world. In the eighteenth century, under the influence of rationalism, God, still perceived as a person, was seen to govern a human history in which human beings could, through the education of their reason (one akin to God’s reason), improve the world materially as they simultaneously enhanced themselves spiritually. History was God’s education of mankind to an ever fuller comprehension of God (a progress entailing even the overcoming of some biblical concepts that could be considered outdated) until the spiritual, rational, and historical worlds would be identical. In the nineteenth-century idealist and romantic concepts of history, God no longer governed the world from “outside” but rather was immanent in it as *Urgrund* (primal, eternal cause) or as a dynamic spiritual principle. God and the world formed a dynamic whole. The kingdom of God referred simply to the spiritual perfection in and of this world, making all of history *Heilsgeschichte* (“history of salvation”). Thus, in the philosophy of history of Georg Wilhelm Friedrich Hegel (1770–1831), the complex relationship of creator and creation in time was transformed into the self-realization of the all-encompassing Idea (pure thought), a process reflected in the increasing identity between the universal and the particular and the potential and the actual. The process was driven by the dialectical struggle of the existing against its inherent negation and directed toward the creation of the new. In a

grand unitary process, the cosmos including God was in motion toward its goal—not happiness or rationality but the fully realized Idea (complete actualization and freedom).

Idealist adaptations of the Christian theology of history reduced the meaning of many traditional elements: the biblical story became relevant for its own time only; the transcendent kingdom of God was transformed to the end stage of the immanent world process; the Christian faith was now only one (although superior) explication of the universal religious truth, with Jesus being one (although special) explicator. History changed from a dramatic struggle between the forces of light and darkness into a dialectically evolving sequence of stages of ever-greater spirituality. In a few cases this mode of thought even affected Roman Catholicism. In the 1830s, Johann Adam Möhler stipulated the reconcilability of tradition with progress as Christians helped the seeds of faith mature by constantly overcoming the time-bound manners of understanding faith and tradition.

*Tradition and historical science.* The drive toward a historiography, not based on traditional authority but on rigorous documentation through critically verified sources begun by erudite historiography, owing a great debt to classical philology, and enhanced by the eighteenth-century Göttingen professors of historical, legal, and political studies, finally produced nineteenth-century German historical science. However, its leading figure, Leopold von Ranke, still considered history God's work, accomplished through the "ideas" as guiding forces and intelligible to historians through an intuitive process (*Abmen*). But the Rankean compromise collapsed, because the new methodology demanded the abandonment of all transcendent elements and because historicism could see in the Christian tradition no more than one of many traditions. Christian scholars who eventually applied text criticism to the Bible in the hope of securing faith through a text properly verified and congenial to modern minds in effect brought about a rapid diminution of the biblical core of traditional historiography. Typical was the attempt to reestablish the authority of the Christian faith in a modern manner through a critically verified biography of Jesus that would reveal what Jesus actually said, did, and taught (see the nineteenth-century "natural" histories of the "prophet" Jesus or Ernest Renan's popular biography of Jesus). Yet, this endeavor failed, because in only a few instances could the Christ of dogmas, miracles, and prophecies be penetrated and make visible the historical Jesus—a problem of great consequence for subsequent attempts to reconcile history and faith.

**Religion and a radically anthropocentric historiography.** Beginning in the 1880s two developments marked the history writing on various continents. Historical science in its secular and tradition-eroding form exerted its impact on the remaining traditional historiographies of the world, while in the West a not-yet-concluded internal struggle began to gain a firm critically verified basis for historical truth, including a new secular interpretation of history. For

their part, Christians continued to reconstruct the traditional Christian view of history.

*Impact on traditional historiographies.* Strains appeared in traditional historiographies even before the impact of the Western critical theory of history. It proved increasingly difficult to integrate the many and varied phenomena of the changing world into a tradition developed from a sacred core. The strains showed first in methodology, the endeavor charged with devising ways to find and affirm truth. Prior to 1900, some Chinese scholars had attempted to make historical methodology (mainly text analysis) more accessible to rational arguments without weakening the tradition so essential for social stability, continuity, and dynastic legitimacy. Then, when Western intrusions ended the isolation of China and the revolution of 1911 overthrew the monarchy, Chinese historiography's continuity and stability were shattered, too. Chinese historians began their search for a new sense of continuity by stressing those genres of traditional historiography most akin to the modern spirit (histories of scholarship, institutions, statecraft); by adapting the old methodology to the Western model, which meant going beyond text criticism and partially accepting the modern Western worldview; by dethroning the classical tradition, such as turning Confucius from a sage for all ages into a "forward"-looking reformer for his own period only; by fusing Western liberalism and its view of progress to the traditional sequence of Chaos, Peace, and Harmony, identifying the last with democracy; and, finally, by adopting a version of Marxist historical materialism, totally hostile to traditional views of the past.

Japanese traditional historiography knew no rationalist undercurrent, although a critical attitude toward past records was not absent as the work of Motoori Norinaga (1730–1801) showed. Yet he analyzed the language and the ideas of ancient Japanese texts not in the interest of a rationalist ideal but in accord with the Shintō restoration of the Tokugawa period that attempted to cleanse these texts of all Chinese and Buddhist accretions. After the opening toward the West in 1868, the Japanese were first convinced that minor adjustments in their traditional views on history would suffice. At the College of Historiography a record collection began in 1877 as a basis for the ongoing *Dainippon hennenshi* (Chronological history of Japan), a work written after the Chinese pattern. But during the following decades Japanese historians came to know German historical theory and English historical monographs; this led to the founding in 1889 of the Historical Society of Japan, which was dedicated to the Western historiographical model. Yet both the Chinese and the Western historiographical models soon found resistance in a new Japanese traditionalism—nationalism. In 1895 *Dainippon hennenshi* was abandoned because of its Chinese character, and while many Japanese works in the Western manner appeared, pro-imperial traditionalist historiography received increasing support.

Islamic historiography has experienced the coexistence of traditional and Western critical historiography, so com-

mon to many modern societies. Attempts to fuse Western historiography with the traditional concepts of Islam coexist with calls from fundamentalists for a return to a strictly traditional historiography. Relative to Islam, however, only Indian historiography has preserved more of its traditional historiography. Traditional chronicles were written in the state of Maratha well into the twentieth century. The absence of a true methodological tradition aiming at the “certain fact” denied Western influence a logical point of entry. Western historical science had to create a separate body of historiographical works.

*Christian historiography and the triumph and crisis of historical science.* By the 1880s, history perceived as a science had triumphed in Western historiography. Modest success had come to the “natural science” school of historiography that had started in the 1830s with Auguste Comte’s three-stage interpretation of history as first theological, then metaphysical, and finally positive. This last, the fulfillment of all of history, recognized no absolutes and essences, only laws governing relationships between phenomena. But no such positive historical laws have been found. German historical science, the attempt to unite history and science without destroying history’s autonomy, had become prevalent. It was just as destructive of traditional historiography, because by rejecting the traditional views and interpretations of history it converted pre-nineteenth-century works into mere pools of source materials. In turn, from the 1880s on, the triumphant scientific history was forced to embark on a search for a new logic of historical inquiry, safely distant from religion or metaphysics, but able to forestall the anarchy of opinions that in the absence of a body of traditional truth threatened the very endeavor of history. Since the 1930s that search has accelerated: neo-idealists advocated the process of mental reconstruction of the past (R. G. Collingwood); admirers of the creativeness of life saw historical truth as everchanging with life (Benedetto Croce); neo-positivists looked for laws covering large numbers of phenomena (Carl Hempel); analytical philosophers found the structure of history in the language structure of historical works; and finally there have been scholars who saw in a consistent, densely reasoned, and well-documented narrative the proper basis for historiography.

With much of the Christian historiographical tradition rejected and historical science more certain of its ability to reconstruct the factual past than of its ability to interpret that past, grand ideologies filled the void: liberalism with its faith in inevitable progress; Marxism with its interpretation of history as the story of the dialectical overcoming of all exploitative societies in favor of the socialist/communist society; and fascism with a militantly nationalist interpretation of the past, linked to a romantic notion of the concentration of the “national soul” in a leader. They all in their own ways neutralized religion and other elements of traditional historiography. Those concerned with Christian historiography found the competition fierce and to many of them accom-

modation to modernity seemed more promising than its rejection.

Enamored by the spirit of progress through the sciences and the Enlightenment, the Jesuit Pierre Teilhard de Chardin (1881–1955) formulated a Christian view of history full of hope closely akin to the modern “religion of the earth.” As a biologist he spoke of salvation as the evolution of consciousness to higher and higher levels approaching Christ’s perfect consciousness. A modern social reformist spirit shaped the American turn-of-the-century Social Gospel movement, and, since the 1960s, Hegel’s and Marx’s visions of an immanent kingdom of God on earth have reverberated in liberation theology, with its call to Christians to make common cause with the poor and oppressed of the developing nations. Here the end of time is not only defined as the ultimate union of human beings with God but also as the communion of human beings with each other. It is not clear whether the process is an ongoing one (ever-new identifications with ever-new poor and oppressed) or a state of perfection following a onetime liberation.

Rejecting all easy adaptations to secular philosophies of history, Reinhold Niebuhr’s *Faith and History* (1949) put forth a Christian view of history that took into account the achievements and the horrors of the twentieth century, a period whose widespread ignorance of biblical tradition contrasted with the affirmation of the “goodness” of human nature and a belief in progress. Niebuhr demonstrated the irony in history of the best human intentions turning to ill effects and pointed to the greater realism of the Christian historical interpretation, which praises human genius but also is aware of evil, the limitations of the rational mastery of the world, and the futility of a life of immanence. History, in which the sacred and profane could never be fully united, is creative but not redemptive.

In this period of fundamental changes, Christian scholars continued to try to reestablish the authority of the Christian tradition by making its core impervious to modern criticism. For many Protestant scholars this meant reducing the biblical component to a small historically, scientifically, or existentially validated core. Rudolf Bultmann and Paul Tillich held the intrusion of eternity (God) into time (human history) to a minimum. For Bultmann the only historical event of sacred character was the Easter event; all other biblical stories were myths (human images of otherworldly phenomena). The *kerygma*, the challenge to faith in Christ, emanated from an understanding of the Easter event and led to timeless recurring decisions to faith. There was neither a base nor a need for a Christian interpretation of history. Tillich, who doubted that any religious statement could be more than symbolic (that is, could directly depict divine reality), acknowledged the role of the historical Jesus as demonstrating human existence without worldly distortions and calling all people to a “new being.” But since much of human activity reflected to various degrees an “ultimate concern” with the “ground of being,” he considered all cultural history to be sacred or religious history.

Other scholars found the price of such a harmonizing with the modern spirit—the abandonment of much of the biblical story as the basis of historiography—too high to pay. Among these scholars were the Protestant fundamentalists, who restored biblically based prophetic history to the center of Christian historical accounts. In the Augustinian and Kierkegaardian vein, Karl Barth (1886–1968) sharply separated time and eternity, insisting that only in biblical times did God reveal himself and not in the course of history, progress, or culture. Christian faith and wisdom rise from the decision individuals make when confronted, in the biblical record, with the story of Christ, and not from the study of the history of cultures and societies. For Barth, history, even ecclesiastical history, is therefore no more than an auxiliary tool of theology.

Large-scale attempts to write the history of cultures from a Roman Catholic viewpoint have been made (Christopher H. Dawson, Martin C. d’Arcy). But since the 1960s such attempts have focused on Roman Catholic Church history, one of the last bastions of traditional Christian historiography. While Protestant historiographical arguments have focused on how much of the Bible could be used in a scientific age as a foundation for interpreting history, Roman Catholic arguments now concentrated on the unique sacred role of the Catholic Church in history. In the 1950s, the traditional view still prevailed that the church, like Christ, represented a unique presence of eternity in time (Jean Daniélou, Henri-Irénée Marrou, Hubert Jedin). At its core, all interpretation of history was explication of doctrine. Then, Vatican II deemphasized the conception of the church as the *corpus mysticum* (mystical body of Christ) in favor of the church conceived as the people of God through time. Some Catholic scholars took this change to mean that the dependence of historical interpretation on theology could now be broken. They attempted to turn church history into a sociological study of an institution or an analysis of the changing behavior of believers in time. With the abandonment of all claims for a special status of the church in history, its history would become one special history among many.

**Outlook.** The near future should see the beginnings of a solution to the dilemma in historical interpretation, now global in scope. For centuries the ancient myths and then the great religions had created and supported the schemes for explaining and organizing history and, with it, meaning. Also, traditional historical interpretations were part and parcel of the traditional social and political order; thus their diminution in strength meant more than just the fading of some opinions. Their challenger, modern Western historical science, too, is an integral part of a larger whole—the scientific-technological Western culture the achievements of which have radically increased the human potential for good and evil and which for the first time has linked all human societies into an interdependent network. As part of the new “religion of the earth,” historical science rejects all sense of mystery and demands that interpretations of history use forces,

patterns, and aims immanent to this world. Thus there is the suspension of moral judgment in historical methodology, an endeavor of great sophistication that has not only expunged superficial or false interpretations but also the ascertaining of meaning in history. None of the new models or narratives, brilliant as they are, has as yet been able to match the public role of traditional history. On the other hand, various attempts to continue the traditional historiographies in a manner acceptable to scientific historiography have had only temporary success. In this crisis the age-old link between religion and history writing is at stake. Religion is threatened with becoming irrelevant to interpreting history, doomed to an ahistorical, recurrent reliving of the sacred past by individuals, while the writing of history, supported by a sophisticated methodology, remains a technical endeavor given to the reconstruction of aspects of the past. In such a situation neither religion nor history is able to master the reconciliation of the past, present, and future that in centuries past has enabled them, in conjunction with each other, to serve a public purpose and give meaning to the flow of life.

#### BIBLIOGRAPHY

Two useful books on the phenomenon of time are *The Philosophy of Time: A Collection of Essays*, edited by Richard M. Gale (Garden City, N.Y., 1967), which focuses on interpretations of time, and Stephen Toulmin and June Goodfield’s *The Discovery of Time* (1965; Chicago, 1982), which narrates the Western revolution in the view of time since the Middle Ages. There is a great deal of literature on the interpretations of history within the West; less material is available for other cultures. The most comprehensive and up-to-date account of Western historical interpretations is my *Historiography: Ancient, Medieval, and Modern* (Chicago, 1983). It includes a most useful thirty-five-page bibliography. More information on specific periods can be found in Harvey H. Guthrie’s *God and History in the Old Testament* (Greenwich, Conn., 1960); L. G. Patterson’s *God and History in Early Christian Thought* (New York, 1967); Beryl Smalley’s reliable *Historians in the Middle Ages* (London, 1974); Alan Richardson’s *History: Sacred and Profane* (Philadelphia, 1964), a fine treatment, although occasionally difficult for the general reader; and *God, History, and Historians: An Anthology of Modern Christian Views of History*, edited by C. T. McIntire (New York, 1977). There is a dearth of readings in non-Western historical interpretations. Most useful, although a bit awkward for the person looking for a general survey, are the published papers of the 1956–1958 conferences at the School for Oriental and African Studies at the University of London. The following volumes are eminently readable and offer general introductions to scholarly debates: *Historians of India, Pakistan, and Ceylon*, edited by Cyril Henry Philips (London, 1961); *Historians of China and Japan*, edited by W. G. Beasley and E. G. Pulleyblank (London, 1961); and *Historians of the Middle East*, edited by Bernard Lewis and P. M.

Holt (London, 1962). Information on Islamic historiography can also be found in Franz Rosenthal's *A History of Muslim Historiography*, 2d ed. (Leiden, 1968), a useful survey of the genres of traditional Islamic history (includes some translated texts); Muhsin Mahdi's *Ibn Khaldūn's Philosophy of History* (Chicago, 1969), which also deals with the cultural context of later Islamic historiography; Abdallah Laroui's *The Crisis of the Arab Intellectual: Traditionalism or Historicism?* (Berkeley, 1976); and Yvonne Haddad's *Contemporary Islam and the Challenge of History* (Albany, 1982). The last two works cited offer insights into the current struggle for a renewed and appropriate Islamic view of history. For traditional Indian historical views, Anthony K. Warder's *An Introduction to Indian Historiography* (Bombay, 1972) offers a good section on the Vedic core together with regional summaries. For the period of westernization, *Historians and Historiography in Modern India*, edited by Siba Pada Sen (Calcutta, 1974), gives sketches of historians and their works. Access to Chinese and Japanese interpretations is most limited for the general reader. Charles Sidney Gardner's *Chinese Traditional Historiography* (1938; reprint with corrections, Cambridge, Mass., 1961) is still useful, particularly for the understanding of Chinese methodology. Also useful is George Macklin Wilson's article "Time and History in Japan," *American Historical Review* 85 (June 1980): 557–571.

*Revised Bibliography*

## HISTORIOGRAPHY: WESTERN STUDIES [FIRST EDITION]

Within the Jewish and Christian traditions, the origin of philosophical and historical examinations of religion lies in the works of the ancient Greeks. This is equivalent to saying that the point of departure for these traditions' philosophical and historical self-examination is Greek thought. Other attitudes toward the development of religion are undoubtedly to be found in Egypt, Mesopotamia, India, and China before Greek thought intervened, but these attitudes will remain

outside my present consideration. I shall here be concerned basically with the examination of religion within the Hellenic tradition.

**HISTORICAL AND PHILOSOPHICAL DICHOTOMY.** A significant distinction was imposed by the very nature of the Greek perspective: philosophical examination and historical examination of religion became two distinct branches of knowledge. Indeed, it is characteristic of Greek thought to distinguish in general (at least from the fifth century BCE onward) between philosophy and history. No doubt philosophical criticism operates inside a historical or antiquarian examination of religion, and, reciprocally, the empirical knowledge of cults and myths collected by historians or antiquarians assists philosophical criticism of religion. But the two subjects—philosophical and historical evaluations of religion—are seldom fused or, at least, seldom confused.

To indicate the depth of this dichotomy in Western thought, it is enough to mention David Hume, who was one of the most radical eighteenth-century thinkers about religion—perhaps one of the most radical thinkers about religion of modern times. Hume approached religion from both the historical and the philosophical points of view. In his *Natural History of Religion* (1757) in which he treats religion in historical terms, he states, "As far as writing of history reaches, mankind, in ancient times, appear universally to have been polytheists." Findings about modern tribes only confirm for him the facts adduced by the ancients about the original polytheism of mankind. In the *Dialogues concerning Natural Religion*, which appeared three years after his death in 1779, Hume discusses religion from a philosophical point of view. His concern is not the evolution of religion but the validity of religion. He contends that the argument from design for the existence of God is of doubtful value. It is generally recognized that Hume took Cicero's *On the Nature of the Gods* as a formal model for his *Dialogues concerning Natural Religion*. There is no obvious ancient model for his *Natural History of Religion*, but he must have carefully considered Diodorus Siculus's *Historical Library*, book 1 (of the first century BCE) and was familiar with the work of Herodotus and Lucian.

**THE ANCIENT GREEKS.** After Herodotus (fifth century BCE), history in Greece tended to be confined to what we would call political and constitutional history, although doctors like Galen use the word *historia* to mean a compilation of medical reports in literature. Other aspects of the past such as religious ceremonies, festivals, or sacrifices, were more frequently examined in monographs that were sometimes generically designated *archaiologia* (in Latin, *antiquitates*). Biography was a separate literary genre: if the subject of a biography was a religious personality (a religious reformer, a priest, a holy man, or even a superstitious politician), biography was a contribution to the history of religion. Within Christianity such biographies were written to recount the lives of saints.

**Poetry.** Two well-known features of Greek Archaic poetry had consequences for the study of religion. The poetry

of Hesiod, especially his *Theogony*, shows a marked tendency to treat the world of the gods as a historical world. In Hesiod's poetry there is a succession of generations of gods in which older gods, without necessarily dying, lose their power in confrontations with younger gods. The society of gods is perceived as a society to which new members are added and in which members gain or lose power. There is not only a change of human attitudes toward gods, but there is also a change in the attitudes of the gods themselves. In Hesiod, myth already incorporates the notion of a succession of leading gods: myths are presented as a sort of history of religion. Another important feature of Greek Archaic poetry is its frequent criticism of the gods. Such criticism often radically repudiated commonly held views about the gods. For example, Xenophanes (fl. 500 BCE) remarked that just as the Ethiopians imagine their gods to be similar to themselves, so horses, if they could paint, would paint their gods as horses.

**Philosophy.** The critical opinions about the gods in Greek Archaic poetry encouraged and inspired philosophical critiques of religion and historical research on the diversity of religions among the nations. Philosophers tended to separate God from mortals to the point of making God almost unintelligible except as the first mover or as a celestial body. The Stoics used allegorical interpretation (which had been current in explaining away embarrassing episodes of the *Iliad*) to turn mythology into a confirmation of their pantheistic materialism. In the handbook *Theologiae graecae compendium* by Cornutus (c. 50 CE), one finds a systematic summary of Stoic allegory with some interesting statements about the religious attitudes of primitive humans. Only Epicurus (341–270 BCE) insisted on believing in the existence of the traditional gods; his position did not allow the gods to exercise any influence on men, and he found in their happiness a model for the happiness of philosophically minded men. It is surprising how few references are made to the gods in the extant works of Aristotle; passages about them are almost marginal remarks (*On the Heavens* 2.1.284a; *Metaphysics* 1.2.982b, 11.8.1074b). Hence, in later Greek thought, especially among Neoplatonists, mystical practices were introduced to supplement the scanty information about gods in the discussions of the philosophic masters.

**Historical research.** Supported by visits to sanctuaries and by travels to foreign countries and remote localities, historical research provided both the raw material and the guiding principles for alternative historical interpretation. As a keen traveler and as one adept in the comparative method (which contemporary doctors used to explain climatic differences), Herodotos provided a model for research on religion. He explained similarities between Greek and Egyptian gods by claiming that the Greeks had derived their gods from Egypt. His account of the Scythians shows his awareness of the difference between reporting and believing. Even more telling of this awareness is his conclusion of the story of Salmoxis: "Whether there was a man called Salmoxis, or this be a name among the Getae for a god of their country, I have

done with him" (4.95–96). Herodotos influenced Greek, and later, Roman writers who explored the customs of foreign countries and who also, as natives, explained to Greeks and Romans the characteristic features of their own countries. Accounts by non-Greeks became particularly frequent after Alexander the Great. These non-Greeks, who had adopted the Greek language, include Manetho (fl. third century BCE), Berossus (fl. 290 BCE), and later Josephus Flavius (c. 37–100 CE). Incidentally, Josephus's writings on the Jews comprise the only complete ancient account of a "barbarian" religion by a native to be preserved—although they were preserved through Christian, not through Jewish, tradition. Posidonius (c. 135–51 BCE) of Apamea in Syria deserves special note insofar as he was both a Stoic philosopher of somewhat mystical inclinations and a universal historian who purported to be a continuator of Polybius; he was, however, more anthropologically oriented than his predecessor.

Greek and Roman historians tended to ignore religion, especially when they dealt with Greek and Roman history. Consequently, most of what we know about Greek and Roman cults is derived from specific monographs on religious subjects (e.g., Plutarch on the Delphic oracle and Lucian on the Syrian goddess), accounts by travelers and geographers (e.g., Strabo and Pausanias), or, finally, works by Christian polemicists (e.g., Lactantius and Augustine).

Books on religion during the Hellenistic and Roman period reflect contemporary perspectives and interests. In the third century BCE, the ruler cults were developed by Alexander and his immediate successors. Ruler cults had, of course, existed before in and outside of Greece; but this new expansion was far more powerful and, at least for Greek speakers, involved delicate balances of power between men and gods. Persaeus, the pupil of Zeno the Stoic, and others reminded their contemporaries that past benefactors and kings had been divinized (cf. Cicero, *On the Nature of the Gods* 1.15.38). Hecataeus of Abdera (c. 300 BCE) distinguished two categories of gods: the celestial and the terrestrial. The second category was comprised of benefactors. (Diodorus Siculus in his *Bibliotheca historica* 1.12 probably reflects his teaching.) In his *Sacred History*, Euhemerus (fl. 300 BCE) claimed to have discovered on the island of Panchaia an inscription revealing that Zeus had been a mortal king who had received divine honors for his contribution to civilization; Zeus was born and died in Crete. Whether Euhemerus thought that all the gods had been men like Zeus is uncertain. Though Euhemerus shocked many with his ideas and his forgeries (the latter being the object of a virulent attack by Eratosthenes), his ideas had success: his book was translated into Latin by Ennius in the second century BCE, and was summarized by Diodorus in the first century BCE. Antoine Banier's *La mythologie et les fables expliquées par l'histoire* (3d ed., 1738–1740) shows that scholarship continued to be euhemeristic even in the eighteenth century.

In the second and first centuries BCE, many erudite Greek works tried to preserve the memory of ceremonies that

were becoming obsolete. Most of these works were lost, except for what may have passed into later lexicons, such as the so-called *Suda*. A conspicuous model, known to the Latins, of this erudition was the work about Athens by Polemon of Ilium (fl. 200 BCE). In Italy Alexander Polyhistor (d. late first century BCE) gained a reputation for systematic compilations of this kind of information about foreign countries.

**ROMAN THOUGHT.** The Latins of the first century BCE had a state with a vigorous religious tradition of its own; this tradition was considered to be the foundation of and the justification for Rome's enormous power. Roman religion had become a constitutive aspect of Roman prestige among her subjects. On the other hand, Greek philosophy had penetrated Roman thought: antiquarian devotion to the religious past was in conflict with rationalistic and irreverent tendencies. In this context a distinction among the theologies of poets, philosophers, and statesmen, probably borrowed from Greek philosophers, became popular in Rome. This distinction was formulated by the Roman lawyer and pontiff Q. Mucius Scaevola and was accepted by Marcus Terentius Varro and (by implication) by Cicero. Mucius Scaevola preferred the theology of statesmen, finding even the theology of the philosophers dangerous. The hesitation is conspicuous in Cicero who, however, is chiefly the protagonist of the introduction of systematic philosophical criticism into the interpretation of Roman religion. Others were oriented toward a guarded defense, or reconstruction, of Roman religion, though they were aware of philosophical argument. Even in Rome Varro was something of an exception when he produced and dedicated to Julius Caesar his *Divine Antiquities*, a systematic description of Roman religion. Varro had reservations about the traditional religion of Rome, but he was mainly interested in saving what was in danger of being forgotten and in propounding it to the ruling class: unknowingly, he was preparing the ground for the restoration accomplished by Augustus. His work (which, much later, Augustine made the foundation of his criticism of Roman paganism) immediately became more authoritative than that of his contemporary Nigidius Figulus, who was strongly committed to religion. There was a great deal of antiquarian doctrine on Etruscan, Persian, and Egyptian religions—not to mention Greek cults—in Figulus's books (e.g., *On the Gods*). If Varro wanted a reasonable preservation of the Roman past, Nigidius Figulus seems to have been more aggressively in favor of a personal synthesis. He emphasized the power that religious practices give to the individual, not to the state. Varro and Nigidius could hardly ignore their Epicurean contemporaries, such as Lucretius, who preached an almost religious escape from religion.

Traditional Roman religion could never be simply taken for granted after the Caesarian age. Though Augustus put an accent on conservation of the past, the writers of the imperial age, even under Augustus, were explicitly or implicitly conditioned by new religious currents. Some writers remained within the frame of paganism ("Oriental cults"); others preached a god who was incompatible with other gods (Juda-

ism and Christianity). The most difficult pagan writers to assess are those who composed their books when Judaism and Christianity were well known, and yet ignored or gave only perfunctory attention to these religions. There is perhaps no great antiquarian lore behind such writers, but they wrote primarily as historians, rather than as philosophers. It is not very clear why Plutarch (c. 46–after 119) writes what he writes about Isis and Osiris and other religious subjects. The same can be said about Pausanias's *Description of Greece* (second century CE) with its great attention to the history of cults in various parts of Greece. It is also difficult to separate autobiography from antiquarian lore in some of the religious speeches by Aelius Aristides in the same century. With Lucian (c. 120–after 180) we are indeed on the threshold of direct polemics with Christianity ("The Passing of Peregrinus"), though his main contributions to the history of religion are his study of his contemporary Alexander of Abonuteichos, the false prophet, and his description of the cult of Dea Syria in Hierapolis, which was composed in an archaizing style inspired by Herodotus.

**CHRISTIAN-PAGAN POLEMICS.** Though polemics between Christians and pagans became common in the second century, Judaic circles (as judged from preserved works) were no longer inclined to discuss religious differences either philosophically or historically. A possible exception is the recently published letter by "Anna" to Seneca, which may be a piece of Jewish propaganda on monotheism that was written not later than the fourth century (see Bernhard Bischoff, *Anecdota novis-sima*, Stuttgart, 1984). The Christians had to explain to the pagans why paganism, that is, polytheism, existed and was deplorable. This involved an element of historical explanation. The pagans, on the other hand, did not have to explain their own existence: it was sufficient for them to defend the rationality of their beliefs, as Celsus did, for instance, by explaining the function of polytheism in a plurinational world. Thus, in this exchange, there was more historical interest on the Christian side, a point worth remembering, as the Christian view prevailed. Whether the Christian view attributed polytheism to demonic influences or to the adulation by human beings of human beings, as the pagan Euhemerus had suggested, there was an element of historical conjecture in the Christian point of view. Indeed, Christian writers used pagan erudition to support their argument. It is enough to point to the use made of Varro by Augustine in the *City of God*; before Augustine, Varro's work was used by the Christian writers Arnobius and Lactantius. Furthermore, Augustine (and he was not alone in this) applied to the evolution of Jewish religion the biological scheme of the transition from infancy to maturity that he had met in pagan historians (*City of God* 10).

**SECOND TO FOURTH CENTURIES.** It would be idle to pretend that the polemics between pagans and Christians in the second to fourth centuries represented more than a secondary contribution to the historical study of religion. Actual historical work is rather to be found in two other types of writing. One is biography of holy men, both pagan and

Christian, which was common in this period of conflict between paganism and Christianity. For example, the biography of Apollonius of Tyana by Philostratus (c. 170–c. 245) precedes the biography of Antony of Egypt by Athanasius (c. 293–373). Biographical exploration now becomes an essential way of describing and understanding religion. Next to it, and hardly less important, is a new form of ecclesiastical history with its peculiar techniques for following up the growth of the church or churches. There is a question about the relation between Eusebius's *Church History*, the prototype of the genre, and the Gospels and *Acts of the Apostles*. It is enough here to underline the fact that, within the tradition of Greco-Roman historiography, first the Gospels and then the *Church History* introduce new and revolutionary types of historiography of religion. *Acts* is, within this literary genre, less original. There is, furthermore, the wider question of whether what we now call pseudepigrapha intended to provide historical information about past situations. This question can be put to such different texts as *4 Maccabees*, the *Martyrdom and Ascension of Isaiah*, and the *History of the Rechabites*; it can even be put to what to us is a novel, the story of *Joseph and Aseneth*.

**THE MIDDLE AGES.** Insofar as lives of saints and ecclesiastical histories remained extremely fertile genres of historiography in the Middle Ages, there was no shortage of recordings of religious events between the sixth and the fifteenth centuries. Furthermore, the ordinary chronicle was adapted to register events inside religious institutions (e.g., monasteries or cathedral churches), and it may be difficult to distinguish this chronicle from a local ecclesiastical history. Histories of wars had to take into account wars that had overwhelmingly religious meanings, such as the Crusades. Conversely, Ordericus Vitalis (1075–1142?) was not the only chronicler to worry about the encroachments of secular history on that ecclesiastical history that he had meant to write in the early twelfth century.

However mixed in character the single events reported, a definition of new religious experiences emerged everywhere. It is obvious in the “spirit of the Crusades,” though one must remember that there were also crusades against heretics. These crusades had their historians (though not many, unfortunately, on the side of the heretics). Our notion of monastic life would be poorer without the autobiography by Abelard and the answer that Héloïse gave to it. The appearance of anchorites among the debris of rural Anglo-Saxon society after the Norman conquest is made vivid by the autobiography of Christina of Markyate, the recluse of the twelfth century. And, of course, there is the assiduous utilization of prophecies by historians of every kind, even by such a hard-boiled historian of the late twelfth century as Giraldus Cambrensis (Gerald de Barri).

These chronicles and biographies, however, seldom analyzed the religious phenomena they described. In the Middle Ages, understanding of religious diversity, if it was even attempted, is in sermons or philosophical treatises rather than

in histories. This is true also of what Jews and Muslims wrote about religion: the former, in any case, had little historiography. Jews, Muslims, and Christians shared monotheistic presuppositions. The differences between the three faiths were debated theoretically rather than investigated historically. There was even less urgency among Jewish, Muslim, and Christian thinkers to understand polytheistic religions. Even Thomas Aquinas tended to follow the most unhistorical aspects of patristic thought in explaining the existence of polytheism. This tendency is also apparent in Jewish thought. Yehudah ha-Levi (c. 1075–1141) portrays the king of the Khazars discussing his own conversion with a rabbi without any serious reference to data derived from ordinary historical or ethnographical sources. Even Maimonides (Moses ben Maimon, 1135/8–1204), who claimed that he had read all he could in Arabic sources about the heathens and who had a keen sense of the social conditions of religious life, confined himself to philosophical or theological arguments. Some Muslim, Jewish, and Christian thinkers explained changes in religion by reference to astral influences (Abū Mashar, Avraham ibn Ezra, William of Auvergne, etc.) The Bible was of course the enormous exception; it was quoted by both Jews and Christians as a source of historical information. Though it would be wrong to underrate the medieval (especially Jewish) contribution to biblical criticism, the Bible as a sacred text was kept isolated from profane historiography.

The first beginnings of a different, more historical approach to religion, and especially to polytheism, is to be found in Islamic, Christian, and Jewish works of the eleventh to twelfth centuries that report on the religious situation in countries visited either by the authors or by their informants. Examples of this new approach are found in the writings of al-Bīrūnī on India, Adam of Bremen on northern Europe (as seen from the diocese of Bremen–Hamburg), and Benjamin of Tudela on the Jews of various parts of the world. This approach was developed further by Christian writers in the middle of the thirteenth century and coincides with the remarkable attempt of Christianity to come to terms with the Mongolian Empire as a potential ally against Islam. Giovanni del Pian dei Carpinī (John of Plano Carpinī) and William of Rubrouck belong to this current, to which one can add Marco Polo. (An English translation of the reports by del Pian dei Carpinī and W. Rubrouck is found in *Mission to Asia*, trans. Christopher Dawson, Toronto, 1980.) Knowledge gained through exploration and diplomacy restored paganism as a relevant part of the contemporary world and supplemented classical accounts of polytheism. At least one writer, the Icelandic historian Snorri Sturluson (1179–1241) in the thirteenth century collected the pagan myths of his own country. The accumulation of the new information on pagan countries must have modified Christians' awareness of their own pagan past in Christian countries. More research is needed if we are to fully understand the effect of this accumulation of new data on polytheism in the late Middle Ages.

**THE RENAISSANCE.** Fifteenth- and sixteenth-century humanism and the Renaissance would have been inconceivable

without this double awareness of external and internal paganism. Ancient mythology, ancient religion, and ancient historiography acquired a new relevance in countries like Italy because the pagan past seemed to require reinterpretation. In Italian humanism (one may start with Giovanni Boccaccio's *Genealogia deorum gentilium*, 1351–1360), the task of describing the pagans is inseparable from the task of explaining the existence of paganism. Even writers whose goal was the conversion of the infidel (and who used public theological controversy increasingly in efforts to convert Jews) sought more information about paganism. Arabic and Hebrew were studied by Christians in order to dispute with and convert Muslims and Jews. Foreign sacred texts, including the Talmud, were perused. An interest in Indian languages was born, though it did not fully emerge until the discovery and serious study of the sacred texts of India in the eighteenth century. The discovery of America opened up the exploration of a new pagan world in which Hebrew survivals were suspected.

The old interpretative models remained valid: euhemerism, demonic tricks, allegory, and the theory of successive revelations. But the new information acquired a value and created alternatives to the old models. First, the aim of informing readers about the religions of the world was in itself a novelty. One finds, for example, Johann Boemus's *Omni-um gentium mores, leges et ritus*, which appeared in 1520 and had successive editions, partly with additions by other authors, during the sixteenth century. His work was followed, for instance, by Lilio Giraldi's *De deis gentium varia et multiplex historia* (1548) and by Alessandro Sardi's *De moribus ac ritibus gentium* (1557). Second, new speculations about languages and nations began to undermine the traditional picture of the early history of mankind. When, for instance, Jean Becan von Gorp made public his discovery that Dutch had been the primitive language of mankind and that Cimbri had taught wisdom to the Greeks (*Origines antwerpianae*, 1569)—one of the many discoveries about the primitive language of mankind—the oddity of the claim was in itself an indication of change.

The new intellectual nationalists of the divided Europe of the sixteenth century could almost simultaneously sympathize with their pagan ancestors and accuse their enemies (most frequently Roman Catholics) of preserving pagan rituals. Such controversial literature is reported in J. A. Fabricius's *Bibliotheca antiquaria* (2d ed., 1716); a prototype, with a physiognomy of its own, is *Apologie pour Hérodote* (1566) by Henri Estienne. The relation between paganism and Christianity then became a question of historical continuity or discontinuity between specific aspects of paganism and Christianity. Conversely, elements in paganism that were judged to be true were ascribed to the survival within paganism of early revealed truths.

An important feature in all these works, notwithstanding the concern with immediate doctrinal issues, is an examination and analysis of the evidence with an attention to detail

and with a philological skill that had been unknown to earlier authors. Though ecclesiastic history by Matthias Flacius Illyricus and his collaborators (the so-called *Centuriae Magdeburgenses*, 1559–1579), represents the Protestant point of view, and Cesare Baronio's refutation, the *Annales ecclesiastici* (1588–1607), represents a Catholic version, Flacius and Baronio have more or less the same critical method. The new style of collecting and sifting evidence became more conspicuous as religious polemics became less sharp in the seventeenth century and tended to peter out (or rather to be affected by Deism or by skepticism) in the eighteenth century. This is already manifest in the *Vitae sanctorum* (Lives of the Saints) of the Bollandists, in the many works dedicated to the history of Christian institutions in given countries (for instance, Fernando Ughelli's *Italia sacra*, 1642, and William Dugdale's *Monasticon Anglicanum*, 1655). The Benedictine erudition in France and Italy of the late seventeenth century and early eighteenth century is the crown of this method.

**SEVENTEENTH AND EIGHTEENTH CENTURIES.** In the seventeenth and eighteenth centuries, pagan antiquities were studied in an effort to understand how the pagans preserved elements of the revelation to the Jews: the Phoenicians were assumed to be the transmitters. This is the subject of Samuel Bochart's *Geographia sacra seu Phales et Chanaan* (1646), G. J. Vos's *De theologia gentili* (1647), Theodore Gale's *The Court of the Gentiles* (1669–1677), and Pierre–Daniel Huet's *Demonstratio evangelica* (1690). At the end of the seventeenth century, the notions that Homer mirrored the age of the patriarchs (Gerard Croese, *Homeros Hebraios*, 1704) and that the religion of Delphi preserved traditions of the age of the Judges (Edmund Dickinson, *Delphi phoenicizantes*, 1655) were not unusual. This type of research went on for the whole of the eighteenth century. (See, for instance, Jacob Bryant, *A New System*, 1744–1746.) In fact one of the most telling titles appeared as late as 1786: Guérin du Rocher's *Hérodote historien du peuple hébreu sans le savoir* (1786). At the same time, it was argued at great length and with great erudition that God had thought it wise to give the Hebrews pagan rites made venerable by antiquity (for example, in John Spencer's *De legibus Hebraeorum ritualibus eorumque rationibus*, 1685). Others, especially Spaniards such as Fray Bernardino de Sahagún in his *Historia general de las cosas de Nueva España*, wanted to insert the new American experience into the context of the old pagan world. But Sahagún's attempt, conducted between 1569 and 1582, was obviously premature: his book remained unpublished until 1820. Joseph-François Lafitau returned with greater maturity to the same subject in 1724. His *Mœurs des sauvages américains comparés aux mœurs des premiers temps* was not only published but found an immediate audience. Yet its importance as a pioneer work in anthropological research was not recognized until the twentieth century.

The gradual apprehension of the religions of India and China with their sacred texts remains one of the great achievements of Western scholarship between the end of the sixteenth and the end of the eighteenth century. For research

on China, Juan González de Mendoza's *Historia de las cosas mas notables . . . del gran Reyno de la China* (1585) is considered epoch making. For scholarship in the next century, I shall mention only Athanasius Kircher's *China illustrata* (1663) because the author, a Jesuit, was also the author of *Oedipus Aegyptiacus* (1652–1654), a pioneering attempt to decipher the Egyptian hieroglyphs and to reconstruct Egyptian religion. Kircher's work typifies the dual interest in ancient and modern pagan civilizations. Kircher was already in possession of a Sanskrit grammar, but it was not until the late eighteenth century that the first successful interpretation of basic Iranian and Indian texts was achieved. The translation of the Zand Avesta by A.-H. Anquetil-Duperron appeared in 1771 (later Anquetil-Duperron turned to the Upaniṣads), while Charles Wilkins's translation of the *Bhagavadgītā* appeared in 1785. William Jones gave the first clear formulation of the relations between Indian religion and Greek and Roman paganism (1784; see Jones's *Works*, vol. 1, 1799, pp. 229–280). It is well to remember, however, that the distribution in Europe in the 1760s of the translation of a text called *Ezur Vedam* (True Veda) delayed the understanding of early Indian religion and misled Voltaire; the text was a concoction by Christian missionaries with native help. Chinese wisdom had the greater appeal for the rationalists and theists of the eighteenth century. It was left for the Romantic movement, especially in Germany and France, to appreciate the religions of India. But there are other works that confirm the eighteenth-century contribution to collecting the evidence about the religious history of distant countries and sects, such as Thomas Hyde's *Historia religionis Veterum Persarum* (1700) and Isaac de Beausobre's *Histoire critique de Manichée et du manichéisme* (1734).

**THE RISE OF MODERN HISTORIOGRAPHY.** The factual, empirical, almost antiquarian attitude of the historians of religion in the late Renaissance and in the Baroque age was transmitted to the historians of the Enlightenment and of the Romantic period. No doubt, as Hume and Voltaire show, erudition was often conspicuously avoided for the sake of philosophic generalization. But erudition was always kept within reach even by the most dedicated philosopher. If there was a shift it occurred not in erudition itself, but rather in the purpose of erudition, which was increasingly used to support Deism (Edward Herbert of Cherbury), tolerance (Pierre Bayle), and religious emotions when contemplating nature, in preference to dogmas.

A new approach to religion emerged that can be described as typical of the Enlightenment: the attempt to determine and describe the various stages of the development of religion in mankind at large. In this approach new stages were identified, such as fetishism, that is, the adoration of objects, which was defined, after several predecessors, by Charles de Brosses in 1760, and animism, which was first tentatively postulated in various memoirs by Nicolas Fréret, while Banier resurrected the old euhemerism. It is here that Hume's insistence on the priority of polytheism over monotheism belongs. Hume's *Natural History of Religion* (1755)

owed much even in its title to the *Natural History of Superstition* (1709) by John Trenchard. The intention behind these systems was not necessarily anti-Christian, though there were writers who were inclined to straight materialism, such as C. F. Dupuis during the French Revolution. One of the most radical and isolated thinkers, Giovanni Battista Vico, was a devout Catholic who tried to save the ancient Jews from the suspicion of myth making that he saw as essential to ancient paganism. The overall result of this philosophical historical movement was to present schemes of human progress that theologians had to face. For the first time, philosophers and historians joined forces in presenting religion as something that had a history. It was an uneasy collaboration between philosophers and historians, but it was a new and significant one. It was even capable of transforming cultural events into religious experiences, as in Antoine Court de Gébelin's *Le monde primitif* (1773–1784).

**NINETEENTH AND TWENTIETH CENTURIES.** But what is this religious experience? What is religion? It is here that pre-Romantic and Romantic thought came out decisively, even against the Enlightenment, to restate the autonomy of religion as an emotion and as a need within the human experience. From G. E. Lessing and J. G. Herder to Friedrich Schleiermacher and F. L. J. von Schelling, the main effort was to rediscover religion as an emotional experience rather than as a culturally conditioned social manifestation. The philosophers parted company again with the historians, for whom the search for the social roots of religion remained a permanent bequest from the eighteenth century. Research in the field of religion during the nineteenth and twentieth centuries reveals an interaction between these two main approaches: the exploration of religious experience as such and the quest for a historical typology of religious attitudes and practices. The two currents seldom run parallel to each other; more often they cross each other, but never achieve confluence. This interaction can be seen in the continuity from Schleiermacher and Benjamin Constant de Rebeque to, say, Gerardus van der Leeuw and the Chicago school of Joachim Wach (with its German roots) in the effort to create a hermeneutic of religious experience. Though this effort must not be confused with that of the various psychological schools that have studied religious phenomena, such as William James's pragmatism and the psychoanalytic doctrines of Freud and Jung, it shares with the psychological schools a search for the roots of the religious experience as such. The relevance of such psychology or philosophy to theology is direct.

On the other side, the historical exploration of specific religions displayed unprecedented sophistication of methods and techniques. The deciphering of hieroglyphics and cuneiform conditioned the modern research on Egyptian and Mesopotamian religions, and even the partial interpretation of Etruscan texts added a new dimension to the knowledge of ancient Italian religions and helped to disentangle Roman from Greek religion. Knowledge of Buddhism, especially outside India, changed dramatically, and new information

about so-called primitive tribes affected our knowledge of (and indeed the terminology we apply to) so-called advanced religions (consider, for example, the scholarly fortunes of the Melanesian term *mana*). The discovery of new texts such as the Dead Sea Scrolls modified the physiognomy of familiar religions.

To these changes, one has to add radical new methods and points of view regarding the examination of traditional texts. The succession (or rather superimposition) of source criticism, comparative studies (especially within Semitic studies), form criticism, redaction criticism, canon criticism, deconstruction, and so on, transformed our understanding of the Bible.

The problem that arose and that dominated the study of religion since the early nineteenth century was how to establish a real connection between theories on the nature of religion (with their hermeneutics of religious experience) and the new “factual” acquisitions about individual religions. Solutions have differed according to intellectual climate and individual preferences. At the beginning of the nineteenth century, for example, G. F. Creuzer tried to create a systematic, symbolic interpretation of ancient mythology (1810–1812). During the middle of the century, F. Max Müller began to develop what he called a “science of religion” on a model offered by the new Indo-European linguists such as Franz Bopp, and English anthropologists, such as E. B. Tylor, tried to improve on their eighteenth-century predecessors by using Darwinian concepts of evolution. The writings of Marx and Engels about the dependence of religion on the economic foundations of society should be mentioned here as well. At the turn of the twentieth century, Wilhelm Wundt developed his “psychology of the nations.” Émile Durkheim, followed by his nephew Marcel Mauss, presented religion as the internal transfiguration of society that keeps society going, and Max Weber, followed by Ernst Troeltsch, proposed a sociology of religion with an inherent typology of religious experience as an answer to the never rigorously developed Marxist interpretation of religion.

Two aspects of this process of connecting history of religion with philosophy of religion deserve special notice. One aspect can be presented with the mere name of Ernest Renan. Though he was a radical critic of the Christian tradition, he communicated genuine religious sentiments in his books and exercised a decisive influence in the formation of modernist currents within Catholicism. (He was, incidentally, also a pioneer in the study of Semitic epigraphy, which renewed our knowledge of Semitic religions.)

The other aspect is the increased scholarship of Jews in a field that had previously been dominated by scholars in the Christian tradition. In the late sixteenth century, the original scholar ‘Azaryah dei Rossi, the author of *Me’or einyeyim* (Light of the Eyes), remained almost unknown to non-Jews and little known to Jews themselves. He was recognized as a pioneer in the study of Judaism by Jews of the generation of Moses Mendelssohn in the late eighteenth century, and

his work opened up the path to the so-called science of Judaism (*Wissenschaft des Judentums*) of the nineteenth and early twentieth centuries (Leopold Zunz, Solomon Munk, Heinrich Graetz, Ismar Elbogen, etc.). Other Jews contributed significantly to the understanding of other religions (James Darmesteter on Persian religion, Ignác Goldziher on Islam) and to the comparative study of religion (Salomon Reinach). It should also be remembered that Durkheim brought a rabbinic education to his sociology.

At present there seems to be a definite preference for sociological interpretations of circumscribed aspects of religion: something less ambitious, say, than the phenomenology of van der Leeuw and Wach, and also less theoretically sophisticated than the sociology of Weber. This preference is due to the realization that many subjects (e.g., the position of women in religion, the function of holy men in different societies, the behavior of sectarians within the “greater societies,” and even apocalyptic and messianic movements) have been studied without sufficient consideration of their social context. This preference for the social aspects of religion may well be a transitory fashion. The tension between the discovery of facts about individual religions and the need adequately to define religion itself is bound to continue. History and philosophy of religion are likely to go on disturbing each other, and theology will go on facing both. The triangle of history, philosophy, and theology is still with us.

#### BIBLIOGRAPHY

Still fundamental to the study of the historiography of religion are the following works: Louis Henry Jordan’s *Comparative Religion: Its Genesis and Growth* (Edinburgh, 1905); Otto Gruppe’s *Geschichte der klassischen Mythologie und Religionsgeschichte* (Leipzig, 1921); Henri Pinard de la Boullaye’s *L’étude comparée des religions*, 2 vols. (Paris, 1922–1925); and Raffaele Pettazzoni’s *Svolgimento e carattere della storia delle religioni* (Bari, 1924).

Among more modern books, special note should be made of Gustav Mensching’s *Geschichte der Religionswissenschaft* (Bonn, 1948); Jan de Vries’s *The Study of Religion: A Historical Approach* (New York, 1967), reprinted as *Perspectives in the History of Religions* (Berkeley, 1977); J. D. Bette’s *Phenomenology of Religion* (New York, 1969); Michel Meslin’s *Pour une science des religions* (Paris, 1973); Eric J. Sharpe’s *Comparative Religion: A History* (London, 1975); Giovanni Filoramo’s *Religione e ragione tra Ottocento e Novecento* (Rome, 1985); and Joseph M. Kitagawa’s *The History of Religions: Retrospect and Prospect* Two very useful anthologies are Burton Feldman and Robert D. Richardson’s *The Rise of Modern Mythology, 1680–1860* (Bloomington, Ind., 1972) and Jacques Waardenburg’s *Classical Approaches to the Study of Religion*, 2 vols. (The Hague, 1973–1974).

For broad studies of the sixteenth through eighteenth centuries, see Giuliano Gliozzi’s *Adamo e il nuovo mondo* (Florence, 1977), Sergio Landucci’s *I filosofi e i selvaggi, 1580–1780* (Bari, 1972), and Dino Pastine’s *La nascita dell’idolatria* (Florence, 1979). Studies focusing on the eighteenth century include Frank E. Manuel’s *The Eighteenth Century Confronts the Gods* (Cambridge, Mass, 1959), Michèle Duchet’s *An-*

*thropologie et histoire au siècle des lumières* (Paris, 1971), and Alfonso M. Iacono's *Teorie del feticismo* (Milan, 1985), which is also relevant to Marx. For studies of the nineteenth century, volume 3 of *Nineteenth-Century Religious Thought in the West* (Cambridge, 1985) is the most relevant to our topics. Also, see Kurt Rudolph's *Die Religionsgeschichte an der Leipziger Universität und die Entwicklung der Religionswissenschaft* (Berlin, 1962). For German antiquities, refer to Frank L. Borchardt's *German Antiquity in Renaissance Myth* (Baltimore, 1971). For American societies, see Antonello Gerbi's *La natura delle Indei Nove* (Milan, 1975). For Eastern religions, see also Raymond Schwab's *La renaissance orientale* (Paris, 1950) and Wilhelm Halbfass's *Indien und Europa* (Basel, 1981). Joachim Wach's *The Comparative Study of Religions* (New York, 1958) helps to bridge German and American studies. For Jewish studies, see Karl Wilhelm's *Wissenschaft des Judentums im deutschen Sprachbereich* (Tübingen, 1967).

ARNALDO MOMIGLIANO (1987)

## HISTORIOGRAPHY: WESTERN STUDIES [FURTHER CONSIDERATIONS ]

In the Western world the study of religion is normally carried out—with a few exceptions—at universities and other academic institutions located in Europe, America and Oceania. To outline the various approaches of the scholars who have described and interpreted religious phenomena, it is expedient to group them according to their countries of origin and the respective academic traditions (which are profoundly influenced by the dominating religious confession: Catholic, Protestant, Orthodox, or secular). The scope of this survey includes the scholars who are active at present or were still active at the end of World War II. The first section deals with that generation of scholars (born between 1880 and 1920) whose education took place before World War II. The second section deals with scholars (born between 1920 and 1950) educated either during the war or immediately after it at the time of the break-up of Europe's colonial empires across four continents. The traditional arrangement of the matter according to the various approaches (historical, phenomenological, anthropological, sociological, psychological), which is best suited to more wide-ranging works, do not do justice to the achievements of the scholars who are committed to grasping the dynamics of religious realities with the minimum of hermeneutic preconceptions and the maximum of disregard for cultural fashions.

### THE WESTERN STUDY OF RELIGION IN THE AGE OF EUROCENTRISM AND EPISTEMOLOGICAL SELF-ASSURANCE.

**Scandinavia and the Netherlands.** The Netherlands and the four Scandinavian countries (with the partial exception of Finland) share the Germanic linguistic stock and the adherence to the Protestant Reform. There is evidently a direct link between the predominance of this specific religious tradition (and the consequent establishment—after some initial resistances—of the teaching of history of religions in

the faculties of theology) and the fact that a group of small countries not in the forefront of research in other scientific fields have produced scholars who are undisputed leaders in the field of religious historiography. As great philologists and prominent specialists of various religious traditions (ancient European paganism, Islam, India, Iran), the Dutch Jan de Vries (1890–1964) and the Swedish Tor Andrae (1885–1947), Henryk Samuel Nyberg (1898–1974), Stig Oscar Wikander (1908–1983), all shared a special instinct for comparison and hermeneutics.

Very different from each other were three other major figures, usually collectively labeled as phenomenologists, who played a decisive role in the foundation of the International Association for the History of Religions (IAHR), of which they were respectively first president, third president, and general secretary. Among them the best known is Gerardus van der Leeuw (1890–1950), who is widely regarded as the incarnation of religious phenomenology with an obvious theological concern conditioned by the Protestant experiential tradition. It is important to note here that, in spite of the breadth and depth of his erudition in many fields of humanities, the works he composed as a specialist of ancient Egypt are hardly utilized in current scholarship. The Swede Geo Widengren (1907–1996) has been the champion of a historically oriented phenomenology and has been one of the few scholars to combine a theory of religion (and a method of research, broadly inspired by his teachers Andrae and Nyberg, as well as by the Italian Raffaele Pettazzoni [1883–1959]) with an imposing scientific production dealing with crucial issues of Near and Middle Eastern religious history (Iran, Old Testament, syncretism). His studies, with their emphasis on patternism and scrupulous philology, are (in spite of the haunting ghost of Iran) still a source of inspiration for specialized scholars.

Claas Jouco Bleeker (1898–1983) was a churchman and a phenomenologist like his compatriot van der Leuw, but, like his close friend and collaborator Widengren (with whom he published a *Handbook for the History of Religions*, Leiden, 1969–1971, designed to emphasize structural similarities in the religions of the world), he consciously took up the historical study of a specific religious tradition (in his case the Egyptian one). In several studies he combined historical empiricism with phenomenological usage of Husserlian principles of *epoché* (suspension of judgment) and eidetic vision (i.e. search of the essence and meaning in a religious phenomenon). Also worth mentioning is the second major representative of the flourishing Uppsala School, Carl-Martin Edsman (1911–), who, based on a first-hand expertise in various fields such as New Testament exegesis, patristics, and folklore, gave notable contributions as a wide-ranging, methodologically alert comparatist.

**Germany.** A half-Catholic and half-Protestant country, which at the beginning of the century had monopolized the field of philology and theology, Germany was apparently the ideal place for achieving outstanding results in the field of

religious studies. Actually, despite their quantity and quality, the works produced in all the domains of religious historiography have hardly left a mark in the development of *Religionswissenschaft* (German for history of religions, whereas *Religionsgeschichte*—without further qualifications—means “religious history”). This is due perhaps to the unsolved tension between the historico-philological approach and various hermeneutic preconceptions. The works indulging to dazzling cross-cultural comparisons by two Jewish scholars, the outsider of the Warburg School Robert Eisler (1882–1949) and the orthodox Jungian Eric Neumann (1905–1960), have always raised suspicions among academic historians and are currently absent from scholarly debate. Paul Tillich (1886–1965) became famous for his conception of religion as the state of being grasped by something of ultimate concern. Ernst Benz (1907–1978) came to the fore for his usage of parapsychology as a hermeneutic tool. Both were engaged as systematic theologians, and so it is no surprise that they have been disregarded by positivist historians.

On the basis of their wide-ranging ethnographic researches in Eurasian and Melanesian societies respectively, Karl Meuli (1891–1968) and Adolf Ellegard Jensen (1899–1965) built daring cultural historical models to explain the origin of cult and civilization from particular kinds of prehistoric sacrifice (comedy of innocence, dema deity) that have been influential in religio-historical research (Walter Burkert [1931–], Károly Kerényi [1897–1973] and the Roman School of history of religions) and subsequently came under fire of intense criticism. On the other hand, very limited influence was exerted outside Germany by scholars, contrasted even in their home country, who adopted a phenomenological approach as professors of religious studies in top German universities such as Marburg, Munich, Bonn. Moving from an impressive cross-cultural study of prayer as the central phenomenon in the history and psychology of religion, Friedrich Heiler (1892–1967) developed a personal version of religious phenomenology which was theologically oriented to the search of essences and meaning and regarded ecumenically all religions as manifestations of the same basic truth.

Though more empirically founded in its insistence on the wealth of historical phenomena, the typology of religion elaborated by Gustav Mensching (1901–1978) is aimed to the recognition of the ultimate unity in the diversity of religions and loyal to the ideas of his mentor Rudolf Otto (1869–1937) even in his definition of religion as experiential encounter with the sacred. As a convinced supporter of a phenomenological approach based on a systematic study of religious forms (and also on his experience as scholar of Renaissance Platonism), Kurt Goldammer (1916–) has raised bitter objections by scholars with historical orientation.

The best-known of these German scholars educated in a theological milieu was Joachim Wach (1898–1955), a devout Protestant layman from a Jewish family, who had to flee to the United States where he founded a thriving school of history of religions in Chicago. He felt the influence of Ed-

mund Husserl (1859–1938) and Otto, but much more he was under the spell of Wilhelm Dilthey's (1833–1911) hermeneutics and Max Weber's (1864–1920) “comprehending sociology.” Despite his insistence that the starting point of the history of religions was the empirical study of single religions, he wrote virtually nothing in this specific field. His methodology is based on lucid theoretical premises and personal intuitions which have a limited value for the progress of history of religions as a scholarly discipline.

**Great Britain.** Great Britain apparently had the potentialities for promoting influential trends in the study of religion: a worldwide colonial empire offering ideal conditions for anthropological fieldwork and an educational system for the ministers (and prospective missionaries) of the Church of England more tolerant and open to doctrinal pluralism and modernity than is anti-modernistic Catholicism dominating in southern Europe or pietist North European Lutheranism. In fact, the functionalist approach advocated by the two leaders of British religious anthropology in the period between the two World Wars, Alfred Reginald Radcliffe-Brown (1881–1955) and Bronislaw Kaspar Malinowski (1884–1942)—an approach based on the method of participant observation as regards investigation and on the emphasis on social structures and functions as regards interpretation—proved to be of great fertility in empiric research. The following developments of the British school of social anthropology, even in a direction with a conscious historical concern, as in the case of Edward Evan Evans-Pritchard (1902–1973) cannot be tackled here.

Despite its sociological and ahistorical (if not anti-historical) stress, functionalism gave impetus to subsequent historiographic work. In this period, the main representatives of comparative religion in Britain (holders of chairs in Cambridge, London and Manchester) were all Anglican clergymen: A.C. Bouquet (1884–?), Edwin Oliver James (1888–1972), S.G.F. Brandon (1907–1971), Geoffrey Parrinder (1910–?). None of them made any notable contribution to the methodological debate and—with the partial exception of Brandon—the style of their comparisons hardly meets the requirements of a historiography founded on philological principles. Characteristically, the British scholar of religion whose work has been most influential in the successive historiographical debate was a representative of the English pug-nacious Catholic minority: the prominent Orientalist (with a profound insight into Indian and Iranian matters) Robert C. Zaehner (1913–1974). Despite the various criticisms leveled at his theory of mysticism and at his assertive loyalism to the Catholic faith, Zaehner's outstanding contribution to the comparative and historical study of religions remains undisputed.

**North America.** The United States is a country obsessed with religion. Even the harshest critics of the Americans' pervading religious attitude appear quasi religious in their iconoclastic zeal. Americans were reported by nineteenth- and twentieth-century European observers as the

most religious people in the world, in the same way as the Egyptians and the Etruscans used to be described by Greek or Roman observers in ancient times. Belief in God is the bedrock of American identity and supplies a kind of cultural cement for society, but at the same time the First Amendment to the 1789 Constitution (“Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof”) fixes the separation of church and state—so-called religious “disestablishment.”

The second paradox is that in the United States the multiplicity of religions (five religious groups have been constitutive: Native Americans, Jews, Roman Catholics, English Protestants, and African Americans) coexists with the oneness of religion. In fact, a kind of religious unity and the consequent cultural cohesion of the American is ensured by the identification of public (civil) religion with the Protestant tradition which has perpetuated its hegemonic position since its early Calvinist and Puritan settlement. This unique social and educational context has created very favorable and at the same time peculiar conditions for the study of religion, in a regime—as it were—of delimited pluralism. Another constitutive factor of the American approach to religious studies has been the presence of pre-modern styles of religiosity as a living tradition among Native Americans.

In effect, the American scholars of religion who contributed the most seminal ideas to the theory and method in the study of religion were anthropologists from the school of Franz Boas (1858–1942). A list of names must include: Alexander A. Goldenweiser (1880–1940), for his influential deconstruction of the category of totemism; Robert H. Lowie (1883–1957) and Clyde K.M. Kluckhohn (1905–1960), for their sober and insightful criticisms of any univocal theories of primitive religion; Paul Radin (1883–1959), for his ambitious if controversial adoption of categories from analytical psychology (the trickster as an archetype); Ruth Fulton Benedict (1887–1948), for her invention of fortunate, though historically unfounded, patterns of (religious) culture; and Margaret Mead (1901–1978), for her challenging views of the interrelation between culture and personality.

In the study of ancient Mediterranean religions, four scholars had a strong historiographical consciousness and dominated their respective ambits of research. Erwin Ramsdell Goodenough (1893–1965), a professed pagan in spite of his Protestant upbringing, taught history of religion at Yale for forty years. His theory that Judaism was deeply hellenized before the birth of Christianity, supported on the investigation of a vast body of archaeological materials hitherto unexploited, has been seminal to successive research. Goodenough’s imposing scholarly work is enlivened by his concern with contemporary religious life in the light of scientific progress (psychoanalysis). Arthur Darby Nock (1902–1963), a Briton who taught history of religions at Harvard for thirty-five years was the dominant figure in the study of Greco-Roman religions for the whole span of his life. In his work he combined in a unique way immense erudition, extreme

caution and outstanding brilliance. Despite his avowed aversion to theory and generality, he had his own (functionalist) definition of religion and a sort of empathy in approaching his subject.

Theodor Herzl Gaster (1906–1992), a British-born scion of a dynasty of rabbis and scholars, traced the myth-ritualist scenario based on the seasonal drama reenacted by the divine king’s sacrifice through the Ancient Near East. He differentiated himself from James Frazer (1854–1941) and the other ritualists by stressing the function of myth in translating the real into terms of the ideal, in a sort of metaphysical plane. Many feel much more at home with the work of his coeval antagonist, the classicist Joseph Fontenrose (1903–1986), who, after having dismantled the dogmas of the “myth-ritual” school, returned to the empirical study of Greek oracles, paying the due attention to the variety in recurrent patterns.

Joseph Mitsuo Kitagawa (1915–1992), a Japanese Episcopal minister who spent all his professional career at Chicago, where he had studied history of religion under Joachim Wach, represents at its best the Chicago approach to the study of religion, called “history of religions.” He was conscious of the leading role played by this approach, following in the footsteps of his mentor Wach and his senior colleague Mircea Eliade (1907–1986). The history of religion has both a historical and a systematic dimension, and needs hermeneutics and comparative analysis. His methodology, insisting correctly on the unity of humankind’s experience, was not very original, but he made a durable contribution to understanding the religious tradition of his native country. The only significant threat to the dominance in North America of the Chicago approach to the study of religion came from a Canadian (from Toronto) theologian and Islamist brought up in a devout Presbyterian and Methodist background: Wilfred Cantwell Smith (1916–2000). His view of religion as a blend of personal faith (out of the scope of historical inquiry) and cumulative tradition which is subject to change and the object of historical research, entails dropping the usage of the word “religion” inasmuch as the external tradition is concerned. Theological issues (transcendence of pure religiousness, inter-religious dialogue) are certainly present in Smith’s approach, but his claim that a dialogical attitude to the adherent of a religious tradition is basic to a scientific understanding poses a serious challenge even to an empirical-oriented historiography.

**France.** Contrary to expectations based on historical realities, the dominant religion of France is not Catholicism (not even in its Gallican version). On the one hand the rate of religious observance is one of the lowest in Europe; on the other hand the real dominant “political” religion in France is laicism. As a consequence, the study of religion as an autonomous discipline is considered “theology” and is virtually excluded from the curricula of university education. The only exception is Strasbourg because of the Protestant influence due to its past belonging to the German Reich.

In practice the study of the single religious traditions is intensely pursued in the fifth section of the “*École pratique des hautes études*” and, occasionally, a professorship of history of religions can also be activated at the University of Paris Sorbonne or at the related Collège de France. Moreover, since the historical sciences in France are dominated by an epistemology based on empirical and idiographic principles, every indulgence to systematic or typological interpretative schemes is overtly stigmatized as philosophical and the delinquent scholar is ostracized from the historical guild. Only three scholars have succeeded in overwhelming this strong resistance, and the impact of their theories has proved to be groundbreaking. The fascination of Georges Dumézil’s (1898–1986) work lies in a powerful idea that—apart from his original intentions—has been seductive in a postwar atmosphere dominated by a strange blend of materialist (post-Marxist) basic ideas and remythologizing nostalgias (post-Christian): the interconnection between the tripartite socio-economical organization of men (Indo-European) on earth and the tripartite organization of gods (Indo-European) in heaven. In spite of the fallacy of the linguistic arguments and the hypostatization of the structures, Dumézil’s work has revived the study of specific ancient (Indo-European) traditions. Scholars of Indian, Iranian, Germanic, Celtic and Roman religions had to come to terms with his neo-comparative historical approach. The durability of his contribution to religious historiography is due to the strength of his philology, which rendered his wide-ranging production palatable to specialists who are accustomed to basing their historical works on philological arguments.

Instead, the works of two other representatives of Parisian structuralism are conspicuous by the absence of historical consciousness and philological accuracy. Claude Lévi-Strauss (1908–) would hardly be worth mentioning here if it were not that his thought has been so influential on several self-styled historians of religion and has attracted so much criticism from other historians. He taught religious ethnology but was an arm-chair anthropologist for most of his life. In his work on mythology he was philologically utterly inaccurate. As a storyteller more than a historian, he neglected empirical data and used a deductive procedure. Being the grandson of a rabbi and a convinced atheist, he candidly professed his aversion to religious forms. Many historians and anthropologists who did real fieldwork consider his view on myths (the structure of which is supposed to be synonymous with its meaning) the dream of a Western philosopher advocating the ultimate reconciliation of thoughts and reality. A partly different case is that of Jean-Pierre Vernant (1914–), who, having received—like Lévi-Strauss—a philosophical education, adopted Dumézil’s trifunctionalism in the interpretation of Greek mythology and then elaborated a personal hermeneutics under the influence of the sociological and psychological approaches of his mentors Louis Gernet (1882–1960) and Ignace Meyerson (1888–1983). This hermeneutics has been influential on the study of ancient religions and has been applied by his followers to the study of various as-

pects of Greek religion (esp. sacrifice and images). His approach has been called “historical anthropology,” but in fact it is placed on the periphery of history.

**Italy.** Italy is notoriously a Catholic country, even if the religious sentiment is not so interiorized as in other strongholds of Catholicism such as Poland or Ireland. However, from its see in Rome the supreme authority of the Catholic Church has always heavily conditioned the ways of education in religious matters. In the primary and secondary schools the teaching of religion has always been reserved for the clergy or for laypersons licensed by the ecclesiastical authority (and in practice identified with the teaching of a popular form of Catholic theology). By contrast, after the closing of the faculties of theology in 1876, in the state universities the teaching of biblical sciences is virtually interdicted; instead, despite some resistances from both the Catholic establishment and the academic milieu (permeated by the historicist views of the philosopher and historian Benedetto Croce [1866–1952]), a few professorships of history of religions and even fewer programs of religious studies have been founded and have been able to survive. In these peculiar conditions, two scholars came forth, who in their respective spheres of competence have been perhaps the most prestigious historians of religions of the twentieth century.

Raffaele Pettazzoni (1883–1959) was the dominant figure among the comparative religionists of his own times and the founder of an influential school. He was, in the words of Mircea Eliade, the last of the encyclopedists: he dared to draw analogies between the spread of Christianity throughout Europe and the spread of Buddhism throughout Asia, but he had also the historical and philological equipment to point out the specific differences. His theory of religion was not particularly sophisticated. In his view there is no insurmountable dualism between the history of religions (concerned with individual data and development) and the phenomenology of religion (concerned with the essences): they are simply two interdependent instruments of the same science, whose unity corresponds to that of its subject, namely religion in its two distinct components, interior experience and exterior manifestations. In his own far-reaching research on the most varied topics (monotheism, confession of sins, religious history of Greece and Iran, mystery cults), he employed a solid method which seems especially suited to counteract the opposite dangers of reductionism, structuralism and phenomenology, and obtained results which represent still a challenge for present-day scholars.

Giuseppe Tucci (1894–1984) was not a comparative religionist, but his achievement was not less significant than that of his long-time colleague at the University of Rome. Indeed, he was the greatest Orientalist of his times, displaying a prodigious activity as a philologist, archaeologist and anthropologist at the same time. His contribution to the history of Asiatic religious traditions (from India to Japan, through China and Tibet) is immense, not only for his outstanding scholarly writings but also for the far-reaching influ-

ence of his teaching: not only on his numerous disciples who became all prominent specialists in their respective fields but also on personalities of high caliber such as Mircea Eliade. His approach to the study of religions was sympathetic but also strictly critical, very distant from both cold positivism and crypto-theological phenomenology.

Two younger scholars affiliated with the school of Pettazzoni were considerably influenced by Pettazzoni's two-ways approach to the study of religion. The older of the two was Ernesto De Martino (1908–1965), who, being the pupil of the ultra-historicist Adolfo Omodeo (1889–1946), tried to integrate the results of various disciplines and approaches (Croce's absolute historicism, Antonio Gramsci's new science of folklore, psychoanalysis, existentialist philosophy, ethnopsychiatry) into a sort of metahistory labeled as "reformed" or "historical" ethnology and based on a method of "differentiating comparison" and "critical ethnocentrism." De Martino's definition of religion as a means of overcoming the crisis of presence is a synthesis of materialism and psychologism in a Heideggerian frame of reference. This overtly hermeneutical presupposition based on a biased selection of historical data makes his production particularly seductive for some anthropologists and historians but invalidates seriously the explanatory value of his scientific project.

The other scholar is Angelo Brelich (1913–1977). Originally a pupil of the classicist Károly Kerényi, he was deeply influenced by Pettazzoni's comparative historical method, but also by Malinowski's functionalism and Jensen's cultural morphology. His main concern was a precise, historical definition of the main religious types (religion itself, myth, ritual, superhuman beings) and of the tasks of the history of religions as an autonomous discipline, based on the comparative method. This discipline is considered by him one of the most efficient tools for the making of "a new type of integral humanism" (Brelich, 1966, p. 70), aiming—in his particular view—to social revolution (Brelich, 1979, p. 222). In stark opposition to phenomenology and any other irrationalist approach, Brelich stresses the omnipresence of history as a factor of total explanation, a concept that in his illusory persuasiveness is clearly conditioned by a positivist mentality. We find, instead, the legacy of functionalism in his tenet that in front of a religious complex a historian must pose the question "what is it for?," not "what does it mean?." Brelich's considerable production is strongly concerned with issues of cultural change and new religious formation, and it has been stimulating for the scholars of ancient Mediterranean religions by pointing out the importance of the history of religions approach for the interpretation of cultural phenomena (polytheism, initiation, human sacrifice) of crucial importance. His work is characterized by great brilliance and meticulous erudition, but his results are sometimes flawed by unfounded presuppositions.

Vittorio Lanternari (1918–), born to a family of secularized Jews, applied the comparative historical method that he had learned from his master Pettazzoni to the study of pre-

literate societies, with particular concern for the interplay between religion and economy as well as for issues of cultural change and acculturation caused by the encounter between the traditional values of third-world societies and the cultural innovation imposed by Western settlers and missionaries. His dialectic-dynamistic approach, revealing the influence of Marxism and, at a more basic level, of his previous education as an agricultural scientist, has borne his best fruit in the study of phenomena eminently interactive, such as modern messianisms and millenarisms throughout all the continents. Despite his professed laicism, Lanternari's theory of religion (and the consequent interpretation of historical phenomena) is conditioned by his quasi-theological socio-political options.

**Hungary and Romania.** The two neighboring countries of Hungary and Romania, in various ways antagonistic, gave birth to two famous scholars of religion who had analogous life experiences and worldviews but opened quite dissimilar routes in the academic study of religion. Károly Kerényi (1897–1973) came from Hungary, a Catholic country with a significant Protestant minority and deeply permeated by a middle-European atmosphere. Soon after his expatriation to Switzerland in 1939 he became an internationally recognized authority on the Greek and Roman religions. His contacts with the hermeneutist of Greek religion Walter Friedrich Otto (1874–1958), the psychoanalyst Carl Gustav Jung (1875–1961) and the Frankfurt ethnological school of Leo Frobenius (1873–1938) and A. E. Jensen were decisive in the formation of Kerényi's influential hermeneutics of myths as archetypal images. In spite of the accusations of irrationalism and psychologism frequently leveled against him, Kerényi's intuitions—nourished as they are by a painstaking philological and archaeological erudition and a deep humanistic insight—are still to be reckoned with. From the perspective of general history of religions, his attempt at conciliating the viewpoints of psychology, anthropology and history by formulating a dialectic between an archetypal element and a cultural-typical one (a dialectic which is basic to the process of historical individuation) should be taken into consideration on a par with other theories based on historicist or social scientific premises.

The roots of Mircea Eliade (1907–1986) are Romanian, even if he was a cosmopolite throughout his life. From his Romanian heritage he absorbed a romantic attachment to the rural dimension of life, the sensation of being located at the frontier between the East and the West, the so-called terror of history, and a peculiar ritualistic view of Orthodox Christianity. But he was at home in Italy, the land of Renaissance, in India, the land of world-transforming asceticism and "cosmic religiosity," in France, the land of philological erudition and avant-gardism, and in North America, the land where extreme conservatism cohabits with radical innovation. Eliade was the most influential historian of religions of the twentieth century and, notably, the only one to have an audience among the public of laypersons because of his

style of thought and his style of writing. Eliade believed that there was no contradiction between his scholarly work and his successful activity as a fiction writer. He was a *historian* who worked in a strictly philological way: he spent three years in India in order to be in contact with the living tradition of the yogis and the original documents of Tantric historical tradition before writing his own book on yoga; he dedicated himself to the grammatical study of a number of dead and living languages; at every time in his career—even when he was an international star—he felt the necessity to peruse all the documents and the secondary literature before dealing with any subject; and finally he was in close contact with specialists of innumerable religious traditions, by whom he was read and appreciated. Eliade's comprehensive surveys of yoga and shamanism can be criticized with philological arguments in points of detail and even in their overall conception, but they should not be rejected on aprioristic methodological or, worse, pseudo-political grounds.

Eliade was vehemently anti-historicist because he was convinced that not all human realities can be resolved in history, which is in itself a construct of Western culture. His hermeneutical and phenomenological presuppositions are patent in that he assigns a hypostatized status to the notion of sacred and he attributes an absolute value—at least in their permanent structures independent from history—to the naturalistic manifestations of this sacred (so-called hierophanies). His emphasis on the values of archaic man and the consequent nostalgia of origins may suggest some connections with the traditional thought and also with the ideology of pre-war Romanian nationalism, but he has always taken his distances from the tenets of René Guénon, and his initial adherence to the Legionary movement cannot be used as a weapon to destroy his lifelong striving for the liberal humanistic values against every kind of totalitarianism. On the other hand, his plea for the history of religions as a “saving discipline” for the demystifying potentialities of its hermeneutics, together with his juvenile anti-colonialist spirit and his aversion to the Western-centered myth of the indiscriminate technological progress, find an echo in present-day widespread aspirations and give him a distinct place among the advocates of a new humanism which is liberal in its fundamentals despite its elitist consciousness.

Eliade, in fact, demystified the doctrines of two famous demystifiers, Karl Marx (1818–1883) and Sigmund Freud (1856–1939), demonstrating that religious motives can be no less deep-grounded than socio-economic or psychological driving forces and can also play a role in the background of professedly secular theories of man and society. Eliade's books are still read and discussed intensely by men of letters, historians, philosophers, theologians, and also by human scientists of various specializations. Further, in the Chicago School a great number of promising students chose their own scholarly direction (sometimes very distant from that of their mentor) and became most influential scholars and teachers of religious studies in North America and Europe. In conclu-

sion, Eliade's method of phenomenological typology (with an obvious stress upon the research of “meaning”) is certainly not the only way to do a comparative study of religions, but in judging his work of unparalleled richness we must respect his own intentions by using the same methodology that most scholars advocate for the study of religious phenomena.

#### THE WESTERN STUDY OF RELIGION IN THE AGE OF DE-COLONIZATION AND EPISTEMOLOGICAL DISENCHANTMENT.

**Scandinavia and the Netherlands.** In postwar times the Nordic countries have maintained a pre-eminent position in the field of religious studies, but the leading role in historiographic work has shifted from the hands of the philologists working on historical reconstructions of the religions of the past to those of scholars studying living traditions with a fieldwork anthropological approach. The Swede Åke Hultrantz (1920–) has done fundamental work on the Lapp and North American Indian religions with focus on soul conceptions, shamanism and healing systems. In his comparative studies he has developed a religio-ecological approach which—without neglecting the dynamics of history—stresses the importance of the environmental factors in determining a religious typology.

In Finland, where an indigenous tradition of folklore studies was flourishing (Uno Harva, Martti Haavio), Lauri Honko (1932–2002) revitalized the discipline of comparative religion with his strong socio-psychological interest in a functionalist-structuralist perspective applied to the study of folk-medicine and Finno-Ugrian religion as well as to methodological issues of definition (theory of genre, myth, and ritual process). His disciple, Juha Pentikäinen (1940–), has developed a particularly rewarding strategy in the study of Finnish mythology, shamanism in Arctic and sub-Arctic regions, and Saami religious life. In his “regional phenomenology approach,” based mainly on fieldwork in close contact with the informant and the usage of religio-anthropological depth-research, he has introduced “world-view analysis” as a new category for scholarship in comparative religion.

Ethnographic in-depth research plays a decisive role also in the work of the Finno-Swedish Nils G. Holm (1943–), concentrating on the study of Pentecostal and Charismatic movements with a focus on the phenomenon of glossolalia. At a methodological level he has developed Hjalmar Sundén's (1908–1993) role theory in the psychology of religion, helping to ensure behavioral sciences an established place in the international field of religious studies.

The Dutch Jacques Waardenburg (1930–) is undisputedly one of the foremost authorities in the field, also on the strength of his skill for trilingual writing and teaching. His contribution to the study of religious historiography is unparalleled, because of its tremendous meticulousness in general and the extraordinary quality of his ground-breaking work on Western Islamic historiography in particular. His

lifelong endeavor to define Islam in the frame of the science of religions is based on a multifaceted and “multi-perspective” approach which aims to respect the concerns of “Reason” as well as those of the (Insider’s) “Religion.” (“Religion and Reason” is the title of an influential series of studies in religion promoted by Waardenburg himself.) If the balance is sporadically tipping in favor of religion to the detriment of reason, this is due to his passionate if secular plea for a new-style phenomenology of religion tuned to its object in order to grasp and understand the so-called religious constructions of reality depending on explicit or implicit intentions.

**Germany.** In Germany the status of religio-historical studies is quite different. The study of ancient religious documents based on philological principles more strict than during the preceding generation has gained a leading position in the current methodology of religious studies. Starting with a critique of the History-of-Religions School and on the strength of expertise in virtually all the philological domains pertaining to the ancient Mediterranean cultures, Carsten Colpe (1929–) has debated with unequalled acumen innumerable issues crucial to the historical understanding of the New Testament, Gnosticism, Manichaeism, Islam, Iranian and Hellenistic religions. More generally, his contribution to the theory of syncretism, prophecy, monotheism, religious innovation, sacred and profane as well as to the methodology of comparison and religious typology is invaluable, characterized as it is by painstaking erudition and hermeneutic subtlety. An equal range of interests—with primary attention to Mandaeism—and a similar formation against a theological and Orientalist background (Leipzig in place of Göttingen) is perceivable in his peer Kurt Rudolph (1929–). With less theoretical sophistication but more concreteness in producing great historical syntheses, Rudolph has been the international advocate of a historical study of religions opposed to any attempt at reducing the autonomy of the history of religions through philosophical, theological or even political devices.

Walter Burkert (1931–) is a classical philologist by formation, but his work on the Greek religion in its interrelationship with Near Eastern religious traditions has been influential far beyond the territory of classical studies, contributing to a new vision—not particularly edifying—of the culture that is at the base of modern consciousness. Further, his theory of sacrificial ritual, tracing parallels between animal behavior and human religious activity, has opened new paths to an understanding of human culture—in all its historicity—within a broader frame of reference. Based instead on a solid training at the phenomenological school of Gustav Mensching and a first-hand knowledge of several Indo-European and Turkish languages, Hans-Joachim Klimkeit (1939–1999) has done seminal work on political Hinduism, Buddhism and Silk-road acculturation. On this firm footing, he has been instrumental in the expansion of the studies on Manichaeism to which he has given an original

contribution by searching literary and artistic motifs in their diffusion throughout the caravan routes of Central Asia. His perceptive studies on encounters of religions and the resulting cultural exchange have left a significant mark in the discipline.

In quite another direction is addressed the scholarly achievement of his peer Hans Georg Kippenberg (1939–), Colpe’s foremost pupil. Moving from the traditional background of post-war *Religionswissenschaft* focused on the so-called “Umwelt des Neuen Testaments,” he has instilled overdoses of social scientific methodology (Max Weber being the main source of inspiration) and ideology criticism theory into his study of ancient salvation religions, sometimes to the detriment of historical concrete evidence. His history of the emergence of religious historiography in tension with modernity is teeming with exact formulations and stimulating ideas, albeit unilateral in its perspectives. Similarly, Kippenberg’s theory of religion is multifaceted and multidisciplinary in its approach, but ultimately quite unilateral, in so far as religion is presented exclusively in cultural terms. Even more versatile is the paradigm proposed by Burkhard Gladigow (1939–), a scholar who has provided stimulating novel contributions in the field of Greek and Roman ancient religions. The material side of a “spiritual” phenomenon emerges forcefully in his perspectives where biology, economics, semiotics and linguistics are called to collaborate on a project of a new science of religions.

More conservative seems the approach of the German-Swiss Fritz Stolz (1942–2001), who, though refusing to give any chance to an old-style phenomenology, sticks to a historically oriented study of traditional themes with focus on ancient Near Eastern religions and Biblical monotheism. However, his attempt at introducing a notion of “worldview” based on three fundamental polarities seems to be a successful strategy for innovating a study of religion concerned with issues of comparison and historical typology.

**Great Britain.** Although in the post-war years anthropology becomes more and more historical and history more and more anthropological, a listing of all of the important anthropologists is not possible here. Nevertheless, mention must be made of anthropologists such as Victor Witter Turner (1920–1983) and Mary Douglas (1921–) whose achievements have been so influential on religious historiography inside and outside Britain. The decolonization of the enormous British Empire has obviously had a large impact on the academic study of religion, as proved also by the outputs of its main representatives. Ninian Smart (1927–2001), the senior of this company, used to confess that he had his initiation to his “empathic” concept of religion when, being in Sri Lanka as a soldier, he saw the appointment of the first Buddhist chaplain in the British army. Apart from widely popular textbooks combining the phenomenological and historical style at its best as well as specialized studies on Indian philosophy, Smart introduced into the British and Anglo-American discourse on religion the notions of “worldviews”

as cross-cultural explorations of human beliefs, and of “dimensions of the sacred” as anatomy of the world’s beliefs. Making no concession to modernist sophistication, he unhesitatingly identifies his approach as a phenomenology or morphology of religion, with all the essentialist implications of this definition.

Eric John Sharpe (1933–2000) has written the most complete history of comparative religion, remarkable for both its thoroughness and lucidity. The first incentive to this work came from his interest in Christian missionary activity encountering Hindu traditions, which also led to the biography of Nathan Söderblom (1866–1931), a founding father of the phenomenological approach to the study of religion but also a promoter of the Ecumenical movement. Apparently, Sharpe was intrigued by the relationship between theology and the scientific study of religions. As a rejoinder to Smart’s six-dimensional structure of religion he offered his own scheme of four functional “modes” (existential, intellectual, institutional, ethical) as well as a hermeneutical tool tuned in to a post-colonial perspective: the concept of “response threshold” implying the right of the insider to advance an interpretation of his or her own tradition. Japan, where he lived for five years, has been for Michael Pye (1939–) the mirror that India was for Smart and Sharpe. After the remarkable juvenile achievement of an introduction to comparative religion based on a choice of significant source materials and an ingenious method keeping the middle-way between understanding and explanation, Pye has gained a distinguished position in the field of Buddhist studies through a painstaking investigation of the Mahāyāna concept of “skilful means” which is basic to the understanding of Buddhist way of salvation. His discovery that the critical study of religions began early in Japan independently from Western influence is, finally, crucial as a deterrent against the dominating trend towards cultural relativism.

**North America.** The impact of an anthropologist such as Clifford Geertz (1926–) or a sociologist such as Robert Bellah (1927–) on religio-historical studies has been certainly stronger than that of theorists scarcely active as empirical historians, such as Robert D. Baird (1933–) or Hans H. Penner (1934–). The former is too conservative in his old plea for understanding religion combined with a problematic mix of functionalism and historicism. The latter is too radical in his keenness on imposing structuralist frames on realities that refuse them firmly. More influential in quite different ways have been two scholars both related to the intellectual atmosphere of the Chicago Divinity School.

A broadly humanistic style combined with fine critical insight operates in the religious hermeneutics devised by Charles H. Long (1926–), following Joachim Wach’s lesson. As a historian, Long applied this hermeneutics to the study of creation myths and, in another vein, he pioneered the post-colonialist approach offering interpretations of Black religion in America which “demask” a series of metaphors of subordination and elucidate symbolic images of the oppressed and the oppressors.

Jonathan Zittel Smith (1938–) after graduating from Yale with a dissertation on Frazer’s *Golden Bough* and a short teaching term at Santa Barbara has spent his career at the University of Chicago. He moves from a wide-ranging in-depth knowledge of Mediterranean religions (with focus on Judaism and Early Christianity in their interrelationship with the Near Eastern and Hellenistic milieus) and an insightful meticulous experience of world-scale anthropological and historical materials. In his concise and intellectually penetrating essays Smith is concerned with testing the adequacy of models developed within the study of history of religions. His inquiries into theories of myth (and truth), ritual and comparison, in passionate critical conversation with such figures as James Frazer, Adolf Jensen and Mircea Eliade, has paved the way for a more self-conscious approach to the comparative study of religion. Smith’s philological accuracy and thoroughness in the treatment of secondary literature is matchless, but his selective style in tackling original sources combined with deconstructionist bias may sometimes result in bold assumptions which can meet difficulties gaining the scholars’ general consensus. Smith’s often quoted dictum, “religion is solely the creation of the scholar’s study—there is no data for religion” (Smith, 1982, p. XI), albeit seductive in its blatantly postmodern relativism, seems to be far from complying with the blunt historical data.

**France.** France and the other French-speaking western countries (Belgium, Switzerland, Canada) have produced in post-war years a great number of religious historians who have been influential in their respective fields, but, for the reasons given above, very few historians of religions. Characteristically enough, the French gurus of postmodernism (Michel Foucault [1926–1984], Jacques Derrida [1930–2004], Pierre Bourdieu [1930–2002], Jean-Louis Lyotard [b. 1924]) who are haunting presences in the current discourse on religion going on in the Anglo-Saxon cultural milieu, are virtually missing in the religio-historical work produced by French scholars. Among them, the most active in the international scene has been the Belgian Julien Ries (1920–). A Catholic priest and a leading specialist in the domains of Gnosticism and Manichaeism, Ries has been meritorious in promoting editorial enterprises including cross-cultural surveys of ancient Mediterranean religious themes, but his (crypto-theological) project of “anthropology of the sacred,” inspired by Eliadean hermeneutics (*Homo Religiosus*) combined with Italian-styled historical typology did not bring any significant innovation into religious historiography.

Likewise, the Swiss Carl-Albert Keller (1920–) is deeply influenced by his Calvinist background. Pastor and professor at Lausanne after seven years of missionary activity in Southern India, Keller was a native speaker of two languages (French and German) and he had philological expertise in two textual traditions (Hebrew and Indian). After various researches on biblical prophecy, Hinduism, Islam and Gnosticism he has devoted all his energies to investigating mystical practices in Western and Eastern traditions (Ramakrishna

and Calvin in particular). His approach to mysticism is aimed to respecting the intentions of the mystical practitioner; his vision of religion can be condensed in the formula “communication with the Ultimate (= God).”

Michel Meslin (1926–) had the rare privilege of teaching history of religions at the University of Paris-Sorbonne and has been perhaps the most prestigious—though not the most influential—figure in the discipline. After doing work on ancient Roman and early Christian traditions with focus on their interrelations (persistence of modes and functions in New Year festivals), Meslin came to comparative religion, advocating the practice of “religious anthropology” as the most appropriate method of the discipline. This approach is professedly multidisciplinary and multi-leveled, though it is basically founded on psychoanalytical hermeneutics and fuzzy epistemological premises.

**Italy (and Romania).** There was nothing decisively new in Italian studies in history of religions with the coming of age of Pettazzoni’s younger students. However, while in other countries, in spite of the labels, comparative religion (or history of religions) was in agony, in Italy it was still kept alive. Alessandro Bausani (1921–1988) was trained as a fully fledged Islamist and Iranologist, but the influence of Pettazzoni is apparent in his plea for a “functional-historical typology” applicable to a discipline of Islamic studies embedded in the history of religions agenda. The contribution of Bausani (a Catholic converted to Baha’ism himself) to the historical study of Iranian religious tradition (from Zarathushtra to Baha’u’llah) and fringe Islam (from India to Indonesia) is invaluable; but his endeavors to elaborate an accurate typology of monotheism gain him also a place as a thoughtful theoretician of the science of religions.

Ugo Bianchi (1922–1995), an ancient historian in his formation, has been the most notable prosecutor of Pettazzoni’s style of historical comparison. He gave seminal contributions to defining the typology of dualism (from Iran to modern revivals), mystery cults, Orphism, Gnosticism, Manichaeism, transition rites, asceticism. Primarily, Bianchi was engaged in the defense of the historicity of myth (ritual and his social setting was not his main concern), elaborating—in the wake of W. Schmidt, R. Pettazzoni, A. E. Jensen, M. P. Nilsson, F. Cumont, H.-Ch. Puech, H. Jonas and M. Eliade—a paradigm that connected in intricate patterns dualistic trails, mystery initiations, Platonism, and the birth of Gnosticism. His method consisted of reading primary sources in the light of a theoretical model and then convening international scholars to test the relevance of that model to their empiric materials. As a theoretician of religion, Bianchi was keenly conscious of the responsibility of history of religions in attempting to devise categories able to eschew both phenomenological and reductionist traps. To paraphrase his words, religion can neither be allowed to assume the status of an a-priori autonomous category of human experience nor be reduced to the status of a subcategory within some other dominant science—whether the science be social

or human (history, ethics or even linguistic and cognitive theories).

The second key figure in Pettazzoni’s Roman School is Dario Sabbatucci (1923–2003), a specialist in ancient classical religions who devised theories of Greek mysticism resulting from social revolution and of Roman religion as the product of juridical theory. These theories, which are markedly reductionist though scarcely consistent with the contextual evidence, have interplayed with structuralist tenets from Paris (Lévi-Strauss, Jean-Pierre Vernant [1914–] and Marcel Detienne [1935–]) and social scientific approaches from Germany (Tübingen School) respectively. More generally, besides an ambitious but amateurish taxonomy of polytheistic religions, Sabbatucci has developed a theory of religion as entirely dissolvable in culture and—in a postmodern vein—as an arbitrary product of Western ethnocentrism. While these figures dominated the academic milieu, two other scholars worked out peculiar approaches to the study of religion that have been widely influential on layperson culture.

Alfonso Maria Di Nola (1926–1997) had the encyclopedic ability of writing on virtually every topic of religious historiography in a learned and intelligible style. Obviously, his innumerable writings rely mostly on second-hand sources with all the imaginable consequences. As an original researcher he studied aspects of Greek religion in cross-cultural comparison as well as animal and healing cults among Italy’s contemporary peasants. His approach to religious anthropology is avowedly based on a neo-Marxist methodology influenced by Antonio Gramsci’s reappraisal of folklore studies. Coherently, his general views on religion and religious historiography are ferociously anti-phenomenological and conditioned by his ideological options as well as by his unabashed philological inaccuracy.

Élémire Zolla (1926–2002) was in many ways the exact opposite of Di Nola in his concern for the individual’s (sometimes elitist) religious experience. Trained as a literary critic and expert in worldwide mystical, esoteric and symbolic traditions, Zolla elaborated a very personal style in reading religious phenomena from the insider’s perspective without losing the contact with the cultural setting. His in-depth researches on alchemy, traditionalism, American transcendentalism and the literary image of Native Americans as well as his perceptive reflections on classical issues of comparative religion such as syncretism, shamanism, Gnosticism, and Dionysian ecstasy characterize him as a careful investigator of spiritual modes that are beyond the grasp of scholars utilizing the tools of traditional historiography. As a terminus of this survey it is worth mentioning a scholar belonging to a later generation and to a different cultural tradition (Romanian) who was a disciple of Bianchi as well as a follower of Zolla.

Ioan Petru Culianu (1950–1991), fundamentally Italian in his training, became familiar with the Dutch academy in Groningen and with the North American one in Chicago, where he became the heir to his compatriot Eliade. The foci

of his scholarly concern were coincident with the favorite subjects of his mentors (ecstasy, dualism, esotericism, views of afterlife). He shifted from a historical method to a mentalistic epistemology that turns historicism on its head. His death was the death knell for the discipline: At the current state of the art, a style of history of religions like that fostered by Pettazzoni, Brelich and Bianchi seems to be hardly conceivable.

#### BIBLIOGRAPHY

Useful for the study of religious historiography in the twentieth century are the following surveys: Jan de Vries, *The Study of Religion: A Historical Approach* (New York, 1967), reprinted with an introduction by Kees W. Bolle as *Perspectives in the History of Religions* (Berkeley, Calif., 1977); Alfonso Di Nola, "Religione" and "Religioni, Storia delle," in *Enciclopedia delle religioni* (Florence, Italy, 1973), pp. 22–309; Eric J. Sharpe, *Comparative Religion: A History* (London, 1975), reprinted with a supplementary chapter and revised bibliography (London, 1986); Michel Meslin, "L'histoire des religions," in H.-Ch. Puech (ed.), *Histoire des religions*, vol. 3 (Paris, 1976), pp. 1277–1328; Seymour Cain, "Study of Religion," in M. Eliade (ed.), *Encyclopedia of Religion* (New York, 1987), pp. 64–83; Giovanni Filoramo and Carlo Prandi, *Le scienze delle religioni* (Brescia, Italy, 1987), reprinted with two additional chapters (Brescia, 1997); Karl-Heinz Kohl, "Geschichte der Religionswissenschaft," in *Handbuch religionswissenschaftlicher Grundbegriffe*, vol. 1 (Stuttgart, Germany, 1988), pp. 217–262; and the following collections: Jacques Waardenburg, *Classical Approaches to the Study of Religion: Aims, Methods and Theories of Research*, 2 vols. (The Hague, 1973–1974), an irreplaceable corpus of classical pages with biographical introductions and detailed bibliographies; Axel Michaels (ed.), *Klassiker der Religionswissenschaft: Von Friedrich Schleiermacher bis Mircea Eliade* (Munich, 1997), providing valuable portraits of scholars but inadequate in its choices and marred by various blunders; Frank Whaling (ed.), *Contemporary Approaches to the Study of Religion*, 2 vols. (Berlin, 1984–1985), a collection of historical essays, of unequal value and assorted in an arbitrary way, too inclusive on the one hand and too exclusive on the other owing to its Anglo-centric perspective.

Basic works (introductory, historical, autobiographical, theoretical or methodological) by authors mentioned in the historical survey are Robert D. Baird, *Category Formation and the History of Religions* (The Hague, 1971), reprinted with a new preface (Berlin-New York, 1991); Ugo Bianchi, *The History of Religions* (Leiden, 1975); C. J. Bleeker, *The Rainbow: A Collection of Studies in the Science of Religion* (Leiden, 1975); Angelo Brelich, *Introduzione alla storia delle religioni* (Rome, 1966); Angelo Brelich, *Storia delle religioni: perché?* (Naples, 1979); Walter Burkert, *Creation of the Sacred: Tracks of Biology in Early Religions* (Cambridge, Mass., 1996); Carsten Colpe, *Theologie, Ideologie, Religionswissenschaft: Demonstrationen ihrer Unterscheidung* (Munich, 1980); Alfonso Maria di Nola, *Attraverso la storia delle religioni* (Rome, 1996); Georges Dumézil, *Entretiens avec Didier Eribon* (Paris, 1987); Mircea Eliade, *L'épreuve du Labyrinthe* (Paris, 1978);

Kurt Goldammer, *Die Formenwelt des religiösen: Grundriss der systematischen Religionswissenschaft* (Stuttgart, 1960); Friedrich Heiler, *Erscheinungsformen und Wesen der Religion* (Stuttgart, 1961); E. O. James, *Comparative Religion: An Introductory and Historical Study* (London, 1938), revised and reset (London, 1961); Carl-A. Keller, *Communication avec l'Ultime* (Geneva, 1987); Hans G. Kippenberg and Kocku von Stuckrad, *Einführung in die Religionswissenschaft* (Munich, 2003); Joseph M. Kitagawa, *The History of Religions: Understanding Human Experience* (Atlanta, 1987); Vittorio Lanternari, *Antropologia religiosa: Etnologia, storia, Folklore* (Bari, Italy, 1997); Gerardus van der Leeuw, *Phänomenologie der Religion* (Tübingen, Germany, 1933; 2d edition enlarged, 1956); Claude Lévi-Strauss and Didier Eribon, *De près et de loin* (Paris, 1988); Charles H. Long, *Significations: Signs, Symbols, and Images in the Interpretation of Religion* (Philadelphia, 1986); Gustav Mensching, *Die Religion: Erscheinungsformen, Strukturtypen und Lebensgesetze* (Stuttgart, Germany, 1959), (unreliably) translated into English as *Structures and Patterns of Religion* (Delhi, India, 1976); Michel Meslin, *Pour une science des religions* (Paris, 1973); Michel Meslin, *L'expérience humaine du divin* (Paris, 1988); Hans H. Penner, *Impasse and Resolution: A Critique of the Study of Religion* (New York and Bern, 1989); Raffaele Pettazzoni, *Svolgimento e carattere della storia delle religioni* (Bari, Italy, 1924); Michael Pye, *Comparative Religion: A Introduction through Source Materials* (Newton Abbot, U.K., 1972); Julien Ries, *La storia delle religioni* (Milan, Italy, 1993); Kurt Rudolph, *Historical Fundamentals and the Study of Religions* (New York and London, 1985); Dario Sabbatucci, *Sommario di storia delle religioni* (Rome, 1991); Eric J. Sharpe, *Understanding Religion* (London, 1983); Ninian Smart, *Worldviews: Crosscultural Explorations of Human Beliefs* (New York, 1983; 3d revised edition, N.J., 2000); Ninian Smart, *Dimensions of the Sacred: An Anatomy of the World's Beliefs* (Berkeley, Calif., and Los Angeles, 1996); Wilfred Cantwell Smith, *Religious Diversity* (New York, 1976); Jonathan Z. Smith, *Map is not Territory: Studies in the History of Religions* (Leiden, 1978); Jonathan Z. Smith, *Imagining Religion: From Babylon to Jonestown* (Chicago, 1982); Fritz Stolz, *Grundzüge der Religionswissenschaft* (Göttingen, Germany, 1988); Jean-Pierre Vernant, *Ai confini della storia* (Turin, Italy, 1993); Joachim Wach, *The Comparative Study of Religions* (New York, 1958); Joachim Wach, *Introduction to the History of Religions* (New York and London, 1988); Geo Widengren, *Religionsphänomenologie* (Berlin, 1969).

Miscellaneous volumes (including festschriften, thematic issues of journals, proceedings of symposia and conferences, textbooks) relevant to the study of religious historiography are innumerable. Among recent introductions to the history and methods of religious studies written by single authors not mentioned in the preceding survey the following are worth mentioning: Kees W. Bolle, *The Enticement of Religion* (Notre Dame, Ind., 2002); Walter H. Capps, *Religious Studies: The Making of a Discipline* (Minneapolis, 1995); Francisco Diez de Velasco, *Introducción a la Historia de las Religiones* (Madrid, 1995; 3d edition revised and augmented, Madrid, 2002); Hans-Jürgen Greschat, *Was ist* (Stuttgart, Germany, 1988); Günter Lanczkowski, *Einführung in die Religionswissenschaft* (Darmstadt, Germany, 1980); Giovanni Magnani, *Storia comparata delle religioni: Principi feno-*

*menologici* (Assisi, Italy, 1999); William E. Paden, *Religious Worlds: The Comparative Study of Religion* (Boston, 1988); Olof Pettersson and Hans Åkerberg, *Interpreting Religious Phenomena: Studies with Reference to the Phenomenology of Religion* (Stockholm, Sweden, 1981); Aldo Natale Terrin, *Spiegare o comprendere la religione? Le scienze della religione a confronto* (Padua, Italy, 1983); Aldo Natale Terrin, *Introduzione allo studio comparato delle religioni* (Brescia, Italy, 1991).

## HISTORY

*This entry consists of the following articles:*

CHRISTIAN VIEWS  
JEWISH VIEWS

### HISTORY: CHRISTIAN VIEWS

Christians understand history from the perspective of the life of Jesus of Nazareth (c. 4 BCE–30 CE), whom they call the Christ. Christians believe that in Jesus Christ God became incarnate in human history and thereby provided the key to the character, validity, and significance of history. Salient events in Jesus' life in ancient Roman Palestine, as Christians understand them—notably his birth, his ministry, his death by crucifixion, and his resurrection to life—form the basis of the Christian religion. At the same time, the life of Jesus Christ provides the ultimate orientation for understanding the whole of history and the historical process, past, present, and future. To be Christian unavoidably entails bonding with an understanding of history, and over the ages the variety of Christian views has been considerable.

Christian views of history have in common that they encompass all peoples as well as all nonhuman creation. For Christians, history began with the creation of the world and will culminate with the return of Jesus Christ to the world. Christians give a special role within history to the Jews before Jesus' time, to his immediate followers during his lifetime, especially those called the twelve apostles, and to the church and the kingdom of God for the remainder of history after Jesus. For Christians, the ongoing temporal course of worldly existence proceeds according to cycles of worship as well as in cycles of forgiveness and renewal as, under the providence of God, Christians seek to do the will of God and to overcome evil with good.

Christian views of history contrast with the alternatives provided by different ultimate orientations, whether secularist, Islamic, capitalist, Hindu, Buddhist, New Age, or something else. With the secularization of thought and society in European and North American cultures during much of the twentieth century, Christian views tended to shrink to an emphasis on church history. But in tandem with the persistence of religions in pluralist relations with each other across the world, many Christians have reaffirmed the validity of Christian approaches for understanding the whole of history and for engaging in the study of any historical subject.

**ELEMENTS OF CHRISTIAN VIEWS OF HISTORY.** The first people who gathered around Jesus disclosed what they believed mattered for the Christian religion. This they did not by instruction in ritual or law, not by theological discourse or logical argument, but by telling the history of Jesus. At first the followers of Jesus told each other about what happened to him. Paul wrote letters to several Christian communities that recalled aspects of his life. The earliest Christian historical writings are the accounts known as the Gospels and the *Acts of the Apostles* that emerged out of and consolidated the recollections that people passed on after the death of Jesus. Christians ever since have looked to the Gospels as the source for their knowledge of Jesus and for his message of the coming of the kingdom of God. History came to be seen as the repeated overcoming of the kingdom of darkness by God's kingdom of light. In the words of the Lord's Prayer, "Our father in heaven, holy be your name, your kingdom come, your will be done on earth as it is in heaven."

The experience of the crucifixion and the resurrection of Jesus totally transformed the first Christians' understanding of history. They created the earliest Christian views of history by reworking the views they inherited from Jewish sources. They regarded Jesus as the one whose coming the ancient Hebrew prophets had often promised. *John* called Jesus the Messiah, the Christ, the one anointed by God to be the savior of Israel. The very use of that title constituted an understanding of the role of Jesus in world history. *Matthew* and *Luke* contained genealogies constructed to show that Jesus was the direct descendant of the two greatest names in Jewish history, Abraham and David, and, according to *Luke*, the direct lineal offspring of Adam, regarded as the first human being created by God.

The Gospels and the *Acts of the Apostles* also told how Jesus projected a new horizon for the future. After leaving his followers for a time he would return again to be among them. They caught suggestions of the end of the age, the *eschaton*, some time in the near or distant future, and they anticipated a final resurrection of the dead.

Paul, in his *Epistle to the Romans*, created an understanding of history that explained both the continuity of Jesus with Israel and Adam and the radical innovation that Jesus inaugurated for his followers in the future. Paul viewed Jesus both as the descendant of Adam and as the New Adam. History, for Christians, thus divides into two ages. Before Christ there were the creation, the old covenant, the old self, the way of the law, whereas after Christ there would be the new creation, the new covenant, the new self, the way of grace. Paul thought that the Hebrew scriptures, which Christians knew as the Old Testament, contained many anticipations of Christ. The children of Abraham and David were to be completed by a new Israel called the *ekklesia*, composed of children of Abraham by adoption.

It is important to understand that the early Christians formed their views of history as part of living within the new community of the *ekklesia*, later called the church. Their

views of history emerged as they engaged in their worship, read their scriptures, preached their sermons, produced their art, instructed their young, and uttered their confessions of faith in Jesus Christ. Over the centuries, it was largely through such tangible and close-to-home means that Christians taught, maintained, elaborated, revised, and unfolded their views of history into the wide variety of forms known in the history of Christianity. The writings on history by the great thinkers—such as Paul, Eusebius (d. c. 339), Augustine (d. 430), Thomas Aquinas (d. 1274), Luther (d. 1546), Calvin (d. 1564), and Bossuet (d. 1704)—depended upon and emerged from within the experience of the worshipping community. The great creeds of the church—from the simple confession of Peter (“You are the Christ, the son of the living God”) to the important Nicene Creed (325), the famous and popular Apostles’ Creed (eighth century), and the many creeds of the Reformation era—were affirmations of the faith of the church that entailed reciting the history of Jesus and a Christian version of world history.

What develops is an understanding of universal history that depicts the course of the ages as a sequence of creation, fall, redemption, and culmination. History begins with the creation of the world, Adam, and Eve by God and continues with a decline into sin and suffering. God then offers the possibility of restoration, first through the line of Abraham and Israel, then through Jesus Christ and the church. Finally come the last days, the *eschaton*, when all things culminate in the return of Jesus Christ, followed by the Last Judgment, the appearance of the new heavens and the new earth, the resurrection of the dead, and the experience of eternal life. It is a comprehensive vision that gathers up the past, opens up the future, and explains the meaning of the present.

Seen in this way, the history of the world has a beginning and will have an ending. History is ongoing. Christian writers, like the author of *Hebrews* and Augustine, use the figures of a journey and a pilgrimage, and others following the Gospels use the image of the way to catch the ongoing tendency of things. They endeavor to grasp the meaning of the course of history by identifying the ages through which the world passes. For example, Paul’s two ages, the old and the new, could also be regarded as one, the present age, surrounded by eternity before creation and eternity after the end of time. The genealogies in *Matthew* and *Luke* calculated four or five ages. The *Letter of Barnabas* (early second century) turns these into six ages by analogy with the six days of creation. And since a day in the eyes of God is like a thousand years (*2 Pt.* 3:8), this suggested that God would bring the world to an end after six thousand years. Augustine adopted the six-age scheme and noted in the final pages of his monumental *City of God* that the world was then in the sixth and final age. Later writers, notably during the Reformation of the sixteenth century, divided the six thousand years into four monarchies—Babylon, Persia, Greece, and Rome—based on the Old Testament *Book of Daniel*. In the

seventeenth century the threefold scheme of ancient, medieval, and modern came into vogue, appearing first in relation to Christian history. Even then, many Christian writers thought that if the history of the world was analogous to human life they were living in the old age of the world. History was moving toward culmination by way of beneficent decline.

With all this emphasis on ongoing tendencies and periods, many people have asserted that Christian views of history are by definition linear and for that reason distinct from views depicting history as cyclical. They contrasted Christian views as linear with Hindu and Buddhist views as cyclical. However, Christian views are also cyclical, even as Hindu and Buddhist views are also linear, and Christian views offer many ways of understanding the recurrent rhythms of history. The earliest instance was the common meal initiated by Jesus Christ in his last supper, later called the Eucharist or the Lord’s Supper, which became a way for Christians when gathered together to remember (*anamnesis*) the life and death of Jesus. The introduction of Sunday as the day of worship symbolized the resurrection of Jesus and gave Christians a recurrent beat for the life of their communities. Paul emphasized the rhythm of creation and re-creation, and Christians over the ages have sought to implement his message by striving repeatedly for the overcoming of evil with good and the renewal of all things. In other guises they know this recurrent rhythm as the pattern of repentance, forgiveness, and restoration by which God repeatedly shows mercy to sinners and brings new things out of old. The symbol of the resurrection itself is an affirmation of the recurrence of blessing and healing in spite of the persistence of death and evil. Following the example of Jesus and Paul, Augustine envisioned world history as a recurrent spiritual conflict between the city of God and the city of this world. In these and other ways, Christian views of history posit the reality of recurrence in the world within the drama of the ongoing course of events from the origins to the *eschaton*.

Christian views of history also have a personal side. They permit Christians to orient their lives within the overall course of history. Over the years Christians as the church have fashioned rituals that, according to their ecclesiastical traditions, they call sacraments, ordinances, or special services. These mark both the linear course of life in the world and the cyclic experience of life in the world: baptism initiates each person, whether at infancy or as an adult, into the church; confirmation or acceptance into church membership marks religious coming of age; marriage establishes companionship on the journey and the procreative relationship; the Eucharist, or Lord’s Supper, remembers Jesus Christ’s death; penance or prayers for forgiveness register the cycle of sin and restoration; and holy unction, last rites, or the funeral complete the earthly pilgrimage.

Christians gradually came to express their views of history in the form of a calendar that liturgically recalls the events of the life of Jesus Christ in an annual cycle. The first fixture

in the calendar became known as Easter and celebrates the resurrection of Jesus, although agreement on when to mark Easter has eluded Christians and yielded diverse representations of the calendar. Christians have remembered the birth of Jesus as Christmas from at least the early fourth century. The advent to Christmas came to mark the start of the Christian new year. Christians later added the events of Epiphany, Holy Week, Pentecost, and the Ascension. Christians also mark the ongoing sequence of years with reference to the birth of Jesus, counting the years from “Our Lord’s Incarnation” (AD, *anno Domini*, the year of the Lord). This scheme, which formalized a popular Christian usage, was devised by Dionysius Exiguus (early sixth century) as part of his calculation of the liturgical date of Easter. Much later and more slowly, Christians began to count the years backward from the incarnation, calling them “Before Christ” (BC). By using these important symbols, they claim that the whole course of history centers on Jesus Christ and that the annual cycle of Christian experience recapitulates Jesus’ life.

A solid tradition of historical writing reflects the emphasis Christians put on recording the course of events, creating a common memory, and handing on their story in writing to future generations. It began with the Gospels and the *Acts of the Apostles*. Early in the third century Julius Africanus produced a five-volume *Chronology* with the dual purpose of establishing that the antiquity of Moses was greater than that of the Greeks and of tracing the continuity of Christianity with Jesus Christ. Eusebius of Caesarea (early fourth century) stabilized a lasting tradition of Christian historiography with his *Chronology* and his *Ecclesiastical History*. Augustine’s magisterial *City of God* formulated what became the most influential Christian reading of world history. Following patterns of explanation found in the Old Testament, he showed how the activities of God, humans, angels, and devils conjoined to produce human history as a struggle between the city of God and the city of this world. Augustine’s student Paulus Orosius elaborated upon this. From these sources an immense number of medieval chronicles, annals, and histories took their cue. Between the seventh and the fifteenth centuries writers produced histories shaped by Christian views: histories of the church, of the peoples of Christendom, of rulers and governments, of cities, of the Crusades, of the saints, of monasteries, and of the whole world known to them. Protestants, Anglicans, and Catholics from the sixteenth-century Reformation onward wrote histories that continued the fecund traditions of Christian historiography and that served to enliven their polemics against each other.

Running through Christian views of history is the understanding that many actors generate history. The Bible offered the necessary models, and Eusebius provided the example for how to translate the biblical vision into a reading of the post-biblical course of events. Christian historians in other periods, of whom Merle d’Aubigné (1794–1872) was a stunning case, as well as pastors and preachers in their sermons every Sunday to the present day instantiate the view

that history is a lively arena for many actors. God is primary, and, although God’s abode is the timeless present of eternity, God acts directly in history. Acting against God are Satan as the Evil One as well as various devils and evil spirits whose deeds impact the course of history. Joined to these are human beings regarded as responsible for what goes on in the course of the ages. Next to all these are the non-human creatures—the animals, the trees, the wind and the rain—that likewise effect what happens in history. How to explain the relations and relative effects of these great actors in history—God, the Evil One, humans, and nature—has been a matter of perennial disagreement among Christians. Christians created the doctrines of divine predestination and human free will in an effort to explain some of this. The Old Testament supplies the model for understanding God’s work in history, while the New Testament does the same for the work of the Evil One. Just as God governed Israel by leading the Israelites out of Egypt, taking them into the Promised Land, establishing David on the throne of Israel, and confounding the enemies of Israel, so God governs the church through the ages. And just as God also ruled over Assyria, Egypt, and Babylon, so God rules over all things in the world throughout the whole of history according to God’s will. Christians call this wise governance by God “Divine providence.”

In a similar way, following the Lord’s Prayer, Christians attribute to God’s action everything from their daily food to the rise and fall of kingdoms. Yet all the while they know, according to their roles in life, that they are responsible for tending their fields as farmers or governing the commonwealth as rulers. God’s central act in history was the incarnation in Jesus Christ, and Jesus Christ continues to rule as Lord of history. Christians began to talk very early in the church’s history of God’s eternal plan of salvation and God’s plan for the world. When human actions fulfill the will of God, God bestows blessings; when they do not, God sends judgment instead. The prospect of the Last Judgment came before the people by means of art, especially during the medieval and early modern periods. The providence of God has given Christians confidence and comfort in history, while the Last Judgment has often given them cause to tremble.

**TYPES OF VIEWS.** From the time of the apostles to the present, Christian views of history have proliferated into at least four dominant types. All types have in common the elements already summarized—orientation by the life of Jesus Christ, the envelopment of universal and personal history, an account of the ongoing and the recurrent matters of history, and so on. They differ, however, in the way they interpret these elements and in the priorities and emphases they assign to them. All appeal to Jesus Christ, the Bible, and the experience of the history of Christianity for justification.

The four types may be called the millenarian, the ecclesiastical, the reform/revivalist, and the mystical. *The millenarian type* of understanding of history appeared quite soon among the early Christians and has reemerged periodically throughout Christian history to the present day. The mille-

narians, or “chiliasts,” emphasize the future of history and eschatology. They are deeply aware of the troubles of the present world. They look forward to the return of Jesus Christ as the means of salvation, and they expect salvific change to be abrupt and total. Their name comes from the anticipated thousand-year rule by Christ at the end of history, the seventh eschatological day after the six days of world history. Their scriptural sources are the *Book of Daniel*, chapter 24 of the *Gospel of Matthew*, and the *Book of Revelation*. The earliest millenarians (see the *First Letter to the Thessalonians*) expected the return of Jesus to occur in their lifetime. Millenarian movements over the years have included the prophets of the end around the year 1000, some elements in the Crusades, Joachim of Fiore (d. 1202), the Fifth Monarchy Men (seventeenth century), and the followers of John Darby (1800–1882). In the twentieth and twenty-first centuries most fundamentalists and evangelicals have been millenarians. They have called themselves “premillenarians” because they emphasize the return of Jesus before the advent of the thousand-year reign of purity, and “dispensationalists” because they emphasize the various ways God has changed the divine mode of working with the world over the ages.

The ecclesiastical type of understanding of history began as the early Christians created the institutional forms of the church community and has carried on to the present by means of the dominant churchly traditions. The ecclesiasticals emphasize the continuity of history expressed by means of a specific sequential connection with Jesus and the apostles (e.g., apostolic succession). They contrast the church and the world, while nonetheless struggling for and often achieving some alliance with the political rulers and some penetration of the general culture with Christian ecclesiastical mores. They believe that salvation comes primarily by means of God’s work through the church, notably in the sacraments and in preaching. They value institution-building, maintenance, and stability and seek to control change. Their biblical sources are the letters of Paul, especially *Romans*. The ecclesiastical view emerged with the appearance of bishops and ecclesiastical organization as recounted by Eusebius. The papacy, the church councils, and the Jesuits are among those who perpetuated this view. In the twentieth and twenty-first centuries, standard Roman Catholics, Anglicans, Orthodox, and Lutherans exemplify this type.

The reform/revivalist type of understanding of history has ridden in tandem with the ecclesiastical type throughout the history of Christianity. The emphasis in this third type has been on renewal and recurrence, together with either a return to some normative past or a renovation to some better future. Its proponents are concerned with overcoming spiritual or moral decline and often stand in judgment against the dominant structures. They see God’s salvific work especially in institutional reform or personal spiritual revival. They expect the need for change to be periodic, or as the motto of one strain within the Protestant Reformation expressed it, they aim to be “always reforming.” Reformers

have readily converted to the ecclesiastical type (in a conservative form) once their reforms have become established. They take their scriptural inspiration especially from Paul’s theme of new creation in *Romans* and *Colossians*. Some of the many movements that have viewed history in this way have been the early Benedictines, the early Franciscans, Cluny monks, early Calvinists and Lutherans, early Methodists, and in recent times, the evangelical revivalists and reformational Kuyperians. The Pentecostal movement of the twentieth century has been a major revivalist movement stressing the outpouring of the Holy Spirit and the restoration of the pristine spirit of Christ. Liberation theologians in Latin America are another example.

The mystic type of understanding of history also appeared early and has reemerged periodically throughout Christian history. Mystics seek to transcend the course of mundane history, suspending themselves, as it were, above the process of past-present-future. They have tended to condemn and belittle the history of the world and to seek salvation by union with another realm. Their hope has been to overcome change, yet through all that, they have also consciously intended to exercise an influence upon the affairs of the world. The vision of John in *Revelation* inspired them biblically. Notable examples of the mystic type are the pillar saints (Stylites) of Syria, the contemplative orders, the Neoplatonic tradition, Meister Eckhart (d. 1327?), Teresa of Ávila (d. 1582), Jakob Boehme (d. 1624), and the early Quakers. Many Christians in the twentieth and twenty-first centuries have welcomed the influence of Buddhist and Hindu mystics on the Christian practice of meditation and prayer.

**DECLINE AND RENEWAL OF CHRISTIAN PERSPECTIVES.** By the late eighteenth century, as part of the early phases of the secularization of European thought and society, many began to call Christian views of history into question. In particular, capitalist industrialization, the new powers of science and technology, and the thought of philosophers as different from each other as David Hume, Voltaire, and Jean-Jacques Rousseau combined to evoke new faith in humanity and in human powers of control, creativity, and reason. These gave support to new convictions that this world (the *saeculum*) was ultimate and that history was progress toward human improvement.

The practical consequence of the secularizing tendency upon Christian views of history has been the accentuation of two sets of distinctions. First, Christians focused more narrowly on the history of the church and tended to regard the history of the rest of life as a secular concern properly handled by scholars acting as secular historians and not as Christian historians. This contributed to the creation of specialized kinds of histories, such as histories of politics, art, and economic affairs, and treated church history as just another specialization. Second, Christians began to formulate a theology of history—as distinct from a philosophy of history. In the hands of philosophers like Voltaire, J. G. Herder,

G. W. F. Hegel, and a host of more recent thinkers like those of the British analytic school, reflection on the world's history could appear to be an exercise quite remote from what theologians did when they thought about the biblical sources, Jesus Christ, and Christian experience.

In this manner a distinction between sacred and profane history became more pronounced. Church historians and theologians came to see themselves, and to be seen by others, as sociologically set apart from other historians and other scholars of religion. They commonly found themselves employed in seminaries, Divinity schools, and Christian colleges, either separated from universities or other faculties within universities. They associated with each other in specialized professional societies organizationally separated from general scholarly associations. From the perspective of the general culture, people commonly came to regard the church as merely one institution next to others, with the result that the relevance of Christian views of history to life as a whole no longer could be assumed. Liturgy and preaching continued in their cyclic rhythm as the primary vehicles for the transmission of Christian views of history, but with a built-in separation of Christian history from the history of life as a whole, now called secular history. Historians, including those who were themselves Christians, found they could readily explain the temporal course of history solely in terms of human actions in the milieu of the natural environment, without reference to the work of God and the Evil One. This they did quite apart from their still operative belief in the activity of God in history and any Christian vision of universal history. The theories and findings of geology, biology, astronomy, and "prehistory" make a convincing case that the world's history has already taken perhaps billions of years in spite of previously honored calculations of the creation of the world based on *Genesis*. The difficulty, if not impossibility, of genuine prediction beyond the most proximate future made Christian visions of the future *eschaton* seem irrelevant to the course of history if not simply wrong.

In the twentieth and twenty-first centuries, however, many historians, philosophers, theologians, writers, and biblical scholars have led a notable renewal of Christian views of history. They have come from a wide range of Christian traditions, including Roman Catholics, Anglicans, Methodists, Reformed, Russian Orthodox, Baptists, and others. Prominent names since the 1930s include Reinhold Niebuhr, Herbert Butterfield, Arnold Toynbee, T. S. Eliot, C. S. Lewis, Christopher Dawson, and Georges Florovsky. After World War II, the renewal formed part of the general ecumenical and church renewal movements associated with the World Council of Churches (after 1948), the Second Vatican Council (1962–1965), and the resurgence of evangelicalism and Pentecostalism.

Several trends concerning Christian views of history have become noteworthy since the 1970s, even as the four major types of views continued. First, many Christians stressed the need to integrate Christian views of history with

their newly emerging awareness of the diversity of Christianity across the world, and with their renewed appreciation of the genuinely universal character of history. Second, many historians who were Christians explored how Christian insights about human beings and worldly existence might suggest approaches to the historical study of all facets of history, including, in addition to churches, the history of politics, gender, class, economic affairs, art, technology, families, the environment, climate, and so on. Third, the ongoing encounter with other religions of the world, notably Hinduism, Buddhism, Islam, Judaism, and the primal religions, has led Christians to reevaluate the meaning of the claims about Christianity being a religion of history. Fourth, the experience of the secular religions of humanism, capitalism and Marxism has stimulated revisions of Christian views of history as a way of helping to overcome economic, social, and political oppression and to promote the well-being of the whole human community. Fifth, the disintegration of the dominant modes of scientific history characterized by commitment to facts and emphasis on hegemonic elites has given new life to post-modern discussions of historical methods and epistemology, discussions to which historians enlivened by Christian views of history make distinctive contributions.

#### BIBLIOGRAPHY

No general book exists that covers all the elements of Christian views of history as they are brought together in this article. Ernst Breisach's *Historiography: Ancient, Medieval, and Modern*, 2d ed. (Chicago, 1994) treats Christian views as part of the general account. The closest thing to a survey of the history of Christian views of history, albeit in reverse time order, is Karl Löwith's *Meaning in History* (Chicago, 1949). Oscar Cullmann's *Christ and Time* (London, 1951) and Philip Carrington's *The Primitive Christian Calendar* (Cambridge, U.K., 1952) are classic statements about the views of history found in the New Testament and early Christianity. The Jewish antecedents of Christian views of history are introduced in John Van Seters's *In Search of History: Historiography in the Ancient World and the Origins of Biblical History* (New Haven, Conn., 1983). Gregory Dix's *The Shape of the Liturgy*, 2d ed. (New York, 1982), explains how liturgy manifests the sanctification of time. The way the creeds recite history is evident in Philip Schaff's *The Creeds of Christendom*, 6th ed., 3 vols. (Reprint edition, Grand Rapids, Mich., 1983). Langdon Gilkey's *Reaping the Whirlwind* (New York, 1976) discusses Providence, and Brian Hebblethwaite's *The Christian Hope* (London, 1984) surveys the history of eschatology. Of the many books on Augustine, Robert A. Markus's *Saeculum: History and Society in the Theology of St. Augustine*, rev. ed. (Cambridge, U.K., 1988) is a good place

to start. Herbert Butterfield's *Christianity and History* (London, 1949) was central to the statement of Christian views of history in the twentieth century. My introduction to his *Writings on Christianity and History*, which I edited (Oxford, 1979), and my *Herbert Butterfield as Historian* (New Haven, Conn., and London, 2004), examine his work in detail. For the renewal of Christian views of history in recent times, see my *God, History, and Historians* (Oxford, 1977). Dale T. Irvin's *Christian Histories, Christian Traditioning: Rendering Accounts* (Maryknoll, N.Y., 1998) relates Christian views of history to the ongoing life of Christian communities across the world. *History and Historical Understanding*, which I edited with Ronald A. Wells (Grand Rapids, Mich., 1984), indicates how historians work with a Christian view of history to engage historical study generally.

C.T. McINTIRE (1987 AND 2005)

## HISTORY: JEWISH VIEWS

This article describes the conception of history in the Hebrew scriptures and in rabbinic and medieval Judaism and controversies concerning historical continuity and change in modern Judaism.

**BIBLICAL VIEWS.** The unusual importance of history in Israelite religion probably predated the articulation of a full-fledged monotheism that explicitly denies the potency of all gods except Yahveh, the God of Israel. The core of the biblical narrative deals with the relationship between Israel and Yahveh, a relationship created and actualized in history. Yahveh is presented as having anticipated, in the calling out of the patriarchs, the formation of the house of Israel (*Gn.* 18:17) and as having liberated the descendants of the patriarchs from Egyptian bondage in order to enter into a covenantal treaty with them at Mount Sinai (*Ex.* 19:3–8, *Dt.* 26:5–9). In the biblical narrative the subsequent history of Israel, a duration of eight centuries, is winnowed and assembled accordingly.

**History and time.** Whenever it was that monolatry (the sacred obligation to worship only Yahveh and not “other gods,” as in exodus 19:5–6, 20:2–3) became monotheism (the explicit negation of the ontic reality of other gods, as in *Isaiah* 45:5–7), the transformation eschewed some of the most widespread ancient mythological themes. Rather than describing the birth of the various generations of gods, the struggles between them to define their respective sovereignties, and the gods' liaisons with other gods and humans, the dramatic foreground of the Hebrew scriptures is occupied by human responses to Yahveh's acts of revelation and salvation, chastisement and consolation. More than embracing narratives of a series of specific moments, however, biblical history moved toward a new sense of historical time.

The contrast is made between mythological time, where ritual and recitation aim at reexperiencing paradigmatic moments, and historic time as a continuum of unrepeatable occasions each possessing independent value. In this regard, the Hebrew Bible is sometimes described as holding to a linear,

rather than a cyclical, notion of time, but this concept oversimplifies the biblical meaning of history. *Genesis* 1–11, often called “the primeval history,” makes use of ancient Near Eastern mythological materials as reinterpreted by Israelite monotheism. And the biblical notion of history does focus on repetitive patterns (the cycle of sin, punishment, contrition, atonement). The mythological residue and the cyclical patterns are presented in the context of a chain of events reaching back to the absolute beginning of the world and human civilization and forward to a future open in a crucial sense. The cyclical-linear sense of time is also a feature of the prophetic books. Implied in the classical prophets is that past events are guideposts to actions taken in a historical present that is infused by a unique, pregnant tension. The prophet addresses the people and its rulers out of the immediacy of the divine imperative; in order to avert an impending catastrophe, he demands a change of direction (turning, repentance). The prophetic oracles do not embody revelations of predetermined fate but warnings of inevitable acts of divine justice if Israel's behavior continues in the path that the prophet has denounced. The prophet speaks out of the conviction that despite sins committed in the past, the future can assume a different character because God forgives those who reform their habitual ways. The prophet hopes to change rather than predict history and to break through the old cycle of failure to advance the divine demand.

**Stages of history.** In its final redaction the Hebrew Bible locates the Israelite-God covenant in a world historical context, creating a conception of universal history that shaped the consciousness of European civilization for many centuries. The primeval history in *Genesis* 1–11 in effect narates the coming-into-being of the human condition, including humanity's division into many nations and tongues. The remaining chapters of *Genesis* trace the precarious continuity of God's blessing of the direct ancestors of Israel during their sojourns in Canaan until the settlement in Egypt. The objective of the exodus from Egypt is the actual formation of the people at Mount Sinai and during their wilderness wanderings, until the twelve Israelite tribes enter Canaan to occupy their patrimonies (through the *Book of Joshua*). A second historical cycle, *Judges* through *2 Kings*, deals with the history of the people in the promised land: The tribes eventually coalesce into an Israelite kingdom that in less than a century is rent in two. The narrative follows the subsequent history of the two kingdoms (extracted, it relates, from royal *Chronicles*, e.g., *1 Kgs.* 14:29, 16:5, 16:14, 16:20, 16:27) together with stories of the prophets who issued judgments on the kings, until the Assyrian destruction of the northern kingdom of Israel in 722 BCE and the Babylonian conquest of the southern kingdom of Judah in 587/6 BCE. The fall of the Israelite kingdoms is attributed, above all, to God's punishment for idolatry condoned by the rulers (e.g., *2 Kgs.* 17:7–18, 21:10–16, 24:3–4). In contrast to the preceding, the Babylonian exile, the return to Zion, and the second commonwealth are recounted episodically in tales of religious fidelity in Babylon (*Dn.* 1–6), accounts of the rebuilding of

the Temple and the reforms of Ezra and Nehemiah (mainly in the books named for these two men), and the story of the near destruction and last-minute salvation of the Jews of the Persian empire in the *Book of Esther*. A second interpretation of Israelite history up to the Babylonian exile is contained in *1* and *2 Chronicles*.

These accounts of the past are completed by a vision of the future, a conception of the ultimate destiny of humanity. Biblical eschatology is ignored in the historical books but present in the prophetic oracles of the “latter time” concerning the prince of justice who will rule the land (*Is.* 9:2–7, 11:1–10), a utopian age of worldwide peace (*Is.* 2:1–5, *Mi.* 4:1–4), universal worship of Yahveh (*Is.* 56:6–8, *Zec.* 8:20–23), thorough internalization of the covenant and outpouring of prophecy (*Jer.* 31:31–34, *Jl.* 2:28–29), the pacification of nature (*Is.* 65:17–25, *Zec.* 14:1–14), and cataclysmic judgments vindicating God’s holiness among the nations (*Ez.* 38–39; *Is.* 24–27, 63:1–6). Some of these and other prophetic visions already show an evolution from the eschatology of classical prophecy to apocalypticism.

Unlike the classical prophet, who is usually located in the text according to the rulers of his own time and the historic situation that he directly addresses, the apocalyptic hides behind the name of an earlier personage who presents a synoptic vision of history through many centuries. For the apocalyptic, history and eschatology are fused in a preordained sequence from the time of the visionary to the final days. In the most developed apocalyptic material of the Hebrew Bible (*Dn.* 7–12), the subject is the future rise and fall of monstrous pagan empires. Eventually “the saints of the Most High” will triumph, God’s dominion will be firmly established in the earth, “and many of the dead will awaken, some to eternal life and some to everlasting contempt” (*Dn.* 12:2). The extracanonical Jewish apocalyptic literature that took shape between the second century BCE and the second century CE sought to sustain the people’s faith that despite appearances to the contrary, the divine plan would culminate in the destruction of evil and the establishment of God’s direct rule over creation. The growth of apocalypticism is but one symptom of a large shift of emphasis, in a period marked by a turning away from concrete history to other themes and interests in Judaism of late antiquity.

**HELLENISTIC AND PHARISAIC-RABBINIC VIEWS.** While this transformation was occurring, however, a final burst of ancient Jewish historiography adumbrated several historical concerns of considerable importance of Judaism later. The books of the Maccabees, which memorialize the struggle against the Seleucid king Antiochus IV (r. 175–164 BCE) to repress Judaism in Judaea, contain the prototype of the literature of martyrology (2 *Mc.* 6–7) developed by medieval Christian and Jewish writers. Josephus Flavius (37/8–c. 100), who recorded the Jewish war against Rome between 66 and 70 CE that eventuated in the destruction of Jerusalem and its Temple, narrated an occurrence of immense practical and symbolic importance for Judaism. Although Josephus’s

works were not preserved by the Jews in the original, a medieval Hebrew rendition of these events, *sefer yosippon*, probably composed in the tenth century in southern Italy, supplemented Talmudic legends concerning this catastrophic event. The bulk of traditional Jewish knowledge about post-biblical history (the Hasmonean and Herodian kingdoms, the religious movements of the late Second Temple period, the revolts against the Romans in the first and second centuries CE, the personalities and actions of the Pharisaic sages and influential rabbis of late antiquity) were preserved in anecdotal, often legendary, form in the Babylonian and Jerusalem Talmuds and in the Midrash.

Biblical history served as a matrix of lessons and models reinforced by repeated allusion to the personages and experiences of ancient Israel. In the liturgy of holy days, Jews annually relived the turning points of history as distilled from the Bible: creation of the universe (Ro’sh ha-Shanah); exodus from Egypt (Pesah); revelation of the Torah at Sinai (Shavu’ot); divine protection during the wilderness wanderings under the leadership of Moses (Sukkot); the constant availability of divine forgiveness and the holy splendor of the priests, who were the channel for atonement of sin while the Temple stood (Yom Kippur); salvation from threatened extermination in the Diaspora (Purim); the miracle of “those days” in Maccabean Jerusalem (Hanukkah); the destruction of Zion and the Temple (Tish’ah be-Av). An indication of the closure and formalization of the rabbinic conception of history is the emergence in late antiquity of a system of dating from the beginning of the world (*anno mundi*, the era of creation), which came to serve as a Jewish alternative to the Christian chronology based on the birth of Christ and, later, the Muslim system dating from the Hijrah.

The most prominent essentially historic element of Pharisaic-rabbinic Judaism is the notion of a continuous chain of religious authority from the revelation at Sinai to the (moving) present. In the rabbinic worldview Torah is a transcendent, premundane blueprint for creation containing God’s purposes for creating humankind and the people of Israel, and Torah is present in history in two guises: the text of the Pentateuch (the written Torah) and the unfolding body of tradition (the oral Torah) anchored in Moses at Mount Sinai and growing with the teachings of every generation of sages. Torah was passed down by word of mouth from the elders to the prophets to the sages (*Avot* 1.1), given a written form in the Mishnah at the end of the second century CE, and continuously supplemented by the discussions and reasoning of the rabbis in the Talmudic *yeshivot* and thereafter. Tracing the chain of reliable authority became a major interest of medieval Jewish historiography.

**MEDIEVAL AND EARLY MODERN VIEWS.** The continuity of the rabbinic tradition became a polemic issue in the eighth and ninth centuries with the rise of the Karaites, who denied the authority of the Talmud. The tenth-century Karaite historiographer Ya’qūb al-Qirqisānī viewed as forerunners of the Karaite movement the Sadducees of the Second Temple

period, who had rejected the Pharisaic “traditions of the fathers” (an early stage of the notion of the oral Torah). In the tenth century Sherira’ Gaon, head of the Pumbedita *yeshiva*, composed an epistle defending rabbinic authority by explaining how the corpus of Talmudic literature came into being, in the course of which he transmitted considerable historical data. The unbroken continuity of the “order of generations” was one of the principal motives of Avraham ibn Daud’s *Sefer ha-qabbalah* (Book of tradition), a schematic account of Jewish history written in the twelfth century that contained undertones of messianic expectation.

As indicated, in the Middle Ages another impetus to the recording of events in Jewish history was the commemoration of Jewish martyrs. The massacres of the Jews of the Rhineland at the inception of the First Crusade was the subject of an Ashkenazic chronicle literature that was augmented as a result of later crises, such as the massacres of the Jews in the Ukraine in 1648–1649. However, most of the medieval Jewish philosophers had little interest in history as such. Moses Maimonides (1135/8–1204) considered the reading of books of history at best a diversion for one’s leisure hours (*The Guide of the Perplexed* 1.2) and a waste of time for serious scholars who should occupy themselves with jurisprudence, the natural sciences, and metaphysics. Maimonides does employ history incidentally to explain some of the biblical commandments as means to wean Israel from pagan practices of the ancient world. Of the medieval Jewish philosophers, it was Yehudah ha-Levi (c. 1075–1141), a severe critic of Jewish Aristotelianism, who grounded Jewish faith in the experience of a specific people qualified by their innate aptitude, when in a proper moral condition in the Holy Land, to receive the Torah. Ha-Levi’s contrast of the abstract, rational God of the Aristotelian philosophers with the puissant God of Abraham, Isaac, and Jacob represents a definite, if limited, turning from metaphysical to historical arguments for the truth value of Jewish faith.

Not until the sixteenth century was there a rebirth of Jewish historiography akin to that of the Hellenistic era. Most of the works of this period, by exiles from the Iberian Peninsula, are, in form, medieval chronicles in which there are sometimes found Renaissance elements (the *Shevet Yehudah* by Shelomoh ibn Verga offers a political and social analysis of the expulsion of Jews from Spain in 1492). A truly pioneering figure in sixteenth-century Jewish historiography was ‘Azaryah dei Rossi, whose *Me’or ‘enayim* shows the influence of Renaissance humanism in its recovery of Hellenistic Jewish texts and critical treatment of Talmudic anecdotes.

In contrast to this limited interest in historical research for its own sake was the qabbalistic interest in history, which was meant to establish the authenticity of its esoteric exegesis of the Torah. The most influential text of the Spanish Qabbalah, the Zohar, was presented by its thirteenth-century author as the work of a circle of second-century Galilean rabbis, giving the Zohar a pedigree as old as the Mishnah and antedating by many centuries the spread of rationalistic philoso-

phy among Jews. Metahistorical elements in qabbalistic literature reached an apogee in the teachings of the sixteenth-century mystic Isaac Luria. Lurianic Qabbalah developed a theology of cosmic redemption based on the principle that carrying out the divine commandments with the correct mystic intention (*kavvanah*) liberates divine sparks that had been scattered abroad and trapped in husks of evil during the processes of cosmic creation. The Lurianic version of the Qabbalah, inasmuch as it conceived of human action as necessary to bring the Messiah, lent an intrinsic dignity to the temporal process that history had not had in Jewish thought since biblical times. However, these human acts produced their effects in a spiritual realm invisible to mundane eyes. An attempt to apply this theory on the concrete stage of history, expressing the buildup of messianic tension in early modern Jewry, erupted in the short-lived movement around the mystical messiah Shabbetai Tsevi in the 1660s. The revolutionary enthusiasm was quickly extinguished among most Jews.

**MODERN VIEWS.** A modern awareness of history entered Judaism in the *Wissenschaft des Judentums* that emerged in Germany in the 1820s. The proponents of the scientific study of the Jewish past argued that an objective knowledge of Jewish history would increase respect for Judaism’s contributions to civilization and, at the same time, enable Jews to grasp the essence of their tradition. However, the critical methodology of modern scholarship also posed new issues for Judaism (and other revealed traditions) by calling into question the historicity of formative events and persons, challenging the unity of scripture, and drawing attention to data that contradicted the presumed continuity of the received tradition.

The religious trends that crystallized in nineteenth-century European and American Jewry represent contrasting strategies of response. The Reform movement perceived Judaism as a progressive revelation that is based on the original inspiration of Moses and the prophets and has attained its most adequate formulation in modern times; for the Reformers, historical knowledge provided the basis for distinguishing between the authentic kernel of Judaism and the protective husk of law and custom once necessary but no longer relevant in postmedieval circumstances. The Positive-Historical approach (which in America became the basis for Conservative Judaism) conceived of revelation as in part molded by the gradually developing consensus of the historic Jewish community, which thereby assured continuity of sacred practice and doctrine. For the Orthodox, Torah was a timeless, immutable divine instruction for the ideal human life; intervention in the process of explicating Torah as undertaken by the Reformers and, more moderately, by the Conservatives in order to bring Judaism in line with the spirit of the times was considered by and large destructive. At present, both Conservative and Orthodox Judaism (and some Reform figures) emphasize the continuity of the *halakhah* (religious law) as a normative feature of Judaism but disagree as to what extent present-day rabbis have the

right to diverge from earlier sages and the stricter contemporary authorities.

As the nineteenth-century progressed, modern Jewish historiography amassed considerable knowledge of the social and political history of the Jews as well as of the religious and literary history of Judaism. Erudite nineteenth- and twentieth-century scholars (preeminently, Heinrich Graetz) published works that educated their readers in the complex and variegated Jewish past, enabling Jews to relate positively to their tradition apart from any commitment to theology or religious praxis. Especially in eastern Europe secular views of Jewish historical identity accompanied the formulation of Jewish nationalist and socialist ideologies (e.g., Simon Dubnow's conception of the centrality of Jewish institutions of self-government in the Diaspora in relation to his ideology of Jewish Diaspora nationalism, and Jewish socialists and Marxists who took economic themes and even the class struggle as central). Most important has been the rethinking of the meaning of Jewish history from the Zionist perspective, emphasizing the age-old longing for redemption from exile and the centrality of the land of Israel as the ancestral homeland to which the Jews were to return to build a new commonwealth, but, in various ways, also seen as a progressive, even revolutionary, advance in history, a kind of active return to history.

Since World War II a theme that has gained prominence in Jewish consciousness is the history of Jewish responses to catastrophe. The Holocaust drew attention to repeated cycles of Judeophobia since ancient times and the ways Jewry has understood itself in relation to the nations of the world. And the Holocaust has raised issues concerning God's relation to history (the traditional problem of theodicy), with reverberations in recent Jewish historical and theological writing.

*Revised Bibliography*

**HISTORY OF RELIGIONS.** This article presents an overview of the history of religions as a scientific discipline. It is not intended to provide a comprehensive survey of the specific data that lie within the province of the historian of religions, nor does it attempt to survey the broader history of the discipline. The purpose here is rather to provide a brief description of the nature of the history of religions and to discuss its methods of research. The first part presents a theoretical examination of the dialectical method proper to the discipline. In the second part, attention will be given to the actual field of comparative research through the presentation of a brief historical typology.

**THEORETICAL OVERVIEW.** The discipline of the history of religions is characterized by the dialectical relationship that exists between its object of study and its methods of research. It is, of course, the concept of religion that best defines the discipline's object. This concept, however, though a necessary precondition for research, is never allowed to function as an *a priori* category, which would predetermine the direction of the historian's inquiries. Instead, it is held in dialectical tension with the ongoing progress of research. The methods employed in this research are in turn adapted to the deeply historical nature of their subject matter. Such meth-

ods are essentially inductive, intended to grasp religion in its concreteness, in its historical creativity, and in its meaningfulness for the cultural, social, and individual lives with which it is interwoven. The dialectic that emerges from this interaction of the concept of religion with specific, ongoing historical investigations may be taken as a distinctive feature of the discipline.

The nature of this dialectical foundation of the history of religions may be clarified by contrasting it with several alternative approaches to religion. First of all, it must be distinguished from the hermeneutical approach, which fixes upon a single interpretative key to unlock the mysteries of the phenomenon under investigation. Hans Jonas's intelligent application of modern existentialist categories, such as the feeling of *Geworfenheit* ("thrownness") in his study of Gnosticism, or Rudolf Otto's use of the category of the holy, may be taken as examples of such an approach. In either case, the task of accurate historical description and the construction of a complete and articulate typology of the phenomenon under study are in danger of being neglected. As a result the interpretative key is insufficiently tested against the facts. In addition, the crucial problems of continuity and change, which are unavoidable in the comparative study of religions, tend to be overlooked.

The dialectical character of the history of religions discipline may also be contrasted with the so-called phenomenological method. This method tends to focus only on the synchronic elements of religion, describing and classifying religious forms without reference to particular historical contexts. It aims at capturing the meaning of religious phenomena without committing itself to an analysis of the historical, cultural, social, and psychological settings of those phenomena. It thereby neglects the study of the diachronic, formative processes that give a religious phenomenon its depth and endow it with the colors of real life. In the end, the special sensitivity of the individual phenomenologist is called upon to fill this gap. No doubt there is something valuable in the phenomenologist's capacity for empathy, or *Einführung*. But the historian of religions must attend first and foremost to the fact that the object of his study is a historical object. The dialectical processes of creation and change, development, and even revolution escape the phenomenologist's ahistorical gaze.

It would be a mistake to conclude from the inadequacies of the phenomenologist's method that the proper alternative lies in historicism. On the contrary, historicism, whether in its idealistic or materialistic form, must also be distinguished from the approach of a historian of religions. While religion is a decidedly historical phenomenon, it must not be reduced to history. Historicism makes religion a mere moment in a dialectic that essentially transcends it. This is as true for Hegel as it is for Marx. In addition to these historical forms of reductionism, there are sociological and psychological approaches to religion that are reductive as well. Whatever the particular form, however, all forms of reductionism have in

common an appeal to a univocal conception of religion located within a preconceived frame of reference.

It is no solution to counter historical reductionism with an appeal to the irreducible character of religion as perceived by the subjective, experiential sensitivity of the phenomenologist. In both cases, that of the phenomenologist as well as that of the historicist, there is an illegitimate appeal to an *a priori*, preconceived conception of religion. It is this *a priori* character of their respective conceptions of religion that is incompatible with the positive, inductive, comparative-historical approach proper to the historian of religions and to the dialectic that the historian must preserve between his tentative interpretative categories and the ongoing progress of his research.

Theory is equally illegitimate in the history of religions when it is applied in an *a priori*, undialectical manner. Nevertheless, it is not to be rejected out of hand. On the contrary, theory is indispensable when it functions as hypothesis open to verification, revision, or rejection on the basis of empirical research. The distinguished anthropologist E. E. Evans-Pritchard, for example, goes too far in his distrust of theory. He would limit the study of religion to the description of the social and cultural functions of specific religions in order to escape the distortions of general theories of religion. This is overly cautious. In fact, even though theoretical biases are unavoidable, arbitrarily reductive positions can be tested on the basis of positive research and their shortcomings exposed. An excellent example of this is Andrew Lang's criticism of the theory of animism. Using concrete evidence, Lang showed that this theory was reductive in its claim to represent the most archaic form of religion. In fact, the theory was unable to account for the widespread belief in a high god among primitive peoples. This use of empirical, historical evidence to test proposed theories or hypotheses provides ample insurance against the dangers of overextended or reductive generalizations.

So far I have argued that preconceived or *a priori* theories of religion that are not held accountable to the findings of historical research remain outside the dialectic that governs the work of the historian of religions. At most, such theories can function as hypotheses awaiting verification. It may be helpful now to examine the dialectic itself more closely by focusing on the particular problem of the definition of religion. How, if at all, are we to arrive at a clear concept of religion? And how does this concept function in actual research? In raising these questions one is immediately confronted with what at first appears to be a methodological impasse. On the one hand, if such a concept is to escape the problems of an *a priori* characterization of religion, it must itself arise out of actual comparative historical study. On the other hand, it is hard to see how such comparative study is to proceed until this concept is in hand.

**The concept of religion.** The appearance of an impasse is created by the way in which the problem is posed. If we assume that a concept of religion is at the same time a prereq-

quisite for and a result of comparison, then we are indeed faced with an insurmountable paradox. But this is not the case if we resort to a dialectic that unites the notion with its employment in such a way as to make them mutually dependent. In this case the concept of religion is inductive in origin, and its clarification goes hand in hand with progress in empirical research.

At this point it is clear that an adequate notion of religion is not to be formed through a mere *a priori* selection of data to which research should be extended. The primary problem is not to extend a conception of religion over the widest possible range of material but rather to discover a conception that is adequate to specific historical contexts. The search for a universally adequate definition of religion can lead quickly to a minimal notion of religion, a kind of lowest common denominator with no practical usefulness. Such a univocal definition, which would seek to rank the different religions as so many species under a single genus, is clearly inadequate for a fundamentally empirical discipline. Such a discipline requires conceptual categories that are continuously being created and are always open to further revision in the light of the development of comparative studies. Far from being a univocal concept, the notion of religion that emerges from the continued comparison of new and varied historical materials is an analogical notion.

Things are described analogically when they correspond to each other in certain important respects but differ from one another in other, equally important respects. Analogical notions thus contrast sharply with univocal notions. When we apply the term *vertebrate*, for instance, to a man, a dog, and a crocodile, we are applying it univocally, since the notion of vertebrate is integrally and equally realized in each of these cases. The same cannot be said of analogical notions. When we describe both a feather pillow and our summer's reading as "light," we are speaking analogically, since the quality of lightness applies very differently in each case. To say, then, that the historian of religions must employ the term *religion* analogically rather than univocally means that it cannot be assumed that all the phenomena studied under the rubric of *religion* are all "religious" in the same respect. This is especially true when studies extend beyond the context of closely related cultural milieus.

Now, it is exactly the analogical value of the notion of religion that relieves it of the impossible task of achieving universal extension while remaining responsive to the specifics of history. If the notion of religion is analogical, the aim of research will not be the progressive extension of a univocal concept but the documentation of sets of partial affinities between different systems of belief and practice, which are the segments of the polychromatic network that constitutes the variegated world of religion. It is clear that this procedure is much more in keeping with the comparative-historical aims proper to the history of religions than any merely phenomenological approach. The approach I am describing is meant to remain constantly in touch with the concreteness of its ob-

ject; facts and sets of facts (historical contexts and processes) are compared directly, without being submitted to an intermediate process of abstract categorization.

If the historian of religions cannot rely on a univocal concept of religion or its deductive use, it follows that he will not be dependent upon philosophy or some metascience for his categories. On the contrary, it is to be expected that comparative-historical research will seek its categories precisely in the historical continuities and discontinuities it studies. The historian of religions is not concerned with facts isolated from their historical contexts and processes but rather with these contexts and processes themselves. The historian of religions aims at discovering the degree and quality of the affinity that exists between religions and that warrants characterizing them as such.

Given the empirical nature of the history of religions and its interpretative categories, and in particular its analogical conception of religion, it becomes apparent that its findings can be neither verified nor falsified through appeals to either *a priori* reasoning or personal convictions. The sole criterion of adequacy becomes empirical. What must be shown is the adequacy of a particular account to the facts it claims to describe, both the facts of a given historical situation and the relationship between one such situation and others. Ultimately, in the comparative context proper to the discipline, this will lead to a principle of holism as the final criterion of adequacy. Accounts will be more adequate as they encompass broader ranges of concrete data.

At this point it may be asked why the concept of religion should be retained at all, even in an analogical sense. Strictly speaking, one could simply refer to various sets of continuities by the use of arbitrary symbols (*x*, *y*, *z*, and so forth). But this analytical procedure would not fit the historical character of the discipline, which is rooted in a cultural milieu and motivated by a specific intellectual interest. It is not by chance that the problem I am analyzing is termed *religion* and not *way*, *law*, or *ethos*, although the latter terms would be equally legitimate labels for comparative study. It is for historical reasons that this particular field is called comparative religion. This does not mean that the validity of the enterprise is merely relative or Eurocentric. It means only that in positing this notion one is conscious that the comparative study of religions began in a particular historical and cultural milieu. It was in this milieu that the term *religion* came to be used in analyzing the problem of continuity and change within systems of belief and ritual behavior. It was in this setting that "true" religion began to be contrasted with the "other" religions. Out of this context arose the history of religions, which rejected the pretense of evaluating different religions normatively (a task, on the other hand, legitimate and unavoidable for philosophy and theology) and instead studied them phenomenologically. On this level it could speak both of the universality of religion, since systems of belief and ritual practice more or less comparable with those in the West can be found everywhere, and of religions in the plural, given the clear differences that distinguish these systems.

These considerations lead us back to the dialectic that is the basis of the comparative-historical methodology proper to the history of religions. The emergence of the notion of religion among Western students of religion was the result of just such a dialectic. This notion was not constructed *a priori* but was already a part of an elaborate cultural and historical milieu that had a Jewish and Christian background. Increased contact with non-Western forms of religious belief and practice initiated the dialectical development just described. This dialectical study continues today as research is progressively extended to new materials, in harmony with the progressively broadened experience of the historian of religions.

This open, dialectical character of comparative historical study will be best served if the actual modalities of this research reflect a consciousness of the analogical character of its categories, especially the category or notion of religion. In this way the distortive effects of the forced employment of univocal terms will be avoided. Dialectical, historical comparison will be free to investigate a wide variety of continuities between different systems of belief and practice without aiming at the reduction of these to a single, comprehensive, univocal referent. The result will be a complex, multidimensional map of religion, a map readable in all directions, on which a given feature or set of features will appear now central, now peripheral. Buddhism, for instance, may appear peripheral when the map is read "theistically" and yet occupy a central place when viewed in terms of its monastic institutions. Similarly, it may appear central when viewed in terms of the widely held belief in transmigrating, but more peripheral in its denial of the reality of the transmigrating soul.

**Holistic approach.** In addition to restricting itself to an analogical use of its interpretative categories in creating such a map of the religious universe, the history of religions must also attempt to be holistic in its approach to its materials. It must study religious beliefs and practices within the specific contexts that give them their full meaning. Within these contexts, functional interpretations will often be of positive value. This is particularly true in the case of simple societies where the functions of religion are relatively undifferentiated from the rest of social life. But the fundamentally analogical character of religion prevents the use of such functional models to explain religion as a whole. As a whole, it remains a concrete whole, and the holisms characteristic of the history of religions must be realized not at the level of univocal theory but at the level of contextualized historical description. This description will aim at the construction of an exhaustive historical typology, a multidimensional map of the actual religious terrain.

The achievement of such an historical typology of religions will result from modalities of historical comparison that must be further specified. In the first place, comparative-historical research in the history of religions must be distinguished from what we may call "idiographic" research, namely, research concentrated on religion in a particular cul-

tural context. Such specific, noncomparative studies are necessary but not sufficient. Nor can the comparative-historical research envisioned here be identified with a systematic, purely formal typology, nor with a phenomenology that neglects issues of origin, growth, and change. The goal is rather the establishment of specific sets of synchronic and diachronic continuities and discontinuities that apply to more than one religion and perhaps to an entire cultural area. In any given case these patterns may be explained either on the basis of cultural diffusion or as the result of independent but parallel developments. In the latter case, parallelism need not signal a unilinear evolution in the history of religions but may rather point to analogies between specific historical and cultural circumstances.

It will often be difficult to decide whether a given pattern is to be explained on the basis of diffusion or parallelism. What is important is to avoid an *a priori* theoretical option in favor of either. This was the mistake of those who, in reaction to the theories of unilinear evolution typical of the nineteenth century, adopted an equally monolithic hypothesis of universal diffusionism. The fact is that one of the major gains in the field of comparative-historical research has been the discovery of partly similar cultural achievements in the field of religion and culture that are not due to phenomena of diffusion, not even stimulus diffusion. A typical example is the birth and diffusion of polytheism. The connection of polytheistic cults and their typical features (such as theogony, theomachy, specialized sanctuaries and priesthoods, anthropomorphic and hypermorphic gods, etc.) with what are known as archaic high cultures is too evident to be overlooked. It is impossible at the present day to explain all such connections solely on the basis of diffusion, even though a diffusionist hypothesis remains obligatory in some well-defined cases (as, for instance, in the case of the widespread cultural and religious diffusion of cuneiform literature).

**HISTORICAL TYPOLOGY OF RELIGION.** Having dwelt on some methodological issues concerning the history of religions as a comparative-historical discipline, I shall turn now to a brief overview of the subject matter of this discipline, that is, to the presentation of a concise and inevitably selective historical typology of religion. But first a few preliminary remarks on earlier attempts to map the most general features of the religions may be in order.

In such earlier attempts we meet with notions that owe much to the different cultural epochs in which they were conceived and to the different theories of the origin and development of religion current at the time. Many of these notions are a legacy of philosophical and theological discussion. The best example here is the concept of monotheism, especially as contrasted with polytheism, deism, and pantheism. Many more concepts, including animism, preanimism, animatism, manism, and—more ancient than these—fetichism, owe their origin to the positivistic evolutionary theories typical of the nineteenth century. All of these notions were conceived as expressing primitive or archaic stages of religious

thought. As such they presupposed a view of religion as primarily concerned with the mental representation of reality. The cultic and ethical aspects of religion were underestimated, as well as the structural and historical complexities of so-called primitive forms of religion (and it was particularly on primitive religions that the new history of religions discipline focused). This rather exclusive emphasis on the conceptual aspect of religion was typical of nineteenth-century anthropology and should be distinguished from what we may call its rational aspect, which had been emphasized both by Scholastic theology and by the Deism of the eighteenth century. These one-sided excesses of the past should serve as a *caveat* for today's historian of religions. This does not mean, however, that attention to the conceptual dimensions of religion should be lessened or arbitrarily reduced in turn.

A very different but equally problematical approach to the study of religion, one mentioned above, was the descriptive and interpretative tendency associated with the familiar concepts of "the holy" and "the numinous," a tendency already in existence before Rudolf Otto's famous book *The Idea of the Holy* (1917, first German edition) gave it a permanent place in religious studies. This new tendency was the opposite of the analytical and conceptual approach just mentioned, and this difference was clearly expressed by Otto's refusal to conceptualize the experience of the holy or to trace it to a specific source, such as God, the gods, spirits, or anything else. Otto's analysis of the essence of religion as the experience of the holy was focused on terms such as *immortality*, *freedom*, or *the absolute*. According to him, man is made intuitively aware of the transcendent reality to which these terms refer through his experience of their opposites on earth. Apart from the similarities of this kind of argument with the ontological argument for the existence of God found in some medieval and modern philosophical systems, the historian of religions must question whether such negative characterizations of the holy are as universal as Otto believed. In fact, they appear to be intertwined, from the point of view of both history and metaphysics, with peculiar notions concerning God, the divine, and religious values, both on the individual level and, as Walter Baetke aptly pointed out, on the social level.

A historical typology of religion should avoid the danger of employing a merely analytical and classificatory conceptualization, particularly if this is intended to reduce the issue of religious ideas and experiences to an issue of mental representations, or to the so-called *imaginaire*. It should also avoid reliance on selective intuitions in the guise of a scientific phenomenology of religion. Both attitudes ultimately prove to be reductive and ethnocentric. As was made clear in the previous section, a historical typology of religion will serve to map specific sets of analogically related affinities that are neither merely conceptual nor phenomenological but in the best sense historical.

Viewed historically, then, religions can be divided into two broad groups, and this division will provide the general

framework for a genuinely historical typology. This initial division is between those religions that are described as ethnic and those that are founded.

**Ethnic religions.** Ethnic religions are a part of the culture of a people and do not owe their origin to a historical founder. No single individual has endowed these religious traditions with the unmistakable impress of his personality. Rather, ethnic religions are historical formations that are originally indistinguishable from the formation processes of the cultures and populations to which they belong. Ethnic religions are not restricted to tribal or nonliterate cultures. They may also be found in highly developed literate cultures. Their exact character, which may thus range from unitary to syncretistic, depends upon specific cultural and historical circumstances.

The historical character of ethnic religions, including those of nonliterate cultures, requires that they be studied holistically. Their actual contents and functions in the epochs and contexts for which there is documentary evidence must be closely examined. This must be done without losing sight of the changes and adaptations that these traditions undergo in the course of time, due to internal, developmental tendencies or to influences and stimuli coming from outside.

The fact that even nonliterate ethnic religions are parts of a larger world means that the purely descriptive or "idiographic" study of these traditions cannot do without a comparative outlook. Comparison becomes inevitable when the scholar's attention is drawn to the cross-cultural affinities or "family resemblances" that link the cultural and religious expressions of different countries and areas.

**Approaches to comparison.** Two main approaches to comparison may be distinguished in the history of religions. The first developed in the nineteenth century, and the other took shape at the end of that century and at the beginning of the twentieth. Each of these warrants a brief discussion before I continue.

The first approach, practiced in the nineteenth century, was inseparably linked to evolutionary thought and to the elaboration of general theories concerning the origins and the growth of religion on a world scale. It was on this basis that notions such as animism and animatism were introduced into what was understood to be scientific research (hence the German name of this field, still with us, of *Religionswissenschaft*). These notions were intended to apply cross-culturally, indeed universally. There is no need to repeat what I have already said about the negative reductive tendencies implicit in such an approach. It was of course highly reductive and arbitrary, insofar as its unilinear evolutionist presuppositions were effective. But it also had some positive effects, inasmuch as it made possible the identification of conceptual, ritual, behavioral, and ethical affinities or continuities that transcended such older categories as idolatry, paganism, and superstition, which were no longer suitable for a descriptive approach.

The rise of a descriptive phenomenology of religion contributed to a further refinement of these new patterns. Take, for instance, the case of the notion of shamanism. Once shamanism was differentiated from the generic notion of animism and considered not only as a peculiar element of religious behavior but also as an element of a structure implying a cosmology and a worldview, it could contribute to the transition from an evolutionistic outlook too fond of concepts and representations to a cultural-historical study based on the discovery of cultural wholes and cultural areas. In other words, the elaboration of a more rigorous, multidimensional, and descriptive phenomenology of religion allowed the history of religions (*Religionswissenschaft*) to survive the inevitable crisis of evolutionism and its universal and unilinear stages and to enter a more rewarding phase characterized by a new form of comparison, namely cultural-historical comparison.

This new form of comparison proved effective when, at the beginning of the twentieth century, cultural-historical research was able to concentrate on area studies, as in the pioneering works of Bernhard Ankermann and Leo Frobenius (on Africa), Fritz Graebner (on Oceania), and Franz Boas (on the North Pacific). On this basis it was possible to connect phenomenological and historical research in the study of a particular group of ethnic religions belonging to nonliterate cultures. In this way the originally negative term *nonliterate* acquired positive content. Nonliterate ethnic traditions became definable on the basis of undeniable categorical continuities (e.g., shamanism) that were at the same time specific to particular areas. As a result, the so-called primitive religions ceased to be studied in terms of a procrustean bed of an alleged, indiscriminate primitivism. Such attributions now had to be demonstrated on the basis of cultural-historical inquiry. In this way the study of nonliterate religions entered with full rights into the field of religious-historical research proper. At the same time, the historian of religions was not obliged to renounce his fundamental interest in comparison and (where appropriate) study of historical development, two aspects that had been neglected by the heirs of the older anthropological methods and the practitioners of an exclusively functional social anthropological research.

**High cultures.** I have already noted that ethnic religions are found among literate as well as nonliterate cultures. In particular, the high cultures of antiquity produced ethnic religious traditions that make special demands on the historian. Study of them requires a philological competence that clearly excludes any simplistic or superficially phenomenological approach. It remains true, however, that even the historian of religions lacking such specialized knowledge can still contribute to a fuller understanding of these religions on the basis of his typological-historical experience. Take, as an example, the discovery of some of the classical characteristics of the demiurgic trickster in such diverse figures as the Greek Prometheus, the ancient Egyptian Seth, and Yurugu, also

named Ogo, of the Dogon of West Africa. This discovery and the accompanying insight into the dualistic cosmology that provides the backdrop for such figures would have been impossible for the classicist or Egyptologist working only within his own speciality. It resulted rather from the comparative method of the historian of religions. This comparative approach can be particularly successful in the comparison of the mythologies of cultures that belong to the same subcontinent but have had different histories. It could, for instance, be expected to shed much light on the difficult question of the relationships between ancient Egyptian culture and other African cultures, both in the sense of an African substratum of Egyptian culture and of an Egyptian influence on sub-Saharan Africa.

Another fascinating problem for comparative research concerns the continuities and discontinuities between the nonliterate cultures and religions on the one hand and the high cultures and their religious systems on the other. Given the differences that exist between them as well as the differences that exist within the respective traditions themselves, the question of their mutual interrelationships becomes quite complex. Particularly important is the question of the partial continuities that exist between the high gods of some nonliterate cultures and the heavenly deities who head the pantheons of some of the typical polytheistic formations in the high cultures of antiquity. This kind of partial continuity, which sometimes extends to founded and universalistic religions as well (as in the case of the God of heaven among the Israelites and the high divinity of pre-Islamic Arabia), is one of the most interesting phenomena in the history of religions.

**Monotheism and polytheism.** Closely connected to the question of continuities between cultures is the question of the exact nature of monotheism. This question has been the subject of a long debate within the history of religions. Some have claimed to find monotheism in the religions of nonliterate cultures, particularly among hunters and gatherers. Others, in contrast, have viewed it as a late phenomenon in the process of evolution, or even, as Raffaele Pettazzoni put it, as a revolutionary stance against a preceding form of polytheism. Actually these alternatives cannot be formulated so rigidly. The explicit and polemical formulations of monotheism that we find in the Bible and the Qur'an have little in common with the high gods of contemporaneous nonliterate cultures. Although the latter are not necessarily *dei otiosi*, severed from the cult and from the world of men, they are nevertheless far from the intense dynamism of the God of the Bible and the Qur'an. It must be admitted that not all religious complexes extraneous to polytheism are *ipso facto* monotheistic. The most developed polytheistic systems did not "evolve" in the direction of monotheism, nor did they express a revolutionary movement in that direction. Rather, they tended to become progressively monistic, elaborating the notion of a deity who is "polyonymous" (as is Isis in the aretalogies of the Hellenistic period) or is *pantheos*, a god containing all the gods. In its most mature form, such a deity

was conceived as “theopantistic,” that is, as identical with the cosmos and at the same time transcending it. Such is the picture of Zeus presented in an Orphic poem: “Zeus is the beginning (or head), Zeus is the middle, from Zeus all things came into existence,” or in a fragment of Aeschylus: “Zeus is all these things, and what is beyond them.” This assessment of Zeus bears comparison with the theopantistic speculation concerning the figure of Purusa in Vedic India.

It is important to realize that polytheism, as a historical type of religion, is much more specific than a merely formal notion of a plurality of gods. In fact, polytheism is not found in all types of culture, but is specifically linked to the high cultures of antiquity (and also to some in modern times, particularly in East and South Asia). These cultures characteristically possess an advanced form of cereal agriculture and show a degree of social stratification, with an attendant differentiation of classes, professions (including scribes), a priesthood and nobility, established sanctuaries, and the like. The cosmos itself is represented as having a departmental organization. Such cultures are found in the ancient Mediterranean area, and in West, South, and East Asia. Further instances can be found in the Nordic countries of Europe, in Central America and Peru, in the medieval kingdoms of the Sudan (owing to Mediterranean influences), and to an extent in Polynesia. The social and historical specificity of polytheism as a religious type would seem to require that opposition between it and monotheism become acute only in particular historical and religious situations. Such situations include the historical emergence of the Hebrew people and their religion in the Near East, the vogue of the cult of Ahura Mazda in Iran, the rise and diffusion of Christianity in the Mediterranean world, and the preaching of Muhammad against the religion of the pre-Islamic Arabs. Clearly, the problem of polytheism and its relation to monotheism is not to be solved on the basis of a general phenomenological “stratigraphy” of religion and its main forms, any more than it was solved by a unilinear evolutionism. It is not a question of relative anteriority between polytheism and monotheism, homogeneous in themselves, but of specific, noninterchangeable historical formations that can interact with different types of religious and cultural organization. Monotheistic formations may present themselves either as immemorial tradition, as a novelty, or as the message of the one God and his triumph over false deities. Other formations could have evolved into pantheons that inspired and also reflected the complex organization of the high cultures of antiquity. Roman religion, for instance, is the product of many different cultural influences, having been almost completely reshaped in the course of time on the basis of long-lasting Greek influence (particularly in its pantheon). Nevertheless, it never lost its continuity with its most primitive expressions. Among these was the notion of a heavenly god, Jupiter, who had an Indo-European heritage. This god was to dominate Roman religion under the name of Optimus Maximus, yet this did not prevent him from being assimilated to the supreme god of

the Greek pantheon, Zeus, and to all types of religious, ethical, philosophical, and symbolic notions.

I have already had occasion to note that the general type that I have identified as ethnic religions and contrasted with founded religions admits of a certain amount of internal diversity. Thus ethnic religions need not be those of nonliterate tribal societies but may also be found in more complex literate societies. I shall now introduce two further subtypes of ethnic religions, those that are scriptural and those that are national.

**Scriptural and national religions.** Some ethnic religions are in fact characterized by the existence of sacred scriptures, organized on the basis of a “canon.” Acceptance of these is considered an essential aspect of religious affiliation. The outstanding example is the function of the Vedas in Hinduism. Ethnic religions possessing scriptures exist in a situation midway between the nonscriptural religions of tribal societies, where religious affiliation is indistinguishable from the simple fact of social life, and at the other extreme, the universal religions, where the individual as such becomes a convert to the “good news” of a prophetic message written down in a book.

Another important subtype among ethnic religions is that of the national religions, those cults that promote a national and political consciousness. This is the case with state Shinto as practiced in some periods of Japanese history, with some forms of Hinduism, with Zoroastrianism in the Sasanid empire, and with the official cults in ancient Rome, such as the cult of Capitoline Jupiter and the cult of the emperor. It must be added that some of the founded religions may initially embrace a national outlook. Islam, for instance, may have been conceived originally as a prophetic message addressed to the Arab nation, although, to be sure, it is considered to be the final form of the historical revelation of God. The situation is similar in Judaism, whose universalism was mediated through the entire course of Hebrew history. There were also particular occasions when Christianity, though possessed of a universalist message, became bound up with specific national, cultural, and political interests, as, for instance, those of the Byzantine empire.

**Founded religions.** I shall now look more closely at the founded religions, which include, in addition to Judaism, Christianity, and Islam, the religions of Zarathushtra (Zoroaster) and the Buddha, the religion of the Sikhs, and, with certain qualifications, the plethora of prophetic-nativistic cults and the “new religions.” These traditions, which all trace their origin to a specific historical founder, raise fundamental historical questions. When a religion is founded, this obviously takes place in a cultural milieu already characterized by specific religious notions and institutions. The relation of the prophet or founder and his original followers to this milieu may vary considerably, depending on whether the preceding religious environment had been predominantly of the ethnic type or had already known prophets and forerunners. In general there is a vivid sense of novelty in the founda-

tion of these religions, sometimes even a revolutionary novelty. The founder nevertheless often conceives his mission as in part a restoration of primordial values long since lost. In some cases this question of partial continuity is decisive and helps illuminate the religious quality of the founder's message. This can be seen in the case of Buddhism. Many of the notions fundamental to Buddhist doctrine, such as *dharmā*, *karman*, *saṃsāra*, and *mokṣa*, already played an important religious role in India at the time of the Buddha. An understanding of the Buddha's appropriation and modification of these terms is thus of great importance for a typological assessment of his message as a "religious" message, bound up with the religious traditions that preceded him.

Among the founded religions the universal religions stand out as a definite subtype. These religions are based on a universal message of salvation, not limited to any particular group, ethnic or otherwise. They are characterized both by eschatological and otherworldly perspectives and by strong this-worldly ethical and social commitments. Their message is addressed to the individual and demands conversion and adherence to a religious community that, in sociological terms, may be described as a church. This community typically undergoes a rapid initial expansion, sometimes suffers persecution, and actively engages in missionary activities aimed at making new converts. These characteristics clearly distinguish the universal religions from the ethnic and national religions, even though, as noted above, universal religions may occasionally become closely associated with specific cultures.

The emphasis on a universal message and personal conversion in response to it, an emphasis that transcends all racial and social barriers, differentiates the universalistic religions from the cults of antiquity that were sometimes their rivals. These cults, such as the mystery religions, would be better described as cosmopolitan rather than universal. Unlike commitment to any of the universal religions, participation in such cults could coexist with whatever other religious commitments an individual might have had, such as to the gods of the tribe, city, or state; the universal religions, however, demanded the individual's total allegiance.

This contrast becomes less clear in the case of the syncretistic tendencies found at the popular levels of the universal religions. Christianity and Islam, for instance, have been influenced, in some of their popular or ethnic manifestations in South America and Africa respectively, by local traditions of animism or "spiritism." The same lack of a clear differentiation between the universal and the local is found in the prophetic-nativistic cults that reinterpret the message of the great universal religions in strictly local terms, although not infrequently these same cults are inimical to preexisting forms of local magic and sorcery.

The case of Buddhism is somewhat unique. Although it displays many of the features that were attributed above to the universal religions, it nevertheless resembles the mystery cults of antiquity in its ability to coexist, in the belief

system of a single individual and in a single cultural milieu, with other forms of locally preexistent religious belief and practice. This is especially evident in contemporary Japan, where a single individual may have a double allegiance to Buddhism and Shinto, according to the circumstances. The rather peculiar status of the universalism of Buddhism is linked to the equally peculiar status of Buddhism as a "religion."

Finally, another historical type of religion is comprised of those mysteriosophic (i.e., Orphic) and Gnostic movements of antiquity and the Middle Ages that drew heavily on the universal religions of Christianity, Islam, and Zoroastrianism, borrowing many of their basic terms but totally reshaping them to suit their own needs. This procedure is found as well in the scientific theosophy of some contemporary Gnostics, whose reinterpretations of the basic tenets of different religions are for the most part superficial.

UGO BIANCHI (1987)

**HITTITE RELIGION.** The exact origin of the Hittites, an Indo-European people, is not known. Invading Asia Minor from the east, by the middle of the second millennium BCE they had established an empire covering the greater part of that region. Their empire declined after 1200 BCE, owing to Indo-European invasions and the growing power of Assyria.

**NAMES OF GODS.** Knowledge about Hittite society, culture, and religion has increased since the deciphering of their cuneiform writing, on clay tablets found early in the twentieth century CE at Bogazköy (in Turkey). Hittite society was ethnically and linguistically diverse, with Hattian, Hurrian, and even some Semitic elements, and this diversity is evident in the divine names.

The earliest identifiable stratum is the Hattian. The Hattians were resident in central Anatolia before the Indo-European Hittites arrived. They had a long tradition of settled urban life. It is understandable that a people open to influences from its neighbors, as the Hittites were, would early adopt the worship of Hattian deities. Because the Hattic language is still very poorly understood, one can only partially understand the meanings of the divine names. Some are common nouns for elements of nature: *Eshtan* (“sun, day”), *Izzishtanu* (“favorable day”), *Kashku* (“moon”), *Kait* (“grain”). Others denote status: *Kattahha* (“queen”), *Wurunkatte* (“king of the land”), *Shulinkatte* (“king of the *suli*”), *Kattishhabi* (“king god”), *Teteshhawi* (“great god”).

The Hurrian language is better understood than Hattic. Still, because the number of Hurrian words that can be translated is not large, it is not possible to interpret many Hurrian divine names. The influence of Sumerian and Akkadian religious vocabulary and divine epithets is obvious. Aya, Ishhara, Ellil (Enlil), Anu, and Alalu were originally Mesopotamian deities.

**NATURE OF DEITY.** In Hittite art the gods were depicted either by their animal totems or anthropomorphically. The

texts concur in depicting them in human terms. Gods needed to eat, drink, sleep, and exercise. They needed companionship, ego-building, and love (including sexual intercourse). They made mistakes through lack of knowledge. They could be deceived. They needed to be informed by others. Each possessed a specialized skill that put him in demand by both mortals and other gods. In myths gods were born and died (i. e., were killed). But very little, if anything, indicates that they aged or became senile. That what they did was not always just or fair is clear from the prayers, in which the human petitioner chides them for mistakes and pleads for fair treatment. Although no god was omniscient, some possessed very wide knowledge and every god was superior to humans in knowledge. In instructions to priests and temple officials, mortals who thought to conceal their offenses from a god were warned of the futility of the attempt. Although every god was more powerful than any mortal, none was omnipotent, and degrees of power were quite diverse among them.

**FUNCTIONS OF A DEITY.** As each mortal had his rank and function in human society, so each deity had his position and role, not only among his fellow deities but in concourse with humanity and the cosmos.

**General functions.** While it is not possible to completely reconstruct the hierarchy of Hittite deities, it is clear that in convocations of gods certain figures naturally assumed leadership. In the Old Hittite vanishing-god myths it is the storm god who presides. But although he presides, he is not always able to enforce his will on the other gods. He must ask advice, plead his case, and seek volunteers for missions. Occasionally he is able to command another figure.

Hierarchical organization is also seen in the New Hittite pantheon. There is a fixed sequence in the god-lists in the state treaties, and there is an order of both gods and goddesses in the processional reliefs at Yazilikaya, near Bogazköy. In the myths *Kingship in Heaven* and *The Kingship of the God Lamma* may be seen how rival factions fight over the position of king of the gods. The god Lamma boasts that his exalted position allows him to control the other gods. In the prayers of Hattusilis III and of his queen, Puduhepa, lower-ranked gods are requested to present the mortals' prayers favorably to their superiors in the pantheon. To be sure, the question is not entirely one of rank. The intercessor god is usually a favorite child or grandchild of the senior god. Indeed, the hierarchy described is that of a large, extended family in which the patriarch and matriarch possess considerable power to direct their descendants and the descendants of their brothers and sisters.

In their prayers the Hittites reminded the gods that they required worshipers who would bring regular food-offerings; thus it was in their own interest that they protect and bless the community of faithful worshipers. But aside from this maintenance of the cult, mortal assistance was rarely needed by the gods. In a mythological context one sees examples in the two versions of the Illuyanka myth. The disabled storm

god must be helped to vanquish his adversary, the great serpent Illuyanka. On the divine level he is assisted by the goddess Inara. She in turn, for no obvious reason, needs the help of the mortal Hupashiya, which she bargains for by consenting to have sexual intercourse with him. But though she subsequently lives with him as a sex partner, she dominates him completely and apparently punishes his unfaithfulness to her with death. Outside of the mythological texts, when a god needed the service of a mortal he revealed himself through omen, oracle, or dream. His request was always viewed as a command, which could not be ignored.

Gods “served” mortals by ensuring material prosperity, protecting them from enemies and natural catastrophes, hearing their prayers, making known to them their sins, and forgiving them (sometimes after a punishment). Although the Hittites apparently believed in an afterlife, at least for their kings and queens, there is no evidence that they prayed or made sacrifices in order to obtain life after death or a better quality of existence in that afterlife.

**Specialized functions.** Just as there were storm gods who sent rain and winds to fertilize the crops and make them prosper, so there were deities of grain and vineyards, deities of the rivers who gave water for irrigation, deities of springs, deities of the forest, and deities of wildlife who gave success in hunting. Under the influence of Mesopotamian concepts, the sun god Ishtanu was the all-seeing dispenser of justice to humans and even to animals. There were war gods (the Zababa type) who gave victory to the Hittite armies. There was a god who could confer invisibility on the Hittite troops and enable them to attack the enemy by surprise. There were deities who sent and withdrew plagues, both upon the Hittites and their enemies. There were deities of human sexual potency. And although one might ask one’s personal god for any of these boons, there were divine specialists for many tasks.

**PANTHEON.** The Hittites called the aggregate of gods and goddesses “the thousand gods,” and there may indeed have been that many. The total number of divine names known from the tablets and inscriptions is slightly more than six hundred, a total arrived at by culling the entire written corpus. The number of deities worshiped in any one Hittite city or town would be much smaller. Lists of divine names are found in state treaties, where the gods of both contracting parties are invoked to ensure that the oaths taken will be kept. Divine names are sometimes listed together with offerings to be made to them either at a particular festival or during the course of a year. In the famous imperial sanctuary at Yazilikaya, carved in low relief on the walls of the sanctuary, is a dual procession of gods and goddesses, the males proceeding from left to right and the females from right to left, with the chief male and female deities meeting at the architectural focus point. The total number of divine figures in the preserved parts of the two processions is seventy-one. This assemblage represents the official imperial pantheon of the last half century of the Hittite kingdom. It is a complete-

ly Hurrianized pantheon, with deities of the Hattian and Hittite-Luwian strata syncretized, where possible, with Hurrian deities. This process of syncretism made possible a considerable reduction in the total number of deities, because several could be included under one (in this case, Hurrian) name. Other divine names in the inscriptions may represent either gods without a cult (e.g. purely literary figures) or gods from cult sites away from the capital who were never admitted into the official state cult.

**MYTHOLOGY.** Mythological texts in the Hittite language may be subdivided into two groups: those of Anatolian origin and those of foreign origin. Myths deriving from Old Hittite originals are all Anatolian. The deities who figure in the Old Hittite Telepinu and Illuyanka myths and the other disappearing-god myths are a mix of what Emmanuel Laroche calls Hattian and Asianic. The myth of the moon falling from heaven occurs in both a Hattic and a Hittite version. There is very little about the Hittite version that linguistically recalls Old Hittite, yet it is surely possible that a long tradition of recopying has removed almost all traces of its original Old Hittite language. Although Kamrushepa is a Hittite replacement for the original Hattic name of this goddess of magic, there is no reason to doubt that the myths in which she figures also belong to this Hattian group. All of the Anatolian myths are associated with incantations or rituals. The myths of non-Anatolian origin are all post-Old Hittite. They are generally independent of any incantation or ritual. One exception is the Ashertu myth, part of which describes a ritual to exorcize and purify Baal.

**Vanishing-god myths.** These myths, the best known of which is about the god Telepinu, are paradigms for dealing with natural catastrophes such as drought, blight, and diseases affecting livestock. The god who disappears must be located, appeased, and brought back. On the mythological level this is accomplished by nonhuman agents. The bee searches for, finds, and stings awake the sleeping god. The goddess Kamrushepa carries out a ritual to appease him. When transferred to the real world of those who are suffering from such a catastrophe, the search for the missing god entails a determination by oracle of which god is angry. Texts recording such oracular inquiry are extremely common in the New Hittite period, but have now been identified in the Old Hittite script, showing that his procedure was probably as common in the earlier period as in the later one. The pacification and return of the god is accomplished by a magic ritual of the type called *mugawar* in Hittite. Directions for such *mugawars* accompany the vanishing-god myths; other *mugawars* are described in ritual texts. It is a characteristic ritual form among the Hittites.

**Illuyanka myths.** Two stories on the same tablet are about the conflict between the storm god and his antagonist, the great serpent Illuyanka. *Illuyanka* is in fact not a name but a common noun, meaning “serpent” or “snake.” But this particular reptile is clearly large and strong enough to have once defeated and disabled the storm god. In both stories the

initially defeated storm god secures the help of a mortal who utilizes a trick to help the storm god triumph in his return match with the reptile. In the first version the goddess Inara and her mortal partner, Hupashiya, make Illuyanka and his brood drunk so that they cannot go back down into their hole in the ground. While they are helplessly drunk, Hupashiya ties them up, and when the storm god comes he is able to kill them. In the second version the storm god's own son by a mortal woman marries the daughter of Illuyanka and apparently uses his right as a son-in-law to ask a gift from Illuyanka. He receives his father's eyes and heart, which he passes on to the storm god. Renewed in his powers, the storm god defeats Illuyanka.

Like the vanishing-god myths, these two stories express natural catastrophes in the mythological terms of a disabled storm god. The disabled god is incapable of restoring himself and needs mortal cooperation, which is but a mythological counterpart of the actual mortal activity in the realm of magic rituals. The breakdown in nature is expressed mythologically as a giant serpent that must be subdued and killed. Reptiles are not a common symbol of evil in Hittite, but it is a fact that in the New Hittite myth of Hedammu a giant reptile is opposed by the goddess Ishtar. Unlike other Hittite myths, the first version of the Illuyanka story is localized, through the mention of the land of Tarukka, in north-central Anatolia. The second version takes place near an unnamed sea.

**Kumarbi cycle.** The theme of this group of stories is kingship among the gods. In *Kingship in Heaven* kingship is first held by Alalu, one of a previous generation of gods, who at the time of the Hittite storyteller are envisaged as dwelling in the netherworld and who bear the name "former gods." After a mere nine years of reign Alalu is driven from his throne by his erstwhile cupbearer, Anu, and he takes refuge in the netherworld. Alalu's own son, Kumarbi, becomes Anu's cupbearer for nine years. Then Anu and Kumarbi do battle, and Kumarbi drives his father's usurper from the throne. Because Anu (Sum., An) was the god of the sky, he tries to escape to the sky. But Kumarbi catches him, drags him down, and emasculates him by biting off and swallowing his genitals. Anu curses Kumarbi and prophesies the birth, from the swallowed genitals, of the god who will ultimately displace Kumarbi. Because Kumarbi is Alalu's son, he hopes to prevent his own removal by Anu's issue. This is the motivation for the emasculation. But fate cannot be denied. The genitals produce in Kumarbi several gods who are "born" from him, one of whom is Teshub, the storm god, who eventually deposes Kumarbi. In the *Song of Ullikummi* the deposed Kumarbi produces issue of his own, a great stone monster conceived by his intercourse with a huge rock, to depose and destroy Teshub. Another myth in this cycle, the *Kingship of Lamma*, also treats the theme of kingship among the gods. Thus the entire cycle of Kumarbi myths deals with struggle among the gods for supremacy.

**Tales of Appu, the Cow and the Fisherman, and the Hunter Keshshi.** These stories, of which unfortunately only

a portion is preserved, were edited almost forty years ago as Hurrian tales in Hittite translation. But it is now known that only the Keshshi story has a Hurrian background. No names in the Appu story, either of gods or humans, are Hurrian, although the geographical setting appears to be somewhere to the east of Mesopotamia. Nor is there any indication of Hurrian elements in the *Cow and the Fisherman*. The fisherman's city is Urma, which is unlocalized. Keshshi marries a woman with the Hurrian name Shintalimeni, whose brother is Udubsharri. The theme of the Appu story is twofold: (1) One cannot escape the fate that marks one at birth; and (2) although evil appears to prevail for a time, the justice of the gods will ultimately triumph. Appu has two sons, to whom the names Unjust and Just are given, and they grow up to fulfill their names. Unjust takes advantage of Just until their case comes to the attention of the gods. And although the end of the story is on a part of the tablet that has broken away, the short prooemium introducing the story predicts the end: The gods always vindicate the just and destroy the unjust.

Not enough is preserved of the *Cow and Fisherman* to discern a theme. Very little is preserved also of the Keshshi story, but it appears that Keshshi has angered the gods by neglecting their cult and doting on his new wife, and that he will suffer for this.

**Baal, Elkunirsha, and Ashertu.** This West Semitic myth about three deities, familiar from the Ugartic myths and the Old Testament, was somewhat inaccurately translated into Hittite. Clues to the wording of the West Semitic original can be found in those places where *parallelismus membrorum* in the original was distorted in translation. The story itself resembles the incident of the patriarch Joseph and Potiphar's wife. Ashertu propositions Baal, and when he refuses, she threatens to get even. He reports the incident to her husband, Elkunirsha, who gives him permission to humble her. He does so, telling her that he has killed her sons. Thereupon Ashertu laments their death and eventually becomes reconciled to Elkunirsha, even turning him against Baal. Ishtar (Astarte), Baal's sister, overhears them plotting against her brother and flies "like a bird" to meet him in the desert, where she warns him. There the tablet breaks off, leaving the narrative unfinished. An attached ritual describes the purification of Baal, which probably followed some injury to him connected with this plot.

**THE HITTITE TEMPLE.** Six Hittite temples have been excavated at Bogazköy. In addition to the cella, where the cult image of the deity was found, each contained a number of rooms that were used to house the permanent personnel and to store temple revenues. Each temple had a central courtyard. Worshipers crossing the courtyard from the temple entrance passed through a portico into the cella, which apparently could accommodate only priests and a small number of worshipers. Some larger temples, such as the principal temple in the lower city at Bogazköy (Temple I), may have contained two or more cellae and therefore housed the cult

images of more than one god. In the terminology of the texts, therefore, going from the “house” of god A to the “house” of god B might have been possible without leaving the confines of a single multiroomed structure.

As in other cultures, the Hittite temple—through its craftsmen personnel, its real estate farmed by sharecroppers, and its shares of booty taken by the king in battle—generated a large amount of revenue. Because of the lack of private economic documents, it cannot be discerned whether in Hatti, as in Babylonia, the temple served as a lending agency, similar to a modern bank. It is not, however, improbable that it did so.

**Cult images.** Although, thanks to rock reliefs depicting Hittite gods and goddesses, researchers have some idea of the appearance of their cult images, these latter (being made of precious metals, which would have been carried off by the destroyers of Bogazköy) have not survived. Small images in gold or silver have indeed survived, but the full-size cult images that stood in the temple cella have not. About these there is information in the inventory texts called statue descriptions, which give a fairly good idea of the appearance of the statues. Here is a quoted example.

The Storm God of Invocation: a gold statue of a standing man with wings coming out of his shoulders. In his right hand he holds a gold ax. In his left hand a gold symbol of good. He stands on an *awitti*-animal, its teeth plated with silver, its chest plated with gold. To the left and right of the wings stand [the attendant goddesses] Ninatta and Kulitta. The Storm God of the Sky: a gold-plated statue of a seated man. In his right hand he holds a *hattalla*-club. In his left hand he holds a gold symbol of good. On top of two mountain gods, portrayed as standing men, silver-plated. Underneath is a silver base. Two silver rhytons. . . . The Storm God of the House: a silver model of a bull's head and neck, facing forward. . . . The Warrior God (Zababa): a silver statue of a standing man. In his right hand he holds a *tukul*-mace. In his left hand he holds a shield. Underneath stands a lion. Under the lion is a silver-plated base. . . . one silver *ashshuzeri*-vessel. He has no attendant. Sun God of the Sky: a silver statue of a seated man. On his head are silver fishes. Beneath him is a wooden base.

From reports of oracle inquiries one learns that the god was thought to be angered when the platings of gold and silver on his statue became worn. When an oracle indicated this, the king had to instruct goldsmiths or silversmiths to replat the image.

**Temple personnel.** Periodically, the king commissioned a census of the temples of the realm. Each city, town, or village was listed with its deities and temple(s). For each deity the census listed two types of male clergy and one type of female clergy. If for any reason a sanctuary lost any of its quota of clergy, it was restaffed. A small staff of two or three clergy was necessary even for a small sanctuary; in the main temple at Bogazköy there were many more. No term corresponding to *high priest* is known in Hittite, but a presiding official for the large, urban temples must have existed.

The larger temples also maintained a staff of craftsmen. A list of the craftsmen employed in the main temple at Bogazköy enumerates goldsmiths and silversmiths, potters, leatherworkers, stonecutters, engravers, weavers, kitchen personnel, and various kinds of musicians. They lived and worked in a precinct just south of the main temple complex. Surviving texts describe the elaborate measures taken to ensure the ritual purity of these temple workers and their counterparts who served the needs of the king. Temple watchmen patrolled the precincts night and day to guard against fire and the intrusion of unwanted “unclean” animals. Visitors had to be escorted by temple guards from the main entrance to their appointments inside the temple and back to the exit once their business was done. Unauthorized persons were not allowed access to the holy precincts. In general, foreigners were not allowed in the Hittite temple; only privileged foreigners, perhaps ambassadors at the court, were allowed admittance under special circumstances.

**Cultus.** As stated above, the gods were treated like rich and powerful men. The description of the transporting of the images uses verbs inappropriate to the transporting of living persons, indicating that the Hittites were well aware that the image was not in fact the god but merely symbolized his presence. Still, the image was treated with the same deference that would be paid to any important personage. It was put to bed at night in the god's bedroom. In the morning it was aroused, washed and groomed, presented with food, and brought out to its cult platform for the day's round of receiving visitors (priests, dignitaries, and so on). On festival days it was put on a litter and carried through the streets to a pleasant meadow outside the city, where ceremonies, prayers, offerings, and even music, acrobatics, and games were performed to entertain the deity. The invisible divine beings symbolized by these statues were also viewed as leading a busy and active life. Ritual prayers invoking their presence in times of great need recognized that the god in question might have gone on a journey to the mountains or even to some foreign land.

No extant tablet contains the entire cultic calendar for the temples of Bogazköy. Texts describing festivals, however, make it evident that the busiest seasons of the year for festivals were fall and spring. The summer was occupied with harvesting and with the king's annual military campaigns. In the winter it was too cold for the outside activity often required at festivals, although it is now known that the Festival of the Year took place toward the end of the winter. There exist elaborate descriptions of some of the major festivals and lists naming many other festivals about which relatively little is known. The personal participation of the king (and sometimes also the queen) was very important. At times of military crisis a king might even have to leave command of the armies to a subordinate in order to return to Bogazköy to celebrate a religious festival. Not to do so constituted an unforgivable affront to the gods that could prove disastrous.

The activities of worship were prayer (addressing the god either to invoke, praise, or petition him), sacrifice (pre-

senting to the god gifts of food and drink), and entertainment (music, games, reciting myths). The musical instruments were drums, stringed and reed instruments, and horns. Singing was done in any of various languages, depending upon the deity's ethnolinguistic background: Hattic, Luwian, Hittite, Palaic, Hurrian, or Babylonian. In the cult of the Hattian gods a lead singer and a chorus sang antiphonally. Hattian deities were addressed in worship under two names: the name used among mortals and that among the gods.

The premise underlying all Hittite prayer is that gods thought like mortals and could be influenced by pleasant words and gifts. The paradigm for the divine-human relationship was a master-slave one. A human could expect from his divine lord or lady just what a slave could from his master.

More than one Hittite noun was used to designate what may be called "prayer." *Mugawar* (*mugesshar*) referred to the invocation of the god's presence through words and ritual acts. Praise, adulation, and adoration were called *wallyiyatar*; petition was *wekuwar*. Reply to accusations of sin (i.e., self-justification or protestation of innocence) was *arkuwar*. A single Hittite prayer often contained several of these types of expression.

Sacrifices were made of domestic animals, principally bulls, cows, sheep, and goats. For certain Hurrian rituals, birds were sacrificed. The cult never prescribed the sacrifice of a wild animal. The animal was killed and its meat prepared to serve as the god's food; no expiatory use was ever made of the blood of the sacrifice.

Animals given to the god were to be healthy specimens. Persons who knowingly substituted scrawny or unhealthy animals for healthy ones were guilty of a serious offense. In some rituals alternate, less expensive victims were accepted from poor worshipers. All sacrifices were to be presented promptly at the prescribed time, and delayed sacrifices or rituals were not accepted. Priests were warned in instructive texts not to tolerate excuses from worshipers who wished to postpone required rites of sacrifice. Especially appropriate at the time of their first harvesting were vegetable and grain offerings; they too had to be brought promptly.

**REVELATION.** The gods communicated their will to mortals in several ways. A surviving oracle text in Old Hittite script proves that oracular inquiry already existed at that time. In the Old Hittite *Telepinu Proclamation*, warnings from the gods about serious offenses came through the words of the "men of the gods," whom a number of scholars have taken to be prophets of some type. A third method—dreams—is not attested earlier than the New Kingdom. Communication of a god's will to a king, queen, or prince is first mentioned in the prayers of Mursilis II and first attested in the childhood of Hattusilis III, the son of Mursilis II. At a certain point in a ritual for a man suffering from sexual impotence, the sufferer is instructed to sleep in a holy place and report his dreams.

**SIN, DEATH, AND THE AFTERLIFE.** Several Hittite words are translated as "sin," "offense," or "crime." Those occurring in prayers are *washtai-*, *washtul*, and *shalla-kardatar*. The first two refer to a deed with evil or unpleasant consequences and in most cases they must be translated as "sin." But either "sin" or "offense" can be expressed by the word *haratar*. A particularly serious offense of a special sexual nature is *hurkel*, which in most instances coincides with what one would call incest. *Shallakardatar* is a deliberate and high-handed offense against a deity.

From the Hittite point of view, sins against the gods could be deliberate or accidental. In either case they had to be identified, confessed, and (in most cases) corrected. Identification of sins committed unwittingly was possible only through consulting the god by oracle. The process was an involved one. By posing questions requiring only a "yes" or "no" answer one gradually narrowed the field of possibilities until a specific offense was determined. Then the question was posed: "Is the god angry for this reason only, and not for any additional reason?" If the answer to this was "yes," the inquiry was terminated. If "no," the inquiry continued until the final cause was identified.

Confession necessitated a promise to make amends. If the offense was the neglect of some religious duty such as a sacrifice, the offender promised to make up the sacrifice, sometimes with a greater outlay of offerings. Two Hittite words denoted gifts to make amends for these sins of neglect: *sharnikzel* and *mashkan*. The former also referred to compensation for injury or breach of contract in civil law, while the latter in profane usage meant a gift or bribe. If the gods punished a person for committing a sin, this did not absolve the sinner from the obligations of confession and compensation. Animal sacrifices were not used to expiate sin, nor did the compensatory gifts mentioned above constitute an expiation. Rather, one's offense against a god was viewed as completely analogous to his offense against another person, and the terminology (e.g., *sharnikzel*) was identical.

Relatively little is said in the surviving Hittite texts about the fate of the deceased after death. The Old Hittite Kantuzzili prayer rather philosophically observes that if one were to go on living under the present circumstances eternally, that might turn out to be a nightmare, for the ills of this life would become eternal. This would turn out to be a grievance (*kattawatar*), that is, a ground for complaint against the gods. In the description of the lengthy ritual for cremation and interring of the ashes of a dead king is the information that certain farming implements were burned in order to accompany the deceased king to the next life, so that he might cultivate the soil there. In the Hittite laws, a clause dealing with a wife's predeceasing her husband decrees that before her dowry can be released to her widowed husband, he must burn certain of her personal possessions. This burning doubtless served the same purpose as the burning of the farming implements for the dead king. In many cultures, items of personal value to the deceased are placed in the grave

with the dead body, a practice strongly suggesting use of the articles in an afterlife. In the case of the Hittite king the texts explicitly confirm this interpretation. Descendants of the dead man continued to make offerings to his spirit. This practice is also attested in Hittite texts. In one instance, King Muwatallis, when he moved the royal residence from Bogazköy to Tarhuntassa, transferred to the new residence the statues of the gods and the “dead [ancestors].”

A Hittite religious belief maintained that the spirit of a dead person with a grievance against a living person might continue to haunt the latter until the grievance was resolved. The precise nature of the grievance was determined in the same way as sins against a god: by oracular investigation. When the grievance had been resolved and the spirit had been pacified, the deceased was “set on the road,” that is, was sent on his or her way to the abode of the dead.

Hittite texts never reveal where that abode was. The Hittite cosmology allowed for a heaven above, where most of the gods dwelled, and the netherworld beneath, where the remainder lived. But it is not known if the dead resided in either of these places. In a ritual intended to remove certain evils and safely dispose of them forever where they could not harm humankind, the dead were magically put into large copper vessels and covered with lids of lead. According to one version of the incantation, these vessels were at the bottom of the sea; according to the other version, in the netherworld. This, of course, does not prove that the spirits of the dead were confined in the netherworld. It only suggests that unwelcome things were kept there.

**HMONG RELIGION** SEE SOUTHEAST ASIAN RELIGIONS, *ARTICLE ON MAINLAND CULTURES*

**HOBBS, THOMAS** (1588–1679) features in intellectual histories as a philosopher and a political theorist and his *Leviathan* as one of the most important political treatises ever written in English. During the last decades of the twentieth century, though, Hobbes came to be regarded as a writer significantly relevant to the history of religious ideas and his *Leviathan* as an early example of a vogue of rational criticism of the Bible that was to become current in the nineteenth century.

**LIFE.** Hobbes was born in Malmesbury, England, on April 5, 1588. He recalls in his verse autobiography that his mother brought forth “twins at once, both me and fear” for she had given birth when the Spanish Armada was approaching the English coast. Hobbes entered Magdalen Hall, Oxford University, in 1603, and immediately after he earned his de-

gree he was offered employment by William Cavendish as tutor of his son. Hobbes remained attached to the Cavendish family throughout his life. Scholars have stressed the classical-humanistic twist in Hobbes's intellectual upbringing as one of the clues that may explain his later standing as a prominent figure in a "European republic of letters" (Malcolm, 2002, p. 474). Although Noel Malcolm's remark refers to Hobbes's posthumous fortune, the roots of this late intellectual prestige are found in the dense network of personal contacts and acquaintances he managed to set up in the course of a number of trips to the Continent as a tutor, as a private man of letters, and later as a refugee from English religious strife. It is worth noting that Hobbes published his masterwork, *Leviathan*, in Paris in 1651. As to Hobbes's elderly years, what is striking is his constant preoccupation with withstanding the attacks of people as well as institutions whose sympathy he had managed to alienate (e.g., the universities, one of the major targets of his polemical concerns) and his interest in exposing the "lies" of his religious adversaries. Indeed the word *Hobbism* became a major current of discourse to label doctrines with a ring of atheism and immorality.

**THE STATE OF NATURE.** Hobbes's early philosophical works include the *Elements of Law* and *De Cive*, where Hobbes addresses religious issues in ways that prelude the more thorough and lavish treatment of Christian religion in *Leviathan* as well as in such later works as the *Historia Ecclesiastica* and the Appendix to the Latin edition of *Leviathan*. That Hobbes, as A. P. Martinich has argued in *The Two Gods of Leviathan* (1992), did not mean to divorce theology from his general philosophical project becomes apparent if one takes a closer look into the subtitle (*The Matter, Forme, and Power of a Commonwealth, Ecclesiastical and Civil*) and the famous frontispiece of *Leviathan*. The subtitle yields insights on how to decipher the latter, which in fact is construed as a sort of emblem, featuring a giant visible from the waist up, wielding in his right hand a scepter, a symbol of the civil power, and in the left a crosier, a symbol of the ecclesiastical power. Across the foreground, before the vigilant gaze of the giant, stretches the image of a well-ordered community, probably reminiscent of the pages in which Hobbes contends that industry, culture of the earth, use of commodities, and so on only take place in times of peace. Hobbes alleges that peace is nothing but a quick and tentative lapse from what he calls the "natural condition of mankind," which is a condition of enduring war, where "war consisteth not in actual fighting, but in the known disposition thereto during all the time there is no assurance to the contrary" (*Leviathan*, 13, p. 8). Thus the frontispiece's image of the well-ordered state is the image of an artifact, something that cannot be found in nature. Therefore Hobbes distances himself from Aristotle, who in his *Politics* had pointed out that the state "belongs to the class of things that exist by nature."

**THE LAWS OF NATURE AND THE SOVEREIGN.** The natural disposition of humans to war ensues from Hobbes's radical nominalism, namely, from his belief that humans cannot

agree upon what is good. By rejecting the existence of an agreed-upon natural good, Hobbes destroys the rational teleology steeped in the Aristotelian underpinnings of the major philosophical and theological currents of the time. Given that the words *good* and *evil* "are ever used with relation to the person that useth them, there being nothing simply and absolutely so" (*Leviathan*, 6, p. 7), there is no way to detect a natural good by means of one's own private discernment. Thus agreement and accord are commodities hardly to be found in nature. Human intellect, though, provides the means by which human beings can anticipate the vantage of a social accord and so escape the state of nature: Hobbes calls these means "laws of nature." Thus Hobbesian individuals are bound to escape this natural predicament and reach a safer condition, whose distinctive feature is its artificiality. These natural individuals have forced themselves to abide by the laws of nature by giving up their natural right *in omnia* to a third party, which from now on will be entitled to establish what is right and what is wrong, namely, to transform the natural laws into commandments made effective by the third party's irresistible will.

What is striking here is that the laws of nature are coterminous with the laws of God. Hobbes was concerned throughout with how to prevent people from attaining a private apprehension of the laws of God and, in this way, bypassing the dictates of the lawful sovereign. Hobbes's crucial question in the third book of *Leviathan* was not the one that had traditionally puzzled the exegetes of the Scriptures, namely, "from whence the Scriptures derive their Authority," but rather "by what Authority they are made Law" (*Leviathan*, 42, p. 36). Hobbes was wary of the consequences that would fall upon the state if the sovereign were deprived of his authority. Hobbes was particularly wary of those "deceivers," namely, self-appointed interpreters of the word of God, who set about persuading people that a workable shortcut to the kingdom of God was already at hand in this world. One of the conditions Hobbes indicates for social stability is that citizens have "to be taught that they ought not be led with admiration of the virtue of any of their fellow subjects" (*Leviathan*, 30, p. 8). Any impulse to admire one's neighbor (modern moral philosophers would use the words *partiality* or *attachment* instead of *admiration*) is potentially conducive to the eroding of the very basis of social stability.

**ABUSES OF THE SCRIPTURE.** According to Hobbes, a typical "abuse of the Scripture" sustains a workable natural law that is said to convey the mystical installment of the kingdom before the end of time. This law, though natural insofar as it bypasses the will of the sovereign, could turn out to be at odds with "the doctrine established by him whom God hath set in the place of Moses" (*Leviathan*, 40, p. 8). Hobbes tracks down a time in which God had reigned directly over humans, and this image of a peaceful *arché*, in which God governs humans, can already be found in Plato (*Statesman*, 271 e). Yet during the time of "regeneration"—as Hobbes calls the time frame "between the ascension and the general resurrection" (*Leviathan*, 42, p. 7)—with God withdrawn

from earth, humans cannot but obey the laws promulgated by their earthly sovereign. A difficulty that immediately arises concerns those individuals who “confound Lawes with Right,” for they “continue still to doe what is permitted by divine Right, notwithstanding it be forbidden by the civill Law” (*De Cive*, 14, p. 3). The political problem individuals have to address as soon as they reject the direct domination of God consists in setting up enduring institutions in the absence of God’s commandments and possibly avoiding the risk of taking “for His law whatsoever is propounded by every man in His name” (*Leviathan*, 42, p. 46).

**BIBLICAL HISTORY.** Hobbes, as Paul in the synagogue of Antiochia (*Acts* 13:16–41), expounds a narrative of biblical history, starting from the exile of the people of God in Egypt through the announcement of the second coming of Christ. Biblical history constitutes the meaning-making framework in which the birth of *Leviathan* takes place. The narrative of biblical history becomes a “politically authoritative history,” and it is worth noting that the “tendency to disregard biblical history has been particularly evident, for example, in many contemporary discussions of Hobbes and Locke for whom, it is often argued, the nonhistorical social contract is their seminal contribution to the history of political thought” (Mitchell, 1993, p. 5).

This refusal to provide historical investigation of the intellectual roots of modernity with the backing of a specific authoritative history has somehow impaired the ability to make sense of those parts of Hobbes’s work mostly concerned with religion. But taking biblical history as a politically authoritative history is not just a workable technique for highlighting those bits of texts that have not received much consideration by scholars: if one assumes that biblical history refers to both the narrative account of sacred events and the political history of the biblical text, namely, the history “of its establishment, in particular circumstances, as an authoritative text” (Malcolm, 2002, p. 427), then it is by restoring the authoritativeness of biblical history that one can see how, underlying the materialism and reductionism of modern exegesis, there might be a latent reception of the Hobbesian text. The Catholic theologian Peter Henrici pointed out that there would not be any reason to puzzle about the “reductionist techniques of interpretation performed by Hobbes, if these techniques had not become the exegetical canon of the theology of the kingdom of God over two centuries—from Spinoza to protestant theology in XIX century” (Henrici, 1986, p. 134).

**POLITICAL THEOLOGY.** Modern debates concerning the issue of political theology have contributed to opening up “a new historical horizon for the interpretation of Hobbes” (Schmitt, 1984, p. 108). The opening of such a new horizon enabled the overcoming of the standard account of Hobbes’s philosophy as a brand of rational skepticism. Debates on political theology have raised significant questions concerning secularization and the meaning of technology in the modern age. Political theology does not just entail the mutually illu-

minating encounter between rationalist philosophy and a faith-ruled policy guided ultimately by the authority of the Bible. A crucial problem for political theology is that the possibility of creating a nonthreatening acquaintance among humans, though ultimately relying on the absence of theological foundations, seems hardly to be achieved on the sole plane of rational stipulations. Hobbes figures in these debates as the thinker who managed to envision a community in which God’s effective withdrawal from human history (*I Sm.* 8:7) is not ideologically concealed but, rather, taken to its extreme consequences. But political theology also entails that, having withdrawn God, people must establish their bearings without falling back upon the authority of God’s perspicuous commands. Yet Hobbes’s state supplies neither an ultimate end nor a workable direction on how people should regulate their conduct: by reducing politics to a technology of social bonding aimed at minimizing discord, Hobbes seems to indicate a pattern of political existence over which individuals cannot exercise effective control.

Schmitt, Carl. *The Leviathan in the State Theory of Thomas Hobbes: Meaning and Failure of a Political Symbol*. Translated by George Schwab and Erna Hilfstein. Westport, Conn., and London, 1996. First published in 1938, this work was a blueprint for major speculations on Hobbes's political theology.

Skinner, Quentin. *Reason and Rhetoric in the Philosophy of Hobbes*. Cambridge, U.K., 1996. Inscribe Hobbes's *Leviathan* in the larger context of a philosophical "history of irony," turning Hobbes into the elective companion of such figures as Bertrand Russell and David Hume, all sharing the ability to deploy rhetorical strategies to mock and ridicule the arguments of their ecclesiastical rivals.

Strauss, Leo. *The Political Philosophy of Hobbes: Its Basis and Its Genesis*. Translated by Elsa M. Sinclair. Chicago, 1952. An immensely influential monograph, charging Hobbes's view of humans and society with being the fountainhead of modern (immoral and atheistic) liberalism.

ROBERTO FARNETI (2005)

**HOCKING, WILLIAM ERNEST** (1873–1966), was an American philosopher of religion and metaphysician who also wrote on the philosophies of law, education, selfhood, and civilization. His magnum opus, *The Meaning of God in Human Experience* (1912; 14th ed., 1962), combined Josiah Royce's idealist concern for meaning and the Absolute with William James's pragmatist commitment to science and experience. Hocking's original contribution was his solution to the problem of solipsism. One shares the mind of another, he argued, through the common perception of, and mutual concern for, a particular object. Mind *is* its content. One cannot simply think (*pace* Descartes); one must think something. This particular object of common concern is the content of everyone's common mind.

The experience is articulated dialectically. Natural realism regards the world as objectively "outside" one's self. Subjective idealism responds that people know only their own individual reality "within" the mind. A dialectical synthesis discovers a world made objectively real by common perception. Hence science assumes public verifiability, and hypothesis becomes fact only when various individual experimenters acknowledge a common perception.

Empirical minds come and go, however, and yet one experiences particular objects as real even when one is alone. How so? One intuitively senses the presence of a nonempirical mind that is constantly a co-observer. One is never absolutely alone. Objective reality is thus grounded in the attention of an Absolute Mind. As personal reality, this caring presence of the Absolute is the meaning of God in human experience.

Hocking relates this natural theology both to Christianity and to the problem of world religious pluralism in three later books: *Re-Thinking Missions* (1932), *Living Religions and a World Faith* (1940), and *The Coming World Civiliza-*

*tion* (1956). There is a natural religion of humankind, shared by ordinary believers the world around. The substance of this religion is compatible with Christian faith. A life lived out of this natural perception will be different from one lived in the light of Christianity's supernatural revelation, but the relation is a natural one. So, in *Human Nature and Its Remaking* (1918), Hocking argues that the natural human will to power finds fulfillment in the evangelism of the Christian world mission, because, ideally, mission seeks to confer power on others, rather than gain power over them.

Nevertheless, the Christian missionary movement has historically been insensitive to non-Western cultures; and Christian theology has been exclusivistic in relation to other world religions. The integrity of the Christian message can be maintained without violence to other religious traditions through a relational model that is neither the indiscriminate amalgamation of synthesis, nor the exclusivism of radical displacement. Encounter causes each religion to rethink basic positions. The world's living religions will not die, nor will the emerging world faith necessarily be called Christian. This way of reconception will, however, lead to a future in which the natural religion of humankind and the substance of historic Christianity will be conjoined, providing the binding ingredient for cultural and religious pluralism in the coming world civilization.

#### BIBLIOGRAPHY

Hocking's *The Meaning of God in Human Experience* (New Haven, Conn., 1912) was the first of his twenty books. Other major writings on religion include *Human Nature and Its Remaking* (New Haven, Conn., 1918); *Living Religions and a World Faith* (New York, 1940); *The Coming World Civilization* (New York, 1956); and *The Meaning of Immortality in Human Experience* (New York, 1957), originally published as *Thoughts on Death and Life* (New York, 1937). For evaluations of Hocking's work see my festschrift for Hocking, *Philosophy, Religion and the Coming World Civilization* (The Hague, 1966), and my *Within Human Experience: The Philosophy of William Ernest Hocking* (Cambridge, Mass., 1969).

LEROY S. ROUNER (1987)

**HOFFMANN, DAVID** (1843–1921), was a German rabbi, Jewish legal authority, Orthodox communal leader, and biblical and rabbinic scholar. David Tsevi Hoffmann was born in Hungary and studied in the *yeshivot* of Moses Schick and Esriel Hildesheimer. Hildesheimer, who affirmed the worth of secular culture and traditional rabbinic scholarship, had a profound influence on Hoffmann. This influence led Hoffmann to Pressburg (now Bratislava, Slovakia), where he studied in both the famed Sofer Yeshiva and the Evangelical Gymnasium. Hoffmann began his university studies in 1865 in Vienna and immigrated in 1866 to Germany, where he completed his university education at Berlin and Tübingen; he received his doctorate in 1870 for his *Mar Samuel, Re-*

ktor der Jüdischen Akademie zu Nehardea in Babylonien (Mar Samuel, rector of the Jewish Academy at Nehardea in Babylonia). This work was severely criticized by Samson Raphael Hirsch for its application of critical methods to the study of Talmud, although Hoffmann himself felt that his own application of this method did not negate the divine authority of the oral law. In 1873 Hoffmann joined the faculty of the Orthodox Rabbinical Seminary in Berlin; in 1899 he became rector of the seminary. He served, simultaneously, as rabbi of the Berlin separatist Orthodox congregation, Adass Jisroel.

Hoffmann insisted that a defense of traditional Jewish religious belief could be combined with an affirmation of contemporary secular culture and scholarship, and he displayed this commitment through hundreds of essays and numerous books of both scholarly and apologetic natures. His defense of the unitary authorship of the Bible is contained in his commentaries on *Leviticus* and *Deuteronomy* and in his famed *Die wichtigsten Instanzen gegen die Graf-Wellhausensche Hypothese* (The most important arguments against the Graf-Wellhausen hypothesis, 1904). Hoffmann also defended German Jews against the attacks of German anti-Semites in *Der Schulchan-Aruch und die Rabbinen über das Verhältnis der Juden zu Andersgläubigen* (The *Shulhan 'arukh* and the rabbis on the relationship between Jews and Gentiles, 1885). Hoffmann's studies in Midrash and Talmud were seminal in the development of modern Jewish scholarship in these areas, and his collection of Jewish legal decisions, *Melammed le-ho'il* (1926–1932), evidences a remarkable sensitivity to the German environment and an absolute determination to preserve Orthodoxy against the encroachments of Reform Judaism. His modern approach to Jewish Orthodoxy provided an important model for Jews in Germany and throughout the West, and, because of this, Hoffmann remains a critical figure to the understanding of the development of Jewish Orthodoxy in the modern world.

DAVID ELLENSON (1987)  
*Revised Bibliography*

**HOKHMAH.** The Hebrew feminine noun *hokhmah* (variation of *hokhmot*, *Prv.* 1:20, 9:1, 14:1) reflects a common Semitic root, attested in Akkadian, Ugaritic, Phoenician, Aramaic, and Arabic. *Hokhmah* is conventionally rendered as "wisdom," though biblical usage has a broader semantic range than the English term. In itself an ethically and religiously neutral term, *hokhmah* denotes, along with intellectual prowess and sagacity, the mastery of crafts ranging from such concrete skills as spinning cloth (*Ex.* 35:25), working in metal, wood, and stone (*Ex.* 31:3–6), and navigation (*Ps.* 107:27), to the more subtle arts of dream interpretation (*Gn.* 41:8), ritual wailing (*Jer.* 9:16), sorcery (*Is.* 3:3), epigrammatic speech (*1 Kgs.* 5:9–14), diplomacy and court politics (*2 Sm.* 20:16–22; *1 Kgs.* 2:6, 2:9; cf. *Eccl.* 9:13–18;), and the exercise of kingship (*1 Kgs.* 5:26; cf. the ironic use in *Is.* 10:13 and *Ez.* 28:4–5, 28:12).

**HOKHMAH IN BIBLICAL PIETY.** Human *hokhmah* is also interpreted as and identified with piety (literally "fear of the Lord") in the so-called wisdom literature (i.e., *Proverbs*, *Job*, *Ecclesiastes*, *Ben Sira*, *Wisdom of Solomon*) and elsewhere (e.g., *Is.* 33:6). In *Proverbs*, *hokhmah* indicates ethical virtue and character as well as practical accomplishment: wisdom and its antithesis, folly, are equivalent to the paralleled righteousness and wickedness found in other proverbs. *Hokhmah* is evident in industry; integrity; circumspect behavior; felicitous, effective, and truthful speech; respect for parents; and care for the poor. To some degree these are pragmatic measures that make for successful living, with promised results in societal honor, security, and protection from the divine wrath attendant upon transgressions. Thus the formulation that "the beginning of *hokhmah* is the fear of the Lord" reflects, on one level, utilitarian self-interest. But the notion also takes a more speculative turn: fear of the Lord is the means to life and knowledge of God (e.g., *Prv.* 9:10–11, 14:27, 19:23; cf. *Ps.* 111:10).

*Hokhmah* is attributed to the deity, especially to the technical skill with which God created the world (*Jer.* 10:12, 51:15; *Prv.* 3:19–20; *Ps.* 104:24). Extraordinary wisdom of mortals can merit the hyperbole of divineline *hokhmah* (*1 Kgs.* 3:28; *Ezr.* 7:25; cf. *2 Sm.* 14:20, "like the wisdom of a divine angel"), and exceptional human *hokhmah* is sometimes considered God's gift (*Ex.* 28:3; *2 Chr.* 1:10–12). God also may impart the "spirit" of *hokhmah*, as to the anointed king (*Is.* 11:1–2) or to Joshua, Moses' charismatic successor (*Dt.* 34:9). The exemplar is Solomon in *1 Kings* 3 who, when offered a boon by God in a dream, asks for a "listening heart" and is granted riches and honor as well. (Much of the biblical

wisdom literature thus claims explicitly or implicitly to come from Solomon, though this is pseudonymous attribution.)

More typical is wisdom gained through human efforts (e.g., *Prv.* 3:13, 4:5, 4:7, 23:23, 29:15). Though aware of ambiguity and human limitation (e.g., *Prv.* 16:1, 16:9, 16:33, 26:4–5), *Proverbs*' ethos remains optimistic about this quest. The tradition takes a skeptical turn in *Ecclesiastes*, however, where injustice and death lead the author to a sense of meaninglessness (“all is vanity”) and the opinion that one who increases wisdom increases sorrow (*Eccl.* 1:18). The *Book of Job* also severely relativizes human wisdom in comparison to God's.

**THE FEMALE PERSONIFICATION OF HOKHMAH.** The paradox of wisdom sought by humans and also conferred by God appears strikingly in passages that personify *hokhmah* as a woman. The theme's most restrained treatment is found in *Job* 28. This elegant poem treats of the rarity and elusiveness of true wisdom—here perhaps only an abstraction rather than a full personification—whose place in the created order is known only to the Creator. In contrast to *Job*'s hidden wisdom is its—now “her”—easy accessibility in *Proverbs* 1–9, where she is met in the streets, the markets, the city gates, and her house, offering life to followers of her ways (*Prv.* 1:32–33, 8:35–36, 9:1–6, 9:11). This message, as well as the female figure itself, unites the several personification poems in these chapters; however, there are also variations in *Hokhmah*'s portrayal.

In *Proverbs* 1 *Hokhmah*'s rhetoric is much like the angry diatribe of a scolding prophet. Woman Wisdom threatens to turn a deaf ear to those who reject her in good times but seek her counsel when calamity strikes. She will ignore their pleas, laughing scornfully at their downfall (*Prv.* 1:20–33). Although women (e.g., Deborah, *Jgs.* 4–5; and Huldah, *2 Kgs.* 22:14–20) as well as men could be prophets, *Hokhmah*'s female gender predominates in passages that cast her as the wife or lover and source of honor to the man who loves and embraces her (*Prv.* 4:5–9, 7:4). This relational imagery links her with the sexually desirable wife (*Prv.* 5:15–19) and with the industrious worthy woman depicted in the book's concluding poem (*Prv.* 31:10–31), who is herself a paragon of *hokhmah*. Both the wife and Wisdom protect their mates from the dangerous “strange woman,” who lures the unsuspecting man into sexual misadventure (*Prv.* 5:20–23, 7:5–23, cf. 2:26–19). Social commentary regarding proper family bonds finds expression here, although these poems are one of the few places in the Hebrew Bible where the sexual double standard is not in evidence: men are enjoined to fidelity as much as women. The patriarchal mindset nonetheless emerges in the binary opposition of good woman and bad woman.

Other poems use the female imagery to constitute competing superhuman forces. The path of the strange woman, who appears as personified Folly in the concluding poem of *Proverbs* 1–9, leads to death: “her guests are in the depths of Sheol” (*Prv.* 9:18, cf. 2:18–19, 5:5–6, 5:23, 7:27). Wisdom,

in contrast, offers life, an offer whose credibility is enhanced by the remarkable poem in *Proverbs* 8. As in chapter 1, she speaks in the first person, here offering a calmly reasoned exposition of her merits. The setting is once again a public one (*Prv.* 8:2–3), and her appeal is universal (if gendered), to all “men” (*Prv.* 8:4). The words of her mouth represent the timeless virtues of truth and justice. Her self-assertion builds in power as she claims to be the source of just governance (*Prv.* 8:15–17), before touching back to the love language of the earlier poems. Her worth exceeds that of gold and silver, yet she will also fill the treasuries of her righteous lovers (*Prv.* 8:18–21), an allusion perhaps to the story of wise Solomon. The climax of her argument (*Prv.* 8:22–31) asserts nothing less than a cosmic pedigree, placing herself with God before creation.

The language of this section is dense with multiple meanings, creating a complex and shifting picture of her relationship to the deity. Following the Greek translation of *Proverbs* 8:22, most English versions read, “The Lord created me at the beginning of his work.” The verb (*qnh*) more typically means “acquire,” however, and is used of a man acquiring a wife. It can also be construed as “engender,” biological conception language that continues in *Proverbs* 8:24–25, where Wisdom says she was “brought forth” (*hll*), the usual term for birthing. Is she then God's creation, God's wife, God's daughter? Another crux comes in *Proverbs* 8:30 with the unusual word *'amon*, translated by some as “darling child,” by others as “master architect.” She plays before the deity, delighting him, but finds her own delight in the human world (*Prv.* 8:30–31).

In *Proverbs* 9:1–6 the images of the wise homemaker and the divine companion at creation conjoin in the accomplished architect of her own seven-pillared edifice, a structure that has received diverse interpretations (architectural, cosmic, astrological, mythological). From her house she sends out her maids to call to the simple to come partake of the food and wine she has prepared, thus obtaining the life-giving substance of Wisdom herself.

**PERSONIFIED WISDOM IN THE ANCIENT CONTEXT.** While Wisdom's association with acceptable human female roles—including village leaders identified as “wise women” (*2 Sm.* 14:1–20, 20:16–22)—may have contributed to her appropriation into a largely patriarchal culture and monotheistic text, the ancient understanding of this figure has been the subject of much scholarly debate. The personification of *hokhmah* may be compared to the personified attributes Faithfulness (*hesed*), Truth (*'emet*), Well-being (*shalom*), and Right (*tsedeq*) in *Psalms* 85:11–14 and thus understood as merely a literary device, female by virtue of its grammatical feminine gender. Reference to the “spirit of wisdom” provides a further biblical parallel (e.g., *Ex.* 28:3; *Dr.* 34:9; *Is.* 11:2). *First Kings* 22 depicts a vision in which God holds court, surrounded by the hosts of heaven; the “spirit” of Falsehood steps forward, volunteering to do the divine bidding. This ancient belief in independent divine beings atten-

dant upon Yahweh may suggest that *hokhmah's* personification is no mere literary trope but reflects a view of wisdom as “hypostasis,” an independently existing manifestation of divine wisdom, or of the order inherent in the divine creation. The Aramaic *Book of Ahiqar* (fifth century BCE), where *hokhmata* is spoken of as “of the gods,” “precious to the gods,” and whom “the lord of holy ones has exalted,” provides a close parallel in extrabiblical literature.

Ancient Near Eastern literature also depicts a number of goddesses who have been argued, with varying degrees of success, to provide a model, or perhaps a repressed background, for female Wisdom. Both the literary forms and iconography associated with the Egyptian Maat (the term designates both the concept of cosmic order and its divine hypostasis) parallel to some degree the presentation of biblical Wisdom, but it is difficult to establish a direct linkage. Closer yet is Isis, who gains international currency in the Hellenistic period, perhaps a bit later than the *Proverbs* poems but clearly reflected in the Greek-language *Wisdom of Solomon's* rendition of Hōkhmah as Sophia (see below). Inscriptional evidence discovered in the late twentieth century shows the ongoing presence of the Canaanite goddess Asherah in Israelite religious practice (perhaps as Yahweh's consort); the ultimate success of her suppression in the biblical literature leads some to suggest that she appears in sublimated form in Woman Wisdom.

The larger literary role played by the female imagery in *Proverbs* may provide one window into the social setting of those who deployed and developed the *hokhmah* concept. The book consists of twenty-one chapters (10–30) constituted mainly by collections of individual two-line proverbs. The proverb (Hebrew, *masbal*) is a constant feature of verbal rhetoric across all oral cultures (see, e.g., *Jgs.* 8:21 and *1 Sm.* 16:7 for proverb performance in Hebrew narrative). Proverbs were taught in the home and village environment by mothers and fathers (cf. *Prv.* 1:8) as well as used by society's leaders. In the *Book of Proverbs*, however, the collected *mesalim* are removed from their life contexts and shaped into bilinear parallel form, probably by the educated elite in the royal court. The instructional poems in chapters 1–9 and 31 then bracket the proverb collections, providing structure to the book as a whole. Here their situational, utilitarian wisdom is construed as an exemplar of a universal Wisdom, embodied in both divine and earthly female form. This literary work is no doubt that of scribes, probably connected with the Jerusalem Temple during the period of Persian and Hellenistic rule (likely fifth through third centuries BCE). Ironically then the female imagery that is excluded from the Second Temple Judaeon cult is maintained, if also tamed, in the Hōkhmah of the scribes who produce the Bible.

**FEMALE WISDOM IN LATE ANTIQUITY AND THE MIDDLE AGES.** The Wisdom figure constitutes a unique and surprising elevation of the feminine in the Hebrew Bible that reappears in the Apocrypha and Pseudepigrapha, sometimes with striking elaboration and innovation. In *Ben Sira* 24:1–21

(composed by a Temple scribe about 180 BCE), Wisdom again speaks on her own behalf, telling of her origination before creation “from the mouth of the Most High.” Seeking a resting place, she makes her dwelling in Zion, this focus on the temple replacing *Proverbs's* focus on creation. Following Hōkhmah's own words, the narrator explicitly identifies her with the law of the covenant (v. 22). So too a hymn to Wisdom in *Baruch* (3:9–4:4) declares Wisdom to be “the book of God's laws,” God's special revelation to Israel. While *Ben Sira's* Wisdom finds a home in Jerusalem, fragments of a Hōkhmah myth preserved in *1 Enoch* 42 recount how Wisdom, not finding any suitable dwelling place among humankind, returns to her original place among the angels.

In *Ben Sira* 51:13–30 the scribe celebrates his acquisition of Wisdom, making novel reference to her “beauty” and the desires it arouses. The Dead Sea Scrolls contain another version of this passage that speaks through bolder, more suggestively erotic double entendre (11QP<sup>s</sup>a cols. xxi–xxii). In the *Wisdom of Solomon* (8:2), composed in Greek, the wise king recalls how he sought to take Wisdom (Sophia) as his “bride.” This Alexandrian text from the first century BCE or CE depicts Wisdom as an independent being, seemingly radiated out from the deity, an auralike emanation of God's glory and light (*Wisd. of Sol.* 7:25–26). Articulating what is only suggested in *Proverbs*, she is an associate, if not the active force, in creation (*Wisd. of Sol.* 7:22, 8:4), sitting by God's throne (*Wisd. of Sol.* 9:4). The rehearsal of Israel's early story in *Wisdom of Solomon* 10 goes so far as to place Sophia in God's saving role.

The Talmud and early midrashim devote little attention to speculation on personified Hōkhmah. There she is effectively replaced by personified Torah, though there is the odd remnant from *Proverbs*. “If one dreams he has had intercourse with his sister, he may expect to obtain wisdom, since it says, Say to wisdom, thou art my sister” (Berachoth 57a). More typical is R. Eleazar: “The deduction is made from this text: Say unto wisdom, ‘Thou art my sister,’ and call understanding thy kinswoman, devise [mnemonic] signs for the Torah” (Eiruvin 54b). In *Genesis Rabbah* 1:1, Torah rather than Hōkhmah is made by God at the beginning of his way and serves as God's architect in creation. Similarly the bread and wine offered in *Proverbs* 9:5 is Torah, with Wisdom's first person reference assimilated to God's voice. The rabbinic interpreter of Torah nonetheless is known as a *hakham*, a wise man or sage. Rabbinic reticence about *hokhmah's* personification may have been partially conditioned by Wisdom's prominent role in the cosmology of Christian and non-Christian Greek Gnostic traditions, which further incorporated the Hebrew term into their system in the form of Achamoth, said to be a daughter or lesser form of Sophia.

In Jewish mystical literature, Qabbalah, *hokhmah* is the second of the ten *sefirot*, or divine emanations, hearkening back to its important role in Greek Jewish and Gnostic speculation. The imagery varies. The ten *sefirot* sometimes form a tree, growing downward from the first *sefirah* (*keter*,

“crown”). Here *ḥokhmah* may be part of the trunk or the water that makes the tree grow. When the *sefirot* form a human, *ḥokhmah* is part of the head.

In another system the first *sefirah* is nothingness, zero, and *ḥokhmah* is the primordial point intermediate between nothingness and being, imaged as the center of a palace, as a river’s source, or as a seed in the womb, with the third *sefirah* (*binah*, “understanding”) comprising, respectively, the palace, the river, or the womb. Whereas in the Bible these two terms are essentially synonyms, here *ḥokhmah* represents a masculine principle, described as Father in the Zohar, requiring the balance of *binah*, the metaphorical Mother. The *sefirot* sometimes reveal different forms of the divine name, with *ḥokhmah* as Yah. Relatedly the divine emanations may be of language as well as creation, tying *ḥokhmah* again to Torah. The preexistent Torah, its most secret aspect, is sometimes identified with God’s primordial wisdom. Qabbalah’s personifications of *Shekhinah* (God’s presence) and Sabbath also took on motifs similar to those associated with personified *Ḥokhmah* in biblical and apocryphal literature. The praise of the wise wife in *Proverbs* 31 became a hymn to *Shekhinah*, which was in turn identified with Queen Sabbath, met as the mystic Bride.

**HOLDHEIM, SAMUEL** (1806–1860), was a rabbi and spokesman for the more radical Reform Jews in Germany. Born in Kempen, Posen, Holdheim mastered the traditional study of rabbinic texts as a youngster. He was also attracted to secular culture, however, and as a young man gained fluency in German and attended the universities of Prague and Berlin. He became rabbi in Frankfurt an der Oder in 1836 and in 1840 succeeded to the post of chief rabbi of Mecklenburg-Schwerin. He became well known in these positions as a champion of Reform and emerged from the Reform rabbinical conferences of 1844–1846 as the leader of its extremist elements. In 1846 he was elected rabbi of the Reform congregation in Berlin, a post Abraham Geiger refused because of the congregation’s separation from the general Jewish community. Holdheim served there until his death.

Holdheim articulated his philosophy of Reform Jewish belief and practice in numerous articles, sermons, pamphlets, and books, including *Ueber die Autonomie der Rabbinen und das Prinzip der jüdischen Ehe* (The autonomy of the rabbis and the principle of Jewish marriage laws; 1843), in which he advanced the thesis that the laws of the state and not rabbinic legislation should regulate matters of marriage and inheritance for Jews. In his philosophy of Reform Judaism, he distinguished between religious-ethical and national components in Judaism. The latter, he claimed, constituted the “perishable shell” of Jewish teachings and were no longer binding in the modern era. The religious-ethical elements, in contradistinction, comprised the “everlasting kernel” of Jewish faith and remained valid in the contemporary period. Thus, he was able to write, “The Talmud speaks with the ideology of its own time, and for that time it was right. I speak from the higher ideology of my time, and for this age I am right” (quoted in W. Gunther Plaut, *The Rise of Reform Judaism*, New York, 1963, p. 123). While Holdheim was not alone among the Reformers in expressing these views, his prominence among the leadership of the movement made him a significant exponent of these sentiments.

Holdheim’s thought found practical expression in his enthusiastic support of Jewish political emancipation as justifying the radical transformation of Judaism, in his sanctioning of mixed marriages, and in his advocating that the Jewish Sabbath be transferred from Saturday to Sunday, “a civil day of rest.” Holdheim also supported the almost complete removal of Hebrew from, and the adoption of the vernacular in, Jewish prayer services (although he advocated the reading of Torah in Hebrew) and, in his Berlin congregation, introduced radical reforms into the prayer book and ritual. His approach to Reform found expression in America through

the efforts of David Einhorn of Baltimore and later Philadelphia; Holdheim can thus be identified as an architect of the “classical Reform” position in the United States.

#### BIBLIOGRAPHY

Perhaps the best summary of Holdheim’s thought appears in Max Wiener’s *Jüdische Religion im Zeitalter der Emanzipation* (Berlin, 1933), pp. 87–101. A great deal of information about Holdheim’s career and thought can be found in David Philipson’s *The Reform Movement in Judaism* (New York, 1967), while Jakob J. Petuchowski’s *Prayerbook Reform in Europe* (New York, 1968) describes Holdheim’s approach to liturgy. In a superb article, “Abraham Geiger and Samuel Holdheim: Their Differences in Germany and Repercussions in America,” *Leo Baeck Institute Yearbook* 22 (1977): 139–159, Petuchowski analyzes the significance and impact of Holdheim in both Germany and America.

*Revised Bibliography*

**HOLĪ** is a popular North Indian festival noted for its Saturnalia-like excitement celebrated each year at the full moon in the lunar month of March–April. The ceremony is not found in South India, but a similar festival in honor of the god of love, Kāma, takes place there at the same time. While there does not seem to be a direct link between the two rites, literary sources suggest that both occasions are examples of an age-old tradition of celebrating the arrival of spring.

People in northern India usually celebrate Holī during the few days after the full moon. However, in many places the festival starts before the full moon, sometimes as early as Vasanta (“spring”), the fifth day of the waxing moon in the lunar month of February–March, when the Holī fire is first prepared for lighting. At this time, people begin to collect and contribute wood and cowdung to pile up around a central pole; in addition, a pot is sometimes filled with seeds and buried beneath this pile. The main Holī ritual centers around a bonfire ceremoniously kindled at the time of the rising moon. Both men and women circumambulate the fire, into which they often throw coconuts or on which they roast new barley. Divinations of the coming harvest are cast by interpreting the direction of the flames (when the fire is burning) or by the state of the seeds in the buried pot (when the fire has gone out). People sometimes take embers from the fire to their homes in order to rekindle their own domestic fires; they also collect the ashes from the Holī fire for use as protection against disease.

The Holī fire is also regarded as a funeral pyre (Marriott, 1966, pp. 201, 204), for it is understood to destroy a female demon commonly known as Holikā. Certain through a boon she was granted that she was never to die by fire,

Holikā climbs the pyre taking in her lap Prahlāda, a faithful devotee of Viṣṇu who is either her brother or the son of her brother Hiraṇyakaśipu (Viṣṇu’s enemy). Prahlāda, who is sometimes identified with the central pole that rises out of the fire, survives the ordeal through his fervent devotion to Viṣṇu; Holikā, the evil one, perishes in the flames.

This exemplary narrative does not really explain the erotic and occasionally violent mood of “playing Holī.” People—usually members of the lower social strata—drench each other as well as powerful and prestigious members of the upper classes with water stained with various powders, cattle urine, and mud. Those victims of the various tricks and pranks played on them, including those men who during the festival have been beaten with sticks by women, must simply go along with their reversed status for the time being. The Holī celebration is marked by the selection of the King of Holī, the hearty enjoyment of lewd singing and shouting, the drinking of *bhang*, a drink of hashish mixed with milk and yogurt, and the fondling of phallus-shaped effigies. Anthropologists have been intrigued by these rites. McKim Marriott, for example, notes that “the dramatic balancing of Holī—the world destruction and world renewal, the pollution followed by world purification—occurs not only on the abstract level of structural principles, but also in the person of each participant” (Marriott, 1966, p. 212). The negation of social status is, however, a limited one, and Holī does not involve the complete reversal of everyday norms (Babb, 1975, p. 174). According to Hindus of northern and central India, the frenzy and licentiousness of the festival is merely a reenactment of the *līlās* of Kṛṣṇa, the amorous and frolicsome “plays” that the god enjoys with cowherd boys and girls. Indeed, Holī is the “feast of love” (Marriott, 1966), and its excesses are clothed in the emotional feelings and motives of Kṛṣṇa *bhakti* movements (Biardeau, 1981, pp. 156–161).

In a Bengali variant of the festival, the burning of a human effigy is associated with the Kṛṣṇaite swing festival (Bose, 1953). In India, the swing carries erotic connotations and may be an element of a generalized marriage ritual. Although Kṛṣṇa does not appear in all variations of the celebrations, the burning of a human or animal effigy is ubiquitous and has gone on for years (*ibid.*, p. 83).

In Andhra Pradesh, the festival to Kāma mentioned earlier retains some of the frenzy of the North Indian Holī (Christian, 1982, p. 255). Such ritual delirium does not appear to any significant extent in Tamil Nadu. Although a festival to Kāma may take place here and there in orthodox Śiva temples, Tamil celebrations usually involve only small local groups instead of entire villages. The Kāma festival begins after Śivarātri and runs until the full moon. An effigy of Kāma is constructed while people recount his story. Assisted by the effects of alcohol, the participants dance wildly, some of them dressed like tribal women (which evokes a good deal of erotic behavior). The effigy of Kāma is burnt in the fire in a ritual reenactment of a well-known tale in which Kāma sends an arrow to Śiva in order to distract him from his med-

itation long enough to allow the god to father a son. Enraged, Śiva destroys Kāma with a bolt of lightening from his third eye, reducing the Lord of Desire to ashes. However, the terrible yogin (Śiva) himself becomes “Desire” for a short time and enjoys the pleasures of sexual union with Pārvatī. For that moment Śiva becomes, in effect, Kāma. The theological reversal echoes the ritual reversal.

The element of *bhakti* does not appear in the South Indian festival, but here the ritual is more explicit. First, in conformity with the Hindu sacrificial context, the Kāma rite focuses on the element of desire—its fulfillment and destruction. Although *kāma* (the fulfillment of desire) may be the lowest of the four traditional goals of life (the others being *artha*, or “prosperity”; *dharma*, or “religious duty”; and *mokṣa*, or “salvation”) it is just as essential as the others, for no aspect of the other three goals can be met without desire (Biardeau, 1981, pp. 49–54, 78). The ascetic Śiva is also Kāma, and thus sires Skanda, for the heroic son must eventually save the world by destroying the demons who are forever threatening the power of the gods. In addition, *kāma*—desire without knowledge—is the goal attributed particularly to the *śūdra*, the noninitiated, lowest order of Hindu society. In the springtime, the time of cosmic renewal, everyone ritually becomes a *śūdra* in order to re-create the world. This temporary inversion of the social hierarchy and of the four goals of Hindu life is marked in the ritual when Kāma, or Holī, is crowned king.

McKim Marriott's “The Feast of Love,” in *Krishna: Myths, Rites and Attitudes*, edited by Milton Singer (Honolulu, 1966), pp. 200–231, gives a firsthand account of the festival and interesting interpretations of its meaning from an anthropologist's perspective. Although slightly out of date, Nirmal Kumar Bose's “The Spring Festival of India,” in *Cultural Anthropology and Other Essays*, edited by Bose (Calcutta, 1953), pp. 76–135, is useful for its information on regional variations. See also Lawrence A. Babb's *The Divine Hierarchy: Popular Hinduism in Central India* (New York, 1975) and Jane M. Christian's “The End Is the Beginning: A Festival Chain in Andhra Pradesh,” in *Religious Festivals in South India and Sri Lanka*, edited by Guy R. Welbon and Glenn E. Yocum (Delhi, 1982), pp. 243–267. Madeleine Biardeau's *L'hindouisme: Anthropologie d'une civilisation* (Paris, 1981) provides pertinent interpretations of some of the basic Hindu conceptions crucial to the working of the ritual.

MARIE-LOUISE REINICHE (1987)

**HOLINESS MOVEMENT** is the term commonly used to identify a perfectionist sector of renewal and reform which sometimes paralleled and sometimes fused with the broader stream of the Protestant revivalism in the United States of the nineteenth century. The focal point of the

movement's mission and ethos was the perfectionist call by John Wesley (1703–1791) to Christian believers, subsequent to their justification, to be entirely sanctified in a second work of grace and by faith alone. Wesleyans believed that this work of the Holy Spirit cleansed the hearts of believers from their bent to sinning and restored in them God's image of love. It established a relationship with God of continuing faith in which it was possible to live without willful rebellion, but never without the possibility of again falling into sin through willful unbelief and disobedience. The movement that gathered around these beliefs left an enduring imprint upon the subsequent theological, cultural, and institutional life of Protestant evangelicalism.

**THE FORMATIVE YEARS.** Pioneer bishop Francis Asbury (1745–1816) set this call to personal and social holiness as the keystone of American Methodism's religious life and evangelism. However, by the 1830s the church's phenomenal growth fostered concerns that its mission of spreading Wesley's evangelical Arminian message of free grace, free will, and freedom from sin was being compromised. In 1835 weekly class meetings for women, led first by Sarah Lankford (1806–1896) and then by her sister Phoebe Palmer (1807–1874), became the seedbed of Holiness promotion and renewal. These “Tuesday Meetings” for conversations and testimonies of spiritual experience held in the New York home shared by the sisters and their spouses became the model for a network of hundreds of similar centers across the nation. Within a short time, the meetings attracted clergy and laity of both sexes and participants from many non-Wesleyan churches. In 1839 friends of Palmer's began publication of the *Guide to Holiness*, which was dedicated to coordinating the revival's activities and promoting its cause.

Palmer's promotion of Holiness had always met with opposition in Methodism, but continued support by many of the church's most respected leaders of the period made it difficult to criticize her; instead, opponents attacked the movement's understanding of Wesleyan perfectionism as skewed. They challenged the immediacy of the revival's call for simple faith in the naked word of God as the promised path to one's experience of cleansing and holiness of heart. Palmer taught that God said it, faith grasps it, and it is done; this “shorter way,” her opponents charged, was “un-Wesleyan.” Some contemporary theologians see in Palmer's simple spiritual formula an omen of the “Name it, claim it” theology that rose in late twentieth-century revivalism. Palmer's four years of ministry in Great Britain, largely among the constituencies of the gathering evangelical alliance, strengthened the already existing interrelationships that characterize the history of U.S. and British and European revivalism. Her forty years of Holiness evangelism, her numerous widely read publications, and her public ministry in Methodist and other churches and camp meetings in the United States and Canada made her the spiritual mother of the Holiness movement.

Palmer's ministry became the model for the freedom and authority of women in the movement. She stoutly de-

fended women's participation in the public life of the church. Her book, *The Promise of the Father* (1866), was the first systematic defense of women's rights to public ministry written by a woman. In it she claimed that Joel's promise that the Spirit of God would fall on "all flesh" made the Pentecostal text the authoritative text for interpreting any other texts, which traditionally had been used to deny women a public ministry. Her example inspired the cofounder of the Salvation Army, Catherine Booth (1829–1890), to exert her rights to leadership and ministry.

The revival's milieu also gave birth to other radical reform movements. In 1843 thousands of Methodist abolitionists, with Congregationalists and others, left their denominations to form the Wesleyan Methodist Connection of America. Their leader, Orange Scott (1800–1847), rooted the new church's call for immediate emancipation of slaves in the ethical implications of Wesley's perfectionist theology. In 1860 a second group, the Free Methodists, led by Methodist pastor B. T. Roberts (1823–1893), became the first to organize a Holiness denomination in response to what they perceived to be Methodism's rejection of Wesleyan perfectionism and its increasing neglect of Wesley's concerns for the poor. The new church also called for the immediate abolition of slavery.

The success of the Wesleyan revivalists became the catalyst for the rise of parallel Holiness movements in New School Calvinism. Wesley's writings contributed directly to the Oberlin perfectionism of Charles Finney (1792–1875) and Asa Mahan (1799–1899). Finney sought to keep his Holiness convictions within the confines of his New School theology; Mahan embraced Wesleyanism more openly. Princeton University professor B. B. Warfield (1851–1921) strongly criticized Finney's and Mahan's forms of "Wesleyanism," but Finney and Mahan are enshrined in Wesleyan/Holiness hagiography along with others in the Reformed tradition.

**THE POST-CIVIL WAR REVIVAL.** In the summer of 1867 thousands responded to the call of a committee of Methodist Episcopal pastors to attend a national camp meeting in Vineland, New Jersey, dedicated to the promotion of Christian holiness. The success of the venture prompted the pastors to create the National Camp Meeting Association for the Promotion of Holiness. Under the leadership of Methodist pastor John Inskip (1816–1884), the association's national committee changed the dynamics of Holiness promotion. Hundreds of affiliated local, county, and state interdenominational Holiness evangelistic associations, most with their own annual camp meetings, became the preaching circuit for hundreds of Holiness evangelists. The camp meetings became the primary centers for the movement's nurture and revivalism. The family atmosphere encouraged by living together for an extended period of time, the private and corporate prayer, praise, solemn hymns, and spirited gospel songs created the ambience that prepared the campers for the urgency of the evangelist's call to decisions for salvation and

sanctification. The camps became the dominant shapers of the ethos and mores that were common to the hundreds of small associations that formed the heart of the movement. Through them, and the wealth of journals and publications that reinforced their cause, the movement became the major platform for the rising divine healing movement. The mingling of non-Methodist themes with the Holiness message, and the adoption of Plymouth Brethren preacher John Nelson Darby's (1800–1882) dispensational premillennialism by large sectors of the movement in opposition to Methodism's traditional postmillennialism, began to weaken institutional Methodism's control of the movement.

Many Holiness associations that became Holiness church congregations at the end of the century made salvation, sanctification, healing, the second coming of Christ, and the free worship style of the Holiness camp meeting their church model; they became known as "camp meeting churches." The freedom promised by Holiness teaching and worship style attracted increasing numbers of African Americans to the movement out of the existing African American Methodist and Baptist churches. In the last quarter of the nineteenth century, the African American woman evangelist Amanda Smith (1837–1915) became one of the most respected of the Holiness movement's itinerant preachers.

From 1873 to 1875 Hannah Whitall Smith (1832–1911), author of the best-selling devotional classic *The Christian's Secret of a Happy Life* (1875) and an ardent Holiness advocate, feminist, and advocate of temperance and women's suffrage, spread the Holiness message with her husband Robert Pearsall Smith (1827–1898) to both the established and free churches of England and continental Europe. A series of Holiness conferences at Oxford and Cambridge Universities, and the annual camp meetings held on the Broadlands estate of Lord and Lady Mount Temple culminated in an 1875 meeting at Brighton, England. Thousands of pastors, theologians, and university students from all across Europe attended. The impact of the Smiths' brief Holiness ministry upon the British and European churches was significant. In Germany it excited the renewal of the pietistic German Fellowship Movement and the Inner-City Movement within the established churches, and the formation of the German Holiness Movement within the free churches. In England the most enduring result was the rise of the Keswick Movement, whose annual meetings for the promotion of scriptural holiness sparked renewal among Reformed evangelicals, both Anglican and free. Keswick gave birth to faith missions movements and student Christian movements around the world.

**INSTITUTIONALIZATION.** By the closing decades of the nineteenth century, many Methodists, tired of the decades-long tensions over the "holiness question," turned from Wesley's perfectionist vision to the theologies rooted in the Enlightenment. In addition, the revival's expansion into non-Methodist environments weakened the national committee's control over the movement as Holiness Baptists, Quakers,

Presbyterians, Congregationalists, Mennonites, and Episcopalian evangelicals sought to assimilate the Holiness message into their own theologies and experiences. Holiness adherents, together with more numerous “populist” association leaders, began to challenge the increasingly strained efforts of the Methodist-controlled National Holiness Association to keep a vibrant and diverse interfaith movement under the aegis of institutional Methodism.

Between 1882 and the century’s end disenchanted Holiness Methodists, joined by converts to the independent Holiness associations who had never been Methodists, formed new Holiness denominations and institutions out of the revival’s constituency. This period marked the largest creation of new denominations in so short a period in U.S. religious history. Other sectors of the revival, within the ministries of Dwight L. Moody (1837–1899), A. T. Pierson (1837–1911), A. J. Gordon (1836–1895), and A. B. Simpson (1843–1919), all rooted in the revivalistic Calvinism of the day, became centers for promoting a Higher-Life theology, the name commonly given to the holiness revival in the Calvinist churches. Organizations of new African American Holiness churches also gathered sectors of the movement to themselves in this organizational phase of the movement’s life.

As the major segments of the Holiness/Higher-Life revival movement were finding homes in new denominations and agencies, a third movement gathered around the pregnant eschatological expectations born of the revival’s steadily increasing emphasis on the significance of the Pentecost event and anticipated new age of the Spirit. The new Pentecostal movement’s structure, leadership, and major theological and worship cultures all were born within the diverse milieu of the Holiness revival. With few exceptions, most established Wesleyan/Holiness leaders quickly condemned the new movement’s teachings as “heretical,” particularly its insistence that “speaking in unknown tongues” was a necessary element of Spirit baptism. Today, although the theological differences between the two movements still exist, their common membership in the National Association of Evangelicals and other interdenominational agencies have lessened the stridency that had often marked the interaction between the two closely related movements.

By the second decade of the twentieth century the movement had largely located within the confines of its new Holiness institutions, with the major exception of the thousands of Holiness adherents who stayed with the older denominations out of hope for renewal from within. Most Wesleyan/Holiness churches and their international affiliates and agencies maintain an informal association with one another and other independent Holiness mission agencies and educational institutions through the Christian Holiness Partnership, the direct descendant of the National Camp Association. A similar association, the Interchurch Holiness Convention, has brought together a group of smaller Holiness adherents who in the post–World War II period separated

from the larger Holiness bodies in protest to what they saw as the established movement’s tendencies to modernism. The worldwide constituency of the Wesleyan/Holiness churches numbers 10 to 15 million. The Church of the Nazarene, the Salvation Army, the Church of God (Anderson, Indiana), the Wesleyan Church (the result of a 1968 merger of the Wesleyan Methodist and the Pilgrim Holiness Churches), and the Free Methodist Church are the largest Holiness Churches. Several of these are active members of the World Methodist Council.

As a whole, these Wesleyan evangelical churches, which have continuing commitments to the plenary inspiration of the Bible and its final authority for doctrine and life, often find themselves in a mediate position in world Protestantism, between the more socially conservative stances of some fellow evangelicals and the more liberal theologies that pervade the religious culture of much of contemporary Protestantism.

- JEWISH THEOLOGICAL RESPONSES

## HOLOCAUST, THE: HISTORY

From the French Revolution to the 1860s, the Jews of western and central Europe experienced political emancipation. Unencumbered by ties to an agrarian way of life, many Jews also experienced economic prosperity and social mobility during the following decades of industrialization and urbanization, as they seized the opportunities that a period of rapid change offered. However, late nineteenth-century Europe also witnessed the emergence of radical protest movements by those who bore the cost of modernization. Such movements were usually anti-Semitic, as the Jew was an easy symbol of all that these people perceived to be the ills of modern society: urbanization; democratization; disruptive social mobility; and a large-scale, impersonal market economy undermining the livelihoods of tradesmen, artisans, and peasants. The adoption of the Jew as such a symbol was facilitated by a ready-made and widespread negative Jewish stereotype fostered by centuries of religious anti-Semitism. A racist brand of Social Darwinism that emerged at this time was quickly utilized to provide a veneer of pseudoscientific respectability suited to a more secular age. In this later view the Jews had such a baneful influence because they were by nature rootless and subversive cosmopolites who could never become true members of a national community shaped by “blood and soil.”

In Germany and Austria this antimodernist protest was known as the *völkisch* movement, and it received added impetus after World War I from the humiliating defeat, revolutionary turmoil, and disintegrative inflation that afflicted central Europe. The most successful mobilizer of this discontent was the National Socialist German Workers' Party of Adolf Hitler, and the antimodernist, anti-Semitic *völkisch* tradition was the ideological force behind most of its early activists. For Hitler himself, however, the Jew was an even deeper psychological obsession. He saw the Jew not only as the cause of present ills, manifested above all in the rising Bolshevik threat, but also as the very metaphysical source of evil itself spanning the centuries. Thus, in addition to a war of expansion in the east assuring Germany of the territorial base (*Lebensraum*) necessary for its status as a major power, Hitler also advocated the “removal” of the Jews from Germany. But Hitler did not come to power because of his promises for war and racial persecution. A much broader, often contradictory appeal for a “renewal” of German life underlay the Nazis' electoral breakthrough in the early 1930s. The hopes for the restoration of effective government to deal with the communist threat and the economic depression, the reconciliation of a highly factionalized German society into a unified racial entity with a common purpose, and a new meritocracy opening up careers to the professionally disadvantaged of Germany's tradition-bound society won votes from all sectors of the population but above all from the middle and lower-middle classes. With the votes of more than one-third of the German population behind Hitler, the old elites gambled that they could use him for their own pur-

poses (many of which partially overlapped with Hitler's own goals). He was appointed chancellor in January 1933.

While Hitler consolidated his dictatorship in short order, an equally rapid solution to the Nazis' self-imposed Jewish problem was not forthcoming. Hitler's obsessive anti-Semitism provided sanction for various kinds of attacks upon the Jews but neither assured coordination of such attempts nor clarified the ultimate goal. Furthermore, Hitler and the Nazis had to take into account various inhibitive factors, such as the fragile state of the economy, foreign reaction, and the sensibilities of their conservative allies and the German public. What emerged was a cyclical pattern of intensifying persecution, as periodic pressure from party radicals for violent attacks upon the Jews was mollified with legislative discrimination more conducive to economic stability and less disturbing to the majority of the German public. In 1933 the Jews were deprived of civic equality and barred from various professions. In 1935 the Nuremberg Laws completed the social ostracism of Jews by forbidding marriage or sexual intercourse between Jews and “Aryans.” In 1938 another wave of legislation impoverished the Jews by systematically stripping them of their property.

The party radicals made one last attempt to take control of Nazi Jewish policy when Joseph Goebbels incited the *Kristallnacht* riots of November 9–10, 1938. The arson of synagogues and vandalism of Jewish businesses throughout Germany caused dismay among many Germans who did not want to be confronted with a choice between their loyalty to and illusions about the regime on the one hand and their innate respect for property and order on the other. Heinrich Himmler and Hermann Göring joined forces and, with Hitler's approval, centralized control of Jewish policy, effectively excluding Goebbels. Henceforth the persecution of the Jews would be carried out through the orderly administration of the German bureaucracy, not through the violent pogroms of local party activists. Unobtrusive but relentless, this bureaucratic persecution proved far more conducive to the indifference of the German public and far more dangerous to the Jews.

With the growing role of Himmler's *Schutzstaffel* (SS) (a complex and expanding conglomeration of elite party organizations, police forces, and eventually even military formations) in shaping Nazi Jewish policy, one clear vision gradually emerged—a Germany free of Jews through emigration. But it was a vision unrealized. Faced with mounting immigration barriers in a world gripped by economic depression and thus decidedly unsympathetic to impoverished refugees, German Jews were reluctant to abandon career, property, and a country to which they were deeply attached. Emigration proceeded slowly, and the addition of Austrian and Czech Jews in 1938–1939 brought more Jews into the Reich than had emigrated over the past six years. The *Kristallnacht* had removed any remaining illusions of waiting out the Nazi regime, and almost all German Jews were now desperate to leave. The SS conducted experiments in coerced

emigration organized by Adolf Eichmann to get rid of the Austrian and Czech Jews as quickly as possible. Nevertheless, time ran out. The outbreak of war in September 1939 closed most borders, and the acquisition first of two million Polish Jews and then another half million Jews in western Europe by June 1940 shattered any expectation of a solution to the Jewish question through emigration.

The Nazis now sought a solution to their Jewish “problem” through increasingly ambitious expulsion schemes. First the Jews of Germany, especially the additional 550,000 of the newly annexed Polish territories, were to be expelled to a “Jewish reservation” in the Lublin region of Poland. Then, with the defeat of France the Nazis conceived a scheme for expelling all the Jews of Europe to the French island colony of Madagascar. Neither plan proved feasible, but in the meantime the Polish Jews were herded into the major cities of Poland and gradually ghettoized. With economic ties severed and most of their property confiscated, the Jews of these frightfully overcrowded ghettos seemed destined to extinction through starvation and disease. One-half million Jews died in the ghettos between 1939 and 1941. The rest survived while Jewish leaders, forced into Jewish councils on German orders, tenaciously struggled to restore minimal communal life and above all a viable ghetto economy that would keep the Jews alive by giving the Germans a stake in the productive potential of Jewish labor.

Germany’s decision to invade the Soviet Union posed once again the dilemma engendered by military success, which inevitably would bring more Jews into the expanding German empire. To break this vicious circle, Hitler called for an unprecedented “war of destruction” in the east, that was simultaneously a campaign for territorial conquest, an ideological crusade against Bolshevism, and a racial struggle against the Slavs and Jews. In the first month following the June 22, 1941, invasion of the Soviet Union, the Germans experienced spectacular success. In the euphoria of seeming victory, the mass murder of “potential enemies” by mobile SS firing squads (*Einsatzgruppen*) as well as other police and military units quickly escalated to include the killing of all Soviet Jews. The previous policies of expulsion and ghettoization had at least implied a decimation of the Jewish population, but now the leap to systematic mass murder, at least on Soviet territory, had been taken.

Intoxicated by victory and the prospect of a whole continent at their feet, Hitler and other leading Nazis contemplated extending the “final solution” to all European Jews. The firing-squad method was proving inadequate even on occupied Soviet territory because of the lack of secrecy of the mass executions, the psychological burden on the killers, and the staggering number of victims to be murdered. The technocrats of the Nazi regime solved these problems, however, by inventing the death camp. Secrecy, efficiency, and psychological detachment were to be achieved by deporting the victims to “factories of death” where a small staff would apply assembly-line methods to rob, gas, and cremate thou-

sands of arriving Jews within a few hours. This vision was approved by Hitler in late September or early October 1941, and construction of the two earliest death camps, Belzec and Chelmno, was soon underway. The construction of four additional death camps eventually followed: the Birkenau section of Auschwitz, Sobibor, Treblinka, and Majdanek. When Reinhard Heydrich met with representatives from the various German ministries at the Wannsee Conference on January 20, 1942, to coordinate the deportation of all European Jews “to the east,” the “final solution” to the Nazis’ self-imposed Jewish problem was at hand.

In Poland the Germans descended upon the ghettos in savage “ghetto-clearing” operations, taking off the nonworking population first. Everywhere Jewish leaders faced the same excruciating dilemma. Resistance in the ghetto invited instant and overwhelming German retaliation against the entire community. Escape of the young fighters to the forests involved the abandonment of families. Compliance meant the incremental destruction of the community but at least initially held out hope that a remnant of workers would survive. This course was thus generally followed by Jewish leaders as the least intolerable evil, until family members had been lost, along with the illusion that the Germans were sufficiently utilitarian to preserve skilled labor. Only then did armed resistance seem rational. The Warsaw ghetto uprising, for instance, broke out in April 1943 when only seventy thousand of its nearly one-half million Jews were still alive.

Outside Poland and Russia the number of prospective victims was much less but the political obstacles to deportation to the death camps were much more complicated. Within the Third Reich both the police and a wide variety of local authorities handled the uprooting process. In the areas of German military administration and among Germany’s allies and satellites, help from local collaborators was essential to identify and round up the Jews. Throughout all these regions the complex deportation program was coordinated by Heydrich’s specialist, Eichmann. Deportations began from the Third Reich in the fall of 1941, and from Slovakia, France, Belgium, the Netherlands, and Norway in 1942. In 1943 the deportation effort spread to Greece, Bulgaria, Denmark, and Italy, though it faltered in Bulgaria and was thwarted almost entirely in Denmark through local obstruction. In Romania and Yugoslavia most of the Jews perished locally without resort to deportations. Finally, in May and June of 1944, nearly one-half million Hungarian Jews were the victims of the largest single deportation of the war.

As the Holocaust ran its course within the German empire, the outside world gradually learned of but never truly comprehended the magnitude and significance of the disaster. The first reports of a German plan to murder the entire Jewish population of Europe reached the West in the summer of 1942 through contacts in Switzerland. By November the reports had been fully confirmed, and an Allied declaration followed that condemned the Nazi actions and threatened punishment after the war. But little more was done.

Old bureaucratic attitudes and patterns of behavior, shaped in an era when policy had been to turn back the tide of refugees from Nazism, did not change quickly. Rescue through military victory provided an easy excuse for inaction, and Allied leaders did not insist upon a fundamental change in priorities necessary to alter this situation. The vast majority of Hitler's victims were beyond any rescue effort, but inability to stop the murder of millions was only made more horrifying by the pervasive passivity of the Allies concerning the possible rescue of additional thousands of threatened Jews.

When the Nazi regime finally collapsed in defeat, between five and six million Jews (approximately one-third of world Jewry) had perished in the Holocaust. A nearly equal number of non-Jews were also murdered by the Nazis: more than three million Russian prisoners of war, the physically and mentally handicapped, the Roma and Sinti, the Polish intelligentsia, political opponents and resisters, homosexuals and others defined as "asocials," numerous slave laborers kept in unlivable conditions, and countless victims—especially Russians, Poles, and Yugoslavs—of mass reprisals and indiscriminate terror aimed at subduing the civilian populations of occupied territories. The Nazi regime showed itself capable of mass murder against virtually any group of people. But no other group of victims occupied the role in Hitler's mind of metaphysical evil incarnate as did the Jews. No other victims were threatened so totally and pursued so relentlessly. And no other victims died so helpless and abandoned.

Pulzer, *The Rise of Political Anti-Semitism in Germany and Austria* (New York, 1964); and Albert Lindemann, *Esau's Tears: Modern Antisemitism and the Rise of the Jews* (New York, 1997). George L. Mosse, *The Crisis of German Ideology* (New York, 1964) discusses the *völkisch* origins of Nazism. Eberhard Jäckel, *Hitler's Weltanschauung* (Middletown, Conn., 1972) is the best treatment of the shaping of Hitler's ideology in the 1920s. Also on Hitler, see Ian Kershaw, *Hitler 1889–1936: Hubris and Hitler 1936–1945: Nemesis* (New York, 1998 and 2000). Sarah Gordon, *Hitler, Germans, and the "Jewish Question"* (Princeton, 1984) examines German attitudes toward the Jews, which is also the subject of David Bankier, *The Germans and the Final Solution: Public Opinion under Nazism* (Oxford, 1992) and David Bankier, ed., *Probing the Depths of German Antisemitism: German Society and the Persecution of the Jews, 1933–1941* (New York, 2000). For the experience of a single German Jew, see Victor Klemperer, *I Will Bear Witness: A Diary of the Nazi Years* (New York, 1998). The evolution of Nazi Jewish policy in the 1930s is treated in Karl A. Schleunes, *The Twisted Road to Auschwitz* (Urbana, Ill., 1970); Uwe Adam, *Judenpolitik im Dritten Reich* (Düsseldorf, 1972); and Saul Friedlander, *Nazi Germany and the Jews: The Years of Persecution* (New York, 1997). For Nazi population policies and "ethnic cleansing," see Götz Aly, *"Final Solution": Nazi Population Policy and the*

*Murder of the European Jews* (London, 1999). The definitive study of the *Einsatzgruppen* is Helmut Krausnick and Hans-Heinrich Wilhelm, *Die Truppe des Weltanschauungskrieges* (Stuttgart, 1980). For the death camps, see Yitzhak Arad, *Belzec, Sobibor, Treblinka: The Operation Reinhard Death Camps* (Bloomington, 1987), and Robert Jan van Pelt and Deborah Dwork, *Auschwitz: 1290 to the Present* (New York, 1996). For contrasting studies of the motivations of the members of the killing squads: Christopher R. Browning, *Ordinary Men: Reserve Police Battalion 101 and the Final Solution in Poland* (New York, 1992); and Daniel Jonah Goldhagen, *Hitler's Willing Executioners: Ordinary Germans and the Holocaust* (New York, 1996).

For an analysis of various arguments concerning the decisions for the "final solution," see Christopher R. Browning, *The Path to Genocide* (New York 1992), and the same author's *Nazi Policy, German Workers, German Killers* (New York, 2000). The classic analysis of the implementation of the "final solution" is Raul Hilberg, *The Destruction of the European Jews* (1961), rev. & exp. ed. 3 vols. (New York, 1985). Other comprehensive studies include Leni Yahil, *Holocaust: The Fate of European Jewry* (New York, 1990), and Peter Longerich, *Politik der Vernichtung: Eine Gesamtdarstellung der nationalsozialistischen Judenverfolgung* (Munich, 1998). For ghetto life, the dilemma of the Jewish leadership, and Jewish resistance, see Isaiah Trunk, *Judenrat: The Jewish Councils in Eastern Europe under Nazi Occupation* (New York, 1972); Yisrael Gutman, *The Jews of Warsaw, 1939–1943: Ghetto, Underground, Revolt* (Bloomington, Ind., 1982); *The Warsaw Diary of Adam Czerniakow*, edited by Raul Hilberg et al.; and *The Chronicle of the Lodz Ghetto, 1941–1944*, edited by Lucjan Dobroszycki (New Haven, Conn., 1984). Allied reaction to the Holocaust has been studied in a series of important books: Henry L. Feingold, *The Politics of Rescue: The Roosevelt Administration and the Holocaust, 1938–1945* (New Brunswick, N.J., 1970); Bernard Wasserstein, *Britain and the Jews of Europe, 1939–1945* (Oxford, 1979); Walter Laqueur, *The Terrible Secret: Suppression of the Truth about Hitler's "Final Solution"* (London, 1980); David S. Wyman, *The Abandonment of the Jews: America and the Holocaust, 1941–1945* (New York, 1984); and Tony Kushner, *The Holocaust and the Liberal Imagination: A Social and Cultural History* (Oxford, 1990).

For the fate of the Soviet prisoners of war, see Christian Streit, *Keine Kameraden: Die Wehrmacht und die sowjetischen Kriegsgefangenen* (Stuttgart, 1978). For the fate of the handicapped, see Henry Friedlander, *The Origins of Nazi Genocide: From Euthanasia to the Final Solution* (Chapel Hill, 1995). For the fate of the "Gypsies" or Roma and Sinti, see Michael Zimmermann, *Rassenutopie und Genozid: die nationalsozialistische "Lösung der Zigeunerfrage"* (Hamburg, 1996), and Guenter Lewy, *The Nazi Persecution of the Gypsies* (New York, 2000). For the wider context of Nazi racial persecution, see Michael Burleigh and Wolfgang Ippenmann, *The Racial State: Germany 1933–1945* (New York, 1991).

CHRISTOPHER R. BROWNING (1987 AND 2005)

## HOLOCAUST, THE: JEWISH THEOLOGICAL RESPONSES

The Holocaust (Heb., *sho'ah*), the willed destruction of European Jewry and the intended complete eradication of world Jewry by the Nazi regime, casts its shadow over all Jewish realities in the post-Holocaust era. The nature of this event, and the particularity and peculiarity of its assault against Jewish life and Jewish dignity, force a fundamental reexamination of all inherited Jewish norms, not the least of which are Judaism's traditional theological foundations. This is not to assert that these classical assumptions will necessarily change or prove inadequate to the test, but only that they must again be asked to answer age-old questions of theodicy.

To grasp the challenge of the Holocaust one must understand the unique racial/Manichaean *Weltanschauung* of Nazism and the role of the Jew in it. For Hitler and his Reich, anti-Semitism and the struggle against world Jewry were not only subjective sentiments of personal will but also actualizations in history of metahistorical antitheses, and as such, necessary and inevitable. Killing Jews, or more precisely eliminating "the Jews," or Judaism itself, was in this modern Gnostic myth a sacred obligation. "The Jew," the collective singular, was the generic, supranatural enemy. The *Endlösung*, the "final solution," was not primarily understood by its cruel initiator as a political or socioeconomic force. It was not an expression of class struggle or nationalism in any recognizable sense. It was intended as, and received its enormous power from, the fact that it aimed at nothing less than restructuring the cosmos. "Those who see in National Socialism nothing more than a political movement," Hitler unflinchingly observed, "know scarcely anything of it. It is more even than a religion: It is the will to create mankind anew" (Hermann Rauschnig, *Gespräche mit Hitler*, Zurich, 1940, pp. 231f.). Thus, as if it were the conclusion of an immutable tautology, Hitler felt that the Jewish people must be annihilated.

In responding to the catastrophic consequences of this racial fantasy, which claimed six million Jewish lives, Jewish thinkers have explored many theological avenues—some old, some new. As to the old, Jewish history is no stranger to national tragedy and, as a consequence, there is an abundance of traditional explanatory models that could be and have been adapted and reapplied to the Holocaust. From these, six have regularly been looked to by modern thinkers as providing maps for understanding the theological complexities raised by the Holocaust.

**THE 'AQEDAH.** The 'Aqedah, or "binding," of Isaac, the biblical narrative recounted in *Genesis* 22:2ff., is often appealed to as a possible paradigm for approaching the Holocaust. (See, for example, Berkovits, 1973, pp. 124–125, and Neher, 1981.) Such a move is rooted in Jewish tradition, especially that of the medieval martyrologies of the Crusader and post-Crusader periods, in which the biblical event became the prism through which the horrific medieval experience became refracted and intelligible. Like Isaac of old, the Jewish

children of Europe, and more generally all of slaughtered Israel, are seen as martyrs to God who willingly sacrifice themselves and their loved ones in order to prove beyond all doubt their faithfulness to the Almighty (see Shalom Spiegel, *The Last Trial*, New York, 1967, and the medieval religious poems collected in A. M. Habermann's *Sefer gezerot Ashkenaz ve-Tsarfat*, Jerusalem, 1945).

The appeal of this interpretation lies in its conferring heroic status on the dead because of their sanctity and obedience to the God of Israel. Their death is not due to sin, to any imperfection on their part, or to any violation of the covenant; rather, it is the climactic evidence of their unwavering devotion to the faith of their fathers—not its abandonment. As a consequence, the traditional (and present-day) reproach, that what befell Israel is "because of our sins," is wholly inappropriate. Not sin but piety is the key factor. God makes unique demands upon those who love him and whom he loves, and, as did Abraham, so too do the Jewish people respond with a fidelity of unmatched purity and selflessness. As such, the dreadful events become a test, the occasion for the maximal religious service, the absolute existential moment of the religious life, whose benefits are enjoyed both by the martyrs in the world to come and by the world as a whole, inasmuch as it benefits from such dedication.

In evaluating the appositeness of this reading of the Holocaust one appreciates its positive elements: It does not assign sin to the victims and denies sin as the cause of the horrific events that unfolded; it praises Israel's heroism and faithfulness. Yet the analogy between biblical and modern events breaks down before other elemental features of the 'Aqedah paradigm. First, in *Genesis* it is God who commands the test. Are Jews likewise to impute Auschwitz to a command of God? Second, in the original it is Abraham, God's especially faithful servant, who is tested because of his special religious status: "Take now thy son, thy only son, whom thou lovest" (*Gn.* 22:2). One cannot transfer, as the analogy requires, Hitler and his *Schutzstaffel* (SS) into the pivotal role of the Abraham who would sacrifice his "beloved." Finally, in the biblical circumstance the angel of the Lord brings the matter to a conclusion with no blood being shed: "Lay not thy hand upon the lad, neither do thou anything to him" (*Gn.* 22:12).

**JOB.** The biblical *Book of Job*, the best-known treatment of theodicy in the Hebrew Bible, naturally presents itself as a second possible model for understanding the Holocaust. (See, for example, Maybaum, 1965, p. 70, and Greenberg, 1981.) According to such a rendering—which is not unlike that offered by the 'Aqedah—Job provides an inviting paradigm because again Job's suffering is not caused by his sinfulness but rather by his righteousness, which is perceived by Satan as a cause for jealousy. Moreover, the tale ends on a "happy" note, as Job is rewarded for his faithfulness with God's double blessing. On a deeper level, the resolution of Job's doubts is never really clear; God's reply through the whirlwind is, in important ways, no answer to Job's ques-

tions; and Job's first wife and family are still dead through no fault of their own.

*Job* presents details that lead away from rather than toward an analogy with the Holocaust, and hence disallow the use of Job's faithfulness as an appropriate response to Hitler's demonic assault. First, the reader of *Job* knows, by way of the prologue, that the pact between God and Satan over the conditions of Job's trial explicitly stipulates that Job not be killed. This, above all, renders the situation of Job and that of Auschwitz altogether different. Second, except for the few who survived them, all theological ruminations are the work of those who were not in the death camps, and hence the theologian's situation is not that of Job but, as Eliezer Berkovits has said, of Job's brother. Third, the haunting matter of those who died in order to make the test possible finds no resolution in *Job*. God's capriciousness appears all too manifest. Finally, the climax of *Job* occurs when God reveals himself. He may not provide an answer to the specific bill of complaints raised by Job, but at least Job knows there is a God and hence, at a minimum, some reason to "trust in the Lord," even if he does not understand his ways. Job receives some sort of "answer," as Martin Buber among others has emphasized, through this manifestation of God's presence: "I had heard of thee by the hearing of the ear; but now mine eye sees thee; wherefore I abhor my words and repent" (*Jb.* 42:5–6; see Martin Buber, *At the Turning*, New York, 1952, pp. 61ff.). By contrast, those who went to their death in the death camps received no such comforting revelation of the divine.

**THE SUFFERING SERVANT.** One of the richest theological doctrines of biblical theodicy is that of the Suffering Servant. Given its classic presentation in the *Book of Isaiah* (especially chapter 53), the Suffering Servant doctrine is that of vicarious suffering and atonement in which the righteous suffer for the wicked and hence atone, in some mysterious way, God's wrath and judgment, thus making the continuation of humankind possible. According to Jewish tradition, the Suffering Servant is Israel, the people of the covenant, who suffer with and for God in the midst of the evil of creation. By suffering for others, the Jewish people make it possible for creation to endure. In this act of faithfulness the guiltless establish a unique bond with the Almighty. As they suffer for and with him, he shares their suffering and agony and comes to love them in a special way for loving him with such fortitude and depth. (For the rabbinic use of this concept see, in the Babylonian Talmud, *Sanhedrin* 98b, *Berakhot* 5a, and *Sotah* 14a.)

In Jewish theological writings emanating from the Holocaust era itself and continuing down to the present day, this theme has been enunciated. One finds it in the writings of Hasidic *rebeyim* (see, for example, Kalman Kalonymus Spiro, *Esh qodesh* [Holy fire], Jerusalem, 1960, and the material presented in *Eleh ezkerah* [These will I remember], edited by Isaac Lewin, 6 vols., New York, 1956–1965). It is also evinced in the work of Conservative thinkers such as Abra-

ham Joshua Heschel (1954 and 1955) and in that of Orthodox thinkers such as Eliezer Berkovits (1973) and Irving Greenberg (1981). "God's servant," writes Berkovits, "carries upon his shoulders God's dilemma with man through history. God's people share in all the fortunes of God's dilemma as man is bungling his way through toward Messianic realization" (p. 127).

One theologian, Ignaz Maybaum, a German Reform rabbi who survived the war in London, takes the paradigm outside the traditional Jewish framework and uses it to construct a more systematic, theological deconstruction of the Holocaust. First in the "servant of God" in *Isaiah*, then in the Jew Jesus, and now at Treblinka and Auschwitz, God uses the Jewish people to address the world and save it: "They died though innocently so that others might live" (Maybaum, 1965, p. 67). According to this reading of the Holocaust the perennial dialectic of history is God's desire that the Gentile nations come close to him while they resist this call. To foster and facilitate this relationship is the special task, the "mission," of Israel. It is they who must make God's message accessible in terms the Gentile nations will understand and respond to. But what language, what symbols, will speak to the nations? Modern Israel repeats collectively the single crucifixion of one Jew two millennia ago and by so doing reveals to humankind its weaknesses as well as the need for its turning to Heaven. In a daring parallelism Maybaum writes: "The Golgotha of modern mankind is Auschwitz. The cross, the Roman gallows, was replaced by the gas chamber. The gentiles, it seems, must first be terrified by the blood of the sacrificed scapegoat to have the mercy of God revealed to them and become converted, become baptized gentiles, become Christians" (*ibid.*, p. 36). For Maybaum, through the Holocaust the world moves again forward and upward, from the final vestiges of medieval obscurantism and intolerance, of which the Sho'ah is a product, to a new era of spiritual maturity, human morality, and encounter between the human and the divine.

Applied to the Holocaust, the doctrine of the Servant seems worse than the problem: It means that God can act cruelly, demand terrible sacrifices, and regulate creation by "unacceptable" means. Surely the omnipotent, omniscient creator could have found a more satisfactory principle for directing and sustaining his creation. Recourse to mystery, to saying "God's ways are not our ways," is not an explanation; rather, it is a capitulation before the immensity of the Sho'ah and a cry of faith.

The more specific, elaborate, form given the doctrine by Maybaum empties Jewish life of all meaning other than that intelligible to and directed toward the gentile nations. Only the Christocentric pattern now applied to the people of Israel gives this people's history and spirituality meaning. In addition, this view is predicated on a false analogy between the Holocaust and Good Friday. Christians are able to declare that "Christ died for the sins of humankind" for (at least) two cardinal reasons. The first and most weighty is that

Christ is believed to be God Incarnate, the second person of the Trinity: The crucifixion is God taking the sins of humanity on himself. He is the vicarious atonement for humankind. There is thus no terrible cruelty or unspeakable “crime” but only divine love, the presence of unlimited divine grace. Second, the human yet divine Christ, the hypostatic union of humanity and God, mounts the cross voluntarily. He willingly “dies so that others might live.” How very different was the Sho’ah. How very dissimilar its victims (not martyrs) and their fate. The murdered were not divine, they were all-too-human creatures crushed in the most unspeakable brutality. If God was the cause of their suffering, how at odds from the traditional Christian picture this is. For here God purchases life for some by sacrificing others, not himself. Furthermore, the Jews were singled out “unwillingly”; they were not martyrs in the classical sense—though some may wish to transform this fate for their own needs by seeing them as such.

The disanalogy of the Holocaust and Good Friday would yet reveal something more. According to Maybaum, the symbol of the crucifixion is one of vicarious atonement. But given the circumstances of the vicarious sacrifice of the Sho’ah, is it not the case that the nature of the atonement is far more criminal and infinitely more depraved than the sins for which it atones? What sort of *kohanim* (“priests”) were the Nazis, and what sort of sacrifice could they bring about? Can one truly envision God, the God of Israel, making such a vicarious expiation?

**HESTER PANIM.** In wrestling with human suffering, the Hebrew Bible appeals, especially in the Psalms, to the notion of *hester panim*, “the hiding of the face” of God. This concept has two meanings. The first, as in *Deuteronomy* 31:17–18 and later in *Micah* 3:4, is the causal one that links God’s absence to human sin. God turns away from the sinner. The second sense, found particularly in certain psalms (e.g., *Ps.* 44, 69, 88 and variants in, e.g., *Ps.* 9, 10, 13; see also *Jb.* 13:24), suggests protest, despair, and confusion over the absence of God for no clear reason, and not as a consequence of sin. Here humankind stands “abandoned” for reasons that appear unknown and unfathomable. Thus the repetitive theme of lament in the Psalms as the psalmists implore God “why” or “how long” he will be absent.

In the rabbinic sources the term *hester panim* is further developed in a variety of contexts, most notably in response to the destruction of the Second Temple in 70 CE. Its employment is an indication (1) that the traditional, more widely used explanation for that event—that it was brought on by sin—is either not compelling or is being rejected; and (2) that the sages were profoundly perplexed by this and related events and yet could not or would not account for it through appeal to either human sinfulness or divine capriciousness. Their faith in divine providence required that they not abandon trust in God, but just how his will and presence was to be deciphered seemed increasingly uncertain; hence the appeal to *hester panim*.

In applying the doctrine of *hester panim* to the Holocaust, modern theologians are attempting to vindicate Israel, to remove God as the direct cause of the evil by suggesting that evil is something humans do to other humans, and to affirm the reality and even the saving nature of the divine despite empirical evidence to the contrary. *Hester panim* is not merely or only the absence of God; rather, it entails a more complex exegesis of divine providence stemming from an analysis of the ontological nature of the divine. God’s absence, *hester panim*, is a necessary, active, condition of his saving mercy; that is, his “hiddenness” is the obverse of his “long-suffering” patience with sinners. In other words, being patient with sinners means allowing sin. “One may call it the divine dilemma that God’s *Erekh Apayim*, his patiently waiting countenance to some is, of necessity, identical with his *hester panim*, his hiding of the countenance, to others” (Berkovits, 1973, p. 107). *Hester panim* also is dialectically related to the fundamental character of human freedom without which human would not be human. It should also be recognized that this notion is an affirmation of faith. The lament addressed to God is a sign that God exists and that his manifest presence is still possible. Even more, it proclaims that God in his absence is still, paradoxically, present. It is a sign that one believes that ultimately evil will not triumph, for God will not always “hide his face.” For some contemporary Jewish theologians, like Emil L. Fackenheim, Eliezer Berkovits, Irving Greenberg, and Martin Buber, the state of Israel is proof of the vindication of the forces of good over evil, light over darkness.

Martin Buber, in his contemporary idiom, modernized the biblical phrase and spoke of the era, during and after the Holocaust, as a time of “the eclipse of God” (as he titled his book, 1952). This felicitous description represents Buber’s wish to continue to affirm the existence of God despite the counterevidence of Auschwitz. Yet this again is an appeal to faith and mystery despite strong evidence to the contrary. Also, this gambit still fails to answer the pressing question: Where was God in the death camps? Given the moral attributes, the qualities of love and concern, that are integral to God’s nature, how can one rest in the assertion of his self-willed absence, that is, in passivity, in the face of the murder of a million Jewish children. The solution only produces a larger conundrum.

**MIPPENEI HATA’EINU.** In biblical and later Jewish sources the principal though not unique “explanation” for human suffering was sin, as has been seen. There was a balance in the universal order that was inescapable: Good brought forth blessing and sin retribution. Both on the individual and collective level the law of cause and effect, of sin and grief, operated. In the present time it is not surprising that some theologians—particularly traditional ones—and certain rabbinical sages have responded to the tragedy of European Jewry with this classical “answer.” Harsh as it is, the argument advanced is that Israel sinned grievously and God, after much patience and hope of return, finally “cut off” the generation of the wicked. The reasoning is expressed in the phrase *mippenei*

*hata'einu* ("because of our sins" are Jews punished). Though the majority of those who have wrestled with the theological implications of the Sho'ah have rejected this line of analysis, an important, if small, segment of the religious community have consistently advanced it.

Two questions immediately arise in pursuing the application of the age-old doctrine to the contemporary tragedy of the Holocaust. The first is: "What kind of God would exact such retribution?" Christian thinkers who "explain" Auschwitz as one of many punishments of a rebellious Israel for the crime of deicide, and Jewish thinkers who pronounce Israel's sinfulness are both obligated to reflect, to be self-conscious, about the implications of their idea of God. Could a God of love, the God of Israel, use a Hitler to annihilate the Jewish people?

Second, what sin could Israel be guilty of to warrant such retribution? Here the explanations vary depending on one's perspective. For some, such as the Satmar *rebe* Yo'el Teitelbaum (1888–1982) and his small circle of Hasidic and extreme right-wing, anti-Zionist followers, the sin that precipitated the Holocaust was Zionism. For in Zionism the Jewish people broke their covenant with God, which demanded that they not try to end their exile and thereby hasten the coming of the Messiah through their own means. In return "we have witnessed the immense manifestation of God's anger [the Holocaust]" (*Sefer va-Yo'el Moshel*, Brooklyn, New York, 5721/1961, p. 5). For others on the right of the religious spectrum the primary crime was not Zionism but Reform Judaism. In this equation the centrality of Germany as the land that gave birth simultaneously to Reform Judaism and Nazism is undeniable proof of their causal connection. (See, for the presentation of this position, Elhanan Wasserman, *Iqvata de-meshiha* [In the footsteps of the Messiah], Tel Aviv, 5702/1942, p. 6; Hayyim Ozer Qanyevski, *Hayyei Olam* [Eternal Life], Rishon Le-Zion, 5733/1972.) In a similar, if broader vein, others of this theological predisposition identified Jewish assimilation as the root issue. Again the key role played by Germany is "proof" of the mechanism of cause and effect. Alternatively, in these same very traditional Orthodox circles, Issachar Teichthal saw the negative catalyst not in the Jewish people's Zionist activity but just the reverse, in their passionate commitment to life in exile and their failure to support willingly and freely the sanctified activity of Zionist upbuilding and thereby bring the exile to a close. In his book *Em ha-banim semehab* (The mother of children is happy), written in Hungary in 1943, Teichthal, writing in the belief that the twin events of the Holocaust and the growth of the Zionist movement marked the beginning of the messianic era, declaimed: "And these [anti-Zionist leaders] have caused even more lamentation; [and because of their opposition] we have arrived at the situation we are in today . . . this abomination in the house of Israel—endless trouble and sorrow upon sorrow—all because we despised our precious land" (*Em ha-banim semehab*, Budapest, 5703/1943, p. 17).

**THE FREE WILL DEFENSE.** Among philosophical reflections concerning theodicy, none has an older or more distinguished lineage than that known as the free will defense. According to this argument human evil is the necessary and ever-present possibility entailed by the reality of human freedom. If human beings are to be capable of acts of authentic morality they must be capable of acts of authentic immorality. Applying this consideration to the events of the Nazi epoch, the Sho'ah becomes a case of the extreme misuse of human freedom. At the same time such a position in no way forces a reconsideration of the cosmological structure in which the anthropological drama unfolds, nor does it call into question God's goodness and solicitude, for it is humanity and not God who perpetrates genocide. God observes these events with his unique divine pathos, but refrains from intercession in order to allow human morality to be substantively real. At the same time that he is long-suffering with evil elements of humanity, his patience results in the suffering of others.

This situation, however, is not ultimate or final in the Jewish context, for there is also the deeply held contention that God must absent himself for humankind to be but must also be present in order that meaninglessness does not ultimately gain final victory. Thus God's presence in history must be sensed as hiddenness, and his anonymity must be understood as the sign of his presence. God reveals his power in history by curbing his might so that humankind too might be powerful. In Israel's experience, as Berkovits declares in making this case, one sees both attributes of God. The continued existence of the Jewish people despite its long record of suffering is the strongest single proof that God does exist despite his concealment. Israel is the witness to God's presence in space and time. Nazism understood this fact, and its slaughter of Jews was an attempt to slaughter the God of history. The Nazis were aware, even as Israel sometimes fails to be, that God's manifest reality in the world is necessarily linked to the fate of the Jewish people.

This defense has been—not surprisingly, given its historical tenacity and intellectual power—widely advocated by post-Holocaust thinkers of all shades of theological opinion. The two most notable developments of the theme in the general theological literature are in Berkovits's *Faith after the Holocaust* and Arthur A. Cohen's *The Tremendum*.

In trying to estimate the power of the free will argument in the face of Auschwitz, two counterarguments are salient. First, could not God, possessed of omniscience, omnipotence, and absolute goodness, have created a world in which there was human freedom but less evil—or even none at all? The sheer gratuitous evil manifest during the Holocaust goes beyond anything that appears logically or metaphysically necessary for the existence of freedom and beyond the bounds of toleration for a just, all-powerful God. Secondly, it might be argued that it would be morally preferable to have a world in which evil did not exist, at least not in the magnitude witnessed during the Sho'ah, even if this meant doing

without certain heroic moral attributes or accomplishments. That is to say, for example, though feeding and caring for the sick or hungry is a great virtue it would be far better if there were no sickness or hunger and hence no need for such care. Here it is important to recognize that free will is not, despite a widespread tendency so to understand it, all of one piece. Free will can be limited to apply only in certain, specific circumstances, just as action can be constrained in certain ways. Consider, too, that God could have created a human-kind that, while possessing free will, nonetheless also had a proportionately stronger inclination for the good and a correspondingly weaker inclination to evil.

**A NEW REVELATION.** To this point the first six positions analyzed have all been predicated upon classical Jewish responses to national tragedy. In the last two decades, however, a number of innovative, more radical, responses have been evoked from contemporary post-Holocaust thinkers. The remainder of this article will concentrate on the most important of these explorations, beginning with the contention argued by Emil L. Fackenheim, that the Holocaust represents a new revelation. Rejecting any account that analyzes Auschwitz as a *mippenei ḥata'ei nu* event, or, in fact, any notion of an "explanation" for the Holocaust, Fackenheim, employing a Buberian model of dialogical revelation, revelation as the personal encounter of an I with the eternal Thou (God), urges Israel to continue to believe despite the moral outrage of the Sho'ah. God, in this view, is always present in Jewish history, even at Auschwitz. One does not, and cannot, understand what he was doing at Auschwitz, or why he allowed it, but one must insist that he was there. Still more, from the death camps as from Sinai, God commands Israel. The nature of this commanding voice, what Fackenheim has called the "614th Commandment" (there are 613 commandments in traditional Judaism) is: "Jews are forbidden to hand Hitler posthumous victories" (1970, p. 84); that is, Jews are under a sacred obligation to survive; after the death camps Jewish existence itself is a holy act; Jews are under a sacred obligation to remember the martyrs; Jews are, as Jews, forbidden to despair of redemption or to become cynical about the world and humanity, for to submit to cynicism is to abdicate responsibility for the world and to deliver the world into the hands of Nazism and similar potentially evil forces. And above all, Jews are "forbidden to despair of the God of Israel, lest Judaism perish" (*ibid.*). The voice that speaks from Auschwitz above all demands that Hitler win no posthumous victories, that no Jew do what Hitler could not do. Fackenheim invests the Jewish will for survival with transcendental significance. Precisely because others would eradicate Jews from the earth, Jews are commanded to resist annihilation. Paradoxically, Hitler makes Judaism after Auschwitz a necessity.

This interesting, highly influential response to the Sho'ah requires detailed analysis. How do historical events become "revelatory"? And what exactly does Fackenheim mean by the term *commandment*? In the older, traditional theological vocabulary of Judaism, it meant something God

actually "spoke" to the people of Israel. Fackenheim, however, would reject this literal meaning in line with his dialogical premises. It would seem that for him the word has only analogical or metaphorical sense in this case; if so, what urgency and compelling power does it retain? Secondly, should Hitler gain such prominence in Jewish theology, to the extent that Judaism survives primarily in order to spite his dark memory? Raising these two issues only begins to do justice to the richness and ingenuity of Fackenheim's position.

**THE COVENANT BROKEN: A NEW AGE.** A second modern thinker who has urged continued belief in the God of Israel, though on new terms, is Irving Greenberg. For Greenberg all the old truths and certainties have been destroyed by the Holocaust. Any simple faith is now impossible. Greenberg explicates this radical notion in this way. There are three major periods in the covenantal history of Israel. The first is the biblical era. What characterizes this first covenantal stage is the asymmetry of the relationship between God and Israel. The biblical encounter may be a covenant, but it is clearly a covenant in which "God is the initiator, the senior partner, who punishes, rewards and enforces the punishment if the Jews slacken" (Greenberg, 1981, p. 6). This type of relationship culminated in the crisis engendered by the destruction of the First Temple in 587/6 BCE. To this tragedy Israel, through the prophets, in keeping with the logic of this position, responded primarily through the doctrine of self-chastisement: The destruction was divine punishment rather than rejection or proof of God's nonexistence.

The second, rabbinic phase in the transformation of the covenant idea is marked by the destruction of the Second Temple. The reaction of the rabbis was to argue that now Jews must take a more equal role in the covenant, becoming true partners with the Almighty. "The manifest divine presence and activity was being reduced but the covenant was actually being renewed" (*ibid.*, p. 7). For the destruction signaled the initiation of an age in which God would be less manifest though still present.

Greenberg believes that a "third great cycle in Jewish history" has come about as a consequence of the Holocaust. The Sho'ah marks a new era in which the Sinaitic covenantal relationship was shattered and thus an unprecedented form of covenantal relationship, if there is to be any covenantal relationship at all, must come into being to take its place. "In retrospect, it is now clear that the divine assignment to the Jews was untenable. After the Holocaust, it is obvious that this role opened the Jews to a total murderous fury from which there was no escape. . . . Morally speaking, then, God can have no claims on the Jews by dint of the Covenant." What this means, Greenberg argues, is that the covenant

can no longer be commanded and subject to a serious external enforcement. It cannot be commanded because morally speaking—covenantally speaking—one cannot order another to step forward to die. One can give an order like this to an enemy, but in a moral relationship,

I cannot demand giving up one's life. I can ask for it or plead for it—but I cannot order it. (ibid., p. 23)

Out of this complex of considerations, Greenberg pronounces the fateful judgment: The Jewish covenant with God is now voluntary. Jews have, quite miraculously, chosen to continue to retain their Jewish identity and to build a collective Jewish state, the ultimate symbol of Jewish continuity. But these acts are, after Auschwitz, the result of the free choice of the Jewish people. The consequence of this voluntary action transforms the existing covenantal order. First Israel was a junior partner, then an equal partner, and finally, after Auschwitz, it becomes the senior partner, “so in love with the dream of redemption that it volunteered to carry on with its mission” (ibid., p. 25).

In turn, Israel's voluntary acceptance of the covenant and its continued will to survive suggest three corollaries. First, these factors point, if obliquely, to the continued existence of the God of Israel. By creating the state of Israel, by raising Jewish children, Israel shows that “covenantal hope is not in vain” (ibid., pp. 37–38). Second, in an age of voluntarism rather than coercion, living as a Jew under the covenant can no longer be interpreted monolithically, that is, only in strict halakhic (traditional rabbinic) fashion. Third, any aspects of religious behavior that demean the image of the divine or of humanity, such as racial prejudice, sexism, and oppression of all sorts, must be purged.

Interpretation of Greenberg's view must turn on the following issues: the correctness of his theological reading of Jewish history, an open and difficult question; the theological meaning and status of key categories such as “covenant,” “revelation,” “commandment,” and the like—that is, on the one hand, whether Greenberg has done justice to the classical meaning of these terms, and, on the other, whether his revised rendering is justifiable and functional; and whether Jews should allow Hitler and the Holocaust such decisive power in determining the inner, authentic nature of Jewish theology.

**A REDEFINITION OF GOD.** An important school in modern theological circles known as “process theology,” inspired by the work of Alfred North Whitehead and Charles Hartshorne, has argued that the classical understanding of God has to be quite dramatically revised, especially in terms of Jewish conception of God's power and direct, causal involvement in human affairs. According to those who advance this thesis God certainly exists, but the old and the more recent difficulties of theodicy and related metaphysical problems emanating from classical theism arise precisely because of an inadequate description of the Divine, a description that incorrectly ascribes to God attributes of omnipotence and omniscience.

Arthur A. Cohen, in his *The Tremendum: A Theological Interpretation of the Holocaust* (1981), made a related proposal. Although he draws on the writing of F. W. J. Schelling (1775–1854) and Franz Rosenzweig (1886–1929) and on Qabbalah (Jewish mysticism) as his sources, he is no doubt

also familiar with the work of the process theologians. After arguing for the enormity of the Holocaust, its uniqueness, and its transcendence of any meaning, Cohen suggested that the way out of the dilemma posed by classical thought is to rethink whether “national catastrophes are compatible with our traditional notions of a beneficent and providential God” (p. 50). For Cohen the answer is no, at least to the extent that the activity and nature of the providential God must be reconceptualized. Against the traditional view that asks, given its understanding of God's action in history, how it could be that God witnessed the Holocaust and remained silent, Cohen would pose the contrary “dipolar” thesis that “what is taken as God's speech is really always man's hearing, that God is not the strategist of our particularities or of our historical condition, but rather the mystery of our futurity, always our *posse*, never our acts” (p. 97). That is, “if we begin to see God less as an interferer whose insertion is welcome (when it accords with our needs) and more as the immensity whose reality is our prefiguration . . . we shall have won a sense of God whom we may love and honor, but whom we no longer fear and from whom we no longer demand” (ibid.).

This redescription of God, coupled with a form of the free will defense, made all the more plausible because God is now not a direct causal agent in human affairs, resolves much of the tension created by the *tremendum*.

This deconstruction of classical theism and its substitution by theological dipolarity fails to deal adequately with the problem of God's attributes. Is God still God if no longer the providential agency in history? Is God still God who lacks the power to enter history vertically to perform the miraculous? Is such a “dipolar” God still the God to whom one prays, the God of salvation? Put the other way round, it certainly does not appear to be the God of the covenant, nor the God of exodus and Sinai, nor yet the God of the prophets and the *hurban bayit ri'shon* (“destruction of the First Temple”) and the *hurban bayit sheni* (“destruction of the Second Temple”). These counterevidences suggest that Cohen's God is not the God of the Bible and rabbinic tradition. Hence it is legitimate to ask whether, if Cohen is right—indeed, particularly if Cohen is right—there is any meaning left in Judaism, in the idea of God in Jewish tradition, or any covenantal role or meaning left to the Jewish people? Cohen's revisionism in this particular area is so radical that it sweeps away the biblical ground of Jewish faith and tradition and allows the biblical evidence to count not at all against his own speculative metaphysical hypotheses.

Secondly, is the dipolar, noninterfering God “whom we no longer fear and from whom we no longer demand” yet worthy of “love and honor?” This God seems closer, say, to Plato's Demiurge or perhaps better still to the God of the deists. What difference in Jewish lives is there between this God and no God at all? What sense is there, given his noninterference, in calling him a God of love and salvation?

Nevertheless, *The Tremendum* is an important work of Jewish theology that forces scholars to engage in theology as few recent books by Jewish authors have and that is saturated with an intense concern with the people of Israel; it is the product of a deep and broadly educated mind.

**GOD IS DEAD.** It is natural that many should have responded to the horror of the Holocaust with unbelief. Such skepticism usually takes a nonsystematic, almost intuitive, form: “I can no longer believe.” However, one contemporary Jewish theologian, Richard L. Rubenstein, has provided a formally structured “death of God” theology as a response to the Sho’ah.

In Rubenstein’s view the only honest response to the death camps is the rejection of God, the statement “God is dead,” and the open recognition of the meaninglessness of existence. One’s life is neither planned nor purposeful, there is no divine will, and the world does not reflect divine concern. Humankind must now reject its illusions and recognize the existential truth that life is not intrinsically valuable, that the human condition reflects no transcendental purpose, and that history reveals no providence. All theological “rationalizations” of Auschwitz fall before its enormity and, for Rubenstein, the only worthy reaction is the rejection of the entire Jewish theological framework: There is no God and no covenant with Israel. Drawing heavily upon the atheistic existentialists such as Camus, Sartre, and earlier Nietzsche, Rubenstein interprets this to mean that in the face of history’s meaninglessness human beings must create and project meaning.

What makes Rubenstein’s theology a Jewish theology are the implications he draws from his radical negation with respect to the people of Israel. Rubenstein inverts the ordinary perception and argues that with the death of God, the existence of the *community* of Israel is all the more important. Now that there is nowhere else to turn for meaning, Jews need each other all the more to create meaning: “It is precisely because human existence is tragic, ultimately hopeless, and without meaning that we treasure our religious community” (1966, p. 68). Though Judaism has to be “demythologized,” that is, it has to renounce all normative claims to a unique “chosen” status, at the same time it paradoxically gains heightened importance in the process.

Coupled to this psychoanalytic revisionism in Rubenstein’s ontology is a mystical paganism in which the Jew is urged to forgo history and return to the cosmic rhythms of natural existence. The modern Jew is exhorted to recognize the priorities of nature. So, for example, he or she must come to understand that the real meaning of messianism is “the proclamation of the end of history and return to nature and nature’s cyclical repetitiveness” (*ibid.*, p. 135). The future and final redemption is not to be the conquest of nature by history, as traditionally conceived in the Jewish tradition, but rather the conquest of history by nature and the return of all things to their primal origins. Humanity has to rediscover the sanctity of its bodily life and reject forever the delusion

of overcoming it; humans must submit to and enjoy their physicality—not try to transform or transcend it. Rubenstein sees the renewal of Zion and the rebuilding of the land with its return to the soil as a harbinger of this return to nature on the part of the Jew who has been removed from the earth (symbolically, from nature) by theology and necessity for almost two thousand years. The return to the land points toward the final escape of the Jew from the negativity of history to the vitality and promise of self-liberation through nature.

Rubenstein’s challenging position raises two especially difficult issues. The first has to do with how one evaluates Jewish history as “evidence” for and against the existence of God. It may well be that the radical theologian sees Jewish history too narrowly. He takes *the* decisive event of Jewish history to be the death camps. Logic and conceptual adequacy require that if one gives negative theological weight to Auschwitz one must give positive theological weight to the re-creation of the Jewish state, an event of equal or greater import in Jewish history. Another issue raised by the question of “evidence” is the adoption by Rubenstein of an empiricist theory of meaning as the measure by which to judge the status of God’s existence. History, in its totality, provides evidence both for and against the nonexistence of God on empirical or verificationist grounds—that is, there is both good and bad in history.

**MYSTERY AND SILENCE.** In the face of the Holocaust, recourse to the God of mystery and human silence are not unworthy options. However, there are two kinds of silence, two kinds of employment of the idea of a God of mystery. The first is closer to the attitude of the agnostic: “I cannot know.” Hence all profound existential and intellectual wrestling with the enormous problems raised by the Sho’ah and with God after the Sho’ah are avoided. The second is the silence and mystery that Job and many of the prophets manifest, to which the Bible points in its recognition of God’s elemental otherness. This is the silence that comes after struggling with and reproaching God, after feeling his closeness or his painful absence. This silence, this mystery, is the silence and mystery of seriousness, of that authenticity that will not diminish the tragedy with a too quick answer, yet that, having forced reason to its limits, recognizes the limits of reason. Had Abraham accepted God’s judgment at Sodom too quickly, or Job his suffering in a too easy silence, they would have betrayed the majesty and morality of the God in whom they trusted. In the literary responses to Auschwitz by survivors one finds this attitude more commonly than in works of overt theology. It is preeminent, for example, in the novels of Elie Wiesel, André Schwarz-Bart, and Primo Levi and in the poetry of Nelly Sachs. Assuredly, there is great difficulty in ascertaining when thought has reached its limit and silence and mystery become proper, but, at the same time, there is the need to know when to speak in silence.

Revised Bibliography

**HOLY, IDEA OF THE.** [This entry attempts an assessment of the role of the German theologian Rudolf Otto and his book *The Idea of the Holy* in setting forth a distinctively phenomenological interpretation of the nature of religion.]

Rudolf Otto's work during the first half of his career culminated with his publication, at the age of forty-eight, of *Das Heilige* (1917), translated as *The Idea of the Holy* (1923). Published in an age of high hopes for science, it has as a central concern the assertion of the autonomy of religion. Otto's position is diametrically opposed to what has come to be called reductionism, that is, the explanation of religion as a creation of human culture, a response to psychological or social needs that is in some sense the product of those needs. Otto, by contrast, asserts the autonomy of religion in the sphere of its own activity and its status as a response to a power transcending the human.

A landmark among theories of religion, Otto's book appeared only five years after the major work by the French sociologist Émile Durkheim (1858–1917), *Les Formes élémentaires de la vie religieuse*. To situate Otto in European intellectual history, it will be useful to discuss Durkheim briefly. This is not because of any direct response by Otto

to Durkheim; as far as can be told, they never met in person, nor did the German theologian and the French sociologist discuss each other's works. Rather, the contrast between these two influential books demonstrates the presence of an issue that has persisted in the interpretation of religion. Durkheim, who analyzes the sacred as originating in a symbolic projection of the clan or tribal group identity, stands as a polar opposite to Otto, who portrays the holy as a power far greater than, and lying far beyond, the human realm.

Although Otto does not seem to have reacted directly to Durkheim, he did write an article in 1910 that was sharply critical of a figure Durkheim found attractive: the German psychologist Wilhelm Wundt, whose *Völkerpsychologie* (Leipzig, 1900–1909) offered an evolutionary theory of religion as a social phenomenon, the product of group fantasy. Otto flatly denied the possibility of a social account of customs and myths in the absence of a capacity for religious feeling in the individual, and he asserted the uniqueness of such a feeling as a distinctively human spiritual capacity.

The significance of Rudolf Otto's work is that it takes account of the cumulative critical and scientific tradition of modern Europe and claims a place of respect for religious experience and religious thought in a modern age. That critical heritage, too vast to be set forth in detail here, included the institutional challenges to church authority of the Renaissance, Reformation, and French Revolution. It included the rationalist critique of revealed knowledge made by the eighteenth-century Enlightenment. It included nineteenth-century scientific discovery, comprehending a view of the evolution of human biology that many saw as paradigmatic for culture as well. And it included comparative linguistic, historical, and cultural studies fueled by an expanding fund of information from Europe's contact with the rest of the world; this new knowledge tended to remove the element of uniqueness from various aspects of the Christian heritage. Otto, then, was a product of modern European culture, seeking an up-to-date but sympathetic expression of religion in terms of what that culture had at its disposal.

**RELIGIOUS FEELING.** By and large, the use of the expression the holy as a noun has spread since the appearance of Rudolf Otto's book, and as a direct result of it. Otto was not the first to employ *the holy* as a noun; that distinction may belong to the German philosopher Wilhelm Windelband (1848–1915), who did so in an essay in 1903. In any event, the pattern of making noun concepts out of adjectival qualities was not new; for instance, the term *das Göttliche* ("the divine") is found in the writings of the German philosopher G. W. F. Hegel (1770–1831).

In the academic study of religion in the English-speaking world, reference to the holy has implied an appreciation of divine potency as a reality. The usefulness of the term has been generic: It has been possible to take references to the source or object of religious veneration as examples of human religiosity generally, without committing oneself to

the affirmations or practices of a particular community and tradition.

The subtitle of Otto's *The Idea of the Holy* declares his agenda: *An Inquiry into the Nonrational Factor in the Idea of the Divine and Its Relation to the Rational*. Otto was not seeking to deny an important role to rationality. Far from it. Otto, in the tradition of Immanuel Kant (1724–1804), insisted that reason could operate a priori to establish mathematics, rules of inference, and the like, and could operate a posteriori to distill impressive amounts of information from sense data. In particular, Otto sought to extend and refine the application of the Kantian critique of reason promoted by Kant's disciple Jakob Friedrich Fries (1773–1843). Those today who read *Das Heilige* in isolation should note Otto's priorities in his foreword to the 1923 English translation: "I feel that no one ought to concern himself with the 'Numen ineffabile' who has not already devoted assiduous and serious study to the 'Ratio aeterna.'" Religious orthodoxy in general, and Christian doctrine in particular, have a tendency toward rationalization, Otto asserts. But while highly developed rational, conceptual systems have their place, Christian theology has tended to overlook the nonrational element in religious experience. It is this element that Otto seeks to characterize and illustrate in *Das Heilige* as "something remarkably specific and unique" (p. 4).

The principal and abiding interest of Rudolf Otto's philosophy of religion has centered on his description of religious experience. In *Das Heilige* Otto presented as characteristic of religion a particular awareness of the presence of divinity for which he coined the word *numinous*. He derived the word from *numen*, the Latin term for a divine spirit or localized power that the ancient Romans perceived in nature. The numinous, for Otto, is a feeling that one has as a creature in the presence of a superior power. Otto gives it a three-factor explication: It is the awareness of a mystery (something wholly other than one's self); which is *tremendum* (awe-inspiring, overpowering, possessed of its own emotion-like initiative) yet at the same time fascinating (such that one is drawn to seek communication with it). Having set this forth in forty pages, Otto seeks in the balance of the book to describe ways in which the sense of the numinous is expressed in religious art, in biblical literature, and in the writings of the Christian mystics. Writing as a Lutheran, Otto is particularly interested in mystical elements in the faith of Martin Luther.

Although *Das Heilige* seems to start out as a treatment of a philosophical problem, namely the role of the rational and the nonrational as sources of religious knowledge, the bulk of the book is not so much an argument as a collection of illustrations. Herein perhaps lie both the book's weakness and its strength. The reader is drawn into material from the history of religious life rather than the history of doctrine, drawn into territory that is more psychological or symbolic than conceptual. Bit by bit, the reader is shown that a religiously satisfying response to the Kantian problem of knowl-

edge of the transcendent is likely to be a deeply personal rather than a rationally analytical one. Otto is by no means the first religious philosopher to have made such a point; the limits of reason had been discussed by early Christian theologians, and the twelfth-century Muslim thinker Abū Ḥāmid al-Ghazālī proposed a particularly appealing synthesis of the roles of reason and experience. But Otto's innovation appears to have been to provide a structure for the description of feeling and in so doing to commend feeling itself to people of a rational bent.

Otto's term *numinous* has subsequently become part of the general vocabulary of the study of religion, often in two senses. In one of these senses, the quality inheres in the experience; one has a numinous experience or feeling, numinosity or numinousness is an aspect of that experience or feeling, and the reality that is held to exist is an event in the consciousness of the religious individual. In the other of these senses, *numinous* refers to the quality of that presumed reality beyond the individual; it produces, or is the object of, that experience or feeling, and it is held by religious participants and religiously committed observers to be a reality far transcending the experience of any one individual.

Essentially, in the rhetoric of Otto's presentation, both of these connotations of the term *numinous* are implied; Otto wants the term to function in both senses. On page 7 of *The Idea of the Holy* he says, "I shall speak, then, of a unique 'numinous' category of value and of a definitely 'numinous' state of mind, which is always found wherever the category is applied." The overall thrust of Otto's presentation involves the conviction that there exist not only a state of mind and a realm of value as two distinct realities, but that the first of these is intimately linked to the second and constitutes a form of evidence for it.

For centuries a recurring problem of religious philosophy has been whether anything in the realm of the transcendent or divine can be demonstrated to the uncommitted or skeptical inquirer to be an existing reality. On the whole, the post-Kantian consensus has been that there is no "objective" knowledge of the transcendent possible through the operation of reason on the data received from the senses. Experience of the transcendent, however compelling to the person who has it, is not necessarily compellingly transferable to the person who does not have it.

Although the bulk of Otto's book amounts to a descriptive inventory of various people's intense experiences of divine power, which seeks to elicit an appreciation of intensely felt religion (particularly of mysticism) from the reader, the inescapable fact that Otto himself realizes is that there is no demonstration by argument that can substitute for religious experience itself. Perhaps the best-known phrases in *The Idea of the Holy* appear on page 8:

The reader is invited to direct his mind to a moment of deeply-felt religious experience, as little as possible qualified by other forms of consciousness. Whoever cannot do this, whoever knows no such moments in his

experience, is requested to read no farther; for it is not easy to discuss questions of religious psychology with one who can recollect the emotions of his adolescence, the discomforts of indigestion, or, say, social feelings, but cannot recall any intrinsically religious feelings.

This fundamental element of religion, the sense of the numinous, is held to be a primary datum of human experience. The explicit contention appears to be that, as in the case of physical sensations, emotions, or aesthetic feelings, if one has not had the experience, one cannot understand the subject; and it is at least loosely implied that if one has had the experience, one can.

Otto appears to expect people to have had religious experience. But his memorable injunction "to read no farther" takes on significance because it is evident that religious experience is not universal—that is, it is something that some people have and others do not. Even if most people have it and only a few lack it, there are still some persons who must be treated as rational, as perceptive, yet not as religious. Thus religiousness, however characteristic it may be of humans in general, and however "normal" it may be, is not universal. This normality or normativeness of religion, not the universality of religion, can be seen as both a strength and a weakness of Otto's position: a strength, in that many have been tempted to take the objects of religion as experientially evident without exhaustive rational proof; but a weakness, in that for those who seek such a proof there is nothing conclusive forthcoming.

**SEMANTICS OF "HOLY" IN ENGLISH.** One of the more interesting aspects of the use of Otto's discussion of the holy in the two generations since his book appeared is the widespread equation between the terms *the holy* and *the sacred* in writings sympathetic to religion in general.

Speakers of English are not surprised to find in their language two common and near-synonymous terms for the same phenomenon. In instance after instance, a word of Germanic (Anglo-Saxon) background such as *get* or *gut* will be matched by a word of Romanic (Latin or French) origin such as *obtain* or *intestine*. Frequently the Germanic word is felt to be more direct or down-to-earth. But while the word of Romanic origin may connote greater sophistication, its denoted meaning may often be the same as the Germanic. The result is that speakers of English can display a tendency to expect synonyms, to assume for practical purposes an equivalence in terminology, without seriously testing the matter.

An instance of this disposition is that in the English-speaking world, writers on the nature of religion in general have referred sometimes to *the holy* and sometimes to *the sacred* as though the phenomena were identical and the terminology a rather incidental matter of personal taste. This has been true not merely when the subject has been mentioned in passing apropos of another argument; it has also been the case in critical works on this very topic, such as Mircea Eliade's *The Sacred and the Profane*, or in discussions of Eliade such as Thomas J. J. Altizer's *Mircea Eliade and the*

*Dialectic of the Sacred* (Philadelphia, 1963, p. 24). Eliade's generation has invested *the sacred* with the same connotations that Otto's generation found in *the holy*, a point to which this article shall return shortly. Otto's English translator, John W. Harvey, assumes the sacred and the holy to mean the same thing in a sentence he adds to the text of *The Idea of the Holy* at a prominent juncture at the end of the first chapter. And in his own appendix to the English translation, "The Expression of the Numinous in English" (*The Idea of the Holy*, pp. 216–220), he finds *holy* "a distinctly more numinous word than *sacred*" but does not specify a difference in denotation. Indeed, for Harvey the two terms are part of "the English wealth of synonyms" that "has presented the translator with an embarrassment at the very outset" (p. 216).

On equivalency of vocabulary, it should be noted that while English is one of the world's more self-consciously cosmopolitan languages, it is by no means the only one. The Norman conquest of England in the eleventh century, which superimposed a Latin vocabulary on a Germanic one, is suggestively parallel to the Islamic conquest of Iran in the seventh century, which gave Persian a massive inventory of Arabic loanwords as synonyms for the vocabulary of pre-Islamic Iran.

What does the English word *holy* mean? For the range of its usage, with dated examples of the first appearance of various senses, the *Oxford English Dictionary* (1933) provides three copious pages of material. For the purposes of this article, the usage divides into three categories: first, the attributes of God (who is definitively holy) or the divine; second, the attributes of things that derive their holiness from association with God; and third, the attributes of people and actions conforming to what is held to be God's expectation. On God as holy, one has such phrases as "Holy art thou," "the Holy One of Israel," and the like. Examples of holy things are the Holy Bible and the Holy Grail. For people and actions, consider the phrases "holy man," "to lead a holy life," etc. Inevitably, there are borderline cases: "Holy matrimony" falls under the second heading if one regards it as an institution (and therefore a "thing"), but under the third if it is seen as an activity.

*Sacred* may today be a near equivalent of holy, but it differs in two important respects. First, it is more recent as a word in English. Whereas *holy*, a term of Germanic origin, occurred in Old and Middle English, *sacred*, coming from Latin by way of French, made its appearance only gradually in the centuries after the Norman conquest. Second, *sacred* took over some, but by no means all, of the semantic range of holy: Specifically, it referred to respected or venerated objects but not to the divine itself and not to persons as individuals. The God of the Bible did not become the "sacred one of Israel," nor did a "holy man" become a "sacred man."

What was at stake in the extension of the word *sacred* in English usage appears to have been an effort to describe the veneration accorded by human beings rather than to as-

sert that the thing in question had been hallowed by God. *Sacred*, a past participle of a now-archaic verb *sacren*, meaning "to consecrate," implicitly commits the speaker or writer merely to a description of human veneration, whereas holy may more likely imply that the user of the term holds that the object in question has indeed been hallowed by God. *Sacred*, though frequently used by religiously committed persons, had also the potential of being a descriptive term used by an outsider to a religious community, while *holy* was much more exclusively a participant's term. Thus, one says "the holy Bible" in a context where the book is treated with reverence, but in referring to others' scriptures one is comfortable with expressions such as "the sacred books of the East."

A telling illustration of this difference appears in English translations of the Bible. In the King James Version of 1611, the Hebrew *qadosh* is regularly rendered as *holy*, whereas in the Revised Standard Version of 1946–1952, it is sometimes *holy* but in other cases *sacred*; the instances in which the twentieth-century translators departed from the usage of their seventeenth-century predecessors have primarily to do with the cultic utensils of the Hebrew temple, a ritual expression of religion from which mid-twentieth-century Protestant biblical scholarship appears to have sought to keep a distance, feeling presumably that God's real intent for people was located elsewhere than in the Hebrew sacrifices.

Conduct is an area in which *sacred* has never taken over the territory of *holy*. A person, to be holy, must conform to the divine standards of conduct: either ritual, or moral, or both. Thus holiness, through the centuries, has been the pattern of obedience put forward as the ideal for the pious devotee that, when most supremely achieved, renders one a holy person—a "saint." Holiness, in this sense of religious practice, was a prime goal for a religiously motivated person, and was self-consciously reflected on. Indeed, the content of articles on holiness in theological dictionaries and encyclopedias prior to the twentieth century was regularly a discussion of the ideals of the religious life and not a generic discussion of the holy as it has come to be treated.

The second decade of the twentieth century saw a shift from such devotional discussions of holiness to a more comparative treatment. A pioneer in this development was the Swedish historian of religions (and subsequently archbishop) Nathan Söderblom (1866–1931), who contributed a substantial article on holiness to the *Encyclopaedia of Religion and Ethics* (vol. 6, 1913). As Otto would do four years later, Söderblom sought not to discuss so much the practice of holiness in the sense of an attribute of human conduct as the awareness of it in the sense of an attribute of divinity. To accomplish this discussion cross-culturally, Söderblom recapitulated various terms suggestive of supernatural power, such as the positive holiness of *mana* and the negative holiness of *taboo*, from the languages of tribal societies—terms that had come to be used by late nineteenth-century European and American theorists of religion to indicate the most pervasive,

the simplest, the most fundamental, and presumably the original feature of religion throughout human culture. Cross-cultural discussions of the nature of religion had been common since the work of F. Max Müller on comparative mythology in the mid-nineteenth century. It appears, however, to have been Söderblom who first applied the term *holiness* to such a topic.

**TRANSLATION EQUIVALENTS.** The semantic differentiation between *sacred* and *holy* that this article has sketched is limited to English and is not necessarily found in other languages. Elsewhere one might expect to find (a) two (or more) terms, possibly with a different distinction than that between *sacred* and *holy* in English; (b) one term, covering both senses; or (c) no readily identifiable vocabulary equivalent.

Latin and the languages descended from it are an example of the first possibility; German and Russian, of the second; and the languages of certain tribal cultures appear to furnish examples of the last category.

Latin has two words that have been frequently translated as “holy”: *sanctum* and *sacrum*. Unlike the situation in English, where two words have etymological sources in different languages, the two Latin terms go back to the same Indo-European root, *sak-*, with an *-n-* infix occurring in the case of *sanctum*. The spheres of use of the two Latin terms, however, appear roughly parallel to English. On the whole, *sanctum*, like *holy*, generally commits the speaker to an endorsement of the holiness in question as a reality, and it applies to the divine power (God is *sanctus*) and to the conduct of individuals (*saint* being derived from *sanctus*). *Sacrum*, on the other hand, denotes human veneration.

Latin’s “daughter languages,” which emerged from vernacular Latin in the Middle Ages, preserve this vocabulary distinction. From *sanctum* come *santo* in Italian and Spanish, *saint* in French; while from *sacrum* come Italian *sacro*, Spanish *sagrado*, and French *sacré*. Yet in the usage of these various languages, it is not always the case that the same adjective is applied to a particular object. If for *holy* one would expect *sanctum* and its derivatives rather than *sacrum*, then French usage will meet one’s expectations with *la sainte Bible*, but Latin, Italian, and Spanish will surprise one with *Biblia sacra* (or, in Spanish, *sagrada*). Could it be that Catholic Europe did not hold the Bible in as high regard as did the Protestants, who turned to it as a source of authority over against that of the church? Such a view might fit in with the Italian and Spanish usage, but hardly explains the expression *la sainte Bible* in French. This illustration, then, may be sufficient to convince one that the semantic distinction between *holy* and *sacred* can serve as an indicator of a potential confusion but not necessarily as a precise tool with which to resolve it.

German has not classically had two terms to use. To be sure, there is a word *sakral*, meaning “cultic,” but only in recent years has it seen much use as in noun form for an organizing concept, and even then it is primarily used to translate *the sacred* from works in other languages. Prior to the mid-

twentieth century, *heilig* covered what has been reviewed as the participant’s semantic field of English *holy* as well as the observer’s connotation of English *sacred*. As long as Western discourse regarding religion dealt almost exclusively with the received Judeo-Christian tradition, and as long as the disposition of most speakers was to accept at least a major subset of the tenets of that tradition, pressure for precision tended not to arise. Indeed, it can be argued that Rudolf Otto tapped the predispositions of a largely willing audience when he published *Das Heilige*. Writing in a language in which *the holy* and *the sacred* are one and the same, he was able to combine a participant’s appreciation of religious experience with an observer’s range of comparative detail. To a very considerable extent, the excitement that he generated revolved around his call for a participant’s appreciation of religion, but this was focused on his discussion of experience; neither he nor his readers directed attention to the “insider” connotation built into the German term *heilig*. To the extent that readers thought about the word, it appears they gave Otto credit for having given it a more comparative or cross-cultural denotation.

The capacity of the German word *heilig* to leave open the possibility of God-given holiness, while also referring to human respect, has had more than minor consequences. A German scholar, Albert Mirgeler (1901–1979) mentions the semantics of holiness as a contributing factor to the medieval investiture controversy, a major political struggle involving northern versus southern Europe over the role of the Roman church in the designation of rulers (*Mutations of Western Christianity*, London and New York, 1964, pp. 96–97). What may have been only a claim for human respect in the Latin name *sacrum imperium Romanum* came to be understood as a more sweeping claim in its German translation, *heiliges römisches Reich* (“Holy Roman Empire”). One must be cautious in pressing this point, for, after all, a divine sanction for the power of the state *was* claimed; and, moreover, many examples could be adduced to show that where words are ambiguous people do have ways of identifying the ambiguity and deciding which sense of a word applies. Still, the possibility of confusion was clearly present.

Russian is another language with only one common word for *holy* and *sacred*: *sviaty*. Rudolf Otto expressed fascination with the chanting of this term, which he had heard from the lips of Russian priests. Again in the Russian case, there are theopolitical overtones. For centuries prior to the victory of Marxist atheism, Russians referred to their land (both its territory and its tradition as a state) as *sviaty Rus*, “holy Russia.” Russia is not the only territory that has been called holy; specific temple precincts frequently are, and the land of the Bible is called “the Holy Land” (“Terra Sancta,” etc.) in the various languages of Christendom. But the holiness claimed for Russia is probably best understood at the level of Latin *sacrum*, not *sanctum*, at a level, in short, not like the spiritual holiness associated with the Holy Land but like the institutional sacredness of the Holy Roman Empire.

Researchers in comparative and cross-cultural studies have generally been ready to suppose that there exists in tribal societies on all continents, as well as in all the great classic traditions of the Eurasian land mass, a universal human pattern of setting apart certain moments in time or precincts in space and of finding in them hints of a transcendent power or value. It seems to be granted that the *phenomenon* of a sense of the sacred or holy is virtually universal. It is, however, far less clear that appropriate *vocabulary* is equally widespread. There appear to be languages without an equivalent covering the same range of meaning as the word *holy*. This is a problem encountered frequently by Bible translators, whose attempts to render *Holy Spirit* have sometimes yielded expressions like “clean ancestor” in the target language.

Indeed, much of the principal ritual expression of holiness is bound up with the notion of purity. For persons most familiar with the religious tradition of the Hebrew and Christian scriptures, this may be not immediately evident, because many interpreters in recent centuries have concentrated on an ethical conception of holiness, crediting the Hebrew prophets or Jesus with a repudiation of ritual. The intimate relationship between holiness and purity can also be overlooked because a separate vocabulary for purity exists in both Hebrew and Greek. But the notion that the holy itself, as well as human beings who seek to draw near to it, should be kept apart from the profane, finds symbolic as well as practical expression in the avoidance of various sorts of contaminating or polluting substances and actions. Jewish avoidance of pork, Muslim traditions regarding fasting, Christian practice of celibacy, Zoroastrian precautions to safeguard the holy fire, traditional Hindu dietary and social taboos, Shintō ablutions at shrines—all these and many more are instances of the maintenance of some sense of purity worthy of holiness in the “great” religions. It should be no surprise that when investigators of tribal traditions have looked at behavior expressing a sense of, or response to, the sacred, the maintenance of standards of purity has been a salient finding. Where an explicit theoretical conceptualization of holiness has seemed to be lacking, emphasis on ritual purity has offered an obvious approximation in the custom and the languages of tribal societies.

**OTTO’S LEGACY.** One of the principal options in the study of religion in the mid-twentieth century has been termed the “phenomenology” of religion. Definitions of this term have varied from strict to loose. Understood strictly, the phenomenology of religion is supposed to be a precise application to religion of insights from the European philosophical movement known as phenomenology, launched by Edmund Husserl (1859–1938), in which the self’s awareness of what presents itself to consciousness is explored. Phenomenology in that sense has little to do with Rudolf Otto, because he antedated many of the philosophical phenomenologists and did not employ their terminology; to the extent that philosophical phenomenology has influenced the phenomenology of religion, that influence has occurred through certain comparativists writing since Otto’s time, particularly in Holland.

In a looser sense of the term, however, Otto was a phenomenologist of religion, indeed one of the pioneers of the enterprise. If by *phenomenology* one means the type of sympathetic treatment of material from a variety of religious traditions, seeing recurring features of religion as a response to a divine stimulus, in the pattern of the Dutch comparativists of the 1930s through the 1960s, then this name for the approach can be applied retroactively to Rudolf Otto. After Otto’s time, this sympathetic treatment of religion in general, stressing similarities (which refrained from arguing the superiority of one tradition over another, stressing differences), would become a major methodological option in the academic study of religion. Many of its practitioners would look back to Rudolf Otto’s work of 1917 as a charter document for phenomenology’s attitude of sympathy for religion (Mircea Eliade does this in *The Sacred and the Profane*, for example), just as they would look back to P. D. Chantepie de la Saussaye’s *Lehrbuch der Religionsgeschichte* (Manual of the science of religion; 1887–1889) as a prototype of phenomenology of religion’s taxonomic treatment of data from various religions.

One does not need to be a comparativist to appreciate, and to be influenced by, Rudolf Otto’s presentation of the holy in *Das Heilige*. In fact, what made Otto’s book a theological best-seller was only marginally the existence in the first quarter of the twentieth century of a cross-cultural cosmopolitanism with respect to religion. Such an interest would account far more for the sales of James G. Frazer’s *Golden Bough* (1897; 3d ed., 1907–1911), whose net effect was to explain away various religious practices as benighted and to suggest that modern men and women had outgrown traditional religion. Much more important was a widespread desire to hold that traditional religion could be felt, if not proved, to be authentic even in a modern age. Most people who read Otto were looking for intellectual and psychological respectability for their own religious faith, not for an elaboration of the faith of others. And it has become commonplace to suggest that the events of World War I, by shattering many easy assumptions of the inevitability of human progress, turned many people to a renewed quest for religious values. This development is often cited as a factor in assessing the impact of Karl Barth in *Der Römerbrief* (1919), a book differing sharply in its religious assumptions from *Das Heilige* but sharing with it the status of theological best-seller in the aftermath of the war.

However much Rudolf Otto was aware of the diversity of religions, he made his principal mark by contributing to the faith-and-reason agenda of Western philosophy of religion and Christian theology. Immanuel Kant, in demonstrating convincingly the limits of rational proof, had “made room for faith” as not only unprovable but undisprovable. After him, Friedrich Schleiermacher (1768–1834) was to characterize religion as rooted in a *feeling* of absolute dependence. Otto’s presentation of the “sense of the numinous” likewise takes feeling or experience as what must be dealt

with rather than questioned. In the decades since Otto, probably the most illustrious bearer of this intellectual lineage has been the Protestant theologian Paul Tillich (1886–1965), who (in contrast with Karl Barth’s emphasis on revelation) argues from human concern as the starting point for discourse about God.

The type of position that largely since Otto’s day has come to be known as religious existentialism, arguing from experience and commitment as a primary datum, remains, despite the obvious problems of objective proof, a major twentieth-century option in the philosophy of religion. To call Otto an existentialist philosopher of religion would be a retroactive designation of the same kind as my calling him a phenomenologist of religion.

In the end Otto’s *Das Heilige* remains a classic in the field probably not because his attempts at a solution have great enduring value but because he has put some of the basic questions in an arresting fashion. Many who pick up the book today feel that they have the measure of it by the fortieth page. Just as a standard newspaper article must face the “cut off test,” it seems to make its main point at the beginning, following that up with optional detail. But the challenge of page 8, “whoever knows no such moments in his experience, is requested to read no farther,” is as compelling today as when Otto wrote it. Page 8 of *The Idea of the Holy* will be with Western civilization for a long time to come.

Revised Bibliography

**HOLY ORDER OF MANS** was a prominent New Age spiritual community whose radical transformation into an Eastern Orthodox Christian brotherhood during the 1980s illustrates the instability of charismatically led religious communities during their founding generation. As the renamed Christ the Saviour Brotherhood, the community has shrunk to a few hundred members unified primarily by a commitment to Orthodoxy and a shared odyssey through late-twentieth-century America’s pluralistic religious marketplace.

The order had its origins in the cultural ferment of mid-1960s San Francisco. Its founder, Earl W. Blighton (1904–1974), was a retired electrical engineer and social worker whose spiritual explorations in California’s alternative religions subculture led him to such organizations as the Theosophical Society, the Subramuniya Yoga order, the Spiritualist church, and the Ancient and Mystical Order Rosae Crucis. Together with his wife, Helen Ruth Blighton, he opened a prayer shrine in 1966 to minister to the young people who were wandering the streets of San Francisco in search of spiritual enlightenment. The committed core of disciples who gathered around the Blightons evolved into an intentional spiritual community organized according to tradition-

al Christian monastic rules. The Holy Order of MANS (there is some controversy surrounding the meaning of the acronym, which was purportedly revealed only to initiates) was incorporated on July 24, 1968.

Blighton's order developed a unique system of initiatory spirituality that included elements of qabbalism, Rosicrucianism, New Age millennialism, New Thought philosophy, and Tantrism. The mission of the order was to prepare the earth and its peoples for an imminent golden dawn of spiritual enlightenment by initiating the masses into the "ancient Christian mysteries." These mystical teachings, Blighton maintained, had disappeared from view once Christianity became a powerful, wealthy institution. In the New Age that was dawning, these esoteric teachings were being revealed again to the world. The order ordained priests under the auspices of the Great White Brotherhood, a hierarchy of advanced spiritual masters who were believed to be responsible for humankind's evolution. Blighton claimed to have received the power to ordain these priests from Christ through revelation. The priests were empowered to perform "solar initiations" that represented stages of the soul's evolution to "mastery." The order's initiations were believed to be recreations of the sacramental initiations of the early Christian church, whose true function had been forgotten with the passage of time.

In the first initiatory rite, baptism, aspirants declared their dedication to the path of spiritual regeneration under the order's guidance. Blighton taught that the rite triggered an infusion of the "Christ force" into the disciple's body and purged the body of the effects of past errors. The second initiation, "illumination," implanted and sealed the "new body of light" in the aspirant. The rite included an awakening of the *kuṇḍalīnī* energy at the base of the spine and an activation of the aspirant's chakra currents. The third initiation, "self-realization," was a neoshamanic rending of an etheric veil that was believed to cover the indwelling spark of divinity at the core of the aspirant's being. After this rite, the disciple could receive interior revelation from the Godhead and was considered a functioning "God-Being." The order also administered a daily communion rite, which was understood as a work of spiritual alchemy in which the wine and bread were transmuted into Christ's body and blood. Communicants believed that they were being infused with the attributes and experience of the Master Jesus, who had taken on the being of the Cosmic Christ during his earthly sojourn.

Between 1969 and 1974, Blighton's order spread quickly throughout the United States. It established mission stations and "brotherhouses" in over sixty cities in forty-eight states. Like traditional monks, order members took vows of obedience, service, poverty, purity, and humility, practiced regular fasting, wore clerical robes, and held all assets in common. Unlike traditional monasteries, however, order centers were coeducational, elevated women to the priesthood, and embraced spiritual practices from non-Christian sources. During this early period, the order also expanded its organi-

zation to include a lay discipleship movement and lay families (Christian Communities) that were interested in practicing the order's path of esoteric spirituality. Blighton also established two suborders, the Immaculate Heart Sisters of Mary and the Brown Brothers of the Holy Light, to provide intermediate training for renunciate members. Members of the suborders performed community service and special Marian devotions, and they engaged in missionary teaching. In 1971 the order opened Raphael House, a shelter for the homeless and for victims of domestic violence. This service outreach would spark a movement across the United States to establish anonymous shelters for battered women and children.

Blighton's sudden death in 1974 precipitated a four-year leadership crisis for the order. A succession of "master-teachers" (the movement's highest level of spiritual attainment) took charge of the group and attempted to impress upon it their own personal interpretation of Blighton's teachings. This period of instability did not impede recruitment, however. The movement reached its height of membership, three thousand, in 1977. Also during this period, international centers opened in London, Bordeaux, San Sebastian, Amsterdam, Buenos Aires, Tokyo, and San Juan, Puerto Rico.

In the spring of 1978, Andrew Rossi was elected director general of the order. Rossi was an erudite former Roman Catholic pre seminarian whose résumé included a stint as a Chinese-language specialist with the Intelligence Section of the U.S. Navy. In his first public statements, Rossi embraced Blighton's Gnostic and New Age vision of the order's mission. He proclaimed that Jesus was calling all peoples to a new understanding of his teachings and divinity, an understanding based on "living Revelation" and unbound by past symbols, dogmas, and scriptures. Though he was the "very form of God Incarnate" and was due the greatest respect and honor, Jesus was not to be worshiped as God himself. The order's mission, according to Rossi, was to present Jesus' teachings in a universal and inclusive way in the dawning millennial age. This new way would lead Christians beyond religion, beyond form, and beyond the figure of Jesus himself, to a state in which all would find their true being in the "Father-Mother God." In obedience to this mission, the order would redouble its efforts to remove the barriers that separated humankind, especially those that had been erected in Jesus' name.

On November 18, 1978, the first reports of the Jonestown mass suicide-murder reached the national media. Within a short time, the cultural context in the United States with regard to new religions changed from one of tolerance and acceptance to one of suspicion and outright hostility. The anticult movement used the national mood of shock and revulsion at the Jonestown events to intensify its efforts to convince politicians and judges to regulate "dangerous cults." Soon, increasingly hostile public scrutiny was brought to bear on the order, which heretofore had enjoyed a positive

public image because of its service outreach in local communities. The order also appeared on the “cult lists” of such leading countercult groups as the Christian Research Institute and the Spiritual Counterfeits Project. To make matters worse, the order community began to experience increasing member defections and a steep drop in recruitment rates.

In response to this crisis, Rossi initiated a strong defense of the order in various public forums. The culmination of these efforts was Rossi's 1980 article in the order's journal, *Epiphany*. Titled “By Their Fruits Ye Shall Know Them: Proclaiming the Spiritual Authenticity of the Holy Order of MANS in a Counterfeit Age,” the article laid out a carefully reasoned apology that defended the order's Christian pedigree, as well as its ecumenical and nonsectarian foundations. Rossi declared that the brotherhood's purpose was to develop a Christian community built around the worship of God, discipleship to Christ, and service to the world. The order, he claimed, lived “within the norms of the Christian Tradition.” Rossi also inaugurated a search by the order's membership for precedents in the history of Christianity for what the movement was attempting to accomplish in the world. This would allow members to explain the order to mainstream Christians in terms that were comprehensible and familiar to them.

These initiatives began to move the order's public and private identity away from its New Age and Rosicrucian/Gnostic origins and towards mainstream Christianity. After flirtations with Protestant evangelicalism and Roman Catholic traditionalism, Rossi directed the group to study Eastern Orthodox Christianity, and in particular its tradition of light mysticism. This directive followed Rossi's secret personal conversion to Eastern Orthodoxy during the early 1980s. At the same time, the order's director general consolidated the group into ten large communities in the United States and Europe and began to jettison its system of esoteric initiatory spirituality. Between 1982 and 1986 the brotherhood focused its energies on the preservation of “authentic cultural traditions of ancient Christianity,” the celebration of seasonal festivals, and the creation of alternative schools for its children based on traditional Christian principles.

With the assistance of a defrocked Russian Orthodox monk, Herman Podmoshensky, Rossi orchestrated a gradual conversion of order members during the mid-1980s to Orthodox monastic spirituality. Blighton's core teachings and practices were replaced with Orthodox doctrines and rituals. Following several years of negotiations with various Orthodox jurisdictions, the order community was received into the autocephalous Archdiocese of Queens, New York, in 1988 by its metropolitan, Pangratos Vrionis. The brotherhood's remaining 750 members were rebaptized and renamed as Christ the Saviour Brotherhood. They proclaimed their new mission as “bringing the light and truth of Orthodox Christianity to the spiritually perishing peoples of these darkening and crucial times.”

The order's decision to become Orthodox led to a steady loss of both members and vitality during the 1990s. Its cohesiveness as a community disintegrated with the disbanding of its renunciate (monastic) brotherhood and the consolidation of its membership into nuclear families. Another problem was the nonrecognition of Pangratos's archdiocese by the Standing Conference of Orthodox Bishops in the Americas (SCOBA), the main legitimating body for Orthodox jurisdictions in North America.

In the late 1990s, following documented proof of Pangratos's conviction for sodomy with minors, Christ the Saviour Brotherhood member communities distanced themselves from the Archdiocese of Queens and negotiated acceptance into SCOBA-approved Orthodox jurisdictions throughout the United States. Although some members have joined the Serbian Orthodox Church or the Russian Orthodox Church outside Russia, most Christ the Saviour Brotherhood parishes have been received into communion with the Orthodox Church in America. Some of the brotherhood's remaining members have set up small Orthodox missions throughout the country that sell Orthodox books and periodicals and sponsor periodic Orthodox liturgies.

The order's legacy is best realized in three initiatives pioneered in its early history. The first is the Raphael House movement, which has led to a growing national awareness of domestic violence and the need for anonymous shelters for battered women and children. The second is Rossi's Eleventh Commandment Fellowship, which was instrumental in the creation of the North American Conference on Christianity and Ecology and in the raising of ecological awareness among mainstream Christians. The third significant initiative is the order's early advocacy of spiritual equality for women and its ordination of women to its priesthood. Many mainstream denominations now ordain women, including the Episcopalians and the Lutherans. Women also now play an increasingly influential role in Roman Catholic parishes, serving as parish administrators and liturgical leaders among other roles. Ironically, Christ the Saviour Brotherhood now accepts Eastern Orthodoxy's traditional proscription of women priests.

The order's history also provides persuasive evidence that the glue holding new religious communities together can be primarily affective in nature rather than ideological. In short, the many shifts in doctrine that characterize new religious movements in their first generation do not necessarily threaten group cohesiveness if that cohesiveness is based on strong feelings of group solidarity and affection. Finally, the order's history stands as a paradigmatic example of how new religious movements are shaped by their surrounding cultural environment. Blighton's eclectic, nonsectarian, and universalist movement reflected the innovative, tolerant, and experience-seeking mood of the 1960s and 1970s. In a similar manner, Rossi's exclusivist and traditionalist Eastern Orthodox brotherhood reflected the conservatism and yearning for “traditional values” of America in the 1980s.

**HOLY SPIRIT** **SEE** GOD; TRINITY

**HOLY WAR** **SEE** CRUSADES; JIHĀD

**HOME** is a universal concept of central importance to religious thought. Like such other general symbols as sun and earth, it recurs from prehistoric times across cultures, in contrast to more culture-specific analogues such as the cross and the Ka'bah. Besides its symbolic importance, home is also a significant locus of ritual in many traditions.

As with most sacred symbols, home is simultaneously an abstraction and a concrete object (as when it is embodied in a dwelling). The development of home as dwelling place can be traced from animal to human habitats; from the dens, windbreaks, and caves of nature to the tents, huts, and houses of culture. To automatically equate house and home, however, is to oversimplify, for home transcends all physical dwellings. Nonetheless, this distinction must be applied cautiously, for it assumes a secular separation of symbol and referent alien to preliterate thought.

The qualities that make home a sacred symbol include the way it traditionally functions as an ordering symbol. As

such, it is a kind of *mandala*, or symbol of wholeness, containing within itself all opposites. Among the Tiv of Nigeria these opposites are primarily social. Spatially, home (the compound of huts and granaries) represents kin and domestic group. Genealogy typically governs both hut and compound location. Consequently, a death in the family necessitates readjustment of hut positions to reflect the resultant social order. When a father dies, his son assumes the father's reception hut and allows the houses of the father's wives to decay. He then builds new huts for the widows among those of the heirs, usually brothers, of the deceased, who now become the women's new husbands through a practice known as levirate. Meanwhile, new huts are built for the son's wives adjacent to his reception hut. With the death of a compound head, fission of a compound often occurs so that sets of brothers and their families leave the compound with a new leader.

Commonly the home symbolizes a cosmic order, as exemplified by the tents of the prerevolutionary Mongol Buriats. The Buriats divided their dwellings into four sections: the south portion from the door to the hearth was the low-status half; that from the hearth back, the high-status half. Each half was then again divided, the west side being male and ritually pure, the east, female and ritually impure. Therefore male visitors would stay in the southwest quadrant, female in the southeast. The seat of honor for the host and high-status guest always rested in the northwest sector. Even objects were categorized in this way; valuables and hunting equipment, for example, were male, household utensils female.

Most Native American cultures saw similar cosmic correlations, leading them to characterize their dwellings as both temple and house. For the Plains Indians, the floor of the tipi represented the earth, the walls the sky, and the poles the paths linking earth and humanity to the sky and Wakan-tanka ("the great mystery"). A small altar of bare earth behind the fireplace, often with sod and roots removed and the earth pulverized and swept clean, represented Mother Earth. Sweet grass, cedar, or sage were burned here as incense to the spirits.

In Africa, the layout of Dogon villages and houses also correlates cosmos, village, house, and individual in a series of scales. Both village and house approximate the figure of a man, some of whose "body parts" are female. The outer door of the house is a phallus, its kitchen door a vagina, and the entire ground floor a woman on her back, ready for sex. The ceiling is her male partner. Such cosmic correlations of home and universe are common to the folklore of many archaic cultures.

**HOMELESSNESS.** When connections linking self, ancestors, society, and cosmos dissolve, homelessness ensues. Dread of such a state is universally expressed in conceptions of the "unhoused" dead. In ancient Greek and Roman thought, for example, the unburied were doomed to wander forever as phantoms incapable of stopping for the offerings necessary

to rescue them. The connection to home is also threatened by enslavement, which severs all bonds to family, tribe, and village, and by banishment, a punishment frequently imposed in preindustrialized cultures.

**CONSECRATION AND DOMESTIC RITUALS.** Consecration initiates the process whereby dwelling becomes home. Worldwide, various kinds of foundation rites effect this transformation. Typically they begin by employing divination (such as the elaborate system of feng-shui in China) or astrology (as in India) to select the appropriate site. Exorcism follows, and then the foundation is laid according to the directions of a priest or sorcerer. Archaeological evidence indicates the universality of foundational “charms” from at least as early as the Shang period in China (c. 1751–1028 BCE), when humans were customarily sacrificed at each house post; similar customs were observed into the twentieth century by groups such as the Maori. Thought to underlie such blood-related offerings is the belief that victims of violent death become demons who make powerful house spirits. Animal substitutes have long been used in foundation rites, as among the Arabs of ancient Moab (present-day Jordan), who sacrifice a sheep to pacify the jinn before laying a tent. Other surrogate victims have included statues (Rome), images of the house god (India), and animal parts, pottery, and vegetable remains (Europe).

In the Korean shamanistic tradition known as *mudang*, this essential process of consecration (*sŏngjo baji*) is repeatedly reenacted even today to symbolize cosmic renewal. Typically, pine branches are hung on the gate and white papers on the roof beams of the central hall room to protect and renew the home. Additional rituals of renewal, the Ttökkosa and Sulkosa, are held at every full moon to correlate cosmic change to the building ground of the new home: as the moon appears the ground is renewed. In this tradition the house replaces the more common archaic symbols of mountains or cosmic trees as symbols of the *axis mundi*.

In Judaism, *hanukat-habayit*, “dedication of the home,” is based on *Deuteronomy* 20:5 (“What man is there that has built a new house and has not dedicated it? Let him go back to his home, lest he die in the battle and another man dedicate it”). No established form exists for this ceremony beyond the uttering of appropriate blessings and the affixing of a *mezuzah*, a parchment believed to protect the occupants from committing sin, inscribed: “And you shall write them on the doorposts of your house and on your gates” (*Dt.* 6:9, 11:20).

In some traditions, domestic rituals augment or replace practices otherwise performed in sacred places specifically set aside for religious purposes. Daily prayers are common to many religions, but more elaborate home-based rituals occur in the post-Vedic Hindu *pūja* rites, in which images of deities must be attended daily. In the morning the deity is awakened, bathed, dressed, perfumed, garlanded, and fed. Food is again proffered at noon and at night, with an evening song closing the day. Domestic rituals also significantly character-

ize Orthodox Judaism, Korean *mudang*, Haitian Voodoo, and the resurgent practice of witchcraft, or Wicca.

**POLLUTION.** In contrast to consecration, which is designed to vitalize and protect a dwelling by installing a strong protective spirit, prophylactic processes are enacted to exorcise malevolent spirits or evil substances, the most malevolent of which involve blood as in giving birth, fatally wounding an occupant, or natural death. Death especially pollutes a dwelling, so that its occupants must be ritually purified before freely resuming their lives. Among the Yoruba, for example, if purification rites fail and a dwelling is believed to be ghost-infested, it will be abandoned.

Pollution almost universally attends the onset of menstruation as well, and a young woman is frequently required to leave her home until ritual purification renders her fit again for home life. This ritual is enacted by various tribal cultures, such as that of the Bolivian Yuracare who require her to live in a specially constructed leaf hut for four days. Similarly, an almost universal pattern of purification rites attends childbirth in preindustrial cultures. Houses that fail in these various struggles against pollution are often considered demonic, as *Leviticus* 14:43–44 describes: “If the disease has spread in the house, it is a malignant leprosy in the house; it is unclean.” The motifs in folklore of people-eating and haunted houses are additional manifestations of this phenomenon.

On a daily basis, too, pollution of the home must be guarded against, as Judaism well illustrates. In a traditionally observant Jewish home, all food must be kosher, meaning that it must conform to Jewish dietary laws developed from *Leviticus* 11:1–43 and must be prepared properly, using one set of dishes and cooking utensils for meat, another for dairy products. If mixing accidentally occurs, the polluted object becomes impure and must be rendered ritually and legally fit again, or discarded.

**DEATH AND DWELLING PLACES.** “Home” means belonging, dwelling in one’s proper habitat. In this sense, the term applies equally to the living and the dead, the grave being as much a home for the dead as a house is for the living. The nearly universal custom of bestowing grave goods on the dead underscores this connection, as does the custom of constructing tiny dwellings specifically for the soul, a practice common in the Yang-shao period of China and in ancient Egypt. The present-day Sakai of the Malay Peninsula similarly fill huts with doll-sized furniture and implements for use of the dead, and images of ancestors are kept in miniature “soul houses” in parts of Papua and Melanesia.

Such intimate connection between home and deceased family members is dramatically expressed in the dwellings of the Kwakiutl of the Northwest Coast of North America. For them, the house itself lives as a kind of double of its owner, becoming “empty” or “broken” when he dies. When the family regroups around its new head, a new house is built. Characteristics of the “life” of the house are its “speaker’s posts,” open-mouthed figures through which ceremonial

words of welcome emerge as if from the ancestor himself, and the gigantic mouth of the frontal pole that “swallows” those who enter.

**HOUSEHOLD SHRINES.** From Neolithic times, the practice of setting aside a corner or room of a dwelling as a shrine has been common to many traditions. In ancient Egypt this domestic shrine, usually recessed in the wall of the central hall and adorned with religious scenes, contained a figure of a household god made of pottery or precious metal. Among the Banyankole in Africa each hut contains a special grass-covered, hard-beaten mound of earth, about a foot high, to hold sacred objects. Among the Gold Coast tribes, an honored place is set aside in one corner of the home for special offerings to the domestic spirit known as the *subman*. The Yoruba place a humanized image of the house god Olarosa at the door and make a recess in the wall for their personal fetish as well. Among the Udmurts, the *vorsud* or clan god customarily resided on a shelf in the outhouse. Household altars also prominently characterize domestic observances in China, Japan, and Tibet.

**HOUSE SPIRITS, DOMESTIC DEITIES, AND FAMILY.** Almost universally, home, as opposed to mere dwelling, is vivified by a spirit of some sort, usually an ancestor. Evidence in the form of cave burials, skull cults, and sacrifices to the dead dates from the Paleolithic era, suggesting a sacred connection linking ancestors with dwelling places. In pre-Christian Europe, the house god was commonly represented as a snake, which was believed to be a vehicle for the souls of the dead. Among the Lithuanians, for example, the paterfamilias typically maintained his serpent (*givojitos*, “the living ones”; *givoitos*, “immortal ancestor”) in a corner of the house where he offered it food and sacrificed to it.

An elaborate system of household deities existed among the ancient Romans: the *manes* were the benign gods, an undifferentiated collective of ancestors; the *penates* were gods of the store closet; and the *lar familiaris* was the primitive concept of home personified, to which offerings were made on all family anniversaries. Among the Teutons, the household spirit often assumed manikin form. The *cofgodar* (“house gods”) of the Anglo-Saxons have their counterparts today in the *Kobolde* and *Butzen* of the Germans; Puck of the English; the brownies of the Scots; and the *gardsvor*, *tomte*, and *nisse* of the Scandinavians, all still frequently believed to be spirits of ancestors.

Among the Slavs every house has a *domovoi*, the spirit of the founder of the family. At festivals commemorating ancestors, this little old grayhaired man in old-fashioned dress is honored, too. Before the family moves, its members pray, offering bread and salt to entice the house spirit to accompany them. Before Lent, the head of the house invites the *domovoi* to supper by going into the yard and bowing to the four cardinal points. In Russia the spirit is named according to location: in the cattle shed he is the *chlevnik*; in the yard, *dvorovoi*; in the drying kiln *ovinnik*; and in the bathroom, *bannik*.

Among the shamanistic Samoyed of the Arctic coast of Russia, the domestic spirits (*haha*), usually one male and one female, are represented by oddly shaped roots and stones or anthropomorphic figures kept on a special *haha* sledge. Whenever the family moves, special *haha* reindeer carry it. No woman, even a shaman, may uncover the *haha* or care for the domestic gods. The *haha* sledge ordinarily stands behind the *chum* (“tent”) on the outer side of the *si*, the place of honor, occupied only by the eldest family male.

In most West African tribes, the family fetish and a class of ancestral spirits known as the “well-disposed ones” protect their particular village and family. Among the Kenyahs, a rude image of the minor deity Bali Atap, who protects the house against sickness and attack, stands beside the gangway connecting house and riverbank. A different god, Bali Utong, brings prosperity.

Among the Ainu of Japan a family spirit, *inaw*, is invested with life, dwelling in a special corner of the hut behind the heirlooms. In times of trouble he is stuck in the hearth and offered prayers. The incorporeal *eingsaung nat* of the Burmese scares off burglars; it lives in the southern post of the house, which is devotionally adorned with leaves. The Burmese also pray to images of respected relatives as house guardians.

**THE SACRED HEARTH FIRE.** The sacred quality of household spirits and deities has frequently been associated with one of the most common attributes of home, the sacred hearth fire. In Brahmanism, the householder rekindled the sacred fire whenever religious rites were performed. For all domestic ceremonies (*smārta-karman*) the fire of a clay hearth (*grhyāgni*) was sufficient. Every morning the family assembled around the fire in prayer before “feeding” it with bits of consecrated wood (*samidh*) from the *palāśa* tree. If the smoldering embers were inadvertently extinguished, the household would be plunged into chaos; only for an expiatory ceremony (*prāyaścitta*) was the fire intentionally rekindled. The fire god, Agni, functioned as both the god of the household and of the clan, protecting both from evil, much as Hestia did in Greece and Vesta in Rome.

Among Native Americans of the Northern Hemisphere the sacred fire burned by day in the hearth at the center of the dwelling. Fire, a gift of the gods, symbolized the sun, much as the surrounding home symbolized the universe. The door or tent flap was positioned facing the east to catch the morning’s first rays.

Since ancient times the sacredness of the hearth fire has been symbolized in China by the stove god, Zao-wang, and in Japan by the kitchen gods Okitsu-hiko and Okitsu-hime and the god of the stove, *kama no kami*. Bronze Age Chinese dwellings all had a central opening for smoke called “the center of the house.” The spot beneath it was sacred to the tutelary god of the ground on which the house stood. Here food was prepared and eaten, family council held, and the god worshiped. Originally, the god represented the mystery of

fire, guardianship of the house ground, and the family's ideals and traditions.

**SECULARIZATION.** In traditional cultures, "home" is a sacred symbol capable of transforming chaos into cosmos and engendering personal wholeness. But for many industrial and postindustrial cultures, home has become a purely secular institution, particularly in those societies that accept Plato's denigration of the private sphere associated with home in favor of the public one associated with politics. Accordingly, two strongly opposed orders are thought to govern existence. One, to which all humans belong, is the natural order of things determined by biology, in which woman bears children and man maintains the life of the family. The center of this existence, which is ruled by necessity (*anagkē*), is the hierarchically arranged household (*oikia*) dominated by the eldest male. Contrasting with and transcending this order, however, is the city-state, the *polis*, in which every member is equal. In this "higher" realm of the *polis*, members are most truly alive, as they engage in the two "highest" forms of human activity, action (*praxis*) and speech (*lexis*). But only citizens can be members—women, children, slaves, and foreigners are automatically excluded.

Both implicitly and explicitly, this praise of the public and denigration of the private elevates males to a place of existence from which women, by virtue of their anatomy, are barred. Historically, the public sphere of men is extolled while the domestic sphere of women, the home, is both trivialized and despised (except briefly in Victorian times in the West when it was sentimentalized). Thus, much as Freud in *Totem and Taboo* openly derides the concept of God as a believer's internalized image of his or her father, many contemporary Western feminists, Marxists, and utopian thinkers now ignore or dispise the institution of home. For them home has become an ugly image of privatism instead of a symbol of cosmic order and personal wholeness.

#### BIBLIOGRAPHY

A contemporary work that deals with the religious significance of home and related aspects is my book *The Sacred and the Feminine: Toward a Theology of Housework* (New York, 1982). Within the context of the nineteenth-century American doctrine of "the cult of true womanhood," Catherine E. Beecher's *A Treatise on Domestic Economy* (New York, 1855) proselytizes about many aspects of home from a popular perspective. One of the best treatments of the psychological significance of houses is Gaston Bachelard's *La poétique de l'espace* (Paris, 1957), translated by Maria Jolas as *The Poetics of Space* (New York, 1964); esp. chaps. 1–3. For a comparative visual study of aboriginal domestic architecture from around the world, Colin Duly's *The House of Mankind* (London, 1979) presents an outstanding collection of photographs with accompanying analysis. A useful discussion of the religious significance of homecoming is Charles E. Winquist's *Homecoming: Interpretation, Transformation and Indi-*

*viduation* (Missoula, Mont., 1978). For an easily readable account of home-centered ritual within Judaism, *The Jewish Catalog*, edited by Richard Siegel, Michael Strassfeld, and Sharon Strassfeld (Philadelphia, 1973), is unsurpassed. Two excellent sources on domestic rituals in the classical world are Numa Denis Fustel de Coulanges's *La cité antique* (Paris, 1864), translated by Willard Small as *The Ancient City: A Study of the Religion, Laws and Institutions of Greece and Rome*, 11th ed. (Gloucester, Mass., 1956); and Georges Dumézil's *La religion romaine archaïque*, 2d ed., rev. (Paris, 1974), the first edition of which was translated by Philip Krapp as *Archaic Roman Religion*, 2 vols. (Chicago, 1970). The classic analysis of the persistent split between the public and private spheres is Hannah Arendt's chapter "The Polis and the Household," in *The Human Condition* (Chicago, 1958). Helpful short discussions on various symbolic and ritual aspects of home in specific cultures appear in Irving Goldman's *The Mouth of Heaven: An Introduction to Kwakiutl Religious Thought* (New York, 1981); Paul Bohannon and Laura Bohannon's *Tiv Economy* (Evanston, Ill., 1968); Sechin Jagchid and Paul Hyer's *Mongolian Culture and Society* (Boulder, Colo. 1979); and Jung Young Lee's *Korean Shamanistic Rituals* (New York, 1981). An excellent general discussion of the theme of home as cosmic image occurs in Mircea Eliade's *The Sacred and the Profane* (New York, 1968).

KATHRYN ALLEN RABUZZI (1987)

**HOMER** (eighth century BCE), according to unanimous ancient Greek tradition, was the author of the *Iliad* and the *Odyssey*. His authorship of other epic poems and of long hexametrical hymns was already disputed in antiquity. Tradition assigns to him several dates, all earlier than the foundation of the Olympic Games in 776 BCE. All ancient information, however, is much later than any of these dates and has rightly been seen as unhistorical in modern scholarship. The *Iliad* and *Odyssey* are now seen as the result and culmination of a long tradition of oral poetry; in their substance, they were composed between the late eighth century BCE and the early seventh century BCE, with a growing consensus for a later rather than an earlier date. As part of a tradition reaching back to the Late Bronze Age, the poems are an important source of information on early Greek religion and cult practice. Because throughout most of later Greek culture the poems had become normative, they in turn shaped the Greek way of perceiving polytheism.

**RELIGION IN HOMER.** Homer's gods are fully anthropomorphic, with the exception of river gods, whose descriptions oscillate between anthropomorphism and their element. Anthropomorphism regards not only the gods' appearance but also their way of thinking and feeling. The major gods live together as a loose family that comprises Zeus, patriarch and king; his siblings Poseidon and Hera (who is also his wife); and his children from several women—Apollo and Artemis, Ares, Aphrodite, Hephaistos, and Athena. Only Demeter and Dionysos are curiously nonexistent. They live in a pala-

tial setting on Olympus, a mythical place that in Homer has already transcended its starting point in geographical reality, Mount Olympus, the highest mountain in Greece. Their common meals are usually the occasion for extensive and often heated policy debates that precede the decisions of Zeus. Although the other gods have some independence of action, Zeus's will runs the world. The *Iliad* and *Odyssey* differ somewhat in their views of how human life relates to the divine world. The *Iliad* tends to see humans helplessly exposed to divine caprice, even though Zeus's decisions are just and well balanced, whereas the *Odyssey* explicitly rejects divine causation of bad moral decisions by humans. The overall impression is that the gods of the *Odyssey* are more willing to warn and sometimes even guide humans, but in the end to let them take their decisions alone. This reflects different concerns with theodicy in the *Iliad* and *Odyssey*. Whereas the *Iliad* juxtaposes Zeus and Fate without ever clarifying their mutual relationship or exploring the origins of bad things, the *Odyssey* makes it clear at its very beginning that Zeus is not responsible for evil but that humans (such as Aegisthus) often act foolishly and against the will and warning of Zeus and thus cause their own downfall.

Divine mythology in Homer is independent from specific local and cultic traditions. The local connections of some gods are acknowledged, such as Hera's with Argos, Apollo's with Delphi and Delos, or Aphrodite's with Cyprus, but the myths are not the local cult stories of Argos, Delphi, or Delos. To some extent this is even true for the four long and early *Homeric Hymns*. Only the "Hymn to Demeter" narrates a cult myth, the foundational story of the Eleusinian mysteries, and the "Hymn to Apollo" combines the Delian birth story with the foundation myth of the Delphian oracle. This independence from local traditions made Homeric mythology extremely well suited to give a translocal, Panhellenic appearance to the Greek gods.

The world of ritual practice that the *Iliad* and *Odyssey* depict must to some degree reflect the contemporary religion. Cities possess temples of their important gods (Athena or Apollo in Troy, Apollo in Chryse, Poseidon at the Phaeacian harbor, Apollo in a grove near Ithaca's town). Athena's Trojan temple contains a sitting image of the goddess. The major Panhellenic sanctuaries—Delphi, Delos, Dodona—are known; Delphi has a stone temple, Delos a famous altar. Humans perform festivals (for example, the festival for Apollo on Ithaca) and sacrifices, either as a group or individually. Twice Homer describes these sacrifices in loving detail, and once he describes an oath sacrifice. Homeric sacrifice is similar to later sacrificial practice with one exception. Whereas later a seer inspected the killed animal to determine whether it was welcome to the gods or not, this custom is absent in the Homeric poems. It is somewhat unclear whether this is a conscious stylization or an indication of contemporary usage. Divination as such is known to Homer, and seers appear in both the *Iliad* and the *Odyssey*. But their art seems to concentrate on observing omens, especially from the flight

of birds. Extispicy, especially the art of consulting the liver of a sacrificial animal, is widespread in the ancient Near East and in Iron Age Etruria, where it must have arrived from the Orient. It is conceivable, although somewhat surprising, that the transfer of extispicy to the Greek world resulted from cultural contacts in the Early Iron Age at about the epoch of Homer.

It is still debated how much the Homeric poems owe to ancient Near Eastern culture, mythology, and literature. Given that both Bronze Age and Geometric Greece were part of a much wider Near Eastern common culture, the influence should not be underrated. On a general level are the common and widespread mythological patterns, such as the succession myth Homer (as well as Hesiod) shares with Near Eastern mythologies. On a second, more specific level are direct influences in mythological motives, such as the (rather isolated) mention of Okeanos and Tethys as "ancestors of the gods" (*Iliad* 14.201). This reflects the Akkadian Apsu and Tiamat as ancestors of the gods as narrated, for example, in the *Enuma elish*. On a third level are highly specific narrative motives shared between literary works, such as the apparition of Patroclus's shadow to Achilles in a dream (*Iliad* 23.65–107), which recalls the apparition of the dead Enkidu to Gilgamesh and points to a close connection between two narrative traditions.

**HOMER'S INFLUENCE ON GREEK RELIGION.** In the course of the Archaic epoch, the poems of Homer became normative for Greek culture. The poems' descriptions of the gods decisively shaped a Panhellenic mythology and iconography. But the anthropomorphism of the Homeric gods that made them act and react like humans provoked the criticism of religious thinkers who were devising a theology in which the gods were viewed as ideal moral beings and who were transcending anthropomorphism for the sake of theology. Xenophanes of Colophon (c. 570–c. 480 BCE) rejected anthropomorphism as a human projection onto the divine, and he heavily criticized Homer and Hesiod for their representations of immoral gods who "steal and lie and commit adultery." Plato (c. 428–348 or 347 BCE) went even further. In the *Republic* he proposed that the ideal state would censure poetry and prohibit immoral representations of the gods.

As a way of dealing with these criticisms, rhapsodes and later Stoic philosophers developed the allegorical explanation of such Homeric scenes. The assumption was that the poet was hiding physical or ethical statements behind a misleading narrative surface; allegorization would reconstruct these original intentions of Homer. Originally developed by the rhapsodic interpreters of Homer, such as Stesimbrotos of Thasos (fifth century BCE), allegorical interpretation turned into a major tool for adapting the understanding of canonical texts to a given society without changing their textual forms.

FRITZ GRAF (2005)

**HOMO RELIGIOSUS.** When the Swedish botanist Linnaeus developed his system of biological classification in the eighteenth century, the Enlightenment's ideal of rationality strongly governed views of humanity. As a result, Linnaeus designated the human species *Homo sapiens*. Soon, however, the Romantic movement and the incipient human sciences accentuated other dimensions of humanity than the rational. In time, new terms were coined on the Linnaean model to designate humanity in various distinctive aspects: *homo ludens* (G. F. Creuzer and, later, Johan Huizinga), *homo faber* (Henri Bergson), *homo viator* (Gabriel-Honoré Marcel), and others. Perhaps the nineteenth century's growing awareness of the universality of religion, especially in the realm of the "primitives" (as they were then known), made it inevitable that a phrase would emerge to express that aspect of humanity that the Enlightenment's ideal had so opposed: *homo religiosus*, "the religious human." In some circles the expression has gained wide currency, but its sense has not remained constant. Three general meanings of *homo religiosus* are most important to students of religion.

**HOMO RELIGIOSUS AS RELIGIOUS LEADER.** In one meaning, *homo religiosus* refers to a particularly religious person within a given (religious) community, that is, to a religious leader. The roots of this usage are much older than the Enlightenment and Linnaeus's *Systema naturae*. In antiquity *religiosus* denoted persons who were scrupulously but not excessively attentive to observances due to gods and humans (Festus, pp. 278 and 289 M; Cicero, *De natura deorum* 2.72). In this sense, Cicero could speak of *homines religiosi* (*Epistulae ad familiares* 1.7.4). Christianization brought overtones of distinctiveness—*religiosi* became persons of special ecclesiastical standing—and this usage was transferred to the vernaculars, as in the English noun *religious* and expressions such as "religious folk" (*Romance of the Rose* 6149).

Later, in reaction to the Reformation's universalization of the religious life, Pietist and Puritan movements emphasized a religious distinctiveness whose center was subjective and individual rather than objective and institutional (a personal *Nachfolge Christi*). Friedrich Schleiermacher thought of religion as neither knowing nor doing but as an experiential awareness of one's absolute dependence upon God. He conceived Christ as the unique person in whom this consciousness received ultimate expression, the person whose fully immediate and perfectly open relationship with the Father qualified him to be the mediator of the divine.

In the twentieth century *homo religiosus* as religious leader has inherited both the medieval meaning of *religiosus* and the liberal Protestant tradition initiated by Schleiermacher. According to Max Scheler, who developed a full version of this view, *homo religiosus* is a particular type of human personality: "the man who has God in his heart and God in his actions, who in his own *spiritual figure* is a transformer of souls and is able in new ways to infuse the word of God into hearts that have softened and yield" (Scheler, 1960, p. 127).

Scheler distinguished the *homo religiosus* from four other exemplars of value: the artist, the leading spirit of a civilization, the hero, and the genius. These other figures are each exemplary in some aspect or other: the hero in deeds, for example; the genius in works. *Homo religiosus*, however, is exemplary in his entire being, which in its totality calls for unquestioning imitation (*Nachfolge*). Moreover, Scheler distinguished several types of *homo religiosus*. Of these, the most significant is the original *homo religiosus*, for historical religious traditions, the founder. Unique in his or her own community, the founder is the medium for a positive revelation of the holy. The various derived *homines religiosi*—followers, martyrs, reformers, priests, theologians, and others—are lesser in stature and reflect the absolute claim advanced by the existence and nature of the perfect *homo religiosus*.

Among modern historians of religions, Joachim Wach spoke of *homo religiosus* in this sense. Unlike Scheler, however, Wach was heavily indebted to Max Weber. He saw the distinctive character of the *homo religiosus* not in an intrinsic

quality or activity of the personality but in the historical and sociological effect of his personal or official charisma.

**RELIGIOUS HUMANITY.** Today, two other senses of *homo religiosus* have eclipsed the definition of *homo religiosus* as religious leader, at least in Anglo-American scholarly parlance. In both cases the term is employed not in a particularistic sense—the *homo religiosus* or *homines religiosi*—but in a generic sense, *homo* referring not to an individual but, as with Linnaeus, to humanity. In one usage, the term is a general designation for all human beings, referring specifically to religion as one constitutive aspect of humanity distinct from others. This usage assumes a fundamental unity of all humankind that is much more than biological, and its proponents speak more of the human condition than they do of concrete religious phenomena.

The Dutch historian of religions Gerardus van der Leeuw openly set this sort of *homo religiosus* in opposition to Scheler's. For van der Leeuw, the human as such emerges in the existential tension between two poles: on the one hand, a fully united collective identity in which the individual is submerged (that is, a primitive mentality, the realm of mysticism); on the other, a duality of subject and object in which a human being strives to render everything a technical object, in the end even itself. With humanity there emerges at the same time both *conscientia* (conscience and consciousness) and, from existential anxiety, a sense of sin—hence God and religion. While van der Leeuw is not unaware of the existence of atheists and agnostics, in his formulation such persons can never escape their own selves, their own *conscientiae*.

More recently, Wilhelm Dupré has seen religion as both a “universal pattern of human self-realization” and a “constitutive presence . . . in the emergence of man” (Dupré, 1975, p. 310). Dupré exposit his conception of humanity by using three expressions, *homo existens*, *homo symbolicus*, and *homo religiosus*, each of which necessitates the next. The symbol, not the existential situation of the subject in the world, is the pivot upon which Dupré's conceptions turn. Because religion is for him both the quality that gives intensity to any process of symbolization and the dimension in which symbolization originates, Dupré sees humanity as inevitably religious.

**HOMO RELIGIOSUS AND HOMO MODERNUS.** In a third meaning, as in the second, *homo religiosus* is a generic term, but here it does not extend to the entire species. Instead, it characterizes the mode of human existence prior to the advent of a modern, secular consciousness. Thus, this usage differs from the second in the seriousness with which it takes secularization as an abandonment of religion and in the weight it assigns religious elements within the modern, secularized world. Its adherents are able to conceive religion in terms of concrete phenomena normally considered religious (such as myths and rites), without recourse to subtle redefinitions governed by their views of humanity in general. At the same time, they may still appreciate religion's secular mani-

festations. Because this view appears above all in the influential writings of Mircea Eliade, it is perhaps the most widely known modern use of *homo religiosus*.

Eliade is struck by the difference between the nature and use of symbols in the ancient classical religions and especially among archaic cultures as opposed to the modern Western intelligentsia. He contrasts two distinct modes of existing in and experiencing the world. His *homo religiosus* is driven by a desire for being; modern humanity lives under the dominion of becoming. *Homo religiosus* thirsts for being in the guise of the sacred. *Homo religiosus* attempts to live at the center of the world, close to the gods and in the eternal present of the paradigmatic mythic event that makes profane duration possible. The experience of time and space for *homo religiosus* is characterized by a discontinuity between the sacred and the profane. Modern humanity, however, experiences no such discontinuity. For *homo religiosus*, neither time nor space is capable of distinctive valorization. *Homo religiosus* is determined indiscriminately by all the events of history and by the concomitant threat of nothingness, which produces a profound anxiety.

The break between the two, however, cannot be complete. Determined by history, modern humankind is thereby determined by its unrenounceable precursor, *homo religiosus*. For support, Eliade points to religious structures in the modern world, such as mythic images suppressed in the modern unconscious and the religious symbols and functions of modern entertainment. Nonetheless, there is a profound difference between archaic reality and modern relic. For *homo religiosus*, recognized structures determine a whole world and a whole person. For modern humanity, these unrecognized structures are particular and private, repressed or relegated to peripheral activities.

The influence of Eliade's notion of *homo religiosus* can be gauged by the amount of discussion it has provoked among scholars. Some, especially anthropologists, question Eliade's data and methods and have come to the radical conclusion that Eliade's *homo religiosus* is never encountered in the field (see Saliba, 1976).

Others point out hidden biases that have skewed what they see as otherwise careful work. Those concerned with women's issues, for example, may find Eliade's view of the genuine human life basically androcentric: Eliade's *homo religiosus* is actually *vir religiosus* (see Saiving, 1976).

A third tack grants Eliade's universal structures but challenges the inferences that he draws. Some wonder, for example, whether archaic structures and their modern survivals might not simply arise from “the organic and psychological constitution of *Homo sapiens*” (Brown, 1981, p. 447). Given human biological unity, they question whether Eliade's differentiation of modern humankind from *homo religiosus* is relevant.

A final critique questions not Eliade's notion of *homo religiosus* but what it sees as his program of revitalizing reli-

gious humanity. For example, Kenneth G. Hamilton, a proponent of the death-of-God theology, finds Eliade's preferences opposed to historical faith (see Hamilton, 1965). Religious humanity surrenders questioning and particularity for openness and universality, and as a result abandons history and morality.

**HOMO RELIGIOSUS IN THE STUDY OF RELIGION.** Clearly, scholars give the term *homo religiosus* a variety of distinctive meanings. In addition, they use it with great variation in specificity and frequency. The expositions given here rely on careful and exact discussions, but many scholars also use the expression casually, and the precise meanings they intend are often difficult to determine. Again, some in the field assign *homo religiosus* a prominent place in their thought, but others do quite well without mentioning the term at all.

The formulation of an adequate concept of *homo religiosus* as such is only rarely a primary scholarly goal. As the varied and often incompatible meanings of the term show, scholars are generally driven by deeper and more substantive questions about religion, and they formulate different views on religious matters in which a phrase like *homo religiosus*—a Latin expression that attracts the reader's attention—can perform a range of services. Nonetheless, so long as the study of religion is conceived of as a human study, some students will find *homo religiosus* a convenient and useful expression.

#### BIBLIOGRAPHY

No general survey is available that covers the entire range of uses of the term *homo religiosus*. The most convenient source for Friedrich Schleiermacher's Christology is his systematic work *The Christian Faith*, translated by H. R. Mackintosh and J. S. Stewart (1929; reprint, New York, 1963). Max Scheler provides hints of a concrete phenomenology of *homo religiosus* in *On the Eternal in Man*, translated by Bernard Noble (London, 1960); a succeeding volume was to include a fuller exposition but was never written. Details are provided by Scheler's essay "Vorbilder und Führer," in *Schriften aus dem Nachlass*, vol. 1, *Zur Ethik und Erkenntnislehre*, 2d rev. ed., edited by Maria Scheler (Bern, 1957), pp. 255–344. For Joachim Wach's views, see his *Sociology of Religion* (1944; reprint, Chicago, 1962), especially chapter 8, "Types of Religious Authority." An internal, experiential dimension is added by scattered but infrequent references to *homo religiosus* in Wach's posthumously published lectures, *The Comparative Study of Religions* (New York, 1958).

Gerardus van der Leeuw develops his views on *homo religiosus* in the context of a discussion of primitive mentality; see his *L'homme primitif et la religion: Étude anthropologique* (Paris, 1940). Similarly, Wilhelm Dupré comes to reflect on the universality of religion when he examines primitive peoples in his *Religion in Primitive Cultures: A Study in Ethnophilosophy* (Paris, 1975).

Indispensable for Eliade's view of *homo religiosus* is his *The Sacred and the Profane* (New York, 1959), which discusses the experience of *homo religiosus* with reference to space, time, nature, and life. The volume contains dispersed contrasts of *homo religiosus* and modern humankind. For these contrasts, see also, among other writings, Eliade's *Myths, Dreams and Mysteries:*

*The Encounter between Contemporary Faiths and Archaic Realities* (New York, 1960) and his *Cosmos and History: The Myth of the Eternal Return* (New York, 1954). A recent article by Eliade discusses technology and mythology in the archaic and modern worlds: "Homo Faber and Homo Religiosus," in *The History of Religions: Retrospect and Prospect*, edited by Joseph M. Kitagawa (New York, 1985).

Discussions of Eliade's notions are still in progress, and a definitive verdict cannot be given. Representative of various critiques of his notion of *homo religiosus* are John A. Saliba's "Homo Religiosus" in *Mircea Eliade* (Leiden, 1976); Valerie Saiving's "Androcentrism in Religious Studies," *Journal of Religion* 56 (April 1976): 177–197, which discusses particularly Eliade's treatment of men's and women's initiation rites; Robert F. Brown's "Eliade on Archaic Religion: Some Old and New Criticisms," *Studies in Religion / Sciences religieuses* 10 (1981): 429–449; and Kenneth G. Hamilton's "Homo Religiosus and Historical Faith," *Journal of Bible and Religion* 33 (July 1965): 213–222.

**HOMOSEXUALITY.** Sexual activity between persons of the same sex is known from many places far and near throughout history. Because the word *homosexuality* derives from the Greek *homos*, meaning "same," and not from the Latin *homo*, meaning "man," the term refers both to sex between males and sex between females, though in practice *lesbianism* is used to refer to sexual relations between females. The image of homosexuality has a special history in the social, medical, and religious discourse of Western culture. This image equates the sexual behavior, personal identity, and sociosexual orientation of a person, often under a negative rubric. Other cultures, however, do not make this equation. Thus to say that someone engages in homosexual activity is different from saying he or she is "homosexual." Moreover, since about the eleventh century CE homosexuality has been seen as antithetical to Western ideas of church, family, and state; this attitude generally reflects a traditional Judeo-Christian cosmology. Homosexual relations in religious contexts outside the Western tradition have a wider meaning.

It has been argued both that homosexuality is universal and, to the contrary, that it is culture-bound to certain societies or historical periods. Part of this controversy depends upon how homosexuality is defined. Victorian scholars such as Krafft-Ebing suggested that homosexuality as an essence indicated nervous degeneracy that produced an inversion of innate instincts. Others, such as Havelock Ellis, saw it differently; and Freud believed that it was “remarkably widespread” in simple societies, because “all human beings are capable of making a homosexual object-choice” based upon bisexual potential and social experience (*Three Essays on the Theory of Sexuality*, New York, 1962, pp. 5–11). The ancient Greeks were an especially puzzling case, as Jeremy Bentham noted, to Victorian scholars, who admired their beautiful art and their accomplishments in literature and philosophy but who detested their customary homosexuality.

Modern research has confirmed Freud’s view that homosexual activity occurs in many simple societies. In a classic comparative study of sexual behavior patterns, Ford and Beach (1951) found that homosexual activity was considered socially acceptable and normative for certain people in 64 percent of the seventy-six societies studied. Moreover, institutionalized homosexuality is known among peoples from parts of Africa and Asia, among North and South American Indian tribes, among peoples on the islands of the Pacific, including New Guinea, and among the Australian Aborigines; it occurs as a religious theme in the ancient world among the Greeks (especially the Dorians and the Spartans), the Celts, and the Romans, in ancient Arabia and Islamic fringe areas, in feudal Japan, in ancient China and Indochina, and in selected Indo-European traditions. Here, religious—or, to be more precise, ritual—homosexuality occurs in relation to phallic cults and fertility symbolism, mythology, and ideas about spirit, seed, and soul, particularly as they concern the creation of the cosmos and maleness in humankind. In some societies, however, same-sex relationships are disliked or defined as taboo; certainly ritual homosexuality is not universal. An analysis of cross-cultural sexual variations does show that in the cultural traditions listed above homosexuality plays a role in respect to the experience of the sacred.

It has been demonstrated that there are three forms of the cultural structuring of homosexual activities and organization the world over: (1) age-structured homosexuality, in which people of the same sex but of different ages are sexually involved; (2) gender-reversed homosexuality, wherein a person adopts the dress, mannerisms, and sexual activities of the opposite sex; and (3) role-specialized homosexuality, in which a person, by virtue of his or her social or religious role, is entitled to engage in homosexual activity. In simple societies these forms usually do not occur together but are mutually exclusive. As described below, most cross-cultural examples of these forms concern only male homosexuality; institutionalized female homosexuality is rare. Contrary to popular Western thought, the first type—age-structured homosexual behavior—seems the most frequent. These social

types can be studied in different ways, each of which provides a somewhat different interpretation. A focus on overt homosexual behavior, for instance, may reveal little about the experience or identities of the persons involved. But it is clear that such ritual homosexual forms do not create the lifelong, habitualized identity that in the West is labelled “the homosexual.” Nor do non-Western homosexual customs necessarily indicate the sexual orientation of the persons involved, because participants in the age-structured type later marry, have children, and may or may not engage in extramarital homosexual relations. The exact causes of these homosexual forms are still unknown. Moreover, to ask what causes these types of homosexuality is very different from understanding how they function or affect individuals and societies. This article shall here examine the latter dimension, on which reliable information exists.

**AGE-STRUCTURED HOMOSEXUALITY.** The most common form of ritual homosexuality is organized through customary sexual relationships between older and younger males. In some cultures the practice is obligatory and universal for all males, usually early in the life cycle and, for the junior partner, before marriage. Age-organized homosexuality is associated with militarized societies as well. Ritual and ceremonial practices frequently provide a social basis for it, thus linking sexuality and religion, though this association is by no means true of all the relevant examples.

Of all age-structured systems, that of the ancient Greeks, the West’s cultural ancestors, is the most famous. In the Hellenic world homosexuality is known among the militaristic Dorians at least as early as 800 BCE. Senior and junior males engaged in homosexual relationships as a part of masculine development. Among the Dorians on Crete, Ephoros describes the experience as an initiation that begins with a ritual capture (*harpagē*) of a boy by his lover; the community acknowledged this by gift giving and feasting, recalling the myths of the pederastic captures of Chrysippus by Laius and of Ganymede by Zeus (see Bremmer, 1980, p. 285). Early Greek homosexuality was fundamentally related to the concept of *aretē*, which in Homer’s time meant “warlike prowess.” *Aretē* implied masculine valor, beauty, and nobility, symbolized, on the earthly plane, by the heroic strength of warrior and athlete, by the spirit and speed of horses, and, on the spiritual plane, by the power of the gods (Jaeger, 1945). Male lovers were known as *erōmenos* (“boy, beloved”) and *erastēs* (“senior, lover”). The ideal was for the senior to transmit the noble qualities of *aretē* to his junior through teaching, love, and sex, the senior receiving sexual pleasure.

The military aspect of Hellenic homosexuality is widely noted. Some scholars feel it has been exaggerated (Hoffman, 1980); certainly it changed over time. The Thebans and Spartans were said to have taken boy lovers with them as comrades and bedmates. The youths in turn learned warrior values and the military arts. The Theban military corps known as the Sacred Band was said to derive its strength from the homoerotic unity of male warrior couples. Many

ancient texts tell celebrated stories of how male lovers overthrew tyrants and defeated invaders. And Plutarch says that “an army consisting of lovers and their beloved ones, fighting at each other’s side, although a mere handful, would overcome the whole world” (Westermarck, 1917, vol. 2, p. 479). In Classical Attic culture, however, the educational and social dimensions of homosexual love were stressed over the military aspect (Dover, 1978).

What did male love mean to the ancient Greeks? The subject has long been a source of controversy, for the ancients have only their texts and art to speak for them. While homosexuality was not directly supported by Greek religion, the polymorphous sexuality of the Greek gods—Zeus himself, for instance, engaged in homosexual love capture, and Aphrodite served as patroness of both heterosexual and homosexual love—is noteworthy. Perhaps polytheism in Greece and in non-Western cultures contributed to the acceptance of homosexuality.

Certainly there is no question that the widely known figures of Greek philosophy, the teacher Socrates and his students Plato and Xenophon, among others, engaged in homosexual relationships as a part of the educational process. The teacher transmitted the noble qualities of *aretē*, knowledge, and virtue in the context of homoerotic love with his students (Dover, 1978). In the Hellenic world, an act could be described as homosexual or heterosexual, but not a person—a view markedly in contrast with the modern one. This was no doubt complemented by the sexual segregation and the taboo on adultery among the Greeks. Still, homosexuality was frowned upon between peers (except with slaves, as among the Romans), and the *erōmenos* went on to marry, father children, and play the role of *erastēs*, which strove toward honor and beauty, “the very heart of the Greek view of life” (Jaeger, 1945, p. 13).

Plutarch reports that in Sparta, at least, noblewomen loved girls as well. There, female initiation involved age-structured lesbian relationships like those of males. The writings of Sappho suggest a similar ritual background.

Age-asymmetric homosexuality was also known in ancient Rome, though the Roman attitude toward it was more ambivalent. The Romans drew upon and emulated Greek culture in many ways, and Livy reports male homosexual intercourse as a part of Bacchic rites in the early Roman Republic. Homosexuality among nobles seems to have elicited a mixed reaction among Romans. Most Romans focused upon the negative character of effeminacy, seduction, and prostitution among those who engaged in homosexual activity, consistent with their patriarchal culture and imperialistic worldview. Nonetheless, there was probably no law against homosexuality until late in the Roman Empire. The masculine senior role in homosexual relationships was widely regarded and honorable; one need only recall the emperor Hadrian’s unending devotion to his dead male lover, the Greek youth Antinous, as a renowned expression of erotic fidelity. The complexity of the Roman response to homosexuality

may have to do with many and diverse influences, which, through Roman conquests, trade, and the advent of Christianity, introduced heterogeneous standards into Roman culture and cosmology.

Age-structured homosexuality appears as a more general theme in various Indo-European traditions from which historical evidence has survived. Most sources suggest that the Celts practiced ritual pederasty, whereas the Irish and Welsh probably did not (see Bremmer, 1980, p. 288). Obligatory homosexuality existed in ancient Germany and Albania and was no doubt linked to their warrior traditions. Here again, age-structured homoeroticism belonged to a transitional period before adulthood, young men engaging in anal intercourse with boys. Because these peoples strongly condemned passive homosexuality in adults (as did the Greeks and Romans), it is reasonable to conclude that whereas for boys the passive role was required, honorable, and masculine, for adults it was dishonorable and despised.

The evidence indicates that homosexuality was broadly accepted and known from the Near East and Mediterranean in biblical times. Homosexual prostitution was known in ritual cults of Mesopotamia and Canaan. Mesopotamian law codes do not mention homosexuality. The Hittite code prohibits only father-son incest, and the Middle Assyrian code forbids only homosexual rape. In the Hebrew scriptures only *Leviticus* 18:22 and 20:13 generally prohibit male homosexuality. It has been argued that negative attitudes toward homosexuality, however, did not take hold until late antiquity. Both Hebrew and Christian dualistic oppositions between good and evil, spirit and flesh, male and female promulgated an ascetic ethos, which repudiated pleasure of all kinds as detrimental to salvation and spirituality. Early Christianity assimilated a view that opposed all sexual pleasure and was generally antagonistic to homosexuality (Greenberg and Bystry, 1982). Following this, church doctrine was ambiguous regarding homosexuality until about the eleventh century CE; thereafter, ecclesiastical law and centralization of the church in the context of European state formation increasingly restricted and criminalized homosexual contact.

Islamic societies held a different and more tolerant, informal attitude toward homosexuality. Indeed, *Šūfis* saw homosexual relations as an expression of the spiritual link between man and God. Some authorities suggest that Islamic ideas influenced the biblical practice of oath taking on the father’s penis. They point to *Genesis* 47:29–31, wherein Jacob, on his deathbed, makes his son Joseph swear he will remove him from Egypt, pledging loyalty by touching Jacob’s penis. This practice may have been a symbolic survival of noble homosexuality in ancient Arabia that involved a primitive rite of transference of male force, from a powerful adult warrior to a younger recruit homoerotically attached to him in order to acquire military and civic education. The same authorities compare the practice to Dorian homosexuality. Modern examples of male homosexuality are known from North Africa and Morocco, and female homosexuality

is reported in harems of certain Muslim societies around the world. Age-structured homosexuality of the ancient Arabian form has been reported in modern times in the Oasis of Siwa.

Love between men in ancient China was seen as an alternate erotic expression not antagonistic to the family or to heterosexual marriage. In some respects the dualistic cosmology of the ancient Chinese, with the principles of yin and yang, was neutralized in the homosexual act. Homosexual love appears to have reached a popular high point in the Han dynasty, when the emperor Aidi cut off the sleeve of his robe when called to court audience rather than awaken his male lover; after this, in Chinese literature, homosexuality was known as "the love of the cut sleeve." Many similar stories are found in feudal Japanese literature.

Age-structured homosexuality was prevalent and esteemed in the militarized feudal order of Japan up to the beginning of the Meiji era (1868). Some of the great shoguns and samurai kept male lovers to provide emotional and sexual support. The youth in this role was esteemed and was given a secure position in the feudal hierarchy. In the seventeenth-century Japanese novelist Saikaku Ihara's book *Comrade Loves of the Samurai* (Tokyo, 1972), are found romantic tales of how samurai sons were urged by their families to form homoerotic alliances with warriors that matured into lifelong companionships, alongside their marriages. The Japanese attitude toward women was similar to that of the ancient Greeks: Women were to be married and produce heirs, whereas boys were for pleasure and companionship. "Samurai warriors would select a particular youth as a favorite and like the Homeric Greeks, a *samurai* would keep a particular lover by his side during battle" (George DeVos, *Socialization for Achievement*, Berkeley, Calif., 1973, p. 269). Because of this homoerotic interest, both male and female houses of prostitution were known in feudal Japan, though the male inmates were probably not boys of noble or samurai birth. The Kabuki theater of Japan is said to have originated from a shogun's preference for male performers.

The Azande of Africa also practiced an age-structured kind of "military homosexuality." The king's household contained hundreds of wives and some boys, all of whom were "married" to him. Young warriors married boys, and a commander could have more than one "boy-wife." When they married, the boy was given spears by his lover; warrior and boy addressed each other as "my love" and "my lover." They traveled together, and the boy kept the senior's household in order. When he matured, the warrior gave him bride-wealth so he could marry in turn and take boy lovers of his own. The example of the Azande suggests that asymmetric homosexuality flourished in a situation in which few females were available for marriage because of polygyny, complexity of marriage arrangements, and warrior segregation (themes also present in Pacific island societies).

The most recent and detailed studies of age-structured homosexuality come from Melanesia, a culture area in which the ancient influence of phallic cults and initiation rites pro-

vides striking parallels with the warrior homosexual ethos noted elsewhere. It has been demonstrated that between 10 and 20 percent of all Melanesian societies, ranging from Fiji and New Caledonia to Malekula Island in Vanuatu and other off-lying islands and lowland areas of New Guinea, practiced ritualized male homosexuality; in the Papuan Gulf region of New Guinea it was universal. Moreover, various Australian Aboriginal tribes, especially those of the Kimberleys and central desert area, had similar customs. The current evidence indicates that these traditions resulted from an ancient migration of peoples into the area around Melanesia some thousands of years ago.

In these societies ritual initiation customs placed homosexuality in a highly structured socioreligious context. The adjective *ritualized* applies best to the Melanesian situation because (1) homosexual practices were implemented through male initiation rites (2) that had sacred significance for society and the individual, (3) the cultural rules and social roles of which were supported by the wider moral-jural force of society or of a secret men's society, (4) which prescribed sexual intercourse between senior and junior males based upon social and kinship taboos. Typically, Melanesian homosexual contact made older adolescent or married men the dominant partners and prepubescent or adolescent boys the passive partners. In most groups age-asymmetric homosexuality was obligatory for all males. It was by nature a transitional sociosexual form that masculinized boys, making them into mature men who eventually married. However, in certain societies, such as the Malekula, the Marind-anim of southwest New Guinea, and the Ingiet secret society (of New Britain), older men were expected to be dominant inseminators of boys, even though they were married and could be grandfathers. In such societies, then, it is appropriate to speak of a pervasive bisexual orientation in the male life cycle.

The military character of Melanesian homosexuality was elaborate and should be underlined. Virtually all of the relevant cultures were caught in a web of intensive and constant Stone Age warfare. Their phallic cults and secret societies not only promoted fertility but constituted the warriorhoods that defended the community and raided neighboring tribes. Initiation into the men's club thus meant entry into military life. Women and children were excluded from secret cult activities, as would be expected in the extreme form of patrilineal culture found there. Phallic worship was omnipresent. John Layard in *Stone Men of Malekula* (London, 1942, p. 489) states that in the New Hebrides (Vanuatu) the penis is held in "high esteem" and the glans penis is accorded "extreme reverence"; elsewhere he refers to these groups as "male admiring societies."

Melanesian homosexual rites involved the transmission of male power by physical means, anal or oral insemination strengthening a boy's penis, body, and masculine character. Little wonder that Arnold van Gennep, in his classic *Les rites de passage* (Chicago, 1960, pp. 169–171), refers to coitus as a rite of great efficacy, and to homosexual insemination as

a final ceremony of incorporation into these male cultures. Such rites should be seen in the broader context of customs that effect boys' submission to the sacred authority of gods and elders. For the Marind-anim, ritual homosexuality was bound up with daring headhunting raids into distant enemy groups; for the Keraki of Papua and the Sambia of the Papuan fringe, the attainment of manhood required participation in war raids, followed by serving as dominant homosexual partners for initiated boys. Homosexuality thus went hand in hand with military training and socialization into the masculine role.

Sexual antagonism is a prominent theme in these Melanesian tribes; some sexual segregation of men and women occurred in all of them. Institutionalized secrecy was supported by ritual sound-producing instruments, such as sacred flutes and bull-roarers, that both protected the cult and symbolized its power over others, thus serving as symbols of male religious orthodoxy. The secret significance of these instruments has been shown to stem from heterosexual hostility and segregation and from men's envious imitation of women's procreative powers. In this context the Dutch authority Jan van Baal goes so far as to refer to Marind-anim homosexuality as the "dark secret" of a phallic religion. Women often were perceived by men as fertile, polluting, and depleting of male life force. Strict taboos on adultery, menstruation, childbirth, and virginity were common. Marriage practices were political arrangements without much freedom of choice. Sister-exchange and bride-wealth marriage customs created alliances between clan groups or villages and enemy groups. It has been found that senior men were expected or allowed to inseminate their wives' younger brothers (i.e., their brothers-in-law) in tandem with impregnating their wives. Polygyny and a shortage of women, too, made institutionalized homosexuality a pragmatic sexual outlet for unmarried mature males. Among the Big Nambas tribe of Vanuatu, it reached an extreme form, in which chiefs were said to exercise a monopoly over females as wives and over boys as lovers, some chiefs becoming so attached to boys that they preferred them to their wives. It is notable that Vanuatu is the only Melanesian area in which institutionalized lesbianism is known.

In the Melanesian world, ritual in general and homosexual rites in particular drew a special boundary between the sacred and profane arenas of culture. The belief system underlying the differences between male and female development must be noted. Females were widely perceived to be "naturally" fast-growing, fertile, and reproductively competent, males slow to grow and not "naturally" fertile or reproductively competent. Here semen and menstrual blood were antithetical; groups such as the Sambia believed they must eradicate "female blood" from boys and then inseminate them through homosexual intercourse in order for them to attain manhood. Thus, women naturally procreated, and men used ceremonies to create spiritually and symbolically "reborn" boys. Insemination thus placed boys in the sacred realm, and initiation created a years-long liminal phase of de-

velopment ultimately leading to the profane and sexually dangerous adult experience of heterosexual marriage.

This dichotomy sheds light on a puzzling bifurcated pattern of homosexuality in Melanesia. Are homosexual relations "real" or "mythical," in Layard's terms? In the vast majority of these societies it has been found that actual homosexual activity occurs for years, as noted. In a small number of societies, however, actual homosexual intercourse may or may not occur, may occur only once, as among the Ingiet cult, or may occur only as a theme in social consciousness or mythology. In most groups, homosexual penetration and submission stress a stronger relationship to the sacred; those cultures that de-emphasize it place homosexuality closer to the profane arena. An intermediate example is the Kaluli of New Guinea, for whom homosexuality was voluntary rather than obligatory, and who stressed symbolic marriage to female spirits as a transition into actual heterosexual relations later (Schieffelin, in Herdt, 1982). Thus the Kaluli saw homosexuality as a profane counterpart to heterosexuality, which was, for them, socially and spiritually higher.

Many scholars have noted the similarities between age-structured homosexual organizations the world over. The comparison of the ancient Greeks and Melanesians is widely cited and seems appropriate, in spite of the cultural differences between their worlds. The Melanesian systems are more closely like those of lowland Amazon tribes, wherein ritualized homosexuality, warfare, and sexual antagonism are also prominent. Yet, Jane Harrison's idea (in *Themis*, New York, 1961) that among the Greeks and primitive peoples, initiations transform boys from a "woman thing" into a "man thing" seems to be borne out. The trend of age-structured homosexuality everywhere was to promote and accomplish the masculinization of boys.

**GENDER-REVERSED HOMOSEXUALITY.** A different social form is based on the adoption of the gender role, dress, and mannerisms of the opposite sex, leading to a different type of homosexual contact. Sometimes this is referred to as institutionalized transvestism, or cross-dressing. It has been found to occur in selected indigenous societies of North and South America, island Polynesia, and Southeast Asia, and among preliterate and peasant groups in mainland Asia and Africa. Gender-reversed homosexuality is associated, although not exclusively, with shamanism as a religious institution. Though the phenomenon is reported in both sexes, male examples are more frequent in the literature. Usually this form exists in societies where it is believed that a small number of individuals in each generation aspire to the gender role of the opposite sex. Gender reversal usually begins in childhood, has recognized customs associated with it, and is acknowledged by the society.

Gender-reversed homosexuality is inextricably linked with symbols of sexual ambiguity in many cultures. Role and erotic inversion here make this symbolic association understandable. If blurring of the genders is present in the cosmology of a society, gender reversal can be expected in socioreli-

gious practice. In the Greek pantheon, for instance, Athena and Dionysos were born of Zeus, blurring on the cosmic plane the boundary between male and female reproduction. In India, Śiva reproduced by spilling his sperm, and Samba, the divine son of Kṛṣṇa, not only engaged in homosexuality but also dressed as a woman to seduce the wives of other gods. Likewise, the *hijāda* role provides a contemporary example of actual gender reversal in Northwest India. Males in this role wear women's clothes, beg alms, and perform as women in ceremonies, though it is unclear whether they engage in homosexual activity. Other examples from ancient and modern times reveal the same link between cosmic sexual ambiguity and actual gender reversal (Carrier, 1980; Hoffman, 1984).

The institution of the berdache (from the Arabic word *bardaj*, meaning a boy slave kept for erotic purposes) is perhaps the best-known anthropological example of gender-reversed homosexuality. Some 115 North American Indian tribes had this traditional role. Most of these groups were hunters and gatherers, some of which permitted a surprising degree of sexual equality. Among the Plains Indians, warfare was also common. Though the male-to-female form of gender reversal is most famous, some 35 of these cultures also recognized female berdaches, who as girls acted and dressed as boys. Three signs indicated that a person could become berdache: preference for occupations of the opposite sex, the adoption of dress and mannerisms indicative of the other sex, and the choice of same-sexed persons as sexual partners. Some berdaches became ritual experts and shamans, and cases are reported of female berdaches who were skilled hunters and great warriors. Few berdaches were biologically abnormal or hermaphroditic. These societies both recognized and legitimized the berdache "calling," which occurred usually in childhood or by vision-quest experiences in adolescence. Berdaches could marry, adopt children, acquire property, and generally participate in most aspects of tribal life. Hostility to the institution of berdache by white settlers and missionaries resulted in the abandonment of the role by the late nineteenth century, though a recent report suggests the survival of acculturated berdaches in some places.

The ranked societies of Polynesia, Tahiti in particular, are associated with gender-reversed homosexual organization. The role of the *mahu* in Tahiti has been reported in depth, and the cross-dressing and feminization of *mahu* males appear very similar to those of the berdache. Female *mahu* are also historically reported. In modern times community response to the *mahu* has varied, with approval of gender-role reversal but disapproval of homosexual behavior. Religious activity seems unrelated to the role.

The obvious sociosexual trend of gender-reversed homosexuality for males is feminization; this is in marked contrast to the age-structured form. Moreover, these traditional gender-reversed roles suggest a lifelong pattern of exclusive homosexual activity, a pattern also at variance with those developed where the age-structured type is practiced. It should

be noted that among Melanesian societies, cross-gender and transvestite behavior are very rare (Herdt, 1984), as was true for the ancient Greeks and others. Hermann Baumann (1955) was perhaps the first scholar to recognize that the age-structured masculinizing form of homosexuality is fundamentally different from the feminizing gender-reversed type found elsewhere. Moreover, he demonstrated that the masculinizing role should not be equated with the androgyne figure in myth or ritual.

**ROLE-SPECIALIZED HOMOSEXUALITY.** The third form of homosexual organization is based solely on the entitlements of a status or role not widely held in a culture. Thus, for example, the person who became a shaman among the Chukchi tribe of Siberia was entitled by supernatural intervention to reverse gender roles and to engage in homosexual behavior, though this was disapproved for others in the society. Here one must consider the element of what Mircea Eliade calls "divine bisexuality," the idea that a special role—usually religious—"is fraught with sacredness" (*Birth and Rebirth*, New York, 1958, p. 25). In simple societies this is different from the obligatory involvement in age-structured homosexuality for all males and from individual expression of gender reversal for selected people noted above. However, examples also show that role-specialized homosexuality in complex societies diverges from a purely religious basis to encompass wider meanings. Because some complex examples do not involve gender reversal, moreover, it is important to avoid confusing the categories of gender-reversed and role-specialized homosexuality.

In ancient societies numerous examples of role-specialized homosexuality drew their support from the religiosity of divine bisexuality. Male and female temple prostitutes who engaged in homosexual activity under the protection of religious cults in Mesopotamia and Canaan are relevant. In the Roman world Semitic cults that utilized gender reversal and homosexuality were role-specialized, the most famous priest in this context being Elagabalus. In these social settings religious morality legitimized homosexual conduct. One should not forget, however, the negative and chaotic consequences of "good" versus "bad" moral choices that could flow from homosexual customs in certain ancient traditions like that of the Greeks. Here a combination of divine royal power and aberrant homosexual choice, as in the Greek myth of Oedipus, arises repeatedly and hangs over the mythology of Western sexuality. It will be recalled that Laius, the father of Oedipus, abducted the boy Chrysippus out of homosexual desire. In rage the goddess Hera, guardian of marriage, sent the Sphinx to destroy Thebes. Eventually, by trickery, Jocasta produced a son from Laius: Oedipus, whom Laius tried to kill. The rest of story is well known; it ends in incest, patricide, Oedipus's self-inflicted blindness (symbolic self-castration), and madness, themes reflected in Shakespeare's great tragedy, *Hamlet*. These mytho-symbolic images of "bad" moral choice foreshadow the ambiguous status of role-specialized homosexuality in the modern Western era.

Role-specialized homosexuality in tribal societies is strongly identified with shamanism. The divine or celestial origins of shamanic curative and medicinal powers is widely attested. What is more, transvestite shamans having important supernatural powers are known on both sides of the Pacific and into Indochina as well. The Chukchi shaman is particularly well known in this respect, and it has been demonstrated that Chukchi shamans cross-dress and engage in homosexual relations, some even taking husbands. Among those who remain heterosexual, their spirit guides still oblige them to dress as women.

An intermediate case of role-specialized homosexuality, which began in a shamanic tradition but changed into a secular form, is provided by the so-called flower boys (*hwarang*) of Silla, known from the Yi dynasty in Korea. Here the concept of *midong* ("good-looking boys," with pederastic overtones) is noteworthy. These boys dressed as girls and accompanied wandering musicians and players. They were sometimes married to the latter, and served as entertainers; they would thus seem to suggest attributes of both age-structured and gender-reversed homosexuality. Yet, they were historically associated with popular shamanic performances and were referred to in terms of the literary and theatrical homosexual traditions of China and the chivalrous homosexual code of medieval Japan.

A more recent and secularized role-specialization example—this one concerning lesbianism—is known from the nineteenth-century Canton Delta in China. Certain villages in this patriarchal class society established girls' houses, wherein girls formed strong affectional and economic bonds with each other. It was notorious throughout China that many of these girls formed lesbian relationships. Non-Buddhist religious sects influenced the young women by stressing sexual equality and purity through nonmarriage. The introduction of the silk industry in this area in the 1860s supported the practice of lesbianism, because families encouraged their daughters to take vows of "popular spinsterhood," rather than lose their income. These spinsterhood bonds were not deviant but were accepted at the time; no other institutional form of lesbian contact occurred in these communities or was acceptable. Remnants of this lesbian sisterhood are still to be found in Hong Kong and Taiwan today. In other words, this role-specialized social form involved homosexual relations but was not gender-reversed or age-structured.

How is homosexual behavior in modern Western society to be interpreted, particularly in light of the trichotomy described here? A partial answer to this question was provided in the historical perspective on homosexuality, noted above, following the fall of the Roman Empire. Role-specialized homosexuality is the most complex category of the three, for it implies elements of social support and ambivalence, normative and gender-reversed behavior, and specialization of socioeconomic and cultural interests. Over the past century homosexuality has undergone a dramatic transfor-

mation, from the "disease of effeminacy" to the modern gay rights movement. It must be made clear, however, that the modern social category and erotic identity signified by the term *gay* is not the same as homosexual organizations or roles found in ancient times and in other cultures (cf. Boswell, 1980); it is in several respects a unique development in human society. This suggests a change from a predominantly gender-reversed feminization to a more frequent masculinization of overt homosexuality in popular culture. In Latin American cultures, such a symbolic transformation is problematic, for as Joseph Carrier notes, gender roles are still defined with respect to the hypermasculine ideal model known as machismo. Western culture, more broadly, has seen a gradual change from the specific identification of gender-reversed homosexuality with specialized roles in the theater and art world. Was it not Freud (*Group Psychology and the Analysis of the Ego*, 1960, p. 94) who said, "In the great artificial groups, the church and the army, there is no room for woman as a sexual object"? In this sense, contemporary age-asymmetric masculine homoerotic bonding in complex societies was until recently restricted to male clubs, military boarding schools, and the armed services. The gay rights movement and related social changes are altering this view, as homosexuality is increasingly decriminalized and removed from the medical category of psychopathology in Western countries.

Recent Western attitudes toward homosexuality are strongly linked to religious history and theology, but broader socioeconomic trends since the late Middle Ages have played an equally powerful role. Historical research has challenged the widely held view that hostility toward homosexuality was merely the result of the Judeo-Christian tradition (Greenberg and Bystryn, 1982). It has been demonstrated that polytheistic societies are generally more tolerant of homosexuality than are monotheistic ones (Hoffman, 1984), though exceptions to this generalization are plentiful. Perhaps the institutionalization of religiously supported sexual morality, as much as anything, fosters disapproval of sexual behavior deviating from heterosexuality. Other factors, such as trends to urbanization and the establishment of capitalistic industrial apparatus, have undoubtedly contributed to changes in Western attitudes toward homosexuality (Boswell, 1980; Foucault, 1978), yet these trends too cannot account for certain historical examples (Greenberg and Bystryn, 1984). The development of complex state and church bureaucracies, with associated unconscious responses to all deviance, including homosexuality, may eventually provide more adequate institutional and psychosocial explanations of the special image homosexuality occupies in Western discourse.

#### BIBLIOGRAPHY

The literature on homosexuality is immense and varied, though much of it is limited to study of modern Western nations.

The classic, and still useful, cross-cultural study of the subject is Clellan S. Ford and Frank A. Beach's *Patterns of Sexual Behavior* (New York, 1951). Of the older encyclopedic surveys, Havelock Ellis's *Studies in the Psychology of Sex*, 7 vols. (Philadelphia, 1900–1928), and Edward A. Westermarck's *The Origin and Development of the Moral Ideas*, 2d ed., 2 vols. (London, 1917), are still valuable. Hermann Baumann's *Das doppelte Geschlecht: Ethnologische Studien zur Bisexualität in Ritus und Mythos* (Berlin, 1955) remains the classic sourcebook on bisexuality and homosexual images in comparative symbology. For recent anthropological surveys, see Joseph M. Carrier's "Homosexual Behavior in Cross-Cultural Perspective," in *Homosexual Behavior: A Modern Reappraisal*, edited by Judd Marmor (New York, 1980), and my collection of essays titled *Ritualized Homosexuality in Melanesia* (Berkeley, 1984).

The material on the ancient Greeks and related classical traditions in this article is based on Richard J. Hoffman's "Some Cultural Aspects of Greek Male Homosexuality," *Journal of Homosexuality* 5 (1980): 217–226, and "Vices, Gods, and Virtues: Cosmology as a Mediating Factor in Attitudes toward Male Homosexuality," *Journal of Homosexuality* 9 (1984): 27–44; Jan Bremmer's "An Enigmatic Indo-European Rite: Paederasty," *Arethusa* 13 (Fall 1980): 279–298; K. J. Dover's masterpiece, *Greek Homosexuality* (Cambridge, Mass., 1978); and Werner Jaeger's *Paideia: The Ideals of Greek Culture*, vol. 1, *Archaic Greece: The Mind of Athens*, 2d ed., translated by Gilbert Highet (Oxford, 1945).

For Melanesian materials, see my book *Guardians of the Flutes* (New York, 1981) and two collections of studies that I have edited: *Rituals of Manhood* (Berkeley, Calif., 1982) and *Ritualized Homosexuality in Melanesia* (Berkeley, Calif., 1984), mentioned above. In *Rituals of Manhood*, which presents comparative findings on male initiation rites, Edward L. Schieffelin's "The *Bau A* Ceremonial Hunting Lodge: An Alternative to Initiation" is particularly noteworthy. For an examination of androgyny and ritual in Melanesia, see Fitz John Porter Poole's superlative study "Transforming 'Natural' Woman: Female Ritual Leaders and Gender Ideology among Bimin-Kuskusmin," in *Sexual Meanings*, edited by Sherry B. Ortner and Harriet Whitehead (Cambridge, U.K., 1981), pp. 116–165. For the most comprehensive study of comparative religious ethics, with special reference to Melanesia, see Jan van Baal's fascinating study *Man's Quest for Partnership* (Assen, 1981). These works also contain useful bibliographies for reference to the wider literature.

A recent survey of the North American Indian *berdache* can be found in Harriet Whitehead's "The Bow and the Burden Strap: A New Look at Institutionalized Homosexuality in North America," in *Sexual Meanings*, pp. 80–115.

For studies on homosexuality in the Western tradition, see Evelyn Hooker's "Sexual Behavior: Homosexuality," in the *International Encyclopedia of the Social Sciences*, edited by David L. Sills (New York, 1968), vol. 15, pp. 222–233, and the more recent *Bisexual and Homosexual Identities: Critical Theoretical Issues*, edited by John P. Decco and Michael G. Shively (New York, 1984). Michel Foucault's *The History of Sexuality* (New York, 1978), although specialized and controversial, provides a new philosophical and sociohistorical critique of homosexuality in Western discourse. Also notable is John

Boswell's *Christianity, Social Tolerance, and Homosexuality* (Chicago, 1980), which surveys homosexuality in western Europe from the beginning of the common era to the fourteenth century. Finally, two studies by David F. Greenberg and Marcia H. Bystryn brilliantly rethink the history of intolerance and cultural structuring of homosexuality in the West: "Christian Intolerance of Homosexuality," *American Journal of Sociology* 88 (November 1982): 515–548, and "Capitalism, Bureaucracy and Male Homosexuality," *Contemporary Crises* 8 (January 1984): 33–56.

*Revised Bibliography*

**HÖNEN** (1133–1212), more fully Hōnen Shōnin Genkū, was a Japanese Buddhist priest and reformer, and the founder of the Jōdoshū sect of Japanese Buddhism. Hōnen's life reflects the changing times in which he lived as well as his role in those changes. He was born in the fourth month of 1133 in Mimasaka province (modern Okayama prefecture) into a provincial military family. The military clans of Japan were then embroiled in a struggle with the nobility for control of agricultural lands, and in 1141 Hōnen's father, Uruma Tokikuni, was killed in a skirmish over possession of a local manor. The young Hōnen was sent to a nearby Tendai Buddhist temple, the Bodaiji, probably for protection from his family's enemies. Hōnen seemed a promising candidate for a clerical career and was therefore sent in 1145 to continue his novitiate at the Tendai main temple of Enryakuji on Mount Hiei near Kyoto. His training went well, and in 1147, at the age of fourteen, he was formally ordained into the Tendai priesthood.

Hōnen was a serious and dedicated monk. His early biographies reveal that in the years following his ordination he

read the entire Buddhist canon three times and mastered not only the Tendai doctrines but those of the other contemporary schools as well. Conditions then, however, were every bit as unsettled on Mount Hiei as elsewhere in Japan and hardly conducive to a life of study and contemplation. The great national struggle between the nobility and the provincial military clans (the same struggle that had claimed the life of Hōnen's father) was rapidly increasing in intensity, and the monastic establishments of the day, including the Tendai order, had become deeply involved in this struggle. Not only was political intrigue rife on Mount Hiei, but numbers of monks had been organized into small armies that engaged in constant brawls with the monastic armies of other temples and with the troops of the Taira military clan, which had by then occupied Kyoto, the capital.

In 1150 Hōnen sought refuge at the small Tendai retreat of the saintly master Eikū (d. 1174) located at Kurodani on the flanks of Mount Hiei. Eikū's small community was a center of Pure Land Buddhist devotion. Hōnen spent twenty-five years there studying the Pure Land scriptures and cultivating *nembutsu zammai*, a meditational trance (*samādhi*) in which the devotee concentrates upon Amida Buddha (Skt., Amitābha or Amitayus), the Buddha of the Western Pure Land.

The worship of Amida Buddha had been growing in Japan since the late tenth century, when the Tendai monk Genshin (942–1017) published his compendium on Pure Land thought and practice, the *Ōjōyōshū* (Essentials of Pure Land rebirth). This Buddhism, which had enjoyed wide popularity in China from the sixth century CE, teaches the existence of a purified Buddha field, a “pure land” presided over by Amida Buddha and situated far to the west of the known world. Those who wholeheartedly devote themselves to this Buddha can be saved by rebirth in this Pure Land after death. Those reborn there will receive the status of a *bodhisattva* and achieve their own enlightenment and buddhahood in but one final lifetime.

The appeal of this kind of Buddhism was growing in Hōnen's time because of a deepening conviction at all levels of society that Japan and all the world had entered the age of the decadent *dharma* (Jap., *mappō*)—a desperate time predicted in the scriptures when the Buddhist establishment, teachings, and even the spiritual capacities of humankind would plummet and the world would be plunged into strife and natural calamity. This conviction was based not only upon an assessment of the decadent monastic institutions and bloody civil conflicts of the age in Japan but also upon consideration of the appalling conflagrations and famines that ravaged the capital district in those times. Because none could achieve emancipation through his own efforts in the traditional ways of discipline, works, and wisdom, the only recourse was rebirth in the Western Pure Land through devotion to Amida Buddha. The swelling tide of Pure Land faith in Hōnen's time was further augmented by its appeal to a new clientele that had until then been largely disenfran-

chised from participation in the Buddhist quest—common people and especially the rural folk.

Hōnen also found spiritual solace in Pure Land faith. While at Kurodani he absorbed himself in the Pure Land scriptures and in cultivation of the *samādhi* of meditation upon Amida. This practice was a legacy of Genshin's *Ōjōyōshū*, which teaches a fervent contemplation (meditative envisualization) upon Amida's resplendent body while invoking his name with the formula “Namu Amida Butsu” (“Homage to the Buddha of Limitless Light”), and repeatedly circumambulating his image. The primary goal of this practice was an ecstatic realization of the nondual Buddha mind—that is, a profound enlightenment experience. A secondary goal was to assure one's rebirth into the Pure Land by achieving a perfect vision of Amida as he would appear in welcoming descent at the moment of one's death.

Hōnen did not, however, find spiritual satisfaction in these exercises even after many years at Kurodani. His later writings reveal that he was convinced that he himself dwelt in an age of decadent *dharma*. He considered the achievement of enlightenment by himself or his contemporaries to be all but impossible, and even the attainment of a perfect vision of Amida to be impractical. In this conviction, Hōnen had recourse to an alternative Pure Land teaching.

In addition to the extremely arduous *nembutsu zammai*, Genshin had also prescribed a practice of simply calling upon the name of Amida Buddha (invocational *nembutsu*), constantly and with deep devotion, but especially at the moment of death, in the hope of thereby eliciting Amida's compassion and being brought by him for rebirth into the Pure Land. Within orthodox Tendai circles, this was considered a practice inferior to *nembutsu zammai* and suitable only as a last resort for sinners and others incapable of the correct practice. Hōnen became convinced that this last resort was the only resort for him and his contemporaries. This conviction was based not only on his own experiences but also on the teachings of the great Chinese Pure Land master Shandao (613–681), whom Hōnen discovered in *Ōjōyōshū*. Shandao emphatically taught, and Hōnen came to agree, that calling upon Amida Buddha's name was not an inferior practice at all, but the practice especially designed by Amida for the salvation of otherwise hopelessly damned humankind during the age of the decadent *dharma*.

In the spring of 1175, at the age of forty-two, Hōnen acted upon his new conviction. He left Eikū's Tendai retreat, took up residence in the suburbs of the capital, and began to teach and practice the exclusive cultivation of invocational *nembutsu*. This marked a definitive departure of the Japanese Pure Land movement from its traditional Tendai home. Hereafter it would pursue an independent course both doctrinally and as a community. The Jōdoshū sect of Japanese Pure Land Buddhism, which became the first independent Pure Land Buddhist community in East Asian history, dates its founding from this time.

During the next quarter century, Hōnen taught widely and wrote voluminously on the way of the Pure Land. He gathered around himself a small community of disciples and lay followers. He also became one of the most respected clerics of his age, preaching and ministering to nobility, lecturing at the national temple, Tōdaiji, and becoming the personal chaplain to the regent to the throne, Kujō Kanezane.

Hōnen's most important composition during this period was the *Senchaku hongan nembutsu shū* (Treatise on the selected *Nembutsu* of the original vow). Composed in 1198 at the request of the regent Kanezane, this work establishes the principles of an independent Pure Land movement with regard to both theory and practice. It divides Buddhism into two paths, the difficult path to enlightenment, impractical in an age of decadent *dharmā*, and the easy path for all, that of rebirth in the Pure Land. Moreover, Hōnen's work maintains the legitimacy of a Pure Land school (Jōdoshū) and designates this school's patriarchal lineage and scriptural canon. It also demonstrates that, among all possible means to Pure Land rebirth, the *nembutsu* of calling on Amida's name is the practice especially selected and guaranteed by Amida Buddha because it is the easiest practice, available to all. Further, the *Senchakushū* repeatedly urges its readers to keep the *Nembutsu* constantly on their lips so as to avail themselves of rebirth into Amida's Pure Land and emancipation from the sufferings of both this life and countless future transmigrations.

Hōnen's following and influence had by now become so great as to be seen as a challenge by the established monastic orders. His Pure Land teachings rejected the fundamentals of their faith and his claim of legitimacy for the Pure Land school flew in the face of one of their most cherished presumptions: that only the emperor could establish a legitimate Buddhist institution. These resentments took a serious turn in 1204 when the monks of the Tendai order petitioned their abbot to suppress Hōnen's movement. Hōnen responded by imposing on his disciples a seven-article pledge (the Shichikajō Seikai) to abstain from such excesses as criticizing other schools of Buddhism, encouraging violation of the Buddhist precepts (on the pretext that those who rely on the *Nembutsu* need have no fear of committing evil), and spreading heretical doctrines while falsely claiming them to be those of their master Hōnen.

This mollified the Tendai establishment for a time, but in the following year (1205) the powerful Kōfukuji order of Nara presented a formal petition to the Cloistered Emperor Go-Toba, accusing Hōnen's movement of nine specific heresies and infractions and demanding its suppression. This Kōfukuji petition (*Kōfukuji sōjō*) accused Hōnen and his followers of (1) presuming to establish a new Buddhist school or sect, (2) making new and unauthorized icons, (3) neglecting Śākyamuni Buddha, (4) condemning practices other than *nembutsu*, (5) rejecting the Shintō gods, (6) distorting the Pure Land teachings by rejecting practices other than *nembutsu* as means to rebirth, (7) misrepresenting *nembutsu*

by rejecting the superior meditative and contemplative *nembutsu* in favor of the inferior invocational *nembutsu*, (8) rejecting the Buddha's monastic community and discipline, and (9) instigating disorder and rebellion in the nation.

No immediate action was taken by the emperor, and Hōnen might well have weathered this storm, for he was highly regarded in court circles. But late in 1206 two of his disciples engaged in an indiscretion that had serious repercussions. During the absence of Go-Toba, the priests Anraku and Jūren led the emperor's ladies in a Pure Land devotional service that continued throughout the night. The jealous emperor was furious and acceded to the demands of the Kōfukuji monks. Early in 1207, Jūren and Anraku were executed, the cultivation of exclusive *nembutsu* was prohibited, and Hōnen and several of his disciples were exiled to distant provinces. Hōnen was not allowed to return to the capital until late in 1211, and he died shortly thereafter in the first month of 1212. Two days before his death, he dictated to his disciple Genchi (1182–1238) his final testament (*Ichimai kishōmon*). It begins thus: "My teaching is neither the contemplative *nembutsu* taught by the wise of both China and Japan, nor is it enlightenment by means of learned meditative *nembutsu*. It is nothing other than to utter 'Namu Amida Butsu' for the purpose of rebirth in the Pure Land without a single doubt of achieving that rebirth." He died with the *Nembutsu* on his lips and, according to his disciples, amid auspicious signs of Pure Land rebirth. He was seventy-nine.

These events were grievous impediments to the Pure Land movement, but they did not stem what was to become a great tide of Pure Land faith. Several of Hōnen's chief disciples, notably Benchō (1162–1238) and Shinran (1173–1263), carried his message to the provinces and organized Pure Land communities. These later became established as the influential Jishū and enormously popular Jōdoshū (Pure Land) and Jōdo Shinshū (True Pure Land) sects.

Though Hōnen initiated sweeping changes in the religious life of Japan, he was not a revolutionary. He was a highly respected cleric in his day, admired for his scholarship and revered for his piety by clerics and laity alike. In some ways, he was deeply conservative. Although he urged on his followers the exclusive cultivation of invocational *nembutsu*, he himself never abandoned his monastic vows of chastity and poverty, and to the end of his life he cultivated contemplative *nembutsu*. Yet he definitively broke with the monastic, elitist Buddhism of his times. He provided both the intellectual foundations and the inspired personal leadership for the first independent Pure Land Buddhist movement.

#### BIBLIOGRAPHY

In addition to the *Senchakushū* and the *Ichimai kishōmon*, Hōnen wrote important doctrinal works such as the *Sambukyō daii* (Meaning of the three-part Pure Land canon) and the *Ōjōyōshū shaku* (Commentary on the *Ōjōyōshū*), accounts of his meditations (*Sammai hotokki* and *Onmusōki*), and a vo-

luminous correspondence. These can be found in his collected works, *Hōnen Shōnin zenshū*, edited by Ishii Kyōdō (Tokyo, 1955).

Works on Hōnen in English are few. The best is still *Hōnen, the Buddhist Saint*, by Harper Havelock Coates and Ryugaku Ishizuka, 5 vols. (Kyoto, 1949). This is ostensibly just a translation of the forty-eight-chapter biography of Hōnen (*Yonjūhachi kanden*) by Shunjō (d. 1335), a relatively late biography with much pious elaboration, but it is much more than that. Besides providing an excellent translation of Shunjō's biography of Hōnen prefaced by an extensive, if dated, introduction to the life, times, and thought of Hōnen, this work presents a wealth of useful information on Hōnen's life and times in notes and appendixes. A short but excellent and up-to-date treatment of Hōnen is to be found in *Foundations of Japanese Buddhism*, vol. 2, *The Mass Movement*, by Alicia Matsunaga and Daigan Matsunaga (Los Angeles and Tokyo, 1976). There is an enormous literature on Hōnen in Japanese. A good, critical biography based on contemporary sources is *Hōnen*, by Tamura Encho (Tokyo, 1959).

ALLAN A. ANDREWS (1987)  
*Revised Bibliography*

**HONJISUIJAKU** is a technical term in Japanese Buddhism that originally designated a theory of emanation pertaining to Shintō and Buddhist divinities. Later, it came to be applied to the interpretative framework of the associations among them (*shimbutsu-shūgō*). The term is a compound: *Honji*, usually translated as “original nature,” designates the limitless potentiality of the Buddha to manifest himself in as many forms as he wishes in order to lure living beings toward awakening; *suijaku*, usually translated as “manifestation” or “hypostasis,” designates those forms. The original use of the term is to be found in the various Chinese commentaries of the *Lotus Sūtra* (Skt., *Saddharmapuṇḍarīka Sūtra*; Chin., *Miaofa lianhua jing*; Jpn., *Myōhorengekyō*). These commentaries propose a twofold division of the scripture in which the first fourteen chapters are called (in Japanese) *jakumon* (“teaching by manifestation”) and the second fourteen chapters, *hommon* (“fundamental teaching”). The *jakumon* part is the collection of the doctrines propounded before the *Lotus Sūtra*, whereas the *hommon* part is the Lotus doctrine according to which the historical Buddha (Śākyamuni) was the mere manifestation of a transcendent principle.

This theoretical scheme was generally applied to the various members of the Buddhist pantheon, so that even *bodhisattvas* could manifest themselves under variegated guises, using the doctrine of salvific means, or clever devices (Skt., *upāya*; Chin., *fangbian*; Jpn., *hōben*), in order to guide living beings of different psychological inclinations or intellectual abilities toward the realization of buddhahood. As Buddhism

came into contact with other religious systems in Asia the *honjisuijaku* theory was then applied to interpret the divinities of these religions as lower manifestations of the members of the Buddhist pantheon. This interpretation had surfaced in China at varied levels of religious life, but it played a central role in Japan from the Nara period (710–784 CE) on.

Buddhism was officially recognized in the records of the Japanese state by the middle of the sixth century CE. Relationships between the Buddhist sects and the evolving systems of religious cults loosely referred to as Shintō began soon thereafter: The legends describing the arrival of Buddhism in Japan in the *Kojiki* (Record of ancient matters, 712) show evidence of the fact that mythological and ritual structures of autochthonous creeds were used to interpret the phenomenon, and there is little doubt that Buddhism was treated as an advanced form of Shintō. Various Buddhist scriptures and rites were used in the traditional context of protection of the state and in agrarian rituals; other rites were used to reinforce the legitimacy of the rulers. Shintō shrines were built to symbolize sociopolitical and economic structures; Buddhist temples came to be built along similar lines, often next to Shintō shrines. As a consequence, Buddhist monks came to officiate next to Shintō priests, to the point that they joined them in rites surrounding the funerals of emperors.

From the early Heian period (794–1185) on some monks were ordained specifically in connection with major Shintō shrines and received as such the name of *shimbundōsha* (monks ordained for Shintō divinities). As time passed, the Buddhist ecclesiasts came to administrate the economic, political, and ritual affairs of the shrines they were associated with, and associations between Shintō and Buddhism began to occur at the levels of thought, ritual, literature, and art. Japan thus evolved syncretic systems that were locally grounded in shrine-temple complexes, in which the different particular divinities of the Shintō shrines were associated with the different Buddhist divinities of the adjacent temples. It is there that the *honjisuijaku* theory played fully: Shintō divinities were seen as manifestations of Buddhas or *bodhisattvas*, and their virtues were explained accordingly.

Because these systems of association were occurring in shrine-temple complexes, the *honjisuijaku* theory permeated many local cults during the classical and medieval periods of Japanese history; but during the Kamakura period (1185–1333) the major cultic centers housing the headquarters of the important sects of Buddhism developed integrative philosophical and ritual systems in which the *honjisuijaku* theory was central. Mount Hiei (Hieizan), center of the Tendai school of Buddhism, developed the syncretic sect Sanno Ichijitsu Shintō, and Mount Kōya (Kōyasan), center of the Shingon school of Buddhism, developed the syncretic sect Ryōbu Shintō.

By the middle of the medieval period, almost all Shintō divinities of Japan were essentially linked to Buddhist divini-

ties at all levels of religious life and experience. Virtually all medieval records of shrines show the name of the Shintō divinity, and immediately thereafter indicate the following: “a *suijaku* of” such and such a Buddhist divinity. The result of these systematic associations was the creation of a composite culture in which one easily recognizes the Indian, Chinese, and Japanese ingredients. It should be noted, however, that historically the *honjisuijaku* theory had an implicit vertical power relationship, aptly suited to Buddhism’s superiority in political, economic, and ritual areas. But most of the associations between the divinities were not perceived, originally, to be couched in the context of power, but rather in the context of association and metaphor. These associations were expressed or interpreted according to word games in which initiated people could read subtle meanings and thereby decode the original and fundamental unity of the divinities of both religions.

However, during the Muromachi period (1336–1573) some priests of Shintō shrines, jealous of Buddhist institutional power and motivated by nationalistic reasons, created other syncretic systems in which the *honjisuijaku* theory was reversed to their advantage: Instead of seeing Shintō divinities as hypostases of Buddhist divinities, they claimed that the Buddhas and *bodhisattvas* were in fact manifestations of Shintō *kami* (divinities). First and foremost in this respect was Yoshida Kanetomo (1435–1511), a priest of the Yoshida shrine in Kyoto, who authored apocryphal scriptures, designed rituals, and formed a “Shintō-sided” sect of syncretism known as Yūitsu Shintō. This sect was of some importance in Japanese religious and cultural history, for it was granted, in the seventeenth century, the authority to license Shintō priests. From that time on Buddhism faced mounting criticism, it lost much of its economic and political support, and the nature of its relationships with Shintō changed accordingly. In 1868 the Meiji government decreed the official separation of Shintō from Buddhist divinities. Shintō was then changed in order to become the state religion: This marks the historical end to the meaningful existence of the *honjisuijaku* theories and practices in Japan.

In the light of these historical processes, the interpretation of the *honjisuijaku* theory becomes quite complex, for if on the one hand one wants to propose a strictly sectarian interpretation of the term, on the other hand one must keep in mind the various interpretations given to it in the course of history, and there is some discrepancy between the two. The Japanese have, in time of crisis, interpreted the theory as a model of power relationships, whereas in time of peace they have interpreted it as a model of peaceful coexistence. It may be said that many associations remain in the minds of some Japanese religious practitioners, and that composite culture is still a major aspect of Japanese religiosity and culture; but in any case, the *honjisuijaku* theory is no longer applicable as a structural device for communication processes between religious systems.

SEE ALSO Kami; Shintō; Syncretism; Upāya.

## BIBLIOGRAPHY

Most of the relevant material for the study of *honjisuijaku* still needs to be thoroughly researched by scholars; the official separation of Shintō from Buddhism has resulted in a general lack of interest in this important area of Japanese religious history. However, in the last few years important studies have appeared in Japan. One may consult with benefit all the works by the historian Murayama Shūichi; particularly recommended is his *Honjisuijaku* (Tokyo, 1974), which is most detailed and provides brilliant analyses. The reader is also referred to the works of another historian, Kuroda Toshio. Among these, *Kokka to shūkyō*, volume 1 of *Nihon shūkyōshi kōza*, edited by Ienaga Saburō et al. (1959; rev. ed., Tokyo, 1971), gives his insightful remarks on the political background of the associations between Shintō and Buddhism. His book entitled *Jisha seiryoku* (Tokyo, 1980) is a systematic exposition of the economic and institutional aspects of Shintō-Buddhist associations and provides many openings for future research. The only book-length study in English is Alicia Matsunaga’s *The Buddhist Philosophy of Assimilation: The Historical Development of the Honji-Suijaku Theory* (Tokyo and Rutland, Vt., 1969), but this work needs to be revised to a considerable extent.

ALLAN G. GRAPARD (1987)  
*Revised Bibliography*

**HONKO, LAURI** (1932–2002) was a Finnish scholar of comparative religion and folklore and one of the most prominent scholars of cultural and religious studies in late-twentieth-century Finland and abroad. His prolific literary output reflects his status as professor of folklore and comparative religion at the University of Turku as well as stints with the Academy of Finland, UNESCO, Folklore Fellows Communications (FFC), and other national and international learned societies.

Honko began his career in the 1950s at the Finnish Literature Society as a student and assistant of Martti Haavio. Honko’s doctoral dissertation discussed folk medicine and phenomenology of religion. His 1962 publication *Geisterglaube in Ingermanland* was a breakthrough that extended research on supernatural experiences into the perception and social psychology of religion on the basis of the folk beliefs he had thoroughly studied in peasant Ingrian society, using archival and field materials gathered from Ingrian refugees in Finland and Sweden.

Honko worked actively to legitimize the academic study of comparative religion in Finnish universities. He was a founder of the Finnish Society for Comparative Religion in 1963, and he launched its journal *Temenos* in 1965 as well as *Uskontotieteen näkökulmia* (Viewpoints on comparative religion) seven years later. He fought equally hard for the discipline of cultural anthropology, which entered Finnish uni-

versity curricula with *Kulttuuriantropologia*, the 1970 textbook he wrote with Juha Pentikäinen.

Honko emphasized the importance of observation in empirical research. His early studies of Ingrian narrations and Karelian laments focused on function and genre analysis, oral poetry in relation to rites of passage, and perception psychology in folk belief. His 1967 fieldwork extended into the *lappmarks* (territorial divisions) of Lapland.

Honko also cofounded the Academy of Finland Sami Folklore Project, in which the Sami themselves worked to establish a folklore collection. He directed the Nordic Folklore Institute (NIF) from 1972 to 1990, producing volumes on such subjects as the ecological tradition. Honko's career culminated in the 1990s with annual visits to India, where he made audiovisual recordings of epic singers. The trips were detailed in his publications *Intian päiväkiriä*, *Textualising the Siri Epic*, and *The Siri Epic as Performed by Gopala Naika I–II*.

Honko's main theoretical contributions were discussions on the phenomenology of religion and the religious traditions of both oral presentations and sacred texts. He wrote several books and encyclopedias on Finnish and Finno-Ugric religions and published numerous works on the Kalevala and other epics, tracing their histories from oral tradition to literary transcription. His last book, a study of Setu (south Estonian) epics, was published posthumously in 2003.

JUHA PENTIKÄINEN (2005)

**HOOKER, RICHARD** (1554–1600), was an apologist and theologian of the Church of England, famous for his work *Of the Laws of Ecclesiastical Polity* (hereafter cited as *Laws*). Born at Heavitree near Exeter, Hooker received his basic education in the Exeter Grammar School. His parents could not afford more advanced schooling for him, but his uncle took the boy to see Bishop John Jewel of Salisbury (1560–1571), who agreed to be his patron and arranged for his admission as a clerk at Corpus Christi College, Oxford, in 1568. His tutor was Dr. John Rainolds (1549–1604), a leader of the moderate Puritans at the university.

Hooker received his B.A. in 1574 and his M.A. in 1577. He was made a fellow of the college and a lecturer in Hebrew, and in 1581 he was ordained. His wide learning, gentle disposition, and genuine piety were admired at Oxford. Among his pupils two became lifelong friends and advisers in the writing of the *Laws*: Edwin Sandys, son of Bishop Edwin Sandys of London (1570–1576; archbishop of York, 1576–1588), and George Cranmer, grandnephew of Thomas Cranmer, archbishop of Canterbury (1533–1556).

In December 1584 Hooker received the living of Drayton Beauchamp, Buckinghamshire, but a few months later he was appointed master of the Temple in London. He was soon involved in bitter controversy with Walter Travers, the afternoon lecturer at the Temple, who was a noted Puritan of presbyterian views and ordination. Instead of living in the

master's house, which was in disrepair and partly occupied by Travers, Hooker took lodging in the nearby home of John Churchman, a prosperous member of the Merchant Taylors' Company and a friend of Sandys. In February 1588, Hooker married Churchman's daughter Joan, who bore him two sons (both of whom died in infancy) and four daughters.

Hooker resigned from the Temple in 1591 and was given the living of Boscombe, near Salisbury. It is doubtful if he was ever resident there, for he was already writing the *Laws* in the Churchmans' home, where he lived with his growing family. There also Sandys, who had entered Parliament, and Cranmer could easily confer with him about the work. In 1595, Hooker moved with his family to a living in Bishopsbourne, near Canterbury. He remained there, except for frequent visits to London, until his death on November 2, 1600.

In the preface to the *Laws*, Hooker outlined the themes of his eight projected books and made clear the purpose of the work. It was a defense, based on scripture, the tradition of the church, and reason, of Queen Elizabeth's settlement of the Church of England against the radical Puritans. The latter sought to overthrow the settlement by abolishing the royal supremacy, episcopacy, and *The Book of Common Prayer* and to substitute a presbyterian system of church government and discipline modeled on Calvin's church at Geneva.

Because Hooker had difficulty finding a publisher, Sandys contracted with a printer, John Windet, Hooker's cousin, to produce the work. Sandys agreed to bear the entire cost. Archbishop John Whitgift of Canterbury gave his license, and the preface and first four books were issued in early March 1593. The publication, as Sandys had hoped and planned, came just before the opening of Parliament to consider (and pass) the Act to Retain the Queen's Subjects in Obedience, a stringent ruling against all who refused to attend the Church of England's services or who were "present at any unlawful assemblies, conventicles, or meetings, under colour or pretence of any exercise of religion."

Book 5, much longer than the others, appeared in 1597. Hooker completed drafts of the last three books before his death. They were not published for many years—books 6 and 8 in 1648 and the complete work, with book 7, in 1662. Their authenticity, often questioned, is now generally accepted. A large portion of the beginning of book 6 has been lost, although notes on it by Sandys and Cranmer are extant, and Hooker's manuscript pages of book 8 were left in some disorder.

Books 1–4 deal with laws in general: the divine law of God himself, the immutable natural law implanted by God in creation, and the positive law of human societies. Yet human reason, impaired by the fall but assisted by divine revelation and grace, can understand the natural law and be guided in positive law according to times, circumstances, and experience. No positive law is perfect, but it is always reformable.

Against the radical Puritans, Hooker argued that the scriptures were not self-authenticating. Their authority had been determined by the church. Nor did the scriptures contain a detailed ordering of the governance and worship of the church, but only its basic principles. These principles were different from the unchanging and essential revelation for faith and salvation. On the basis of scriptural principle, Hooker defended in book 5 the rites and customs of *The Book of Common Prayer* and in book 6 its mode of penitential discipline.

In book 7 he based episcopacy not on any divine institution but on the universal practice of the church since apostolic times. Book 8 on the royal supremacy is cautiously ambivalent. Hooker defended on scriptural grounds the necessity of obedience to constituted civil authority by the consent of the people. In his England, as in ancient Israel, civil and ecclesiastical societies were coextensive. He was aware, however, that the Crown had used its prerogatives to limit the church's freedom in ordering its own internal life.

Hooker's extensive and erudite documentation of his arguments, the richly textured eloquence of his style, and his openness to reforms in the Church of England have made his work a constant resource in the later development of Anglican theology. His political philosophy has been judged as both a conservative apology for the status quo and a liberal critique of the Elizabethan church. He has been acclaimed as the first major prose writer in modern English literature. Yet his lasting legacy has been his appeal to reason in the interpretation of scripture, the church's government, and worship.

#### BIBLIOGRAPHY

The standard text is that edited by John Keble, *The Works of that Learned and Judicious Divine, Mr. Richard Hooker, With an Account of his Life and Death by Isaac Walton* (1838), 3 vols., 7th ed., revised by R. W. Church and F. Paget (1888; reprint, New York, 1970). Another edition is *The Folger Library Edition of the Works of Richard Hooker*, edited by William S. Hill (Cambridge, Mass., 1977–1998). For an introduction to this edition, see *Studies in Richard Hooker: Essays Preliminary to an Edition of His Works*, edited by William S. Hill (Cleveland, 1972), with an extensive annotated bibliography.

Charles J. Sisson's *The Judicious Marriage of Mr. Hooker and the Birth of The Laws of Ecclesiastical Polity* (Cambridge, U.K., 1940), by researches into parish, chancery, and other records, effectively questions and revises many statements in Isaac Walton's famous *Life* and opens new insights into the publication of the *Laws* and the fate of Hooker's posthumous manuscripts.

An important Anglican interpretation, which errs in an attempt to make the *Laws* a *summa* of Anglican theology, is John S. Marshall's *Hooker and the Anglican Tradition: An Historical and Theological Study of Hooker's Ecclesiastical Polity* (Sevanee, Tenn., 1963). Robert K. Faulkner's *Richard Hooker and the Politics of a Christian England* (Berkeley, Calif., 1981) gives a fresh reading of the *Laws*.

MASSEY H. SHEPHERD, JR. (1987)

**HOOKER, THOMAS** (1586–1647), was an English and American Puritan minister. Born in Leicestershire, Hooker took his B.A. and M.A. at Cambridge, where he was variously Dixie fellow, catechist, and lecturer in Emmanuel College. As a minister he became active in the unofficial meetings of Puritan ministers then taking place. When William Laud moved to restrict nonconforming ministers in the late 1620s, Hooker fled, first to the Netherlands, thence to New England in 1633. He and Samuel Stone organized the first church in Newtown (now Cambridge), Massachusetts. Partly because of religious and political disputes in the Bay Colony, partly because of his parishioners' dissatisfaction with their land allotments, Hooker led in 1636 a removal to Connecticut, where he and his group founded Hartford. When the General Court of Connecticut first met in May 1638 to draw up its Fundamental Orders, Hooker's sermon on the occasion described the proper relationship between the people and their magistrates. Although an important political statement of early New England, the sermon is no longer commonly accepted, as it once was, as evidence of Hooker's democratic attitudes. Hooker maintained his influence in Boston, returning in 1637 to serve as a moderator of the synod called to deal with Anne Hutchinson and the antinomian threat, then later in 1645 to participate in the meeting called to consider responses to the Westminster Assembly. The first of these meetings marked the triumph of Hooker's preparationist theology as a nearly official view of the process of salvation for the New England churches. At the later meeting Hooker presented his *Survey of the Summe of Church Discipline* (London, 1648), which became one of the definitive statements of the congregational church order in New England. He died at Hartford on July 7, 1647.

More than thirty volumes appeared over Hooker's name or were legitimately credited to him; the most important, in addition to the *Survey*, are collections of sermons that examine the spiritual stages the soul passes through on the way to conversion. Under the influence of Richard Sibbes and other English preparationist theologians who held that the individual soul could not earn grace but could prepare itself for its reception, Hooker preached extensively on the subject and made his final survey of the soul's progress during his pastorate at Hartford. These sermons were published posthumously in the two volumes entitled *The Application of Redemption* (London, 1656–1659). Hooker was well known in his own time for his direction of troubled spirits in the process of discovering saving grace in themselves, and this concern is evident in his various sermonic works on the theology and psychology of conversion. He was also interested in the role meditation could play in the spiritual life of a soul under the workings of grace, and he has been recognized in this century as one of the significant Puritan exponents of the meditative process.

#### BIBLIOGRAPHY

The best biography of Thomas Hooker is my own *Thomas Hooker, 1586–1647* (Princeton, N.J., 1977), but there is also use-

ful material, especially on Hooker's career in England and Holland, in *Thomas Hooker: Writings in England and Holland, 1626–1633* (Cambridge, Mass., 1975), edited by George H. Williams and others. Notable in this volume is Sargent Bush's bibliography of the various printings of Hooker's numerous works. Bush is also the author of *The Writings of Thomas Hooker* (Madison, Wis., 1980), the best analysis of Hooker's religious concerns, his theology, and his sermon technique. Perry Miller's influential essay on Hooker's political position, "Thomas Hooker and the Democracy of Early Connecticut," appeared first in the *New England Quarterly* 4 (October 1931): 663–712, and was reprinted in *Errand into the Wilderness* (Cambridge, Mass., 1956).

FRANK SHUFFELTON (1987)

**HOPE.** If we define religion as the systematic expression of the interplay between traditional faith and transforming hope, then hope is of the essence of religion. It is the impetus of religious renewal, as fear is often behind hardening tradition. Priestly conceptions of religion may accentuate the equation of religion with tradition and the past. Prophetic calls for renewal also may emphasize a return to pristine purity. But each major tradition posits a future leader who focuses the hope arising from past faith. Jewish traditions speak of a messiah, Islam of a hidden imam. Christians look for the second coming of Christ. Buddhists speak of Maitreya (Jpn., Miroku) as the Buddha to come, and Hindus of Vaiṣṇava orientation look for another avatar of Viṣṇu. The hope is for a final realization of what is now only anticipated, in continuity with the patterns of devotion fostered by the central figure or founder of the present community.

Until modern times, the emphasis tended to be on reform rather than renewal. Myths of ending were shaped by myths of beginnings. The biblical motif of a return to paradise lost is a case in point. The conception of the new as better comes in European thought with the inversion of the chain of being, the change from classical, hierarchical conceptions of emanation (typically beginning with the spiritual and settling into the material) to contemporary, developmental conceptions of evolution and revolution (beginning with the inorganic and culminating in consciousness). Whether retrospective or prospective, religious thought, to be religious, must be characterized by the hope that present vicissitudes will be overcome, that faith will be vindicated, and that the group, if not the individual, will realize a joy or bliss of which we now experience only passing intimations. Even those who conceive of eternity as timeless and ever present acknowledge that this realization of bliss remains, for most, a future possibility on the horizon of daily living. However conceptualized, the fact of such hope for the future often makes devotees ready to become martyrs to their cause.

Religious hope is necessarily transforming because of the focus in religion on ways of liberation or salvation, often expressed in terms of a movement from death to full life, error

to right knowledge, disease to perfect health, despair to assurance of ultimate satisfaction. Patterns of transformation, or ways to realization of a religious end, were classically conceived in terms of refinement, renunciation, reintegration or resurrection and, more recently, in terms of revolution and reconstruction. Each pattern is generated by different concepts of self and of ultimate reality, although different traditions embody features of more than one means of transformation; as, for instance, in monastic Christian ideas of paradise, where Hebrew visions of restoration or resurrection melded with Hellenistic versions of renunciation.

Refinement is typically of the cultured or cultivated self in repudiation of barbaric, chaotic elements presently disrupting society. The ideal is of the sage, as exemplified in China by Confucius and taken up in the Enlightenment strand of modern Western thought by such thinkers as Voltaire and John Dewey. Renunciation is of material things for spiritual value, or of the demands of the body for the sake of the soul, as in the case of Socrates or the story of Gautama the Buddha. Reintegration is of the whole self as microcosm with the harmonies of earth and heaven as macrocosm, as articulated in the Daoist literature of China and the psychology of C. G. Jung. Restoration may be of the faithful people, as in Israel under King David. But restoration in its Christian pattern, resurrection, is of the individual and corporate self, both body and spirit, re-created by God within a whole new order of being, identified in medieval times with heaven but biblically imaged, especially in the *Book of Revelation*, as both a new heaven and a new earth. Modern transformations may be described as reconstruction, when the emphasis is on the mechanistic thrust of science and technology, notably through medicine, where it is the material order which is renewed. Or we may speak of revolution, partly technological (as in the industrial revolution or the contemporary movement for women's liberation, insofar as this relates to child-bearing and housework) but primarily political and economic, as in the call for collective renewal by Marx and Mao.

As already noted, the different ways of transformation may be blended with each other. The story of Socrates includes motifs of refinement and renunciation. Christian ascetics link renunciation with resurrection, while modern theologies of liberation link resurrection with revolution. Relevant for our topic is the fact that the grounds for hope vary according to the way in question. Resurrection presupposes the reality of transcendent divine power, which can create out of nothing. Revolution comes through human action, whether in solidarity with a wholly human collective or in communion with God. Reintegration affirms the forces of nature in all of us. Thus, religious hope hinges on different conceptions of ultimate transformation—theistic, humanistic, and/or naturalistic—and is not necessarily tied to a particular belief in the existence of a supernatural agent or god. Where classical myths portray gods and goddesses as immortals, modern stories revolve around heroes and antiheroes. What gives each story religious significance is the hope of ultimate transformation, not the reference to god as such.

The subject of transformation is the self; but by self may be meant just a part or principle of life as we first experience it. As mentioned, ways of renunciation deny the physical body but affirm the continuity of a spiritual self. In the extreme case of Buddhism, both mind and matter are identified with the present cycle of miserable existences (*samsāra*), and what is affirmed is a principle (the Buddha nature, which has realized *nirvāṇa*). Reintegration is of the whole self, body and mind, with the present cosmos. By contrast, resurrection entails the gift of a new body and an individuating spirit in a new world (whereas immortality implies a true spiritual self, or soul, now trapped in the body and only really at home in a supernatural realm). Both resurrection in the religion of Israel and revolution in modern times emphasize the community, of which a remnant is restored or gains the ideal condition aspired to by all. In tribal this-worldly traditions, hope for the future is focused on the children and succeeding generations as they return to the ways of their ancestors (a variant on refinement, especially in the ancestral cult called Confucianism by Western scholars). Thus, who and what is hoped for varies, according to conceptions of selfhood and the nature of ultimate reality.

Again, while a common religious hope may be for life after death, this is not necessarily the case. If the sense of self is of an individual or of a pattern of characteristics transmigrating through a possible infinite series of bodies, then the expectation of life after death may instill fear, not inspire hope. The Buddhist doctrine of no self (Sanskrit, *anātman*; Pali, *anatta*) was developed in just such a context. Even when life is thought to be singular, not cyclical, the expectation of an afterlife may be fearful if the prospect is of a ghostly loss of place or of torment in hell. Traditional notions of purgatory arose to meet this fear and to give grounds for hope to those who despaired of immediate entry to heaven.

The scope of renewal may be temporary or permanent, partial, individual, communal or cosmic. Renunciation is for the sake of permanent renewal of the spiritual self or permanent realization of *nirvāṇa*. Reintegration presupposes a permanent process on the cosmic scale, but individual integration within this process may be temporary and partial. Resurrection, in classical Christian and Muslim eschatologies, is of the whole individual with the whole people of God, involving permanent enjoyment of God's enlivening presence for the faithful and perpetual punishment for the faithless. The vision of a new heaven and a new earth includes the whole created order within the compass of the promised renewal. The emphasis falls on faith because it is what God does for humankind, and not unaided human effort, that carries the promise of salvation. By comparison, refinement and revolution are primarily humanistic ways that include the rest of nature only as the setting for human fulfillment.

Reconstruction presupposes the permanence of nature and, through applied science, makes this increasingly available to human beings: for instance, through computerized memory banks, artificial limbs and hearts, and artificial in-

semination (where hope is concentrated on survival through one's children). In principle, such hope is available to all, but in practice, access is limited to the affluent. Science fiction often illustrates how the current limitations on reconstruction may be overcome, at least in our imagination. In general, it seems fair to say that the dominant global cultures, including their religious systems, are increasingly universal in scope and are expanding the range of human expectations from tribal lands to the whole earth, from the earth to the universe, and from the known universe to all possible galaxies and states beyond the terrestrial.

Symbols of hope reflect the blending of traditions and motifs of transformation. In Buddhism, the tree reflects the rootedness of perfect enlightenment conquering ignorance. The tree of life in images of paradise reflects the garden setting for creation in Mesopotamian cultures. Daoist Chinese images include bowls of life-enhancing fruit. By contrast, the cross of Jesus provides a reverse image for Christians, linking the tree of life to the historical paradigm of suffering and atonement. The evergreen tree in northern climes, combined with images of mother and child, is a Christian example of conflated symbols, whose meaning varies according to the story told. The Buddhist wheel, by contrast, can suggest both abhorrence of the cycles of existence and the teaching that reverses the patterns of alienation. The lotus is a reminder that beauty arises even out of the mud.

Symbols are especially important in expressions of hope because hope is always for what is possible but not yet fully realized. As already noted, the sense of ultimate reality shapes the horizon of hope. Symbols of journeys and arrival at the far shore suggest both present separation and eventual satisfaction. Where this world is all there is, hope through children or through lasting achievements dominates, and hope is linked to memory. Where all possibilities seem closed off, despair sets in. We owe to Søren Kierkegaard the definitive contrast, expressed in modern literature, between despair of ever realizing the authentic self and despair caused by realizing what the self has become. Since Plato, Western religious thought has emphasized being as the ideal end of becoming. Asian thought, by comparison, has often posited an ultimate emptiness of individuating features, such that despair more typically has been despair at continuing to be as one is.

Hope, as the obverse of despair, may be hope for oneself as individual or group, hope for one's world, or hope for the ultimate nature of things. As such, classical thought counted hope a virtue. In Chinese traditions, a world in disarray was evidence of the lack of virtue among earthly and heavenly rulers. The concept of the mandate of heaven for the virtuous gave reformers hope that order might be restored. On the Indian subcontinent, despair over the lack of virtue throughout the hierarchy of being led to expectations of periodic, cosmic cataclysms, followed by renewal. Echoes of this idea appear in biblical stories of Noah and the flood followed by the rainbow. In Christian thought, hope is a theological virtue, along with faith and love. According to Thomas Aquinas (*Summa*

*theologiae* 2.1.25.3), hope is always for some future good that is difficult but possible to attain. There is no hope for the damned, while the blessed no longer need hope since they enjoy the direct vision of God. It is theological, since the gift of the possibility comes from God, and a virtue, since the gift may be refused.

With regard to hope for oneself, increasing differentiation in the evolution of modern culture has put more and more emphasis on the individual. To live for the reflected glory of an earthly or heavenly lord no longer appeals to those who would be rulers of their own destiny. In *The Myth of Sisyphus* Albert Camus carries this line of thought to its final point. In existential psychology, the importance of hope was most insisted on by Viktor Frankl. Drawing on his experience in the concentration camps of the 1930s and 1940s, he realized both that while there's life there's hope and that to go on living we must have hope.

PETER SLATER (1987)

**HOPKINS, EMMA CURTIS.** Emma Curtis Hopkins (1849–1925) was the oldest of nine children born to Lydia Phillips Curtis and Rufus Curtis. She grew up with her Congregationalist family in Killingly, Connecticut, and became a teacher. In 1874 she married a schoolteacher, George Hopkins, and they had a son, John, born in 1875.

In 1881 Emma had a healing experience using the methods of Christian Science. She heard Mary Baker Eddy (1821–1910) speak in 1883 and subsequently became a member of the Church of Christ, Scientist, traveling to Boston for lessons with Eddy. Recognizing her talents, Eddy appointed her to serve as the first full-time (and unpaid) editor of the *Christian Science Journal* in September 1884. After a year and a half, Hopkins was asked by Eddy to leave the position. Financial constraints or theological differences were most likely the reasons for the split. Hopkins resigned from the Christian Science Association in October 1885.

Hopkins and her family relocated to Chicago in early 1886. There was a burgeoning women's movement there

and she was an immediate success in her educational ventures and healing ministries, which dovetailed with the social activism of the time. George Hopkins later moved back to New England, and they were divorced in 1900. In 1886 Emma Hopkins and a colleague, Mary Plunkett (d. 1900), founded the Hopkins College of Christian Science, which taught an idealistic theology with a focus on serene lifestyles, prosperity, and positive thinking. The first graduates of the initial class in 1886 formed the backbone of the Hopkins Metaphysical Association, which grew in numbers and evolved into the first organized association of the New Thought movement in the United States. At that time, *Christian Science* was a generic term used by many to denote the mental healing movement. It continued to be used in a generic way until Eddy threatened to sue any group that used the term. By the 1890s *New Thought* became the standard term for groups not affiliated with Eddy.

Graduates of the Hopkins College, functioning as religious entrepreneurs and trained as practitioners and teachers, transported Hopkins's idealistic theology to every region of the United States and later to Great Britain and New Zealand, making New Thought an American export. Hopkins's student, Frances Lord, was the first to systematize and teach New Thought's prosperity principles, expounding upon Hopkins's ideas. By the end of 1887 there were seventeen or more New Thought associations around the United States affiliated with Hopkins College and Hopkins's philosophical tenets. The college's graduates, most of them women, traveled by train as missionaries, setting up Truth Centers around the country and checking in with the Hopkins Association in Chicago. From 1887 until 1894, the association served as the social and theological hub for their religious activity.

In 1887, Hopkins, now a national figure as well as a social activist, was invited to speak to large gatherings in San Francisco, Milwaukee, and New York. These lectures gained new proponents for her approach to mental healing and her theology of a monistic, impersonal God who, as Divine Mind, was omniscient, pure, and perfect. Widely read, Hopkins drew upon Gnostic ideas of the immanence of divinity and she rejected the traditional Christian notion of sin, replacing it with a belief that human failings were merely spiritual errors, which could be overcome. She had a theory similar to what would later become Jungian ideas. She believed that racial memory was something akin to what Jung would describe as the collective and individual unconscious. These stored memories, embedded within the genetic code of the individual when triggered, recall disease, traumatic events and health challenges from the individual and collective past. She believed these cases of racial memory could be cured through silent healing. Convinced that the advent of spiritual healing methods ushered in the second coming of Christ, Hopkins dissolved her college and reorganized her teaching to fit an ecclesiastical structure. Believing her mission to be sacred, a hallmark of the second coming of Christ, she orga-

nized the Christian Science Theological Seminary in late October 1887. She meant for her top-ranked disciples to be trained in a religious manner and ordained. Those not taking the most advanced course with her on a one-to-one basis were licensed as teachers and practitioners. She selected talented faculty, such as Annie Rix Militz (1856–1924), who later founded the Homes of Truth, to teach classes in the manner of Protestant seminaries. In 1888 an early graduate, Ida Nichols, founded the periodical *Christian Science*, for which Hopkins, a prolific writer, authored feature articles. Hopkins's classic texts, *Class Lessons 1888* (1888) and *Scientific Mental Practice* (1890), also became seminal lessons to understanding her teachings. At this time she was also asked to write *International Bible Lessons*, a weekly column for the Chicago *Inter-Ocean* newspaper that ran for nine years.

What was unique about Hopkins was that she did not found a church; she thought the sick people of the world were her church. It was her disciples and ordinands that founded churches. Every prominent New Thought church surviving today was started by her students and disciples.

The predominantly female social milieu in which Hopkins operated, and her ideas about the innate goodness of women that she associated with the Holy Spirit of the Trinity, prepared her to act as bishop. On January 10, 1889, she ordained twenty-two ministers to the independent Christian Science ministry. During the next four years, 111 students graduated from her seminary. The importance of her graduates and ordinands, coupled with their success in founding and forming New Thought churches and Truth Centers, earned for her the sobriquet "teacher of teachers" of the New Thought movement.

During 1894, content that her dedicated students had established ministries and were teaching "the newer ways," she closed the seminary, sold the property, and relocated to New York. There, as a reclusive mystic she taught primarily one-to-one in her private hotel suite in Manhattan. She taught Mabel Dodge Luhan (1879–1962), Hutchins Hapgood (1869–1944), Neith Boyce (1872–1951), and other prominent writers working for a more democratic treatment of minority peoples. She taught Elizabeth Duncan, the older sister of the dancer Isadora Duncan (1877–1927), and supported their progressive school for children. Her teachings advocated for Native American and African American rights. One of her students, Emilie Hapgood, supported the first all-black theater troupe to perform on Broadway, while Luhan labored all of her life for Native American rights.

Every major contemporary New Thought organization can be traced directly to Hopkins's teachings. She ordained Myrtle Fillmore (1845–1931) and Charles Fillmore (1854–1948), who founded Unity; Malinda Cramer (1844–1906), Nona Brooks (1861–1945), Fannie James, and Alethea Small, who founded Divine Science in Denver; and Harriet Emilie Cady (1848–1941), who wrote Unity's all-time best-seller, *Lessons in Truth*. During the New York years, she taught a young Ernest Holmes (1887–1960), who founded

Religious Science in Los Angeles and inspired the theology of Norman Vincent Peale (1898–1993) and Robert Schuller (b. 1926). Other speakers and teachers who appropriated Hopkins's work and taught it in more secular form number in the thousands, and they spread her teachings to millions. Prior to her death from heart failure in 1925, Hopkins wrote the culmination of her life's work, *High Mysticism* (1912–1917).

GAIL M. HARLEY (2005)

**HORNER, I. B.** The British scholar Isaline B. Horner (1896–1981) devoted her considerable intelligence and energy to furthering scholarly and popular understanding of Buddhism, especially in the English-speaking West. After earning her B.A. (1917) at Newnham College—then one of only two women's colleges at Cambridge University—Horner stayed at the college as assistant librarian (1918–1920) and then acting librarian (1920–1921). In 1921 she accepted an invitation to accompany the college principal's sister, D. J. Stephen, on a trip to Ceylon (now Sri Lanka), India, and Burma (now Myanmar). Although Stephen probably considered the trip a Christian mission, she and Horner shared an interest in Eastern religions, and Horner filled her letters home with descriptions of Buddhist and Hindu practices she encountered in these British colonies.

After two years abroad, Horner returned to Newnham as librarian, a position she would hold until 1936. Shortly thereafter, she began studying the religion she had witnessed in Ceylon: Theravāda Buddhism. At that time Western scholars of Asian religions tended to regard scriptures as repositories of the earliest and, therefore, most authentic forms of these religions. Thomas Rhys Davids had founded the Pali Text Society (PTS) in 1881 to facilitate the study of Theravāda Buddhism by producing editions in roman characters, and translations into English, of the Theravāda tradition's scriptures, written in the language called Pali. In 1925 Horner contacted Caroline Rhys Davids, Thomas's wife and successor as president of the PTS following his death in 1922. Caroline Rhys Davids encouraged Horner to research the topic of women in early Buddhism, in part by studying English translations of Pali texts. Horner followed this advice, while studying the Pali language with Cambridge professor E. J. Rapson.

Horner's *Women under Primitive Buddhism* came out in 1930, and her second book about Theravāda Buddhism based on study of Pali texts, *The Early Buddhist Theory of Man Perfected*, was published in 1936. Both books were well received by scholars of Buddhism and by the intellectual English-reading public. *Women under Primitive Buddhism* remained the only book-length study of women in Buddhism for nearly fifty years. When scholars eventually took up this topic again, they rediscovered—and acknowledged their gratitude for—this book. Several of them corresponded with Horner late in her life, and she encouraged their efforts to build on her work. Although some of Horner's characterizations of early Buddhism in these two books from the 1930s appear outmoded in light of later scholarship, her grounding in the Pali texts ensured the lasting relevance of much of this work.

Horner's greatest contribution to the study of Buddhism came through her work on the Pali literature and her leadership of the PTS. By the early 1930s Horner had begun to edit and translate Pali texts for publication. Over the next fifty years she edited four volumes of Pali scripture and translated fifteen volumes of Pali texts into English for the PTS.

But Horner's impact on the study of Theravāda Buddhism through its Pali scriptures extended far beyond even this impressive list of published Pali editions and translations. Groomed by Caroline Rhys Davids to step in as her successor at the PTS, Horner served the PTS first as honorary secretary (1942–1959) after her mentor's death and later as president (1959–1981). For nearly four decades Horner actively recruited scholars from Europe, America, and Asia to contribute to the work of the PTS, and she then politely but persistently pushed them, and helped them, to complete their projects. Horner guided fifty-six new volumes of PTS publications through the complex process of book production, from initial correspondence with potential editors and translators through final negotiations with printers and distributors. Many acknowledgments of and grateful thanks for Horner's help appear in the prefaces and introductions to these PTS publications. Over the same period, Horner monitored the stocks of PTS books and managed the reprinting of 223 out-of-print and revised volumes.

Horner's indefatigable dedication and financial backing ensured that the PTS continued to publish one to four volumes annually throughout the twentieth century. For decades she inspired and encouraged students to take up the study of Pali and scholars to work on Pali texts without pay or even royalties. Horner actively pursued funding for the work of the PTS and often paid for its publications herself when she could not drum up sufficient financial support from other sources. Horner also left the PTS a substantial legacy in her will that has continued to support many of its activities into the twenty-first century.

In addition to her contributions to the scholarly study of Buddhist texts, Horner influenced the growing popular practice of Buddhism in the West by giving countless lectures to Western Buddhist groups and writing articles for their publications. Horner hesitated to call herself a Buddhist because she did not meditate, but she constantly demonstrated her commitment to propagating what she saw as the true teachings of Buddhism, always grounded in the Pali texts. She had little patience for Western Buddhists who corrupted the teachings of Buddhism with those of Hinduism or ideas of their own devising. Her interpretations of Buddhism for practitioners impressed even Asian Buddhist monks and scholars, including her many friends and admirers in Sri Lanka, Burma, and Thailand, who frequently asked her to contribute articles to their publications and to give lectures when she traveled in Asia (1934–1935, 1938–1939, 1950, 1953–1954).

The University of Ceylon granted Horner an honorary doctor of letters in 1964, as did Nava Nalanda Mahavihara in 1977. In 1980 Horner received an Order of the British Empire award from Queen Elizabeth II for her services to the PTS. Having lived to see the celebration of the first one hundred years of the PTS, Horner died in London on April 25, 1981.

GRACE G. BURFORD (2005)

**HORNS.** The physical power and reproductive potency of horned animals, which were so important in the economy of ancient hunting and agricultural societies, made them ideal symbols of strength and fertility. The primitive use of horns as plows and the symbolic view of plowing as the im-

pregnation of Mother Earth led to the belief that horns were charged with sexual power. The association of horns with fertility was further encouraged by their phallic shape and symbolic identification with both the rays of the sun and the crescent moon.

The association of horns with power and fertility accounts for the proliferation of horned gods and goddesses in both the East and the West. The Sumerian gods Anu, Enlil, and Marduk wear horned headdresses, as do the Egyptian deities Hathor, Isis, Nut, Seth, and Amun. The Hindu god Śiva and the Greek god Poseidon share the same emblem, a trident, a symbolic representation of horns. In Greek mythology, Dionysos, Pan, the satyrs, the river gods, Hera, Io, and Aphrodite all have horns as attributes. The Cretan ceremony of bull vaulting involved grasping the horns, the source of fertility and power; and the Cretan symbol of the double ax is probably a pair of stylized horns.

The Canaanite gods Baal and El were horned bull gods as was, originally, Yahveh, which is why horns decorate the altar described in *Exodus 27*. Moses, too, has been associated with horns. In *Exodus 34:29–35*, the Hebrew verb *qaran*, which means either “to send forth beams” or “to be horned,” occurs three times in the phrase *qaran ’or panav*, describing the beaming face of Moses upon his descent from Mount Sinai. In the Vulgate, however, this phrase is translated as *facies cornuta* (“horned face”), and the symbolism of this mistranslation has persisted over the centuries. The horns on the head of Michelangelo’s *Moses*, sculpted about 1515, are one well-known example.

In Christian iconography, the foremost association of horns is with devils and demons, although the Virgin Mary is sometimes depicted with the “horns” of the moon. The Vedic and Buddhist divinity Yama is horned. In ancient China, Shen Nong, one of three legendary divine emperors, is traditionally pictured with two horns on his head, as a symbol of his connection with nutrition and animal life. Celtic gods and goddesses are often horned.

The horned headgear of the gods was appropriated by humans to indicate their divine mandate and power. Babylonian and Assyrian kings wore rounded caps with horns. Alexander the Great identified himself with the horned god Amun and appears on coins with ram’s horns. Etruscans, Celts, Vikings, and Anglo-Saxons wore horned headdresses, as did American Indian chiefs and shamans. Medieval crowns, and even the miters worn by Christian bishops, owe their shape to earlier horned headdresses.

The association of horns with fertility accounts for the metaphoric use of *horn* for “phallus” (*Ps.* 132:17, *Jer.* 48:25), as well as for the worldwide consumption of powdered horn as an aphrodisiac. The image of cornucopias, or horns of plenty, is a well-known symbol of abundance. Horn amulets have been found on every continent. One of their most important uses was in detecting poison, because horned animals, particularly unicorns, were thought to be the natural

enemies of venomous serpents. The Chinese still use ivory for this purpose, reserving carved rhinoceros horns for the decorative function of symbolizing prosperity and strength. The prophylactic properties of horn extends to the sounds made by horned instruments, which have been valued throughout the world for their ability to ward off evil spirits, ghosts, demons, and devils.

Not all associations with horns are positive. Horned animals are dangerous. From the Stone Age on, horns were used as weapons. (The curved shape of swords and daggers reflects this primitive usage.) Potions made from powdered horns may be poisonous. The association of horns with fertility made them the ideal symbol of cuckoldry. The symbolism connecting horns with the moon has negative, as well as positive, implications. While the waxing of the moon is a sign of rebirth, the waning moon symbolizes death, darkness, and the underworld. Horns are, therefore, ideal attributes for evil and libidinous demons, devils, and monsters. Aside from the Devil of Christian folklore, sometimes known as “Old Hornie,” the Babylonian demon Pazzuzu was horned, as were the libidinous satyrs of ancient Greece. Japanese *oni* are evil spirits depicted as humans with bull horns. Most monsters have horns or horny scales.

#### BIBLIOGRAPHY

A full appreciation of the ramifications of horn symbolism requires a look at mythology and religion throughout the world. A good way to start is by consulting Jack R. Conrad’s *The Horn and the Sword: The History of the Bull as Symbol of Power and Fertility* (New York, 1957) and Frederic T. Elworthy’s *Horns of Honour* (London, 1900).

ALLISON COUDERT (1987)

**HORSES** have played an essential role in the life, and therefore in the religion, of all the peoples who have had direct contact with them, particularly the Indo-Europeans, the ancient Mesopotamians and Egyptians, the Arabs, the Chinese, and the North American Indians. It is fair to say that horses have always captured the mythic imagination through their ability to symbolize a number of related phenomena: power, wealth, divinity, sexuality, flying, and the tension between taming and freedom.

Among the earliest evidence of the importance of the horse to human culture are the magnificent wall paintings in the caves of Lascaux, in southern France, dating from around 30,000 BCE. There the grouping of horses with other wild animals such as stags and bison suggests that they were probably animals that were hunted rather than harnessed or ridden. Even so, it has been proposed that certain structures depicted on the walls at Lascaux represent corrals, implying that some sort of taming may already have begun. André Leroi-Gourhan has argued that the horse is part of the male half of a general sexual bipartition in the animal symbolism at Lascaux. If this is so, there is very early evidence indeed

of the horse in association with both taming and sexuality, perhaps even with the combined concept of the taming of sexuality, which is a dominant theme in the Indo-European religious symbolism of the horse.

But the true history of the horse in human religious conceptualization must begin with the first certain evidence of its domestication: the use of the chariot, which, for several centuries before horses were ridden, was employed as a means of transport, of farming, and as an instrument of war. Starting before 2000 BCE from a location somewhere in the area of the Caspian and Mediterranean seas, the use of the horse to pull a chariot spread eastward through Persia to India, then south through Syria to Egypt, then west through Anatolia to Greece, and then northwest into eastern Europe. Among the Hittites, a Mittannian named Kikkulis, who was employed as Master of the Horse by the Hittite king Sepululiumas, composed the earliest known book that deals with nothing but horses, about 1360 BCE. And the earliest known Egyptian figure of a horse appears on a bronze axhead of the eighteenth dynasty (c. 1450 BCE), which shows a horse led in hand in a manner assumed to be that of a charioteer rather than that of a rider. Horse chariots were also found in the tomb of Tutankhamen and are depicted on a wall painting from Thebes dated about 1400 BCE.

A particularly vivid description of the Egyptian chariots, and one that places horse and horseman in a religious narrative context, is the fifteenth chapter of *Exodus* in the Hebrew scriptures, a chapter that some scholars have dated as early as the twelfth century BCE. The passage that celebrates the parting of the Red Sea and the subsequent drowning of Pharaoh's men, horses, and chariots begins "I will sing unto the Lord, for he hath triumphed gloriously; the horse and his rider hath he thrown into the sea." The term *rider* may not necessarily refer to a mounted horseman; it is a generic term that could apply as well to a charioteer. But it is worth noting that the horse is here associated with several themes that occur often in the mythology of the horse: armies, evil, death, and, most striking, the bottom of the ocean.

**ANCIENT INDO-EUROPEAN HORSE SACRIFICES.** With the Greeks and the Vedic Indians, and later with the Romans, the horse truly came into its own as a religious symbol, one that pervades both myth and ritual. Rituals involving horses, more particularly rituals that involve the killing of a white stallion, are attested throughout the Indo-European world. Among the ancient Norse, a white horse symbolizing the sun and accompanied by women was killed in a ritual that included obscene references to the phallus of the horse, ritual castration, and an intoxicating drink. In the Roman festival of the October Equus, a horse dedicated to Mars was killed in the course of a ritual, and a chariot race took place; in the Roman Parilia, a horse was mutilated (perhaps castrated). Among the Greeks, white horses were sacrificed to Poseidon and to the sun; a white mare was sacrificed at the grave of a maiden who had been raped and had committed suicide; black horses were inauspicious. Both Roman and Greek

sources indicate a fertility cult associated with the horse, one that often agrees in striking detail with the Vedic cult of the horse. The Persians tell of a battle between an evil black horse and a good white horse, whose victory released the fertilizing rains; and the Iranians regarded white horses as symbolic of the sun (Pausanias, 3.4.20; Xenophon, *Cyropaedia* 8.3.11). Among the Indo-Europeans in general, it appears, the white horse was sacred.

This article shall examine the Indian and Irish models of these rituals in greater detail, but in this introductory survey it is useful to note a linguistic link between these far-flung Indo-European cults of the horse. The Gallic proper name *Epomeduos* may be cognate with the Sanskrit *śvamedha*; both royal names are possessive compounds designating kings who have (performed) horse sacrifices. The first element of the compound simply means "horse"; the second element is more difficult to pin down, but it has the connotations of a ritual drink (such as mead) or an intoxicating drink. Thus the term as a whole may mean "intoxication with the horse"; Jaan Puhvel, who has noted these linguistic implications, remarks that "the early Indo-Europeans were undoubtedly 'crazy about horses,' and so were the Gauls" (Puhvel, 1955). It may, however, mean "one who has performed a ritual involving a horse and a sacred drink" or even—as is supported by the evidence provided by the Indian and Irish horse sacrifices—a ritual in which the horse itself supplied the substance or the sacrificial food and drink for the king, a ceremony in which a horse was ritually eaten. Whether eaten or not, horses were sacrificed by the Greeks (Herodotus, 7.113; Ovid, *Fasti* 1.385), by the Armenians and Massagetes (Xenophon, *Anabasis* 4.5; Herodotus, 1.216), and by the Scythians, of whose spectacular royal burials Herodotus provides a hair-raising description (4.71–72).

Still, it is the Vedic, Roman, and Irish horse sacrifices that provide the triangle on which the Indo-European evidence rests, however shakily. The facts of congruence in existing sources are impressive, although the weight and substance of documentation are grotesquely dissimilar. The Vedic ceremony is by far the best documented, both in terms of the contemporaneous nature of the ritual and the text describing it (both dating from 900 BCE but referring to the hymns to the horse in the *Rgveda*, perhaps as much as three hundred years earlier) and in terms of the volume of data: hundreds and hundreds of pages of Sanskrit texts. The Roman ritual is a poor second, cursorily described by Polybius (12.4b), Plutarch (*Quaestiones Romanae* 97), and Festus (ed. Lindsay, pp. 178.5ff.) with distressing discrepancies and lacunae. The Irish ritual is even more problematic, having been described only in the twelfth century CE by a Christian monk who could scarcely believe his eyes, so appalled was he by the obscenity of the rite (Giraldus Cambrensis, *Topographia Hibernica*, ed. Brewer, p. 169).

Yet the parallels are truly striking. In India, a ritually consecrated stallion was killed after a chariot race; the chief

queen than pantomimed copulation with the stallion, to the accompaniment of verses (spoken by priests) regarded as obscene even by the contemporaneous texts (which prescribe a “perfumed” verse to be recited at the end, to wash out the mouths of the participants). In Rome, after a race the right-hand horse of the winning chariot was sacrificed to Mars; its tail was carried to the Regia, where its blood was sprinkled on the altar (Plutarch) or the hearthstone (Festus). Men from the Sacra Via and the Suburra did battle for the head, the latter (if they won it) carrying it to the Turrus Mamilia, the former to the wall of the Regia. In Ireland, the king pantomimed (or performed) copulation with a live mare who was afterward dismembered and cooked; the king bathed in her broth and drank it, and the broth was then distributed to the people.

The common thread in all three rituals is the killing of an equine. In two of the rituals (India and Rome) the horse is a stallion; in two of the rituals (India and Ireland) there is a sexual union as well as a death. It could be argued, from the writings of Georges Dumézil and others, that the ritual emphasizes a different one of the three Indo-European functions in each of the three cultures in which it appears: the Roman primarily martial, the Indian royal and sacred, the Irish fertile and nourishing. But all three rituals can and do incorporate all three levels of symbolism. A ceremony that is about royalty and the power of the king not only can but, in a sense, must also be about sexuality and nourishment: for the ancient Indo-European stallion symbolized at once the powers of the warrior; of the king, and of the virile male.

**ANCIENT INDO-EUROPEAN HORSE MYTHS.** Given the primacy of the stallion in the aggressively virile cultures of the Indo-Europeans, how is one to explain ritual focus on the Irish mare? It could be argued that the Irish variant is properly Gallic, rather than Indo-European, and make the case (as Robert Graves did in *The White Goddess*, 1948) for an ancient Gallic horse goddess whose cult was superseded by that of an Indo-European horse god. In support of this contention is the Gallic cult of the goddess Epona, almost the only goddess worshiped in the same guise by both continental and insular Celts. Intimately connected with the Welsh Rhiannon and the Irish Macha, whom shall soon be encountered, and thematically connected with the horseheaded Greek Demeter, Epona is often depicted as a woman riding on a mare, or as a mare, or with a mare’s head; she is also associated with a male horse god, Rudiobus. Epona, whose name comes from the Proto-Indo-European \**ékwo*s, “horse” (Lat., *equus*; Skt., *áśva*), is particularly concerned with pregnant mares and with foals. Pseudo-Plutarch (parallel 29; cited by Le Roux, 1963, p. 133) gives what may be the only ancient record of a Celtic hierogamy like the one that is described, as a ritual, by Giraldus Cambrensis so many years later: “A certain Phoulouios Stellos, who hated women, had intercourse with a mare. In time, she brought forth a beautiful maiden whom she named Epona, a goddess of horses.”

Celtic mythology offers rich support for the concept of an ancient horse goddess. The Irish *Táin Bó Cuailnge* nar-

rates the myth of Macha, a tri-functional equine goddess who, forced to run in a chariot race while she is pregnant, dies bringing forth twins or who, in another avatar, brings forth a son at the very moment when a mare in the stable gives birth to twin foals (Kinsella, 1970; Gricourt, 1954). And the Welsh *Mabinogi* tells the story of Rhiannon, who appears to King Pwyll riding on a white horse, marries him, and bears him a child while a mare has a foal at the same moment; accused (falsely) of killing the child, Rhiannon is condemned to carry guests from the mounting block to the court on her back.

The myth of the mare goddess has a broader Indo-European distribution as well. In India, the myth begins with references in the *Rgveda* to the wife and false-wife of the sun, a myth that is told in greater detail in the Brāhmaṇas and the Purāṇas: Vivasvant, the sun, married Saranyū, who fled from him and substituted for herself another female, Chāyā (“dark shadow”) upon whom Vivasvant begat a son, Manu, the ancestor of the human race. Meanwhile, Saranyū took the form of a mare and fled from Vivasvant, but he took the form of a stallion, followed her, and covered her; upon giving birth to the twin horse-gods, the Aśvins, she abandoned them. The parallels with Celtic myths are striking: A goddess in the form of a white mare takes human form and mates with an aging sun king; impregnated by him, she gives birth to hippomorphic twins, the ancestors of the human race, whom she injures or abandons, and she leaves the king to return to her heavenly home. The inversions and reversals that take place over the wide Indo-European area and through the centuries are complex, but clearly this is some sort of protean mythic core.

Greek mythology supplies further evidence in support of this corpus. Demeter, who is often depicted with a mare’s head, mated with Poseidon (the god of the sea, to whom horses were sacrificed, and who was himself called Hippios, “equine”; Apollodorus, 3.6.8; Pausanias, 8.25 and 8.42); in Arcadia, Demeter is portrayed as Black Demeter, with the head and mane of a horse on the body of a woman (Ovid, *Metamorphoses* 6.406b). Poseidon is also involved in several myths in which a woman is raped by a god in the form of a stallion and gives birth to foals that she attempts to destroy; he is more distantly involved in a Greek cycle of myths about overprotective fathers of equine goddesses who destroy their suitors (the myths of Hippodameia, Hippomenes, and Alcippe). Glaucus and Diomedes of Thrace are said to have had savage mares, made more savage by their enforced chastity, who devoured men, and Hippolytus (well known from Euripides’ tragedy), who worshiped Artemis and denied Aphrodite, was dragged to death by chariot horses that were frightened by a monster sent by Poseidon from the sea.

**EUROPEAN MYTHS OF EVIL MARES.** The pattern of myths of evil mares is almost exclusively Indo-European, which is hardly surprising, given the special place of the horse in Indo-European culture. The negative symbolism of the Indo-European mare is epitomized by the myth, widely doc-

umented in India, in which a demonic female full of anger and destructive lust is tricked into taking the form of a mare with flames shooting out of her mouth. While she dwells at the bottom of the ocean, the flames in her mouth keep the ocean from overflowing its bounds and the ocean keeps her flames from destroying the world. On doomsday she will emerge from the ocean; her flames will destroy the universe with fire; and the uncontrolled waters of the ocean will flood the world. The underwater mare is thus a symbol of the tension between uncontrolled powers and the dangers that arise from the brutal suppression of those powers; it is a symbol of the paradox of the wild and the tame, in all three Indo-European spheres: the sacred, the martial, and the sexual.

The underwater mare appears, in various transformations, throughout later European mythology. Celtic mythology describes aquatic monsters known as Goborchinn (“horseheads”) as well as horse eels and water horses, the fore-runners of sea serpents and dragons like the Loch Ness monster, whose heads are often surprisingly equine. And, closer to home, one can see this symbolism at the heart of the climactic scene in Richard Wagner’s opera *Götterdämmerung* (The twilight [or doomsday] of the gods). Brünnhilde is one of the Valkyries, the female warrior spirits who ride their winged horses through the skies to bring fallen warriors to Valhalla; at the end of the opera, Brünnhilde mounts her white horse and rides through a wall of fire to her death, whereupon the waters of the Rhine rise and flood the world.

In folklore, the more anthropomorphic aspects of the myth, particularly the implications of the relationships between the mare and her children, are stressed. The Anti Aarne-Stith Thompson index of tale types and motifs gives many examples of myths in which a queen is falsely accused of the murder of her children and condemned to death, myths in which horses usually play a part. The accused woman sets out on a mare, and the wicked fairy who calumniates her is torn to pieces by a horse (TT 451); the unfaithful wife is transformed into a mare, like adulteresses in the *Arabian Nights* as well as in Finnish, Russian, and Italian tales (TT 449). Witches are closely associated with mares: A witch may be accompanied by a horse, she may appear as a horse, she may transform a man into a horse and ride him, or she may become a man-eating mare. The equine witch appears consistently as the villain in Indo-European folklore: She is the female fiend who eats children and rides her victims (an image with psychological overtones of fear and sexuality); she is the black maiden from hell, riding on her white horse; or she is the leader of the wild chase of witches on their phallic broomsticks, the horses of death. The image of the erotic woman on the white horse is not necessarily negative—there is always Lady Godiva, not to mention naked women on horseback in contemporary soft-core pornography—but her very eroticism is a negative value in the ancient Indo-European conceptual system, in which women should be not erotic but chaste.

The term *nightmare*, even though it is etymologically unrelated to the word for the female horse, comes to assume

explicit equine overtones from an early period in European mythology, in part through the attraction of assonance and in part through the influence of an already developed mythology. The true etymology is from the Old English *mare* (“hag”), and a nightmare, according to the *Shorter Oxford English Dictionary*, is a “female monster . . . supposed to settle upon people and animals in their sleep, producing a feeling of suffocation.” The prototype of the nightmare who presses down on the sleeper or has intercourse with him while lying on top of him is the mare who rides perversely astride her husband or victim. In modern reinterpretations of the image of the nightmare, in literature and art (the horse in Fuseli’s haunting painting entitled *The Nightmare*, or in Blake’s *Death on a Pale Horse*, or the tortured horses in Picasso’s *Guernica*), the cluster of meanings related to the several homonyms often merge: mother (Fr., *mère*), female horse (Eng., *mare*), ocean (Lat., *mare*; Fr., *mer*), death (IE, *\*mer*, *\*mor*), and the underlying Old English etymological meaning, “hag.”

One can postulate chronological levels in the history of the degradation of the symbolism of the mare. At first there may have been one mare goddess, an awesome, dangerous, sacred creature (sacred in Rudolf Otto’s sense of the word: *mysterium fascinans et tremendum*), who was sought by the king, captured, and wooed. She is a source of power, who invigorates the aging king by her annual ritual copulation with him; she dies in a sacrifice of her immortality to his mortality. At this period, the mare is simultaneously maternal, sororal, and erotic. In Semitic and Babylonian myths, she is manifest in the figures of Inanna and Ishtar, both of whom were said to copulate with horses. But in later European mythology, the mare goddess was split into two parts, the good mother and the evil whore, and the benevolent white mare is given a malevolent, black alter ego.

This transition is even more sharply marked in the closely related mythology of the swan-maiden. Mares in many Indo-European myths about evil women are closely associated with birds: They assume the form of birds or appear as winged horses. In the swan-maiden variants of the theme, a woman from the other world assumes the more delicate and feminine form of a white bird, instead of a white horse; she lives with a prince for a while and then leaves him when he violates the condition that she had set for their cohabitation (not to ask her name, or not to see her naked). This may be a very old Indo-European motif indeed, judging from archaeological evidence from Europe before 3500 BCE depicting the bird goddess. Her mythology begins with the Vedic myth of Pururavas and Urvasi and extends to the ballet figures of *The Firebird* (the firebird is the Russian version of the magic sunbird) and *Swan Lake*, in which Odette, the good, chaste White Swan, is opposed by Odile, the evil, seductive Black Swan. Then, too, when the Valkyries are not riding horses they become swans.

But the demotion from mare to swan was not the last step in the degradation of the symbol. The swan became

male. In Greek myth, Zeus assumes the form of a white swan in order to seduce Leda as she is bathing in a river (Leda's two sons, Castor and Pollux, became known as the Dioscuri, or equine twins, the Greek parallel to the Vedic Asvins). And in the legend of Lohengrin, it is he, not she, who rides in the swan boat. In Lohengrin's story the more ancient myth of the immortal woman who visits the mortal man or king came to be replaced by the myth of the immortal man who rescues the mortal woman. In a skiff drawn by a white swan (here a male), Lohengrin rides, as on a white horse, to the rescue of Elsa; the helpless female awaits the great horse/swan god who deigns to visit her and who will make her promise never to ask him his name or his lineage. Now Leda awaits Zeus, awaits the moment when she may, in Yeats's words, "put on his knowledge with his power / before the indifferent beak could let her drop."

**THE RIDER ON THE WHITE HORSE.** Thus the white stallion came to supplant the white mare in Indo-European mythology at a very early period. His mythology, like hers, was a mythology of ambivalence, of the coincidence of opposites, but the powers in question were different. The stallion came to symbolize not only death (as had the mare) but also re-birth, not only the taming of the wild (as had she) but also complete freedom from all social bonds.

Plato likened the human soul to a charioteer who had harnessed two horses to his chariot, one pulling him toward brutish sensuality, the other to a higher spiritualism; and, before Plato, the Indian Upanisads had likened the senses to horses that must be controlled if they are not to remain vicious and wild. The locus of this taming is the mouth of the horse, whence are derived such metaphors as "to bridle," "to curb," "to take the bit between the teeth," and so forth. The horse's mouth was therefore seen as the point of dangerous interaction. This notion is a misconception (for, as every horseman knows, although horses can indeed bite, it is the other end of the horse that poses the real danger, and horses are in any case strict vegetarians); nevertheless, it is the source of the many myths in which horses devour people, myths in which doomsday flames come out of the horse's mouth (or nostrils). That the mouth of the mare is believed to be dangerous is an instance of the projection of aggression, assuming that she will injure you with the organ where you have injured her (through the bit).

In Christian mythology, doomsday appears as the four horsemen of the apocalypse, or the rider on the white horse; in India, death becomes incarnate as the centaur or white horse named Kalki, an avatar of Viṣṇu who will usher in the final Kali Age and the end of the world. This is the image captured in Peter Schaffer's play *Equus*, in which an adolescent boy confuses together in his fantasies the tortured mouth of the horse-god that he rides naked in sexual ecstasy and the tortured head of Christ bridled in his crown of thorns. And it is the image that begins James Joyce's famous poem:

I hear an army charging upon the land

And the thunder of horses plunging, foam about their knees.

Arrogant, in black armour, behind them stand,  
Disdaining the reins, with fluttering whips, the  
charioteers. (from *Chamber Music*, 1907)

But the other, positive aspect of the horse never lost its symbolic power. Centuries before the Roman invasions, someone carved into the chalky hillsides of the English Downs several colossal images of a white horse. The horse by itself, unharnessed, unbridled, unriden, was always at home in the mountains, close to its divine home and far away from the ropes of humans. The horse thus remained always a symbol of freedom. In the ancient Indian horse sacrifice, the stallion wandered freely for a year before the ceremony, attended by his herds and followed by the king's men, to claim for the king whatever grazing land he cared to wander through. This image of freedom was somehow preserved rather than canceled by the later composite image of the white horse and its noble rider, who were thought of as a single creature, ideally a kind of centaur. The horse transferred its freedom and nobility to its rider, even as the ancient Indian stallion transferred these qualities to the king during the sacrifice. Thus Saint George, always mounted on a white horse, kills the very dragon that is, as has been seen, a variant of the demonic underwater mare, the shadow side of the white stallion itself; and medieval equestrian imagery placed not only knights and kings but princes of the church on horseback, to symbolize all that was not only noble, but divine.

The horse carried humanity from earth to heaven. In India and Greece, as well as in medieval Europe, one reads of princes who are lured by white stags (or white swans, or white horses, or unicorns) from the safe territory of the royal parks to the thick of the forest, to the Other World, where they may meet their princess or encounter their dragon (or both, or both in one). The many tales of winged horses, as well as the conflation of horse and bird, often transform this horizontal voyage into a vertical flight. Not until the advent of photography in the mid-nineteenth century did people come to realize that a galloping horse did not actually fly, with forelegs stretched forward and hindlegs backward, and even then galloping continued to feel like flying. In many of the shamasitic myths of Inner Asia, China, and India, the initiate mounts a white horse and is suddenly carried off, out of control, into the world of the gods, where the initiation takes place. Thus the horse leads humankind from the world of the tame to the world of the wild, the magic, supernatural world of the gods.

This symbolism found its expression in the mythology of the American West, where the magnificent white mustang who can never be caught stands on the mountains with the wind lifting his mane, symbolizing all that is wild and free. Yet the stallion is caught, to become the alter ego (in India one would say the vehicle, or *vahana*) of the cowboy, who comes himself to represent the last bastion of male freedom—freedom from sexuality (the cowboy rides alone, like

Lancelot, whose chastity was his power), from the law (for even the lawmen tend to be mavericks, and the outlaws are good outlaws), but most of all from being tamed or “fenced in.”

Humankind can never entirely succeed in taming the horse. This is the charm and the challenge of any intimate association with a wild animal, that it retains some measure of its wildness. But the horse untames humans, transferring to them—or, one might say, sacrificing for them—some of its own wildness and freedom.

#### BIBLIOGRAPHY

A good overview of the history of the horse in human culture is provided by Anthony Austen Dent's *The Horse through Fifty Centuries of Civilization* (New York, 1974). Much of the material on the myths and rituals of the horse in India, Greece, and Ireland that I have used in the article above has been condensed from pages 149–282 of my *Women, Androgynes, and Other Mythical Beasts* (Chicago, 1980), which, in turn, draws upon several basic studies of indo-European equine symbolism (in addition to the primary texts reproduced and analyzed therein): the writings of Georges Dumézil, particularly “Derniers soubresauts du Cheval d’Octobre,” in his *Fêtes romaines d’été et d’automne* (Paris, 1975), pp. 111–168, 177–219. Paul Émile Dumont's *L'asvamedha* (Paris, 1927); Jean Gricourt's “Epona-Rhiannon-Macha,” *Ogam* 6 (1954): 22–188; Wilhelm Koppers's “Pferdeopfer und Pferdekult der Indogermanen,” *Wiener Beiträge zur Kulturgeschichte und Linguistik* 4 (1936): 279–411; Françoise Le Roux's “Recherches sur les éléments rituels de l'élection royale irlandaise et celtique,” *Ogam* 15 (1963): 123–137; and two articles by Jaan Puhvel, “Vedic *asvamedha* and Gaulish IIPOMIID-VOS,” *Language* 31 (1955): 353–354, and “Aspects of Equine Functionality,” in *Myth and Law among the Indo-Europeans*, edited by Jaan Puhvel (Berkeley, 1970). For prehistoric images of the horse, see André Leroi-Gourhan's article “Préhistoire,” in *Dictionnaire des mythologies*, edited by Yves Bonnefoy (Paris, 1981); for horses in Britain, see Anthony Austen Dent and Daphne Machin Goodall's *The Foals of Epona* (London, 1965); and for the Irish *Táin*, Thomas Kinsella's translation, *The Táin, Translated from the Irish Epic “Táin Bo Cuailnge”* (Oxford, 1970).

**HORUS.** In ancient Egypt there were originally several gods known by the name Horus, but the best known and most important from the beginning of the historic period was the son of Osiris and Isis who was identified with the king of Egypt. According to myth, Osiris, who assumed the rulership of the earth shortly after its creation, was slain by his jealous brother, Seth. The sister-wife of Osiris, Isis, who collected the pieces of her dismembered husband and revived him, also conceived his son and avenger, Horus. Horus

fought with Seth, and, despite the loss of one eye in the contest, was successful in avenging the death of his father and in becoming his legitimate successor. Osiris then became king of the dead and Horus king of the living, this transfer being renewed at every change of earthly rule. The myth of divine kingship probably elevated the position of the god as much as it did that of the king. In the fourth dynasty, the king, the living god, may have been one of the greatest gods as well, but by the fifth dynasty the supremacy of the cult of Re, the sun god, was accepted even by the kings. The Horus-king was now also “son of Re.” This was made possible mythologically by personifying the entire older genealogy of Horus (the Heliopolitan ennead) as the goddess Hathor, “house of Horus,” who was also the spouse of Re and mother of Horus.

Horus was usually represented as a falcon, and one view of him was as a great sky god whose outstretched wings filled the heavens; his sound eye was the sun and his injured eye the moon. Another portrayal of him particularly popular in the Late Period, was as a human child suckling at the breast of his mother, Isis. The two principal cult centers for the worship of Horus were at Bekhdet in the north, where very little survives, and at Idfu in the south, which has a very large and well-preserved temple dating from the Ptolemaic period. The earlier myths involving Horus, as well as the ritual performed there, are recorded at Idfu.

LEONARD H. LESKO (1987)

**HOSEA,** or, in Hebrew, Hoshe'a (mid-eighth century BCE), was a Hebrew prophet whose words are recorded in the biblical *Book of Hosea*. Hosea prophesied during the reign of Jeroboam II of the northern kingdom of Israel (787/6–747/6 BCE), which was a period of economic prosperity and political stability. There are, however, a number of allusions in the book to either war (5:8ff.) or political anarchy (7:1ff., 10:3, 13:10–11), which may suggest that Hosea continued to prophesy until the fall of Samaria in 722. This fits well with the superscription's list of the Judahite kings (Uzziah, Jotham, Ahaz, and Hezekiah) during whose reigns Hosea prophesied. Hosea's prophetic emphasis is mainly on domestic affairs, especially the cultic situation.

**HOSEA'S MARRIAGE AND HIS PROPHETIC MESSAGE.** The information on Hosea's background is minimal. There is information, however, about a unique personal experience in his life, a peculiar marital episode. God had commanded Hosea to marry a harlot, one Gomer, daughter of Diblaim (1:3), who bore him two sons and one daughter. This mar-

riage and its consequences, interpreted in religio-theological terms, form the major theme of chapters 1–3. The story of the marriage is told twice. The first account (chap. 1) is in the third person, while the second (chap. 3) is reported directly by Hosea. The significance of Hosea's marriage to a harlot and the text's repetition of the story of this marriage have been major issues in research on *Hosea*. Should God's order to "go, take to yourself a wife of harlotry and have children of harlotry" (1:2) be read literally or only as a metaphor for the nation's religious attitude, with Hosea the faithful husband representing God, and Gomer the unfaithful wife representing Israel? Is a "harlot" defined as a professional prostitute or as a sacred prostitute (cf. *Amos* 2:7)? There are no clear answers to these questions. One should not ignore, however, the prophets' tendency to dramatize events literally (e.g., *Is.* 20:2, *Jer.* 28:10, *Am.* 8:1–3) and therefore the possibility that Hosea married a harlot (professional or sacred) to symbolize the content of his message. The root *znh* ("harlotry") appears no fewer than nineteen times in his prophecy, always in key passages. Hosea's personal experience is thus the paradigm of his prophetic message that Israel has betrayed God. The relationship between God and Israel is like that between man and woman, husband and wife, where Israel is the unfaithful wife and God the loving and forgiving husband, who calls to his wife to repent and come back to him (see 2:14ff. [Masoretic text 2:16ff.]). The names of Hosea's three children, dictated to him by God, further express his prophetic message. The elder son is called Jezreel because "I will punish the House of Jehu for the blood of Jezreel" (see *1 Kgs.* 19:15–17; *2 Kgs.* 9–10) and "I will put an end to the kingdom of the house of Israel" (*Hos.* 1:4). His daughter is named *Lo'-ruḥamah* ("not pitied"), "for I will no more have pity on the house of Israel" (1:6), and the younger son is called *Lo'-ammi* ("not my people"), "for you are not my people and I am not your God" (1:8).

No other prophet has portrayed the relationship between God and the people of Israel in such rich images of harlotry and vivid descriptions of the unfaithful wife. Indeed, the key words of Hosea's message are words that connote "fidelity" (*ḥesed*; 4:4, 6:4, 6:6), an emotional relationship with God (*da'at Elohim*; 4:1, 6:6) and repentance (*shuvah*; 6:1, 6:11, 7:10, 12:7).

Hosea's protestations against the unfaithful marriage also raise questions as to the nature of the Israelite religion of this time, because the Hebrew word for "husband," *ba'al*, also connotes the chief Canaanite god. Thus, a renewed relationship of fidelity between God and Israel will be expressed in new terms for marital relationships: "And in that day, says the Lord, you will call me 'my man' [*'ish*], and no longer will you call me 'my husband' [*ba'al*]" (2:16 [MT 2:18]). Scholars call attention to the possibility of religious syncretism that may have taken place in Israel. Archaeological findings in Kuntillet 'Ajrud in Sinai may indicate that a cult of Yahveh, with Baal as either an alternative name or a co-god, existed toward the end of the ninth century BCE. Hosea may

thus have been protesting against a cult of fertility that involved sacred harlots and was practiced in his own agricultural society. Hosea also called to renew the *berit* between Israel and God. Many scholars translate *berit* as "covenant" and reject the existence of the concept of formal covenant between God and Israel prior to the later appearance of the Deuteronomistic school. Nevertheless, *berit* occurs in *Hosea* at least five times (see especially 6:7 and 8:1) and may be understood in terms of faithful marriage, as the context of Hosea's prophecy suggests.

**HOSEA AND EARLIER TRADITION.** Hosea is opposed to fundamental institutions of his society. He criticizes the priests (4:4–10) as well as the political leaders and even the monarchs of his kingdom.

Where now is your king, to save you;  
where are all your princes, to defend you—  
those of whom you said, "Give me a king and princes"?

I have given you kings in my anger,  
and I have taken them away in my wrath. (13:10–11,  
RSV)

He is the only prophet to anchor his reservations about kings in ancient antimonarchical traditions (see *1 Sm.* 8:5ff.). Hosea's disappointment in the kings of Israel may also mirror the political situation that followed the death of Jeroboam II. Jeroboam's son Zechariah ruled for six months and was assassinated by Shallum, who governed for just one month and was killed by Menahem (*2 Kgs.* 15:8ff.). Two other Israelite kings were also assassinated before the fall of the kingdom, for a total of four out of six kings murdered within approximately twenty-five years.

Hosea does not see himself as an innovator. He speaks for and identifies himself with the long prophetic tradition that started with Moses (12:13 [MT 12:14]; see also 6:5, 9:7, 12:10 [MT 12:11]). He has no illusions about the effect of his address, as he points out in 9:7: "The prophet is a fool, the man of the spirit is mad." But he does not withdraw, regarding himself as "the watchman of Ephraim" (9:8), following prophetic tradition (cf. 3:17ff.). (In *Hosea* this tribe's name is often used for the entire northern kingdom.) He is familiar with traditions about the patriarch Jacob—his birth (*Hos.* 12:3 [MT 12:4]), his struggle with the angel (12:4 [12:5]), his devotion to his beloved wife Rachel, and his flight from the land of Aram (12:12 [12:13]). He refers to the period of the Exodus (2:15 [2:17], 11:1, 13:4); to Moses, the prophet who brought Israel up from Egypt (12:13 [12:14]); and to Israel's unfaithful behavior in the desert at Ba'al-pe'or (9:10; see *Nm.* 25:1–18), when God punished the people by means of a plague for committing cultic-sexual sins. Hosea even refers to a certain version of the Decalogue (4:2; cf. *Jer.* 7:9). But he also emphasizes God's care of the Israelite people in the desert (13:5). Thus he shows that Israel's relationship with God has a long history, yet the people have ignored the ancient traditions that demonstrate God's devotion and commitment. For him, fulfillment of the moral commandments is the ultimate condition for the survival of

the land and its people (4:3), for this constitutes faithfulness to this relationship with God.

**LANGUAGE, STRUCTURE, AND AUTHORSHIP.** Hosea's identification with the prophetic tradition as well as certain linguistic affinities with *Deuteronomy* suggest that his ideas and language influenced the Deuteronomistic ideology and terminology. It may be that after the fall of Samaria, either Hosea himself or his disciples moved to Jerusalem, where his speeches were collected and preserved. Hosea's portrayal of God and Israel as husband and wife is also reflected in the prophecy of Jeremiah (cf. *Jer.* 2:17ff., 3:1ff.), who was very familiar with the style of the Deuteronomist.

Hosea was a great poet, a master of language; his verses in 11:8–9 are among the most moving lines in the prophetic literature. His language is a mixture of prose and poetry. His verses are longer than is typical and often break the symmetrical pattern of parallelism, enabling the isolation and emphasis of a specific idea through the device of climax.

What shall I do with you, O Ephraim?

What shall I do with you, O Judah?

Your love is like a morning cloud, like  
the dew that goes early away.

Therefore I have hewn them by the prophets,  
I have slain them by the words of my mouth,  
and my judgment goes forth as the light.

For I desire steadfast love and not sacrifice,  
the knowledge of God, rather than burnt offerings.  
(6:4–6, RSV)

No other prophet employs so many figures of speech, especially simile, as Hosea. He may use a series of similes to create a single long poetic image, as in developing the figure of the oven in 7:4ff. He refers to God as a lion (5:14), a leopard (13:7), and a bear (13:8), images that illustrate his effort to attract his audience's attention in an unconventional way and to deliver his message as effectively as possible.

*Hosea's* language is complicated, however, and every study of the book struggles with the difficulties of the text. The language, especially beginning with chapter 4, is very often puzzling. Perhaps the text has been poorly transmitted, or, as some scholars suggest, perhaps Hosea speaks in a northern dialect, which may sound odd to the modern reader of the Hebrew Bible, who is used to the Judahite style.

The *Book of Hosea* is divided into two major parts: chapters 1–3 and 4–14. The first part includes three literary genres: biography (chap. 1), autobiography (chap. 3), and prophetic speech (chap. 2). There have been discussions concerning the chronological order of these chapters, with some scholars suggesting that chapter 3 precedes chapter 1, so that the biography (chap. 1), which develops the theme of the marriage, elaborates Hosea's personal account. Others, who attempt to preserve the present order, point to the words "Go again, love a woman" (3:1), which may indicate that chapter 3 refers to a second marriage and not to Gomer.

Chapters 4–14 are a compilation of poetic orations, and determining each prophetic speech unit is sometimes difficult. In light of the stylistic differences and the personal approach of chapters 1–3, it has been suggested that two different books composed by two prophets were combined. However, the intense imagery of harlotry, the motif of repentance, and the return of the wife to her husband dominate the second part of the book as well and thus suggest that the entire book is Hosea's composition.

In contrast to many other prophetic books, most of the material in *Hosea* has been assigned by scholars to Hosea himself or to his close disciples, except verses such as 1:7 and 3:5, which may reflect a redaction in terms of a Judahite salvation eschatology. The various historical allusions (which are not always readily obvious), such as the Syro-Ephraimite war (5:8ff.), and 13:9–16, which may refer to a military occupation toward the end of the existence of the northern kingdom, may suggest that the book was edited into chronological order.

**HOSPITALITY.** The word *hospitality* is a translation of the Latin noun *hospitium* (or the adjective *hospitalis*), which in turn derives from *hospes*, meaning both "guest" and "host." Behind this double connotation is the Greek concept of the *xenos*, the stranger who receives a welcome or, less frequently, acts as a welcomer of others. A great many cultures attach religious and ethical value to the establishment of friendly exchanges between those who view one another as different—in rank, race, or tribe—and, therefore, potentially

dangerous. In order to provide a focus for interpreting the diverse traditions that relate to this subject, the present entry concentrates upon the prescribed behaviors for guests and hosts, particularly at meals, and the reasons (whether stated or implied) for these mores.

Pictures of hospitality abound in the *Iliad* and the *Odyssey*. Indeed, the practice of hospitality can be perceived as a cardinal virtue among the Homeric characters. Odysseus, the great wanderer, is praised for his exemplary hosting (Homer, *Odyssey* 1.176). In both epics hospitality represents that aspect of fearing the gods that creates a readiness for reciprocal relationships with strangers. Those who do not attain such openness are deemed barbarians (*Odyssey* 6.120ff.). Conversely, a single act of welcoming on the part of one family group toward another, usually by means of a meal, can result in a bond of friendship that lasts for generations (*Iliad* 6.215ff.). Thus, hospitality is an eminently practical virtue; through gift exchanges and the sharing of food or shelter, peace and harmony are achieved in what would otherwise be a chaotic world.

In Greek epic tradition, the gods themselves sometimes put on human disguises and assume the role of guests. On those occasions when they are welcomed, they respond with good news (*Odyssey* 1.180ff.) or extraordinary gifts (Ovid, *Metamorphoses* 8.678ff.). In this reciprocity there exists a link with the ancient bedouin tradition concerning Abraham's gracious reception of three strangers by the Oaks of Mamre (*Gen.* 18:1ff.). The strangers are variously understood to be human messengers, angels, or, in later Christian thought, the Trinity. Thus, icons of the orthodox churches depict Abraham's *philoxeny*, or love of strangers, as the believer's enjoyment of communion with the divine presence. In the biblical story, Abraham's guests respond to the lavish banquet that he and Sarah have prepared for them with the miraculous news that Sarah, advanced in years like her husband, will soon bear a son, Isaac. It is not surprising that in rabbinic Judaism, early Christianity, and Islam, Abraham becomes a kind of patron saint of hosts. Enmeshed in this tradition is the premise that hospitality merits a reward from God and must therefore be encouraged. One version of the premise occurs in Matthew 25:33ff., where Jesus appears as the judge of all nations and announces that hospitable acts performed for the least of his brothers and sisters have actually been done for him and that, moreover, the end result of these acts is the opening up of God's kingdom to those who have undertaken them. The special vocation of Christian monastics to care for strangers and the needy, in part through the founding of hospitals, may be understood as an attempt to embody this teaching.

Rabbinic Judaism sometimes employs hospitality as a metaphor for the teaching and learning of Torah ("Let thy house be a place of meeting for the wise, and dust thyself with the dust of their feet and drink their words with thirst"; *Avot* 1.4). Sometimes hospitality is thought to be blessed by the bestowal of God's presence ("Three who have eaten at

one table and have said over it words of Torah are as if they had eaten from the table of God"; *Avot* 3.4). Similar thoughts occur in New Testament stories where Jesus and Paul receive material hospitality as guests but then demonstrate by their words and actions that they are agents of God's kingdom, blessing their hosts with divine gifts. (*Luke* 24:28–35; *Acts* 20:6–12; 28:7–9).

Jesus in particular is seen as one who welcomes sinners and marginal people (*Matt.* 11:19; *Luke* 15:1–2); typically the gospels picture him doing this at meals to which he has been invited as a guest (*Mark* 2:15ff.; *Luke* 7:36–50; 19:1–10). The major exception is what Christians have come to call the last supper, a meal during the week of Passover, just before Jesus' death, when he initiates a guest-meal for his disciples. In the Synoptic Gospels Jesus blesses bread and wine at this meal with words relating them to his body and blood. For Christians, this event is usually seen as the institution or forerunner of the Eucharist or Lord's Supper, which often functions today as a welcoming ritual but also, in some branches of the church, as a means of self-definition that excludes nonmembers. According to the Fourth Gospel, the last supper featured a special act of hospitality by Jesus: the humble washing of his disciples' feet followed by an exhortation to perform this act for one another (*John* 13:1–14).

In Islam, the fundamental notion underlying the theory and practice of hospitality is protection. This is expressed in the Arabic term *djiwar*, which denotes neighborliness or the granting of refuge to wayfaring strangers and resident visitors who are not members of one's own tribe. Such practices could have their origin in the bedouin conviction that guest and host alike (the Arabic word *dayf*, like *xenos*, refers to both) stand at the mercy of a hostile environment and must adhere to firm rules for the sharing of necessities to ensure their common survival. Foremost among these rules is a custom according to which travelers may count on receiving food and lodging from a given host for three days. At the end of this period, they are expected to continue their journey unless unusual circumstances intervene (see also the early Christian writing *Didachē* 11–12). From this fundamental rule, refinements of hospitality evolve. Hosts who are especially virtuous prevail upon their guests to stay longer, and they emerge from their tents to welcome passing strangers. Some hosts furnish provisions for their guests when they resume their journeys and even escort them on their way.

Articulations of hospitality that are explicitly religious occur with regularity. For example, proximity to a sacred place is thought to confer protection; and it is said that when one becomes a Muslim, one is henceforth God's *djar* (protected neighbor). Perhaps it is this trust in God's care that stimulates Islamic practitioners of hospitality to extend such largess to their guests. H. R. P. Dickson reported that in the 1920s he was greeted by a number of Saudi Arabian hosts with this couplet: "O Guest of ours, though you have come, though you have visited us, and though you have honored our dwellings / we verily are the real guests, and you are the

Lord of this house” (Dickson, 1951, p. 118). A story from about this same period concerns the German diplomat Leopold Weiss who is reputed to have converted to Islam as a result of reflection on a guest-meal. When a poor bedouin traveling with him aboard a merchant ship brought out his millet bread and olive oil and insisted on sharing half of it with Weiss, he was overcome with the man’s generosity and wanted to know more about his religious convictions (*Islamic Voice*, November 2000). Whether intended or not, the practice of hospitality often becomes a missionary gesture.

In Hinduism of the classical period and, to a lesser extent, Hinduism today, practices of hospitality are shaped primarily by the caste system and the fourfold stages of life through which an individual (i.e., student, householder, hermit, or homeless wanderer) passes. According to some of Hinduism’s oldest sacred texts, members of one caste may not interdine with those of another. Under this constraint the basic foundation for mutuality between strangers, utilized by most cultures, is eliminated. Nevertheless, Hinduism recognizes an alternate code of hospitality whereby the *brahman* (Skt., *brāhmaṇa*), or member of the priestly caste, accepts food from members of other castes (under carefully prescribed conditions) in return for spiritual services, especially the reciting of the Vedas. Moreover, *brahmans* are enjoined to be generous hosts to members of other castes, albeit at separate tables and after their fellow *brahmans* have been provided for (*Laws of Manu* 3–4). The lowest caste, the *śūdra*, is understood to be servant to the other three, although the higher castes must see to the basic material needs of the lowest (*Mahābhārata* 12). In general, *brahmans* are to assume the task of hosting the gods on behalf of other castes by offering sacrifices of food.

With regard to the fourfold stages of life, householders and hermits are the chief host figures, while students and homeless wanderers typically play the role of guests. In all encounters between individuals an exchange of spiritual and material gifts is expected, although not necessarily at large common meals. All gifts are reproductive to the donor; that is, they bring an increase during one’s present life and/or in subsequent reincarnations. Gifts of food in particular exercise special influence over an individual’s *karman*. Indeed, “one is reborn in the other world with the nature of those whose food one accepts, or of those whose food is in one’s stomach, or with the nature of the food itself” (Mauss, 1954, p. 126). Today some of Hinduism’s ancient societal barriers no longer prevail, and a number of castes that had traditionally maintained strict separation from one another practice interdining when it is perceived to be in their common social and economic interests.

Tradition has it that as the Buddha lay dying at the home of Cunda the smith, who had served him poisonous mushrooms by mistake, he ordered his disciples to tell the grieving host that he must not feel guilty about the demise of his guest. On the contrary, said Gautama, Cunda’s meal had granted him final passage to *nirvāṇa* and therefore ought

to be praised. In addition to portraying Gautama’s extraordinary compassion, this story illustrates a constant theme in Buddhist depictions of hospitality: whenever hosts share food with guests, especially when the guests are monks or revered teachers, merit accumulates for all parties.

In Theravāda Buddhism, no ritual acts as such are prescribed. In the canonical texts, however, two public occasions of a religious nature are presupposed: the feeding of monks and preaching. In Sri Lanka, these are often combined in an event called the *pinkama* (“act of merit”), during the course of which a *dāṇé* (gift-meal) is provided, usually by laypeople, and *baṇa* (preaching) or *pirit* (recitation of sacred texts) is contributed by the monks. These events may be large festal gatherings at temples, private visits by monks to the households of laypeople, or funeral meals attended by families and friends. The common feature of all of them, however, is the transferring of merit, which is accomplished when a host expresses his wish that the benefits of the food and drink being served might accrue to others who are not visibly present. Normally, gods, dead relatives, or *pretas* (homeless, hungry spirits) are named, but in the popular understanding merit transferred at a *pinkama* also contributes toward the enlightenment of its ordinary human guests. Indeed, according to the “perfection of donation” tradition in Mahāyāna Buddhism, a *bodhisattva* may reassign the merit produced by his giving so that it benefits every living creature. The merit itself is then conceived of as food, for the *bodhisattva* vows: “I turn over into full enlightenment the meritorious work founded on jubilation. May it feed the full enlightenment (of myself and of all beings)” (*Aṣṭasāhasrikā* 6.138; trans. Conze, 1954). In effect, the *bodhisattva* becomes host to the entire universe.

One sees in this vow a conviction that everyone associated with feeding events will experience spiritual gain. Sometimes the gain is equated with a convivial happiness among the guests, which earns them even more merit than that achieved by the host. Thus, Richard F. Gombrich reports that a priest in Ceylon (Sri Lanka), who had spent five thousand rupees on a *pinkama*, told him how any villager responding to this meritorious act with sympathetic joy could accumulate more merit than the priest—and without spending any money (Gombrich, 1971, p. 226). One may conclude then that for Buddhists hospitality in the form of the guest-meal typically functions to extend compassion; through the meal an endless process toward universal enlightenment is initiated.

In Confucian thought and practice, represented by documents dating from the Zhou dynasty (c. 1150 BCE to 256 BCE), gatherings for the sharing of food and drink are occasions that honor the natural distinctions between individuals or groups and at the same time provide opportunities for a decent, orderly communion among all the participants. When those involved follow the prescribed rites, harmony is achieved, and this harmony has cosmic as well as societal implications. According to Marcel Granet’s reconstruction of the ancient Ba Zha agricultural festival, all those present

were divided into two groups, one acting as hosts, the other as guests. These two groups embodied all the opposing forces of the universe (e.g., *yin* and *yang*), which produce great blessings when they meet under the proper conditions. Similar types of ritual meetings for the sake of harmony are the community drinking ceremony, as pictured in Xunzi's description; the elaborate protocols for state visits and feasts transmitted by the authors of the *Yili* (Book of etiquette and ceremonial) and the family ancestor festivals, during which the living and the dead are united through offerings of food. By means of such offerings, the dead are aided in their journey to the Western Heaven of Happiness, and the living are enabled to appropriate their merit. Thus, everyone benefits from the common feast.

The potlatch assemblies of the American Indians of the Northwest Coast appear to be altogether different from Confucian ceremonies in character and purpose, for their chief visible feature is an almost orgiastic competition in gift giving, which obligates guests to hosts and virtually enforces role reversals at future meals for fear of losing face. Tribal and individual statuses are determined by the ability to give everything away in ritual acts of consumption or destruction. Nevertheless, as Marcel Mauss has shown in his classic work on gift exchanges among archaic peoples, even the radical potlatch (the literal meaning of which is both "nourish" and "consume") becomes a form of acting out natural laws, according to which a reciprocal flow of giving and receiving between those of different ranks must occur in order to preserve society. Guests and hosts are seen to be deeply linked with each other in a cosmic order that requires them to change their roles periodically so as to ensure proper redistributions of wealth and value (Mauss, 1967, pp. 31–45). However much the potlatch differs from its Chinese counterparts in matters of decorum, it resembles them in embodying a basic harmony. For potlatch societies, however, that harmony is one of great flux.

All guest-host events within the life of religious communities involve a certain degree of ritual activity, even when spontaneity is prized. Sometimes the rituals evolve into elaborate liturgies, as in celebrations of the Eucharist or Lord's Supper among members of the more catholic branches of Christianity. Even more stylized forms of hospitality are found in practices associated with the Japanese tea ceremony or *chanoyu*, the origin of which can be traced to ancient China. The sharing of tea by sages is recounted in an old legend concerning the Daoist master Laozi. Upon accepting an invitation to tea from a mountain hermit, the former rewards his host with a copy of the *Dao de jing*. Here again hospitality functions to promote gift exchanges, as well as a certain degree of equality. While Confucian officials used tea ceremonies to solidify status and hierarchical order in society through insuring that only those recognized as the greatest could be hosts, more egalitarian practices prevailed among Chinese Buddhists, especially those of the Chan group. These apparently involved rituals in which monks drank out

of a common bowl before the image of Bodhidharma, the order's Indian founder.

The Way of Tea or *chado* reached Japan in the ninth century CE through the monk Eichu, who returned to his homeland after studying with Chinese Buddhists. Later, Zen Buddhists added most of the distinctive features of the ceremony as we know it today, including the philosophy of hospitality underlying it. The sixteenth-century Zen master Sen Rikyū is reputed to have stated that "through concentrating on *chanoyu* both guests and hosts can obtain salvation," by which he probably meant *satori* (Anderson, 1991, p. 53). Indeed, Rikyū gave a privileged place to the tea ceremony as a vehicle by which all participants could attain enlightenment. In performing the intricate duties prescribed for them, guests and hosts are thought to disclose and even create personal tranquility and harmony with nature. Today many practitioners hold that when the ceremony is done well, everyone present is able to "participate fully in a cooperative act of ritual world maintenance" (Anderson, 1991, p. 8).

By way of summary, it may be noted that in virtually all the cultures and traditions examined above, hospitality, especially when it takes the form of the guest-meal, is marked by exchanges of spiritual goods along with the sharing of food and drink. These exchanges frequently have the effect of multiplying blessings or merit for the participants beyond the sum total of resources brought by the guests and hosts. Indeed, some cosmic progress is effected. Often gods, dead relatives or founding figures, and forces of nature are thought to be present at the meal. When this happens, their influence is felt, typically as a communion or productive alliance with the deeper forces of the universe. In many ways hospitality shows itself to be a universal force for good, at least when it is practiced without guile. In the wide variety of cultures studied here, guest-host events nearly always serve to promote an honoring of the "other," even when that other seems strange or hostile. Host figures are generally perceived to be both powerful and magnanimous, while guests are often expected to be bearers of gifts and, in some cultures, divine messengers (*Heb.* 13:2). One can even speak of hospitality as a catalyst for virtues. Generosity, gratitude, humility, and openness to peaceful relationships among parties otherwise suspicious of one another characterize many guest-host events.

#### BIBLIOGRAPHY

Perhaps the best overall work for understanding hospitality as a religious phenomenon remains Marcel Mauss's *The Gift: Forms and Functions of Exchange in Archaic Societies*, translated by Ian Cunnison (Glencoe, Ill., 1954; New York, 1967). Originally published in 1925, Mauss's seminal essay gives considerable attention to the roles of guests and hosts at meals and to the religious conceptualizations of these in a number of cultures. For an understanding of Buddhist views on hospitality, particularly as they occur in present-day Theravāda Buddhism, Richard F. Gombrich's field-based

work, *Precept and Practice: Traditional Buddhism in the Rural Highlands of Ceylon* (Oxford, 1971), proves invaluable. Also useful are the texts and interpretations provided in *Buddhist Texts through the Ages*, edited by Edward Conze, I. B. Horner, David Snellgrove, and Arthur Waley (New York, 1954). With regard to Hinduism, the collected papers of Louis Dumont, published as *Religion, Politics, and History in India: Collected Papers in Indian Sociology* (Paris, 1971), furnish a helpful sociological perspective on guest-host relationships. John Koenig's *New Testament Hospitality: Partnership with Strangers as Promise and Mission* (Minneapolis, 1985; Eugene, Ore., 2001) contains information on spiritual conceptualizations of hospitality in early Christianity and rabbinic Judaism. For Islamic practices of hospitality, especially those based on bedouin traditions, one may consult H. R. P. Dickson's sharp-eyed account of his experiences in Kuwait and Saudi Arabia, *The Arab of the Desert*, 2d ed. (London, 1951). The story of Leopold Weiss's encounter with Islamic hospitality occurs in the editorial "Living Islam," in *Islamic Voice*, vol. 14-11, no. 167. Two works on Chinese religion, Marcel Granet's *Festivals and Songs of Ancient China*, translated by E. D. Edwards (New York, 1932), and Francis L. K. Hsu's *Under the Ancestors' Shadow* (New York, 1948), deal specifically with the transcendent aspects of meals. *An Introduction to Japanese Tea Ritual* by Jennifer L. Anderson (Albany, N.Y., 1991) is an accessible source for the history, practice, and ideology of the ritual in its various forms.

JOHN KOENIG (1987 AND 2005)

## HOTTENTOTS SEE KHOI AND SAN RELIGION

**HOWITT, A. W.** (1830–1908), was an English-born explorer, geologist, and amateur anthropologist who made first-hand studies of Aboriginal life in southeastern Australia. To the many aspects of indigenous culture that he described (social and political organization, as well as religion), Alfred William Howitt brought a comprehensive and systematic approach. He did have blind spots, however. He doubted, for example, whether Aboriginal beliefs in the supernatural were religious, apparently because of their remoteness from an ideally conceived Christianity. One of his notable achievements was to show that prolonged and highly organized ceremonies could be celebrated by people with a simple economy and material culture.

Howitt's descriptions of human-making ceremonies (initiation rites) in Southeast Australia, such as the Kuringal and Jeraeil ceremonies, stand comparison with the renowned studies of such rites in other parts of Australia made by Walter Baldwin Spencer and Francis James Gillen. His studies are especially valuable, however, because Aboriginal beliefs and ceremonies have become moribund in the Southeast, whereas much traditional culture survives in the central and northern parts of the continent. Howitt made it clear that ceremonies are ordered sequences of action, and he brought

out the complex articulation of art, myth, choreography, and social organization that characterizes them. In documenting these vital aspects of sequence and articulation, Howitt displayed an intuitive grasp of the structural considerations stressed around the turn of the century by the French comparatists—by Arnold van Gennep in analyzing rites of passage and by Henri Hubert and Marcel Mauss in analyzing sacrificial rites. Another of Howitt's services was to show how widespread in the Southeast, and how essential to the intelligibility of the ceremonies, was belief in the powerful sky spirit he named the All-Father.

In addition to his obvious importance as recorder of a now-vanished way of life, Howitt is noteworthy for his urge, at that early date in the history of Australian anthropology, to typify and generalize. It was no mean feat to see in the Kuringal, Jeraeil, and many other ceremonies particular examples of a general type, to classify all Aboriginal initiations as belonging to either an eastern or a western type, or to perceive the All-Father in such diverse mythic personages as Baiame, Bunjil, Daramulun, Kohin, and Mungan-ngaua.

## BIBLIOGRAPHY

Howitt published many articles and notes on aspects of Aboriginal culture. Most were drawn upon, together with additional material, in his major work, *The Native Tribes of South-East Australia* (London, 1904), which is the essential source for an understanding of his anthropological contribution. *Come Wind, Come Weather* (Melbourne, 1971) is a comprehensive and readable biography of Howitt by his granddaughter, Mary Howitt Walker. It includes several chapters on his work in geology and anthropology, as well as complete bibliographies.

*Revised Bibliography*

**HROTSVIT** (c. 935–c. 1000, alternate spellings include Hrotswitha and Hrosvitha) was canoness in the Abbey of Gandersheim in tenth-century Saxony. Hrotsvit is known today as Europe's first woman playwright, indeed the first known dramatist of Christian Europe. Her six extant plays, written in rhymed Latin prose, offer a Christian response to the Roman comedies of Terence (c. 190–159 BCE), incorporating the traditions of medieval hagiography. Blending comic intrigue and disguise motifs with conflicts between pagan and Christian values, Hrotsvit's plays typically feature strong-willed female protagonists who undergo physical ordeals and achieve redemption. Hrotsvit also created a parallel sequence of eight poetic saint's legends and two historical verse epics.

The appearance of such a figure in the "dark ages" of the tenth century may seem surprising, but the social and in-

tellectual contexts of Hrotsvit's life reveal that she grew up in privileged circumstances, at the height of what is known today as the Ottonian Renaissance. Only recently Christianized, the Saxons became dominant in Germany in the tenth century as inheritors of the empire of Charlemagne. The daughters of the Saxon aristocracy not chosen for dynastic marriages were sent to nunneries to be educated and comfortably housed in circumstances befitting their rank. Hrotsvit was such an aristocrat, closely related to the royal family, and Gandersheim was a uniquely rich and independent foundation. Entering as a canoness rather than a nun, Hrotsvit would have been permitted to retain her own private property, employ servants, and travel at will from the cloister, as well as receive an education in the writings of both classical and Christian authors.

At Gandersheim Hrotsvit mastered the arts of the Latin language and was encouraged to begin her own compositions; appropriately, her Saxon name, *Hro-svit*, is usually translated as "strong voice." Her earliest works were the eight sacred legends, written in the classical measures of dactylic hexameter and elegiac verse. Two poems commemorate incidents in the life of the Virgin Mary and Jesus Christ; the remainder present the lives of Christian saints and martyrs. The legends tell lively tales of pagan-Christian conflicts, and Hrotsvit's taste for sensational incidents is evident.

There is some indication that Hrotsvit's dramas were intended to complement the verse legends, forming part of a larger unified sequence of works. However the immediate stylistic impulse of the plays is a response to the pagan comic dramatic texts of Terence, valued for their refined Latin style. Hrotsvit's innovation was to write new Latin dramas in a similarly refined style, but with Christian characters and subject matter, rather than clever servants and love intrigues in the Roman tradition.

Although sometimes carelessly described as adaptations of Terence's dramas, Hrotsvit's six plays are retellings in dramatic form of the lives of Christian saints and martyrs, borrowing Terentian phrases and plot devices, but leading her central characters through ordeals and tortures to salvation, rather than comic happy endings. *The Conversion of General Gallicanus* features a pagan general who is converted to Christianity on the battlefield, and later suffers martyrdom at the hands of Julian the Apostate. The remaining plays, all with female central figures, were given titles by modern editors that would suggest otherwise; in the summaries below, Hrotsvit's original titles are employed, with the traditional titles in parentheses.

*The Martyrdom of the Holy Virgins Agape, Chionia, and Hirena (Dulcinius)* tells the story of three Christian maidens pursued by a farcically lustful pagan governor and then tortured cruelly by the emperor—an ordeal that they survive without pain, gaining martyrdom in the process. *The Resurrection of Drusiana and Callimachus (Callimachus)* also recounts the martyrdom of a Christian woman who chooses death before dishonor. In *The Fall and Repentance of Mary,*

*the Hermit Abraham's Niece (Abraham)* a young novice in a nunnery runs off to become a notorious prostitute. Her uncle, a monk, disguises himself as a customer and confronts her, winning her repentance. In a similar vein, *The Conversion of the Harlot Thaïs (Paphnutius)* dramatizes the encounter of a monk and a prostitute. In this case, the harlot Thaïs is a secret Christian who gives up her jewels and gold for a foul-smelling cell in a cloister. The final drama in Hrotsvit's sequence is *The Martyrdom of the Holy Virgins Fides, Spes, and Caritas (Sapientia)*, another tale of pagan-Christian conflict, featuring the ordeals and martyrdom of the three allegorically named daughters. All of these works were completed by the year 973, and there are no further records of Hrotsvit's life.

Were these dramas intended for performance, and if so, in what form? Earlier scholars assumed that the plays were intended solely for reading, but most of Hrotsvit's contemporary critics think it likely that the texts were intended for some dimension of performance, whether in a group reading in the abbey or in a more formal performance at the Saxon court.

For many centuries after her death Hrotsvit was a forgotten figure, but all this changed in 1493 when the German humanist Conrad Celtes discovered a manuscript of her work in a monastery. Soon Hrotsvit was celebrated as the first poet of Germany, and her works were printed in 1501 in an elegant edition with woodcuts by Albrecht Dürer and others. Surviving claims by misogynist critics that her works were forgeries invented by Celtes, Hrotsvit is today recognized as a remarkable and unprecedented literary figure. Whether or not her works were intended for performance, there has been no shortage of stage revivals of her work, beginning in 1888 with a marionette performance in Paris inspired by Anatole France, who modeled his popular novel *Thaïs* on Hrotsvit's original. By 1914 her plays had reached the London stage, with Ellen Terry in the role of Thaïs. Since that time performances of Hrotsvit's plays have taken place regularly in Britain, Germany, and the United States, generally in academic settings and often with a feminist focus.

#### BIBLIOGRAPHY

The standard edition of Hrotsvit's Latin texts is Helene Homeyer's *Hrotsvithae Opera* (Munich, 1970). Fluent rhymed English translations of the plays may be found in *Hrotsvit of Gandersheim: A Florilegium of Her Works*, edited and translated by Katharina M. Wilson (Cambridge, UK, 1998). Wilson is also the editor of a collection of critical essays *Hrotsvit of Gandersheim: Rara Avis in Saxonia?* (Ann Arbor, Mich., 1987). For an annotated bibliography and performance history of Hrotsvit's work to 1963, see Anne Lyon Haight's *Hroswitha of Gandersheim: Her Life, Times, and Works, and a Comprehensive Bibliography* (New York, 1965). Key critical works include Bert Nagel, *Hrotsvit von Gandersheim* (Stuttgart, Germany, 1965), and Peter Dronke, *Women Writers of the Middle Ages: A Critical Study of Texts from Perpetua (d. 203) to Marguerite Porete (d. 1310)* (Cambridge, UK, 1984). Recent articles on the plays include Sue-

Ellen Case, "Re-Viewing Hrotsvit," *Theatre Journal* 35 (1983): 533–542; Marla Carlson, "Impassive Bodies: Hrotsvit Stages Martyrdom," *Theatre Journal* 50, no. 4 (1998): 473–487; and David Wiles, "Hrosvitha of Gandersheim: The Performance of Her Plays in the Twentieth Century," *Theatre History Studies* 19 (1999): 133–150.

**HUANGDI**, the Yellow Emperor, is a pan-Chinese culture hero and the mythic first emperor of history. In order to avoid the very narrow connotations of the term *emperor*, the word *di* is often rendered *lord*, *monarch*, *thearch*, *ancestor*, or *god*. The complex mythology of Huangdi is roughly composed of three traditions that evolved during the first millennium BCE and that appear together in the first universal history of China, the *Shiji* (Records of the historian), in the second century BCE: Huangdi as celestial deity, as perfect sovereign, and as patron of the esoteric arts.

As the personification of the central part of heaven, surrounded by the four "emperors" of the four orientals, Huangdi received a cult from feudal lords in the Zhou kingdom. After the unification of the empire by the Qin (221 BCE), the Han dynasty (206 BCE–220 CE) affirmed its heaven-ordained rule by unifying the cults to the five emperors and their celestial regions (corresponding to the Han dominion of "all under heaven"). Besides being the color associated with the center of the four directions, *huang* ("yellow") also means "radiant"; there are traces of a sun god myth of Huangdi. More important is the fact that the graph *huang* ("yellow") is often used for another *huang* ("august, sovereign"), thus blurring the distinction between the Yellow Emperor and the "August

Emperor," that is, the supreme celestial deity Shangdi of the feudal religion. This might explain why, by the second century BCE, the majority of feudal clans claimed Huangdi as their ancestor. From the same period dates Huangdi's place in Chinese astronomy. Under his personal name, Xianyuan, and in the form of a yellow dragon (the imperial emblem) he is an asterism in the southern section of the sky (*Jin shu* 11A).

Huangdi's reign at the dawn of history was a "golden age of perfect peace," or *taiping* (*Shiji* 1). Although the Daoists saw in this first ruler the initiator of humanity's decline into artificial and superficial civilization (*Zhuangzi*), Huangdi became for them the paragon of emperors who heed the advice of their counselors. The Daoist traditions of Han times propagated the "teachings of Huang (-di) and Lao (-zi)," hence their name: Huang-Lao Dao. The association of Huangdi with the paragon sage Laozi signifies the double relationship between the ruler-disciple and his adviser-master. Although the adviser is socially inferior to the ruler, the latter's charisma is but a manifestation of the sage's wisdom. Like a puppet moved by invisible hands, the emperor is the tool of the sage; their interplay symbolizes the invisible Dao and its manifest efficacy (*de*). Inspired by these teachings, the millenarian Taiping rebels of 184 CE aimed at the re-creation of Huangdi's golden age and wore yellow head scarves (hence the name Yellow Turban Rebellion) as a sign of the imminent rule under the aegis of the "yellow agent" (earth) of Huangdi. In the many sacred scriptures attributed to him, Huangdi is always the disciple being instructed by a sage or divine master. These scriptures concern not only philosophy and the art of government but also longevity techniques and the martial arts.

The earliest alchemists taught the Han emperor Wu (140–87 BCE) the art of making gold and becoming immortal "like Huangdi," who had cast a sacred crucible and ascended to heaven on a dragon (*Shiji* 28). Daoist lore contains traces of Huangdi's role in archaic confraternities of metalworkers and in medical, pharmaceutical, and yogic traditions that all contributed to the formation of Daoist immortality techniques. The oldest book on medicine, *Huangdi neijing suwen* (The pure questions of Huangdi, esoteric canon of medicine), is a dialogue between Zhi Bo, a Celestial Master, and his disciple Huangdi. Other texts present him as being instructed by two female deities in the related arts of sexual and military techniques. Xuannü ("the dark woman") taught him a magic dance to overcome the rebel Chi You and, according to later legend, revealed to him a Daoist manual of military strategy, the *Yinfu jing* (Classic of the yin talisman; c. eighth century CE). Xuannü or Sunü ("the clear woman") taught the emperor the immortality-conferring "arts of the bedchamber." A *Sunü jing* (Classic of the clear woman), now lost, was popular in the Middle Ages; it probably contained Sunü's sexual instructions to the emperor. Furthermore, Xuannü is his teacher in one of the earliest Daoist treatises on alchemy, the *Huangdi jiuding shendan jing* (Yellow Emperor's canon of the nine vessel magical elixir).

In the official traditions throughout history Huangdi's image has been pale but distinct. His prestige as ancestor of the Chinese people and founder of their culture has recently been reasserted in a syncretist movement, the Xianyuan Jiao. Under the shock of defeat and flight to Taiwan in 1949, its founder, Wang Hansheng, had a vision of Huangdi and his sacred crucible (which is also a symbol of dynastic legitimation). Established in Taipei in 1957 and claiming one hundred thousand followers in 1981, the Xianyuan Jiao teaches a mixture of Daoist, Confucian, and Moist ideas and labors for a renaissance of Chinese culture and for the reunification of the empire.

ANNA SEIDEL (1987)  
*Revised Bibliography*

**HUAYAN.** A major tradition of Buddhist doctrine and practice that emerged in seventh-century China, Huayan (Jpn., Kegon; Kor., Hwaōm) was soon transmitted to Korea and Japan, and has continued even into modern times to exert great influence on many aspects of religion, thought, and culture throughout East Asia. A product initially of the fruitful encounter between Mahāyāna Buddhism and elements of the native Chinese religious worldview, Huayan is especially noted for its liberating vision of the radical interrelatedness or interpenetration of all events and experiences, a unity amidst diversity wherein each and every particular phenomenon is seen both to incorporate and be absorbed by all other phenomena, without ever losing its own unique identity. It has often been characterized as a syncretism and, although more original than that description might suggest, it does in fact combine classical Mahāyāna themes like “emptiness” (*śūnyatā*), “representation only” (*viññaptimātratā*), and the embryonic Buddhahood of all beings (*tathāgata-garbha*) with such native Chinese motifs as cosmic harmo-

ny, the essential rightness of the natural world, and the intrinsic goodness of human nature.

Although not at all lacking in practical relevance to such forms of actual religious life as meditation and morality, Huayan has traditionally been regarded, along with Tiantai, as one of the more theoretical or philosophical of Buddhist traditions, and as such has commonly been contrasted to supposedly more practical traditions like Chan (Zen) or Pure Land. That this contrast is an invidious oversimplification is seen in the actual history of the tradition, which abounds in examples of the amalgamation of practice with theory. This was the rule during the several centuries in which Huayan maintained its identity as a separate teaching lineage and it was even more apparent later when, having waned as a distinct “school,” it continued to flourish either as a basic ingredient in other Buddhist traditions like Zen and Tantrism or as an influence upon non-Buddhist traditions like neo-Confucianism.

**SCRIPTURAL FOUNDATION.** The scripture on which Huayan was based, and from which it took its name, is the *Da fangguang fo Huayan jing* (Sanskrit, following the Tibetan, *Mahāvaiṣṭya Buddhāvataṃsaka Sūtra*), known most commonly by the abbreviated title *Huayan jing* (*Avataṃsaka Sūtra*) and usually referred to in English as the *Flower Garland* or *Flower Ornament Scripture*. This is a very long text composed of a number of originally independent scriptures of diverse provenance, all of which were combined, probably in Central Asia, sometime during the late third or the fourth century CE. It is a Mahāyāna scripture, mythopoeic and visionary in character like most of its genre and replete with grand descriptions of the Buddha, his extraordinary powers, his retinue of *bodhisattvas* and other heavenly beings, their qualities, and the myriad world-systems of Buddhist cosmology. Its occasion is the primal event itself, for the matters related by the text, insofar as they may be deemed temporal at all, are thought to have occurred during the period immediately following the Buddha's own experience of enlightenment, while he was still absorbed in the ineffable meditative experience (*samādhi*) of all things as they really are.

Of special importance among the text's various themes is that of the *bodhisattva* path, with its many stages and wondrous spiritual attainments. All of this is conveyed in vivid imagery dominated by the motif of light and translucency. Pervasive radiance, the most salient feature of the scripture's world, is understood to represent the boundless scope and unimpeded force of the Buddha's insight, which reaches everywhere and before which nothing remains opaque. The text culminates in a final chapter, by far the longest and most cohesive, known in China as the *Ru fajie pin* (Chapter on entering the realm of truth) but elsewhere better known as the originally independent *Gaṇḍavyūha Sūtra*. This is the story of the youth Sudhana (Shancai), who represents all sentient beings aspiring to enlightenment, and of his long pilgrimage, during which he takes instruction from a number of spiritual advisers (fifty-two to fifty-four, depending on

how one counts) and in effect accomplishes the *bodhisattva* path charted throughout the rest of the scripture. It is especially rich in the symbolism of fusion, interpenetration, and unity within multiplicity that would later inspire Huayan doctrine.

The earliest surviving version of the full text of the *Avatamsaka Sūtra* is the Chinese translation done by Buddhahadra between 418 and 420 CE (T.D. no. 278). That version comprises sixty fascicles (scrolls) and thirty-four chapters and is divided into eight “assemblies” (*hui*) or scenes held at seven different locations. This was the version used by the earliest Huayan thinkers in their creation of the tradition. Another complete translation was done between 695 and 699 CE by Śikṣānanda (T.D. no. 279). This is in eighty fascicles and thirty-nine chapters, and it is usually divided into nine assemblies held at seven places. Shortly after its completion, this later version effectively supplanted Buddhahadra’s as the canonical foundation of the Huayan tradition.

**HISTORICAL OUTLINE.** Study of the *Huayan jing* began almost immediately after Buddhahadra’s translation. The chronicles of fifth- and sixth-century Chinese Buddhism reveal not only that it was then a popular focus of scholarly scrutiny but also that it figured prominently in the devotional lives of many practitioners as a text to be chanted, copied, celebrated in maigre feasts, meditated upon, revered for its magical powers, and employed by artists as a repertory of themes. However, it was not until the early seventh century that anything even remotely like a distinctive Huayan “school” or lineage (*zong*) can be said to have emerged. Scholars now trace such an origin to the Sui dynasty (589–618) and the opening decades of the Tang dynasty (618–907). Special attention has recently been given to a trio of monks associated in those years with the Zhixiang monastery, located in the Zhongnan mountains just south of the capital of Chang’an (Xi’an). The eldest was Dushun, also known as Fashun (557–640), a meditation master and thaumaturge who was especially inspired by the *Huayan jing* and whose use of it in the performance of miracles earned him considerable prominence in local traditions of popular piety. He is also credited (but perhaps erroneously so) with the authorship of certain early Huayan treatises, the most important of which was the *Fajie guanmen* (Contemplations of the realm of truth), the *locus classicus* of the most famous of all Huayan doctrines, namely, the teaching of principle (*li*), phenomena (*shi*), and the various modes of their interpenetration. Dushun was anointed by the later tradition as its “first patriarch,” but it should be borne in mind that the conception of Huayan as a master-disciple succession in the manner of the Chan lineages is an anachronistic fiction.

Dushun’s contemporary Zhizheng (559–639) was a scholar-monk, heir to several of the scholastic traditions of sixth-century Chinese Buddhism and noted especially for his exegesis of the *Huayan jing*. These two men shared an outstanding student in the person of the monk Zhiyan (602–668), traditionally held to be Huayan’s second “patriarch.”

Zhiyan combined in his career both the emphasis on practice learned from Dushun and the breadth of scholarship fostered by Zhizheng and other of his teachers. He was expert particularly in the learning of two early Chinese traditions of Yogācāra Buddhism that incorporated important elements of Tathāgatagarbha thought, the Dilun school, based on Vasubandhu’s *Daśabhūmivijyākhyāna* (Exposition of the ten stages scripture) and the Shelun school, based on Pāramārtha’s sixth-century translation of Asaṅga’s *Mahāyānasamgraha* (Compendium of Mahāyāna). He went on to apply his knowledge of these traditions in the study of the *Huayan jing* and composed several fundamental texts that are among the earliest pieces of distinctively Huayan literature. In the composition of these works Zhiyan created many of the doctrines that came to be characteristic of Huayan, not the least of these being the classical fivefold doctrinal classification (*pan-jiao*) system, the rudiments of the sophisticated Huayan view of causation and dependent origination (*yuanqi*), the teaching of “nature origination” (*xingqi*), and the doctrine of the instantaneous achievement of buddhahood (*yi’nian chengfo*).

Among Zhiyan’s disciples, two were of special note. Ūisang (625–702) was a Korean monk who studied with Zhiyan in Chang’an in the mid-660s. He then returned to his homeland to establish Huayan as one of Korea’s most important Buddhist traditions, beginning the process whereby Huayan came to enjoy proportionately greater and more enduring eminence in Korea than in either China or Japan. Ūisang’s fellow student Fazang (643–712), later judged to be the tradition’s third “patriarch,” was a man of enormous erudition and a prolific author especially skilled in the eloquent and methodical exposition of doctrine. He was Huayan’s great systematizer and its first publicist. Much of his career was spent in codifying and elaborating the doctrines first formulated by his teacher and in adding to them teachings of his own devising, notably those born of his study of the *Dasheng qixin lun* (The awakening of faith in Mahāyāna).

The development of Huayan during the several decades following Fazang’s death is complex. One of his disciples, the Korean monk Shimsang (Jpn., Shinjō; d. 742), was instrumental in transmitting Huayan to Japan, where it shortly became one of the dominant scholastic and ecclesiastical traditions of the Nara period (710–794). Shimsang’s lectures on the *Huayan jing* helped motivate Emperor Shomu (r. 724–749) to construct the great Tōdai Temple and to install there the monumental Great Buddha, which ever since has stood as one of the foremost examples of Huayan influence on the arts. Another of Fazang’s disciples, Huiyuan (c. 673–743), departed from his master on several key doctrinal issues and was unfortunately dismissed by the later tradition as a kind of heretic. Familiar with Fazang’s works, although never his student, was the layman Li Tongxuan (635?–730?), whose several writings—including what was perhaps the first complete exposition of the eighty-fascicle translation of the *Huayan jing*—are marked throughout by very original interpretations of Huayan themes.

The next phase in the history of Huayan is signaled by the contributions of its reputed fourth “patriarch,” Chengguan (738–839?). Born twenty-six years after Fazang’s death and thus not his direct descendant, Chengguan nevertheless mastered the Huayan system, which he studied with a student of Fazang’s student Huiyuan. He resided for many years in northern Shanxi, in the complex of monasteries located on the Wutai Mountains, long a center of Huayan devotion and study. His many treatises and exegetical works earned special distinction, particularly his immense commentary on the eighty-fascicle version of the *Huayan jing*, which would later vie with Li Tongxuan’s work for pride of place among all commentaries on the scripture. Perhaps his most notable accomplishment was to have laid a foundation on which Huayan could consort with other kinds of Buddhism, not only the Monastic Discipline (Vinaya) tradition, Tiantai, and Sanlun (all of which he had studied) but also, and most significantly, Chan. Chengguan was a student of Chan during a crucial period in its history, just as it was in the process of taking the forms that would come to be regarded as classical. The Chan lineage with which he was most closely associated was the Oxhead (Niutou) tradition and this, in turn, had direct links with the classical Chan lineage *par excellence*, the Hongzhou school. Since Chan was then on the verge of becoming paramount among all Chinese Buddhist traditions, Chengguan’s efforts to bring Chan and Huayan together were especially important; they helped assure a future for Huayan during the subsequent centuries of Chan dominance.

The last of the five great “patriarchs” of Huayan was the literatus-monk Zongmi (780–841). An accomplished prose stylist and a scholar as well versed in China’s “secular” traditions as in Buddhism, Zongmi combined a devout religious life with a successful clerical career and was cultivated by some of the foremost court scholars of his day. Like those of Chengguan, his Buddhist studies were by no means confined to Huayan. He too was a Chan monk, especially faithful to the Heze or “Southern Lineage” deriving from Shenhui (670–762). He was especially noted for his advocacy of a text associated with none of the established traditions, the *Yuanjue jing* (Scripture of complete enlightenment), a Chinese composition devoted to themes of a Tathāgatagarbha sort. Against the background of mature Huayan doctrine, Zongmi classified all the varieties of Buddhism, including all forms of Chan, into a comprehensive and hierarchical overview of Buddhist doctrine and practice. He then extended that classification to include both Confucianism and Daoism by composing the famous *Yuanren lun* (Enquiry into the origins of man), a reply to the critique of Buddhism found in essays of similar title by Han Yu (768–824), the great precursor of neo-Confucianism. Of special importance for the future of Huayan was his advocacy of a unification of Chan and the more doctrinal (*jiao*) forms of Buddhism, Huayan being in his view the foremost of the latter. He is also sometimes identified as a bridge between Buddhism and neo-Confucianism.

After Zongmi, Huayan’s history becomes rather diffuse. Traditional accounts continue to speak of a Huayan lineage extending through the end of the Tang into the Song dynasty, and such lineages did persist in Korea and Japan, but after the late ninth century the truly significant developments in Huayan were those occurring in other traditions that made use of Huayan themes. Huayan thought was particularly important in several lineages of Five Dynasties and Song dynasty Chan, the Linji master Dahui (1089–1163), for example, being only one of a great many prominent Song Chan figures indebted to Huayan. It was also absorbed just as deeply into Korean Chan (Sŏn), as may be seen in the thought of Chinul (1158–1210), Korea’s greatest Chan teacher. And in Japan, where Esoteric Buddhism (Mikkyō) developed further than anywhere else in East Asia, Mikkyō practitioners like Myōe Shōnin (Kōben; 1173–1232) made unique use of Huayan motifs in their Esoteric contemplations and writings.

**THE TEACHINGS.** Underlying the often bewildering array of technical doctrines that comprise Huayan is the single, unitary vision of a world in which all things—both the particular phenomenal things (*shi*, “phenomena”) that comprise conventional worldly experience and the general noumenal truths or principles (*li*) that govern phenomenal reality—are seen “to be without mutual obstruction” (*wu’ai*), that is, to enter, include, penetrate, absorb, and fuse with each other, but to do so without losing their respective identities. In traditional Buddhist terms, this is simply a novel and ingenious reiteration of the cardinal doctrine of dependent origination (Skt., *pratītya-samutpāda*; Chin., *yuanqi*), whereby things are said neither to exist in themselves (the error of eternalism) nor not to exist (the error of annihilationism). However, whereas it is more typical of earlier Buddhism to employ negative, “neither/nor” phrasing to express this teaching and its corollaries, Huayan favored more affirmative locutions, even if they required figurative rather than literal language.

Perhaps the best known and most effective example of this is the metaphor of the “net of Indra.” This inspired trope pictures a universe in which each constituent of reality is like a multifaceted jewel placed at one of the knots of a vast net. There is such a jewel at each knot, and each jewel reflects not only the rest of the jeweled net in its entirety but also each and every other jewel in its individuality. Thus, each particular reflects the totality, the totality so reflected is both a unity and a multiplicity, and the reflecting particular maintains its distinctive but not discrete reality. All things and beings, Huayan teaches, are like these jewels. When this “metaphysical” insight is made to yield its soteriological or gnoseological implications it is seen to entail, among other things, the essential Buddhahood of each sentient being, the potential enlightenment at the core of all ignorance, the fundamental purity of all defilements, the eternity of each instant, the presence of the Buddha mind in all objects, and the final attainment implicit in even the most elementary stage of the path.

According to Huayan’s five-part scheme of doctrinal classification, all other forms of Buddhism saw only a part

of this comprehensive truth. Hīnayāna Buddhism saw the emptiness of beings, their selflessness, but not the emptiness of all events (*dharmā*). Elementary Mahāyāna—the emptiness teaching and the version of the Representation Only teaching that held the mind to be essentially corrupt—saw the insubstantiality of all things and beings, and the inveterate ignorance and impurity of the mind which infected and distorted the world, but it did not see the countervailing actuality of those things and beings or the deeper purity of their underlying wisdom. Mature Mahāyāna—the Tathāgatagarbha tradition and the version of the Representation Only teaching that affirmed the essential purity of the mind—saw the immanence of transcendental reality, for example, the buddhahood in each sentient being, but ran the risk of a kind of docetism in which particular mundane things were subordinated to the universal supramundane truths they harbored and were not valued in themselves. The so-called sudden teaching (*dunjiao*)—associated initially with the theme of silence in texts like the *Vimalakīrti Nirdeśa* (The discourse of Vimalakīrti) but later with the translinguistic character of Chan practice—saw the limits and snares of language and conceptualization and emphasized the all-at-once nature of liberation, to which words and ideas can make no gradual approach, but it ran the risk of underestimating the need for effortful practice and the importance of language and imagination in practice. It was only Huayan itself—the “complete” or “perfect” (*quan*, literally “round”) teaching—that comprehended the whole truth without succumbing to partiality or extremes. In this respect Huayan saw itself as the “one vehicle,” identical (*tong*) with all other vehicles combined insofar as it included them all, but also separate (*bie*) from them in that it surpassed them all.

There was something about the Huayan worldview that East Asian cultures, shaped as they were by the values of classical Chinese civilization, found quite congenial. Perhaps it was the deft way in which Huayan thinkers combined Chinese values and notions, like the affirmation of “this world” or the conception of reality as a concrete order governed by principles of harmony and complementarity, with basic Buddhist concepts like insubstantiality, interdependence, and the essentially mind-made character of all things. No doubt the abstruse character of Huayan discourse needed the leaven of an emphasis on practice and experience, a leaven of the sort it was to find in its collaboration with Chan and Mikkyō, but with that it rose to be a major ingredient in the intellectual and religious life of the whole East Asian world, and it stands even today as a paramount example of the East Asian transformation of Buddhism.

#### BIBLIOGRAPHY

The best and most extensive scholarship on Huayan is that done by modern Japanese scholars. Those who have access to that

language would do well to consult especially the works of Takamine Ryōshū, Sakamoto Yukio, Kamata Shigeo, Kimura Kiyotaka, and Yoshizu Yoshihide, to name only a few. Sustained Western-language study of the tradition got off to an inauspicious start with the publication of Garma C. C. Chang’s unreliable and tendentious *The Buddhist Teaching of Totality* (University Park, Pa., 1971). The situation was improved considerably, however, by the appearance of Francis D. Cook’s *Hua-yen Buddhism: The Jewel Net of Indra* (University Park, Pa., 1977), which, though clearly as much concerned to advocate Huayan as to present it to the academic community, is sound and informative. It deals especially with the thought of Fazang. Two other works of lesser value have recently appeared that put Huayan into the service of idiosyncratic Western philosophical programs. They are Alfonso Verdú’s *Dialectical Aspects in Buddhist Thought* (Lawrence, Kans., 1974), which treats especially of uses of Huayan thought in Caodong Chan from a Hegelian perspective, and Steve Odin’s very odd miscellany, *Process Metaphysics and Hua-yen Buddhism* (Albany, N.Y., 1982), which deals haplessly with the thought of Ūisang and attempts to draw comparisons between Huayan and the work of Western thinkers like Whitehead, Heidegger, Merleau-Ponty, and others.

Three different translations of the *Huayan jing* are now under way. Thomas Cleary’s *The Flower Ornament Scripture*, of which the first volume has already appeared (Boulder, Colo. 1984), is an excellent rendering of the eighty-fascicle version of the Chinese text. The same version is being translated by members of the International Institute for the Translation of Buddhist Texts in Talmage, California. Theirs is a resolutely literal translation with interspersed commentary by the contemporary Chinese monk Xuanhua; more than ten volumes have so far appeared. Apart from a few standard pieces like Fazang’s *Golden Lion Treatise* or Zongmi’s *Enquiry into the Origins of Man*, which appear in indifferent translations in certain popular anthologies, not much of the enormous corpus of Huayan literature composed in China, Korea, and Japan has yet been translated into Western languages, but Thomas Cleary has recently published a collection of fine though sparsely annotated translations of several shorter works by Dushun, Zhiyan, Fazang, and Chengguan. The collection is entitled *Entry into the Inconceivable* (Honolulu, 1983).

**HUBBARD, L. RON** (1911–1986), the founder of the Church of Scientology, emerged in the last half of the twentieth century as one of the most controversial leaders of new religious movements. Hailed by the members of his church as one of the most creative minds of the century, he was equally assailed by his critics.

Lafayette Ron Hubbard was born on March 13, 1911, in Tilden, Nebraska. His father, Harry Ross Hubbard, was an officer in the U.S. Navy. Hubbard spent much of his childhood in Montana on his grandfather's ranch. He was able to take advantage of his father's occupation, however, to make two trips during his youth to the Orient and returned with vivid memories of his time in China.

Hubbard attended the Swavely Preparatory School in Manassas, Virginia, and began his college work at George Washington University in 1930. College proved not to be his forte, and he dropped out after only two years. He spent the rest of the decade participating in a variety of expeditions as an explorer (which earned him membership in the Explorers Club) and writing. He published more than 150 short stories and nonfiction articles. The subject matter ranged from aviation to western adventure stories, though his most memorable work was in science fiction.

Hubbard was commissioned as a lieutenant in the navy in 1941. Holding a variety of posts and commands, he finished World War II at Oak Knolls Naval Hospital, Oakland, California, where he gained the initial insights that led to his development of Scientology. After the war Hubbard continued to make his living as a writer as he accumulated insights into the human mind. His new ideas first appeared in several articles and culminated in *Dianetics: The Modern Science of Mental Health*. The book describes his therapeutic techniques for ridding individuals of the causes of aberrant behavior and leading them to a state he termed *clear*. The response to his book, including the emergence of many amateur efforts to practice the book's teachings, led Hubbard to found the Hubbard Dianetic Research Foundation and to write a set of texts on the proper application of his theories.

The next few years proved to be intense and decisive. Hubbard continued his exploration of human existence,

shifted his focus from the mind to the spirit, and expanded Dianetics into a complete philosophical and religious system he began to call Scientology. The change proved costly in some respects, as many of his early supporters were unable to accept his new findings (such as the preexistence of the human soul) and withdrew. In 1954, however, the first Church of Scientology opened in Los Angeles, California. Hubbard now turned his full attention to the development of the church (including the writing of a detailed organizational manual) and the growth of Scientology into a comprehensive scientific religion.

Hubbard resigned all official positions he held in the church in 1966 and turned his attention to further research into the higher levels of Scientology, in which the soul (which Hubbard termed the *thetan*) learns to operate free of the body. The first of the Operating Thetan (OT) levels, or training steps, was released in 1966, with others released periodically through Hubbard's lifetime. Beginning in 1967 he conducted a significant part of OT research aboard an ocean-going vessel in company with a group of his more dedicated followers. There he founded the Sea Organization, or Sea Org, an ordered though nonmonastic community originally designated to take charge of the delivery of the OT levels. The 1970s were a time of extensive writing on all phases of Scientology.

Hubbard encountered the next crucial test of his ideas at the end of the 1970s. In 1979 a number of church officials connected with the Guardian's Office, including Hubbard's wife, were arrested. The Guardian's Office, which had been established in 1966 to handle a variety of attacks upon the church, had engaged in several clandestine operations to uncover U.S. government files believed to be the source of its problems. The conviction of those arrested led to the disbanding of the Guardian's Office, a complete reorganization of the church at the highest levels, and the assumption of control by the Sea Organization of the church's international and policy-making offices.

Hubbard spent the last years of his life in seclusion, his whereabouts disclosed to only a few friends and high church officials. He returned to fiction writing and produced a major novel, *Battlefield Earth* (1982), and a ten-volume science fiction series, *Mission Earth* (1985–1987). He died on January 24, 1986, in Crestone, California.

Hubbard left his considerable wealth and all his copyrights to the church, which had already assigned scriptural status to his Scientology texts. The church subsequently established a new corporation, Author Services, to handle the ongoing publication and licensing of Hubbard's non-Scientology writings. The church has published a number of smaller works describing Hubbard's various accomplishments, although no comprehensive critical biography had appeared by the beginning of the twenty-first century.

J. GORDON MELTON (2005)

**HÜGEL, FRIEDRICH VON** (1852–1925), Roman Catholic layman who at the turn of the twentieth century became involved in the modernist crisis and who later became recognized as an outstanding authority on mysticism and religious philosophy. Born in Austria, von Hügel moved with his family to England in 1867. Mainly self-educated, von Hügel became a friend of the French exegete Alfred Loisy (1857–1940) and of the English Jesuit George Tyrrell (1861–1909). He immersed himself in the new scriptural criticism and championed Loisy's right to publish when the latter faced church condemnation. He also generally supported Tyrrell, who was expelled from the Society of Jesus in 1906. The official church saw in the ideas of a number of writers at the time, including Loisy and Tyrrell, a denial of the transcendence of God and of church authority. It labeled their ideas "modernism" and condemned them in the encyclical *Pascendi* in 1907. Von Hügel and others believed that the church's very broad condemnation was unfair and to a degree a misunderstanding. But he gradually cooled to some of Loisy's ideas, although he continued to support the cause of the freedom of the exegete. He showed external respect in every way he could for the church's decrees, but he never essentially changed his position.

Toward the end of the modernist crisis von Hügel published his great work, *The Mystical Element of Religion as Studied in St. Catherine of Genoa and Her Friends* (1909). Around the biographical core of the book he developed his ideas on religion and mysticism. The chief forces of Western civilization he saw as Hellenism, Christianity, and science. He worked out three elements in all religion: the institutional, the intellectual, and the mystical. The thirst for religion and mysticism is at bottom metaphysical, arising from a keen sense of imprisonment in the contingent. "If man did not somehow have a real experience of objective reality and truth, he could never suffer so much from the very suspicion of a complete imprisonment within purely human apprehensions and values."

In 1912 von Hügel published *Eternal Life*, a study of the eternal and the absolute in religion. Time, he insisted,

is a composite phenomenon containing two elements: clock time, or succession, and duration. In duration, the human being stands open to the infinite and experiences a quasi eternity. In 1921 he published *Essays and Addresses on the Philosophy of Religion*, in which he underlined the transcendent element in religion and also included a probing essay on the apocalyptic element in Jesus' teaching. Some of his work was published posthumously. *Essays and Addresses on the Philosophy of Religion, Second Series* (1926) contains discussions on institutional religion, church authority, and suffering in God. Von Hügel's unfinished work on the Gifford Lectures was published as *The Reality of God and Religion and Agnosticism* (1931).

Von Hügel became an outstanding spiritual director. He was a major influence on Evelyn Underhill, who was later to publish her remarkable works on mysticism. His deep spiritual life is seen in *Letters from Baron von Hügel to a Niece* (1928) and *The Life of Prayer* (1929). He received an honorary doctor of law degree from the University of Saint Andrews in Scotland in 1914, and in 1920 he became the first Roman Catholic since the Reformation to be honored with an honorary doctor of divinity degree from Oxford University.

JOHN J. HEANEY (1987 AND 2005)

**HUGH OF SAINT-VICTOR** (d. 1142) was a regular canon of the Abbey of Saint-Victor, Paris, and influential thinker with lasting and decisive contributions to biblical exegesis, theology, and spirituality. The date and place of Hugh's birth are unknown. Both Saxony and the Low Countries have been plausibly suggested as the place of his birth. By 1125 he was at Saint-Victor teaching in the abbey school, where he founded the vigorous and creative Victorine intellectual tradition. At the same time, the first abbot, Gilduin, was winning royal favor and rich endowments for the young community, which had been founded in 1108 by William of Champeaux upon his retirement from teaching in the Parisian schools.

Hugh's learning was broad and deep. He united in a special way a religious vocation, keen intellectual curiosity,

a strong historical sense, theological creativity, and dedication to the contemplative life. The breadth of Hugh's knowledge is illustrated by his *Didascalicon*, a guide to the study of philosophy and biblical exegesis. Philosophy, embracing all knowledge, was divided into four parts (theoretical; practical, including ethics; mechanical, including weaving, farming, et al.; and logical) that were to remedy the ignorance, vice, and bodily weakness resulting from the fall.

In biblical studies Hugh introduced the idea that history, allegory, and tropology, the traditional three levels of meaning in the biblical text, should be seen as three areas of study to be pursued in succession. This idea had the important effect of making the systematic study of the historical, literal meaning of the text the foundation for all further biblical study. Moreover, Hugh consulted Jewish rabbis about the literal meaning of the Hebrew text and incorporated their comments into his exegesis. In the Victorine program of studies theology was studied systematically to prepare for allegorical exegesis, while tropology was the context of examining not only ethics but also the discipline of body and mind leading to contemplative experience.

For each area of study—historical, theological, and mystical—Hugh wrote important books. His *Chronicon* contained a treatise on the art of memory and numerous tables for biblical chronology and the history of the Christian church, European rulers, and the papacy. *De sacramentis Christianae fidei* (On the sacraments of the Christian faith), Hugh's handbook to prepare for allegorical exegesis, was the first systematic summa of Christian theology and thus initiated a major form of medieval theological literature. Hugh's theology incorporated a unique sense of historical development and distinguished between the divine works of foundation in six days and the divine works of restoration that extend through all history from beginning to end. His doctrine of the sacraments was important for his definition of a sacrament and his recognition of valid sacraments in all historical periods.

Hugh introduced ideas from the writings of Dionysius the Areopagite into the mainstream of theological and mystical discussion. The major sources for Hugh's mystical teachings are two treatises on Noah's ark (*De arca Noe morali* and *De arca Noe mystica*) and a set of sermons on *Ecclesiastes*. In the ark treatises Hugh describes a complex, mandala-like drawing that represents with a subtle iconography the cosmos, salvation history, and the mystic's inward journey to union with the divine as these are related to Christ the creative, sustaining, incarnate, judging, and contemplative Word. This powerful symbolic representation of the spiritual quest is a major document in the development of medieval Christian mysticism.

Hugh's successors at Saint-Victor tended to emphasize single aspects of his thought. Andrew of Saint-Victor (d. 1175) devoted himself to the literal sense of scripture, advancing even further the historical understanding of the biblical text and drawing, like Hugh, on Jewish exegesis. Rich-

ard of Saint-Victor (d. 1173), one of the greatest medieval mystical writers, advanced Hugh's analysis of contemplation and his use of Dionysius in treatises combining subtle symbolic interpretation of scripture, psychological insight, and deep contemplative experience. Through Richard and Hugh, the Victorine tradition influenced the theological and contemplative writings of the great Franciscan writer Bonaventure.

In poems of complex symbolism and theological depth, Adam of Saint-Victor brought the liturgical sequence to a high point in its development. The sermons of Abbot Achard of Saint-Victor (d. 1171) embodied the combination of contemplative and preaching traditions so characteristic of the abbey. The Victorine theological tradition was continued by Godfrey of Saint-Victor (d. after 1194) in *Fons philosophiae* and *Microcosmus*, while a narrow, antidialectical spirit at odds with other Victorines emerged in the writings of Walter of Saint-Victor (d. 1180). Thomas Gallus (d. 1246), a Victorine who became abbot of Vercelli, continued Hugh's interest in the works of Dionysius and wrote a commentary on them. All told, Hugh began an influential intellectual tradition at the abbey, a tradition that exercised a widespread influence on medieval thought and life in many areas.

#### BIBLIOGRAPHY

The Latin text of Hugh's writings is in *Patrologia Latina*, edited by J.-P. Migne, vols. 175–177 (Paris, 1854). Major translations into English are *Selected Spiritual Writings* (London, 1962); *Didascalicon: A Medieval Guide to the Arts*, translated by Jerome Taylor (New York, 1961); *Hugh of Saint Victor: On the Sacraments of the Christian Faith (De sacramentis Christianae fidei)*, translated by Roy J. Deferrari (Cambridge, Mass., 1951). The most comprehensive study of Hugh's thought is Roger Baron's *Science et sagesse chez Hugues de Saint-Victor* (Paris, 1957). For Hugh's biblical exegesis and the Victorine tradition, see Beryl Smalley's masterful *The Study of the Bible in the Middle Ages*, 2d ed. (Oxford, 1952). Several essays in M.-D. Chenu's *Nature, Man and Society in the Twelfth Century* (Chicago, 1968) will be found useful. GROVER A. ZINN, JR. (1987)

**HUICHOL RELIGION.** The twenty to twenty-five thousand Huichol-speakers of the Sierra Madre Occidental are the only sizable indigenous population in Mexico whose aboriginal religion survives with only minor Spanish additions, and almost none of the syncretistic adaptations to Christianity typical of the rest of Mesoamerican Indian cultures. The first missions in Huichol country were established in 1722. More than two and a half centuries later Spanish Roman Catholicism is evident only in the addition of the Virgin of Guadalupe, Jesucristo, and some saints to the extensive native pantheon of male and female nature deities. The Huichol have also added nominal baptism practices; feast day celebrations of the respective patron saints of the five independent, self-governing *comunidades* that make up the mountainous Huichol homeland; and observance of portions of the Christian ritual calendar to their ritual life. The celebration of these holy days is accompanied by recitations and dramatic enactments of a Christian myth cycle so drastically altered to conform to the native worldview that it resembles the New Testament only in broad outlines.

**DEITIES.** In contrast, in the native ceremonial round and in prayers, the Huichol deities have retained their ancient names, personalities, and associations, rather than having become identified with Christian supernatural beings. Some Huichols believe that the Virgin of Guadalupe is really Our Mother Young Eagle Girl, a female sky deity who usually takes the form of a bicephalic eagle; on the other hand, few Huichols have followed the neighboring Cora, and other Indian peoples, in identifying Jesucristo with the indigenous solar deity. The supernaturals are addressed in kinship terms, prefaced by the pronoun *ta* ("our"): for example, the fire god Tatewarí ("our grandfather"); the sun god Tayaupá ("our father"); the whitehaired old earth and creator goddess Tatutsi Nakawé ("our great grandmother Nakawé"); Tamátsi Kauyumari ("elder brother Káuyumarie"), the trickster / culture hero who manifests himself as deer; another deer deity, Tamátsi Maxa Kwaxí ("elder brother deer tail"); the corn goddess, who also personifies the earth made fertile by rain, Tatéi Utuánaka ("our mother"; lit., "our aunt"); and so forth. Female deities personify rain, water holes, lakes, ponds, maize, and squash. Agricultural, human, and animal fertility and fecundity are also personified by female deities, who are often depicted as snakes in ceremonial art. Many of the male deities are associated with the dry season, the hunt, and game. Some male and female deities function as owners of animal or plant species. The divine cactus, peyote, is personified as Sacred Deer, Master of the Deer, in a system of interdependent and interchangeable symbols that, since the shift from hunting and gathering to slash-and-burn agriculture, has also come to include maize. As a group the deities,

or divine ancestors, are variously called *kákaima* or *kakayarixi* (apparently archaic expressions that convey the sense of "gods" or "greater spirits"). Female deities are collectively known as *tatéima* ("our mothers"). Tatewarí is the most prominent deity in the western part of the Huichol territory, and in the eastern part it is Father Sun. The fire deity is also the first shaman, who, with grandmother Nakawé, put the world in order in the "first times," and is often addressed simply as Mara'akáme (*marakáme* is the Huichol term for shaman or singer). Charismatic shamans may be identified with Tatewarí, as is the leader of the peyote pilgrimage. Probably as many as one-third to one-half of the adult Huichols, particularly the men but also some women, are sufficiently schooled in the sacred traditions to function as low-level shamans who are able to divine, conduct curing rites, and communicate with ancestral deities through chants, prayer arrows, symbolic designs of wool yarn and/or beads and beeswax, decorated gourd bowls, and food and drink offerings. To practice the higher level of shamanic and priestly activity, a person must gain community consensus and prestige and trust sufficient for him or her to have assumed successful leadership of at least five peyote pilgrimages.

**SACRED SPACES.** Beyond the local *ranchos*, ritual centers on the large circular sacred house or temple, *tuki* or *tukípa* in Huichol, with the meaning of Big House. Several of these *tuki* or *tukípa* are found scattered through each of the five *comunidades*. They contain a doorway that faces east, a fire-place that represents Tatewarí, an altar, a hole in the center of the floor and another below the roof (from which subterranean gods, divine ancestors, and celestial spirits may emerge), sacred paraphernalia, prayer offerings, a low bench along the interior wall, and sometimes a squared, hollowed-out log that serves as a foot drum, whose sound is intended to alert subterranean ancestors and supernatural beings and to invite them to participate in the ritual.

Individual ranches have a sanctuary, called *xiriki*, that is constructed like the dwellings of the Huichol; the sanctuary houses carved stone and wood images of supernaturals, personal ceremonial paraphernalia, bows, arrows and deer-skin quivers that are used on the peyote pilgrimage, an upright log drum with deerskin head, snares for ceremonial deer hunting, a supply of peyote, clay pots for the ritual maize beer (*nawá*) and so on. The most important occupant of the sanctuary is the *urukáme*, which is a small rock crystal tied in a sacred bundle to the shaft of a hunting-arrow-like prayer arrow and that represents a deceased ancestor, usually a shaman. This miniature medicine bundle functions as supernatural guardian of the ranch community, who gives spiritual and practical counsel to the ranch elder or family shaman.

Numerous shrines associated with one or more deities are located in and around the Huichol territory, most prominent among them the great cave of Teakáta, home of the old earth goddess and other important deities, in the *comunidad* of Santa Catarina. Other shrines as far away as the Pacific

coast and Lake Pátzcuaro, south of Guadalajara, also draw Huichol pilgrims with offerings to such local deities as Tatéi Haramára, divine personification of the Pacific Ocean. A whole series of shrines lies along the three-hundred-mile pilgrimage route to Wirikúta, the Huichol name for the sacred homeland of the divine peyote cactus, *Lophophora williamsii*, *híkuri* in Huichol, just north of the Tropic of Cancer in the high desert of the state of San Luis Potosí.

Peyote was prominent in Aztec religion and divinatory curing, and is still important to several Indian populations of northwestern Mexico. But nowhere does it play so central a role in religious ideology and ritual as among the Huichol. The mythic charter of the Huichol peyote “cult” has a historic ring: in ancient times a group of divine male ancestors, who later become the principal deities, calls on the great *mara’akáme* Tatewarí to cure them of a variety of physical and spiritual afflictions. He diagnoses their ills as having been caused by their separation from Wirikúta, home of the sacred Deer Peyote in the distant north-central high desert, and by their failure to follow the ancestors in hunting and consuming the divine cactus that lives there in the form of deer. He orders them to abstain from sex, salt, food, and drink and leads them on a pilgrimage so lengthy and arduous that some fall by the wayside. Along the way, within sight of the distant sacred mountains of Wirikúta, they are saved from death by thirst by female deities, who meet them with life-giving offerings of water at a place of desert springs called Tateimatiniéri (“where our mothers dwell”). From there the male and female supernaturals proceed to Wirikúta, where, under the leadership of the great shaman, they track and slay the sacred deer. Peyote sprouts from the deer’s antlers and his body transforms into peyote. They grind the antlers with sacred water from the desert springs, and when they drink the mixture they experience visions that restore their health and help them “find their life.”

Huichol are enculturated as infants into the sacred geography and meaning of the peyote pilgrimage during an annual first fruits ceremony, in which the family shaman “transforms” the infants into hummingbirds and, to the beat of the deerskin drum and the chanting of the peyote tradition, leads them on a magical flight to Wirikúta and back. The myth becomes reality during the dry season when small groups of Huichol set out for Wirikúta under the leadership either of an experienced *mara’akáme* or one still in training. The pilgrims assume the identities of the ancestral deities who made the first vision quest, their leader becoming Tatewarí, Grandfather Fire. The three-hundred-mile pilgrimage is a journey back in time and space to the Huichol’s sacred origins, where ordinary language and time are reversed, sand becomes water, night day, and the oldest man *nunútsi* (“a baby”). For novices, who are blindfolded until they reach the sacred female springs, the pilgrimage serves as symbolic birth and initiation rite into the mysteries of the peyote medicine. Along the way, the pilgrims acknowledge the stopping places of the divine ancestors, and the most solemn and emotion-

charged of the rites is reserved for Wirikúta and the first peyote to come into view. As in the myth, peyote is deer; thus, the plant is literally shot with arrows. Each party of pilgrims forms at least a temporary society of *bikuritámete*, that is, a community of veterans of the peyote hunt that disbands at the conclusion of the ritual. In former times the *bikuritámete* may have functioned as a shamanistic medicine society similar to those of North American Indians. Following a solemn communion-like meal of the first peyote, the pilgrims scatter to collect *híkuri* for their own individual vision quests, and large quantities are harvested for future use.

Notwithstanding the emphasis on peyote as *the* divine psychoactive substance, there survive among the Huichol remnants of a former use and veneration of *Solandra*, a class relative of *datura*. Personified as the supernatural sorcerer Kieri, *Solandra* has its own myth cycle with historical overtones and prayer offerings similar to those given to peyote. So far as is known, however, no actual use of the solonaceous *Solandra* or *datura* survives among the Huichol, as it does, for example, among the Native American populations of the Southwest.

PETER T. FURST (1987 AND 2005)

**HUI NENG** (638–713) was a Chan Buddhist teacher, who is best considered in terms of two entirely different persons: historical and legendary.

**THE HISTORICAL FIGURE.** Very little is known about the historical Huineng. He was included in an early list of the ten

most important students of Hongren (601–674), the primary figure of the East Mountain Teaching phase of early Chan. However, the list identifies him as a teacher of merely regional significance, and the only credible detail known about him is that after his death his family home was donated to the *sangha* (i.e., the Buddhist monastic community) for use as a temple, which implies a certain degree of wealth and local prominence. Presumably because of Huineng's place of residence in the far south of China, no awareness of his religious teachings was conveyed either to the Buddhist centers of the Yangzi River valley or the two capitals of Luoyang and Chang'an. Nor did Huineng's famous student, Shenhui (684–758), know very much about his own teacher—or at least this great storyteller provides us with no anecdotes about him. Furthermore, Shenhui was apparently unable to provide Wang Wei (699?–759) with even the most basic biographical details for an epitaph that the great poet, literatus, and Buddhist devotee wrote for Huineng in 739 or shortly thereafter.

**THE FIGURE OF LEGEND.** The legendary account of Huineng portrays him as a penniless and illiterate layman living in Nanhai in the far south (Guangdong province) and supporting his widowed mother by selling firewood. This account derives primarily from the *Platform Sūtra*, the earliest known version of which dates from about 780, almost seven decades after the historical Huineng's death. This text begins with an entertaining and instructive anecdote in which Huineng has a flash of religious insight upon hearing someone recite the *Diamond Sūtra*, after which he travels to Hongren's monastery in the middle Yangzi area (Huangmei, in modern Hubei province). In his first encounter with Hongren, who is depicted as first treating the newly arrived southerner as a bumpkin, Huineng reveals his inner wisdom by pointing out that there was no distinction of north and south in the possession of the buddha-nature, the luminous potential for enlightenment inherent within all sentient beings. In spite of his precociousness, Huineng is sent off to work threshing rice, treatment that may indicate his laborer origins. In the process, however, he becomes one of the temple's lay practitioners (a pre-ordination track in the two-tier system of becoming formally ordained in Tang-dynasty Buddhism).

The story continues to the effect that Hongren, having decided to appoint a successor, instructs his students to write verses expressing their levels of understanding. The only one to do so is the senior student Shenxiu (606?–706), *dharma* instructor to the other students, who with great trepidation writes:

The body is the *bodhi* tree. The mind is like a bright mirror's stand. At all times we must strive to polish it and must not let dust collect.

In response, the illiterate but inspired layman Huineng dictates the following (only one of several variants is given here):

*Bodhi* originally has no tree. The mirror also has no stand. The Buddha-nature is always clear and pure. Where is there room for dust? (McRae, 1986, pp. 1–2)

Despite his lack of formal qualifications to become head of the community—illiterate, penniless, of humble family background, and not even an ordained monk—Huineng is appointed “sixth patriarch” by Hongren. The balance of the text is devoted to his explanation of the *dharmā*, which is identified as the teaching of “sudden enlightenment.” However, the verses and Huineng's sermon, when considered together, actually describe a threefold structure consisting of: (1) the constant teaching of *bodhisattva* practice (in the verse attributed to Shenxiu); (2) the deconstruction of the terms of that teaching through the doctrine of *śūnyatā*, or emptiness (in the verse attributed to Huineng); and (3) a restatement of Chan practice in highly metaphoric terms, culminating in bestowal of the “formless precepts” (in Huineng's sermon that follows).

Although the *Platform Sūtra* follows Shenhui in accepting Huineng as Hongren's sole successor, it effectively writes Shenhui out of the story, saying nothing of his famous campaign and belittling him as a foolish young monk. The *Platform Sūtra* account is demonstrably ahistorical, for Shenxiu studied with Hongren in the 650s, not toward the end of the master's life. In addition, the clever drama by which Hongren selects a single successor could only have made sense after Shenhui's vigorous campaign to have Huineng recognized as the “sixth patriarch” of Chan, which stipulated for the first time that the transmission had to be strictly unilinear.

In spite of the fictive quality of the *Platform Sūtra*, the text had inestimable value as a religious scripture throughout East Asia, based on its inspired depiction of Huineng as an unlettered sage. The legendary persona of Huineng had an everyman quality to it, implying that book learning or even difficult religious training was not necessarily required for spiritual enlightenment, only the innate capacity to understand the ultimate truth. At the same time, this seemingly liberal message had a conservative underside: by showing that the Chan school would go so far as recognizing someone who was so lacking in formal qualifications, the text also implied the converse, that anyone the Chan school installed as abbot (i.e., the patriarch of a given monastic community) was therefore an enlightened individual, no matter what role social privilege or other factors might have played in his selection.

The *Platform Sūtra* is a masterful synthesis of ideas from various early Chan sources. For example, in the text Huineng famously redefines “seated meditation” so that “seated” actually means “not to activate thoughts,” while “meditation” means to see the buddha-nature within oneself. This style of radical redefinition is associated with both the Northern and Oxhead schools; indeed, a member of the latter faction may have edited the earliest known version of the text. The threefold structure described above also seems to be characteristic of Oxhead Chan. Substantial material was added to the scripture over the years, so that the standard editions used from the thirteenth century onward are well over twice the length of the original.

In addition to the fame accorded him through Shen-hui's campaign and his depiction in the *Platform Sūtra*, the legendary Huineng is also recognized as the teacher of two figures from whom all later Chan lineages are said to derive. (There is no reliable biographical evidence that these or any of the other supposed students of Huineng's actually studied with the historical figure.) These are Nanyue Huairang (677–744) and Qingyuan Xingshi (d. 740), who are known only through their identities as the teachers of Mazu Daoyi (709–788) and Shitou Xiqian (710–790), from whom derive the later Linji and Caodong lineages (Japanese, Rinzai, and Sōtō).

#### BIBLIOGRAPHY

For a masterful study of the growth of the legend of Huineng and a translation of the earliest version of the *Platform Sūtra*, which also includes an edition of the Dunhuang manuscript on which the translation is based, see Philip B. Yampolsky, *The Platform Sūtra of the Sixth Patriarch: The Text of the Tun-huang Manuscript with Translation, Introduction, and Notes* (New York, 1967). Another translation of the same version, sometimes useful for its renderings of colloquial Chinese phrases, is Wing-tsit Chan, *The Platform Scripture* (New York, 1963). For a translation of the much expanded thirteenth-century version of the text, see John R. McRae, *The Platform Sūtra of the Sixth Patriarch*, BDK English Triṭṭaka 73-II (Berkeley, Calif., 2000). Morten Schlütter has discussed the evolution of the text in "A Study in the Genealogy of the Platform Sutra," *Studies in Central and East Asian Religions* 2 (Autumn 1989): 53–115. For analysis of the legendary identity of Huineng and the contents of the *Platform Sūtra*, see John R. McRae, *The Northern School and the Formation of Early Ch'an Buddhism* (Honolulu, 1986), pp. 1-6 and 235–238, and *Seeing through Zen: Encounter, Transformation, and Genealogy in Chinese Zen Buddhism* (Berkeley, Calif., 2003), pp. 60–69.

#### HUI-NENG SEE HUINENG

**HUITZILOPOCHTLI** ("hummingbird of the south") was the most powerful god in Aztec religion. The tribal god of the wandering México, he became the patron deity of the Aztec ceremonial capital, Tenochtitlán (1325–1521). Primary sources depict the dual nature of the god, including a human aspect as left-handed warrior hero and a divine aspect as the solar god who kills the powers of the night. Both aspects express a single fact about Huitzilopochtli: He was a terrible, overwhelming warrior who completely dominated his enemies.

At the time of the Spanish conquest in 1521, Huitzilopochtli's shrine was situated, along with that of the rain god Tlaloc, on top of the largest pyramid in the Aztec empire, the Templo Mayor (Great Temple) of Tenochtitlán.

His spectacular religious development from a tribal god to the principal god of the imperial capital is reflected in two mythical episodes that were ritually celebrated by the Aztec. The first, telling of the founding of the city, appears in the *Historia de la nación mexicana* and in the Codex Boturini, which recount how Huitzilopochtli led the México from Chicomoztoc ("place of the seven caves") into the Valley of Mexico. In a second episode, Huitzilopochtli appears in the form of a giant eagle landing on a blooming cactus growing from a rock in the center of Lake Tezcoco in 1325 CE, the date of the founding of the Aztec capital. This event, pictured in the Codex Mendoza, is marked by the construction of a shrine to Huitzilopochtli and the division of the community into five parts.

This shrine (which became the Templo Mayor of Tenochtitlán) and much of the ritual activity associated with it were modeled after the myth of Huitzilopochtli's birth recorded in book 3 of Fray Bernardino de Sahagún's *Historia general de las cosas de la Nueva España* (1569–1582; also known as the Florentine Codex). The *teotuatl* ("divine song") of the god's birth depicts a society of the gods preparing for war at the cosmic mountain, Coatepec ("serpent mountain"), where the mother of the gods, Coatlicue, has been mysteriously impregnated by a ball of feathers. Her four hundred children, enraged at her pregnancy, launch an attack. At the critical moment, Coatlicue gives birth to Huitzilopochtli, fully grown and dressed for war. He takes his *xihcoatl* ("serpent of lightning") and slaughters the attacking siblings. This episode has been variously interpreted by scholars as depicting a historical event or an astral encounter of the sun conquering the moon and stars.

Huitzilopochtli's supreme power was lavishly celebrated at the festival of Panquetzalitzli ("raising of banners"), which involved special human sacrifices following an opening ritual called Ipainá Huitzilopochtli ("the swiftness of Huitzilopochtli"). In the latter ritual, according to Fray Diego Durán in *Los dioses y ritos* and *El calendario* (c. 1581), a swift runner carried a dough image of the god through the streets of the capital, pursued by a multitude of "travelers" who never managed to catch him. This signified that Huitzilopochtli was never captured in war, but was always triumphant over his enemies.

Historically, following the formation of the Aztec state with the successful revolution against the empire of Azcapotzalco in 1428, the cult of Huitzilopochtli came to include massive human sacrifices of captured warriors, women, and children, which, the Aztec believed, contributed to the integration of the Aztec state, cosmic order, and Huitzilopochtli's dominance.

*Revised Bibliography*

**HUIYUAN** (334–416), more fully Shi Huiyuan or Lüshan Huiyuan, Chinese Buddhist monk. Born to a literati family named Jia in Yanmen (Shanxi province), Huiyuan went to Henan at the age of thirteen to study both the Confucian classics and the *Laozi* and *Zhuangzi*. When he was twenty he met the eminent Buddhist monk Dao'an (312–385), whose personality and explanation of the philosophy of the "perfection of wisdom" (Skt., *prajñāpāramitā*) impressed him so much that he embraced Buddhism and became his disciple. He remained with Dao'an for twenty-four years, residing mostly at Xiangyang. In 378 the invading Qin army forced master and disciple to separate. Huiyuan went south and eventually settled on Mount Lü in Jiangxi, where one of his colleagues from his days in Xiangyang, Huiyong, interceded on his behalf to have the Donglin Monastery built for him around 384. He remained there until his death thirty years later.

The Donglin Monastery soon became the most famous center of Buddhism in southern China and continued to be so for several centuries after Huiyuan's death. Much of this prestige derived from the high esteem in which Huiyuan was held by the courts of the Eastern Jin dynasty in the South and the Yao Qin dynasty in the North, and by local rulers, who regarded him as the bulwark and paragon of Buddhist virtue. Huiyuan was active as a scholar and proponent of Buddhism, improving its status in China by increasing the number of texts available in translation and by defending the religion against its opponents. He sent certain of his disciples west to gather scriptures, of which over two hundred were eventually translated. He was also involved in the activities of many translators, three of whom represented three important tendencies in Buddhism: Saṃghadeva (Abhidharma texts), Buddhahadra (*dhyāna* texts), and Kumārajīva (Mādhyamika texts). In 404, in response to the anti-Buddhist policies of Huan Xuan, the usurper of the Eastern

Jin, Huiyuan elaborated his position on church-state relations in his influential *The Śramaṇa Does Not Pay Homage to the Ruler*. Here he argued that of the two groups in Buddhism, the laity and the clergy, the former is subject to temporal authority but not the latter, since its members had abandoned society for nonworldly ends.

Huiyuan also enjoyed enormous popularity among the gentry of South China, for it was to this group that he primarily directed his literary efforts. Some thirty of his works, in the form of letters, essays, prefaces, eulogies, or inscriptions, are extant. Unlike Dao'an, who primarily wrote commentaries for the Buddhist clergy, Huiyuan addressed issues that most concerned the gentry: rebirth, the immortality of the soul, the doctrine of *karman*, and the nature of the *dharmakāya*. His previous classical training made him successful in explaining these concepts in terms of the philosophical outlook of the Chinese elite, which at the time was dominated by *xuanxue* ("dark learning") speculations into the underlying source (*ben*) of phenomena. That he never once quoted a Buddhist sūtra by name but made numerous allusions to the Confucian classics attests to his fervent desire to bring Buddhism into the mainstream of Chinese spiritual and intellectual life. Modern scholars have identified certain areas in which Huiyuan's understanding of important Buddhist concepts deviates from that of the Indian texts. They have attributed this both to his concern to present Buddhist notions in a form comprehensible to the Chinese, as in his postulation of a cosmic soul (*shen*) as a means of explaining the process of rebirth, or to his frank inability in some instances to master the subtleties of Buddhist doctrine. This is particularly evident in his treatment of the Mādhyamika concepts introduced into China by Kumārajīva. Huiyuan's correspondence with this, perhaps the greatest of all Buddhist translators, is one of our richest sources of information on the development of Buddhist thought in fifth-century China.

Among Huiyuan's many accomplishments, his devotional group probably had the most enduring influence on Chinese Buddhism. In 402 Huiyuan and 123 lay and clerical disciples gathered before an image of the Buddha Amitābha and made a collective vow to be reborn together in his Pure Land. Huiyuan's devotional group served as a model for the lay-based Buddhist societies of the mid-Tang and Song periods, the most well known of which is the White Lotus Society of the early twelfth century. This group claimed to take its name from that of Huiyuan's confraternity; modern scholarship, however, has shown the name to be of later origin. The deliberate evocation of Huiyuan's legacy some eight hundred years after his death, however, attests vividly to his enduring prestige in the Chinese Buddhist community. His influence continues to be acknowledged by the Pure Land traditions of both China and Japan, which have traditionally regarded Huiyuan as their founder and first patriarch.

**BIBLIOGRAPHY**

The best historical treatment of Huiyuan, including translation of his biography, can be found in Erik Zürcher's *The Buddhist Conquest of China* (Leiden, 1959), pp. 204–253. For an overview of Huiyuan's thought, with emphasis on his deviation from the original Indian position, there is Walter Liebenthal's "Shih Hui-yüan's Buddhism as Set Forth in His Writings," *Journal of the American Oriental Society* 70 (1950): 243–259. Huiyuan's major essay, *The Śramaṇa Does Not Pay Homage to the Ruler* (*Shamen bu jing wangzhe lun*), is fully translated by Leon Hurvitz in "'Render unto Caesar' in Early Chinese Buddhism," in *Liebenthal Festschrift*, "Sino-Indian Studies," vol. 5, pts. 3–4, edited by Roy Kshitis (Santiniketan, 1957), pp. 80–114. An assessment of Huiyuan's understanding of Mādhyamika philosophy, plus translation of his correspondence with Kumārajīva and a list of all of his extant writings with textual references, can be found in Richard Robinson's *Early Mādhyamika in India and China* (Madison, Wis., 1967), pp. 96–114, 181–205. *Eon Kenkyū*, 2 vols., edited by Kimura Eiichi (Kyoto, 1960–1962), is the most thorough work on this figure; it includes studies on Huiyuan, his texts and translations.

*Revised Bibliography*

**HUIJWĪRĪ, AL-** (d. AH 469?/1076? CE), more fully 'Alī ibn 'Uthmān ibn 'Alī al-Jullābī al-Ghaznawī al-Hujwīrī, was the author of *Kashf al-mahjūb* (The unveiling of the secrets), a very early textbook of Sufism in the Persian language. Almost all the facts of al-Hujwīrī's life that can be trusted come from what he says about himself and his contemporaries in the *Kashf al-mahjūb*. His name relates that he was a native of Ghaznīn; Jullāb and Hujwīr were apparently quarters of that town. From the descriptions of his contemporaries, it is clear that he was born around the beginning of the eleventh century. He studied Sufism with Abū al-Faḍl Muḥammad Khuṭṭalī and read some other sciences with Abū al-'Abbās al-Ashqānī. Al-Hujwīrī traveled widely through Central Asia, Afghanistan, Iran, Azerbaijan, Iraq, and Syria as a dervish, staying in Sūfī hospices (*khānqāhs*) and apparently subsisting on alms. For the first eleven years that he was a mystic, he says, he had been preserved from marriage; but then either a marriage or a love affair (for the words are not clear) created a dangerous diversion, although he was able to escape after one year. By the time he wrote the *Kashf al-mahjūb* he had already composed as many as

nine works, all of which, except for a collection of verses (*dīwān*), were devoted to mysticism and ethics. Of these none has survived.

Contrary to later tradition, al-Hujwīrī does not seem to have had a single spiritual guide (pir), and certainly his visit to Lahore, to judge from his own words, was not at this unnamed pir's orders. He says that he was separated from his books in Ghaznīn and forced to be (*giriftār*) among strangers (*nājinsān*) in Lahore. The use of the past tense suggests that he was no longer in Lahore when he was writing the *Kashf al-mahjūb*, and from a passage on contemporary saints it would seem that he was then in Ghaznīn. His tomb in Lahore is, therefore, not likely to be genuine. The traditional year of his death (AH 465) inscribed on this tomb is probably not far wrong, however, though Nicholson believes that he might have died within the next four years.

Al-Hujwīrī's *Kashf al-mahjūb* became a classic text for later Persian and Indian Sufism, partly because of its comprehensive nature, partly because of its moderation, and partly because of its eclecticism. Al-Hujwīrī wrote when many of the later elements of Sufism—the erotic concept of relationship with God, the total submission to the pir (leading to the "chain" of teachers, or *silsilah*), and the doctrine of pantheism—were either subdued or held only in secret. These are, therefore, not prominent in the text, though, as in the section on Maṣṣūr al-Ḥallāj, al-Hujwīrī shows himself capable of both rejecting and tolerating pantheism; elsewhere he attempts a distinction between *maḥabbah* and *'ishq* to grapple with the tendency toward eroticism. The separate Sūfī discipline, of which the pir was later to become the kingpin, is boldly elaborated: The life of poverty, acceptance of alms, the patched garment, the practice of verse recitation (*samā'*), even the trend toward celibacy, are all expounded, though always with a willingness to state or even tolerate contrary opinions. In his treatment of the *ḥājj*, he expresses the same curious reserve toward the actual performance of that ritual as is found in subsequent Sūfī tradition.

**BIBLIOGRAPHY**

*Kashf al-mahjūb* has been edited by V. A. Zukovsky (Leningrad, 1926) and, from a very old manuscript, alleged to date from the thirteenth century, printed by Aḥmad Rabbānī, with an introduction (posthumous) by Muḥammad Shafī' (Lahore, 1967). An abridged translation has been published, with an important introduction by Reynold A. Nicholson, *Kashf al-Mahjūb: The Oldest Persian Treatise on Sufism*, "Gibb Memorial Series," 2d ed., (1936; reprint, Lahore, 1976).

MYTHS AND SYMBOLISM  
HUMAN BODIES, RELIGION, AND GENDER  
HUMAN BODIES, RELIGION, AND ART

## HUMAN BODY: MYTHS AND SYMBOLISM

One of the great intellectual and spiritual problems throughout human history has been posed by the fact that certain material substances, which are now termed “organic,” possess life, while other matter does not. The observation that some things eat, drink, grow, and reproduce for a finite period of time, then cease to do so, prompts fundamental inquiries into the nature of life and death, time and change, meaning and meaninglessness, and also gives rise to speculation about the nature of living substances—specifically as to what it is that sets them apart from those that are dead and inert. Such speculations, until the very recent past, were hardly confined to technical issues of biochemistry and biophysics. Rather, physiology entailed the study of life, humanity, and the universe; as such, it had always a profoundly religious dimension.

Although there have been countless different systems of religio-physiological speculation that enjoyed currency at one time and place or another, two general patterns are particularly well attested and noteworthy for the pointed way in which they frame the problematic of organic matter. These are the dualism of body and soul (which radically differentiates the life principle from all else) and the homologization of microcosm and macrocosm (which systematically correlates the body with the world outside).

With regard to the first, dualistic physiology posits a radical distinction between base matter and some nonmaterial life principle which inheres only within certain material aggregates for a period of finite duration. The entry of this life principle—be it defined as soul, spirit, breath, warmth, or the like—vivifies and energizes the matter in which it resides; when it departs, death is the result. Such a dualism is implicit in the familiar account of the creation of the first human being in *Genesis* 2:7, where the body is carefully differentiated from the life principle, with only the latter deriving directly from Yahveh himself: “Then the Lord God formed man of dust from the ground, and breathed into his nostrils the breath of life; and man became a living being.”

Such a dualism inevitably connotes a devaluation of the body in relation to the life principle. To a certain extent, the two are contrasted to one another so that soul is to body as sacred is to profane. The logic of this analogy, however, demands a mythology, cosmology, and metaphysics that attempt to resolve the questions of how and why a divine, immaterial life principle can reside within a profane material body, and what the ultimate fate of this life principle may be. *Genesis* posits an earthly origin for the body of the first man (whose very name, *Adam*, “clay,” underscores this fact) and a divine origin for his life principle, breathed into him by a benevolent creator. The analysis of death in Hebrew scripture follows as a corollary to this, for the body is returned to the dust from which it came, while the life force is breathed back to God with the final (literal) expiration (*Ecl.* 12:7, *Ps.* 104:29).

A more emphatically dualistic understanding of the human condition, supported by a much more elaborate mythology and cosmology, is to be found in the Manichaean system. Although the details differ somewhat from one textual source to another, the basic outlines of Mani’s views are reasonably consistent throughout. Within Mani’s universe, two realms initially stood separate from one another, these being characterized sometimes as the realms of light and darkness, good and evil, God and matter, or the truth and the lie. From the realm of light, it is told there ventured forth a being, a son of God, known as Primeval Man, Ohrmazd, and by other names. This figure took with him his own five sons, who were the beneficent elements of air, wind, light, water, and fire (but note the absence of earth!), and he attached these elements to his body in order that they might serve as armor to protect him. His expedition, however, ended in defeat, and as a result particles of light came to be intermixed with dark, gross, earthly matter. As one Manichaean hymn describes it:

Angry became Āz [“Desire”],  
that evil mother of all demons,  
and she made a heavy disturbance  
for the sake of helping herself.  
And of the dirt of the demons  
and of the filth of the she-demons  
she made this body,  
and she herself entered it.  
Then from the five Elements of Light,  
the armor of Lord Ohrmazd,  
she formed the good soul  
and fettered it into the body.  
She made it like one blind and deaf,  
unconscious and deceived,  
that he at first might not know  
his true origin and family.  
She created the body and prison,  
and fettered the grieved soul. (trans. Jes P. Asmussen)

The problem that then faced Manichaeans was how to regain knowledge of the origin and true nature of the light within them, how to separate it from the disgusting bodily matter with which it was now commingled, and how to return it—along with as many other light particles as possible—to the celestial realm of light. In pursuit of salvation, the Manichaean elect were called upon to purify themselves through meditation, sexual abstinence, withdrawal from normal labor, and a fascinating set of dietary practices. Above all, their prescribed diet emphasized items that were extremely light in color, such as melons and cucumbers, for these were considered to have within them many particles of light. Proper ingestion was thus understood to be the absorption of light, while defecation was the voiding of dark matter. Over time the elect was expected to modify the mixture of darkness and light within his body in favor of the latter, in preparation for the ascent of this concentrated light to its primordial, heavenly home. Bodily processes thus, ironically,

became the mechanism for salvation from the bodily prison. Turning to the second general pattern of religio-physiological speculation, one may take as an example of the homologization of microcosm and macrocosm the general Indo-European system of creation mythology. This system rests upon two elegantly symmetrical myths: a cosmogony, in which is described the creation of the universe from the body of the first man; and an anthropogony, describing the creation of the first man out of parts of the universe. Germanic sources offer excellent examples of both. Consider, for instance, this cosmogonic account:

From Ymir's flesh the earth was made  
and from his sweat, the sea;  
  
Mountains from his bones, trees from his hair,  
and heaven from his skull.  
  
From his brows built the gentle gods  
Midgard for the sons of men;  
  
And from his brain shaped they all the clouds,  
Which were hard in mood. (*Grímnismál* 40–41)

Although the following anthropogonic account exhibits a superficial Christianization, having been written in the fifteenth century CE, the bulk of its contents derive from the pre-Christian tradition, as is seen from the way it preserves the same pattern as the pagan cosmogony cited above:

God made the first man—that was Adam—from eight transformations: his bone from stone, his flesh from earth, his blood from water, his heart from wind, his thoughts from clouds, his sweat from dew, the locks of his hair from grass, and his eyes from the sun. (Code of Emsig)

What is established in texts such as these—Indic, Iranian, Baltic, Slavic, Greek, Roman, and Celtic parallels could also be adduced—is the fundamental consubstantiality of the human body and the universe. The intent of these myths is to demonstrate in convincing detail that the cosmos is composed of the very same matter as is the body, and vice versa, the only difference between the two being one of scale. Flesh, for instance, is only the small-scale version of soil, and stone the large-scale version of bones, the two latter being the dense hard matter located within earth and flesh, respectively. A less obvious homology is that between brain and clouds, which seems to rest upon three perceived similarities: location in the upper regions of the body or world, crenellated shape, and quasi insubstantiality (although this last is more appropriate to thoughts than to the brain itself).

Like flesh and earth or bones and stones, brain and clouds were understood to be alloforms—alternative incarnations—of one another. In all, nine sets of alloformic homologies, beyond the general one of body/universe, may be confidently reconstructed for the Indo-European system: flesh/earth, bone/stone, hair/grass, blood/water, eyes/sun, mind/moon, brain/cloud, skull/rim of heaven, and breath/wind. These detailed homologies gave concrete expression to a sweeping religious vision in which the unity of humanity

and the cosmos, of matter and spirit were resoundingly affirmed; they also provided the basic building blocks for a variety of ritual actions.

Among these rituals, one of the most important was sacrifice. This was no mere gift exchange but a ceremony in which the very cosmos was sustained as matter drawn from the bodily parts of the victim was transformed into its macrocosmic alloform, replenishing and renewing thereby the universe, in repetition of the cosmogony: bones became stones, flesh became earth, and so on. Healing rituals were also based upon knowledge of the homologic relation between body and cosmos. Broken bones might thus be knit by the introduction of matter drawn from stones, flesh injuries healed by application of earth, and loss of hair reversed by rubbing plants into the scalp—as is attested in an Indic charm, in which the priest addresses first the plant to be used and then the patient:

You are a goddess, born upon the divine earth, O Plant!  
We dig you now, you who stretch downward, in order to  
make the hairs firm.

Make the old ones firm; cause to be born those which are  
still unborn, and make those which have been born grow  
longer.

That hair of yours which falls out, and that which is  
cut off with its roots still attached—

This now I sprinkle with the all-healing herb!  
(*Atharvaveda* 6.136)

The posited efficacy of this cure rests on the alloformic relation of hair and plants. Plants were taken to be nothing other than an alternative form for the same matter also present in hair, and the knowledgeable priest could ritually transform this matter back into hair when the need arose. Traces of this ideology and ritual persist today in the enduring popularity of herbal shampoos, conditioners, and hair tonics.

The same physiological views that gave rise to such cures for baldness inform more serious questions of life and death, for at death, bodily matter was taken to be transformed into its macrocosmic counterparts, again in repetition of cosmogonic events. Witness this Middle Persian text:

There are five collectors, receptacles of the corporeal substance of those who have died. One is the earth, which is the keeper of flesh and bone and sinew. The second is water, which is the keeper of blood. The third is the plants, preservers of bodily hair and the hair of the head. The fourth is light, the recipient of fire. Last is the wind, which is the life-breath of creatures at the time of the Renovation. (*Zadspram* 34.3–7)

The Renovation (*Frashokereti*) referred to in the last line of this passage is the eschaton, the moment of world renewal and final purification. The reference is a pointed one, for among the culminating events of this end time is the resurrection (Pahl., *ristāxēz*) of the dead, a process that reverses that of death, taking matter from its macrocosmic incarnation and restoring it to bodily existence; this is spelled out

in another Middle Persian source, which states that in order to accomplish the resurrection “Ohrmazd [the Wise Lord] summons bone from the earth, blood from the water, hair from the plants, and life-breath from the wind” (*Pahlavi Rivāyat accompanying Dādīstān i dīnīg* 48.55).

If death repeats the cosmogony of this system, it is also apparent that resurrection repeats the anthropogony. Bodily incarnation is but one phase of an eternal existence, in which the same material substance moves from body to cosmos to body to cosmos ad infinitum, death and (re)birth being but moments of transition. Knowledge of the body thus amounts to knowledge of the universe, from which it is inseparable and of which it is the counterpart. Moreover, reverence for one amounts to reverence for the other.

In presenting these two systems—body-soul dualism and homology of microcosm and macrocosm—we have focused on attitudes toward and analyses of the origin, nature, and destiny of the body: on the material body as a topic for speculation. But one must also consider the body as a metaphor and a means of communication, for in addition to its being a topic for thought, the body is also a medium for expression. Highly visible to others, the body is something social as well as material, something that does not simply exist but acts and speaks as well. Displayed, viewed, commented upon, criticized, and interpreted, bodies provide powerful vehicles for the discussion of cultural norms and values.

Among the Navajo of the American Southwest, for example, central cultural values are elegantly summarized within the multiple usages of the term *hózhó*, the semantic range of which spans social norms and etiquette, health and healing, ethics, religion, and aesthetics. Usually translated “beauty,” *hózhó* denotes something considerably broader than its English equivalent, referring specifically to a state of order, harmony, dynamic balance, and well-being—in short, all that is desirable and makes life pleasant, stable, interesting, and worthwhile. Yet the translation “beauty” is more a condensation than an oversimplification, for it is possession of these qualities that, according to the Navajo, makes and marks anything as beautiful.

Given such a view, physical beauty is quite naturally highly valued, for it is understood to be the visible form produced by an inner state, specifically by that inner state that makes a person cooperative, dependable, productive, and beneficial to others. Moreover, such beauty is contagious, and can be transmitted from one person to another. That is to say, one who is at peace with himself/herself, possessing a balanced, well-ordered (*hózhó*) mental and emotional state, communicates this to others, leading them to relax and enjoy the same well-being, which they may then transmit to still others. That physical beauty may also be transmitted follows as a natural corollary of this line of thought, and a regular feature of a Navajo woman’s initiation ritual is the “molding” of the initiand by an older woman who is recognized as beautiful in the fullest sense of the word. By the pressure of her body—applied in strenuous massages—and by the

force of her personality, this woman is expected to shape the body and life of the young woman so that she too will enjoy and exhibit *hózhó*.

Costume and adornment may also carry *hózhó* and transmit it, as is most clearly stated regarding silver jewelry. These objects will be beautiful only if they have been made by artisans who are in a state of *hózhó*, the visible beauty of the objects being the result and expression of their makers’ inner beauty. Worn proudly, they communicate balance, rhythm, energy, order, and stability to those who wear them and to any who behold them, transforming their lives and making them more beautiful in the process.

Body decoration is also an important means for communicating cultural values and transforming life experience throughout New Guinea, as is evident, for instance, in the Mount Hagen area, where such practices have been intensively studied by Andrew and Marilyn Strathern (1971). For all important public occasions, Mount Hageners decorate their faces with brilliant painted patterns, and their bodies with oils, shells, plumes, furs, wigs, and fancy aprons. Most of these items are obtained through trade or loan, and involve the wearer in a complex system of socioeconomic bonds, the successful maintenance of which is indispensable in putting together an impressive costume. Moreover, the wearing of such a costume is a public display of one’s success in establishing and maintaining the friendship, kinship, marital, and trading relations necessary for costuming and for life. Nor is body decoration merely the proud display of past success in these relations; it is also a means to ensure future success, especially in marriage and trade, for an effective costume is understood to be one that is attractive—that literally attracts future wives and trading partners to the wearer.

It should be stressed that among Mount Hageners, body decoration is not an individualistic display born of personal ambition or vanity. Rather, it is something undertaken by a corporate group, most often a clan, who paint their faces and arrange their ornaments for a given occasion in accordance with a prearranged pattern set by a “Big Man.” Within the clan, members compete to produce the finest costume while adhering to the common pattern, but they also compete as a group against other clans for the prestige of having the finest decorations. Success in such competition can come only when the clan has the support of its ancestral spirits, and such support is ensured by two methods. First, sacrifices to the ancestors are offered prior to any occasion of public display, thereby cementing good relations between the living and the dead. Second, good relations among clansmen must also be maintained, for the ancestors are outraged by moral failings and friction within the clan group, and will withhold their support should these be present.

In the Mount Hagen area, then, not only is it true that body decoration is a means for announcing and commenting upon social values, but the set of rituals and beliefs associated with body decoration serves as a buttress for those values. As the Stratherns cogently argue:

The two central values are clan solidarity and prestige, and individual wealth and well-being. This suggests why it is so appropriate that Hageners decorate *themselves* for it is men and women as persons who remain the points of reference of these values. This is not to deny that the value of group solidarity could be expressed in many other ways, for example by cult buildings or statues. But decorations and dancing provide an excellent mechanism for demonstrating both of the two values together. Moreover, the values are to some extent complementary rather than opposed. . . . Hageners hold, in fact, that in this context the prestige of the clan coincides with that of its members. It is themselves that they decorate, for it is through men's personal achievements that renown is brought to them and their clan alike. (Strathern and Strathern, 1971, pp. 172–173)

The Navajo and Mount Hagen examples and others like them are particularly important for showing the rich and varied ways in which the body may be used to articulate and activate complex systems of thought and values. At a more general—and thus, of necessity, more superficial—level, certain recurrent patterns of symbolic discourse centered on the body have been identified and analyzed, Raymond Firth, for instance, has singled out four general styles of body symbolism, which may be termed the gestural, the membral, the reliquary, and the corporate, although Firth himself does not make use of these (or any other) specific identifying terms.

Gestural symbolism, for its part, involves the use of an individual actor's body in a deliberately chosen stance or motion to express an attitude or idea, as, for instance, when one kneels in prayer or submission as a means of acknowledging the superior power and stature of some other being, while simultaneously showing one's humility in the face of that being. In contrast, membral symbolism is utilized more in speech acts than in bodily action, for it employs reference to a specific bodily part in order to make statements about abstract personal qualities, as in the common metaphors "big-hearted" (generous) or "silver-tongued" (eloquent). Reliquary symbolism is related to both gestural and membral symbolism in certain ways. Like the latter, it makes use of bodily parts rather than bodily wholes, but like the former, it employs a real body rather than an imagined or metaphorical one. In specific, in reliquary symbolism a piece of the body of some revered figure—a saint, prophet, ancestor, or lover, to cite a few possibilities—becomes the focal object for one's emotional attachment, as with a lock of hair worn around the neck or a saint's enshrined remains.

Most interesting and important, however, is the corporate pattern, in which the entire human body is presented as a model or replica of the social "body," with detailed resemblances between the constituent units of society and the bodily members. Political leaders or others in positions of primacy may thus be described as the "head," "heart," or "backbone" of society, as a means to describe the ways in which they direct, vivify, or support the social grouping. More unusual is the way in which a Roman legend, the so-

called Apologue of Menenius Agrippa, employs corporate imagery. The story, as told by Livy and others, is that at a certain moment in Roman history, the lower classes of society (the plebes) withdrew from the city of Rome, outraged at their exploitation by the ruling Patrician class. Unwilling to confront them militarily—for victory or defeat would be equally disastrous—the Patricians sent an ambassador, one Menenius Agrippa, who recounted the following parable to the rebellious orders:

There was a time when man's bodily parts did not agree in unity, as they do now, but individual limbs had their own opinions and their own powers of speech. Then, the other parts were outraged at having to work for the belly, while the belly rested idly, savoring their delicious gifts. So they plotted that the hands would not take food to the mouth, the mouth wouldn't swallow, and the teeth wouldn't chew. As a result, they starved the belly and all of them wasted away together. It thereby became apparent that the belly is no idler, but just as others feed it, it feeds the rest of the body. (Livy, 2.32.9–11)

Debate here centers on whether the upper classes are parasitic or not, an issue discussed through body symbolism; the parable asks how the belly shall be understood, but it is evident from the frame-story that the real issue is how society will be ordered.

Often, corporate symbolism is used to charter and legitimate social stratification, as in the celebrated Vedic creation hymn, *Rgveda* 10.90 (see especially verses 11–12), in which priests are said to have been created from the first man's mouth, warriors and kings from his arms, the class of food producers and merchants from his thighs, and the servant class from his feet. Similar systems are found in Slavic and Greek texts (the *Poem on the Dove King* and Plato's *Timaeus* 69d–70a and *Republic* 431a–d), although certain details differ. In all cases, however, the position of the dominant social class—numerically smallest but greatest in power and prestige—is justified by comparison to a bodily part (usually the head, sometimes an organ within the head, like the mouth or brain) that is smaller than other bodily parts, representing other social classes, but is placed vertically above them and enjoys some measure of executive control over them. Through this use of corporate imagery, the social order is represented as if it were a natural, thus inviolable, order.

On the horizontal plane, as on the vertical, corporate imagery is also regularly used to represent and reinforce social hierarchies. The polarity of right and left (dextrous and sinister) is here a dominant symbol, by use of which subordination of women to men or of radicals to reactionaries, to cite but two examples, may conveniently be coded. The power of such imagery derives in large measure from the numerous polarities to which right and left are consistently associated, among them light/dark, even/odd, hand used in eating/hand used after defecation, culture/nature, purity/pollution, and sacred/profane.

The distinction between what is inside the body and what is outside is also crucial for countless systems of corporate symbolism that stress the difference between what is self and what is alien, what is contained and what is not, what ordered and what chaotic. Reflections on bodily images of inside and outside, moreover, give rise to the extremely thorny problematic of mediation, for there are certain places—the bodily orifices—where inside and outside meet, and certain substances—food and bodily products of all sorts (urine, feces, tears, sexual fluids, saliva, mucus, pus)—which pass from outside to inside or vice versa. Attitudes toward, and proscribed behaviors (taboos) regarding, these interstitial places and products may thus serve as a means for expressing and working out attitudes toward other borders—social, political, ethnic, taxonomic, or broadly cognitive—as has been forcefully argued by Mary Douglas (1966).

It would be a relatively simple matter to multiply examples almost endlessly for these and other patterns of body symbolism and speculation upon the nature of the body, so widespread have they been. Any thorough study of the religious significance of the body ought to include discussions of systems of physical discipline and the overcoming of fleshly existence, as found in Yoga, among the Jains, and within branches of Christian monasticism; attempts at the winning of bodily immortality as in Daoist and Western alchemy; and systems of bodily ornamentation and expression such as tattooing, scarification, dance, and masquerade. It is important to bear in mind that rich examples may as easily be drawn from one's own culture as from exotic realms, a point delightfully made in Horace Miner's classic essay "Body Ritual among the Nacirema" (1956), in which he describes the cultic significance of such Nacirema (*American* spelled backward) customs as the brushing of teeth and the use of deodorants. Nor is Miner's point mere satire; the rituals and ideology of European and American bodybuilders, dancers, dieters, joggers, healthcare professionals, and fashion designers might well stand comparison to those of the Manichaeans, Navajo, or Mount Hageners.

#### BIBLIOGRAPHY

On the general theme of body symbolism and ideas regarding the nature of the body, a number of useful essays are to be found in two volumes: *The Body as a Medium of Expression*, edited by Jonathan Benthall and Ted Polhemus (New York, 1975), and *The Anthropology of the Body*, edited by John Blacking (New York, 1977).

On the dualism of body and soul, the fullest study remains Ugo Bianchi's *Il dualismo religioso: Saggio storico ed etnologico*, 2d ed. (Rome, 1983). Also of value are Bianchi's *Prometeo, Orfeo, Adamo* (Rome, 1976), Simone Pétrement's *Le dualisme chez Platon, les gnostiques, et les manichéens* (Paris, 1946), and Ioan P. Culianu's "Demonisation du cosmos et dualisme gnostique," *Revue de l'histoire des religions* 196 (1979): 3–40.

On the homology of microcosm and macrocosm, most recently, see my *Myth, Cosmos, and Society: Indo-European Themes of Creation and Destruction* (Cambridge, Mass., 1986); *Bai Wen Bian, or the Hundred Questions: A Dialogue between Two Daoists on the Macrocosmic and Microcosmic System of Correspondences*, translated by Rolf Homan (Leiden, 1976); and Leonard Barkan's *Nature's Work of Art; The Human Body as Image of the World* (New Haven, Conn., 1975), the last of which deals with the popularity of this theme in England in the sixteenth to eighteenth centuries.

On the Navajo ideas of beauty, see Gary Witherspoon's *Language and Art in the Navajo Universe* (Ann Arbor, Mich., 1977) and Louise Lincoln's "Navajo Silver, Navajo Aesthetics," in *Southwest Indian Silver from the Donnelly Collection*, edited by Louise Lincoln (Austin, 1982). On body ornamentation in New Guinea, see Andrew Strathern and Marilyn Strathern's *Self-Decoration in Mount Hagen* (London, 1971). More general works on body decoration, such as Robert Brain's *The Decorated Body* (London, 1979) or André Virel's *Decorated Man: The Human Body as Art* (New York, 1970), tend to have splendid photos and rather banal texts. On costume, however, *The Fabrics of Culture: Anthropology of Clothing and Adornment*, edited by Justine Cordwell (The Hague, 1979), contains some excellent essays. The studies of dance, gesture, and facial expression, while still in their infancies, are ably discussed in several of the essays in Benthall and Polhemus's *The Body as a Medium of Expression* (cited above).

Raymond Firth's discussion of patterns of body symbolism is found in his volume entitled *Symbols: Public and Private* (Ithaca, N.Y., 1973), in which see especially pages 226–230. Vertical stratification along lines suggested by the structure of the human body is discussed in my *Myth, Cosmos, and Society* (cited above), especially chapter 7. Polarity of left and right is the central theme of the essays in *Right and Left: Essays on Dual Symbolic Classification*, edited by Rodney Needham (Chicago, 1973) and Serge Tcherkézoff's *Le roi Nyamwezi, la droite et la gauche* (New York, 1983). On bodily margins and orifices, the most important work remains Mary Douglas's *Purity and Danger: An Analysis of Concepts of Pollution and Taboo* (London, 1966).

Horace Miner's essay on "Body Ritual among the Nacirema" first appeared in *American Anthropologist* 58 (1956): 503–507 and has frequently been reprinted. Valuable primary data on American ideologies of the body can be found in such popular volumes as Charles Gaines and George Butler's *Pumping Iron: The Art and Sport of Bodybuilding* (New York, 1982) or John T. Molloy's *Dress for Success* (New York, 1975).

Discussions on Manichaean, Jain, yogic, Christian monastic, and Daoist ideas of the body will be found in the works cited in the bibliographies to the relevant articles for each of these traditions. Of special note regarding the last of these, however, is Kristofer Schipper's "The Daoist Body," *History of Religions* 17 (1978): 355–387.

## HUMAN BODY: HUMAN BODIES, RELIGION, AND GENDER

Sigmund Freud (1856–1939) famously described human beings as sick animals, caught between the apparent transcendence of rationality and the immanent reality of being physical creatures that need food to survive, that defecate, that reproduce through sexual intercourse, and who will die. While one need not accept all Freud's claims, this distinction between two different types of human experience provides a useful starting point for exploring the historical development of ideas concerning the relationship between the human body, religion, and gender. While Freud is at pains to accept the significance of the body (and particularly sexuality) for human self-understanding, in effect questioning the extent to which rationality can be understood as the defining feature of human being, other interpretations of these different experiences have tended to undervalue or belittle physicality. Religious theorizing has made a consistent separation between the intellect and the body, the spiritual and the physical. This distinction is particularly notable in the Western tradition, although by no means exclusive to it. Here, the religious division of existence into that which is "sacred" and that which is "profane" is underpinned by an equally persistent philosophical theory of the human person as consisting of two unequal properties. For Plato (c. 428–347 BCE), the true self is equated with the soul (see *Phaedo*), an idea that is built upon by René Descartes (1596–1650) in his division of the human subject into a mind whose existence can be proved, and a body whose existence is subject to doubt (see *The Second Meditation*).

**THE BODY IN CONTEMPORARY ACCOUNTS OF PERSONHOOD.** Twentieth-century developments in the philosophy of mind, most notably in the work of Gilbert Ryle (1900–1976) and Ludwig Wittgenstein (1889–1951), challenged this dualistic understanding of the human person that distinguishes "mind" from body and values the former at the expense of the latter. Significantly, feminists have added to this analysis by exposing the unspoken gender assumptions that lie beneath the dualistic construction of the human person. Historically, the visually obvious role that the female plays in reproduction has led to her consistent identification with

the body and the processes of nature. At the same time, the male has been equated with the mind and rationality, and spirituality has been defined in terms of those elements that transcend the natural world. In such a context, it is perhaps not surprising that the desire to impose order upon nature, or perhaps to evade nature entirely, has disproportionately affected women, as control of the female can easily be conflated with control of nature itself. And just as the attributes associated with the male have been equated with the spiritual realm, so it can be argued that the concept of the divine has been created in the image of those masculine values conceived as distinguishable from the potentially chaotic forces of the natural world.

Recent philosophical and theological theorists have begun seeking a return to the body, taking seriously human physicality and refusing to see the body as a disposable container for the human soul. In such a context, issues such as gender and race are revealed as significant indicators for the way in which human beings have understood their placing in the world. At the same time as attention is being directed towards the body, postmodern theorists have challenged any attempt to understand the body in a straightforwardly "natural" or obvious way. The body, like every other aspect of human life and society, is subject to "infinitely variable social constructions" (Coakley, 1997, p. 3). One cannot separate "the body" from its cultural representation.

An analysis of the history of religion in this context is particularly significant, for in the guise of addressing the issues that arise from being a physical being, particular and exacting disciplines have been imposed upon what has been taken to be a potentially unruly and dangerous site of experience. Michel Foucault (1926–1984) has argued that the sexual character of the body has itself been shaped by political intervention. More often than not, women have been associated primarily with the physical, and as such the female body has been disproportionately affected by the attempts of the religious to control the body.

**THE FEMALE BODY IN RELIGIOUS WRITINGS.** According to Émile Durkheim (1858–1917), religion is best understood in terms of its social function. Religious practices and beliefs function as part of the attempt made by human beings to impose order upon the apparently chaotic world of nature. The body is not exempt from this attempt to distinguish what is pure, ordered, and thus holy from what is dirty, disordered, and impure. As the anthropologist Mary Douglas points out, ideas of holiness and social order are closely related to the symbol of the body. The body stands as a symbol for society, and "its boundaries can represent any boundaries which are threatened or precarious" (Douglas, 2000, p. 142). In seeking to impose order on their surroundings, human beings render as problematic that which defies order, and this is particularly true of the human body that stands as a microcosm for the world. The discharges of the body, immune to any attempt at ordering, are thus seen as potentially defiling, and in need of careful control (Douglas, 2000, p. 64).

While male and female bodies are both subject to various forms of discharge and excreta, the female body has been associated most intimately with the perceived dangers of discharges (notably menstruation) and has been subjected to all forms of religious stricture and control. Indeed, it can be argued that a pessimistic attitude to the body as a means of achieving spiritual fulfillment leads irrevocably to misogyny. For example, the Hindu *Laws of Manu* (6.76–7) states that the body is “foul-smelling” and “filled with urine and excrement,” and this fundamentally pessimistic attitude toward the body is coupled, argues Wendy Doniger, with an explicit misogyny. Excrement is indeed a popular metaphor for the hidden dangers of the female that crosses religious and cultural boundaries. For Nāgārjuna (second century CE), one of the greatest thinkers of Mahāyāna Buddhism, one who lies with a woman may think that he lies with the most beautiful of creatures, but in fact he “merely lies on top of a woman’s bladder” (Williams, 1997, p. 210). In almost identical fashion, the Christian Saint Odo of Cluny (c. 878–942 CE) notes that “to embrace a woman is to embrace a sack of manure.”

“Dirt is dangerous,” as Douglas points out (2000, p. xi), but to categorize bodily emissions as “dangerous” simultaneously suggests something of their power, and goes some way toward explaining the attitude towards the female in many religious traditions. In prehistoric times, a strong association seems to have been made between the female body and the processes of fertility. Small statuettes of female figures portrayed with large breasts, pregnant stomachs, and prominently marked genitals have been found dating back to Paleolithic times. While the ability to reproduce suggests something of women’s ability to create (for cultures that probably did not fully understand the male role in reproduction, seemingly *ex nihilo*), the attempt to control such power has led to taboos being constructed around both menstruation and birth. Menstruation was, and in some cases remains, subject to rigid practices in most religions. In Orthodox Judaism, a menstruating woman is kept separate from contact with male family members. In Hinduism, both menstrual blood and the blood of birthing are considered unclean. In Christianity, menstruation is described as “the curse,” punishment for the disobedience of Eve, and in medieval times a menstruating woman was not allowed to participate in the Eucharist.

Feminist scholars suggest that this suspicion of the female body and its apparently unruly but also awe-inspiring nature lies at the heart of patriarchal attempts to control the natural world. For Rosemary Ruether “patriarchal religion is built on many millennia of repressed fear of the power of female bodily processes” (quoted in Joseph, 1990, p. 18). Naomi Goldenberg develops such reflections, suggesting that religion arises as “a result of the sustained practise of gender,” for men can, in these cultural arenas, “safely pretend to be women, especially in regard to matters of nurture and reproduction” (Goldenberg, 1998, pp. 193, 199). Under this reading, men envy the power of women to procreate, and re-

ligious systems provide a symbolic setting where they can pretend that they are, in fact, the life-givers.

Goldenberg’s theory goes some way toward offering an explanation for the ambivalence shown towards women in the various world religions. As has been noted, the female body has been seen as potentially dangerous, its “unruly nature” subject to a range of taboos: yet at the same time women’s bodies have also been praised for their virginal and maternal qualities. In Christianity, this veneration gains its supreme expression in the figure of the Virgin Mary, who stands as the embodiment of both. Yet far from forcing an engagement with what it means to be a sexual being, Mary is invariably constructed in theological discourse as an asexual woman, neutered and rendered safe by an overarching male hierarchy. She poses little challenge to patriarchal definitions of what it is to be a woman: she is, after all, defined according to her perceived sexual status and her relationship to the men in her life, be they human or divine. Simultaneously, she provides “real” women with an impossible ideal to emulate: she is the virgin who is also a mother. Indeed, reflection on Mary suggests an apparent distortion in understandings of what it means to be an embodied being that is brought into play by the Christian account of sin.

In the religions of classical antiquity, notions of virginity were not necessarily associated with the bodily integrity of an unbroken hymen: to call a goddess “virgin” was simply to highlight the autonomy of the deity, who was perceived as being beyond the control of men. Thus Artemis and Athena are virgin goddesses not primarily because they “know not man” but because they are not constrained by male power. Once the idea of original sin, transmitted through the sexual act, became the orthodox Christian position, explicated in its fullest form by Augustine of Hippo (354–430 CE), virginity takes on an altogether different hue, becoming the way *par excellence* of being spiritual. In such a context, the woman who gives expression to her sexuality is particularly problematic, for she moves outside not simply male control but also the divine order.

Even the apparently safe construction of woman as mother is not altogether removed from the sleight of sin. Childbirth is not enough to remove the inherited guilt of being a daughter of Eve, the first seductress of man. In part, this theological underpinning explains the ritual of “churching” women after childbirth. A Christian form of the purification rite that was prescribed for new mothers in *Leviticus* 12, contemporary forms emphasize the aspect of thanksgiving for the safe delivery of a child. Yet the liturgical emphasis is on the status of the maternal body rather than upon that of either baby or father, suggesting that it is the potentially polluting power of the maternal body that must be addressed and rendered safe by the appropriate religious rite.

The ambiguity felt towards the mother is not peculiar to Christianity. In the Indian tradition, the goddess Kālī expresses the power of the mother both to sustain and annihilate. A manifestation of the mother goddess Devī, she is in-

variably represented as a dark goddess, wearing a girdle of dead men's hands or penises, her face and breasts covered in blood. As such, she provides a subversion of the constraining, conventional formulation of motherhood in the Indian tradition. This terrifying apparition gives expression to the deep-seated fears of the maternal power to consume as well as to succor. For feminists like Vrinda Dalmiya, Kālī provides a model for challenging and confronting the forces that shape patriarchal constructions of motherhood.

Kālī provides an explicit image of the consistent connection that has been made between women and death. The ability to give birth is not conceived in a straightforwardly positive way, for just as the mother gives life, so she also introduces the child to the world of decay and death. Samuel Beckett (1906–1989) expresses succinctly the perceived ambiguity of the mother: Women “give birth astride a grave, the light gleams an instant, then it's night once more” (*Waiting for Godot*, 1953, Act II). In her role as progenitrix of the species, woman stands at the boundary between life and death. Existence is never only about being, for it also contains the inevitability of nonbeing. Paradoxically, then, emphasizing the role of the female body in reproduction exposes a further connection between woman and death. The desire to instigate control over the terrifying world of fecundity, change, and decay has already been noted. Indeed, recognizing mortality can lead to a desire to evade the physical, and even the most cursory glimpse at the history of religion suggests that the connection between sexuality and mortality has been developed in such a way as to suggest that by resisting the former the consequences of the latter might be, if not avoided, at least brought under control. In early Sufism, sex was seen as that which disturbed “the pure surrender of the soul” to God. Resistance to the sexual was mirrored in a tacit disgust for women that reflected the disgust felt towards the world that got between the soul and its God. Woman was “the world” for she was an integral part of the process of physical renewal (Schimmel, 1997).

Reflection on gender is of crucial significance at this point, for rather than see sexuality as a fundamental part of what it is to be human (or even *male*) this troubling feature has been consistently projected onto the female. Spirituality in diverse traditions becomes less an engagement with the facts that emerge from accepting that we are creatures that will die, and more an attempt to evade the realm of the body personified by woman. Even Buddhist thought, uncompromising in its attempt to engage with the facts of mortality, is not immune from this process of identifying woman with the spiritual death that comes from valuing physical things. Thus the Buddha is reported to have said:

It would be better, foolish man, to put your male organ into the mouth of a terrible and poisonous snake than into a woman. . . . It would be better, foolish man, to put it into a blazing, burning, red-hot charcoal pit than into a woman. Why? On account of *that*, foolish man, you might die, or suffer deathly agony, but that would not cause you to pass, at the breaking up of the body

after death, to a lower rebirth, a bad destiny, to ruin, to hell. But on account of this, foolish man, [you may].  
(*Vinaya* III 19)

Danger is associated with women's sexuality rather than with the sexual desires of the man himself, although often such negative comments on the female body are accompanied by the proviso that “your own [male] body is as filthy as a woman's” (Nāgārjuna, quoted in Williams, 1997, p. 211). Despite such comments, connecting the female body with the perceived problems of the body and sexuality in general gives the impression that these features are female rather than male, and thus avoiding the female can help the male to overcome these dangers. The debates surrounding the ordination of women to the priesthood of the Anglican Church are a case in point. Analogies used to resist the possibility of ordaining women suggested a clear identification of woman with the (apparently) “lower” physical world. One opponent argued that one might as well ordain a pot of anchovy paste as ordain a woman (Smith, 1989, p. 48), a comment that suggests there is something primal, vegetative, and fundamentally inhuman about woman, and that spirituality will involve resisting all things female. In such a context, a “woman priest” is an anomaly. Women's bodies thus become battlefields upon which the struggle against mortality and the physical world takes place.

The areas of monasticism and asceticism prove fruitful for examples of this construction of (male) spirituality as resistance to the (female) body. A story told of the Desert Father Saint Anthony (c. 250–356) describes him falling prey to the seduction of a demon disguised as a beautiful woman who visits him in his cave. She is exhausted from traveling, and he offers her shelter. They talk, and simply talking with “her” is enough to engender lustful thoughts. Eventually, overcome with desire, the monk seeks to consummate his passion, at which point the demon reveals “herself” and leaves, laughing at the continuing power lust has over him.

Woman is the temptress who lures man away from the path of spiritual perfection into the imperfect world of the physical, often described in overtly sexual terms. The thirteenth-century Ṣūfī sage Jamāl Hānswī gives a suitably gendered interpretation of the different paths confronting the soul: “The seeker of the world is feminine, the seeker of the other-world is a hermaphrodite, and the seeker of the Lord is masculine” (Schimmel, 1997, p. 274). Given this typology, it is not difficult to take the next step: not only is the female body associated with the physical, but it also provides a fitting model for damnation. The image of the *vagina dentata* (“the womb with teeth”) is used in psychoanalytic theories to illuminate the male fear of the castrating female: yet its primary grounding is in religious art and imagery, where the image of the devouring mouth is commonly used as a representation of hell. In this context, the mouth and the womb are connected in what Freud would call “an upward displacement.” Identical images are used to describe both the female sexual organs and the mouth of hell. Boccaccio

(1313–1375), reflecting on the insatiability of the womb, uses explicitly infernal images: “That gulf, then, is certainly an infernal abyss which could be filled or sated as the sea with water or the fire with wood” (Blamires, 1992, p. 176). Jerome (c. 342–420) and Thomas Aquinas (1225–1274), separated by nearly a thousand years, are similarly obsessed with the claim in *Proverbs 7:27* that a wicked woman’s “house” is “the way to hell, reaching even to the inner chambers of death.” The womb, like the mouth, is that which devours, hence a Muslim saying: “Three things are insatiable: the desert, the grave, and a woman’s womb.” The life-giving power of the female body is thus reworked as an image for annihilation.

**“THE RETURN TO THE BODY” IN CONTEMPORARY RELIGIOUS THEORIZING.** Contemporary feminist theology has played a significant role not only in exposing the ways in which women have been consistently identified with the despised physical: recent work in the area has sought a more positive reconstruction of the place of the body for developing an appropriate contemporary spirituality. “Body theologians” have sought to reclaim women’s bodies from patriarchal interpretation and control, seeking to “allow celebration to take the place of guilt and repression” (Isherwood and Stuart, 1998, p. 19). In this context, the body emerges not as an entity to be resisted, but as a site for knowledge. The philosophical and theological dualism of mind/body is disrupted, leading to the integration of the spiritual into the physical. The logic of such an approach has an impact upon not only the way in which *human* being is conceived. James Nelson, applying feminist insights to the development of an embodied male spirituality, resists the idea that sexuality should be viewed as an aspect of “man’s” lower, animal nature. Integrating spirituality and sexuality leads him to reappraise the nature of God. God is not as an entity transcendent from the world and its processes, but is found in relationship.

This reappraisal of the dichotomy between divine and human is also addressed in the contemporary women’s spirituality movement. The publication of *Womanspirit Rising* (1979), edited by Carol Christ and Judith Plaskow, was a significant landmark in the development of this movement. The women who contributed to this collection came from a number of religious traditions, and sought to reclaim the sacrality of the female body. For some contributors, this involved actively seeking “the female divine.” To adapt Carol Christ’s words, “women need the Goddess,” and writers such as Starhawk and Monica Sjöö have since developed a form of Goddess feminism that links the realization of female power with the rediscovery of a female divine principle. Melissa Raphael, the chief commentator on this movement, argues that Goddess feminism reconstructs the female body as a site for the sacred, disrupting the old ideas of the female body as something profane. Of particular importance to the movement has been the attempt to rediscover and reclaim the biological cycles of the female body. In part this has involved an engagement with the maternal body, not simply

as an aspect of (some) women’s experience, but as a cipher for the creative processes of the cosmos.

Similar reflections are developed—albeit in a rather more abstract way—in the writings of feminist philosophers of religion. In her quest to develop a feminist philosophy of religion, Grace Jantzen proposes that natality (the fact that we are born) replace mortality (the fact that we will die) as the paradigm for understanding human being. This shift in focus leads to a different set of values from those advanced by patriarchy: flourishing and human relationship are fostered, in contrast to the individualistic concerns with immortality and the self cultivated by an overemphasis on death. Such conclusions have been questioned, for reflection upon mortality and death need not lead to the kind of solipsism that Jantzen resists, but can similarly highlight the dependence of human beings upon each other and upon the cosmos itself.

Indeed, reasserting the body affects how the earth itself is understood. Sallie McFague’s “ecothology” results in part from her attempt to break down the dichotomy between transcendence and immanence, and thus to rethink the earth, not as the physical opposition to the spiritual divine, but as “the body of God” (McFague, 1993). Accepting “the interconnect[ed]ness of Spirit and all created beings” (Primavesi, 1991, p. 265) leads to a greater willingness to work with, rather than against, the processes of the physical world.

Reappraising the body thus affects much more than just an understanding of human being. Such reflection can even influence the method for studying religion. Amy Hollywood suggests that an adequate philosophy of religion will reflect not so much on the beliefs that people hold, but upon the way in which bodily practice shapes religious experience and subsequent belief. Adopting Marcel Mauss’s (1872–1950) description of mystical states as resulting from specific “body techniques,” Hollywood argues that ritual action creates “certain kinds of subjects, dispositions, moods, emotions, and desires.” Focusing upon specific religious practices necessitates an acknowledgment of “those differences inscribed in and on bodies (often through rituals and bodily, mental, and spiritual practices themselves).” Bodily experience, under this reading, is both “physiological and cultural” (Hollywood, 2003, pp. 230, 226, 231), a claim that coheres with the way in which social and religious norms have shaped female bodily experience. Her ideas, however, move beyond a simple discussion of the female body: if her claims are taken seriously, it will be difficult to generalize about “religion” just as it will become impossible to separate belief from practice.

Indeed, reflection on the female body opens up a range of topics that transcend any isolated or simplistic engagement with gender. Accepting the significance of difference for understanding bodily practice moves beyond any uniform account of “the body.” Yet such a conclusion need not invalidate the significance of focusing on the body. For example, Nancy Eisland suggests that reflection on the experiences of people with disabilities supports the claim that the

body must be seen as central for human self-understanding. People with disabilities, she notes, “become keenly aware that our physical selves determine our perceptions of the social and physical world” (Eisland, 1994, p. 31).

Eisland’s work, far from challenging the significance of engaging with the body, suggests that this engagement must be complex. Addressing the “lived experience” of disability suggests that it will be difficult, if not disingenuous, to talk of “the body” in a simplistic way. This realization has led some feminists to a more critical engagement with feminism itself. Tina Chanter has suggested that the turn to the body means that mainstream (invariably white) feminism will be forced to take seriously issues of race. Similarly, Ellen Armour resists the notion that there can be any unified, generalized account of “the female body” that fails to take account of “its” multiple differences. It is not just patriarchy who have sought to make such generalizing assertions: feminists have also tended to speak in an unproblematic way of the female body. Armour challenges such theorizing by employing the deconstructionist category of *différance*. Whitefeminists (Armour’s term for “mainstream” feminist theologians) have singularly failed to recognize the different ways in which black women experience the female body. As womanist theologians have argued, black women have been more closely identified with the body than white women. In the United States (the focus for Armour’s study), black women have been identified with nature, while white women have been identified with culture. And this suggests very different experiences of what it means to be female: for the black woman, it may mean being treated as a “beast of burden”; for the white woman, being treated as “the angel in the house.” Just as men are encouraged to reflect upon their own sexual embodiment rather than projecting such features onto women, so white women should be encouraged to grapple with their racial demarcation and what this means, instead of seeing race as an issue only in relation to black women, who are too easily given the mantle of “the other.”

Reflection on the body, then, opens up a rich vein for the study of religion. The constructions of “woman,” spirituality, race, and even the way in which religion itself is studied must be considered once the significance of the body is accepted. And precisely because it opens up such a plethora of subjects, it is important not to ignore the lived experience of being human that underpins such cultural and intellectual constructions. As Lisa Isherwood and Elizabeth Stuart comment: “What must be guarded against at all costs is the disappearance of the real, lived, laughing, suffering, birthing and dying body underneath the philosophical and theological meaning it is called to bear. It would indeed be foolish to allow ‘the body’; to become a disembodied entity” (Isherwood and Stuart, 1998, p. 151).

## HUMAN BODY: HUMAN BODIES, RELIGION, AND ART

The subject matter of this entry is the depiction, inclusion, and interpretation of the human body in works of art premised on religious principles or beliefs. Investigations of visual presentations of the human body are examinations of the meanings and roles of the various intersections of art and religion. The implicit question of the dichotomy, whether real or imagined, between sacred and secular art is implied throughout any discussion of the human body. Artistic and religious dimensions of the human form highlight cultural values and societal attitudes toward gender, figurative art, and the relationship between humanity and divinity. The fundamental issue is whether art must include the human figure in order to be religious.

**GENERAL PERCEPTIONS OF HUMAN BODIES, ART, AND RELIGION.** The role and meaning of the human body incorporates a diverse range of cultural forces, including but not limited to art and religion. Different cultures and eras interpret the meaning and value of the human body in distinctive ways. The various interconnections of ideas, especially concepts related to art and religion, reflect more than aesthetic or devotional applications. As a historical and cultural category, the human body undergoes numerous transformations as prevailing social, political, and economic forces change. Race, gender, and class, as well as religious and cultural values, have been imprinted on depictions of the human body and sanctioned throughout history. Representations of the human body in art, whether identified as religious or secular, raise questions concerning structures of power, ideology, and identity. Artistic renderings and religious interpretations of the human body privilege it as a symbolic value and a political agent, especially during periods of protest against societal norms and definitions of gender as sexual identification.

The broader history of changing attitudes toward corporeality, or the bodily dimension of human existence, raises a question: Can art be identified as religious if it is nonfigural; that is, if it omits the human figure? The human body is the pivotal organizing principle for the expression and comprehension of humanity's position within society and the universe. Traditionally, artistic presentations of bodily proportions, physical motions, and facial or manual gestures were visual signifiers of the internal movements of the soul. For many cultures, including Renaissance Europe, the presentation of the human body was a visual means of classifying knowledge about the world.

The depicting of human bodies draws connections between theology and artistic styles, including presentations of asceticism, the cult of chastity, and the family. Typically, depictions of the human body are predicated on theological and cultural interpretations. For example, in religious cultures like the Christian West, in which the human body is seen as shameful, fallen, and in need of discipline against sin, representations of the human body have emphasized physical weakness through unnatural but symbolic caricatures of such specific body parts as arms, hands, and torsos. In contrast, those religious cultures in which the human was seen as a mirror of the divine, such as classical Greece or Hindu India, emphasized the beauty and balance of the human form. These cultures interpreted the human body as the locus and signifier of internal modes of religious life and thought.

Discrete systems for naming and presenting identical objects evolved naturally within world cultures. The human body was one individual object that possessed both singular and communal identities. Interwoven within the cultural fabric of each distinctive work of art was a simultaneous recognition of both the universality and the uniqueness of the human body. The implicit recognition of the human body, cultural matrix, and religious values reinforced the collective memory of artist and observer.

Western cultural attitudes toward the human body are categorized by three types: classical, medieval, and modern. Referencing philosophic and religious concepts of the human form as an expression of divinity, classical art emphasizes harmony and order as well as a culturally conditioned concept of beauty. Medieval art reflects the preoccupation of Latin-speaking Christianity with finitude and guilt as the human body becomes a visual signifier of corruption and decay. This art tends to distort or exaggerate representations of the human form. Contemporary Western attitudes are extraordinarily varied and complex, which may be as much the result of multiculturalism and globalization as advances in artistic techniques. The human body is often depicted in modern art as an active agent of political and societal protest (especially against social and sexual orthodoxies) or as a victim of aging and disease. The optic metaphor for these varied identities is presentations that depict bodily fragmentation and religious disruption, or physical idealization and theological conformity.

Given the universal nature of humanity, artistic presentations of the human body become the means of drawing viewers' attention and then enticing them into a gradual unfolding of religious narratives or events, thereby forming strong emotional and psychological connections with the underlying religious message. Interactions between human figures, or between human figures with either animals or inanimate objects, convey the psychological and spiritual dimensions of religious teachings. The religious dichotomy between the material and spiritual is symbolized by the human body in naturalistic, representational, and symbolic depictions.

Certain religious cultures, such as those of Judaism and Islam, ban the production and enjoyment of art, either completely or with specific regard to religious usage. Other religious cultures prohibit the creation of figural images for ceremonial purposes. The imaging of the human body as the reference or entry point for viewers is found in these religious cultures through the arts of poetry or music, or through the use of discrete visual symbols denoting the body through abstraction or attribute. Other religious cultures that are characterized initially as aniconic (opposed to the use of figural images) establish symbolic codes that signify the presence of the human form—as in Buddhism, where the earliest images of the Buddha were not anthropomorphic but represented his swaddling clothes and his footprints.

A crucial question in analyzing the various interconnections of the human body with art and religion is the manner in which one comes to describe and understand the ways in which one sees one's own image and in which other peoples see their own images. Since the 1970s there has been an increasing emphasis among Western scholars in studying marginalized groups—rarely studied categories such as women, racial and ethnic minorities, and people of diverse sexual orientations—whose roles, positions, and influences on culture should be factored into human history. Anthropologists and artists recognize differing body types due to climatic and nutritional variations, or due to different religious or aesthetic definitions of the ideal body. Discussions of the meaning and significance of racial and ethnic types within religious art were initiated within studies of marginalized groups.

The perception and interpretation of images of the human body within one culture or across cultures has been amplified significantly since the 1970s. The process of seeing and creating images of the human body is a multilayered syntax composed of sociopolitical, economic, and cultural factors. The fundamental Western attitude of entrancement with one's own image leads to the appreciation of separate elements in the image, including muscular structure, individuality, or culturally conditioned ideas of beauty. This Western perception is derived from the classical Greek view of the human body as a reflection of divine beauty, as a disciplined physical mechanism, and as the temporal home of the human spirit. History and art scholarship has recognized this Western attitude as normative, thereby privileging the West-

ern ideal as the appropriate model for the comprehension and production of images of the human body.

**IDENTIFYING HUMAN BODIES IN ART AND RELIGION.** The "reading" of works of art, especially in terms of the presentation of the human body in religious art, depends on a series of visual cues that provide viewers with information related to the appropriate models of behavior from ceremonial and devotional purposes to religious teachings of gender and morality. The symbolic role of the human body in visual discourse conveys messages through identifiable images and imagery known through cultural memory and the common cultural matrix of religious traditions. These visual cues include the values expressed through gestures and postures, hieratic art, and body symbolism. The physicality of the human body assumes a variety of forms, from naturalistic bodily representations to geometric and linear depictions, ideographic simplifications, or exaggerations. The essence of being human—especially with relation to divinity and cultural concepts of humanity—must be transformed into substantive and convincing shapes, whether natural or abstract.

In religious art, the question of function is paramount in discerning the message conveyed. Whether the work is intended or used for institutional, communal, or personal purposes determines more in this regard than does its size or cost. The manner and mode of depicting the human body and the interpretation placed upon the depiction are predicated on the idea, teaching, or story presented to viewers. The human body is unconsciously viewed as a model of social reality and an element in the larger structures of society, culture, community, and the world. Specific artists, patrons, or religious traditions encode particularized information within artistic renditions of the human body. More than the bearer of cultural concepts of beauty and gender or sex, the human figure embodies religious and cultural values as well as engendered and social behavior. As a result, the focus of investigation becomes the nature and types of tasks that are assigned to the human body in religious art.

Artistic representations of the human figure can be manipulated or designed in multiple ways to signify religious meaning and values. Traditionally—that is, before the advent of interest in marginal groups—art historians construed the prime connector between Eastern and Western art as cultural and religious understandings of the human body as tangible manifestation of the otherwise imagined shapes of divinity. The Greek principle of the idealization and perfection of the human form as a visible image of divine beauty privileged the Western attitude. The Eastern artistic tradition developed the parallel practice of relating the essence of transcendent ideas abstractly through the human body. Considerations of the human body as a signifier of engendered power, racial and ethnic identities, class distinctions, or sociopolitical values encoded with religious meaning and cultural constructs are issues raised by the study of marginalized people. Attention must be given to the relationship between the privileging of Western categories even to the point

of asking questions about what constitutes art and what are appropriate themes for analyses of the intersection of the human body, art, and religion.

Traditional Western art incorporates figural representations, as opposed to the abstractions of the human body found in modern Western art. This difference clarifies the generalization that traditional art emphasizes the object that is portrayed, while modern art accentuates the process of seeing the object. Traditional art is the creative expression of a society, while modern art emphasizes the creative expressions of individual artists. Both artistic modes appropriate visual symbols and signs as revelatory of supernatural or transcendental powers that created and now govern earthly cultures. Whether identified as pedagogical or ceremonial in function, or mystical or aesthetic in intent, religious art includes the anthropomorphic representations of divinity as it gives material shape to that which is otherwise intangible and imperceptible.

**THE HUMAN BODY AS AN EXPRESSION.** From signification of fertility and maternity to objectification of disciplined perfection, the human body becomes the visual locus of a multilayered discourse connecting humanity and divinity. Whether interpreted as culturally conditioned carriers of engendered meaning or sources of sensual pride, artistic renderings of the human figure within the framework of religious language are physical sites of fear and anxiety. The imagery of the human body communicates religious ideas and moral values in the arts through eight categories of expression.

The first expression is creativity and fertility, which are most often represented by the female body. The earliest signifiers of fecundity were primal female bodies like those of the so-called Venus of Willendorf and Cycladic statuettes of goddesses, which emphasize the hips, thighs, and abdomen while deemphasizing the head (particularly the individualized face) and the upper body. The universal recognition of the importance of female fertility figurines—all of which exaggerate those features of the female body that evoke sensuality, invite sexual attention, and signify the fecundity of both the goddess and the earth. Depictions of male fertility, typically symbolized by a tumescent phallus, appear less frequently over the course of history. Expressions of female fecundity were gradually transmuted from figurines of adult females to representations of mother and child, often in the posture of the nursing mother. Subliminally a personification of fertility, the imaging of mother and child became the universal visual purveyor of moral values, the sanctity of the family, and physical and spiritual nurture. Reaching new heights of stylization in presentation and meaning, the iconography of the mother and child was a powerful communicator of religious ideas, values, and significance. The theme of creativity is embodied in artistic depictions of the nine Greek muses and female inspiration of creative activity.

The second expression is religious devotion. The first subcategory of the human body in devotional art is that of the receiver of acts or offerings of devotion. The second sub-

category is that of devotees who proffer ceremonial honor, prayer, adoration, and gifts. Bodily postures and gestures signify both the performed action and provide a model from which viewers can learn to enter into acts of religious devotion. Such activities, whether identified as sacred or secular, turn viewers into participants and are categorized as participative art. The fundamental modes of religious participation—prayer, fasting, ascetic practice, and partaking of sacraments or religious rituals—transform minds and bodies. An encounter with a devotional artwork provides an alternate site for transformation or transcendence through participation.

The third expression is form, particularly ideal form that connotes sacrality and spirituality through the human body, or the distortions resulting from physical suffering and frailty that denote human finitude. Culturally specific as well as universal, the imaging of physical perfection is an ocular metaphor for spiritual presence, evidenced in depictions. The aesthetics of the human body communicates such moral concepts as self-sacrifice, discipline, self-respect, and personal honor. Presentations of a suffering, injured, emaciated, or tormented body in religious art signifies asceticism, sacrifice, or martyrdom.

The fourth expression is gender, which became problematic after the field of women's studies began to influence the fields of art and religion in the late 1970s. Traditional understandings of sex as defined by biological characteristics and gender as a socialized mode of being in the world were questioned in the new fields of women's studies, men's studies, and gay studies. Gender studies became an umbrella term applicable to all these disciplinary categories. All three designations of gender—an inclusive field of study; sexual identification; and a socialized mode of being in the world—are possible in presentations of the human body in art. Investigations and analyses of gender in religious art expanded exponentially throughout the 1980s and 1990s and were closely connected to the themes of power, dress, and nudity.

The fifth expression is power, whose essential characteristic is the visible interactions between individuals or groups. Power has many meanings and iconographic representations. One is the fundamental anthropological category of *mana*, which is a supernatural force that may be concentrated in persons or inanimate objects. *Dynamis* is a force released through the relationship between form—specifically the human body—and the artistic process. The work of art is empowered through the process of embodiment. A form of sociopolitical power is communicated through the bodily figures of the hierarchy of authority, whether social, academic, governmental, military, or religious. Dress is a visual delineation of social order, economic class, and military position. Power is signified through the bodily presentations of monarchs, chiefs, ancestors, guardians, and warriors, including depictions of dress, postures, and gestures. These figures of protection are normatively identified through physical and spiritual attributes that may include physical stature, symbol-

ically enlarged body parts, and expressions of moral or physical strength. As protective figures guarding devotees in sacred or domestic spaces, these embodiments of authority often integrate animal features to represent the primeval forces of nature.

The sixth expression is motion or movement as a medium of communication, through posture and gesture, for ideas, religious values, and moral ideals. Posture includes stance, position, and pose; gesture involves communication through facial contortions, hand signals, and the arrangement of the feet. Combining these elements, the human body conveys messages or ideas, tells stories, or articulates attitudes, emotions, and passions. There are three basic bodily postures in religious art: standing, seated, and recumbent—as exemplified by the Buddha, who stands in contemplation, sits in meditation or pedagogy, and lies on his bed at the moment of his *parinirvāṇa*, or death. Hand gestures, known as *mudrās* in both Buddhism and Hinduism, are a repertoire of digital and manual poses that communicate such specific ideas as protection by the deity (*abhaya*), signified by the raised hand, or the simple gesture of obeisance (*anjali*).

The seventh expression is dress and nudity, a dichotomy greater than the simple distinction between being naked or clothed. First, there is the moral and cultural evaluation of the body as biologically either male or female, as well as the multilayered syntax of nudity. The nude as an artistic category represents a specific set of attitudes toward the depiction of the human body in a state of undress. The classical nude is rooted in the religion and philosophy of ancient Greece, in which the ideal human body is identified as a locus of sacred presence. Depictions of nudity in the Jain tradition reflect perfect yogic control, while in Hindu art such nude female figures as the Yakshī are aligned with female sensuality associated with fertility spirits. The irony here is that noted by Kenneth Clark (1956), who identified nakedness as a state of embarrassment and nudity as a state of ease and comfort with one's body.

In contrast to nudity, dress and drapery enhance the appearance of the human body and reflect the social status of the wearer. In a practical sense, dress is a form of protection, whether from difficult climatic conditions and the elements, from animals, or from the gaze of other human beings. Dress is a moral value, as appropriate garments provided for both women and men testify to the normative conditions of modesty, virginity, or motherhood. Dress is connected to costume, which is a category of dress that identifies a person's social position, military rank, or authoritative status. Drapery, as a specific category of dress, enhances the appearance of the human body because loose flowing fabric creates an illusion of delicacy and motion, or of shadow and light, from the viewer's perspective, thereby enlivening the depiction of the body.

The eighth expression is portraiture, which, as a universal genre, is divided into two categories: realistic portraits of identifiable individuals and idealized depictions of a type,

such as a ruler or saint. Portraiture can be created with only one figure, several figures (as in family portraits), or a larger group representing a community. It can be achieved by both the imagining of oneself and of others. Portraits may be intended for either private use or public display. Portraiture is a testament to success in life or as a remembrance of a deceased person; it is a mode of legitimizing authority and hierarchical power.

**THE HUMAN BODY AS A MEDIUM OF SYMBOLIC DISCOURSE.** A myriad of early texts on aesthetics and the nature of human beings, especially from classical Greece, described the human body as a small-scale copy of the universe, as a microcosm of the macrocosm. Through this smaller but harmonious image of the divine, the human came to identify himself or herself, others, and the world. The beautiful female and handsome male statues of deities attest to the universality of this concept across the classical world, from Egypt, Greece, and Rome into Persia and India. As the idea of individuality emerged within these classical cultures, humanity interpreted itself at the center of a world of symbols in which the human body participated through a series of analogies and correspondences with the universe. In this way, bones signified the earth, blood signified water, and the head signified fire, as delineated in an almost universal pattern of ascent found in sources as different as the sages of the Upanishads and the Fathers of the early Christian Church. The human being was the only creature that connected with the three cosmic levels in such a way that the feet touched the earth, the torso dwelt in the atmosphere, and the head reached the heavens.

The classical Greek cult of physical perfection was based on these correspondences between the human body and the structure of the universe. The athlete was the model of divine perfection and demonstrated this identification by competing in the nude. Buddhism affirmed the existence of an eternal divine Buddha with the teaching of levels of being ascending from the *nirmāṇakāya* (body of manifestation) to the *saṃbhogakāya* (body of bliss) and the *dharmakāya* (body of law). Renderings of the human body were shaped by technical artistry and religious attitudes toward humanity either as symbols of the divine, ideals, or historical individuals.

**THE HUMAN BODY AS EXPRESSIVE POTENTIAL.** Varied artistic and religious approaches to the forming and informing of images of the human body confirm that the central issue is not the specific messages that are conveyed by bodily metaphors, but the ways in which the human figure functions as the central element in art and religion. The endowment of the concept of humanity with an identifying physical form finds two normative categories of expressive potential in art and religion: anthropomorphic (fully human in shape or form) and therianthropic (partly human and partly animal in shape or form). The application of recognizable natural forms for men and women, either as a whole or a part, is found in the majority of world religious art. Whether the formations of that human body are deemed ideal, perfect, cor-

rupted, distorted, or elegant is simultaneously culturally conditioned and theologically defined. Therianthrope bodies depend on recognition of the equality of humanity and animals beyond the symbolic exchange that is fundamental to Christian typology. This combination of human and animal forms raises questions related to the meaning and value of humanity.

Another mode for the human body as expressive potential is *pars pro toto*, or the part for the whole, in which the symbolic employment of body parts—hands, feet, or heads—signifies both coded messages and individual persons. Any transformation, transmutation, or reformulation of body imaging communicates the artist's intention to express an idea or transfer a message by accentuating either the distinct body part or its function. The enlarged eyes or ears of a Byzantine Christ denotes his extraordinary senses and abilities as the creator and guardian of the universe. Exaggerated features or body parts may inspire fear or ridicule, conveying additional symbolic messages and removing the viewer from recognition of the subject's "reality" or "humanity." Alternately, exaggerations of body parts are eloquent examples of the multivalent nature of visual symbols, as in the Buddhist *ushnisha*, or topknot—that singular protuberance on the top of Buddha's head designating his extraordinary wisdom and intelligence.

A third mode is abstraction, in which the essence of the idea, message, or meaning is extracted from larger representational image. The visual emphasis in abstraction results in a minimized if not radical simplification of form for emotional expressiveness or organic structure. Through an economical but elegant use of lines, the essence of humanity is revealed through the separation, reduction, and rearrangement of bodily components. Transformed into decorative patterns of shapes or geometric structures, abstractions appear initially to have little relation to the traditional figure of the human body; re-presentations affect the viewer's emotions and intellect.

**THE HUMAN BODY AS SUBJECT OF ART AND RELIGION.** Historians of sculpture from Herbert Read to Tom Flynn have argued persuasively that 90 percent of sculpture is about the human body. Sculpture's fundamental tactile nature combined with the intrinsic qualities of mass and volume attest to the one-for-one valuing of sculpture with the human body. Until the twentieth century's fascination with abstract and nonfigurative art, the majority of artworks incorporated the human figure as the main focus of aesthetic or thematic interest. The human body was the subject of art and religion even to the point of substituting the human image for the bodiless divinities and celestial personae.

**THE HUMAN BODY AS OBJECT OF ART AND RELIGION.** Body art transforms the human body from the subject to the object of art and religion. Whether specified as permanent or temporary painting of the body or face, tattooing, or the intentional scarification (permanently marking the body by cutting, without the use of pigments) of the body, body art

has multivalent purposes, ranging from an emblem of identification or sign of initiation to the impersonation of an ancestor or divinity. As an art form accessible to all social and economic classes, ethnic groups, and sexes, body art celebrates the generic beauty and prowess of the human body, and it refines the individual body aesthetically. The normative source for the designs is the religious iconography of each community. Body or face painting reconnects individuals with ancestors or ancestral spirits and presages the reappearance of that ancestor as a protector and guide. Regardless of its modality or function, body art is a universal art form that fashions the human body into a bearer of the sacred.

**THE HUMAN BODY AS MEDIUM OF ART AND RELIGION.** Dance and the other performing arts transfer the role of the human body in art and religion from subject or object. Gerardus van der Leeuw identified the human body as the primary agent of the arts in his magisterial *Sacred and Profane Beauty: The Holy in Art* (1963). Whether identified as primal or literate, as indigenous or imperialist, all religious traditions incorporate the human body into expressive rituals and ceremonies. The natural and rhythmic movement of the human body, whether in ecstasy, agony, trance, or prayer, is the elemental form of religious expression. Bodily movements accentuated through gestures, postures, facial expressions, costume, and music have affected religious iconography throughout history. As religious drama, music, and ritual were incorporated within cultural analyses of performance and display, the concept of the human body as medium of art and religion became an established reality.

**FURTHER PERSPECTIVES.** Since the 1970s, the critical relationships between the human body, art, religion, and marginalized groups was articulated predominantly by feminist scholars, especially in the recognition of variable body types and their meanings. Regional and ethnic studies extended that critique into discussions of colonialism and the centrality accorded to body types based on the Greek ideal. Power, in terms of engendered power and male dominance, was a focus of these post-1970s studies as the Western cultural appreciation of the human body, especially of the nude in art and religion, was questioned in relation to voyeurism, pornography, and "the gaze." Caroline Walker Bynum's *The Resurrection of the Body in Western Christianity* (1995), Linda Nochlin's *The Body in Pieces: The Fragment as a Metaphor of Modernity* (1994), and Margaret R. Miles' *Carnal Knowing: Female Nakedness and Religious Meaning in the Christian West* (1989) provide a feminist lens through which to critique the various meanings of the human body in religion and art.

The interdisciplinary motifs and methodologies for the study of the human body, art and religion have, until the late twentieth century, been treated by Western scholars within the framework, language, and motifs of Western history. Future comparative analyses of this subject may well prove the thesis that the Western preoccupation with order, clarity, and ideal types may be inappropriate or inapplicable to non-

Western art and religion (Apostolos-Cappadona, 1996). Gender distinctions as religious values (and their visualizations) may prove to be discrete and defy traditional patterns of iconographic and iconological examination, thereby expanding both the borders and the methods of scholarship. Three exceptional comparative cultural analyses of human bodies, art, and religion are available for examination in the exhibition catalogue *In Her Image: The Great Goddess in Indian Asia and the Madonna in Christian Culture* (1980); the exhibition catalogue for *The Human Image* (2000); and several special issues of *P+ Art and Culture Magazine*.

#### BIBLIOGRAPHY

There is no central or universal study of the human body in art and religion. The reader may wish to consult Kenneth Clark's *The Nude: A Study in Ideal Form* (1956; reprint, 1984), in which he defines the naked and the nude with a subtext that defines the body as a conveyor of cultural and religious values. This classic text has been controversial since the 1980s among feminist scholars (see especially Margaret Miles's critique [1989]), who regard it as limited by Clark's emphases on the male figure as the site of power. Clark's thesis and his text are significant for its application to non-Western art as a basis for critique and expansion of the study of the human body in art and religion. Other art-historical studies of the symbol and meaning of the human body are similarly criticized for their privileging of the Greek ideal, elitist Western values, and absence of any discussion of marginalized groups. Herbert Read's *The Art of Sculpture* (1956) or Tom Flynn's *The Body in Sculpture* (1998) move beyond chronological analyses to consider the artistic presentation of cultural attitudes toward the body, albeit within the frame of Western art history. Margaret Walters, *The Male Nude* (1978) and Bernard Rudofsky, *The Unfashionable Human Body* (1971) voice critical questions related to the concepts of "human body" and "gender" in art and religion.

DIANE APOSTOLOS-CAPPADONA (2005)

**HUMANISM.** The Christian humanism of the Renaissance and Reformation period was a complex intellectual movement, primarily literary and philological in nature, but with important historical, philosophical, and religious implications. Humanism was rooted in the love of classical antiquity and the desire for its rebirth, both in terms of form (primarily a search for new aesthetic standards) and of norm (a desire for more enlightened ethical and religious values). The return to original sources is reflected in a parallel way in the reformers' emphasis upon the scripture as norm and New Testament Christianity as the ideal form of church life. Humanism developed in Italy during the fourteenth century and persisted through the Reformation well into the age of the Enlightenment.

The word *humanism* came from the phrase *studia humanitatis* or *humaniora*, the liberal arts or humane studies, a concept derived largely from Cicero. The liberal arts curriculum emphasized grammar, rhetoric, poetry, history, and moral philosophy. While the course of studies owed something to the traditional education of the medieval cathedral schools, it was less concerned with dialectic or logic, natural science, and Scholastic metaphysics. The term *humanist* was originally applied to professional public or private teachers of classical literature who continued the medieval vocation of the *dictatores*, who taught the skills of letter-writing and proper style in speech and writing. But the word gradually came to assume a more comprehensive meaning, referring to all devotees of classical learning. Humanism came to be cultivated not merely by professional educators but by many men of letters, historians, moral philosophers, statesmen, and churchmen, including regular as well as secular clergy. They set the *aurea sapientia*, or golden wisdom, of the ancients against the arid dialectic of the Scholastic doctors. Christian humanism tended toward religious syncretism, moralism, and ethical Paulinism, and also toward a Christocentrism that emphasized Christ as an example of good living, rather than a Christology that focused on Christ's sacrifice on the cross as sin-bearer, substitute, and savior.

**ITALIAN RENAISSANCE HUMANISM.** It was natural that humanism should emerge most strongly in Italy, given the Roman inheritance and the artistic and architectural reminders of ancient glories. Toward the end of the thirteenth century, a form of protohumanism developed in the north of Italy, in Padua, Verona, and Vicenza, and in Arezzo and Florence in Tuscany. But the "father of humanism" was Francesco Petrarch (1304–1374), who gave to Italian literary humanism its basic character. He is perhaps best remembered for his vernacular lyrics, chiefly love poems to Laura; he was crowned poet laureate on the Capitoline Hill in Rome in 1341. Petrarch stressed the purity of the classical Latin style, revived enthusiasm for ancient Rome, and helped develop a sense of distance from the past and a revulsion toward the medieval "dark ages." He raised important personal and religious questions in such writings as *On the Solitary Life*, the *Secretum*, *Ascent of Mount Ventoux*, and *On His Own Ignorance and That of Many Others*, in which he wrote as an

apologist for the Christian view of humanity and the humanists' appreciation of the worth of the individual against certain neo-Aristotelians whose natural philosophy subverted those values.

Petrarch's friend Giovanni Boccaccio (1313–1375) gained renown for his *Decameron*, a collection of a hundred short stories, for books on famous men and women, and for an encyclopedic *Genealogy of the Gods*, an important handbook of mythology. Petrarchan humanism spread through Italy, largely as a lay, upper-class, and elitist movement. In the search for classical manuscripts, humanists such as Poggio Bracciolini (1380–1459), Francesco Filelfo (1398–1481), Cyriacus of Ancona (c. 1391–1457), and Giovanni Aurispa (1374–1450) excelled, rediscovering key works of Cicero, Quintilian, Vitruvius, Plautus, Pliny the Younger, Tacitus, Thucydides, Euripides, Sophocles, and other ancient authors.

Humanism gained new momentum and direction with the Greek revival. In the final decades of the fourteenth century the Byzantine emperor, threatened by the Ottoman Turks, who were encircling Constantinople, made two expeditions to the West, in 1374 and 1399, to seek help. His efforts were futile, but some Greek scholars, such as Manuel Chrysoloras (c. 1355–1415), John Bessarion (1403–1472), and Gemistus Plethon (c. 1355–1450), remained in the West and introduced Greek literature, patristics, and philosophy. After the fall of Constantinople in 1453, other scholars fled to the West, notably John Argyropoulos, Demetrius Calcondylas, and John and Constantine Lascaris, adding new momentum to the Greek revival and broadening the dimensions of philosophical discussion.

Certain humanists placed their rhetorical gifts in the service of the Florentine republic against the threatening tyrants of Milan and Naples. These civic humanists, such as chancellor Coluccio Salutati (1331–1406) and Leonardo Bruni (c. 1370–1444), stirred up the patriotic impulses of the citizenry for the defense of the state. In a broader sense civic humanism was more than an ideology of embattled republicanism, for it stood for a life of action spent for the common good. Giannozzo Manetti (1396–1459), who wrote *On the Dignity and Excellence of Man*, once described the whole duty of humanity as being to understand and to act. Leon Battista Alberti (1404–1472), a truly universal man, the architect of Renaissance churches, palaces, and fountains, wrote treatises that for many decades dominated theory on architecture, painting, and the family.

In order to convey humanist ideals to youth, humanist educators not only wrote influential treatises on education but also established schools to put their theories into practice. Generally optimistic about the educability at least of the upper classes, the humanists cultivated the liberal arts to develop leaders with sound character and lofty vision. Pietro Paolo Vergerio (1370–1444) wrote a treatise on the morals befitting a free man, drawing extensively on Plato, Plutarch, and Cicero. Vittorino Rambaldoni da Feltre (1378–1446)

and Guarino da Verona (1370–1460) set up model schools with a humanist curriculum and introduced such innovations as physical education and coeducation.

Among the disciplines emphasized was history, for the humanists valued both ancient and contemporary history. What the humanists learned from classical historians was reflected in their own histories, from the *History of Florence* of Leonardo Bruni to the *History of Florence* of Niccolò Machiavelli and the *History of Italy in His Own Times* by Francesco Guicciardini (1483–1540). Flavio Biondo (1389–1463), the founder of modern archaeology, produced massive topographical-historical works on Rome and all of Italy. Lorenzo Valla (1407–1457) anticipated many of the questions raised later by Luther, such as free will and predestination, errors in the Vulgate, and the value of lay piety in contrast to monasticism. In a treatise titled *On the Donation of Constantine*, he proved with philological and historical critical arguments that the *Donation of Constantine* was a forgery purporting to prove that when Constantine moved the capital of the Roman empire to the East, he had given the Lateran Palace and outlying provinces to Pope Sylvester I and his successors, as well as conferring immense privileges upon them.

During the second half of the fifteenth century classical scholarship was more closely integrated with literary composition in the vernacular, printing spread rapidly following the establishment of the first printing press in Italy in 1465, and a new metaphysical emphasis superseded the relatively uncomplicated moral philosophy of the literary and civic humanists with the development of Neoplatonic, neo-Pythagorean, neo-Aristotelian, Hermetic, and qabbalistic philosophies and theodicies. Neoplatonism became the most prominent and characteristic form of Renaissance philosophy. The renewal of interest in patristic writings, aided by scholars such as Ambrogio Traversari (1386–1439), and especially in the Greek fathers, added impetus to the Greek revival. Nicholas of Cusa (1401–1464) was concerned with the search for unity between the infinite One and the infinite multitude of finite things, the *coincidentia oppositorum*, a pantheism that raised the specter of pantheism. Marsilio Ficino (1433–1499), the most eminent Renaissance philosopher, presided over the “Platonic Academy” endowed by Cosimo de’ Medici, the de facto ruler of Florence. Ficino did editions of Plato’s works and edited the *Enneads* of Plotinus and works of Greek pagan Neoplatonists such as Proclus and Porphyry, as well as of Dionysius the Areopagite, whose christianized Neoplatonism was so influential throughout the medieval period. Among his own influential works were the *Theologia Platonica* and the *De religione Christiana*, in which he used Neoplatonism apologetically as a support for the Christian faith. His understudy, Giovanni Pico della Mirandola (1463–1494), sought to find the religious truth common to Christianity, Platonism, Aristotelianism, Hermetism, Islam, and Qabbalah. He published for public disputation nine hundred theses, the *Conclusiones*, in which he sought to summarize all learning. In his oration *On the Dig-*

nity of Man, sometimes described as the most characteristic Renaissance document, he places humankind at the center of the “great chain of being,” the object of special creation, able to rise upward toward God or to sink downward to the sensate animalistic level, as it chooses. Giordano Bruno (1548–1600), combining Nicholas of Cusa’s Neoplatonism and Hermetic ideas with the physical implications of Copernican astronomy, synthesized a philosophy that verged on pantheism. Aristotelianism persisted in the universities, and Neo-Aristotelianism found advocates such as Pietro Pomponazzi (1462–1525), who wrote on the nature of immortality, fate, free will, predestination, and providence.

**NORTHERN HUMANISM.** Thanks to close political, commercial, ecclesiastical, and university ties with Italy, the new humanist culture came earlier to Germany than to other countries of northern Europe. The pioneers included wandering poets such as Peter Luder, schoolmaster humanists such as Johannes Murmellius and Rudolf von Langen, half-Scholastic humanists such as Conrad Summenhart and Paul Scriptoris, and moralistic critics of church and society such as Heinrich Bebel, Jacob Wimpfeling, Sebastian Brant, and the preacher Johann Geiler von Kaisersberg. But the man credited with being the father of German humanism was Roelof Huysman (Rodolphus Agricola, 1444–1485), known as the “German Petrarch.” After a decade in Italy he returned to “the frozen Northland” and presided over a group of young humanists in Heidelberg, to whom he expounded his theories of rhetoric. One of his disciples, Conrad Pickel (Conradus Celtis, 1459–1508), the “German arch-humanist,” organized young humanists into the Rhenish and Danubian sodalities to promote humanism and to do a topographical-historical work entitled *Germania illustrata*, never completed.

At the universities humanists struggled with Scholastics for positions, and by 1520 humanism had spread to urban centers and to both ecclesiastical and princely courts. The lawyer Conrad Peutinger, the historian Johannes Turmair (Aventinus), the city councilor Willibald Pirckheimer, a friend of Conrad Pickel, and the Nuremberg artist Albrecht Dürer were patrons and advocates of humanism. The clash of humanists and Scholastics came to a head in the celebrated Reuchlin controversy. Johannes Reuchlin (1455–1522) did a Hebrew vocabulary and grammar and wrote two major works, *On the Wonder-Working Word* and *On the Qabbalistic Art*, in which he used the Jewish mystical Qabbalah in support of Christianity. Reuchlin defended some Hebrew books from a vicious book-burner, Johannes Pfefferkorn, a converted Jew, and was in turn attacked by certain Scholastic doctors at Cologne. An Erfurt humanist, Johann Jäger (Crotus Rubianus, c. 1480–1545), and the young knight Ulrich von Hutten (1488–1523) wrote a biting satire, *The Letters of Obscure Men*, ridiculing the Scholastics and defending Reuchlin. In Gotha the canon Mutianus Rufus (1471–1526) gathered a circle of young humanists from the University of Erfurt to promote classical learning.

Although there were early ties with Italy during the Avignon papacy and some promise of a flowering early in the fifteenth century, for example in the circle gathered around chancellor Jean de Montreuil (1354–1418), the Hundred Years’ War and the struggle between France and Burgundy delayed the full development of humanism in France. The great flowering of humanism came from 1515 to 1547, during the reign of Francis I, a great patron of art and literature. Guillaume Budé (1468–1540) did a commentary on the *Pandects* (a digest of Justinian’s law), a work on numismatics, a commentary on the Greek language, and a major work on Hellenism. Lefèvre d’Étaples (1455–1536) worked on biblical texts, doing a critical edition of *Psalms* and commentaries on Paul’s letters and on the four Gospels; this work was important to Luther and the French reformers. Margaret of Angoulême, Francis I’s sister, was not only an author but also a patroness of humanists and young reformers, along with Bishop Guillaume Briçonnet. François Rabelais (c. 1495–1553), author of the witty, gross, and satirical *Gargantua and Pantagruel*, offered criticism through the story of a giant and his son. Although sometimes called a skeptic, Rabelais is now seen more as an Erasmian Christian humanist interested in reform. The famous essayist Michel de Montaigne (1533–1592) was the greatest French literary figure of the age.

In Spain, Erasmianism, Lutheranism, and mysticism found followers, but nonconformity was effectively suppressed. Cardinal Jiménez de Cisneros (1436–1517) instituted rigorous clerical reforms, founded the University of Alcalá with a trilingual college, and endowed the publication of the Complutensian Polyglot Bible. Antonio de Nebrija (1441–1522), at Salamanca, was an outstanding classicist. The greatest literary figure of Spanish humanism was Miguel de Cervantes (1547–1616), author of *Don Quixote*.

English humanism developed during the fifteenth century from political and ecclesiastical contacts with Italy. Classical studies were cultivated seriously at Oxford by Thomas Linacre (c. 1460–1524), William Grocyn (c. 1466–1519), and William Latimer (c. 1460–1543). John Colet (1467–1519), dean of Saint Paul’s and founder of Saint Paul’s School, modeled somewhat after the humanist schools of Italy, corresponded with Ficino and was intrigued by Neoplatonism. But he had a serious theological bent, and in his lectures on *Romans* he emphasized humanity’s sinfulness and need for God’s forgiveness. Thomas More (1478–1535) wrote the most famous work of English humanism, *Utopia*.

The prince of the northern humanists was Desiderius Erasmus of Rotterdam (1469?–1536), who articulated the loftiest ideals of Christian humanism. A great classicist and patristics scholar, he expressed social and ecclesiastical criticism in *The Praise of Folly* and the *Colloquies*, expounded his “philosophy of Christ” in the *Enchiridion* and in *Paraclesis*, and did editions, with long introductions, of Latin and Greek classical authors and church fathers. His fame was eclipsed by the advent of the Reformation, and he reluctantly attacked Luther on the question of the freedom of the will.

Erasmus inclined toward moralism and spiritualism rather than consequential soteriology, emphasizing Christ the teacher and example rather than the Savior who died on the Cross for the salvation of humankind.

**HUMANISM AND THE REFORMATION.** The Reformation owed much to humanism for its success; contributing to an atmosphere favorable to the Reformation were humanism's emphasis on knowledge of the biblical languages and a return to the sources; its criticism of ecclesiastical and social abuses; its negative attitude toward Scholasticism; a concomitant romantic cultural nationalism; the use of the printing press; and the activities of the cadres of young humanists who carried Luther's message to all parts of the Holy Roman Empire in the early years. Luther referred to the Renaissance as akin to John the Baptist heralding the coming of the gospel. The so-called magisterial reformers, Luther, Zwingli, Calvin, Melancthon, Bucer, Beza, and others, were all university men with some background in classical studies and humanist learning. Led by Luther, they reformed the university curricula in favor of humanist disciplines, reformed old and founded new universities, and established secondary schools, *Gymnasiums* and *lycées*, to promote the liberal arts. They insisted upon compulsory education for boys and girls, thus expanding education beyond the elitist upper-class concerns of the Italian humanists. They stressed teaching as a divine vocation. While Luther loved the classics, rejected Scholasticism, and favored humanism, his colleague Philipp Melancthon (1497–1560) was the major influence in promoting classicism. In line with Italian humanism, the reformers de-emphasized dialectic and stressed the value of rhetoric, poetry, moral philosophy, and history. Along with their concern for pure theology, the proper distinction between law and gospel, and the centrality of sin and grace, the reformers viewed higher culture as a sphere of faith's works and became strong advocates of humanist learning. Learned Protestants such as the polymath Joachim Camerarius (1500–1574), the educator Johannes Sturm (1507–1589), the historian Johannes Philippi (Sleidanus, 1506–1556), the irenic theologian Georg Calixtus (1586–1656), and a host of neo-Latin poets, playwrights, and philosophers carried humanism into the seventeenth century and the beginnings of the Enlightenment. Catholic reformers, too, especially the Jesuits, saw the value of the *humaniora*, or humane studies, and introduced them into their academies, colleges, and universities. The Reformation owed much to humanism and repaid the debt richly by broadening the popular base of education and carrying humanist learning into modern times.

The Reformation brought to an end the role of Renaissance humanism as an independent cultural force, for thereafter it became associated closely with the various Christian confessions. Lutheran, Calvinist, Catholic, and radical humanist learning was cultivated in secondary schools and universities. Where humanism was transmitted in this academic way, it was preserved much longer than where it remained a matter of a few individuals or groups; but humanism took

on a more pedantic and less spontaneous character in the universities.

Humanist impulses were not only widespread horizontally on a European scale but reached down vertically through the centuries. Where humanist influence was strong, it nourished tendencies toward universalism, or at least toward latitudinarianism, especially in England and the Netherlands, and fostered an irenic spirit. The humanist way of thinking has remained in evidence into the twentieth century.

#### BIBLIOGRAPHY

For the historical background of Renaissance humanism, such standard works as *The New Cambridge Modern History*, vol. 1, *The Renaissance, 1493–1520*, edited by G. R. Potter (Cambridge, 1957), and Myron P. Gilmore's *The World of Humanism, 1453–1517* (1952; reprint, Westport, Conn., 1983) serve as excellent guides. Wallace K. Ferguson's *The Renaissance in Historical Thought: Five Centuries of Interpretation* (Boston, 1948) provides a survey of the changing currents of historiography.

The most excellent work on the thought of the Italian humanists is Charles E. Trinkaus's *In Our Image and Likeness: Humanity and Divinity in Italian Humanist Thought*, 2 vols. (Chicago, 1970), which in a detailed, profound, and comprehensive way shows how the humanists integrated the surging secular activities and achievements of early modern Europe into the beliefs and practices of the Christian inheritance. See also his brilliant essays in *The Scope of Renaissance Humanism* (Ann Arbor, 1983). The Florentine scholar Eugenio Garin, in his *Italian Humanism: Philosophy and Civic Life in the Renaissance* (New York, 1965), offers a succinct analysis of humanism as a reflection of the new urban civic life. The most prolific author and bibliographer of Italian humanism is Paul O. Kristeller, who holds that humanism derived from the *studia humanitatis* in the Italian universities and offered an educational alternative to Scholasticism. Among his many writings one may cite the representative titles *Studies in Renaissance Thought and Letters* (Rome, 1956), *Renaissance Thought: The Classic, Scholastic and Humanistic Strains* (New York, 1961), *Eight Philosophers of the Italian Renaissance* (Stanford, Calif., 1964), and *Renaissance Thought and Its Sources* (New York, 1979). The most discussed book on civic humanism is Hans Baron's *The Crisis of the Early Italian Renaissance: Civic Humanism and Republican Liberty in an Age of Classicism and Tyranny*, rev. ed. (Princeton, N.J., 1966), in which Baron argues that the threat to Florence from the Visconti tyrants of Milan led the humanist chancellors of the city to write in defense of the republic.

Significant titles for the study of northern humanism include *Itinerarium Italicum: The Profile of the Italian Renaissance in the Mirror of Its European Transformations*, edited by Heiko A. Oberman and Thomas A. Brady (Leiden, 1975), on the reception of Italian Renaissance culture in France, the Low

Countries, England, and Germany; Eckhard Bernstein's *German Humanism* (Boston, 1983); my book *The Religious Renaissance of the German Humanists* (Cambridge, Mass., 1963); James H. Overfield's *Humanism and Scholasticism in Late Medieval Germany* (Princeton, N.J., 1984); Franco Simone's *The French Renaissance: Medieval Tradition and Italian Influence in Shaping the Renaissance in France* (London, 1969); and Douglas Bush's *The Renaissance and English Humanism* (Toronto, 1939).

On the Reformation and humanism, see E. Harris Harbison's *The Christian Scholar in the Age of the Reformation* (New York, 1956); Marilyn J. Harran's *Luther and Learning* (Selingsgrove, Pa., 1985); Gerhart Hoffmeister's *The Renaissance and Reformation in Germany* (New York, 1977); Manfred Hoffmann's *Martin Luther and the Modern Mind* (New York and Toronto, 1985); and Quirinus Breen's *John Calvin: A Study in French Humanism*, 2d ed. (Hamden, Conn., 1968), underscoring the continuity of humanism in Reformation thought.

**HUMAN RIGHTS AND RELIGION.** Human rights are a secular, supposedly normative (because often defined as "universal") doctrine of ethical behavior embedded in national, regional, and international systems of law under the authority of the United Nations (UN) and implemented with varying degrees of success and failure. Indicative of the enhanced role of religion in global politics, the relationship between religion and human rights remains complex and diverse, covering a variety of ever-fluctuating geopolitical situations.

**UNIVERSAL HUMAN RIGHTS.** The 1945 Charter of the United Nations sets out basic principles upon which international legal standards have been developed. On December 10, 1948, the General Assembly of the United Nations adopted and proclaimed the Universal Declaration of Human Rights, thirty articles that remain fundamental for all subsequent covenants, conventions, and treaties in the field. The pream-

ble to the declaration states that the "recognition of the inherent dignity and of the equal and inalienable rights of all members of the human family is the foundation of freedom, justice, and peace in the world." The preamble also recognizes that "disregard and contempt for human rights have resulted in barbarous acts which have outraged the conscience of mankind." It hopes for "the advent of a world in which human beings shall enjoy freedom of speech and belief and freedom from fear and want," proclaimed as "the highest aspiration of the common people."

From these aspirations arose the International Bill of Human Rights, which is a collection of five documents, consisting of:

- Universal Declaration of Human Rights (December 10, 1948)
- International Covenant on Economic, Social, and Cultural Rights (December 16, 1966; into effect January 3, 1976)
- International Covenant on Civil and Political Rights (December 16, 1966; into effect March 23, 1976)
- Optional Protocol to the International Covenant on Civil and Political Rights (December 16, 1966; into effect March 23, 1976)
- Second Optional Protocol to the International Covenant on Civil and Political Rights, aiming at the abolition of the death penalty (December 15, 1989)

Given how wide-ranging the statement of human rights is—from basic civil and democratic political freedoms to rights in education, employment, and health—it is not surprising that in an effort to make social progress through subsequent human rights work, the nature and extent of the rights framework has become extremely complex, not to say controversial.

**RELIGION AND POLITICS.** The immediate aftermath of the end of the Cold War was a time of ideological triumphalism. If Western models of governance based upon democracy and universal human rights had seemingly come out victorious from a struggle against Soviet Communism, then books such as *The Clash of Civilizations* by Samuel Huntington controversially revitalized an ancient notion that differing value systems will inevitably come into conflict. Some people, such as Francis Fukuyama, suggested that Western models of governance based on democracy and universal human rights had triumphed, receiving collective recognition as the best political system the world had yet produced. This new international consensus over political values demonstrated, according to Fukuyama, nothing less than an end of history. According to this analysis, if secularization theory has widely predicted the marginalization of religion to a private domain rather than a sphere of public influence, then religion simply did not come into the equation to any significant degree.

Arguably more astute commentators were beginning to suggest that the end of the Cold War might mean something

different—what significant scholars of religion had always argued: that the place of religion in world politics had in the modern era been seriously underplayed. In *The World's Religions*, Ninian Smart, foremost among such scholars, argued for the relevance of religion in a number of dimensions. While this might be expected from a scholar of religion, such a notion, unfashionable for so long outside religious studies, came to take on importance in politics and sociology. Jeff Haynes's analysis of religion in world politics builds on Jose Casanova's foundational theoretical work in sociology.

Casanova's *Public Religions in the Modern World* began seriously to challenge the largely accepted secularization thesis, that in modern societies religion becomes less and less relevant to public discourse, and any influence it might have would be relegated to people's private lives. Both Haynes and Casanova demonstrated from a series of geopolitical case studies how the secularization thesis was no longer supportable or at least presented evidence that it needed to be refined to explain how religious traditions were gaining an increasingly public profile, from the rise of Islam in political contexts across innumerable states to increasing conflicts between cultural and religious traditions, notably in Africa, Asia, and the former Soviet Union.

**RELIGION AND HUMAN RIGHTS.** Since the formation of the United Nations, human rights issues related to religion and belief have been the focus of several international instruments:

- The Universal Declaration of Human Rights (1948)
- The Arcot Krishnaswami Study (1959)
- The International Covenant on Civil and Political Rights (1966)
- The International Covenant on Social, Economic, and Cultural Rights (1966)
- The Declaration on the Elimination of All Forms of Intolerance and Discrimination Based on Religion or Belief (1981)

The Universal Declaration of Human Rights includes a number of articles of relevance to freedom of religion and belief. These include Article 2 (forbidding prejudicial distinctions of any kind, including those related to religion) and Article 26 (on the rights to a particular religious education). The foundation stone of freedom of religion and belief, though, is found in Article 18 of the Universal Declaration of Human Rights. This states, "Everyone has the right to freedom of thought, conscience, and religion; this right includes freedom to change his religion or belief, and freedom, either alone or in community with others and in public or private, to manifest his religion or belief in teaching, practice, worship, and observance."

Nathan Lerner in *Religion, Beliefs, and International Human Rights* offers one of the most authoritative commentaries on religion in the UN system. As Lerner suggests, Article 18 greatly influenced the texts incorporated in the 1966

covenants and was influential in regional treaties and the 1981 declaration. Some key international legal standards relating to freedom of religion and belief include:

- Declaration on the Elimination of All Forms of Intolerance and of Discrimination Based on Religion or Belief (November 25, 1981);
- Declaration on the Rights of Persons Belonging to National or Ethnic, Religious, and Linguistic Minorities (December 18, 1992);
- Oslo Declaration on Freedom of Religion and Belief (1998);
- World Conference against Racism, Xenophobia, and Related Forms of Discrimination (September 2002).

The preamble to the UN Declaration on the Elimination of All Forms of Intolerance and Discrimination Based on Religion or Belief (1981) restates the wider context of the charter of the United Nations. Notably this reiterates the "dignity and equality inherent in all human beings," international commitment on the promotion of universal human rights and fundamental freedoms for all, "without distinction as to race, sex, language or religion," and the principles of "non-discrimination and equality before the law and the right to freedom of thought, conscience, religion, and belief."

Issues of religion have increasingly come to the fore in a United Nations formally cautious about being explicit about arguably the most contentious of all human rights, while an increasingly intense post-September 11 context has highlighted the issue of potential violent conflict in the world. The wider significance of these issues might be summarized by four points. First, after a long neglect (or low-level treatment) of religion explicitly, the UN system from the late 1970s and especially with the 1981 declaration began to recognize the international significance of religion for a stable world order.

During the 1990s religion emerged explicitly in numerous international statements, gaining a new and unprecedented prominence. These included the Cairo Declaration on Human Rights in Islam (1990) and the Fundamental Agreement between the Holy See and the State of Israel (1993). The Vienna Declaration and Plan of Action (1993) and the follow-up to the World Conference on Human Rights, the office of the UN High Commissioner on Human Rights (1993), also gave some prominence to freedom of culture and religion, an important development given the respective post-Yugoslavia and post-Rwanda contexts. The new prominence given to religion culminated in the Oslo Declaration on Freedom of Religion and Belief (1998).

Second, and indicated by both the 1981 declaration and the 1998 Oslo declaration, the notion of freedom of religion was itself extended to freedom of religion and belief to allow for a wider interpretation of worldviews. Third, this in turn has had the effect of linking issues such as "freedom of thought, conscience, and religion" to what Carl Wellman in

**Mass Slaughter Since the 1948 Convention Against Genocide**

Date	State	Victims	Deaths
1943–1957	USSR	Chechens, Ingushi, Karachai	230,000
1944–68	USSR	Crimean Tartars, Meskhetians	57,000–175,000
1955–77	China	Tibetans	Not available

1975–79	Cambodia	Including Muslim Cham	2 million?
1975–98	Indonesia	East Timorese	60,000–200,000
1978–	Burma	Muslims in border regions	Not available
1979–86	Uganda	Karamanjong, Nilotic Tribes Bagandans	50,000–100,000
1981	Iran	Kurds, Bahais	10,000–20,000
1983–7	Sri Lanka	Tamils	2,000–10,000
1994	Rwanda	Tutsis	500,000–million
1992–5	Bosnia– Herzegovina	Mainly Bosnian Muslims	200,000

(Ryan, in Gearon, 2002)

TABLE 1.

*The Proliferation of Rights* has called rights of human solidarity, notable in connections publicly made between religious intolerance and the ending of racism, xenophobia, and discrimination. For example, the 1981 Declaration on the Elimination of All Forms of Intolerance and of Discrimination Based on Religion or Belief was followed just over a decade later by the UN Declaration on the Rights of Persons Belonging to National or Ethnic, Religious, and Linguistic Minorities (1992).

Fourth, also related to Wellman's notion of human solidarity are the rights affecting particular groups of the world's population, including children and indigenous peoples. In terms of religion and human rights, the major issue here is women and human rights in the world's religions. The prominent and influential World Conference on Women was held in Beijing in 1995, the fiftieth anniversary of the

founding of the United Nations. The resulting Beijing declaration was careful to set the event in the context of other conferences. Cited conferences included those on women in Nairobi in 1985, on children in New York in 1990, on environment and development in Rio de Janeiro in 1992, on human rights in Vienna in 1993, on population and development in Cairo in 1994, and on social development in Copenhagen in 1995. Convinced that "women's empowerment and their full participation on the basis of equality in all spheres of society, including participation in the decision-making process and access to power, are fundamental for the achievement of equality, development and peace," commitments made by the Beijing declaration included (1) full implementation of the human rights of women and of the girl child "as an inalienable, integral, and indivisible part of all human rights and fundamental freedoms" and (2) the em-

powerment and advancement of women, “including the right to freedom of thought, conscience, religion, and belief.”

**TENSIONS IN EQUALITY: THEORETIC EQUALITY VERSUS FACTUAL INEQUALITY.** Heightened emphasis upon religion and culture in international relations shows a world that continues to reflect considerable tensions between worldviews when dealing with ideals such as human rights. These tensions are of four kinds: first, between particular cultural and especially religious systems and the notion of universal human rights; second, between religious traditions and different culture’s worldviews; within and between human rights themselves; and between a stated universality of rights and factual inequality in their distribution.

**Human rights.** There are tensions between particular cultural and especially religious systems and the notion of universal human rights. Examples include the right to freedom of expression that might give offense to some religious sensibility or the tension between democratic political systems and religiously inspired systems of governance or, and perhaps especially, issues of universal rights between men and women. Most critically on December 18, 1979, the Convention on the Elimination of All Forms of Discrimination against Women was adopted by the UN General Assembly. It entered into force as an international treaty on September 3, 1981.

While marking significant progress and the culmination of three decades of work by the UN Commission on the Status of Women (established 1946), the Beijing and Beijing +5 meetings show that the equal status of women remains in many countries and cultures a distant ideal, despite the fact that basic equality in human rights was fundamental to the UN charter and the Universal Declaration. The convention states that discrimination against women is extensive and details the areas (health, education, employment, and legal and political status) where progress needs to be made. The convention also devotes much time to reproductive rights, issues around maternity, and rights centered on marriage. Of general importance is the disparity between the UN definitions of women’s rights and those perceived within certain cultural and religious traditions. In reality each religion will address particular issues of integrating or rejecting women’s rights within their respective traditions. And these will be tempered by political circumstances.

For political case studies on women’s rights, major non-governmental organizations (NGOs) in the field, like Human Rights Watch, often focus on similar specific issues. Human Rights Watch has continually updated studies of each of the world’s geographical regions. In general the legal difficulties in combining the equalities, rights, and freedoms of religion with the equalities, rights, and freedoms of women are real, representing arguably the most significant tension between international systems of human rights and religious traditions. On the technical legal side of such matters, Kelly D. Askin and Dorean M. Koenig’s *Women and*

*International Human Rights Law* (1999) is certainly worth consulting.

**Worldviews.** There are tensions between religious traditions and different culture’s worldviews. Religious, cultural, and ethnic differences remain the major source of conflict in a post–Cold War world. After two world wars and with a clear awareness of the systematic mass murders of the Holocaust, the 1948 Genocide Convention was born out of a never-again mentality. Since then genocide, defined here as the systematic and deliberate targeting for extinction of particular sections of a population, has happened repeatedly. Genocide in the twentieth century became fundamental to human rights discourse in the twenty-first century.

**Between rights themselves.** There are tensions within and between human rights themselves, for example, between freedom of religion or belief and freedom of expression. Here the conflict between religious traditions and universal human rights contributes to these tensions between rights that seem to compete rather than be complementary.

**Stated universality and factual inequality.** A wider tension exists between a stated universality of rights and factual inequality. The 1993 World Conference on Human Rights attempted to address this with the Vienna Plan of Action. Priorities for the global implementation of human rights were listed and, as with the majority of UN world conferences, a five-year review was planned. The UN commissioner for human rights concludes his Vienna +5 review with this paragraph:

The international community must conclude that five years after Vienna, a wide gap continues to exist between the promise of human rights and their reality in the lives of people throughout the world. At the beginning of the twenty-first century, making all human rights a reality for all remains not only our fundamental challenge but our solemn responsibility.

In the UN system, human rights imply universality. Yet human values are by their nature contested, and history reveals a tragically imperfect world where inequalities abound and justice is too often absent. The World Conference on Human Rights in Vienna expressed “its dismay and condemnation that gross and systematic violations and situations that constitute serious obstacles to the full enjoyment of all human rights continue to occur in different parts of the world.” It is this most fundamental sense of inequality—over and above differences between religious traditions and secular notions of human rights—that arguably presents the greatest cause of conflict the world over. As Albert Camus once remarked, “The spirit of revolt can only exist where a theoretic equality conceals great factual inequalities.”

**CONCLUSION.** Many nation-states now regard issues of religion and human rights as essential barometers of wider democratic freedoms. In the United States, for example, the 1998 International Religious Freedom Act made it a requirement for the U.S. secretary of state to publish an annual report on religious freedom worldwide. Published each September, the

Annual Report on International Religious Freedom is submitted to the Committee on International Relations in the U.S. House of Representatives and the Committee on Foreign Relations in the U.S. Senate. The report is extensive and provides country-by-country accounts of religious freedoms and infringements on and improvements in these freedoms. The report contains an extremely useful executive summary and clearly links freedom of religion with the likelihood that countries that preserve this right will respect other fundamental rights.

## HUMAN SACRIFICE

*This entry consists of the following articles:*

AN OVERVIEW  
AZTEC RITES

### HUMAN SACRIFICE: AN OVERVIEW

Human sacrifice, defined as the killing of humans or the use of the flesh, blood, or bones of the human body for ritual purposes, has been a widespread and complex phenomenon

throughout history. Most contemporary scholars try to explain human sacrifice in terms of earlier theories of sacrifice in general. Though the explanations given for the purposes of sacrifice have been almost as varied as the phenomena themselves, they may be reduced to nine common themes drawn from four of the classic works on sacrifice. These themes may be illustrated with descriptions of human sacrificial practices in differing cultural contexts.

E. B. Tylor (1832–1917) theorized that the origin of religion lay in the primitive tendency to “animate” the entire world with “soul-ghosts.” Human sacrifice released these soul-ghosts so that they might join their ancestors and function as a gift to gain particular ends, as homage to a deity, or as a form of renunciation.

**THEORETICAL PERSPECTIVES.** According to W. Robertson Smith (1846–1894), sacrifice originated in totemism. Sacrifice was a communal meal shared between the people and their god, who was simultaneously their totemic animal and their kinsman. Smith postulated two types of sacrifice. The first, the honorific, was a gift either on a friendly basis of exchange or as a part of homage to a powerful deity. The communion meal became a cannibal feast when a tribe, such as the wolf tribe, offered to the god the appropriate food—the members of the sheep tribe, for example. The second, the piacular or expiatory sacrifice, took on a mystical, sacramental flavor when a tribe’s own totemic animal was offered as a redemption for a misdeed. The animal, who as a kinsman was also a representative of the people themselves, was killed and then shared in a communion in which people achieved atonement by physically assimilating into their own bodies the totemic form of themselves. The sacrificed animal was reborn by being assimilated into the living bodies of the people who ate it, and since those people were identified with the totemic animal, they too were reborn through this ritual.

James G. Frazer (1854–1941) developed a theory of regeneration of fertility according to which the sacrificial offering possessed tremendous potency. Sacred kings and human vegetative gods were killed to pass on their power to a younger successor, to incorporate their potency into the living who consumed their bodies, and to prevent their decay in old age since decay would endanger the fertility of earthly existence. Frazer also suggested that animals and plants were eventually substituted for the original human sacrificial offering because of the fear inherent in killing humans.

In their essay on Vedic and Hebrew sacrifice (1898), Henri Hubert and Marcel Mauss considered sacrifice to be a religious act which, through the consecration of an offering, modified or transformed the condition of the person who accomplished that act by joining the divine and mortal via the sacrifice. Moreover, the self-sacrifice of a god in human form was the ideal abnegation, for it was an offering of one’s own life.

Nine basic purposes of human sacrifice have been commonly cited from these early theorists: (1) humans are sacri-

ficed in order to release souls for the service of the dead ancestors; (2) human sacrifice is a gift that binds deities to people in an exchange or that serves to propitiate the gods either as homage or as renunciation; (3) human sacrifice is a communion meal in which the power of life is assimilated and thus regenerated; (4) the offering of human sacrifice serves as an expiation of past transgressions and has a redemptive character; (5) it brings about atonement, (6) the regeneration of earthly fertility, or (7) immortality; (8) it transforms human conditions; and (9) it unifies the divine and mortal. Although some new approaches have been added taking into consideration factors such as the role that cosmology plays or the ordering capacities of human sacrifice, contemporary interpreters of human sacrifice still find these themes fruitful in a variety of cultural settings.

**HISTORICAL CORROBORATION.** The burials at Chan Chan (fourteenth–fifteenth centuries) in Peru are illustrative of the theme of soul-release and kinship with the dead. In this capital of the Chimu empire, many adolescent females were sacrificed and buried with their king. It is known that later, during Inca domination (fifteenth–sixteenth centuries), the king was considered alive after death and was treated as a participant in the affairs of his surviving kin. A kinship was established between the dead and the living in the Shang period (c. 1500–1050 BCE) in China as well. According to David N. Keightley (1978), in the Shang political system the dead and the living formed a bureaucracy together. The dead received “salaries” in the form of human sacrifices for their jobs as intercessors between the king and the high god Di. Without this, earthly prosperity could not continue. At Anyang (c. 1500–1400 BCE), the entombment of an entire company of soldiers, four charioteers, their companions, the horses, and the chariots has been unearthed.

The themes of expiation, redemption, and communion were central in the sacrificial tradition of the early Christian church. The early martyrs believed that their sufferings were evidence that the millennium was close at hand. By recapitulating Christ’s death, they shared in his resurrection and were instantly transported into his presence. Ignatius of Antioch (Antakya, Turkey) echoed the themes of redemptive communion when he joyously declared that he looked forward to being crushed by the teeth of beasts so that he might become wheat for God’s bread.

Themes of redemption and abnegation can also be found in the self-sacrifices of the samurai in Japan. Drawing on a warrior tradition dating back to the eleventh century that stressed kinship and extreme loyalty in the face of failure, the Bushidō cult arose in the peaceful Tokugawa period (1600–1868). Since there were few wars for the samurai to fight, Confucian ideals were joined with the earlier warrior ethic to create a martial cult in which the warrior was to give complete loyalty to his lord by rendering service in office rather than in war. If *seppuku* (ritual suicide) was demanded, the samurai were to comply without question. The reasons for *seppuku* might include atonement for transgressions, the

avoidance of capture in war, the death of one's lord, or a final protest to a lord who failed to follow the samurai's good advice—an act of selflessness intended to bring the foolish lord back to his senses. *Seppuku* became a refined art in which the samurai, with tremendous self-control, slashed his own belly. Often an assistant then decapitated him in such a way that the head was left hanging by a bit of flesh. In one incident forty-seven samurai chose this ritual to avenge the disgraceful death of their lord. The kamikaze pilots of World War II also followed this ancient warrior tradition.

In the Hawaiian Islands, sacrifice stands for transformation, communion, and the capacity to reorder what has been disordered. In Hawaiian theology, gods, humans, and nature are one human species. Gods are no more than differentiated manifestations of the undifferentiated cosmic Pō (of which people and nature are extensions) so that the entire world is related by kinship. The sacrificial ritual begins with some perceived lack, which is understood as a kind of disorder. The offering is consecrated to the god, who eats a part of the sacrifice, thus assimilating into himself its *mana* (effective potency). The sacrifice then passes back to the participants, who assimilate it. In this communal sharing, life is reordered and thus regenerated via the mutual assimilation of the sacrifice—an assimilation made possible by the shared kinship of gods and humans. A transformative reordering is made.

The evidence for human sacrifice in Vedic India (c. 1500–600 BCE) is still largely contested. However, by drawing on both textual and archaeological sources, Asko Parpola has suggested that rituals that were precursors of the Agnicayana (Vedic fire sacrifice) included the killing of humans. These earlier rites were part of a yearly cycle of two seasons devoted to war and agriculture, the two divisions marked by sacrifices in which the *Aśvamedha* (horse sacrifice) was equated with the *puruṣamedha* (human sacrifice). Death and regeneration were central concepts in these two sacrifices as they were in the Agnicayana. Even in the early twenty-first century, the Agnicayana symbolically involves human sacrifice: The mythic sacrificial dismemberment of Puruṣa (Cosmic Man) is recalled as the fire altar is constructed brick by brick, an act that reorders both Puruṣa and the cosmos. Five heads originally were buried under the altar—those of a man, a horse, an ox, a sheep, and a goat. Today a live tortoise is buried because of its cosmic and regenerative symbolism. The first layer of bricks represents Puruṣa's thousand eyes, and the finished altar is shaped like the firebird who will carry the sacrifice to heaven. J. C. Heesterman has suggested that human sacrifice was eliminated in the Brāhmaṇas (c. 900–700 BCE), which substituted animals and rice cakes, in an attempt to control the fear of disorder inherent in the ritual killing of humans.

The themes of order and disorder also play a role in Aztec sacrifice as does the theme of sacrificial exchange. A central myth of the Aztec tells of the birth and destruction of four ages prior to the Fifth Sun, the age of the Aztec. Each previous age is named for the way in which the sun was total-

ly destroyed. The Fifth Sun, called the “age of movement,” was also doomed to destruction by earthquakes and famine. The sun of this age was born by the willing self-sacrifice of the gods, and so shall people sacrifice themselves for the gods in return. In a cosmic exchange, gods are the maize of people's existence while people are tortillas for the gods to eat. But just as all people are born, eat food, grow old, and die, so too will the Fifth Sun meet its demise, no matter how much it is fed. The Aztec universe was thus unstable—wobbling between periods of order and disorder. Only human sacrifice could stay the end, and that only temporarily. In this eschatological setting, massive sacrificial rites were performed that may have offered people a chance to take some control of their inevitable destruction, a chance to control the uncontrollable.

Human sacrifice may seem remote to civilized sensibilities. Nevertheless, as a human act it must be at least partly intelligible to other humans. On November 18, 1978, in Jonestown, Guyana, 914 members of the People's Temple took their own lives by means of a cyanide-laced fruit drink. Most of them did so willingly. The complex reasons for this massive sacrifice of human lives are both disturbing and challenging to one's capacity to understand. Yet some familiar themes may be recognized. The people of Jonestown, like the Christian martyrs, believed in a utopian world on “the other side.” Like the samurai, they chose death as a “revolutionary act” to protest against the racism that they had failed to overcome, and like the Aztecs, they preferred to choose the time and place of their own deaths. As Jim Jones said during that “white night”: “I haven't seen anybody yet didn't die. And I like to choose my own kind of death for a change.”

#### BIBLIOGRAPHY

E. B. Tylor's theories of animism and sacrifice as a release of souls is discussed in his *Religion in Primitive Culture* (1871; Gloucester, Mass., 1970), vol. 2, pp. 1–87. The section on sacrifice (pp. 461–496) describes this phenomenon in terms of Tylor's views on its traits, mechanisms, permutations, and survivals. The short article “Sacrifice” in the *Encyclopaedia Britannica*, 9th ed. (Boston, 1886), is W. Robertson Smith's initial and concise explication of his theories of sacrifice in general, including those of human sacrifice. For James G. Frazer's theories of sacrifice, see his twelve-volume work *The Golden Bough: A Study in Magic and Religion*, 3d ed., rev. & enl. (London, 1911–1915). Henri Hubert's and Marcel Mauss's *Sacrifice: Its Nature and Function* (Chicago, 1964) is a short study of the structure and function of Vedic and Hebrew sacrificial rituals and is a classic work that has had widespread influence.

*Origins of Chinese Religion* by David N. Keightley (Berkeley, Calif., 1983) offers one of the best overviews of early Chinese culture. Keightley offers a more concise discussion of the religious perspective that may have provided a basis for, among other things, human sacrifice in the Shang period in “The Religious Commitment: Shang Theology and the Genesis of

Chinese Political Culture,” *History of Religions* 17 (February–May 1978): 211–225. A comprehensive discussion of martyrdom and its sacrificial theology in the early Christian church can be found in the classic work by W. H. C. Frend’s *Martyrdom and Persecution in the Early Church* (Oxford, 1965). A more recent treatment can be found in *A Noble Death: Suicide and Martyrdom among Christians and Jews in Antiquity* (San Francisco, 1992) by Arthur J. Droge and James D. Tabor. H. Paul Varley’s *Warriors of Japan* (Honolulu, 1995) explores the evolving Samurai culture from the tenth to the fourteenth centuries as reflected in tales of war. Valerio Valeri’s *Kingship and Sacrifice: Ritual and Society in Ancient Hawaii* (Chicago, 1985) is an extensive study of the structure and function of Hawaiian sacrificial rituals, with particular attention to the role of the king. Valeri includes a fine discussion of Hawaiian theology as well.

A lengthy treatment of a contemporary performance of the ancient Vedic fire ritual can be found in Frits Staal’s two-volume *Agni: The Vedic Ritual of the Fire Altar* (Berkeley, Calif., 1983). This book also includes source material for the historical background of the possibility of human sacrifice in early India. It also includes an article by Asko Parpola, “The Pre-Vedic Indian Background of the Srauta Rituals” (vol. 2, pp. 41–75), which discusses the relationship between the horse sacrifice and human sacrifice.

An extraordinarily rich source of information on the Aztecs was compiled by a sixteenth-century Franciscan father, Bernardino de Sahagun, in his *Historia general de las cosas de la Nueva España*, translated by Arthur J. O. Anderson and Charles E. Dibble as *Florentine Codex: A General History of the Things of New Spain*, 13 vols. (Santa Fe, N.Mex., 1950–1982). Volumes 2, 3, and 7 are particularly good for ritualistic and mythic sources on human sacrifice. A general discussion of Aztec sacrifice can be found in *Time and Sacrifice in the Aztec Cosmos* by Kay Read (Bloomington, Ind., 1998), and an excellent synthesis and application of a number of classic and contemporary theories on Aztec sacrifice appears in *Envisioning Power: Ideologies of Dominance and Crisis* by Eric Wolf (Berkeley, Calif., 1999, pp. 134–195).

KAY A. READ (1987 AND 2005)

## HUMAN SACRIFICE: AZTEC RITES

One of the most vivid examples of the Aztec ritual of sacrificing human beings (*tlamictiliztli*) appears in Bernal Díaz del Castillo’s book *The Discovery and Conquest of Mexico* (1632; Eng. ed., 1953). Díaz del Castillo, a foot soldier in Hernando Cortés’s army, describes seeing his comrades, who had been captured in a recent battle, being dragged by force up the steps of the temple of Coatepec by Aztec warriors and priests. As the “dismal drum” of the war god, Huitzilopochtli, mixed with the ominous sounds of shell and horn trumpets, the Aztecs decorated their captives with Aztec costumes and “with fans in their hands they forced them to dance before Huichilobos [Huitzilopochtli]” (p. 191). After this ceremonial preparation, we are told that the Aztecs lay the Spaniards “on their backs on some rather narrow stones which had been prepared as places for sacrifice, and with some knives

they sawed open their chests and drew out their palpitating hearts and offered them to the idols that were there” (p. 191). Following this offering to the gods at the temple, the victims were rolled back down to the bottom of the steps where ritual experts “cut off their arms and feet and flayed the skin off the faces, and prepared it afterwards like glove leather with the beards on, and kept those for the festivals when they celebrated drunken orgies and the flesh they ate in chilimole” (p. 191).

This shocking description of an apparent massacre represents what Burr C. Brundage in his book *The Fifth Sun* (1979) calls “the central fact of Aztec life . . . the nuclear cult of war, sacrifice and cannibalism.” In this no doubt biased selection, major ritual elements of Aztec human sacrifice can be identified that help illuminate some aspects of Aztec religion. Among the outstanding elements in the text are the centrality of the sacred temple of Tenochtitlan, the ascent and descent of the temple stairs, ritual dressing, dancing and music, the heart sacrifice of enemy warriors, the dismemberment and flaying of the victim, cannibalism, and an atmosphere of political and military crisis. While it is significant that even in the report of an enemy soldier like Díaz del Castillo a number of indigenous facts of Aztec ritual sacrifice are communicated, it is important to acknowledge that many crucial dimensions are missed. First, the Nahuatl word that is closest to “sacrifice” was *nextlaoalli* (paying of the debt). In many parts of the Mesoamerican world, the ritual killing of plants, animals, and humans was carried out within a deep-seated belief that the deities had created the universe out of their own self-immolations or the giving of some part of their essences. Secondly, this gift of life put a debt on human beings whose responsibility it was to pay back the gods through ritual sacrifice and the production of blood that would result in the rejuvenation of the divine forces that sustain the world. Thirdly, this commitment to paying the debt had many ritual and theological dimensions that the Spaniards could not understand including the Mesoamerican belief that the reliability of many crucial transitions between months, years and larger cycles of time depended on the ritual giving of blood. These are just some of the key meanings of human sacrifice that is often overlooked by public and scholars alike.

As a means of understanding these elements within a comprehensive setting, this essay will focus on the following: (1) the social-political world of the Aztec Empire, characterized as a pulsating polity marked by ferocious rivalries between the capital city of Tenochtitlan (the center) and the allied and enemy territories of the state (the periphery); (2) the cosmological setting of Aztec religion and human sacrifice; and (3) the practice and paraphernalia of human sacrifice. This approach will show Aztec ritual sacrifice as both text and context, ritual order and ritual destruction aimed at cosmic and social revitalization. The Aztec warrior and worshiper powerfully experienced the gods not only in the poetry, art, and architecture of the ceremonial centers of the

empire but also in the elaborate preparations of ritual places, plants, animals and people for sacrifice through the deadly thrust of the sacrificial knife, the eruption of blood on the temple, and sometimes the transformation of human flesh into ritual food.

**THE SOCIAL WORLD OF CENTER AND PERIPHERY.** The social world in which Aztec ritual sacrifice developed was a rapidly expanding empire, organized around the capital city of Tenochtitlan between 1426 and 1521. This state organization was created and maintained, in part, by military force and a religious cosmology pervaded by themes of competition, conflict, agricultural regeneration, warfare, and the ritual killing of gods and men. In the ninety-plus years of the rise of Aztec power, the elites of Tenochtitlan—who conceived of their world as *cemanabua*, a “land surrounded by water” that was divided by the gods into four quadrants emanating from the capital—constructed the largest and most powerful political state in Mesoamerican history. This achievement of centralization was accomplished through the military conquest of scores of communities that lay in all directions from the capital. This center-oriented cosmological and social world was hampered by a pulsating political process marked by constant rebellions, secessions, and realignments by allies. One of the major political and religious instruments in stabilizing peripheral territories, and in the acquisition of massive tribute payments such as maize, beans, cloth, war service, and labor, was the periodic, sometimes large-scale sacrifice of enemy warriors at the major temples of Tenochtitlan. Some of these sacrifices constituted theatrical ritual displays of the ideology, wealth, and symbolism of the exemplary center for the purpose of establishing and expanding Aztec authority within and beyond the Valley of Mexico.

This pattern of conquest, tributary control, and human sacrifice was already a traditional practice in Mesoamerica when the Aztec ancestors, the *Chichimec* (sons of the dogs), migrated into the valley in the thirteenth and fourteenth centuries. At that time, the Valley of Mexico was politically fragmented into a myriad of small, warring city-states (each with a population of between ten and fifty thousand) in constant competition and conflict for political, ritual, and economic control. While human sacrifice as an instrument of political intimidation and religious devotion was widely practiced and regulated by several calendars, the Aztec expanded its uses during the fifteenth and early sixteenth centuries.

The most powerful city-state encountered by the Aztec during their rise to dominance was the Tepenac empire, which consolidated some areas of the central valley in the late fourteenth and early fifteenth centuries. Around 1424, the Aztec of Tenochtitlan and the city-states of Texcoco and Tlacopan successfully rebelled against the Tepenac and formed a state organization called the Triple Alliance, which took over the Tepenac patterns of conquest, territorial control, and tribute payments. However, during the next ninety years, Aztec *tlatoanis* (chief speakers/rulers) directed aggres-

sive military campaigns to the north, south, east, and west of the city and central valley in order to expand their territorial and tributary empire. In some cases, large-scale military campaigns were carried out at great distances from the capital. These expansions into peripheral territories resulted in both new acquisitions of land and tribute but also terrible defeats of the Aztecs at the hands of the Tlaxcala-Puebla Valley kingdom in the east and the Tarascan state in the west.

**The Flowery Wars.** One of the most important ritual and political institutions of the Aztec Empire was the *Xochiyaoyotl* (Flowery Wars), which lasted from 1450 to 1519 and consisted of a series of scheduled battlefield confrontations between warriors of the Triple Alliance and warriors of the Tlaxcala-Puebla Valley kingdoms. In recent years a controversy has arisen over the causes and significance of the Flowery Wars. According to indigenous accounts that reflect the ideology of Aztec elites, the “wars” were staged primarily to provide sacrificial victims for ritual festivals and to keep the warriors in training. One argument is that the devastating famines of 1450 to 1454, during the reign of Motecuhzoma Ilhuicamina (Moctezuma I) (1466–1520) were interpreted by the priestly elites as a sign of angry gods who needed a greater supply of warrior sacrifices. A sixteenth-century chronicler, Fray Diego Durán, states that the Flowery Wars were instituted for the specific purpose of supplying victims for the Templo Mayor (Great Temple) of Tenochtitlan, where the shrines of Huitzilopochtli and Tlaloc stood. Whereas the actual social causes were almost certainly more complex, the argument put forth by Tlacaellel, the chief adviser of Motecuhzoma Xocoyotzin (Moctezuma II) (1502–1520) represents the Aztec vision well. He compared a warrior going to the Flowery Wars with a merchant going to distant markets to purchase luxuries. The god and his army went to the battlefield to purchase blood and hearts, the luxuries of the temples.

Recent research has expanded our understanding of the Flowery Wars by revealing that they

began almost as demonstration wars or tournaments, with limited numbers of elite combatants, no intentional killing, and the release of prisoners. A convincing display of superiority could lead to capitulation, but if that failed, the war escalated over a period of years: ever larger numbers of combatants were involved; the types of weapons allowed expanded to include those, such as bows and arrows, that inflicted indiscriminate death; captives were sacrificed and battles became lethal confrontations. (Hassig, 2001, p. 320).

Thus, these military confrontations resulted not just in the capture of warriors for temple sacrifice but eventually in large-scale battlefield killing that left the competing armies depleted and in disarray. In these cases, the Flowery Wars reflect true warfare conditions between states, not simply the acquisition of warriors for sacrifice in the capital. Further, it is certain that during periods of truce between these ritually warring kingdoms, rulers of enemy territories were invited

to witness the theatrical sacrifice of warriors in the ceremonial center of Tenochtitlan. Hidden behind special canopies, these visiting lords witnessed the ritual devastation of allied and enemy warriors. According to Johanna Broda, the Aztec rulers organized the ceremonies so that their enemies could see “the greatness of Mexico” and in order to “bewilder them, fill them with fear, . . . in order to show that the Aztecs were the masters of all the riches of the earth” (Broda, 1970, p. 234). In this case, the rulers from the peripheries of the Aztec state were brought to the center to witness the ceremonial authority of the capital, Tenochtitlan, which assisted the Aztec in their purpose of achieving political superiority.

Whereas the Aztecs were able by the middle of the reign of Motecuhzoma Xocoyotzin to consolidate scores of city-states into their empire and to intimidate many others into uneasy alliances, their world was repeatedly shocked by rebellions and defeats at the peripheries of their empire. These tensions put the Aztec state in an atmosphere of periodic crisis and regeneration and likely contributed to the escalation of ritual human sacrifices in the ceremonial center of the capital.

It must be noted, however, that human sacrifice was practiced prior to the Aztec Empire and in many parts of Mesoamerica. There is evidence of human sacrifice among the Olmecs who date back to 1200 BCE and the Classic Maya inscriptions have a special glyph for the notion of sacrifice that sometimes referred to the ritual killing of a defeated, rival king. The ritual torture of prisoners at ceremonial temples as well as the ritual dismemberment and beheading of prisoners is shown on murals and painted vessels from numerous Maya archaeological sites. As González Torres writes, sacrifice is now known to have taken place at the great city of Teotihuacan in central Mexico.

Recent excavations in Teotihuacan have proved that human sacrifice was practiced there on a large scale. So far, 126 skeletons have been found in or around the temple of Quetzalcoatl, and archaeologists think there were at least 272 individuals represented in remains associated just with this building. One hypothesis is that they constituted a foundation sacrifice that may have been part of a great ceremony dedicated to the deities of water, just before the completion of the temple. (González Torres, 2001, p. 103)

Whereas this essay focuses intensely on the Aztec patterns and practices, other Mesoamerican cultures devised elaborate sacrificial practices that deserve further attention.

**COSMOLOGY OF HUMAN SACRIFICE.** In the various creation myths and sacred histories found in such representative works as the *Historia de los Mexicanos por sus pinturas*, the *Leyenda de los soles*, and Fray Bernardino de Sahagún’s *Historia general de las cosas de la Nueva España* (1569–1582), the Aztec cosmos is shown to have several distinctive qualities, including a dynamic, unstable, and destructive cosmic setting that is marked by sharp alternations between order

and disorder, cosmic life and cosmic death. This oscillation reflects historical developments in which the collapse of specific city-states or kingdoms resulted in the initial fragmentation but later proliferation of new communities.

At least three major cosmogonic episodes contain paradigms for the Aztec practices of warfare and human sacrifice. A review of these episodes reveals three important patterns: first, a widening of the pattern of sacrifice from sacrifice to a single deity to sacrifice to masses of deities, and, second, the conquest and sacrifice of gods from the periphery of the cosmos by the gods and warriors at the center of the world. In some cases a third pattern appears—the victory of a weaker god or brother over the dominant sibling or deity.

A major cosmogonic episode related to human sacrifice is reported in Sahagún’s *Florentine Codex* as occurring after the universe has passed through the first four cosmogonic ages. We are told that during the night the gods gathered around a divine fire at Teotihuacan (abode of the gods) to discuss who take it upon himself to “be the sun, to bring the dawn” (vol. 7, p. 6). Following four days of penance and ritual, the god Nanahuatzin (the pimply one), dressed in ceremonial garb, hurled himself into the fire, followed by a second deity, Tecuciztecatl (lord of snails). Immediately, an eagle and a jaguar rose from the flames. “From this event it is said, they took the custom whereby one was called valiant, a warrior” (vol. 7, p. 6). Then the dawn appeared in all directions. Uncertain as to where the sun would rise, the gods fell upon their knees. Quetzalcoatl looked eastward and “when the sun came to rise, when he burst forth, he appeared to be red, he kept swaying from side to side” (vol. 7, p. 7). The gods were faced with an unstable, threatening cosmic orb born out of the self-sacrifice of two of their number. Because of the motionless sun, the gods decide to sacrifice themselves, saying, “Let this be, that through us the sun may be revived. Let all of us die” (vol. 7, p. 7). The wind god, Ecatl (Ehécatl), “deals death” to the mass of deities, but the sun still fails to “follow his path.” In desperation, Ecatl “exerted himself fiercely, and violently as he blew” and the sun “went on his way” (vol. 7, p. 7). Thus began the fifth and present age—the Aztec age—created when one courageous warrior god sacrificed himself, followed by the sacrifice of almost all of the gods. It may be that this cosmogonic sacrifice served as the religious justification for the increase in sacrifices at later ceremonial cities such as Tenochtitlan.

**COSMIC SACRIFICE OF HUITZILOPOCHTLI.** The cosmic pattern of mass sacrifice to energize the sun is repeated in a subsequent episode in which terrestrial warfare and human sacrifice are created by the gods to provide for their nourishment. In one version, the god Mixcoatl (cloud serpent) creates five women and four hundred Chichimec warriors to stir up discord and warfare. While the warriors pass their time hunting and drinking, the god sends the five human beings to slay them. In this account, war is created specifically to provide sacrificial victims for the gods but again we see a large number of sacrifices taking place.

However, the specific paradigm for massive sacrifices of enemy warriors at Tenochtitlan appears in the *teotiuicatl* (divine song) of the birth of Huitzilopochtli, the Aztec war god. This narrative illustrates the pattern of the conquest and ritual killing of warriors from the periphery of the state at the major temple in the heart of the capital. The story begins when the mother of the gods, Coatlicue (serpent skirt), becomes pregnant while sweeping out the temple at Coatepec (serpent mountain). When her daughter Coyolxauhqui hears of the pregnancy, she incites her 399 siblings to dress for war. The text in book 3 of Sahagún's *Historia* reads, "They were very angry, they were very agitated, as if the hearts had gone out of them. Coyolxauhqui incited them, she inflamed the anger of her brothers, so that they should kill her mother" (p. 6). Next, Coyolxauhqui directs them to dress for war: "They distributed among themselves their paper garb, the anecuyotl, the nettles, the streamers of colored paper, . . . their arrows had barbed points, . . . then they began to move" (p. 6). Following a journey through many towns, the army, led by Coyolxauhqui, charges up Serpent Mountain to kill Coatlicue. As they reach the top, Huitzilopochtli is born fully dressed and attired for war. Attacking Coyolxauhqui, he cuts off her head and dismembers her. The text notes, "The body of Coyolxauhqui rolled down the slope; it fell apart in pieces; her hands, her legs, her torso fell in different places" (p. 7). Next, Huitzilopochtli attacks the other warriors: "He pursued them, he chased them like rabbits, all round the mountain . . . four times, . . . with nothing could they defend themselves. He chased them, he drove them away, he humbled them, he destroyed them, he annihilated them" (p. 7). Following the killing of the enemy warriors at the mountain, he takes off their costumes and "introduces them into his destiny" (p. 7).

As the significant excavations (1978–2003) of the Templo Mayor of Tenochtitlan have revealed, this mythic episode was replicated in the architecture and ritual action of the temple, which was dedicated to Huitzilopochtli and Tlaloc. It has been learned that the temple was called "Coatepec" by the Aztec. Its arrangement of parts, with Huitzilopochtli's shrine at the top of one of the great stairways and the eleven-foot-diameter round stone depicting the dismembered Coyolxauhqui located at the bottom, is an architectural repetition of this mythic episode. Ethnographic research has shown that the largest number of ceremonial sacrifices of enemy warriors from surrounding communities took place at this temple. As the divine song of Huitzilopochtli's birth states at the end,

The Méxica venerated him, made sacrifices to him, honored and served him. And Huitzilopochtli paid back those who behaved that way. And his cult was taken from there, from Coatepec, the Mountain of the Serpent, as it was practiced in ancient times. (Sahagún, vol. 3, p. 8)

As remarked earlier, many mythic episodes related to sacrifice constitute an "overthrow" episode in which the younger, weaker or more vulnerable sibling or god overcomes the

older or more powerful sibling resulting in the death of the latter and the creation of a new age, place or era. In the three cases above, we see this pattern acted out when Nanahuatzin becomes the hero god of the Fifth Sun, when the five women take on the role of sacrificing the lazy male deities and when the miracle child Huitzilopochtli defeats his fully grown, experienced warrior sister. In these and many cases, the universe is renewed as a result of an "overthrow" of the younger sibling against the older and more powerful god.

**PRACTICE AND PARAPHERNALIA OF HUMAN SACRIFICE.** It must be understood that the "debt payments" by humans to the gods who created them and the universe—what we are calling human sacrifice—were carried out within a larger, more complex ceremonial system in which a tremendous amount of energy, wealth, and time was spent in a variety of ritual festivals dedicated to a crowded and active pantheon of divinities who needed to be nurtured. This dedication is reflected in the many metaphors and symbols related to agricultural renewal, war and sacrifice. Blood was called *chalchihuatl*, meaning "precious water." Human hearts were likened to fine burnished turquoise, and war was *teotlatchinolli*, meaning "divine liquid" and "burnt things." War was the place "where the jaguars roar," where "feathered war bonnets heave about like foam in the waves." And death on the battlefield was called *xochimiquiztli*, meaning "the flowery death."

The crowded ceremonial schedule was acted out in the many ceremonial centers of the city and empire. The greatest single ceremonial precinct, that surrounding the Templo Mayor, formed the axis of Tenochtitlan and measured 440 meters on each of its four sides. It contained, according to some accounts, more than eighty ritual temples, skull racks, schools, and other ceremonial structures. Book 2 of Sahagún's *Historia* contains a valuable list with descriptions of most of these buildings, including "the Temple of Uitzilopochtli [Huitzilopochtli] . . . of Tlaloc . . . in the middle of the square; . . . it was higher; it was taller; . . . [it] faced toward the setting of the sun." Sahagún's work also contains descriptions of the kinds of sacrifices performed at various sacred places. At Teccizcalli, the Florentine Codex reports, "Moctezuma did penances; . . . there was dying there; captives died there." At Mexico Calmecac "dwelt the penitents who offered incense at the summit of the Temple of Tlaloc, quite daily." At Teccalco "there was casting of men into the fire." At the Great Skull Rack "there also . . . used to be slaying." At the Temple of Cinteotl, "the impersonator of Chicomecoatl died, at night only. And when she died, then they flayed her . . . the fire priest put on the skin." At Coaapan "the fire priest of Coatlan bathed himself." At Tilocan, amaranth-seed dough was "cooked . . . [for] the image of Uitzilopochtli." And, finally, at Acatl Yiacapan Uey Calpulli, "they gathered together the sacrificial victims called Tlalocs . . . when they had slain them, they cut them to pieces there and cooked them. They put squash blossoms with their flesh . . . then the noblemen ate them, all the high judges; but not the common folk—only the rulers." (All

quotations in the preceding passage are from Sahagún, vol. 2, pp. 179–193.)

Though important variations of ritual activity were carried out at these temples, schools, skull racks, and bath-houses, the general pattern of debt payment/human sacrifice was as follows. Most Aztec ritual began with a preparatory period of priestly fasting (*nezahualiztli*) that lasted four (or a multiple of four) days. An important exception was the yearlong fast by a group of priests and priestesses known as the *teocuaque* (god eaters) and the greatly feared *in iachhuan Huitzilopochtli in mocexihzahuhque* (the elder brothers of Huitzilopochtli who fasted for a year). This preparatory period also involved nocturnal vigils (*tozohualiztli*) and offerings of flowers, food, cloth, rubber, paper, and poles with streamers, as well as incensing (*copaltemaliztli*), the pouring of libations, and the embowring of temples, statues, and ritual participants. Dramatic processions of elaborately costumed participants moving to sacred songs played by musical ensembles passed through the ceremonial precinct before arriving at the specific temple of sacrifice. The major ritual participants were called *in ixiptla in teteo* (deity impersonators). All important rituals involved a death sacrifice of either animals or human beings.

**Autosacrifice and bloodletting.** It is often overlooked that autosacrifice or the willful piercing and bleeding was the most common form of sacrificial action carried out by the Aztecs on their own bodies. A simple way to understand the meaning of autosacrifice is to state that Mesoamerican peoples shed their own blood at the completion of major temporal cycles and periods. This reflects their understanding that the continuation of life on the cosmic and local scales depended on the ritual offerings of one's own internal divine substance—namely blood. As Cecelia Klein writes in her superb summary of this ritual practice “Maya rulers let their blood during what we now call ‘period endings,’ which could mark the successful completion of a *katun* (twenty-year period), *baktun* (four-hundred-year period), or even longer time cycle. On those occasions, autosacrifice was intended to encourage the safe transition between the old cycle and the new, and thus the continuation of life” (Klein, 2001, pp. 64–66).

Klein shows that as early as the ninth century BCE, Mesoamerican peoples were using stingray spines and other sharp instruments to ritually bloodlet themselves. This practice, as shown in the archaeological (obsidian, flint blades, animal bones—sometimes found in the foundation of buildings), iconographic (lintels, pictorial manuscripts sometimes showing the ritual instruments as elaborately decorated) and documentary (sixteenth-century accounts) evidence was carried out throughout Mesoamerican history. These practices were carried out by elites and commoners alike with the former sometimes using sharpened jaguar bones and the latter using stingray spines. The Aztecs had elaborate rules determining when and what parts of the body were to be bled. In colonial manuscripts it describes Aztec priests piercing

their tongues, thighs, calves, and there are written reports that the most committed priests pierced their tongues and penises, sometimes splitting them in two. All people—men, women, and children—were apparently expected to carry out ritual bloodletting and several Maya carvings depict royal women involved in highly important scenes of autosacrifice. As Klein writes,

These women are invariably wives or mothers of a male ruler, who typically accompanies them in the image. The most famous example is Lintel 24 from Yaxchilan. In his sixteenth-century *Relacion de las cosas de Yucatan*, the Franciscan bishop Diego de Landa reports that bloodspattered paper strips used in autosacrificial rites by the Conquest-period Yucatec Maya were eventually burned. The smoke from the burning bloodletters and bloodied papers was thought to transmit nourishment to the gods, since blood was perceived as an analogue of both fertilizing water and semen. (2001, p. 64)

The most dramatic and valued sacrifices were the human sacrifices of captured warriors and slaves. These victims were ritually bathed, carefully costumed, taught to dance special dances, and some were fattened or slimmed down during the preparation period. They were elaborately dressed to impersonate the specific deities to whom they were sacrificed. What must be emphasized—if one is to gain a deeper understanding of the indigenous practices, is that these rituals utterly transformed the identity of the human beings to be sacrificed into *teotl ixiptlas* (living images of the gods) as they had lived in the mythic times before the establishment of the daily life of the present age. This point has been made most clearly by Alfredo Lopez Austin who writes that these deity impersonators or

*teteo imixiptlabuan*, . . . men possessed by the gods, who, as such, died in a rite of renewal. The idea of a calendric cycle, or a periodic returning, in which the power of a god was born, grew, decreased, and concluded made it necessary in a rite linking the time of man to mythical time that a god would die so his force might be reborn with new power. It was not men who died, but gods—gods within a corporeal covering that made their possible ritual death on earth. If the gods did not die, their force would diminish in a progressively aging process. Men destined for sacrifice were temporarily converted into receptacles of divine fire, they were treated as gods, and they were made to live as the deity lived in legend. Their existence in the role of *ixiptlatin*, or “images” could last from a few days up to four years. (Lopez Austin, 1988, p. 377)

**Various sacrificial techniques.** The different primary sources reveal a wide range of sacrificial techniques, including decapitation (usually for women), shooting with darts or arrows, drowning, burning, hurling from heights, strangulation, entombment and starvation, and gladiatorial combat. Usually, the ceremony peaked when splendidly attired captors and captives sang and danced in procession to the temple, where they were escorted (sometimes unwillingly) up the stairways to the sacrificial stone. The victim was quickly

thrust on the sacrificial stone (*techcatl*), and the temple priest cut through the chest wall with the ritual flint knife (*techpatl*). The priest grasped the still-beating heart, called “precious eagle cactus fruit,” tore it from the chest, offered it to the Sun for vitality and nourishment, and placed it in a carved circular vessel called the *cuauhxicalli* (eagle vessel). In some cases, the body, now called “eagle man,” was rolled down the temple steps to the bottom, where it was dismembered. The head was cut off and the brains taken out. In some ceremonies the victim was beheaded and the head was placed on the *tzompantli*, a skull rack consisting of long poles laid horizontally and loaded with skulls. In many cases, the captor was decorated (for instance with chalk and bird down) and given gifts. Then, in some cases, together with his relatives, he consumed a ritual meal consisting of a bowl of stew of dried maize called *tlacatlaolli*.

Although this pattern of ritual preparation, ascent, and descent of the temple, as well as heart sacrifice of enemy warriors, dismemberment, and the offering to the gods in order to nurture them was typical, it is also important to emphasize the diversity of sacrificial festivals, which involved variations and combinations of these elements. For instance, during the feast of Tlacaxipeualiztli (the feast of the flaying of men), a prisoner of war “who came here from lands about us” was taken by a priest called the “bear man” and tied to a huge, round sacrificial stone, called the *temalacatl*, that was placed flat on the ground. The captive was provided with a pine club and a feathered staff to protect himself against the attacks of four warriors armed with clubs of wood and obsidian blades. When he was defeated he was taken off the stone, his heart was taken out, and he was flayed. His skin was then prepared to be worn by relatives of the captor and then paraded around the city going from house to house asking for gifts.

Another distinctive festival, called Toxcatl, was dedicated to the protean god Tezcatlipoca. Elaborate efforts were made to find the perfect deity-impersonator for this festival. The captive warrior had to have a flawless body and musical and rhetorical skills. For a full year prior to his sacrifice, he lived a privileged existence in the capital. He had eight servants to ensure that he was splendidly arrayed and bejeweled. Four wives were given to him during the last twenty days of his life. Just before the end of the sacrificial festival, he arrived at a small temple called Tlacoachalco. “He ascended by himself, he went up of his own free will, to where he was to die. As he was taken up a step, as he passed one step, there he broke, he shattered his flute, his whistle.” He was then swiftly sacrificed (see Sahagún, vol. 2, p. 71).

Still another remarkable ceremony was the New Fire Ceremony, also called the Binding of the Years, held only once every fifty-two years on the summit of the Hill of the Star outside Tenochtitlan. At midnight, when the star cluster called *Tianquiztli* (marketplace; the Pleiades) passed through the zenith, marking the end of the fifty-two-year calendrical cycle, a captive warrior was sacrificed. In his chest cavity a

new fire was started, marking the regeneration of the cosmos. The fire was then taken to the Templo Mayor and thence to all the cities and towns in the empire.

A remarkable festival, celebrated on the first day of the month of Atlcuaualo, involved the paying of debts to Tlaloc, the rain god. On this day, children (called “human paper streamers”) with two cowlicks in their hair and favorable day signs were dressed in costumes—some set with pearls—of dark green, black-striped with chili red, and light blue were sacrificed in seven different locations. The flowing and falling of tears of the children insured the coming of rain. It should be noted that some sources indicate the difficulty that priests had in carrying out these particular “debt payments.” The meaning of the rain-blood exchange in this ritual has been interpreted by the historian of religions Phil Arnold as follows. These child sacrifices physically constituted

the central theme of correspondence between human life and the landscape; blood and water. The former is a bodily water and the basis of human life, the latter is an earthly or heavenly blood and logically the basis of Tlalocan or the landscape’s life. The reciprocal nature of life and death was a central element in most of Aztec religious life. The ritual acquisition of water required paying a high price in children’s blood, which offset the costs of the sacrifice given by Tlaloc. The exchange was a liquid one. (Arnold, 1999, p. 227)

**CONCLUSION.** In recent years a controversy has broken out in academic and popular literature as to whether there is any reliable evidence that the Aztecs and other Mesoamerican peoples actually carried out human sacrifice. It has been argued in polemical tones that all the evidence is the result of either distorted archaeology or terribly biased Spanish sources. One motive for these denials is to protect contemporary indigenous peoples from being labeled as descending from uncivilized even monstrous cultures. For years, the word Aztec has been equated—like no other world culture—with the worst and most violent forms of human violence. In books, films, and art, the Aztecs are degraded in ways that sometimes makes a fulsome understanding and appreciation of their culture impossible. The solution is not to deny what is so clearly in the record pre-conquest and post conquest—namely that ritual violence against humans was one of the many ways the Aztecs and their precursors carried out their religious commitments, military expansions, and political dominations. The more useful approach is to study the Aztecs in the full range of their expressions in daily life and political glory—including their extraordinary linguistic achievements, their astonishing aesthetic expressions, their architectural and political practices, and their bellicose traditions of imagining and treating the human body as a receptacle of divine fire that needed to be magically transformed into a divinity, cultivated in spirit, and cut open so the plants and political forces of the world could be rejuvenated. This duality with its apparent contradictions is what makes the study of the Aztecs and all Mesoamerican peoples so interesting, challenging, and necessary. It also demonstrates in dis-

comforting ways that their contradictions—however distant from modern practices—are similar to people in modern times.

With all this cosmology, social history, and ritual practice in mind, it can be seen that Bernal Díaz del Castillo witnessed more than a massacre. He glimpsed and was later able to record with some accuracy fragments of an elaborate ritual tradition struggling to maintain the dominance of the Aztec city and its temple against threats from enemy warriors, who, like the siblings of Huitzilopochtli (and like the Spaniards), had come from the edge of the world to conquer and kill.

- Nicholson, H. B. "Religion in Pre-Hispanic Central Mexico." In *Handbook of Middle American Indians*, vol. 10, edited by

Gordon F. Ekholm and Ignacio Bernal, pp. 395–446. Austin, Tex., 1971. This classic introduction to Mesoamerican religion provides a cogent description of the salient features of Aztec ritual and human sacrifice. Key Nahuatl phrases are incorporated into the text.

Sahagún, Bernardino de. *Historia de las cosas de la Nueva España* (compiled 1569–1582; first published 1820). Translated as *Florentine Codex: General History of the Things of New Spain*, 13 vols., by Arthur J. O. Anderson and Charles E. Dibble. (Santa Fe, 1950–1982). Vivid descriptions of temples, rituals, paraphernalia, and mythology can be found in several of this work's volumes, especially volumes 2 and 3.

DAVÍD CARRASCO (1987 AND 2005)

**HUME, DAVID** (1711–1776), was a Scottish philosopher and historian. Hume was born in Edinburgh on April 26, 1711, to Joseph and Katherine Home. Most of his childhood was spent on the family estate at Ninewells, in Berwickshire, forty miles south of Edinburgh near the border of England. At age eleven Hume entered the University of Edinburgh, and upon leaving the university three years later, began to prepare for a career in law. Hume's interest in law was soon eclipsed by his passion for literature, history, and philosophy; over the following decade most of his time was spent studying what he called "polite authors" such as Shaftesbury, Butler, Locke, and Cicero. In 1734, at age twenty-three, Hume left Scotland to take a position as clerk with a Bristol merchant. It was here that he changed the spelling of his surname from *Home* to *Hume*, because in Scotland *Home* is pronounced as *Hume* is in England; Hume preferred that his name be pronounced correctly, even if it meant changing the spelling. After four months in Bristol, Hume left for the south of France, determined to pursue a life of letters.

In 1737 Hume returned from France with the two volumes of *A Treatise of Human Nature* in manuscript form. Being sure that the work would bring him instant fame and fortune, he was eager to publish without delay. In his own words, however, the *Treatise* "fell dead-born from the press." This is not to say that it was not widely read both in Britain and on the continent. Hume undoubtedly meant that the ideas put forth in the *Treatise* fell dead-born on the minds of those who read it. Reviews of the *Treatise* were universally negative.

Hume's disappointment was profound. During the six-year period from 1739 to 1745 he lived in virtual seclusion at Ninewells, writing the third volume of the *Treatise* (published in 1740) and experimenting with the essay form as a medium of expression. Hume's first efforts as an essayist resulted in a two-volume work published in 1742 under the title *Essays Moral and Political*. This was Hume's first successful publication. Only a small selection of the twenty-seven essays therein contained can be counted as serious philosophical pieces, and these were not the ones that accounted for the popularity of the collection as a whole.

Short of money, in 1745 Hume took a position as tutor to the marquis of Annandale, and in the same year applied for the chair of Ethics and Pneumatical Philosophy at the University of Edinburgh. Hume judged that a regular academic appointment would provide both the income and leisure necessary to pursue a full-time life of study. However, his application was opposed by the principal of the university, who accused him of atheism, heresy, and skepticism. His failure to secure this appointment was the second great disappointment of his life.

Hume's next two years were spent traveling in France as secretary to James St. Claire, a general in the British army. The army was of interest to Hume for financial reasons only: He stayed just long enough to accumulate the money needed for another retreat to his study. Between 1747 and 1751 he composed and published his two great treatises: *An Enquiry concerning Human Understanding* (originally titled *Philosophical Essays concerning Human Understanding*), and *An Enquiry concerning the Principles of Morals*. These were the first of Hume's serious philosophical works to achieve acclaim.

In 1752 Hume secured an appointment as librarian to the Faculty of Advocates in Edinburgh. This was the first time Hume had had steady access to a major library. He took the opportunity to pursue a project of long-standing interest—the detailed study of English history. Between 1754 and 1761 Hume published, in installments, his masterful six-volume *History of England*. Regarded as a classic in Hume's own time, this text remained the standard in its field until the end of the nineteenth century.

In 1763 Hume became secretary to the British embassy in Paris, spending the next three years writing and conversing with the luminaries of the Parisian intellectual set. By this time he was generally regarded as Britain's foremost man of letters. Hume returned to England in 1766 as under secretary of state, but he resigned from the diplomatic service three years later, retiring to Ninewells. In 1775 Hume was stricken with an internal disorder that claimed his life on August 25, 1776.

David Hume was a man of gentle bearing—humane, tolerant, charitable, and generous in his opinions of others. In his autobiographical essay “My Own Life,” Hume characterized himself as being of “cheerful nature.” From all reports, his wit was sparkling; he was a favorite both in the polite salons of Paris and the rude pubs of Edinburgh. To his French intimates he was known as “le bon David,” while his many friends in Scotland referred to him as “Saint David.” Although Hume never married, he was not unpopular with the ladies; his charm and good humor more than compensated for his obese physical appearance.

Directly following its poor reception in 1739, Hume made two attempts to stimulate interest in *A Treatise of Human Nature*. In 1740 he published an essay titled “An Abstract of a Treatise on Human Nature,” which identified the nub of the work's method and summarized some of the con-

clusions of the text. At the same time, Hume was busy at Ninewells preparing a corrected edition of the first two volumes, which he hoped would remove the misunderstandings that his first efforts had generated. But the corrected edition never appeared. The only changes made during this period that survived in printed form were included in an appendix to the *Treatise* published together with the third volume in 1741. Neither the publication of the *Abstract* nor the materials appended to the *Treatise* had the desired effect. It was not until Hume cast the basic theses of the *Treatise* into essay form and released them in the *Enquiries* that the ideas first delivered in the *Treatise* received the sort of attention Hume thought they deserved. In later years, Hume in effect abandoned the *Treatise* in favor of his *Enquiries*. In the “Author's Advertisement” printed in volume 2 of the 1777 edition of Hume's works, Hume described the *Treatise* as a “juvenile work,” stating that he had made an “error in going to press too early,” and announcing that the *Enquiries* rather than the *Treatise* should be taken as expressing his considered views on the topics therein discussed. Still, succeeding generations of scholars have, as it were, rediscovered the *Treatise*. Most students of the history of philosophy now regard it as Hume's foremost contribution to philosophical literature.

Regarding the impact of the philosophical views first expressed in the *Treatise* and restated in the *enquiries*, two comments are in order. First, book 1 (“Of the Understanding”) and its companion, *An Enquiry concerning Human Understanding*, are generally thought to contain definitive statements of the epistemological theses associated with classical British empiricism and generative of the empiricist trends in Western philosophy during the nineteenth and twentieth centuries. In the introduction to the *Critique of Pure Reason*, Kant acknowledges Hume as the one who inspired his own probing into the foundations of human knowledge. The empiricist elements in the philosophies of Mill, Russell, Carnap, and Wittgenstein are in no small measure traceable to the direct or indirect influence of Hume.

Second, it should also be noted that, in book 3 of the *Treatise* and in *An Enquiry concerning the Principles of Morals*, Hume sets the stage for much of what follows in nineteenth- and twentieth-century moral philosophy. Here Hume works out a hedonistic, rule-based, and utilitarian theory of ethics very much like the one suggested more than a hundred years later by John Stuart Mill in chapter 5 of *Utilitarianism*. This theory has served as one of the major foci of moral-theoretical reflection in twentieth-century philosophical literature. It might be added that at least some commentators (e.g., A. J. Ayer, 1980) claim to find in Hume's ethical writings rudiments of the so-called emotive analysis of ethical language—a theory not brought to maturity until the mid-twentieth century, but very influential in British-American moral philosophy since that time. Whether or not this last claim can be sustained, it is clear that Hume stands as a major figure in the history of ethics. Putting it all together, it is hard to imagine how the last two hundred years of Western phi-

losophy would have gone, had the ideas expressed in the *Treatise* really fallen dead-born from the press.

The corpus of Hume's writings includes seven texts that specifically treat religious topics. In order of their appearance in published form, they are: (1) "Of Superstition and Enthusiasm," published in 1742 as one of the *Essays Moral and Political*; (2) "Of Miracles" and (3) "Of a Particular Providence and of a Future State," which appeared in 1748 as parts 10 and 11 respectively of *An Enquiry concerning Human Understanding*; (4) "The Natural History of Religion," one of *Four Dissertations* published in 1757; (5) "Of Suicide" and (6) "On the Immortality of the Soul," brought out together in 1777 under the title *Two Essays*; and (7) the *Dialogues concerning Natural Religion*, which occupied Hume's attention periodically during the last twenty-five years of his life and was finally published in 1779.

All these texts are critical of religion—of religious institutions, religious practices, theological doctrines, and/or theological arguments. Correlatively, all were greeted in orthodox circles with suspicion and, in some cases, with hostility. Most were in one way or another suppressed either by Hume or by his publishers for fear of reprimand from the religious community. Thus, "Of Miracles," written prior to 1739 and originally intended for inclusion in the *Treatise*, was deleted from the text prior to publication, because Hume judged that it might be found scandalous and thus detract from the reception of his work. Similarly, "Of Suicide," "Of the Immortality of the Soul," and an early version of *Dialogues concerning Natural Religion* were all scheduled for publication in 1756, but they were suppressed by Hume's publisher for prudential reasons. All three were published only after Hume's death and even then without the author's or publisher's name attached. It should be recalled that in 1745 Hume's appointment at the University of Edinburgh had been opposed because his writings were judged wanting on religious grounds. Eighteenth-century Britain could be hard on religious dissenters; neither Hume nor his publishers sought to cause offense.

Although Hume is best known for his views in epistemology and moral philosophy, the essay "Of Miracles" and the *Dialogues concerning Natural Religion* are generally regarded by contemporary philosophers as classics in the philosophy of religion. "Of Miracles" is centered on the question of whether evidence supporting the claim that a given miracle occurred could ever be strong enough to warrant belief, given the facts that (1) a miracle is by definition an event whose occurrence violates natural law, and (2) the evidence supporting the claim is derived entirely from human testimony. Hume's negative verdict is based on a general historiographical principle that is applicable not only in the study of religion, but in any area of inquiry that relies on human testimony as a major source of evidence: namely, that the credibility of any given piece of testimony is in part a function of the plausibility of what is affirmed within it.

*Dialogues concerning Natural Religion* is focused on a very special version of the argument from design used by a number of eighteenth-century devotees of Isaac Newton's theological writings. In the course of the discussion, Hume not only delivers what many believe to be the definitive refutation of the argument from design (even anticipating the nineteenth-century Darwinian account of adaptation in nature), but he also presents a series of sharply penetrating critical studies on a wide variety of other important theological topics such as divine attribution, the cosmological argument for the existence of God, and, especially, the problem of evil. It should be added that, apart from its stunning philosophical merits, Hume's *Dialogues* can also be credited with what is perhaps the most beautifully executed employment of the dialogue form in Western philosophical literature.

## BIBLIOGRAPHY

### Works by Hume

*Dialogues concerning Natural Religion*. In *Essential Works*, edited by Ralph Cohn; a reprint of the original 1779 edition. There are modern editions by Norman Kemp Smith (Oxford, 1935), Henry Aiken (New York, 1948), and myself (Indianapolis, 1970).

*History of Great Britain from the Invasion of Julius Caesar to the Revolution in 1688*. 6 vols. The most recent edition is by R. Worthington (New York, 1880).

*Hume on Religion*. Edited by Richard Wollheim. New York, 1963. This text includes all seven of Hume's works on religion and the autobiographical essay "My Own Life."

*Hume's Enquiries* (1894). Edited by L. A. Selby-Bigge. 3d ed. Oxford, 1975. Contains both *An Enquiry concerning Human Understanding* and *An Enquiry concerning the Principles of Morals*. There is also a modern edition of the *Enquiry concerning Human Understanding* with Hume's autobiographical essay, "My Own Life," and a letter from Adam Smith concerning Hume's death (La Salle, Ill., 1956).

*Hume's Philosophical Works*. 4 vols. Edited by Thomas H. Green and Thomas S. Grose. London, 1874–1875. Contains all of Hume's philosophical works except the "Abstract."

*A Treatise of Human Nature*. Edited by L. A. Selby-Bigge. Oxford, 1888. Book 1, "Of the Understanding," has been published more recently in a volume that includes the appendix to the *Treatise* and the "Abstract," edited by D. G. C. MacNabb (London, 1962).

### Works about Hume

Ernest C. Mossner's *The Life of David Hume* (New York, 1954) is the best available biography. It is a rich and abundant account. Norman Kemp Smith's *The Philosophy of David Hume* (London, 1941) is a well-worked-out analysis of Hume's ethical and epistemological theories. Barry Stroud's *Hume*, a thoughtful and patient work with a useful bibliography, covers much the same ground (London, 1977). See also A. J. Ayer's *Hume* (New York, 1980). The various editions of Hume's *Dialogues* by Kemp Smith, Aiken, and myself all contain commentaries on the text. Kemp Smith's is thought by some to be definitive. My own is more detailed (110 pages) and also contains a bibliography. See also Richard Wollheim's introduction to *Hume on Religion*. Wollheim

comments briefly but broadly on Hume's writings on religious topics.

NELSON PIKE (1987)

## HUMOR AND RELIGION

 HUMOR AND RELIGION IN EAST ASIAN CONTEXTS  
 HUMOR AND ISLAM  
 HUMOR, IRONY, AND THE COMIC IN WESTERN  
 THEOLOGY AND PHILOSOPHY

### HUMOR AND RELIGION: AN OVERVIEW

The topic of humor and religion poses a puzzle. As witnessed by notions such as *Homo ridens* and *Homo religiosus*, both humor and religion have been regarded as defining the human condition. Somewhat differently, both have often been held to be universals found throughout history and across cultures. Even if one questions their use to define the human condition or their status as universals, one must admit that both humor and religion do seem to be found almost everywhere. The relation of religion and humor, however, has not formed a central topic for reflection in the study of religion. Although a number of well-known instances of the conjunction of the two—such as that of tricksters or the Christian festival Carnival—have drawn considerable attention and theoretical reflection, both classic and more current theorists of religion rarely give the topic extended, if any, treatment. In addition, no prominent general studies of the topic exist. Introductory textbooks for the study of religion and encyclopedias of religion have also given the topic rather scant attention.

The puzzle might be stated thus: humor and religion seem to be ubiquitous, yet their relation is rarely treated. Two possible explanations present themselves. The first is that religion and humor represent two different modes of awareness, experience, or cognition that exist only occasionally in any significant relation to one another. This view can be seen, for instance, in the still rather commonly held idea that religion deals with serious matters and humor with the nonserious. A second explanation is that the relation of religion and humor is of more importance than has generally been recognized and deserves fuller exploration and reflection. This overview will attempt, through offering a provisional map of some of the ways humor and religion are related, to suggest that the second explanation is closer to the truth.

Humor and religion clearly share one thing in common. Discussions of the two terms frequently claim at some point that definition of the concepts is almost impossible. Rather than attempt formal definitions here, a characterization of the relation of religion and humor in terms of the interplay of congruity and incongruity will be offered as a means of orienting the discussion. Whether cast in terms of salvation,

order, meaning, or redemption, religion frequently has been characterized as preoccupied with congruity, with bringing human hopes, expectations, actions, and longings into agreement with an ideal that may be described either as conformity with some form of cosmic order or as liberation from some form of oppressive order. Such characterizations of religion are of value as long as religion is not viewed solely in terms of a concern with congruity. A preoccupation with congruity must inevitably result in—perhaps even inevitably generate—an encounter with a range of incongruities including those of both a tragic and humorous sort.

Religion then may be conceived as a complex interplay of congruity and incongruity that inevitably entails humor. Humor here is understood in the most inclusive sense as embracing phenomena such as wit, satire, and comedy from which it is sometimes distinguished. Whatever form it may take, humor may be said to involve a perception of incongruity generated by the intrusion of an unexpected event, logic, or perception that calls into question, at least temporarily, some standard expectation, belief, or orientation.

Humor and religion share something else in common. Although the value of both has been questioned by many throughout history, there is still a widespread assumption at present that religion and, perhaps especially, humor are inherently good, healthy, and liberating. Both seem best approached, however, as morally neutral terms. Humor and religion may serve at times to free people from imposed conceptual constraints, overcome a sense of self-importance, and establish community, yet both may also function to denigrate others, enforce social hierarchies, and underscore the differences between communities.

**HUMOR IN MYTH, SACRED TEXTS, AND LITERATURE.** Although there are no comprehensive comparative studies, humor has played important roles in the central myths and sacred texts of many religious traditions. It has even been argued that a fundamental characteristic of mythic narratives is their humorous nature. In this view, myths in a variety of ways present humorous incongruities that serve to challenge the confines of normal, everyday patterns of thought (Bolte, 1968, pp. 35–72). Although only a few preliminary observations can be offered here, a comparison of the roles of humor in myths, tales, and sacred texts would seem to be a promising project: Are mythic narratives inherently humorous? What sort of sense of humor, if any, do the gods possess? What roles are accorded humor in the interaction of gods and people? What roles does humor play in bringing into being, maintaining, or disrupting cosmic order?

Humor has figured significantly in the mythologies, stories, and folklore of what have been variously termed savage, primitive, nonliterate, primal, indigenous, tribal, or traditional religions. Most attention here has been focused on figures known as tricksters, a term that seems first to have been applied to the often humorous, disruptive, seemingly amoral, and yet at times creative figures appearing in Native American myth and folklore. The term has been extended to

mythological figures in Africa, South America, Southeast Asia, and well beyond. Trickster or tricksterlike figures have even been taken as a fundamental characteristic of traditional religions (Smith, 1995, pp. 1093–1094).

Tricksters usually are presented as having inhabited the world in mythic times when the world was moving toward its present form and a range of supernatural beings was active and present, though some figures identified as tricksters are active and present in this age. Tricksters often exhibit a combination of divine, human, and animal characteristics, and their actions contribute to shaping the world and human condition. They are also frequently preoccupied with their bodies, sexuality, bodily orifices and excretions, and boundaries and limits of all kinds. Tricksters' excesses and experimentation with the body often lead to comic situations. As their name suggests, they often play tricks, with their tricks sometimes backfiring and rendering themselves rather than their victims the objects of humor. Among the many functions and meanings attributed to tricksters is mocking and calling into question both human and divine solemnity.

The usefulness of the category of the trickster has been questioned, and the term has no doubt often been overextended, including applications to the Marx Brothers, Jesus, the Japanese media, and Thomas Merton (1915–1968). For the purposes of this essay, however, scholarship on the trickster clearly establishes a valuable point. Whether narratives of tricksters or tricksterlike figures form a part of central myths or whether they exist as separate narratives commenting on other myths, they clearly demonstrate that humor in a variety of forms has played a central role in the myths of many traditional religious communities. In other words, even if the trickster does not represent a coherent category or concept, the variety of figures gathered under the term at least testify to the importance, if not centrality, of humor in traditional religions.

The history of the study of tricksters is also of significance for reflecting on the relation of humor and religion. In the nineteenth and early twentieth centuries when missionaries and anthropologists were encountering religious communities with myths, tales, and rituals containing humor linked with sexuality, scatology, and other "scandalous" elements, such myths, tales, and rituals were linked with savagery, primitiveness, and childishness. At work here of course were normative assumptions about the nature of proper religion, derived largely from Christianity as well as from the Enlightenment's preoccupation with rationality. The ensuing century or so, however, has seen some change; tricksters and the sensibilities they embody are as like as not to be viewed as positive, as possessing something modernity and Christian traditions have regrettably lost. The reappraisal in the last hundred years of what were deemed "primitive" traditions has at least partially hinged, in other words, on a reappraisal of the humor to be found in such traditions.

Humor has played important roles as well in the myths of religions beyond those once deemed primitive. The gods

of Greek myth, whom Christians came to regard as immoral, are a case in point. While not infrequently laughing at and mocking humans, the gods also acted much like humans: they played tricks on one another, made foolish mistakes, committed adultery, and laughed at and made fun of one another. Being sexual beings themselves, at least some of the Greek gods also had an appreciation for the humorous dimensions of sexuality. As seen in the myth of Demeter, getting the gods to laugh was one way of restoring the world to order and fertility. Dionysos was a god of laughter linked with sexual excess and inebriation. In short it is difficult to conceive of the Greek gods and their relations to humans without taking into account humor.

There is probably no corpus of myth richer in humor than that of India. Though India has produced as refined, abstract, and sublime conceptions of the divine as anywhere, Indian deities, despite all the powers they may possess, share with humans most if not all of the elements necessary to generate a wide variety of humor: folly, ambition, excessive sexual appetite, curiosity, conflicting desires, a delight in trickery, and so forth. Humor is linked also to an important theme running throughout Vedic, epic, and Puranic myths: "the excess of anything, bad or good—such as the virtue of an ascetic—poses a threat to the balance of a closed universe" (O'Flaherty, 1973, p. 282). Mythic exploration of the consequences of excess frequently leads to comic situations, humor, and laughter. When confronted with Śiva's aim to overcome attachment to sexuality through ascetic practices, Kāma, the god of sexuality, commented: "If a man who is wise and intent upon release tries to slay me, I dance before him as he devotes himself to attaining the bliss of liberation—and I laugh at him" (*Mahābhārata* 14.13.16–17). Given Indian deities' explorations of the consequences of excess and the delight of at least some gods in trickery, a number of divine or semidivine figures in Indian myth such as Indra, Viṣṇu, Kṛṣṇa, and the sage Nārada have sometimes been identified as tricksters or tricksterlike figures. It has also been suggested that the Indian view of this world as *māyā* (illusion) in contrast to another level of ultimate reality sets up a potentially comic or humorous situation: suddenly seen from the perspective of a higher truth, the events of this world can take on the quality of a joke.

Given the influence they have had on the Western study and conceptualization of religion, the sacred texts of the Abrahamic traditions deserve special attention. The holy books of Judaism, Christianity, and Islam have frequently been characterized as being devoid of humor, particularly when satire and ridicule are excluded from the category of humor. This in itself, of course, is evidence of an important, if negative, relation between humor and religion and has done much to shape Western conceptions of the relation of humor and religion by suggesting that sacred matters and texts are or should be marked by an absence of humor. There has been a growing effort in recent years, however, to recover the humorous dimensions of these sacred texts.

Though conceived in various ways, the god of the Abrahamic traditions stands apart from the gods of many other Middle Eastern religions in not having, with some notable exceptions, what might be termed an active sexual life and in rejecting many of the sexual aspects of fertility rituals that were elsewhere a source of humor and laughter. Humor seems, for instance, to have been an issue in the confrontation between the cult of Baal and the cult of Yahweh. In the cult of Baal (as in many traditional religions throughout the world), laughter was associated with rituals of renewal and fertility that included sexual symbolism and practices; joy, sexuality, laughter, and fertility were often linked. The prophets of Israel opposed and ridiculed such practices as well as the gods associated with them.

Perhaps the most prominent mode of humor found in the Hebrew scriptures is the humor of mockery and derision. In *Psalms* 1 and 2, which are often held to serve as guides for reading the entire book of *Psalms*, mockery plays a central role. In *Psalms* 1 the righteous and those who scoff at their implausible beliefs are contrasted. In *Psalms* 2 the Lord “sits in the heavens and laughs” at those who oppose him. A number of the *Psalms* return to these themes, with the righteous being laughed at by the unrighteous and vice versa. The Lord is portrayed as a god who laughs at the unrighteous, knowing that they will come to ruin and eventually understand that what they took as implausible or incongruous is not so.

In addition to the aggressive humor of satire and ridicule, the Hebrew scriptures are marked by other types of humor. The most noted episode involving humor and laughter is found in *Genesis* 17 and 18 where God reveals to Abraham and then Sarah that they shall have a child. The initial response of both Abraham and Sarah is to laugh at the implausibility of the aged Sarah bearing a child. God upbraids Sarah for laughing at his pronouncement. In addition, God stipulates that the child shall be named Isaac, which means “laughter” or “he laughs,” and Sarah exclaims that God has given her reason to laugh. Although the story has been interpreted in various ways, it is difficult to deny that humor based on a perception of incongruity is at the heart of this story of the interaction of God, Abraham, and Sarah. A crucial moment in the Abrahamic tradition is thus marked, in more than one way, by laughter and reflection on the appropriateness of laughter.

Arguments have been made for the existence of a wide variety of forms of humor in various parts of the Hebrew scriptures. Considerable attention has been given to humorous punning, verbal wit, and irony in a number of texts ranging from *Genesis* to *Proverbs*; *Jonah* has been treated as a parody of the standard prophetic narrative or, alternatively, as a satire of a prophet; and figures such as Jacob have been discussed as tricksters. Many of the Hebrew Bible’s narratives, including *Job*, have also been understood as comedies—narratives resolving in a more or less happy ending and, at least in some readings, involving humor.

Considerable humor has also been found in the commentary on sacred texts found in the Talmud and in the Midrash. Included here are witty disputations, farcical animal fables, humorous stories about sinners as well as pious fools and rabbis, portrayals of God as being a bit of a trickster, and some joking at the expense of Jesus and Christians. The flavor of some of this humor is suggested by an encounter between Moses and God: “When Moses went up to God he found God weaving crowns for the letters of the Law. God said to him: Do men give no greetings in your city? Moses said: Does a slave greet his master? God replied: You ought to have wished me success. Then Moses said: May the power of the Lord be great, according as *Thou* hast spoken” (Jónsson, 1985, p. 54). There is also, of course, a rich literature of satire, parody, humorous tales, and jokes to be found throughout Jewish traditions which forms an additional “commentary” on sacred texts. In many traditions the understanding of more “serious” sacred texts has often been conditioned and qualified by humorous commentary on or alternative versions of sacred texts.

Though there is a long tradition denying that Jesus ever laughed (and thus also perhaps that he lacked a sense of humor), growing attention has been given to the question of humor in the New Testament. There has been considerable debate about whether the sayings, repartee, and parables of Jesus can be regarded as humorous. Some have pointed, for instance, to passages such as *Matthew* 19:24—“It is easier for a camel to go through the eye of a needle than for a rich man to enter into the kingdom of God”—as evidence of Jesus’ use of humorous incongruity in teaching. Even if the debate about Jesus’ humor is unresolved, it is obviously of crucial importance in that it involves fundamental issues concerning the image of Jesus as well as the meaning of his pronouncements and the ways they were understood. Despite the immense progress which has been made in the study of the canonical Gospels, scholars are still uncertain as to whether Jesus was joking or serious and, if joking, uncertain as to how to understand his humor. One of the fundamental ways in which Jesus remains an enigma, in other words, concerns his relation with humor.

In the New Testament humor also functions to define the boundary between and relation of the righteous and non-righteous or believers and unbelievers. *Luke*, for instance, has Jesus describing the coming of the kingdom of God in terms of a reversal of who will be able to laugh: “Blessed are you who weep now, for you will laugh” and “Woe to you who are laughing now, for you will mourn and weep” (*Luke* 6:21, 25). In the canonical Gospels, humor also plays a role in the trial and crucifixion of Jesus, who is mocked and ridiculed as a powerless figure claiming to be (or proclaimed by some to be) a king.

Varying accounts of the crucifixion of Jesus also illustrate how the presence or absence of humor can signal radically different religious orientations. In the canonical Gospels, clearly there is little in the way of humor on Jesus’ part

during the Passion. However, in one of the gnostic gospels, the *Apocalypse of Peter*, Jesus is depicted as laughing because his physical body is only an illusion and, despite what his persecutors may think, he is not really in pain. The joke is reversed, with Jesus now laughing at those who ridicule him, and marks a radically different conception of Jesus and the nature of his presence in the world than that found in some Christian traditions.

The Qurʾān is not usually thought of as containing much in the way of humor. Like the sacred scriptures of Judaism and Christianity, the Qurʾān makes much of the opposition between believers and unbelievers, with the unbelievers mocking the believers and taking them as fools. Allāh in turn will mock the unbelievers (*Sūrah* 1: 11–15). The Qurʾān also makes some use of irony, humor, and wordplay. Much of this dimension of the Qurʾān, however, is lost when the Qurʾān is interpreted into another language without detailed commentary on the original Arabic.

Though humor is not prominently featured in the Qurʾān, it would be a mistake to conclude that humor is thus of little importance in Islam. Though some Muslim theologians have expressed reservations about humor and laughter, this has done little to curb the Muslim appreciation of humor, as witnessed by the numerous collections of jokes, anecdotes, and humorous tales to be found in Arabic literature from a relatively early date. Franz Rosenthal observes in *Humor in Early Islam* that “the otherworldliness of Islam did little to stop the actual enjoyment and literary appreciation of humor. With all his seriousness and the foreboding of impending doom, the prophet Muhammad himself possessed much cheerful humanity and his followers through the centuries have always preserved a good-natured love of jokes and pranks” (1956, p. 5). Indeed some traditions present the Prophet as a bit of a practical joker. As Rosenthal relates, “he told an old woman that old women were not admitted into Paradise, and when she was greatly upset by his statement, he quoted Qurʾān 56. 35–7/34–6 to the effect that all women in Paradise would be equally young” (1956, pp. 5–6).

Because it is difficult if not impossible to deduce the attitudes about humor to be found in a religious community based solely on an examination of its most central or sacred texts, attention should be given to the vast body of tales, folklore, and literature that, often from the perspective of both religious communities and scholars, lies outside the bounds of sacred myths and texts proper. Many of these stories and texts have humorous aspects and treat or comment on the themes of what are usually regarded as more sacred myths and texts. In Europe, Mexico, and the American Southwest, for instance, there is a rich body of folktales presenting Saint Peter as a tricksterlike figure (Hynes and Steele, 1993). How religious communities have understood and experienced their sacred myths and texts cannot be grasped without an appreciation of how they stand in relation to the less sacred stories and texts that often offer a humorous perspective on them.

**HUMOR AND RITUAL.** Humor plays important roles in both the central and more peripheral rituals of religious communities. It should be noted that, even when it is not present, humor is important for ritual. Many religious rituals are marked of course by seriousness and solemnity. In such cases the exclusion of humor is a major strategy for marking the sacred nature of the occasion.

When humor is present in ritual it often exhibits a range of related but not always present features: an at least seeming absence of social control; a reversal or inversion of norms, status, social roles, and conventional behavior; explicitly sexual and scatological behavior; mocking or burlesque of authority, sacred rituals and beings, and foreigners; the appearance of comic, ambiguous, and incongruous figures such as jokesters, fools, and clowns; and an appearance of disorder and chaos. Various meanings and functions, some compatible and some not, have been attributed to ritual humor: conflict resolution; the cathartic release of tension and emotion; entertainment; maintenance of order and social control; the establishment of community; the marking of boundaries between groups; subversion and the questioning of authority; the use of incongruity and ambiguity to facilitate ritual and symbolic transformations; and the use of humorous incongruities to reflect on religious, cosmological, and metaphysical concepts. In short, there is no theoretical consensus on the meaning of ritual humor, and the precise meanings and functions of ritual humor are often context specific.

Although some traditions contain clear charter myths for the use of humor and laughter in ritual, the roles humor and laughter may play in ritual cannot be deduced merely from an examination of sacred texts and theological pronouncements. The New Testament contains little to encourage humor explicitly and Church Fathers often cautioned against it, yet the presence of humor and laughter in Christian ritual is hardly unknown. Easter rituals in some Eastern Orthodox communities, for instance, have made use of ritualized laughter as part of the celebration of Jesus' resurrection.

Ritual humor has formed a key component of both calendrical rituals and life-cycle rituals in traditional societies and has received considerable attention from anthropologists, particularly in their studies of Native American and African societies. In many traditional, agriculture-based societies, rituals linked with the start of the agricultural cycle often involve obscene joking, licentious behavior, or pantomimes of sexual acts. Such rituals of course parallel the fertility-related rituals rejected by Israelite religion and Christianity. Humor, often including scatological and sexual elements, may also be found in puberty rites, weddings, funerals, and a variety of initiation rituals. Humor is integrated into such rites in numerous ways and serves various roles.

The use of humor in some initiation rites illustrates how humor may play a role in encouraging reflection on religious concepts and practices. A famous example here is Victor Turner's analysis of an initiation rite for the cult of Chihamba

among the Ndembu people of Zambia. At one point in the rite, initiates are ordered to strike with rattles an effigy of the deity Kavula hidden under a white cloth. The initiates are then told they have killed the deity. They are soon told, however, that they have not really killed him, and the white cloth is pulled back to reveal nothing more than a few everyday objects. Laughter results (1962, p. 87). The point of the joke seems to be the destruction of any simple-minded identification of the deity with a material object. Humor works here to free one from overly simple conceptions. Reflecting on such examples, Jonathan Z. Smith has gone so far as to suggest that many if not most initiations have the character of a practical joke (1978, p. 301).

Considerable attention has also been given to the role of ritual humorists or clowns (sometimes also referred to as fools or buffoons) in traditional cultures. Anthropologists have focused in particular on ritual clowns in the Americas and Africa, though examples can be found throughout most parts of the world. The role of ritual humorists in the Americas and Africa is at times but by no means inevitably linked to tricksters appearing in myth and folklore. Some have even regarded ritual humorists or clowns as a characteristic though not universal feature of the ritual life of traditional religions (Smith, 1995, pp. 1093–1094). If the category of ritual humorist is extended to include fools, buffoons, and jesters of various sorts, then ritual humorists can be found in many if not most religious traditions. Particularly noteworthy here are court jesters and fools who have played important roles in relation to kings and rulers in China, India, Mesoamerica, medieval and early modern Europe, and the Muslim Middle East.

The history of the study of ritual clowns and humor in traditional religions is instructive and parallels that of the study of the trickster. When initially encountered by missionaries and anthropologists in the nineteenth and early twentieth centuries, religious ritual involving humor as well as often scatological and sexual elements were perceived as strange, exotic, and unusual. According to Mahadev L. Apte, one of the reasons for the attention given these rituals by anthropologists “may have been the ‘exotic’ nature of the rites, since they often involved scatological and sexual acts that appeared to be a strange combination of the ‘sacred’ and the ‘profane’ to the Western mind” (1985, p. 153). Observers were encountering dimensions of religion that Christianity had for the most part managed to exclude from the domain of the sacred. Such rituals were initially perceived by some as immoral and irrational and as evidence of the primitive and undeveloped character of such cultures. Interpretation of such rites has shifted over the course of the last century, however, to one of celebration rather than denigration.

Within the context of larger ritual systems, some rituals and festivals stand out as distinct because of the central role accorded humor. Two noteworthy examples are the Jewish Purim and the Holī festival of northern India. One of the most widely discussed examples of such ritual humor is the

Christian festival Carnival, as exemplified by the medieval Feast of Fools which generally took place between Christmas and Epiphany. In the course of the festival a choir boy was elected King of the Fools to serve as bishop, a parody of the Holy Mass was staged, and revelry of various sorts took place both within the cathedrals and in the streets of the cities. Unlike the ritual humor found in many traditional societies which was generally accepted as a legitimate and even essential part of rituals and the ritual calendar, the hierarchy of the Roman Catholic Church struggled, with limited success, for hundreds of years to control, temper, and do away with Carnival. Though the Feast of Fools eventually died out, Carnival has continued in Europe and throughout the Americas despite being modified, controlled, and restrained by both church and secular authorities.

Although the parody of the Mass in the Feast of Fools was not universally approved within the Catholic community, parodies or burlesques of religious rituals that seem to be generally accepted by the community are one notable type of ritual humor. The activities of ritual clowns in many cultures often include comic parodies of priestly figures and sacred rituals. In Japan many rituals are presented in both a serious mode and comic mode (known as *modoki*), with the serious ritual usually being followed by a comic version. Such parodies of religious ritual may, however, reflect tensions and different orientations within communities. There are a number of studies which report on women engaging in comic imitations of rituals wherein men are the major actors. Kwakiutl women, for instance, have at times performed parodies of the potlatch ceremonies so important for determining male prestige and status (Apte, 1985, p. 160).

The interpretation of the role of humor in ritual requires a careful analysis of such factors as kin relations, religious hierarchy and status, and gender. Anthropologists of an earlier generation preoccupied with structural-functional theories of society devoted great efforts to the study of institutionalized kin-based (including extended kin, interclan, and intertribal) joking relationships, particularly in East Africa. Though the content of the joking was not necessarily of an explicitly religious nature, kin-based relationships were frequently if not characteristically understood in religious terms, and such joking relationships frequently impinged upon religious ritual. For example, in the *utani* relationship in some East African tribes, at funerals the joking partner of the deceased was allowed, if not expected, to make fun of the deceased.

The relation of gender, ritual, and humor, however, is a topic only beginning to be explored. It is important to note that there are few women who function as ritual clowns or humorists. There has been considerable research on women’s cults and initiations in various religions, yet the issue of women’s humor and the gender dimensions of ritual humor seem to deserve fuller exploration (Sands, 1999, pp. 442–444). Historical documentation for women’s activities is not as great as that for men’s. In addition it is only

in recent decades that a growing number of women anthropologists have been able to gain access to settings in traditional societies in which only women are permitted (Apte, 1985, p. 78). There are also reports, particularly regarding wedding ceremonies and female rites of passage, of extensive mockery of men by women. Indeed a growing body of scholarship suggests that women have not always taken men's activities—often including religious activities—terribly seriously.

If the relation of women and humor has not received the full attention it deserves, the relation of children, ritual, and humor has received even less. Though there seems to be little research on the topic, there have been reports of children engaging in imitations of religious rituals in both a serious and comic mode. Ijaw children in Nigeria, for instance, have been reported to play by imitating sacred dances used to appease the spirits of the ancestors. Early in the twentieth century in France, sets of paraphernalia were available for children so that they could play at enacting their own versions of the Catholic Mass. It has also become common in some Protestant services to invite young children to the front of the sanctuary, usually prior to the serious sermon, to receive a more informal teaching from the minister. The children often find parts of this informal sermon amusing and funny; the adults almost invariably find funny moments to laugh at. A humorous mode of teaching, in other words, is used to instruct both children and adults; and the message is conveyed that a sense of humor is part of Christian identity. These examples suggest that the role of humor and play in the socialization of children into a religious life deserves fuller exploration.

One last extensive topic deserves at least mention in a discussion of ritual and humor. Even if one does not accept theories that understand drama as having emerged from ritual, one cannot deny that many forms of drama have been linked to religious ritual at some point and that often it is difficult to draw a clear line between ritual and drama. Many forms of drama of course are comic or humorous, and such dramas have played a considerable role in ritual and festival systems throughout the world. In addition to commenting often from a humorous or comic perspective on religious themes and topics, such dramas are often considered as offerings to the gods. Not a few religious communities, as well as the gods themselves, thus seem to be open and receptive to humorous reflection on the relations of people and gods.

**THE DARK SIDE OF HUMOR.** Religious traditions and communities have not infrequently considered humor to be a problem. At times this has resulted in a near outright rejection of humor. More frequently certain types of humor have been rejected or humor excluded from certain occasions and situations. Whether an effort is made to reject, critique, or control humor, the effort serves at least partially to define a particular religious orientation, moment, or mode.

Even in religious communities where humor is markedly present in myth, tales, or rituals, there is never a total em-

bracing of humor. Even if humor is present in some rituals, there are other ritual moments and occasions marked by solemnity and seriousness. Even if some religious themes, rituals, gods, or religious figures are treated humorously in certain rituals, myths, or texts, they are not always treated humorously. In other words, efforts are frequently made to control the distribution of humor in the life of a religious community. Despite the appearance of chaos, disorder, or total freedom in humorous expression that sometimes occurs, humor is usually limited by rules as to who can make light of what and whom under what circumstances.

Aspects of what we might now classify as falling under the category of humor also emerged as a problem for philosophers and religious thinkers at a relatively early date. Plato (c. 428–348 or 347 BCE) discusses laughter primarily as the laughter of ridicule directed at other people's ignorance about themselves. Aristotle (384–322 BCE) also closely links laughter with the ridicule and derision of others. Both suggest that at least some aspects of such laughter and ridicule are morally questionable. Cicero (106–43 BCE) and others throughout classical antiquity echoed similar concerns about at least some aspects of laughter and humor. Such doubts and concerns have continued throughout much of Western philosophy. Some have even read Western philosophical and theological traditions, with some notable exceptions, as basically rejecting humor (Morreall, 1989).

Humor has been treated with some suspicion outside of the West as well. In one of the first analyses of literature in China, *Wenxin diao long* (*The Literary Mind and Carving of Dragons*), Liu Xie (465?–520?) conceded the value of some forms of humor but criticized from a Confucian perspective other forms of humor involving jests, riddles, and puns as undermining the correct and proper use of language. Inappropriate forms of humor were also deemed misleading, possibly immoral, capable of disrupting social order, and not suitable to those of high social standing. An ambivalent and at times negative attitude toward humor runs throughout the Confucian tradition.

What have sometimes been classified as “otherworldly” or “world-rejecting” religions have at times considered humor and laughter particularly problematic. At times, though not invariably, the rejection of humor seems to be linked with the rejection of worldly entertainments and a rejection of or effort to control sexuality. The propriety of at least some forms of humor has been questioned, for instance, within Buddhism, Christianity, and Islam.

In reaction to the laughter of dancing girls attempting to entertain him, the prince Siddhārtha Gautama wondered to himself: “How can anyone laugh who knows of old age, disease, and death?” (*Buddhacarita* 4.59). After his enlightenment the Buddha repeated the question in slightly different form: “How can there be mirth or laughter when the world is on fire?” (*Dhammapada* 146). Within the Buddhist tradition, humor and laughter are also rendered problematic by the noble eightfold path, particularly the precept concerning

right speech that can be read as inveighing against at least some forms of humor, laughter, and mirth. The rejection of sex by Buddhist monks and nuns also would seem to preclude humor associated with sexuality. Buddhism has, however, been anything but a humorless religion. The Buddha himself, at least as portrayed in some texts, seems somewhat to have recovered his sense of humor. There are also many well-known examples within the Buddhist tradition linking insight and enlightenment with humor.

Christianity presents some of the clearest examples of the rejection of humor. As noted, at least some within Judaism and Christianity rejected the humor associated with fertility cults. In addition the writings gathered together as the New Testament express little in the way of explicit humor, despite the best efforts of some to locate it there. The Church Fathers were generally suspicious of and often hostile toward humor and laughter. John Chrysostom (c. 354–407), for instance, made a point of noting that Jesus never laughed, raised the question of how Christians could possibly laugh when they thought of the suffering of Christ, spoke of laughter and mirth as leading to sin, and, like Jesus in *Luke*, predicted that those laughing now will be wailing in torment on the day of judgment. As Chrysostom also complained that members of his congregation were laughing when they should have been praying, not all Christians seem to have shared his views. Part of the rejection of humor by the Church Fathers also seems to be linked to the rejection of entertainments, theater, and rituals linked with pagan religions. The rejection of humor and laughter may also be found among ascetics, hermits, and monks. Christian ascetics “shared with Greek and Jewish ascetics the ideal of the perfect human who never laughed” (Gilhus, 1997, p. 64). Like Jesus, Saint Anthony (c. 250–356) has been regarded by many as a model who never laughed.

Those expressing an ambivalent or even negative attitude toward at least some forms of humor have a point. Although humor may serve to bring people together, humor in the guise of ridicule and satire has also been used to divide peoples, to mark others as somehow inferior, and to enforce social control. If the *we/they* distinction is a basic component of any group’s identity, communities have frequently, if not invariably, partially established their identity by ridiculing others. This seems to hold true for religious communities as well. What is now referred to as “ethnic humor” frequently involves ridicule of other religions and does not seem to be a phenomenon of recent origin.

Ridicule, mockery, and satire of foreign gods, cults, and kings is not uncommon in the Hebrew scriptures. In *1 Kings* 18:27, for instance, Elijah mocks the Baal prophets when their god seemed not to reply to their entreaties: “And it came to pass at noon, that Elijah mocked them, and said, Cry aloud: for he *is* a god; either he is talking, or he is pursuing, he is on a journey, *or* peradventure he sleepeth, and must be awakened.” Prophets themselves of course were also subject to mockery and ridicule. Following Elijah’s ascent, Elisha

was mocked by young children saying: “Go up, thou bald head; go up, thou bald head” (*2 Kings* 2:23). Mockery of prophets, however, is sometimes dangerous. After being cursed by Elisha, the children were eaten by two bears.

Even if the entire history of religions could not be written as a history of the ways in which different religions have made fun of one another, a good portion of it probably could be. A suggestive essay here is the unsigned article “Religions of Antiquity” included in *The HarperCollins Dictionary of Religion* (Smith, 1995). The essay provides an overview of religions of antiquity in which humor (along with death and magic) is a major theme. Humor is examined in terms not only of how it functions within a religious community but also of how it functions with regard to competition and rivalry between different religions or between different communities within the same religion.

The way in which ridicule can shape religious identity is clearly illustrated by examples drawn from the history of Christianity. Early Christians were frequently subject to ridicule because many people found some Christian beliefs laughable. Some Christians such as Paul responded to ridicule by embracing the role of “fools for Christ’s sake.” In turn Christian figures such as Clement of Alexandria (c. 150–215) and Tertullian (c. 160–c. 220) made fun of pagan religions. So-called heretical Christian groups were also ridiculed by those of a more orthodox orientation. Conversely some gnostic texts have been read as making fun of or being parodies of more orthodox texts. In his later years Martin Luther (1483–1546) penned satirical portrayals of Catholicism and the pope which made free use, in “primitive” fashion, of scatological themes. As illustrated by the designations Quakers, Shakers, and Methodists, the names of some Christian groups derive from terms of ridicule often initiated by fellow Christians of a different persuasion.

Religions frequently have been subjected to ridicule, mockery, and satire not only by those of different religious orientations but also by those who might be described as unbelievers. Satirical treatments of religion appear at a relatively early date in India, China, Japan, and the West, though determining whether a rejection of all religion is entailed is often difficult. Some satirists in late antiquity, such as Lucian of Samosata (120–c. 180), seemed to be making fun of most if not all religions. As for modernity, it is difficult to conceive of it without taking into account satirical treatments of religion. Although the United States is often described as the most religious of modern nations, a truly American literature was initiated, according to some, by an author whose works are replete with satires of Christianity as well as religion in general: Mark Twain.

In some instances it is possible to argue that ridicule of religion has a profound impact on the development of some religions and the surrounding culture. An example here would be the 1925 trial of John Scopes (also called the “monkey trial”) that pitted Clarence Darrow (1857–1938), representing a modern scientific orientation, against William Jen-

nings Bryan (1860–1925), representing a Christian perspective embracing a literal reading of the Bible and its account of creation. Although Darrow initially lost the case (the ruling was eventually overturned), he effectively defeated Bryan by exposing, at least to many, Bryan's position to be a foolish one. Much of the press at the time joined in the ridicule of Bryan and the views he represented. Some have suggested that this event had a profound effect on segments of the conservative Christian community, causing them to withdraw from mainstream public life until resurfacing, decades later, when they had regained their confidence.

Religion's use of ridicule and the ridicule of religion are deeply connected to contemporary studies of religion. Introductory textbooks on religion almost invariably state that the purpose of studying religions (and especially religions not one's own) is to gain sympathetic understanding of others so that we no longer see them as strange and, though this is rarely explicitly said, funny. In North America what is called political correctness has repeatedly reminded us that we should not make fun of others. Scholarly studies of groups perceived by some as odd and funny not infrequently remind the reader that we should not laugh at or make fun of these people (though it is hard to imagine that the readers of such books need to be reminded). Although at least some of this effort is no doubt well and for the good, it is possible that this mission to rid the world of negative humor also blinds us in some aspects. It is difficult to find a book on religion that clearly makes the point that religions have sometimes defined themselves by making fun of others.

There is yet another way in which humor plays a role in distinguishing peoples and defining the other. Other peoples can be made to seem strange and alien either by denying them a sense of humor or attributing to them a strange, inappropriate, or inferior sense of humor. As noted many Westerners have found the humor of "primitives" to consist of a scandalous mixing of the sacred and the profane that was taken as evidence of childishness, a lack of civilization, or even immorality. In similar fashion, Lucien Lévy-Bruhl judged the humor of "primitives" to be inferior to that of Europeans because it was lacking in rationality (Chidester, 1996, pp. 230–32). For much of the period after World War II the Japanese were widely perceived as being without humor or, just as disturbingly, given to laughing and giggling at inappropriate times. In the culture and literature of the United States a common characterization of the religious or "overly religious" is that they are without a sense of humor. At present it is difficult to locate studies on the relation of humor and Islam. Either Muslims are humorless or Muslim humor has simply not been explored. The latter alternative is no doubt closer to the truth. The image of Muslims as humorless of course fits well with the image of Muslims as fanatical or overly religious in some way.

**CELEBRATIONS OF HUMOR.** Humor has also been celebrated as possessing particular religious value within some religions or movements within religions. In such cases humor may be

regarded as a teaching tool, a way of awakening religious realization, or a sign of a holy or enlightened state, or a fundamental aspect of the structure of the cosmos; it may also relate to the basic functions of certain religious specialists or even help define the basic orientation of a religious community.

The study of the celebration of humor within religions is closely related to scholarly evaluations of humor and might indeed be linked to a growing celebration of humor within Western thought. As already noted, Western philosophical and theological traditions, from the Greeks through the Enlightenment, have expressed at best an ambivalent attitude toward humor. Humor was considered suspect on a number of grounds. The cruelty of humor, as expressed in ridicule and other forms, was rejected on moral grounds. Humor too closely connected with sexuality, the body, or the emotions was also frequently questioned as undermining either spirituality or the dictates of rationality. Whether considered from the perspective of Christian theology, Enlightenment rationality, or the demands of modern civilization, humor was something more to be controlled or constrained rather than celebrated.

There has been, however, a growing reappraisal of the importance of humor. Amid increasing doubts about the values of modernity, Enlightenment rationality, and traditional Christian theology, not a few have concluded that their costs are too high and that one of these costs is the loss of traditional forms of humor. This loss has been traced to a variety of sources, including Christianity in general, Protestantism in particular, Enlightenment rationality, bourgeois sensibilities, and the modern bureaucratic state. Humor in this reappraisal is accorded a positive, liberating value both emotionally and cognitively. Some have linked this revised view of humor with postmodern sensibilities. Whether or not the West has somehow been lacking in humor and whether or not the cause has been rightly identified, such views are of importance for the ways they have shaped scholarship.

At least some of the roots of this recent reappraisal of humor can be found within Western traditions. *The Praise of Folly* (1511) by Desiderius Erasmus (1466?–1536) anticipates later celebrations of folly and medieval Carnival from both a Christian and non-Christian perspective. Thinkers as diverse as Francis Hutcheson (1694–1746); Anthony Ashley Cooper, the first earl of Shaftesbury (1621–1683); Immanuel Kant (1724–1804); and Jean Paul (1763–1825) all treated humor in terms of a perception of incongruity and attributed to it a cognitive value. Søren Kierkegaard (1813–1855) was preoccupied with irony throughout much of his work and linked the comic with a perception of the contradiction or incongruity between infinity and the finite. For Kierkegaard such a perception was regarded as the precursor to religious insight or faith.

In the twentieth century a number of thinkers also granted importance to humor and related ideas. Johan Huizinga's *Homo Ludens: A Study of the Play-Element in Culture*

(1938) defined the human condition in terms of play, an activity closely related to humor, and inspired many in their reflections on the importance of humor. In a similar fashion Arthur Koestler's *The Act of Creation* (1964) placed humor at the center of human thought and culture. Another widely influential work is Mikhail Mikhailovich Bakhtin's *Rabelais and His World* (1965), a celebration of medieval Carnival which argues that the modern world is impoverished in comparison to the fulfilling and liberating culture of laughter existing in the medieval period. Umberto Eco's best-selling novel *The Name of the Rose* (1983) at least implicitly makes a similar argument, with readers being asked to contemplate the cost of the church's supposed suppression of Aristotle's work on comedy. Scholars with orientations based in Marxism, postmodernism, or cultural studies have also come to focus on humor whenever it might be viewed as somehow "subversive" of Enlightenment rationality, social hierarchy, or the political, economic, and cultural hegemony of the West.

Humor has also served to define basic orientations of and within various religions. Saint Paul's presentation of Christians as being "fools for Christ's sake" (*1 Corinthians* 4:10) indicates a recognition that Christian belief and behavior were perceived as folly, if not madness, when viewed from other religious and nonreligious perspectives of the time. At least some Christians in early Christianity willingly embraced the role of the fool. Although this embrace of folly was not inevitably humorous in itself, it was grounded in a willingness to accept mockery and ridicule for embracing what seemed like folly to much worldly and religious wisdom. Jesus himself, indeed, had been subjected to mockery and ridicule. The embrace of folly and acceptance of ridicule and mockery, however, was accompanied by the expectation of reversal: the foolish would be shown to be wise and the wise foolish.

Once Christianity established itself, became a religion of empire, and came to wield considerable political power, Christians were no longer as widely regarded as fools and perhaps less inclined to welcome the designation of fool. Within both Eastern and Western Christianity, though, some continued to embrace the role of fools for Christ's sake. However, many Christians seemed to regard these fools as merely ordinary fools rather than holy fools. There are a number of celebrated holy fools to be found in both Catholic and Orthodox traditions, with the Orthodox traditions more clearly recognizing and celebrating holy fools. Though the list is extensive, prominent examples from the Catholic and Orthodox traditions include Theophilus and Maria of Antioch and Saint Symeon of Emesa in the sixth century, Saint Andrew the Fool of Constantinople in the tenth and eleventh centuries, Saint Isaac Zatvornik of Kiev and Saint Basil the Innocent in the eleventh century, and Saint Francis of Assisi in the twelfth and thirteenth centuries. Among the range of behaviors embraced by such fools were nakedness, self-humiliation in a variety of forms, association with sin-

ners, radical poverty, an itinerant existence, and engaging in joking and parody. Such figures, it should be noted, frequently set their folly in opposition not simply to worldly wisdom but also to the wisdom of the church.

Within Christianity, mention should be accorded to Meister Eckhart, considered by many to represent the pinnacle of Christian mysticism for identifying, if in somewhat cryptic fashion, laughter as playing a crucial role in the genesis of that most mysterious of Christian mysteries, the Trinity: "Indeed I say, the soul will bring forth Person if God laughs to her and she laughs back to him. To speak in parable, the Father laughs into the Son and the Son laughs back to the Father; and this laughter breeds liking, and liking breeds joy, and joy begets love, and love begets Person, and Person begets Holy Ghost" (Pfeiffer, 1947, p. 59). The genesis and nature of the relation among the persons of the Trinity and people is imagined in terms of laughter.

Within Islam, *Şūfī* traditions have also at times granted a special place to humor. Throughout at least part of the history of Sufism, *Şūfī* communities have existed outside of or in tension with more orthodox orientations, and *Şūfī* figures have rejected some of the local strictures of daily behavior as well as questioned the adequacy of orthodox formulations either to communicate or to express union with the divine. All of these factors have led *Şūfīs* to be sometimes regarded as fools. The name itself, meaning "wool-wearer" in reference to the ascetic garb of early *Şūfīs*, may well have originated as a term of ridicule. *Şūfīs* are also well known for the use of humorous tales in their teaching, as witnessed by considerable use of tales concerning Kheẓr and Mullā Narsruddin, who both make use of humor and who are at times seemingly willing objects of humor themselves. While closely linked with Sufism, tales of these two figures have been appreciated more widely throughout much of the Muslim world. Some *Şūfīs* have also clearly linked laughter and humor with the highest of religious experiences. The *Şūfī* Rūmī (c. 1207–1273) is reported to have observed: "If you want special illumination, look upon the human face: See clearly within laughter the Essence of Ultimate Truth" (Shah, p. 5).

Within Asian religious traditions a range of religious specialists and movements might be viewed as embracing foolishness and humor. Throughout the region a variety of Indian gurus, wandering ascetics, Daoist sages, and Buddhist monks are well known for their use of humor and embrace of folly. The Chan or Zen school of Buddhism has frequently been singled out for special attention here. In addition to pointing to the wide use of humorous tales and teaching methods in Zen, some have even defined the basic Zen orientation as humorous or comic. This celebration of the comic orientation of Zen, however, is much more prominent in the West than in Asia, suggesting that Western images of Zen as particularly humorous perhaps represent in part a fantasy concerning what is sensed to be missing in the West.

In the course of the twentieth century and into the twenty-first, some in certain parts of the world have come

to identify Judaism as a religion that is fundamentally comic or humorous in orientation. At least in English and in the United States, there has been an endless stream of mostly popular books celebrating Jewish humor (though at times the humor relates more perhaps to questions of Jewish identity than to Judaism itself, though the two of course cannot be clearly separated). There seems to be, however, relatively few scholarly works on Jewish humor that clearly relate the Jewish humor of the modern period to the history of the Jewish traditions. Even if Judaism is not inherently more humorous in orientation than other religious traditions, the modern perception of Judaism as a particularly humorous religion is of interest and importance in itself.

Mention might also be made of a reappraisal of the importance of humor in popular Christian theology which seems to have begun in the 1960s and is exemplified by works such as Elton Trueblood's *The Humor of Christ* (1964), Harvey Cox's *The Feast of Fools: A Theological Essay on Feast and Fantasy* (1969), Cal Samra's *The Joyful Christ: The Healing Power of Humor* (1986), Conrad Hyers's *And God Created Laughter: The Bible of Divine Comedy* (1987), and Earl Frank Palmer's *The Humor of Jesus: Sources of Laughter in the Bible* (2001). All of these works are united by the notions that Christianity, somewhere along the line, lost its sense of humor and that properly valuing humor is central to the Christian message. Although some of these works have served to raise interest among scholars and theologians in the topic of the relation of religion and humor, none seems to have generated enough interest among Christians at large to engender new Christian movements or orientations embracing humor as a central Christian value. Within some charismatic movements in recent years, however, hysterical or uncontrolled laughter in worship services has come to be taken as a sign of a visitation of the Holy Spirit. It is possible that the perception of the importance of humor in religions such as Judaism and Zen has influenced this reappraisal of the role of humor by some Christian theologians.

**THE HUMOR WE HAVE MISSED.** The importance of the various relations of humor and religion seem to have been overlooked for a number of reasons. Despite all the critical reflection, in the last one hundred fifty years or so, devoted to the study of religion, assumptions concerning the "holy" and the "sacred" deriving primarily from the sacred scriptures of Judaism and Christianity still seem to haunt Western conceptions of religion. Most obvious of these assumptions is that religion is somehow fundamentally connected with what is serious and solemn rather than with what is humorous.

The failure to connect religion and humor might also be traced to the tendency of many Enlightenment philosophers to draw essentialistic distinctions between phenomena such as religion and art by linking them with essentially distinct faculties, epistemologies, or modes of symbolization. Some Enlightenment philosophers, such as Kant, treated humor under the category of the aesthetic and thus neatly separated it from religion. Undoing such essentialistic dis-

tinctions has taken time. It is only in recent decades, for instance, that scholars have begun to explore more fully the connections between religion and the arts.

Vastly different conceptions of religion might have arisen if other sacred texts and other philosophical traditions had formed the starting point for (or had truly been given equal weight in) reflection on religion. For instance, if Japanese myth had formed a starting point for the study of religion, it would have been difficult to form a conception of the "holy," "sacred," or "divine" that was not closely connected to humor. In the myth of the heavenly cave, a central narrative episode in Japanese myth, the gods employ humor and laughter to restore order to the cosmos as well as to establish the basic forms of ritual by which people should relate to the gods.

An additional reason for the neglect of humor in the study of religion is the social location of much humor. Humor and religion have been given scholarly attention most often when humor is institutionalized in myths, texts, rituals, or formal joking relationships. As many have observed, there is a great deal of humor that exists in noninstitutionalized spaces: humor often emerges in informal interactions that comment on the more institutionalized aspects of life. Much of this humor is ephemeral, unrecorded, and often unnoticed.

Historians have access to such moments only when they happen to be recorded in texts, the visual arts, or archeological remains. Although such sources allow us to reconstruct, with varying degrees of certainty, the rituals, myths, and beliefs of the past, we have precious little indication, for example, of what peoples of the past were doing and saying before, after, and perhaps surreptitiously during rituals. If we assume that people have always had recourse to humor and humorous commentary on "serious" matters, then we are perhaps missing an important dimension of the religious life.

Though anthropologists have had direct access to moments of informal humor, they have done little better than historians in bringing the significance of these moments to light. Anthropological theory has not often attuned anthropologists to the importance of such moments, documenting informal interaction is difficult and time consuming, anthropologists have often lacked the near native command of a language required to appreciate and understand humor, and much of the informal joking anthropologists are able to observe is humor provoked by the presence of a strange being—the anthropologist (Driessen, 1997). In addition, not a few have suggested that, even with a command of the language, informal humor is often the most difficult part of a foreign culture to fathom and understand.

What we have lost here is well documented and illustrated in Samuel C. Heilman's *Synagogue Life: A Study in Symbolic Interaction* (1976). In addition to an account of the ritual activity occurring at a synagogue, Heilman also offers an analysis of the joking that takes place at informal mo-

ments, such as the coffee hour, at the synagogue. Some of the joking makes use of or comments on the more serious and solemn moments of ritual activity. Such joking is obviously an important part of the participants' experience of ritual and religion. The lesson here is a simple one: we cannot get a serious sense of people by looking only at serious, formal moments. If we can assume that such moments of informal joking have been ubiquitous in human experience, then we have perhaps seriously misconstrued the degree to which and the ways in which people have been "serious" about their religion.

As suggested above, the history of the study of religion in the last one hundred and fifty years might well be written in terms of a gradual and not yet complete coming to terms with the various ways humor has formed a part of the religious lives of many outside the West. This can be seen in the shifting attitudes to tricksters and ritual clowns. Initially treated as evidence of childishness, primitiveness, a lack of civilization, or even immorality, tricksters and ritual clowns now tend to be celebrated as representing a sensibility and insight into the human condition which many in the modern West have lost. It can also be seen in the ways some religions, such as Zen, have come to be celebrated in the West as possessing an appreciation of humor lacking in Christianity. To an extent at least, the European encounter with the humor of others has led to changes in Western notions of religion, has played a not unimportant, albeit often overlooked, role in the development of the study of religion, and has even entailed a rediscovery of the humor to be found in Western religious traditions.

#### BIBLIOGRAPHY

Although no classic studies of humor and religion exist, several recent works provide good starting points for exploring the topic. Peter Berger's *Redeeming Laughter: The Comic Dimension of Human Experience* (New York, 1997) is a sociological and theological reflection on the various ways religion and humor might be related. Though focused on the symbolism of laughter rather than humor in the strict sense, much of Ingvild Sælid Gilhus's *Laughing Gods, Weeping Virgins: Laughter in the History of Religion* (London and New York, 1997) might be read as relating to the study of humor and religion. Despite their titles, both works are focused on Western traditions and exclude Islam from consideration. Both works contain useful bibliographies. John Morreall's *Comedy, Tragedy, and Religion* (Albany, N.Y., 1999) deserves mention for directly addressing the question of the relation of religion to comedy and humor and for including Islam as well as Asian traditions in the discussion.

A brief but important discussion of the role humor played in the encounter of Western missionaries and colonialists with "savages" and "primitives" may be found in David Chidester's *Savage Systems: Colonialism and Comparative Religion in Southern Africa* (Charlottesville, Va., 1996), pp. 226–233.

Chidester highlights here the ways indigenous peoples satirized some Christian teachings and behavior they found to be funny, and he argues that such a response constitutes a form of comparative religion. Chidester's book as a whole suggests indeed that Westerners and indigenous peoples finding each other to be strange, ludicrous, funny, or ridiculous was an important part of the emergence of the notion of religion in the modern period.

A relatively early and still useful effort to focus attention on the relation of religion and humor is *Holy Laughter: Essays on Religion in the Comic Perspective*, edited by M. Conrad Hyers (New York, 1969). Hyers's essays in this volume offer still interesting efforts to give a phenomenological account of the relation of religion and humor. Among Hyers's subsequent works on the topic are *The Laughing Buddha: Zen and the Comic Spirit* (Wolfeboro, N.H., 1989) and, more theologically oriented, *And God Created Laughter: The Bible as Divine Comedy* (Atlanta, 1987).

*A Cultural History of Humour: From Antiquity to the Present Day*, edited by Jan Bremmer and Herman Roodenburg (Cambridge, U.K., 1997) contains a number of essays treating the relation of humor and religion in the West. The essays are important for the ways in which they complicate many set ideas, such as Bakhtin's analysis of Carnival, and the notion that Protestantism is humorless. In addition an argument is made that humor has been a topic at least relatively neglected by cultural historians. The collection also includes an excellent bibliography. Anton C. Zijderveld's *Reality in a Looking-Glass: Rationality through an Analysis of Traditional Folly* (London, 1982) explores the causes and consequences of the loss of folly in the course of modernization in the West.

An excellent introduction to anthropological studies of humor is Mahadev L. Apte's *Humor and Laughter: An Anthropological Approach* (Ithaca, N.Y., and London, 1985) which offers an overview of the relevant literature, an extensive bibliography of English language studies, and chapters on religion and tricksters. Henk Driessen's "Humour, Laughter and the Field: Reflections from Anthropology" in the previously discussed *A Cultural History of Humour*, pp. 222–241, provides a more recent guide to discussions of humor in anthropology. Both Apte and Driessen lament the lack of attention given to the study of humor thus far in anthropology. *Clowns & Tricksters: An Encyclopedia of Tradition and Culture*, edited by Kimberly A. Christen (Denver, Colo., 1998), is valuable not only for the range of examples brought together but also for the bibliographic references provided for each entry. Christie Davies' *Ethnic Humor Around the World: A Comparative Analysis* (Bloomington, Ind., 1990) is a thorough survey of studies of ethnic humor, much of which is related to religion. An influential and often cited essay on humor is Mary Douglas's "Jokes" in her *Implicit Meanings: Essays in Anthropology* (London and Boston, 1975), pp. 90–114.

*Taking Laughter Seriously* (Albany, N.Y., 1982) and *The Philosophy of Laughter and Humor* (Albany, N.Y., 1987), both by John Morreall, are good introductions to discussions of humor in Western philosophy. Morreall provides an argument concerning the rejection of humor in Western philosophic and religious traditions in "The Rejection of Humor in Western Thought," *Philosophy East and West* 39, no. 3 (1989): 243–266. John Lippitt's *Humour and Irony in Kier-*

*kegaard's Thought* (New York, 2000) is an excellent study of Kierkegaard, whose work is perhaps the most profound of Christian reflections on humor.

Discussions of humor in the Hebrew scriptures may be found in *On Humour and the Comic in the Hebrew Bible*, edited by Yehuda T. Radday and Athalya Brenner (Sheffield, U.K., 1990), and in J. William Whedbee's *The Bible and the Comic Vision* (New York, 1998). A good introduction to the possible types of humor in the New Testament is given by Jakob Jønsson in *Humour and Irony in the New Testament: Illuminated by Parallels in Talmud and Midrash* (Leiden, 1985). The essays grouped under "Humor and Wit" in *The Anchor Bible Dictionary*, edited by David Noel Freedman, vol. 3 (New York, 1992), contain discussions as well as bibliographies for the Middle East in ancient times, Hebrew scriptures, and the New Testament.

A good introduction to the topic of Jewish humor is *Jewish Humor*, edited by Avner Ziv (New Brunswick, N.J., 1998). An engaging critique of the notion of Jewish humor is Dan Ben Amos's "The Myth of Jewish Humor," *Western Folklore* 32 (1977): 112–131.

Though limited in historical scope, the best introduction in English to Islam and humor is still Franz Rosenthal's *Humor in Early Islam* (Philadelphia, 1956). A good introduction to the Qur'an's relationship to humor is Mustansir Mir's "Humor in the Qur'an," *The Muslim World* 81, nos. 3–4 (1991): 179–193.

Motivated by his skepticism regarding scholarly opinion that there was little humor or satire to be found in Sanskrit literature, Lee Siegel offers an extensive and enthusiastic exploration of the wealth of humor to be found in India in *Laughing Matters: Comic Tradition in India* (Chicago, 1987).

Mention should be made of a number of works which provide suggestions for developing a theory of religion in which humor plays a central, if at times implicit, role: Helmuth Plessner's *Laughing and Crying: A Study of the Limits of Human Behavior*, translated by James Spencer Churchill and Marjorie Grene (Evanston, Ill., 1970); Arthur Koestler's *The Act of Creation* (London, 1964); Kees W. Bolle's *The Freedom of Man in Myth* (Nashville, 1968); and Jonathan Z. Smith's *Map Is Not Territory: Studies in the History of Religions* (Chicago, 1978). Though Smith makes only passing reference to humor here and in other works, his approach to religion as an interplay of congruity and incongruity is well suited to developing a fuller appreciation of the relation of religion and humor. For a suggestive essay discussing play and humor in relation to Smith's approach to religion, see Sam Gill's "No Place to Stand: Jonathan Z. Smith as *Homo Ludens*, the Academic Study of Religion *Sub Specie Ludi*," *Journal of the American Academy of Religion* 66, no. 2 (1998): 283–312.

#### HUMOR AND RELIGION: HUMOR AND RELIGION IN EAST ASIAN CONTEXTS

An overview of humor and religion in East Asia is complicated by a number of factors. While the area is united by millennia of cultural exchange, exemplified by the spread of the Chinese writing system, it is also marked by sharp cultural and linguistic divides. East Asia has also been influenced by an Indian tradition, Buddhism, which both transformed and was transformed by the religions of the area. In addition, it is difficult to neatly separate religious traditions such as Buddhism, Confucianism, Daoism, and Shintō; though distinctions were made, there was a constant tendency to combine and blur traditions sometimes now thought of as distinct. What are today thought of as the major traditions have existed in complex relations with what have been variously styled as local, indigenous, or folk traditions.

**INDIGENOUS CONCEPTS AND ORIENTATIONS.** While the English word *humor* has been absorbed into and widely used in both Chinese and Japanese in the modern era, there is a long history of related or analogous indigenous concepts to be found throughout the languages of East Asia. Since there is, however, little in the way of systematic studies of such concepts, only the importance of exploring them further can be suggested here. In Chinese, one related term that was also made use of in Korea and Japan is *huaji*, combining *hua* (slippery) with *ji* (a bobbling motion), a word for ancient jesters, acrobats, jugglers, and entertainers. An integral part of ancient Chinese court and ritual life, *huaji* wore costumes asymmetrically half red and half black. These specialists were mad, or topsy-turvy, and by their frenzy threw the normal world out of its order. Comic jesters were deemed indispensable to the efforts of kings to mediate between heaven and earth. Both the Korean and Japanese languages are also replete with a number of terms and concepts related to humor.

In ancient China, a central locus for the development of humor in religion was the ritual cycle of offerings and per-

formances for the ancestors and gods. As is documented by oracle bone inscriptions, it was hoped that the higher gods could be influenced by establishing smooth relations with the recently dead. Royal ritual life in early China was thus organized in great detail around the need to mollify the dead, with special efforts being made to please them with food and entertainment. Records from the Shang period (late second millennium BCE), show the existence of rituals to “entertain” the ancestors. As the writing system developed, it generated, as a means to express this notion, a system of interchangeable graphs and a network of concepts relating to the terms *pray* (celebrate, intone), *pleasing, elder brother* (who conducted ceremonies for ancestors), *music, joy, sacred speech, and laughter*. Laughter was thus implicated in a network of concepts for conceiving of the relations among people, ancestors, and gods.

In early Japan, a charter myth relating to the role of humor in religion is found in *Kojiki*. The myth narrates how the Sun goddess, Amaterasu, faced with the outrageous behavior of her brother Susano-o (who has sometimes been identified as a trickster), secludes herself in a cave and thus throws the heavenly realm into chaos and darkness. The other gods, however, devise a plan to lure Amaterasu from the cave by pretending another goddess is present. As part of the ruse, Ame no Uzume performs a dance on an overturned tub and exposes herself. Ame no Uzume’s performance produces uproarious laughter on the part of the other gods. Not able to understand why the gods are laughing when she has hidden herself away, Amaterasu is told another goddess is present, and thus is lured out of the cave. The myth testifies to the efficacious power of laughter, as well as the gods’ appreciation of humor. In the medieval Nō play *Emu* (The votive tablet), Amaterasu is even portrayed as wanting to reenact the myth so that she can enjoy the joke again. Ame no Uzume’s performance is also often cited as the origin of *kagura* (ritual song and dance offered to the gods), rites of possession, and many traditional forms of theater and performance.

Though the issue has not been fully argued, some have suggested that the religions of East Asia are inherently more open to humor than the monotheistic religions of the West. There is probably a degree of truth in this argument. The gods of East Asia tend to be more human than those of the monotheistic traditions and not nearly as fastidious about sexual matters, one of the great sources of humor in human life.

**CONFUCIANISM, DAOISM, AND BUDDHISM.** Though the traditions of Confucianism, Daoism, and Buddhism have greatly influenced one another and often existed in symbiotic relation to one another, they nevertheless exhibit somewhat distinctive orientations to humor.

**Confucianism.** Neither Confucius nor Confucianism is particularly noted for humor. One should never underestimate, however, the continuous presence of puns, wordplay, sarcasm, and ridicule throughout the Chinese tradition. The

works of the early ritualists, chroniclers, and philosophers were often invested with puns, wordplay, ambiguity, and amusing stories. In a text purporting to chronicle events of 574 BCE (*Chronicles of Zuo*, 17th year of Duke Cheng), Confucius is, for instance, recorded telling some jokes involving puns about foot amputation that may well have had deeper cosmological implications. Confucius is also depicted (*Analects* 17.4) laughing at an elaborate ritual held in a town of very modest importance, characterizing the villagers as “using a beef cleaver to cut a chicken!” When his students remonstrated, Confucius admits that he had only been joking.

As the body of early texts was canonized and made into the so-called Confucian classics, the Ru (Ritualist or Confucian) school more and more became an arbiter of cultural orthodoxy. With its emphasis on decorum, morality, and the proper use of language, and particularly in its role as state ideology, Confucianism has perhaps rightly been characterized as a dry religion. An early work on literature in the Confucian tradition, which was also of some influence in Japan, is Liu Xie’s (465?–520?) *Wenxin Diaolong* (The literary mind and carving of dragons). The work expresses an ambivalent opinion of the value of humor, particularly in the way it undermines the clear and proper use of language. Perhaps inevitably, Confucianism also became a straight man for humor and ridicule. Ridicule of slavish imitators of Confucius or Confucians became a popular topic in Chinese jest books (Harbsmeier, 1990, p. 152).

Confucianism was sometimes even linked with moves to suppress humor. In the seventeenth through the nineteenth centuries, Japan witnessed a boom in comic literature that illustrates how religion can be subject to satire and parody and how some religious orientations can oppose humor. Informed by Confucian notions of morality and decorum, the Tokugawa regime made frequent, and mostly futile, efforts to suppress the upsurge of comic and satirical literature that made fun of most aspects of Japanese social, political, and religious life. One early anonymous work was *Hijiri yūkaku* (The pleasure quarter of the sages), in which the Buddha, Confucius, and the Daoist sage Laozi congregate in Japan for the purpose of visiting an Osaka brothel run by the Tang poet Li Bo, with his colleague Bai Ju-i as an entertainer. While some political and religious authorities took offense at much of this satire, it is unclear whether the buddhas and gods were offended or not.

**Daoism.** Daoism has taken many forms throughout Chinese history, and the term is highly contested. As used here, it denotes primarily what has sometimes been referred to as philosophical Daoism, centered on the texts *Laozi* and *Zhuangzi*. While the first of these texts maintains a relative air of dignity and seriousness, *Zhuangzi* is marked by a more humorous orientation and makes considerable use of irony, paradox, and amusing stories. In its philosophical and literary forms, which advocated a radical relativism of opposites and distinctions, Daoism seems inherently open to a comic

and humorous perspective as a way of freeing oneself from the unnatural constraints imposed by society, the state, and an overly rational approach to the world. Daoism also shares with Buddhism a sense of the limits of language to describe reality, thus opening the way for ironic and humorous displays of the limits of language and concepts. Not a few scholars have argued that Daoism contributed much to the Chinese transformation of Buddhism, especially to the use and appreciation of humor in the Chan or Zen schools.

The *Zhuangzi*, of course, is a *locus classicus* for many hilarious images of human limitation that suggest the uselessness of usefulness, the usefulness of uselessness, the irrationality that undermines the very notion of rationality, and in general the possibility of liberation from all such categories. The famous tale of Zhuang Zhou dreaming he was a butterfly (and then on waking not knowing whether he had dreamed of being a butterfly or whether the butterfly was now dreaming of being him) is an amusing and humorous account of a basic human conundrum. The text also makes fun of a variety of human proclivities, such as the desire to better oneself: “A youth of Shouling in the state of Yan studied the proper way of walking in Handan, the capital of Zhao. He failed to learn the distinguished gait of Handan. Moreover he unlearned his original way of walking. So he came crawling back home on all fours” (Harbsmeier, 1989, p. 303).

The general Daoist orientation was also one factor making possible the appearance of a type of religious figure characterized by extreme eccentricity, drunkenness, or madness. Well-known examples of such eccentric figures are Liu Ling (221–300) and the other members of the Seven Sages of the Bamboo Grove at the time of the transition from the Han dynasty to the Jin dynasty. Liu Ling, who often went around his house naked, is remembered for his retort to the objections of an offended guest: “The universe is my house, and this room is my trousers. What are you doing here inside my trousers?” (Welch, 1957, pp. 124–125)

**Buddhist ambivalence.** While Buddhism is frequently celebrated in the West for its appreciation of humor, the Buddhist attitude to humor has often been ambivalent. The Buddha himself questioned how any one could laugh given the suffering that marked the world. Early Buddhist scholastics debated whether the Buddha had ever laughed (it was decided that only the faintest of smiles had crossed his lips), and the precept concerning right speech was often interpreted as rejecting laughter and joking. Buddhists have nevertheless managed to develop at times a rich appreciation of humor.

The most celebrated aspect of the relation of Buddhism and humor is no doubt the use of humor in Chan, or Zen. In an overstatement of his case, D. T. Suzuki argued that Zen was the only religion to find room for laughter. In many respects, Zen schools took to a radical extreme the Buddhist teaching that the truth could not be fully conveyed in symbols, concepts, and words. Whether expressed in dialogues,

*kōans*, tales, or behavior, humor became a pedagogical tool for teaching the limits and constraints of conventional teachings and concepts. Humor was, in short, a technique for ensuring that one did not take the finger pointing at the moon as the moon itself. Laughter was also often taken as a sign of enlightenment, as a mark of having realized the comic absurdity of attempting to apprehend the truth in rational distinctions, concepts, and categories. How humor might teach and how laughter is a sign of understanding is concisely communicated in a tale about the Chinese master Yangqi, who, when about to lecture his disciples on the path to enlightenment, simply said: “Ha! Ha! Ha! What’s all this! Go to the back of the hall and have some tea!” (Blyth, 1959, p. 90)

Throughout East Asia, Chan/Zen teachers or figures, be they historical or legendary, often exhibited the behavior of clowns or fools. In China, the “foolish” figures Hanshan and Shide are well-known both in paintings and tales about them. In Japan, Zen figures such as Ikkyū, Ryōkan (whose name means “great fool”), and Hakuin were known not only for their foolishness but also as self-consciously embracing the role of fool. The Japanese Zen master Harada Sogaku (1871–1961) even elevated the Buddha himself to the status of fool. “My admonition, then: Be a Great Fool! You know, don’t you, that there was a master [Ryōkan] who called himself just that? Now, a petty fool is nothing but a worldling, but a Great Fool is a Buddha. Śākyamuni and Amitābha are themselves Great Fools, are they not?” (Hyers, 1989, p. 43). The foolishness of Zen figures was directed not only at upsetting the common-sense assumptions of the day but also the rigidity of Buddhist and Zen teachings themselves.

**LOCAL, INDIGENOUS, AND FOLK TRADITIONS.** As has been suggested, what have sometimes been styled as “great traditions” were not only not easily separable but also existed in complex relations with what have sometimes been referred to as local, indigenous, or folk traditions in China, Korea, and Japan. Such traditions and practices embraced a variety of types of humor and were also subject to a variety of forms of control, suppression, and systematization as they were harnessed to the agendas of emerging kingdoms, imperial systems, and modern nation states. As part of these “civilizing” processes, local traditions were often regarded as “superstitions,” and the humor they embraced was at times deemed inappropriate.

Whether motivated by the desire to celebrate auspicious occasions, restore harmony, or divine the future, the center of religious life throughout the indigenous religions of East Asia has been daily and periodic interaction among people, ancestors, and gods. Much of the humor related to religion throughout the area may be traced indeed to this ongoing interaction. In contrast to the gods of the monotheistic traditions, the gods and ancestors of the region seem more human in their engagement in and appreciation of a variety of types of humor. In addition, the coming together of people, ancestors, and gods often aims at the creation of a “happy atmosphere” (Chinese, *xìqì*) or “celebration” (Japanese *iwai*) in

which people, as well as gods and ancestors, are entertained. Given that all involved have an appreciation of humor, the coming together often involves a variety of humorous performances and interactions.

Divination in various forms has played a central role in ritual practices throughout East Asia. At present, Chinese divination activities continue on a daily basis both at home in front of the ancestors' shrine and publicly in temples. The most common articles for divination now are comma-shaped pieces of wood that are flat on one side and convex on the other. The inquirer must throw a pair of such blocks in such a way as to produce one up and the other down. If both land flat, the god has refused the request, but if both land rocking on the round side, the gods are "laughing." This is not an outright refusal; the inquirer continues. Humor has also played a role in divinatory practices in Japan. The Nō play *Emu* (The votive tablet) even presents the gods as making fun of people for wanting to divine the future when the gods have already pledged to bestow their blessings.

**Ritual and festivals.** Ritual life and festivals—be they Buddhist, Shintō, or, as was more often the case, a complex symbiosis of the two—have been marked by humor throughout Japanese history. Though there are solemn Buddhist and Shintō rituals, many ritual complexes contain humorous dimensions, the gods and buddhas of many shrines and temples enjoy humorous performances, and serious rituals often have a comic counterpart known as *modoki*. There is even a tradition of festivals devoted to laughter—*warai matsuri*, or laughing festivals—in which the central ritual act is laughing. As seen in a ritual held annually in May at the Atsuta Shrine in Nagoya, even shrines closely linked with Imperial Shintō (and thus more focused on maintaining an air of dignity and solemnity) are marked by laughter. Following rites of purification to commemorate the shrine's being entrusted with a sacred sword (one of the imperial regalia), the priests begin to laugh aloud and are soon joined in laughter by the crowds gathered there. Folklorists remain a bit uncertain, however, about just what everyone is laughing about.

Some of the ritual humor to be found throughout East Asia is of a sexual nature and is often linked with agriculture and fertility rituals. At a small festival in the mountains of Mikawa in Japan, the gods Ebisu and Daikoku appear. The latter must declare what he has brought with him, and the fun involves him producing, after some hesitation, a larger-than-life-size phallus. Yanagita Kunio (1875–1962), a pioneering scholar of folklore and humor in Japan, has noted that some female mountain deities seem to be amused by and partake in the laughter provoked by the display of a small dried fish. Furthermore, in China, occasions of festivity sometimes involve ribald humor such as in the Yangge (rice-sprout songs) performances at Chinese New Year or in the dances featuring masked figures in the Nuo rituals still held in peripheral areas of China or among minority groups. Ribald humor is also found throughout Korean folk songs. Efforts have often been made, it should be noted, to suppress

or sanitize sexual humor. Under Mao Zedong, extensive attempts were made to recast Yangge dances into properly revolutionary terms. Throughout the Meiji period (1868–1912) in Japan, efforts were also made to suppress or tone down some of the more ribald aspects of ritual in an effort to nationalize and civilize some aspects of Shintō. Despite such efforts, at least traces of earlier practices continue.

Humor has a prominent role to play in the *kut*, the ritual conducted by *mansin* (shamans), that plays a central role in Korea's indigenous religion and aims at harmonizing the relations of gods, ancestors, and the living. The *kut* has been described as a "living and loud event with some mistakes, much skill, clumsy moments, copious wine, and considerable laughter" (Kendall, 1985, pp. 20–21). While various aspects of the interaction of gods, ancestors, shamans, and people in the *kut* can provoke laughter, there is one being in particular that the shaman can call upon and embody who frequently, if not inevitably, will add humor and levity to the interaction. This is Changbu, a female, clownlike figure linked with the spirits of actors, singers, and acrobats. In addition to offering advice, Changbu engages in making fun of people, particularly if they do not seem disposed to accept the advice the shaman has offered or have not sufficiently contributed money to support the proceedings. By engaging in actions such as tweaking the breasts of the recalcitrant, Changbu sometimes transgresses the boundaries of decorum in a way that causes consternation to some and provokes laughter in others. In a somewhat similar fashion, shamanistic rituals in Taiwan not infrequently involve similar comic behavior on the part of the gods and spirits evoked.

**Korean tiger, Chinese Budai.** In Korea, humor is also linked with the activities of the tiger, an important figure in myth and folklore who has sometimes been understood as a trickster figure. Like tricksters, the tiger appears in a variety of guises and roles; exhibits contradictory features (sometimes benevolently working for good, at others wreaking havoc); and frequently plays tricks, many of which backfire on him or her. In addition to serving as the messenger and companion of the mountain god, tigers have also served as guides and aids of shamans. In many tales, tigers are identified as Horangi (young boy tiger), a name suggestive of such tigers' playfulness and mischievousness. It is a bit difficult to determine whether all of these tigers are the same tiger or whether there are different types of tigers. When appearing in his more malevolent form, the tiger's tricks and plans often backfire, and he becomes an object of laughter. When appearing as a more benevolent figure, the tiger often serves to reveal the foolishness of people's actions and preoccupations. Images of the tiger are also common in the visual arts. A common folk painting of Horangi, believed to be capable of repelling evil or bad fortune, often depicts the tiger in humorous fashion as smiling, sometimes almost idiotically.

An important humorous figure in East Asia who illustrates the difficulties of discussing religion in terms of discrete schools and traditions is the Chinese figure Budai (Jap-

anese, Hotei), who is sometimes referred to as the Laughing Buddha and whose legends, at least by some accounts, are based on the life of a Chinese monk of the Tang dynasty (618–907). The name Budai means “sackcloth” and was supposedly given to the monk because of his habit of carrying his meager worldly possessions in a sackcloth over his shoulder. In sculpture and painting, Budai is portrayed as a jolly, fat monk with his large stomach protruding from his disheveled robes. One of his major activities seems to have been playing with children. Budai also came to be regarded as an incarnation of the future buddha Maitreya, both popularly and by some schools of Zen that sometimes enshrine images of Budai as Maitreya. In China, Budai as Maitreya appears as a masked laughing man dancing with dragon dancers at festive occasions such as New Years. In Japan, Hotei appears as one of the Seven Gods of Fortune (*shichifukujin*) and is the patron deity of fortune-tellers and liquor merchants. His sack of material goods now inexhaustible, Hotei is also regarded as a source of material blessings.

**HUMOR, RELIGION, AND THE ARTS.** Another vast area providing evidence of the links between humor and religion is to be found in the rich traditions of visual art, literature, folk tales, theater, and a range of performing arts, including song, dance, music, and storytelling, found throughout East Asia. The origins of many of these art forms are traced to the activities of the gods, cultural heroes, and various types of holy personages. In addition, all of these art forms have at one time or another been offered at shrines, temples, and other places for the entertainment of the gods. It is not unusual for art forms such as sculpture, song and dance, or theater to be conceived as vehicles for rendering the gods present in this world. Comic, humorous, and ribald elements are not at all rare in these art forms.

Throughout the region, temples and shrines often contain a stage or area set aside for the performance of rituals, plays, dances, and a variety of other performing arts. Such performances have pleased the gods throughout history and frequently contain humorous elements. At Takachiho in Kyushu, as well as other places throughout Japan, performances offered as entertainment for the gods depict an old couple attempting to have sex with somewhat hilarious results. In contemporary Taiwan, some temples are equipped with a television appropriately placed so that the gods may view it without impediment.

Various forms of theater and performance throughout the area also make extensive use of humor and satire in relation to religion. The Japanese *Gigaku* (Korean, *Giak*) is a form of Buddhist masked drama originating in China and transmitted from Korea to Japan in the seventh century. A fourteenth-century Japanese text describes the masked performance as containing comic scenes making fun of the evils of drunkenness and lewd behavior. Traditional forms of theater, however, also make fun of religious figures and, at times, even the gods themselves. The traditional Korean masked dance play *Sandae* (some of whose roots may perhaps

be found in *Giak*) incorporates Buddhist and shamanistic music and frequently holds up Buddhist monks and members of the literati for ridicule. In the comic Japanese *Kyōgen* theater, monks and other religious figures are often the object of humor, and the gods themselves are often portrayed in comic fashion. In the play *Asaina*, Enma—the god of the underworld—lets a hunter off lightly for the crime of killing animals when the hunter introduces the god to the delights of eating roasted meat. The humor directed at religion in these plays, however, cannot be simply taken as a rejection of religion. As suggested above, such plays were not infrequently understood as being performed for the entertainment of the gods.

The literary traditions of East Asia are also replete with stories, novels, tales, poems, and songs in which humor and religion are entwined in every conceivable way. A single example must suffice here: *Xiyouji*, translated as *The Journey to the West*, one of the most celebrated of Chinese works of literature. The work narrates the journey of the monk Tang Sanzang, aided by Sun Wukong, or Monkey, to India for Buddhist scriptures to bring back to China. The tale might be regarded as a comedy and contains numerous humorous episodes. Towards the beginning of the tale, the Buddha agrees to confer divine status on Monkey if he is able to jump over the Buddha’s hand, but to make him do penance if he fails. Having acquired magical powers and believing himself up to the task, Monkey thinks the Buddha a fool and accepts the proposition. Jumping to what seems the outer edge of the cosmos, Monkey writes his name on five pillars he finds there to mark his achievement. For good measure, he also pisses on one before leaving. When Monkey returns to where the Buddha is waiting, the Buddha holds up one hand with Monkey’s name written on each finger and with one finger stained yellow.

As suggested, the visual arts throughout the region also include many works linking humor and religion. A well-known subject in painting is the Three Doctrines, which portrays the Buddha, Confucius, and Laozi together as away of symbolizing the unity of the three religions (though it has been noted that some of the paintings do attempt to subtly suggest the superiority of one of the three). At least in a number of the paintings, such as that by the early-fifteenth-century Japanese painter Josetsu, there is a general comic air, and the Buddha and Laozi are depicted as smiling in such a way as to suggest that they are either chuckling or about to chuckle. Confucius, it must be admitted, looks a bit somber. There is the suggestion, however, that a degree of mirth is involved in the coming together and recognition of the unity of the three religions.

#### **BIBLIOGRAPHY**

There are no general overviews of humor and religion in East Asia, and few books and essays even centered on more discrete aspects of the topic. Though not focusing on religion, a num-

ber of popular books on humor in East Asia have appeared throughout the twentieth century. Some of these works are still capable of providing inspiration. A classic, popular work of this sort is R. H. Blyth's *Oriental Humor* (Tokyo, 1959), a work that covers China, Korea, and Japan and touches frequently on religion. Reference here might also be made to George Kao, ed., *Chinese Wit and Humor* (New York, 1974), an anthology of Chinese humor giving considerable place to the humor to be found in the Chinese classics. In many respects, the work of scholars has yet to appreciate and develop the insight about the importance of humor in culture and religion to be found in such works.

A useful starting point for exploring more scholarly discussions of the topic is *Philosophy East and West* 39, no. 3 (1989), an issue of the journal devoted to the role of humor in Asian thought. Particularly useful for placing the topic in comparative perspective is John Morreall's "The Rejection of Humor in Western Thought," pp. 243–266, which suggests how certain philosophical assumptions have led many Western scholars to downplay the importance of humor. Morreall's *Comedy, Tragedy, and Religion* (Albany, N.Y., 1999) contains a chapter devoted to Asian religions that, like his article, attempts to put the issues in comparative perspective.

There are a number of valuable discussions of the place of humor in Chinese religious thought and philosophy. Among the articles included in the issue of *Philosophy East and West* cited above are Christopher Harbsmeier, "Humor in Ancient Chinese Philosophy," pp. 243–266, and Joel J. Kupperman, "Chuang Tzu's Strategies of Communication," pp. 289–311. Harbsmeier's "Confucius Ridens: Humor in Ancient Chinese Philosophy," *Harvard Journal of Asiatic Studies* 50 (1990): 136–161, and David R. Knechtges's "Wit, Humor, and Satire in Early Chinese Literature (to A.D. 220)," *Monumenta Serica* 29 (1971): 79–98, also provide valuable contributions to the topic. Humor in relation to Chan/Zen is treated at length in Conrad Hyers's *The Laughing Buddha: Zen and the Comic Spirit* (Wolfeboro, N.H., 1989).

Karin Myhre's "Wit and Humor," in *The Columbia History of Chinese Literature*, edited by Victor H. Mair (New York, 2001), pp. 132–138, is a valuable discussion of Chinese notions of humor, with some reference to religion. Victor H. Mair and Maxine Belmont Weinstein's "Popular Literature: Part I: Folk Literature," in *The Indiana Companion to Traditional Chinese Literature*, edited by William H. Nienhauser (Bloomington, Ind., 1986), pp. 75–81, provides an orientation to the place of joke books and folk humor in Chinese literature. Both of these volumes also contain a number of relevant articles and bibliographies. A study of humor in Chinese art and literature that also touches on religion throughout is Henry W. Wells's *Traditional Chinese Humor: A Study in Art and Literature* (Bloomington, Ind., 1971). Hu Pi-ching's "Feng Meng-lung's Treasury of Laughs: Humorous Satire in 17th Century Chinese Culture and Society," *Journal of Asian Studies* 57 (1998): 1042–1048, provides a good introduction to the some of the vast body of satirical literature in China that includes satires of religion.

Though Korean culture is rich in humor, there are few English language discussions of the topic, particularly in relation to religion. The following works, however, provide at least

some entry to the roles humor plays in Korean religions: Edward R. Canda, "The Korean Tiger: Trickster and Servant of the Sacred," *Korea Journal* 21, no. 11 (1981): 22–38; Suk-kee Yoh, "Farcical Elements in Korean Mask Plays," in *Humor in Korean Literature*, edited by Chun Shin-yong (Seoul, 1977); and Young-pil Kwon, "Humor: An Aesthetic Value in Korean Art, Especially as Expressed in Scholarly Painting," *Korea Journal* 37, no. 1 (1997): 68–80. Laurel Kendall's, *Shamans, Housewives, and Other Restless Spirits: Women in Korean Ritual Life* (Honolulu, 1985) provides some discussion of Changbu.

For Japan, an overview of the history of concepts of humor, with some reference to religion, is offered in Marguerite Wells, *Japanese Humor* (New York, 1997). In addition to providing an overview of humor in Japan, Howard Hibbett's *The Chrysanthemum and the Fish: Japanese Humor since the Age of the Shoguns* (Tokyo, 2002) presents a detailed survey and analysis of the voluminous satirical literature of the Edo period, much of which was related to religion. Arthur H. Thornhill III's *Six Circles, One Dewdrop: The Religio-Aesthetic World of Komparu Zenchiku* (Princeton, N.J., 1993) contains an excellent discussion of the myth of the heavenly cave and later interpretations of the myth in Japan.

For humor in the performing arts, the religious themes appearing in the comic art of *rakugo* are discussed in Heinz Morioka and Miyoko Sasaki, *Rakugo: The Popular Narrative Art of Japan* (Cambridge, Mass., 1990), and the religious themes in *Kyōgen* are considered in Carolyn Anne Morley, *Transformation, Miracles, and Mischief: The Mountain Priest Plays of Kyōgen* (Ithaca, N.Y., 1993). Discussions of humor and religion relating to folk religion can be found in Fanny Hagin Mayer, "Japanese Folk Humor," *Asian Folklore Studies* 41, no. 2 (1982): 187–200; Shuhei Kikkawa, "The Function of Laughter in Japanese Religious Ritual," *Tokushima Bunri Daigaku Hikaku Bunka Kenkyūjō Nenpō* 10 (1994): 29–44; and Goh Abe, "A Ritual Performance of Laughter in Southern Japan," *Australian Journal of Comedy* 7, no. 2 (2001): 16–24. A discussion of the role of parody, satire, and humor in response to Aum Shinrikyō can be found in Richard A. Gardner, "The Blessing of Living in a Country Where There Are *Senryū!*: Humor in the Response to Aum Shinrikyō," *Asian Folklore Studies* 61, no. 1 (2002): 35–75.

SCOTT DAVIS (2005)

## HUMOR AND RELIGION: HUMOR AND ISLAM

"Do not seek to put man in a cosmic dimension, but to humanize the cosmos, for there surely is laughter, and strength against tragedy" (Orfalea and Elmusa, p. 153). Thus the Arab American poet Eugene Paul Nasser neatly sums up the interdependency of religion and humor while acknowledging a certain inevitable tension between those of earnest and those of ironic inclination. Laughter, like music, dance, alcohol or drugs, love, and poetry, can be considered threatening to religion because of its powerful attraction. Although it can be co-opted, repressed, or embraced, it cannot be ignored. A Tunisian trickster tale was the author's introduction to the

world of humor and Islam. Shared by an unlettered thirty-five-year-old North African mother of four over tea on a cold spring afternoon in 1967, the tale for some might humanize the cosmos a little too much, but for many over the centuries and around the Mediterranean Sea, it has borne an essential charm. In it the trickster Juha, not a religious figure, finds himself at odds with a religious practice and religious authority. He is annoyed at the noise of his small town muezzin's early morning call to prayer and the subsequent arising of his mother, who takes their only blanket for prayers. Juha's simple solution is to cut off the muezzin's head and pitch it down a well. Juha is unfazed by his deed, but his mother covers up for him by secretly throwing a ram's head down the well so it is what is discovered when the townspeople search for the missing muezzin. The punch line, yelled up by the investigator from inside the well, is, "Oh townspeople, does your muezzin have horns?" (Dundes, p. 310; Chanfrault, pp. 54–55).

To associate humor with Islam might disconcert readers of publications that stereotype Muslims as essentially humorless and incompatible with the West, members of "a different civilization" living in the "land of bloody borders" (Huntington, 258). And indeed some Muslims, like some Christians and Jews, are serious. Yet M. Conrad Hyers, in *Holy Laughter*, cautions that "the [religiously] over zealous, the fanatic, the excommunicator and executioner . . . are nearly always serious, contemptuous of frivolity and giggles" (Hyers, p. 245). He finds in religious humor the antidote to zealotry. Like the tale above, such humor tends to cluster around areas of social or personal tension or difficulty—in Juha's case, the challenge of required prayers.

The examples of Islam and humor that follow, selected from different centuries, regions, and classes and from both oral and written sources, tend toward breaking down hierarchies, creating liminal spaces that offer a chance to see facets of the Muslim experience afresh as they are played out in personal and congregational, micro and macro situations. In some examples secular humor is used to critique religion, whereas in others religious humor is used to highlight social ills. Some examples have been chosen for their Muslim subject matter, some because the Muslim humorist drew on humor for religiously informed ethical instruction, and some because the protagonist of a humorous joke or anecdote is represented as a religious figure and thus a lesson might be expected. Each is offered to crystallize a certain facet of Muslim artful managing of confluences of humor and Islam or to point to a locus where humor seems often to emerge within a religious context. No doubt other loci will occur to readers from their own experiences. (Nonreligiously referenced joking behavior of people who happen to be Muslim is beyond the scope of this entry.) Although women's humor as well as laughter in noninstitutionalized or marginal spaces is attended to here, more study of humor from the geographical, social, gender, religious, and class hinterlands from whence new thoughts and practices tend to emerge and the

taken-for-granted interrogated needs to be done. Some examples of debate about the appropriateness of humor in Islam are offered in the conclusion.

Humor appears in religiously central Muslim texts, including the Qur'an and *hadiths*, in texts or oral traditions of specific locales, embedded in larger ritual and festival practices, and as a central expectation within certain antinomian Muslim groups. The joking behavior can be directed toward fellow practitioners or, as in the Juha story, to the arduousness of following the basic directives, or can emerge from a generational dissonance. For example, the son of a famous Sūfī irreverently refers to the formulaic and protracted exchange of greetings, compliments and blessings between his Sūfī father and members of his brotherhood as "ping-pong." Further, humor can ease tensions or comment on relations between Muslims and non-Muslims. These humorous incursions reflect but also overtly or obliquely comment on, evaluate, and reimagine shared and personal religious (and other) phenomena (Webber, 1987). A humorous look at religious practice can be a resource for vulnerable or marginalized Muslims, as in many trickster stories, providing a safety valve and sometimes protection for the subaltern, the old, the poor, and the young—especially young women or minorities—to resist power or to defend themselves by humorously calling attention to the fates of those who harm them. In all cases the cosmos is made relevant to the human condition.

**RELIGION AS EVERYDAY LIFE.** Religion is a marked off category so that a certain comportment is expected in the presence of religious leaders, sacred texts, sacred performances and sacred space. Sometimes these expectations get in the way of what really matters and laughter can restore the balance.

Boundaries between the religious and the every day are often relaxed in the "little traditions," and this is a locus of criticism by the more conservative keepers of the "great tradition," itself in flux. The effects of this collapsing vary from one situation to another, but the incongruity catches the attention of the audience—in a narrative, an essay, a *mawlid* (birthday, anniversary), children's play—and opens up the space for insight or revelation.

**Children.** The religious behaviors of children provide unexpected, amusing examples of interweaving of the sacred with playfulness. In 1968 in a Tunisian kindergarten little boys sometimes used the school's dolls to play funeral—with procession and improvised prayers—causing the Muslim teachers to gasp and laugh. In 1985 in a mosque in Toledo, Ohio, startled smiles were elicited from adults who noticed little boys lined up between their fathers for prayer bowing forward contrapuntally to the grownups to play peekaboo with their small friends to their left and right in the row of worshippers. In such circumstances children innocently play the part of outsiders, the uninitiated, and thus remind adult adherents of the constructedness of religious practice.

Memories of childhood religious rituals from an adult's perspective are also a source of humor and perhaps proble-

matize that ritual. In “Theft in Broad Daylight” the scholar Abdulaziz Abbassi recalls the day as a young schoolboy in his Moroccan hometown that he was tricked into his Muslim-ordained circumcision:

And why were the barbers [at his friend Hassan’s house]? Was it to cleanse or purify you before you were allowed to play with Hassan’s [pet] rooster? Or, was it to cleanse and purify you after the incident . . . when a female cousin on the verge of womanhood tricked you into playing body-intertwine with her? Were these people going to let the rooster’s blood or yours? . . . All efforts to struggle out of their tight grip proved futile. The last thing you remembered before fainting was biting desperately at someone’s arm. Later you found out that poetic justice had prevailed. It was rumored that it took Hassan’s father months of doctor’s visits, frequent dressings, and medication before the bite healed. (Abbassi, pp. 226–227)

**The elderly.** Postmenopausal women are both powerful and supposedly naive and thus able to commingle the religious and religiously abjured without the communal censorship that any others except young children, holy fools, or the simpleminded might incur. The following joke about an old lady returning from pilgrimage going through Egyptian customs takes this to extremes. Each duty-laden item in her bag is respectfully forgiven by the customs official due to its religious import (e.g., the imported television she claimed she needed for the sermons of a well-known religious leader, the tape recorder to listen to Qur’anic recitations) until the customs official finds the whiskey. “Whiskey, oh *hājja* (pilgrim)?” She explains that as an old lady the circumambulation of the Ka’bah was too much for her. Thus, she says, “I drink two glasses, and the Ka’bah goes around me!” (Ibrahim, p. 207). This joke critiques the use of the *hājja* as a shopping trip (a kind of money changers in the Temple critique) and religious hypocrisy, while appropriating the *hājja*’s deployment of her old lady status to evade a younger male authority figure.

**Women.** Passion within marriage is considered necessary, and it is not out of bounds for women to allude to it humorously even in some religious settings. So, one afternoon in the late 1970s in Tunisia women and children were sitting in the shrine of a *walī* (Sidi Ahmed) celebrating with feasting the recovery one woman’s husband from an accident. At this *ziyāra* (visit) to a local *walī* tomb, some women in the cool, dusky shrine were getting semi-permanent small, lacy decorations of *harcous*, a black, smoky and clove-scented cosmetic painted on their hands or feet. Admiring the intricate scented decoration on her little finger, a young wife laughed, “I am putting this right next to [my husband’s] nose tonight” (Webber 1991, p. 188)—yet another example of bringing the cosmos home.

The convergence of the sacred and sexual, especially as it relates to women’s desires, seems to be less problematic for the Muslim community than for Judaic or Christian communities. The Qur’an itself does not ignore God-given de-

sires or their human and humorous consequences. In the Joseph Sura v. 30–32 the wife of Potiphar, the Egyptian who bought Joseph, has attempted to seduce him and her lady friends are condemning her. Thus follows an amusing scene when she invites the women to dine. As they are peeling fruit she has Joseph appear unexpectedly and her guests are so affected by his beauty that they lose control of their knives and, en masse, knick their hands instead of the fruit, intimating that they might have behaved no better than she had they been in her situation. Again, this humor in the Qur’an collapses the distance between the sacred and the everyday, brings some Muslims closer to God and even helps believers not fear death (Mir, 1991).

Female modesty can also be a locus of humor when juxtaposed with a new technology. In an 1874 cartoon in an Istanbul journal, a veiled woman instructs her photographer, “above all . . . I want a good likeness.” (Georgeon, p. 109)

**Muslims in the West.** Sometimes a participant observer finds the juxtaposition of sacred and profane humorously and touchingly jarring. The poet H. S. Hamod finds himself next to a busy South Dakota highway as his father, grandfather, and father’s friend have insisted that he stop his car so they can pray on their Navaho blanket-turned-prayer-rug as night falls:

me, driving the 1959 Lincoln ninety miles an hour “STOP, STOP this car.” . . . I stop . . . car lights stream by more than I’ve ever seen in South Dakota . . . they discuss which direction is East after a few minutes it’s decided it must be that way they face what must surely be South they face their East . . . Three old men chanting the Qur’an in the middle of a South Dakota night *Allahu Ahkbar Allahu Ahkbar* . . . more cars flash by *malik a youm a deen* . . . I’m embarrassed to be with them *en umta ailiy him* . . . people stream by, an old woman strains a gawk at them *wil-lathouu leen* . . . I’m standing guard now. (Orfalea and Elmusa, pp. 165–168)

The refusal of the older men to acknowledge “mundane” difficulties to fulfilling prayer requirements puts the worldlier poet into a betwixt and between situation, striving to mediate for himself and his readers religious and everyday, East-West perspectives.

*Hijābs* (head scarfs), sometimes a focus of cultural tension in both east and west, can also be mediated through humor. In a comedy club in the United States, Tissa Hami, an American stand-up comedian who is “covered,” lets her scarf introduce part of who she is to her audience as she jokes about the marginality of Muslims in the United States. “It was scary growing up Iranian in this country,” she tells her audiences, “but when other kids teased me, I threatened to take them hostage” (Potier, p. 2). Another joke told by contemporary American Muslims not only collapses together religious and secular concerns, but also comments on U.S. religious diversity, assumptions about Muslims, immigrant name changes, and immigrant fears about generational divi-

sions and loss of identity. A Muslim immigrant named Mohamed starts his first day of school in his new country. As the youngsters introduce themselves, the teacher tells him that Mohamed is not an American name. They will call him Mike. That night when his parents ask how his day went, he doesn't answer, until finally he announces that they must now address him as Mike. He is spanked for being insolent. The next day his teacher asks him how his first day in America had gone. He grouses, "One day in America and I'm attacked by two terrorists."

**POWERFUL WORDS AND IMPETUOUS ITERATIONS.** In curses the sacred and profane are often collapsed together, and Muslim profanities can be a locus of humor. Many, probably most, curses are not meant seriously, and Muslims do not feel that an impulsive curse is binding or effective but a momentary loss of control that can bring laughter in the appropriate context. In 1996 in Tunisia an extended family was socializing while a fragile old auntie was praying in the midst of them, as women often do. Small children disrupted her by their tumbling on and around her prayer mat—oblivious to her or a sacred space and moment. She stopped in the middle of her prayers, roundly cursed them and then continued praying. Youths and other adults in the room then had to step quietly outside, muffling their laughter. (Laughter in prayer time, as opposed to, say, a smile, invalidates the prayer.) In literary collections as well, humorous accounts of inappropriate behaviors during mosque prayers or attempts to repress one's laughter in the holy site abound. However, this particular example might also be likened to the singlemindedness of the old men praying on their Navaho rug by the side of a superhighway in South Dakota. For most, these incidences of less-than-perfect prayer performances offer occasions to celebrate the lives of the prayers and the unexpected gift of a good story.

In 1967 the author and another Peace Corps volunteer were team teaching with two teenage Muslim women in a Tunisian kindergarten. One day the Muslims remembered the curse "[When you die] may you be buried in the graveyard of the Christians" and "cursed" their Christian counterparts with giggling glee. During the colonial period, just ended at the time, this was a bitter curse "othering" a fellow townspeople who might be a bit of an "Uncle Ahmed." Using it in a new context, among friends, conveyed a good bit about the new leveling of hierarchies. Similarly parents quite often rain curses down on the heads of their misbehaving young children only to shift their ire to any other adult who would dare to intone, "amen" (Webber, 1991, p. 189, n.18).

Even when a curse works, it is sometimes cause for, if not unabashed laughter, a satisfied snort. In a Tunisian town a descendant of a well-known *wali* [holy person] had a philandering husband. After enduring years of his roaming, she finally cursed him with a deadly disease, and he caught it and died. As time passes and the story is told and retold, the regret for the death recedes and the local community wryly

takes note of divine justice for a woman seemingly without recourse.

Impetuous words that cannot legally be unsaid are the cause of laughter for all but the miscreant who is caught with his or her self-control down. Conflation of the sacred, secular, and sexual often results in humorous moments. According to *shari'ah*, once a man swears thrice that he divorces his wife, she is divorced, and they cannot be remarried unless she is first married to and divorced from another. Mirth and good stories arise from cases in which a divorced wife is wed supposedly temporarily to a friend of the former spouse, who she then decides she prefers. It is a cautionary tale that depends for its effectiveness on humorous sexual humiliation.

**SUBALTERN RESISTANCE, HUMOR, AND ISLAM.** Muslim authorities recognized the vulnerability of their religion to the condescension of nineteenth-century colonizers of Asia and Africa. The Orientalist impulse to appropriate the East's intellectual heritage included an assumed mastery of and thus right to critically interrogate its religions. Foreign scholars found fault with Islamic and other religious practices of the colonized. For their part, the colonized, made marginal to their own religious traditions, could through religious-based humor resist, mediate, and educate across religions and cultures. In his work on the Egyptians of the early 1800s, Edward Lane strives to document Egyptian (usually Cairene) lifestyles with little regard for individual personalities or humanity. But in the few cases in which Egyptians are quoted, readers glimpse witty, appealing Muslim individuals. In one anecdote an Egyptian Muslim friend learns that another Egyptian has asked Lane for his watch (*sa'ah*). Because *sa'ah* also means "hour" or "period of general judgment," Lane's friend suggests that Lane return an "equivocal and evasive answer" taken from the Qur'an: "Verily the *sa'ah* shall come: I will surely make it to appear" (Lane, pp. 280–281). Whereas Lane uses this humorous riposte to illustrate what he sees as an unfortunate Muslim tendency to confound the sacred with the everyday, readers might rather glimpse an appealing personality in the unnamed Egyptian friend, a man steeped in the witty culture of Muslim literati (*udaba'*) that often depends for effect on a shared knowledge of the Qur'an.

In another story Lane challenges a Muslim friend concerning the propriety of a certain book that when closed has a page relating a scene of debauchery covering a page of prayer. His friend jokes that Lane could simply turn the book over so that the prayer page would cover the debauchery—the sin would then be covered by forgiveness. To Lane the incident proved Egyptians hypocrites. "The generality of the Arabs," Lane concludes, are "a most inconsistent people" (Lane, p. 280). Readers might find, however, that the Muslim's urbane witticism provides proof of a more subtle, multilayered world than the one Lane perceived.

**TRICKSTERS.** Muslim tricksters, like the Mediterranean Juha, who is also sometimes Jewish or Christian, are humans whose humorous escapades only intermittently attend to religion. Juha's religiously linked escapades are irreverent and

collapse hierarchies so that Juha in some narratives can even outsmart or bargain with God, much as he outsmarts the rich or the learned. Two other tricksters are Nasruddin Hodja or Mullah Nasruddin—poor, rural, low-level religious teachers or scholars, sometimes judges. They, like Juha, are at least quasi-legendary with times of birth and death and place of burial contradictorily noted in various sources. Sidi Khadir, like some *walīs* and *walīyyas*, has supernatural powers and is trickster-like, causing confusion through his miracles (Webber, 1991, pp. 143, 160, 189). Like Juha, Nasruddin Hodja or Mullah Nasruddin are found in various transformations around the Mediterranean. Perhaps because the rough and tumble antics of Juha are tempered in the latter two tricksters by the quasi-respectability endowed by their religiously evocative honorifics, the latter two tricksters take on somewhat more respectable personae. They are comic geniuses, folk philosophers, and a bit less messy and more socially acceptable than Juha. Depending on the listener's or reader's acceptance of the trickster protagonists' credentials, the stories might be expected to offer a religious or ethical life lesson even if the narrative itself is not overtly religious. In *adab* (Arabic corpus of belles lettres) tricksters are often a humorous Sancho Panza-type sidekick or a master of disguise, but again their escapades only incidentally involve religion.

The following Nasruddin account, one of thousands, could be used as the opener to a speech to raise charitable donations or in a conversation with a family member who is borrowing or lending money. Like most of the hodja and mullah stories, it addresses topics of communal tension, such as haves and have-nots, money, and judgmental individuals. The story's seeming senselessness amuses and intrigues the listener or reader long enough that some underlying recurrent cultural and communal quandaries can be confronted:

The Mullah went to see a rich man. "Give me some money." "Why?" "I want to buy . . . an elephant." "If you have no money, you can't afford to keep an elephant." "I came here," said Nasruddin, "to get money, not advice." (Shah, p.13.)

Why the impulse in the Abrahamic traditions toward humorous human tricksters like Till Eulenspiegel, Pedro de Urdemalas, and Juha? A trickster in human form, it seems, has a different cultural role than trickster as animal or as god (or as animal-supernatural being). These legendary, lower-class tricksters, rogues, and fools are not so other as magical or supernatural tricksters: their behaviors, however foolish, quirky, or outrageous, can be identified by listeners or readers with their own curtailed impulses or moments of whimsy but writ large and run out to their logical (illogical) conclusions.

In many trickster escapades involving encounters with the religious establishment, tricksters violate the most basic rules of Islam. Thus, their reverently irreverent behavior is reminiscent of that of socially vulnerable antinomian Sūfis, dervishes and holy fools and their real-life uses of humor and

taboo breaking. By definition these trickster-like religious figures, like the storied tricksters, violate social norms and embrace unconventional and liminal behavior including disregard of Islamic ritual practices and contravention of religious law (Karamustafa, pp. 17-18). Poverty, of course, accentuates perceptions of deviance and sometimes antinomians even gave up great wealth to embark on their antinomian way.

Ahmet Karamustafa's (1994) intriguing work on the antinomian dervishes, wandering Sūfī groups that spread from Egypt to South Asia between 1200 and 1550 BCE, illustrates some of the behaviors of the religious groups known for mirth and merrymaking and assessed as ruffraff by the elite, who felt that "Islam was at the mercy of spiritual delinquents" (Karamustafa, p. 9). The boisterous commentary of these "men of good humour" actually puts the dervishes in danger from the establishment, religious and otherwise, by their trickster-like behaviors—combining mirth and merrymaking with dance and ecstasy, wine drinking, hashish smoking, homosexuality (or chastity), "dependence on love to the point of disregarding reason," and so on (Karamustafa, p. 72). Evoking the image of a holy fool, the leader of one group, the Abdals, brought merriment when he "danced like a bear and sang like a monkey" (Karamustafa, p. 1). Thus, like the tricksters, the antinomians tend toward a motley of dress, ignoring of boundaries—social, temporal, and spatial—and amorality, exhibition of human-animal dualism, and so on.

**TRADITIONAL ADAB, RELIGION, AND HUMOR.** What comprises *adab* has varied over the centuries, but its core genres might be defined at any one time and place as those established *udaba'* (masters of *adab*) choose to include in their broad repertoires: knowledge of philosophy (Greek, Roman, Persian, Arabic), history, manners, theology, sermons, travel narratives, biography and autobiography, sex manuals, proverbs, riddles, tall tales, humorous narratives; a keen assessment of middle-class society; and the ability to write engagingly about such topics according to or challenging aesthetic norms. Although *adab* shares plots, themes, tales, motifs, and genres with popular aesthetic culture, a central distinguishing feature of *adab* is that it is written and transmitted by a renowned author living the lifestyle of an artist who was, even in the fairly recent past, sometimes on the fringes, less frequently in the center, of a rarified court lifestyle (Allen, p. 170). Basic to all scholars was their thorough knowledge of religious texts—beginning with Qur'an memorization. In many cases this training continues in the twenty-first century.

Being able to write humorously was an important talent for the *udaba'*, especially during those times when they were dependent on wealthy patrons, so humorous incidents about misreading or misuse of Qur'anic verses are drawn on as accessible to most everyone. In early *adab* ridicule also surfaced in debates over the relative merits of other religions, especially Zoroastrianism and Christianity. Franz Rosenthal does

not see this early humor as an attack “upon the established religion or expressions of a liberal and skeptical spirit” but comic relief on notice of unexpected deviation from well-known “literary expressions and ritualistic practices” (Rosenthal, p. 28). Some *adab* humor, however, definitely seems to express the liberal or ironic outlook of a jaded, bohemian community. In his satiric debate “The Pleasure of Girls and Boys Compared,” for example, the Basran *adib* Jahiz (c. 776–868 CE), who was also a religious scholar, has his fictional debaters cite verses from the Qurʾān to bolster their sexual preferences for boys or girls. Such quotes from the Qurʾān as those of Jahiz and the quote from Lane’s friend cited previously are humorous because they are frivolous applications from a sacred source. Mistakes in use of Qurʾanic references, which most people knew so well, could also cause laughter: “Abu ʿAlgamah mentioned the name of the wolf who ate the Biblical and Qurʾanic Joseph, and when he was told that Joseph was not eaten by a wolf, he said that the name he had mentioned, then, was the name of the wolf that did *not* eat Joseph” (Rosenthal, p. 10, n. 5).

Inability to recognize a common Qurʾanic quote can also cause laughter. The *adib* Abu al-Faraj al-Isfahani (d. 967 CE) notes an occasion in the mosque when the *imām* recited, “And why should I not serve Him Who created me?” (Qurʾān 36:22), a witty effeminate, al-Dalal, responded, “I don’t know,” and caused most of the worshippers to laugh and invalidate their prayers (Rowson, p. 683).

A theme that runs through earlier *adab* is attribution of humorous, daring statements to the Prophet, seemingly again humanizing the cosmos. The early poet Hassan ibn Thabit observes “that the Prophet was not as puritanical as some people imagine” (cited in Mir, p. 162). Sexual banter is attributed to the Prophet in the form of *ḥadīth* (Rosenthal, p. 29). And class-based humor also invokes the Qurʾān as when Yusuf Shirbini, cited by Nelly Hanna, quotes the ignorant commoners’ *ʿulamāʾ* as claiming to have a copy of the Qurʾān in the author’s handwriting, or as asking for a summary of the Qurʾān since the original is too difficult for his students (Hanna, p. 77).

The practice of listing *ḥadīth* transmitters is also made light of. Rosenthal reports that the famous early *adib* Ashʿab, on being advised by religious critics that it would be more becoming for him to transmit traditions than tell his inappropriate jokes, offered this *ḥadīth*, “I was told by Nafi’ . . . on the authority of Ibn ʿUmar that the Messenger of God said: ‘A man in whom there are found two qualities belongs to God’s chosen friends.’” When his critic then complimented Ashʿab and asked what these two qualities were, he replied that Nafi’ had forgotten one and he, Ashʿab, had forgotten the other (Rosenthal, p. 117).

The five pillars of Islam—profession, prayers, almsgiving, fasting, and pilgrimage—also are resources for *udabaʾ* wit. “A man on pilgrimage was glaring at a slave girl as though she were a heathen in the pulpit. Her arms were bare, her skin was as white as palm-core and she was mouthing one

obscurity after another. ‘How dare you talk like that on pilgrimage! It’s not me on pilgrimage, stupid, it’s my camel! Can’t you see that I’m the one sitting and it’s doing the walking?’” (Colville, p. 206).

Not surprisingly given the number required each day, speedy prayer is also a source of humor. *Udabaʾ* report their protagonists—buffoons, tricksters, and effeminate—drawing upon quotes from the Qurʾān and *ḥadīth* for proof that making long prayers is a sign of false piety or accusing the slower prayer of having an inordinate number of sins to assuage.

**ISLAM AND HUMOR: CRITIQUES AND DIALOGUE.** Humor in religion introduces a bit (or more) of the chaotic into what some feel should be a sober and controlled cultural domain—hence attempts to control the uncontrollable. Some joking behavior might be acceptable only among insiders. Some Islamic leaders in colonial Cairo felt that the kinds of humor incorporated into the *mawlid* festivals, the levity and buffoonery, made Islam appear ridiculous in Western eyes and so attempted to manage them. Censorship of religious humor, like that of certain mullah tales in Iran following the fall of the shah, results in risky humor retreating to oral and private venues.

And yet there are apologists for some joking behavior even on the fault lines of religious sectarianism. “The joking is not a problem,” one middle-aged family man told the author in 1986 about the jokes Muslim and Coptic neighbors in Cairo tell on each other, “It’s time to worry when the joking stops.” Laughter might be troubling but also allows space for insight or creativity. Altogether most Islamic leaders viewed joking and laughter relatively positively, although bringing in examples from the behavior of the Prophet and his companions would be taboo for some. Only hurtful, mocking laughter is consistently criticized.

Still debates about the place of humor in Islam surface in times of change or crisis, and sometimes this results in harsh treatment of the perceived irreverent. For example, an *imām* of the early fifteenth century, Ibn Sudun al Busbugawi, wrote in Egypt during a time of failing economy due to the costs of a large army, of recurrent plague, and of famine. Religion and humor were not his principal preoccupation (rather perhaps food and hashish), but in his work *The Diversion of the Souls: Bringing a Laugh to a Scowling Face*, after presenting his favorite rice recipes, he mildly joshes Muslim portion sellers about the efficacy of their products as well as Muslims who claim exclusive access to heaven: “He who eats two platefuls [of the rice] after lunch and two platefuls after dinner for forty years on end . . . will never fall sick, unless from some disease, and he will not die, except when his allotted time is up; and if he should die a Muslim he will enter Paradise” (cited in Vrolijk, p. 28). Indeed he also penned a loving, rather humorous poem about his mother upon her death—behavior that was (and still is) criticized later by more conservative Muslims but which is evocative of some contemporary memorial services or of wake reminiscences.

He remembers, “When I ran away from my teacher and my dad was chasing after me to send me back, my mother always found me a hiding place” (Vroljik, p. 45). And he jokingly reproaches her for her choice of heaven over him: “You’ve gone up to heaven to God who forgives all / How on earth could it please you to leave me / you were never like that before” (Vroljik, p. 134). Again, a familiar approach collapses the distance between the cosmos and the quotidian and thus between the son and his missed mother. Perhaps the hard times account for that fact that Ibn Sudun’s humor and decadent behavior displeased both his father and Cairene religious authorities to such a degree that he was exiled to Damascus near the end of his life.

Another incident of attempted repression of humor occurred in 1877, when the Ottoman parliament debated the issue of press humor during wartime. More conservative members—Muslims and non-Muslims alike—felt that humor was frivolous and dangerous, whereas others felt that it was religiously encouraged even though printing presses at that time (like the Internet of the twenty-first century perhaps) had made a much broader dissemination of humor possible. In fact the Egyptian Boulaq Press had already, almost fifty years earlier, published a collection of Ottoman Turkish Nasruddin Hodja tales. The great majority of deputies defended humor as having a social utility.

Whatever is officially decided in any one time or place about the relation between humor and Islam, humor will accrete to Islam and to its texts and practices, and Muslims will be the first to find, through irreverence, a means to point out the dissonances between Islamic ideals and the practices of those claiming to adhere to them (Sultan-Qurraie, chap. 4). In Casablanca in the last decade of the twentieth century, the new Hasan II Mosque, a pet project of the king of Morocco, had just been completed in a slum area by the Atlantic Ocean. It is absolutely lovely and drew on the talents of Moroccan artisans for stonework, woodwork, and mosaics. It has the tallest minaret in the world. The problem was that the middle classes especially felt that their financial contributions (the mosque cost \$800 million) were more extortions than contributions and that, besides the sewage and flooding problems the mosque has exacerbated in the slum, the contrast between the opulence of the mosque and the poverty of its surroundings jars on some of the faithful. Thus jokes about the mosque abound in the realm of private, verbal art of the local Muslim community. Most popular seemed to be an ironic caution about standing outside one’s local mosque during crowded Friday noon prayer time waiting to get in to pray. “Let’s go home,” goes the punch line, “he’ might decide to build another one.”

Ammann, Ludwig. *Vorbild und Vernunft: Die Regelung von Lachen und Scherzen im mittelalterlichen Islam*. Arabische Texte und Studien Band 5. New York, 1993. A thorough look at the development of Islamic attitudes about humor deriving from scholarly and folk considerations of the Qur’ān, the *sunnah*, and pre-Islamic Arab, Persian, Greek aesthetics. Ammann also considers differences between theories about joking behavior and its practice in everyday medieval life and in *adab*. Contains a complete index and bibliography.

Babcock-Abrahams, Barbara. “‘A Tolerated Margin of Mess’: The Trickster and His Tales Reconsidered.” *Journal of the Folklore Institute* 11, no. 3 (1975): 147–184.

Burke, Peter. *Popular Culture in Early Modern Europe*. New York, 1978. See chap. 8 for a lengthy description of Christianity’s attempts between 1500 and 1800 to repress local religious “irreverent” culture. The *adib*, with his capacity for the impudent and the heretical, seemed better able to avoid repression. Rabelais might be the closest in early modern Europe to the irreverence and voracious interest in popular culture of some *udaba’* (although lacking the equivalent of the religious training of the *adib*).

Chanfrault, Bernard. “Jeha (Djoha) en Tunisie: De la tradition au modernisme; Approche socio-historique de l’anecdote orale.” *Revue du Monde Musulman et de la Méditerranée* 77–78, nos. 3–4 (1996): 51–59.

Christen, Kimberly A. *Clowns and Tricksters: An Encyclopedia of Tradition and Culture*. Oxford, 1998. Short descriptions of almost two hundred trickster figures, including Juha, Khadir, Mullah Nasruddin, and Nasruddin Khodja. Includes references and further readings.

Colville, Jim, comp. and trans. *Sobriety and Mirth: A Selection of the Shorter Writings of Al-Jahiz*. London, 2002. Jahiz was a specialist in *adab* who humorously considered the prejudices and inequalities in Basra and in the comfortable cosmopolitan world of imperial Baghdad. He humorously and irreverently considers misers, the pretentious, exploiters of homosexuals and eunuchs. Quite often his setting for a humorous account of inappropriate behavior is a mosque or during a religiously prescribed event, such as pilgrimage, fasts, prayers.

Dundes, Alan, and Taoufik Bradai. “Tales of a Tunisian Trickster.” *Southern Folklore Quarterly* 27, no. 4 (1963): 300–315. See p. 310 for a thorough discussion of the muezzin’s head tale included in this entry and consult the article for an extensive bibliography on the Middle East and North African trickster and connections of his stories with similar international motif and tale types.

Georgeon, Francois. “Rire dans l’Empire ottoman?” *Revue du Monde Musulman et de la Méditerranée* 77–78, nos. 3–4 (1996): 89–109. A consideration of laughter and attitudes about laughter within the Ottoman Empire. The author concludes that laughter, especially religious laughter like that of the Karagoz puppet shows put on during religious “occasions” such as circumcisions and Ramadan, was extinguished with the demise of the empire.

Hanna, Nelly. *In Praise of Books: A Cultural History of Cairo’s Middle Class, Sixteenth to the Eighteenth Century*. Syracuse, N.Y., 2003.

- Huntington, Samuel P. *The Clash of Civilizations: Remaking of World Order*. New York, 1996. Historical study indicates that theories of the inevitability of civilizational clashes can become self-fulfilling prophecies. Issues with borders would better be addressed by attention to how, when, why, and by whom certain borders were established rather than assuming the culpability of Islamdom.

- Marzolph, Ulrich. *Arabia Ridens: Die humoristische Kurzprosa der frühen adab-literatur im internationalen*. Frankfurt, Germany, 1992. This is a consideration of early *adab* humor in the context of world literature. Because Marzolph is a folklorist, he extensively considers the material using both the Aarne-Thompson tale type index and also Thompson's motif index, thus bringing in similar humorous material from other parts of the world, especially Europe. He considers the reshaping of anecdotes as they fit into different cultural times and contexts, both Muslim (Persian, Afghan, Berber, and so on) and otherwise. His bibliography, citing references from early Persian and Arabic to the twentieth century, is particularly useful.
- Marzolph, Ulrich. "Molla Nasr al-Din in Persia." *Iranian Studies* 28 (1995): 157–174. Discussion of the place of the mullah and Juha in Persia, past and present, with attention to the issues of censorship of his stories by clergy, examples of the intermingling of Arabic, Persian, and Turkish stories, and extensive bibliography on related figures like Juha, Bohlul, and Nasruddin Hodja in the Ottoman tradition.
- Masliyah, Sadok. "Curses and Insults in Iraqi Arabic." *Journal of Semitic Studies* 46, no. 2 (2001): 267–308.
- Mir, Mustansir. "Humor in the Qur'an." *Muslim World* 81, nos. 3–4 (1991): 179–193. Mir observes that humor in religion can be an object of suspicion because humor collapses the distance needed to evoke "reverence and awe" (p. 180). On the other hand, Qur'anic humor, especially ironic humor, can inspire religious insight or "elucidate a theological teaching" (p. 180). Mir cites Sarah and Solomon laughing and several amusing scenes involving Moses. He points to caricatures of a Meccan leader and of Medinan hypocrites. He concludes that the attempt to collapse distance between sacred and profane may in itself be humorous.
- Orfalea, Gregory, and Sharif Elmusa, eds. *Grape Leaves: A Century of Arab-American Poetry*. New York, 1988; reprint, 2000. Contains Arab American poetry of Christians, like Nasser, and Muslims, like Hamod.
- Potier, Beth. "The Big Picture: Tessa Hami, Comedian." *Harvard University Gazette*, January 8, 2004. Available from <http://www.news.harvard.edu/gazette/>.
- Redfield, Robert. *Peasant Society and Culture*. Chicago, 1956. The little traditions—great traditions split was parsed by Redfield in this work (see pp. 83–86, 99–100 for his discussion of Islam in particular) and modified by Burke and others. It is a problematic split because the process of negotiating "reality" is much the same for each. Also see Karamustafa's discussion of the "methodological poverty of the two-tiered model of religion" (Karamustafa, p. 10) and Burke's discussion (Burke, pp. 26–28).
- Rosenthal, Franz. *Humor in Early Islam*. Philadelphia, 1956. This work provides an extensive bibliography especially good for the Arabic sources.
- Rowson, Everett K. "The Effeminates of Early Medina." *Journal of the American Oriental Society* 111, no. 4 (1991): 671–693. The "effeminates" (probably transvestites) were useful as musicians and go-betweens. The article is concerned with what can be learned about the effeminates' roles in society during the early Islamic centuries. Clearly they often played central roles as artists, wits, and intellectuals and as confidants of both men and women. Also clearly they were at times censored, banished, and even put to death during less-permissive times for their representations of self, or their sexual stances as well as their irreverence.
- Rowson, Everett K. "Review of *Arabia Ridens* by Ulrich Marzolph." *Journal of the American Oriental Society* 115, no. 3 (1995): 493–496. A thorough review that also points out some possible weaknesses in Marzolph's work.
- Rowson, Everett K. "Review of *Vorbild und Vernunft* by Ludwig Ammann." *Journal of the American Oriental Society* 115, no. 3 (1995): 491–493. Rowson concludes that Ammann's "picture of both life and literature in medieval Islamic society is . . . on the whole considerably grimmer than what the evidence actually suggests" (p. 493).
- Scott, James C. *Weapons of the Weak*. New Haven, Conn., 1985.
- Shah, Idries. *The Pleasantries of the Incredible Mulla Nasrudin*. London, 1968.
- Sultan-Qurraie, Hadi. *Modern Azeri Literature: Identity, Gender, and Politics in the Poetry of Mo'juz*. Bloomington, Ind., 2003. Chap. 4 is an important contribution to discussion of the Azeri Muslim tradition of humor and satire.
- Vrolijk, Arnoud. *Bringing a Laugh to a Scowling Face: A Study and Critical Edition of the "Nuzhat Alji-nufus Wa-mudhik Al-'abus" by 'Ali Ibn Sudun al-Basbugawi (Cairo 810/1407–Damascus 868/1464)*. Leiden, Netherlands, 1998. The mid-fifteenth-century "Cairene lowlife character" Ibn Sudun, a trained theologian known also as a buffoon and hashishi was

exiled finally from Cairo to Damascus by judgmental Mamlūk authorities. His work is in the *adab* tradition, showing facility with diverse literary styles. The first part, "Serious Poetry," is only half as long as the second part, "On Pleasancies," which contains numerous examples of humor and Islam. Chap. 3 of Vrolijk's work contrasts the broader outlook of Ibn Sudun's libertine attitude with that of contemporary Egyptian and Western critics. A 178-page Arabic, critically edited synthesis of several redactions is included.

### HUMOR AND RELIGION: HUMOR, IRONY, AND THE COMIC IN WESTERN THEOLOGY AND PHILOSOPHY

In the history of Western theology and philosophy, humor and religion have had a stormy relationship. Attitudes to humor and joking—and especially to laughter—have ranged from wholesale condemnation, to qualified acceptance and praise of certain forms of humor, to more enthusiastic acceptance.

**THE SEPARATION OF HUMOR AND RELIGION.** The separation of humor and religion cannot be understood without understanding attitudes to laughter in the history of Western philosophy and theology. For centuries, the condemnation of laughter was commonplace. Among the ancient Greeks, for instance, Plato associates indulgence in laughter with the loss of self-control. In his *Republic*, the guardians who are to govern the ideal society must not be "too fond of laughter" (388e), and no literature portraying the gods or other reputable characters as overcome with laughter can be permitted in the ideal *polis*. Aristotle is rather more charitable, and as we shall shortly see, views wit (*eutrapelia*) as a virtue. Nevertheless, in the *Poetics* he still associates comedy with something "lowly." In comedy we laugh at the imitation of those inferior to us because of their "ridiculousness . . . a particular form of the shameful" (1449a). A comic character is ludicrous in respect of some "error or unseemliness that is not painful or destructive" (1449a). Numerous Greek, Jewish, and Christian ascetics took as an ideal the perfect human who never laughed. In the Christian tradition, Luke 6:25 reports Jesus as saying "Woe to you who laugh now, for you will mourn and weep." Much was made of this verse by early Christian ascetics in judging laughter to be contemptible. John Chrysostom (347–407 CE) has been cited as the first to point out that the gospels never portray Jesus as laughing, and the former's condemnation of laughter is typical of a common attitude in early Christianity:

When . . . thou seest persons laughing, reflect that those teeth, that grin now, will one day have to sustain that most dreadful wailing and gnashing, and that they will remember this same laugh on That Day whilst they are grinding and gnashing! Then thou too shalt remember this laugh! (*Concerning the Statutes, Homily XX*. Cited in Gilhus, p. 63)

But if laughter was contemptible, weeping—over Christ's death, one's own sin, and the threat of eternal damnation—was to be praised and recommended (for more on this idea see Gilhus, chapter 4). This condemnation of laughter seems largely to do with its bodily nature, the idea being that laughter had to be conquered as part and parcel of controlling the body. As Gilhus puts it, "The more the body was closed against the world, the more the soul was opened up to God" (p. 67).

**THE FEAST OF FOOLS: A MORE POSITIVE VIEW.** Though there were exceptions to the disapproving view of humor in early Christianity—chiefly among the Gnostics, several of whose myths included laughter as a reaction to a clash between a material and spiritual interpretation of events—it was not until the medieval period that a far more positive view of laughter and the comic emerged. According to several scholars, this was largely the result of a changed view of the human body, related not least to the centrality of the Eucharist and an increased emphasis upon Christianity as a religion of incarnation. It is from such factors that Mikhail Bakhtin generates his influential view of the Middle Ages' "laughter culture" in his seminal book *Rabelais and His World*. The festivals of this period included the Feast of Fools, nearly all the rituals of which were, according to Bakhtin, "a grotesque degradation of various church rituals and symbols and their transfer to the material bodily level: gluttony and drunken orgies on the altar table, indecent gestures, disrobing" (pp. 74–75).

Certainly, parody and revelry of various kinds were central to such carnivals. The contrast between the likes of John Chrysostom and the writers of an apology for such activities issued by the Paris School of Theology in 1444 could hardly be starker. The apologists claim that "foolishness" is humanity's "second nature," and stress the importance of its being given the opportunity to "freely spend itself at least once a year." Humans are compared to badly constructed wine barrels, "which would burst from the wine of wisdom, if this wine remains in a state of constant fermentation of piety and fear of God." Just as such wine must be given air so that it does not spoil, so the church must allow folly on certain days "so that we may later return with greater zeal to the service of God" (quoted by Bakhtin, p. 75). This can be seen as an embryonic version of the so-called relief or release theory of humor or laughter, later developed in more detail by Herbert Spencer and Sigmund Freud.

**STRIKING THE MEAN: ST. THOMAS AQUINAS.** But the Middle Ages also provide a mean between the extremes described by Bakhtin and the ascetic despisers of laughter. St. Thomas Aquinas, for instance, shows a markedly greater tolerance of

laughter than does John Chrysostom. Drawing on Aristotle, according to whose *Nicomachean Ethics* wit (*eutrapelia*) is a virtue, Aquinas argues that the lack of mirth is a vice. Following Aristotle, he commends *eutrapelia*, an application of the doctrine of the golden mean to the sphere of play:

Those who go to excess in merry-making [Aristotle] calls buffoons (*bomolochoi*) . . . these people are always ready to seize anything which they can turn to ridicule. Such men are a nuisance through their efforts at all costs to raise a laugh. . . . But he says also that those who do not want themselves to make a joke and are annoyed by those who do, because they feel insulted, appear to be “agrii,” that is, “boorish,” and hard, because they are not softened by the pleasure of play. . . . Thus Aristotle shows what is the mean in playing. He says that those who exercise moderation in play are called *eutrapeloi*, “well-turning,” because they are able to turn aptly into laughter what is said or done. (St. Thomas Aquinas, *In decem libros Ethicorum Aristotelis ad Nichomachum*, lib. iv, lect. 16. Cited in Hugo Rahner, “*Eutrapelia*: A Forgotten Virtue,” in Hyers, 1969, p. 193)

The fact that Aristotle, so respected a source for medieval Christianity, praises wittiness and its concomitant laughter appears to be a problem for laughter’s religious enemies. This issue is given a memorable fictional portrayal in Umberto Eco’s novel *The Name of the Rose* (1980), in which the laughter-hating monastery librarian Jorge is prepared to kill rather than allow the discovery of his library’s secret treasure, the lost second book of Aristotle’s *Poetics* which praises comedy and laughter. Though Aquinas’s view of laughter and the comic is clearly more measured than that found among certain celebrants of the Feast of Fools, it has often been noted that by the medieval period, the church had moved from an almost entirely negative view of laughter to fostering it actively through religious plays and feasts.

**THE REFORMATION AND BEYOND.** However, the Reformation’s more negative view of the body, exemplified by such moves as the spiritualization of the Eucharist, marked a turn in the opposite direction: in England, for instance, one Particular Baptist group agreed that future members must never make jokes, and certain Puritan pamphlets, putting the case for the closure of theaters, seem to urge a return to John Chrysostom’s view. (For a somewhat contrary view that discusses the significance of Martin Luther in the history of laughter, see Zwart, chapter 4.)

It is from this general trend that Bakhtin derives his view that, in contrast to the Renaissance view of laughter that he associates with Rabelais, Cervantes, and Shakespeare, for whom laughter “has a deep philosophical meaning . . . Certain aspects of the world are accessible only to laughter” (p. 66), from the seventeenth century onwards, what laughter is left becomes diminished: its “cold humor, irony, sarcasm” (p. 38) and the like are “a laughter that does not laugh” (p. 45). This attitude culminates in one of the best-known of all comments on laughter, from one of Lord Ches-

terfield’s mid-eighteenth-century letters to his son: “There is nothing so illiberal, and so ill-bred, as audible laughter. . . . I am sure that since I had full use of my reason, nobody has ever heard me laugh.”

In this view, laughter per se is vulgar, which is in some respects a return to Plato’s view. Several scholars have suggested that this is rooted in a low evaluation of the body in relation to the soul: as Gilhus puts it, “laughter with its anchorage in the body was . . . devalued against superior reason” (p. 101). However, the tide turns again with the increasing association of laughter with humor, understood as being rooted in incongruity. Since the ability to perceive incongruity requires rational capacities, rational beings can view laughter more positively. There is a certain irony in the association with incongruity being viewed as a point in humor’s favor, however, since others have taken quite a contrary view. George Santayana, for instance, in *The Sense of Beauty*, insists that the pleasure of humor or the comic cannot inhere in incongruity itself; since as rational animals, we are incapable of finding incongruity, absurdity, or nonsense pleasurable.

Overall, then, what we note is a deeply ambivalent relationship to humor, the comic, and laughter in the religious thought of the West. For long periods, humor and comedy were condemned, due largely to their association with such an inherently bodily phenomenon as laughter, but also because of their association with derision or scorn. However, there are more positive views of the connection between religion and humor, irony, and the comic, such as Aquinas’s commendation of *eutrapelia* and, in the Renaissance period, Erasmus’s *Praise of Folly*. In this respect, two thinkers in particular deserve special mention: G. W. F. Hegel, for whom the comic consciousness plays an important role in the history of religion; and Søren Kierkegaard, for whom Christianity is “the most humorous view of life in world history.”

**HEGEL.** G. W. F. Hegel (1770–1831) discusses tragedy and comedy in the section on religion in his influential *Phenomenology of Spirit*. Central to Hegel’s philosophy is the belief that the world is rational, and the purpose of human enquiry is to bring this rationality to consciousness. Hegel characterizes the *Phenomenology* as an introduction to his philosophical system, and in it, he traces the story of Spirit (*Geist*) progressively coming to know itself. A vital part of Spirit’s progress is through various manifestations of religion: from “natural religion” (e.g. the idea of God as light, and of plant and animal spirits); through various forms of “religion in the form of art” (exemplified by the Greeks); to “revealed religion” (Hegel’s version of Christianity).

Hegel briefly discusses epic, tragedy, and comedy in a section entitled “The Spiritual Work of Art” (pp. 439–453). In an epic, the actions and destiny of the heroes are controlled by the gods. In tragedy, by contrast, individuals seem to have more control over their fate. However, this is largely illusory, since the hero or heroine is often destroyed by trusting in the seemingly obvious meaning of an ambiguous ut-

terance of the gods: “The double-tongued character of what they announced as a certainty deceive him” (p. 446). The hero or heroine’s true powerlessness in relation to the gods is revealed by the chorus, which “clings to the consciousness of an alien fate” for him or her (p. 445).

The divine forces in tragedy represent a split between the “feminine” pole of family and the “masculine” pole of state or government. Think, for instance, of Agamemnon, commanded by the gods to sacrifice his daughter Iphigenia in exchange for winds favorable to the fleet, so that it can sail and sack Troy. Agamemnon is torn between his love for his daughter Iphigenia (the family pole) and his duty as king (the state pole). However, the focus on the character of the tragic hero or heroine brings about a change in the way the religious consciousness thinks of the gods. Rather than see them as agents directing the lives of the heroes, the divine becomes viewed as fate, and this “completes the depopulation of Heaven. . . . The expulsion of such shadowy, insubstantial picture-thoughts which was demanded of the philosophers of antiquity thus already begins in [Greek] Tragedy” (p. 449).

This is where comedy enters the picture. In comedy, “actual self-consciousness exhibits itself as the fate of the gods” (p. 450): that is, even the gods become selves that are in an important sense indistinguishable from the actor or spectator. Everyone, including the gods, is reduced or leveled, as the religious consciousness no longer distinguishes between the divine and itself. “It is the return of everything universal into the certainty of itself. . . . [a] complete loss of fear and of essential being on the part of all that is alien” (pp. 452–453). Hegel thinks that this contains an element of truth: in the words of J. N. Findlay, “The truth of comedy is that all the great big essential fixtures that stand over against self-consciousness are really products of, and at the mercy of, self-consciousness” (in *Phenomenology of Spirit*, 1977, p. 584). Yet this leveling has a downside, as we shall shortly see. In contrast to the lonely isolation of the tragic hero or heroine, Hegel characterizes comedy in terms of the self-assertion of the common man in what Findlay calls “his revolutionary disrespect for everything” (p. 584). Both the comic consciousness and religion in the form of art are the spirit of an age in which pure individualism is starting to get out of control. For Hegel, this is a period, such as the early Roman Empire, which stresses the rights of an abstract self. But Hegel thinks that such a conception of a right is an empty abstraction that needs to be filled by the Spirit of a particular people: a particular community or epoch. Thus the ostensibly liberating universal disrespect in which the comic consciousness revels is not the liberation it appears to be. And the “comic consciousness that is perfectly happy within itself” (p. 455) is brought to completion by its counterpart, the unhappy consciousness, which sees the abstract self for the chimera that it is.

Thus the secular outlook of the comic consciousness will not do, but crucially, it is its inherent instability that

gives rise to the highest stage of religion, “revealed religion,” in which God achieves self-consciousness through humanity. Christianity, for Hegel, constitutes the highest form of religious consciousness, in its recognition that “the divine nature is the same as the human” (p. 460): in its incarnation, the “absolute Being” ascends “for the first time to its own highest essence” (p. 460); the world is able “to behold what absolute Being is, and in it to find itself” (p. 461). In this way, the comic consciousness has a vital role to play in the development of what is, for Hegel, the highest form of religion: Christianity as speculative knowledge.

**KIERKEGAARD.** A rather different view of the relationship between humor and religion is to be found in a philosopher who is influenced by, and yet in many respects opposes himself violently to, Hegel: the Danish thinker Søren Kierkegaard (1813–1855). It is ironic that the thinker who makes one of the most explicit connections between religion and the comic is typically caricatured as “the melancholy Dane.” As well as being capable of dazzlingly witty and amusing prose, Kierkegaard makes some striking remarks about humor’s relation to Christianity in particular and also to a more general religious worldview. In his *Journals and Papers*, he makes the extraordinary claim that Christianity is “the most humorous view of life in world history” (vol. 2, entry 1681).

Kierkegaard had a lifelong fascination with Socrates, “the greatest master of irony,” on whom he wrote a dissertation, *The Concept of Irony with Continual Reference to Socrates*, and he viewed the notoriously obscure writer J. G. Hamann as “the greatest humorist” (entry 1554). Kierkegaard’s richest and most extended discussion of religion and the comic, however, is in the *Concluding Unscientific Postscript* (1846), published under the pseudonym Johannes Climacus, a character who describes himself as a “humorist.” As well as containing some of Kierkegaard’s most famous satire at the expense of Hegelianism (for the philosophical significance of this, see Lippitt, 2000, chapter 2), the *Postscript* develops important existential roles for irony and humor, subcategories of Kierkegaard’s more generic term “the comic.”

Irony and humor serve as *confinia*, or “boundary zones,” between the aesthetic, ethical, and religious existence-spheres or “stages on life’s way.” Climacus sees the ironist as being on the boundary between the aesthetic and the ethical life. The ironist has seen the limitations of the aesthetic life—a life which involves an endless evasive toying with existential possibilities—but has not made the movement to the ethical, in which serious choices and commitments for one’s own life are made. The contrast here is between a life of fragmented episodes (the aesthetic) and a life of coherent narrative unity (the ethical). The ironist possesses an insight, albeit limited, into the stage “beyond.” He or she thus occupies a transitional stage between the two spheres of existence: aware of the limitations of the former, but unable or unwilling to make the move to the latter.

One key difference between humor and irony, for Climacus, is that whereas irony is proud, and tends to divide one person from another—Climacus describes it in terms of self-assertion and “teasing” (p. 551)—humor is rather more gentle, and is concerned with those tragicomic elements of the human condition shared by all human beings. Humor thus has a sympathy that irony lacks (p. 582). Moreover, the humorist also has a more profound understanding of important elements of life than the ironist: in particular, the humorist understands that suffering is essential to human life. (There is a complicated relationship, for Climacus, between humor and pain.) It is this insight into such aspects of the religious life as resignation, suffering, and guilt that places humor, but not irony, at the boundary of the ethical and the religious.

Climacus equivocates as to whether humor is on the boundaries of the ethical and Religiousness A (his term for a sort of generic religious consciousness that is aware of the centrality to human life of resignation, suffering, and guilt), or on the boundary of Religiousness A and Religiousness B (Christianity). But the overall idea seems to be that, as one ascends the existence-spheres from the aesthetic to the ethical to the religious, one develops an ever deeper and more profound sense of the comical in life. Hence Climacus’s claim that a sense of and taste for the comic is intimately related to one’s existential capabilities: “the more competently a person exists, the more he will discover the comic” (p. 462).

The religious person is described as one who has “discovered the comic on the greatest scale” (p. 462). Such a person views life as a “jest,” in that she is able to see that all one’s efforts are as nothing, because one is capable of nothing without God. However, there are limits to Climacus’s praise for humor. First, he stresses that for the seriously religious person, such jest is mixed with “earnestness,” in that one’s ultimate dependence upon God does not detract from the need for existential striving. Second, he insists that there are limits to what may legitimately be laughed at: there is nothing comic, for instance, about religious suffering (p. 483). (For more on Climacus’s account of when the comic is legitimate, see Lippitt, 2000, chapter 7.)

Finally, as well as being “boundary zones,” irony and humor play a second important role as “incognitos” for ethical and religious individuals respectively. By acting as a kind of existential disguise, irony and humor allow such individuals to protect their “inwardness.” Yet also, somewhat paradoxically, they act as means by which what it is to live ethically or religiously can be communicated indirectly to those on the boundaries of ethical or religious life. That is, irony and humor can function as forms of “indirect communication,” drawing those with the relevant sensitivity towards an ethical or religious life. In this way, Kierkegaard and his pseudonym Climacus effectively suggest that developing a sense for the comic can play a vital part in a radical shift in one’s view of life. More recently, this idea has been developed by others to suggest that prolonged exposure to humor of an

appropriate sort can have an important role to play in the development of moral and religious virtues, as part of the process of moral education as habituation espoused by Aristotle. (For more on this, see Roberts, 1988, and Lippitt, 2005).

**THE TWENTIETH CENTURY TO DATE: THEORIES OF HUMOR.** By the latter portion of the twentieth century, it had become common among philosophers and other scholars interested in humor to treat theories of humor as falling into three broad types, based around incongruity, superiority, and relief (or the release of energy). *Humor* had by now become the standard umbrella term, with irony, satire, wit, and so on treated as subcategories thereof.

The incongruity tradition is commonly treated as originating in the remarks of Immanuel Kant and, in particular, Arthur Schopenhauer. In *The World as Will and Idea* Schopenhauer claims that “the cause of laughter in every case is simply the sudden perception of the incongruity between a concept and the real objects thought through it in some relation” (vol. 1, p. 76). Recent writers in this tradition have disagreed as to whether what really causes amusement is the perception of incongruity itself, or the resolution of that incongruity: the fitting of an apparent anomaly into some conceptual schema.

The term *incongruity* has been used to cover a wide range of phenomena, from logical impossibility via ambiguity (such as double entendres) to mere inappropriateness (such as importing into one context what belongs to another). Indeed, so wide has the range of application of the term been that it becomes reasonable to wonder whether it has not been stretched so far, or used so vaguely, as to cease to be a particularly informative term at all.

Another difficulty is whether the incongruity tradition puts all the emphasis on form or structure at the expense of content or context. Even if it were possible to point to an element of incongruity in any instance of humor, to what extent is it the incongruity (as opposed to, say, the subject matter, or the surrounding social context, or some combination of factors) that is the real cause of amusement? For example, one joke may be rated as much funnier than another that is entirely identical in structure simply because the former is about sex and the latter about a more neutral topic. This raises a serious question as to whether, in such cases, it can really be a purely formal notion such as incongruity that is doing all the work. These problems notwithstanding, probably a majority of theorists now subscribe to some version of the idea that incongruity is a central element in humor.

The second major theoretical tradition revolves around superiority. This can be traced back to Aristotle’s association of comedy with the “lowly,” and finds its most famous early modern treatment in Thomas Hobbes’s claim, in his *Human Nature*, that laughter is “sudden glory arising from some sudden conception of some eminency in ourselves, by comparison with the infirmity of others, or with our own formerly”

(p. 46). If this is all there is to laughter, it becomes easier to see why so many have held a negative view of it.

But the superiority view is haunted by some problems equivalent to those that haunt the incongruity tradition. First, why do some feelings of superiority (or instances of incongruity) manifest themselves in laughter, but not others? Second, isn't Hobbes's view excessively narrow? It is hard to deny that the misfortune or alleged deficiencies of others is a staple topic of comedy, from the hackneyed example of the man slipping on the banana peel to various kinds of racist and sexist humor. But how plausible is it to claim that *all* humorous laughter involves *Schadenfreude* or one of its close relatives?

One twentieth-century follower of Hobbes, Anthony Ludovici, aims to tackle this problem by explaining all laughter—humorous and non-humorous—in terms of “superior adaptation.” Under this heading, he includes experiences as diverse as *Schadenfreude* and the pleasure taken, such as when enjoying nonsense and absurdity, in a temporary escape from the need to obey the rules of logic and reason. Thus Ludovici is able to account for a greater variety of humor than is Hobbes. But he achieves this only by stretching his use of terminology in a similar, but arguably more extreme, manner than sometimes happens in the incongruity tradition.

Both Hobbes and Ludovici seem to overlook the attitude of childlike playfulness that is important to the enjoyment of so much humor. They also have difficulties adequately explaining the phenomenon of laughing at oneself. For Hobbes, the self at whom I laugh is a former self to whom I am now superior; for Ludovici, finding myself in a position of inferior adaptation, I feign the sign of superior adaptation. Both explanations overlook the fact that one could possibly find one's own current self genuinely amusing, and that this capacity is central to the ability genuinely to laugh at oneself.

Moreover, this point seems especially relevant to an important “religious” use of humor. Many who have seen a positive ethical or religious function for humor (such as Kierkegaard) have done so because they recognize our capacity to transcend ourselves in humorous laughter. But as Kierkegaard's location of humor as a boundary zone on the verge of the genuinely religious suggests, it is important to recognize, *pace* Hobbes, that it can be one's current, flawed, self at which one is genuinely laughing, rather than some former self that one has already transcended.

Another twentieth-century thinker often treated as part of the superiority tradition is Henri Bergson. Central to Bergson's treatment of laughter is that it functions as a social corrective. For Bergson, mechanism and inelasticity are the key elements of the comic, such that what is funny is “something mechanical encrusted on the living” (p. 84). Society requires us to adapt our behaviour to its demands: those who fail demonstrate unsociability, treated by Bergson as a kind of inelasticity, and are thereby comical. Seeing others

laughed at for such behaviour coerces us into acting as society demands: laughter is a kind of policeman of the social order. Again, Bergson's account seems excessively reductionist, and he too seems to overlook the childlike playfulness that is so far removed from this laughter of social correction.

The third major tradition revolves around relief, or the release of tension or psychic energy. Herbert Spencer propounded a relatively simple version of this theory, though the most important and elaborately worked-out version of it is that of Sigmund Freud in *Jokes and Their Relation to the Unconscious*. Freud divides jokes into “innocent” and “tendentious,” the latter category being further subdivided into “hostile” and “obscene.” Freud's view of tendentious jokes is in some ways the opposite of Bergson's view of laughter as the policeman of the social order. For Freud, civilization forces us to repress our aggressive and sexual desires. Tendentious jokes allow us to enjoy these pleasures by circumventing the obstacle that stands in the way of the satisfaction of the hostile or lustful instinct. Though the general idea that laughter can provide a release of nervous energy seems plausible, Freud's key error, in trying to offer his theory as a scientific one, is to take the notion of “psychic energy” too literally, and to aim to quantify it in a somewhat implausible manner.

Various connections can be drawn between these three theoretical traditions and our earlier discussions. Kierkegaard, for instance, treats the essence of the comic as rooted in contradiction or incongruity, and the interplay of congruity and incongruity has even been seen as the central feature around which the whole discussion of humor and religion can usefully be oriented. As suggested earlier, the idea that humor and laughter are rooted in one's own perceived superiority probably accounts, at least in part, for why laughter has so commonly been condemned as irreligious. And, as also noted, the justification of “foolishness” given by the apologists for the Feast of Fools seems to trade on an embryonic version of the release theory. However, the idea that these three traditions are exhaustive should be treated with caution, as the significance of many thinkers' contributions to this debate will be missed if one attempts to shoehorn their ideas into one or other of these three traditions.

JOHN LIPPITT (2005)

**HUNA'** (c. 216–c. 297) was a leading second-generation Babylonian amora, based in the city of Sura. Along with his colleague Yehudah bar Yehezqel, Huna' expanded the work of the first amoraim who employed the Mishnah to spread rabbinic Judaism. He focused directly on the Mishnah, clarifying it and citing alternative or disputing tannaitic sources. He played a key role in presenting the traditions of Rav, his main teacher (B.T., *Shab.* 128a), and, in explaining Rav's and, occasionally, Shemu'el's dicta, he treated unclear legal points and new cases and developed independent teachings (Epstein, 1964). He instructed students and other rabbis in such diverse areas as ritual laws, ethics, and practical behavior (e.g., B.T., *Ber.* 6b, *Shab.* 23b, *Pes.* 105a). Stories, possibly reflecting educational developments, attribute outstanding features to his study sessions (B.T., *Ket.* 106a) and prominently associate him with the *kallah*, a periodic academic convention that lasted several days and was open to masters and disciples (Goodblatt, 1975, pp. 156–157, 168).

In receiving exilarchic authorization to judge civil and property matters, Huna' applied rabbinic principles in the marketplace and in such areas as divorce and inheritance

(e.g., B.T., *San.* 7b; Neusner, 1968). Stories describe his pious acts for the poor and the sick (B.T., *Ta'an.* 20b–21a), and a dictum claiming that “whoever only studies Torah resembles a person without God” (B.T., *A.Z.* 17b) stresses the importance of good deeds. The Talmudic tradition, on the other hand, elevates his Torah study, in that its merit is what protected Huna' from natural calamities and enabled him effectively to hurl curses (B.T., *Mo'ed Q.* 27b, *Ta'an.* 20b).

He also emphasized the human inability wholly to know God's nature and ways (*Gn. Rab.* 12.1) and, like his contemporaries, saw both divine justice and mercy as well as reward and punishment at work (e.g., B.T., *Ber.* 7b, *R. ha-Sh.* 17b; Neusner, 1968, pp. 149–158). The accounts of miraculous events attending his burial underscore the esteem Babylonian and Palestinian Jews held for Huna' even after his death (B.T., *Mo'ed Q.* 25a; cf. Neusner, 1968, pp. 51–53). His exilarchic backing, however, laid the foundations on which he was able to build his influential career of piety and teaching.

#### BIBLIOGRAPHY

A comprehensive treatment and bibliography of Huna' and his teachings can be found in Jacob Neusner's *A History of the Jews in Babylonia*, 5 vols. (Leiden, 1966–1970), esp. vol. 3. Jacob N. Epstein's *Mavo' le-nusah ha-Mishnah*, 2 vols. (1948; reprint, Jerusalem, 1964), pp. 311–318, discusses the attitude of Huna' to tannaitic traditions and the Mishnah. See also David M. Goodblatt's *Rabbinic Instruction in Sasanian Babylonia* (Leiden, 1975) and my *Samuel's Commentary on the Mishnah* (Leiden, 1975), p. 217.

*Revised Bibliography*

**HUNGARIAN RELIGION.** Hungarian belongs to the Uralic languages, which can be traced back by historical linguistic methods at least to 5000–4000 BCE. Its subdivision, the Finno-Ugric languages, can be traced back similarly to 4000–3000 BCE. To reconstruct the earliest possible phases of Uralic or Finno-Ugric religions, we could find their roots in etymologies in the northernmost parts of Central Eurasia. The Ugrians (i.e., today's Voguls, Ostyaks, and Hungarians) might have lived to the east of the Ural Mountains from about 3000 BCE. They were hunters, fishermen, and gatherers around the taiga area. We do not know with any certainty when the Hungarians finally separated from the Ob-Ugrians remaining in Siberia, but their long westward migration lasted more than two thousand years. Thus, the forefathers of the Hungarians crossed the steppes and finally learned animal husbandry and some agriculture. When Byzantine and other sources describe in the eighth- and ninth-centuries CE the way of life of the Hungarians (whom they called Turks), they mention their military ability, the “worship of the fire” and burials, their “sacred kings,” and

a rather complicated social structure of tribes and auxiliary tribes characteristic of nomads. By about 896 CE the seven Hungarian tribes invaded the central regions of the Carpathian Basin. Hungarian sources in medieval times were already calling the event the Conquest or Land-Taking. It was the turning point in the history of religions among the Hungarians.

Only after that time do we find relevant historical, linguistic, and archaeological data that reflect the religion of early Hungarians. Since then Europeans have seen them as relatives of the Huns, and that false association became the origin of the term *Hungarian* in European languages. The ethnonym *Magyar*, a term that can be traced back to Ugrian time, is identical with the ethnonym of the Voguls, *Mansi*.

Inseparable from the establishment of the feudal Hungarian kingdom, Christianity was declared the official religion in 1000 CE by the Roman church. But we know from historical and linguistic data that even before that time Hungarians had already had contacts with Byzantine, Czech, German, and Italian priests, and already among the “conquering” Hungarians were adherents of the Christian, Jewish, and Muslim faiths. Hungarian Muslims, called *böszörmény*, originally meaning “Muslim,” lived in Hungary until about the fourteenth century. Several times the Jews in the Middle Ages were expelled from Hungary. Then Sephardic Jews came together with the Ottomans in the sixteenth century, but they left the country by the end of the seventeenth century. Immediately thereafter the forefathers of today's Hungarian Jews emigrated from Central Europe. The majority of the Yiddish-speaking Ashkenazi came from Galicia in the nineteenth century, when northeast Hungary was a haven for famous Hasidic “wonder-making rabbis.”

**HYPOTHETIC EARLY FORMS.** Five thousand years of early Hungarian religion remains thus a field for comparative studies, based sometimes on speculation rather than research. In Hungarian there are Uralic words reflecting the dualistic concepts of the soul (*lélek*, “soul of the breath,” later also with the meaning “spirit” or “ghost,” as opposed perhaps to the later *iz*, a “spirit of disease”). A curious Hungarian word, *reg-*, “being intoxicated,” can be compared with the “heat” component of the Siberian shaman's *séance*. If it is a cognate word to Hungarian *rejt*, “to hide,” it might be connected with the activity of early seers too. The names for two figures in modern Hungarian folk beliefs, *tudós* and *táltos* (both “persons with supernatural power or knowledge”) also have solid Uralic etymologies. On the other hand, the possible traces of Uralic totemism or shamanism in modern Hungarian are not known. No origin myth or legend among the Hungarians can be connected with such a distant time. Several scholars such as Róheim, Diószegi, and Hoppál have argued for such connections—for example, for the origin myth concerning the stars in the Milky Way (being “the path of the souls of the dead”) or for the myth on chasing the mythical elk/deer—but their arguments are not convincing. The phratrial system of the Ob-Ugrians stresses a distinction be-

tween “raw meat eating” and “cooked meat eating” kinship groups, but this distinction was unknown among the Hungarians. In Hungarian there are no direct references even to the archaic Siberian cosmology (tripartite word, cosmic tree, the sky and stars as a tent with holes), and the Hungarian data (on upper and lower worlds, more precisely on the “other world,” *másvilág*) are too vague and too widely dispersed to date them back five millennia and exactly to the Uralic or Altaic area. Also, the oldest terms in Hungarian traditional healing, including the word *beteg*, “sick person,” have Siberian parallels, which makes them hard to interpret.

During the time of the migrations the early Hungarians had long, steady, or fortuitous contact with several Turkic and Iranian peoples, and judging by the loanwords in Hungarian and some funeral customs, early attributes of the god(s) can be traced to that time. The South Siberian Altaic word for “shaman” (*bö*) was known in early Hungarian too, perhaps with the meaning “head of the sib, chieftain.” At the time of the migration two interesting forms of totemism may have been developed: tribes and their leaders associated themselves with predatory birds (such as falcons and eagles), and an “agricultural totemism” developed in personal names. (The name of the leader of the Hungarians at the time of the Conquest, Árpád, literally “barley” plus a personal diminutive, is a good example.) In both cases the terminology comes from Turkic languages, which might have been the tongue of the tribal elite. The names for the “seven” tribes do not show direct religious indications.

A series of the most important words used even today in Hungarian religious terminology can be dated back prior to the Conquest. Examples include *isten*, “god”; *ördög*, “devil”; *bűn*, “sin”; *üdv*, “cheer,” later “salvation”; *bocsájt*, “to let free,” later “to forgive”; *lulimád*, “to worship,” later “to adore” or “to pray”; and even *kereszt*, “cross.” Since the words *gyász*, “mourning,” and *tor*, “burial feast,” belong to the same time, in those cases a continuation of customs and beliefs in later Hungarian folklore seems to be more plausible.

But even with such elaborate religious terminology, we do not find any name of any god among the Hungarians. We do not find any hints to a “mythology,” even in the restricted sense of the word in which we can speak of the Ob-Ugrian “deities” or “mythology.” On the other hand, the oldest known Hungarian word for “sacred” (*igy*) was already used at this time. An alleged opposition between *Boldogasszony*, today the common name for “Holy Virgin Mary,” more precisely “happy lady/woman,” and *szépasszony*, “fair lady/woman,” later a taboo name for “witch,” can be dated back to that time; the problem is that we do not know the “first” meaning of those words. The word *hiedelem*, “belief,” originally “a cool place, refrigerium,” might have originated from this time, but it is registered only in late medieval Hungarian texts. Archaeological excavations from the time after the Conquest (in the territory of today’s Hungary) show very rich tombs of tribal and military leaders mounted on their

horses. The Hungarian tribes were surely for a while a part of the Khazar Kaganate and accepted also the institution of the Sacred King. Perhaps the father of Árpád, whose name was Álmos, “from a dream,” was such a sacred ruler.

**RELIGION AFTER ACCEPTING THE CHRISTIAN FAITH.** The conversion of the Hungarians was conducted through the drastic force of the state. Soon “pagan uprisings” (1046 and 1061) tried to restore old habits, including non-Christian dress, hairstyles, horse-meat eating, and horse sacrifices, and to destroy Christian churches and kill their priests. But behind these acts more political and less religious motivations were prevalent. From the decrees made by the first synod in Hungary (1092, organized by King László I) we learn of the strict prohibition of “pagan sacrifices beside springs, trees or stones,” but the question arose: do the decrees reflect the actual religious situation in Hungary, or are the texts simply copies of Carolingian ecclesiastical law? As we know from the *Regestrum Varadinense*, ordeals (oaths upon red-hot iron) were imposed by the church; between 1208 and 1235 there were 389 such cases. “Great sinners” from Hungary had to pay to take faraway pilgrimages; for example, Georgius Miles de Ungaria (1353) and Lőrinc Tar (1410) had to visit St. Patrick’s Purgatory.

The church in Hungary (in spite of good contacts with Byzantium) followed the Roman model. The imposing list of early dynastic saints in Hungary speaks to the strength of the new religion in Hungary. From the House of the Árpáds King Stephen I, Prince Imre (both canonized in 1083), King László I (canonized in 1192), Princess Elisabeth of Thuringia (canonized in 1235), and later Princess Margit (d.1270) were canonized. Among other countries in Europe, Hungary was proclaimed too as *Regnum Marianum* (“the Kingdom of the Holy Virgin Mary”). The veneration of King Stephan’s “holy right hand” is known from 1083 on, and that of the “Holy Crown of Hungary” dates back as early as the fourteenth century (and is practiced today as well). The only religious order that emerged from Hungary (by about 1263) was the Paulians, named after the famous Hermit in Thebes. From the Angevin rulers from Naples Hungarian kings (since the fourteenth century) inherited “royal healing power” (also inherited later by the Hapsburgs). Large numbers of troops for the First, Second, and Third Crusades marched through Hungary, and King András II himself participated with Hungarian soldiers (1217–1218) in the Fifth Crusade. Among the places for pilgrimage for Hungarians, the most important were Rome; from 1307 the cathedral in Aachen (where King Louis the Great erected soon afterwards the magnificent Hungarian Chapel); from the thirteenth century Mariaszell (where again King Louis built the Gothic Chapel in 1366); and later the tomb of Friar John of Capistran, who died in the famous 1453 Hungarian victory over the Turks. The various copies of the register of pilgrims from such cities as London, Paris, and Rome, *Miracula Ioannis de Capistrano* (1460), list from 180 to 621 (mostly healing) miracles there.

We do not know of early heretics active in Hungary. The *bogomils* in Bosnia from the twelfth century were perse-

cuted by the Hungarian kings. We know of some flagellant groups strolling through Hungary. A few (German) Waldensians lived in west Hungary. The Hussites had some influence in Hungary too. Even a peasant revolt in Transylvania, led by Antal Budai Nagy (1437), expressed the same tendency of establishing a people's religion. The first extensive Bible translations into Hungarian date back to the second half of the fifteenth century. The religious terminology of the Hungarian translations of the Hussite Bible hints back to earlier centuries. From its very beginning (twelfth–thirteenth centuries) the vernacular literature in Hungary used elaborate religious terminology, including expressions of Mariology and mysticism. It was further developed by the Franciscans, who preached in Hungarian, and especially during the time of the Reformation.

Humanism in Hungary reached its highest point in the court of King Matthias Corvinus. He invited Italian scholars, who spread Neoplatonism, hermetism, and astrology among the elite. Johannes Regiomontanus (from 1468 on) worked in Buda in cataloging Greek astronomical manuscripts in the royal library, and in 1471 he made suggestions for a new university in Pozsony. Late Humanism in Hungary easily adopted the ideology of the Reformation. For example, Péter Bornemisza in his printed book *Ördögi kísértetek* (1578) added actual Hungarian narratives to Philipp Melanchthon's Lutheran devil lore. But only members of high society knew about magic, occultism, and alchemy. Paracelsus visited Hungary, John Dee wrote his *Monas Hieroglyphica* (1563) in Hungary, and even later he (and Edward Kelly) had Hungarian contacts. Count Boldizsár Batthyány collected a rich library of occult and alchemical works between 1570 and 1580. Later István Weszprémi, in his biography of medical doctors in Hungary (1774–1787), could list a dozen alchemists working in Hungary. The “golden age” of alchemy in Hungary, however, took place in the decades before the French Revolution after it was practiced generally in Europe.

The fall of the independent Hungarian kingdom was first marked by the great peasant revolt (1514) led by György Dózsa with anticlerical and antiféudal violence, but it was not marked by the fanaticism of a “new religion” (as in Germany). In 1516 the winner of the decisive battle at Mohács was Sultan Suleiman the Magnificent. Some years later the Reformation won quickly the larger part of the country, but the Ottoman invasion of the central region of Hungary (lasting about 150 years) ended the ecclesiastic structure too. The Counter-Reformation (from the early seventeenth century), supported by the Hapsburg rulers, was successful: two-thirds of the population again became Roman Catholic.

The Reformation in Hungary (and in Transylvania) went on in steps: first the moderate Lutherans, then the more presbyterian Calvinists gained the majority. Somewhat later in Transylvania the Unitarians and Antitrinitarians organized their churches, making there a haven for refugees from Europe. The more radical movements (e.g., the Sabbatists) remained in fact small religious groups. In spite of Otto-

man rule in central Hungary, the conversion to Islam was in fact insignificant (which makes a difference to several Balkan areas). The rest of the people there, without the church hierarchy, established small religious communities. The Reformation stressed the individual's or the community's direct responsibility for its spiritual welfare, including the constant fight against sin and the devil's tricks.

There are in Hungarian archives about five thousand documents of witch trials from about 1408 to about 1768. They follow the general European pattern, and we find little “great” or “politically motivated” witch-hunting. The majority of the witches were peasant women; thus, the trials had a strong flavor of Hungarian folk belief. The Inquisition proper was not active in Hungary then, but we know of a shortened Hungarian version of the *Malleus Maleficarum* from Mátyás Nógrádi's *Lelki próbakő* (1651). Hungarian Protestant theologians studied at German, Dutch, Swiss, and other universities, bringing home the ideas of Cartesianism and Puritanism. Visionary and chiliastic tendencies can be observed from the seventeenth to the late eighteenth centuries. Johannes Amos Comenius was professor of education in Hungary from 1650 to 1654. The then generally accepted actual and political prophecies of Miklós Drábik (Nicolaus Drabitus) were also published by Comenius (*Lux e tenebris*, 1655; *Historia revelationibus*, 1659).

Inchoative religious propaganda (following the Tridentinum principles) was very active in Hungary: miracle stories and private religious pictures were distributed through the eighteenth century. In the second half of the eighteenth century the Roman Catholic Church tried to regulate practically all folk customs. (See the activity of Bishop Márton Pedantic Biro from 1744 on.) At the same time Queen Maria Theresa and King Joseph II modernized education and health care; the later instructed a radical secularization of “nonteaching” religious orders. It was the age of the first anticlerical pamphlets in Hungary. Historians have tried to collect material on early forms of Hungarian religion too. Freemasons, Rosicrucians, and alchemists were active in Hungary in the second half of the eighteenth century. The founder of homeopathy, Samuel Hahnemann, was a medical doctor in his youth in Transylvania. But then Hungary was better known in Europe as a land of the vampires. Dom Augustin Calmet published his *Dissertations sur les Apparitions des Anges, des Démons et des Esprits et sur les Revenants et Vampires de Hongrie, de Bohème, de Moravie et de Silésie* (1746), which was one of the most widely read books in Europe. The Hungarian cases he refers to are not very authentic. (The same identification of vampires with Transylvania, well known from Bram Stoker's book *Dracula* [1897], represents another false allegation.) Hungarian folk-belief narratives tell about werewolf-like figures in Transylvania, most probably a borrowing from Romanian folk beliefs.

**FROM “HUNGARIAN MYTHOLOGY” TO THE STUDY OF FOLK BELIEFS: THE IMPORTANCE OF RESEARCH ON RELIGION IN HUNGARY.** Describing the origin and development of “an-

cient religion” among the Hungarians was for a long time a preoccupation of Hungarian scholars. From the eighteenth century on there were various attempts, for example, by Ferenc Otrókosi Fóris (1648–1714), Daniel Cornides (1732–1787), and others. In 1847 the Hungarian Academy announced a competition for describing “Ancient Hungarian Religion.” The winner, Ferenc Kállay (1790–1861), and even Bishop Arnold Ipolyi (1823–1886) and others, tried to show a hypothetical “historical” stratification of religious practices among early Hungarians, called “Hungarian mythology,” which is the equivalent to *Deutsche Mythology* by the brothers Grimm. There was much discussion about the topic but little in the way of acceptable results from a scholarly standpoint. During the last hundred years positivism, Freudianism, some forms of sociology, the neo-ritual school, and Marxism served as innovative methods.

Among contemporaneous Hungarian folklorists, Vilmos Diószegi (1923–1972) and Mihály Hoppál (1942–) follow the historical-reconstructionist school. Innovative ideas were expressed by Géza Róheim (1891–1953), founder of psychoanalytic folklore research. Recently Vilmos Voigt (1940–), Gábor Klaniczay (1950–), Éva Pócs (1936–), György Endre Szőnyi (1952–), Gábor Tüskés (1955–), and others want to show the European and comparative horizons of the history of religion in a wider sense of the term. Their papers have been published in numerous languages. Hungarian religion is a very important field for comparative studies because Hungarians are the only non-Indo-European people in Central Europe, with their own traditions, at the same time representing fully the common European background of religions (at least during the last thousand years).

From the beginning of the nineteenth century, popular works against superstitions were published. New Protestant churches (Adventists, Baptists) developed in Hungary. Before the First World War new communities appeared, from Jehovah’s Witnesses to Nazarenes and Tolstoianists. Atheism gained a free voice too. The Marxist state after World War II struggled against religion, but to a lesser degree than other East European countries. Among the “new religions” since the 1970s, first Hare Krishna and Bahais arrived. Today there are several small modern Hindu and modern Buddhist churches. New Age or modern “heathen” religions are insignificant. The reconstruction of the “Old Pagan Hungarian Religion” is a preoccupation of a few intellectuals. A handful of “urban shamans” learn from old sources the techniques of ecstasy and combine it with rock-music-style performances. The Hit Gyülekezete (“Congregation of Faith”) is the only new Hungarian church. One should not forget that Zionism was created by a Jew born in Hungary: Theodor Herzl (1860–1904). Rudolf Steiner (1861–1925), founder of Anthroposophy, spent decisive years of his youth in Hungary. At time of the Holocaust 90 percent of Hungary’s Jews were killed, but today there is a Jewish revival in Hungary, though it often lacks religious motivations.

Hungarian folklorists have made summary descriptions of folk beliefs and customs during the last two centuries.

Thank to professor Sándor Bálint (1904–1980), the study of (mostly Roman Catholic) popular religion is very productive. The “lay prayers” were collected and published by Zsuzsanna Erdélyi (1921–). József Török (1946–) has studied the early Christian liturgy in Hungary. Catholic pilgrimage and imagery were studied by Gábor Barna (1950–) and József Liszka (1956–). Greek United folklore is a special topic of Elek Bartha (1956–) and others. The Antitrinitarian (and similar) movements were the research topic of Antal Pirnát (1930–1997), Róbert Dán (1936–1986), Mihály Balázs (1948–), and others. Adventists and Protestants in general were studied by László Kardos (1918–1980), Ambrus Molnár (1922–2000), and Professor Jenő Szigeti (1936–). Jewish studies have a glorious past in Hungary. See the works of Immanuel Löw (1854–1944), Vilmos Bacher (1850–1913), Bertalan Kohlbach (1866–1944), and—last but not least—the director of the Rabbinic Seminar in Budapest, Sándor (Alexander) Scheiber (1913–1985), who was one of the best-known Jewish folklorists. Hungarians are conducting important fieldwork studies in Romania, Serbia, Slovakia, and Carpatho-Ukraine, discovering archaic beliefs and at the same time interethnic contacts.

The study of the sociology of religion in Hungary (especially in recent works by Miklós Tomka (1941–), István Kamarás (1941–), and others) is today again in progress. On the religious history of Hungary only the first sketches have been made. Still a new handbook on religions in Hungary has not yet appeared.

VILMOS VOIGT (2005)

**HUN RELIGION.** Over the centuries, the name *Hun* has been widely and indiscriminately applied to a multiplicity of Inner Asian nomad peoples. In this article only the "genuine" Huns will be considered, those who in the second half of the fourth century CE took possession of the North Pontic steppes (the steppes to the north of the Black Sea) and for about eighty years—particularly under the rule of Attila (433?–453)—played a major role in the history of Europe. I shall also take into account those Huns who, following the disintegration of Attila's empire, established and maintained in the northern Caucasus a kingdom that lasted to the end of the seventh century.

By the standards of Inner Asian historiography, the history of the Huns is reasonably well documented, mainly by written sources, among which the (alas!) fragmentary text of Priscus's eyewitness account of daily life in Attila's entourage

is particularly valuable. Archaeology contributes next to nothing to the picture; so far it has not been possible to isolate more than a few finds incontestably Hun. Among these, some typical bronze caldrons have, on occasion, been considered sacrificial vessels, but there is no evidence in support of such an opinion.

The statement by the fourth-century historian Ammianus Marcellinus (31.2.11) that the Huns were not "bound by any reverence for religion or superstition" is contradicted by other, contemporary sources. These do give some clues about Hun religious beliefs, although, with one exception, none attempts to give a systematic description thereof. This exception is to be found in the Armenian chronicle attributed to Moses Daskhuranci, who does give some interesting, trustworthy data on the Caucasian Huns of the second half of the seventh century. He speaks of their "satanically deluded tree-worshipping errors" and mentions that they use horses as burnt offerings in the worship of "some gigantic savage monster whom they invoke as the god T'angri Khan, called Aspandiat by the Persians." In the first of these names it is easy to recognize the Turco-Mongol deity Tengri ("sky" or "heaven"), whose cult is first attested among the Hsiungnu in Mongolia in the centuries just before and after the beginning of the common era. The Huns also "made sacrifices to fire and water and to certain gods of the roads, and to the moon and to all creatures considered in their eyes to be in some way remarkable."

Moses pays special attention to the funeral rites of the Huns who, "possessing completely anarchical minds," so he says, "stumble into every sort of error, beating drums and whistling over corpses, inflicting bloody saber and dagger cuts on the cheek and limbs, and engaging naked in sword fights—O hellish sight—at the graves, man against man and troop against troop. . . ." Although, to my knowledge, sword fights between groups are not noted elsewhere in such a context, the self-inflicted wounds and the laceration of the mourners' faces were a widespread custom among medieval Turkic peoples, described in classical as well as in Chinese sources, and also represented on wall paintings preserved in Chinese Turkistan. Fragment 23 of Priscus relates that at the death of Attila, the Huns, "as is the custom of that race, cut off part of their hair and disfigured their faces horribly with deep wounds so that the distinguished warrior might be bewailed, not with feminine lamentations and tears, but with manly blood." Before burying their dead the Huns were wont to lay out the body and, at least in cases in which the deceased had been a man of importance, the mourners would ride around the bier at full gallop "as in the circus games." The body was put in a coffin and a funeral feast preceded the burial. Priscus gives the Hun word for this repast, *strava*, a term for which no acceptable etymology has been proposed. If not due to a scribal error, the initial consonant cluster excludes the possibility that the word is Turkic or Mongol.

It was customary to place valuable objects in the tombs. Attila was interred by night, in great secrecy, and those who

buried him were slaughtered so that—in Priscus’s opinion—they should not be able to divulge the location of the tomb. It could be that a human sacrifice was performed. Analogies to this case can be found among the early (sixth-century) Türk. Captives were said to have been sacrificed “to victory” by the Huns upon their arrival on the Pontic steppes, but Jordanes’ sixth-century account of this period contains many fictional elements.

There is evidence to show that the services of diviners were appreciated. According to Jordanes, Attila “sought counsel of omens in all warfare.” He reports that the method used by the soothsayers consisted in the examination of the entrails of cattle and of “certain streaks in bones that had been scraped.” The remark refers probably to scapulimancy, widely practiced in Inner Asia. The sources provide no evidence of the very likely use of shamans.

The practice of worshiping a sacred sword, often referred to in the secondary literature, cannot be established. At best, such references can be traced to a remark by Attila who, so it would appear, once declared that a sword that had been accidentally unearthed by a shepherd and brought to him would ensure his supremacy over the whole world.

In the Caucasus, in the Asian or European provinces of Byzantium, in Italy, and in their campaigns through Germanic lands, the Huns were in constant touch, friendly or inimical, with Christians. It can be taken for granted that many of the Huns were converted, a fact that allowed Jerome to write to Laeta in 403 that “the Huns are learning the psalter, the frosts of Scythia are warmed by the fire of faith” (107.2). Perhaps Jerome’s, as it turned out unjustified, optimism was motivated by the news of the missionary efforts of John Chrysostom and others. Success came only to the Albanian bishop Israel who in 681 and 682 stayed with the Huns of the Caucasus, converted their leaders, destroyed their idols, and burned their sacred trees. The Hun prince Alp Ilteber promised, in the words of Moses Daskhuranci, to “burn the sorcerers and wizards who will not adopt the faith, and [to] put to the sword any person who acts like a pagan.” Thus, Western civilization arrived among the Huns of the epigone kingdom, putting an end to the religious tolerance so typical of Inner Asian states, including that of the Huns, those “unreasoning beasts” (to quote Ammianus Marcellinus), “utterly ignorant of the difference between right and wrong.”

**HURGRONJE, CHRISTIAAN SNOUCK** SEE SNOUCK HURGRONJE, CHRISTIAAN

**HURRIAN RELIGION.** A Near Eastern phenomenon dating mainly from the second millennium BCE, the Hurrian religion is known more from contemporary and later Hittite documents than from native Hurrian sources. The Hurrians were an apparently Armenoid people who moved into northern Syria and northwestern Mesopotamia by at least 2300 BCE. The cities of Nuzi, in the eastern Tigris region, and Alalah, in northern Syria, were major centers of Hurrian culture by circa 1500 BCE. Wassukkanni was the capital of the reign.

The term *Hurrian* is an ethnic designation, and *Subartu* (roughly equivalent to the Hurrian *Aranzab*) is the Sumerio-Akkadian name of the Hurrian-dominated area north and northeast of the Tigris. Mitanni was a Hurrian kingdom of the mid-second millennium in northern Syria and Iraq that had an Indo-Aryan aristocracy, and Urartu (whence Ararat) was a successor kingdom that flourished in southern Armenia circa 800 BCE. The Hurrian language, written in Sumerio-Akkadian cuneiform (and, later, in Ugaritic alphabetic cuneiform), is neither Semitic nor Indo-European in origin.

Some prominent European scholars would deny that the Horites of the Old Testament are Hurrians (in *Gn.* 14 the Horites are enemies of Abraham; in *Dt.* 2 they are dispossessed by the Edomites; in *1 Chr.* 1 they are the ancestors of Esau), but most American authors favor the identification. (Similar efforts to identify the Old Testament Hivites with the Hurrians are less convincing.) While admitting the presence of biblical anachronisms, the American scholars cite the extensive evidence that the Hurrians had moved down into the coastal areas and probably into Palestine at least by the Amarna age (mid-first millennium BCE). By the final quarter of the second millennium BCE there was, for example, a large and flourishing Hurrian population farther north at Ugarit, on the Syrian coast. Also notable are the remarkable parallels of legal and social customs between Nuzi documents of the fifteenth century BCE and the *Genesis* patriarchal narratives.

**HURRIAN RELIGIOUS ASSIMILATIONS.** Because of the limited natively Hurrian resources, it is difficult to distinguish specif-

ically Hurrian religious and cultic elements from those of their neighbors. The Hurrians borrowed heavily from Mesopotamian religion, either by assimilating Assyro-Babylonian divinities into their own pantheon outright or by identifying these divinities with indigenous Hurrian gods. In turn, some of the Hurrian gods and religious practices were adopted by the Hittites. The Hittites also absorbed into their religion pre-Hittite elements and elements from other Anatolian peoples such as the Luwians. Since it is mostly from Hittite mythic and religious texts that scholars have access to the Hurrians, the situation is complicated indeed; many authors have resorted to referring simply to an “Anatolian religion” and have made no substantial effort to separate its strands. The major Hittite sources for Hurrian religion are the archives from Boğazköy (Hattushash), the ancient Hittite capital, and the stone carvings from the shrines at Yazilikaya, about two miles east of Boğazköy.

Hurrian culture is equally notable as a vehicle of exchange of religious concepts and practices, especially from east to west, and as a source of original contributions. The flow of such ideas over almost three millennia was generally from the Mesopotamians to the Hurrians, from the latter to the Hittites and northwestern Semites (Amorites, Canaanites, and Phoenicians), and thence ultimately to Greece and Rome. Recent scholarship suggests that the Hurrians played a far larger role in this process than had previously been detected. Because of the Indic element among their aristocracy, it is also likely that the Hurrians were purveyors of some Indo-Aryan religious motifs to the west.

**HURRIAN PANTHEON** At the head of the native Hurrian pantheon was the weather god Teshub, the “king of heaven,” the later Urartean Teisheba. One of his ancient centers of worship was the yet unidentified town of Kumme (Kummiya). His genealogy varies somewhat, depending on the way in which the relevant Babylonian material was assimilated. In Hittite texts stemming from the Hurrian myth cycle of Kumarbi (the father of the gods), and in some other texts, it is told that Alalu (chthonic divinity, with Mesopotamian origin) was the first king in heaven and was dethroned by Anu (heavenly god, also with a Mesopotamian name). Kumarbi, Alalu’s son, dethroned Anu and swallowed his genitals, to prevent him from having offspring. But Kumarbi became pregnant and gave birth to Teshub, among other gods.

Early Anatolian iconography uses the symbol of a bull or of lightning bolts in connection with Teshub and other weather gods. Teshub, like other gods of this kind, have storm, wind, rain, and lightning as weapons. He provides rain, and is therefore also protector of vegetation and agriculture.

Teshub’s consort was Hebat, or Hapat, who was an ancient Syrian goddess who was known in Ebla and was assimilated by Hurrians and turned into the queen of heaven. Although she is not prominent in the extant mythological texts, worship of her was very widespread, and she was syncretized with other Near Eastern goddesses in later times. In Hittite

iconography she is apparently identified with the sun goddess of Arinna, whose name is not known. Hebat has a rather matronly appearance in Anatolian art, and she is frequently depicted standing on the back of a lion.

The son of Teshub and Hebat was Sharruma, whom the Hittites associated with the weather gods of Nerik and Zipalanda. Sharruma was originally an Anatolian mountain god of the Anatolian and Syrian borderland. At Yazilikaya the god who is represented by a pair of human legs immediately behind Hebat is doubtless Sharruma. The iconography from Yazilikaya reflects the religious reforms of Hattushili III, who tries to assimilate the divine triad into the imperial family. Teshub is identified with the king, the Sun-goddess with the queen, and Sharruma with the heir.

Shaushka, who in Hittite myths about Kumarbi is called Teshub’s sister, is prominent in the extant texts and in works of art, where she is often shown as a winged goddess standing (like Hebat) on the back of a lion. Shaushka’s nature is very elusive. The Hittites identified her with the Mesopotamian Inanna-Ishtar, herself a goddess of extraordinarily complex origins and characteristics. In the Hurrian world she is the goddess of war and sex. Shaushka was said to have had two ladies-in-waiting, Ninatta and Kulitta, known also as musicians.

Kumarbi, already mentioned in a Hurrian tablet from Mari, about 1700 BCE, had scarce importance in the worship but was a major figure in the myths. He had the power in primeval years and was dethroned by Teshub, but tries to recover the throne again and again. The god is identified with the Mesopotamian god of grain, Dagan, with the Sumerian-Akkadian Enlil, and with the Ugaritic El.

Other Hurrian gods are Sheri (“day”) and Hurri (“night”), who pull Teshub’s wagon and are portrayed as bulls (the name of Hurri is replaced by Tilla in the eastern tradition); the moon god Kushuh (the same as the proto-Hattic Kashku), who is the protector of oaths, and his consort, Nikkal, corresponding to the Sumerian Ningal; a sun god, Shimigi (the Urartean Shiwini), who is linked with omens because he sees everything on earth; Shuwaliyatti and his consort, Nabarbi; Teshub’s vizier, Tasmisu; and Ashtabi, the god of war. The later Urartean pantheon included Teisheba, Shiwini, and the national god, Haldi. An inscription found at Sargon II names the goddess Bagbarti as Haldi’s consort.

The Hittite myths mention often a group of underworld gods, called “ancient gods,” whose names come in rhyming pairs such as Nara-Napsara, Minki-Ammunki, Muntara-Mutmuntara. They were the earlier generations of gods, but they were driven into the underworld by Teshub. The “ancient gods” are a sort of opposite of the upper gods, because they are “impure” and represent the disorder.

In the treaty between the Hittite king Shuppiluliuma and Mittanian Shattiwaza, Indo-Aryan gods such as Indra, Mitra, Varuna, and the Nasatya are mentioned as guarantors.

This fact indicates that the Indo-Aryan aristocracy maintained its ancestral gods as protectors of the kings of Mittani.

In addition to personal gods, Hurrians had impersonal divinities such as earth and heaven or mountains and rivers, the mountains being considered as companions of the storm god or as independent deities.

**MYTH CYCLES.** Hurrian mythic narratives are known almost exclusively through their Hittite versions in which the material is considerably intermixed with other Anatolian elements. Only scarce fragments remain from the Hurrian version of some myths, although it is almost impossible to obtain some information about them. The most significant myth cycle is that of the god Kumarbi. This myth tells how Kumarbi was dethroned by Teshub and how the dethroned deity tries repeatedly to recover his power, fathering one son after another. The major texts, all in Hittite, are a myth whose title was probably *Song of Kumarbi* (conventionally called *Kingship in Heaven*), a tale of the struggle for divine kingship strikingly similar to Hesiod's *Theogony*, the *Song of Hedammu*, and the *Song of Ullikummi*, the best-preserved poem, although it is not complete either.

The most remarkable fact is that the poems of Kumarbi cycle, in contrast to other ancient myths, are not part of rituals or cults. They are pure literature, didactic poems that inform people about the history of the world and explain the role that human beings have in the world order, especially in their relations with the gods.

In *Kingship in Heaven*, Alalu (a chthonic god) is king of heaven for nine years, and Anu (the Sumerian sky god), "first among the gods," worships at his feet. Anu, however, battles with Alalu and defeats him, reigning in turn for nine years, with Kumarbi, Alalu's son, now worshipping him. Anu and Kumarbi engage in combat and Anu flees up to the sky. Kumarbi seizes him, drags him down, and bites off his genitals, laughing with glee. Anu cautions: "Do not laugh, for you have a heavy burden: I have impregnated you with the storm god [Teshub], the river Aranzah [the Tigris], and Tasmisu." Kumarbi spits and gets free of part of his burden. Later, a god called KA.ZAL came up out of Kumarbi's skull and Teshub out of the "good place." On the other hand, Tasmisu is born from Mount Kanzura, fertilized by Anu's seed, which Kumarbi had spat. Then Kumarbi tries to swallow his sons, but the god Ea gives him a stone wrapped in diapers. What ensues is not clear, but apparently Teshub captures the kingship from Kumarbi.

There are striking similarities between myths told in *Song of Kumarbi* and some tales from other cultures. In the Babylonian *Enuma elish*, Apsu and Tiamat are the primeval couple. Apsu is deprived of his tiara (a euphemism, because the tiara symbolizes male vigor that goes together with royalty). Other generations of gods follow the primeval couple: Anu, Ea, and Marduk, who, like Teshub, finally seizes the power among gods. On the other hand, Hesiod mentions only three generations of gods: Ouranos (Sky), Kronos, and

Zeus, although Ge (Earth), who generates Ouranos and is relegated at a given moment, corresponds quite well to Hurrian Alalu. It is her son Kronos who, like Kumarbi, will take revenge on the celestial divinity that has her relegated when he castrates Ouranos with a sickle. At the end, Zeus defeats Kronos and seizes power. In the Orphic Theogony commented in the Derveni Papyrus, Night begins the series of generations, followed by Ouranos, Kronos, and Zeus; Kronos castrates Ouranos, but Zeus swallows Ouranos's phallus and he becomes pregnant, as a result of which he gives birth to all the gods. However, in the *Phoenician History* by Sankuniaton, preserved in Philo Byblius's Greek version, the divine kings are Elioun (called in Greek Hysistos, "the Highest")—a god only mentioned by his Greek name, Epigeios, corresponding to Greek Ouranos (who is also castrated); El—in Greek Kronos; and Zeus Demarus—corresponding to Phoenician Baal Hadad.

But there are also significant differences between the quoted versions. The most remarkable one is that in Babylonian and Greek myths every god is son of the previous, while in the Hittite text, Kumarbi, the god that reigns in third place, is "Alalu's offspring," or the son of the first king. On the other hand, Anu, the second god in heaven, does not seem to have any relationship with Alalu, in spite of what is read in some studies, such as those of Kirk or Wilhelm, who believe that there is one (genealogical) line of gods in the Hittite myth. In the Hittite tale, then, according to the text, there is a conflict between two lines of gods that compete for supremacy: one of a netherworld god, Alalu, whose descendant is Kumarbi, and the other of a celestial god, Anu. The conflict is solved because Teshub is a result of Anu's seed, but Kumarbi, with his pregnancy, plays the role of the mother of the god.

In the *Song of Hedammu*, Kumarbi tries to regain the throne and mates with Sertapsuruhi, the huge Sea's daughter, who gives birth to a snake whose voracious appetite leads him to devour all kinds of animals and vegetables. As a result of this, human beings are starving. Since human beings cannot give sacrifices to the gods, the gods are hungry too. In a meeting of the gods, Ea reproaches Kumarbi with having harmed the gods. He fears that gods themselves must work. Then Ishtar seduces Hedammu with the sight of her naked body. The end is not preserved, but probably the monster is defeated and world order recovered.

In the *Song of Ullikummi*, Kumarbi plots against his upstart son, Teshub. Kumarbi mates with a stone and she bears him another son, Ullikummi, made of diorite. The name *Ullikummi* contains the name of Kumme, the city consecrated to Teshub, and probably means "destroyer of Kummi(ya)." Various helper gods place Ullikummi on the shoulders of Ubelluri, an Atlas figure that bears on his shoulders the earth and the sky, and the young Ullikummi grows rapidly. The sun god notices the mighty figure of Ullikummi rising from the sea and warns Teshub, who weeps bitterly. Teshub appeals to the god Ea, who eventually takes in hand the blade

that had originally severed the earth from the heaven and cuts Ullikummi off at the ankles. Presumably (here the story breaks off), Kumarbi and his powerless monster-son are defeated and Teshub's rule is assured.

There are striking similarities between Hedamu and Ullikummi's myths and other Hesiodic themes. In the *Theogony* the Titans and Typhoeus challenge Zeus's power and they are defeated. But there are again differences between Hurrians and Greeks in their view of divinities. In Hesiod, Zeus remains as undisputed lord of gods and men. This has nothing to do with instability of Teshub's power. His whining image when he sees Ullikummi and the description of his defeat and humiliation contrast with the Hesiodic image of Zeus as a strong god with a total control of the situation.

Scarce fragments of other poems belonging to Kumarbi's cycle are preserved. In one of these poems a god called KAL becomes king of heaven. During his reign, humans enjoy excessive welfare, but they neglect worship. Because of that, Ea orders the mutilation of the king. This theme has similarities with the Prometheus's myth. According to the Hurrian conception, the proper relationship between gods and human beings requires that the latter not be excessively pressed (as in *Hedammu*) nor enjoy excessive welfare (as in the poem of KAL). A balance between both extremes is the ideal.

Another poem of the cycle deals with Silver, a character whose Hurrian name Ushu is mentioned in a very fragmentary Hurrian text: "Hail, Silver, the lord that has become king!" Although it is very difficult to reconstruct the plot of the poem from its scarce remains, Silver is another of Kumarbi's sons, who overthrews Teshub and is later defeated by the storm god.

The *Myth of Kessi*, only a few fragments of which are preserved, is the story of a stalwart hunter, and the *Song of Release* is a poem composed of several parables and non-mythological narratives. The parables deal with mountains, animals, cups, or other objects that behave in a bad manner and receive punishment, and later they are compared with the actions of human beings. Many authors who have written on Hurrian myths with religious motifs include the folktale of Appu of Lulluwa and his wife, prosperous folk who go to bed fully clothed and wonder why they cannot conceive. The gods set them right and they bear two sons, Good and Evil. Later both sons fight for the inheritance. The plot has similarities with the story of Hesiod and his brother Perses in *Works and Days*. Others, however, believe that this tale does not have a Hurrian origin.

**HURRIAN WORSHIP.** Little is known of the actual cultic practices and worship of the Hurrians. From syncretic Hittite texts, mostly from Boğazköy, there is evidence for sympathetic magic, bird sacrifices (also attested in texts from Ugarit), and various forms of divination. The interpretation as omens of abnormal natural phenomena, such as eclipses or streaks of lightning, was also a common practice among

the Hurrites. Frequently they resorted to the interpretation of birds' flight or to analysis of bird entrails in order to explain such phenomena. The translation into Hurrian of Babylonian collections of omens shows Hurrian interest in these practices. The Hittites in their turn translated their texts about this topic.

The cult included offers of food and drink. In addition to this the gods' images were anointed with scented oil. Instrumental or choral musical accompaniments were also frequent. Rites could be performed in temples, sacred groves, or shrines in the rocky cliffs.

As with the Hurrian pantheon, there was clearly much Babylonian influence on the Hurrian cult, and in turn, the Hurrian cult apparently was partially assimilated into that of the Hittites.

WILLIAM J. FULCO (1987)  
ALBERTO BERNABÉ (2005)

**HUS, JAN** (1372/3–1415), also known as John Huss, was a Czech reformer of the Christian church. Hus was called John of Husinec after the village in southern Bohemia in which he was born of peasant parents. During his university years, he shortened his name to Hus. After earning a master's degree, in 1398 Hus became a member of the faculty of liberal arts at the University of Prague. He was ordained a priest in 1400, served as dean of the faculty from 1401 to 1402, and matriculated in the faculty of theology to work toward the degree of doctor of theology. Because of his subsequent activities and the controversies that developed around him, Hus never completed the degree.

In 1402 Hus was appointed preacher at Bethlehem Chapel in Prague, where sermons were delivered in Czech rather than Latin. He became a leader in the national Czech reform movement, which emphasized moral reform and preaching in the vernacular. Through his teachers Hus had been introduced to the thought of Milic of Kromeriz (c. 1325–1374) and Matthew of Janov (c. 1355–1393), early leaders of the reform movement.

Hus, along with other reformers, also became interested in the thought of John Wyclif. Prior to 1402, Hus appears to have known only Wyclif's philosophical writings. But after Hus's friend Jerome of Prague brought a number of Wyclif's theological and reformist works to Prague in 1401, and again in 1406, Hus began to use some of Wyclif's less

radical ideas for reform in his own sermons at Bethlehem Chapel. He also translated Wyclif's *Trialogus* into Czech. In 1403, the conflict between the nominalism of the German members of the faculty at the university and the philosophical realism of Wyclif and the Czech faculty members contributed to an academic (not an ecclesiastical) condemnation of the heretical sense of forty-five articles drawn from Wyclif's writings.

The archbishop of Prague, Zbyněk Zajíc, who was primarily a soldier, not a theologian, at first supported both the clerical reform party and Hus. In 1405, he appointed Hus preacher to the Prague synod. However, by attacking clerical vices and abuses in his sermons, Hus aroused increasing clerical opposition to the reform party. Innocent VII and Gregory XII both exhorted Zbyněk to check the growing interest in Wyclif's views. Hus's friends Stanislav of Znojmo and Stephen Pálež later became his bitter enemies after they were forced to defend themselves against charges of heresy by renouncing Wyclif's views (particularly the doctrine of remanence, i.e., that bread and wine remain unchanged after the words of consecration in the sacrament).

Hus lost the archbishop's support when he and other Czech faculty members sided with Wenceslas, king of Bohemia, in his recognition of Alexander V, who in 1409 had been elected pope by the Council of Pisa in an attempt to end the schism that was dividing Western Christendom into three factions. The council had deposed and excommunicated Gregory XII and Benedict XIII, who both, however, refused to abdicate in Alexander's favor. When Zbyněk and the German members of the faculty supported Gregory XII, Wenceslas changed the constitution of the university in a manner that the Germans could not accept, with the result that they left Prague. (Some of them founded the University of Leipzig.) Zbyněk then obtained support from the antireformist clergy and acknowledged Alexander V as legitimate pope in order to secure papal approval of his proposed actions. To silence Hus, the archbishop forbade preaching in private chapels, but Hus continued to preach. Zbyněk retaliated by ordering the burning of Wyclif's books and sending charges of heresy against Hus to the Curia Romana.

When John XXIII, successor of Alexander V, issued indulgences for sale to raise funds for his crusade against Gregory XII and Gregory's supporter Ladislav of Naples, Hus opposed the methods used to sell the indulgences, but not the doctrine of indulgence itself. He thus lost the support of King Wenceslas, who was profiting from the sale of the indulgences. Hus was placed under a stricter ecclesiastical ban, and because his presence threatened Prague with an interdict, he left the city in 1412. He sought refuge in the castles of friends in southern Bohemia, where he completed important works in Czech and Latin, including his famous *De ecclesia* (1413).

Wenceslas's brother Sigismund, king of Hungary and king of the Romans, seeking to crush heresy and to end the papal schism, brought pressure to convoke in 1414 the

Council of Constance. Threatened by an interdict for tolerating heresy in Bohemia, Wenceslas was forced to agree to Sigismund's plan to send Hus to the council. Hus arrived in Constance in 1414 with Sigismund's assurance of safe-conduct, but there he was questioned, imprisoned, and tried for heresy. He was found guilty and was burned at the stake at Constance on July 6, 1415.

Hus's religious views have been interpreted as being derived from the writings of Wyclif, and thus as both heretical and devoid of originality. They have also been interpreted as the culmination of the national Czech reform movement, modified by some of Wyclif's less radical ideas. In this interpretation, Hus is seen as essentially orthodox in his scholastic views, unlike his colleagues, some of whom advocated radical Wyclifite heresies. Some recent Czech writers have seen Hus and his followers as representatives of the lower classes in their revolt against a feudal society.

Hus had what is now called an ecumenical view of the church. He thought of the Roman church as but one among several branches of the church militant and defined the true church as the totality of the predestinated. Thus his judges at the Council of Constance interpreted his views correctly when they accused Hus of denying that the Roman church is the only true church but were wrong in their interpretation that he refuted the valid existence of the church militant. Denying the supreme authority of popes and councils, Hus accorded supreme authority for faith and practice to Christ's teachings and life, as chronicled in scripture; however, he granted a subordinate authority to the traditions of the church, and as a scholastic theologian did not exclude appeals to these traditions. Hus was not, strictly speaking, a pre-Lutheran advocate of *sola scriptura*. Neither was he an advocate of *sola fide*, justification by faith alone. He emphasized (with rare exceptions) the necessity of good works for salvation in the sense of *fide caritate formata*, faith formed by love. He believed in transubstantiation rather than in the doctrine of remanence. Toward the end of his life, in a letter from the Council of Constance to his substitute at Bethlehem Chapel, Hus approved the distribution of both bread and wine, not bread alone, to the laity, a practice that his followers continued.

Hus's influence was especially pronounced among the moderate Hussites who were known as Utraquists (from *utraque*, "each of two," referring to the two Communion elements), and also as Calixtines (from *calix*, "goblet, drinking vessel"). His teachings strongly influenced the members of the *Unitas Fratrum* (Unity of Czech Brethren), who separated from the other Hussites in 1467. The Czechoslovak Hussite Church (or Czechoslovak National Church), founded in 1920, continues the Hussite tradition.

## BIBLIOGRAPHY

### Works by Hus

*De Ecclesia: The Church*, by John Huss (1915; reprint, Westport, Conn., 1974) is an edited translation by David S. Schaff of Hus's most famous work. S. Harrison Thomason prepared a critical edition of the Latin text as *Magistri Joannis Hus tractatus de ecclesia* (Boulder, Colo., 1956). Matthew Spinka edited and translated the important work "Hus on Simony," in *Advocates of Reform from Wyclif to Erasmus*, "Library of Christian Classics," vol. 14 (Philadelphia, 1953). Spinka also translated *The Letters of John Hus* (Manchester, 1972).

### Works about Hus

Johann Loserth influenced many by his thesis of Hus's extreme dependence on Wyclif in *Wiclif and Hus*, translated by Maurice John Evans from the first German edition (London, 1884). Loserth's *Hus und Wiclif: Zur Genesis der hussitischen Lehre* (Munich, 1925) is a second, revised edition. Czech scholars and others have criticized this thesis, for example, Paul de Vooght in his *L'hérésie de Jean Huss* (Louvain, 1960). Matthew Spinka's criticism of it had appeared in *John Hus and the Czech Reform* (1941; reprint, Hamden, Conn., 1966). Spinka extended his argument, showing the importance of the national Czech reform tradition, in *John Hus' Concept of the Church* (Princeton, 1966). The appendix to this work contains the forty-five articles attributed to Wyclif that were condemned in 1403 and 1412 and the thirty articles for which Hus was executed together with Hus's responses. Spinka translated and edited *John Hus at the Council of Constance* (New York, 1965), which contains an instructive introduction and a translation of "An Account of the Trial and Condemnation of Master John Hus in Constance," by Peter of Mladonovice. Spinka's *John Hus: A Biography* (Princeton, 1968) is a thorough study with useful maps. Each of these last three works contains an excellent bibliography of primary sources and specialized studies, many of which are by Czech scholars.

JOHN C. GODBEY (1987)

**HUSAYN IBN 'ALĪ, AL-** (AH 4–61/626–680 CE) was the son of Fāṭimah, the daughter of the prophet Muḥammad, and the Prophet's cousin 'Alī ibn Abī Ṭālib. Al-Ḥusayn was born in Medina on 3 Sha'bān 4 (January 626). He and his elder brother, al-Ḥasan, were the only grandsons of the Prophet, and many accounts survive in Muslim tradition of the Prophet's affection for them. The Prophet is reported to have said: "al-Ḥasan and al-Ḥusayn are the lords of the youth of Paradise," interpreted by the Shī'ah as proof for their *imāmah*. The Prophet is also reported to have said "al-Ḥusayn is from me and I am from al-Ḥusayn," which signals the intimate relationship between grandson and grandfather, or in the Shī'ī conception, between the Prophet and his third successor as *imām*. Al-Ḥusayn is best known as the archetypal martyr of the Shī'ī cause and a pristine, moral Islam. His tragic death with a small band of followers at Karbala in Iraq on 10 Muḥarram 61 (October 680), an event that according to Shī'ī tradition was foretold and lamented by the Prophet himself, became the pivotal event in Shī'ī salvation history.

**HISTORY.** Al-Ḥusayn grew up as a member of the Muslim elite in Medina. He was a child when the Prophet died, and he suffered the death of his mother soon after. He also saw how his father—according to the Shī'ah—was continuously denied his right as the legitimate religious and political successor to the Prophet until the chaos of 656, when, following the murder of the third caliph, 'Uthmān ibn 'Affān, by disaffected Egyptian rebels, 'Alī was chosen as caliph by the community in Medina. Some, however, were not willing to accept his leadership and 'Alī had to fight fellow Muslims to assert his authority. 'Uthmān's kinsman, Mu'āwiyah ibn Abī Sufyān, governor of Syria, disputed 'Alī's authority, claiming that the blood of the dead caliph had not been avenged, ushering in what is known in Muslim tradition as the first civil war. After the famous and inconclusive battle at Ṣiffīn on the northern borders of Syria and Iraq, 'Alī was coerced by a group of his forces, who were unable to countenance further internecine blood, to accept arbitration. This led to the discontent of some of his supporters, who declared him to be an unbeliever for accepting arbitration over what they regarded as the rule of God. These Khārījīs rebelled and were crushed at Nahrawān. But the movement survived and in 661 one of its members assassinated 'Alī in the mosque at Kūfah, the caliphal capital.

Al-Ḥasan succeeded his father. But the intrigue against him and his lack of support led him to agree to terms whereby he abdicated the caliphate in favor of Mu'āwiyah. According to the agreement, Mu'āwiyah would safeguard the life and property of the supporters of 'Alī, cease the public cursing of 'Alī from pulpits in Syria, and ensure that his successor would be decided by consultation, probably in favor of al-Ḥasan or al-Ḥusayn. Al-Ḥasan died in 671, poisoned by Mu'āwiyah according to Shī'ī tradition, which also affirms that Mu'āwiyah never kept his side of the bargain.

**MARTYRDOM.** The hope of the Shī'ah turned to al-Ḥusayn. He stood by the agreement with Mu'āwiyah and refused to revolt in his lifetime. But when Mu'āwiyah died in 680, ensuring the succession of his son Yazīd, universally regarded in Muslim tradition as an immoral and unjust tyrant, al-Ḥusayn became the leader of those who refused to acknowledge the succession. Yazīd ordered the governor of Medina to seek the allegiance of the notables in the city, especially al-Ḥusayn, who was the surviving grandson of the Prophet. Al-Ḥusayn evaded this demand and left for Mecca and its sanctuary. The Shī'ah in Kūfah, upon hearing of al-Ḥusayn's action, urged him to come to Iraq to lead a revolution against Yazīd. Responding to their call, al-Ḥusayn sent his cousin, Muslim ibn 'Aqīl ibn Abī Ṭālib, to Kūfah to assess his support. Yazīd, however, appointed 'Ubayd Allāh ibn Ziyād, the son of a close confidant of Mu'āwiyah, as the governor, with the mandate to crush any resistance. Ibn Ziyād quelled the discontent in Kūfah through coercion and bribery, and he executed Muslim and his protectors, especially Hānī' ibn 'Urwah. Ibn Ziyād then sent out forces to intercept al-Ḥusayn, who had set out from Mecca towards Kūfah with a band of family and followers. As news of events

in Kūfah spread, al-Ḥusayn's following dwindled. The remainder was intercepted by Ibn Ziyād's forces, led by al-Ḥurr ibn Yazīd, and the group was forced to stop on the banks of the Euphrates at Karbala. Ibn Ziyād then sent a further force, under the command of 'Umar ibn Sa'd ibn Abī Waqqās, to urge al-Ḥusayn to submit or to suffer the fate of a rebel. Al-Ḥusayn's party was surrounded and denied water. The Battle of Karbala took place on 10 Muḥarram 61 (October 680), the day known as 'Āshūrā'.

Al-Ḥurr, appalled by the possibility of being responsible for the death of the Prophet's grandson, switched sides. But the forces of the governor, which included many who had initially called al-Ḥusayn to Kūfah to support them against Yazīd, persisted, demonstrating the success of Ibn Ziyād in transforming the rebellion. All of al-Ḥusayn's followers were killed, including his infant child and other children of his family. Al-Ḥusayn was executed, decapitated, and his body trampled under the hooves of horses. Possessions were plundered and the women and children were taken as captives, first to Kūfah and then to Damascus, where they were paraded as defeated rebels. Only one son of al-Ḥusayn, 'Alī, who had been sick throughout, survived. In Shī'ī accounts, the humiliation is amplified by the fact that few in Syria even recognized them as the family of the Prophet.

**HISTORICAL LEGACY, MARTYRLOGY, AND COMMEMORATION.** The martyrdom came as a great shock to the Muslim community and inspired many Shī'ī revolts aimed at revenging the blood of al-Ḥusayn. The earliest, known as the Penitents (*al-Tawwābūn*), were Kūfans who regretted their failure to support al-Ḥusayn. When the 'Abbāsids came to power in 750 through a revolution, the call for avenging al-Ḥusayn was a key aspect of their *kerygma*. Nevertheless, once the rights of the family of the Prophet and the Shī'ah remained unfulfilled, Shī'ī rebellions continued. Vengeance for al-Ḥusayn still lies unfulfilled in Twelver Shī'ī theology until the coming of the messianic *mahdī*, the descendent of the Prophet and al-Ḥusayn, who at the end of time will eradicate injustice, thus avenging the blood of al-Ḥusayn, and usher in a final era of peace and justice.

The emotional affect of al-Ḥusayn's martyrdom inspired elegies and accounts of what happened. These accounts, the earliest being the Kūfan Shī'ī Abū Mikhnaf al-Azdī's *maqṭal*, were central to mobilization for the Shī'ī cause. The *maqātil* (accounts of the martyrdom) literature proliferated in a variety of vernaculars from Arabic to Swahili (and continues to be written—the contemporary Arabic *maqṭal* of the Iraqi scholar Sayyid Muqarram is very popular). As powerful rhetorical devices that represent and express Shī'ī theology, the *maqātil* signal the devotion, aspirations, thought, and collective memory of the Shī'ah. Over time, more miraculous stories and details were layered into the account. These accounts, along with the rituals of commemoration, developed elaborate forms, including sermons recounting the martyrdom (known in the Persianate East as *rawzeh* after a key text of the fifteenth-century, the *Rawḍat*

*al-shuhadā* of Ḥusayn Vā'iz Kāshifī). Concurrently, pilgrimages to the shrine of al-Ḥusayn in Karbala developed, and rulers expressed their piety and devotions through the construction of works at the shrine and charitable endowments. Prayer and pilgrimage manuals set out the excellences and rites of visitation (*ziyārah*) and salutations upon the martyred *imām*, through which the Shī'ah would renew their covenant of allegiance to the *imāms* of the family of the Prophet. The visitation also recognizes the spiritual vitality of the *imām* as an enshrined saint.

The commemoration rituals during the month of Muḥarram, known as *tā ziyah*, take on various cultural forms and illustrate the translations of Shī'ī aspirations and grief for the death of al-Ḥusayn. The earliest public sponsorship of the 'Āshūrā' commemoration occurred during the Būyid period in fourth-century Iraq. In the Fāṭimid period and in subsequent Shī'ī states, such as the early modern Safavids in Iran, patronage of the commemorations was central to the affirmation of Shī'ī identity and dynastic legitimacy. On the Indian subcontinent, processions from the late Mughal period have been the main expression, with mourners, flagellants, and devotees carrying replicas of the shrine of al-Ḥusayn and war banners streaming through the streets. In Iran and Bahrain, passion plays recounting the events are enacted. They are socially and even politically significant, as every political tyrant is equated with Yazīd and every seeker of justice with al-Ḥusayn. It is not insignificant that the Iranian revolution in 1979 was sparked during the Muḥarram commemorations. More recently in Iraq, the fall of Ṣaddām Ḥusayn in 2003 was celebrated with free Shī'ī commemorations for the fortieth day after 'Āshūrā' for the first time in more than twenty years. According to some accounts, up to four million pilgrims were in Karbala for the occasion. The vitality of the symbol of Karbala and the martyred al-Ḥusayn remains a strong strand in the life of the world's Shī'ī communities.

SAJJAD H. RIZVI (2005)

**HUSSERL, EDMUND** (1859–1938), German philosopher, founder and central figure in the twentieth-century philosophical movement or approach known as phenomenology. Born in Prossnitz (Prostejov), Moravia, Husserl studied at the universities of Leipzig and Berlin and received his Ph.D. from the University of Vienna in 1882. After becoming an assistant to the mathematician Karl Weierstrass in Berlin, he moved to Vienna where, largely under the influence of the philosopher Franz Brentano, he changed his field from mathematics to philosophy.

Husserl's three teaching positions roughly correlate with three periods in the development of his phenomenological philosophy. His stay at the University of Halle (1887–1901) coincided with a prephenomenological period, during which he attempted to provide a psychological basis for mathematics and logic; it culminated in the influential *Logical Investigations* (2 vols., 1900–1901), which laid the foundation for his descriptive phenomenology. During his tenure at the University of Göttingen (1901–1916), Husserl established his role as founder of the “phenomenological movement.” He developed the phenomenological project that he had introduced in the second volume of his *Logical Investigations* and, in his *Ideas* (1913), he turned to a “pure” or “transcendental” phenomenology—a philosophical turn that was rejected by many of his followers. His work at the University of Freiburg (from 1916 to 1929) brought a radicalization of this phenomenological idealism, in which phenomenology was conceived as a renewal of life, a realization of one's ethical autonomy, and an overcoming of the crisis of European science. The years from 1929 to 1939, during which Husserl lived in Freiburg after his retirement from the university, may be designated as a fourth period. This period comprises the works of the “late Husserl.” Though isolated by social and political pressures as a man with Jewish parentage in Nazi Germany and, finally, by illness, Husserl developed, during this period, his existential notion of “life-world” (*Lebenswelt*) with which he explored the intersubjective and historical dimensions of experience.

Since Husserl was continually rethinking his phenomenological project, his works never formed a closed philosophical system. There are, however, several themes that can be found throughout his writings. Phenomenology, for example, was to be a descriptive, "rigorous science," free from unexamined presuppositions, and each step was to have a sense of self-evident necessity. Husserl continually searched for radical "new beginnings," that is, for an absolute foundation on which to ground his phenomenology and to grasp the constitution of meaning.

Husserl conceived phenomenology to be a radically descriptive approach, free from our normal, unexamined preconceptions; it was to utilize a phenomenological method that would allow it to describe the phenomena that appear in immediate experience and to gain direct intuition into their essential structures and meanings.

Husserl's attitude toward religion is open to several interpretations. Though the majority of Husserl scholars have assumed that he had little or no interest in religion, several scholars, largely on the basis of unpublished manuscripts, correspondence, and conversations, have submitted that religion and "the problem of God" were serious concerns for Husserl.

Born to Jewish parents, Husserl became an Evangelical Lutheran in 1887. A few individuals have claimed that he had a religious conversion on his deathbed, but this report has been widely challenged. In general, Husserl's phenomenological suspension of all judgments about what is real produced a tolerance toward all "genuine" religious phenomena. In addition, many scholars have commented that Husserl often conceived his phenomenological approach in terms of a "conversion," and that he regarded his philosophical mission with a kind of religious fervor. It does seem, however, that Husserl had little interest in a personal God or in any other aspect of traditional religion; he rejected the externals of religion and all theological dogma. On the other hand, scattered references to God appear in *Logical Investigations* and *Ideas*; passages with religious reference or implication are found also in later works such as *The Crisis of European Sciences and Transcendental Phenomenology* (1936) and in Dorian Cairns's *Conversations with Husserl and Fink* (1976); and a greater number of religious references appear in Husserl's diaries and in later unpublished manuscripts and correspondence.

Although these passages tend to be vague, underdeveloped, and open to conflicting interpretations, it is apparent that, according to Husserl, God is neither a personal deity nor a cause of the world, but an "idea" within the context of universal teleology. God as idea is the *telos*, that is, the universal and ideal end and the transcendent motivating force and final principle in the evolution of reason. Furthermore, Husserl cryptically comments that only with an understanding of the "transcendental consciousness" of phenomenology can one "understand the transcendence of God," and that "ethical-religious questions are the last questions of phenom-

enological constitution" (Cairns, *Conversations*, 1976, p. 47).

Husserl's major contribution to the study of religion is found in later attempts by scholars to apply a modified Husserlian analysis to religion. Husserl's influence can be seen in the phenomenological works of Max Scheler, Gerardus van der Leeuw, Paul Ricoeur, and many others. Phenomenology of religion has characterized itself as radically descriptive and antireductionistic. It has often adopted Husserlian terms, such as *epoche* and "eidetic vision," and has sometimes utilized aspects of Husserl's phenomenological method.

To a lesser extent, Husserl's phenomenology has influenced philosophy of religion and theology. In the appendix to his *Ecclesial Man* (1975), Edward Farley surveys the impact of phenomenology on numerous Catholic and Protestant philosophers and theologians, submitting that Max Scheler was the dominant figure in the field during the period between 1921 and 1934, and that the philosopher and theologian Henri Duméry, who applies a Husserlian method to the study of religion, has dominated the period from the 1950s. Many scholars maintain that French phenomenology, deeply influenced by Husserl, took a religious and even a theological turn in the 1980s and 1990s.

Starting in the 1990s, there has been a revival in philosophical phenomenology of religion. This has involved both renewed interest in older phenomenologists and the emergence of younger phenomenologists of religion. In this renewal of phenomenology of religion, most of these scholars either trace their phenomenology back to Husserl or at least interact with Husserl's foundational formulations. Among philosophers considered by other scholars as contributing to the renewal of phenomenology of religion are Martin Heidegger, Paul Ricoeur, Emmanuel Levinas, Jacques Derrida, Michel Henry, and Jean-Luc Marion.

#### BIBLIOGRAPHY

François Lapointe includes a bibliography of Husserl's writings, beginning with 1882, in his *Edmund Husserl and His Critics: An International Bibliography, 1894–1974* (Bowling Green, Ohio, 1980). The definitive edition of Husserl's collected works is *Husserliana: Edmund Husserl, Gesammelte Werke* (The Hague, 1950–). Among translations of Husserl's writings into English, one may cite *Logical Investigations* (1900–1901), 2 vols. translated by John N. Findaly (New York, 1970); *Ideas Pertaining to a Pure Phenomenology and to a Phenomenological Philosophy. First Book: General Introduction to Pure Phenomenology* (1913), translated by Fred Kersten (The Hague, 1982); *The Crisis of European Sciences and Transcendental Phenomenology: An Introduction to Phenomenological Philosophy* (1936), translated with introduction by David Carr (Evanston, Ill., 1970). A good collection of Husserl's translated writings is *The Essential Husserl: Basic Writings in Transcendental Phenomenology*, edited by Donn Welton (Bloomington, Ind., 1999).

Although there have been thousands of titles devoted to Husserl (Lapointe lists 3,879 publications), relatively few are con-

cerned with religion. Perhaps the best source on this subject is *The Teleologies in Husserlian Phenomenology*, edited by Anna-Teresa Tymieniecka, volume 9 of "Analecta Husserliana" (Dordrecht, Netherlands, 1979). This volume includes several articles on Husserl, religious experience, and theology, of which Stephan Strasser's "History, Teleology, and God in the Philosophy of Husserl" is especially noteworthy. Edward Farley's *Ecclesial Man* (Philadelphia, 1975) utilizes Husserl's phenomenology in formulating a phenomenological theology and surveys the impact of Husserl's phenomenology on Catholic and Protestant philosophy of religion and theology. Among the works of "the new phenomenology," primarily written by French phenomenologists of religions, one may cite Jean-Luc Marion, *Reduction and Givenness: Investigations of Husserl, Heidegger, and Phenomenology*, translated by Thomas A. Carlson (Evanston, Ill., 1998). See also *Phenomenology and the "Theological Turn": The French Debate* by Dominique Janicaud and others (originally published in French, 1991; New York, 2000).

DOUGLAS ALLEN (1987 AND 2005)

**HUTCHINSON, ANNE** (1591–1643), was the central figure in the antinomian controversy in the Massachusetts Bay Colony in 1636–1637. A native of Alford, Lincolnshire, Anne Marbury married William Hutchinson, an affluent merchant of that town, and mothered a large family. Around 1630 she came under the religious influence of John Cotton, vicar of Saint Botolph's in nearby Boston, and four years later she and her family followed him to the newly settled town of Boston in New England.

The Puritans of the English Congregational churches had sought to leaven John Calvin's harsh predestination decree by incorporating a concrete assurance of election that would be contingent on the moral responsibility of the elect. They asserted that the hopeful believer could prepare his or her soul for the reception of God's saving grace through a life of purity that might offer evidence of salvation. John Cotton, however, warned that this innovation imperiled the basic Protestant doctrine of justification by faith alone. The believer must receive "witness of the Spirit itself," he wrote, before being able to advance his or her moral condition as evidence of a state of grace.

Anne Hutchinson incautiously distorted Cotton's doctrine by asserting that the gift of grace implied the actual indwelling of the spirit of the Lord, mystically uniting the elect to himself, thus rendering superfluous all other evidence of salvation. This conclusion verged perilously on the antinomian heresy, which held that Christians are freed from the moral law of the Old Testament by the new dispensation of grace proffered in the gospel.

Hutchinson communicated her beliefs in the guise of an informal exegesis of Cotton's weekly sermons. Large numbers of people attended these doctrinal discussions at her home in Boston, and a majority of the local congregation, including most of the town's political and mercantile leaders,

became enthusiastic disciples. When, at last, she accused all the Massachusetts clergy except Cotton of preaching a covenant of works, she precipitated a factional division that aroused the colony. Soon the religious breach assumed political dimensions and threatened the public safety.

The orthodox leaders, seeing the future of the colony at stake, regained political ascendancy by enlisting the support of outlying agricultural communities. A clerical synod declared Hutchinson guilty of holding numerous erroneous opinions, most of them inferential extensions of her central doctrine. Arraigned before the General Court in November 1637, Hutchinson unguardedly boasted that she had received revelations from the Holy Spirit, a heretical claim that horrified all orthodox Puritans. Repudiated by Cotton, excommunicated from the Boston church, and banished from the colony, she fled with family and friends to neighboring Rhode Island. Further dissension prompted her removal to New Netherland where, in 1643, she and her younger children were massacred by Indians.

Hutchinson left behind neither a religious organization nor a fixed system of belief. Although a remarkably intelligent and courageous woman, she seems to have been intolerant of religious doctrines other than her own. But the struggle of such sectarians who sought freedom of conscience for themselves prompted a diversity of beliefs that paved the way to a general freedom of religion for later generations.

#### BIBLIOGRAPHY

Basic documentation can be found in *Antinomianism in the Colony of Massachusetts Bay, 1636–1638* (1894; reprint, New York, 1967), edited by Charles Francis Adams, and in *Winthrop's Journal, "History of New England," 1630–1649*, 2 vols. (1908; reprint, New York, 1966), edited by James K. Hosmer. The most satisfactory brief account, although skeptical of the religious issues, is in Charles Francis Adams's *Three Episodes of Massachusetts History*, rev. ed., 2 vols. (1896; reprint, New York, 1965). My own book *Saints and Sectaries: Anne Hutchinson and the Antinomian Controversy in the Massachusetts Bay Colony* (Chapel Hill, N.C., 1962) is a more detailed study. Criticism of the modern tendency to see Hutchinson as a "prophet of liberalism" is made by Edmund S. Morgan in "The Case against Anne Hutchinson," *New England Quarterly* 10 (December 1937): 635–649. Essential to an understanding of the issues of the antinomian controversy are two works by Perry Miller: *The New England Mind: The Seventeenth Century* (New York, 1939) and *Orthodoxy in Massachusetts, 1630–1650* (1933; reprint, Gloucester, Mass., 1965).

EMERY J. BATTIS (1987)

**HUTTERIAN BRETHREN.** The Hutterian Brethren are a branch of Anabaptist Christians originally organized by Jacob Hutter (d. 1536). Hutter's followers, known still as Hutterites, accept the year 1528 as the date of their founding because it was then that the founders decid-

ed to pool their resources and—unlike their Anabaptist counterparts the Amish and the Mennonites—to hold “all things common.” Although they have no objection to the name Hutterites, they prefer to be known as Hutterian Brethren or simply Brethren.

Jacob Hutter, a hat maker whose surname means *hatter*, was a Swiss Anabaptist minister who promulgated the practice of adult baptism, rejection of oaths, pacifism, and nonassimilation. He apparently had some education, since he spoke well and had knowledge of geography and basic mathematics. He was also a firm disciplinarian and a brilliant organizer. Journeying in 1529 from the Tyrol to Moravia, he found disarray and dissension among various congregations of Anabaptists. With an unwavering hand, he was able to overcome the schisms and impart a sense of mission.

Hutter was a man of indomitable will and exceptional courage. During a trip to the Tyrol in 1536, he was abducted and imprisoned by his enemies. Despite torture, he refused to give up his beliefs in the separation of church and state, and he refused to take oaths, to bear arms, or to abandon his economic communalism. In February of that year he was burned at the stake. After only three years as leader, he had become a martyr.

Following the death of Jacob Hutter, Hans Amon became head of the church. After Amon's death in 1542, Peter Riedeman, one of Hutter's former assistants, assumed leadership. Like Hutter, Riedeman was a man of total conviction. His beliefs, heretical to prevailing ones, prompted his imprisonment for nine years. Following his death in 1556, the Brethren continued to grow. By 1600 they numbered some 25,000 members.

The so-called golden years ended abruptly, however, and during the 1600s and 1700s persecution became relentless. Hutterite numbers dwindled, and those who remained faithful were forced eastward, to Moravia, Transylvania, Slovakia, and the Ukraine. Under a promise of religious freedom, the Brethren were able to survive in Russia from 1770 to 1870, at which time the promise was withdrawn. Between 1874 and 1877 the entire Hutterite population, more than one thousand members, emigrated to the United States. The communal members, approximately four hundred, settled in South Dakota in three separate colonies known as Bruderhofs. These proved to be successful and growth was rapid. By the time of World War I, some seventeen hundred Brethren lived in seventeen Bruderhofs.

Because of their refusal to bear arms, the war brought great difficulties to the Hutterites. Hostility caused all but one Bruderhof to relocate to Canada, but after the war many returned to the United States. During World War II, the Brethren were granted conscientious-objector status.

Each Bruderhof is a self-supporting agricultural community employing modern farm machinery. All property is owned communally by approximately 150 members. If a group grows beyond this number, branches are set up. The

Bruderhof is administered by five or six men elected for a lifetime; women do not serve on the council, nor are they permitted to vote. The minister of each Bruderhof is both the spiritual and the secular head.

By the beginning of the twenty-first century, the Hutterites had grown to over 400 colonies with a population of more than thirty thousand members throughout the midwestern United States and Canada. Three groups of Hutterites exist (though their differences are more traditional and geographical than doctrinal): the Schmiedeleut, the Dariusleut, and the Lehrerleut. In 1992, the Schmiedeleut branch of the Hutterian Brethren split when a large group of Schmiedeleut Hutterites (also known as Committee Hutterites or Group 2) became dissatisfied with some community policies. Thus, the committee Hutterites created a new church constitution and installed a committee of elders to look after their own affairs.

**SEE ALSO** Anabaptism; Mennonites.

#### BIBLIOGRAPHY

There are a number of accounts dealing with various aspects of Hutterian life, but the best single book is John A. Hostetler's *Hutterite Society* (Baltimore, 1974). Another sound book for the general reader is John W. Bennett's *Hutterian Brethren: The Agricultural Economy and Social Organization of a Communal People* (Stanford, Calif., 1967). A more theoretical approach is the same author's "Social Theory and the Social Order of the Hutterian Community," *Mennonite Quarterly Review* 51 (1977): 292–307. Victor Peters's *All Things Common: The Hutterian Way of Life* (Minneapolis, 1965) provides a comprehensive overview for the nonspecialist. For readers interested in the earlier history of the Hutterites, an illuminating book is Leonard Gross's *The Golden Years of the Hutterites* (Scottsdale, Pa., 1980).

WILLIAM M. KEPHART (1987)  
*Revised Bibliography*

**HYPOSTASIS** is a Greek noun that became an important term in philosophical and theological speculation. The

use of the term in Greek philosophy, especially in Platonism, contributed directly to its use as a technical term in Christian theology and in Gnosticism. The term is also used in modern scholarship in the history of religions. This article will stress the use of the term *hypostasis* in early Christianity and Gnosticism.

**GENERAL USAGE.** As a verbal substantive the Greek word *hupostasis* depends for its meaning on the verb *huphistēmi* (lit., “stand under”); it can mean the act of “standing under” or the result of that action. A wide range of meanings flow from these possibilities, including such abstract meanings as “origin,” “substance,” “real nature,” and so on.

**GREEK PHILOSOPHY.** The fifth-century Christian historian Socrates, in the context of his discussion of the Synod of Alexandria (362), relates that the founders of Greek philosophy never used the term *hypostasis*, though they often used another term, *ousia* (“being,” “substance,” etc.). While the ancient philosophers ignored the term *hypostasis*, the more recent ones (in Socrates’ terms) have used the term as an equivalent of *ousia*. This statement and its context imply (correctly) that the use of the term *hypostasis* in Christian theology is largely dependent upon its usage by the Greek philosophers.

**Stoicism.** It is among the Stoics that *hypostasis* was first used as a philosophical (ontological) term. In Stoicism *hypostasis* comes to be used to refer to being that has “attained reality,” that is, objective or concrete reality. It is Posidonius (first century BCE) who gives the noun *hypostasis* this particular sense. Posidonius also uses the term in an antithesis: Objects in nature such as rain and hail “have *hypostasis*” (i.e., reality), in contrast to the rainbow, which exists “according to semblance” (*kat’ emphasin*). Another Stoic, Cornutus (first century CE) applies the term to theology: Zeus is “father of gods and men” in that he is the cause of their hypostasis, that is, their objective reality. The Roman Stoic Seneca (first century CE) uses the Latin term *substantia* in an analogous sense, referring to centaurs, giants, and so on, which are fanciful beings not having *substantia* (“reality”).

**Platonism.** Plato did not use the term *hypostasis*. Later Platonists adopted the term from the Stoics, probably by way of Posidonius. Middle Platonists of the second century deny that sense-perceptible objects have their own hypostasis. That is, the term *hypostasis* cannot be used to refer to matter, for the truly real is immaterial. In the Platonic context one can regard *hypostasis* (“reality”) as virtually identical with *ousia* (“being, substance”). When they are distinguished in Neoplatonic usage, *hypostasis* has the sense of a more particular reality that has been brought into actuality by a higher cause.

Plotinus (third century) is the originator of the Neoplatonic doctrine of the hypostases, or “first principles,” though in fact his use of the term *hypostasis* is still rather fluid. He developed the doctrine of three “first principles” (*archai*): the One (*to hen*), Intellect or Mind (*nous*), and Soul (*psuchē*). The *locus classicus* of this doctrine is *Enneads* 5.1, to

which Porphyry gave the title *Concerning the Three Primal Hypostases*.

Plotinus’s hierarchy of being, involving the doctrine of the hypostases, can be summarized as follows. (1) Being flows from being. (2) The realization of the lower hypostasis occurs as a result of the next higher one’s “activity” (*energeia*). (3) Yet the higher level is not thereby diminished. (4) Each perfect hypostasis is dependent upon the preceding one, as multiplicity is to unity. (5) The One is ground of all being. (See Dörrie, 1955, p. 72.) Plotinus also says of the “first hypostasis,” that is, the One, that it is “prior to *hypostasis*” and “beyond being.” (See Witt, 1933, pp. 337–342.) That the One transcends hypostasis is the standard view of the later Neoplatonists. The usage of Proclus (fifth century), for example, involves the tendency, generally observable in Neoplatonism from Iamblichus (fourth century) on, to multiply hypostases and levels within them. Proclus sees in each hypostasis a triadic movement of remaining, procession, and reversion. One can then define the term *hypostasis* as distinct from two other important ontological terms, *huparxis* (“existence”) and *ousia* (“being”). While *ousia* is sometimes used as a synonym of *hypostasis* and sometimes as a synonym of *huparxis*, the latter connotes unity, whereas *hypostasis* connotes triplicity. *Ousia* is thus a more flexible term in Neoplatonism. (See Gersh, 1973, pp. 31–37.)

**THE SEPTUAGINT AND PHILO.** Christian usage of the term *hypostasis* presupposes not only some of the philosophical background already discussed but also the use of the term in the Greek Bible (the Septuagint) and in Hellenistic (Greek-speaking) Judaism, such as is represented by Philo of Alexandria.

**The Septuagint.** *Hypostasis* occurs in the Septuagint some twenty times, corresponding to twelve different words in the Hebrew scriptures (in some cases *hypostasis* is hardly a correct translation). The meaning of the word in the Septuagint is very fluid, corresponding to general usage, though the notion of “reality” is present in a number of cases. For example, *Ruth* 1:12, where *hypostasis* means “reality” as a guarantee, renders the Hebrew word for “hope.” The most important meaning of the word in the Septuagint is “underlying reality behind something” (Koester, 1972, pp. 581–582).

**Philo.** Philo’s use of *hypostasis* reflects both Stoic and Middle Platonic influences. Philo says, for example, that a ray of light “does not have its own *hypostasis*,” that is, it does not have its own “substantial existence” (*On the Eternity of the World* 88), reflecting a Stoic use of *hypostasis*. The Middle Platonic example is found in a passage where Philo refers to the immaterial “intelligible world” (*kosmos noētēs*) as “the world of intelligible *hypostasis*,” that is, of reality, to which is contrasted the material world of sense perception (*On Dreams* 1.188). But Philo would finally attribute ultimate reality only to God, the ground of all being. Using a form of the verb *huphistēmi*, Philo says, “God alone subsists in

being,” basing his statement on *Exodus* 3:14 (*The Worse Attacks the Better* 160).

**EARLY CHRISTIANITY.** A wide variety of meanings of the word *hypostasis* can be found in early Christian literature, but from the fourth century on the term comes to be used in special senses in dogmatic formulations on the Trinity and the doctrine of Christ (Christology). Greek philosophical influence becomes more and more evident in these contexts.

**The New Testament and early patristic literature.**

*Hypostasis* occurs five times in the New Testament, twice in *Paul* and thrice in *Hebrews*. The two Pauline instances are *2 Corinthians* 9:4 and 11:17, where in both verses the term means something like “situation” (not “confidence”). In *Hebrews* 1:3 Christ, as Son of God, is called the “reflection of [God’s] glory and the stamp [*charaktēr*] of his *hypostasis*,” that is, of God’s transcendent reality. *Hebrews* 11:1 contains a famous definition of faith (*pistis*) as “the *hypostasis* of things hoped for, the evidence of things not seen,” wherein the word *hypostasis* means “realization” (rather than “assurance,” as in the usual psychologizing interpretation; see Mathis, 1922, p. 87). *Hebrews* 3:14 should be interpreted accordingly: In this verse *hypostasis* refers to the “realization” (by faith) of Christ, already commenced in the life of the Christian community. (See Koester, 1972, p. 587.)

Beginning with Tatian in the second century, the term *hypostasis* comes to be used more often and takes on a distinct philosophical and theological cast. Tatian refers to God as the *hypostasis*, or “absolute reality,” of the universe, inasmuch as he has brought all things into being. Tatian can also refer to the *hypostasis*, or “real nature,” of the demons as “reflections of evil.” The author of the *Epistle to Diognetus* (2.1) challenges the heathen to reflect on what sort of *hypostasis* (“real nature”) or form their so-called gods have. In one of the recently discovered Coptic texts from Nag Hammadi, *The Teachings of Silvanus*, a Christian document whose Greek original probably dates from the second century, it is said that “Christ has a single *hypostasis*” (99.13) and that he is “incomprehensible with respect to his *hypostasis*” (102.3). Here the term means “real nature.” This text represents a transitional stage in the development of a trinitarian and Christological use of the term *hypostasis*.

**Trinitarian theology.** The main issue confronting early Christian theologians was how to reconcile a belief in the deity of Christ (and the Holy Spirit) with the belief in only one God, a fundamental inheritance from Judaism. In the development of Christian trinitarian dogma such basic philosophical terms as *ousia* and *hypostasis* come to play a decisive role. But it was not immediately evident how these terms should be defined in relation to each other. The same fluidity of usage can be seen among Christian theologians as has already been observed in the discussion of Greek philosophy.

Socrates stated that the terms *hypostasis* and *ousia* were being used as equivalents by Greek philosophers. It has been

seen, however, that the terms come to achieve greater specificity in later Neoplatonism. The same thing happens in Christian theology. Origen (third century), while sometimes using the terms as virtual equivalents, does speak of the one God as monad, but also as a *trias* (“trinity”) containing three *hypostaseis*, Father, Son, and Holy Spirit. Origen is also probably the first to speak of Christ as *homoousios* (“of the same substance”) with the Father. (The Gnostics had already used this word, but in another context; see Stead, 1977, pp. 190–202.) Thus Origen posits for the Deity a unity of *ousia*, or “substance,” as genus, but a triad of *hypostaseis*, in the sense of three distinct species (Wolfson, 1970, p. 322). It is this language that becomes standard in Greek trinitarian theology.

It is possible that the second-century Gnostic Valentinus “was the first to think of three *hypostaseis* and three persons [*prōsopa*; lit., “faces”], Father, Son and Holy Spirit” (fragment 9), but this statement may reflect a later terminology. (The fragment is found in Pseudo-Anthimus, who is perhaps identifiable as Marcellus of Ancyra, of the fourth century.)

Tertullian (second to third century) used the Latin term *substantia* as equivalent to the Greek *ousia* (though its exact Greek etymological counterpart is *hypostasis*), and expressed the unity of Father, Son, and Holy Spirit as *una substantia*. He used the term *persona* (probably derived from juridical language) to refer to each of the three members of the Trinity. This is the language that became standard in Latin trinitarian theology.

It was not until the fifth century that orthodox trinitarian terminology became standardized. The Council of Nicaea (325), in rejecting the Arian heresy and adopting the *homoousios* formula to express the relationship between Father and Son, nevertheless used the words *ousia* and *hypostasis* as synonyms. At the Synod of Alexandria in 362, under the influence of Athanasius, the designation *treis hypostaseis* (“three hypostases”) was officially adopted, though even there *mia hypostasis* was conceded to express the unity of the divine being as well as *mia ousia*. The Cappadocian Fathers of the fourth century, especially Basil of Caesarea, were influential in the eventual differentiation of *ousia*, as the more common term, from *hypostasis*, the more particular. Hence the Council of Chalcedon (451) could define the unity of God as a unity of *ousia* and characterize the individual members of the Trinity as three perfect *hypostaseis* or three perfect *prosōpa* (Lat., *personae*).

It should be noted that Christian theological development of the term *hypostasis* runs parallel to that of the Neoplatonist philosophers. But, in the final analysis, in orthodox Christian trinitarian language the three hypostases are coordinated, whereas in Neoplatonism lower hypostases are subordinated to the higher in a chain of being, and all hypostases are ultimately subordinated to the One.

**Christology.** As the distinction between *hypostasis* and *ousia* was gradually being defined a new problem was arising:

the relation between *hupostasis* and *phusis* (“nature”) in the context of Christology, that is, in descriptions of Christ as both God and humankind. Apollinarius of Laodicea (fourth century) virtually equated the two terms, maintaining that Christ, even after the incarnation, is “one nature, one *hupostasis*.” Apollinarius was widely denounced as a heretic. In the early fifth century a very different Christology was propounded by Nestorius: Christ has two natures (*phuseis*), divinity and humanity, and each *phusis* has its own *hupostasis* (“substantial reality”). Cyril of Alexandria, the archenemy of Nestorius, developed the notion of a “hypostatic union”: Christ has two natures, but they are united *kath’ hupostasin* (lit., “according to hypostasis,” i.e., in reality). Pope Leo I, in his famous *Tome*, defined the relationship between Christ’s divinity and humanity as a duality in nature but a unity in person or *hupostasis*, and it is this formula that became standardized at the Council of Chalcedon in 451 (“two natures . . . one *prosōpon* and one *hupostasis*”). However, the distinction between *hupostasis* and *phusis* thus achieved was never accepted by the so-called monophysite churches, which continue to reject the Chalcedonian formulation.

**GNOSTICISM.** The word *hupostasis* was used by certain second-century Gnostics, as attested both in Greek patristic testimonies and in the recently available Coptic texts from Nag Hammadi.

**Greek testimonies.** It has already been noted that Valentinus may have been the first to think of Father, Son, and Holy Spirit as three *hupostaseis*. Other Valentinian Gnostic uses of the term are more reliably attested. In the system of Ptolemy, as reported by Irenaeus, a primal divine Ogdoad is posited as the “root and *hupostasis* of all things” (*Against Heresies* 1.1.1). Here the term has the connotation of “origin” as well as “underlying reality.” Later in the same system three “underlying” (*hupokeimenoī*) entities are posited: “matter” (*hulē*), “the psychic” (*to psuchikon*), and “the spiritual” (*to pneumatikon*). These entities are subsequently referred to with the terms *ousia* and *hupostasis*, used interchangeably. These entities exist also in humans, and the *pneumatike hupostasis* is the “spiritual reality” of the Gnostic, incapable of being sullied by anything in the world (1.6.2.). The Valentinians can even refer to the “spiritual *hupostasis*” of evil, quoting *Ephesians* 6:12 in this connection (1.5.4). Here the term means “reality” or “real nature,” as in other second-century Christian literature (e.g., Tatian).

Marcus, a Valentinian Gnostic teacher, developed a speculative system based on the letters of the alphabet. Irenaeus, in describing this system, says that Marcus constructs the *ousia* and *hupostasis* (i.e., “real nature”) of the incorporeal and insubstantial Father out of many letters of the alphabet, but the technical terminology here may be that of Irenaeus himself. Monoemus the Arab, a Gnostic known to us only from the testimony of Hippolytus, applied numerology in his interpretation of the Bible. The composition of numbers as “corporeal *hupostaseis*” (i.e., “realities”) out of the primal monad is for him an analogy to the generation of the

Son of man from the unknown Perfect Man (*Refutation of All Heresies* 8.13).

Plotinus accuses the Gnostics known to him of introducing “other *hupostaseis*,” such as “exiles” (*paroikēseis*), “impressions” (*antiitupoi*) and “repentances” (*metanoiai*) (Enneads 2.9.6), referring doubtless to a Gnostic mythological-metaphysical system in which those entities occur, presumably as “levels of reality.” (These terms actually occur in some of the Coptic texts known to us—*Zostrianos*, for example—though the term *hupostasis* is not found in that connection.)

**Coptic texts.** The fourth tractate in Nag Hammadi Codex II is given the title *The Hypostasis of the Archons* and has as its main subject matter the “reality” of the cosmic “rulers.” The meaning of the term in that text, which opens with a quotation from *Ephesians* 6:12, is akin to that of the Valentinian usage noted above (“*hupostasis* of evil”), but it also bears the connotation of “origin,” as the content of the text attests (*hupostasis* is so used at 93.35).

In the *Apocryphon of John*, the term *hupostasis* is used of the “being” created by the Demiurge according to the image of God (15.9); of the seven psychic “substances” out of which Adam’s psychic body is created (15.25); and of the “reality” of the flesh borne by the Gnostic before his final redemption (25.34).

In the *Gospel of the Egyptians*, it is said that the Demiurge “trusted in his *hupostasis*,” that is, his “nature” (59.1). In the *Sophia of Jesus Christ*, the term *hupostasis* is used twice of the “real nature” of the universe (91.3, 92.4).

In *A Valentinian Exposition*, the Son is said to be the “*hupostasis* of the Father,” that is, the Father’s “real nature” (24.23). Later he is called “the *hupostasis* of the All” (25.33), that is, the “underlying reality,” or perhaps “origin,” of the All.

The term *hupostasis* is also used in two non-Christian gnostic texts of the late second or early third century, both of them heavily influenced by Platonic philosophy: *Allogenes*, a text known to Plotinus and his school, and *Marsanes*. In *Allogenes* a divine being called the Triple Power or Autogenes is said to be a “*hupostasis* of the primacy of the One who truly exists.” Here the term means “real nature” but also has the connotation of “first principle” or “hypostasis” in the Neoplatonist sense. In *Marsanes* the term also means “real nature”: of the Three-Powered One (9.17); of the Dyad (32.18); and of the redeemed Gnostic (40.1).

In Gnosticism the term *hupostasis* was used in a variety of ways under the influence of popular (mainly Platonist) philosophy, but it never achieved a consistent philosophical or theological definition, even if Gnostic usage contributed, positively or negatively, to the formulations of Neoplatonist philosophy and Christian theology.

**HISTORY OF RELIGIONS SCHOLARSHIP.** The English term *hypostasis* is used in modern scholarship in the study of reli-

gion to refer to various “hypostatizations” (or “hypostasizations”), that is, mythic objectifications or personifications of divine qualities, gifts, or attributes or of abstract concepts or aspects of human existence, whereby such entities assume an identity of their own. Such “hypostases” are very widespread in ancient religions. Examples are Dike (“justice”) in ancient Greece, Maat (“truth”) in ancient Egypt, and Hokhmah (“wisdom”) in ancient Israel. Such hypostases proliferate in the religious syncretism of the Greco-Roman world, and some of them (e.g., Tyche, “fortune”) even acquire their own cultus. Wisdom is an especially important hypostasis in biblical religion (*Prov.* 8:22–31; *Ben Sira* 24:1–22), and her manifestation as Sophia in Greek-speaking Judaism (*Wisdom of Solomon*; the works of Philo Judaeus) is of great importance for the development of early Christian Christology as well as early Gnostic mythology.

It should be stressed that the use of the term *hypostasis* for such entities is a modern development of the Greek term, though ultimately derived from the ancient philosophical usage. (See Ringgren, 1947, 1959.) An ancient intimation of such usage can be found in Plotinus (*Enneads* 3.5.2): The heavenly Aphrodite, as child of Kronos (“mind”) is “the most divine kind of Soul” and “a separate *hypostasis*.” (See Koester, 1972, p. 577.)

#### BIBLIOGRAPHY

The standard lexicon articles on the Greek word *hypostasis* are in Henry G. Liddell, Robert Scott, and Henry S. Jones's *A Greek-English Lexicon*, 9th ed. (Oxford, 1940), p. 1895, and G. W. H. Lampe's *A Patristic Greek Lexicon* (Oxford, 1961), pp. 1454–1461. The standard systematic articles on the term, with full documentation, are R. E. Witt's “Hypostasis,” in *Amicitiae Corolla: A Volume of Essays Presented to James Rendel Harris*, edited by H. G. Wood (London, 1933), pp. 319–343; Heinrich Dörrie's “*Hypostasis*: Wort und Bedeutungsgeschichte,” *Nachrichten der Akademie der Wissenschaften in Göttingen* 1 (1955): 35–92, reprinted in his *Platonica Minora* (Munich, 1976); and Helmut Koester's “*Hypostasis*,” in the *Theological Dictionary of the New Testament*, vol. 8 (Grand Rapids, Mich., 1972). Witt and Dörrie stress the philosophical usage, and Koester the biblical.

An extensive article devoted to Christian theological usage is Adolphe Michel's “Hypostase,” in *Dictionnaire de théologie catholique*, vol. 7 (Paris, 1922). An important monograph on the term, with special reference to *Hebrews* 11:1, is that of M. A. Mathis, *The Pauline Pistis-Hypostasis according to Hb 11:1* (Washington, D.C., 1920), summarized in an article, “Does ‘Substantia’ Mean ‘Realization’ or ‘Foundation’ in Hebr. 11,1?,” *Biblica* 3 (1922): 79–89, wherein he also responds to criticisms of his book. Important discussions of the philosophical usage are found in G. C. Stead's *Divine Substance* (Oxford, 1977) and S. E. Gersh's *Kínésis akinétos: A Study of Spiritual Motion in the Philosophy of Proclus* (Leiden, 1973). Very useful discussions of the early Christian theological usage are found in G. L. Prestige's *God in Patristic Thought* (1936; London, 1952), J. N. D. Kelly's *Early Christian Doctrines*, 5th ed. (London, 1977), and Harry A. Wolfson's *The Philosophy of the Church Fathers*, vol. 1, 3d ed. (Cambridge, Mass., 1970). Rather little has been done with the gnostic material, much of which is new. The most important work on hypostases in the history of religions is that of Helmer Ringgren, *Word and Wisdom: Studies in the Hypostatization of Divine Qualities and Functions in the Ancient Near East* (Lund, 1947). Also important is his article “Hypostasen,” in *Die Religion in Geschichte und Gegenwart*, 3d ed., vol. 3 (Tübingen, 1959).

Revised Bibliography

## I SEE REN AND YI

**I AM.** The “I AM” Religious Activity emerged in the 1930s as a major new representative of the Western Esoteric tradition, drawing most of its theology and imagery directly from the Theosophical Society. It subsequently gave birth to a number of groups that have, with minor variations, generally adopted the unique ideas and practices of the “I AM” while organizationally separating from the parent body.

**HISTORY.** “I AM” founders Guy Ballard (1878–1939) and Edna W. Ballard (1886–1971) were already steeped in esoteric thought when the seminal events in the movement’s formation occurred. Guy Ballard had been employed as a mining engineer when in the early 1930s he visited Mount Shasta in northern California. In several esoteric books, Mount Shasta previously had been identified as a location of spiritual significance, most recently in 1931, in a book published by the Ancient and Mystical Order Rosae Crucis, *Lemuria, the Lost Continent of the Pacific*.

On the slope of the volcanic mountain, Ballard claimed he encountered a man who identified himself as Saint Germain, an important personage in the eighteenth-century European esoteric community, who since his earthly existence had become an ascended master. In Theosophical lore, ascended masters are spiritually evolved individuals who formerly had incarnated in earthly bodies but who no longer participate in the cycles of reincarnation. From their exalted state, they now collectively guide humanity’s spiritual destiny.

Saint Germain described his current purpose as initiating a new spiritual activity, the Seventh Golden Age. He had found Ballard as an embodied human fit to receive and pass on to humanity the Laws of Life. He eventually designated Ballard, his wife Edna, and their son Donald as the only accredited messengers of the ascended masters. Operating as a messenger entailed allowing different masters to speak through oneself (in a manner analogous to Spiritualist mediums or channels). During his lifetime, Guy Ballard was

the only one of the three to operate as a messenger. Edna operated as a messenger only briefly in the last years of her life, and Donald, though active in the movement, never functioned as messenger.

Ballard initially described his experiences with Saint Germain in a set of letters to his wife, sent from Mount Shasta to the family residence in Chicago. It is of some interest that at the time he wrote these letters, he was also reading a set of books by Baird Spaulding, *The Life and Teachings of the Masters of the Far East*, whose description of the masters and their work coincided with what Ballard was learning from Saint Germain. Ballard described his own experiences in more detail in the manuscripts of two books, *Unveiled Mysteries* (1934) and *The Magic Presence* (1935), both written under the pseudonym Godfré Ray King. Upon his return to Chicago, Ballard founded the “I AM” Religious Activity in stages. After deciding in 1932 to release the two books, the Ballards founded the Saint Germain Foundation and its publishing arm, the Saint Germain Press. In 1934 they held a ten-day class at which Guy Ballard for the first time operated as a messenger in a public setting. The first book, *Unveiled Mysteries*, appeared in 1934, and a periodical, *The Voice of the I Am*, which carried the text of newly received messages, was first issued in 1936.

**“I AM” BELIEFS.** The “I AM” Religious Activity centered its attention on the “I AM” Presence, God in Action, which emanates from the Great Central Sun, the impersonal source of the universe. The Great Central Sun is a knowable aspect of the supremely unknowable and transcendent God. The universe has come into being as a series of emanations from God, the material world being the lowest level of those emanations. Each emanated level of the universe is inhabited by evolved beings that together constitute a spiritual hierarchy, frequently referred to as the Great White Brotherhood. At the lowest level of the spiritual hierarchy are the Lords of the Seven Rays (of light), spiritual beings who most easily and often communicate with humans. Saint Germain is seen as one of those Lords, as is Jesus and El Morya (one of the masters believed to have initiated the Theosophical Society).

Individuals are seen as sparks of the divine “I AM” Presence now embodied in the physical word. However, individuals have through history misused the powers available to them, resulting in the individual and social discord that is the current lot of humanity. The problems created by humans are carried over from one incarnation to another. Most individuals remain trapped in a limited situation characterized by evil and discord, but a few people have risen above and learned to attune themselves to their divine nature, the “I AM” Presence. Those who have completely aligned themselves with the “I AM” become ascended masters. The present Lords of the Seven Rays had previously incarnated as outstanding spiritual leaders. Saint Germain, for example, was at different times on Earth as the Jewish prophet Samuel, the British Christian leader Saint Alban, and Francis Bacon. Ballard, who is now seen as having ascended in 1939, was previously on Earth as George Washington.

The “I AM” Presence individualizes as the essence of each embodied soul. Activated, it is the means of cleansing the person of karmic conditions and assisting the process of spiritual evolution. The best means of activating the “I AM” is the use of decrees, affirmative commands calling upon the “I AM” Presence to initiate actions, a practice that appears to have originated early in the twentieth century within the New Thought movement. Decrees are spoken aloud in a chant-like fashion. Decrees, like prayers in other movements, may be of a general nature or directed to specific and immediate concerns. The words *I am* that begin the decrees serve to identify the individual with the divine action being affirmed.

Whereas most decrees are very positive, emphasizing the spread of positive virtues, decrees may also be directed specifically to the dissipation of evil forces. The “I AM” movement has become its most controversial when it has identified specific evils that were subsequently targeted and against which decrees have been directed.

Color forms an important element of “I AM” belief. Those masters who oversee humanity most closely are the Lords of the Seven Rays (of the light spectrum), each color being associated with a particular virtue or character trait. Saint Germain is associated with violet, and the most important activity in the “I AM” Religious Activity is calling upon the Violet Flame pictured around each individual to burn away undesirable personal conditions. Most colors are positive, but two—red and black—are to be avoided. Thus, all “I AM” literature is printed with colored (usually purple) ink rather than black ink.

Through the 1930s, the movement had its creative center in the public classes at which Ballard brought forth messages from the masters. Beginning with the initial class, held in the Civic Opera House in Chicago, subsequent classes were held in New York, Philadelphia, Boston, and Miami. A class in Los Angeles a short time before Ballard’s death attracted some 7,000 attendees. From these came a book of decrees and a hymnal that were used to provide a format for local groups to emerge, and the movement spread across North America. It claimed more than a million students by 1939, though the number who had had more than a single superficial encounter with the movement was far less.

**LATER HISTORY.** The forward progress of the “I AM” Religious Activity was brought to an abrupt halt in 1939 when Guy Ballard, only in his early 60s, suddenly died. Many in the movement were distressed, as they expected him to bodily ascend rather than face a normal human death. A group of vocal critics arose, led by Gerald B. Bryan, who wrote a series of booklets challenging the integrity of the teachings. Legal authorities moved against Edna and Donald Ballard and the foundation staff. Given First Amendment guarantees of religious freedom, prosecutors found an opening in the movement’s use of the mail to send out “I AM” material. They brought the Ballards to trial for mail fraud and argued that because no rational person could believe what the Bal-

lards were teaching, they had to be knowingly perpetuating a fraud. It was a false religion, and they knew it to be false.

Convicted at the trial level, the Ballards' appeal took them to the U.S. Supreme Court twice and resulted in one of the most important rulings in American jurisprudence concerning religion. In his opinion in *U.S. v. Ballard* (1944), Justice Douglass suggested that the courts get out of the business of examining "other people's faiths." Individuals, he suggested, "may not be put to the proof of their religious doctrines or beliefs." The ruling did not completely end the "I AM" problems, however, as the initial trial verdict had led the U.S. Postal Service to reject the movement's right to distribute material through the mail, a privilege only returned in the 1950s.

Because of its experience in the courts, the "I AM" Religious Activity adopted a low profile, partially accounting for a paucity of scholarly comment on the movement. While continuing to exist, it became largely invisible on the religious landscape, many believing it had been dissolved. In 1978 the foundation moved into new facilities in Schaumburg, Illinois (a Chicago suburb), joined there four years later by the Saint Germain Press. The press continued to publish the messages originally received from Guy Ballard, becoming available in some fifteen volumes of "I AM" Discourses. Land purchased in the 1950s on the slope of Mount Shasta became the site for a range of summer retreats and an annual passion play depicting the life of Jesus (adapted to an "I AM" interpretation concentrating upon his final ascension). Over 300 "I AM" sanctuaries (local centers) exist across the United States.

**BREAKAWAY GROUPS.** Conditions internal to the "I AM" Religious Activity led to several schisms. Beginning in the 1930s, people emerged claiming also to be in contact with the masters, but the decades following Guy Ballard's death when no new messages were being received made many yearn for continued contact with the ascended masters. The movement also had strictures against translating messages into other languages, thus inhibiting its growth into Spanish-speaking communities. As early as 1944, Geraldine Innocente began to receive messages from Ascended Master El Morya and to publish them under the pseudonym Thomas Printz. Following Innocente's refusal to stop publishing the messages and her break with Edna Ballard, her work, which was also translated into Spanish for distribution in Puerto Rico and Cuba, became the basis of an organization called the Bridge to Spiritual Freedom.

Also in the 1950s, other groups formed which claimed they were receiving messages from the masters independently of the "I AM." One such group was the Lighthouse to Freedom in Philadelphia. Originally a member of the Lighthouse to Freedom, Mark L. Prophet (1918–1973) founded the Summit Lighthouse in 1958 and began publishing the messages he was receiving primarily from El Morya. The Summit gained a large following prior to Prophet's sudden death in 1973. Prophet's widow, Elizabeth Clare Prophet (b. 1939),

however, picked up the messenger's mantle and expanded the organization's work as the Church Universal and Triumphant. The church grew significantly in the 1970s and, unlike the "I AM" Religious Activity, assumed a high profile and identified strongly with the New Age Movement. It also became quite controversial after being labeled a "cult" and being subjected to several lawsuits. During the 1990s, following the rise of a period of apocalyptic fervor, the church underwent a thorough reorganization, culminating in the retirement of Mrs. Prophet, who had become increasingly incapacitated by Alzheimer's disease. The church differs from the "I AM" Movement on several points, most noticeably in the manner in which decrees are repeated in a very fast mode and Prophet's emphasis on world religions (especially Buddhism) alongside esoteric Christianity.

**IBĀDIYYA.** The Ibādiyya sect (also known as the Ibādī sect, or simply as the Ibādīs) constitutes one of the main branches of Islam. The Ibādīs are relatively few in number in comparison to the Sunnīs and the Shī'ah, and for many centuries they have lived largely in isolated areas, principally Oman and Zanzibar, Tripolitania in Libya, the island of Jerba in Tunisia, and the Mزاب area of Algeria. This isolation has meant that until the late twentieth century almost all of

what is known about the Ibādīs has come through prejudiced and hostile Sunnī sources. However, since the accession of Qaboos b. Saïd to the sultanate of Oman in 1970, there has been a sustained program for the publication of major Ibādī works, so that it is at last becoming possible to view the Ibādīs through their own tradition. Among the works that have come to light are a number that date back to before 800 CE and are crucial for an understanding of the development of Islamic thought in general. Unfortunately, very little has so far trickled through into English.

The origins of the Ibādīs go back to not much more than twenty years after Muḥammad's death. They have their roots in the groups, collectively known as Khārijites, that came into existence during the First Islamic Civil War (656–661 CE). The basic doctrinal beliefs of the Khārijites were the same as those of all Muslims: the five pillars of Islam. It was in the further tier of doctrine that did not fully emerge until after Muḥammad's death that they had differences with the rest of the nascent Muslim community. Even in these further doctrines there were, in this early period, more similarities than differences with the other parts of that community. Like those who were the precursors of the Sunnīs, the early Khārijites held the views that infidels had no legal existence or protection unless they were Jews or Christians, that Muslims should not live among infidels, and that unprotected infidels should be fought until they were converted or killed.

What split the early Islamic community in the first instance were views about the actions of the third caliph, 'Uthmān, and the fourth caliph, 'Alī. There was much opposition both to 'Uthmān, who was murdered by some of his opponents, and to 'Alī. With the Khārijite groups that opposition acquired a doctrinal underpinning. Already outraged by the wrongdoings of 'Uthmān in his later years as caliph, they were further appalled when 'Alī, during fighting against those who sought vengeance for the death of 'Uthmān, agreed to arbitration about the rights and wrongs of the killing. Summing up their feelings in the slogan "Judgment belongs to God alone," they broke away from the majority of the believers. They took a stern view of those believers who did not share their opinions, holding that their actions and beliefs had caused them to return to unbelief. At first they designated their opponents by the simple term *al-qawm*, "those people," a phrase that, somewhat confusingly, their opponents also used of them. For the Khārijites, *al-qawm* had fallen into a state of *barā'a* (dissociation), having lost the *walāya* (loyalty both to God and fellow-Muslims) that was central to the community of true believers. This applied to those members of the community who accepted the legitimacy of 'Uthmān or 'Alī. However, the Khārijites could not agree among themselves about how to deal with the *qawm*. The majority of early Khārijite groups favored armed confrontation with those whom they considered to have lapsed into infidelity, but a minority favored a live-and-let-live stance. Whenever an opportunity arose, the activist majority pursued its views to the death.

When 'Alī was killed by a Khārijite activist in 661 CE, the Umayyad dynasty came to power, and for a time some stability was imposed. It appears that this was the period when there was a growth in the number of those Khārijites who, while holding that the majority of the Muslim community had lapsed into unbelief, came to the conclusion that those who had lapsed should be merely spurned rather than given the choice of submission or the sword.

By the time of the Second Civil War (688–692 CE), the principal quietist group, living mainly in Basra, had become known as the Ibādīyya. This name derives from 'Abdallāh b. Ibād, who appears to have been the political mentor of the group, though its spiritual leader was Jābir b. Zayd, a man universally recognized for his learning and piety, who became the first *imām* of the group.

While Jābir was alive, the Ibādīyya were tolerated by the central authorities (unlike the violent Khārijite groups, who fought and were fought to the death). The community devised rules, which still hold, to enable them to survive among a non-Ibādī Muslim majority (the *qawm*). Thus it is permitted to marry non-Ibādīs and to enjoy mutual inheritance with them. Religious dissimulation (*taqīyya*) is also permitted, though not to the point of serving non-Ibādī rulers.

After the death of Jābir in 711 CE, the Ibādīs found it more and more difficult to live in Basra, and their next two *imāms* encouraged them to migrate to places where they could follow their own faith without harassment. Most moved to the remote parts of the Arab world—Oman, the Hadramawt, Yemen, and North Africa—although some also went to Khurasan. It was only in Oman and the Mzab that they survived in numbers, with a religious, legal, and political tradition going back unbroken to their earliest days in Basra. In North Africa, in particular, the Ibādīs suffered from some schisms. None of the breakaway groups was particularly important, and only one, the Wahbiyya, survived to the twenty-first century.

The early Ibādīs were an earnest lot, much concerned with the coherence and rectitude of their beliefs and with their relationships with the *qawm*, whom they now increasingly called *ahl-al-qibla* (people who use the *qibla*'), or *ahl al-jumla* (people who utter the *shahāda*'), both phrases ironically indicating the superficial nature of any belief that such persons might have. These included not only those now called Sunnīs and Shī'ah but also the violent, activist Khārijite groups, such as the Azāriqa and the Najdiyya, and other movements that have failed to survive, such as the Murji'a. The Ibādīs designated such "lapsed" Muslims as infidels of a special category, classing them as hypocrites who claimed to be Muslims but whose deeds showed them to be ungrateful for the blessings of God (*kāfir kufr ni'ma*). As such, they were to be shunned and not killed unless they had committed a capital offence or become mischief makers (*muhdithūn*). Ibādīs who are corrupt or do serious wrong also lose their *walāya*.

Because of their doctrines about *walāya* and *barāʿa*, the Ibādīs have also retained the original Khārijite view about who may be the leader of the community, the *imām*. They believe that any believer who is morally and religiously irreproachable may be elected *imām*, regardless of his race or tribe, “even if he is an Ethiopian slave,” as the texts graphically put it. Equally, the community has the right to vote to depose an *imām* from office if he goes astray and becomes corrupt, and it must take every step to remove him if it possibly can do so. This is the most democratic stance toward leadership in traditional Islamic thinking and is one of those points that sharply differentiates the Ibādīs from the Sunnīs, who basically believe that the *imām* must be from Quraysh, the tribe of Muḥammad, and from the Shīʿah, who believe that he must be from the family of ʿAlī.

In legal matters the Ibādīs put more weight on the Qurʾān and less on the *ḥadīth* than other branches of Islam. Thus, they do not impose the (non-Qurʾanic) punishment of stoning for adultery. The nature of their community has also led to more thinking through of problems (*ijtihād*) than is found in the other branches, and unlike the Sunnīs but like the Shīʿīs, they have never “closed the gates of *ijtihād*.” Ibādī scholars have never shut their eyes to the value of major works by writers from other sects, particularly Sunnīs and Muʿtazilīs, though such writings are always viewed from the standpoint of Ibādī intellectual tradition, which has always managed to flourish despite its isolation.

The fact that the Ibādīs differed so radically from the Azāriqa and the Najdiyya in their views about infidels led some Ibādī thinkers to deny their Khārijite origins. This view appears to have emerged in the ninth century, and it has become stronger ever since. Modern Ibādīs, therefore, tend to minimize these Khārijite origins, and even those whose accept that there is a historical link are outraged to be classed as latter-day Khārijites. This has recently become a matter of some importance, as modern Islamist groups have sometimes been likened to the activist Khārijites of the early Islamic era. It is a matter of pride for the Ibādīs that they have consistently opposed terrorist activity for over thirteen hundred years.

ALAN JONES (2005)

**IBERIAN RELIGION.** The term *Iberian religion* is used here geographically. It refers to the religious systems of Iberia, the name the Greeks gave in antiquity to the Iberian Peninsula, from the arrival of the Phoenicians (documented by the ninth century BCE) to the time these places were incorporated into the Roman Empire in the first centuries CE.

Tartessos is the name that identifies the peninsula in the first historical records dating to ancient Greek literature. That is the time of the expansion of Eastern cultural influence on other parts of the Mediterranean (from the eighth to sixth centuries BCE). Tartessian culture had its core in lower Andalusia and seems to have developed from the cultural contact between the indigenous late Bronze Age population and Semitic colonizers who arrived from the eastern Mediterranean. Later, a secondary Greek presence contributed to the culture.

**TARTESSOS AND RELIGIOUS CONTACT WITH THE PHOENICIAN WORLD.** Phoenician materials appear in several shrines, most importantly in Gadir (Cádiz), the site of the famous temple of Melqart, patron god of Tyre, assimilated to Herakles and described by such authors of the Roman Empire as Strabo (*Geographica* 3.5), Silius Italicus (*Punica* 3.1–44), and Philostratus (*Vita Apollonii* 5.5). Other examples are El Carabolo, near Seville, and the Cerro de San Juan, in Coria del Río, probably dedicated to Baal Saphon, protector of navigation. Phoenician religious pieces, such as altars, betyls, and liturgical bone spoons, are documented also in the interior, near Carmona (in the province of Seville), and in Cancho Roano in the municipality of Zalamea la Real, province of Badajoz. The latter complex was destroyed in the late fifth century BCE and seems to have been an Easternized indigenous sanctuary that served as a dwelling—the residence of the ruler and his family. It also fulfilled economic, political, and religious functions. It was a space to display power and a site to worship ancestors, and it also allowed control of access to the region. The Poggio Civitate complex in Murlo, Etruria, with its multiple functions, was comparable to Cancho Roano.

The problem presented by these sites is that of their identity. Are they indigenous sanctuaries influenced by the Phoenician religious system? Or are they Eastern enclaves placed in indigenous locations that would have also operated as centers of commerce? The sanctuaries of Muela de Cástulo in the province of Jaén; El Acebuchal in Carmona, Seville; and Montemolín in Marchena, Seville, are special cases. They show evidence of sacrifices performed on platforms or

altars and dating to the seventh century BCE. The cooking and consumption of sacrificial animals (cows, goats, sheep, and pigs) recorded in these sites are well-known practices documented in the biblical texts of *Exodus* (29:15–18) and *Leviticus* (7:32–33).

The few existing Phoenician inscriptions, generally property marks preserved on ceramic vases or other objects, document names associated to Melqart, Baal, Eshmun, and Astarte. An inscription associated with Astarte found on an image in El Carambolo (Seville) suggests that indigenous elites would have been attracted to the cult by assimilating Astarte to an indigenous fecundity goddess. The same could have happened with Melqart, who like Reshef is always depicted in the statuettes.

The necropolises document characteristic elements of Phoenician funeral rites, such as the use of plates, libation jars, and perfume burners. The “treasure” of La Aliseda, like the necropolis of Medellín in the province of Badajoz, is proof that Eastern objects spread out by land all the way to the northeast of the peninsula, the source of mineral wealth. The graveyards (La Joya in Huelva and Los Alcores in Carmona) display evidence of both cremation and inhumation; stelae and markers are common features. Especially interesting is the necropolis of Las Cumbres in Castillo de Doña Blanca, province of Cádiz. There the oldest cremation sites, dating to the first half of the eighth century BCE, were local and presented little evidence of social differences. A later group of burials, dating from the seventh century BCE, evidenced funeral rites that included libations, incense, and oil-based perfumes, all Phoenician traits that indicate a clear social hierarchy.

Besides the archaeological data, there is extensive literary data from Greek and Latin authors who speak of two “mythical” dynasties in the region. The first is that of Geryon, about whom Stesichorus of Himera wrote a poem (*Geryoneia*) in the sixth century BCE. The poem narrates how Herakles stole Geryon’s bulls and carried them off to Mycenae. Geryon is depicted in archaic Greek pottery as a three-headed being, and it is possible that the tricephalous image evidences an influence of Celtic culture in the Tartessian world.

The second dynasty is that of Gargoris and Habis, recorded in Justin’s third century CE summary of the work of the historian Pompeius Trogus (*Epitoma Historiarum Philippicarum Pompei Trogi*). Gargoris, the ancient god of the Curetes, forest-dwelling hunters, discovered the value of honey and taught his people to use it. Gargoris’s incestuous relationship with his daughter begot Habis, who was abandoned to be devoured by wild beasts but miraculously survived (a frequent theme in the story of a hero’s infancy, as in those of Sargon, Moses, Cyrus the Great, and Romulus and Remus). As king, Habis “tied the people to the law and the oxen to the plow” (Justin, *Epitoma* 44.4, 11). He is thus the prototype of the civilizing and legislating king. This myth illustrates the transition from a barbarian state (Gargoris) to one of urban culture (Habis). The debate centers on whether

these are expressions of an indigenous culture or simply an invention of the Hellenic scholars in which some previous historical elements, perhaps of Tartessian origin, subsist.

The ancient poem about the seacoast by a Punic or Greek author from the sixth century BCE, *Ora Maritima*, which inspired Rufus Festus Avienus in the fourth century CE, mentions a series of sacred places located in Tartessos. As happened later with Punic and Iberian deities, the poem translates, through the process the Romans called *interpretatio*, the name of the Tartessian or Phoenician gods into those of their Roman or Greek counterparts, or into Greek and Roman deities that fulfilled similar functions to them, such as Herakles, Venus, or Saturn.

**RELIGION OF THE IBERIAN PEOPLES.** After the late sixth century BCE, the Iberian culture was influenced by the contacts between the peoples of the south and east of the peninsula (living between the Huelva estuary and the Rodanus in France) and the Greek and Punic colonizers. After the late third century BCE those contacts included the Romans. The study of Iberian cultural spaces and necropolises has increased among modern scholars.

Following the decline of the Tartessian world, monumental funerary complexes confirm the existence of an aristocratic power. The complex of Pozo Moro (Albacete), shaped like a tower and dated to around 500 BCE, is reminiscent of Eastern monuments, such as Amrit or the tomb of Cyrus the Great, and neo-Hittite models in its art. The monument displays extraordinary iconography—the scene of a sacrificial banquet with a human victim and an animal one and a hero carrying the tree of fertility and uniting in hierogamy with a goddess. Perhaps it is a depiction of a mythical tale of origin or an exaltation of the heroic deeds of the dynasty’s ancestors or the ruling elite. By the first half of the fifth century BCE another imposing funeral complex was built in Cerrillo Blanco within the municipality Porcuna (Jaén) that depicts as a central element a hero’s struggle with a lion or gryph (which has such well-known parallels as the stories of Dumuzi, Sargon the First, and Melqart or Herakles). It also shows combat between armed warriors.

Besides the towerlike burials of the kind found at Pozo Moro, Iberian necropolises present two types of arrangement of monumental sculptures in “princely” graves. One is known as “stelae pillars,” which depict, atop columns, sculptures of bulls, sphinxes, lions, does, or wolves of an apotropaic nature (typical of Contestania, a region between Valencia and Murcia that seems to have been the true center of Iberian culture). The second kind consists of the arrangement of sculptures directly on the funeral mounds, as found in Los Villares (La Hoya Gozalo, Albacete).

Toward 375 BCE there must have been a social crisis that translated into the destruction of several complexes and resulted in important changes to the society of the “princely graves.” There is a documented transition to the world of sanctuaries, where the collective image of society is expressed

through deities and where new sources of expression emerge, such as silver trays and especially pottery, that developed their richest iconography after the third century BCE. Of the two distinguishable periods in pottery iconography, the first (300–150 BCE) shows, through its depictions of warriors, hunters, and ladies, the values of the urban ruling classes, whereas the second (200–50 BCE) centers more on the depiction of deities, myths, and religious rituals (Aranegui Gascó, 1998).

**Sanctuaries and rituals.** Punic materials are characteristic of such sanctuaries as La Algaida in the mouth of the Guadalquivir River, where thousands of votive offerings have been found, some from Etruria and the eastern Mediterranean. They are also characteristic of the Gorham Cave (Gibraltar), Carteia (Algeciras), the Peñón de Salobreña and the Cerro de la Tortuga near Málaga, Baria (Villaricos, Almería), and the Cova d'Es Cuyram (Ibiza) devoted to the Carthaginian goddess Tanit. The last contained splendid terra-cotta figurines, now exhibited in the island's archaeological museum. In these sanctuaries Astarte did not replace Tanit, but rather the two were assimilated beginning in the middle of the fourth century BCE.

Greek and Latin authors related the existence of sanctuaries on the coast of the peninsula that were devoted to certain deities “translated” into their Greek and Roman counterparts, Herakles, Kronos, Hera, Asklepios, Phosphorus, Hephaistos, and Aletes—the mythic discoverer of the silver mines of Carthago Nova, according to Polybius (*Historiae* 10.10.1). Technical progress in archaeology and the increased number of excavations have broadened the evidence considerably, and it is possible to classify the different sacred spaces.

There is a distinction between urban and nonurban sanctuaries. Among the latter there are three kinds: suburban or periurban sanctuaries in close proximity to inhabited centers; great supraterrestrial sanctuaries; and rural sanctuaries, including caves, which are characteristic of the Valencian region.

Sierra Morena in Jaén is the center of the most characteristic territorial and mountain sanctuaries in the Iberian world. These played an important role in the territorial development of the Oretanian peoples. The Collado de los Jardines (Santa Elena) in Despeñaperros and El Castellar de Santisteban were probably centers of salutiferous cults. The most characteristic elements of these sanctuaries are bronze figurines depicting males and females offering gifts (or praying), warriors, riders, and even priests.

The complex rituals typical of the southeast have different characteristics. El Cerro de Los Santos and El Llano de La Consolación in Montealegre del Castillo, Albacete, were characterized by stone statuary. Other good examples include El Cigarralejo (Mula) and Nuestra Señora de La Luz (Verdolay, Murcia). Of the more than two hundred statues that have been found in Cerro de Los Santos, the most fa-

mous are of worshipping females, which probably depict devout aristocrats or priestesses. Most of these sanctuaries were active into the advanced Roman imperial age.

The last category of sanctuaries includes those located in urban settlements. Martín Almagro-Gorbea and Teresa Moneo (2000) developed a typology that includes three parameters of differentiation. The three descriptions of domestic/dynastic family, properly urban, and entrance sanctuaries correspond to the three parameters within the category of urban sanctuaries. First are domestic or dynastic family sanctuaries, which were integrated into a noble family's dwelling inside the *oppidum* or fortified village. La Serreta de Alcoy in Alicante; Sant Miquel de Lliria in Valencia, and Ullastret in Girona are good examples.

Second are urban temples (*Templos urbanos propiamente dichos*), isolated structures with an autonomous relationship to the *oppidum*. These include two kinds. First are the “open-air” areas (La Alcudia de Elche and Campillo Island in Alicante), which consist of square enclosures (*temenos*) and the remains of columns or structures that have been interpreted as altars or offering tables typical of the Phoenician world. The other type consists of buildings set on stone bases and located on the highest point of a settlement. Typical examples include Azaila (Teruel) and Ullastret (Girona). They present influences from Emporion (Ampurias) in the expansion of this kind of Roman-Hellenic temple.

Third are “entrance sanctuaries” located next to a settlement's entrance, in some instances inside the walls (especially in the east and northeast of the peninsula) and in some outside the walls. Sanctuaries located outside the city walls are often located near caves or springs, associated to offerings that suggest fertility rites and rites of passage or social incorporation. Some of these sanctuaries are associated with river ports, such as that in La Muela de Cástulo, or seaports, like that of Artemis, in Sagunto.

The third century BCE is the time of the emergence of great periurban sanctuaries at the territorial level, while territory-wide periurban sanctuaries associated with the construction of ethnic or political projects, coincide with the decline of ritual caves, which were especially common in the fifth and fourth centuries BCE. Some of the complexes (El Cerro de Los Santos, La Luz, and La Encarnación in Caravaca Murcia) experimented with a process of monumentalization in the second and first centuries BCE, when they adopted Italo-Hellenistic concepts. Human terra-cotta masks found in some sanctuaries may have been used by the faithful when performing ritual dances like those known to have taken place in the Artemis Orthia sanctuary in Sparta and other locations.

Necropolises show a wide diversity of funerary practices related to cremation. The exceptions are child burials, performed inside homes. Bodies range in age from fetuses to six months old and have been documented in eastern Spain (from Alicante to the French Languedoc) and in the mid-

Ebro River valley. When the remains are found within structures, such as walls or benches, they have been interpreted as sacrificial in nature, having a functional or propitiatory character, and are accompanied by or substitute for animal sacrifices. They have some parallels with those from Etruscan Tarquinia, Latium, and the Greek world.

The iconography offers valuable information about initiatic rites and rites of passage into puberty or heroization. Such subjects as the struggle between a youth and a beast of the underworld, often incarnate in a wolf (portrayed in the pottery of La Alcudia de Elche and in sculptures from the “frontier” sanctuary at El Pajarillo in Huelma, Jaén) were set within city territory. The “goddess of the wolves” found in Moratalla, Murcia, was probably an initiatic figure. Hand-to-hand combat scenes between warriors and hunting scenes also reflect the value system (*ethos*) of the elites. Sacrificial scenes are depicted in such objects as the silver tray of Tivissa (Tarragona), which is dated to the third century BCE; depictions of dances and processions are found in the pottery of Sant Miquel de Liria (Valencia). It is possible that certain themes, such as the sphinx carrying the deceased found in the park of Elche, the pillar of Jumilla, and the wolves with open jaws and human heads of Santisteban del Puerto in Jaén, refer to travel to the afterlife.

The presence of priests in the Tartessian world of the period of Hellenization is documented in the Phoenician sanctuary of Melqart in Cádiz by Silius Italicus (*Punica* 3.1), who writes that the priests wore linen tunics with purple embroidery and shaved their heads. There is no such information regarding the Iberian period after 500 BCE, although archaeological data suggests there was a priesthood. The existence of priests is inferred from sacrificial knives found in graves and sanctuaries, the tonsured characters found in the Collado de los Jardines (Jaén), and the bronze from Segura de la Sierra (Jaén), which is dated to the fifth century BCE and depicts a man slaughtering a goat on the water of a river. These priests would have been recruited among the ruling class and hierarchized according to the types of sanctuaries. Domestically they would have been heads of household.

**Elusive divinities.** In contrast to Indo-European Hispania, the names of the gods worshiped by the Iberian peoples of the coastal regions are not known, with few exceptions, probably because religious acculturation had occurred for centuries and the divine personae were expressed through Punic and Phoenician names (or the Greco-Roman ones with which the Semitic deities were assimilated). One example of such assimilation is in Torrepardones, Jaén. On the forehead of a female stone figure a devotee inscribed, in the second or first century BCE, the caption “Dea Caelestis,” the Latin name of Carthage’s goddess Tanit.

Fortunately iconography contributes to the understanding of certain divine characters. It seems clear that there was a protecting goddess associated with the earth, death, and regeneration. Some depictions, besides aniconic representa-

tions such as pillars, are the statue of the Lady of Baza, the sitting Ladies of El Cigarralejo, La Alcudia de Elche, El Cabe-cico del Tesoro in Verdolay, and probably the Lady of Elche. That goddess, sometimes winged and linked to the Punic Tanit, appears “emerging” from the earth and associated with birds or flowers in Elche-Archena pottery, whereas on some Turdetan coins she is represented as a stalk of wheat. There are about ten examples of representations of the *des-potes hippon*, the “horse-taming” god originally from the Aegean, which appear from Villaricos (Almería) to Saguntum (Valencia). Some votive pieces depicting horses are associated with that deity, like the ones found in El Cigarralejo (Murcia) and Pinos Puente (Granada), as are the Iberian coins from the Ebro Valley, which show the typical rider brandishing a spear or palm, a divinity or mythical ancestor that illustrates the values of the equestrian elites.

The iconography of perfume burners with female heads—associated with Demeter or Tanit—is reproduced in a limestone female head uncovered in La Luz (Murcia), probably a cult image. Perhaps the most interesting of divine iconographies is that of a woman holding her suckling child. Such images were known in Cyprus in the first millennium BCE and were documented in a bronze from the Fundación Gómez-Moreno in Granada, in some sitting statuettes from Alicante and Murcia, and especially in a terra-cotta group from the sanctuary of La Serreta in Alcoy (Alicante) dated to the third and second centuries BCE. Ricardo Olmos Romero (2000–2001) has suggested that the image represents a regional feast where the mothers of the area present their children to the goddess, an event similar to some documented in Locri (southern Italy) and Greece.

Some scenes are interpreted in a mythical key. That is the case of the farmer with a team of oxen depicted in a vase from Cabezo de La Guardia de Alcorisa (Teruel), probably a representation of the god or mythic ancestor who taught men to plow (as Habis did in the Tartessian myth).

**RELIGION IN INDO-EUROPEAN HISPANIA.** Latin epigraphy from the first centuries CE have offered more than five hundred names of deities from Indo-European Hispania (which does not mean so many gods were worshiped, because several names can refer to the same god invoked under different epithets). There is a clear contrast between the western and northwestern regions in the peninsula and the eastern Celtiberian Plateau. Most of the names preserved originate in the former, where Lusitanian, an Indo-European language more archaic than the Hispano-Celtic language known through Celtiberian texts, was spoken. Fewer indigenous names of deities have been preserved in the central areas of the two plateaus of the peninsula or in Celtiberia. That is the result of broader religious acculturation from the Greco-Roman world, which influenced the Iberian peoples of the coast.

**The gods.** The literature on Indo-European gods in Hispania is minimal. Strabo (*Geographica* 3.3.7) states that the peoples of the north sacrificed hecatombs of men and horses to a war god he identifies with the Greek Ares. In an-

other passage Strabo (*Geographica* 3.4.16) says the Galicians were atheists, whereas the Celtiberians and their northern neighbors worshiped an unnamed deity, in honor of whom they danced on nights of the full moon. The supposed atheism of the Galicians contradicts the abundant religious offerings in the northwest, and thus should be interpreted as a denigrating strategy by Strabo to underline the extreme barbarism of the peoples living farther away from the Mediterranean. A minor degree of barbarism must have been that of the Celtiberians, whose gods were yet unnamed (like those of the pre-Greek Carions mentioned by Herodotus (*Historiae* 2.52). On the other hand, Macrobius (*Saturnalia* 1.19.5) mentions that the Accitani of Granada worshiped a god named Neto, astral in nature and equated with Mars, named in a couple of Lusitanian inscriptions and probably appearing as the Neito of the first Celtiberian Bronze Age in Botorrita (Zaragoza).

The cultural geography of the Hispanic Indo-European pantheon allows several levels of differentiation. First are those gods worshiped in ancient Celtica, such as Lugus, the Matres, or Epona. Lugus is the deity worshiped in the mountains of Peñalba de Villastar (Teruel), a great “border” sanctuary between Celtiberia and the eastern Iberian world. His name is also found in Northwest Celtiberia (in the plural, Lugoves). He is an astral god, interpreted to be the Gallic Roman Mercury (Caesar, *Bellum Civile* 6.17). The Matres, who show the Celtic influence of triads (and thus appear represented on a stone in Aquae Flaviae in Chaves, Portugal), are fecundity goddesses worshiped mostly in Celtiberia, as was Epona, the Celtic goddess of horses.

A series of gods are documented mostly in the west of the peninsula. The most common group is formed by four names, Bandua (or Bandis), Cusus, Nabia, and Reva, addressed with various epithets, which probably document the emergence of federative deities and those that protect the territory. But the best-documented Lusitanian deities are Endovellicus and Ataecina. The sanctuary of the former (who seems to be related to Vaelicus, worshiped by the Vettones in the sanctuary of Postoloboso, Avila) is in San Miguel da Mota (Alardoal, Alto Alemtejo, in Portugal), which is under excavation. There are scores of inscriptions with his names, which makes him one of the best-documented gods in the western provinces of the Roman Empire. There are nearly forty inscriptions related to Ataecina, fifteen in the sanctuary of El Trampal (Alcuéscar, Cáceres). Some include the epithet Turobrigensis, a city in Celtic Beturia (Pliny, *Naturalis Historie*, 3.14), from which her cult extended to Sardinia or Noricum. She is mentioned in some execratory inscriptions, and she was assimilated into Proseprina, which suggests she was a diabolical deity.

**Sacred spaces and rites.** In Indo-European Hispania rites were performed in the open air, often in hierophanic spaces and in some instances documented in rupestrian inscriptions. Some sources document human sacrifices among peninsular peoples, such as the Lusitanians (divinatory in na-

ture, Livy, *Periochae* 49; Strabo, *Geographica* 3.3.6), the Bletonenses near Salamanca (Pliny, *Naturalis Historie* 30.12), and the mountain people in the north of the peninsula (Strabo, *Geographica* 3.3.7). The subject is a commonplace of Greco-Latin writings on druidic religion, but such sacrifices must have been exceptional. Such sources are likely to have been used to emphasize the barbarism of “others.”

There is much more evidence of animal sacrifices, documented in sanctuaries, such as the one in Picote, Tras-os-Montes; in inscriptions, such as those in Marecos–Penafiel or Cabeço das Fraguas in Portugal; and in various depictions. Among the depictions are six “sacrificial bronzes” from different locations in the northwest of the peninsula that include cauldrons, torques, or axes. The species mentioned in the Lusitanian inscription from Cabeço das Fraguas (bull, sheep, and pig) correspond to those shown in these bronzes and are similar to the victims of Roman *suovetaurilia* and Indian *sautramani*.

The sanctuary excavated in Castrejón de Capote, Badajoz, is especially important. The site, destroyed by the Romans in the mid-second century BCE, includes an altar with a running bench that opens into the main street of the town. The animal and material remains (knives, a stake, grills, cups, and glasses) give proof of collective sacrifices and banquets celebrated with the cooked flesh of the animals (Berrocal-Rangel, 1994). Similar rituals took place in rupestrian sanctuaries, characterized by the presence of ladders, cavities, and receptacles of different sizes in which the victims’ blood would have been gathered and their entrails handled. They are characteristic of the Celtiberian area, the plateau, and especially the Galician-Lusitanian northwest. The ritual sanctuaries of Ulaca (Avila) and Panoias in Portugal, where inscriptions mention the continuation of the cults into the Roman era, are the most important ones.

Posidonius and other authors (Diodorus, *Bibliotheca Historica* 5.29; and Strabo, *Geographica* 4.4.5 regarding the Gauls) documented the rite among Celtic peoples of “cutting off the head” (“*cabezas cortadas*”) of a prisoner or a defeated foe. In the Iberian Peninsula the practice is recorded in a type of fibula, in which the human heads are depicted hanging from horses, with or without riders, and in some skulls, sometimes perforated by nails, unearthed in Numantia, Ullastret, Puig Castellar, and Garvão, Portugal. They are similar to the skulls displayed in the Celtic-Ligurian sanctuaries of Provence.

There is significant data regarding the role of priests, mostly Celtic, in Indo-European Hispania. Proof of their role is the oracular practice in the sanctuary of Endovellico, in San Miguel da Mota (where epigraphic formulas indicate they received instructions from the deity through dreams—*incubatio*). Further evidence appears in some Celtiberic words that point at priestly functions and in the iconography (in a vase from Numantia, an individual wearing a trunklike tiara sacrifices a rooster on an altar).

Some of the literature sheds light on funeral rites different from the traditional cremation. Silius Italicus (*Punica* 3.340–343) and Elianus (*De natura animalium* 10.22) document how Celtiberians and Vacceans performed a ritual of leaving dead warriors in the open to be devoured by vultures, which carried their souls to the heavens (Sopeña Genzor 1995). The ritual indicates some concepts about an afterlife in the heavens (thus the rich astral iconography found in the Hispano-Roman gravestones of these areas). This is confirmed by scenes depicted in the different stelae and in pottery from Numantia. The rite seems to have been common among other peoples of Celtic Europe and explains the boldness and fearlessness of these peoples for whom, according to Lucanus (*Pharsalia* 1.468), death was but the halfway of a long life.

The statues of the so-called Lusitanian warriors, created under the influence of Romanization, seem to depict deified ancestry and in some instances were placed in the entrance to a village (Santa Comba, Mozinho, or Sanfins). The golden diadems of Moñes in Piloña, Asturias, should be interpreted as scenes of warrior heroization. They depict warriors and riders, birds and fish together with figures carrying enormous cauldrons—receptacles that in the Celtic tradition symbolize abundance and immortality—a key element that is a symbol of the “last voyage.”

#### IBN ʿABD AL-WAHHĀB, MUḤAMMAD

(AH 1115–1206/1703–1792 CE), Islamic fundamentalist teacher who established the Wahhābi movement. He was born in Najd, a central region in Arabia. His father was the judge in the town of al-ʿUyaynah and also taught jurisprudence according to the strict Ḥanbali legal school and traditions. Muḥammad ibn ʿAbd al-Wahhāb began his study of the Qurʾān and basic Ḥanbalī texts under his father but set out on travels “in search of knowledge” when he was about twenty years old. He went first to Mecca and Medina, where he studied mainly with ʿAbd Allāh ibn Sayf and Muḥammad Ḥāyat al-Sindi. ʿAbd Allāh was a Ḥanbali scholar from Najd who had settled in Medina. Through him, Ibn ʿAbd al-Wahhāb became tied to the traditions of Syrian Ḥanbalī

scholarship. Ibn Sayf transmitted the course of studies of the seventeenth-century Syrian teacher ‘Abd al-Bāqī al-Ḥanbalī and instructed him in the works of the great Ḥanbalī jurist and theologian Aḥmad ibn Taymiyah (d. 1328). Al-Sindi was not a Ḥanbalī scholar but a scholar of traditions who came from India; in Medina, he was part of a group of teachers who inspired a spirit of socio-moral revival in students from many areas. It was this basic education, with his father and after, that prepared Ibn ‘Abd al-Wahhāb for his life’s mission: the purification and renewal of Islamic society.

He went next to the city of Basra and the region of al-Ḥasā in eastern Arabia. Although he continued his studies, he also began his mission of purification. In Basra in particular, he opposed popular religious customs as well as the beliefs of the large Shī‘ī Muslim population. Some sources suggest that Ibn ‘Abd al-Wahhāb also went to Persia, Syria, and even Egypt; this is, however, highly unlikely, for the sources closest to his lifetime make no mention of these broader travels.

Sometime between 1731 and 1737, he returned to Najd and lived in Ḥuraymilā, where his father was at the time. Following his father’s death in 1740, Ibn ‘Abd al-Wahhāb returned to al-‘Uyaynah and received the support of the local ruler for his purification efforts. Soon forced to leave by local opposition, however, he moved to al-Dar‘īyah; there the local leader, Muḥammad ibn Sa‘ūd, swore in 1744 to protect Ibn ‘Abd al-Wahhāb and to support his mission. This alliance created a new state based on the fundamentals of Islam.

People from many areas were persuaded by the teachings and writings of Ibn ‘Abd al-Wahhāb. In addition, as conflicts arose, the military power of the new state brought victory and further expansion. Following Ibn Sa‘ūd’s death in 1765, Ibn ‘Abd al-Wahhāb remained a major counselor to his successor, ‘Abd al-Azīz, and continued to preach and write until his death in 1792.

Muḥammad ibn ‘Abd al-Wahhāb left many works. Although he addressed varied subjects, his writings on *tawḥīd*, or the oneness of God, are the most prominent; the major text in this group is *Kitāb al-tawḥīd*. For him, *tawḥīd* was more than a monotheistic affirmation: it was a rejection of “saint worship” and veneration of anything other than God. A summary of his teachings is presented in *Al-uṣūl al-ṭhalāthah wa-adillatuhā* (The three roots and their proofs). Some of his sermons have been published in *Khuṭab al-shaykh* (Sermons of the shaykh), while some legal decisions are presented in the history written by Ibn Ghannām.

Muḥammad ibn ‘Abd al-Wahhāb created a movement of renewal at a time of ferment within the Islamic world. During the eighteenth century there were many Muslim groups working for socio-moral reconstruction on the basis of a strict interpretation of Islamic fundamentals. Muḥammad ibn ‘Abd al-Wahhāb was not unique, but he was the most rigorous of the major leaders in rejecting medieval “innovations” and the most intractable in opposing compromises with popular religion.

The immediate result of his work was the creation of a state community in Arabia dedicated to the implementation of his mission. This state was militarily defeated in the nineteenth century but experienced a revival in the twentieth, when it became the kingdom of Saudi Arabia.

Ibn ‘Abd al-Wahhāb’s influence, however, goes beyond this political aspect. Islamic renewal in its Wahhābi form inspired later Muslim thinkers and activists in a variety of areas. For much of the nineteenth century, “Wahhābism” played a role in the Islamic world similar to that of “Khomeinism” in the last part of the twentieth. In intellectual terms, what Ibn ‘Abd al-Wahhāb wrote and taught about themes such as *tawḥīd* became part of the fundamentalist mood in modern Islam. His work was respected by a wide spectrum of thinkers ranging from the relatively fundamentalist Rashīd Rīda in Egypt to the South Asian modernist scholar Muḥammad Iqbāl.

#### BIBLIOGRAPHY

The basic primary sources include the writings of Muḥammad ibn ‘Abd al-Wahhāb preserved in ‘Uthmān ibn Bishr’s *Kitāb ‘unwān al-majd fī tā’rīkh Najd* (Baghdad, 1328/1910), and Husayn ibn Ghannām’s *Rawḍat al-afkār* (Riyadh, 1368). Although early Western discussions made use of the anonymous *Lam‘ al-shihāb fī sīrat Muḥammad ibn ‘Abd al-Wahhāb*, edited by Ahmad M. Abu Hikima (Beirut, 1967), it is not a reliable source. Important secondary sources include ‘Abd Allāh al-Ṣāliḥ al-‘Uthaymin’s *Al-Shaykh Muḥammad ibn ‘Abd al-Wahhāb, ḥayātuhu wa-fikruhu* (Riyadh, n. d.); Henri Laoust’s *Essai sur les doctrines sociales et politiques de Taki-al-Din Aḥmad B. Taymiya* (Cairo, 1939), pp. 506–540; and the many books on Arabia by H. St. John Philby, including *Arabia* (New York, 1930). The most thorough study of his life and thought is Natana J. Delong-Bas, *Wahhābi Islam: From Revival and Reform to Global Threat* (New York, 2004). Surveys that indicate his place in modern Islamic history are Alexei Vassiliev, *The History of Saudi Arabia* (New York, 2000) and John Obert Voll’s *Islam: Continuity and Change in the Modern World* (Syracuse, N.Y., 1994).

JOHN O. VOLL (1987 AND 2005)

**IBN ADRET, SOLOMON** SEE ADRET, SHELOMOH BEN AVRAHAM

**IBN AL-‘ARABĪ** (1165–1240 CE), known throughout the Islamic world simply as the “greatest master” (*al-Shaykh al-akbar*), is acknowledged to be one of the most important spiritual teachers within the mystical tradition of Islam. A vastly prolific writer and visionary, he is generally known as the prime exponent of the concept of the Unity of Being (*wahdat al-wujūd*), even though that particular term, by which his teachings came later to be designated, was hardly used in his own milieu. His emphasis, as with any mystic,

lay rather on the true potential of the human being and the path to realizing that potential, which reaches its completion in the Perfect or Complete Man (*al-insān al-kāmil*). Ibn al-‘Arabī wrote at least 300 works, ranging from minor treatises to the huge thirty-seven-volume *Meccan Illuminations* (*al-Futūhāt al-Makkīya*) and the quintessence of his teachings, *The Bezels of Wisdom* (*Fusūs al-Hikam*). Approximately 110 works are known to have survived in verifiable manuscripts, some 18 in Ibn al-‘Arabī’s own hand. He exerted an unparalleled influence, not only upon his immediate circle of friends and disciples, many of whom were considered spiritual masters in their own right, but also on succeeding generations, affecting the whole course of subsequent spiritual thought and practice in the Arabic-, Turkish-, and Persian-speaking worlds. In recent years his writings have also increasingly become the subject of interest and study in the West, leading to the establishment of an international academic society in his name.

Ibn al-‘Arabī’s thought is characterized by a profound visionary capacity, coupled with a remarkable intellectual insight into human experience and a thorough knowledge of all the traditional sciences. It has been tempting for scholars to characterize him as a mystical philosopher, a formulation that is rather at odds with his own teachings on the limitations of philosophical thinking. He was as much at home with Qur’anic and *ḥadīth* scholarship as with medieval philology and letter symbolism, philosophy, alchemy, and cosmology. He could write with equal facility in prose or poetry, and utilized the polysemous ambiguity of the Arabic language to great effect—the characteristic resonances of rhymed prose (*saj’*), which are to be found in the Qur’ān, abound in his works. In recent years Western scholars such as Michel Chodkiewicz have begun to explore the radical way in which Ibn al-‘Arabī’s thought is underpinned and inspired by the Qur’ān. He adopts the rich vocabulary of spiritual phenomenology that previous mystics had built up, and gives it both a scriptural basis and an ontological grounding.

The complexity of his writings makes him one of the most demanding of authors, and difficult to comprehend, leading some Islamic scholars to oppose and even reject his positions. Among his admirers, his writing was always considered to be the most elevated exposition of mystical thought in Islam, and therefore unsuitable for the untrained mind. He combines a detailed architecture of spiritual experience, theory, and practice, with descriptions of the attainments of other masters he met and of his own personal visions, insights, and dreams. It is his propensity to recount stories from his own direct experience, primarily in order to make a teaching point, that allows readers to gain such a detailed insight into his inner world, and also allows us to reconstruct his life and times with some accuracy.

**IBN AL-‘ARABĪ’S LIFE.** Born on July 28, 1165, in Murcia, Abū ‘Abdullāh Muḥammad b. ‘Alī b. Muḥammad Ibn al-‘Arabī al-Hātīmī al-Tā’ī, as he signs himself (often shortened to simply Ibn ‘Arabī), was brought up from the age of

seven in Seville, the provincial capital of the Almohad Empire during the heyday of Andalusian Muslim culture. His father served as a professional soldier in the sultan’s entourage, and for a time the son seemed destined to follow in his footsteps. Contrary to the romantic picture painted by later writers, the family was well-off, but neither noble nor very religious. He seems to have been blessed with an extraordinary visionary capacity from a very young age, and the seminal experience of his youth took place when he was about fifteen or sixteen years old. Without having had any formal training and apparently under the impulsion of an irresistible inner demand, he undertook a retreat alone just outside Seville, probably in the ruins of the old Roman city of Italica, where he had a remarkable dream-vision of the three major prophets, Jesus, Moses, and Muḥammad. According to his own testimony, each of them is said to have given him a piece of advice: Jesus, whom he referred to as his first teacher, exhorted him to follow the spiritual life, and instructed him to practice renunciation and detachment; Moses, whom Ibn al-‘Arabī regarded as epitomizing the reception of divine inspiration, promised that he would be given knowledge by God directly, without any intermediary; and, finally, Muḥammad, who rescued him from a host of assailants, told him: “Hold fast to me and you will be safe” (Hirtenstein, 1999, p. 55). As a consequence of this instruction, Ibn al-‘Arabī says, he began his study of *ḥadīth* (reports of the prophet Muḥammad’s words and deeds).

This triple vision also had one other direct result: the great Aristotelian philosopher, Ibn Rushd (Averroës), who was nearing the end of his life in Cordoba, asked to meet him, and their celebrated meeting included a most extraordinary exchange, touching on the very nature of the spiritual quest: in response to Ibn Rushd’s question about whether mystical illumination produces the same results as rational inquiry, Ibn al-‘Arabī replied: “Yes and no, and between the yes and the no spirits take wing from their matter, and necks are separated from their bodies” (*Futūhāt* I.153), leaving the philosopher dumbfounded. This response not only indicates Ibn al-‘Arabī’s understanding of the gulf between the philosophical and the mystical, between intellectual reflection and spiritual retreat, but also his appreciation of how mystical thought can include and accommodate apparently contradictory notions.

Within two years, Ibn al-‘Arabī had irrevocably dedicated himself to a rigorous spiritual life, turning his back on the military career that his father had wanted him to pursue, and entrusting everything he possessed into his father’s keeping. From this time he began to frequent other spiritual masters. An account of the many Sūfī teachers, male and female, that he met in Seville, Córdoba, and other major cities of Andalusia and North Africa is given in one of his most accessible books, *The Spirit of Holiness* (*Rūḥ al-quds fī munāsabāt al-naḥs*), which provides a wonderful insight into spiritual teaching in his time. Some of his teachers were poor and illiterate and referred to Ibn al-‘Arabī as their spiritual son, like

his first master, al-<sup>2</sup>Uryānī, who demonstrated a Christ-like spirituality, or one of his female teachers in Seville, Fatima bint Ibn al-Muthanna, who was already ninety-six years old when they met and appeared superficially as a simpleton, “though she would have replied that he who knows not his Lord is the real simpleton” (Austin, 1988, p. 143). Others were more apparently learned, and introduced Ibn al-‘Arabī to the teachings of the great saint of North Africa, Abū Maḍyan (1115–1198), and to central texts of Sufism. Perhaps the most crucial influence was his friend and mentor in Tunis, ‘Abd al-‘Azīz al-Mahdawī, a master who seems to have shared Ibn al-‘Arabī’s depth and subtlety of mind and with whom he spent two extended periods. In addition to these contacts, Ibn al-‘Arabī undertook a lengthy retreat of at least nine months, following which, in Cordoba in 1190, he experienced a remarkable vision of all the prophets and messengers, from Adam to Muḥammad. In many ways the fruition of the initial triple vision he had had in Seville, this vision would also presage the claim he would later make to being what he called the Seal of Muhammadian Sainthood, the saint who encompasses all the inner meanings of the prophetic message of Muḥammad.

After his first visit outside Andalusia to Tunis where he stayed with al-Mahdawī in 1194, Ibn al-‘Arabī composed probably his first major work, *Contemplation of the Mysteries (Mashāhid al-asrār)*, a series of fourteen visionary episodes and dialogues with God, written specifically for the disciples of al-Mahdawī. His parents died soon after, and as the clouds of war gathered prior to the Almohad victory over the Castilian army at Alarcos in 1195, Ibn al-‘Arabī took his two sisters to the peaceful Moroccan city of Fez, where he arranged for them to be married. With all his family commitments completed, he spent another two years in Fez, where his reputation as a spiritual master in his own right grew. It was here that he experienced his mystical ascension in imitation of the Prophet, recounted in detail in *The Night-Journey (Kitāb al-Isrā’)*: “I gained in this night-journey the true meaning of all the Divine Names, and I saw them returning to One Named and One Essence. This Named was my very object of contemplation; that Essence was my very being” (*Futūhāt* III.350).

In 1198 Ibn al-‘Arabī returned to the Iberian Peninsula for the last time, to bid farewell to the land of his birth. At the same time several other substantial works flowed from his pen, often in response to direct requests from friends and disciples, in particular his Ethiopian companion, friend, and servant, Badr al-Habashī. In Córdoba he attended the funeral of Ibn Rushd, which, poignantly, featured a donkey laden with the master’s body in a coffin on one side, counterbalanced by his works on the other. His decision to leave Andalusia for good may have been partly in response to instability in the wake of the death of the Almohad sultan in 1199, which many saw as marking the end of an age. At the same time, his leaving was certainly also motivated by the desire to accomplish the pilgrimage to Mecca. As he traveled on his

way to Marrakech in 1200, he again underwent a spiritual transformation. He had a vision in which a Ṣūfī saint of two centuries earlier informed him that he had attained the highest degree of sainthood, known as the Station of Closeness.

After spending another six months in Tunis with his friend al-Mahdawī, Ibn al-‘Arabī visited all the major sites of pilgrimage: Hebron, where the Patriarchs are buried; Jerusalem, the city of David and later prophets; Medina, where Muḥammad is buried; and, finally, Mecca, where he arrived in mid-1202. For him, this pilgrimage was a physical reenactment of the ascension he had undertaken inwardly. Three episodes held special significance for him. The first was a meeting with a young girl, Nizam, who “surpassed all the people of her time in refinement of mind and cultivation, in beauty and in knowledge” (Nicholson, 1911, p. 14). The love that she evoked within Ibn al-‘Arabī’s heart led to an outpouring of yearning, and she became the inspiration for his famous collection of poems, *The Interpreter of Ardent Desires (Tarjumān al-ashwāq)*. In the style of the great Arabic *qasīda*, these poems express the poet’s longing for the Divine Beloved, who is ever out of reach but whose traces can be found in the abandoned encampments of the caravan train. This was for Ibn al-‘Arabī the first awakening of love of women, characterized by the tradition that God made women worthy of love for His prophet, and as a consequence he married Fatima, the daughter of a Meccan notable. While Nizam personified wisdom and beauty, her father was a well-known *muhaddith*, or transmitter of prophetic traditions, and Ibn al-‘Arabī assiduously collected these, making one of his works, the *Mishkāt al-anwār*, a collection of 101 *hadīth qudsī* (divine sayings, in which God speaks through the mouth of the Prophet). Ibn al-‘Arabī also states that when he came to know the tradition that God had made women worthy of love for His prophet, he was awakened to love of women, and relinquished his near-monastic life to marry the daughter of a Meccan notable.

The second significant event took place at the Ka‘aba in 1202. During the circumambulation Ibn al-‘Arabī encountered a mysterious Youth, “both speaker and silent, neither alive nor dead, both complex and simple” (*Futūhāt* I.47), who described himself as Knowledge, Knower, and Known. The youth’s being inspired in Ibn al-‘Arabī a series of insights, which he was told to write down and which became his *Meccan Illuminations (Futūhāt)*.

Finally, while writing the *Meccan Illuminations* preface, Ibn al-‘Arabī had a vision of his own role as heir to Muḥammad’s spiritual teaching and Seal of Muhammadian Sainthood: just as Muḥammad had been given the totality of prophetic messages and meanings, so Ibn al-‘Arabī saw himself being granted the “gifts of Wisdoms” in a solemn ceremony of investiture. This privileged status as one who summarizes and completes the spiritual dimension of Islam was confirmed in a dream in the following year, in which he saw himself as two gold and silver bricks that completed the walls of the Ka‘aba.

The momentous years in Mecca saw not only the completion of several works and the initiation of the *Futūhāt*, but also brought Ibn al-‘Arabī into contact with many well-known figures from the eastern lands of Islam. These included direct disciples of the great Baghdad Ṣūfī ‘Abd al-Qādir al-Jīlānī (1077–1166), as well as the adviser to the Seljuk court of Anatolia, Majduddīn Ishāq al-Rūmī (died c. 1215). The latter became a close friend and patron of Ibn al-‘Arabī, and they traveled together to Konya to meet the Seljuk sultan. Typically for that time, Majduddīn was both a man of political power and a spiritual teacher: as adviser to the Seljuk royal family, he encouraged Ibn al-‘Arabī to settle in Majduddīn’s native town of Malatya in southeastern Anatolia, to raise his growing family there, and to benefit people with his teachings. While Ibn al-‘Arabī did live a more settled life writing in Malatya for a time, he also traveled in the Levant, building relations with and serving as adviser to kings and princes throughout the region, from Konya to Baghdad, Aleppo, and Damascus. He had at least two wives and three children—two sons and a daughter. In addition, after Majduddīn died, he took on responsibility for Majduddīn’s son, Ṣadr al-Dīn Qūnawī (d. 1274), who would become his heir and most influential disciple. Ibn al-‘Arabī’s connections to Anatolia would have profound implications for the future course of Sufism there, as his teachings became part of mainstream Ottoman culture.

For the final seventeen years of his life Ibn al-‘Arabī lived in Damascus, under the patronage of a wealthy and influential judge, Ibn al-Zakī. If Tunis may be considered the fulcrum of his Western life as the place where his spiritual training was completed, then Damascus was certainly the axis around which his Eastern career revolved. The writing continued unceasingly, with the first draft of the *Futūhāt* being completed in 1231 and a second recension of the entire work in 1238. As was customary at that time, the whole book was read aloud in sections before a group of friends and disciples, sometimes as large as thirty or more, with the author himself checking that the handwritten text was correct and the names of those present meticulously recorded. These listening certificates (*samā*) are testimony to the enormous respect accorded to Ibn al-‘Arabī by all sections of the spiritual and religious elite, in keeping with which he was named Muḥyī al-Dīn (“the reviver of the religion”), as was his great theological Ṣūfī predecessor, Abū Ḥāmid al-Ghazālī (1058–1111), who had also taught in Damascus a century before.

It was not only the *Futūhāt* which sealed his reputation: there were other works, most notably a huge *Dīwān* of poetry completed in 1237, and the work that is perhaps his most influential masterpiece, *The Bezels of Wisdom (Fusūs al-Hikam)*, which he states was received from the hand of the prophet Muḥammad in a dream in 1229. The *Fusūs* contains twenty-seven chapters, each related to a particular wisdom as exemplified by one of the prophets whose stories are told in the Qur’ān: for example, the Wisdom of Divinity in the word of Adam (who was created in the divine image, and

thus, just as Allāh is the Name which includes all the Names, is the prototype who includes all humanity); or the Wisdom of Elevation in the word of Jesus (describing the elevated reality of Jesus, born of the water of Gabriel and the water of Mary, as spirit and son of spirit). These twenty-seven prophets represent the different modalities of human spirituality, facets displaying the jewels of divine wisdom, the full meaning of which is understood through the jurisdiction and collective wisdom of Muḥammad, the Seal of prophets. This book has had a perennial appeal, giving rise to at least one hundred commentaries over several centuries and in several languages, and these constitute a whole history of Islamic mystical thought in themselves.

**IBN AL-‘ARABĪ’S THOUGHT.** Ibn al-‘Arabī’s writings reflect a comprehensive explanation of *tawḥīd*, the “Unity of God,” or the assertion that God is One. While this has often been taken to mean the doctrine of the Unity of Being (*wahdat al-wujūd*), the concept his school was later associated with, the crux of his teaching is perhaps better described as the perfectibility of Man, that is to say, the human potential for the fullest realization of Unity, the true nature of existence and the place and function of the human being within the universe. The one who asserts God’s Unity and believes it to be true is capable of being transformed into one who knows what It means (*‘arif*). It is becoming a “knower” or Gnostic that is the prime purpose of all of Ibn al-‘Arabī’s teaching.

Ibn al-‘Arabī deconstructs all systems and reference points except for Being itself, the essence of the Real. This is the only absolute, the base for all phenomena, from which they have come and to which they return. At the same time, we may intellectually conceive of another absolute, pure nonexistence, even though this cannot actually exist, and it is this conception that allows us to distinguish different aspects of Being. Sheer Being or Light cannot be perceived, embraced, or understood by any other than Itself, so none knows God but God. In fact this Absolute One is a total negation of all things, without exception. It is absolutely non-manifest, undetermined, unarticulated: even Allāh, God, can only be considered as Its outward face with regard to things. Being is refracted as “things,” which lie in the relative ambiguity of being both existent/light and nonexistent/dark. Thus the world of creation, which is everything other than God, from the highest spirits to the densest matter, can be viewed as either dark or light, relative nonexistence or existence. In one respect, the thing is He; in another respect, it is not Him. This plurality is one of aspects, not an ontological multiplicity. All aspects refer to God, the One who is named by all Names. “The creation is intelligible,” Ibn al-‘Arabī writes, “and God is perceptible and visible, according to the people of faith and the people of unveiled insight and experience” (Austin, 1980, p. 108). He emphasizes the mutual dependence of God and the world: without the world of creation, God cannot be known as Creator; without living things, God cannot be recognized as the Living.

According to Ibn al-‘Arabī, these two mutually dependent sides must constantly be borne in mind, if the relation-

ship between God and universe, Reality and appearance, is to be truly understood: on the side of nonexistence there are all the possibilities of being or immutable entities (*al-a’yān al-thābita*), which he says “have never smelt the breath of existence” (Austin, 1980, p. 76); on the side of existence there are the divine names, attributes, qualities, and actions. It is because of nonexistence that God is described as transcendent (*tanzīh*), and because of existence that He is known as immanent (*tashbīh*). The first qualification is accomplished through the use of reason, whereas the second is made through the exercise of imagination. By employing both faculties, reason and imagination, together properly, the mystic becomes “the one with two eyes,” that is to say, someone with perfectly balanced vision. The two aspects of God, transcendence and immanence, are summarized for Ibn al-‘Arabī by the Qur’anic verse “There is no thing like Him, and He is the Hearer, the Seer” (Qur’ān 42.11).

Ibn al-‘Arabī’s creed of rigorous Unity is at the same time one of supreme tolerance of diversity and openness to fresh understandings. Throughout his writings he frequently cites an earlier author who wrote that “in everything there is a sign pointing to the fact that He is One” (*Futūhāt* I.491). Each created thing is at once a “receiver” of Divine Being and a “place” where God is manifest (*mazhar*). Whether it is a gnat or an angel, every created thing has a particular dignity and closeness to God that demands respect. Insofar as it has no being of its own, its quality is what is implied by nonexistence, i.e., total dependence and humility; insofar as it manifests the Divine Being, it is imbued with divine qualities such as Knowing and Living.

The two fundamental aspects of all existence, which give rise to all the paradoxes and ambiguities of life, are reconciled for Ibn al-‘Arabī in the heart of Perfect or Complete Man, who is receptive to all possible manifestations at every level, and has no particular inclination to one side over the other. While everything in the universe manifests certain divine aspects, it is only in and to Man that God is fully revealed and the meaning of the universe is made clear. Ibn al-‘Arabī uses a Qur’anic account to contrast, for example, the elevated glorification of God by which the angelic host praise Him with the divine command for them to prostrate before Adam. Although the angelic nature appears to be the closest to the divine, the angels do not possess the all-embracing nature of Man, who is created in the divine image and possesses knowledge of every level and degree.

Because the ordinary perception of the world is that of multiple existences, each self-subsistent and different from others, it follows that human beings are veiled from their true reality by ideas of self-existence. Revelation, in different forms at different times but culminating in the total revelation granted to Muḥammad, is needed to establish proper divinely guided modes of living. True fidelity to the essentials of religious law, however, is only possible for one who realizes its inner spiritual significance. To return to one’s primordial nature voluntarily while in this world (rather than

by the inevitable way of death) demands the shedding of illusions. This journey of awakening ends with the complete annihilation (*fanā*) of all other than God, out of which arises a new kind of existence (*baqā*, literally “remaining”) in full consciousness. Here the true human being becomes “the one with two eyes,” seeing the One and the many, God in the creature and the creature in God, without being veiled by either. The world is seen as the theater of divine theophanies (*tajallī*), renewed at each instant by the “breathing-out” of God. This Ibn al-‘Arabī calls “the Breath of the All-Compassionate,” a loving outpouring relieving the Divine Names from their state of constriction in latency and allowing them fullness in expression. There is, he stresses, “no repetition in revelation”: no two moments are the same for anyone, nor is one moment the same for two people.

Prophets and saints are those who have realized their essential nonexistence, and return again to the world as guides who act in accordance with the celebrated divine saying (*hadīth qudsī*): “I was a Hidden Treasure and I loved to be known; so I created the world that I might be known.” (*Futūhāt* II.399). For them God is forever manifest, as the veil of their own selfhood has been rent.

**CONTINUITY AND INFLUENCES.** The impact of Ibn al-‘Arabī’s teachings is difficult to measure: although no dervish order was founded in his name, their influence has been at the heart of much of Ṣūfī teaching ever since. Commentaries on well-known texts have sometimes used Ibn al-‘Arabī’s terminology and teachings, as in, for example, the famous commentary on Rūmī’s *Mathnawī* by the Mevlevi *shaykh*, Ismā‘il al-Anqarāwī (d. 1631). The list of those who can be considered his direct followers reads like a roll call of some of the most famous masters and authors in Sufism: from his adopted son and heir, Ṣadr al-Dīn Qūnawī—who taught in Konya at the same time as his friend, Jalāl al-Dīn Rūmī, successfully transmitting the heritage of Ibn al-‘Arabī to succeeding generations, and whose famous library preserved so many of his works—to Mu‘ayyiduddīn Jandī (d. 1300), ‘Abd al-Razzāq al-Kāshānī (d. 1329), Dā‘ūd al-Qaysarī (d. 1350), and ‘Abd al-Raḥmān Jāmī (d. 1492). Ibn al-‘Arabī’s work also inspired poets, such as the wandering dervish Fakhr al-Dīn ‘Irāqī (d. 1289) and the author of the *Gulshan-i-rāz* (The rose-garden of mystery), Maḥmūd al-Shabistarī (d. 1320), as well as those of a more philosophical mind like Mullā Ṣadrā of Shiraz (d. 1640). There were many others who did not write books of their own but developed a very deep spiritual affinity with Ibn al-‘Arabī, such as Mehmet Uftade (d. 1580), one of the great Ottoman masters who numbered Sultan Suleyman the Magnificent among his disciples.

While Ibn al-‘Arabī’s works have been publicly adopted at certain times by some Islamic governments, notably the Ottoman Empire and Iran, they have not been universally accepted within the Islamic world and have often been rejected as heretical. Later Muslim scholars have disagreed about the validity of his teaching: some were bitterly antagonistic

to what they saw as heretical philosophizing endangering the moral framework of the whole community; others were equally keen to defend Ibn al-ʿArabī's religious orthodoxy and spiritual stature. This long polemic over Ibn al-ʿArabī's legacy, with all its ambiguities and shifting positions, has lasted until the present day, and reflects both the central importance of the issues he addressed, and the fascination that the multifaceted writings and personality of the "Greatest Master" have exerted.

## BIBLIOGRAPHY

### Works by Ibn al-ʿArabī Available in English

Austin, R. W. J., trans. *The Bezels of Wisdom*. Preface by Titus Burckhardt. London, 1980; reprint, 1997. A complete translation of Ibn al-ʿArabī's *Fusūs al-Hikam*.

Austin, R. W. J., trans. *Sufis of Andalusia*. Reprint, Sherborne, U.K., 1988. Extracts from Ibn al-ʿArabī's *Rūḥ al-quḍs* and *Durrat al-fākhira*, giving stories of the masters he knew in the Maghrib.

Bayrak, Tosun, trans. *Divine Governance of the Human Kingdom*. Louisville, Ky., 1997. A fairly free translation of *al-Tadbīrat al-ilāhīya* from Ottoman Turkish.

Chodkiewicz, Michel, ed. *Meccan Illuminations*. Translated by William C. Chittick and James W. Morris. New York, 2002. A selection of passages from Ibn al-ʿArabī's magnum opus, the *Futūhāt al-Makkīya*.

Elmore, Gerald, trans. *Islamic Sainthood in the Fullness of Time: Ibn ʿArabī's Book of the Fabulous Gryphon*. Leiden, 1999. A fully annotated translation of the 'Anqa' *Mughrib*, one of Ibn al-ʿArabī's most abstruse works, with a full introduction.

Hirtenstein, Stephen, and Pablo Beneito, trans. *The Seven Days of the Heart*. Oxford, 2000. A book of prayers for the days and nights of the week, with a full introduction.

Nicholson, Reynold, trans. *The Tarjuman al-ashwaq: A Collection of Mystical Odes*. London, 1911. A good translation of fifty-one celebrated love poems.

Rauf, Bulent, trans. *Ismail Hakki Bursevi's Translation of and Commentary on Fusūs al-Hikam by Muhyiddin Ibn ʿArabī*. 4 vols. Oxford, 1986–1991. A translation of the most comprehensive Ottoman commentary on the *Fusūs al-Hikam*.

Twinch, Cecilia, and Pablo Beneito, trans. *Contemplations of the Holy Mysteries and the Rising of the Divine Lights*. Oxford, 2001. One of the earliest works, in the form of accounts of fourteen visionary experiences, with commentary by his student, Ibn Sawdakīn.

Winkel, Eric, trans. *Mysteries of Purity: Ibn ʿArabī's Asrar al-tahārah*. Notre Dame, Ind., 1995. A section from the *Futūhāt*.

### Works about Ibn al-ʿArabī in English

Addas, Claude. *Quest for the Red Sulphur: The Life of Ibn ʿArabī*. Translated by Peter Kingsley. Cambridge, U.K., 1993. A major biography covering the temporal and mystical life of Ibn al-ʿArabī.

Addas, Claude. *The Voyage of No Return*. Translated by David Spreight. Cambridge, U.K., 2000. A brief introduction to the life and thought of Ibn al-ʿArabī.

Chittick, William. *The Sufi Path of Knowledge: Ibn al-ʿArabī's Metaphysics of Imagination*. New York, 1989. Over six hun-

dred passages translated from the *Futūhāt*, with commentaries, organized by theme.

Chittick, William. *The Self-Disclosure of God: Principles of Ibn al-ʿArabī's Cosmology*. Albany, N.Y., 1997. Based primarily on Ibn al-ʿArabī's *Futūhāt*, from which more than one hundred chapters and subsections are translated. The book is divided into three parts, dealing, respectively, with the relation between God and the cosmos, the structure of the cosmos, and the nature of the human soul.

Chodkiewicz, Michel. *An Ocean without Shore: Ibn ʿArabī, the Book, and the Law*. Albany, N.Y., 1993. An examination of the Qurʾanic roots of the writings of Ibn al-ʿArabī.

Chodkiewicz, Michel. *The Seal of the Saints: Prophethood and Sainthood in the Doctrine of Ibn ʿArabī*. Translated by Liadain Sherrard. Cambridge, U.K., 1993. An exploration of Ibn al-ʿArabī's teachings on sainthood.

Coates, Peter. *Ibn ʿArabī and Modern Thought: The History of Taking Metaphysics Seriously*. Oxford, 2002. An examination of some of the central and defining ideas of modernity in the light of Ibn al-ʿArabī's writings on the unity of existence.

Corbin, Henry. *Alone with the Alone: Creative Imagination in the Sūfism of Ibn ʿArabī*. Princeton, N.J., 1997. An original study with two complementary essays: "Sympathy and Theopathy" and "Creative Imagination and Creative Prayer."

Hirtenstein, Stephen. *The Unlimited Mercifier: The Spiritual Life and Thought of Ibn ʿArabī*. Oxford, 1999. Seventeen chapters alternating biography and commentary, with illustrations, photographs, and maps. Both an introduction and a further study.

Izutsu, Toshihiko. *Sufism and Taoism: A Comparative Study of Key Philosophical Concepts*. Berkeley, Calif., 1984. A groundbreaking analysis and comparison of the works of Ibn al-ʿArabī, Laozi, and Zhuangzi.

*Journal of Muhyiddin Ibn ʿArabī Society*. Oxford, 1984–present. A biennial journal comprising new translations and studies of Ibn al-ʿArabī and his school.

Knysh, Alexander D. *Ibn ʿArabī in the Later Islamic Tradition: The Making of a Polemical Image in Medieval Islam*. Albany, N.Y., 1998. An analysis of the heated debates around Ibn al-ʿArabī's ideas in the three centuries following his death.

Muhyiddin Ibn ʿArabī Society website. Available at [www.ibnarabisociety.org](http://www.ibnarabisociety.org). One of the best resources for up-to-date scholarship.

Nettler, Ronald L. *Sufi Metaphysics and Qurʾanic Prophets: Ibn ʿArabī's Thought and Method in the Fusūs al-Hikam*. Cambridge, U.K., 2003. An analytical commentary on the *Fusūs al-Hikam* closely following Ibn al-ʿArabī's arguments in their order and organization.

Yahya, Osman. *Histoire et classification de l'oeuvre d'Ibn ʿArabī*. 2 vols. Damascus, 1964. Still the most detailed and extensive survey of manuscript works written by or attributed to Ibn al-ʿArabī. Indispensable for all those who intend to study any aspect of his thought.

STEPHEN HIRTENSTEIN (2005)

**IBN AL-FĀRID** (AH 576–632/1181–1235 CE), more fully Abū Ḥafṣ or Abū al-Qāsim ʿUmar ibn Abī al-Ḥasan

'Alī ibn al-Murshid ibn 'Alī; often called the greatest mystical poet in the history of Arabic literature. His father, known as al-Fāriḍ because his profession was the allocation of shares (*furūd*) in cases of inheritance, migrated from his native Hama in Syria to Cairo, where Ibn al-Fāriḍ was born and where he lived and died.

Though little is known about his life, there is evidence that he married and had at least two sons and a daughter. He studied *ḥadīth* and Shāfi'ī law in his youth, but his spiritual bent was such that he preferred solitary devotion in the desert or on Mount al-Muqaṭṭam, east of Cairo, and he finally became a Ṣūfī. After a long sojourn in Mecca, he returned to Cairo and was venerated by the populace as a saint.

He is said to have been handsome, righteous, and awe-inspiring yet pleasant and sociable. Later generations ascribed supernatural powers to him, following the example of his own grandson, 'Alī, who wrote an introduction to Ibn al-Fāriḍ's *Dīwān* (Collected works) and filled it with several fantastic tales. This may have been a defensive effort to exonerate the poet from accusations of heresy such as those made by Ibn Taymīyah (d. 1328) and others regarding the practices and pantheistic tendencies of certain Ṣūfīs.

The *Dīwān* of Ibn al-Fāriḍ is slim, and the poems in it are of varying lengths. Dominated by the theme of love, they are couched in a beautiful style of great tenderness and sensitivity in which the sounds, patterns, and rhetorical conceits of the language are natural elements of the moods and ideas they convey. Capable of being read as love lyrics, they are intended to be expressions of mystical yearning for God. This is true even of the only wine poem in the *Dīwān*, in which intoxication with wine is but a symbol of union with the divine beloved.

Almost half of the *Dīwān* is occupied by a single poem of 761 verses entitled *Nazm al-sulūk* (Poem of the way), often referred to as "The Greater Ode Rhyming in T" to distinguish it from a shorter poem of 103 verses also rhyming in the letter *t*. Considered Ibn al-Fāriḍ's masterpiece, this ode is unique in its description of the mystic's experience of God and of the harmony achieved through realizing the union of phenomenal existence and pure Being. It has so intrigued subsequent generations of Ṣūfīs by its exquisite beauty and mystical truths that many have written large volumes commenting on it, including al-Farghānī (d. 1300), al-Qāshānī (d. 1334), al-Qaysarī (d. 1350), Jāmī (d. 1492), al-Būrīnī (d. 1615), and al-Nābulusī (d. 1730). The commentaries of the last two were combined by Rushayd ibn Ghālib al-Daḥḍāḥ (d. 1889). Commentaries have also been written on the *Khamrīyah* (Wine poem) illuminating its mystical symbolism and explaining its religious and literary allusions.

A Ṣūfī order named al-Fāriḍīyah was known to exist in Egypt during the sixteenth century and claimed to originate from Ibn al-Fāriḍ, but it does not seem to be in existence today. The poet's tomb, however, still stands in a well-known shrine at the foot of Mount al-Muqaṭṭam in Cairo.

## BIBLIOGRAPHY

The poetry of Ibn al-Fāriḍ is available in English in A. J. Arberry's *The Poem of the Way* (London, 1952) and *The Mystical Poems of Ibn al-Fāriḍ* (Dublin, 1956) with good, short introductions and notes. For more recent translations, see *Umar Ibn al-Fāriḍ; Ṣūfī Verse, Sainly Life*, translated by Th. Emil Homerlin, preface by Michael A. Sells (New York, 2001). An excellent study is found in chapter 3 of Reynold A. Nicholson's *Studies in Islamic Mysticism* (1921; Cambridge, 1967). An excellent later study is *From Arab Poet to Muslim Saint: Ibn al-Fāriḍ, His Verse, and His Shrine* by Th. Emil Homerlin (Columbia, S.C., 1994). For an assessment of the sources for Ibn al-Fāriḍ's biography, especially impugning certain contributions by the poet's grandson 'Alī, see my article "Toward a Biography of Ibn al-Fāriḍ," *Arabica* 28 (1981): 38–56. For an evaluation of Ibn al-Fāriḍ's rhetorical devices as inalienable elements of his style, correlative to his mystical vision of harmony in union with God, see my article "Verbal Arabesque and Mystical Union: A Study of Ibn al-Fāriḍ's 'al-Tā'iyya al-Kubrā,'" *Arab Studies Quarterly* 3 (1981): 152–169.

ISSA J. BOULLATA (1987 AND 2005)

**IBN 'ATĀ' ALLĀH** (AH c. 650–709, c. 1252–1309 CE), more fully Ahmād ibn Muḥammad ibn 'Abd al-Karīm ibn 'Atā Allāh al-Iskandarī, was an Arab Ṣūfī saint and sage of Egypt. He was the third great master of the Shādhilī order of Sufism founded by Abū al-Ḥasan al-Shādhilī (d. 1258) and the first shaykh of the order to reduce its teachings and practices to writing. Born in Alexandria into an illustrious dynasty of Mālikī religious scholars, he early evinced mastery in all of the religious disciplines and became an authority on Islamic law while professing antagonism toward Sufism. But a chance encounter with his future Ṣūfī shaykh, Abū al-'Abbās al-Mursī (d. 1287), dramatically transformed him into an ardent contemplative, and he became an authority in both the law and the spiritual path in a relatively short time. Most of his life was spent in Cairo as a Ṣūfī shaykh and as a teacher of the exoteric religious disciplines.

He wrote many works on Sufism and religious topics, a half dozen of which have been particularly popular in Ṣūfī circles over the centuries and have gone through a number of reprints in recent times. The best known of these is his *Kitāb al-ḥikam* (Book of Aphorisms), a series of maxims of great beauty on Ṣūfī spirituality that has produced many commentaries by Ṣūfīs and become a classic in the field because its comprehensive and poetical formulations may easily be memorized. He defended Ibn al-'Arabī (d. 1240) and other Ṣūfīs against the Ḥanbalī fundamentalist theologian Ibn Taymīyah (d. 1328), who objected to their monistic speculations.

In the course of time, some of the works of Ibn 'Atā' Allāh have become practically canonical among the Shādhilīyah; later masters constantly cite him. At his death his funeral procession was immense. He was buried in the

Qarāfah cemetery of Cairo where his tomb, recently totally renovated with a new mosque and minaret, has for long centuries been visited by the pious. Lately he has become the object of a number of studies by scholars because of his preeminence in Sufism and the fact that the Shādhilī order has shown a continuing vitality down to the present.

#### BIBLIOGRAPHY

Bibliographical references to Ibn ‘Aṭā’ Allāh in Arabic and European languages are to be found in Carl Brockelmann’s *Geschichte der arabischen Literatur* (Leiden, 1937–1949), vol. 1, pp. 143–144, and suppl. vol. 1, pp. 145–147. An excellent critical edition of the *Kitāb al-ḥikam*, with introduction and notes, was done by Paul Nwyia with the title *Ibn ‘Aṭā’ Allāh et la naissance de la confrérie ṣadīlīte* (Beirut, 1972). I have translated into English, with an introduction and notes, a collated version of several Arabic manuscripts of the *Kitāb al-ḥikam*, in *The Book of Wisdom* (New York, 1978). *Al-qasd al-mujarrad fī ma’rifat al-ism al-mufrad*, a text on the divine name *Allāh*, has been translated into French by Maurice Gloton as *Traité sur le nom Allāh* (Paris, 1981).

VICTOR DANNER (1987)

**IBN BĀBĀWAYHI** or Ibn Bābūyah (AH 306?–381/918?–991 CE), Abu Ja’far Muḥammad ibn ‘Alī, known as al-Ṣadūq (“the veracious”), was a Twelver Shī’ī jurist and traditionist. Very little is known of his life. According to popular belief, he was born after his father, a leading figure in the Twelver community of Qom, had asked the Hidden Imam to pray that he be granted a son. The father had a decisive influence on Ibn Bābawayhi’s early upbringing and education. Following the custom of his day, Ibn Bābawayhi traveled widely in search of knowledge. He came to Baghdad in 963 CE and, after a stay of more than a year, proceeded to Mecca to perform the pilgrimage before returning to Baghdad via Kufa in 966.

Ibn Bābawayhi was a frequent visitor to Nishapur and other Khorasani cities and was regarded by many as the leading light of Khorasani Twelver Shiism. His travels took him as far as Transoxiana, which he visited in 979. At some point in his career he established contacts with the western Iranian city of Rayy. These contacts were reinforced around 983, when Rukn al-Dawlah, the Buyid ruler of Rayy, asked him to take up residence at the court. Rukn al-Dawlah became Ibn Bābawayhi’s patron, and in return Ibn Bābawayhi provided answers to questions that his benefactor put to him on matters of doctrine. Ibn Bābawayhi was highly esteemed in Rayy, although his influence seems to have waned somewhat toward the end of his life. He died and was buried in Rayy, where a domed shrine was erected over his tomb.

Ibn Bābawayhi was a prolific writer, although fewer than twenty of some three hundred works ascribed to him have survived. Even so, the surviving works are greater in number than those of any other older or contemporary Twelver author, and their impact on subsequent generations

has been considerable. *Man lā yahḍuruhu al-faqīh* (Every man his own lawyer) is Ibn Bābawayhi’s best-known work. As the title suggests, the need for such a work arose after the disappearance of the twelfth imam—the so-called greater occultation (*ghaybah*), which began in 941—who was no longer available to answer questions on religious practice. This work was completed in 979 and became one of the four standard legal textbooks of Twelver Shiism. Shorter legal compilations are *Al-hidāyah* (Guidance) and *Al-muqni‘ fī al-fiqh* (Sufficiency in jurisprudence).

Ibn Bābawayhi’s mastery of Twelver traditions also comes to the fore in works such as the *Thawāb al-a‘māl* and *‘Iqāb al-a‘māl*, which include traditions on the reward and punishment, respectively, for praiseworthy or evil actions; the *‘Ilal al-sharā’i‘*, in which many traditions are adduced in explication of the reasons underlying various religious obligations; and the *Kitāb al-khiṣāl*, where traditions describing myriad qualities and actions are grouped in order of increasing numbers, from one to one million. Ibn Bābawayhi’s *‘Uyūn akhbār al-Riḍā* is an invaluable mine of information on the life and times of the eighth imam, ‘Alī al-Riḍā (d. 818), while *Ikmāl al-dīn wa-itmām al-ni‘mah* (The perfection of religion and completion of blessing, a title harking back to *sūrah* 5:3 of the Qur’ān) is one of the earliest and most exhaustive expositions of the doctrine of the twelfth imam, his occultation, and his future reappearance as the Mahdi (Messiah).

Ibn Bābawayhi’s interest in questions of dogma led him to compose the *Risālat al-i‘tiqādāt*, the earliest extant Twelver creed. The views that he upholds there are in general agreement with those of earlier Twelver thinkers, yet they are at times less deterministic and anthropomorphic. He thus holds that the will of God encompasses everything, including evil deeds, but then defines this will as foreknowledge. In contrast to some Twelver traditionists, he denies the possibility that God may be seen in the hereafter. Because of his declared opposition to theological disputation (*kalām*), Ibn Bābawayhi, in the creed and elsewhere, relies almost totally on traditions of the imams, to the exclusion of reasoning. For this he was criticized by his renowned pupil Shaykh al-Mufīd (d. 1022) in the latter’s *Taṣḥīh al-i‘tiqād* (Correction of the Creed). Al-Mufīd also attacked Ibn Bābawayhi’s position on some specific matters, such as his contention that the immunity (*‘iṣmah*) of prophets and imams from sin and error did not preclude the possibility of inadvertent mistakes, which God might induce in them to show that they were merely human. In his later years Ibn Bābawayhi was obliged to modify his anti-*kalām* views in the face of attacks by the Mu‘tazilāh, whose rationalist theology came increasingly to dominate Twelver thinking. This change is particularly evident in his *Kitāb al-tawḥīd* (The book of the unity of God).

As the example of al-Mufīd shows, Ibn Bābawayhi was not without his critics, whose main complaint was that he relied on traditions of dubious authenticity. It is perhaps to counter such complaints that the honorary appellation

al-Ṣadūq was conferred on him. later generations of Twelver scholars are virtually unanimous in viewing Ibn Bābawayhi as one of the pillars of Twelver Shiism. His work may in fact be regarded as adumbrating the full-fledged Twelver literature of the eleventh century.

#### BIBLIOGRAPHY

The most detailed account available of Ibn Bābawayhi's life and works is by A. A. Fyzee in the introduction to *A Shī'ite Creed* (London, 1942), a translation of Ibn Bābawayhi's *Risālat al-i'tiqādāt*. A shorter version is provided by Fyzee in the article on Ibn Bābawayhi that he wrote for the new edition of *The Encyclopaedia of Islam* (Leiden, 1960–), where further literature is cited. Ibn Bābawayhi's position on major dogmatic and juristic issues is discussed by Wilferd Madelung in "Imamism and Mu'tazilite Theology," published in *Le shī'isme imāmīte*, edited by Toufic Fahd et al. (Paris, 1970), pp. 13–30, at pp. 17–20, and by Martin J. McDermott in *The Theology of al-Shaikh al-Mufīd* (Beirut, 1978), particularly in part 2 (see also the index).

ETAN KOHLBERG (1987)

**IBN BĀJJAH** (d. AH 533/1139 CE), known in Arabic as Abū Bakr Muḥammad ibn Yaḥyā ibn al-Ṣā'igh and in Latin as Avempace, was the founder of Islamic metaphysics in Andalusia. Ibn Bājjah was also a poet and musician, an astronomer who dismissed the Ptolemaic epicycles, a politician, and a man of affairs. Born in Saragossa, reportedly of Jewish ancestry, he became a vizier when Saragossa fell to the Almoravids in 1110, but he was subsequently imprisoned while on an embassy to the former ruler. After his release, he avoided the Christian conquest of Saragossa by withdrawing to Valencia, only to be imprisoned for heresy at Játiva. This time Ibn Rushd's father or grandfather secured his release. He served twenty years as vizier to Yaḥyā ibn Yūsuf ibn Tāshufīn, lived in Seville and Granada, circulated to Oran, and died in Fez, reportedly poisoned.

Some thirty brief works preserve Ibn Bājjah's philosophy. Despite the distractions that, according to Ibn Ṭufayl, prevented him from fully clearing the storehouses of his wisdom (Goodman, 1983, p. 99), Ibn Bājjah contributed three distinctive, closely related ideas to the philosophical progression from al-Fārābī to Ibn Rushd.

1. His theory of the soul's "conjunction" (*ittiṣāl*) with the divine (namely, the Active Intellect) explains the common goal of mysticism, philosophy, ethical self-perfection, and metaphysical quest Platonically, as the consummation of an intellectual progress by which humankind is purified of material attachments and regains its true spiritual identity. By speaking of "contact" rather than simply union, and by interposing the Active Intellect between humankind and God, Ibn Bājjah attains a balance that eluded the more "inebriated" mystics (whom he criticized for their sensuality) and avoids their twin paradoxes—that humanity's identity is lost when it is finally fulfilled and that human becomes God just when

it has annihilated the self. For pantheistic oneness Ibn Bājjah substitutes at-oneness, by reading "union" cognitively, as communion. Thus the intellectuality of Ibn Bājjah's vision preserves a quasi identity for the beatified soul.

2. The beatified souls, which ceaselessly sanctify God, are united to the Active Intellect by their contact with it; lacking matter as a principle of individuation, they cannot be differentiated from one another. This artful application of the Neoplatonic insight that the notions of ordinary arithmetic do not apply to disembodied substances is later taken up in Ibn Rushd's mono-psychism; it is further clarified by Ibn Ṭufayl's deployment of the Plotinian argument that the notions of identity and difference proper to the arithmetic of bodies are inapplicable to spiritual substances. Maimonides, who proudly stated that he studied under a disciple of Ibn Bājjah, treated Ibn Bājjah's approach (when properly qualified by the realization that disembodied things can still be differentiated as cause and effect) as the solution to the problem of the arithmetic of souls.

3. Much as Plotinus had recoiled from "this blood-drenched life," Ibn Bājjah looked to fulfillment for the individual despite rather than through the social community and its cultural traditions. In a synthesis of prophetic and ascetic withdrawal, he suggests, like al-Fārābī, that the spiritual adept find a true home beyond the very categories of this life. The gesture is completed again in Ibn Ṭufayl's vivid contrast of the cultural confinement and symbolic opacity of legalism and ritualism with the free and individualistically responsible insight of the spirit of the "solitary."

Ibn Bājjah's philosophy contrasts sharply with his worldly life, but Ibn Ṭufayl, the disciple who never met him, clearly paints in the lines of force that mark the powerful movement of the philosopher from revulsion with pettinesses, shams, and hypocrisies to the higher, purer realm that achieves fuller definition by the contrast.

#### BIBLIOGRAPHY

Majid Fakhry has gathered a number of Ibn Bājjah's works in a collection, in Arabic, entitled *Opera Metaphysica* (Beirut, 1968). It includes, among others, the texts of *The Regimen of the Solitary*, *The Human Goal*, *Farewell Epistle*, and *On Contact of the Intellect with Man*. D. Miguel Asín Palacios has edited and translated into Spanish "Avempace botanico," *Al-Andalus* 5 (1940): 255–299; "Tratado de Avempace sobre la union del intelecto con el hombre," *Al-Andalus* 7 (1942): 1–47; "La 'Carta de Adios' de Avempace," *Al-Andalus* 8 (1943): 1–87; and *El Regimen del Solitario por Avempace* (Madrid, 1946). The last of these was edited and translated by D. M. Dunlop as "Ibn Bājjah's *Tadbīru'l-Mutawāḥhid* (Rule of the Solitary)," *Journal of the Royal Asiatic Society* (1945): 61–81. M. S. Hasan Ma'sumi has translated into English Ibn Bājjah's *Ilm al-naḥs* (Karachi, 1961). See also my English translation, with commentary, of Ibn Ṭufayl's *Hayy Ibn Yaqzān*, 2d ed. (Los Angeles, 1983), an important work by a disciple of Ibn Bājjah.

L. E. GOODMAN (1987)

**IBN DAUD, AVRAHAM** (1110–1180), known in rabbinic texts by the acronym RABAD I (Rabbi Avraham ben David), to distinguish him from Rabad II, Avraham ben Yitshaq of Narbonne, and Rabad III, Avraham ben David of Posquières, was a Spanish astronomer, historian, and philosopher. Avraham ibn Daud ha-Levi is best known for his history of the Jewish people, *Sefer ha-qabbalah* (*The Book of Tradition*; 1161), and his comprehensive Jewish philosophy, *Al-'aqidah al-rafiyah* (*The Exalted Faith*; 1168). He also published a work on astronomy (1180) that has not survived.

*The Book of Tradition* consists of a history of (1) the biblical period, (2) the Second Commonwealth, (3) the tannaim, (4) the amoraim, (5) the savoraim, (6) the Geonim, and (7) the rabbis after the Geonic period. On the surface, this work is a history of the Jewish people from its origins to the time of Avraham ibn Daud. But in reality, as the work's prologue and epilogue make clear, it is a detailed theological polemic that uses history. Against the Karaites, Muslims, and Christians who claimed that rabbinic tradition does not correctly record the revelation given to the children of Israel at Sinai, Avraham argues that rabbinic tradition is authentic. It is an unbroken chain of transmission of testimony to the true meaning of the divine revelation at Sinai by witnesses whose integrity is beyond question. In other words, the goal of *The Book of Tradition* is not to write the history of a people; rather, it is to show that the rabbinical account of the revelation at Sinai is true. The rabbis' testimony is to be accepted because all of the leaders of the rabbinic communities involved in the chain of tradition from Moses through Ezra to the rabbis of Andalusia in the twelfth century were individuals of intelligence and good character who therefore could be trusted to understand what they were told and to communicate the information they received honestly, without prejudice or distortion. Therefore, all accusations by Israel's enemies to the effect that rabbinic Judaism is a perversion of the theophany at Sinai are without foundation.

Whatever will be the ultimate judgment of historians on the accuracy of Avraham's history, *The Book of Tradition* has served as a prime source of information about Jewish history for Jewish and Christian historians from Avraham's own day to the twenty-first century. The seventh part of the book is considered authoritative for the history of Andalusian Jewry, because it in effect amounts to an eyewitness report. But the earlier sections of the history also continue to have great authority for modern Jewish history; for example, they remain the basis for the list of the generations of tannaim and amoraim in the studies of classical Judaism by scholars such as Isaac Weiss, Hermann Strack, and G. F. Moore.

*The Exalted Faith* is the first work of Jewish philosophy to apply the diverse elements in the thought of Aristotle to a religious philosophy of Judaism. Avraham's arguments and statements are not so developed as those of later Jewish Aristotelians such as Levi ben Gershom (Gersonides, 1288–1344), but his work is the most comprehensive of all the Jewish Aristotelians. Avraham does not cite his contemporary

sources, but he was clearly influenced by Ibn Sīnā (980–1037), Sa'adyah Gaon (892–942), and Yehudah ha-Levi (c. 1075–1141).

*The Exalted Faith* is divided into three books. Book 1 deals with those presuppositions in Aristotelian natural science that are needed to explain what Avraham considers to be the basic principles of Judaism. Book 2 uses the claims in book 1 to explain what Avraham judges to be the basic principles of Jewish faith, namely, God's existence, oneness, and attributes (Principles 1–3); the existence and function of angels (Principle 4); the authenticity of the written Torah and rabbinic tradition (Principle 5); and divine providence (Principle 6). Book 3, "On Spiritual Healing," reads as an addendum to the treatise, the proper conclusion of which is the final principle of book 2.

Avraham asserts that the whole of *The Exalted Faith* was written to solve the problem of necessity and human choice. In the past the rabbis knew a great deal about science and religious law, but in his own time that is not the case. Those who know science know little about Jewish law, and those who know Jewish law know almost no science. This deplorable state of affairs leads many religious Jews to think that the study of science is in itself harmful to Jewish religious commitment. But the price they pay for ignoring science is that they lack the appropriate training that would enable them to grasp the fundamental principles of religious law. Hence, they are not equipped to provide a viable solution to fundamental questions of Jewish faith. The treatise is intended for Jews who have mature minds but insufficient knowledge and, in consequence of both conditions, are religiously confused. In other words, *The Exalted Faith* is intended to be a guide for the perplexed Jews of Avraham's time.

*The Guide of the Perplexed* (1190) of Maimonides (Mosheh ben Maimon, 1135/8–1204) overshadowed *The Exalted Faith* in subsequent Jewish philosophy. Maimonides' writings clearly exhibit Avraham's influence, but that is not to say that the two Jewish philosophers have the same philosophy. Clearly they do not. For example, Maimonides rejects Avraham's claims that being Jewish in some way is relevant to the qualifications for prophecy, and that to some extent God's relations with the world enable human beings to have positive knowledge of God. Also, Avraham's accounts of all of the sciences are vastly more detailed than the mere hints of information contained in *The Guide*. In fact, no other work in Jewish philosophy is so comprehensive as Avraham's. Book 1 in itself is an excellent introduction to medieval Aristotelian philosophy and science for modern students. It includes a reasonably detailed explanation of philosophical concepts such as substance and accident, as well as all of Aristotelian physics, psychology, and astronomy. (Only Levi ben Gershom presented a more detailed astronomy.) Similarly, book 2 provides an excellent introduction to classical Jewish philosophy and theology for modern students. In addition to its topical breadth, Avraham's work

combines the atomistic and Neoplatonic teachings of the earlier generations of Jewish philosophers such as Sa'adyah Gaon and Yehudah ha-Levi (whose works he transcends but does not abandon) with new Aristotelian themes that subsequent Jewish philosophers such as Levi ben Gershom and Hasdai Crescas would develop in the fourteenth century. Students of Jewish history and Avraham's *Book of Tradition* will be especially interested in the fifth principle of part 2, in which Avraham spells out in detail the philosophical grounds and the theological purposes of his earlier history of the Jews.

NORBERT M. SAMUELSON (1987)  
*Revised Bibliography*

**IBN 'EZRA', AVRAHAM** (c. 1089–c. 1164), was a Jewish biblical commentator and poet. Born in Christian Spain, Ibn 'Ezra' was educated both in traditional Jewish literature and in secular subjects. He was a friend of the theologian and poet Yehudah ha-Levi and recorded his answer to Yehudah's question about God in his commentary on *Exodus* 20:2. After leaving Spain in 1140, Ibn 'Ezra' spent the rest of his life traveling through Italy, France, and England. Most of his works were written during this period.

In his travels Ibn 'Ezra' carried with him the intellectual achievements of Judeo-Muslim culture in Spain. One of the first to write on secular subjects in Hebrew (rather than Ara-

bic), which required that he develop a technical vocabulary for standard scientific terms, he exposed Jews outside the Iberian Peninsula to the sophisticated study of Hebrew grammar and to other new areas of scholarly investigation.

Ibn 'Ezra' wrote several original treatises on mathematics, astronomy, and scientific instruments, chapters of what may have been intended as an encyclopedia of astrology, and Hebrew translations of Arabic scientific works, some no longer extant in the original. More a systematizer than a profoundly original scientific thinker, he was important for his transmission of Arabic science to the West and for his efforts to integrate all bodies of knowledge with biblical exegesis and Jewish doctrine. Some traditionalists viewed him as a dangerous proponent of possibly heretical teachings.

The poetry of Ibn 'Ezra' broke away from classical Andalusian Hebrew poetics to a more popular mode. *Hay ben Mekiz*, modeled after Abū 'Alī Ibn Sīnā's (980–1037) *Ḥayy ibn Yaḳẓān*, is perhaps the first attempt at sustained allegory in medieval Hebrew literature. At the same time Ibn 'Ezra' was one of the last of the Spanish liturgical poets. His commentary on *Ecclesiastes* 5:1 contains an apologia for the newer, Spanish style, celebrating clarity of expression and purity of biblical diction. His commentary also contains an incisive critique of the older form, represented by the great medieval liturgical poet El'azar Kallir, for its intermixing of biblical and rabbinic Hebrew, grammatical errors, and intentional obscurity. Poetry used in prayer, he argued, must be intelligible to the masses.

*Yesod Morā'* (c. 1160) treats many standard problems of medieval Jewish religious and ethical thought. The *Iggeret ha-Shabbat* was written to defend the traditional Jewish view that the Sabbath begins at sundown on Friday evening.

Ibn 'Ezra' composed commentaries on all the books of the Hebrew Bible, although some have been lost. The introduction to his commentary on the Torah provides a critical review of contemporary biblical exegesis. Four types of commentators are censured: (1) those who frequently incorporate scientific treatises into comments on biblical phrases; (2) the Karaites, who reject rabbinic tradition; (3) those who make the Torah into a cryptic expression of esoteric doctrine; and (4) those who fill their commentaries with homiletic interpretations from the rabbis. Ibn 'Ezra' then outlines his own method, heavily dependent upon grammar and semantics. His plan was first to explain each problematic word and then to explicate the simple meaning of the passage as a whole.

These biblical commentaries remained the most enduringly influential part of Ibn 'Ezra's oeuvre, engendering more than a dozen supercommentaries, many of which attempted to elucidate the "secrets" to which he occasionally referred. Some of his interpretations were scathingly rebutted by Moses Nahmanides (Mosheh ben Nahman, 1194–1270), who referred to his "open rebuke and hidden love" for Ibn 'Ezra'. Barukh Spinoza (1632–1677), in chapter eight of *Theological-Political Treatise* (1670), cited the comments of

Ibn 'Ezra' on *Genesis* 12:6 and *Deuteronomy* 1:1 as evidence that the medieval commentator had anticipated his own position in questioning the Mosaic authorship of the entire Pentateuch.

#### BIBLIOGRAPHY

The explosion of interest in various aspects of Ibn 'Ezra's oeuvre is reflected in Robert Singerman's bibliographic survey, "Abraham ibn 'Ezra' Scholarship, 1970–1990," *Jewish Book Annual* 49 (1991–1992). Two collections of essays, Isadore Twersky and Jay M. Harris, eds., *Rabbi Abraham ibn Ezra* (Cambridge, Mass., 1993); and Peter J. Tomson, ed., *Abraham ibn Ezra: Savant universel* (Brussels, 2000), contain studies of his biblical exegesis, philological and grammatical work, scientific treatises, poetry, and influence. A thorough treatment of Ibn 'Ezra's method as a commentator is in Ezra Zion Melamed's *Mefarshai ha-mikra*, vol. 2, pp. 515–714 (Jerusalem, 1975). Annotated translations of Ibn 'Ezra's commentary on the Pentateuch are Jay F. Schachter, *The Commentary of Abraham Ibn 'Ezra' on the Pentateuch: Leviticus* (Hoboken, N.J., 1986); and H. Norman Strickman and Arthur M. Silver on the four other books, *Ibn Ezra's Commentary on the Pentateuch* (New York, 1988–2001). Irene Lancaster, *Deconstructing the Bible* (London, 2003), is a translation and detailed analysis of Ibn 'Ezra's introduction to the Torah commentary. Israel Levin's *Avraham ibn-Ezra: Hayyav ve-shirato* (Tel Aviv, 1969) is a good general treatment of his poetry. Selected translations are in Leon J. Weinberger's *Twilight of a Golden Age* (Tuscaloosa, Ala., 1997). Ibn 'Ezra's major ethical work has been translated and edited by Strickman, *The Secret of the Torah* (Northvale, N.J., 1995). Important investigations of his scientific treatises are Bernard Goldstein, "Astronomy and Astrology in the Works of Abraham ibn Ezra," in *Arabic Sciences and Philosophy* 6 (1996): 9–21; Tzvi Langermann, "Some Astrological Themes in the Thought of Rabbi Abraham ibn Ezra," in Twersky and Harris, pp. 28–85; and Tony Lévy, "Abraham ibn Ezra et les mathématiques: remarques bibliographiques et historiques," in Tomson, pp. 60–75; and, comprehensively, Shlomo Sela, *Abraham ibn Ezra and the Rise of Medieval Hebrew Science* (Leiden, Netherlands, 2003). Levin provides an annotated Hebrew anthology of all genres of Ibn 'Ezra's work in *Yalkuṭ Avraham ibn 'Ezra'* (New York, 1985).

MARC SAPERSTEIN (1987 AND 2005)

**IBN GABIROL, SHELOMOH** (c. 1021–1058), known in Latin texts as Avicbron, Avencebrol, and Avicembron; Jewish poet and the first Jewish philosopher in Spain. Ibn Gabirol was born in Malaga, was raised in Saragossa, and died in Valencia. He is best known in the Jewish community as the author of secular, ethical, and liturgical poetry that reflects Jewish faith under the influence of both Neoplatonism and Ṣūfī poetry. His poems include *Ha-‘anaq*, a 400-verse Hebrew grammar that he composed when he was twenty

years old; *Azharot*, a rhymed enumeration of the 613 commandments of the Torah; and *Keter malkhut* (*The Royal Crown*), his most famous liturgical poem, which is a part of the liturgy for the Day of Atonement.

*The Royal Crown* contains four sections. The first two deal with names of God, the third presents Ibn Gabirol's cosmology, and the fourth is a confessional prayer. The overall theme of the poem is the great distance between God and man, and Ibn Gabirol's description of the structure of the heavens in section three reinforces his account of this vast separation. The universe is arranged in five parts, consisting of the sublunar world, the supralunar world (the heavens), the sphere of Intelligence, the "Throne of Glory," and the Will of God (or God's Wisdom).

Of particular importance in Ibn Gabirol's spiritual cosmology are the doctrines of divine glory (*kavod*) and the throne of glory (*kisse ha-kavod*). The soul is generated from the radiance of the former, and the latter is the place under which the souls of the righteous are stored after their separation from their bodies and until the end of days. Ibn Gabirol's eschatology reflects the tension within his own thought between his affirmation of the traditional rabbinic belief in a final end of humanity that is a return to corporeal life and his interpretation of this belief via a Neoplatonic schema that identifies the realm of spirit with good and the realm of body with evil. The result of the tension is that he spiritualizes the nature of the world to come (*ha-'olam ha-ba*). Hence, the final vision is not of a particular place at a particular time, but simply of an idealized perfection, a *sum-mum bonum*, of the human soul.

In 1045 Ibn Gabirol composed an ethical study in Arabic, *Islah al-akhlaq* (On the improvement of the moral qualities), which was translated into Hebrew by Yehudah ibn Tibbon in 1167 under the title *Tiqqun middot ha-nefesh*. Man's soul, Ibn Gabirol says, comes from the realm of Intelligence and enters Nature, but it remains between these two realms throughout its embodied life. Its goal during this life is to return to the level of Intelligence by means of knowledge and practice. Perhaps the most original part of this book is the correlation that Ibn Gabirol draws between virtues and vices, the external human senses, the humors, and the four elements of the sublunar world (air, water, earth, and fire). All human beings are composites of these elements and corresponding humors. A proper balance of these components produces human virtues, whereas an imbalance produces vices.

Ibn Gabirol's major philosophic work is *Yanbu' al-hayat* (*The Fountain of Life*), of which no copies of the original Arabic text have survived. It was translated into Latin in 1150, under the title *Fons vitae*, by Dominicus Gundisalpinus, archbishop of Segovia, with the assistance of a Jewish convert. In the thirteenth century Shem Ṭov ben Yosef Falaquera translated excerpts from the original into Hebrew under the title *Liqqutim mi-sefer meqor hayyim*; Jewish scholars apparently felt no need to prepare a Hebrew translation

of the entire work, since the Aristotelian Avraham ibn Daud had judged it to be excessively verbose, philosophically shallow, and religiously questionable. Ibn Daud's critique of *The Fountain of Life* in his work *The Exalted Faith* (1168) is a major reason why Ibn Gabirol's philosophic masterpiece was ignored by subsequent generations of Jewish philosophers.

A philosophic study of matter and form, *The Fountain of Life* is devoid of any direct reference to biblical or rabbinic texts or doctrines, which in itself explains why subsequent Christian scholars could mistake this book's author for a Muslim or a Christian. In fact it was only in 1845 that Salomon Munk identified Avicebron, the author of *Fons vitae*, as Ibn Gabirol, the author of *Meqor hayyim*.

*The Fountain of Life* is divided into five treatises. The first is a general introduction of the topic of matter and form and their relation to physical substances. The second deals with the substance or matter that underlies the corporeality of the sublunar world. The third is a proof of the existence of simple substances, which function in Ibn Gabirol's ontology as intermediaries between God and the physical world. The fourth is a proof that these simple or spiritual substances are composed of form and matter, and the fifth treatise is an account of the universal form and universal matter that underlie everything in the universe except God.

The main thesis of the work is that everything in God's universe has matter as well as form, a doctrine severely criticized by Ibn Daud and ignored by all subsequent Jewish philosophers until Barukh Spinoza. While *The Fountain of Life* had little influence on Jewish thought, it was a major influence on thirteenth-century Christian philosophy. The main thesis was adopted by Duns Scotus and the Neoplatonic Franciscans, while it was opposed by Albertus Magnus, Thomas Aquinas, and the Aristotelian Dominicans. Among the Christian thinkers who explicitly referred to Avicebron were Dominicus Gundissalinus, William of Auvergne, Alexander of Hales, Bonaventure, William of La Mar, and Giordano Bruno.

## BIBLIOGRAPHY

### Works by Ibn Gabirol

The primary edition of the Latin translation of Ibn Gabirol's *The Fountain of Life* is *Avengebrolis fons vitae*, edited by Clemens Bäumker (Münster, Germany, 1892–1895). A partial English translation has been made by Harry E. Wedeck (New York, 1962), and a complete English translation by an unnamed author can be found at the library of the University of Pennsylvania. In addition, Salomon Munk's *Mélanges de philosophie juive et arabe* (1859; reprint, New York, 1980), in which Munk demonstrates that Ibn Gabirol is Avicebron, contains the selections from *The Fountain of Life* that were translated into Hebrew by Shem Ṭov ben Yosef Falaquera.

Ibn Gabirol's philosophical poem *Keter Malkhut* (Y. I. Zaidman, ed.; Jerusalem, 1950), which closely parallels the content of

the *Fons vitae*, was translated into English by Bernard Lewis under the title *The Kingly Crown* (London, 1961). There are published collections of Ibn Gabirol's liturgical (Jerusalem, 1979) and secular (Jerusalem, 1975–1976) Hebrew poetry, but as of yet no English translation of either collection. Israel Zangwill made English translations of some of the liturgical poems in *Selected Religious Poems of Solomon Ibn Gabirol*, edited by Israel Davidson (1930; reprint, New York, 1973). The primary study of Ibn Gabirol's major work in ethics is Stephen S. Wise's translation and edition of *The Improvement of the Moral Qualities* (New York, 1902), which contains the original Arabic text.

### Works about Ibn Gabirol

Modern critical study of Ibn Gabirol's philosophy is almost virgin territory for scholars. Published general studies, most of which date from the nineteenth century, range from Herman N. Adler's *Ibn Gabirol and His Influence upon Scholastic Philosophy* (London, 1865) to Jacques Schlanger's *La philosophie de Salomon ibn Gabirol* (Leiden, Netherlands, 1968) and Raphael Loewe's *Ibn Gabirol* (London, 1989). Studies of Ibn Gabirol's poetry include Raphael Loewe's "Ibn Gabirol's Treatment of Sources in the *Kether Malkhut*" (in *Studies in Jewish Religious and Intellectual History Presented to Alexander Altmann*, edited by Siegfried Stein and Raphael Loewe, pp. 183–194 [Tuscaloosa, Ala., 1991]), a variety of articles written in Hebrew, and Adena Tanenbaum's extensive treatment of the poetry in *The Contemplative Soul: Hebrew Poetry and Philosophical Theory in Medieval Spain* (Leiden and Boston, 2002). Of special interest are the following: Raymond P. Scheindlin's study of the relationship between Ibn Gabirol's poetry and Ṣūfī poetry (in *Sefarad* 54 [1994]: 109–141), and John M. Dillon's study of Ibn Gabirol's doctrine of intelligible matter in *Neoplatonism and Jewish Thought*, edited by Lenn E. Goodman (Albany, N.Y., 1992).

Two works have been published in Hebrew that deal with Ibn Gabirol's relationship to Jewish mysticism. They are Israel Levin's *Mystical Trends in the Poetry of Solomon ibn Gabirol* (Lod, Israel, 1986) and Yehudah Liebes's "Rabbi Solomon ibn Gabirol's Use of the Sefer Yesira and a Commentary on the Poem 'I Love Thee,'" *Jerusalem Studies in Jewish Thought* 6 (1987): 73–123. However, neither has been translated into English.

Other related studies that deserve mention are Michael Wittmann's study of Thomas Aquinas's opposition to Ibn Gabirol, entitled *Die Stellung des heiligen Thomas von Aquin zu Avengebrol* (Münster, Germany, 1900), and Milton Arfa's "Abraham ibn Daud and the Beginnings of Medieval Jewish Aristotelianism" (Ph.D. diss., Columbia University, 1954), a discussion of Ibn Daud's severe criticism of *The Fountain of Life*.

NORBERT M. SAMUELSON (1987 AND 2005)

## IBN ḤANĀBILAH SEE ḤANĀBILAH

**IBN ḤAZM** (AH 384–456/994–1064 CE), more fully Abū Muḥammad ʿAlī ibn Aḥmad ibn Saʿīd ibn Ḥazm, was

a Muslim theologian and man of letters. Born in Cordova to a rich and influential family, Ibn Ḥazm received a distinguished education in religious sciences, literature, and poetry. Nonetheless, he grew up in a period of disruptive ethnic and clan rivalries that saw the decline of the Umayyad caliphate at Cordova and the formation of tiny kingdoms fighting among themselves. His own childhood was marred by the disgrace of his father after the fall of Caliph Hishām II and by the destruction of the family home at Balāṭ Mughīth in the course of bloody battles between Arabs and Berbers.

As a result of his political activities on behalf of the legitimist (Umayyad) party, Ibn Ḥazm met with imprisonment, banishment, and flight but was appointed to high positions as well, serving as vizier at least twice, under ‘Abd al-Raḥmān III al-Murtadā and ‘Abd al-Raḥmān V al-Mustazhir, and possibly a third time under the last caliph, Hishām al-Mu‘tadd. Profoundly disappointed by his political experience and offended by the conduct of his contemporaries, Ibn Ḥazm subsequently left public life and devoted his last thirty years to literary activities.

His writings are quite personal, shaped by the intensity of his own reactions and rigorous in their condemnation of what is, in fact, only human nature. *Ṭawq al-ḥamāmah* (The dove’s neck-ring), a youthful work that was clearly revised later, is interesting in several respects. As a collection of prose passages and poetic illustrations on the subject of love and lovers, it offers a fairly standard treatment of a popular theme in Arabic literature. What sets it apart, however, is Ibn Ḥazm’s penetrating observation of human psychology, a trait found in his later study of characters and conduct, *Kitāb al-akhḫāq wa-al-siyar*, as well. Underlying the delicate charm of the prose and poetry in *Ṭawq al-ḥamāmah* is an uneasy sensibility. Questioning, for example, the sincerity of exchanges between women and their lovers, Ibn Ḥazm finds a gap between what is said and what is thought and concludes that language often serves to mask thought. This otherwise commonplace discovery of dishonesty provides him in turn with a basis for profound reflection on language and its wider uses, and it is here that he introduces the notion of *zāhir*, the “apparent” or literal meaning of words.

This line of thought is further developed when Ibn Ḥazm examines the word of God. In opposition to the Mālikīyah, he argues that people are bound to obey only the law of God, in its *zāhir* or literal sense, without restrictions, additions, or modifications. Although he was originally a Shāfi‘ī jurist, Ibn Ḥazm joined the Zāhirī school and brought to it a systematic structure of logic. For the interpretation of sacred texts, he put together a Zāhirī grammar in which he specifically eliminates the ambiguities that grammarians were using to explain certain syntactical forms. He takes the position that language itself provides all that is necessary for the understanding of its content and that, therefore, God, who revealed the Qur’ān in clear (*mubīn*) Arabic, has used the language to say precisely what he means. Each verse should be understood grammatically and lexically in its

immediate and general sense: When God wants a verse to have a specific meaning, he provides an indication (*dalīl*), in the same verse or elsewhere, which allows the meaning to be restricted.

The significance of a Qur’anic text can also be determined by a *ḥadīth* recognized as authentic after careful critical examination; a verb in the imperative, for example, can be taken as a command, but also as a suggestion: The meaning can be determined only from the literal sense of the context. From this position, it follows that Ibn Ḥazm strongly criticizes the use of reasoning by analogy (*qiyās*) and the principles of personal evaluation: the pursuit of what is considered good (*istiḥsān*), the pursuit of values for the common good (*istiṣlāḥ*), and most of all, the recourse to personal opinion (*ra’y*) by which the jurists sought to extend divine law to cases not mentioned in the texts (*nuṣūṣ*). In the same spirit, he limits the basis of consensus (*ijmā‘*) to the companions of the Prophet; the agreement of the community of scholars on a legal question does not authorize the derivation of a law.

In *Al-iḥkām fī uṣūl al-aḥkām* (Judgment on the principles of *Aḥkām*), Ibn Ḥazm develops his method for classifying human acts within the five established juridical categories (*aḥkām*) of obligatory, recommended, disapproved, forbidden, and lawful: For an action to fall into one of the first four categories, there must be a text (Qur’ān or authentic *ḥadīth*) that establishes its particular status; otherwise, the act is lawful. This method is further applied in his voluminous treatise on Zāhirī law, *Kitāb al-muḥallā* (The book of ornaments).

Ibn Ḥazm is also famous for his great work, the *Fiṣal* (Detailed critical examination), in which he offers a critical survey of different systems of philosophical thought in relation to religious beliefs among the skeptics, Peripatetics, brahmans, Zoroastrians and other dualists, Jews, and Christians. Using the examination of these religions to establish the preeminence of Islam, he also attacks all the Muslim theologians, the Mu‘tazilah and the Ash‘arīyah in particular, along with the philosophers and mystics. His main objection is that each of them raises questions about the revealed text only to resolve them by purely human means. Ibn Ḥazm does not deny recourse to reason, because the Qur’ān itself invites reflection, but this reflection must be limited to two givens, revelation and sense data, because the so-called principles of reason are in fact derived entirely from immediate sense experience. Thus reason is not a faculty for independent research, much less for discovery.

By submitting humans exclusively to the word of God, Ibn Ḥazm’s literalism frees them from any choice of their own. His drive for synthesis leads him to demonstrate the harmony of all the Qur’anic and prophetic texts through the application of Zāhirī principles. As a result, his work constitutes one of the most original and important monuments of Muslim thought.

#### BIBLIOGRAPHY

A general work for the study of Ibn Ḥazm is W. Montgomery Watt and Pierre Cachia’s *A History of Islamic Spain* (Edin-

burgh, 1965), which provides a useful summary of cultural and political history as well as a detailed bibliography. D. B. Macdonald's *Development of Muslim Theology, Jurisprudence and Constitutional Theory* (1903; reprint, New York, 1965) and Ignác Goldziher's classic work *The Zāhirīs: Their Doctrine and Their History*, translated and edited by Wolfgang Behn (Leiden, 1971), shed light on the legal and theological currents of which Ibn Ḥazm was a part.

A work that specifically concerns Ibn Ḥazm is my *Grammaire et théologie chez Ibn Ḥazm de Cordoue: Essai sur la structure et les conditions de la pensée musulmane* (Paris, 1956). Miguel Asín Palacios's *Abenḥázam de Córdoba y su historia crítica de las ideas religiosas*, 5 vols. (Madrid, 1927–1932), is an analytical edition and partial translation of Ibn Ḥazm's most famous work, *Kitāb al-faṣl fī al-milal wa-al-ahwā' wa-al-nihal*. His *Ṭawq al-ḥamāmah fī al-ulfah wa-al-ullāf* has been translated by A. R. Nykl as *A Book Containing the Risala Known as the Dove's Neck-ring, about Love and Lovers* (Paris, 1931) and by A. J. Arberry as *The Ring of the Dove* (London, 1953).

*Translated from French by Miriam Rosen*

**IBN KHALDŪN** (AH 732–808/1332–1406 CE) was a Muslim historian, famous as the first systematic theoretician of the social, economic, psychological, and religious forces that determine human history and society. Born in Tunis into an aristocratic and scholarly family that had left Seville for Northwest Africa almost a century earlier, he received the thorough education customary among the Muslim middle and upper classes. Entering government service shortly after he lost his parents and many of his teachers to the Black Death, he soon left Tunis and in 1354 arrived in Fez, where he was well received by the Marinid ruler but also had to suffer the customary tribulations of political involvement.

The Northwest African period of his life included a sojourn of a little over two years in Andalusian Granada (December 1362–February 1365), during which he undertook a diplomatic mission to Christian Seville, and over three years of quiet retirement from active politics (1375–1378) in rural Qal'at Ibn Salāmah (province of Oran). There he started work on his great history of the world (*Kitāb al-'Ibar*) and completed its "introduction," the *Muqaddimah*, in 1377. Returning to his native Tunis in order to complete the history, he reentered government service but soon felt that his position at court was shaky. Under the pretext of going on the pilgrimage to Mecca, he left Tunis in October 1382 for Egypt. There he spent the rest of his life as a college professor and administrator and achieved the zenith of his career with an appointment to the prestigious and influential Mālikī judgeship. His religious experience was enlarged by a pilgrimage to Mecca (1387–1388) and, in particular, a visit to the holy cities of Palestine (1400). A meeting with the Mongol ruler Timur in Damascus early in 1401 was another noteworthy event of his Egyptian period. He died unexpectedly in Cairo on March 17, 1406.

Ibn Khaldūn's approach to religion was conditioned by the fact that he lived in a Muslim society and was a prominent member of its religio-juridical establishment. Both as an enormously complex institution and as a powerful religious force in society, Islam is always present in his work and his thought. The encyclopedic outline of Muslim civilization in the *Muqaddimah* contains brief and factual sketches of the religious sciences and institutions; these sketches are admirably persuasive and have proved useful, for Muslims and non-Muslims alike, as a first introduction to the subject. The historical development of the sciences connected with the Qur'ān, the prophetic traditions (*ḥadīth*), and jurisprudence is analyzed in a deceptively simple manner, and the great political-theological problems agitating Muslim society, such as the character of the caliphate and the ever present messianic expectations, are discussed astutely.

A matter of vital concern in Ibn Khaldūn's life and time was the religious and social meaning of the relationship of Islam, in its dominant traditional manifestation as a sum of fundamentalist theology and law, to the individual and group emotionality of internalized religion represented by Sufism (*taṣawwuf*, "mysticism"). He is credited with a legal responsum (*fatwā*) and historical description and discussion of theories on mysticism, that expands on the chapter devoted to Sufism in the *Muqaddimah*. He supports traditional Sufism and rejects its ecstatic, seemingly antinomian forms, while being fully aware of their great impact on society. Other supernatural sciences, that were taken very seriously throughout medieval Islam, such as sorcery, astrology, and "scientific" attempts at divining the future, are discussed as to their compatibility with the traditional religious outlook. In general, Ibn Khaldūn applies a sense of realism to his basic concern with the forces governing human society. His approach to the religious/political institutions and religious sciences of Islam is predicated upon the assumption that human rationality, different though it is from revealed religion, affects them as it does all other cultural activity. Even where psychological or supernatural factors appear to be involved, humankind's task is to rely on reason, seconded by observation and experience, for understanding and explaining its world.

This approach raises the question of how Ibn Khaldūn reconciled his views on the normal course of human affairs with the dominant religious traditions and beliefs. The importance of his work results from his remarkable attempt to explain the historical processes in human terms, assumed by him to possess universal validity. Culture, equated with human life, is seen as dependent upon population density, a natural assumption in premodern times possibly confirmed for people in the fourteenth century by the devastation of the Black Death. The innate human psychological need to belong and give political support to a group dominated by one or more leading personalities, for which Ibn Khaldūn chose the code word *'aṣabīyah*, translated approximately as "group feeling," is instrumental in producing the circular ebb and

flow of concentrations of political power necessary for all civilization; religious convictions are beneficial, at times even indispensable, for an *‘aṣabiyyah* to achieve its potential. Economic factors—to a large extent controllable by proper human management, provided that the wisdom and will for it are present—complete the picture of human society, or societies, as based upon reason, numbers, and psychology.

What role, then, belongs to the principal religious tenets of Islam, such as God, prophecy, and the other world? Ibn Khaldūn could not disregard this question. He takes for granted the undeniable reality of the vast metaphysical structure set up by traditional Islam. Although he argues that prophecy cannot be proved by logical means, and he explains prophecy, on the human side, as depending on an extraordinary power of the soul, he accepts as a matter of course the existence of a succession of chosen human beings who are transmitters of the divine message, culminating in the prophet Muḥammad. Metaphysical forces are seen to have exercised a large, and often lasting, influence in certain ages, particularly at the origin of Islam. The potential for divine interference in human affairs at any given time continues to exist. Such interference, however, as in the form of miracles whose occasional occurrence cannot be denied, constitutes an interruption of the ordinary and need not be reckoned with in studying human society and the rules governing it. The widespread speculation about the end of the world concerned him only inasmuch as it was a belief that tended to conflict with political realities. There was practically no need for him to discuss life after death, which he accepted as a powerful belief.

It is tempting to ascribe to Ibn Khaldūn a kind of secularism and even claim for him a tendency to separate religion from politics and sociology. This view is anachronistic and disregards Muslim reality. Ibn Khaldūn was not an original religious thinker, but he showed a deep and no doubt genuine appreciation of the importance of Islam and religion in general. As befitted his position in life, he was sincere in his reverence for traditional Islam and the dogmas and practices it had produced. His individual religious views were not such as to cause much of a stir among his contemporaries, and there was little reason for later generations to pay attention to them. It was his way of looking at history that deeply impressed succeeding historians, especially among the Ottoman Turks. The full significance of his achievement began to find worldwide appreciation in the nineteenth century.

#### BIBLIOGRAPHY

A classified bibliography can be found in Aziz Al-Azmeh's *Ibn Khaldūn in Modern Scholarship* (London, 1981), pp. 229–318. Among translations of Ibn Khaldūn's works, two are recommended: *The Muqaddimah*, 3 vols., an English translation by Franz Rosenthal (1958; reprint, Princeton, N.J., 1980), and *Le voyage d'Occident et d'Orient*, a French translation of the *Autobiography* by Abdesselam Cheddadi (Paris, 1980).

A good introduction to the thought of Ibn Khaldūn remains Muhsin Mahdi's *Ibn Khaldūn's Philosophy of History* (Lon-

don, 1957). While there are numerous studies of his sociological, philosophical, and historical thought, few are devoted to the specifically religious aspects of his work; among them is Ignacio Saadé's *El pensamiento religioso de Ibn Jaldūn* (Madrid, 1973).

FRANZ ROSENTHAL (1987)

**IBN RUSHD** (AH 520–595/1126–1198 CE), better known in Western sources as Averroës, was the last outstanding Arab philosopher and commentator of Aristotle. Ibn Rushd was born in Córdoba, the capital of Muslim Spain (*al-Andalus*) in 1126, into a family of prominent (Mālikī) religious scholars. His full name in Arabic is given as Abū al-Walīd Muḥammad ibn Aḥmad ibn Rushd, and he is reported to have studied jurisprudence (*fiqh*), Arabic letters (*adab*), theology (*kalām*), philosophy, and medicine with a number of eminent teachers, some of whose names are given in the biographical sources. None of his philosophy teachers are mentioned by name, but he is reported to have had the highest regard for Ibn Bājjah (Avempace, d. 1139), who was responsible for introducing Aristotle into al-Andalus and was the first Arab philosopher in that part of the Islamic world. In addition, Ibn Rushd was a friend of Ibn Tufayl (d. 1185), author of a well-known philosophical novel, *Ḥayy Ibn Yaḡzān*, which has been compared to *Robinson Crusoe*. Ibn Tufayl, who was the royal physician of the caliph, Abū Ya'qūb Yūsuf, introduced Ibn Rushd in 1169 to that prince, who was apparently genuinely interested in philosophy, but complained of the “abstruse idiom of Aristotle or his (Arabic) interpreters.” Thereupon, Ibn Rushd was commissioned to comment on Aristotle's works for the use of the caliph and was appointed Mālikī judge (*qāḍīn*; *qāḍī*) of Seville and later chief judge of Córdoba. In 1182, he was appointed royal physician at the court of Marakesh, where he died in 1198 at the age of seventy-two; he was buried in his birthplace of Córdoba.

When Abū Yūsuf, surnamed al-Manṣūr, succeeded his father in 1184, Ibn Rushd continued to enjoy royal patronage, but in 1195, probably in response to public pressure instigated by the Mālikī jurists, who were averse to the study of philosophy and the “ancient sciences,” Ibn Rushd's fortune took an adverse turn; he was exiled to Lucena, to the southeast of Córdoba; his books were burned; and the study of philosophy and the sciences, with the exception of astronomy, medicine, and arithmetic, was prohibited. Ibn Rushd's disgrace, however, did not last long and he was soon restored to favor, but died shortly after.

**WRITINGS.** Ibn Rushd's writings fall into five distinct categories: philosophical, theological, juridical, medical, and linguistic.

His philosophical writings consist of a series of commentaries—long, intermediate, and short (i.e., summaries or paraphrases)—of the whole Aristotelian corpus with the exception of the *Politics*, totaling thirty-eight titles, which have

survived in Arabic, as well as Hebrew and Latin translations. In addition, he wrote paraphrases of Plato's *Republic* and the *Isagoge* of Porphyry; commentaries on *De intellectu* of Alexander of Aphrodisias, the *Metaphysics* of Nicolaus of Damascus, and the *al-Magest* of Ptolemy; and a series of original tracts titled *On the Intellect*, *On the Syllogism*, *On the Conjunction with the Active Intellect*, and *On the Heavenly Sphere*. To these tracts should be added a number of polemical tracts, aimed at al-Fārābī (d. 950) and Ibn Sīnā (d. 1037).

The theological treatises include the *Decisive Treatise* (*Faṣl al-Maqāl*) and the *Exposition of the Methods of Proof* (*al-Kashf*), to which his rebuttal of Abū Ḥāmid al-Ghazālī's *Incoherence of the Philosophers*, discussed below, might be added. Ibn Rushd's juridical writings include two treatises on jurisprudence, of which the *Primer of the Discretionary Scholar* (*Bidāyat al-Mujtahid*) has survived. His medical writings consist of *al-Kulliyāt*, translated into Latin as *Colliget*, as well as the short tracts *On Fever*, *On the Humors*, and *On Theriac*. There are also a number of paraphrases or summaries of Galen's medical treatises and finally a commentary on Ibn Sīnā's medical proem, known as *al-Urjūzah*. Ibn Rushd also wrote a solitary treatise on Arabic grammar.

**DEFENSE OF PHILOSOPHICAL DISCOURSE.** Philosophy, which found its way into the Arab Muslim world in the eighth century, was not always well received in intellectual Islamic quarters, but came into collision with Islamic theology (*kalām*) towards the middle of the ninth century. The philosophical-theological confrontation reached its climax in the last quarter of the tenth century, when al-Ghazālī, generally regarded as the greatest theologian of Islam, launched his onslaught against the philosophers in a classic work of antiphilosophical polemic entitled *Incoherence of the Philosophers* (*Tahāfut al-Falāsifah*), published in 1085. Almost a century later, Ibn Rushd took up the cudgels against al-Ghazālī in a book entitled *The Incoherence of the Incoherence* (*Tahāfut al-Tahāfut*, 1180). Shortly before, Ibn Rushd wrote the already-mentioned *Decisive Treatise* (1178) and *Exposition of the Methods of Proof* (1179) to defend the thesis of the harmony of the religious law (*sharī'ah*) and philosophy (*ḥikmah*) and to define the subject matter of theological enquiry respectively.

In the first of these two treatises, Ibn Rushd sets out to prove that religious law has indeed "commanded" the study of philosophy, which he defines as "the investigation of existing entities and their consideration insofar as they reveal their Maker." He supports this claim by reference to a series of Qur'anic verses that call upon humankind to "investigate the kingdom of the heavens and the earth" (7:184), "to reflect upon the creation of the heavens and the earth" (3:191), and "to consider, you people of understanding" (59:2).

This investigation, reflection, or consideration, Ibn Rushd goes on to argue, is only possible by means of rational deduction (*qiyās*), which he contrasts with legal deduction, or analogy, which had been sanctioned from the earliest times by legal scholars. If the latter is religiously admissible,

he says, the former ought to be as well. To do this, the seeker of religious truth must first acquire a thorough knowledge of the various forms of deduction, the demonstrative (*burhānī, apodeictic*), the dialectical, the rhetorical, and the sophistical, corresponding to the four types of syllogism given in Aristotle's *Organon*. The highest of these forms of deduction, according to Ibn Rushd, is the demonstrative, which is the prerogative of the philosophers, followed by dialectic, the prerogative of the theologians (*Mutakallimūn*), and the rhetorical, the prerogative of the masses at large. The sophistical form is naturally excluded as invalid.

To illustrate the methodology he proposes in the *Decisive Treatise*, Ibn Rushd proceeds in the *Exposition* to list and discuss the major propositions that constitute the subject matter of what was known in the Middle Ages as Scholastic theology, discussed for instance in the *Summa Theologica* of Thomas Aquinas (d. 1274). The list opens with the existence of God, his attributes, and his creation of the world, followed by questions concerning the commissioning of prophets, divine decree and predestination, and resurrection.

In connection with the proofs of the existence of God, Ibn Rushd is critical of the Ash'arite proof, which rests on the two premises of the creation of the world in time and its composition of indivisible particles or atoms, neither of which, according to him, is demonstrable or certain. His own proof, which he believes to be embodied in the Qur'ān, is the teleological, or as he calls it, the proof from divine providence (*'ināyah*) or invention (*ikhtirā'*).

**REBUTTAL OF AL-GHAZĀLĪ'S INCOHERENCE OF THE PHILOSOPHERS.** A pivotal aspect of Ibn Rushd's philosophical output is the rehabilitation of philosophy, which had come under constant assault almost from the start. The most devastating such assault was launched by the great Ash'arite theologian and mystic al-Ghazālī in his *Incoherence of the Philosophers*, by whom he meant al-Fārābī and Ibn Sīnā, the chief Islamic interpreters of Aristotle, according to him. Those philosophers, al-Ghazālī argues, should be charged with irreligion (*kufī*) on three questions and heresy or innovation (*bid'ah*) on seventeen. The former questions or propositions are the pre-eternity of the world, God's knowledge of universals but not of particulars, and the denial of bodily resurrection. The remaining seventeen include the post-eternity of the world; the inability of the philosophers to prove conclusively the existence of God, his unity, or his simplicity; and their assertion of a necessary causal "correlation" between natural occurrences that neither observation nor reason warrants.

In his rebuttal, Ibn Rushd counters the first charge by arguing that the philosophers distinguish between "continuous" and "discontinuous" creation and hold that the former, known in the Middle Ages as *creatio ab aeterno*, is more appropriately predicated of God. Ibn Rushd counters the second charge by arguing that God's knowledge is generically different from human knowledge insofar as it is the *cause* of the object known, whereas human knowledge is the *effect* of

that object, on the one hand, and its modality is unknown to us on the other. Finally, he counters the third charge by asserting that bodily resurrection is a matter in which all the religious scriptures, including the Qur'ān, the Gospels, and the Jewish scriptures, concur. Belief in bodily resurrection and the similar religious dogmas should not be questioned insofar as they are preconditions of happiness and virtue in this life, and, although not philosophically demonstrable, they should be adhered to on moral, social, and pragmatic grounds.

On the question of necessary causation, Ibn Rushd argues along Aristotelian lines that the repudiation of causality is tantamount to the repudiation of scientific knowledge altogether, since such knowledge is grounded in the knowledge of the specific properties of existing entities and the way in which they impinge on each other as causes and effects.

**ETHICS AND POLITICS.** Ibn Rushd's contribution to ethics is embodied in his summary of Aristotelian ethics and a middle commentary on the *Nicomachean Ethics*, which has survived only in Latin translations. More interesting in this context is his *Paraphrase of Plato's Republic*, which has survived in Hebrew and Latin translations and in which he discusses at some length the interrelation of the two "practical" sciences of ethics and politics. He states in the preface that he has elected to paraphrase Plato's famous political treatise because Aristotle's *Politics* "has not fallen into our hands." He does not appear to be aware of the fact that the Aristotelian treatise was never translated into Arabic in his day and was only translated from Greek in 1957 by Augustin Barbara.

In his paraphrase (*jawāmi'*), Ibn Rushd distinguishes the two practical sciences of ethics and politics, whose object is action, from the theoretical, whose object is scientific knowledge. Ethics, he then argues, has a certain analogy with medicine insofar as it has, like medicine, two subdivisions: hygienic and therapeutic. The former is concerned with the way in which habits and voluntary modes of behavior or traits become ingrained in the soul; the latter with the way in which those habits or modes of behavior are restored once they are gone. All the practical virtues, however, are subservient to the theoretical, which consist of the rational, deliberative, moral, and technical, corresponding to Aristotle's table in the *Nicomachean Ethics* VI, or reason (*nous*), practical wisdom (*phronesis*), and practical art (*techné*).

Politics, by contrast, is concerned with those modes of association in which the human is a political animal (*zoon politicon*) and is forced to choose, by dint of the need for security and survival, as Plato held in the *Republic*, Book I. Ibn Rushd agrees with Plato that the state, like the individual soul, has three parts—the rational, the spirited (*thymos*), and the appetitive—with which the perfection of each is bound up. Thus, a person is described as wise to the extent the rational part of his or her soul rules the spirited and the appetitive. A person is courageous to the extent his or her spirited part is subservient to the rational, and temperate to the extent his or her appetitive part is subservient to the rational as well.

The same is true of the state and its parts. When all the parts of the soul or state are rationally ordered, the supreme virtue of justice arises. This virtue is defined at the individual level as "the way in which everyone of the (soul's) parts (i.e., the rational, the spirited, and the appetitive) does only what it has to do in the appropriate manner and at the appropriate time." At the collective or the political level, justice is stated to be "nothing more than that every man in the state does the work that is his by nature in the best way he possibly can." This is achieved once the class that possesses the virtues of knowledge and wisdom (i.e., the philosopher-king and the guardians) are allowed to rule the two subordinate classes of auxiliaries (the military) and laborers.

**LATIN AVERROISM: IBN RUSHD IN THE WEST.** Less than three decades after his death, the commentaries of Ibn Rushd found their way into Western Europe in Hebrew and Latin translations. The interest of the Jews in his writings stemmed from the high regard in which he was held by his countryman, the great Jewish Aristotelian, Moses Maimonides (d. 1204). By 1230, Michael the Scot, Herman the German, and William of Luna rendered into Latin the greater part of Ibn Rushd's commentaries. No sooner had these translations found their way into learned circles in France and Italy than they caused a major intellectual stir. First, they led to the rediscovery of Aristotle, whose philosophy was almost completely forgotten since the time of Boethius (d. c. 525), the Roman consul and author of the *Consolations of Philosophy*, who had translated the whole logical corpus of Aristotle, known as the *Organon*, and commented on parts of it. Secondly, they contributed to the rise of Latin Scholasticism, one of the glories of late Medieval philosophy, as Étienne Gilson has put it, which prior to that rediscovery was inconceivable. Thirdly, they contributed to the rise of European rationalism, which Gilson has attributed in his *Reason and Revelation in the Middle Ages* (1938) to the influence of that "Arabian philosopher (meaning Averroës). . . who bequeathed to his successors the ideal of a purely rational philosophy, an ideal whose influence was to be such that, by it, even the evolution of Christian philosophy was to be deeply modified" (p. 38).

By the middle of the thirteenth century, as a consequence of Ibn Rushd's influence, Latin philosophers and theologians split into rival groups, the pro-Averroists, represented by Siger of Brabant (d. 1281), Boethius of Dacia (d. 1284), John of Jandun (d. 1328), and others; and the anti-Averroists, represented by Thomas Aquinas, his teacher Albertus Magnus (d. 1280), and others. The controversy between the two groups reached such a pitch that the bishop of Paris, Etienne Tempier, was forced to issue in 1270 the first condemnation of fifteen heretical propositions, thirteen of which were of Averroist inspiration. This was followed in 1277 by a second condemnation of 219 propositions of Averroist and Aristotelian inspiration.

In the next century, Dante Alighieri (d. 1321) advanced in his *De Monarchia* an antipapalist and secularist thesis

based on Averroës's theory of the "possible intellect," which was met with staunch opposition from ecclesiastical quarters. In 1327, Dante was condemned as an Averroist and his *De Monarchia* was burned in the public square of Bologna by order of Pope John XXII.

The anti-Averroist group, led by Thomas Aquinas, challenged the Averroists on three major counts: the unity of the intellect, the eternity of the world, and the scope of divine providence. In his famous tract, *De unitate intellectus, contra Averroistas*, Thomas Aquinas challenges Averroës's interpretation of Aristotle's view of the intellect as both universal and transcendent, and accordingly susceptible of immortality in both its possible and active capacities.

On the question of the eternity of the world, Thomas Aquinas contends, following the lead of Maimonides in his *Dux Perplexorum*, that Aristotle did not actually assert the eternity of the world in a conclusive way, but had in two of his works, *Topica* and *De Coelo*, regarded it as simply probable. As regards the scope of divine providence, Averroës explicitly, and Aristotle by implication, were accused of a rigid determinism that left no scope for divine intervention in the form of miracles.

Latin Averroism continued to gain ground in Padua, Bologna, and elsewhere in Italy well into the sixteenth century. The chief Averroists of the period were John of Jandun (d. 1328), Marsilius of Padua (d. 1343), Urban of Bologna, Paul of Venice, and others.

Pietro Pomponazzi (d. 1525), who tended to follow Alexander of Aphrodisias in his interpretation of Aristotle, was nevertheless in agreement with Averroës that religion has a purely pragmatic, social, and ethical function insofar as it contributes to private and public morality. The chief Averroists of the sixteenth century included Niphus and Zimara, the two most accomplished commentators on the works of Aristotle and Averroës during that period.

MAJID FAKHRY (2005)

**IBN SĪNĀ** (AH 370–428/980–1037 CE), more fully Abū 'Alī al-Ḥusayn ibn 'Abd Allāh ibn Sīnā, known in Latin as Avicenna; Muslim philosopher and physician. Ibn Sīnā was born in Afshana, a village near Bukhara. Today a city in Uzbekistan, Bukhara was at that time the capital of the Samanid rulers, for whom Ibn Sīnā's father worked.

**EDUCATION.** Ibn Sīnā grew up in a bilingual environment; his native language was Farsi (Persian), but the language of his education was Arabic. The heritage of these two cultures was to lead to the two very different lines of his influence on later thinkers.

The education provided for Ibn Sīnā by his father was very wide-ranging, encompassing both Muslim religious studies and secular subjects from the Arabic, Greek, and Indian traditions. He began by memorizing the Qur'ān and much of the didactic literature known as *adab*, then went on to study Muslim jurisprudence (*fiqh*). His father and brother were followers of the Isma'īlī branch of Shī'ī Islam, which encouraged the study of hermetic philosophy, Neoplatonism, and mathematics. Ibn Sīnā did not become an Isma'īlī but did study these subjects, as well as "Indian calculation," probably meaning the use of the Hindi (Arabic) numerical system. When he reached ten years of age, his father hired a tutor to teach him Greek philosophy and science. For the next several years he studied Aristotle's logic, Euclid's geometry, and Ptolemy's astronomy and quickly surpassed his tutor in his knowledge of these subjects.

From age fourteen or fifteen Ibn Sīnā continued his studies on his own, reading the texts and commentaries in the natural sciences, metaphysics, and medicine. He excelled in this last subject, to the point that he was practicing and teaching it by the time he was sixteen. He completed his education in the following year and a half, reviewing and mastering all the branches of philosophy: logic, mathematics, natural science (or physics), and metaphysics. He was helped in his understanding of metaphysics by the commentary of Abū Naṣr al-Fārābī (d. 950 CE), whose commentaries on Greek philosophy and original writings had a great influence on Ibn Sīnā. In his attack on both Ibn Sīnā and al-Fārābī, the great theologian al-Ghazālī (d. 1111) was to consider their views virtually identical.

**PUBLIC LIFE.** Ibn Sīnā's entry into public life began during this period of study, when he was summoned to treat the Samanid emir in Bukhara and then became part of his court. He was to spend the rest of his life—the next forty years—as a courtier, with all of the vicissitudes of fortune which that position usually entails. He held both medical and political positions in a number of courts in areas that are today part of Iran and the central Asian republics, usually being forced to leave a given territory by “necessity,” as he laconically calls it. At several courts he was an important minister, but the jealousy of rivals and an undoubtedly arrogant attitude toward his intellectual inferiors (virtually everyone he met) brought about his downfall and imprisonment or hasty escape from most of these courts.

During the time of this active political involvement, Ibn Sīnā was also engaged in writing a large and influential corpus of works on medicine and all branches of philosophy. Many of these works have been lost, and many that exist today are unedited, so we cannot speak with certainty about his philosophical development. Most of his major writings have survived, however, with the exception of *Al-inṣāf* (The judgment), in which he compared the Eastern and Western views of Aristotle's philosophy. This work was lost during his lifetime; it might have answered some of the questions about his philosophy which exist even today. The two most influential of his works, *Al-qānūn fī al-ṭibb* (The canon of medicine) and *Al-shifā'* (The healing [of the soul]), were written over a period of years and were intended to be compendia of their subjects, medicine and philosophy. Most of his other major writings that can be dated were composed during the last thirteen years of his life, which he spent in Isfahan or on campaign with its ruler, as his official physician and courtier. During this period he composed some works in Farsi, such as the *Dānish-nāmah-i 'Alā'ī* ('Alā'ī philosophy), and oversaw the translation of some of his earlier Arabic treatises into Farsi. In all, more than 130 works by Ibn Sīnā have survived to this day, many of them found only in manuscript form in Middle Eastern libraries.

Ibn Sīnā was interested in all branches of knowledge, religious and secular. Once, in order to avenge a slighting remark about his knowledge of Arabic philology, he spent three years studying the subject, then wrote several letters imitating exactly the greatest prose stylists in the language, and concluded his study by writing a book on the subject. Most of his surviving writings are of this sort: accounts of one aspect or another of the learning of his time, often in response to questions posed by his contemporaries. His philosophy is presented more systematically in his major works: the *Shifā'*; the *Najāt* (Salvation [from error]), a selection of the most important parts of the *Shifā'*; *Ishārāt wa-al-tanbīhāt* (Instructions and remarks), the last of his major writings; and the *Dānish-nāmah-i 'Alā'ī*. The *Shifā'*, for example, is divided into four parts, treating logic, physics, mathematics, and metaphysics; the first three parts are further subdivided, thus covering virtually all of the subjects of philosophy.

**THOUGHT.** As can be seen from his major writings, Ibn Sīnā wished not merely to study all knowledge but to synthesize it as well. Aristotle's philosophy, Neoplatonism, Islamic religious teachings, and quite possibly Zoroastrian concepts were all present in his intellectual background, and traces of all of these traditions can be found in his thought. In his cosmology, for example, he adopts the Neoplatonic theory of emanation from a Necessary Existent through a series of Intelligences to the Active Intelligence, from which emanate the vegetative, animal, and rational souls and the material basis of the sublunary world. This emanation is necessary, since it is implicit in the nature of the Necessary Existent, as is its absolute goodness.

The Necessary Existent is the only exception to Ibn Sīnā's absolute distinction between essence and existence. For the Necessary Existent, essence and existence are identical; for all other existents they are separate. Even though the Necessary Existent is the Prime Cause of the created universe, the latter is independent of the Necessary Existent, which has no control over the good and (necessary) evil resulting from the process of emanation. Thus he employs Neoplatonic ideas in his attempt to harmonize the theory of Aristotle, which regards matter as coeternal with the Prime Mover, and the belief in creation by God *ex nihilo* held by Muslims. He was later criticized by Ibn Rushd (Averroës; d. 1198) for not following Aristotle more closely and was accused of heresy by al-Ghazālī for not accepting creation *ex nihilo*.

In his exposition of the relationship between human beings and the Necessary Existent, Ibn Sīnā likewise advocates a position that draws upon Neoplatonism to synthesize the various positions current in his time. Each human being, he states, is composed of body, soul, and intelligence. The highest aspect of the human being, the intelligence, desires to reach its perfection, to return to the source from which it has emanated. Passing back through the various stages of emanation, which Ibn Sīnā compares to passing through the stages of the mystical path, the individual intelligence ultimately achieves union with the Necessary Existent. There are similarities between this view and Aristotle's position that the greatest human happiness is found in the godlike activity of contemplation. However, in no sense could a part of the human soul become identified with the Prime Mover in Aristotle's system. Ibn Sīnā is closer to an Islamic position in his discussion of the relationship of humans to the Necessary Existent. But it is not the orthodox theological doctrine, which stresses the absolute separateness of human beings and God, that he approaches in his account. Rather, it is the Šūfī, or mystical, view of the divine-human relationship. His mysticism differs from that of most Šūfīs, however, in his argument that the *'arīf* (“knower,” or, perhaps, “Gnostic”) can attain the *ma'rifat Allāh* (“knowledge of God”) by his own will; he does not need God's grace to achieve this state of illumination.

In recent years, students of Ibn Sīnā's religious thought have found traces of Zoroastrian influence, in addition to the

influences of Aristotelian, Neoplatonic, and Islamic ideas. His theory of the role of the Intelligences in the universe bears a resemblance to the angelology of Zoroastrianism, and much less to the traditional Islamic view of angels as God's vicegerents and messengers. The individual must awaken to the knowledge that his intellect is a part of the world of the angels; at that point the mystical journey begins. Ibn Sīnā's view of the material universe as eternal, evil (mixed with good), and completely determined is related not only to the tenets of Gnosticism and Manichaeism that still survived in the Iran of his time, but also to the late Zoroastrian doctrine of Zurvanism, which held even God to be bound by fate. In his development of a philosophical vocabulary in Farsi, he shows a knowledge of Zoroastrian terminology and adapts it to his own system.

**INFLUENCE ON THE WEST.** In canto 4 of his *Inferno* Dante includes Ibn Sīnā with the great pagan writers of antiquity in Limbo, the highest circle of Hell. Muslims were generally seen as schismatics—Dante in fact puts Muḥammad and ʿAlī among the schismatics in canto 28—so it is surprising to encounter Ibn Sīnā alongside Homer, Plato, and Aristotle. Dante placed him in this high position quite likely because of the great influence his writings had exerted on Christian thought over the previous century and a half. His influence on Dante's ideas was especially strong.

Ibn Sīnā's influence in the West began almost as soon as his works began to be translated in twelfth-century Spain. Most of the *Shifāʾ* was translated into Latin before 1150, and it presented Christian thinkers with their first exposure to a completely coherent cosmology and system of metaphysics. It had a seductive attraction because of its comprehensiveness and was in some respects easier to accept than Aristotle's philosophy. Because Aristotle's works were being translated at the same time as those of Ibn Sīnā, and because some Neoplatonic works were attributed to Aristotle (e.g., the *Liber de causis*, a collection of extracts from Proclus's *Elements of Theology*), it was not always easy to distinguish the ideas of the two philosophers. During the thirteenth century, however, students of their works and commentators on them were able to separate the two men and identify the spurious works attributed to them. At this point it was discovered by Christian theologians, as al-Ghazālī had alleged over a century earlier, that Ibn Sīnā's cosmology and metaphysics posed a danger to orthodox monotheism, whether Christian or Muslim.

Ibn Sīnā's philosophical system was too well constructed to refute completely and too widespread to ignore. Virtually all of the scholastic theologians accepted some of his ideas, although none went so far as to become "Latin Avicennists." The Christian writer who came closest to adopting his philosophy completely was his twelfth-century translator, Dominicus Gundissalinus, who wrote a number of works which borrowed heavily from the psychology and metaphysics of Ibn Sīnā, which Gundissalinus had translated into Latin. Gundissalinus's works, as well as those of Ibn Sīnā, were viewed critically by William of Auvergne (or William

of Paris, c. 1180–1249). He accepted Ibn Sīnā's distinction between essence and existence but strongly rejected his emanationist creation theory, including the hierarchy of Intelligences existing between humans and God. In this rejection he was followed by Albertus Magnus (1206–1280) and Thomas Aquinas (1224–1274).

The two most important Christian thinkers strongly influenced by Ibn Sīnā were the British Franciscans Roger Bacon (c. 1214–after 1292) and John Duns Scotus (c. 1265–1308). Bacon did not compose a systematic theology but, rather, wrote a scientific encyclopedia resembling in many ways Ibn Sīnā's *Shifāʾ*. Neither Ibn Sīnā nor Roger Bacon wished to compare each point with the views of the ancient philosophers; as Ibn Sīnā told his chief disciple, Jūzjānī, "If you would be satisfied with my composing a work in which I would set forth what, to me, is sound in these sciences, without debating with those who disagree or devoting myself to their refutation, I would do that" (Gohlman, 1974, p. 55). Bacon also believed that Ibn Sīnā was, after Aristotle, the prince of philosophy. Even so, Bacon could not follow Ibn Sīnā completely: he substitutes God for Ibn Sīnā's creating Active Intelligence, for example. Duns Scotus adopted Ibn Sīnā's definition of metaphysics as the study of being *qua* being, and his discussion of universals was largely based on that of Ibn Sīnā as well.

**INFLUENCE IN THE MUSLIM WORLD.** Ibn Sīnā had a number of disciples who continued studying and teaching his philosophical system. The orthodox Islamic revival of the eleventh century CE, however, crowned by al-Ghazālī's attack on the philosophers, limited the spread of his ideas to those areas not under the control of the Seljuk dynasty. The fact that he did not found a school like the Academy or Lyceum also restricted his influence to the occasional scholar or group of scholars. It is ironic that his philosophical writings became a part of the curriculum of European universities but not of the *madrasahs* (colleges) established in the Muslim world.

Ibn Sīnā's influence on Muslim writers, especially in the Farsi-speaking area of the Muslim world, was, nevertheless, important. The most significant impact of his thought was on Sufism, more specifically on the Ishrāqī (Illuminationist) school of Sufism founded by Shihāb al-Dīn Yaḥyā Suhrawardī (1153–1191). The source of this influence was not his great encyclopedia of philosophy, the *Shifāʾ*, but rather several short treatises, *Ḥayy ibn Yaḡzān*, *The Bird*, *On Love*, and *Salmān and Absāl*, as well as the last sections of his *Ishārāt*. There is a dispute among contemporary scholars concerning the extent to which Ibn Sīnā intended these works to be interpreted exoterically as mystical treatises. The Ishrāqī Sūfīs, however, read them in this way and combine them with the obviously mystical theosophy of Muḥyi al-Dīn ibn al-ʿArabī (1165–1240) and the ideas of his contemporary Suhrawardī to form the most influential school of mystical philosophy in the Farsi-speaking Islamic world.

The aspect of Ibn Sīnā's writings that attracted Suhrawardī and his followers was his Eastern (*mashriqīyah*) philosophy. The Arabic words for "Eastern" and "Illuminationist" (*mushriqīyah*) are written identically; according to Suhrawardī they mean the same thing in Ibn Sīnā's works. Unfortunately, the most important of his writings on Eastern philosophy, *Al-inṣāf*, was lost, but his references to the East in *Ḥayy ibn Yaqzān* and *The Bird* convinced Suhrawardī that Ibn Sīnā was on the right track. Suhrawardī translated the latter into Farsi and wrote a companion work to *Ḥayy ibn Yaqzān*, which he called *Western Exile*. In his basic treatise *Ḥikmat al-ishrāq* (Illumination wisdom), Suhrawardī points out that the sources of wisdom that Ibn Sīnā lacked were precisely those writings of Zoroastrianism, Pythagoreanism, and Hermetism which were both Eastern and Illuminationist. He rejects Ibn Sīnā's distinction between essence and existence, saying that existence has no reality outside the intelligence that abstracts its essence. Ibn Sīnā's view of form and matter, similar to that of Aristotle, is transformed by Suhrawardī into light and darkness; the human soul is composed of light. He interprets Ibn Sīnā's treatises to be symbolic accounts of the return of the soul/light to the Supreme Light, and wrote several treatises that describe this journey of the soul to God.

The Ishrāqī tradition was most influential in Iran after the establishment of the Safavid regime (1499–1722) and its adoption of Shī'ī Islam as the official state religion. In Isfahan, the Safavid capital after 1598, the two greatest exponents of the Ishrāqī school were Mīr Dāmād (d. 1631) and his pupil Mullā Ṣadrā (1571/2–1640). Mīr Dāmād wrote a commentary on the metaphysics of the *Shifā'* in which he combined the teachings of Ibn Sīnā and Suhrawardī, particularly in the area of angelology. Mullā Ṣadrā, the greatest of the Ishrāqī theosophers, founded a school that continues to the present day. His synthesis of philosophy, revelation, and illumination follows Ibn Sīnā's principle of the primacy of existence and its division into necessary, possible, and impossible existents. He departs from Ibn Sīnā's views and relies more on Ibn al-'Arabī, the Neoplatonists, and Islamic revelation in holding that the sciences of the "otherworld," learned by illumination and revelation, are true knowledge and far superior to the sciences of this world. Just as the Europeans had accepted only one aspect of Ibn Sīnā's thought, the philosophical/scientific, the Ishrāqīyah selected only the other aspect, the mystical, for inclusion in their system of belief.

#### BIBLIOGRAPHY

The best account of Ibn Sīnā's life and works is his brief autobiography and its continuation by his disciple Jūzjānī, which I have edited and translated as *The Life of Ibn Sīnā* (Albany, N.Y., 1974). A survey of his writings and their influence on the European and Islamic worlds is found in Soheil M. Afnan's *Avicenna: His Life and Works* (London, 1958); a work emphasizing his influence on Christian and Jewish thought is *Avicenna: Scientist and Philosopher*, edited by G. M. Wickens (London, 1952). The best analysis of his

metaphysical theories is Parviz Morewedge's *The Metaphysics of Avicenna (ibn Sīnā)* (New York, 1973), which is a translation of the *Ilāhīyāt* (Metaphysics) of the *Dānish-nāmah-i 'Alā'ī* with an extensive commentary and comparison with Ibn Sīnā's other works on metaphysics. The negative side of the debate over interpreting his works esoterically is presented by Amélie-Marie Goichon in such works as the introduction and notes in her French translation of the *Ishārāt: Livre des directives et remarques* (Paris, 1951) and *Le récit de Ḥayy ibn Yaqzān* (Paris, 1959). The case for an esoteric interpretation is made in Henry Corbin's *Avicenna and the Visionary Recital*, translated by Willard R. Trask (New York, 1960); the connection between Ibn Sīnā and the Ishrāqī school is shown in Seyyed Hossein Naṣr's *Three Muslim Sages: Avicenna, Suhrawardī, Ibn 'Arabī* (Cambridge, Mass., 1964).

WILLIAM E. GOHLMAN (1987 AND 2005)

**IBN TAYMĪYAH** (AH 661–728/1263–1328 CE), more fully, Taqī al-Dīn Abū al-'Abbās Aḥmad ibn 'Abd al-Ḥalīm ibn 'Abd al-Salām al-Ḥarrānī al-Dimashqī, was a jurisconsult, theologian, and Ṣūfī. He was born in Harran, and at the age of six he fled with his father and brothers to Damascus during the Mongol invasions. Ibn Taymīyah devoted himself from early youth to various Islamic sciences (Qur'ān, *ḥadīth*, and legal studies), and he was a voracious reader of books on sciences that were not taught in the regular institutions of learning, including logic, philosophy, and *kalām*.

**EARLY CAREER.** Ibn Taymīyah studied law under the direction of his father and Shams al-Dīn 'Abd al-Raḥmān al-Maqdisī (d. 1283). Under several teachers of *ḥadīth* he studied a number of works, in particular the *Musnad* of Aḥmad ibn Ḥanbal, (a *ḥadīth* collection that he read several times), the "six books" of *ḥadīth*, and the biobibliographical *Mu'jam* of al-Ṭabarānī. He studied Arabic grammar and lexicography for a brief period under Sulaymān ibn 'Abd al-Qawī al-Ṭūfī (d. 1316); then, on his own, he mastered Sībawayh's text on grammar. He became qualified to issue legal opinions before the age of twenty; at twenty-one, upon the death of his father in 1283, he succeeded him as professor of *ḥadīth* and law at Dār al-Ḥadīth al-Sukkarīyah, a Ṣūfī monastery and college of *ḥadīth* founded around the middle of the thirteenth century in Damascus. Ibn Taymīyah was a prolific writer, described as "fast to learn and slow to forget": It was said of him that once he learned something, he never forgot it.

Ibn Taymīyah also succeeded his father at the Umayyad Mosque, where he gave lectures on Qur'anic exegesis. His biographers record that, lecturing without notes, he would give materials for two or more fascicles. On one of these Fridays of Qur'anic exegesis in the Umayyad Mosque in 1291, Ibn Taymīyah lectured briefly on the divine attributes. This was his first known public venture into controversial dogmatics. The reaction was quick among his opponents, who tried to prevent him from lecturing further in the mosque but failed

in their attempt. Ibn Taymīyah's treatment of the divine attributes was given as part of his profession of faith, the *'aqīdah*. The Shāfi'ī chief *qāḍī* Shihāb al-Dīn al-Khuwayyī declared: "I am in agreement with the creed of Shaykh Taqī al-Dīn [ibn Taymīyah]." When he was reproved, he continued: "because he has sound intelligence, speaks from extensive knowledge, and says only what he knows to be sound."

In 1292 Ibn Taymīyah went on the pilgrimage to Mecca, where he gathered materials for his work *Manāsik al-ḥajj* (Rituals of the pilgrimage), denouncing a number of practices in the rituals of the pilgrimage as condemnable innovations.

The Shāfi'ī historian Ibn Kathīr, in the events of the year 1293/4, treats of the affair of 'Assāf al-Naṣrānī ("the Christian"), who was reported by witnesses to have cursed the Prophet. Ibn Taymīyah and a companion, al-Fāriqī, apparently implicated in the affair for encouraging the assault and battery to which 'Assāf and his bedouin protector were victims, were flogged and put under house arrest. This was the episode behind Ibn Taymīyah's work *Kitāb al-ṣārim al-maslūl 'alā shātim al-rasūl* (The sharp sword drawn against the reviler of the messenger [of God]).

In 1296, at the death of his professor Zayn al-Dīn ibn Munajjā, Ibn Taymīyah succeeded to the chair of law thus vacated in the Madrasah Ḥanbalīyah. His biographer Ibn Rajab said that he read an autobiographical note in Ibn Taymīyah's own hand to the effect that Ibn Taymīyah was offered, before the year 1291 (thus before the age of thirty), the post of *shaykh al-shuyūkh*, or head of the Ṣūfīs, and the post of chief *qāḍī*, but he refused them both. Refusals to assume such posts usually meant that the scholar wished to stay aloof from the central power, out of desire for a private scholarly life, or in order to pursue the ascetic life, or to remain free to criticize practices he deemed not in keeping with the tenets of Islam. When Ibn Taymīyah's subsequent life is taken into consideration, his refusal clearly appears to have been based on the last of these reasons.

**OPPOSITION TO THE ASH'ARĪYAH.** Ibn Taymīyah lived in a period between those of two notable propagandists of the rationalist Ash'arī movement in theology: Ibn 'Asākir (d. 1176) and Subkī (d. 1370). The attempt of the Ash'arī movement to obtain legitimacy by infiltrating the Shāfi'ī *madhhab* (school) of law—an attempt that surfaced in the eleventh century—was still developing and had to face two implacable forces blocking its goal. The traditionalist movement was represented particularly by two *madhhabs* of law: the Ḥanbalī and the Shāfi'ī. The former was the obvious obstructive force, while the latter included the Ash'arī faction, which was hard at work to gain the adherence of fellow Shāfi'īs to Ash'arī thought, an effort destined to fail in the face of the alliance between the traditionalists of the two *madhhabs*.

Already in the days of Ibn 'Asākir the traditionalists had introduced an institution that was conceived to correct,

among other things, the detrimental consequences of the exclusory principle in the *madrasah*, according to which only those students who chose to belong to the *madhhab* represented by the *madrasah* were admitted. This policy tended to be divisive, separating members of the traditionalist movement who belonged to all the Sunnī *madhhabs*, while allowing the Ash'arīyah to stay within one *madhhab*, the Shāfi'ī. The new institution that helped to correct the situation was the Dār al-Ḥadīth, wherein the principal subject of instruction was *ḥadīth* rather than law, and students of any of the four *madhhabs* could attend. Thus a Ḥanbalī professor, such as Ibn Taymīyah, could have students belonging to the Shāfi'ī *madhhab*, such as al-Birzālī, Mizzī, and al-Dhahabī. The first Dār al-Ḥadīth was founded in Damascus by the Zengid ruler Nūr al-Dīn (d. 1173).

To the philosophical theology of the Ash'arīyah, Ibn Taymīyah opposed his famous professions of faith (*'aqīdah*; pl., *'aqā'id*). His first full-length *'aqīdah*, written at the request of the people of Hama in the year 1299 and therefore known as *Al-'aqīdah al-ḥamawīyah*, was very hostile to the Ash'arīyah and their *kalām*-theology. According to Ibn Rajab, Ibn Taymīyah wrote this *'aqīdah* in one sitting. His other important profession of faith is the *'Aqīdah wāsiṭīyah*, written for a group of religious intellectuals in Wāsiṭ (Iraq) before the arrival of the Mongols in Damascus. Both professions of faith were attacked by his enemies, and he was taxed with anthropomorphism. In a meeting in the house of the Shāfi'ī *qāḍī* Imam al-Dīn 'Umar ibn 'Abd al-Raḥmān al-Qazwīnī (d. 1299) the *'Aqīdah ḥamawīyah* was studied; Ibn Taymīyah was questioned regarding various points, and it was deemed to be satisfactory. Regarding the *Wāsiṭīyah*, even the Ash'arī-Shāfi'ī Ṣafī al-Dīn al-Hindī (d. 1315) found it to be in conformity with the Qur'ān and *sunnah*. Nevertheless, his enemies tried hard to keep him in prison, even to have him executed, but failed on both counts.

Ibn Taymīyah's polemic activity extended to the philosophers, especially the logicians, against whom he wrote a refutation, *Al-radd 'alā al-manṭiqīyīn*. He wrote extensively against the monistic (*ittiḥādīyah*) and incarnationist (*hulūlīyah*) Ṣūfīs and condemned as heretical innovations many of the Ṣūfī practices of his day. Nevertheless, Ibn Taymīyah was praised by the Ṣūfī Abū 'Abd Allāh Muḥammad ibn Qawwām, who said: "Our Sufism became sound only at the hands of Ibn Taymīyah," implying that Ibn Taymīyah was not an outsider to Sufism. Recently discovered evidence shows that Ibn Taymīyah belonged to the Ṣūfī order of the Qādīriyah, named after the Ḥanbalī Ṣūfī 'Abd al-Qādir al-Jīlānī, whom he praised and preferred to the other Ḥanbalī Ṣūfī, al-Anṣārī al-Harawī.

On the theological question of the divine attributes, Ibn Taymīyah held that God should be described "as he has described himself in his book and as the Prophet has described him in his *sunnah*." This classical traditionalist doctrine goes back to al-Shāfi'ī (d. 820) and to Aḥmad ibn Ḥanbal (d. 855), the two great leaders of the movement, in whose

works Ibn Taymīyah was thoroughly versed. Ibn Taymīyah and his famous disciple Ibn Qayyim al-Jawzīyah (d. 1350) drew much of their inspiration from the works of al-Shāfiʿī and Ibn Ḥanbal. From the genesis of the traditionalist movement the principal message has always been that the basic sources for belief and practice are the book of God and the practice (*sunnah*) of the Prophet.

Ibn Taymīyah, in the title of one of his numerous works, emphasized the place of the Prophet in relation to the two fundamental sources: *The Steps Leading to the Knowledge That the Messenger of God Has Already Made a Clear Exposition of the Roots and Branches of Religion*. For the Prophet, as messenger, brought the book of God and was himself a living example of what should be followed. Ibn Qayyim al-Jawzīyah quotes from the introduction to al-Shāfiʿī's *Risālah*: "Praise be to God . . . who is as he has described himself, and who is exalted above all the attributes given to him by those among his creatures who have described him." And again: "No event shall befall an adherent of God's religion but that there is a guide in the book of God showing the right way to be followed." These two statements were quoted against the Ashʿariyah, the rationalist movement of the period of Ibn Taymīyah and Ibn Qayyim, as al-Shāfiʿī had said them some five centuries before in condemnation of the Muʿtazilah, the rationalist movement of his day.

**UNDER ATTACK.** Ibn Taymīyah's troubles came chiefly from his opposition to Ashʿarī thought working from within the Shāfiʿī *madhhab*, and also from his criticism of extremist Ṣūfī thought and practices. His troubles (*mihān*; sg., *mihnah*) were treated extensively by his Shāfiʿī disciples al-Birzālī, al-Dhahabī, and Ibn Kathīr, and by the Ḥanbalī biobibliographer Ibn Rajab.

Ibn Taymīyah's enemies finally succeeded in removing him from the scene. The opportunity was presented by one of his legal opinions (*fatwās*) titled "Travel to the Tombs of the Prophets and Saints," in which Ibn Taymīyah prohibited such travel. His opponents pounced on this *fatwā* and charged him with demeaning the prophets and with unbelief (*kufī*). Eighteen jurisconsults, led by the Mālikī *qāḍī* al-Ikhnāʿī, wrote *fatwās* condemning him. The four chief *qāḍīs* of Cairo issued their decision that he be imprisoned in the citadel of Damascus. Other jurisconsults, including the two sons of the leading Mālikī jurisconsult Abū al-Walīd, had issued *fatwās* condemning that decision. They stated that it had no valid basis against Ibn Taymīyah because he had simply cited the divergent opinions of the jurisconsults on the subject of the visiting of tombs (*ziyārat al-qubūr*) and had given preponderance to one side of the question, a choice that was legitimate to make. But the decision stood without appeal. Ibn Taymīyah was never to leave the citadel alive; he died there some two years later. Three months before his death, his enemy al-Ikhnāʿī, against whom he had written a refutation, complained to the sultan, who ordered that Ibn Taymīyah be deprived of the opportunity to write; his ink, pen, and paper were taken away from him.

But to the very last, his enemies could not quite get the better of him.

The biographers cite a number of statements made by Ibn Taymīyah during his imprisonment that show the man's stature and state of mind. "A prisoner is one who has shut out God from his heart." "A prisoner is one whose passions have made him captive." "In this world there is a paradise to be entered; he who does not enter it will not enter the paradise of the world to come." "What can my enemies possibly do to me? My paradise is in my breast; wherever I go it goes with me, inseparable from me. For me, prison is a place of retreat; execution is my opportunity for martyrdom; and exile from my town is but a chance to travel." In reference to his enemies who strove to have him imprisoned: "If I were to give all the gold it takes to fill the space of this citadel, I could not possibly reward them for the good they have done me." And he often repeated the following prayer: "O God! Help me to move my tongue incessantly in your praise, to express my gratitude, and to serve you in perfect worship."

On 20 Dhū al-Qaʿdah 728 (September 26, 1328), Ibn Taymīyah died in the citadel at the age of sixty-five. The populace turned out in the hundreds of thousands for the funeral procession, which was compared to that of Aḥmad ibn Ḥanbal. He was buried next to his brother, Sharaf al-Dīn ʿAbd Allāh, in the Ṣūfī cemetery where other Ṣūfī members of his family were buried.

Ibn Taymīyah's influence has reached modern times. His teachings, first followed by Muḥammad ibn ʿAbd al-Wahhāb (d. 1792), became the basis of the Wahhābī movement in the nineteenth century and the guiding principles of the Wahhābī state of Saudi Arabia. Again, in the nineteenth and twentieth centuries, through Muḥammad ʿAbduh and Rashīd Riḍā, they influenced the modernist Salafīyah movement.

## ICONOCLASM

*This entry consists of the following articles:*

AN OVERVIEW

ICONOCLASM IN THE BYZANTINE TRADITION

### ICONOCLASM: AN OVERVIEW

Iconoclasm can be defined as the intentional desecration or destruction of works of art, especially those containing human figurations, on religious principles or beliefs. More general usage of the term signifies either the rejection, aversion, or regulation of images and imagery, regardless of the rationale or intent. Any investigation of either the historical events or the concept of iconoclasm raises questions regarding the valuing and meaning of imagery, particularly sacred art and ecclesiastical doctrines. Traditionally, doctrinal pronouncements defined roles, functions, and meanings of art or iconoclasm within specific religious traditions.

Any study of iconoclasm is premised on the bifurcation of a historical event or a cultural attitude or idea. As a historical event, iconoclasm can be interpreted as being either active or passive. The former category includes legitimate accounts of the damaging of images; whereas the latter category corresponds to the promulgation and the contents of religious doctrines. Evaluations should incorporate motivations, meanings, and results of either form of the iconoclastic enterprise. As a cultural idea or attitude, iconoclasm requires analysis from the perspective of valuing art and imagery within the individual culture, the formative role of religious values on that culture, and the role of the visual within that religious tradition.

According to the *Oxford English Dictionary*, the English word *iconoclasm* is a composite formed from two Greek words: *eikon* (icon) and *klasma* (breaking); whose primary meaning is "[t]he breaking or destroying of images; esp. the destruction of images and pictures set up as objects of veneration; the attacking or overthrow of venerated institutions and cherished beliefs, regarded as fallacious or superstitious." With the same Greek roots, the *Oxford English Dictionary's*

primary definition of an iconoclast is as "[a] breaker or destroyer of images; *spec. (Eccl. Hist.)* One who took part in or supported the movement in the 8th and 9th centuries, to put down the use of images or pictures in religious worship in the Christian churches of the East; hence, applied analogously to those Protestants of the 16th and 17th centuries who practised or countenanced a similar destruction of images in the churches." The *Oxford English Dictionary* lists an important secondary definition to the broader concept of iconoclasm and iconoclast as "[o]ne who assails or attacks cherished beliefs or venerated institutions on the ground that they are erroneous or pernicious." The rarely invoked term *iconomachy* is delineated in the *Oxford English Dictionary* as being from the ecclesiastical Greek, *eikonomachia* is defined as "[a] war against images; hostility or opposition to images, esp. to their use in connexion with worship."

The primary reference for iconoclasm has been religion, and in particular, Western monotheism. This reference raises critical issues in any discussion of the meaning of iconoclasm in world religions. Foremost among these issues is the role of religious belief in the formation of cultural and individual identity. If the procedures by which an individual learns about, assents to, is initiated into, and becomes a member of a religious community is analogous to those for entry into political and social communities, then a socialization process orients perception. How we come to see and interpret what we see is predicated on our disciplined sense of values. Orientation into a religious confession privileges the acceptance of the normative and appropriate, and simultaneously defines the abnormal and inappropriate.

However, if Ernst Cassirer (1962/1944), Moshe Barasch (1992), Mircea Eliade (1992/1986), and Marshall G. Hodgson (1964), to name only a select few, are correct, then how do we resolve their commitment to the basic human activity of "symbol making" with the privileging status of religion in the process of seeing and the discussion of iconoclasm? If iconoclasm is limited to the preconceived categories of Western monotheism, then is it independent of the otherwise universal relationship between art and cultural memory and religious traditions? As the basic nature of human beings is to make symbols—visual as well as auditory and oral symbols—then imaging can be defined as a universal human activity.

All world religions have an attitude toward art and imagery; some have a bifurcated view, others a single lens through which they see and define art. The remaining religions vacillate throughout their individual histories as ambiguous or ambivalent toward imagery. Nonetheless, art and cultural memory are embedded within religion and encoded with religious meaning and value. This reality must be evaluated within the late twentieth- and early twenty-first-century recognition that there is no innocent eye; rather, feminist, deconstructionist, and postmodernist scholarship argues persuasively that *le regard* is more than an engendered gaze. *Le regard* offers a nonreligious basis for the recognition that

there is a right and a wrong way to look and that the process through which one comes to see properly and to recognize impropriety is socialization, into a political, religious, or societal system.

**GENERAL PERCEPTIONS OF ICONOCLASM.** The general perceptions of iconoclasm, whether in Eastern or Western cultures, is that it is a religious phenomenon generated from a position of belief and right action as defined within that belief system. There is the recognition that the role of belief in defining cultural identity is primary, and trumps all other constructs of political, societal, and cultural values.

The multilayered syntax of iconoclasm, especially in the Western monotheistic traditions, provides a linguistic analogy to the complexity of its etymology, implementations, and functions. There is the internal correspondence between image and word within each religion. In those traditions in which image plays a primary or even a secondary role, iconoclasm is read as an attack on the orthodoxy of that religion. While in those traditions that question or deny the place or role of images, iconoclasm is not interpreted as a defense of religious orthodoxy.

Despite the placement of the visual modality within the religious hierarchy, the existence of images—especially icons as sacred portraiture of persons, events, or concepts—exists parallel with the fear of idols. Whether named image, icon, or idol, the visual object is presupposed by the believer to contain or partake of sacred energy and power. Whether that power is deemed as positive or negative expression depends on what is depicted.

The “power” of images is critical to *iconoclasm* as both an activity and a concept. Intrinsic to any image, power is the foundation for the fear in some cultures and/or religions results in the primacy of the word and the banning of images. If that power is characterized as sensual in nature, and thereby bifurcated in its moral character, the interpretation may be predicated on a generic cultural or religious distrust of what is seen—“the evidence of our eyes”—or of a fear of the sensory and the sensual.

The question of whether or not images have power, and the nature of that power, is elementary to the variations of cultural and religious definitions of iconoclasm. If a religion assumes that images have power, then iconoclasm is a necessary form of control of or deterrent to that power. How power is defined and manifested is characterized by its generative cause, in the arts named as creativity or the creative process. This power can be transferred either to, by, or through the artist whether native to the artist or gifted through an external source, and then transferred between the artist and the created object, or from the artist to the object, or from the artist through the object to the audience. Alternatively, this transmission could occur without the implied or actual presence of the artist who is merely a vehicle through which an external or other force operates. Thereby, power is exchanged from created object to audience, between object and audi-

ence, or from audience to object. In certain religions, this communication of power occurs only through the ceremonial or ritual function of the created object, or in coordination with its religious consecration. These multiple models for the transfer of “power” can be categorized within the discussions of the nature of creativity and the creative process, sacralization process, and response theory (see especially Freedberg, 1989).

Further questions arise either as to the appropriation or denial of the power of images, especially how that power is manifested, or used, in conjunction with cultural and religious interpretations of both images and iconoclasm. When interpreted as sacred energy, this power is transmitted in the form of healing, enlightenment, spiritual renewal, or protection. However, if initiated from a negative source, this power is interpreted as “misdirected” to effect harm, enchantment, danger, or subversion. Certain forms of religious iconoclasm are intellectual denials of the power or the existence of images.

Throughout his seminal text *The Power of Images: Studies in the History and Theory of Response* (1989), David Freedberg expands the boundaries of his early historical studies of iconoclasm in sixteenth- and seventeenth-century Holland into an analysis of the concept of iconoclasm. Essential to the “power of images” are the ambiguities that arise in any confrontation between fear and religious devotion. This form of fear is specific: what images might do if their usage, effects, and powers were unmonitored. For Freedberg, the iconoclastic motive is not universally and totally destructive of all images. It is a physical, oftentimes violent, response that operates within a series of parameters—geographic, chronological, social, and religious. Iconoclasm is not a total rejection, denial, or destruction of *all* images either for a particular historical moment or throughout history.

Another variant of iconoclasm is defined as iconophobia. This form of the iconoclastic enterprise is detailed in distinctively different studies by Patrick Collinson (1986), and Marshall G. Hodgson (1964). For the former, iconoclasm transmogrifies into a series of spirited “attacks”—verbal, visual, physical, or violent—on unacceptable images. This action is premised on a discernment of inappropriate or false images, although it is not a denial or repudiation of all images. Limitations on the types and styles of appropriate imagery permit visual delight within the iconoclastic hegemony of religion and religious values. For Collinson, iconoclasm moves from a “simple” distrust or suspicion of images and destruction of falsely identified “sacred art” to a complex “horror” or hatred of all imagery. Iconophobia is not an innocent “fear of images,” but a total repudiation of all images that becomes a pervasive cultural attitude predicated on religious values.

Hodgson proffers an understanding of iconophobia as a “mistrust” of symbols that rooted simultaneously in religious values and class struggle. Emphasizing the connections between symbols, worship, and moral impulse, especially in

the monotheistic traditions of Judaism and Islam, Hodgson correlates this mistrust of symbols to the distrust of the aristocracy as an exploitive, privileged class. The connector between aesthetic mistrust and social distrust is art. The foundation is in the unspoken realm of human feeling and emotions as symbols arise from the condition of being human, and art operates through symbols. As a transmitter of feelings and emotions, art, especially in worship, trumps the liturgical or ceremonial rites as it communicates directly and interpersonally. The primordial objections to idols are transferred to images and symbols, and then to art. Mistrust springs from the rigorous moralism found in the prophetic monotheisms of Judaism and Islam. Combined with the economic value of art, the native ambivalence of lower classes toward images becomes synonymous with economic and social status. Thereby, politics merges with religion as the privileged class is rejected by the populace, and the mistrust of images becomes iconophobia.

**Prejudices about iconoclasm.** Whether defined as a mode of behavior or a historical event, studies of iconoclasm are prejudiced by popular “misperceptions” of its origin, intent, and activity. The first misperception is that iconoclasm is an act of complete destruction, most typically described as “the smashing” of images. Second, that this destructive act is premised on a distrust, fear, and perhaps a hatred of images. Third, that iconoclasm is simultaneously a religious act that unifies all believers, regardless of class and gender, and that it is a monolithic response of that religion. Fourth, that iconoclasm is an activity with two historical Christian expressions: Byzantine and Reformation. Fifth, that Judaism is the original historically identified religious expression of iconoclasm. Finally, that twenty-first century demonstrations of iconoclasm by Islamic fundamentalists are solely religiously motivated acts as Islam is iconoclastic monotheism par excellence.

Although iconoclasm is identified as both a generic religious and a Christian attitude predating Byzantium, the most common reference is the Byzantine iconoclastic controversies of the seventh and eighth centuries. Without doubt, the basic tendency—cultural, philosophic, and religious—toward iconoclasm pervades all religious traditions and predates the foundations of Western monotheism. Normatively interpreted as an attack on religious imagery, iconoclasm is any attack on imagery whether works of “high,” “low,” or popular art. Consideration must be given to the related political issues of censorship and the affinities between religious and cultural definitions of *le regard* with its basic implications that there is a right and a wrong way to look.

The object of *le regard* is the work of art that engenders the wrath, admiration, or passions of viewers. The rarely discussed but regularly experienced “power of images” evokes a response through the mystery of the aesthetic dimensions. This evocation is associated with an energy or power beyond the human, so that the religious believer is divided between the divine and the demonic. Among iconophilist religions,

the experience of spiritual affirmation through an encounter with art attests to its salvific value. While those images that excite the senses and exude sensuality are condemned in an iconophilist milieu but destroyed in an iconoclastic culture.

A primary consideration distinguishing images from idols is religio-cultural attitudes toward the human body, especially in terms of measure and form. Carefully rendered human forms, either life-size or monumental, create the experience of a direct encounter with another living being. The life-size depiction of a beautiful nude female or male figure awakens the senses, sensuality, and often sexuality of viewers. The more erotic, or exotic, the presentation of the human figure, the more heightened the viewer’s sexual response.

The question is whether or not religious or sacred art requires the human figure for even geometric and abstract imagery can evoke an aesthetic experience or arouse human sensuality. A classic argument for the removal and desecration of images in iconoclastic religions is their conviction that the believer’s attention is diverted from the sacred, the holy, or God by art. Thereby, the aesthetic experience trumps, and must be separated from, the religious experience.

Closely related to the “fear of the senses and the sensual” is the recognition that the violent acts wrought on art are generated by passionate and opinionated reactions that in combination with religious vocabulary and the religious impulse can only be manifested in a physical response. Perhaps inexplicable if related solely to intellectual or theological upheavals, the physicality of this heightened emotional state is a curiosity not yet fully comprehended or studied. An investigation of the modes by which an otherwise acknowledged inanimate object so inflames the human senses as to garner a physical response might provide a new foundation toward understanding iconoclasm. Interrelated issues include why such physical violence is identified as a “punishment”? What is the religious impulse that motivates an act of physical violence? Is physical violence, even unto the assault on inanimate images, a justifiable physical response to fear, especially to fear inspired by religion? The further reality is that acts of mutilation or destruction are levied against “generic” images—not identifiably religious in nature, motif, or iconography—simply because they are art.

Recognition of this tenuous but direct relationship between iconoclasm and physical violence orients attention to the modes of cultural and political behavior named censorship and vandalism. Throughout history and cultures, innumerable images, objects, and monuments—whether religious or secular in origin—have been replaced, relocated, renamed, modified, updated, defaced, stolen, confiscated, and placed in storage. Beyond the simple inquiry of how this happens, is the more significant issue of the meaning of such actions, and whether they are justifiably categorized as acts of censorship, vandalism, or iconoclasm. Recent commentators in art history and visual culture note the affinities between censorship and iconoclasm (Hoffman and Storr,

1991b; Hoffman, 1996), and iconoclasm and vandalism (Boime, 1998; Gamboni, 1997). These homologous activities are organized within the matrix of art, politics, religion, and society delineated by Hodgson (1964) in his discussion of the role of art and culture in Islam.

Barbara Hoffman defines censorship as the “[c]ontrol of expression that is regarded as outside of and a threat to the religious, political, and social orthodoxy of the time” (1996, vol. 6, p. 174). Premised on the distrust of images—most cogently explicated by Plato (c. 428–348 or 347 BCE) as the deception of forms and the ability to evoke human emotions, and later echoed in a variety of religious and secular documents in the West—iconoclasm as censorship is an expression of power, albeit political or moral power.

Even in the model secular society, the United States of America, prominent acts of public censorship executed ostensibly on behalf of the government and within the purview of the legal system, resulted in outcries of injustice and hegemony of the religious, especially fundamentalist Christian, values of the minority over the body politic. From the nationwide controversies provoked by the withdrawal of federal funding through National Endowment for the Arts grants, to individual artists like Andre Serrano for the creation of his now infamous *Piss Christ* (1989), or to museums that sponsor exhibitions such as the retrospective of Robert Mapplethorpe’s black-and-white photographs cancelled by the Corcoran Gallery of Art (1989), the overt concern has been violation of the individual’s constitutional rights, while the sub rosa fear is the control of artistic expression by those religious individuals driven by a moral impulse that they identify publicly as patriotism but that is in fact a form of religious fundamentalism. The questionable act of government censorship in the threatened withdrawal of city funding to the Brooklyn Museum of Art by Rudolf Giuliani, the then-mayor of New York City, was because of the exhibiting of Chris Ofili’s painting of *The Holy Virgin Mary*, which Roman Catholics found to be morally offensive. This “spin” was motivated as much by the mayor’s own personal sense of affront as by the politics of his bid for reelection and his recognition of the meaning of Roman Catholic values (1990). This discussion of the affinities between religion and censorship through the formation of cultural values is advanced further with consideration of the fate of Serrano’s infamous photograph. When *Piss Christ* was knocked off the wall of a public museum and damaged irreparably by visitors who identified themselves as “outraged believers” (1997), was this an act of public censorship given the public arguments over the allocation of public funds for this work, or was it an act of religious iconoclasm or vandalism?

It is difficult to decipher acts of vandalism as simple but senseless acts of destruction from iconoclastic events. Religious and moral values have motivated the destruction, or desecration, of images and monuments under the guise of “religious iconoclasm as a defense of orthodoxy” or “vandalism as a moral outrage” by religious believers and invading

armies. If these are justifiably deemed as acts of iconoclasm, then what are we to make of the theft of the then recently restored Byzantine icons from Russian churches following the fall of communism (late 1980s–early 1990s), the exploding of the giant Buddhas at Bamiyan (2001), or the looting of the Baghdad museums and the toppling of statues of Saddam Hussein (2003).

One final variant of iconoclasm should be identified: The “silent iconoclasm” of those religious traditions that espouse a nonviolent rejection of images and icons as, for example, among the Āryā Samāj of Hindu India, the Sthānakvāśis and Terāpanthis of Jainism, and Lutheran Christians. This passive form of iconoclasm is doctrinally practiced and pronounced, and can thereby be considered a form of iconoclastic or religious censorship.

**Process of defining iconoclasm.** Throughout human history, culture has been organized around religious identity whether a named religion or a coalition of religions as in the Judeo-Christian tradition. This organizational schema privileges what is typified normatively as culture by religious valuing. Individual and communal discourses are embedded with religious references. The initial consideration is whether iconoclasm is a religious act or a religious act encoded with and motivated by economic, political, or societal purposes.

The integral elements in the process of defining iconoclasm range from the religious impulse to intellectual rationale. The arrangement, or rearrangement, of these elements in distinctive patterns is premised on religious and cultural values. Basic to any study of iconoclasm is a discussion of the meaning and purpose of images, especially with regard to the “power of images.” Analyses of iconoclasm, especially with regard to religion either generally or specifically, become mired in the divisive dichotomy of image veneration versus image destruction. Consideration is not adequately given to the possibility that the iconoclastic impulse is native to human creativity and should be examined in relationship to the definition of art and artist with the exception of Freedberg’s seminal study (1989).

As the visual definition of citizenship, public imagery illustrates the narratives of cultural history and national origin, and is recognized as the common denominator of national identity. These symbols and images envision the political and societal discourse of power, and during invasions or occupations need to be destroyed to “accept” the new government. Such acts of iconoclasm ostensibly motivated by political considerations are in reality deeply rooted in the socialization process from childhood through which an individual learns to accept or deny the “truth claim” of images. Cultures are oriented around religious values, discourse, and meanings, so that any act of political iconoclasm is not a simple secular performance. Similarly, iconoclasm is embedded in economic, societal, or political conflict whether that conflict is defined as class, race, or gender struggles or major cultural shifts such as the Renaissance. With the exception of the recent studies of Albert Boime (1998) and Dario Gam-

boni (1997), there have been insufficient studies of the consequences of the social and cultural function of imagery, especially of national symbols and monuments.

The term *the artist* requires careful attention. There is a history and an etymology to this word that has evolved, or been denied, through a variety of cultural and religious transformations, transmutations, and adaptations. For example, the Western apprehension that began with a coalition of artisan, craftsman, and teacher was transformed by early Christianity into a vehicle for divine expression, by the Renaissance into a cult of the genius, by the nineteenth century into a romantic rebel, and by the twentieth century into a critical, prophetic voice oftentimes self-defined as shamanic. Each definition or redefinition arose from a new way of seeing and valuing human experience. The sanctification of the artist initiated by the Renaissance cult of the genius, strengthened by the nineteenth-century rebel, and affirmed by the twentieth-century shaman, was cultivated in tandem with the secularization of Western culture. Iconoclasm as both event and ideology shifted from the political arena to the religious realm onto the national scene and, ultimately, to a religio-political enterprise.

Iconoclasm is a term loaded with diverse meanings from the “simple” whitewashing of images or placement in storage to the violent acts of total destruction. As both a term and an event, iconoclasm has traversed as complex and undulating a course as have the images and imagery it endangers. Whether the act of “smashing” is incited by the threat of idols to temple worship, by the power of the narrative of a living but particular image, or by the investment of imagery into political and societal narratives, the cardinal fear may be simply Plato’s claim that images fail us by not telling the truth. Images must be apprehended with a hermeneutics of suspicion, thereby, an internal tension exists between iconic and iconoclastic, between image makers and image breakers.

A series of relationships, rarely studied before the initiation of the study of the previously marginalized in the late 1960s and early 1970s, should be amalgamated into the complex alliance of the disparate pieces of the puzzle named “iconoclasm”; for example, the association between class and “taste,” or the affinities between gender and violence. Additionally, there is a cultural or a religious indifference to images. This is not to intend that “silent iconoclasm” of Lutheran Christians or the Brahṃā Samāḃ, but rather an investigation into the indifference, if not, denial of the power of images wrought by the glut of images found among the populace through popular culture, mass media, and the information highway of the internet. The question becomes: Can an individual and a society become numbed by images, as Thomas J. J. Altizer argues happened with words?

Tangential to this anesthetic of images is the subject of the figure and figuration in the arts. The issue is whether or not religious art requires the human figure, and if it does, what type of human figure: idealized, realistic, to scale, or monumental—the possibilities are limitless, but the concept

may prove limiting and maybe even threatening. If religious art were basically aniconic, then would it instill the same level of fear, anxiety, or danger within the eyes and hearts of those predisposed to iconoclasm? As with iconoclasm, not every religion or culture defines or delineates the human in identical terms. Rather, the actuality of a pluralistic world privileges a systematic analysis of cultural contacts and of mutual or contradictory concerns rather than a single explanation for phenomena as diverse as iconoclasm.

**Cultural permutations.** Historically, a distinction has been made by both art historians and historians of religion between the cultural and religious forms distinguished by the geographic and cultural categories identified as East and West. Among the most “glaring” distinctions is the minimal, if nonexistent, conversation about iconoclasm outside of Western monotheism. While there may be an intellectual and historical foundation to iconoclasm as it was identified and studied in terms of Western monotheism, it was not believed to exist in other religious traditions, whether indigenous, preliterate, native, or Eastern. Every religion and every culture has an attitude toward art and commensurately toward iconoclasm. The traditional “single explanation” for such diverse phenomena demands to be reframed and refashioned.

The following survey of cultural permutations of the idea of iconoclasm can be read as a series of suggestions that illustrate differing bases for the intellectual and emotional parallels identified in Eastern and Western religions. These attitudes suggest that there are differing forms of (religious) iconoclasm and that these differences can be clarified most sharply in coordination with examination of the relationships with culture, politics, and society. The distinguishing qualitative characteristic may be to paraphrase the art historian Oleg Grabar (1975), the simple difference between Iconoclasm with a capital *I* and iconoclasm with a lowercase *i*. Confirmation of the distinctions between iconoclasm as a historical event, mode of behavior, ideology, and attitude toward image must be carefully evaluated. The critical question is whether or not iconoclasm should be defined from the perspective of a cultural or religious entity, and equitably from the historical categories of geographic or religious distinctions.

*Eastern permutations of iconoclasm.* Whether perceived as a historic event, a mode of behavior, or an ideology, iconoclasm exists within the multiple cultures identified today as Asian. Culture is directly conjoined with religion, and thereby religious values become enshrined as cultural values. Violent acts of iconoclasm are not supported by or integral to either traditional Indian culture or orthodox Hinduism. As an abstraction without individual parts (Sanskrit *niskala*), the Hindu divinity comes to be known through abstract symbols or figural absence as at Chidambaram. The constant flow of invaders entering the Indian subcontinent proffers an exemplum for cultural and religious syncretism. Investigations into the nature and meaning of iconoclasm need to detail the

destruction, displacement, and replacement by invading groups. The absence of figurations or forms results in an iconism understood as elemental in the historical displacement of indigenous icons by Aryan invaders in northern India (c. 1500 BCE). The dearth of religious buildings and monuments can be credited to both invasion and construction from perishable materials such as light woods, paper, or clay; for single or minimal use; and then prepared for destruction and replacement. These practices remain prevalent in all parts and religions of India. Violent acts of iconoclasm such as the destruction of the temple in Somanatha built by Mahmūd of Ghazna (971–1030) were the results of Muslim invasions in northern India in the eleventh century. Such iconoclastic activity was spurred forward by a rigorous monotheism, a hostility to images, and the moral impulse.

From the eighteenth through the late twentieth century, there was a recognition of the irreparable damage “done” to Indian culture by invasions and invaders. The British occupation of India brought not simply a taste for British cultural values and political status, but an uncompromising allegiance to Protestant Christianity. Incorporating this Protestant indifference to images, the evolution of modern forms of Hindu esotericism, such as Advaita Vedānta, practiced a philosophic monism and rejected religious imagery. Nonviolent rejection of images, icons, and idols was found in the silent forms of iconoclasm as practiced by the Brahṃā Samāj and the Āryā Samāj.

The geographic location of the Indian subcontinent made it an attractive site for multiple invasions, religious and philosophical cross-fertilizations, and cultural fusions. Several religious traditions originated or flourished simultaneously on Indian soil including Hinduism, Buddhism, Sikhism, Jainism, and Islam, as well as a variety of Christian traditions. This religious syncretism influenced both attitudes toward images and commensurately iconoclasm. Images whether free-standing forms, monuments, or carved or painted onto buildings reflect these varied religious and philosophical perspectives, multicultural aesthetics, and stylistic advances. Not all works were made for the ages; rather, some ancient monuments and temples were raised for new edifices while others made from perishable materials were regularly replaced (similar to the Shintō practice in Isē-shima, Japan). Individual representations of specific deities or spirits and sand or flower mandalas were created for a single occasion or rite, others for a few days or for several months. Images for popular worship and devotion made of clay, paper, or soft woods, necessitate a short life span. These temporary images were created for specific ceremonial purposes with the specified intention of ritual iconoclasm.

Tantrism affirms a theoretic commitment to interiorized forms of mental worship as the higher form of devotion, while external worship with tangible images is the lowest form. Daily practice is far from the espoused theory, as the Tantric tradition incorporates regular use of visual images. Initially a devotional and reformist movement within

Hinduism, Sikhism partially distinguished itself by its iconoclastic ideology. As with other religions, this initial iconoclasm acceded to iconicism in which images of Gurū Nānak (1469–1539) emerged as a form of religious pedagogy and visual inspiration for piety and good works.

Buddhism encountered the spectrum of attitudes and modes of behavior toward images and iconoclasm ranging from the theoretic iconoclasm of Zen to the iconolatry of Hinayana and Mahayana. More icon or recipient of veneration, the image of Buddha became deified as an object of worship and provoked reaction against state-imposed Buddhism in a fashion reminiscent of Hodgson’s (1964) discussion of the political rejection of art as a category of social privilege. The destruction of Buddha images in the Bayon temple at Angkor Wat by Hindu iconoclasts followed the death of the Mahayana Buddhist king Jayavarman VII (c. 1120–1215 or 1219). The doctrine that Buddha nature pervades all created things and beings affirms the practice of ritual iconoclasm throughout the Buddhist world. Given both the spontaneity and nonconformist mode of satori, or enlightenment, Buddhism aligns iconoclasm with the cessation of visualization during meditation, and the destruction of the canon. Written authority is replaced with the intuitive immediacy between student and master as in Zen Buddhism. The basic ambivalence toward images is in direct correspondence to the developmental stage of an individual’s spiritual consciousness. Tangible images are necessary for the initiate to enter into the meditation, however, material objects of attachment, images are to be transcended. The Buddha counsels individuals to learn to extricate themselves from attachment to material objects like mandalas and images.

As practiced in monastic environments, Zen iconoclasm differs from other forms of Buddhist iconoclasm that occur in temples, urban and rural environments, and domestic settings. Accounts of the destruction of the objects ranging from Hui-neng’s (638–713) physical shredding of scriptures (sixth century) to Tan-hsia’s (1064–1117) incineration of a Buddha-image (ninth century) may be intended more as parables than as documented history. Images, whether text or artwork, are not to become either attachments or objects of worship; rather, they are simply reminders of the Buddha’s way to enlightenment that each person must follow for him- or herself. Hui-neng’s action was a model of Zen’s rejection of written authority in favor of the monastic tradition of intuitive insight as taught by master to disciple. Similarly, Tan-hsia’s story witnessed the Zen practice of nonattachment and the moving away from an external object as the entry point to meditation. Relics of the Buddha, like Buddha images, are accorded due reverence by both the Buddhist traditions and monastic disciplines. Humor is a normative vehicle for the vernacular of Zen iconoclasm. The Zen technique of relentless overthrow of idols employs laughter to effect positive response in believers and a not so positive response in the idols. The sound of laughter causes the idols to turn over on their heads, thereby removing their aura of dignity and simultaneously their claims of authority and truth.

The final, and not often mentioned, category of iconoclasm initiated on the Indian subcontinent is the silent iconoclasm found in both Hinduism—the *Āryā Samāj* and the *Brahmā Samāj*—and Jainism—*Sthānakvāsīs* and *Terāpanthis*. This silent iconoclasm is characterized by a nonviolent rejection of all images, icons, and idols predicated on a religious moralism.

*Western permutations of iconoclasm.* Western understandings of iconoclasm have been deemed normative as historical events, modes of behavior, and ideologies, as well as subjects for scholarly evaluation. This privileging of iconoclasm by Western monotheism raises concerns for wider investigations. As iconoclasm is almost synonymous with monotheism, investigators must consider whether iconoclasm in all of its definitions and etymologies is simply a monotheistic entity; and not applicable to world religions and cultures. Most documentation, analyses, and scholarship related to iconoclasm discusses Christian, more specifically Byzantine or Protestant, forms of iconoclastic activities. This survey suggests additional modes of iconoclasm within Western religions.

The establishment of monotheism in the West transformed cultural attitudes, societal structures, and dispositions toward images. Dedication to the one God as the singular divine source reconfigured the conceptual and spiritual relationality with human beings. This exclusive deity was defined as unique in substance and as transcending traditional boundaries of gender, sexuality, and bodily forms, and was uncircumscribable in visual depictions or cognitive classifications. He spoke authoritatively and through his speech created the world, its contents, and human beings (*Gen.* 1–2). This emphasis on divine utterances enhanced the primacy of the word over the image in Western religions, the written scriptures over the icon.

Western monotheism was initiated by the “new religion” established by the pharaoh Akhenaton (r. 1379–1362 BCE) in his devotion to Aton. Aniconism prevailed in images of Aton while figural depictions of pharaoh and his family were significantly transformed in bodily presentations from earlier pharaonic portraits on monuments and manuscripts. As Aton become singular and aniconic, Akhenaton, his wife Nefertiti (fourteenth century BCE), and their children, were rendered naturalistically even unto physical characteristics of ageing from double chins to sagging bellies. This earliest Western monotheism humanized portrayals of the aristocracy while symbolizing a nonfigural deity without rejection or destruction of all images. Ironically, iconoclasm in Egypt occurred in the desecration of the monuments honoring Akhenaton and the only female pharaoh, Hatshepsut (r. 1503–1482 BCE), whose portraits and written names were “erased” from all records of Egyptian history. Whether these acts were simply expressions of political power or religiously motivated, especially the restoration of the Egyptian pantheon and its priesthood, may be singular case studies in Western iconoclasm.

Western monotheism and its unique prophetic iconoclasm were instituted through the Old Testament religion of Israel. This specific iconoclasm was predicated on adherence to a strict moralism pronounced by a prophet, or series of prophets, inspired by the one God to reveal a message of hope, judgment, and obedience to the transcendent supreme creator. There is a qualitative distance between God and humanity. Faith in God involves fulfillment of moral demands as believers receive a direction and purpose to human history. The faith community is dependent on the commandments and laws that this God has directed be written in “the book.” God is beyond any concepts or forms known to human beings; neither anthropomorphic imaging or identification is possible. Such religions abound with elegant verbal symbols and images in oral and written texts denying the visual.

Defining and differentiating Judaism from its neighbors, the religious hierarchy and prophets named its singular religious identity and ethical practices. As many scriptural citations (e.g., *3 Kings* 11:5; *Dan.* 14:2; *Judg.* 10:6) affirm the neighboring cultic practice of worshiping idols, Judaism demarcates itself attesting to God’s singularity, primacy of the Word, and obedience to a strict moral code. Judaism fostered the ideology of idolatry as “the other” necessitating rigorous iconoclasm. The normative interpretation of Judaism was a religion rich in verbal imagery and symbolism nurturing religious pedagogy, liturgical ceremonies, and spirituality. Archaeological excavations at Dura Europos and Bet Alpha, and cultural studies of Jewish history, question this traditional description of Judaism as a nonvisual culture (Julius, 2001; Mann, 2000).

Historically, Christianity has had a bifurcated attitude toward images that arose from the dual heritage of Hebraic (prophetic) iconoclasm and Hellenistic philosophy. Christian iconoclasm is understood by its two historical expressions: Byzantine and Reformation. However, the concept, if not the violence, of iconoclasm operates in all forms of Christianity, all geographic regions, and among all races, classes, and gender. With the exception of Byzantine iconoclasm, several of the other modes of Christian iconoclasm will be reviewed herewith.

Whether perceived or experienced as an idea or object, art is ambiguous. Although inanimate, art operated humanly communicating and evoking a response from viewers, and was interpreted as a danger as well as a delight. Evidence of this equivocal attitude is found in early Christian art, as there is no portrait of Jesus (c. 6 BCE–c. 30 CE) rather visual symbols, allegories, and signs. The Council of Elvira (309) issued contradictory decrees in which idol worship and sacrifice were denounced, while the breaking of idols was identified as unwarranted according to the scriptures. Among Church Fathers, notably Clement of Alexandria (c. 150–between 211 and 215), Tertullian (c. 155 or 160–after 220), and Augustine of Hippo (354–430), there was affirmation of Plato’s distrust of art as deception. The sensuality and superstition associated with images as idols that created the greatest ap-

prehension within the early church. Initially, Christian iconoclasm included pronounced condemnations and physical removal or destruction of pagan idols and secular images. By the third century, images played an integral role in Christian worship and catechesis. Qualifications were announced in conciliar decrees, patristic texts, and sermons. Christian mistrust of images was reformed by the sixth century into a trust in images with *achieropaic* (not made by hands) icons created through the direct contact with Jesus, especially the miraculous portraits known as the Mandylion of Edessa and Veil of Veronica. The seventh-century synod in Trullo (692) reaffirmed the doctrines of the incarnation and proscribed symbolic or allegorical images, such as the lamb, for Christ. Synodical documents demanded anthropomorphic images of Christ, although not necessarily in the politically motivated placement of his portrait on imperial coins by Justinian II (c. 669–711).

Contemporary to the Byzantine iconoclastic controversies is the little studied Carolingian iconoclasm. As early Christian iconoclasm must be studied in concert with the political and societal establishment of the church, Carolingian iconoclasm demands consideration of both political relations between Constantinople and Aachen, and the Spanish heresy of Adoptionism. The immediate effects of Carolingian iconoclasm are more evident than any permanent attitude or theological shift in Western Christianity. A survey of Carolingian art reveals the conundrum that although Charlemagne imagined himself in the mold of the Roman Empire, there are no surviving depictions of him in any court manuscripts. A similar near-total absence of illustrations of the life of Christ affirms Carolingian iconoclasm espousal of parallels between Christology and the image. Promulgated at the Council of Frankfurt (794), the *Libri Carolini* (Caroline Books) condemned Adoptionism and qualified images in terms of the spirit of Gregory the Great (540–604) as appropriate for pedagogy, aesthetic adornment, and moral inspiration, but not adoration. A conceptual debate on the Christian moral relationship between art and materialism might have occurred between Bernard of Clairvaux (1090–1153) and the Abbé Suger (1081–1151). Bernard, who vilified the expense of images, declared them a hindrance to the contemplation of the divine as witnessed in Benedictine purity and simplicity which cleansed abbey churches of stained-glass windows, wall paintings, and sculptures. Simultaneously, Suger proceeded with his design for the world's first Gothic cathedral, Saint Denis, an innovative model in elegant and inspired Christian aesthetics. The more pertinent theological issue of the abuses of devotional imagery led to violent iconoclasm in medieval Christianity.

Reform, especially as theological thinking on artistic imagery, was initiated in the fourteenth century, if not earlier. John Wycliffe (c. 1330–1384), the English reformer, and his “Lollards” (mumblers) debated the value of imagery and sought the destruction of human-figured forms. While the Dominican monk Girolamo Savonarola (1452–1498)

preached against materialism and the decadence of humanism, decrying, for example, the nude figure in Renaissance art and inspiring the infamous “Bonfire of the Vanities.” Influential not only on a majority of Florentines, Savonarola motivated artists such as Sandro Botticelli (1445–1510) and Michelangelo (1475–1564) to mutilate or destroy their own works.

Sixteenth-century Protestant Reformers resurrected the prophetic iconoclasm of the Judeo-Christian foundations and inspired attitudinal reposition from iconoclasm to iconophobia. Like the Byzantine iconoclastic controversies, Reformation or Protestant iconoclasm was equitably motivated by economic, political, aesthetic, and theological issues. The central question of defining or redefining the God-human relationship affected both the concept and the violent acts of the iconoclastic impulse. Reformers were divided in their individual definitions: Martin Luther (1483–1546) acknowledged the didactic use of religious art and decried the “destructive cleansing” advocated by Bodenstein von Karlstadt (c. 1480–1541). John Calvin (1509–1564) initially defended religious art as didactic but later opposed images given the tendency toward veneration; however, like Luther, he did not support violent iconoclasm. Huldrych Zwingli (1484–1531) banned religious art as a distraction from worship and supervised the closing and cleansing of churches by whitewashing the interior walls and removing all statues, images, and stained-glass windows. Proponents of the Church of England advocated public spectacles such as the “Bonfire of the Virgins” (July 1538) to champion the reform process. Calvin's and Zwingli's followers were driven by the “horror of imagery” to destroy not simply individual religious images but entire buildings but to move toward iconophobia as an attitude and activity destructive of all images.

The Christian iconoclastic impulse extended into the colonizing of Latin and South America in the sixteenth and seventeenth centuries. The danger, or threat, of idolatry was transformed by European missionaries and explorers to the New World into native images as purveyors of false religion. The destruction, either physically or by assimilation into Roman Catholic imagery, of native religious art signified the concurrent replacement of popular religion with Christianity. The European interpretation of indigenous religion was colored by the perception of art as “craft” and as inferior in quality to the “high art” of the West. This relating of image with religion colored the inculcation of “European” culture and religion on the Americas.

Further violent acts of, or inspired by, Christian iconoclasm include the transformation or “secularization” of Western culture through political and social revolutions from the eighteenth to the twentieth century. Foremost is the spontaneous and wanton destruction of religious art and monuments by the lower classes in establishing the secular state of the French Revolution. This havoc was motivated by the economic, political, and societal abuses the aristocracy and the church—identified as one and the same entity—

wrought on the working poor. Similarly, the political and ideological “revenge” of the Russian people, or at least the leadership of the new Russian government, against the czar and the church was the establishment of a secular state and the disestablishment of a state church.

Given its theocentric universe and resolute avowal of monotheism, Islam interpreted the existence of images not merely as simple idolatry but as an assault on the integrity of God. Aware that he is the sole eternal creator, the qualitative difference between God and humanity becomes immense. Beyond the boundaries of human limitations and descriptors, there is no attempt to humanize God as this would be interpreted as both an act of idolatry and tantamount to the unforgivable sin of *shirk*. Although there is no formal condemnation of the visual arts or of images in the Qurʾān, neither is there affirmation. The Qurʾānic silence on art, human creativity, and the visual modality is interpreted through the lens of inference, so that the passages, for example, such as those relating Solomon’s wealth and power (34:12–13), Abraham’s opposition to idols (6:74), and Jesus’ transformation of the clay bird to life (3:43) attest to a disapproving attitude toward representation. As God is the creator, any discussion or description of the artist as a “creator” proclaims a competition that is not permissible. The Prophet Muhammad (c. 570–632), who denounced the indigenous Arabic customs of idol worship, is credited by tradition with pronouncing that artists as they perceive themselves as “creators” will be severely tested and punished on Judgment Day. Angels, he is further credited with saying, would neither enter or protect a home with pictures or images. Several hadiths identify the artist as a deceiver or idolater, while a variety of texts—Arabic, Persian, and Turkish—of both Sunni and Shiʿah origins, denounce both the artist and art as blasphemous.

Grabar (1975) espouses the position that early Islam was indifferent to images, however, there is reference to an Islamic opposition to representation and to the artist as competing with God in the texts of Thawdhurus Abū Qurrah (c. 750–825). Except for legendary references and a contested episode in the life of Muhammad, there is no public or authoritative “debate on images” in Islam similar to those in Christianity, especially the Byzantine iconoclastic controversies. However, for some commentators the simple historical synchronicity of the rise of Islam during the latter Christian crises is a signifier of a homogeneous ethos or intellectual disposition.

The Islamic rejection of figural representation transformed the art of writing, whether inscriptions or calligraphy, into an artistic vehicle for theological expression. Similarly, abstract, geometric, and floral pictoriality defined the otherwise “religious” arts of Islamic cultures. Aniconism may have so dominated the Islamic attitude toward art that critical issues such as the amorphous relationship between the act of representation and the object represented, and the forms of possible representation of the divine or abstract concepts, were rarely, if ever, discussed. Rather, Islamic art reflected

the cultural matrix of a social and moral ethos and denied expression in figurative forms. Nevertheless, within Islam’s earliest centuries, iconoclasm flourished sporadically, depending on local interpretations of the Qurʾān and hadiths, economic and political struggles, and moral affirmation of the integrity of the one God. Islamic iconoclasm, if this is a justifiable phrase, is an umbrella term for a variety of phenomena ranging from wanton destruction or vandalism in military campaigns to the whitewashing of images of other religions or cultures. Historically documented violent acts of Islamic iconoclasm were related most often either to conquests or to transformations of buildings in central Asia (Buddhist), India (Hindu), Anatolia, Turkey, and Al Andalus, Spain (Christian). Whenever adherents rigorously define Islam as the prophetic witness to the one God, who is the transcendent and invisible creator, and who cannot be restricted by or contained within figural images, such a theological position with which the Taliban might identify itself, then the violent acts of iconoclasm such as the destruction of the giant Buddhas at Bamiyan (2001) may be interpreted as self-justification.

**FURTHER CONSIDERATIONS FOR THE STUDY OF ICONOCLASM.** Studies of iconoclasm as a mode of behavior or an ideology converge with the issues and methodologies employed in the analyses of response theory (Freedberg, 1989), optics and vision (Elkins, 1996; Kemp, 1990), and the dynamics of class, race, and gender, especially through the lens of visual culture and popular culture (Morgan, 1998; Nochlin, 1998/1995; Plate, 2002/2003). Early twenty-first century history including the destruction of the giant Buddhas at Bamiyan heightens the recognition of the affinities between iconoclasm and violence and points toward both psychologically and religiously based analyses. The censoring of “religious art” such as Chris Ofili’s *The Holy Virgin Mary* motivates in-depth examinations of the affiliations between iconoclasm and censorship. Clearly, both relationships sharpen interest in the connectives between the economy, politics, and religion as the integral matrix sustaining iconoclasm, particularly violent iconoclasm.

The more complex nature of iconoclasm particularly as a religious act requires a thorough investigation into the patterns of iconoclasm in both Eastern and Western religions. A comparison of variations according to cultural patterns, religious values, political structures, and gender and class struggles provides a methodology for examining iconoclasm as both a mode of behavior and historical event. The basic nature of the iconoclastic impulse is clarified by detailed comparison of the singularity of the Western model in and against the global evidence for iconoclasm as a value larger than the limitation of Western monotheism.

#### BIBLIOGRAPHY

Despite its universality within world religions, the predominant number of texts on iconoclasm focus specifically on Christianity, in particular either Byzantine or Reformation studies. The following texts analyze iconoclasm within other reli-

- gious traditions but not comparatively between traditions. The discussions of iconoclasm by Mircea Eliade, Marshall G. Hodgson, Albert C. Moore, and more recently Diane Apostolos-Cappadona, are singular in their approach toward the religious meaning of iconoclasm and in their employment of a comparative methodology.

DIANE APOSTOLOS-CAPPADONA (2005)

## ICONOCLASM: ICONOCLASM IN THE BYZANTINE TRADITION

Byzantine iconoclasm in all its facets remains an unresolved subject. Key sources are still to be published in modern editions, and interpretation of those that have been published have not yet achieved a consensus. Nonetheless the lengthy bibliography on this topic not only marks its significance but also the breadth of interests potentially, if not necessarily, encompassed by the somewhat misleadingly titled "era of iconoclasm" (literally, the destruction of images) in the eighth and ninth centuries and the iconomachy (contest over the images) that preoccupied the minds of theologians at that time.

The precise dates given by historians to the iconoclastic crisis are not fixed. Modern scholarship has dismissed the historical reality of the traditional opening moment, the destruction in 726 CE of Christ's icon on the Chalke Gate of the Great Palace in Constantinople. Instead, 730 CE, when Emperor Leo III (r. 717–741 CE) forced the resignation of Patriarch Germanos I (r. 715–730 CE), has now become the preferred opening moment of this debate. Given this, it remains possible to trace the origins of the crisis back to legislation enacted at the Quinisext Council held in Constantinople in 691/692 CE. This first phase of iconoclasm was brought to an end by the Seventh Ecumenical Council that met at Nicaea in 787 CE. Iconoclasm returned in 815 CE, when Emperor Leo V (r. 813–820 CE) encouraged the revival and refinement of the iconoclastic case made in the eighth century. This second phase is usually considered to have ended in 843 CE with the first celebration of the Triumph of Orthodoxy. Iconoclasm continued to be discussed, most notably in the writings of Patriarch Photios I (r. 858–867 and 877–886 CE) in the period leading up to and during the Eighth Ecumenical Council that met in Constantinople in 869–870 CE.

**PRELUDE.** Long cast as an atavistic reaction to the increasing popularity of images, the precise origins of Byzantine iconoclasm remain open to debate. The influence of Islam and Judaism as well as imperial adventurism, social and cultural crises, and military failure have all been cited as potential causes for the onset of iconoclasm. These have tended to downplay the internal theological questions that drove and continued to drive the terms of the debate within the Orthodox Church itself, as theologians grappled with the problem of finding an appropriate language to justify the incorporation of images and their veneration into legitimate Christian practice. This problem was raised by the eighty-second canon of the Quinisext Council, which declared that it was inappropriate for Christians to use symbolic representations of Christ (such as the Lamb of God) when the fact of Christ's incarnation made his corporeal representation a necessity.

**FIRST PHASE.** Knowledge of the earliest iconoclastic case against the images is scant. From the reports embedded in iconophile responses, it appears that the iconoclasts asserted the continuing value of Old Testament prohibitions on im-

ages, such as those found in the second commandment. In response, iconophile theologians argued that these prohibitions against idols and their worship were no longer valid for Christians, whose God, thanks to the incarnation, had become a historical being, whose acceptance of the spatial and temporal limits of a human body had made him visible and hence available for representation in icons. The primary advocates of this position were Patriarch Germanos I of Constantinople, whose views are known from three letters included in the documents of the Seventh Ecumenical Council, and John of Damascus (c. 675–749 CE), whose three orations on the images remain an influential discussion of the role of images in Orthodox Christianity. The arguments proposed by Germanos and John are crucial in that they linked the fate of the icon to Christological thought, thus making the debate over the image continuous with the Christological debates of the preceding centuries.

**SECOND PHASE.** The second phase of the iconoclastic era belongs to the early 750s CE. In preparation for an iconoclastic council to be held in 754 CE, Emperor Constantine V (r. 741–775) issued a series of *Enquiries* on the image question. These challenged the Christological case made by the first generation of iconophiles. Constantine deployed a Trinitarian conception of the image to show that the Christological defense of images was insufficient. In particular, he argued that the iconophiles had failed to account for how an icon could represent a divine being such as Christ without either dividing his dual natures or limiting his person. Constantine's position was largely endorsed by 338 bishops and other participants at the iconoclastic Hieria Council held at Chalcedon in 754 CE. The remaining years of Constantine's reign were marked by an intensified persecution of iconophile opponents to this conciliar decision. One further consequence of the council was that it reinforced papal opposition to what had come to be seen as an imperial policy of iconoclasm. This opposition to iconoclasm was expressed in the Lateran Council of 769 CE and in the numerous letters written by Pope Adrian I (r. 772–795) in regard to the Seventh Ecumenical Council held at Nicaea in 787 CE and the Council of Frankfurt in 794 CE. It is arguable that this opposition also contributed to the papal alliance with the emergent Carolingians that began in the 750s CE and that was to culminate with Charlemagne's coronation as Holy Roman Emperor in 800 CE.

The second phase was brought to an end by the ecumenical council that brought together 350 delegates at Nicaea in 787 CE. This council was held under the auspices of Empress Irene (r. 797–802 CE) and her son Constantine VI (r. 780–797 CE) and came about with the strong support of Pope Adrian I. The council was shaped by Patriarch Tarasios I of Constantinople (r. 784–806 CE) and was a direct response to the iconoclastic council of 754 CE. The greater part of the discussion was devoted to the establishment of the continuing tradition of the icon in the life of the church. The enormous array of testimony gathered toward this end remains a primary witness to the early history of the icon. Hav-

ing established that icons belonged within the traditions of the church, the council reiterated that the icon was essential for the commemoration of the reality of the incarnation and that this function made the icon worthy of veneration.

**THIRD PHASE.** In 815 CE Emperor Leo V forced Patriarch Nikephoros I (r. 806–815) to resign. This emperor had sponsored a revival of the iconoclastic theology espoused during the reign of Constantine V. Under the auspices of a committee led by the monk John the Grammarian, who became Patriarch of Constantinople in 837 CE, these ninth-century iconoclasts developed aspects of their iconoclastic predecessors' theology. This included an acceptance of the visual representation of holy persons, although these images were to be denied veneration and were also considered to be a lesser medium than verbal representations.

Resistance to this fresh outbreak was led by Patriarch Nikephoros I of Constantinople and Theodore of Stoudios (759–826). Nikephoros wrote an extensive series of treatises against the unfolding iconoclastic theology, whereas Theodore's primary contribution lay in his three refutations of iconoclastic arguments. Both authors built upon the Christological defense of images. To this they added a rigorous use of Aristotelian logical terminology. This enabled them to clarify the language that framed the icon and to provide a precise description of iconic representation. Above all the icon was defined in relational terms as a likeness of the one depicted therein. An icon was thus understood to represent the formal, nonessential aspects of the visible properties of a historical subject. Furthermore, this relational model was also applied to the question of the veneration of icons. Iconophile theologians vigorously denied that the veneration of an image could lead to any confusion between the icon and its subject. Rather, they continued to build upon Basil of Caesarea's (c. 329–379 CE) fourth-century dictum that the honor addressed to an image was passed on to the person whose portrait was conveyed by that object. Following the death of Emperor Theophilus (r. 829–842 CE), Emperor Michael III (r. 842–867 CE) and Empress Theodora (r. 842–858 CE), guided by the eunuch Theoktistos, installed Methodius (c. 825–884 CE) as Patriarch of Constantinople (r. 843–847 CE) and removed the iconoclastic ban on the cult of images.

**AFTERMATH.** The years of debate that marked Byzantine iconoclasm confirmed the centrality of the icon for Orthodox Christians. Thereafter, the icon was deemed an exact and truthful eyewitness and confirmation of the reality of Christ's incarnation. The arguments presented by John of Damascus, Nikephoros of Constantinople, and Theodore of Stoudios continued to define the key issues concerning the place of art in Byzantine Christianity. The Synodikon of Orthodoxy, first composed before 920 CE, summarized and memorialized the iconophile argument. When this text was read each year on the first Sunday of Lent to mark the Triumph of Orthodoxy, it both reiterated the iconophile defense of the icon and affirmed the centrality of the icon to the definition

of orthodoxy. Furthermore the arguments of these iconophile fathers continued to be studied and invoked in Byzantine debates over the image that took place in the eleventh and fourteenth centuries. Later in the West their ideas were “rediscovered” by the Counter-Reformation theologians of the sixteenth century as they searched for models for a Catholic defense of images.

Indeed, the Council of Trent, Vatican II, and Pope John Paul II's *Letter to Artists* demonstrate the continuing value of Byzantine theology of the icon for Catholic theologians. Each of these texts shows that the ideas addressed during Byzantium's debates over the status of the icon remain fundamental to any discussion of Christian image making and image use.

#### BIBLIOGRAPHY

Modern work on Byzantine iconoclasm has focused upon the production of good critical editions and sound translations of both key and neglected texts. New critical editions have helped clarify some key texts; for example, Saint Theodore of Studites, *Theodori Studitae Epistulae*, edited by Giorgios Fatouros (Berlin, 1992); Joseph A. Munitiz et al., eds. and trans., *The Letter of the Three Patriarchs to Emperor Theophilus and Related Texts* (Camberley, U.K., 1997); Saint Nicephorus, Patriarch of Constantinople, *Nicephori patriarchae Constantinopolitani Refutatio et eversio definitionis synodalis anni 815*, edited by Jeffrey Featherstone (Turnhout, Belgium, 1997); Stephen the Deacon, *La vie d'Étienne le Jeune: Par Étienne le Diacre*, edited by Marie-France Auzépy (Aldershot, U.K., and Brookfield, Vt., 1997); Ignatios the Deacon, *The Life of the Patriarch Tarasios: By Ignatios the Deacon*, edited by Stephanos Efthymiadis (Aldershot, U.K., and Brookfield, Vt., 1998).

New translations have also made crucial material more accessible; for example, Saint Nicephorus, Patriarch of Constantinople, *Discours contre les Iconoclastes*, translated by Marie-José Mondzain-Baudinet (Paris, 1989); Theophanes the Confessor, *The Chronicle of Theophanes Confessor: Byzantine and Near Eastern History AD 284–813*, translated by Cyril Mango and Roger Scott (Oxford, U.K., 1997); *Byzantine Defenders of Images: Eight Saints' Lives in Translation*, edited by Alice-Mary Talbot (Washington, D.C., 1998); and Andrew Louth, ed., *Three Treatises on the Divine Images* (Crestwood, N.Y., 2003). This work on the texts from this era has led to a more complex assessment of the use of the evidence that is available from this period. This enquiry is led by, among others, the work of Paul Speck, usefully introduced in his *Understanding Byzantium: Studies in Byzantine Historical Sources* (Aldershot, U.K., and Brookfield, Vt., 2003); and Marie-France Auzépy, including her *Hagiographie et l'iconoclasm: Le cas de la Vie d'Étienne le Jeune* (Aldershot, U.K., 1999).

Leslie Brubaker and John Haldon, *Byzantium in the Iconoclast Era, ca. 680–850: The Sources; An Annotated Survey* (Aldershot, U.K., 2001), provides a useful survey of the material and verbal sources available for the study of Byzantine iconoclasm. For art-historical discussion see André Grabar, *L'iconoclasm byzantin: Le dossier archéologique* (Paris, 1984); and Charles Barber, *Figure and Likeness: On the Limits of Representation in Byzantine Iconoclasm* (Princeton, N.J., 2002). The papers collected in Anthony Bryer and Judith Herrin, eds., *Iconoclasm* (Birmingham, U.K., 1977), remain an important point of departure for the study of this topic. For an introduction to the theological issues see Kenneth Parry, *Depicting the Word: Byzantine Iconophile Thought of the Eighth and Ninth Centuries* (Leiden, Netherlands, 1996).
